70.34.19 **AddFieldToFormAction**(Action as Integer, Field as Integer, Include as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Adds a field to a form action.  
**See also** AddFieldToFormAction function in DynaPDF manual.

70.34.20 **AddFieldToHideAction**(HideAct as Integer, Field as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** This function adds a field to a hide action.  
**See also** AddFieldToHideAction function in DynaPDF manual.

70.34.21 **AddFileComment**(Text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Adds one or more comments to the end of the PDF file.  
**Notes:** The text parameter is converted to unicode.  
**See also** AddFileComment function in DynaPDF manual.

70.34.22 **AddFileCommentAnsi**(Text as string) as boolean

**Function:** Adds one or more comments to the end of the PDF file.
70.34.23  AddFontSearchPath(path as folderitem, recursive as boolean = true) as Integer

**Function:** This function adds a search path to the list of available font search paths.

**Notes:**
This function adds a search path to the list of available font search paths. An arbitrary number of search paths can be added at runtime. Subdirectories are included recursively if the parameter Recursive is true. DynaPDF requires no separate metric files for Type1 fonts.

The list of search directories can be cleared at runtime with the function ClearHostFonts().

If system fonts are enabled (default) DynaPDF adds the default font directories of the operating system automatically to the list of font search paths (Windows and Mac OSX only, see SetUseSystemFonts() for further information). On Windows this is the %Windows%/Fonts directory as well as fonts listed in the Registry and linked fonts.

On Mac OSX the following directories are added to the list of font search paths (in this order):

- users font folder in
  `~ /Library/Fonts`
- `/Library/Fonts`
- `/System/Library/Fonts`

If the function succeeds the function returns the number of found font files (this is maybe not the number of available fonts, because the list is cleared each time all fonts in the list are processed during font selection). If the function fails a negative error code is returned.

Please call this method on Linux to get fonts loaded from your font folder.

Also check the dynapdf manual on the pdfAddFontSearchPathA function (pdfAddFontSearchPathW for Windows).

See also AddFontSearchPath function in DynaPDF manual.

See also:

- 70.34.24 AddFontSearchPath(path as string, recursive as boolean = true) as Integer
CHAPTER 70. DYNAPDF

70.34.24 AddFontSearchPath(path as string, recursive as boolean = true) as Integer

**Function:** This function adds a search path to the list of available font search paths.

**Example:**

```pascal
dim d as new DynaPDFMBS
if TargetLinux then
call d.AddFontSearchPath "/usr/share/fonts/truetype", true
else
    // on Mac and Windows we use system fonts.
end if
```

**Notes:**

This function adds a search path to the list of available font search paths. An arbitrary number of search paths can be added at runtime. Subdirectories are included recursively if the parameter Recursive is true. DynaPDF requires no separate metric files for Type1 fonts.

This function is implemented in an ANSI and Unicode compatible version. However, Unicode file paths are converted back to ANSI on Windows. On non-Windows operating systems the path is converted to UTF-8 and passed to the ANSI version of the function.

The list of search directories can be cleared at runtime with the function ClearHostFonts().

If system fonts are enabled (default) DynaPDF adds the default font directories of the operating system automatically to the list of font search paths (Windows and Mac OSX only, see SetUseSystemFonts() for further information). On Windows this is the %Windows%/Fonts directory as well as fonts listed in the Registry and linked fonts.

On Mac OSX the following directories are added to the list of font search paths (in this order):

- users font folder in
  - `textasciitilde /Library/Fonts`
- `/Library/Fonts`
- `/System/Library/Fonts`

If the function succeeds the function returns the number of found font files (this is maybe not the number of available fonts, because the list is cleared each time all fonts in the list are processed during font selection). If the function fails a negative error code is returned.
Please call this method on Linux to get fonts loaded from your font folder.

Also check the dynapdf manual on the pdfAddFontSearchPathA function (pdfAddFontSearchPathW for Windows).
See also AddFontSearchPath function in DynaPDF manual.
See also:

- 70.34.23 AddFontSearchPath(path as folderitem, recursive as boolean = true) as Integer

### 70.34.25 AddImage(Filter as Integer, Flags as Integer, Image as DynaPDFImageMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Adds an image to the current image file.
**Notes:**
For the filter you use one of the kcf* constants.
For the flags you use either kicNone of kicUseCCITT4.

TIFF is the only format that supports different compression filters. The Filter parameter of the function AddImage() is ignored if the image format supports only one specific compression filter.
Note that images are automatically converted to the nearest supported color space if the image format does not support the color space of the image.
See also AddImage function in DynaPDF manual.

### 70.34.26 AddInkList(InkAnnot as UInt32, points() as DynapdfPointMBS) as boolean

**Function:** Adds an array of points or path to an Ink Annotation.
**Notes:**
The function must be called within an open page.
An ink annotation can contain an arbitrary number of paths. The points will be connected by curves to achieve a smooth transition between points. The coordinates are treated in current user space. Any transformation that was applied on the coordinate system will be taken into account.
If the number of points is zero then all paths will be deleted from the annotation.

Returns true on success.
See also AddInkList function in DynaPDF manual.
70.34.27  AddJavaScript(Name as string, Script as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function adds a global JavaScript to the PDF file. **Notes:** The script parameter is converted to unicode. See also AddJavaScript function in DynaPDF manual.

70.34.28  AddJavaScriptAnsi(Name as string, Script as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function adds a global JavaScript to the PDF file. **Notes:** The script parameter is converted to ANSI.

70.34.29  AddLayerToDisplTree(parent as DynaPDFLayerGroupMBS, layer as UInt32, Title as string) as DynaPDFLayerGroupMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a layer to the display tree. See also AddLayerToDisplTree function in DynaPDF manual.

70.34.30  AddLayerToDisplTreeAnsi(parent as DynaPDFLayerGroupMBS, layer as UInt32, Title as string) as DynaPDFLayerGroupMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a layer to the display tree.

70.34.31  AddMaskImage(BaseImage as Integer, Buffer as MemoryBlock, Stride as UInt32, BitsPerPixel as UInt32, Width as UInt32, Height as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function adds an image mask to a base image. **Notes:** Please note that this function can be called with Ptr or Memoryblock. See also AddMaskImage function in dynapdf_help.pdf manual. See also: AddMaskImage function in DynaPDF manual.
70.34.32 AddMaskImage(BaseImage as Integer, Buffer as Ptr, BufSize as UInt32, Stride as UInt32, BitsPerPixel as UInt32, Width as UInt32, Height as UInt32) as boolean

**Function:** The function adds an image mask to a base image.  
**Notes:**  
Please note that this function can be called with Ptr or Memoryblock.  
See also AddMaskImage function in dynapdf_help.pdf manual.  
See also AddMaskImage function in DynaPDF manual.  
See also:

70.34.33 AddObjectToLayer(OCG as UInt32, ObjType as Integer, Handle as Integer) as boolean

**Function:** The function adds an object to an Optional Content Group (OCG) or Optional Content Membership dictionary (OCMD).  
**Notes:**  
If the function succeeds the return value is true. If the function fails the return value is false.  
For ObjectType use the constants: kooAnnotation, kooField, kooImage and kooTemplate.  
See also AddObjectToLayer function in DynaPDF manual.

70.34.34 AddOCGToAppEvent(Handle as UInt32, Events as Integer, Categories as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Adds an Optional Content Group (OCG) to an application event.  
**Notes:** See dynapdf_help.pdf manual for details.  
See also AddOCGToAppEvent function in DynaPDF manual.
**70.34.35 AddOutputIntent(ICCFile as folderitem) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** This function adds an ICC color profile to the PDF file that should be used to render device-dependent colors.
**Notes:**
Also check the dynapdf manual on the pdfAddOutputIntentA function (pdfAddOutputIntentW on Windows).
This function was named AddRenderingIntent before.
Requires DynaPDF Lite license.
See also AddOutputIntent function in DynaPDF manual.

**70.34.36 AddOutputIntentEx(buffer as Memoryblock) as Integer**

**Function:** This function adds an ICC color profile to the PDF file that should be used to render device-dependent colors.
**Notes:**
This function was named AddRenderingIntentEx before.
Requires DynaPDF Lite license.
See also AddOutputIntentEx function in DynaPDF manual.
See also:
- 70.34.37 AddOutputIntentEx(buffer as string) as Integer

**70.34.37 AddOutputIntentEx(buffer as string) as Integer**

**Function:** This function adds an ICC color profile to the PDF file that should be used to render device-dependent colors.
**Notes:**
This function was named AddRenderingIntentEx before.
Requires DynaPDF Lite license.
See also AddOutputIntentEx function in DynaPDF manual.
See also:
- 70.34.36 AddOutputIntentEx(buffer as Memoryblock) as Integer
70.34.38  AddPageLabel(StartRange as UInt32, PageLabelFormat as Integer, Value as string, FirstPageNum as Int32) as Integer

**Function:** The function creates a page label object.
**Notes:** The Value string is converted to Unicode internally.
See also AddPageLabel function in DynaPDF manual.

70.34.39  AddPageLabelAnsi(StartRange as UInt32, PageLabelFormat as Integer, Value as string, FirstPageNum as Int32) as Integer

**Function:** The function creates a page label object.
**Notes:** The Value string is converted to Windows ANSI internally.

70.34.40  AddValToChoiceField(Field as Integer, ExpValue as string, Value as string, Selected as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** This function adds a value to a choice field.
**Notes:** The Value string is converted to Unicode.
See also AddValToChoiceField function in DynaPDF manual.

70.34.41  AofLAB(LAB as Integer) as Integer

**Function:** Returns A of a LAB color value.
**Example:**
```powershell
dim lab as Integer = DynaPDFMBS.LAB(1,2,3)
MsgBox str(DynaPDFMBS.AofLAB(lab)) // shows 2
```

70.34.42  Append as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** This function appends an empty page to the document.
**Example:**
dim pdf as DynaPDFMBS  // your DynaPDF object
dim bBool as Boolean

// Create a new page
bBool=pdf.Append

See also Append function in DynaPDF manual.

### 70.34.43 ApplyAppEvent(TOCApplEvent as Integer, SaveResult as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The visibility state of optional content groups (OCGs) can be dynamically changed in application events like Export, View, or Print. **Notes:**

DynaPDF loads the view state when rendering PDF pages by default. The function can be used to apply the visibility state of another event if necessary. The result can optionally be stored in the PDF file but note that this has only an effect in PDF viewers which support layers but no application events since the events will not be deleted from the PDF file. It is also possible to delete the events with DeleteAppEvents().

If the function succeeds the return value is true. If the function fails the return value is false.

See also ApplyAppEvent function in DynaPDF manual.

### 70.34.44 ApplyPattern(PattHandle as Integer, ColorMode as Integer, ColorValue as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function sets a tiling pattern as current fill, stroke or fill, and stroke color. **See also** ApplyPattern function in DynaPDF manual.

### 70.34.45 ApplyShading(ShadHandle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function applies a shading to the current clipping path, or if no clipping is active, to the entire page.
See also ApplyShading function in DynaPDF manual.

### 70.34.46 AssociateEmbFile(DestObject as Integer, DestHandle as Integer, Relationship as Integer, EmbFile as UInt32) as boolean

**Function:** The function associates an embedded file with a PDF object.

**Notes:**
- The parameter DestHandle must be a valid handle of a PDF object. If destination object type is a page, then the page number must be used as handle. The first page is denoted by one. If the destination object is the documents catalog then the parameter DestHandle is ignored. Set the parameter to zero or -1 in this case.
- The parameter EmbFile must be a valid handle of an embedded file. See AttachFile() or AttachFileEx() for further information.

Associated files are supported since PDF 2.0 and in PDF/A 3 files. In PDF/A 3 files all embedded files must be associated with a PDF object.

If the function succeeds the return value is true. If the function fails the return value is false.
See also AssociateEmbFile function in DynaPDF manual.

### 70.34.47 AttachFile(File as folderitem, Description as string, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The function attaches a file to the document.

**Notes:**
- On Windows, the description parameter is converted to unicode.
- Also check the dynapdf manual on the pdfAttachFileA function (pdfAttachFileW on Windows).
See also AttachFile function in DynaPDF manual.

### 70.34.48 AttachFileEx(Buffer as Memoryblock, Filename as string, Description as string, Compress as boolean) as Integer

**Function:** The function attaches a file to the document in the same way as AttachFile() but accepts a file buffer instead of a file path.

**Notes:** Also check the dynapdf manual on the pdfAttachFileA function (pdfAttachFileExW on Windows).
See also AttachFileEx function in DynaPDF manual.
See also:

- 70.34.49 AttachFileEx(Buffer as string, Filename as string, Description as string, Compress as boolean) as Integer

70.34.49 AttachFileEx(Buffer as string, Filename as string, Description as string, Compress as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function attaches a file to the document in the same way as AttachFile() but accepts a file buffer instead of a file path.
Example:

```vbnet
dim pdf as DynaPDFMBS // your dynapdf object

// add embedded file to PDF
const Compressed = true
call pdf.AttachFileEx("This is hidden text in an attached file.", "attachment.txt", ",", Compressed)
```

Notes: Also check the dynapdf manual on the pdfAttachFileA function (pdfAttachFileExW on Windows). See also AttachFileEx function in DynaPDF manual.
See also:

- 70.34.48 AttachFileEx(Buffer as Memoryblock, Filename as string, Description as string, Compress as boolean) as Integer

70.34.50 AutoTemplate(Templ as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: To insert a template automatically on newly created pages, use the function AutoTemplate(). See also AutoTemplate function in DynaPDF manual.

70.34.51 BeginContinueText(PosX as Double, PosY as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function prepares the output of multiple text lines which use the graphics state parameter Leading as line height, or the font size if Leading is not set. See also BeginContinueText function in DynaPDF manual.
70.34.52 BeginLayer(OCG as UInt32) as boolean

**Function:** The function opens a layer in the current open page or template. 
Notes: 
If the function succeeds the return value is true. If the function fails the return value is false.

See also **BeginLayer** function in DynaPDF manual.

70.34.53 BeginPageTemplate(Name as String, UseAutoTemplates as boolean) as boolean

**Function:** Creates a new page template with given name. 
Notes: 
This function creates or opens a page template for editing. Page templates are hidden pages which can be added to the document or overlaid on existing pages via JavaScript.

The usage of the function is like Append() or EditPage(). If the template does already exist then it will be opened for editing. Page templates support form fields and annotations but it is not allowed to add article beads to them. 
See also **BeginPageTemplate** function in DynaPDF manual.

70.34.54 BeginPattern(PatternType as Integer, TilingType as Integer, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** This function creates a new tiling pattern. 
See also **BeginPattern** function in DynaPDF manual.

70.34.55 BeginTemplate(Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Begins a new template 
See also **BeginTemplate** function in DynaPDF manual.
70.34.56 BeginTemplateEx(BBox as DynaPDFRectMBS, Matrix as Dynapdf-MatrixMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Begins a new template  
**Notes:** The plugin passes nil to the library for the bbox or the matrix parameter if they are nil.

70.34.57 BeginTransparencyGroup(x1 as Double, y1 as Double, x2 as Double, y2 as Double, Isolated as Boolean, Knockout as Boolean, CS as Integer, CSHandle as Int32) as Int32

MBS DynaPDF Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Begins a new transparency group.  
**Notes:** CS: color space, pass kes* constants.

Requires DynaPDF Pro license.  
See also BeginTransparencyGroup function in DynaPDF manual.

70.34.58 Bezier_1_2_3(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x3 as Double, y3 as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a bezier path to the pdf.  
See also Bezier_1_2_3 function in DynaPDF manual.

70.34.59 Bezier_1_3(x1 as Double, y1 as Double, x3 as Double, y3 as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a bezier path to the pdf.  
See also Bezier_1_3 function in DynaPDF manual.
70.34.  CLASS DYNAPDFMBS

70.34.60  Bezier_2_3(x2 as Double, y2 as Double, x3 as Double, y3 as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** Adds a bezier path to the pdf.
See also Bezier_2_3 function in DynaPDF manual.

70.34.61  BofLAB(LAB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** Returns B of a LAB color value.
**Example:**

```vbscript
dim lab as Integer = DynaPDFMBS.LAB(1,2,3)
MsgBox str(DynaPDFMBS.BofLAB(lab)) // shows 3
```

70.34.62  BofRGB(RGB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** Returns B of a RGB color value.
**Example:**

```vbscript
dim rgb as Integer = DynaPDFMBS.RGB(1,2,3)
MsgBox str(DynaPDFMBS.BofRGB(rgb)) // shows 3
```

70.34.63  BuildFamilyNameAndStyle(IFont as Integer, byref name as string, byref style as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** Builds a family name and style from a font object.
See also BuildFamilyNameAndStyle function in DynaPDF manual.

70.34.64  CalcWidthHeight(OrgWidth as Double, OrgHeight as Double, ScaledWidth as Double, ScaledHeight as Double) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** This function calculates the scaled width or height of a given size in the same way as InsertImage() or PlaceTemplate().
CHAPTER 70. DYNAPDF

See also CalcWidthHeight function in DynaPDF manual.

70.34.65 CaretAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, ColorValue as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

Function: Creates a caret annotation.
Notes:
This type of annotation is typically used to mark a position on a page where a user should add or edit text.
If the coordinate system is bottom-up the point PosX, PosY defines the lower left corner of the bounding rectangle. If the coordinate system is top-down it defines the upper left corner.
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also CaretAnnot function in DynaPDF manual.

70.34.66 CaretAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, ColorValue as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

Function: Creates a caret annotation.
Notes:
This type of annotation is typically used to mark a position on a page where a user should add or edit text.
If the coordinate system is bottom-up the point PosX, PosY defines the lower left corner of the bounding rectangle. If the coordinate system is top-down it defines the upper left corner.
This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
70.34.67  ChangeAnnotName(Handle as Integer, Name as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function changes or deletes the optional name of an annotation. **Notes:** The Name parameter is converted to unicode. See also ChangeAnnotName function in DynaPDF manual.

70.34.68  ChangeAnnotNameAnsi(Handle as Integer, Name as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function changes or deletes the optional name of an annotation. **Notes:** The Name parameter is converted to ANSI.

70.34.69  ChangeAnnotPos(Handle as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function changes the position and size of an annotation. See also ChangeAnnotPos function in DynaPDF manual.

70.34.70  ChangeBookmark(ABmk as Integer, Text as string, Parent as Integer, DestPage as Integer, Open as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function changes an existing bookmark. **Notes:** The text parameter is converted to unicode. See also ChangeBookmark function in DynaPDF manual.

70.34.71  ChangeBookmarkAnsi(ABmk as Integer, Text as string, Parent as Integer, DestPage as Integer, Open as Boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function changes an existing bookmark. **Notes:** The text parameter is converted to ANSI.
70.34.72  **ChangeFont(Handle as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function changes or sets the font to the one defined by the parameter AHandle. See also ChangeFont function in DynaPDF manual.

70.34.73  **ChangeFontSize(size as Double) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function changes the font size of the current font. See also ChangeFontSize function in DynaPDF manual.

70.34.74  **ChangeFontStyle(Style as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function changes the style of the current font. See also ChangeFontStyle function in DynaPDF manual.

70.34.75  **ChangeFontStyleEx(Style as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function changes the font style of a font like ChangeFontStyle() but it accepts also the font styles fsBold and fsItalic. See also ChangeFontStyleEx function in DynaPDF manual.

70.34.76  **ChangeJavaScript(Handle as Integer, Text as string) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function replaces a global JavaScript with a new one. **Notes:** The text parameter is converted to unicode. See also ChangeJavaScript function in DynaPDF manual.

70.34.77  **ChangeJavaScriptAction(Handle as Integer, Text as string) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function replaces the script of a JavaScript action with a new one. **Notes:** The text parameter is converted to unicode.
70.34.78  ChangeJavaScriptActionAnsi(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function replaces the script of a JavaScript action with a new one. **Notes:** The text parameter is converted to ANSI.

70.34.79  ChangeJavaScriptAnsi(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function replaces a global JavaScript with a new one. **Notes:** The text parameter is converted to ANSI.

70.34.80  ChangeJavaScriptName(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function changes the name of a global JavaScript. **Notes:** The text parameter is converted to unicode. See also ChangeJavaScriptName function in DynaPDF manual.

70.34.81  ChangeJavaScriptNameAnsi(Handle as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function changes the name of a global JavaScript. **Notes:** The text parameter is converted to ANSI.

70.34.82  ChangeLinkAnnot(Handle as Integer, URL as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function changes the link of a file link or web link annotation. **Notes:** See also ChangeLinkAnnot function in DynaPDF manual.
70.34.83 ChangeSeparationColor(CSHandle as UInt32, NewColor as UInt32, AlternateExtColorSpace as Integer, AltHandle as Integer = -1) as boolean

Function: The function changes the color of a separation color space.

Example:

// your instance
dim pdf as DynaPDFMBS

dim ColorSpaceHandle as Integer = pdf.CreateSeparationCS("test", DynapdfMBS.kcsDeviceCMYK,-1,DynapdfMBS.CMYK(0,0,0,100))
call pdf.SetExtColorSpace(ColorSpaceHandle)

dim pdf.SetfillColor(255)  // 100% of the separation color test
call pdf.DrawCircle(193,389,66, pdf.kfmFill)

call pdf.ChangeSeparationColor(ColorSpaceHandle, 255, DynapdfMBS.kcsDeviceRGB, -1)

Notes:
The new color value must be defined in the alternate color space. The alternate color space can be any device or ICC based color space including Lab. If a non-device color space is used, the parameter AltHandle must be set to the color space handle of the alternate color space.

Returns true on success or false on failure.
See also ChangeSeparationColor function in DynaPDF manual.

70.34.84 CheckCollection as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function:
The function checks whether user defined data fields in embedded files are consistently defined with collection fields.

See also CheckCollection function in DynaPDF manual.
70.34. **CheckConformance**

**CheckConformance(ConformanceType as Integer, CheckOptions as Integer) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function checks whether the PDF file is compatible to a specific PDF standard or PDF version depending on the parameter Type and modifies anything that is required to get the file compatible to the standard depending on the check options.

See also **CheckConformance** function in DynaPDF manual.

70.34.86 **CheckFieldNames as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function checks all currently defined interactive form fields for invalid duplicate field names.

See also **CheckFieldNames** function in DynaPDF manual.

70.34.87 **CircleAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string) as Integer**

MBS DynaPDF Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function draws a circle annotation on the current open page.

**Notes:**

If the parameters Width and Height are equal the function draws a circle, an ellipse otherwise. If the annotation should be drawn without a border, set the parameter LineWidth to zero or StrokeColor to the special constant kNO_COLOR.

If the interior should be transparent set FillColor to the special constant kNO_COLOR.

Although the line width can be set to any positive floating point value, Adobe's Acrobat or Reader restrict the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in Adobe viewer products.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails, the return value is a negative error code.

See also **CircleAnnot** function in DynaPDF manual.
**70.34.88 CircleAnnotAnsi**

(PosX as Double, PosY as Double, Width as Double, Height as Double, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Comment as string) as Integer

**Function:** The function draws a circle annotation on the current open page.

**Notes:**

If the parameters Width and Height are equal the function draws a circle, an ellipse otherwise. If the annotation should be drawn without a border, set the parameter LineWidth to zero or StrokeColor to the special constant kNO_COLOR.

If the interior should be transparent set FillColor to the special constant kNO_COLOR.

Although the line width can be set to any positive floating point value, Adobe’s Acrobat or Reader restrict the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in Adobe viewer products.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails, the return value is a negative error code.

---

**70.34.89 ClearAutoTemplates as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** This function deletes the array of templates which are automatically added to newly created pages.

See also ClearAutoTemplates function in DynaPDF manual.

---

**70.34.90 ClearErrorLog**

**Function:** Clears the error log.

See also ClearErrorLog function in DynaPDF manual.

---

**70.34.91 ClearHostFonts as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** This function deletes the array of fonts included in all currently defined font search paths.

See also ClearHostFonts function in DynaPDF manual.
**70.34.92 ClipPath(ClipMode as Integer, FillMode as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function marks the current path as clipping path. See also ClipPath function in DynaPDF manual.

**70.34.93 CloseAndSignFile(CertFile as folderitem, Password as string, Reason as string, Location as string) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function finishes the PDF file, digitally signs it, and frees all used resources if the file was not created in memory. See also CloseAndSignFile function in DynaPDF manual.

**70.34.94 CloseAndSignFileEx(OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer, CertFile as folderitem, Password as string, Reason as string, Location as string) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function finishes the PDF file, encrypts it, digitally signs it, and frees all used resources if the file was not created in memory. See also CloseAndSignFileEx function in DynaPDF manual.

**70.34.95 CloseAndSignFileExt(SigParams as DynaPDFSigParmsMBS) as boolean**

MBS DynaPDF Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function closes the PDF file and returns either the file hash or the byte ranges to be signed by an external signature handler. See also CloseAndSignFileExt function in DynaPDF manual.

**70.34.96 CloseAndSignPDFFile(OutputFile as FolderItem, CertificateData as String, Password as String, ContactInfo as String = "", Location as String = "", Reason as String = ") as boolean**

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Closes and signs file. **Notes:** This uses pdf_signature.cpp example code from DynaPDF.
The function will on Windows use functions from Crypt DLL on Windows. Internally calls CloseAndSignFileExt, OpenOutputFile and FinishSignature. Returns true on success and false on failure.

Loads certificate from provided certificate file data.

Version 15.1 allows OutputFile to be nil.

**70.34.97 CloseAndSignPDFFileWithDialog(OutputFile as FolderItem, StoreName as String = ”MY”, ContactInfo as String = ””, Location as String = ””, Reason as String = ””) as boolean**

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.

**Function:** Closes and signs file.

**Notes:**

This uses pdf_signature.cpp example code from DynaPDF. The function will on Windows use functions from Crypt DLL on Windows. Internally calls CloseAndSignFileExt, OpenOutputFile and FinishSignature. Returns true on success and false on failure.

Version 15.1 allows OutputFile to be nil.

**70.34.98 CloseFile as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** This function finishes the PDF file and frees all used resources if the file was not created in memory.

**Example:**

```dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

bBool=pdf.CloseFile```

See also CloseFile function in DynaPDF manual.
70.34.99  CloseFileEx(OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function finishes the PDF file, encrypts it, and frees all used resources if the file was not created in memory.
**Notes:** Requires DynaPDF Lite license.
See also CloseFileEx function in DynaPDF manual.

70.34.100  CloseImage as boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes the current open image.
See also CloseImage function in DynaPDF manual.

70.34.101  CloseImportFile as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function closes an open import file that was be opened by OpenImportFile() or OpenImportBuffer().
**Example:**
```pascal
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

bBool=pdf.CloseImportFile
```
See also CloseImportFile function in DynaPDF manual.

70.34.102  CloseImportFileEx(Handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function closes a specific import file and deletes the corresponding parser instance.
**Notes:**
The parameter Handle must be a valid file handle that was returned by OpenImportFile() or OpenImportBuffer(). See OpenImportFile() for further information in dynapdf_help.pdf.
If the function succeeds the return value is true. If the function fails the return value is false.
See also CloseImportFileEx function in DynaPDF manual.
70.34.103  ClosePath(FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes the current path.
See also ClosePath function in DynaPDF manual.

70.34.104  CloseTag as boolean

See also CloseTag function in DynaPDF manual.

70.34.105  CMYK(C as Integer, M as Integer, Y as Integer, K as Integer) as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Builds a CMYK color value based on the given component values.
**Example:**
```vbs
Dim cmyk as Integer = DynaPDFMBS.CMYK(1, 2, 3, 4)
MsgBox Hex(cmyk)
```
**Notes:** Returns different values on BigEndian and LittleEndian systems.

70.34.106  CofCMYK(CMYK as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns C of a CMYK color value.
**Example:**
```vbs
Dim cmyk as Integer = DynaPDFMBS.CMYK(1, 2, 3, 4)
MsgBox Str(DynaPDFMBS.CofCMYK(cmyk)) ' // shows 1
```
**Notes:** Returns different values on BigEndian and LittleEndian systems.
70.34. **CLASS DYNAPDFMBS**

### 70.34.107 ComputeBBox(Flags as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Computes the bounding box.

See also `ComputeBBox` function in DynaPDF manual.

### 70.34.108 ConvColor(Colors() as Double, SourceColorSpaceHandle as Integer, DestColorSpace as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts a color from one ColorSpace to another.

**Example:**

```vbnet
// setup Environment
dim dy as new DynaPDFMBS
call dy.CreateNewPDF(nil)

// create a simple RGB colorspace
dim whitePoint as MemoryBlock = NewMemoryBlock(12)
whitePoint.SingleValue(0)=1.0
whitePoint.SingleValue(4)=1.0
whitePoint.SingleValue(8)=1.0

dim BlackPoint as MemoryBlock = nil // default
dim Gamma as MemoryBlock = nil // default
dim Matrix as MemoryBlock = nil // default

dim h as Integer = dy.CreateCIEColorSpace(dy.kesCalRGB, WhitePoint, BlackPoint, Gamma, Matrix)

// do we have one?
if dy.GetColorSpaceCount=0 then
MsgBox "No color space!"
Return
else
MsgBox str(dy.GetColorSpaceCount)+" Colorspace defined"
end if

// Now get the colorspace information including the Object reference:
dim c as DynapdfColorSpaceMBS = dy.GetColorSpaceObj(h)

dim d(-1) as Double = array(0.3,0.5,0.7)
dim IColorSpace as Integer = c.Handle
dim DestCS as Integer = DynaPDFMBS.kesDeviceCMYK

// convert a color
dim n as Integer = dy.ConvColor(d, IColorSpace, DestCS)
```
Chapter 70. DynaPDF

MsgBox hex(n)

Notes:
Colors: The array of color values. 3 values for RGB, 4 values for CMYK and one value for Gray.
IColorSpaceSource: The source color space object reference.
DestCS: The destination color space. One of the kcs* constants.
See also ConvColor function in DynaPDF manual.

70.34.109  ConvertColors(Flags as Integer) as Boolean

Notes: Requires DynaPDF Pro license.
See also ConvertColors function in DynaPDF manual.

70.34.110  ConvertEMFSpool(File as folderitem, LeftMargin as Double, TopMargin as Double, Flags as Integer = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function converts an EMF spool file to PDF.
Notes: See dynapdf_help.pdf file.
Pass kspc* flags.
Requires DynaPDF Lite license.
See also ConvertEMFSpool function in DynaPDF manual.

70.34.111  ConvertStyledText(StyledText as StyledText) as String

Example:
Public Function Convert(s as StyledText) as string
dim d as new DynaPDFMBS

// create dummy in memory pdf
call d.CreateNewPDF(nil)
70.34. CLASS DYNAPDFMBS

// create dummy page
call d.Append

// convert
Return d.ConvertstyledText(s)

// destructor will cleanup
End Function

Notes:
You can use the result with WriteFText, WriteFTextEx or DynaPDFTableMBS.SetCellText functions. Needs an open page as it loads fonts for you. May cause error events if fonts are not found.

70.34.112 CopyChoiceValues(Source as UInt32, Dest as UInt32, Share as Boolean) as Boolean

Function: Copies the list items, default value, and value of the source field to the destination field.
Notes:
The source and destination field can be combo and list boxes. It is allowed to copy the list items of a list box to a combo box or vice versa.
If Share is true, the function adds just a reference to the list item so that both fields share the same list items. This is still the case if more list items will be added to such a field. If Share is false, the list items will be copied to the destination field. Both fields contain independent list items in this case.
Already existing list items of the destination field will be deleted.
See also CopyChoiceValues function in DynaPDF manual.

70.34.113 Create3DAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Name as string, U3DFile as string, Image as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The function creates a 3D annotation from a U3D file.
See also Create3DAnnot function in DynaPDF manual.
### 70.34.114 Create3DBackground(IView as Integer, BackColor as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function creates a background dictionary for a 3D annotation that is used to change the annotation's background color. See also Create3DBackground function in DynaPDF manual.

### 70.34.115 Create3DGotoViewAction(Base3DAnnot as Integer, IView as Integer, Named as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A go to 3D view action can be used to dynamically change the view of a 3D annotation. See also Create3DGotoViewAction function in DynaPDF manual.

### 70.34.116 Create3DProjection(IView as Integer, ProjType as Integer, ScaleType as Integer, Diameter as Double, FOV as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function creates a projection dictionary for a 3D annotation. See also Create3DProjection function in DynaPDF manual.

### 70.34.117 Create3DView(Base3DAnnot as Integer, Name as string, SetAsDefault as boolean, Matrix as memoryblock, CamDistance as Double, RenderingMode as Integer, LightingScheme as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function creates a 3D view for a 3D annotation. **Notes:** The plugin passes nil for the matrix if the matrix memoryblock parameter is nil. See also Create3DView function in DynaPDF manual.

### 70.34.118 CreateAnnotAP(annot as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates an annotation appearance stream. **Notes:** Returns the new annotation handle. You can draw to this template directly.
You must close it with EndTemplate.

This method helps you to create a custom stamp or change different annotation appearance. See also CreateAnnotAP function in DynaPDF manual.

### 70.34.119 CreateArticleThread(ThreadName as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function creates a new article thread. **Notes:** ThreadName string is converted to Unicode. See also CreateArticleThread function in DynaPDF manual.

### 70.34.120 CreateArticleThreadAnsi(ThreadName as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function creates a new article thread. **Notes:** ThreadName string is converted to ANSI.

### 70.34.121 CreateAxialShading(sX as Double, sY as Double, eX as Double, eY as Double, SCenter as Double, SColor as Integer, EColor as Integer, Extend1 as Boolean, Extend2 as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Axial shadings define a color blend that varies along a linear axis between two endpoints and extends indefinitely perpendicular to that axis. See also CreateAxialShading function in DynaPDF manual.

### 70.34.122 CreateBarcodeField(Name as string, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, Barcode as DynaPDFBarcodeMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function creates a barcode field. **Notes:** Note that users require either the full version of Adobe’s Acrobat or a separate license of Adobe’s Barcodes Paper Forms Solutions to enable the usage of barcode fields in Adobe’s Reader. See also CreateBarcodeField function in DynaPDF manual.
70.34.123 CreateButton(Name As String, Caption as string, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** This function creates a push button.
**Notes:** The Caption parameter is converted to unicode.
See also CreateButton function in DynaPDF manual.

70.34.124 CreateButtonAnsi(Name As String, Caption as string, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

**Function:** This function creates a push button.
**Notes:** The Caption parameter is converted to ANSI.

70.34.125 CreateCheckBox(Name as string, ExpValue as string, Checked as boolean, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** This function creates a check box.
See also CreateCheckBox function in DynaPDF manual.

70.34.126 CreateCIEColorSpace(Base as Integer, WhitePoint as memoryblock, BlackPoint as memoryblock, Gamma as memoryblock, Matrix as memoryblock) as Integer

**Function:** The function creates a CIE based color space.
See also CreateCIEColorSpace function in DynaPDF manual.

70.34.127 CreateColItemDate(EmbFile as Integer, Key as string, Value as Integer, Prefix as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** The function creates a user defined collection item which accepts a date time value.
70.34. CLASS DYNAPDFMBS

See also CreateColItemCount function in DynaPDF manual.

70.34.128 CreateColItemCountNumber(EmbFile as Integer, Key as string, Value as Double, Prefix as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function creates a user defined collection item which accepts an arbitrary number as value. See also CreateColItemCountNumber function in DynaPDF manual.

70.34.129 CreateColItemCountString(EmbFile as Integer, Key as string, Value as string, Prefix as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function creates a user defined collection item which accepts an arbitrary string as value. Notes: The value and prefix parameters are converted to unicode. See also CreateColItemCountString function in DynaPDF manual.

70.34.130 CreateColItemCountStringAnsi(EmbFile as Integer, Key as string, Value as string, Prefix as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function creates a user defined collection item which accepts an arbitrary string as value. Notes: The value and prefix parameters are converted to ANSI.

70.34.131 CreateCollection(View as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function marks the current PDF file in memory as PDF collection, also known as PDF Package. Notes: Requires DynaPDF Lite license. See also CreateCollection function in DynaPDF manual.

70.34.132 CreateCollectionField(ColType as Integer, Column as Integer, Name as String, Key as string, Visible as boolean, Editable as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function creates a user defined collection field.
Notes: The name parameter is converted to unicode.
See also CreateCollectionField function in DynaPDF manual.

70.34.133 CreateCollectionFieldAnsi(ColType as Integer, Column as Integer, Name as String, Key as string, Visible as boolean, Editable as boolean) as Integer

Notes: The name parameter is converted to ANSI.

70.34.134 CreateComboBox(Name as string, Sort as boolean, Parent as Integer,PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function creates a combo box.
See also CreateComboBox function in DynaPDF manual.

70.34.135 CreateDeviceNColorSpace(Colorants() as string, PostScriptFunc as string, AlternateColorSpace as Integer, Handle as Integer) as Integer

Notes: Strings are passed as UTF-8 Strings in this function to the library.
Currently the function is limited to 100 colorants on the plugin side.
See also CreateDeviceNColorSpace function in DynaPDF manual.

70.34.136 CreateDeviceNColorSpaceAnsi(Colorants() as string, PostScriptFunc as string, AlternateColorSpace as Integer, Handle as Integer) as Integer

Notes: Strings are passed as Windows ANSI Strings in this function to the library.
Currently the function is limited to 100 colorants on the plugin side.

### 70.34.137 CreateExtGState(e as dynapdfExtGStateMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The function creates an extended graphics state dictionary from the structure e.

**Example:**

```vba
dim h as Integer ' handle
dim pdf as DynaPDFMBS
dim state as new dynapdfExtGStateMBS

' get pdf, set state properties
h=pdf.CreateExtGState(state)
call pdf.SetExtGState(h)
```

**Notes:** Requires DynaPDF Lite license.
See also CreateExtGState function in DynaPDF manual.

### 70.34.138 CreateGoToAction(DestType as Integer, PageNum as Integer, a as Double, b as Double, c as Double, d as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** A go-to action changes the view to a specific destination (page, location, and magnification factor).

See also CreateGoToAction function in DynaPDF manual.
See also:

- 70.34.139 CreateGoToAction(NamedDest as Integer) as Integer

### 70.34.139 CreateGoToAction(NamedDest as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The function creates a go-to action which uses a named destination to open the target page.

See also CreateGoToAction function in DynaPDF manual.
See also:

- 70.34.138 CreateGoToAction(DestType as Integer, PageNum as Integer, a as Double, b as Double, c as Double, d as Double) as Integer
70.34.140 CreateGoToEAction(Location as Integer, Source as string, SrcPage as Integer, Target as string, DestName as string, DestPage as Integer, NewWindow as boolean) as Integer

Function: The function creates an embedded GoTo action.
Notes: See also CreateGoToEAction function in dynapdf help.pdf manual.
See also CreateGoToEAction function in DynaPDF manual.

70.34.141 CreateGoToRAction(File as folderitem, PageNum as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: This function creates a go to remote action.
Notes: See also CreateGoToRAction function in DynaPDF manual.
See also:
• 70.34.142 CreateGoToRAction(FilePath as String, PageNum as integer) as integer

70.34.142 CreateGoToRAction(FilePath as String, PageNum as integer) as integer

Function: The function creates a go-to-remote action that opens a named destination in an external PDF file.
Notes: Also check the dynapdf manual on the pdfCreateGoToRActionExA function (pdfCreateGoToRActionExW on Windows).
See also CreateGoToRActionEx function in DynaPDF manual.
See also:
• 70.34.143 CreateGoToRActionEx(File as folderitem, DestName as String, NewWindow as boolean) as Integer

70.34.143 CreateGoToRActionEx(File as folderitem, DestName as String, NewWindow as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The function creates a go-to-remote action that opens a named destination in an external PDF file.
Notes: Also check the dynapdf manual on the pdfCreateGoToRActionExA function (pdfCreateGoToRActionExW on Windows).
See also CreateGoToRActionEx function in DynaPDF manual.
See also:
• 70.34.144 CreateGoToRActionEx(FilePath as String, DestName as String, NewWindow as boolean) as integer
**70.34.144 CreateGoToRActionEx(FilePath as String, DestName as String, NewWindow as boolean) as integer**

**Function:** The function creates a go-to-remote action that opens a named destination in an external PDF file.

**Notes:** Also check the dynapdf manual on the pdfCreateGoToRActionExA function (pdfCreateGoToRActionExW on Windows).

See also: CreateGoToRActionEx function in DynaPDF manual.
See also:
- 70.34.143 CreateGoToRActionEx(File as folderitem, DestName as String, NewWindow as boolean) as Integer 11772

**70.34.145 CreateGoToRActionExU(File as folderitem, DestName as String, NewWindow as boolean) as Integer**

**Function:** The function creates a go-to-remote action that opens a named destination in an external PDF file.

See also:
- 70.34.146 CreateGoToRActionExU(FilePath as String, DestName as String, NewWindow as boolean) as integer 11773

**70.34.146 CreateGoToRActionExU(FilePath as String, DestName as String, NewWindow as boolean) as integer**

**Function:** The function creates a go-to-remote action that opens a named destination in an external PDF file.

See also:
- 70.34.145 CreateGoToRActionExU(File as folderitem, DestName as String, NewWindow as boolean) as Integer 11773

**70.34.147 CreateGroupField(Name as string, Parent as Integer) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** This function creates a group field.

See also CreateGroupField function in DynaPDF manual.
70.34.148 CreateHideAction(Field as Integer, Hide as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A hide action hides or shows one or more interactive form fields on screen by setting or clearing their hidden flags. See also CreateHideAction function in DynaPDF manual.

70.34.149 CreateICCBasedColorSpace(File as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function creates an ICC based color space. **Notes:** Use the value returned for the SetExtColorSpace method. See also CreateICCBasedColorSpace function in DynaPDF manual.

70.34.150 CreateICCBasedColorSpaceEx(Buffer as Memoryblock) as Integer

MBS DynaPDF Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new ICC based color space from ICC file content in a string buffer. **Notes:** Returns the color space handle. See also:
- 70.34.151 CreateICCBasedColorSpaceEx(Buffer as string) as Integer

70.34.151 CreateICCBasedColorSpaceEx(Buffer as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new ICC based color space from ICC file content in a string buffer. **Notes:** Returns the color space handle. See also:
- 70.34.150 CreateICCBasedColorSpaceEx(Buffer as Memoryblock) as Integer

70.34.152 CreateImage(file as folderitem, format as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates an image file with the given image format. **Notes:** For the format parameter use the kifm* constants. See also CreateImage function in DynaPDF manual.
**70.34.153** CreateImpDataAction(DataFile as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An import data action imports FDF data into the document’s interactive form. **Notes:** Also check the dynapdf manual on the pdfCreateImpDataActionA function (pdfCreateImpDataActionW on Windows).

**70.34.154** CreateIndexedColorSpace(Base as Integer, Handle as Integer, ColorTable as memoryblock, NumColors as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function creates an indexed color space which can be used for vector graphics and text output. **Notes:** Use the value returned for the SetExtColorSpace method. See also CreateIndexedColorSpace function in DynaPDF manual.

**70.34.155** CreateJSAction(Script as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function creates a JavaScript action. **Notes:** The script parameter is converted to unicode. See also CreateJSAction function in DynaPDF manual.

**70.34.156** CreateJSActionAnsi(Script as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function creates a JavaScript action. **Notes:** The script parameter is converted to ANSI.

**70.34.157** CreateLaunchAction(OP as Integer, FileName as folderitem, DefDir as string, Param as string, NewWindow as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A launch action launches an application or opens or prints a document. See also CreateLaunchAction function in DynaPDF manual.
70.34.158 **CreateLaunchActionEx(FileName as folderitem, NewWindow as boolean) as Integer**

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a launch link. See also CreateLaunchActionEx function in DynaPDF manual.

70.34.159 **CreateListBox(Name as string, Sort as boolean, Parent as Integer,PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function creates a list box. See also CreateListBox function in DynaPDF manual.

70.34.160 **CreateNamedAction(Action as Integer) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function creates a named action. See also CreateNamedAction function in DynaPDF manual.

70.34.161 **CreateNamedDest(Name as string, DestPage as Integer, DestType as Integer, a as Double, b as Double, c as Double, d as Double) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function creates a named destination that can be accessed from external PDF files. **Notes:** The name parameter is converted to unicode. See also CreateNamedDest function in DynaPDF manual.

70.34.162 **CreateNamedDestAnsi(Name as string, DestPage as Integer, DestType as Integer, a as Double, b as Double, c as Double, d as Double) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function creates a named destination that can be accessed from external PDF files. **Notes:** The name parameter is converted to ANSI.
70.34.163  CreateNewPDF(OutPDF as folderitem = nil) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** This function creates a new PDF file.

**Example:**

```vba
dim dest as folderitem ' where to save?
dim pdf as DynaPDFMBS ' your DynaPDF object
dim bBool as Boolean

// create new pdf
bBool=pdf.CreateNewPDF(dest)
if bBool=False then
    MsgBox "Failed to create pdf file "+dest.AbsolutePath
    Return
end if
```

**Notes:** Also check the dynapdf manual on the pdfCreateNewPDFA function (pdfCreateNewPDFW on Windows).
See also CreateNewPDF function in DynaPDF manual.

70.34.164  CreateOCG(name as string, DisplayInUI as boolean, Visible as boolean, Intent as Integer) as Integer

**Function:** The function creates an Optional Content Group (OCG).

**Notes:** CreateOCG stores the name in unicode encoding and CreateOCGAnsi in Windows ANSI encoding.
See also CreateOCG function in DynaPDF manual.

70.34.165  CreateOCGAnsi(name as string, DisplayInUI as boolean, Visible as boolean, Intent as Integer) as Integer

**Function:** The function creates an Optional Content Group (OCG).

**Notes:** CreateOCG stores the name in unicode encoding and CreateOCGAnsi in Windows ANSI encoding.
70.34.166  CreateOCMD(Visibility as Integer, OCGs() as Integer) as Integer

**Function:** The function creates an Optional Content Membership Dictionary (OCMD).  
**Notes:** For Visibility use the constants kovAllOff, kovAllOn, kovAnyOff, kovAnyOn and kovNotSet.  
See also CreateOCMD function in DynaPDF manual.

70.34.167  CreateRadialShading(sX as Double, sY as Double, R1 as Double, eX as Double, eY as Double, R2 as Double, SCenter as Double, SColor as Integer, EColor as Integer, Extend1 as boolean, Extend2 as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Radial shadings define a color blend that varies between two circles.  
See also CreateRadialShading function in DynaPDF manual.

70.34.168  CreateRadioButton(Name as string, ExpValue as string, Checked as boolean, Parent as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** A radio button field is a set of related toggle controls (check boxes), at most one of which may be on at any given time; selecting any one of the button automatically deselects all others.  
See also CreateRadioButton function in DynaPDF manual.

70.34.169  CreateResetAction as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** A reset form action resets all or specific fields of an interactive form to their default values.  
See also CreateResetAction function in DynaPDF manual.

70.34.170  CreateSeparationCS(Colorant as string, Alternate as Integer, Handle as Integer, ColorValue as Integer) as Integer

**Function:** The function creates a Separation color space.  
**Notes:** This function passes colorant string in UTF-8 encoding to the library.  
See also CreateSeparationCS function in DynaPDF manual.
70.34. **CLASS DYNAPDFMBS**

### 70.34.171 CreateSeparationCSAnsi(Colorant as string, Alternate as Integer, Handle as Integer, ColorValue as Integer) as Integer

**Function:** The function creates a Separation color space.
**Notes:** This function passes colorant string in Windows ANSI encoding to the library.

### 70.34.172 CreateSetOCGStateAction(On() as UInt32, Off() as UInt32, Toggle() as UInt32, PreserveRB as boolean) as Integer

**Function:** The function creates a SetOCGState action that can be used to change the visibility state of certain Optional Content Groups (OCGs).
**See also** CreateSetOCGStateAction function in DynaPDF manual.

### 70.34.173 CreateSigField(Name as string, Parent as Integer,PosX as Double,PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** This function creates an empty signature field which can be used to digitally sign the PDF file.
**See also** CreateSigField function in DynaPDF manual.

### 70.34.174 CreateSigFieldAP(SigField as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The function creates a signature appearance template in the exact size of the base signature field.
**See also** CreateSigFieldAP function in DynaPDF manual.

### 70.34.175 CreateSoftMask(TranspGroup as UInt32, MaskType as Integer, BackColor as UInt32) as Integer

**Function:** Creates a new soft mask.
**Notes:**
- MaskType: pass ksmtAlpha or ksmtLuminosity constants.
- Requires DynaPDF Pro license.
**See also** CreateSoftMask function in DynaPDF manual.
CHAPTER 70. DYNAPDF

70.34.176 CreateStdPattern(Pattern as Integer, LineWidth as Double, Distance as Double, LineColor as Integer, BackColor as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function creates a hatch pattern.
See also CreateStdPattern function in DynaPDF manual.

70.34.177 CreateStructureTree as boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a structure tree.
See also CreateStructureTree function in DynaPDF manual.

70.34.178 CreateSubmitAction(Flags as Integer, URL as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A submit form action submits the field values of an interactive form to a web server.
See also CreateSubmitAction function in DynaPDF manual.

70.34.179 CreateTable(AllocRows as UInt32, NumCols as UInt32, width as Double, DefRowHeight as Double) as DynaPDFTableMBS

MBS DynaPDF Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a table with the given size.
**Notes:** Returns a new table object.
See also CreateTable function in DynaPDF manual.

70.34.180 CreateTextField(Name as string, Parent as Integer, Multiline as boolean, MaxLen as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function creates a text field.
See also CreateTextField function in DynaPDF manual.
70.34.181  **CreateURIAction(URL as string) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:**
A uniform resource identifier (URI) is a string that identifies (resolves to) a resource on the internet - typically a file that is the destination of a hyperlink, although it can also resolve to a query or other entity.

**Notes:**
A URI action causes a URI to be resolved. The parameter URL must be 7 bit ASCII string.

See also **CreateURIAction** function in DynaPDF manual.

70.34.182  **DecryptPDF(File as folderitem, PwdType as Integer, Password as string) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function decrypts a PDF file by using the supplied password to decrypt the file.

**Notes:** Also check the dynapdf manual on the pdfDecryptPDFA function (pdfDecryptPDFW on Windows).
See also **DecryptPDF** function in DynaPDF manual.

70.34.183  **DecryptPDFAnsi(Path as string, PwdType as Integer, Password as string) as Integer**

MBS DynaPDF Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function decrypts a PDF file by using the supplied password to decrypt the file.

**Notes:** Same as DecryptPDF, but takes path name in Windows ANSI encoding.

70.34.184  **DeleteAcroForm**

MBS DynaPDF Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Deletes an acrobat reader form.
See also **DeleteAcroForm** function in DynaPDF manual.
70.34.185  **DeleteActionFromObj**(ObjType as Integer, ActHandle as Integer, ObjHandle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: This function deletes an action from a PDF object.
See also **DeleteActionFromObj** function in DynaPDF manual.

70.34.186  **DeleteActionFromObjEx**(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: This function can be used to delete an action from an object without using an action handle.
See also **DeleteActionFromObjEx** function in DynaPDF manual.

70.34.187  **DeleteAnnotation**(Handle as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: This function deletes an annotation.
See also **DeleteAnnotation** function in DynaPDF manual.

70.34.188  **DeleteAnnotationFromPage**(PageNum as UInt32, Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: Deletes an annotation from a page.
See also **DeleteAnnotationFromPage** function in DynaPDF manual.

70.34.189  **DeleteAppEvents**(ApplyEvent as Boolean, TOCAppEvent as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: The function deletes all application events if any.
**Notes:**
The function can optionally apply the visibility state of an event before the application events will be deleted. The new visibility state will be stored in the PDF file. To apply the visibility state of a specific event without deletion call **ApplyAppEvent()** instead.
If the function succeeds and if application events were deleted the return value is 1. If the no application events were defined the return value is 0. If the function fails the return value is a negative error code.

See also DeleteAppEvents function in DynaPDF manual.

**70.34.190 DeleteBookmark(ABmk as Integer) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function deletes a bookmark. See also DeleteBookmark function in DynaPDF manual.

**70.34.191 DeleteEmbeddedFile(handle as Integer) as boolean**

MBS DynaPDF Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Deletes the embedded file with the given handle. See also DeleteEmbeddedFile function in DynaPDF manual.

**70.34.192 DeleteField(Field as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function deletes an interactive form field. See also DeleteField function in DynaPDF manual.

**70.34.193 DeleteFieldEx(URL as string) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function deletes an interactive form field by using its full qualified name, that is the name of any parent group field separated by a period (.) plus the field name. See also DeleteFieldEx function in DynaPDF manual.

**70.34.194 DeleteJavaScripts(DelJavaScriptActions as boolean)**

70.34.195  **DeleteOCGFromAppEvent(Handle as UInt32, Events as Integer, Categories as Integer, DelCategoryOnly as Boolean) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Deletes an OCG or layer from one or more application events, or it deletes only one or more categories from an application event in which the OCG was found (if DelCategoryOnly is true).
**Notes:**
If DelCategoryOnly is true, and if no more categories are left in the application event, then the event will be deleted. See also AddOCGToAppEvent() and SetOCGContUsage() for further information.
If the function succeeds the return value is true. If the function fails the return value is false.
See also DeleteOCGFromAppEvent function in DynaPDF manual.

70.34.196  **DeleteOutputIntent(Index as Integer) as Integer**

**Function:** Can be used to delete a specific or all output intents.
**Notes:**
A PDF file can contain more than one output intent. Call GetOutputIntentCount to determine the number of available output intents. If the parameter Index is set to -1 all output intents will be deleted.
If the function succeeds the return value is the remaining number of output intents. If the function fails the return value is a negative error code.
See also DeleteOutputIntent function in DynaPDF manual.

70.34.197  **DeletePage(PageNum as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** This function deletes a page.
See also DeletePage function in DynaPDF manual.

70.34.198  **DeletePageLabels**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The function deletes all page labels contained in the current open document, if any.
See also DeletePageLabels function in DynaPDF manual.
**70.34.199  DeleteSeparationInfo(AllPages as boolean) as boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function deleted the separation of the current open page or of all pages if the parameter AllPages is set to true.
See also DeleteSeparationInfo function in DynaPDF manual.

**70.34.200  DeleteTemplate(handle as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function deletes a template.
See also DeleteTemplate function in DynaPDF manual.

**70.34.201  DeleteTemplateEx(index as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function deletes a template by using an index instead of a template handle.
See also DeleteTemplateEx function in DynaPDF manual.

**70.34.202  DeleteXFAForm**

MBS DynaPDF Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Deletes XFA Form.
See also DeleteXFAForm function in DynaPDF manual.

**70.34.203  DrawArc(PosX as Double, PosY as Double, Radius as Double, StartAngle as Double, EndAngle as Double) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function draws an arc by using a start and end angle.
See also DrawArc function in DynaPDF manual.
70.34.204 **DrawArcEx**(PosX as Double, PosY as Double, Width as Double, Height as Double, StartAngle as Double, EndAngle as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function draws an elliptical arc. **Example:**

```vba
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// create new PDF
call pdf.CreateNewPDF f

// We want to use top-down coordinates
call pdf.SetPageCoords pdf.kpcTopDown

// new page
call pdf.Append

// black
call pdf.SetStrokeColor 0

// draw an arc
call pdf.DrawArcEx 100,100,100,100, 90,180
call pdf.StrokePath

// and a second one
call pdf.DrawArcEx 200,200,100,100, 0,90
call pdf.StrokePath

// and a third one. 0 to 0 gives a full circle
call pdf.DrawArcEx 300,300,100,100, 0,0
call pdf.StrokePath

// finish page
call pdf.EndPage

// Close file
call pdf.CloseFile

// open PDF
f.Launch
```
See also DrawArcEx function in DynaPDF manual.

### 70.34.205 DrawChord(PosX as Double, PosY as Double, Width as Double, Height as Double, StartAngle as Double, EndAngle as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** This function draws an elliptical chord (a region bounded by the intersection of an ellipse and a line segment, called a secant).

See also DrawChord function in DynaPDF manual.

### 70.34.206 DrawCircle(PosX as Double, PosY as Double, Radius as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** This function draws a circle.

**Example:**

```vba
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Line.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// Create a new PDF
call pdf.CreateNewPDF f

// We want to use top-down coordinates
call pdf.SetPageCoords pdf.kpcTopDown

// Add a page
call pdf.Append

// a circle, filled
call pdf.SetFillColor pdf.RGB(0,255,0) // green
call pdf.DrawCircle(100, 100, 100, pdf.kfmFill)

// a circle, stoked
call pdf.SetStrokeColor pdf.RGB(255,0,0) // red
call pdf.DrawCircle(200, 200, 100, pdf.kfmStroke)

// end page
call pdf.EndPage

// Close page
```
call pdf.CloseFile

// Open PDF
f.Launch

See also DrawCircle function in DynaPDF manual.

70.34.207  DrawPie(PosX as Double, PosY as Double, Width as Double, Height as Double, StartAngle as Double, EndAngle as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function draws a pie-shaped wedge bounded by the intersection of an ellipse and two angles. See also DrawPie function in DynaPDF manual.

70.34.208  EditPage(PageNum as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function prepares a page for editing. **Example:**

dim pdf as DynapdfMBS  // your dynapdf instance

// edit page 1
call pdf.EditPage(1)
// set a font
call pdf.SetFont( "Times New Roman",pdf.kfsNone,46,True,pdf.kcp1252 )
// set a color
call pdf.SetFillColor(0)

// now add a text annotation
call pdf.FreeTextAnnot( 100, 100, 100, 100, "author", "test", 0 )

// end page
call pdf.EndPage

See also EditPage function in DynaPDF manual.
**70.34.209 EditTemplate(index as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function prepares a template for editing. See also EditTemplate function in DynaPDF manual.

**70.34.210 EditTemplate2(handle as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function prepares the template for editing. See also EditTemplate2 function in DynaPDF manual.

**70.34.211 Ellipse(PosX as Double, PosY as Double, Width as Double, Height as Double, FillMode as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function draws an ellipse. See also Ellipse function in DynaPDF manual.

**70.34.212 EnableMutex(Value as boolean)**

MBS DynaPDF Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to enable mutex or not.

**70.34.213 EncryptPDF(File as folderitem, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function encrypts a PDF file. **Notes:** Also check the dynapdf manual on the pdfEncryptPDFA function (pdfEncryptPDFW on Windows). See also EncryptPDF function in DynaPDF manual.

**70.34.214 EncryptPDFAnsi(Path as string, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer**

MBS DynaPDF Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function encrypts a PDF file.
Notes: Same as EncryptPDF, but takes path name in Windows ANSI encoding.

70.34.215 EndContinueText as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function finishes a continue text block that was created with the function BeginContinueText() beforehand. Deprecated: This item is deprecated and should no longer be used.

70.34.216 EndLayer as boolean

MBS DynaPDF Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function closes a layer that was opened by BeginLayer. Notes: If the function succeeds the return value is true. If the function fails the return value is false.

See also EndLayer function in DynaPDF manual.

70.34.217 EndPage as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function closes an open page that was opened by Append() or EditPage(). Example:

```
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

bBool=pdf.EndPage
```

See also EndPage function in DynaPDF manual.

70.34.218 EndPattern as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function closes an open pattern that was opened by BeginPattern() or CreateStdPattern(). See also EndPattern function in DynaPDF manual.
70.34.219  EndTemplate as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function closes an open template that was opened by BeginTemplate(), EditTemplate() or EditTemplate2(). See also EndTemplate function in DynaPDF manual.

70.34.220  EnumDocFonts as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function enumerates all fonts used in the current PDF document. **Notes:** Will call the EnumDocFont event. See also EnumDocFonts function in DynaPDF manual.

70.34.221  EnumDocFontsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function enumerates all fonts used in the current PDF document and returns the count. **Notes:** Returns the number of fonts found. Does not call the event.

70.34.222  EnumHostFonts as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function enumerates all fonts found in the search directories by passing the font names to a callback function. **Notes:** Calls the EnumHostFont event. See also EnumHostFonts function in DynaPDF manual.

70.34.223  EnumHostFontsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function enumerates all fonts found in the search directories. **Notes:** Returns the number of fonts found. Does not call the event.

70.34.224  EnumHostFontsEx as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function enumerates all fonts found in the search directories in the same way as EnumHostFonts().
**Notes:** Calls the EnumHostFontEx event.
See also EnumHostFontsEx function in DynaPDF manual.

### 70.34.225 EnumHostFontsExCount as Integer

**Function:** The function enumerates all fonts found in the search directories in the same way as EnumHostFontsCount().
**Notes:** Returns the number of fonts found. Does not call the event.

### 70.34.226 ExchangeBookmarks(Bmk1 as Integer, Bmk2 as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** This function exchanges two bookmarks.
See also ExchangeBookmarks function in DynaPDF manual.

### 70.34.227 ExchangePages(first as Integer, second as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The function exchanges two pages.
See also ExchangePages function in DynaPDF manual.

### 70.34.228 ExtractPageText(RemoveText as boolean = false) as String

**Function:** Extracts text of current open page.
**Notes:**
This is a convenience function so you don’t need to use DynaPDFStackMBS class yourself.
Returns the text of the page. Use EditPage() to open a page and than EndPage() to close it.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.
70.34.229 ExtractPageTextRect(Left as Double, Top as Double, Right as Double, Bottom as Double, RemoveText as boolean = false) as String

Function: Extracts text of current open page within given rectangle.
Notes:
Text that starts within the given rectangle is captured.
Be aware that PDF coordinates start on bottom left of page with 0/0.

This is a convenience function so you don’t need to use DynaPDFStackMBS class yourself.
Returns the text of the page. Use EditPage() to open a page and than EndPage() to close it.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.
Requires DynaPDF Pro license.

70.34.230 ExtractText(PageNum as Integer, Flags as Integer, rect as DynaPDFRectMBS = nil, byref text as string) as Boolean

Function: Extracts the text of the page PageNum.
Notes:
The first page is denoted by 1.

Text lines can be sorted in x- and y-direction. The flag ktefDeleteOverlappingText causes that identical text records which are placed on the same position (with a tolerance of 2 units) will be deleted. The records must occur one after the other in order to detect them.

The optional parameter Area can be set to restrict the text extraction to that rectangle. The rectangle must be defined according to the current coordinate system. That means either in bottom up or top down coordinates, see SetPageCoords() for further information. Note also that the function considers the orientation of the page. The width and height of the rectangle must be exchanged if the orientation is 90, -90, 270, or -270 degrees.

If the function succeeds the return value is true. If the function fails the return value is false.
**CHAPTER 70. DYNAPDF**

**70.34.231 FileAttachAnnot(PosX as Double, PosY as Double, Icon as Integer, Author as string, Desc as string, File as folderitem, Compress as boolean) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The function inserts a file attachment annotation on the current open page.

**Notes:**

On Windows, the Desc and the Author parameters are converted to unicode.

Also check the dynapdf manual on the pdfFileAttachAnnotA function (pdfFileAttachAnnotW on Windows).

See also FileAttachAnnot function in DynaPDF manual.

**70.34.232 FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as String, FileBuffer as MemoryBlock, Compress as boolean) as Integer**

**Function:** Creates a file attachment annotation exactly in the same way as FileAttachAnnot() but accepts a file buffer as input.

**Notes:**

See FileAttachAnnot() for further information. The parameter FileName is required. It should contain the file name including extension, e.g. "MyImage.jpg".

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.

See also:

- 70.34.233 FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as String, FileBuffer as String, Compress as boolean) as Integer

**70.34.233 FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as String, FileBuffer as String, Compress as boolean) as Integer**

**Function:** Creates a file attachment annotation exactly in the same way as FileAttachAnnot() but accepts a file buffer as input.

**Notes:**

See FileAttachAnnot() for further information. The parameter FileName is required. It should contain the file name including extension, e.g. "MyImage.jpg".

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the
function fails the return value is a negative error code.

See also:

* 70.34.232 `FileAttachAnnotEx(PosX as double, PosY as double, Icon as integer, Author as string, Desc as string, Filename as string, FileBuffer as MemoryBlock, Compress as boolean) as Integer`

### 70.34.234 `FileLink(PosX as Double, PosY as Double, Width as Double, Height as Double, FileLink as string) as Integer`

**MBS DynaPDF Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.**

**Function:** The function creates a file link annotation.

**Notes:** Here you can pass a string which may be a relative file path like simply the file name of other pdf file in same folder.

See also `FileLink` function in DynaPDF manual.

### 70.34.235 `FileLinkAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, FileLink as string) as Integer`

**MBS DynaPDF Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.**

**Function:** The function creates a file link annotation.

**Notes:** Here you can pass a string which may be a relative file path like simply the file name of other pdf file in same folder.

### 70.34.236 `FindBookmark(DestPage as Integer, Text as string) as Integer`

**MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.**

**Function:** This function searches for a bookmark in the document outline tree.

**Notes:** The text parameter is converted to unicode.

See also `FindBookmark` function in DynaPDF manual.

### 70.34.237 `FindBookmarkAnsi(DestPage as Integer, Text as string) as Integer`

**MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.**

**Function:** This function searches for a bookmark in the document outline tree.

**Notes:** The text parameter is converted to ANSI.
70.34.238  FindEmbeddedFile(Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the embedded file Name and returns the handle of it when it can be found. **Notes:**
The file can then be extracted with GetEmbeddedFile().

If the function succeeds the return value is an embedded file handle, a value greater or equal zero. If the file cannot be found the return value is -1. See also FindEmbeddedFile function in DynaPDF manual.

70.34.239  FindField(Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function searches for an interactive form field by using the fully qualified field name. **Notes:** The Name parameter is converted to unicode. See also FindField function in DynaPDF manual.

70.34.240  FindFieldAnsi(Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function searches for an interactive form field by using the fully qualified field name. **Notes:** The Name parameter is converted to ANSI.

70.34.241  FindLinkAnnot(URL as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function searches for a file link or web link annotation. See also FindLinkAnnot function in DynaPDF manual.

70.34.242  FindNextBookmark as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function searches for the next bookmark with the same search parameters which were used by a previous call of FindBookmark(). See also FindNextBookmark function in DynaPDF manual.
70.34. FinishSignature(PKCS7 as Memoryblock) as boolean

**Function:** The function writes the PKCS# 7 signature object to the PDF file and writes finally the finish PDF file to disk and frees all used resources if the file was not created in memory.

**Notes:**
If the file was created in memory GetBuffer() can now be called to obtain the finish PDF buffer.
CloseAndSignFileExt() must be called prior this function can be called.

Return values: If the function succeeds the return value is true. If the function fails the return value is false.
See also FinishSignature function in DynaPDF manual.
See also:

- 70.34.244 FinishSignature(PKCS7 as string) as boolean

---

70.34.244 FinishSignature(PKCS7 as string) as boolean

**Function:** The function writes the PKCS# 7 signature object to the PDF file and writes finally the finish PDF file to disk and frees all used resources if the file was not created in memory.

**Notes:**
If the file was created in memory GetBuffer() can now be called to obtain the finish PDF buffer.
CloseAndSignFileExt() must be called prior this function can be called.

Return values: If the function succeeds the return value is true. If the function fails the return value is false.
See also FinishSignature function in DynaPDF manual.
See also:

- 70.34.243 FinishSignature(PKCS7 as Memoryblock) as boolean

---

70.34.245 FlattenAnnots(AnnotFlattenFlags as Integer = 0) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Flattens the annotations.

**Notes:**
By default all annotations which have an appearance stream and which have the print flag set are flattened.
All annotations are deleted when the function returns with the exception of file attachment annotations.
If you want to flatten the view state then set the flag affUseViewState.

Annotation flags:
kaffNone 0  Printable annotations independent of the type
kaffUseViewState 1  If set, annotations which are visible in a viewer become flattened.
kaffMarkupAnnots 2  If set, markup annotations are flattened only. Link, Sound, or FileAttach
annotations are no markup annotations. These types will be left intact.

See also FlattenAnnots function in DynaPDF manual.

70.34.246 FlattenForm as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function converts all fields of an Interactive Form to native PDF vector graphics and deletes the form after all fields are converted, incl. all JavaScript actions which are connected with form fields, pages, or the catalog object, and global JavaScript functions. **Notes:** Requires DynaPDF Pro license. See also FlattenForm function in DynaPDF manual.

70.34.247 FlushPageContent(stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function replaces the content stream of a page or template that was changed with the function ReplacePageText() or ReplacePageTextEx() beforehand. **Notes:** The function must be called after all changes are made. See GetPageText() for an example application.

Return values:
If the function succeeds the return value is true. If the function fails the return value is false.

See also FlushPageContent function in DynaPDF manual.

70.34.248 FlushPages(Flags as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Flushes pages. **Notes:** Do not use FlushPages and SetUseSwapFile together. Use one function. See also FlushPages function in DynaPDF manual.
**70.34.249 FreeImageBuffer**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Frees the current image buffer.  
See also FreeImageBuffer function in DynaPDF manual.

**70.34.250 FreeImageObj(Handle as UInt32) as boolean**

MBS DynaPDF Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function releases memory that was allocated by GetImageObj to decompress the image.  
**Notes:** If the function succeeds the return value is true. If the function fails the return value is false.  
See also FreeImageObj function in DynaPDF manual.

**70.34.251 FreePDF as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function frees all used resources except the font cache.  
See also FreePDF function in DynaPDF manual.

**70.34.252 FreeTextAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Text as string, Align as Integer) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function creates a free text annotation.  
**Example:**
```
dim pdf as DynapdfMBS // your dynapdf instance

// edit page 1
call pdf.EditPage(1)

// set a font
call pdf.SetFont( "Times New Roman",pdf.kfsNone,46,True,pdf.kcp1252 )

// set a color
call pdf.SetFillColor(0)

// now add a text annotation
call pdf.FreeTextAnnot( 100, 100, 100, 100, "author", "test", 0 )

// end page
call pdf.EndPage
```
Notes: The Name and Author parameters are converted to unicode.
See also FreeTextAnnot function in DynaPDF manual.

70.34.253 FreeTextAnnotAnsi(PosX as Double, PosY as Double, Width as Double,
Height as Double, Author as string, Text as string, Align as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function creates a free text annotation.
Notes: The Name and Author parameters are converted to ANSI.

70.34.254 GetActionCount as Integer

See also GetActionCount function in DynaPDF manual.

70.34.255 GetActionHandle(ObjType as Integer, ObjHandle as UInt32, ActIndex as UInt32) as Integer

Notes:
To determine the number of available actions of a specific object call GetObjActionCount. Since the Catalog object contains no handle, the parameter ObjHandle will be ignored for this object type.

If the function succeeds the return value is the action handle, a value greater or equal zero. If the function fails the return value is a negative error code.
See also GetActionHandle function in DynaPDF manual.

70.34.256 GetActionType(ActHandle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the type of an annotation.
See also GetActionType function in DynaPDF manual.
70.34.257 GetActionTypeEx(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the action type of an action used by a specific PDF object. See also GetActionTypeEx function in DynaPDF manual.

70.34.258 GetActiveFont as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the handle of the active font or 1 if no font is set. See also GetActiveFont function in DynaPDF manual.

70.34.259 GetAllocBy as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the pre allocated buffer size of page content streams in bytes. See also GetAllocBy function in DynaPDF manual.

70.34.260 GetAnnot(ahandle as Integer) as DynaPDFAnnotationMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function retrieves the most important properties of an annotation. **Example:**

```
    dim pdf as DynaPDFMBS // your instance

    dim c as Integer = pdf.GetAnnotCount

    for i as Integer = 0 to c-1
    dim a as DynaPDFAnnotationMBS = pdf.GetAnnot(i)
        MsgBox str(a.Type)
    next
```

**Deprecated:** This item is deprecated and should no longer be used. You can use GetAnnotEx instead.
70.34.261  GetAnnotBBox(ahandle as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function retrieves the bounding box of an annotation measured in bottom up coordinates. See also GetAnnotBBox function in DynaPDF manual.

70.34.262  GetAnnotCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the number of annotations currently used in the document. See also GetAnnotCount function in DynaPDF manual.

70.34.263  GetAnnotEx(ahandle as Integer) as DynaPDFAnnotationExMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function retrieves the most important properties of an annotation. Example:

```
dim pdf as DynaPDFMBS // your instance

dim c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
    dim a as DynaPDFAnnotationExMBS = pdf.GetAnnotEx(i)
    MsgBox str(a.Type)
next
```

See also GetAnnotEx function in DynaPDF manual.

70.34.264  GetAnnotFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the default flags used for newly created annotations. See also GetAnnotFlags function in DynaPDF manual.
70.34.265  GetAnnotLink(Handle as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function returns the URL or file path of a file link annotation. See also GetAnnotLink function in DynaPDF manual.

70.34.266  GetAnnotType(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the type of a specific annotation. See also GetAnnotType function in DynaPDF manual.

70.34.267  GetAscent as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the ascender of the active font. See also GetAscent function in DynaPDF manual.

70.34.268  GetBBox(boundary as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns a bounding box of a PDF page. See also GetBBox function in DynaPDF manual.

70.34.269  GetBidiMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A new function in dynapdf which is not documented. See also GetBidiMode function in DynaPDF manual.

70.34.270  GetBookmark(ahandle as Integer) as DynaPDFBookmarkMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function returns the properties of a bookmark. See also GetBookmark function in DynaPDF manual.
70.34.271 GetBookmarkCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the number of bookmarks defined in the document. See also GetBookmarkCount function in DynaPDF manual.

70.34.272 GetBorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the global border style which is used for newly created Interactive Form fields. See also GetBorderStyle function in DynaPDF manual.

70.34.273 GetBuffer as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns a pointer to the buffer of a memory based PDF file. **Notes:** The result string has no encoding set. See also GetBuffer function in DynaPDF manual.

70.34.274 GetBufferMemory as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns a pointer to the buffer of a memory based PDF file. **Notes:** The result string has no encoding set.

70.34.275 GetCapHeight as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the cap height of the active font. See also GetCapHeight function in DynaPDF manual.

70.34.276 GetCharacterSpacing as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the current character spacing. See also GetCharacterSpacing function in DynaPDF manual.
70.34.277 GetCheckBoxChar as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the character used for newly created check boxes. See also GetCheckBoxChar function in DynaPDF manual.

70.34.278 GetCheckBoxCharEx(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Queries the check box character for the given field. See also GetCheckBoxCharEx function in DynaPDF manual.

70.34.279 GetCheckBoxDefState(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function returns the default state of a check box, that is 1 == checked or 0 == unchecked. See also GetCheckBoxDefState function in DynaPDF manual.

70.34.280 GetCMap(index as Integer) as DynapdfCMapMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns the CMap object with the given index. See also GetCMap function in DynaPDF manual.

70.34.281 GetCMapCount as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns the number of character maps. See also GetCMapCount function in DynaPDF manual.

70.34.282 GetColorSpace as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the active color space. See also GetColorSpace function in DynaPDF manual.
CHAPTER 70. DYNAPDF

70.34.283  GetColorSpaceCount as Integer

**Function:** The number of color spaces.

**Example:**

```vba
Sub DrawSomething(pdf as DynaPDFMBS)
   '// draw all colorants with their own color
   Dim MyX, MyY as Double

   MyX = 10
   MyY = 100

   '// set a font
   call pdf.SetFont "Times", pdf.kfsItalic, 10.0, true, pdf.kcp1252

   '// loop over all color spaces
   Dim Colorcount as Integer = pdf.GetColorSpaceCount
   For j as Integer = 0 to Colorcount-1
      MyX = 10
      Dim MyColourSpace as DynapdfColorSpaceMBS = PDF.GetColorSpaceObj(j)
      Dim ColorantsCount as Integer = MyColourSpace.ColorantsCount
      Dim c as Integer = MyColourSpace.NumInComponents
      Call pdf.SetExtColorSpace j

      '// draw name of each colorant
      For i as Integer = 0 to c-1
         '// build array with colors and set 100% for the one color we need
         Dim values() as Double
         Redim values(c-1)
         values(i) = 1.0
         '// get name
         Dim name as string = "# " + str(i)
         If i <= ColorantsCount Then
            name = MyColourSpace.Colorants(i)
         End If

         '// seaw name
         Call pdf.SetFillColor(values)
         call pdf.WriteText(MyX,MyY, name)
      Next
      MyX = MyX + pdf.GetTextWidth(name) + 20
   Next
```
See also GetColorSpaceCount function in DynaPDF manual.

70.34.284  GetColorSpaceObj(index as Integer) as DynaPDFColorSpaceMBS

70.34.285  GetCompressionFilter as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the standard compression filter for images. See also GetCompressionFilter function in DynaPDF manual.

70.34.286  GetCompressionLevel as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the active compression level. See also GetCompressionLevel function in DynaPDF manual.

70.34.287  GetContent as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function returns a pointer to the content stream of the currently open page or template. Notes: The result string has no encoding set. See also GetContent function in DynaPDF manual.
70.34.288  GetDefBitsPerPixel as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The function returns default color depth in bits per pixel, which determines whether images should be down sampled.  
See also GetDefBitsPerPixel function in DynaPDF manual.

70.34.289  GetDescent as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The function returns the descender of the active font.  
See also GetDescent function in DynaPDF manual.

70.34.290  GetDocInfo(dinfo as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The function retrieves a document info entry as Unicode string.  
**Notes:** The result is an unicode string.  
See also GetDocInfo function in DynaPDF manual.

70.34.291  GetDocInfoCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The function returns the number of document info entries defined in the document.  
See also GetDocInfoCount function in DynaPDF manual.

70.34.292  GetDocInfoEx(index as Integer, byref DInfo as Integer, byref key as string, byref value as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The function returns a document info entry.  
**Notes:** Key is an ascii string and value an unicode string.  
See also GetDocInfoEx function in DynaPDF manual.

70.34.293  GetDocumentColorSpaces as DynaPDFColorSpaceMBS()

**Function:** Queries Colorspace objects for all colorspaces in the current working document.
70.34.294 GetDocUsesTransparency(Flags as UInt32 = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks whether this document uses transparency. **Notes:** Checks whether a PDF file uses native PDF Transparency (PDF 1.4). The file uses transparency when it contains soft masks, blend modes other than Normal, or fill or stroke alpha values smaller than 1.0. The function checks all pages, templates, extended graphics states, images, annotations, and form fields. If the file uses transparency the return value is true. If it uses no transparency the return value is false. See also GetDocUsesTransparency function in DynaPDF manual.

70.34.295 GetDrawDirection as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the actual draw direction for closed vector graphics such as rectangles, circles, ellipses and so on. See also GetDrawDirection function in DynaPDF manual.

70.34.296 GetDynaPDFVersion as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the version string of DynaPDF. **Notes:** Result is an ASCII string. See also GetDynaPDFVersion function in DynaPDF manual.

70.34.297 GetEmbeddedFile(Handle as Integer, byref FileSpec as dynapdfFileSpecMBS, Decompress as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the most important properties of an embedded file as well as a pointer to the file buffer. **Example:**

```plaintext
// new PDF Environment
dim pdf as new MyDynapdfMBS
call pdf.CreateNewPDF nil

// import PDF file
```
```vbnet
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with hidden data.pdf")
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)
call pdf.OpenImportFile(f)
call pdf.ImportPDFFile(1)

' walk over list of embedded files and get their data
dim c as Integer = pdf.GetEmbeddedFileCount
for i as Integer = 0 to c-1
    dim e as DynaPDFFileSpecMBS
    if pdf.GetEmbeddedFile(i, e, true) then
        dim data as string = e.Buffer
        Break
    end if
next

' cleanup
call pdf.CloseFile
```

See also GetEmbeddedFile function in DynaPDF manual.

### 70.34.298 GetEmbeddedFileCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The function returns the number of embedded files available in the PDF file.  
**Example:**

```vbnet
' new PDF Environment
dim pdf as new MyDynapdfMBS
call pdf.CreateNewPDF nil

' import PDF file
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with hidden data.pdf")
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)
call pdf.OpenImportFile(f)
call pdf.ImportPDFFile(1)

' walk over list of embedded files and get their data
dim c as Integer = pdf.GetEmbeddedFileCount
for i as Integer = 0 to c-1
    dim e as DynaPDFFileSpecMBS
    if pdf.GetEmbeddedFile(i, e, true) then
        dim data as string = e.Buffer
        Break
    end if
next
end if
next

// cleanup
call pdf.CloseFile

See also GetEmbeddedFileCount function in DynaPDF manual.

70.34.299 GetEMFPatternDistance as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: A new function in dynapdf which is not documented.
See also GetEMFPatternDistance function in DynaPDF manual.

70.34.300 GetErrLogMessage(index as Integer) as DynaPDFErrorMBS

Notes: Index from 0 to GetErrLogMessageCount-1.
See also GetErrLogMessage function in DynaPDF manual.

70.34.301 GetErrLogMessageCount as Integer

See also GetErrLogMessageCount function in DynaPDF manual.

70.34.302 GetErrorMessage as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the last error message as a string, or "" if no error occurred.
See also GetErrorMessage function in DynaPDF manual.
70.34.303 GetErrorMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the current error mode. See also GetErrorMode function in DynaPDF manual.

70.34.304 GetField(index as Integer) as DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the most important properties of a field. **Deprecated:** This item is deprecated and should no longer be used. You can use GetFieldEx instead.

70.34.305 GetFieldBackColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the default background color used for newly created interactive form fields. See also GetFieldBackColor function in DynaPDF manual.

70.34.306 GetFieldBorderColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the default border color used for newly created interactive form fields. See also GetFieldBorderColor function in DynaPDF manual.

70.34.307 GetFieldBorderStyle(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the border style of a specific form field. See also GetFieldBorderStyle function in DynaPDF manual.

70.34.308 GetFieldBorderWidth(aField as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the line width of the border of a field. See also GetFieldBorderWidth function in DynaPDF manual.
70.34.309 GetFieldChoiceValue(Field as Integer, ValIndex as Integer) as DynaPDFChoiceValueMBS

MBS DynaPDF Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the choice values for this field. See also GetFieldChoiceValue function in DynaPDF manual.

70.34.310 GetFieldColor(Field as Integer, ColorType as Integer, byref ColorSpace as Integer, byref ColorValue as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves a specific color of an interactive form field. See also GetFieldColor function in DynaPDF manual.

70.34.311 GetFieldCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the number of fields contained in the document. See also GetFieldCount function in DynaPDF manual.

70.34.312 GetFieldEx(index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the most important properties of a field. **Example:**

```vbnet
dim pdf as new MyDynapdfMBS
pdf.SetLicenseKey "Lite" // For this example you can use a Lite, Pro or Enterprise License
call pdf.CreateNewPDF(nil)
call pdf.SetImportFlags(BitwiseOr(pdf.kifImportAll, pdf.kifImportAsPage))

dim filePath as FolderItem=SpecialFolder.Desktop.Child("acroform.pdf")
if (pdf.OpenImportFile(filePath, pdf.kptOpen, "]0) then
MsgBox "Input file "]“ not found!"
quit
end if

// import all pages
dim r as Integer = pdf.ImportPDFFile( 1, 1.0, 1.0)
```
// now check all fields
dim n as Integer = pdf.GetFieldCount
for i as Integer = 0 to n-1
    dim f as DynaPDFFieldExMBS = pdf.GetFieldEx(i)
    break // inspect in debugger
next

Notes: See dynapdf.help.pdf for more details.
See also GetFieldEx function in DynaPDF manual.

70.34.313 GetFieldExpValCount(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the number of values/export values which are defined for a field. See also GetFieldExpValCount function in DynaPDF manual.

70.34.314 GetFieldExpValue(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function retrieves the export value(s) of a check box, list box, or combo box. See also GetFieldExpValue function in DynaPDF manual.

70.34.315 GetFieldExpValueEx(Field as Integer, ValIndex as Integer, byref Value as string, byref ExpValue as string, byref Selected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function can be used to enumerate the choice values of a combo box, list box, or radio button. See also GetFieldExpValueEx function in DynaPDF manual.

70.34.316 GetFieldFlags(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the flags of a specific interactive form field. See also GetFieldFlags function in DynaPDF manual.
70.34. **CLASS DYNAPDFMBS**

### 70.34.317 GetFieldGroupType(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the base type of a field group.
See also GetFieldGroupType function in DynaPDF manual.

### 70.34.318 GetFieldHighlightMode(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the highlight mode of buttons, checkboxes, and signature fields.
See also GetFieldHighlightMode function in DynaPDF manual.

### 70.34.319 GetFieldIndex(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the index or tab order of the field.
See also GetFieldIndex function in DynaPDF manual.

### 70.34.320 GetFieldMapName(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the mapping name of a specific form field if set.
**Notes:** The result string is in unicode or ASCII encoding.
See also GetFieldMapName function in DynaPDF manual.

### 70.34.321 GetFieldName(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the name of a specific interactive form field.
See also GetFieldName function in DynaPDF manual.

### 70.34.322 GetFieldOrientation(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the orientation of a field.
See also GetFieldOrientation function in DynaPDF manual.
70.34.323 GetFieldTextAlign(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the text alignment of a text field or button field.
See also GetFieldTextAlign function in DynaPDF manual.

70.34.324 GetFieldTextColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the default text color used for newly created fields.
See also GetFieldTextColor function in DynaPDF manual.

70.34.325 GetFieldToolTip(Field as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves a pointer to the tool tip string of a specific interactive form field.
**Notes:** The result string has either unicode or ascii encoding.
See also GetFieldToolTip function in DynaPDF manual.

70.34.326 GetFieldType(Field as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the field type.
See also GetFieldType function in DynaPDF manual.

70.34.327 GetFillColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the current color used for fillings.
See also GetFillColor function in DynaPDF manual.

70.34.328 GetFontCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the font count.
See also GetFontCount function in DynaPDF manual.
70.34. **CLASS DYNAPDFMBS**

### 70.34.329 GetFontEx(index as Integer) as DynaPDFFontMBS

**Function:** Queries the font information for the font specified by the index value.

**Example:**

```realbasic
// create PDF object with page
dim pdf as new DynaPDFMBS
call pdf.CreateNewPDF(nil)
call pdf.Append

// draw some text
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252
call pdf.WriteFText pdf.ktaCenter, "My first Realbasic output!"

// and list all fonts:
dim n as Integer = pdf.GetFontCount-1
for i as Integer = 0 to n
    MsgBox pdf.GetFontEx(i).FontName
next
```

**Deprecated:** This item is deprecated and should no longer be used. You can use GetFontInfo instead.

**Notes:**
- Returns nil on any error.
- Index from 0 to GetFontCount-1.

---

### 70.34.330 GetFontInfoEx(index as Integer) as DynaPDFFontInfoMBS

**Function:** Retrieves the most important properties of a font.

**Notes:**
- This function accepts a font handle instead. A font handle is a simple array index. To enumerate all fonts of a document execute the function in a loop from zero to GetFontCount - 1.

If the function succeeds the return value is font info object. If the function fails the return value is nil.

See also GetFontInfoEx function in DynaPDF manual.
70.34.331 GetFontOrigin as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the current font origin. See also GetFontOrigin function in DynaPDF manual.

70.34.332 GetFontSearchOrder as Integer()

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns the font search order. Notes:
The values in the array use this constants:

kfbtTrueType TrueType, TrueType Collections, or OpenType fonts with TrueType outlines
kfbtType1 Type1 font
kfbtOpenType OpenType font with Postscript outlines
kfbtStdFont PDF Standard font
kfbtDisabled This value can be used to disable a specific font format.

The array has 4 values. See also GetFontSearchOrder function in DynaPDF manual.

70.34.333 GetFontSelMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the current font selection mode. See also GetFontSelMode function in DynaPDF manual.

70.34.334 GetFontWeight as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the weight that will be used to emulate a bold font style. See also GetFontWeight function in DynaPDF manual.
70.34.335  GetFTextHeight(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function measures the height of a formatted text block. Notes: The text parameter is converted to unicode. See also GetFTextHeight function in DynaPDF manual.

70.34.336  GetFTextHeightAnsi(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function measures the height of a formatted text block. Notes: The text parameter is converted to ANSI.

70.34.337  GetFTextHeightEx(Width as Double, Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function measures the height of a formatted text block. Notes: The text parameter is converted to unicode. See also GetFTextHeightEx function in DynaPDF manual.

70.34.338  GetFTextHeightExAnsi(Width as Double, Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function measures the height of a formatted text block. Notes: The text parameter is converted to ANSI.

70.34.339  GetGlyphIndex(Index as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the glyph index of the given code page or Unicode index. Notes: How Index must be defined depends on the code page with which the font was loaded. For example, if the font was loaded with a 8 bit code page, then indexes below 256 are treated as index into the code page table. Higher indexes are treated as Unicode value in this case. Note that all Unicode encoded glyphs of the font are accessible in this case, also if the font was loaded with a 8 bit code page!
At time of publication the function does not support CJK code pages which require a conversion to Unicode, e.g. cpCJK_Big5_Uni, cpCJK_EUC_JP_Uni, and so on.

If the function succeeds the return value is greater or equal zero. If the function fails the return value is a negative error code.
See also GetGlyphIndex function in DynaPDF manual.

**70.34.340 GetGlyphOutline(Index as UInt32) as DynaPDFGlyphOutlineMBS**

**Function:** The function returns the outline of a glyph of the active font.
**Notes:**
Note that not all glyphs have an outline. A space character, for example, has no outline and therefore the size can be zero. The function returns normalized outlines scaled to a font size of 1000 units.

Please see dynapdf_help.pdf and our example project on how to process the outline data.
See also GetGlyphOutline function in DynaPDF manual.

**70.34.341 GetGoToAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = & h00000080) as DynaPDFGoToActionMBS**

**Function:** Queries details for a GoToR action.
**Notes:**
Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed. And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
See also GetGoToAction function in DynaPDF manual.

**70.34.342 GetGoToRAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = & h00000080) as DynaPDFGoToActionMBS**

**Function:** Queries details for a GoTo action.
### 70.34.343 GetGStateFlags as Integer

**MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.**

**Function:** The function returns the current graphics state flags.

*See also GetGStateFlags function in DynaPDF manual.*

### 70.34.344 GetHideAction(index as Integer) as DynaPDFHideActionMBS

**MBS DynaPDF Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.**

**Function:** Queries details for a hide action.

**Notes:** Index is from 0 to GetActionCount-1.

*See also GetHideAction function in DynaPDF manual.*

### 70.34.345 GetIconColor as Integer

**MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.**

**Function:** The function returns the icon color used for newly created text annotations.

*See also GetIconColor function in DynaPDF manual.*

### 70.34.346 GetImageBuffer as string

**MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.**

**Function:** Returns the image buffer.

*See also GetImageBuffer function in DynaPDF manual.*

### 70.34.347 GetImageBufferMemory as memoryblock

**MBS DynaPDF Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.**

**Function:** Returns the image buffer.
**70.34.348 GetImageCount(File as folderitem) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The function returns the number of images contained in a multi page image.  
See also GetImageCount function in DynaPDF manual.  
See also:

- **70.34.349 GetImageCount(Path as string) as Integer**

**70.34.349 GetImageCount(Path as string) as Integer**

**Function:** The function returns the number of images contained in a multi page image.  
See also GetImageCount function in DynaPDF manual.  
See also:

- **70.34.348 GetImageCount(File as folderitem) as Integer**

**70.34.350 GetImageCountEx(Buffer as Memoryblock) as Integer**

**Function:** The function determines the number of images in a multi-page image in the same way as GetImageCount(), but accepts a file buffer as input.  
See also GetImageCountEx function in DynaPDF manual.  
See also:

- **70.34.351 GetImageCountEx(Buffer as string) as Integer**

**70.34.351 GetImageCountEx(Buffer as string) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The function determines the number of images in a multi-page image in the same way as GetImageCount(), but accepts a file buffer as input.  
See also GetImageCountEx function in DynaPDF manual.  
See also:

- **70.34.350 GetImageCountEx(Buffer as Memoryblock) as Integer**
70.34.352 GetImageHeight(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the height of an image in pixel.
See also GetImageHeight function in DynaPDF manual.

70.34.353 GetImageObj(Handle as UInt32, Flags as Integer) as DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the properties of an image as well as the decompressed image buffer if needed.
**Notes:**
For the flags use the constants: kpfNone, kpfDecompAllImages, kpfNoJPXDecode, kpfDitherImagesToBW, kpfConvImagesToGray, kpfConvImagesToRGB, kpfConvImagesToCMYK or kpfImageInfoOnly.

By default all images are returned decompressed, with exception of image types which are already stored in a valid file format like JPEG and JPEG 2000 images.
If all image types should be decompressed set the flag kpfDecompressAllImages.
This function allocates memory that should be released with FreeImageObj when finish.
Image handles are simple array indexes. The number of image objects can be determined with GetImageObjCount. Note that this array does not include inline images which are stored in content streams. Such images can only be accessed with ParseContent().

Returns the function succeeds the return value is true. If the function fails the return value is false.
See also GetImageObj function in DynaPDF manual.

70.34.354 GetImageObjCount as Integer

MBS DynaPDF Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of image objects which were loaded with DynaPDF functions or imported from external PDF files.
**Notes:**
The images can be accessed with GetImageObj().
The return value is the number of image objects. This function cannot fail.
See also GetImageObjCount function in DynaPDF manual.
### 70.34.355 GetImageWidth(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: The function returns the width of an image in pixel. See also `GetImageWidth` function in DynaPDF manual.

### 70.34.356 GetImportDataAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = &h00000080) as DynaPDFImportDataActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: Queries details for an import action. **Notes**: Index is from 0 to GetActionCount-1.

If Decompress is true, all file specification containing compressed data are uncompressed. And ImageParseFlags defines how `GetImageObj` is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data. See also `GetImportDataAction` function in DynaPDF manual.

### 70.34.357 GetImportFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: The function returns the current import flags used to import PDF files. See also `GetImportFlags` function in DynaPDF manual.

### 70.34.358 GetImportFlags2 as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: Queries import flags 2. See also `GetImportFlags2` function in DynaPDF manual.

### 70.34.359 GetInBBox(PageNum as Integer, Boundary as Integer) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: The function retrieves a bounding box of an external PDF page. **Example:**
dim pdf as new MyDynaPDFMBS

// import some PDF
call pdf.CreateNewPDF(nil)
call pdf.OpenImportFile(file, 0, "")
call pdf.SetImportFlags(pdf.kifImportAsPage) // important! It makes the rendering faster.
call pdf.ImportPDFFile(1,1.0,1.0)

dim bounds as DynaPDFRectMBS = pdf.GetInBBox(1, pdf.kpbMediaBox)

See also GetInBBox function in DynaPDF manual.

70.34.360 GetInDocInfo(DInfo as Integer, byref value as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves a document info entry from an external PDF file as Unicode string. See also GetInDocInfo function in DynaPDF manual.

70.34.361 GetInDocInfoCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the number of available document info entries of the currently opened import file or a negative error code on failure. See also GetInDocInfoCount function in DynaPDF manual.

70.34.362 GetInDocInfoEx(index as Integer, byref DInfo as Integer, byref key as string, byref value as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns a document info entry from the currently opened import file. **Notes:**
The key result is an ASCII string.
The value result is an ASCII or Unicode string. See also GetInDocInfoEx function in DynaPDF manual.
70.34.363  GetInEncryptionFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the encryption flags of the currently opened import file. See also GetInEncryptionFlags function in DynaPDF manual.

70.34.364  GetInFieldCount as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns number of field in open import file. See also GetInFieldCount function in DynaPDF manual.

70.34.365  GetInIsCollection as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function checks whether the currently opened import file is a portable collection. **Notes:** Changed to integer in order to allow returning error codes besides 0 for false and 1 for true. See also GetInIsCollection function in DynaPDF manual.

70.34.366  GetInIsEncrypted as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function checks whether the currently opened import file is encrypted. **Notes:** Changed to integer in order to allow returning error codes besides 0 for false and 1 for true. See also GetInIsEncrypted function in DynaPDF manual.

70.34.367  GetInIsSigned as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function can be used to determine whether a PDF file contains a digital signature. **Notes:** Changed to integer in order to allow returning error codes besides 0 for false and 1 for true. See also GetInIsSigned function in DynaPDF manual.

70.34.368  GetInIsTrapped as Integer

MBS DynaPDF Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the input PDF is trapped.
Notes: Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInIsTrapped function in DynaPDF manual.

### 70.34.369 GetInIsXFAForm as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether the input PDF is a XFA form.
Notes:
See the dynapdf manual for details.
Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInIsXFAForm function in DynaPDF manual.

### 70.34.370 GetInMetadata(PageNum as Integer) as String

Function: Access the optional metadata streams of pages or the global metadata stream of the current open import file.
Notes:
Metadata streams are in XMP format that is a superset of XML. The PDF file must be opened with OpenImportFile or OpenImportBuffer beforehand.
Although the global XMP stream does usually exist in todays PDF files, metadata streams are optional and maybe not present. The function returns true if no error occurs, also if no metadata stream is present.
See also GetInMetadata function in DynaPDF manual.

### 70.34.371 GetInOrientation(PageNum as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The function returns the orientation of a specific page within the currently open import file (see also OpenImportFile()).
See also GetInOrientation function in DynaPDF manual.

### 70.34.372 GetInPageCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The function returns the number of pages contained in an external PDF file.
See also GetInPageCount function in DynaPDF manual.
70.34.373  GetInPDFVersion as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the minor PDF version number of an external PDF file.
See also GetInPDFVersion function in DynaPDF manual.

70.34.374  GetInPrintSettings as DynapdfPrintSettingsMBS

MBS DynaPDF Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the print settings for the imported document.
**Notes:** This is a PDF 1.7 extension.
See also GetInPrintSettings function in DynaPDF manual.

70.34.375  GetInRepairMode as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function can be used to determine whether the current open import file was opened in repair or normal mode.
**Notes:** Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.
See also GetInRepairMode function in DynaPDF manual.

70.34.376  GetIsFixedPitch as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns 1 if the active font is a fixed pitch font or 0 if the font is a variable pitch font.
**Notes:** Changed to integer in order to allow returning error codes besides 0 for false and 1 for true.

70.34.377  GetIsTaggingEnabled as boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether tagging is enabled.
See also GetIsTaggingEnabled function in DynaPDF manual.

70.34.378  GetItalicAngle as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the italic angle in degrees that will be used to emulate italic style fonts.
70.34.379 GetJavaScript(Handle as Integer) as string

Notes: The result text string has either unicode or ASCII encoding.
See also GetJavaScript function in DynaPDF manual.

70.34.380 GetJavaScriptAction(Handle as Integer) as string

Notes: May return an unicode string.
See also:

- 70.34.381 GetJavaScriptAction(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer, byref ObjEvent as Integer) as string

70.34.381 GetJavaScriptAction(ObjType as Integer, ObjHandle as Integer, ActIndex as Integer, byref ObjEvent as Integer) as string

Notes: May return an unicode string.

The ObjEvent parameter was added in plugin version 9.3 and contains a value from the koe* constants.
See also:

- 70.34.380 GetJavaScriptAction(Handle as Integer) as string

70.34.382 GetJavaScriptActionEx(index as Integer) as DynaPDFJavaScriptActionMBS

Notes: Index is from 0 to GetActionCount-1.
See also GetJavaScriptActionEx function in DynaPDF manual.
70.34.383  GetJavaScriptCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** The function returns the number of global JavaScripts contained in a document.
See also GetJavaScriptCount function in DynaPDF manual.

70.34.384  GetJavaScriptEx(Name as string) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** The function returns a global JavaScript as string by using the script s name instead of a handle to identify the script.
**Notes:** The result string is an unicode or an ASCII string.
See also GetJavaScriptEx function in DynaPDF manual.

70.34.385  GetJavaScriptName(Handle as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** The function returns the name of a global JavaScript.
**Notes:** The result string has either unicode or ASCII encoding.
See also GetJavaScriptName function in DynaPDF manual.

70.34.386  GetJPEGQuality as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** The function returns the current JPEG compression quality in percent used for newly inserted images which are compressed with JPEG.
See also GetJPEGQuality function in DynaPDF manual.

70.34.387  GetJPEGVersion as String

**Notes:** Currently reporting 9.1 for version 9b.

70.34.388  GetLanguage as string

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** The function returns the language identifier of the document as an ISO 3166 language tag or IANA
70.34.389 GetLastTextPosX as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the x coordinate of the last printed text.

70.34.390 GetLastTextPosY as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the y coordinate of the last printed text.

70.34.391 GetLaunchAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = & h00000080) as DynaPDFLaunchActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries details for a launch action. **Notes:**
- Index is from 0 to GetActionCount-1.
- If Decompress is true, all file specification containing compressed data are uncompressed.
- And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data.
- See also GetLaunchAction function in DynaPDF manual.

70.34.392 GetLayerConfig(Index as Integer) as DynaPDFOCLayerConfigMBS

MBS DynaPDF Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the most important properties of a layer configuration. **Notes:**
- A PDF file can contain one or more layer configurations so that different layers can be initially shown or hidden.
- A PDF file that contains layers (Optional Content Groups in PDF syntax) contains usually at least a default configuration dictionary. This configuration is loaded by default when the visibility state of a layer or optional content group must be determined, e.g. when rendering a page.
- To determine the number of available configurations call GetLayerConfigCount(). The first index is denoted tag, or "" if not set. See also GetLanguage function in DynaPDF manual.
If the function succeeds the return value is the object. If the function fails the return value is nil.

70.34.393 GetLayerConfigCount as Integer

MBS DynaPDF Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of available layer configurations.

**Notes:**
Note that it is possible that a document contains layers but no layer configuration. To determine whether a document contains layers or optional content groups use GetOCGCount().
To load a specific layer configuration call LoadLayerConfig().

70.34.394 GetLeading as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the current leading.
See also GetLeading function in DynaPDF manual.

70.34.395 GetLineCapStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the current line cap style used for vector graphics.
See also GetLineCapStyle function in DynaPDF manual.

70.34.396 GetLineJoinStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the current line join style used for vector graphics.
See also GetLineJoinStyle function in DynaPDF manual.

70.34.397 GetLineWidth as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the current line width used for stroked vector graphics and the border of interactive objects.
70.34. CLASS DYNAPDFMBS

See also GetLineWidth function in DynaPDF manual.

70.34.398 GetLinkHighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the current highlight mode used for newly created annotations. See also GetLinkHighlightMode function in DynaPDF manual.

70.34.399 GetLogMetafileSize(FileName as folderitem) as DynapdfRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the logical bounding box of an enhanced or Windows metafile. See also GetLogMetafileSize function in DynaPDF manual.

70.34.400 GetLogMetafileSizeEx(Buffer as Memoryblock) as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the logical bounding box of an enhanced or Windows metafile. See also GetLogMetafileSizeEx function in DynaPDF manual. See also:

- 70.34.401 GetLogMetafileSizeEx(Buffer as string) as DynapdfRectMBS

70.34.401 GetLogMetafileSizeEx(Buffer as string) as DynapdfRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the logical bounding box of an enhanced or Windows metafile. See also GetLogMetafileSizeEx function in DynaPDF manual. See also:

- 70.34.400 GetLogMetafileSizeEx(Buffer as Memoryblock) as DynaPDFRectMBS

70.34.402 GetMatrix(byref Matrix as DynapdfMatrixMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the current transformation. See also GetMatrix function in DynaPDF manual.
70.34.403 GetMaxFieldLen(TxtField as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the allowed maximum string length of a text field, or zero if the length is not restricted. See also GetMaxFieldLen function in DynaPDF manual.

70.34.404 GetMetaConvFlags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the conversion flags used to convert enhanced metafiles to PDF. See also GetMetaConvFlags function in DynaPDF manual.

70.34.405 GetMetadata(ObjType as Integer, Handle as Integer) as String

MBS DynaPDF Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function can be used to access the optional metadata streams of pages, fonts, images, pages, templates, as well as the global metadata stream that is associated with the Catalog object. **Notes:**
Metadata streams are in XMP format that is a superset of XML.
The global metadata stream will be created when this function is called. The returned stream is a preview of the XMP stream that will be stored in the file when CloseFile or CloseFileEx is called. Note that the creation and modification date will be updated when the file is closed.
The original global XMP stream of external PDF files can be accessed with GetInMetadata().
Metadata streams are optional and maybe not present. The function returns true if no error occurs, also if no metadata stream is present. See also GetMetadata function in DynaPDF manual.

70.34.406 GetMissingGlyphs as UInt32()

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an array with missing glyphs. **Notes:** See also GetMissingGlyphsString. See also GetMissingGlyphs function in DynaPDF manual.

70.34.407 GetMissingGlyphsString as String

MBS DynaPDF Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a string containing the missing glyphs characters.
70.34. CLASS DYNAPDFMBS

Notes:
This is a convenience function which builds a string from the array given by pdfGetMissingGlyphs.
See also GetMissingGlyphs.

70.34.408 GetMiterLimit as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the current miter limit used to draw stroked vector graphics. See also GetMiterLimit function in DynaPDF manual.

70.34.409 GetMovieAction(index as Integer, Decompress as Boolean = false, ImageParseFlags as Integer = &h00000080) as DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Queries details for a movie action. Notes:
Index is from 0 to GetActionCount-1.
If Decompress is true, all file specification containing compressed data are uncompressed. And ImageParseFlags defines how GetImageObj is called internally to decompress image. Default is to only get image info, but you can pass other values to actually get image data. See also GetMovieAction function in DynaPDF manual.

70.34.410 GetNamedAction(index as Integer) as DynaPDFNamedActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Queries details for a named action. Notes: Index is from 0 to GetActionCount-1. See also GetNamedAction function in DynaPDF manual.

70.34.411 GetNamedDest(index as Integer) as DynaPDFNamedDestMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Queries information about the named destination with the given index. Notes:
70.34.412 GetNamedDestCount as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of named destination objects.

See also GetNamedDestCount function in DynaPDF manual.

70.34.413 GetNeedAppearance as boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether appearance is needed.

See also GetNeedAppearance function in DynaPDF manual.

70.34.414 GetObjActionCount(ObjType as Integer, ObjHandle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the number of actions used by an object.

70.34.415 GetObjActions(ObjType as Integer, ObjHandle as Integer, byref Actions as DynaPDFObjActionsMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries details for an object action.

**Notes:**

Index is from 0 to GetActionCount-1.

The function retrieves the first action and additional trigger events that should be executed when a specific event occurs.
If the object type is a page, then use the page number as handle.

Trigger events are supported by the global Catalog object (this is the document root), Pages, and Form Fields. All other objects do not support trigger events.
Actions are defined as a single linked list. That means one action can execute another action (if NextAction of that action is >= 0).
Note that an action can reference itself! The application must check whether an action is already in the
execution list before it will be executed.

If an error occurred, the plugin returns nil.
On success, we provide the DynaPDFObjActionsMBS object in Actions parameter.

Return values:

<0  An error occurred, e.g. due to an invalid handle.
0   The object contains no action or trigger event.
1   The object contains an action.
2   The object contains a trigger event.
3   The object contains an action and a trigger event.

See also GetObjActions function in DynaPDF manual.

70.34.416  GetOCG(Handle as UInt32) as DynaPDFOCGMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the properties of an OCG, also called layer.
Notes:
An OCG handle is a simple array index. You can loop over all available OCGs from 0 to GetOCGCount - 1.
If the member HaveContUsage is true, the OCG contains a Content Usage dictionary. The contents of this
dictionary can be accessed with the function GetOCGContUsage. A Content Usage dictionary contains
additional information about a layer or OCG.

If the OCG is also included in an application event, this is the case if AppEvent is non-zero, then the Content
Usage dictionary is used to control the visibility state of the layer. The member Categories specifies which
categories control the visibility state.

Returns nil on any error.
See also GetOCG function in DynaPDF manual.

70.34.417  GetOCGContUsage(Handle as UInt32) as DynaPDFOCGContUsageMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the properties of the Content Usage dictionary that is associated with an OCG or layer.
Notes:
If the OCG is not included in an application event, then the contents in this dictionary serves as pure information.
If the OCG is included in one or more application events, then these settings control also the visibility state of the OCG. The function GetOCG returns the events and categories which control the layer visibility.
If UserNamesCount is greater zero, the dictionary contains also user names. The user names can be accessed with GetOCGUsageUserName.

Returns nil on any error.
See also GetOCGContUsage function in DynaPDF manual.

70.34.418  GetOCGCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the number of OCGs or layers which are available in document.
Notes: This function cannot fail, the return value is always greater or equal zero.
See also GetOCGCount function in DynaPDF manual.

70.34.419  GetOCGUsageUserName(Handle as UInt32, Index as UInt32, byref Name as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a user name of a Content Usage dictionary that is associated with an OCG or layer.
Notes: The functions a pointer of the original string that is stored in the PDF file.
If the function succeeds the return value is true. If the function fails the return value is false.
See also GetOCGUsageUserName function in DynaPDF manual.

70.34.420  GetOCUINode(Node as Integer) as DynaPDFOCUINodeMBS

Function: Retrieves the most important properties of an Optional Content UI node (UI stands for User Interface).
Notes: If the PDF file was not already imported with ImportPDFFile() the function ImportOCPProperties() must be called to import the global Optional Content Properties.
UI nodes are part of a layer configuration. Therefore, a layer configuration must be loaded with LoadLayerConfig() before the function can be called.
Optional Content Groups (OCGs) which are returned by this function should be visible in the user interface of a viewer application. All other OCGs should not be shown by default.

UI nodes are stored in a single linked list. To get the pointer of the root node set the parameter Node to 0. The parameter OutNode will be ignored in this case but it is required otherwise.

The next node of the root is in the NextItem property. If no further node is available the return value will be 0.

Every node can contain one or more child nodes, an optional label, or a reference to an OCG.

### 70.34.421 GetOpacity as Double

**MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:** The function returns the opacity value used to draw the visible appearance of an annotation (requires Acrobat 5 or higher).

See also GetOpacity function in DynaPDF manual.

### 70.34.422 GetOrientation as Integer

**MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:** The function returns the orientation of the current open page if an open page was detected or the default orientation for newly created pages if no open page was detected.

See also GetOrientation function in DynaPDF manual.

### 70.34.423 GetOutputIntent(Index as Integer) as DynaPDFOutputIntentMBS

**MBS DynaPDF Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:** Returns an output intent as well as the properties of it.

**Notes:**

An output intent is an ICC profile that describes the characteristics of the output device. The profile is mostly embedded but certain standards like PDF/X 4p, for example, allow also the usage of non-embedded profiles.

The parameter Index is the array index of the output intent. To determine the number of available intents call GetOutputIntentCount.

Returns nil in case of error.

See also GetOutputIntent function in DynaPDF manual.
70.34.424 GetOutputIntentCount as Integer

**Function:** Returns the number of available output intents.  
See also GetOutputIntentCount function in DynaPDF manual.

70.34.425 GetPage(PageNum as UInt32) as DynaPDFPageMBS

**Function:** Returns the page object for the given page number.  
**Notes:** If you like to open a page for editing, please use editpage function.

70.34.426 GetPageAnnot(index as Integer) as DynaPDFAnnotationMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Retrieves the page annotation with the given index.  
**Deprecated:** This item is deprecated and should no longer be used. You can use GetPageAnnotEx instead.

70.34.427 GetPageAnnotCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Queries the page annotation count.  
See also GetPageAnnotCount function in DynaPDF manual.

70.34.428 GetPageAnnotEx(index as Integer) as DynaPDFAnnotationExMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Queries an extended annotation with the given index.  
See also GetPageAnnotEx function in DynaPDF manual.

70.34.429 GetPageColorSpaces as DynaPDFColorSpaceMBS()

**Function:** Queries for current open page the color spaces used.  
**Notes:**  
Color spaces used for drawing colors (Stroke and Fill Color) and for image color space.  
The list may be empty if for example everything is drawn in standard color spaces like RGB.
70.34. CLASS DYNAPDFMBS

70.34.430 GetPageCoords as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the page coordinate system setting.  
**Notes:** The native coordinate system of the Portable Document Format is bottom up.  
See also GetPageCoords function in DynaPDF manual.

70.34.431 GetPageCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the number of pages of the current PDF file if any.  
See also GetPageCount function in DynaPDF manual.

70.34.432 GetPageField(Index as Integer) as DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the most important properties of a field.  
**Deprecated:** This item is deprecated and should no longer be used. You can use GetPageFieldEx instead.

70.34.433 GetPageFieldCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the number of fields used by a page.  
See also GetPageFieldCount function in DynaPDF manual.

70.34.434 GetPageFieldEx(Index as Integer) as DynaPDFFieldExMBS

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the most important properties of a field.  
**Notes:** The parameter Index must be a valid index to the page’s field array. To enumerate the fields of a page execute the function in a loop from 0 to GetPageFieldCount - 1.  
See also GetPageFieldEx function in DynaPDF manual.

70.34.435 GetPageHeight as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the height of the currently open page.  
See also GetPageHeight function in DynaPDF manual.
70.34.436 GetPageLabel(index as Integer, byref Label as DynapdfPageLabelMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the properties of a page label. See also GetPageLabel function in DynaPDF manual.

70.34.437 GetPageLabelCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the number of page labels defined in the document. See also GetPageLabelCount function in DynaPDF manual.

70.34.438 GetPageLayout as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the page layout that is used when opening the document with Adobe's Acrobat. See also GetPageLayout function in DynaPDF manual.

70.34.439 GetPageMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the page mode that is used when opening the document with Adobe's Acrobat. See also GetPageMode function in DynaPDF manual.

70.34.440 GetPageNum as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the page number of the currently open page. See also GetPageNum function in DynaPDF manual.

70.34.441 GetPageText(stack as DynaPDFStackMBS) as boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function can be used to extract the text of a page or template, or to find a specific text that should be replaced or deleted with the function ReplacePageText() or ReplacePageTextEx(). **Notes:**
InitStack must be called before you use GetPageText.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs. Requires DynaPDF Pro license. See also GetPageText function in DynaPDF manual.

70.34.442 GetPageWidth as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the width of the currently open page. See also GetPageWidth function in DynaPDF manual.

70.34.443 GetPDFVersion as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the minor version of the output PDF file as Integer value. Notes: Zero stand for PDF 1.0, one for PDF 1.1 and so on. See also GetPDFVersion function in DynaPDF manual.

70.34.444 GetPNGVersion as String

70.34.445 GetPrintSettings as DynapdfPrintSettingsMBS

MBS DynaPDF Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Queries the print settings for the current document. Notes: This is a PDF 1.7 extension. See also GetPrintSettings function in DynaPDF manual.

70.34.446 GetResetAction(Handle as UInt32) as DynaPDFResetFormActionMBS

See also GetResetAction function in DynaPDF manual.

70.34.447 GetResolution as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the resolution in DPI (Dots per Inch), in which images are stored by DynaPDF. See also GetResolution function in DynaPDF manual.

70.34.448 GetSaveNewImageFormat as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If false, images are not downscaled if necessary. See also GetSaveNewImageFormat function in DynaPDF manual.

70.34.449 GetSeparationInfo(byref Colorant as string, byref ColorSpace as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the separation info stored in the current open page. See also GetSeparationInfo function in DynaPDF manual.

70.34.450 GetSpaceWidth(FontHandle as Integer, FontSize as Double) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the width of the space character of the font depending on the font size. **Notes:**

If the font contains no space character a default size is used to compute the space width. The parameter FontHandle must be a valid pointer to a PDF font. Such a reference is returned by GetPageText, EnumDocFonts, or by the content parser (see ParseContent).

Returns: If the function succeeds the return value is the space width. If the function fails the return value is zero. This function does not use the exception handling of DynaPDF. No error message is set on failure. See also GetSpaceWidth function in DynaPDF manual.
70.34. **CLASS DYNAPDFMBS**

70.34.451 **GetStrokeColor as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the current stroke color. See also GetStrokeColor function in DynaPDF manual.

70.34.452 **GetSubmitAction(Handle as UInt32) as DynaPDFSubmitFormActionMBS**

MBS DynaPDF Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the properties of a Submit Form Action. **Notes:** Returns nil in case of an error. See also GetSubmitAction function in DynaPDF manual.

70.34.453 **GetSysFontInfo as DynaPDFSysFontMBS**

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the most important properties of a system font. **Example:**

```plaintext
// list all fonts
dim d as new DynaPDFMBS

dim f as DynaPDFSysFontMBS = d.GetSysFontInfo
while f<>nil
Listbox1.AddRow f.FamilyName
f = f.NextFont
wend
```

**Notes:**
The function returns the fonts in the current font search order. That means if the search order is `{ fbtTrueType, fbtOpenType, fbtType1, fbtStdFont }`, for example, then the function returns first all TrueType fonts sorted in ascending order, then all OpenType fonts, and so on. Since standard fonts are no system fonts, these fonts are not returned. See also GetSysFontInfo function in DynaPDF manual. See also:

- 70.34.454 **GetSysFontInfo(PostscriptName as String) as DynaPDFSysFontMBS**
70.34.454 GetSysFontInfo(ReactDOMName as String) as DynaPDFSysFontMBS

**Function:** Queries system font with given postscript name.  
**Example:**

```vbnet
    dim d as new DynaPDFMBS

    // find one font with postscript name
    dim font as DynaPDFSysFontMBS = d.GetSysFontInfo("Verdana-BoldItalic")

    // find all with family name
    dim fonts() as DynaPDFSysFontMBS = d.GetSysFontInfos("Verdana")
```

**Notes:** Returns nil if font is not found.  
See also GetSysFontInfo function in DynaPDF manual.  
See also:

- 70.34.453 GetSysFontInfo as DynaPDFSysFontMBS

70.34.455 GetSysFontInfos as DynaPDFSysFontMBS()

**Function:** Returns an array with the most important properties of system fonts.  
**Example:**

```vbnet
    dim pdf as new MyDynaPDFMBS

    // get all fonts
    dim fonts() as DynaPDFSysFontMBS = pdf.GetSysFontInfos

    // add one row for each font
    for each f as DynaPDFSysFontMBS in fonts
        dim name as string = f.FamilyName

        if f.BaseType = pdf.kfbtOpenType and f.CIDOrdering = "" then
            // This font cannot be used with Unicode
        else
            // Anything is ok
        end if

    next
```
Notes:
The function returns the fonts in the current font search order. That means if the search order is { fbttTrueType, fbttOpenType, fbttType1, fbttStdFont }, for example, then the function returns first all TrueType fonts sorted in ascending order, then all OpenType fonts, and so on. Since standard fonts are no system fonts, these fonts are not returned.
See also:

• 70.34.456 GetSysFontInfos(Name as String) as DynaPDFSysFontMBS() 11847

70.34.456 GetSysFontInfos(Name as String) as DynaPDFSysFontMBS()

MBS DynaPDF Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns an array with the most important properties of system fonts.
Example:

dim d as new DynaPDFMBS

// find one font with postscript name
dim font as DynaPDFSysFontMBS = d.GetSysFontInfo("Verdana-BoldItalic")

// find all with family name
dim fonts() as DynaPDFSysFontMBS = d.GetSysFontInfos("Verdana")

Break // see in debugger

Notes:
Matches fonts by family name, full name or Postscript name.

The function returns the fonts in the current font search order. That means if the search order is { fbttTrueType, fbttOpenType, fbttType1, fbttStdFont }, for example, then the function returns first all TrueType fonts sorted in ascending order, then all OpenType fonts, and so on. Since standard fonts are no system fonts, these fonts are not returned.
See also:

• 70.34.455 GetSysFontInfos as DynaPDFSysFontMBS() 11846

70.34.457 GetTabLen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the tabulator length in spaces that is used to emulate tabulators during text
formatting (see WriteFText() for further information).
See also GetTabLen function in DynaPDF manual.

70.34.458 GetTemplCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the number of templates used by a page. See also GetTemplCount function in DynaPDF manual.

70.34.459 GetTemplHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the handle of the current open template or a negative error code on failure. See also GetTemplHandle function in DynaPDF manual.

70.34.460 GetTemplHeight(Handle as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the height of a template. See also GetTemplHeight function in DynaPDF manual.

70.34.461 GetTemplWidth(Handle as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: A new function in dynapdf which is not documented. See also GetTemplWidth function in DynaPDF manual.

70.34.462 GetTextDrawMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the text draw mode. Se draw modes are described in detail under SetTextDrawMode(). See also GetTextDrawMode function in DynaPDF manual.
70.34.463 GetTextFieldValue(Feature as Integer, byref Value as string, byref DefaultValue as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the text of a field. **Notes:** The strings may be ANSI or Unicode encoded. See also GetTextFieldValue function in DynaPDF manual.

70.34.464 GetTextHeight(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function measures the height of a formatted text block. **Example:**

```vbnet
dim pdf as DynaPDMBS // your PDF instance

dim text as string = "Hello \ul# World"

dim h1 as Integer = pdf.GetTextHeight(pdf.ktaLeft, text)
dim h2 as Integer = pdf.GetTextHeight(pdf.ktaLeft, text)

dim h3 as Integer = pdf.GetTextHeightEx(150, pdf.ktaLeft, text)
dim h4 as Integer = pdf.GetTextHeightEx(150, pdf.ktaLeft, text)

// see different heights in debugger.
```

**Notes:**

GetTextHeight does escape backslashes so no formatting commands are taken from the string. The text parameter is converted to unicode.

70.34.465 GetTextHeightAnsi(Align as Integer, aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function measures the height of a formatted text block. **Notes:**

GetTextHeightAnsi does escape backslashes so no formatting commands are taken from the string. The text parameter is converted to ANSI.
70.34.466  

**GetTextHeightEx(Width as Double, Align as Integer, aText as string)** 
as Double

**Function:** The function measures the height of a formatted text block.
**Example:**

```vba
    dim pdf as new MyDynapdfMBS
    call pdf.CreateNewPDF nil
    call pdf.Append
    call pdf.SetFont("Helvetica", pdf.kfsnone, 12, true, pdf.kcpUnicode)
    dim h as Double = pdf.GetTextHeightEx(100, pdf.ktaLeft, "Hello World. Just a test string.")
    MsgBox "height: " +str(h)
    call pdf.EndPage
    call pdf.CloseFile
```

**Notes:**
GetTextHeightEx does escape backslashes so no formatting commands are taken from the string. The text parameter is converted to unicode.

70.34.467  

**GetTextHeightExAnsi(Width as Double, Align as Integer, aText as string)** 
as Double

**Function:** The function measures the height of a formatted text block.
**Notes:**
GetTextHeightExAnsi does escape backslashes so no formatting commands are taken from the string. The text parameter is converted to ANSI.

70.34.468  

**GetTextRect(byref PosX as Double, byref PosY as Double, byref Width as Double, byref Height as Double)** 
as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The function retrieves the bounding rectangle to output formatted text.  
See also GetTextRect function in DynaPDF manual.
70.34.469 GetTextRise as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the current text rise used to output text. See also GetTextRise function in DynaPDF manual.

70.34.470 GetTextScaling as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the current value of horizontal text scaling. See also GetTextScaling function in DynaPDF manual.

70.34.471 GetTextWidth(aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function calculates the width of a string. **Notes:** The text parameter is converted to unicode. See also GetTextWidth function in DynaPDF manual. See also:

- 70.34.472 GetTextWidth(FontHandle as integer, Text as String, CharSpacing as Single, WordSpacing as Single, TextScale as Single) as double

70.34.472 GetTextWidth(FontHandle as integer, Text as String, CharSpacing as Single, WordSpacing as Single, TextScale as Single) as double

MBS DynaPDF Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates text width. **Notes:**

The function can be used to calculate the width of a sub string that was returned by the content parser (see ParseContent() for further information). The parameter FontHandle must be a valid handle of a font object that was provided in the SetFont event. Note that this function is optimized for speed and does not use the normal error handling of DynaPDF. The parameters CharSpacing, WordSpacing, and TextScale must be taken from the current graphics state.

If the function succeeds the return value is the string width measured in text space. If the parameter FontHandle is set 0 the return value is 0.0. See also GetTextWidth function in DynaPDF manual. See also:

- 70.34.471 GetTextWidth(aText as string) as Double
70.34.473 GetTextWidthAnsi(aText as string) as Double

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function calculates the width of a string. **Notes:** The text parameter is converted to ANSI.

70.34.474 GetTIFFVersion as String

MBS DynaPDF Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries version of tiff library. **Notes:** Should be 3.7.2 on plugins 17.1. Version is always same on Mac, Windows and Linux. If you notice a mismatch, something is wrong!

70.34.475 GetTransparentColor as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the transparent color value that is used for newly inserted images. See also GetTransparentColor function in DynaPDF manual.

70.34.476 GetTrapped as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the trapped key of the document. See also GetTrapped function in DynaPDF manual.

70.34.477 GetURIAction(index as Integer) as DynaPDFURIActionMBS

MBS DynaPDF Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries details for an URI action. **Notes:** Index is from 0 to GetActionCount-1. See also GetURIAction function in DynaPDF manual.
70.34.478 GetUseExactPwd as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If the property UseExactPwd is false, an encrypted PDF file can always be decrypted, if either the open or owner password in the file is an empty string.
See also GetUseExactPwd function in DynaPDF manual.

70.34.479 GetUseGlobalImpFiles as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The property specifies whether import files should be loaded permanent into memory, e.g. to enable splitting of large PDF files.
See also GetUseGlobalImpFiles function in DynaPDF manual.

70.34.480 GetUserRights as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the encryption flags of an imported PDF file or -1 if the imported PDF file was not encrypted.
See also GetUserRights function in DynaPDF manual.

70.34.481 GetUserUnit as single

MBS DynaPDF Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the user unit of the current open page.
**Notes:**
A user unit acts like a scaling factor. The page format and all page coordinates are multiplied with this factor in a viewer application. The default size of a PDF unit is 1/72 inch and the default user unit is 1.0. User units can be useful if the page format would be too large to be expressed in standard PDF units. The largest page format in PDF is limited to 14400 units or 200 inches. This limit can be extended with the user unit.
The largest value that is supported is 75.0 which results in a maximum page format of 15,000 x 15,000 inches or 1,800,000 units.
See also GetUserUnit function in DynaPDF manual.

70.34.482 GetUseStdFonts as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns 1 (true) if the 14 standard fonts are enabled.
70.34.483 GetUsesTransparency(Page as Integer = -1) as Boolean

Function: Checks whether a page or the entire document uses transparency.
Notes:
This is no quick check as GetDocUsesTransparency() applies. The function parses the page or pages to
determine whether transparent objects are really used.
To check whether a specific page uses transparency set the parameter PageNum to the wished page number.
The first page is denoted by 1. To check the entire PDF file set PageNum to -1.

The return value is a bit mask on success (a positive integer value), or a negative error code on failure.
The following flags are defined:

- 0: The page or document uses no transparency.
- 1: The content stream of a page contains transparent objects.
- 2: A page defines the blending color space (Group dictionary).
- 4: A page contains transparent annotations or form fields.

The above values can occur in any combination. To check whether a specific flag was set use a binary and
operator: BitwiseAnd(value, flag)

70.34.484 GetUseSystemFonts as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The property specifies whether the % Windows% /Fonts directory should be added automatically to
the list of available font search paths.
See also GetUseSystemFonts function in DynaPDF manual.

70.34.485 GetUseTransparency as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The property specifies whether images should get a transparent background.
See also GetUseTransparency function in DynaPDF manual.
70.34.486 GetUseVisibleCoords as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The property specifies whether DynaPDF should consider the crop box to calculate to position of an object. See also GetUseVisibleCoords function in DynaPDF manual.

70.34.487 GetViewerPreferences(byref Preference as Integer, byref AddVal as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the viewer preferences specified in the document. See also GetViewerPreferences function in DynaPDF manual.

70.34.488 GetViewport(Page as UInt32, index as Integer) as DynaPDFViewportMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a viewport that is associated with a page. **Notes:**

A viewport is a rectangular region of a page, that specifies usually a measure coordinate system or points in a geospatial coordinate system. Since viewports might overlap, to determine the viewport to use for any point on a page, the viewports in the array shall be examined, starting with the last one and iterating in reverse, and the first one whose BBox entry contains the point shall be chosen. To determine how viewports and measure dictionaries can be used, please have a look into the PDF Reference 2.0, ISO/DIS 32000-2, Section Measurement properties. Returns nil on any error. See also GetViewport function in DynaPDF manual.

70.34.489 GetViewportCount(Page as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of viewports which are associated with a page. **Notes:**

The first page has the page number 1. If the function succeeds the return value is the number of viewports, a number greater or equal zero. If the function fails the return value is a negative error code. The function can only fail if the page number is invalid.
### 70.34.490 GetWMFDefExtent(byref width as Integer, byref height as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the default size which is used to convert non portable WMF files to EMF. See also GetWMFDefExtent function in DynaPDF manual.

### 70.34.491 GetWMFPixelPerInch as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the default pixels per inch of the y-axis which are used to convert portable WMF files to EMF. See also GetWMFPixelPerInch function in DynaPDF manual.

### 70.34.492 GetWordSpacing as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns the current word spacing. See also GetWordSpacing function in DynaPDF manual.

### 70.34.493 GetXFAStream(Handle as UInt32) as DynaPDFXFAStreamMBS

MBS DynaPDF Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function returns an XFA stream. **Notes:**
The parameter Index is the array index. The function GetXFAStreamCount() returns the number of available streams.
An XFA form consist of several XML streams. The stream name must be used to determine which stream was returned.
If the function succeeds the return value is 1. If the function fails the return value is 0.
See also GetXFAStream function in DynaPDF manual.
70.34.494 GetXFAStreamCount as Integer

Function: Returns the number of available XFA streams.
Notes:
XFA streams are available after a PDF file was imported.
If the function succeeds the return value is the number of available XFA streams. If the function fails the return value is a negative error code.
See also GetXFAStreamCount function in DynaPDF manual.

70.34.495 GetZlibVersion as String

Function: Queries version of zlib library.
Notes:
Should be 1.2.7 on plugins 17.x.
Version is always same on Mac, Windows and Linux.
If you notice a mismatch, something is wrong!

70.34.496 GofRGB(RGB as Integer) as Integer

Function: Returns G of a RGB color value.
Example:
```vbs
    dim rgb as Integer = DynaPDFMBS.RGB(1,2,3)
    MsgBox str(DynaPDFMBS.GofRGB(rgb)) // shows 2
```

70.34.497 HaveOpenDoc as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: If an error occurred it is not always clear whether the PDF file was already deleted or if it is still in memory.
See also HaveOpenDoc function in DynaPDF manual.
CHAPTER 70. DYNAPDF

70.34.498 HaveOpenPage as Boolean

**Function:** Whether a page is open.  
See also HaveOpenPage function in DynaPDF manual.

70.34.499 HighlightAnnot(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, ColorValue as Integer, Author as string, Subject as string, Comment as string) as Integer

**Function:** Adds a highlight annotation with unicode text.  
**Notes:** See the dynapdf manual for details.  
See also HighlightAnnot function in DynaPDF manual.

70.34.500 HighlightAnnotAnsi(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, ColorValue as Integer, Author as string, Subject as string, Comment as string) as Integer

**Function:** Adds a highlight annotation with ANSI text.  
**Notes:** See the dynapdf manual for details.

70.34.501 HighlightOnAllPages(SearchText as string, ColorValue as Color, CaseInsensitive as boolean = false) as Integer

**Function:** Highlights text on all pages of the current document.  
**Notes:**  
If CaseInsensitive is true, the case of letters is ignored (also umlauts and accents)  
Searches on all pages in the document.  
Returns number of times the text was found.

70.34.502 HighlightOnCurrentPage(SearchText as string, ColorValue as Color, CaseInsensitive as boolean = false) as Integer

**Function:** Highlights text on all pages of the current page.
Notes:
If CaseInsensitive is true, the case of letters is ignored (also umlauts and accents)
Use EditPage function to open the page before you search on it.
Returns number of times the text was found.

70.34.503 ImportBookmarks as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function imports the outline tree of the currently opened import file (see OpenImportFile() or OpenImportBuffer()).
See also ImportBookmarks function in DynaPDF manual.

70.34.504 ImportCatalogObjects as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function imports global objects of the currently opened import file such as bookmarks, JavaScripts, embedded files, open actions, invisible page templates, rendering intents, the document info entries, and certain other global properties such as the page mode or page layout.
See also ImportCatalogObjects function in DynaPDF manual.

70.34.505 ImportDocInfo as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function imports the document info entries from the currently opened import file.
See also ImportDocInfo function in DynaPDF manual.

70.34.506 ImportEncryptionSettings as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Imports the encryption settings from the currently open import file (see OpenImportFile() or OpenImportBuffer() for further information).
**Notes:**
If the PDF file is not encrypted, the function does nothing. To determine whether the open PDF file is encrypted call GetInIsEncrypted().
The encryption settings should be imported to make sure that the PDF file can be saved with the same settings after it was edited. The user rights should be considered if the file was opened with the open password, also if the password was just an empty string. See GetUserRights() for further information.
If the file was opened with the owner password, then all editing rights should be granted. The PDF file must
be closed with CloseFile() or CloseAndSignFile() for example. Don’t use CloseFileEx() for example since this function would override the encryption settings.

If the file should be saved unencrypted call ResetEncryptionSettings() before closing the file. Return values:
If the function succeeds the return value is true. If the function fails the return value is false.
See also `ImportEncryptionSettings` function in DynaPDF manual.

70.34.507  ImportOCProperties as Boolean

**Function:** Imports the global Optional Content Properties of the current open import file.
**Notes:**
OC properties are normally automatically imported by functions like ImportPDFFile() or when importing a page that contains layers. However, a viewer application must be able to access the OC properties right after the PDF file was opened so that the layer configuration and the layer tree can be loaded (see LoadLayerConfig() and GetOCUINode() for further information).
The function can be called multiple times without causing unwanted side effects.

If the function succeeds the return value is true. If the function fails the return value is false.

70.34.508  ImportPage(PageNum as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The function imports a page of an external PDF file and converts this page to a template.
**Notes:** Requires DynaPDF Pro license.
See also `ImportPage` function in DynaPDF manual.

70.34.509  ImportPageEx(PageNum as Integer, ScaleX as Double = 1.0, ScaleY as Double = 1.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The function imports a PDF page of an external PDF file incl. interactive objects such as annotations, form fields and so on, if any.
**Notes:** Requires DynaPDF Pro license.
See also `ImportPageEx` function in DynaPDF manual.
70.34. **CLASS DYNAPDFMBS**

### 70.34.510 ImportPDFFile(DestPage as Integer, ScaleX as Double = 1.0, ScaleY as Double = 1.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function imports an external PDF file incl. interactive objects such as annotations, bookmarks, form fields and so on.

**Notes:**

Scaling factor is ignored if importing as pages (not templates).

This function returns the page number of the last page imported. It does not return how many pages are imported. If you need number of imported pages, please use returned value minus DestPage.

See also ImportPDFFile function in DynaPDF manual.

### 70.34.511 ImportPDFPage(PageNum as Integer, ScaleX as Double = 1.0, ScaleY as Double = 1.0) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Imports a PDF page.

**Notes:**

If a page is open, this function calls EndPage.

Than it appends a new page, calls ImportPageEx and Endpage.

On success the return value is zero. If the function fails the return value is a negative error code.

### 70.34.512 InitColorManagement(profiles as DynaPDFColorProfilesMBS, DestSpace as Integer, Flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes color management with the given default profiles.

**Notes:**

Pass nil for profiles to disable color management.

DestSpace can be kcsDeviceRGB, kcsDeviceCMYK or kcsDeviceGray.

Flags can be kicmDefault or kicmBPCompensation for:

Black point compensation preserves the black point when converting CMYK colors to different color spaces.

See also InitColorManagement function in DynaPDF manual.
70.34.513 **InitColorManagementEx** (profiles as DynaPDFColorProfilesExMBS, DestSpace as Integer, Flags as Integer) as boolean

**Function:** Initialize color management.

**Notes:**

The function enables color management in the functions RenderPage(), RenderPageEx(), RenderPageToImage(), and RenderPDFFile() exactly like InitColorManagement() but accepts ICC profile buffers instead of file paths. See InitColorManagement() for further information.

To disable color management set the parameter Profiles to nil.

Initializing the color management requires a considerable amount of processing time. It is strongly recommended to use one PDF instance as long as possible so that it must not be initialized again when another PDF file will be rendered.

The color management can be initialized right after the PDF instance was created.

Returns true on succes or false on failure.
See also **InitColorManagementEx** function in DynaPDF manual.

70.34.514 **InitStack** (byref stack as DynaPDFStackMBS) as boolean

**Function:** The function initializes the variable Stack with default values and prepares the editing of a content stream.

**Example:**

```
    dim s as DynaPDFStackMBS
    dim pdf as DynaPDFMBS  // get your DynaPDF object

    call pdf.InitStack(s)
```

**Notes:**

If stack is nil, a new one will be created and stored in the variable.

Return values:

If the function succeeds the return value is true. If the function fails the return value is false.

See also **InitStack** function in DynaPDF manual.
**Class DynaPDFMBS**

**70.34.515 InkAnnot(points() as DynapdfPointMBS, LineWidth as Double, ColorValue as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer**

**Function:** Creates an Ink annotation.

**Notes:**

An ink annotation (PDF 1.3) represents a freehand "scribble" composed of one or more disjoint paths. The parameter Points represents a stroked path. More paths can be added with AddInkList.

The points are interpreted in current user space. Any transformation that was applied on the coordinate system will be taken into account.

The points are connected with bezier curves to achieve a smooth transition between points. If the points should be connected with straight lines, then create a PolyLine annotation instead (see PolyLineAnnot).

This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState() if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.

See also InkAnnot function in DynaPDF manual.

**70.34.516 InkAnnotAnsi(points() as DynapdfPointMBS, LineWidth as Double, ColorValue as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer**

**Function:** Creates an Ink annotation.

**Notes:**

An ink annotation (PDF 1.3) represents a freehand "scribble" composed of one or more disjoint paths. The parameter Points represents a stroked path. More paths can be added with AddInkList.

The points are interpreted in current user space. Any transformation that was applied on the coordinate system will be taken into account.

The points are connected with bezier curves to achieve a smooth transition between points. If the points should be connected with straight lines, then create a PolyLine annotation instead (see PolyLineAnnot).

This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState() if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.
70.34.517  InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as memoryblock) as Integer

Function: The function inserts a Device Independent Bitmap from a file buffer.
Deprecated: This item is deprecated and should no longer be used. You can use InsertImageFromBuffer instead. See also:

- 70.34.518 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string) as Integer

- 70.34.519 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, BufferAddress as Integer) as Integer

70.34.518  InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string) as Integer

Function: The function inserts a Device Independent Bitmap from a file buffer.
Deprecated: This item is deprecated and should no longer be used. You can use InsertImageFromBuffer instead. See also:

- 70.34.517 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as memoryblock) as Integer

- 70.34.519 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, BufferAddress as Integer) as Integer

70.34.519  InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, BufferAddress as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The function inserts a Device Independent Bitmap from a file buffer.
Deprecated: This item is deprecated and should no longer be used. You can use InsertImageFromBuffer instead. See also:

- 70.34.517 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as memoryblock) as Integer

- 70.34.518 InsertBMPFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string) as Integer
70.34.520  InsertBMPFromHandle(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, hBitmap as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function inserts a bitmap in the same way as InsertImage() but accepts a HBITMAP handle as input. See also InsertBMPFromHandle function in DynaPDF manual.

70.34.521  InsertBookmark(title as String, parent as Integer, DestPage as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function inserts a bookmark to the global outline tree of the document. **Notes:** The title parameter is converted to unicode. See also InsertBookmark function in DynaPDF manual.

70.34.522  InsertBookmarkAnsi(title as String, parent as Integer, DestPage as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function inserts a bookmark to the global outline tree of the document. **Notes:** The title parameter is converted to ANSI.

70.34.523  InsertBookmarkEx(title as String, parent as Integer, NamedDest as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function inserts a bookmark to the global outline tree of the document. **Notes:** The title parameter is converted to unicode. See also InsertBookmarkEx function in DynaPDF manual.

70.34.524  InsertBookmarkExAnsi(title as String, parent as Integer, NamedDest as Integer, Open as boolean, AddChildren as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function inserts a bookmark to the global outline tree of the document. **Notes:** The title parameter is converted to ANSI.
**70.34.525** InsertImage(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, File as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The function inserts an image from a file.

**Example:**

```vbnet
dim pdf as DynaPDFMBS
// ... add page
// use transparency from image
call pdf.SetUseTransparency(False)
// max 300 dpi for recompressed images
call pdf.SetResolution(300)
// use JPEG when compressing new pictures
call pdf.SetCompressionFilter(pdf.kcfJPEG)
// pass through JPEGs if possible
call pdf.SetSaveNewImageFormat(False)
// insert image
dim source as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
call pdf.InsertImage(0, 0, 300, 200, source)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use InsertImage instead.

**Notes:**

Please call SetUseTransparency(false) before inserting image if you don’t like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.

**70.34.526** InsertImageEx(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, File as folderitem, index as Integer = 1) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The function inserts an image from a file.

**Example:**

```vbnet
dim pdf as DynaPDFMBS
// ... add page
// use transparency from image
call pdf.SetUseTransparency(False)
// max 300 dpi for recompressed images
call pdf.SetResolution(300)
// use JPEG when compressing new pictures
call pdf.SetCompressionFilter(pdf.kcfJPEG)
// pass through JPEGs if possible
call pdf.SetSaveNewImageFormat(False)
// insert image
dim source as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
call pdf.InsertImage(0, 0, 300, 200, source)
```
dim pdf as DynaPDFMBS

// ... add page

// use transparency from image
call pdf.SetUseTransparency(False)

// max 300 dpi for recompressed images
call pdf.SetResolution(300)

// use JPEG when compressing new pictures
call pdf.SetCompressionFilter(pdf.kcfJPEG)

// pass through JPEGs if possible
call pdf.SetSaveNewImageFormat(False)

// insert image
dim source as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
call pdf.InsertImageEx(0, 0, 300, 200, source)

Notes:
Please call SetUseTransparency(false) before inserting image if you don’t like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
See also InsertImageEx function in DynaPDF manual.

70.34.527 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as Memoryblock, index as Integer = 1) as Integer

Function: The function inserts an image in exactly the same way as InsertImageEx(), but it accepts a file buffer as input.
Notes: Please call SetUseTransparency(false) before inserting image if you don’t like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.
Please pass position and size as doubles. If you use integers, Real Studio will give a compile error.
See also InsertImageFromBuffer function in DynaPDF manual.
See also:

- 70.34.528 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string, index as Integer = 1) as Integer

### 70.34.528 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as string, index as Integer = 1) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function inserts an image in exactly the same way as InsertImageEx(), but it accepts a file buffer as input. **Notes:** Please call SetUseTransparency(false) before inserting image if you don’t like one of the colors (default white) to become transparent.

DynaPDF 3.0 adds support for pictures with alpha channel for this function.

Please pass position and size as doubles. If you use integers, Real Studio will give a compile error.

See also **InsertImageFromBuffer** function in DynaPDF manual.

See also:

- 70.34.527 InsertImageFromBuffer(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Buffer as Memoryblock, index as Integer = 1) as Integer

### 70.34.529 InsertMetafile(FileName as folderitem, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic. **Notes:** Requires DynaPDF Lite license.

See also **InsertMetafile** function in DynaPDF manual.

### 70.34.530 InsertMetafileEx(Buffer as memoryblock, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafile(). **Notes:** Requires DynaPDF Lite license.

See also **InsertMetafileEx** function in DynaPDF manual.

See also:
70.34. **CLASS DYNAPDFMBS**

- 70.34.531 InsertMetafileEx( Buffer as string, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

### 70.34.531 InsertMetafileEx( Buffer as string, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafile().

**Notes:** Requires DynaPDF Lite license.

See also InsertMetafileEx function in DynaPDF manual.

See also:

- 70.34.530 InsertMetafileEx( Buffer as memoryblock, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

### 70.34.532 InsertMetafileExt( FileName as folderitem, View as DynapdfRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafile().

**Notes:** Requires DynaPDF Lite license.

See also InsertMetafileExt function in DynaPDF manual.

### 70.34.533 InsertMetafileExtEx( Buffer as Memoryblock, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafileEx().

**Notes:** Requires DynaPDF Lite license.

See also InsertMetafileExtEx function in DynaPDF manual.

See also:

- 70.34.534 InsertMetafileExtEx( Buffer as String, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean
**70.34.534** InsertMetafileExtEx(Buffer as String, View as DynaPDFRectMBS,PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function converts an Enhanced Meta File (EMF) or Windows Meta File (WMF) to a native PDF vector graphic in the same way as InsertMetafileExt(). **Notes:** Requires DynaPDF Lite license. See also InsertMetafileExtEx function in DynaPDF manual. See also:

* 70.34.533 InsertMetafileExtEx(Buffer as Memoryblock, View as DynaPDFRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

**70.34.535** InsertMetafileFromHandle(hEnhMetafileHandle as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function inserts an Enhanced Metafile exactly in the same way as InsertMetafile() but accepts a HENHMETAFILE handle as input. **Notes:** Requires DynaPDF Lite license. See also InsertMetafileFromHandle function in DynaPDF manual.

**70.34.536** InsertMetafileFromHandleEx(hEnhMetafileHandle as Integer, View as DynapdfRectMBS, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function inserts an Enhanced Metafile exactly in the same way as InsertMetafileExt() but accepts a HENHMETAFILE handle as input. **Notes:** Requires DynaPDF Lite license. See also InsertMetafileFromHandleEx function in DynaPDF manual.

**70.34.537** InsertPicture(pic as picture, mask as picture, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Takes a REALbasic picture with a mask and adds it to the PDF. **Example:**
// insert MBS Logo with round Mask
dim d as new MyDynapdfMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

call d.CreateNewPDF file
call d.Append

// get picture
dim p as Picture = LogoMBS(500)

// get mask
dim m as new Picture(500, 500, 32)
m.Graphics.ForeColor = & c FFFFFF
m.Graphics.FillRect 0,0,500,500
m.Graphics.ForeColor = & c 000000
m.Graphics.FillOval 0,0,500,500

// add image to pdf
call d.InsertPicture(p, m, 50, 150, 500, 500)

call d.EndPage
call d.CloseFile

Notes:
Please call SetUseTransparency(false) before inserting image if you don’t like one of the colors (default white) to become transparent.
This is a convenience function to handle picture with mask. With DynaPDF 3 the mask is used while we used a keycolor in DynaPDF 2.x.

Internally this calls pdfInsertRawImage so check the documentation on this function in the dynapdf manual. Does not work with alpha channel pictures.

PosX and PosY are the destination position and ScaledWidth and ScaledHeight is the new size of the image. See also:

• 70.34.538 InsertPicture(pic as picture,PosX as Double,PosY as Double,ScaleWidth as Double,ScaleHeight as Double) as Integer

70.34.538 InsertPicture(pic as picture,PosX as Double,PosY as Double,ScaleWidth as Double,ScaleHeight as Double) as Integer

Function: Takes a REALbasic picture and adds it to the PDF.
Notes:

Please call SetUseTransparency(false) before inserting image if you don’t like one of the colors (default white) to become transparent.

Internally this calls pdfInsertRawImage so check the documentation on this function in the dynapdf manual. Does not work with alpha channel or masked pictures.

PosX and PosY are the destination position and ScaledWidth and ScaledHeight is the new size of the image. See also:

- 70.34.537 InsertPicture(pic as picture, mask as picture, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

70.34.539 InsertRawImage(Data as String, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

**Function:** The function inserts an image from a raw image buffer which contains no image header.

See also InsertRawImage function in DynaPDF manual.

See also:

- 70.34.540 InsertRawImage(Memory as MemoryBlock, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

70.34.540 InsertRawImage(Memory as MemoryBlock, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The function inserts an image from a raw image buffer which contains no image header.

See also InsertRawImage function in DynaPDF manual.

See also:

- 70.34.539 InsertRawImage(Data as String, BitsPerPixel as Integer, ColorCount as Integer, ImgWidth as Integer, ImgHeight as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Integer
70.34.541 InsertRawImageEx(PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double, Image as DynaPDFRawImageMBS) as Integer

Notes:
See also InsertRawImageEx in dynapdf_help.pdf manual file.
Returns false if image parameter has invalid values.
See also InsertRawImageEx function in DynaPDF manual.

70.34.542 IsBidiText(Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function returns the position of the first bidirectional character that can be found in the string or -1 if no such character can be found.
Notes: The text parameter is converted to unicode.
See also IsBidiText function in DynaPDF manual.

70.34.543 IsColorPage(GrayIsColor as Boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function checks whether a page is a color page or if all graphic elements of the page use black & white only.
Notes: Value is 0 for false, 1 for true or negative for an error.
See also IsColorPage function in DynaPDF manual.

70.34.544 IsEmptyPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function checks whether a page is empty.
Notes: Value is 0 for false, 1 for true or negative for an error.
See also IsEmptyPage function in DynaPDF manual.

70.34.545 IsWrongPwd(errCode as Integer) as boolean

Notes: We have several error codes which result from different password protections and this function considers them all. See also IsWrongPwd function in DynaPDF manual.

### 70.34.546 KofCMYK(CMYK as UInt32) as Integer

**Function:** Returns K of a CMYK color value.  
**Example:**

```vba
dim cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MsgBox str(DynaPDFMBS.KofCMYK(cmyk)) // shows 4
```

Notes: Returns different values on BigEndian and LittleEndian systems.

### 70.34.547 LAB(L as Integer, A as Integer, B as Integer) as Integer

**Function:** Builds a LAB color value based on the given component values.  
**Example:**

```vba
dim lab as Integer = DynaPDFMBS.LAB(1,2,3)
MsgBox hex(lab)
```

### 70.34.548 LineAnnot(x1 as Double, y1 as Double, x2 as Double, y2 as Double, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

**Function:** Adds a line annotation.  
See also LineAnnot function in DynaPDF manual.
**70.34.549** LineAnnotAnsi(x1 as Double, y1 as Double, x2 as Double, y2 as Double, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

**Function:** Adds a line annotation.

**70.34.550** LineTo(PosX as Double, PosY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The function draws a path from the current position up to the specified point.
**Example:**

```pascal
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Line.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// Create a new PDF
 call pdf.CreateNewPDF f

// We want to use top-down coordinates
 call pdf.SetPageCoords pdf.kpcTopDown

// Add a page
 call pdf.Append

// black
 call pdf.SetStrokeColor 0

// line down
 call pdf.MoveTo(100,100)
call pdf.LineTo(200,200)
call pdf.StrokePath

// line up
 call pdf.MoveTo(200,200)
call pdf.LineTo(300,100)
call pdf.StrokePath

// end page
 call pdf.EndPage
```
// Close page
call pdf.CloseFile

// Open PDF
f.Launch

See also LineTo function in DynaPDF manual.

70.34.551  LoadCMap(CMapName as string, Embed as Boolean) as Integer

**Function:** Loads a character map.  
See also LoadCMap function in DynaPDF manual.

70.34.552  LoadError as String

**Function:** The last error message from LoadLibrary call.  
**Example:**

dim f as FolderItem = SpecialFolder.Desktop.Child(“test.dylib”)  
if DynaPDFMBS.LoadLibrary(f) then
    MsgBox “OK”
else
    MsgBox DynaPDFMBS.LoadError
end if

70.34.553  LoadFDFData(FileName as folderitem, Password as string, Flags as Integer) as Boolean

**Function:** Loads PDF form data from the given PDF file.  
See also LoadFDFData function in DynaPDF manual.
70.34.554  LoadFDFDataEx(Buffer as memoryblock, Password as string, Flags as Integer) as Boolean

Function: Loads PDF form data from the given PDF file in the buffer.
See also LoadFDFDataEx function in DynaPDF manual.
See also:
• 70.34.555 LoadFDFDataEx(Buffer as string, Password as string, Flags as Integer) as Boolean 11877

70.34.555  LoadFDFDataEx(Buffer as string, Password as string, Flags as Integer) as Boolean

Function: Loads PDF form data from the given PDF file in the buffer.
See also LoadFDFDataEx function in DynaPDF manual.
See also:
• 70.34.554 LoadFDFDataEx(Buffer as memoryblock, Password as string, Flags as Integer) as Boolean 11877

70.34.556  LoadFont(Buffer as memoryblock, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

Function: The function loads a font from a file buffer.
Notes: Added CollectionIndex parameter in 12.1 plugin version.
See also LoadFont function in DynaPDF manual.
See also:
• 70.34.557 LoadFont(Buffer as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer 11877

70.34.557  LoadFont(Buffer as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

Function: The function loads a font from a file buffer.
Notes: Added CollectionIndex parameter in 12.1 plugin version.
See also LoadFont function in DynaPDF manual.
See also:
• 70.34.556 LoadFont(Buffer as memoryblock, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

70.34.558 LoadFontEx(File as folderitem, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

**Function:** The function loads a font from a font file and activates it in the graphics state if the function was called within an open page or template.

See also `LoadFontEx` function in DynaPDF manual.

See also:

• 70.34.559 LoadFontEx(Filepath as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

70.34.559 LoadFontEx(Filepath as string, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

**Function:** The function loads a font from a font file and activates it in the graphics state if the function was called within an open page or template.

See also `LoadFontEx` function in DynaPDF manual.

See also:

• 70.34.558 LoadFontEx(File as folderitem, Style as Integer, size as Double, Embed as Boolean = false, CodePage as Integer = 2, CollectionIndex as UInt32 = 0) as Integer

70.34.560 LoadLayerConfig(Index as Integer) as Boolean

**Function:** Loads the specified layer configuration.

**Notes:**

A PDF file that contains layers (Optional Content Groups in PDF syntax) contains usually at least a default configuration dictionary. This configuration is loaded by default when the visibility state of a layer or optional content group must be determined, e.g. when rendering a page.

Use this function to load another configuration if available. To determine the number of available configurations call `GetLayerConfigCount()`.

The parameter `Index` can be one of the following:

• -1: Load the default configuration.
• -2: If a configuration was already loaded, leave it unchanged. Load
• the default configuration otherwise.
• 0..Count -1: Load the specified configuration.

If the function succeeds the return value is true. If the function fails the return value is false.

70.34.561  LoadLibrary(File as FolderItem) as boolean

Function: Loads the dynapdf library file.
Example:
MsgBox "Version before: " +DynaPDFMBS.DynaPDFVersion

    dim f as FolderItem = SpecialFolder.Desktop.Child("dynapdf.dylib")
    if DynaPDFMBS.LoadLibrary(f) then
        MsgBox "Version after: " +DynaPDFMBS.DynaPDFVersion
    else
        MsgBox DynaPDFMBS.LoadError
    end if

Notes:
Returns true on success or false on failure.

While the plugin comes with an internal dynapdf library, you can use this method to load a different version of the library.
See also:

• 70.34.562 LoadLibrary(Path as string) as boolean

70.34.562  LoadLibrary(Path as string) as boolean

Function: Loads the dynapdf library file.
Notes:
Returns true on success or false on failure.

While the plugin comes with an internal dynapdf library, you can use this method to load a different version of the library.
See also:

- 70.34.561 LoadLibrary(File as FolderItem) as boolean

### 70.34.563 LockLayer(layer as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unlocks a layer. See also LockLayer function in DynaPDF manual.

### 70.34.564 LofLAB(LAB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns L of a LAB color value. **Example:**

```vbnet
dim lab as Integer = DynaPDFMBS.LAB(1,2,3)
MsgBox str(DynaPDFMBS.LofLAB(lab)) // shows 1
```

### 70.34.565 MofCMYK(CMYK as UInt32) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns M of a CMYK color value. **Example:**

```vbnet
dim cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MsgBox str(DynaPDFMBS.MofCMYK(cmyk)) // shows 2
```

**Notes:** Returns different values on BigEndian and LittleEndian systems.

### 70.34.566 MovePage(source as Integer, dest as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function moves a page to another position in the document. See also MovePage function in DynaPDF manual.
MoveTo(PosX as Double, PosY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The function moves the current position to the point specified by PosX, PosY.

**Example:**

```plaintext
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Line.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

// Create a new PDF
call pdf.CreateNewPDF f

// We want to use top-down coordinates
call pdf.SetPageCoords pdf.kpcTopDown

// Add a page
call pdf.Append

// black
call pdf.SetStrokeColor 0

// line down
call pdf.MoveTo(100,100)
call pdf.LineTo(200,200)
call pdf.StrokePath

// line up
call pdf.MoveTo(200,200)
call pdf.LineTo(300,100)
call pdf.StrokePath

// end page
call pdf.EndPage

// Close page
call pdf.CloseFile

// Open PDF
f.Launch
```

See also MoveTo function in DynaPDF manual.
**70.34.568 MultiplyMatrix(M1 as DynapdfMatrixMBS, M2 as DynapdfMatrixMBS, NewMatrix as DynapdfMatrixMBS) as boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function multiplies two transformation matrices and stores the result in the parameter NewMatrix. **Notes:** You must pass three non nil matrix references into the function. See also MultiplyMatrix function in DynaPDF manual.

**70.34.569 OpenImportBuffer(Buffer as Memoryblock, PwdType as Integer = 0, Password as string = "") as Integer**

MBS DynaPDF Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function reads an external PDF from a file buffer so that it can be imported entirely or parts of it. **Notes:** Requires DynaPDF Lite license. See also OpenImportBuffer function in DynaPDF manual. See also:

- 70.34.570 OpenImportBuffer(Buffer as string, PwdType as Integer = 0, Password as string = "") as Integer

**70.34.570 OpenImportBuffer(Buffer as string, PwdType as Integer = 0, Password as string = "") as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function reads an external PDF from a file buffer so that it can be imported entirely or parts of it. **Notes:** Requires DynaPDF Lite license. See also OpenImportBuffer function in DynaPDF manual. See also:

- 70.34.569 OpenImportBuffer(Buffer as Memoryblock, PwdType as Integer = 0, Password as string = "") as Integer

**70.34.571 OpenImportFile(File as folderitem, PwdType as Integer = 0, Password as string = "") as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function opens an external PDF file so that it can be imported entirely or parts of it. **Notes:** Also check the dynapdf manual on the pdfOpenImportFileA function (pdfOpenImportFileW on Windows). Requires DynaPDF Lite license.
70.34.572 OpenOutputFile(File as folderitem) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function opens the output file into which the PDF file should be written.

**Notes:** Also check the dynapdf manual on the pdfOpenOutputFileA function (pdfOpenOutputFileW on Windows).

See also OpenOutputFile function in DynaPDF manual.

70.34.573 OpenOutputFileEncrypted(File as folderitem, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Opens the output file and sets the encryption parameters.

**Remarks:**

**Notes:**

This function enables in combination with FlushPages the creation of very large encrypted PDF files with minimal memory usage.

The function can be called in a while statement, e.g. to display an open file dialog if the file could not be opened. Once the function succeeds the PDF file can be finished with CloseFile.

If the function succeeds the return value is true. If the function fails the return value is false.

See also OpenOutputFileEncrypted function in DynaPDF manual.

70.34.574 OpenTag(Tag as Integer, Lang as string, AltText as string, Expansion as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Opens a tag.

See also OpenTag function in DynaPDF manual.
70.34.575 OpenTagAnsi(Tag as Integer, Lang as string, AltText as string, Expansion as string) as boolean

70.34.576 Optimize(Flags as Integer, Params as DynaPDFOptimizeParamsMBS = nil) as boolean

70.34.577 PageLink(PosX as Double, PosY as Double, Width as Double, Height as Double, DestPage as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function inserts a page link onto the current open page. See also PageLink function in DynaPDF manual.

70.34.578 PageLink2(PosX as Double, PosY as Double, Width as Double, Height as Double, NamedDest as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function inserts a page link onto the current open page by using a named destination as target. See also PageLink2 function in DynaPDF manual.

70.34.579 PageLink3(PosX as Double, PosY as Double, Width as Double, Height as Double, NamedDest as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function adds a page link to the current open page by using a named destination as target. Notes: The difference in comparison to PageLink2() is that the named destination can be defined as string. This makes it possible to create the link, also if you don’t have the required information to create the named destination at this point. If the named destination does not exist when the file is closed then the link does
nothing. See also, CreateNamedDest().

Return values:
If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.

See also PageLink3 function in DynaPDF manual.

70.34.580 PageLinkEx(PosX as Double, PosY as Double, Width as Double, Height as Double, DestType as Integer, DestPage as Integer, a as Double, b as Double, c as Double, d as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function inserts a page link onto the current open page. See also PageLinkEx function in DynaPDF manual.

70.34.581 PageStatistic(page as Integer = -1) as DynaPDFPageStatisticMBS

MBS DynaPDF Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Queries statistics from a page. Notes: If page is -1 the current open page is used. Else the plugin uses editpage(page) to open the page and run the statistics on that. Returns nil on any error or statistic value.

70.34.582 ParseContent(ParseInterface as DynaPDFParseInterfaceMBS, flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Parses the content of a page. Notes: Requires DynaPDF Pro license. See also ParseContent function in DynaPDF manual.
**70.34.583** ** PlaceImage(ImgHandle as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Images can be used multiple times on different positions and with different sizes. This function places an image onto a page or template that was already inserted beforehand by an image function. See also PlaceImage function in DynaPDF manual.

**70.34.584** ** PlaceSigFieldValidateIcon(SigField as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function places the validation icon in a signature field to the wished position. See also PlaceSigFieldValidateIcon function in DynaPDF manual.

**70.34.585** ** PlaceTemplate(TmplHandle as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function places a template onto a page, another open template, or pattern. See also PlaceTemplate function in DynaPDF manual.

**70.34.586** ** PlaceTemplateEx(TmplHandle as Integer, PosX as Double, PosY as Double, ScaleWidth as Double, ScaleHeight as Double) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Places a template. See also PlaceTemplateEx function in DynaPDF manual.

**70.34.587** ** PolygonAnnot(Vertices() as DynapdfPointMBS, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer**

MBS DynaPDF Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function creates a Polygon Annotation. **Notes:** The vertices are connected by straight lines. The path is always closed before it will be drawn. It is not required to close the path explicitly. At least two vertices must be provided.
The coordinates of the vertices are interpreted in current user space. Any transformation that was applied on the coordinate system will be taken into account. The stroke or fill color can be set to the special constant kNO_COLOR to fill or stroke the polygon. It is not allowed to set both colors to kNO_COLOR since this would result in an invisible annotation. This annotation type has an associated PopUp annotation that displays the string Content in a floating window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code. 

See also PolygonAnnot function in DynaPDF manual.

70.34.588 PolygonAnnotAnsi(Vertices() as DynapdfPointMBS, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer
70.34.589 PolyLineAnnot(Vertices() as DynapdfPointMBS, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

Function: The function creates a PolyLine Annotation.

Notes:

The vertices are connected by straight lines. At least two vertices must be provided.
The coordinates of the vertices are interpreted in current user space. Any transformation that was applied
on the coordinate system will be taken into account.
The parameter FillColor is only used if the line end style of the start or end point has an interior that can
be filled. The special constant kNO_COLOR represents a transparent interior.
The stroke color is required and must not be set to kNO_COLOR.

This annotation type has an associated PopUp annotation that displays the string Content in a floating
window. The initial window state of the associated PopUp annotation is closed by default but the state can
be changed with SetAnnotOpenState if necessary.
The parameter LineWidth must be in the range 0 through 12 units. Values outside the valid range will be
adjusted to the nearest allowed value. A zero line width produces a 1 pixel wide line.
The line end styles can be changed if necessary with SetAnnotLineEndStyle.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the
function fails the return value is a negative error code.
See also PolyLineAnnot function in DynaPDF manual.

70.34.590 PolyLineAnnotAnsi(Vertices() as DynapdfPointMBS, LineWidth as Double, StartLineEndStyle as Integer, EndLineEndStyle as Integer, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Content as string) as Integer

Function: The function creates a PolyLine Annotation.

Notes:

The vertices are connected by straight lines. At least two vertices must be provided.
The coordinates of the vertices are interpreted in current user space. Any transformation that was applied
on the coordinate system will be taken into account.
The parameter FillColor is only used if the line end style of the start or end point has an interior that can
be filled. The special constant kNO_COLOR represents a transparent interior.
The stroke color is required and must not be set to kNO_COLOR.

This annotation type has an associated PopUp annotation that displays the string Content in a floating
window. The initial window state of the associated PopUp annotation is closed by default but the state can be changed with SetAnnotOpenState if necessary.
The parameter LineWidth must be in the range 0 through 12 units. Values outside the valid range will be adjusted to the nearest allowed value. A zero line width produces a 1 pixel wide line.
The line end styles can be changed if necessary with SetAnnotLineEndStyle.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.

70.34.591 PrintGetDevMode as String

Function: Queries last print dev mode.
Notes:
You can store this in a preferences file for next printing.
This is same data structure as in WindowsDeviceModeMBS class.

70.34.592 PrintGetDevNames(byref Driver as String, byref Device as String, byref Output as String, byref DefaultFlag as Integer) as Boolean

Function: Queries printer device names.
Notes:
Driver: File name (without the extension) of the device driver.
Device: Name of the device.
Output: Device name for the physical output medium (output port).
DefaultFlag: 1 if the selected printer is the default one.

Returns true on success or false on failure.

70.34.593 PrintPDFFile(TmpDir as FolderItem, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Prints current PDF file.
Notes:
Returns true on success and false on failure.
Flags can be a combination of the flag values kpffPrintAsImage, kpffDefault, kpffColor, kpffAutoRotateAndCenter and kpff1Bit.
Margin can be nil. If not nil, specifies the margins to use.
DCHandle is the handle of the graphics context.

If you only want to print a selection of pages, please only import those pages via ImportPDFPage function. Or use DeletePage to remove the pages you don’t want to print.

Does not work with a graphics handle from Xojo 2016r4 and newer due to switch to DirectDraw APIs. Or in other words, you can use a HDC handle from graphics class in Xojo 2016r3 and older to print PDF. See also PrintPDFFile function in DynaPDF manual.
See also:

- 70.34.594 PrintPDFFile(TmpDir as FolderItem, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

70.34.594 PrintPDFFile(TmpDir as FolderItem, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

Function: Prints current PDF file.
Notes:
Returns true on success and false on failure.
Flags can be a combination of the flag values kpffPrintAsImage, kpffDefault, kpffColor, kpffAutoRotateAndCenter and kpff1Bit.
Margin can be nil. If not nil, specifies the margins to use.
PrinterName is the name of the printer to use. The plugin will open the printer and print PDF there with default settings.

If you only want to print a selection of pages, please only import those pages via ImportPDFPage function. Or use DeletePage to remove the pages you don’t want to print.
See also PrintPDFFile function in DynaPDF manual.
See also:

- 70.34.593 PrintPDFFile(TmpDir as FolderItem, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean
70.34.595  PrintPDFFileWithDialog(TmpDir as FolderItem, DocName as string, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil, parentWindow as Window = nil) as Boolean

Function: Prints current PDF file with dialog.

Notes:

Returns true on success and false on failure.
Flags can be a combination of the flag values kpffPrintAsImage, kpffDefault, kpffColor, kpffAutoRotateAndCenter and kpff1Bit.
Margin can be nil. If not nil, specifies the margins to use.
Shows print dialog and allows user to set printer.

If you only want to print a selection of pages, please only import those pages via ImportPDFPage function. Or use DeletePage to remove the pages you don’t want to print.

After this call you can use PrintGetDevNames and PrintGetDevMode to get printer settings.
And before this call you can use PrintSetDevMode and PrintSetDevNames to restore printer settings.

70.34.596  PrintPDFPage(PageNum as Integer, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

Function: Prints a page.

Notes: See PrintPDFFile for details and options.

See also:

- 70.34.597 PrintPDFPage(PageNum as Integer, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

70.34.597  PrintPDFPage(PageNum as Integer, DocName as string, PrinterName as String, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

Function: Prints a page.

Notes: See PrintPDFFile for details and options.

See also:
70.34.596 PrintPDFPage(PageNum as Integer, DocName as string, DCHandle as integer, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil) as Boolean

70.34.598 PrintPDFPageWithDialog(PageNum as Integer, DocName as string, Flags as Integer = 0, Margin as DynaPDFRectMBS = nil, PrintParams as DynaPDFPrintParamsMBS = nil, parentWindow as Window = nil) as Boolean

70.34.599 PrintSetDevMode(data as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. Function: Set last print dev mode. Notes: Returns true on success. This is same data structure as in WindowsDeviceModeMBS class.

70.34.600 PrintSetDevNames(Driver as String, Device as String, Output as String, DefaultFlag as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. Function: Sets printer device names. Notes: Driver: File name (without the extension) of the device driver. Device: Name of the device. Output: Device name for the physical output medium (output port). DefaultFlag: 1 if the selected printer is the default one. Returns true on success or false on failure.
70.34.601  ReadImageFormat(FileName as folderitem, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the most important properties of an image file.

70.34.602  ReadImageFormat2(FileName as folderitem, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the most important properties of an image file.

**Example:**

```pascal
// read image format and resolution and calculate physical size
dim bits as integer
dim useZip as Boolean
dim resX as integer = 0
dim resY as integer = 0
dim physHeight as integer
dim physWidth as integer
dim w as integer
dim h as integer

call pdf.ReadImageFormat2(Source, 1, w, h, bits, useZip)
call pdf.ReadImageResolution(Source, 1, resX, resY)

if (resX <> resY and resX > 0 and resY > 0) then
  if (resX > resY) then
    physWidth = w
    physHeight = h \ (resX \ resY)
  else
    physWidth = w \ (resY \ resX)
    physHeight = h
  end if
else
  physHeight = h
  physWidth = w
end if
```

See also ReadImageFormat2 function in DynaPDF manual.
70.34.603  ReadImageFormatEx(hBitmap as Integer, byref Width as Integer, 
byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as 
Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the most important properties of a memory bitmap. See also ReadImageFormatEx function in DynaPDF manual.

70.34.604  ReadImageFormatFromBuffer(Buffer as memoryblock, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the most important properties of an image in the same way as ReadImageFormat2(), but accepts an image buffer as input. See also ReadImageFormatFromBuffer function in DynaPDF manual. See also:

- 70.34.605 ReadImageFormatFromBuffer(Buffer as string, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

70.34.605  ReadImageFormatFromBuffer(Buffer as string, Index as Integer, byref 
Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, 
byref UseZip as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the most important properties of an image in the same way as ReadImageFormat2(), but accepts an image buffer as input. See also ReadImageFormatFromBuffer function in DynaPDF manual. See also:

- 70.34.604 ReadImageFormatFromBuffer(Buffer as memoryblock, Index as Integer, byref Width as Integer, byref Height as Integer, byref BitsPerPixel as Integer, byref UseZip as Boolean) as Boolean

70.34.606  ReadImageResolution(FileName as folderitem, Index as Integer, byref 
ResX as Integer, byref ResY as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function retrieves the horizontal and vertical resolution of an image file. **Example:**
// read image format and resolution and calculate physical size

dim bits as integer

dim useZip as Boolean

dim resX as integer = 0

dim resY as integer = 0

dim physHeight as integer

dim physWidth as integer

dim w as integer

dim h as integer

call pdf.ReadImageFormat2(Source, 1, w, h, bits, useZip)
call pdf.ReadImageResolution(Source, 1, resX, resY)

if (resX < resY and resX > 0 and resY > 0) then
  if (resX > resY) then
    physWidth = w
    physHeight = h \ (resX \ resY)
  else
    physWidth = w \ (resY \ resX)
  end if
else
  physHeight = h
  physWidth = w
end if

See also ReadImageResolution function in DynaPDF manual.

70.34.607 ReadImageResolutionEx(Buffer as Memoryblock, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean

Function: The function retrieves the horizontal and vertical resolution of an image file in the same way as ReadImageResolution() but accepts an image buffer as input.
See also ReadImageResolutionEx function in DynaPDF manual. 
See also:

• 70.34.608 ReadImageResolutionEx(Buffer as string, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean
70.34.608 ReadImageResolutionEx(Buffer as string, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** The function retrieves the horizontal and vertical resolution of an image file in the same way as ReadImageResolution() but accepts an image buffer as input.
See also ReadImageResolutionEx function in DynaPDF manual.
See also:

- 70.34.607 ReadImageResolutionEx(Buffer as Memoryblock, Index as Integer, byref ResX as Integer, byref ResY as Integer) as Boolean

70.34.609 Rectangle(PosX as Double, PosY as Double, Width as Double, Height as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** This function draws a rectangle.
See also Rectangle function in DynaPDF manual.

70.34.610 ReEncryptPDF(File as folderitem, PwdType as Integer, InPwd as string, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** This function encrypts an already encrypted or unencrypted PDF file.
**Notes:** Also check the dynapdf manual on the pdfReEncryptPDF function (pdfReEncryptPDFW on Windows).
See also ReEncryptPDF function in DynaPDF manual.

70.34.611 ReEncryptPDFAnsi(Path as string, PwdType as Integer, InPwd as string, OpenPwd as string, OwnerPwd as string, KeyLen as Integer, Restrict as Integer) as Integer

**Function:** This function encrypts an already encrypted or unencrypted PDF file.
**Notes:** Same as ReEncryptPDF, but takes path name in Windows ANSI encoding.
70.34. **CLASS DYNAPDFMBS**

### 70.34.612 RenamedSpotColor(Colorant as string, NewName as string) as Integer

**Function:** Renames a colorant.

**Example:**

```vbnet
// your instance
dim pdf as DynaPDFMBS

// rename the color
call pdf.RenameSpotColor("Magenta", "Magenta2")
```

**Notes:** Strings are converted to UTF-8.
See also **RenameSpotColor** function in DynaPDF manual.

### 70.34.613 RenderAnnotOrField(Handle as UInt32, IsAnnot as boolean, State as Integer, Matrix as DynapdfMatrixMBS, Flags as Integer, PixFmt as Integer, Filter as Integer, byref Out as DynaPDFBitmapMBS) as Integer

**Function:** The function renders an annotation or field independent of the page.

**Notes:**
Please check dynapdf_help.pdf for details on RenderAnnotOrField function.
Plugin will fill out parameter only if result is zero.
Requires DynaPDF Pro license.
See also **RenderAnnotOrField** function in DynaPDF manual.

### 70.34.614 RenderPagePicture(PageNum as Integer) as picture

**Function:** Renders a picture for the page with the given page number.

**Example:**

```vbnet
dim pdf as new MyDynapdfMBS

// For this example you can use a Pro or Enterprise License
pdf.SetLicenseKey "Pro"

// create in memory
call pdf.CreateNewPDF nil
```
// set import flags
call pdf.SetImportFlags pdf.kifImportAsPage

// open the PDF file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
call pdf.OpenImportFile(f, 0, "")

// import all the pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

// and render first page
dim out as Picture = pdf.RenderPagePicture(1)

// display in window
Backdrop = out

Notes:

Please note that for most cases RenderPageToImage and RenderPDFFile are better choices for rendering. Especially if you plan to compress images later anyway. And you avoid trouble with color matching. For this function to work correct you have to initialize DynaPDF with right color space for screen (Generic RGB on Mac and screen profile for Windows).

The picture size is set to the Cropbox. If no crop box is defined, it uses the media box.

Returns nil on any error.

If you render a lot of pages from the same PDF, consider using DynaPDFRasterizerMBS class as it’s faster when you reuse the rasterizer.

Currently not available for Linux Desktop apps.
Requires DynaPDF Pro license.
See also:

- 70.34.615 RenderPagePicture(PageNum as Integer, Width as Integer, Height as Integer, DefScale as Integer = 2, matrix as DynapdfMatrixMBS = nil) as picture

70.34.615 RenderPagePicture(PageNum as Integer, Width as Integer, Height as Integer, DefScale as Integer = 2, matrix as DynapdfMatrixMBS = nil) as picture

Function: Renders a picture for the page with the given page number.
Example:

```vba
dim pdf as new MyDynapdMBS

// For this example you can use a Pro or Enterprise License
df.SetLicenseKey "Pro"

// create in memory
call pdf.CreateNewPDF nil

// set import flags
call pdf.SetImportFlags pdf.kifImportAsPage

// open the PDF file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
call pdf.OpenImportFile(f, 0, "")

// import all the pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

// and render first page with window size
dim out as Picture = pdf.RenderPagePicture(1, Width, Height)

// display in window
Backdrop = out
```

Notes:

Please note that for most cases RenderPageToImage and RenderPDFFile are better choices for rendering. Especially if you plan to compress images later anyway. And you avoid trouble with color matching. For this function to work correct you have to initialize DynaPDF with right color space for screen (Generic RGB on Mac and screen profile for Windows).

The picture is created with the given size. The PDF page is scaled to fit size. You can use the constants kpsFitBest, kpsFitHeight or kpsFitWidth for the DefScale parameter. The matrix allows you to move, rotate or scale the PDF inside the picture.

Returns nil on any error.

If you render a lot of pages from the same PDF, consider using DynaPDFRasterizerMBS class as it’s faster when you reuse the rasterizer.

Currently not available for Linux Desktop apps.
Requires DynaPDF Pro license.
See also:
70.34.616  RenderPageToImage(PageNumber as UInt32, OutFile as folderitem, Resolution as UInt32, Width as UInt32, Height as UInt32, Flags as(UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

**Function:** The function renders a PDF page into an image.

**Example:**

```vba
dim pdf as new MyDynapdfMBS ' your DynaPDF subclass with Error event filled

' where to get PDF page
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

' where to write
dim t as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

pdf.SetLicenseKey "Pro" ' For this example you can use a Pro or Enterprise License

call pdf.CreateNewPDF nil
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)

' open file
call pdf.OpenImportFile(f,0,"")

' add page
call pdf.Append

' import the page
call pdf.ImportPageEx(1,1.0,1.0)
call pdf.EndPage

' render the page
call pdf.RenderPageToImage(1, t, 72, ImageView1.Width, ImageView1.Height, DynaPDFRasterImageMBS.krfDefault, DynaPDFRasterizerMBS.kpxfRGB, DynaPDFMBS.kcfJPEG, DynaPDFMBS.kifmJPEG)
```

**Notes:**

PixFmt: pass kpxf* constants like DynaPDFRasterizerMBS.kpxfRGB.
Filter: Pass kcf* constants like DynaPDFMBS.kcfJPEG.
Format: pass kifm* constants like DynaPDFMBS.kifmJPEG.

The page that should be rendered must be closed (Append() or EditPage()) open a page and EndPage()
If the parameter OutFile is set to nil the image is created in memory. In this case call GetImageBuffer() to retrieve the image buffer and finally FreeImageBuffer() to release it.

The output image size can be calculated in different ways:

- If Resolution is >0 the image width and height is calculated according to the specified resolution. On a 32 bit machine it is possible to render pages in up to 1200 DPI depending on the page format. Larger resolutions require special techniques like banding to restrict the memory usage. However, no such feature is available in DynaPDF.

- If Width >0 and if Height == 0 the image height is calculated according to the given width to archive an image with exact proportions.

- If Width == 0 and if Height >0 then image width is calculated according to the given height to archive an image with exact proportions.

- If Width >0 and if Height >0 the image is scaled to the width and height.

The pixel format and the output image format must be compatible. Because TIFF is the only image format that supports different compression filters, the parameter Filter will be ignored for all other output formats. If the function succeeds the return value is true. If the function fails the return value is false.

Requires DynaPDF Pro license.
• If Resolution is >0 the image width and height is calculated according to the specified resolution. On a 32 bit machine it is possible to render pages in up to 1200 DPI depending on the page format. Larger resolutions require special techniques like banding to restrict the memory usage. However, no such feature is available in DynaPDF.

• If Width >0 and if Height == 0 the image height is calculated according to the given width to archive an image with exact proportions.

• If Width == 0 and if Height >0 then image width is calculated according to the given height to archive an image with exact proportions.

The pixel format and the output image format must be compatible. Because TIFF is the only image format that supports different compression filters, the parameter Filter will be ignored for all other output formats. If the function succeeds the return value is true. If the function fails the return value is false.

Must be called inside a Xojo (Real Studio) thread so time yields to main thread and you can keep the GUI running.
Requires DynaPDF Pro license.

70.34.618 RenderPageToPicture(PageNum as Integer, pic as picture, DefScale as Integer = 2, matrix as DynapdfMatrixMBS = nil) as boolean

Function: Renders the page into the given picture.
Example:

dim pdf as new MyDynapdfMBS

    // For this example you can use a Pro or Enterprise License
    pdf.SetLicenseKey "Pro"

    // create in memory
    call pdf.CreateNewPDF nil

    // set import flags
    call pdf.SetImportFlags pdf.kifImportAsPage

    // open the PDF file
    dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
    call pdf.OpenImportFile(f, 0, "")

    // import all the pages
    call pdf.ImportPDFFile(1, 1.0, 1.0)
// create picture
    dim out as new Picture(800, 600, 32)

// render first page in the existing picture
    call pdf.RenderPageToPicture(1, out)

// display in window
    Backdrop = out

Notes:

Please note that for most cases RenderPageToImage and RenderPDFFile are better choices for rendering. Especially if you plan to compress images later anyway. And you avoid trouble with color matching. For this function to work correct you have to initialize DynaPDF with right color space for screen (Generic RGB on Mac and screen profile for Windows).

This method draws into an existing picture. The PDF page is scaled to fit size. You can use the constants kpsFitBest, kpsFitHeight or kpsFitWidth for the DefScale parameter. The matrix allows you to move, rotate or scale the PDF inside the picture.

Returns nil on any error.

This does not work on Linux desktop targets as the plugin can’t write into a picture there.

If you render a lot of pages from the same PDF, consider using DynaPDFRasterizerMBS class as it’s faster when you reuse the rasterizer.

Requires DynaPDF Pro license.

70.34.619 RenderPDFFile(OutFile as folderitem, Resolution as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

Function: The function renders all PDF pages which are currently in memory and stores the result in a proprietary image format.

Example:

dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim pdf as new MyDynapdfMBS

call pdf.CreateNewPDF nil
call pdf.OpenImportFile(file, 0, "")
call pdf.ImportPDFFile(1, 1.0, 1.0)

// create a TIFF file:

dim outfile as FolderItem = SpecialFolder.Desktop.Child("test.tif")

dim Flags as Integer = DynaPDFRasterImageMBS.krfDefault
dim PixFmt as Integer = DynaPDFRasterizerMBS.kpxfRGB
dim Format as Integer = DynaPDFMBS.kifmTIFF // use kifm* constants
dim Filter as Integer = DynaPDFMBS.kcfLZW // pick a compression scheme for the file format

call pdf.RenderPDFFile(outfile, 300, Flags, PixFmt, Filter, Format)

// create a folder of JPEG file:

dim outfolder as FolderItem = SpecialFolder.Desktop.Child("test files")
outfolder.CreateAsFolder

Flags = DynaPDFRasterImageMBS.krfDefault
PixFmt = DynaPDFRasterizerMBS.kpxfRGB
Format = DynaPDFMBS.kifmJPEG // use kifm* constants
Filter = DynaPDFMBS.kcfJPEG

call pdf.RenderPDFFile(outfolder, 300, Flags, PixFmt, Filter, Format)

**Notes:** Also check the dynapdf manual on the pdfRenderPDFFileA function (pdfRenderPDFFileW on Windows).

### 70.34.620  RenderPDFFileEx(OutFile as folderitem, Resolution as UInt32, Width as Integer, Height as Integer, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

**Function:** Renders all PDF pages which are currently in memory and stores the result in a proprietary image format.  
**Notes:**  
The pages in memory could be imported from one or more external PDF files, e.g. with ImportPDFFile(), created with DynaPDF functions, or a combination of both.

The parameter OutFile can be a path to an existing directory or the file name of the output image. The latter type can be used with TIFF images because this format supports multi-page output. When a file path is used with a single page image format only the first page will be rendered.
The function checks whether the path is a directory or a file name. The function can render pages in a specific resolution, or scale them to a given width or height.

Depending on which parameters are set the image size is calculated as follows:

- Resolution >0 and Width == 0 and Height == 0: Pages are rendered according to the given resolution. Note that PDF pages can be very large. Therefore, it is maybe not possible to render all pages in the wished resolution.

- Resolution >0 and Width <0 and or Height <0: Pages are rendered according to the given resolution. Negative values of Width and Height are interpreted as maximum width or height if Resolution is greater zero. Since PDF pages can be very large, it is recommended to set the maximum width and height to a value that is low enough so that no out of memory exception occurs, e.g. 5000 x 5000 pixels.

- Resolution == 0 and Width >0 or Height >0: Pages are scaled to the given Width or Height. If Width and Height are greater zero then pages are scaled to that size independent of the original page format (not recommended). It is usually best to set the width or height to zero so that the function can calculate the missing value to preserve the aspect ratio.

On a 32 bit system it is possible to render PDF pages in RGB with up to around 1200 DPI, depending on the page format and available memory. The resolution of gray images can be higher but the encoder must be able to handle such large images. The PNG and bitmap encoders accept images in almost arbitrary resolutions but all other encoders can fail when the resolution is larger than about 2000 DPI.

The function calls the progress events. Returns true on success or false on failure.

70.34.621 RenderPDFFileExMT(OutFile as folderitem, Resolution as UInt32, Width as Integer, Height as Integer, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Renders all PDF pages which are currently in memory and stores the result in a proprietary image format.

**Notes:**

The pages in memory could be imported from one or more external PDF files, e.g. with ImportPDFFile(), created with DynaPDF functions, or a combination of both.

The parameter OutFile can be a path to an existing directory or the file name of the output image. The latter type can be used with TIFF images because this format supports multi-page output. When a file path is used with a single page image format only the first page will be rendered.
The function checks whether the path is a directory or a file name.
The function can render pages in a specific resolution, or scale them to a given width or height.

Depending on which parameters are set the image size is calculated as follows:

- **Resolution >0 and Width == 0 and Height == 0:** Pages are rendered according to the given resolution. Note that PDF pages can be very large. Therefore, it is maybe not possible to render all pages in the wished resolution.

- **Resolution >0 and Width <0 and or Height <0:** Pages are rendered according to the given resolution. Negative values of Width and Height are interpreted as maximum width or height if Resolution is greater zero. Since PDF pages can be very large, it is recommended to set the maximum width and height to a value that is low enough so that no out of memory exception occurs, e.g. 5000 x 5000 pixels.

- **Resolution == 0 and Width >0 or Height >0:** Pages are scaled to the given Width or Height. If Width and Height are greater zero then pages are scaled to that size independent of the original page format (not recommended). It is usually best to set the width or height to zero so that the function can calculate the missing value to preserve the aspect ratio.

On a 32 bit system it is possible to render PDF pages in RGB with up to around 1200 DPI, depending on the page format and available memory. The resolution of gray images can be higher but the encoder must be able to handle such large images. The PNG and bitmap encoders accept images in almost arbitrary resolutions but all other encoders can fail when the resolution is larger than about 2000 DPI.

The function calls the progress events.
Returns true on success or false on failure.

Same as RenderPDFFile, but multithreaded.

Must be called inside a Xojo (Real Studio) thread so time yields to main thread and you can keep the GUI running.
Requires DynaPDF Pro license.

**70.34.622 RenderPDFFileMT(OutFile as folderitem, Resolution as UInt32, Flags as UInt32, PixFmt as UInt32, Filter as UInt32, Format as UInt32) as boolean**

**Function:** The function renders all PDF pages which are currently in memory and stores the result in a proprietary image format.

**Notes:**
70.34. CLASS DYNAPDFMBS

Same as RenderPDFFile, but multithreaded.
Also check the dynapdf manual on the pdfRenderPDFFileA function (pdfRenderPDFFileW on Windows).

Must be called inside a Xojo (Real Studio) thread so time yields to main thread and you can keep the GUI running.
Requires DynaPDF Pro license.

70.34.623  ReOpenImportFile(Handle as Integer) as boolean

Function: The function re-opens a PDF file so that further contents can be imported from it.
Notes:
The parameter Handle must be a valid file handle that OpenImportFile() or OpenImportBuffer() returned.
When the file is no longer needed close the parser instance with CloseImportFileEx().
If the function succeeds the return value is true. If the function fails the return value is false.
See also ReOpenImportFile function in DynaPDF manual.

70.34.624  ReplaceFont(PDFFontRef as Integer, Name as string, Style as integer = 0, NameIsFamilyName as boolean = true) as integer

Function: Replaces a PDF font with another one.
Notes:
The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

On Linux or Unix system fonts must be loaded with AddFontSearchPath() before this function can be called. This should be done before the first PDF file is imported.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFont function in DynaPDF manual.
70.34.625 ReplaceFontAnsi(PDFFontRef as Integer, Name as string, Style as integer = 0, NameIsFamilyName as boolean = true) as integer

Function: Replaces a PDF font with another one.
Notes:
The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

On Linux or Unix system fonts must be loaded with AddFontSearchPath() before this function can be called. This should be done before the first PDF file is imported.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.

70.34.626 ReplaceFontEx(PDFFontRef as Integer, FontFile as FolderItem, Embed as boolean = true) as integer

Function: Replaces a PDF font with another one.
Notes:
The font file can be loaded directly. It is not required to install the font on the system. The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.
See also ReplaceFontEx function in DynaPDF manual.
See also:

• 70.34.627 ReplaceFontEx(PDFFontRef as Integer, FontFilePath as string, Embed as boolean = true) as integer

70.34.627 ReplaceFontEx(PDFFontRef as Integer, FontFilePath as string, Embed as boolean = true) as integer

Function: Replaces a PDF font with another one.
Notes:
The font file can be loaded directly. It is not required to install the font on the system. The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.

See also ReplaceFontEx function in DynaPDF manual.

See also:

- 70.34.626 ReplaceFontEx(PDFFontRef as Integer, FontFile as FolderItem, Embed as boolean = true) as integer

70.34.628 ReplaceFontExAnsi(PDFFontRef as Integer, FontFilePath as string, Embed as boolean = true) as integer

Function: Replaces a PDF font with another one.

Notes:

The font file can be loaded directly. It is not required to install the font on the system. The function can be called in the OnFontNotFound event of the function CheckConformance(). The return value of the event should be the return value of this function. The parameter PDFFontRef is a parameter of the event. The font reference is required and must be passed unchanged to the function.

If the function succeeds the return value is zero. If the function fails the return value is a negative error code.

70.34.629 ReplaceICCProfile(ColorSpace as Integer, ICCFile as folderitem) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: This function is used to dynamically create ICC based color spaces within the callback function OnReplaceICCProfile of CheckConformance().

Notes: Also check the dynapdf manual on the pdfReplaceICCProfileA function (pdfReplaceICCProfileW on Windows).

See also ReplaceICCProfile function in DynaPDF manual.

70.34.630 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as MemoryBlock) as integer

Function: Replaces an ICC profile exactly in the same way as ReplaceICCProfile() but accepts a file buffer
as input.

**Notes:** If the function succeeds the return value is zero. If the function fails the return value is a negative error code.

See also:

- 70.34.631 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as String) as integer 11910

### 70.34.631 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as String) as integer

**Function:** Replaces an ICC profile exactly in the same way as ReplaceICCProfile() but accepts a file buffer as input.

**Notes:** If the function succeeds the return value is zero. If the function fails the return value is a negative error code.

See also:

- 70.34.630 ReplaceICCProfileEx(ColorSpace as integer, ICCFileData as MemoryBlock) as integer 11909

### 70.34.632 ReplaceImage(ImageToReplace as DynaPDFImageMBS, ImageFile as FolderItem, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean

**Function:** Replaces an image with another image.

**Notes:**

The parameter ImageToReplace must be a valid pointer of an image object which is retrieved by functions like GetImageObj() or ParseContent().

The resolution, aspect ratio, color space and so on can be freely chosen. However, note that this function does not change the output position or size. If the aspect ratio of the new image is different, then it will be stretched or shrunk to fit into the output rectangle.

The parameter ColorSpace specifies the destination color space into which the image should be converted or saved, if the image is already defined in that color space. CSHandle must be the handle of that color space if a non-device space is used. The will be ignored for devices spaces.

The function works in the very same way as InsertImageEx() with the following differences:

The color of an image mask cannot be set or changed because this would require changes on the content stream in which the image is used. An image mask will be created if the image color depth is 1 bit and if color key masking is enabled (see SetUseTransparency()). SetUseTransparency() should normally be set to false before calling this function.

The image will never be downscaled, independent of the current resolution, because the size of the output rectangle is not known.
If the image that should be replaced is a soft mask of another base image, then make sure that the destination color space is set to kesDeviceGray, kesCalGray, or to a one channel ICC based color space because a soft mask must not contain more than one color channel.
The flags kgfUseImageColorSpace, kgfIgnoreICCProfiles, kgfRealPassThrough, and kfNoBitmapAlpha are all supported. See SetGStateFlags() for further information.

If the function succeeds the return value is true. If the function fails the return value is false.

70.34.633 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as MemoryBlock, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean

Function: Replaces an image with a new image exactly like ReplaceImage() but accepts a file buffer as input.
Notes: See ReplaceImage() for further information.

If the function succeeds the return value is 1. If the function fails the return value is 0.
See also:

• 70.34.634 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as String, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean

70.34.634 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as String, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean

Function: Replaces an image with a new image exactly like ReplaceImage() but accepts a file buffer as input.
Notes: See ReplaceImage() for further information.

If the function succeeds the return value is 1. If the function fails the return value is 0.
See also:

• 70.34.633 ReplaceImageEx(ImageToReplace as DynaPDFImageMBS, ImageData as MemoryBlock, Index as Integer = 1, ColorSpace as Integer = 0, CSHandle as Integer = -1, Flags as Integer = 0) as Boolean
**70.34.635** ReplacePageText(text as string, stack as DynaPDFStackMBS) as boolean

**Function:** The function deletes or replaces a text string of a content stream that was found by the function GetPageText() beforehand.

**Notes:**

Be aware that ReplacePageText can’t always replace text as encoding must match and fonts may not have the characters for the new text. For that better use ReplacePageTextEx.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs. Requires DynaPDF Pro license.

See also ReplacePageText function in DynaPDF manual.

**70.34.636** ReplacePageTextEx(text as string, stack as DynaPDFStackMBS) as boolean

**Function:** The function deletes or replaces a text string of a content stream that was found by the function GetPageText() beforehand.

**Notes:**

The text parameter is converted to unicode.

If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs. Requires DynaPDF Pro license.

See also ReplacePageTextEx function in DynaPDF manual.

**70.34.637** ReplacePageTextExAnsi(text as string, stack as DynaPDFStackMBS) as boolean

**Function:** The function deletes or replaces a text string of a content stream that was found by the function GetPageText() beforehand.

**Notes:**

The text parameter is converted to ANSI.

Requires DynaPDF Pro license.
70.34.638  ResetEncryptionSettings as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Resets the encryption settings which were imported from an external PDF file so that the PDF file in memory can be saved unencrypted. **Notes:** If the function succeeds the return value is true. If the function fails the return value is false. See also ResetEncryptionSettings function in DynaPDF manual.

70.34.639  ResetLineDashPattern as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function resets a previously defined line dash pattern to its default value (straight line). See also ResetLineDashPattern function in DynaPDF manual.

70.34.640  RestoreGraphicState as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function restores a previously saved graphics state. See also RestoreGraphicState function in DynaPDF manual.

70.34.641  RGB(R as Integer, G as Integer, B as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Builds a RGB color value based on the given component values. **Example:**

```vbs
dim rgb as Integer = DynaPDFMBS.RGB(1,2,3)
MsgBox hex(rgb)
```

70.34.642  RofRGB(RGB as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns R of a RGB color value. **Example:**

```vbs
dim rgb as Integer = DynaPDFMBS.RGB(1,2,3)
MsgBox str(DynaPDFMBS.RofRGB(rgb)) // shows 1
```
**70.34.643 RotateCoords(alpha as Double, OriginX as Double, OriginY as Double) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function rotates the coordinate system at the point OriginX, OriginY by applying a transformation matrix. **Notes:** Please do not try to scale/skew/translate back later. Use SaveGraphicState and RestoreGraphicState. See also RotateCoords function in DynaPDF manual.

**70.34.644 RotateTemplate(OldTemplate as Integer, Rotation as Integer) as Integer**

MBS DynaPDF Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Rotates a template. **Notes:** Returns a new template handle. This is a convenience function which creates a new template and draws the existing template there with rotation. Returns negative number for errors. The plugin uses -1 for plugin errors like wrong rotation angle.

**70.34.645 RoundRect(PosX as Double, PosY as Double, Width as Double, Height as Double, Radius as Double, FillMode as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function draws a rectangle with rounded corners. **Example:**

```vbnet
dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Round Rectangles.pdf")
pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

call pdf.CreateNewPDF f
call pdf.Append

dim PosX as Double = 100.0
dim PosY as Double = 100.0
dim Width as Double = 100.0
dim Height as Double = 100.0
dim Radius as Double = 20.0
dim FillMode as Integer = pdf.kfmFill
```
70.34. CLASS DYNAPDFMBS

call pdf.RoundRect(PosX, PosY, Width, Height, Radius, FillMode)

PosX = 300.0
dim RadiusX as Double = 30.0
dim RadiusY as Double = 30.0

call pdf.RoundRectEx(PosX, PosY, Width, Height, RadiusX, RadiusY, FillMode)

call pdf.EndPage
call pdf.CloseFile

f.Launch

See also RoundRect function in DynaPDF manual.

70.34.646 RoundRectEx(PosX as Double, PosY as Double, Width as Double, Height as Double, rWidth as Double, rHeight as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function draws a rectangle with elliptical corners. Example:

dim pdf as new DynaPDFMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("Create PDF with Round Rectangles.pdf")

pdf.SetLicenseKey "Starter" // For this example you can use a Starter, Lite, Pro or Enterprise License

call pdf.CreateNewPDF f
call pdf.Append

dim PosX as Double = 100.0
dim PosY as Double = 100.0
dim Width as Double = 100.0
dim Height as Double = 100.0
dim Radius as Double = 20.0
dim FillMode as Integer = pdf.kfmFill

call pdf.RoundRect(PosX, PosY, Width, Height, Radius, FillMode)

PosX = 300.0
dim RadiusX as Double = 30.0
dim RadiusY as Double = 30.0
call pdf.RoundRectEx(PosX, PosY, Width, Height, RadiusX, RadiusY, FillMode)
call pdf.EndPage
call pdf.CloseFile
f.Launch

See also RoundRectEx function in DynaPDF manual.

70.34.647  SaveGraphicState as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function saves the current graphics state.
See also SaveGraphicState function in DynaPDF manual.

70.34.648  ScaleCoords(sx as Double, sy as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function scales the coordinate system by applying a transformation matrix.
**Notes:** Please do not try to scale/skew/translate back later. use SaveGraphicState and RestoreGraphicState.
See also ScaleCoords function in DynaPDF manual.

70.34.649  SelfTest as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function checks the size of all required data types and checks whether the endian configuration of the library is correct.
See also SelfTest function in DynaPDF manual.

70.34.650  Set3DAnnotProps(Annot as Integer, ActType as Integer, DeActType as Integer, InstType as Integer, DeInstType as Integer, DisplayToolbar as boolean, DisplayModelTree as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the properties of a 3D Annotation.
See also Set3DAnnotProps function in DynaPDF manual.
70.34. **CLASS DYNAPDFMBS**

70.34.651 **Set3DAnnotScriptAnsi(Annot as Integer, Value as string) as boolean**

MBS DynaPDF Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the 3D Annotation Script.

70.34.652 **SetAllocBy(Value as Integer) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the size of the memory blocks in kilo bytes, which will be allocated if memory must be allocated for page content streams. See also SetAllocBy function in DynaPDF manual.

70.34.653 **SetAnnotBorderEffect(Handle as Integer, BorderEffect as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the border effect for an annotation. **Notes:** Returns true on success. Handle is in range of 0 to number of annotations - 1. See also SetAnnotBorderEffect function in DynaPDF manual.

70.34.654 **SetAnnotBorderStyle(Handle as Integer, BorderStyle as Integer) as boolean**

MBS DynaPDF Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the annotation border style. See also SetAnnotBorderStyle function in DynaPDF manual.

70.34.655 **SetAnnotBorderWidth(Handle as Integer, LineWidth as Double) as boolean**

MBS DynaPDF Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the annotation border width. See also SetAnnotBorderWidth function in DynaPDF manual.
70.34.656 SetAnnotColor(Handle as Integer, ColorType as Integer, PDFColorSpace as Integer, ColorValue as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the annotation color. See also SetAnnotColor function in DynaPDF manual.

70.34.657 SetAnnotFlags(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the default flags used for newly created annotations. See also SetAnnotFlags function in DynaPDF manual.

70.34.658 SetAnnotFlagsEx(Handle as Integer, Flags as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the annotation flags. See also SetAnnotFlagsEx function in DynaPDF manual.

70.34.659 SetAnnotHighlightMode(Handle as Integer, HighlightMode as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the annotation highlight mode. See also SetAnnotHighlightMode function in DynaPDF manual.

70.34.660 SetAnnotIcon(Handle as Integer, AnnotIcon as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the annotation icon. See also SetAnnotIcon function in DynaPDF manual.

70.34.661 SetAnnotLineDashPattern(Handle as UInt32, dash as memoryblock, NumValues as integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets or deletes the line dash pattern of an annotation.
Notes:
The following annotation types support line dash patterns:

- atCircle
- atInk
- atLine
- atPolygon
- atPolyLine
- atSquare

Memoryblock must contain floating point values (Single).
Returns true on success.

If array is nil, the pattern is removed.
See also SetAnnotLineDashPattern function in DynaPDF manual.
See also:

- 70.34.662 SetAnnotLineDashPattern(Handle as UInt32, dash() as single) as Boolean

70.34.662 SetAnnotLineDashPattern(Handle as UInt32, dash() as single) as Boolean

Function: Sets or deletes the line dash pattern of an annotation.
Notes:
The following annotation types support line dash patterns:

- atCircle
- atInk
- atLine
- atPolygon
- atPolyLine
- atSquare
Returns true on success.

If array is nil, the pattern is removed.
See also SetAnnotLineDashPattern function in DynaPDF manual.
See also:

- 70.34.661 SetAnnotLineDashPattern(Handle as UInt32, dash as memoryblock, NumValues as integer) as Boolean

70.34.663 SetAnnotLineEndStyle(Handle as UInt32, StartLineStyle as Integer, EndLineStyle as Integer) as boolean

Function: The function sets or changes the line end styles of a Line or PolyLine Annotation.
Notes: If the function succeeds the return value is true. If the function fails the return value is false.
See also SetAnnotLineEndStyle function in DynaPDF manual.

70.34.664 SetAnnotMigrationState(Handle as Integer, State as Integer, Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds a migration state to a markup annotation.
Notes:

All annotation types with exception of 3D, Link, Movie, Screen, PrinterMark, TrapNet, and Watermark are
markup annotations.
Migration states are stored in text annotations as reply to the base annotation. Further states are stored as
reply to the last reply; the result is a single linked list. Because the base annotation contains no reference to
the last reply or migration state the function must search for it. To speed up processing the function returns
the handle of the text annotation so that the next state can directly be added to this annotation.

The migration state is defined since PDF 1.5. The function adjusts the PDF version automatically if it is
lower than PDF 1.5.

If the function succeeds the return value is the handle of the text annotation, a value greater or equal zero.
If the function fails the return value is a negative error code.

State can be kasNone, kasAccepted, kasRejected, kasCancelled, kasCompleted.
See also SetAnnotMigrationState function in DynaPDF manual.
70.34.665  SetAnnotMigrationStateAnsi(Handle as Integer, State as Integer, Name as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds a migration state to a markup annotation.
Notes: All annotation types with exception of 3D, Link, Movie, Screen, PrinterMark, TrapNet, and Watermark are markup annotations. Migration states are stored in text annotations as reply to the base annotation. Further states are stored as reply to the last reply; the result is a single linked list. Because the base annotation contains no reference to the last reply or migration state the function must search for it. To speed up processing the function returns the handle of the text annotation so that the next state can directly be added to this annotation.

The migration state is defined since PDF 1.5. The function adjusts the PDF version automatically if it is lower than PDF 1.5.

If the function succeeds the return value is the handle of the text annotation, a value greater or equal zero. If the function fails the return value is a negative error code.

State can be kasNone, kasAccepted, kasRejected, kasCancelled, kasCompleted.

70.34.666  SetAnnotOpacity(Handle as Integer, opacity as Double) as Boolean

Function: The function changes the opacity of a markup annotation.
Notes: The function GetAnnotEx() or GetPageAnnotEx() can be used to determine whether an annotation is a markup annotation.

Returns true on succes or false on failure.
See also SetAnnotOpacity function in DynaPDF manual.

70.34.667  SetAnnotOpenState(Handle as Integer, Open as Boolean) as boolean

Function: Sets the annotation open state.
See also SetAnnotOpenState function in DynaPDF manual.
70.34.668  SetAnnotOrFieldDate(CSHandle as UInt32, IsField as Boolean, Type as Integer, DateTime as UInt32) as boolean

**Function:** The function sets or changes the creation or modification date of an annotation or form field.

**Notes:**

If the parameter IsField is set to true, a valid field handle must be passed to the parameter Handle. An annotation handle is expected otherwise.

Annotations and form fields support a modification date but a creation date is supported by markup annotations only.

The following annotation types are markup annotations:

- Care
- Circle
- FileAttach
- FreeText
- Highlight, Squiggly, Strikeout, Underline
- Ink
- Line
- Polygon
- Projection
- Redact
- Sound
- Square
- Stamp
- Text

The function GetAnnotEx() or GetPageAnnotEx() can also be used to determine whether an annotation is a markup annotation.

If the function succeeds the return value is 1. If the function fails the return value is 0.

See also SetAnnotOrFieldDate function in DynaPDF manual.
70.34.669  SetAnnotQuadPoints(Handle as UInt32, points() as DynapdfPointMBS) as boolean

Function: Sets or changes the quad points definition of a Highlight, Link, Redakt, Squiggly, atStrikeOut, or Underline annotation.

Notes:
The function must be called within an open page.
Independent of the used coordinate system (bottom up or top down), the points must be defined in the following order:
\[ x_1, y_1 \quad x_3, y_3 \]
\[ x_2, y_2 \quad x_4, y_4 \]
The coordinates of the vertices are interpreted in current user space. Any transformation that was applied on the coordinate system will be taken into account.
The number of points must be 4 or a multiple of 4.

Returns true on success.
See also SetAnnotQuadPoints function in DynaPDF manual.

70.34.670  SetAnnotString(Handle as Integer, StringType as Integer, Value as string) as boolean

Function: Creates a stamp annotation.
See also SetAnnotString function in DynaPDF manual.

70.34.671  SetAnnotStringAnsi(Handle as Integer, StringType as Integer, Value as string) as boolean

Function: Creates a stamp annotation.

70.34.672  SetAnnotSubject(Handle as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: The function sets or changes the optional subject string of an annotation.
Notes: The value parameter is converted to unicode.
See also SetAnnotSubject function in DynaPDF manual.
70.34.673 SetAnnotSubjectAnsi(Handle as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets or changes the optional subject string of an annotation. **Notes:** The value parameter is converted to ANSI.

70.34.674 SetBBox(Boundary as Integer, LeftX as Double, LeftY as Double, RightX as Double, RightY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets a specific bounding box of the current open PDF page. **See also** SetBBox function in DynaPDF manual.

70.34.675 SetBidiMode(BidiMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets or changes the bidirectional mode. **See also** SetBidiMode function in DynaPDF manual.

70.34.676 SetBookmarkDest(ABmk as Integer, DestType as Integer, a as Double, b as Double, c as Double, d as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets or changes the destination of a bookmark. **See also** SetBookmarkDest function in DynaPDF manual.

70.34.677 SetBookmarkStyle(ABmk as Integer, Style as Integer, RGBColor as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the bookmark style. **See also** SetBookmarkStyle function in DynaPDF manual.

70.34.678 SetBorderStyle(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function set the global border style which is used for newly created form fields.
70.34.679 SetCharacterSpacing(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the current character spacing. The function requires an open page, template or pattern. See also SetCharacterSpacing function in DynaPDF manual.

70.34.680 SetCheckBoxChar(CheckBoxChar as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the character which should be used for newly created check boxes. See also SetCheckBoxChar function in DynaPDF manual.

70.34.681 SetCheckBoxDefState(Field as Integer, Checked as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function changes the default state of a check box; it can differ from the current visible state of the check box. See also SetCheckBoxDefState function in DynaPDF manual.

70.34.682 SetCheckBoxState(Field as Integer, Checked as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function changes the state of a check box. The parameter Field must be a valid check box handle. See also SetCheckBoxState function in DynaPDF manual.

70.34.683 SetCIDFont(CMapHandle as Integer, Name as string, Style as Integer, Size as Double, Embed as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets a CID Font. See also SetCIDFont function in DynaPDF manual.
70.34.684  SetCMapDir(path as folderitem, flags as Integer) as Integer

**Function:** Sets the character map directory.  
**Example:**
```
dim pdf as DynaPDFMBS // your dynapdf instance
```

**Notes:**
Takes an integer instead of a boolean starting with plugin version 11.2pr6.  
See klcmDefault, klcmDelayed and klcmRecursive constants.  
Requires DynaPDF Pro license.  
See also SetCMapDir function in DynaPDF manual.  
See also:
- 70.34.685 SetCMapDir(path as string, flags as Integer) as Integer

70.34.685  SetCMapDir(path as string, flags as Integer) as Integer

**Function:** Sets the character map directory.  
**Example:**
```
dim pdf as DynaPDFMBS // your dynapdf instance
```

**Notes:**
Takes an integer instead of a boolean starting with plugin version 11.2pr6.  
See klcmDefault, klcmDelayed and klcmRecursive constants.  
Requires DynaPDF Pro license.  
See also SetCMapDir function in DynaPDF manual.  
See also:
- 70.34.684 SetCMapDir(path as folderitem, flags as Integer) as Integer

70.34.686  SetColDefFile(EmbFile as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The function sets the initial document of a portable collection that should be opened in the viewer application. See also CreateCollection().
SetColorMask(ImageHandle as Integer, Mask as Ptr, Count as UInt32) as boolean

Function: The functions sets or overrides the color mask of an image.

Notes: See also SetColorMask function in DynaPDF manual.

See also:
- 70.34.688 SetColorMask(ImageHandle as Integer, Mask() as Integer) as boolean

SetColorMask(ImageHandle as Integer, Mask() as Integer) as boolean

Function: The functions sets or overrides the color mask of an image.

Notes: Same as other SetColorMask function, but values are taken from array.

See also:
- 70.34.687 SetColorMask(ImageHandle as Integer, Mask as Ptr, Count as UInt32) as boolean

SetColors(ColorValue as Integer) as Boolean

Function: The function sets the fill and stroke color.

Example:
```vba
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// get the colorspace of the image file
```
const DP csDeviceRGB=0
const DP csDeviceCMYK=1
const DP csDeviceGray=2

dim iColorSpace as Integer

iColorSpace=DP.csDeviceRGB

// define color space
bBool=pdf.SetColorSpace(iColorSpace)

See also SetColorSpace function in DynaPDF manual.

70.34.691 SetColSortField(ColField as Integer, AscendingOrder as boolean) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function sets the collection field that should be used to sort the list of embedded files. See also SetColSortField function in DynaPDF manual.

70.34.692 SetCompressionFilter(Filter as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function sets the compression filter which is used to compress images. Example:

dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// set compression filter
bBool = pdf.SetCompressionFilter(pdf.kcfJPEG)

Notes: Use kcfCCITT3, kcfCCITT4, kcfFlate, kcfFlateBW, kcfJP2K, kcfJPEG or kcfLZW constants. See also SetCompressionFilter function in DynaPDF manual.
70.34. CLASS DYNAPDFMBS

70.34.693 SetCompressionLevel(CompressLevel as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function sets the current compression level. See also SetCompressionLevel function in DynaPDF manual.

70.34.694 SetContent(buffer as memoryblock) as Boolean

MBS DynaPDF Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function replaces the content stream of the currently open page or template with a new one. See also SetContent function in DynaPDF manual. See also:

- 70.34.695 SetContent(buffer as string) as Boolean

70.34.695 SetContent(buffer as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function replaces the content stream of the currently open page or template with a new one. See also SetContent function in DynaPDF manual. See also:

- 70.34.694 SetContent(buffer as memoryblock) as Boolean

70.34.696 SetDateTimeFormat(TxtField as Integer, Fmt as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function restricts the allowed value of a text field to a date time format and applies this format if the value was valid. See also SetDateTimeFormat function in DynaPDF manual.

70.34.697 SetDefBitsPerPixel(value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function sets the default color depth in bits per pixel, which determines whether images should be downsampled. See also SetDefBitsPerex function in DynaPDF manual.
70.34.698  SetDocInfo(DInfo as Integer, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The function set or changes a document info entry.
Example:

```vba
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean
dim source as FolderItem // source pdf file?

const diAuthor=0
const diCreator=1
const diKeywords=2
const diProducer=3
const diSubject=4
const diTitle=5

// Define some pdf properties:
bBool=pdf.SetDocInfo(diAuthor, SystemInformationMBS.Username)
bBool=pdf.SetDocInfo(diCreator, "SysProgName" + " - " + "MetSysProgVer")
bBool=pdf.SetDocInfo(diKeywords, "")
bBool=pdf.SetDocInfo(diProducer, "SysProgName" + " - " + "MetSysProgVer")
bBool=pdf.SetDocInfo(diSubject, "")
bBool=pdf.SetDocInfo(diTitle, source.name)
```

Notes: The text parameter is converted to unicode.
See also SetDocInfo function in DynaPDF manual.

70.34.699  SetDocInfoAnsi(DInfo as Integer, Text as string) as Boolean

Function: The function set or changes a document info entry.
Example:

```vba
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean
dim source as FolderItem // source pdf file?

const diAuthor=0
const diCreator=1
const diKeywords=2
const diProducer=3
const diSubject=4
```

const diTitle=5

// Define some pdf properties:
bBool=pdf.SetDocInfoAnsi(diAuthor, SystemInformationMBS.Username)
bBool=pdf.SetDocInfoAnsi(diCreator, "SysProgName" + " - " + "MetSysProgVer")
bBool=pdf.SetDocInfoAnsi(diKeywords, "")
bBool=pdf.SetDocInfoAnsi(diProducer, "SysProgName" + " - " + "MetSysProgVer")
bBool=pdf.SetDocInfoAnsi(diSubject, "")
bBool=pdf.SetDocInfoAnsi(diTitle, source.name)

Notes: The text parameter is converted to ANSI.

70.34.700 SetDocInfoEx(DInfo as Integer, Key as string, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function set or changes a document info entry. Notes: The Text parameter is converted to unicode. See also SetDocInfoEx function in DynaPDF manual.

70.34.701 SetDocInfoExAnsi(DInfo as Integer, Key as string, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function set or changes a document info entry. Notes: The Text parameter is converted to ANSI.

70.34.702 SetDrawDirection(Direction as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function sets the draw direction of closed vector graphics such as rectangles, ellipses, triangles and so on. See also SetDrawDirection function in DynaPDF manual.
70.34.703 SetEMFFrameDPI(DPIX as Integer, DPIY as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function can be used to adjust DPI value which is used to calculate the picture size of an EMF file. See also SetEMFFrameDPI function in DynaPDF manual.

70.34.704 SetEMFPatternDistance(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function changes the default distance between lines of standard patterns during EMF conversion. See also SetEMFPatternDistance function in DynaPDF manual.

70.34.705 SetErrorMode(ErrMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The error mode specifies which error types should be treated as fatal error. See also SetErrorMode function in DynaPDF manual.

70.34.706 SetExtColorSpace(Handle as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function activates an extended color space in the graphics state. Notes: Requires DynaPDF Pro license. See also SetExtColorSpace function in DynaPDF manual.

70.34.707 SetExtFillColorSpace(Handle as UInt32) as boolean

**70.34.708 SetExtGState(Handle as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function applies an extended graphics state.
See also SetExtGState function in DynaPDF manual.

**70.34.709 SetExtStrokeColorSpace(Handle as UInt32) as boolean**

MBS DynaPDF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set the colorspace for filling.
**Notes:**
Pass Colorspace handle like for SetExtColorSpace.
Requires DynaPDF Pro license.
See also SetExtStrokeColorSpace function in DynaPDF manual.

**70.34.710 SetFieldBackColor(ColorValue as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the background color used for newly created interactive form fields and annotations.
See also SetFieldBackColor function in DynaPDF manual.

**70.34.711 SetFieldBBox(Handle as Integer, rect as DynaPDFRectMBS) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function changes the bounding box of a field.
See also SetFieldBBox function in DynaPDF manual.

**70.34.712 SetFieldBorderColor(ColorValue as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the border color used for newly created interactive form fields and annotations.
See also SetFieldBorderColor function in DynaPDF manual.

**70.34.713 SetFieldBorderStyle(Field as Integer, Style as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function changes the border style of a specific Interactive Form field.
CHAPTER 70. DYNAPDF

See also SetFieldBorderStyle function in DynaPDF manual.

70.34.714  SetFieldBorderWidth(Field as Integer, LineWidth as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function can be used to change the border width of a field. See also SetFieldBorderWidth function in DynaPDF manual.

70.34.715  SetFieldColor(Field as Integer, ColorType as Integer, ColorSpace as Integer, ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets a specific color of an interactive form field. See also SetFieldColor function in DynaPDF manual.

70.34.716  SetFieldExpValue(Field as Integer, ValIndex as Integer, Value as string, ExpValue as string, Selected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function can be used to change the choice values of a combo box, list box, or radio button. See also SetFieldExpValue function in DynaPDF manual.

70.34.717  SetFieldExpValueAnsi(Field as Integer, ValIndex as Integer, Value as string, ExpValue as string, Selected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function can be used to change the choice values of a combo box, list box, or radio button.

70.34.718  SetFieldExpValueEx(Field as Integer, ValIndex as Integer, Selected as boolean, DefSelected as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function marks a choice value of a combo or list box as selected or unselected. **Notes:** It can also be used to change the state of check boxes or the children of a radio button. The parameter ValIndex will be ignored if the field is a normal check box (no child of a radio button or field group).
To enumerate the choice values of a combo box, list box or radio button use the function GetFieldExpValueEx().

Return value:
If the function succeeds the return value is true. If the function fails the return value is false.

See also SetFieldExpValueEx function in DynaPDF manual.

**70.34.719** SetFieldFlags(Field as Integer, Flags as Integer, Reset as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the flags of a specific interactive form field.

See also SetFieldFlags function in DynaPDF manual.

**70.34.720** SetFieldFont(Field as Integer, Name as string, Style as Integer, Size as Double, Embed as Boolean, CodePage as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets or changes the font of a form field.

**Notes:** See documentation of SetFieldFont function in dynapdf help manual file for details.

See also SetFieldFont function in DynaPDF manual.

**70.34.721** SetFieldFontAnsi(Field as Integer, Name as string, Style as Integer, Size as Double, Embed as Boolean, CodePage as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets or changes the font of a form field.

**Notes:** See documentation of SetFieldFont function in dynapdf help manual file for details.

**70.34.722** SetFieldFontEx(Field as UInt32, Handle as UInt32, FontSize as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets or replaces the font of a field.

**Notes:** The function requires a font handle that was returned by SetFieldFont.
Returns true on success and false on failure.
See also SetFieldFontEx function in DynaPDF manual.

70.34.723  SetFieldFontSize(aField as Integer, FontSize as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:**  The function changes the font size of a specific field.
See also SetFieldFontSize function in DynaPDF manual.

70.34.724  SetFieldHighlightMode(Field as Integer, HighlightMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:**  The function changes the highlight mode of a specific field.
See also SetFieldHighlightMode function in DynaPDF manual.

70.34.725  SetFieldIndex(Field as Integer, Index as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:**  This function can be used to set the tab order of interactive form fields.
See also SetFieldIndex function in DynaPDF manual.

70.34.726  SetFieldMapName(Field as Integer, Name as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:**  The function sets or changes the mapping name of a field.  
**Notes:**  The parameter name is converted to unicode.
See also SetFieldMapName function in DynaPDF manual.

70.34.727  SetFieldMapNameAnsi(Field as Integer, Name as string) as Boolean

**Function:**  The function sets or changes the mapping name of a field.  
**Notes:**  The parameter name is converted to ANSI.
70.34.728  SetFieldName(Field as Integer, NewName as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function changes the name of an interactive form field. See also SetFieldName function in DynaPDF manual.

70.34.729  SetFieldNameAnsi(Field as Integer, NewName as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function changes the name of an interactive form field. Notes: The text parameter is converted to ANSI.

70.34.730  SetFieldOrientation(Field as Integer, Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function sets or changes the orientation of a field. See also SetFieldOrientation function in DynaPDF manual.

70.34.731  SetFieldTextAlign(Field as Integer, Align as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function set or changes the text alignment of a text or button field. See also SetFieldTextAlign function in DynaPDF manual.

70.34.732  SetFieldTextColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function sets the text color which is used for newly created interactive form fields. See also SetFieldTextColor function in DynaPDF manual.

70.34.733  SetFieldToolTip(Field as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function set or changes the tool tip or description string of an interactive form field. Notes: The value parameter is converted to unicode. See also SetFieldToolTip function in DynaPDF manual.
70.34.734  SetFieldToolTipAnsi(Field as Integer, Value as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function set or changes the tool tip or description string of an interactive form field. **Notes:** The value parameter is converted to ANSI.

70.34.735  SetFillColor(ColorValue as Color) as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the fill color. **Notes:** Raises an exception if current color space is CMYK or Gray and not RGB. The parameter Color must be defined in the current color space. See also SetFillColor function in DynaPDF manual. See also:

- 70.34.736 SetFillColor(ColorValue as Integer) as Boolean
- 70.34.737 SetFillColor(values() as Double) as boolean
- 70.34.738 SetFillColor(values() as single) as boolean

70.34.736  SetFillColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the fill color. **Example:**

```java
// new DynaPDF Object. Use your own subclass to catch errors in error event
dim pdf as new DynaPDFMBS

// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey ”Starter”

// destination pdf file
dim f as FolderItem = SpecialFolder.Desktop.Child(”test.pdf”)

// create new pdf document
call pdf.CreateNewPDF f

// add new page
call pdf.append

// set red text color
call pdf.SetFillColor pdf.RGB(255,0,0)
```
// set font
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252

// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"

// close page
call pdf.EndPage

// close file
call pdf.CloseFile

// open in users preferred PDF viewer application
f.Launch

Notes: The parameter Color must be defined in the current color space.
See also SetFillColor function in DynaPDF manual.
See also:

• 70.34.735 SetFillColor(ColorValue as Color) as Boolean
• 70.34.737 SetFillColor(values() as Double) as boolean
• 70.34.738 SetFillColor(values() as single) as boolean

70.34.737 SetFillColor(values() as Double) as boolean

Function: Sets fill color based on an array of floats.
Example:

// new DynaPDF Object. Use your own subclass to catch errors in error event
dim pdf as new DynaPDFMBS

// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey "Starter"

// destination pdf file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// create new pdf document
call pdf.CreateNewPDF f

// add new page
call pdf.append
// set blue text color with values in memoryblock
dim colorvalues() as Double = array(0.0, 1.0, 0.0)
call pdf.SetFillColor colorvalues

// set font
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252

// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"

// close page
call pdf.EndPage

// close file
call pdf.CloseFile

// open in users preferred PDF viewer application
f.Launch

Notes: The number of components must match.
See also SetFillColor function in DynaPDF manual.
See also:

- 70.34.735 SetFillColor(ColorValue as Color) as Boolean 11938
- 70.34.736 SetFillColor(ColorValue as Integer) as Boolean 11938
- 70.34.738 SetFillColor(values() as single) as boolean 11940

70.34.738 SetFillColor(values() as single) as boolean

Function: Sets fill color based on an array of floats.
Notes: The number of components must match.
See also SetFillColor function in DynaPDF manual.
See also:

- 70.34.735 SetFillColor(ColorValue as Color) as Boolean 11938
- 70.34.736 SetFillColor(ColorValue as Integer) as Boolean 11938
- 70.34.737 SetFillColor(values() as Double) as boolean 11939

**Function:** Sets the fill color using the values in parameters.

**Example:**

```vba
// new DynaPDF Object. Use your own subclass to catch errors in error event
dim pdf as new DynaPDFMBS

// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey "Starter"

// destination pdf file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// create new pdf document
call pdf.CreateNewPDF f

call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252

// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"

call pdf.EndPage

call pdf.CloseFile

f.Launch
```

**Notes:** Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.

See also **SetFillColorEx** function in DynaPDF manual.

See also:
70.34.740  SetFillColorEx(ParamArray colorvalue as Integer) as Boolean

Function: Sets the fill color using the values in parameters.

Example:

```vba
// new DynaPDF Object. Use your own subclass to catch errors in error event
dim pdf as new DynaPDFMBS

// For this example you can use a Starter, Lite, Pro or Enterprise License
pdf.SetLicenseKey "Starter"

// destination pdf file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// create new pdf document
call pdf.CreateNewPDF f

// add new page
call pdf.append

// set red text color
call pdf.SetFillColorEx 255,0,0

// set font
call pdf.SetFont "Times", pdf.kfsItalic, 40.0, true, pdf.kcp1252

// write some text
call pdf.WriteFText pdf.ktaCenter, "My first PDF!"

// close page
call pdf.EndPage

// close file
call pdf.CloseFile

// open in users preferred PDF viewer application
f.Launch
```

Notes: Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.

See also SetFillColorEx function in DynaPDF manual.

See also:
70.34.741  SetFillColorSpace(Colorsaspace as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function changes the fill color space.
See also SetFillColorSpace function in DynaPDF manual.

70.34.742  SetFloatPrecision(NumTextDecDigits as UInt32, NumVectDecDigits as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function changes the output precision of text and vector coordinates.
**Notes:**
The default precision for text and vector graphics is two decimal digits. This corresponds to 7200 DPI. The output precision of bezier curves is one higher as for vector graphics. The maximum output precision is 5 decimal digits.
Note that higher values increase the resulting file size.

NumTextDecDigits: Number decimal digits for text object.
NumVectDecDigits: Number of decimal digits for vector objects.

Returns boolean, true for success.
See also SetFloatPrecision function in DynaPDF manual.

70.34.743  SetFont(Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CP as Integer = & h27) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function loads a font that can be used for text output and interactive form fields.
**Notes:**
The name parameter is converted to unicode.

If font is not found by name, please check SetFontSelMode function.
See also SetFont function in DynaPDF manual.
70.34.744  SetFontAnsi(Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CP as Integer = & h27) as Integer

Function: The function loads a font that can be used for text output and interactive form fields.
Example:

```pascal
dim pdf as DynaPDFMBS // your PDF object
call pdf.SetFontAnsi("Helvetica", pdf.kfsNone, 10.0, true, pdf.kcp1252)
```

Notes:
The name parameter is converted to ANSI.

If font is not found by name, please check SetFontSelMode function.

70.34.745  SetFontEx(Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CP as Integer = & h27) as Integer

Function: The function loads a font that can be used for text output and interactive form fields.
Notes:
The name parameter is converted to unicode.

If font is not found by name, please check SetFontSelMode function.
See also SetFontEx function in DynaPDF manual.

70.34.746  SetFontExAnsi(Name as string, Style as Integer = 0, Size as Double = 12, Embed as boolean = true, CP as Integer = & h27) as Integer

Function: The function loads a font that can be used for text output and interactive form fields.
Notes:
The name parameter is converted to ANSI.

If font is not found by name, please check SetFontSelMode function.
70.34. **SetFontOrigin(Origin as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the current font origin that is used to position text strings. See also SetFontOrigin function in DynaPDF manual.

**70.34.748 SetFontSearchOrder(Order() as Integer)**

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the font search order. **Notes:**

The values in the array use this constants:

- kfbfTrueType: TrueType, TrueType Collections, or OpenType fonts with TrueType outlines
- kfbfType1: Type1 font
- kfbfOpenType: OpenType font with Postscript outlines
- kfbfStdFont: PDF Standard font
- kfbfDisabled: This value can be used to disable a specific font format.

The array has 4 values. See also SetFontSearchOrder function in DynaPDF manual.

**70.34.749 SetFontSearchOrderEx(Order1 as Integer, Order2 as Integer, Order3 as Integer, Order4 as Integer)**

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function changes the font search order in the same way as SetFontSearchOrder() but it does not use an array to set the search order to improve compatibility to programming languages with limited array support. **Notes:** use the font base constants. See also SetFontSearchOrderEx function in DynaPDF manual.

**70.34.750 SetFontSelMode(Mode as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function changes the font selection mode. See also SetFontSelMode function in DynaPDF manual.
70.34.751  SetFontWeight(Weight as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The font weight specifies the thickness or boldness of a font. See also SetFontWeight function in DynaPDF manual.

70.34.752  SetGStateFlags(Flags as Integer, Reset as boolean)

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets optional flags affecting the graphics state and coordinate handling. See also SetGStateFlags function in DynaPDF manual.

70.34.753  SetIconColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The icon color is used for the closed state of a text annotation. See also SetIconColor function in DynaPDF manual.

70.34.754  SetImportFlags(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets optional flags to control the import of external PDF files. See also SetImportFlags function in DynaPDF manual.

70.34.755  SetImportFlags2(Flags as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets optional flags to control the import of external PDF files. See also SetImportFlags2 function in DynaPDF manual.

70.34.756  SetItalicAngle(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The property ItalicAngle is used to emulate an italic font if the font is not available in an italic style. See also SetItalicAngle function in DynaPDF manual.
### 70.34.757 SetJPEGQuality(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the quality of JPEG compressed images in percent if JPEG compression is used. See also SetJPEGQuality function in DynaPDF manual.

### 70.34.758 SetLanguage(ISOTag as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The property specifies the language of the document. See also SetLanguage function in DynaPDF manual.

### 70.34.759 SetLeading(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the leading that will be used by the functions AddContinueText() and WriteFText() to calculate the distance between two text lines. **Notes:** This is for setting the line height. See also SetLeading function in DynaPDF manual.

### 70.34.760 SetLicenseKey(Value as string)

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Use this function to enter your license key. **Example:**
```
    dim pdf as DynaPDFMBS // your DynaPDF object
    pdf.SetLicenseKey("1234567890") // enter your code here
```

**Notes:**
If the value represents a correct license key the demo string does not longer appear on PDF pages. Once a correct key was set, it will be active until the library is unloaded or the current PDF object is released. Note that the key must be entered for each PDF object or process of a multi-threading application separately.

The license key must not be stored in the registry or other files in an unencrypted form.

You need to buy a license key from MBS.
The key will unlock the library to not run in demo mode.
Pro license is required for the following functions:

- BeginTransparencyGroup
- ConvertColors
- Create3DAnnot
- CreateSoftMask
- FlattenForm
- GetPageText
- ImportPage and ImportPageEx
- ParseContent
- RenderAnnotOrField
- RenderPage
- SetCMapDir
- SetExtColorSpace, SetExtFillColorSpace and SetExtStrokeColorSpace.
- SetUseGlobalImpFiles

Lite is required for:

- AddRenderingIntent and AddRenderingIntentEx
- CreateFormFields
- CloseFileEx
- ConvertEMFSpool
- CreateCollection
- CreateExtGState
- InsertMetafile and InsertMetafileEx
- OpenImportBuffer, OpenImportFile and OpenImportStream
- SetPDFVersion for PDF/A and PDF/X

And all functions relaying on those functions internally.
See also SetLicenseKey function in DynaPDF manual.
70.34.761  SetLicenseKeyGlobal(Value as string)

Function: Use this function to enter your license key.
Notes: This method stores the key for later use. The constructor uses than this key to call SetLicenseKey for any new instance of the DynaPDFMBS class. This way you can register in the app.open event for your whole application.

70.34.762  SetLineAnnotParms(Handle as UInt32, FontHandle as Integer, FontSize as Double, Params as DynaPDFLineAnnotParameterMBS) as boolean

Function: The function sets or changes the properties of a line annotation relating to measure lines.
Notes:
The parameter Params can be set to nil to delete all measure line specific values. The parameters FontHandle and FontSize will be ignored in this case.
The member Caption specifies whether the parameter Content of the function LineAnnot should be used as caption of the measure line. Although a measure line can display the string in a PopUp annotation like ordinary line annotations, this is not recommended and not fully supported in Adobe’s Acrobat or Reader. If Caption is true (recommended), the caption is drawn horizontally centered either on top or inside the measure line. The text position can be changed from its normal position with the members CaptionOffsetX and CaptionOffsetY.
The parameter FontHandle can be used to specify an arbitrary font that should be used to draw the caption. Although it is possible to use any font or font size greater 0 with DynaPDF, a PDF viewer will change the font and font size to it’s default values when the annotation will be edited since line annotations support no property to specify the font or font size.
Function Reference

The default font to draw the caption is Helvetica and the default font size is 9 units. In order to use the default font set the parameter FontHandle to -1. The default font size is used if the parameter FontSize is set to zero.

Returns true on success or false on failure.
See also SetLineAnnotParms function in DynaPDF manual.

70.34.763  SetLineCapStyle(Style as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The function sets the line cap style that specifies how the endpoint of a line will be drawn.
See also SetLineCapStyle function in DynaPDF manual.
70.34.764  **SetLineDashPattern(Dash as string, Phase as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The line dash pattern controls the pattern of dashes and gaps used to stroke paths. See also *SetLineDashPattern* function in DynaPDF manual.

70.34.765  **SetLineDashPatternEx(dash as memoryblock, NumValues as Integer, Phase as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets a line dash pattern in the same way as *SetLineDashPattern()*. **Notes:** dash is a memoryblock with doubles. So dash.size=NumValues*8. See also *SetLineDashPatternEx* function in DynaPDF manual. See also:

- 70.34.766  **SetLineDashPatternEx(dash() as double, Phase as integer) as Boolean**

70.34.766  **SetLineDashPatternEx(dash() as double, Phase as integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets a line dash pattern with a given array. **Notes:** However, this version accepts an array of doubles instead of a string value. Returns true on success. See *SetLineDashPattern* for more details. If array is nil, the pattern is removed. See also *SetLineDashPatternEx* function in DynaPDF manual. See also:

- 70.34.765  **SetLineDashPatternEx(dash as memoryblock, NumValues as Integer, Phase as Integer) as Boolean**

70.34.767  **SetLineJoinStyle(Style as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the line join style which specifies how two line segments are connected.
70.34. **CLASS DYNAPDFMBS**

See also SetLineJoinStyle function in DynaPDF manual.

70.34.768  **SetLineWidth(value as Double) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the line width used to stroke paths. See also SetLineWidth function in DynaPDF manual.

70.34.769  **SetLinkHighlightMode(Mode as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the highlight mode that is used by link annotations. See also SetLinkHighlightMode function in DynaPDF manual.

70.34.770  **SetListFont(Handle as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function marks an arbitrary font as list font. See also SetListFont function in DynaPDF manual.

70.34.771  **SetMatrix(Matrix as DynapdfMatrixMBS) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function left multiplies the current transformation matrix with the new one. See also SetMatrix function in DynaPDF manual.

70.34.772  **SetMaxErrLogMsgCount(value as Integer)**

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the maximum number of error log messages kept in memory. See also SetMaxErrLogMsgCount function in DynaPDF manual.

70.34.773  **SetMaxFieldLen(TxtField as Integer, MaxLen as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function changes the maximum count of characters which can be entered into a text field.
Notes:

A value of zero determines that the string length should not be restricted.

See also `SetMaxFieldLen` function in DynaPDF manual.

70.34.774 `SetMetaConvFlags(Flags as Integer) as Boolean`

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** The function sets specific flags to control the conversion of metafiles.
See also `SetMetaConvFlags` function in DynaPDF manual.

70.34.775 `SetMetadata(ObjType as Integer, Handle as Integer, Memoryblock) as Boolean`

MBS DynaPDF Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** The function sets or replaces the XMP metadata stream of a specific object.
**Notes:**
The function deletes the XMP stream if empty buffer will be provided.

If the global XMP stream of the Catalog object should be replaced then proceed as follows:

- Set the wished output PDF version with `SetPDFVersion`.
- Get a preview of the XMP stream with `GetMetadata`.
- Modify the returned stream as needed and save it with `SetMetadata`, finished!

The above steps make sure that the XMP metadata and document info contain the same values. This is especially important for PDF standards like PDF/A or PDF/X. DynaPDF makes sure that the creation and modification date will not be changed when closing the file.

Returns true on success and false on failure.
See also `SetMetadata` function in DynaPDF manual.
See also:
- 70.34.776 `SetMetadata(ObjType as Integer, Handle as Integer, Buffer as String) as Boolean`
70.34.776  SetMetadata(ObjType as Integer, Handle as Integer, Buffer as String) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** The function sets or replaces the XMP metadata stream of a specific object.
**Notes:**
The function deletes the XMP stream if empty buffer will be provided.

If the global XMP stream of the Catalog object should be replaced then proceed as follows:

- Set the wished output PDF version with SetPDFVersion.
- Get a preview of the XMP stream with GetMetadata.
- Modify the returned stream as needed and save it with SetMetadata, finished!

The above steps make sure that the XMP metadata and document info contain the same values. This is especially important for PDF standards like PDF/A or PDF/X. DynaPDF makes sure that the creation and modification date will not be changed when closing the file.

Returns true on success and false on failure.
See also SetMetadata function in DynaPDF manual.
See also:
- 70.34.775 SetMetadata(ObjType as Integer, Handle as Integer, Buffer as Memoryblock) as Boolean

70.34.777  SetMiterLimit(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Sets the miter limit.
See also SetMiterLimit function in DynaPDF manual.

70.34.778  SetNeedAppearance(value as boolean)

**Function:** Sets the appearance flag.
See also SetNeedAppearance function in DynaPDF manual.
70.34.779  **SetNumberFormat**(TxtField as Integer, Sep as Integer, DecPlaces as Integer, NegStyle as Integer, CurrStr as string, Prepend as boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function restricts the allowed input characters of a text field to numbers and formats the resulting string as specified. See also SetNumberFormat function in DynaPDF manual.

70.34.780  **SetOCGContUsage**(Handle as UInt32, Value as DynaPDFOCGContentUsageMBS) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates or changes the Content Usage dictionary of an OCG. **Notes:**

See dynapdf_help.pdf manual for details.
If the function succeeds the return value is true. If the function fails the return value is false.
See also SetOCGContUsage function in DynaPDF manual.

70.34.781  **SetOCGState**(Handle as UInt32, On as Boolean, SaveState as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the visibility state of an OCG or layer. **Notes:**

If the parameter SaveState is true, the new state is also saved in the PDF file. Otherwise, the state is only changed temporarily so that the wished state can be rendered with RenderPage or RenderPageToImage for example.
Note that only the new state of the current OCG will be be saved. If the state of other OCGs were changed beforehand, while SaveState was set to false, then these changes will not be considered.

If the function succeeds the return value is true. If the function fails the return value is false.
See also SetOCGState function in DynaPDF manual.

70.34.782  **SetOpacity**(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the opacity value which is used to render the appearance of a text annotation.
**70.34.783 SetOrientation(Value as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the orientation of a page.
See also SetOrientation function in DynaPDF manual.

**70.34.784 SetOrientationEx(Value as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function changes the orientation of a page, incl. important page properties such as the width and height, and the coordinate system.
See also SetOrientationEx function in DynaPDF manual.

**70.34.785 SetPageCoords(PageCoords as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The native coordinate system of the Portable Document Format is bottom up.
**Notes:** Value can be kpcTopDown or kpcBottomUp. Default is kpcBottomUp.
See also SetPageCoords function in DynaPDF manual.

**70.34.786 SetPageFormat(Value as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets a predefined page or paper format.
**Notes:**
Common paper formats and sizes in points:

See also SetPageFormat function in DynaPDF manual.

**70.34.787 SetPageHeight(value as Double) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function changes the height of the currently open page if any, or the default height for newly created pages.
**Example:**
Format | Size in units (Width x Height)
---|---
DIN A3 | 842.0 x 1191.0
DIN A4 | 595.0 x 842.0
DIN A5 | 419.0 x 595.0
DIN B4 | 709.0 x 1001.0
DIN B5 | 499.0 x 709.0
DIN B6 | 354.0 x 499.0
DIN C3 | 918.0 x 1298.0
DIN C4 | 649.0 x 918.0
DIN C5 | 459.0 x 649.0
DIN C6 | 323.0 x 459.0
DIN C65 | 323.0 x 649.0
DIN DL | 312.0 x 624.0
DIN E4 | 623.0 x 879.0
DIN E5 | 439.0 x 624.0
DIN E6 | 312.0 x 439.0
DIN E65 | 312.0 x 624.0
DIN M5 | 439.0 x 632.0
DIN M65 | 317.0 x 632.0
US Legal | 612.0 x 1008.0
US Letter | 612.0 x 792.0

```dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean
dim dWidth as Double = 800 // new width
dim dHeight as Double = 600 // new height

// define page size
bBool=pdf.SetPageWidth(dWidth)
bBool=pdf.SetPageHeight(dHeight)
```

**Notes:**

Common paper formats and sizes in points:

See also `SetPageHeight` function in DynaPDF manual.

70.34.788 SetPageLayout(Layout as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The function sets the page layout that is used when opening the document with Adobe’s Acrobat.
Example:

```vba
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// define page view
'plSinglePage = 0, // Show one page at time
'plOneColumn = 1, // Show the pages continous
'plTwoColumnLeft = 2, // Two columns, start with left column
'plTwoColumnRight = 3 // Two columns, start with right column
bBool=pdf.SetPageLayout(0)
```

See also SetPageLayout function in DynaPDF manual.
70.34.789 SetPageMode(Mode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The function sets the page mode that is used when opening the document with Adobe’s Acrobat.

**Example:**

```vbscript
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// define page mode
'pmUseNone = 0, // Default
'pmUseOutlines = 1, // Show the outline tree
'pmUseThumbs = 2, // Show the thumb nails
'pmFullScreen = 3 // Open the document in full-screen mode
bBool=pdf.SetPageMode(0)
```

See also `SetPageMode` function in DynaPDF manual.

70.34.790 SetPageWidth(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The function changes the width of the currently open page if any, or the default width for newly created pages.

**Example:**

```vbscript
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean
dim dWidth as Double = 800 // new width
dim dHeight as Double = 600 // new heihht

// define page size
bBool=pdf.SetPageWidth(dWidth)
bBool=pdf.SetPageHeight(dHeight)
```

**Notes:**

Common paper formats and sizes in points:

See also `SetPageWidth` function in DynaPDF manual.
70.34. CLASS DYNAPDFMBS

Format | Size in units (Width x Height)
---|---
DIN A3 | 842.0 x 1191.0
DIN A4 | 595.0 x 842.0
DIN A5 | 419.0 x 595.0
DIN B4 | 709.0 x 1001.0
DIN B5 | 499.0 x 709.0
DIN B6 | 354.0 x 499.0
DIN C3 | 918.0 x 1298.0
DIN C4 | 649.0 x 918.0
DIN C5 | 459.0 x 649.0
DIN C6 | 323.0 x 459.0
DIN C65 | 323.0 x 649.0
DIN DL | 312.0 x 624.0
DIN E4 | 623.0 x 879.0
DIN E5 | 439.0 x 624.0
DIN E6 | 312.0 x 439.0
DIN E65 | 312.0 x 624.0
DIN M5 | 439.0 x 632.0
DIN M65 | 317.0 x 632.0
US Legal | 612.0 x 1008.0
US Letter | 612.0 x 792.0

70.34.791 SetPDFVersion(Version as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The function changes the output PDF file version.

**Example:**

```plaintext
const pvPDF_1_3=3

dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// ask to create a pdf in version 1.3
bBool=pdf.SetPDFVersion(DynapdfMBS.kpvPDFA_2005)
```

**Notes:** Requires DynaPDF Lite license for PDF/A and PDF/X versions. See also SetPDFVersion function in DynaPDF manual.
70.34.792  SetPrintSettings(Mode as Integer, PickTrayByPDFSize as Integer, NumCopies as Integer, PrintScaling as Integer, PrintRanges() as Integer) as boolean

Function: Sets the print settings.
Notes:
This is a PDF 1.7 extension.

For the Mode use the kdpm* constants.
For the PrintScaling use the kps* constants.
See also SetPrintSettings function in DynaPDF manual.

70.34.793  SetResolution(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The function sets the resolution in DPI (Dots per Inch), in which images are stored by DynaPDF.
Example:

```vbnet
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// set maximum resolution
bBool = pdf.SetResolution(150)
```

See also SetResolution function in DynaPDF manual.

70.34.794  SetSaveNewImageFormat(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The property SaveNewImageFormat specifies whether images should be downscaled if the original resolution of the image is higher than the value of the property resolution (see also SetResolution()).
Example:

```vbnet
dim pdf as DynaPDFMBS // your DynaPDF object
dim bBool as Boolean

// whether you want image to be recompressed
bBool = pdf.SetSaveNewImageFormat(False)
```
70.34. CLASS DYNAPDFMBS

See also SetSaveNewImageFormat function in DynaPDF manual.

70.34.795 SetSeparationInfo(Handle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function sets the separation info of the current open page. See also SetSeparationInfo function in DynaPDF manual.

70.34.796 SetStrokeColor(ColorValue as color) as Boolean

MBS DynaPDF Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function sets the color used for stroked graphics objects. Notes: Raises an exception if current color space is CMYK or Gray and not RGB. See also SetStrokeColor function in DynaPDF manual. See also:

- 70.34.797 SetStrokeColor(ColorValue as Integer) as Boolean
- 70.34.798 SetStrokeColor(values() as Double) as boolean
- 70.34.799 SetStrokeColor(values() as single) as boolean

70.34.797 SetStrokeColor(ColorValue as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function sets the color used for stroked graphics objects. See also SetStrokeColor function in DynaPDF manual. See also:

- 70.34.796 SetStrokeColor(ColorValue as color) as Boolean
- 70.34.798 SetStrokeColor(values() as Double) as boolean
- 70.34.799 SetStrokeColor(values() as single) as boolean

70.34.798 SetStrokeColor(values() as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Sets stroke color based on an array of floats. Notes: The number of components must match. See also SetStrokeColor function in DynaPDF manual. See also:
70.34.799  SetStrokeColor(values() as single) as boolean

Function: Sets stroke color based on an array of floats.
Notes: The number of components must match.
See also SetStrokeColor function in DynaPDF manual.
See also:

- 70.34.796 SetStrokeColor(ColorValue as color) as Boolean
- 70.34.797 SetStrokeColor(ColorValue as Integer) as Boolean
- 70.34.798 SetStrokeColor(values() as Double) as boolean

70.34.800  SetStrokeColorEx(colorvalues as memoryblock, count as Integer) as Boolean

Function: Sets the stroke color using the values in parameters.
Example:

```java
dim p as DynaPDFMBS // get a pdf object

dim colorvalues as memoryblock

colorvalues=NewMemoryBlock(3)
colorvalues.Byte(0)=255
colorvalues.Byte(1)=128
colorvalues.Byte(2)=0

if p.SetStrokeColorEx(colorvalues, 3) then
  ' ok
else
  ' failed
end if
```

Notes: Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.
See also SetStrokeColorEx function in DynaPDF manual.
See also:
70.34.801  SetStrokeColorEx(ParamArray colorvalue as Integer) as Boolean

Example:

```vba
   dim p as DynaPDFMBS  // get a pdf object
   if p.SetStrokeColorEx(255,128,0) then  
     ' ok
   else  
     ' failed
   end if
```

Notes: Pass as many color values as needed for the current color space. 3 for RGB, 4 for CMYK. All values must be in the range of 0 to 255.

See also SetStrokeColorEx function in DynaPDF manual.

See also:

- 70.34.800 SetStrokeColorEx(colorvalues as memoryblock, count as Integer) as Boolean

70.34.802  SetStrokeColorSpace(Colorspace as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function changes the stroke color space. In PDF, fill and stroke colors use both their own color spaces.

See also SetStrokeColorSpace function in DynaPDF manual.

70.34.803  SetTabLen(TabLen as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function sets the tabulator length, specified in number of spaces, which will be used to emulate tabulators during text formatting (see WriteFText() for further information).

See also SetTabLen function in DynaPDF manual.

70.34.804  SetTextDrawMode(Mode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The text draw mode specifies how text should be rendered.
See also SetTextDrawMode function in DynaPDF manual.

70.34.805 SetTextFieldValue(\text{Field as Integer, Value as string, DefValue as string, Align as Integer}) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. \textbf{Function:} The function sets or changes the value and default value of a text field. \textbf{Notes:} The Value and the DefValue strings are converted to unicode. See also SetTextFieldValue function in DynaPDF manual.

70.34.806 SetTextFieldValueAnsi(\text{Field as Integer, Value as string, DefValue as string, Align as Integer}) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. \textbf{Function:} The function sets or changes the value and default value of a text field. \textbf{Notes:} The Value and the DefValue strings are converted to ANSI.

70.34.807 SetTextFieldValueAnsiEx(\text{Field as Integer, Value as string}) as Boolean

70.34.808 SetTextFieldValueEx(\text{Field as Integer, Value as string}) as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. \textbf{Function:} Sets the text field value. See also SetTextFieldValueEx function in DynaPDF manual.

70.34.809 SetTextRect(\text{PosX as Double, PosY as Double, Width as Double, Height as Double}) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. \textbf{Function:} The function defines the output rectangle that is used to output formatted text by the function WriteFText(). See also SetTextRect function in DynaPDF manual.
**70.34.810  SetTextRise(value as Double) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Text rise specifies the distance, to move the baseline up or down from its default location. See also SetTextRise function in DynaPDF manual.

**70.34.811  SetTextScaling(value as Double) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The scaling value adjusts the width of glyphs by stretching or compressing them in the horizontal direction. See also SetTextScaling function in DynaPDF manual.

**70.34.812  SetTransparentColor(ColorValue as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the transparent color which is used for newly inserted images. See also SetTransparentColor function in DynaPDF manual.

**70.34.813  SetTrapped(value as boolean)**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the trapped key of the document. See also SetTrapped function in DynaPDF manual.

**70.34.814  SetUseExactPwd(value as Boolean) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If the property UseExactPwd is false, an encrypted PDF file can always be decrypted, if either the open or owner password in the file is an empty string. See also SetUseExactPwd function in DynaPDF manual.

**70.34.815  SetUseGlobalImpFiles(value as Boolean) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The property can be used to load an external PDF file permanent into memory, e.g. to split a large PDF file into smaller pieces.
Notes: Requires DynaPDF Pro license.
See also SetUseGlobalImpFiles function in DynaPDF manual.

70.34.816 SetUseImageInterpolation(Index as Integer, Value as Boolean) as Boolean

Function: Enables or disables image interpolation explicitly for a given image.
Notes:
If nothing was specified (this is the default), a viewer applications can only use a heuristic to determine whether image interpolation should be enabled or not. The result is then of course application specific.
The parameter Handle must be a valid image handle that was returned by a DynaPDF function like InsertImage(), InsertImageEx(), or InsertImageFromBuffer(), for example.

If the function succeeds the return value is true. If the function fails the return value is false.

70.34.817 SetUserUnit(value as single) as boolean

Function: The function sets the user unit of the current open page.
Notes:
A user unit acts like a scaling factor. The page format and all page coordinates are multiplied with this factor in a viewer application. The default size of a PDF unit is 1/72 inch. User units can be useful if the page format would be too large to be expressed in standard PDF units. The largest page format in PDF is limited to 14400 units or 200 inches. This limit can be extended with the user unit.
The largest value that is supported is 75.0 which results in a maximum page format of 15,000 x 15,000 inches or 1,800,000 units. Note that all functions which return page coordinates or page properties do not consider the user unit.
The page format must still be in the range 3..14400 units. It is also strongly recommended to set the user unit only if necessary. This is only the case if the required page format is larger 14400 units.
Default value = 1.0

Return values:
If the function succeeds the return value is true. If the function fails the return value is false.
See also SetUserUnit function in DynaPDF manual.
70.34.818  SetUseStdFonts(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function can be used to disable the 14 standard fonts temporarily. See also `SetUseStdFonts` function in DynaPDF manual.

Example:

```vbnet
    dim pdf as DynaPDFMBS ' your DynaPDF object
    ' define a swap file in case memory is low
    dim b as Boolean=pdf.SetUseSwapFile(False, 256*1024*1024)
    if b=False then
        MsgBox "Failed to create swap file."
        Return
    end if
```

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Do not use `FlushPages` and `SetUseSwapFile` together. Use one function.

70.34.819  SetUseSwapFile(SwapContents as Boolean, SwapLimit as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** When creating large PDF files with many or large images it is sometimes recommended to page out large objects to a temp file to restrict the memory usage.

Example:

```vbnet
    dim pdf as DynaPDFMBS ' your DynaPDF object
    // define a swap file in case memory is low
    dim b as Boolean=pdf.SetUseSwapFile(False, 256*1024*1024)
    if b=False then
        MsgBox "Failed to create swap file."
        Return
    end if
```

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Do not use `FlushPages` and `SetUseSwapFile` together. Use one function.

70.34.820  SetUseSwapFileEx(SwapContents as Boolean, SwapLimit as Integer, SwapDir as FolderItem) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function enables paging out of large objects to restrict the memory usage in the same way as `SetUseSwapFile()`.

**Deprecated:** This item is deprecated and should no longer be used.

70.34.821  SetUseSystemFonts(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The property specifies whether the Windows/Fonts directory should be added automatically to the list of available font search paths. See also `SetUseSystemFonts` function in DynaPDF manual.
70.34.822  SetUseTransparency(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The property specifies whether images should get a transparent background.  
**Example:**

```vbnet
dim pdf as DynaPDFMBS // your DynaPDF object  
dim bBool as Boolean  

// allow transparency for images  
bBool=pdf.SetUseTransparency(False)
```

See also SetUseTransparency function in DynaPDF manual.

70.34.823  SetUseVisibleCoords(value as Boolean) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The property specifies whether DynaPDF should consider the crop box to calculate to position of an object.  
See also SetUseVisibleCoords function in DynaPDF manual.

70.34.824  SetViewerPreferences(Value as Integer, AddVal as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The function sets the viewer preferences which can be used to control a few parameter of Adobe’s Acrobat, such as hide the toolbar or men bar.  
See also SetViewerPreferences function in DynaPDF manual.

70.34.825  SetWMFDefExtent(Width as Integer, Height as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The function sets the default size which is used to convert non-portable WMF files to EMF. See InsertMetafile() for further information.  
See also SetWMFDefExtent function in DynaPDF manual.
70.34. CLASS DYNAPDFMBS

70.34.826 SetWMFPixelPerInch(Value as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the default pixels per inch of the y-axis which are used to convert portable WMF files to EMF.
See also SetWMFPixelPerInch function in DynaPDF manual.

70.34.827 SetWordSpacing(value as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sets the word spacing.
See also SetWordSpacing function in DynaPDF manual.

70.34.828 ShowDifferences(PageIndex1 as Integer, OtherPDF as DynaPDFMBS, PageIndex2 as Integer, CheckMoving as boolean, HighlightColor as UInt32 = & hFFFF, ScaleFactor as Integer = 1, ColorTolerance as Integer = 3, debug as boolean = false) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Shows differences on two PDF pages by adding highlight annotations.
**Notes:**
Please pass page indexes for both pages. OtherPDF can be same as the current instance you call this method on.

CheckMoving: Whether to check for moving parts, e.g. the big part of the page shifted up one line.

Returns number of annotations on success which means that highlight annotations have been added to both pages.
Or returns negative value in case of error.
You can then render a page to show differences to user.
Requires a DynaPDF Pro license. Without a license, the DynaPDF watermark will reduce the accuracy.

Scale: When comparison, scales up the pictures used for comparison. Default is 1 for 72dpi, but you can use 2 for double.
ColorTolerance: The tolerance for color comparison.
Colors where red, green or blue components are within given tolerance are considered equal. So FFFFFF and FFFFFD are equal.
Default is 3.

Debug Parameter: Whether to write debug images to temp folder.
If true, we write png files to temp folder. One image is before the check, one with all similar lines removed and one with result of comparison. Red pixels show you the raster, green equal pixels.

70.34.829  **SkewCoords(alpha as Double, beta as Double, OriginX as Double, OriginY as Double) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function skewes the coordinate system and sets the coordinate origin to the point OriginX, OriginY. **Notes:** Please do not try to scale/skew/translate back later. use SaveGraphicState and RestoreGraphicState. See also SkewCoords function in DynaPDF manual.

70.34.830  **SortFieldsByIndex as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sorts the interactive form fields of a page by comparing the internal indices which can be set for each field separately (see SetFieldIndex() for further information). See also SortFieldsByIndex function in DynaPDF manual.

70.34.831  **SortFieldsByName as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function sorts the interactive form fields of a page in ascending order by field name. See also SortFieldsByName function in DynaPDF manual.

70.34.832  **SquareAnnot(PosX as Double,PosY as Double, Width as Double, Height as Double, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Comment as string) as Integer**

MBS DynaPDF Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function draws a square annotation on the current open page. **Notes:**
- If the parameters Width and Height are equal the function draws a square, a rectangle otherwise. If the annotation should be drawn without a border, set the parameter LineWidth to zero or StrokeColor to the special constant kNO_COLOR.
- If the interior should be transparent set FillColor to the special constant kNO_COLOR.
- Although the line width can be set to any positive floating point value, Adobe’s Acrobat or Reader restrict
the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in Adobe viewer products.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails, the return value is a negative error code.

See also SquareAnnot function in DynaPDF manual.

**SquareAnnotAnsi**

70.34.833  
SquareAnnotAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, LineWidth as Double, FillColor as UInt32, StrokeColor as UInt32, ColorSpace as Integer, Author as string, Subject as string, Comment as string) as Integer

**Function:** The function draws a square annotation on the current open page.  
**Notes:**
If the parameters Width and Height are equal the function draws a square, a rectangle otherwise. If the annotation should be drawn without a border, set the parameter LineWidth to zero or StrokeColor to the special constant kNO_COLOR.  
If the interior should be transparent set FillColor to the special constant kNO_COLOR.  
Although the line width can be set to any positive floating point value, Adobe's Acrobat or Reader restrict the line width to 0 through 12 units. The line width should be restricted in the same way to avoid issues in Adobe viewer products.

If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails, the return value is a negative error code.

**StampAnnot**

70.34.834  
StampAnnot(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Subject as string, Comment as string) as Integer

**Function:** Creates a stamp annotation.  
See also StampAnnot function in DynaPDF manual.
70.34.835  **StampAnnotAnsi(SubType as Integer, PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Subject as string, Comment as string) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a stamp annotation with ANSI encoded texts.

70.34.836  **StrokePath as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function strokes the current path without closing it.  See also StrokePath function in DynaPDF manual.

70.34.837  **TestGlyphs(FontHandle as Integer, Text as string) as Integer**

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function checks whether all glyphs of the text are available in the specified font.  **Example:**

```vbnet
// create dummy PDF with one page
dim d as new myDynaPDFMBS

call d.CreateNewPDF

call d.Append

// check this text
dim x as string = "" "Hello in Chinese"

// load 2 fonts to check
dim FontHandle1 as Integer = d.SetFont("Times", 12)
dim FontHandle2 as Integer = d.SetFont("Arial Unicode MS", 12)

dim r1 as Integer = d.TestGlyphs(FontHandle1, x)

if r1 = -1 then
    MsgBox "Times supports chinese characters"
else
    MsgBox "Times does not support chinese characters"
end if

dim r2 as Integer = d.TestGlyphs(FontHandle2, x)

if r2 = -1 then
    MsgBox "Arial Unicode MS supports chinese characters"
```
else
    MsgBox "Arial Unicode MS does not support chinese characters"
end if

Notes:
The return value is the position of the first missing glyph, or -1 if all glyphs are available. If the font uses a mixed 8/16 bit CJK code page that requires a conversion to Unicode (a code page that ends with ",Uni"), then the return value corresponds to the converted Unicode string and not to the CJK input string. See also TestGlyphs function in DynaPDF manual.

70.34.838  **TestGlyphsAnsi**(FontHandle as Integer, Text as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function checks whether all glyphs of the text are available in the specified font. **Notes:** The return value is the position of the first missing glyph, or -1 if all glyphs are available. If the font uses a mixed 8/16 bit CJK code page that requires a conversion to Unicode (a code page that ends with ",Uni"), then the return value corresponds to the converted Unicode string and not to the CJK input string. The text parameter is converted to ANSI.

70.34.839  **TextAnnot**(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Text as string, Icon as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function creates a text annotation. **Notes:** The text and the author parameters are converted to unicode. See also TextAnnot function in DynaPDF manual.

70.34.840  **TextAnnotAnsi**(PosX as Double, PosY as Double, Width as Double, Height as Double, Author as string, Text as string, Icon as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function creates a text annotation. **Notes:** The text and the author parameters are converted to ANSI.
70.34.841  TranslateCoords(OriginX as Double, OriginY as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function translates the coordinate system to the new origin OriginX, OriginY.
See also TranslateCoords function in DynaPDF manual.

70.34.842  TranslateRawCode(IFont as Integer, text as string, byref Width as Double, byref Decoded as boolean, CharSpacing as Double, WordSpacing as Double, TextScale as Double) as string

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Translates a raw code.
**Notes:** Deprecated. Please use other variant with more parameters.
See also:
- 70.34.843 TranslateRawCode(IFont as integer, text as string, textOffset as Integer, byref Width as double, byref Decoded as boolean, CharSpacing as double, WordSpacing as double, TextScale as double, byref count as integer) as string

70.34.843  TranslateRawCode(IFont as integer, text as string, textOffset as Integer, byref Width as double, byref Decoded as boolean, CharSpacing as double, WordSpacing as double, TextScale as double, byref count as integer) as string

MBS DynaPDF Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function converts a source character to Unicode.
**Notes:**
The code length of a character depends on the font’s encoding. PDF supports encodings with fixed and variable code lengths from one through four bytes per character. The Count parameter provides the number of bytes which were consumed to convert the character to Unicode; this value must be used to increment the textOffset parameter for further calls.
The resulting Unicode character or sequence is returned in function result. The width parameter is used to return the character width.
The parameter Decoded is set to true if the source character could be successfully converted to Unicode. If Decoded is false the output string and character width contain no meaningful values.
The function can only fail when processing strings of CID fonts, e.g. if the font depends on an external CMap that could not be loaded, or if the font uses a damaged CMap. The search path(s) to external CMaps should always be set before extracting text from PDF files with SetCMapDir().
Passing an invalid or undefined code sequence to the function does not result in an error. In this case the notdef character is added to the output string (this is usually 0 or 0xFFFD if the font contains a ToUnicode
Notice:
To improve processing speed the function does not check whether the parameters are valid.
Remarks:
This function was designed to convert raw strings on a per character basis to Unicode which were returned
by ParseContent() or GetPageText(). The parameters CharSpacing, WordSpacing, and TextScale must be
taken from the current graphics state or from the structure DynaPDFStackMBS.
Return values:
The count value of this function is always greater or equal to one. Check the parameter Decoded to determine
whether the function succeed.
See also:

- 70.34.842 TranslateRawCode(IFont as Integer, text as string, byref Width as Double, byref Decoded
  as boolean, CharSpacing as Double, WordSpacing as Double, TextScale as Double) as string

70.34.844 TranslateString(IFont as Integer, text as string, flags as Integer) as string

Function: Translates a string.
See also:

- 70.34.845 TranslateString(stack as DynaPDFStackMBS, flags as Integer) as string

70.34.845 TranslateString(stack as DynaPDFStackMBS, flags as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The function translates a binary string returned by GetPageText() to Unicode.
See also:

- 70.34.844 TranslateString(IFont as Integer, text as string, flags as Integer) as string

70.34.846 Triangle(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x3
  as Double, y3 as Double, FillMode as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The function draws a triangle.
See also Triangle function in DynaPDF manual.
70.34.847  **UnLockLayer(layer as UInt32) as boolean**

**Function:** Locks a layer.  
See also UnLockLayer function in DynaPDF manual.

70.34.848  **WatermarkAnnot(PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer**

**Function:** Creates a Watermark annotation.  
**Notes:**  
Watermark annotations have no interactive elements like other annotation types. This property is useful in many cases because it is usually not possible to select or change the contents of a watermark annotation in viewer applications.  
The annotation has no appearance after it was created. Call CreateAnnotAP to create an appearance template for the annotation. After the appearance template was created you can draw text, images or vector graphics into it. The template must be closed with EndTemplate when finished. It is also possible to import an external page or EMF contents into the template.  
Watermark annotations can be shared on multiple pages. To place the annotation on other pages call AddAnnotToPage.  
If the function succeeds the return value is the annotation handle, a value greater or equal zero. If the function fails the return value is a negative error code.  
See also WatermarkAnnot function in DynaPDF manual.

70.34.849  **WebLink(PosX as Double, PosY as Double, Width as Double, Height as Double, aText as string) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The function inserts a web link onto the current open page.  
**Notes:** The text parameter is converted to unicode.  
See also WebLink function in DynaPDF manual.

70.34.850  **WebLinkAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, aText as string) as Integer**

**Function:** The function inserts a web link onto the current open page.
70.34.851 WeightFromStyle(s as Integer) as Integer

**Function:** Converts a style value to a weight value.

70.34.852 WeightToStyle(s as Integer) as Integer

**Function:** Converts a weight value to a style value.

70.34.853 WidthFromStyle(s as Integer) as Integer

**Function:** Converts a style constant to the width value.

70.34.854 WidthToStyle(s as Integer) as Integer

**Function:** Converts a width value to a style value.

70.34.855 WriteAngleText(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The function prints a string in a user defined angle around a radius.
**Notes:** The text parameter is converted to unicode.
See also WriteAngleText function in DynaPDF manual.
See also:

- 70.34.856 WriteAngleText(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean
70.34.856  WriteAngleText(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

**Function:** The function prints a string in a user defined angle around a radius. 
**Notes:** This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

See also WriteAngleText function in DynaPDF manual.
See also:

- 70.34.855 WriteAngleText(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

70.34.857  WriteAngleTextAnsi(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

**Function:** The function prints a string in a user defined angle around a radius. 
**Notes:** The text parameter is converted to ANSI, so use only with SetFont with kcp1252.

70.34.858  WriteAngleTextDirect(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

**Function:** The function prints a string in a user defined angle around a radius. 
**Notes:** The text parameter is not converted, so pass a string in the right encoding.
See also:

- 70.34.859 WriteAngleTextDirect(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean
70.34. **CLASS DYNAPDFMBS**

**70.34.859** WriteAngleTextDirect(glyphs() as Integer, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

**Function:** The function prints a string in a user defined angle around a radius.

**Notes:**
This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.

See also:

- 70.34.858 WriteAngleTextDirect(aText as string, Angle as Double, PosX as Double, PosY as Double, Radius as Double, YOrigin as Double) as Boolean

**70.34.860** WriteFText(Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.

**Notes:**
The text parameter is converted to unicode.

The PageBreak event is called when needed by the plugin.

See also WriteFText function in DynaPDF manual.

See also:

- 70.34.861 WriteFText(Align as Integer, glyphs() as Integer) as Boolean

**70.34.861** WriteFText(Align as Integer, glyphs() as Integer) as Boolean

**Function:** Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.

**Notes:**
This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

The PageBreak event is called when needed by the plugin.

See also WriteFText function in DynaPDF manual.

See also:
70.34.862 WriteFTextAnsi(Align as Integer, aText as string) as Boolean

Function: Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.

Notes:

The text parameter is converted to ANSI, so use only with SetFont with kcp1252.

The PageBreak event is called when needed by the plugin.

70.34.863 WriteFTextDirect(Align as Integer, aText as string) as Boolean

Function: Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.

Notes:

The text parameter is not converted, so pass a string in the right encoding.

The PageBreak event is called when needed by the plugin.

See also:

- 70.34.864 WriteFTextDirect(Align as Integer, glyphs() as Integer) as Boolean

70.34.864 WriteFTextDirect(Align as Integer, glyphs() as Integer) as Boolean

Function: Instead of printing text on a line by line basis it is also possible to output text into a rectangle by applying a formatting algorithm.

Notes:

This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.

The PageBreak event is called when needed by the plugin.

See also:

- 70.34.863 WriteFTextDirect(Align as Integer, aText as string) as Boolean
70.34. CLASS DYNAPDFMBS

70.34.865 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The function prints a formatted text exactly in the same way as WriteFText().
Notes:
The text parameter is converted to unicode.

The PageBreak event is called when needed by the plugin.
See also WriteFTextEx function in DynaPDF manual.
See also:
- 70.34.866 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean

70.34.866 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean

Function: The function prints a formatted text exactly in the same way as WriteFText().
Notes:
This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

The PageBreak event is called when needed by the plugin.
See also WriteFTextEx function in DynaPDF manual.
See also:
- 70.34.866 WriteFTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean

70.34.867 WriteFTextExAnsi(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean

Function: The function prints a formatted text exactly in the same way as WriteFText().
Notes:
The text parameter is converted to ANSI, so use only with SetFont with kcp1252.

The PageBreak event is called when needed by the plugin.
70.34.868  WriteFTextExDirect(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean

**Function:** The function prints a formatted text exactly in the same way as WriteFText().  
**Notes:**  
The text parameter is not converted, so pass a string in the right encoding.  
The PageBreak event is called when needed by the plugin.  
See also:

- 70.34.869 WriteFTextExDirect(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean

70.34.869  WriteFTextExDirect(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, glyphs() as Integer) as Boolean

**Function:** The function prints a formatted text exactly in the same way as WriteFText().  
**Notes:**  
This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.  
The PageBreak event is called when needed by the plugin.  
See also:

- 70.34.868 WriteFTextExDirect(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, aText as string) as Boolean

70.34.870  WriteStyledText(Align as Integer, StyledText as StyledText) as Boolean

**Function:** Writes styled text.  
**Notes:** Same as WriteFText, but calls ConvertStyledText for you to convert the styled text to formatting commands.  
See also:

- 70.34.871 WriteStyledText(Align as Integer, TextArea as TextArea) as Boolean
70.34. CLASS DYNAPDFMBS

70.34.871 WriteStyledText(Align as Integer, TextArea as TextArea) as Boolean

Function: Writes styled text from TextArea.
Notes: Same as WriteFText, but calls ConvertStyledText for you to convert the styled text to formatting commands.
See also:

- 70.34.870 WriteStyledText(Align as Integer, StyledText as StyledText) as Boolean

70.34.872 WriteStyledTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, StyledText as StyledText) as Boolean

Function: Writes styled text.
Notes: Same as WriteFTextEx, but calls ConvertStyledText for you to convert the styled text to formatting commands.
See also:

- 70.34.873 WriteStyledTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, TextArea as TextArea) as Boolean

70.34.873 WriteStyledTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, TextArea as TextArea) as Boolean

Function: Writes styled text from TextArea.
Notes: Same as WriteFTextEx, but calls ConvertStyledText for you to convert the styled text to formatting commands.
See also:

- 70.34.872 WriteStyledTextEx(PosX as Double, PosY as Double, Width as Double, Height as Double, Align as Integer, StyledText as StyledText) as Boolean

70.34.874 WriteText(PosX as Double, PosY as Double, aText as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The function prints a text onto the current open page, template, or pattern.
Notes: The text parameter is converted to unicode.
See also WriteText function in DynaPDF manual.
See also:
70.34.875  **WriteText(PosX as Double, PosY as Double, glyphs() as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function prints a text onto the current open page, template, or pattern. **Notes:** This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

See also **WriteText** function in DynaPDF manual.

See also:

- 70.34.874  **WriteText(PosX as Double, PosY as Double, aText as string) as Boolean**

70.34.876  **WriteTextAnsi(PosX as Double, PosY as Double, aText as string) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function prints a text onto the current open page, template, or pattern. **Notes:** The text parameter is converted to ANSI, so use only with SetFont with kcp1252.

70.34.877  **WriteTextDirect(PosX as Double, PosY as Double, aText as string) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function prints a text onto the current open page, template, or pattern. **Notes:** The text parameter is not converted, so pass a string in the right encoding.

See also:

- 70.34.878  **WriteTextDirect(PosX as Double, PosY as Double, glyphs() as Integer) as Boolean**

70.34.878  **WriteTextDirect(PosX as Double, PosY as Double, glyphs() as Integer) as Boolean**

MBS DynaPDF Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function prints a text onto the current open page, template, or pattern. **Notes:**
This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.

See also:

- 70.34.877 WriteTextDirect(PosX as Double, PosY as Double, aText as string) as Boolean

70.34.879 WriteTextMatrix(Matrix as DynapdfMatrixMBS, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.

**Notes:**

This version takes an array of integers. So if you are using the kcpUnicode on SetFont, please pass an array of unicode codepoints. If you use kcpGlyphIndexes, please pass an array of glyph values.

See also WriteTextMatrix function in DynaPDF manual.

See also:

- 70.34.880 WriteTextMatrix(Matrix as DynapdfMatrixMBS, Text as string) as Boolean

70.34.880 WriteTextMatrix(Matrix as DynapdfMatrixMBS, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.

**Notes:** The text parameter is converted to unicode.

See also WriteTextMatrix function in DynaPDF manual.

See also:

- 70.34.879 WriteTextMatrix(Matrix as DynapdfMatrixMBS, glyphs() as Integer) as Boolean

70.34.881 WriteTextMatrixAnsi(Matrix as DynapdfMatrixMBS, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.

**Notes:** The text parameter is converted to ANSI, so use only with SetFont with kcp1252.
CHAPTER 70. DYNAPDF

70.34.882  WriteTextMatrixDirect(Matrix as DynapdfMatrixMBS, glyphs() as Integer) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
Notes: This version takes an array of integers. So pass in values in the encoding you are using. This can be glyph values or bytes in any encoding you selected in the SetFont method.

See also:

- 70.34.883 WriteTextMatrixDirect(Matrix as DynapdfMatrixMBS, Text as string) as Boolean

70.34.883  WriteTextMatrixDirect(Matrix as DynapdfMatrixMBS, Text as string) as Boolean

MBS DynaPDF Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The function prints a text onto the current open page, template, or pattern by using a transformation matrix to calculate the position of the string.
Notes: The text parameter is not converted, so pass a string in the right encoding.

See also:

- 70.34.882 WriteTextMatrixDirect(Matrix as DynapdfMatrixMBS, glyphs() as Integer) as Boolean

70.34.884  YofCMYK(CMYK as UInt32) as Integer

Example:

dim cmyk as Integer = DynaPDFMBS.CMYK(1,2,3,4)
MsgBox str(DynaPDFMBS.YofCMYK(cmyk))  // shows 3

Notes: Returns different values on BigEndian and LittleEndian systems.
70.34.885  Properties

70.34.886  DynaPDFVersion as String
Function: The DynaPDF version text.
Notes: (Read only property)

70.34.887  Handle as Integer
MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The IPDF handle passed to each API function.
Notes:
The constructor fills this handle and the destructor frees it.
(Read only property)

70.34.888  ImportFlags as Integer
Function: Get/Set import flags.
Notes:
Same as using GetImportFlags and SetImportFlags.
(Read and Write property)

70.34.889  ImportFlags2 as Integer
Function: Get/Set import flags 2.
Notes:
Same as using GetImportFlags2 and SetImportFlags2.
(Read and Write property)

70.34.890  PageCoords as Integer
Function: The page coordinate system setting.
Notes:
The native coordinate system of the Portable Document Format is bottom up. Also check the dynapdf manual on the pdfGetPageCoords and pdfSetPageCoords functions. Value can be kpcTopDown or kpcBottomUp. Default is kpcBottomUp. (Read and Write property)

### 70.34.891 TraceFile as Folderitem

**Function:** The trace file.
**Notes:**
The plugin writes debug messages to this file so you can check what functions you called. Not all functions are supported for this. Improved with 16.2 plugin to really cover over 99% of all calls with parameters and result. Please report if you miss something.
(Read and Write property)

### 70.34.892 TraceHandle as Integer

**Function:** The internal file handle for the trace file.
**Notes:**
If this is not zero, the tracing option is turned on. You can set this value indirectly by using the TraceFile property.
(Read only property)

### 70.34.893 ValidateTextEncodings as Boolean

**Function:** Whether to validate text encodings.
**Example:**
```plaintext
dim pdf as new DynaPDFMBS

call pdf.CreateNewPDF nil
call pdf.Append

// enable validating
pdf.ValidateTextEncodings = true

// make text without text encoding
dim s as string = "Hello World"
```
s = DefineEncoding(s, nil) // remove encoding

call pdf.SetFont "Times", pdf.kfsItalic, 20.0, true, pdf.kcp1252
// now cause exception
call pdf.WriteText 50.0, 580.0, s

call pdf.EndPage
call pdf.CloseFile

Notes:
You should enable this for debugging to find bugs with text encodings.
(Read and Write property)

70.34.894 Events

70.34.895 EnumDocFont(Font as DynaPDFFontMBS, FontInfo as DynaPDF-FontInfoMBS, Type as Integer, BaseFont as string, Fontname as string, Embedded as boolean, IsFormFont as boolean, Flags as Integer, FontRef as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.
Function: The event being called if you use the EnumDocFonts function.
Notes:
Font is deprecated. FontRef is the internal reference to the font.
FontInfo is the new property to use for font details.

70.34.896 EnumHostFont(FamilyName as string, PostScriptName as string, Style as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.
Function: The event called by EnumHostFonts.

70.34.897 EnumHostFontEx(FamilyName as string, PostScriptName as string, Style as Integer, BaseType as Integer, Embeddable as boolean, Flags as Integer, FilePath as string) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.
Function: The event called by EnumHostFontsEx.
70.34.898 Error(ErrorCode as Integer, ErrorMessage as string, ErrorType as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.

Function: The error callback.

Notes:
ErrCode is a positive error number starting at zero; it is an index into the array of error messages. ErrType is a bitmask to determine what kind of error occurred. The following constants are defined:

const E_WARNING = & h02000000
const E_SYNTAX_ERROR = & h04000000
const E_VALUE_ERROR = & h08000000
const E_FONT_ERROR = & h10000000
const E_FATAL_ERROR = & h20000000
const E_FILE_ERROR = & h40000000

At time of publication only one flag is set at any one time. Future versions may be set multiple flags, e.g. E_SYNTAX_ERROR and E_WARNING. Because of this, it is recommended to mask out the error type with a bitwise and operator.
If the callback function returns a value other than zero (0), processing stops immediately.

70.34.899 InitProgress(ProgType as Integer, MaxCount as Integer)

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.

Function: Called when a progress ist starting.

Notes:
The return value of the progress callback function must be 0, any other return value breaks processing.

See pt* constants for ProgType.

70.34.900 OnFontNotFound(PDFFontRef as Integer, FontName as string, Style as Integer, StdFontIndex as Integer, IsSymbolFont as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.

Function: The events called when a font is not found.
Notes:
Please call one of the ReplaceFont functions here and return their return code from the callback.
Or return -1 if your code has an error.
See also OnFontNotFound function in DynaPDF manual.

70.34.901  OnReplaceICCProfile(Type as Integer, ColorSpace as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: The event called when an ICC profile is replaced.
See also OnReplaceICCProfile function in DynaPDF manual.

70.34.902  PageBreak(LastPosX as Double, LastPosY as Double, PageBreak as boolean) as Integer

Notes:
Some things are set by WriteFText.
For example SetFont may fail if you try normal font family names. That is because SetFontSelMode is used with postscript names and you may want to set it to ksmPostScriptName using SetFontSelMode for SetFont to accept family names.
Coordinate system may be switched to bottom up.

70.34.903  Progress(ActivePage as Integer) as Integer

Notes: The return value of the progress callback function must be 0, any other return value breaks processing.
CHAPTER 70. DYNAPDF

70.34.904  RasterShowText(MatrixBefore as DynapdfMatrixMBS, MatrixAfter as DynapdfMatrixMBS, TextBuffers() as DynaPDFTextRecordAMBS, Texts() as String, Width as Double, Vertical as boolean, FontRef as Integer, textScaling as Double)

Function: Rastering draws text.

Notes:
This is experimental and will be replaced later with a better API in a future DynaPDF release. Works only if you have a plugin where this is enabled by us.

If you implement this event, you get an event whenever one of the rasterizers draws some text on a page. MatrixBefore tells you start position, MatrixAfter end position. TextBuffers provide raw text data. Texts array the matching unicode text. Width is length of text in points. Vertical is true for vertical text. FontRef is the internal font reference. You can query fonts with EnumDocFont before to get a list of all fonts and find it in the array. Do not use font functions in the event as that can confuse the rasterizer.

Do not use with MT methods, please.

70.34.905  Constants

70.34.906  kadAnnotation = 0

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the destination object types.

Notes: Destination is annotation handle.

70.34.907  kadCatalog = 1

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the destination object types.

Notes: Destination is root object of document (no handle).

70.34.908  kadField = 2

MBS DynaPDF Plugin, Plugin Version: 13.5.

Function: One of the destination object types.

Notes: Destination is field handle.
MBS DynaPDF Plugin, Plugin Version: 13.5. **Function:** One of the destination object types.  
**Notes:** Destination is image handle.

MBS DynaPDF Plugin, Plugin Version: 13.5. **Function:** One of the destination object types.  
**Notes:** Destination is page handle.

MBS DynaPDF Plugin, Plugin Version: 13.5. **Function:** One of the destination object types.  
**Notes:** Destination is template handle.

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the application event constants.  
**Notes:** Export

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the application event constants.  
**Notes:** Print

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the application event constants.  
**Notes:** View

MBS DynaPDF Plugin, Plugin Version: 8.6. **Function:** One of the annotation flatten flags.  
**Notes:** If set, markup annotations are flattened only. Link, Sound, or FileAttach annotations are no markup annotations. These types will be left intact.
70.34.916  kaffNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.6. **Function:** One of the annotation flatten flags.  
**Notes:**  
Printable annotations independent of the type.  
By default all annotations which have an appearance stream and which have the print flag set are flattened.  
All annotations are deleted when the function returns with the exception of file attachment annotations.  
If you want to flatten the view state then set the flag affUseViewState.

70.34.917  kaffUseViewState = 1

MBS DynaPDF Plugin, Plugin Version: 8.6. **Function:** One of the annotation flatten flags.  
**Notes:** If set, annotations which are visible in a viewer become flattened.

70.34.918  kafHidden = 2

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.  
**Notes:** One of the three options to hide the annotation (see dynapdf manual)

70.34.919  kafInvisible = 1

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.  
**Notes:** One of the three options to hide the annotation (see dynapdf manual)

70.34.920  kafLocked = & h00000080

MBS DynaPDF Plugin, Plugin Version: 15.3. **Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.  
**Notes:** (PDF 1.4) If set, do not allow the annotation to be deleted or its properties (including position and size) to be modified by the user. However, this flag does not restrict changes to the annotations contents.

70.34.921  kafLockedContents = & h00000200

MBS DynaPDF Plugin, Plugin Version: 15.3. **Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.
**Notes:** (PDF 1.7) If set, do not allow the contents of the annotation to be modified by the user. This flag does not restrict deletion of the annotation or changes to other annotation properties, such as position and size.

### 70.34.922 kafNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.  
**Notes:** No flags are set

### 70.34.923 kafNoRotate = & h00000010

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.  
**Notes:** Do not rotate the annotation

### 70.34.924 kafNoView = & h00000020

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.  
**Notes:** One of the three options to hide the annotation (see dynapdf manual)

### 70.34.925 kafNoZoom = 8

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.  
**Notes:** Do not zoom the annotation

### 70.34.926 kafPrint = 4

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF annotation flags constants for SetAnnotFlags.  
**Notes:** Annotation is printable
70.34.927  \texttt{kafReadOnly} = \& \texttt{h00000040}

MBS DynaPDF Plugin, Plugin Version: 8.0. \textbf{Function}: One of the DynaPDF annotation flags constants for SetAnnotFlags.
\textbf{Notes}: Changes are not allowed.

70.34.928  \texttt{kafToggleNoView} = \& \texttt{h00000100}

MBS DynaPDF Plugin, Plugin Version: 15.3. \textbf{Function}: One of the DynaPDF annotation flags constants for SetAnnotFlags.
\textbf{Notes}: (PDF 1.5) If set, invert the interpretation of the NoView flag for certain events.

70.34.929  \texttt{kaiComment} = 0

MBS DynaPDF Plugin, Plugin Version: 8.0. \textbf{Function}: One of the DynaPDF constants for annotation icons.

70.34.930  \texttt{kaiHelp} = 1

MBS DynaPDF Plugin, Plugin Version: 8.0. \textbf{Function}: One of the DynaPDF constants for annotation icons.

70.34.931  \texttt{kaiInsert} = 2

MBS DynaPDF Plugin, Plugin Version: 8.0. \textbf{Function}: One of the DynaPDF constants for annotation icons.

70.34.932  \texttt{kaiKey} = 3

MBS DynaPDF Plugin, Plugin Version: 8.0. \textbf{Function}: One of the DynaPDF constants for annotation icons.

70.34.933  \texttt{kaiNewParagraph} = 4

MBS DynaPDF Plugin, Plugin Version: 8.0. \textbf{Function}: One of the DynaPDF constants for annotation icons.
70.34.934  kaiNote = 5

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for annotation icons.

70.34.935  kaiParagraph = 6

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for annotation icons.

70.34.936  karAlternative = 4

MBS DynaPDF Plugin, Plugin Version: 14.3. **Function:** One of the relationship constants. **Notes:** This key must be used for ZUGFeRD compatible invoices

70.34.937  karAssociated = 0

MBS DynaPDF Plugin, Plugin Version: 13.5. **Function:** One of the relationship constants.

70.34.938  karData = 1

MBS DynaPDF Plugin, Plugin Version: 13.5. **Function:** One of the relationship constants.

70.34.939  karSource = 2

MBS DynaPDF Plugin, Plugin Version: 13.5. **Function:** One of the relationship constants.

70.34.940  karSupplement = 3

MBS DynaPDF Plugin, Plugin Version: 13.5. **Function:** One of the relationship constants.

70.34.941  kasAccepted = 1

MBS DynaPDF Plugin, Plugin Version: 15.4. **Function:** One of the annotation migration state constants. **Notes:** Accepted
70.34.942  \textit{kasAuthor} = 0

MBS DynaPDF Plugin, Plugin Version: 9.7. \textbf{Function}: One of the annotation string type constants for \texttt{SetAnnotString}.
\textbf{Notes}: Author

70.34.943  \textit{kasCancelled} = 3

MBS DynaPDF Plugin, Plugin Version: 15.4. \textbf{Function}: One of the annotation migration state constants.
\textbf{Notes}: Cancelled

70.34.944  \textit{kasCompleted} = 4

MBS DynaPDF Plugin, Plugin Version: 15.4. \textbf{Function}: One of the annotation migration state constants.
\textbf{Notes}: Completed

70.34.945  \textit{kasContent} = 1

MBS DynaPDF Plugin, Plugin Version: 9.7. \textbf{Function}: One of the annotation string type constants for \texttt{SetAnnotString}.
\textbf{Notes}: Content

70.34.946  \textit{kasCreateReply} = 5

MBS DynaPDF Plugin, Plugin Version: 15.4. \textbf{Function}: One of the annotation migration state constants.
\textbf{Notes}: Don’t add a migration state, create a reply instead. Set the contents of the reply with \texttt{SetAnnotString}.

70.34.947  \textit{kasName} = 2

MBS DynaPDF Plugin, Plugin Version: 9.7. \textbf{Function}: One of the annotation string type constants for \texttt{SetAnnotString}.
\textbf{Notes}: Name
70.34.948   \texttt{kasNone} = 0

MBS DynaPDF Plugin, Plugin Version: 15.4. \textbf{Function}: One of the annotation migration state constants. 
\textbf{Notes}: Undefined

70.34.949   \texttt{kasRejected} = 2

MBS DynaPDF Plugin, Plugin Version: 15.4. \textbf{Function}: One of the annotation migration state constants. 
\textbf{Notes}: Rejected

70.34.950   \texttt{kasRichStyle} = 4

MBS DynaPDF Plugin, Plugin Version: 15.3. \textbf{Function}: One of the annotation string type constants for \texttt{SetAnnotString}. 
\textbf{Notes}: Default style string. ->FreeText annotations only.

70.34.951   \texttt{kasRichText} = 5

MBS DynaPDF Plugin, Plugin Version: 15.3. \textbf{Function}: One of the annotation string type constants for \texttt{SetAnnotString}. 
\textbf{Notes}: Rich text string. ->Supported by markup annotations.

70.34.952   \texttt{kasSubject} = 3

MBS DynaPDF Plugin, Plugin Version: 9.7. \textbf{Function}: One of the annotation string type constants for \texttt{SetAnnotString}. 
\textbf{Notes}: Subject

70.34.953   \texttt{kat3D} = \&h00000013

MBS DynaPDF Plugin, Plugin Version: 8.0. \textbf{Function}: One of the constants for annotation types. 
\textbf{Notes}: PDF 1.6
70.34.954  kat3D_AppDefault = 0

MBS DynaPDF Plugin, Plugin Version: 9.8. **Function**: One of the 3D Activation Type constants.  
**Notes**: Default.

70.34.955  kat3D_Explicit = 3

MBS DynaPDF Plugin, Plugin Version: 9.8. **Function**: One of the 3D Activation Type constants.  
**Notes**: The annotation should remain inactive until explicitly activated by a script or action (default).

70.34.956  kat3D_PageOpen = 1

MBS DynaPDF Plugin, Plugin Version: 9.8. **Function**: One of the 3D Activation Type constants.  
**Notes**: The annotation should be activated when the page is opened.

70.34.957  kat3D_PageVisible = 2

MBS DynaPDF Plugin, Plugin Version: 9.8. **Function**: One of the 3D Activation Type constants.  
**Notes**: The annotation should be activated when the page becomes visible.

70.34.958  katCaret = 0

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function**: One of the constants for annotation types.

70.34.959  katCircle = 1

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function**: One of the constants for annotation types.

70.34.960  katFileAttach = & h00000015

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function**: One of the constants for annotation types.  
**Notes**: PDF 1.3
70.34. CLASS DYNAPDFMBS

70.34.961  katFileLink = 2

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function**: One of the constants for annotation types.

70.34.962  katFreeText = 3

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function**: One of the constants for annotation types.

70.34.963  katGoTo = 0

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function**: One of the constants for action types.

70.34.964  katGoTo3DView = & h00000010

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function**: One of the constants for action types.  
**Notes**: PDF 1.6

70.34.965  katGoToE = & h00000011

MBS DynaPDF Plugin, Plugin Version: 9.3. **Function**: Like katGoToR but refers to an embedded PDF file.

70.34.1462  kfsSemiExpanded = & h00000600

MBS DynaPDF Plugin, Plugin Version: 10.1. **Function:** One of the font style constants for the width class.

70.34.1463  kfsStriked = 8

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the constants for font style.

70.34.1464  kfsThin = & h06400000

MBS DynaPDF Plugin, Plugin Version: 10.1. **Function:** One of the font style constants for the weight class.
70.34.1465 \texttt{kfsUltraBlack = \& h3E800000}

MBS DynaPDF Plugin, Plugin Version: 10.1. \textbf{Function:} One of the font style constants for the weight class.

70.34.1466 \texttt{kfsUltraCondensed = \& h00000100}

MBS DynaPDF Plugin, Plugin Version: 10.1. \textbf{Function:} One of the font style constants for the width class.

70.34.1467 \texttt{kfsUltraExpanded = \& h00000900}

MBS DynaPDF Plugin, Plugin Version: 10.1. \textbf{Function:} One of the font style constants for the width class.

70.34.1468 \texttt{kfsUnderlined = 4}

MBS DynaPDF Plugin, Plugin Version: 8.0. \textbf{Function:} One of the constants for font style.

70.34.1469 \texttt{kfsVerticalMode = \& h00000010}

MBS DynaPDF Plugin, Plugin Version: 10.1. \textbf{Function:} One of the constants for font style. 
\textbf{Notes:} Not considered at this time (v2.5)

70.34.1470 \texttt{kftButton = 0}

MBS DynaPDF Plugin, Plugin Version: 8.0. \textbf{Function:} One of the field type constants. 
\textbf{Notes:} Button

70.34.1471 \texttt{kftCheckBox = 1}

MBS DynaPDF Plugin, Plugin Version: 8.0. \textbf{Function:} One of the DynaPDF constants. 
\textbf{Notes:} Checkbox
70.34. CLASS DYNAPDFMBS

70.34.1472 kftComboBox = 3
MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants. **Notes:** Combobox

70.34.1473 kftGroup = 7
MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants. **Notes:** This is not a real field type, it is just an array of fields.

70.34.1474 kftListBox = 4
MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants. **Notes:** Listbox

70.34.1475 kftMMType1 = 0
MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for font types. **Notes:** Multiple Master

70.34.1476 kftRadioBtn = 2
MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants. **Notes:** Radio Button

70.34.1477 kftSignature = 6
MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants. **Notes:** Signature

70.34.1478 kftText = 5
MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants. **Notes:** Text.
**70.34.1479** \( \text{kftTrueType} = 1 \)

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for font types.  
**Notes:** TrueType font

---

**70.34.1480** \( \text{kftType0} = 2 \)

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for font types.  
**Notes:** CID font - the descendant font can be a TrueType, Type1 (CFF), or OpenType font

---

**70.34.1481** \( \text{kftType1} = 3 \)

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for font types.  
**Notes:** Type1 font

---

**70.34.1482** \( \text{kftType3} = 4 \)

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for font types.  
**Notes:** Type3 font

---

**70.34.1483** \( \text{kgfAnsiStringIsUTF8} = \& \text{h00000020} \)

MBS DynaPDF Plugin, Plugin Version: 12.4. **Function:** One of the graphics state flag constants.  
**Notes:**  
If set, single byte strings in Ansi functions are treated as UTF-8 encoded Unicode strings.  
Currently not useable with plugins.

---

**70.34.1484** \( \text{kgfCompatible} = 0 \)

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the graphics state flag constants.  
**Notes:** Compatible graphics state to earlier DynaPDF versions - default
70.34. CLASS DYNAPDFMBS

### 70.34.1485 kgfIgnoreICCProfiles = & h00000010

MBS DynaPDF Plugin, Plugin Version: 9.3. **Function:** One of the graphics state flag constants.  
**Notes:** Meaningful only if the flag gfUseImageColorSpace is set. If set, an embedded profile is not used to create an ICCBased color space for the image. The image is inserted in the corresponding device color space instead.

### 70.34.1486 kgfNativeBlackWhite = 4

MBS DynaPDF Plugin, Plugin Version: 8.1. **Function:** One of the graphics state flag constants.  
**Notes:** Do not convert RGB black or white to DeviceGray

### 70.34.1487 kgfNoBitmapAlpha = & h00000080

MBS DynaPDF Plugin, Plugin Version: 14.3. **Function:** One of the graphics state flag constants.  
**Notes:** If set, the alpha channel in 32 bit bitmaps will be ignored. Useful for bitmaps with an invalid alpha channel.

### 70.34.1488 kgfNoImageDuplCheck = & h00000100

MBS DynaPDF Plugin, Plugin Version: 14.3. **Function:** One of the graphics state flag constants.  
**Notes:** Disables duplicate check for images.

### 70.34.1489 kgfNoObjCompression = & h00000200

MBS DynaPDF Plugin, Plugin Version: 16.1. **Function:** One of the graphics state flag constants.  
**Notes:** If set, object compression will be disabled.

### 70.34.1490 kgfRealPassThrough = & h00000040

MBS DynaPDF Plugin, Plugin Version: 14.3. **Function:** One of the graphics state flag constants.  
**Notes:** If set, JPEG images are inserted as is. JPEG images are normally rebuild, also in pass-through mode, to avoid issues with certain malformed JPEG images which cannot be displayed in Adobes Acrobat or Reader. If you know that your JPEG images work then set this flag to avoid unnecessary processing time.
70.34.1491 \textbf{kgfRealTopDownCoords} = 2

MBS DynaPDF Plugin, Plugin Version: 8.0. \textbf{Function}: One of the graphics state flag constants. 
\textbf{Notes}: If set, the page coordinate system is not reset to bottom-up when transforming the coordinate system. However, real top-down coordinates require a large internal overhead and where never fully implemented. The usage of this flag should be avoided if possible.

70.34.1492 \textbf{kgfRestorePageCoords} = 1

MBS DynaPDF Plugin, Plugin Version: 8.0. \textbf{Function}: One of the graphics state flag constants. 
\textbf{Notes}: Restore the coordinate system with the graphics state (the value of PageCoords, see SetPageCoords())

70.34.1493 \textbf{kgfUseImageColorSpace} = 8

MBS DynaPDF Plugin, Plugin Version: 9.3. \textbf{Function}: One of the graphics state flag constants. 
\textbf{Notes}: If set, the active color space is ignored when inserting an image. The color space is taken from the image file instead.

70.34.1494 \textbf{khmInvert} = 1

MBS DynaPDF Plugin, Plugin Version: 8.0. \textbf{Function}: One of the Highlight Mode Constants.

70.34.1495 \textbf{khmNone} = 0

MBS DynaPDF Plugin, Plugin Version: 8.0. \textbf{Function}: One of the Highlight Mode Constants.

70.34.1496 \textbf{khmOutline} = 2

MBS DynaPDF Plugin, Plugin Version: 8.0. \textbf{Function}: One of the Highlight Mode Constants.

70.34.1497 \textbf{khmPush} = 3

MBS DynaPDF Plugin, Plugin Version: 8.0. \textbf{Function}: One of the Highlight Mode Constants.
70.34.1498  \textit{khmPushUpd} = 4

MBS DynaPDF Plugin, Plugin Version: 8.0. \textbf{Function:} One of the Highlight Mode Constants. 
\textbf{Notes:} Update appearance stream on changes.

70.34.1499  \textit{khtDetached} = 0

MBS DynaPDF Plugin, Plugin Version: 10.2. \textbf{Function:} One of the constants for CloseAndSignFileExt. 
\textbf{Notes:} Returns the byte ranges of the finish PDF buffer to create a detached signature.

70.34.1500  \textit{khtSHA1} = 1

MBS DynaPDF Plugin, Plugin Version: 10.2. \textbf{Function:} One of the constants for CloseAndSignFileExt. 
\textbf{Notes:} Returns the SHA1 hash of the PDF file so that it can be signed.

70.34.1501  \textit{kicfDefault} = 0

MBS DynaPDF Plugin, Plugin Version: 11.2. \textbf{Function:} One of the cache initialization flags.

70.34.1502  \textit{kicfIgnoreOpenAction} = 1

MBS DynaPDF Plugin, Plugin Version: 11.2. \textbf{Function:} One of the cache initialization flags.

70.34.1503  \textit{kicfIgnorePageLayout} = 2

MBS DynaPDF Plugin, Plugin Version: 11.2. \textbf{Function:} One of the cache initialization flags.

70.34.1504  \textit{kcmbBPCompensation} = 1

MBS DynaPDF Plugin, Plugin Version: 11.3. \textbf{Function:} One of the flags to pass to InitColorManagement function. 
\textbf{Notes:} Black point compensation preserves the black point when converting CMYK colors to different color spaces.
70.34.1505  kicmCheckBlackPoint = 2

MBS DynaPDF Plugin, Plugin Version: 14.2. **Function:** One of the flags to pass to InitColorManagement function.  
**Notes:** If set, soft proofing will be disabled if the black point of the output intent is probably invalid.

70.34.1506  kicmDefault = 0

MBS DynaPDF Plugin, Plugin Version: 11.3. **Function:** One of the flags to pass to InitColorManagement function.  
**Notes:** Default rules.

70.34.1507  kicNone = 0

MBS DynaPDF Plugin, Plugin Version: 7.7. **Function:** One of the image conversion flag constants.  
**Notes:** Default value.

70.34.1508  kictCMYK = 2

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for ICC profile types.

70.34.1509  kictGray = 0

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for ICC profile types.

70.34.1510  kictLab = 3

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for ICC profile types.

70.34.1511  kictRGB = 1

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for ICC profile types.
70.34.1512  kicUseCCITT4 = 1

MBS DynaPDF Plugin, Plugin Version: 7.7. **Function:** One of the image conversion flag constants. **Notes:** Use CCITT Fax 4 compression instead of Flate for dithered images.

70.34.1513  kif2CopyEncryptDict = & h00000040

MBS DynaPDF Plugin, Plugin Version: 17.0. **Function:** One of the constants for ImportFlags2. **Notes:**
If set, the encryption settings of an encrypted PDF file are copied to the new PDF file. The flag does nothing if the file is not encrypted.

70.34.1514  kif2DuplicateCheck = & h00000010

MBS DynaPDF Plugin, Plugin Version: 12.4. **Function:** One of the constants for ImportFlags2. **Notes:** Perform a duplicate check on color spaces, fonts, images, patterns, and templates when merging PDF files.

70.34.1515  kif2MergeLayers = 1

MBS DynaPDF Plugin, Plugin Version: 8.1. **Function:** One of the constants for ImportFlags2. **Notes:** If set, layers with identical name are merged. If this flag is absent DynaPDF imports such layers separately so that each layer refers still to the pages where it was originally used.

70.34.1516  kif2NoMetadata = 8

MBS DynaPDF Plugin, Plugin Version: 11.3. **Function:** One of the constants for ImportFlags2. **Notes:** Ignore metadata streams which are attached to fonts, pages, images, and so on.

70.34.1517  kif2NoResNameCheck = & h00000020

MBS DynaPDF Plugin, Plugin Version: 16.5. **Function:** One of the constants for ImportFlags2. **Notes:** Useful in viewer applications.
70.34.1518  kif2Normalize = 2

MBS DynaPDF Plugin, Plugin Version: 10.3. **Function:** One of the constants for ImportFlags2. **Notes:** Replace LZW compression with Flate, apply limit checks, repair errors if possible.

70.34.1519  kif2UseProxy = 4

MBS DynaPDF Plugin, Plugin Version: 11.3. **Function:** One of the constants for ImportFlags2. **Notes:** Not meaningful for PDF files which are loaded from a memory buffer. If set, all streams are loaded from the file on demand but they are never held in memory. This reduces drastically the memory usage and enables the processing of almost arbitrary large PDF files with minimal memory usage. The corresponding PDF file must not be deleted before CloseFile() or CloseFileEx() was called.

70.34.1520  kif3DAnnot = & h00100000

70.34. CLASS DYNAPDFMBS

70.34.1596 kmdoCatalog = 0

MBS DynaPDF Plugin, Plugin Version: 14.0. **Function:** One of the metadata object contants.  
**Notes:** The global XMP stream of the document (no handle needed)

70.34.1597 kmdoFont = 1

MBS DynaPDF Plugin, Plugin Version: 14.0. **Function:** One of the metadata object contants.  
**Notes:** Parameter Handle must be a font handle.

70.34.1598 kmdoImage = 2

MBS DynaPDF Plugin, Plugin Version: 14.0. **Function:** One of the metadata object contants.  
**Notes:** Parameter Handle must be an image handle.

70.34.1599 kmdoPage = 3

MBS DynaPDF Plugin, Plugin Version: 14.0. **Function:** One of the metadata object contants.  
**Notes:** Parameter Handle must be a page number.

70.34.1600 kmdoTemplate = 4

MBS DynaPDF Plugin, Plugin Version: 14.0. **Function:** One of the metadata object contants.  
**Notes:** Parameter Handle must be a template handle.

70.34.1601 kmfApplyBidiAlgo = & h00080000

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants.  
**Notes:** Apply the bidirectional algorithm on Unicode strings

70.34.1602 kmfClipRclBounds = & h01000000

MBS DynaPDF Plugin, Plugin Version: 8.5. **Function:** One of the metaflags constants.  
**Notes:**
If set, the graphic is drawn into a clipping path with the size of rclBounds. This flag is useful if the graphic contains content outside of its bounding box.

### 70.34.1603  kmfClipView = 8

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants. **Notes:** Draw the file into a clipping rectangle

### 70.34.1604  kmfDebug = 1

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants. **Notes:** Write debug information into the content stream.

### 70.34.1605  kmfDefault = 0

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants. **Notes:** Default conversion

### 70.34.1606  kmfDefBkModeTransp = & h00040000

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants. **Notes:** Initialize the background mode to transparent (SetBkMode() overrides this state).

### 70.34.1607  kmfDisableRasterEMF = & h02000000

MBS DynaPDF Plugin, Plugin Version: 8.7. **Function:** One of the metaflags constants. **Notes:** If set, EMF files which use unsupported ROP codes are not rastered.

### 70.34.1608  kmfFullScale = & h00010000

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants. **Notes:** Recommended if 32 bit coordinates are used
70.34.1609 kmfGDIFontSelection = & h00100000
MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants. **Notes:** Use the GDI to select fonts

70.34.1610 kmfIgnoreEmbFonts = & h08000000
MBS DynaPDF Plugin, Plugin Version: 13.4. **Function:** One of the meta flag constants. **Notes:** If set, embedded fonts in GDIComment records will be ignored. This flag must be set if the fonts of an EMF spool file were pre-loaded with ConvertEMFSpool(). Spool fonts must always be loaded in a pre-processing step since required fonts are not necessarily embedded in the EMF files.

70.34.1611 kmfIntersectClipRect = & h00002000
MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants. **Notes:** enabled by default - can be disabled with mfNoClippingRgn

70.34.1612 kmfNoBBoxCheck = & h04000000
MBS DynaPDF Plugin, Plugin Version: 13.3. **Function:** One of the meta flag constants. **Notes:** Disable the bbox check.

70.34.1613 kmfNoBmpPatterns = & h00000400
MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants. **Notes:** Ignore bitmap patterns

70.34.1614 kmfNoClippingRgn = & h00000040
MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants. **Notes:** Disables SelectClippingRegion, IntersectClipRect, and SelectClipPath

70.34.1615 kmfNoFontEmbedding = & h00000080
MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants. **Notes:** Do not embed fonts - Fonts should be embedded!!!
70.34.1616 kmfNoImages = & h00000100

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants.
**Notes:** Ignore image records

70.34.1617 kmfNoStdPatterns = & h00000200

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants.
**Notes:** Ignore standard patterns

70.34.1618 kmfNoText = & h00000800

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants.
**Notes:** Ignore text records

70.34.1619 kmfNoTextClipping = & h00400000

MBS DynaPDF Plugin, Plugin Version: 8.5. **Function:** One of the metaflags constants.
**Notes:** If set, the ETO_CLIPPED flag in text records is ignored.

70.34.1620 kmfNoTextScaling = 4

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants.
**Notes:** Do not scale text

70.34.1621 kmfNoUnicode = & h00008000

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants.
**Notes:** Avoid usage of Unicode fonts - recommended to enable PDF 1.2 compability
70.34.1622  kmfRclFrameEx = \& h00200000

MBS DynaPDF Plugin, Plugin Version: 8.1. **Function:** One of the DynaPDF constants.

---

70.34.1623  kmfShowBounds = 2

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants.  
**Notes:** Show the bounding boxes of text strings

---

70.34.1624  kmfSrcCopy_Only = \& h00800000

MBS DynaPDF Plugin, Plugin Version: 8.5. **Function:** One of the metaflags constants.  
**Notes:** If set, images which use a ROP code other than SRCCOPY are ignored. This is useful when processing Excel 2007 spool files.

---

70.34.1625  kmfUseRclBounds = \& h0000010

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants.  
**Notes:** Use rclBounds instead of rclFrame

---

70.34.1626  kmfUseRclFrame = \& h00020000

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants.  
**Notes:** This flag should be set if the rclFrame rectangle is properly set

---

70.34.1627  kmfUseSpacingArray = \& h0000020

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants.  
**Notes:** enabled by default ->can be disabled with mfUseTextScaling

---

70.34.1628  kmfUseTextScaling = \& h00004000

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants.  
**Notes:** Scale text instead of using the intercharacter spacing array
70.34.1629  kmfUseUnicode = & h00001000

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the meta flag constants.  
**Notes:** Ignore ANSI_CHARSET

70.34.1630  knaDefault = 0

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for a 3D named action.

70.34.1631  knaDeletePages = & h0000000D

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the named action constants.

70.34.1632  knaFirst = 1

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for a 3D named action.

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the named action constants.

70.34.1634  knaFitPage = & h0000000B

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the named action constants.

70.34.1635  knaFontsInfo = 8

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the named action constants.
70.34.1636 knaFullScreen = & h0000000C

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the named action constants.

70.34.1637 knaGeneralInfo = 7

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the named action constants.

70.34.1638 knaGoBack = 4

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the named action constants.

70.34.1639 knaLast = 2

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for a 3D named action.

70.34.1640 knaLastPage = 1

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the named action constants.

70.34.1641 knaNext = 3

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for a 3D named action.

70.34.1642 knaNextPage = 2

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the named action constants.

70.34.1643 knaOpenDlg = 5

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the named action constants.
**70.34.1644 knaPrevious = 4**

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for a 3D named action.

**70.34.1645 knaPrevPage = 3**

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the named action constants.

**70.34.1646 knaPrintDlg = 6**

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the named action constants.

**70.34.1647 knaQuit = & h0000000E**

MBS DynaPDF Plugin, Plugin Version: 9.8. **Function:** One of the named action constants.

**70.34.1648 knaSaveAs = 9**

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the named action constants.

**70.34.1649 knaSecurityInfo = & h0000000A**

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the named action constants.

**70.34.1650 kNEW_ALIGN_CENTER = 3**

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants.

**70.34.1651 kNEW_ALIGN_JUSTIFY = 4**

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants.
70.34. CLASS DYNAPDFMBS

70.34.1652  **kNEW_ALIGN_LEFT** = 1

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants.

70.34.1653  **kNEW_ALIGN_RIGHT** = 2

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants.

70.34.1654  **kNO_COLOR** = & hFFFFFFF1

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the RGB color constants.
**Notes:**
This value can be used for form fields, annotations and standard patterns to determine that the specific color is not set.
For example, when a form field should have a transparent background, set the field background color to NO_COLOR. The background appears then transparent.

70.34.1655  **knsMinusBlack** = 0

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the negative number format constants for SetNumberFormat.
**Notes:** The number is colored black with a minus sign.

70.34.1656  **knsParensBlack** = 2

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the negative number format constants for SetNumberFormat.
**Notes:** The number is colored black with parenthesis.

70.34.1657  **knsParensRed** = 3

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the negative number format constants for SetNumberFormat.
**Notes:** The number is colored red with parenthesis.
**70.34.1658**  \( \text{knsRed} = 1 \)

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the negative number format constants for `SetNumberFormat`.  
**Notes:** The number is colored red.

**Notes:** PDF 1.5 - Form fields only
70.34. CLASS DYNAPDFMBS

70.34.1679  koeOnValidate = & h0000000C

MBS DynaPDF Plugin, Plugin Version: 8.0.  **Function:** One of the DynaPDF constants.  
**Notes:** All form fields, except buttons

70.34.1680  kofAdjZeroLineWidthOnly = & h00002000

MBS DynaPDF Plugin, Plugin Version: 17.0.  **Function:** One of the constants for the Optimize function.  
**Notes:** Meaningful only if the parameter MinLineWidth of the optimize parameters is greater zero. If set, change the line width of real hairlines only (a hairline is a one pixel width line ->LineWidth = 0).

70.34.1681  kofConvertAllColors = 2

MBS DynaPDF Plugin, Plugin Version: 14.2.  **Function:** One of the constants for the Optimize function.  
**Notes:** If set, Separation, DeviceN, and NChannel color spaces will be converted to the device space.

70.34.1682  kofDefault = 0

MBS DynaPDF Plugin, Plugin Version: 16.4.  **Function:** One of the constants for the Optimize function.  
**Notes:** Just rebuild the content streams.

70.34.1683  kofDeleteAlternateImages = & h00000400

MBS DynaPDF Plugin, Plugin Version: 16.4.  **Function:** One of the constants for the Optimize function.  
**Notes:** If set, alternate images will be deleted.

70.34.1684  kofDeleteInvPaths = & h00000040

MBS DynaPDF Plugin, Plugin Version: 16.1.  **Function:** One of the constants for the Optimize function.  
**Notes:** Delete invisible paths. An invisible path is a path that was finished with the no-op operator "n".

70.34.1685  kofDeletePrivateData = & h00000100

MBS DynaPDF Plugin, Plugin Version: 16.4.  **Function:** One of the constants for the Optimize function.  
**Notes:**
Delete private data objects from pages, templates, and images. For example, Indesign may store the original Photoshop image within the PDF file.

70.34.1686  *kofDeleteThumbnails = & h00000200*

MBS DynaPDF Plugin, Plugin Version: 16.4. **Function:** One of the constants for the Optimize function. **Notes:** Thumbnails can be deleted since PDF viewers can create thumbnails easily on demand.

70.34.1687  *kofFlattenLayers = & h00000080*

MBS DynaPDF Plugin, Plugin Version: 16.1. **Function:** One of the constants for the Optimize function. **Notes:** Flatten layers if any.

70.34.1688  *kofIgnoreICCBased = 4*

MBS DynaPDF Plugin, Plugin Version: 16.2. **Function:** One of the constants for the Optimize function. **Notes:** If set, ICCBased color spaces will be left unchanged.

70.34.1689  *kofIgnoreZeroLineWidth = & h00001000*

MBS DynaPDF Plugin, Plugin Version: 16.4. **Function:** One of the constants for the Optimize function. **Notes:** Meaningful only if the parameter MinLineWidth of the DynaPDFOptimizeParamsMBS class is greater zero. If set, ignore line width operators with a value of zero (zero means one device unit).

70.34.1690  *kofInMemory = 1*

MBS DynaPDF Plugin, Plugin Version: 16.1. **Function:** One of the constants for the Optimize function. **Notes:** Optimize the file fully in memory. Only useful for small PDF files.

70.34.1691  *kofNewLinkNames = & h00000020*

MBS DynaPDF Plugin, Plugin Version: 16.1. **Function:** One of the constants for the Optimize function. **Notes:** If set, rename all object links to short names like F1, F2 etc.
70.34.1692  kofNoImageSizeCheck = & h00000800

MBS DynaPDF Plugin, Plugin Version: 16.4. **Function:** One of the constants for the Optimize function. **Notes:** Meaningful only if ofScaleImages is set. If set, do not check whether the scaled image is smaller as the original image.

70.34.1693  kofScaleImages = 8

MBS DynaPDF Plugin, Plugin Version: 14.2. **Function:** One of the constants for the Optimize function. **Notes:** Scale images as specified in the DynaPDFOptimizeParamsMBS class.

70.34.1694  kofSkipMaskedImages = & h00000010

MBS DynaPDF Plugin, Plugin Version: 16.4. **Function:** One of the constants for the Optimize function. **Notes:** Meaningful only if ofScaleImages is set. If set, don’t scale images with a color mask.

70.34.1695  koiAll = 8

70.34.1800  kpffPrintPageAsIs = & h00000100

MBS DynaPDF Plugin, Plugin Version: 17.2. **Function:** One of the printing flags.  
**Notes:** If set, do not scale or rotate a page to fit into the printable area.

70.34.1801  kpffShrinkToPrintArea = & h00000010

MBS DynaPDF Plugin, Plugin Version: 15.1. **Function:** One of the printing flags.  
**Notes:** Shrink PDF to print area.

70.34.1802  kpffImageInfoOnly = & h00000080

MBS DynaPDF Plugin, Plugin Version: 8.2. **Function:** One of the image import flags.  
**Notes:** If set, images are not decompressed. This flag is useful if you want to enumerate the images of a  
PDF file or if you want to determine how many images are stored in it. Note that images can be compressed  
with multiple filters. The member Filter of the structure TPDFImage contains only the last filter with which  
the image was compressed. There is no indication whether multiple decode filters are required to decompress  
the image buffer. So, it makes no sense to set this flag if you want to try to decompress the image buffer  
manually with your own decode filters.
70.34.1803  kpfNoJPXDecode = 4

MBS DynaPDF Plugin, Plugin Version: 7.7. **Function:** One of the PDF Parser constants.  
**Notes:** Meaningful only if the flag pfDecomprAllImages is set. If set, JPEG2000 images are returned as is so that you can use your own library to decompress such images since the the entire JPEG2000 codec is still marked as experimental. If we find an alternative to the currently used Jasper library then we will replace it immediatly with another one...

MBS DynaPDF Plugin, Plugin Version: 11.1. \textbf{Function:} One of the constants to specify how the page should be scaled into the image buffer.  
\textbf{Notes:} Scale the page so that it fits fully into the image buffer.

70.34.1828  \texttt{kpsFitHeight} = 1

MBS DynaPDF Plugin, Plugin Version: 11.1. \textbf{Function:} One of the constants to specify how the page should be scaled into the image buffer.  
\textbf{Notes:} Scale the page to the height of the image buffer.

70.34.1829  \texttt{kpsFitWidth} = 0

MBS DynaPDF Plugin, Plugin Version: 11.1. \textbf{Function:} One of the constants to specify how the page should be scaled into the image buffer.  
\textbf{Notes:} Scale the page to the width of the image buffer.
70.34.1830 kpsFitZoom = 3

MBS DynaPDF Plugin, Plugin Version: 11.3. **Function:** One of the constants to specify how the page should be scaled into the image buffer. **Notes:** This mode must be used if the scaling factors of the transformation matrix are <>1.0

70.34.1831 kpsNone = 1

MBS DynaPDF Plugin, Plugin Version: 8.7. **Function:** One of the print scaling flag constants.

70.34.1832 kpt3DOrthographic = 0

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the constants for 3D projection types. **Notes:** Orthographic

70.34.1833 kpt3DPerspective = 1

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the constants for 3D projection types. **Notes:** Perspective

70.34.1834 kptColored = 0

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the pattern type constants.

70.34.1835 kptDontCopyBuf = 4

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the constants for password type to pass when opening files. **Notes:** If set, OpenImportBuffer() does not copy the PDF buffer to an internal buffer. This increases the processing speed and reduces the memory usage. The PDF buffer must not be released until CloseImportFile() or CloseFile() was called.

70.34.1836 kptForceRepair = 2

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the constants for password type to pass when opening files.
**70.34. CLASS DYNAPDFMBS**

**Notes:** Meaningful only when opening a PDF file with OpenImportFile() or OpenImportBuffer(). If set, the PDF parser rebuilds the cross-reference table by scanning all the objects in the file. This can be useful if the cross-reference table contains damages while the top level objects are intact. Setting this flag makes only sense if the file was already previously opened in normal mode and if errors occured when importing pages of it.

---

**70.34.1837  kptImportPage = 0**

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for the progtype parameter in the progress event.

**Notes:** This value is for: Start page import

---

**70.34.1838  kptOpen = 0**

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the constants for password type to pass when opening files.

**Notes:** No password.

---

**70.34.1839  kptOwner = 1**

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the constants for password type to pass when opening files.

**Notes:** Owner password provided.

---

**70.34.1840  kptPrintPage = 2**

MBS DynaPDF Plugin, Plugin Version: 15.2. **Function:** One of the DynaPDF constants for the progtype parameter in the progress event.

**Notes:** Progress for printing a page.

---

**70.34.1841  kptShadingPattern = 2**

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the pattern type constants.
70.34.1842  kptUnColored = 1

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the pattern type constants.

70.34.1843  kptWritePage = 1

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for the progtype parameter in the progress event.
**Notes:** This value is for: Start writing a page to file or buffer

70.34.1844  kpvPDFA_1a = & h00000010

70.34.1874 \hspace{1em} kp\textsubscript{xfBGRA} = 5

MBS DynaPDF Plugin, Plugin Version: 12.2. \textbf{Function:} One of the pixel format constants.
\textbf{Notes:} BGRA
MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the pixel format constants. **Notes:** CMYK without alpha

**70.34.1876**  \( \text{kpfxCMYKA} = \& \text{h}0000000A \)

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the pixel format constants. **Notes:** CMYK with alpha

**70.34.1877**  \( \text{kpfxGray} = 1 \)

MBS DynaPDF Plugin, Plugin Version: 12.2. **Function:** One of the pixel format constants. **Notes:** 8 bit grayscale.

**70.34.1878**  \( \text{kpfxGrayA} = 8 \)

MBS DynaPDF Plugin, Plugin Version: 11.2. **Function:** One of the pixel format constants. **Notes:** 8 bit grayscale with alpha.

**70.34.1879**  \( \text{kpfxRGB} = 2 \)

MBS DynaPDF Plugin, Plugin Version: 12.2. **Function:** One of the pixel format constants. **Notes:** RGB

**70.34.1880**  \( \text{kpfxRGBA} = 4 \)

MBS DynaPDF Plugin, Plugin Version: 12.2. **Function:** One of the pixel format constants. **Notes:** RGBA

**70.34.1881**  \( \text{krfClipBoxMask} = \& \text{h}0000001C \)

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants. **Notes:** The mask for Clip flags.
**70.34.1882** \( \text{krfClipToArtBox} = 4 \)

MBS DynaPDF Plugin, Plugin Version: 12.2. **Function:** One of the raster flag constants.  
**Notes:**
Clip the page to the art box if any.

Only one of these clip flags must be set at time!

**70.34.1883** \( \text{krfClipToBleedBox} = 8 \)

MBS DynaPDF Plugin, Plugin Version: 12.2. **Function:** One of the raster flag constants.  
**Notes:**
Clip the page to the bleed box if any.

Only one of these clip flags must be set at time!

**70.34.1884** \( \text{krfClipToTrimBox} = \& \text{h00000010} \)

MBS DynaPDF Plugin, Plugin Version: 12.2. **Function:** One of the raster flag constants.  
**Notes:**
Clip the page to the bleed box if any.

Only one of these clip flags must be set at time!

**70.34.1885** \( \text{krfCompositeWhite} = \& \text{h00001000} \)

MBS DynaPDF Plugin, Plugin Version: 13.1. **Function:** One of the raster flag constants.  
**Notes:** Composite pixel formats with an alpha channel finally with a white background. The alpha channel is 255 everywhere after composition. This flag is mainly provided for debug purposes but it can also be useful if the image must be copied on screen with a function that doesn't support alpha blending.

**70.34.1886** \( \text{krfDefault} = 0 \)

MBS DynaPDF Plugin, Plugin Version: 12.2. **Function:** One of the raster flag constants.  
**Notes:** Render the page as usual
70.34.1887  krfDisableAAClipping = & h00200000
MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants.
**Notes:** Disable Anti-Aliasing for clipping paths. This flag is the most important one since clipping paths cause often visible artefacts in PDF files with flattened transparency.

70.34.1888  krfDisableAAText = & h00400000
MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants.
**Notes:** Disable Anti-Aliasing for text.

70.34.1889  krfDisableAAVector = & h00800000
MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants.
**Notes:** Disable Anti-Aliasing for vector graphics.

70.34.1890  krfDisableAntiAliasing = & h00E00000
MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants.
**Notes:** Combination of krfDisableAAVector, krfDisableAAText and krfDisableAAClipping.

70.34.1891  krfDisableBiLinearFilter = & h01000000
MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants.
**Notes:** Disable the BiLevel filter for images. Sometimes useful if sharp images are needed, e.g. for barcodes.

70.34.1892  krfExclAnnotations = & h00000020
MBS DynaPDF Plugin, Plugin Version: 12.2. **Function:** One of the raster flag constants.
**Notes:** Don’t render annotations.

70.34.1893  krfExclButtons = & h00004000
MBS DynaPDF Plugin, Plugin Version: 14.4. **Function:** One of the raster flag constants.
**Notes:**
If you want to render specific field types with `RenderAnnotOrField()` then use this flag to exclude buttons. If all fields should be skipped then set the flag `rfExclFormFields` instead.

70.34.1894 krfExclCheckBoxes = & h00008000

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants. **Notes:**
If you want to render specific field types with `RenderAnnotOrField()` then use this flag to exclude checkboxes. If all fields should be skipped then set the flag `rfExclFormFields` instead.

70.34.1895 krfExclComboBoxes = & h00010000

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants. **Notes:**
If you want to render specific field types with `RenderAnnotOrField()` then use this flag to exclude combobox. If all fields should be skipped then set the flag `rfExclFormFields` instead.

70.34.1896 krfExclFormFields = & h00000040

MBS DynaPDF Plugin, Plugin Version: 12.2. **Function:** One of the raster flag constants. **Notes:** Don’t render form fields.

70.34.1897 krfExclListBoxes = & h00020000

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants. **Notes:**
If you want to render specific field types with `RenderAnnotOrField()` then use this flag to exclude listbox. If all fields should be skipped then set the flag `rfExclFormFields` instead.

70.34.1898 krfExclPageContent = & h00002000

MBS DynaPDF Plugin, Plugin Version: 14.4. **Function:** One of the raster flag constants. **Notes:** If set, only annotations and form fields will be rendered (if any).
70.34. **CLASS DYNAPDFMBS**

70.34.1899  **krfExclSigFields = & h00080000**

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants. **Notes:**
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude signature fields. If all fields should be skipped then set the flag rfExclFormFields instead.

70.34.1900  **krfExclTextFields = & h00040000**

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants. **Notes:**
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude text fields. If all fields should be skipped then set the flag rfExclFormFields instead.

70.34.1901  **krfIgnoreCropBox = 2**

MBS DynaPDF Plugin, Plugin Version: 12.2. **Function:** One of the raster flag constants. **Notes:** Ignore the crop box and render anything inside the media box without clipping.

70.34.1902  **krfInitBlack = & h00008000**

MBS DynaPDF Plugin, Plugin Version: 13.1. **Function:** One of the raster flag constants. **Notes:** Initialize the image buffer to black before rendering (RGBA or GrayA must be initialized to black)

70.34.1903  **krfRenderInvisibleText = & h02000000**

MBS DynaPDF Plugin, Plugin Version: 18.2. **Function:** One of the raster flag constants. **Notes:** If set, treat text rendering mode Invisible as Normal.

70.34.1904  **krfRotate180 = & h00002000**

MBS DynaPDF Plugin, Plugin Version: 12.2. **Function:** One of the raster flag constants. **Notes:** Rotate the page 180 degress.
70.34.1905  krfRotate270 = \& h00000400

MBS DynaPDF Plugin, Plugin Version: 12.2. **Function:** One of the raster flag constants.  
**Notes:** Rotate the page 270 degrees.

70.34.1906  krfRotate90 = \& h00000100

MBS DynaPDF Plugin, Plugin Version: 12.2. **Function:** One of the raster flag constants.  
**Example:**

```vbs
dim pdf as new DynaPDFMBS // make subclass to catch error event

dim f as FolderItem = SpecialFolder.Desktop.Child("dynapdf_help.pdf")

// create PDF
call pdf.CreateNewPDF(nil)
// set import flags
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)

// open import file
call pdf.OpenImportFile(f, 0, "")

// import all pdf pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

dim PageCount as Integer = pdf.GetPageCount

// create rasterizer.
dim r as new DynaPDFRasterizerMBS(pdf, 1000, 1000)

// create options
dim o as new DynaPDFRasterImageMBS

// fill white
o.InitWhite = true

// scale to fit
o.DefScale = o.kpsFitBest

// rotate
o.Flags = o.krfRotate90

// render all pages
for i as Integer = 1 to PageCount

dim p as DynaPDFPageMBS = pdf.GetPage(i)
```
if r.RenderPage(p, o) then
    // save to disc
    dim outfile as FolderItem = SpecialFolder.Desktop.Child("page " + Format(i,"0") + ".jpg")
    call outfile.SaveAsJPEGMBS(r.pic, 75)
end
next

Notes: Rotate the page 90 degrees.

70.34.1907  krfScaleToBBox = & h00100000

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants.  
**Notes:** Meaningful only, if rfClipToArtBox, rfClipToBleedBox, or rfClipToTrimBox is set. If set, the picture size is set to the size of the wished bounding box.

70.34.1908  krfScaleToMediaBox = 1

MBS DynaPDF Plugin, Plugin Version: 12.2. **Function:** One of the raster flag constants.  
**Notes:** Render the real paper format. Contents outside the crop box is clipped.

70.34.1909  krfSkipUpdateBG = & h00000080

MBS DynaPDF Plugin, Plugin Version: 12.2. **Function:** One of the raster flag constants.  
**Notes:** Don’t generate an update event after initializing the background to white.

70.34.1910  kriAbsoluteColorimetric = 0

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the rendering intent constants.

70.34.1911  krifByteAligned = & h00001000

MBS DynaPDF Plugin, Plugin Version: 10.1. **Function:** One of the flags for adding raw images.

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the submit flag constants for CreateSubmitAction.

70.34.1970  ksfNone = 0

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the submit flag constants for CreateSubmitAction.
**Notes:** The default export format is FDF

70.34.1971  ksfPDF = & h00000100

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the submit flag constants for CreateSubmitAction.
**Notes:** Submit the entire PDF file -> requires the full version of Adobe’s Acrobat.
**70.34.1972**  
ksfSubmCoords = & h00000010

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the submit flag constants for CreateSubmitAction.

**70.34.1973**  
ksfXML = & h00000024

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the submit flag constants for CreateSubmitAction.

**70.34.1974**  
ksmFamilyName = 0

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for font selection modes.

**70.34.1975**  
ksmFullName = 2

MBS DynaPDF Plugin, Plugin Version: 11.3. **Function:** One of the DynaPDF constants for font selection modes.  
**Notes:** Full name.

**70.34.1976**  
ksmPostScriptName = 1

MBS DynaPDF Plugin, Plugin Version: 8.0. **Function:** One of the DynaPDF constants for font selection modes.  
**Notes:**  
If font selection mode is set to smPostScriptName the font styles fsItalic or fsBold are ignored. The PostScriptName is already a unique font name incl. style information.

**70.34.1977**  
ksmtAlpha = 0

MBS DynaPDF Plugin, Plugin Version: 11.3. **Function:** One of the soft mask constants.  
**Notes:** Alpha mode.
**70.34.1978**  
\texttt{ksmtLuminosity} = 1

MBS DynaPDF Plugin, Plugin Version: 11.3. **Function:** One of the soft mask constants.  
**Notes:** Luminosity mode.

**70.34.1979**  
\texttt{kspcDefault} = 0

MBS DynaPDF Plugin, Plugin Version: 13.4. **Function:** One of the constants for ConvertEMFSpool.  
**Notes:** Default flags.

**70.34.1980**  
\texttt{kspcDontAddMargins} = 2

MBS DynaPDF Plugin, Plugin Version: 13.4. **Function:** One of the constants for ConvertEMFSpool.  
**Notes:** If set, the page format is calculated from the EMF files as is. The current page format is not used to calculate margins which are maybe required. Note that the parameters LeftMargin and TopMargin will still be considered.

**70.34.1981**  
\texttt{kspcFlushPages} = 8

MBS DynaPDF Plugin, Plugin Version: 13.4. **Function:** One of the constants for ConvertEMFSpool.  
**Notes:** If set, the function writes every finish page directly to the output file to reduce the memory usage. This flag is meaningful only if the PDF file is not created in memory. Note also that it is not possible to access already flushed pages again with EditPage().

**70.34.1982**  
\texttt{kspcIgnorePaperFormat} = 1

MBS DynaPDF Plugin, Plugin Version: 13.4. **Function:** One of the constants for ConvertEMFSpool.  
**Notes:** If set, the current page format is used as is for the entire spool file.

**70.34.1983**  
\texttt{kspcLoadSpoolFontsOnly} = 4

MBS DynaPDF Plugin, Plugin Version: 13.4. **Function:** One of the constants for ConvertEMFSpool.  
**Notes:** If set, only embedded fonts will be loaded. The EMF files must be converted with the flag \texttt{mIgnoreEmbFonts} in this case. This flag can be useful if you want to use your own code to convert the EMF files of the spool file.
70.34.1984  kspCross = 4
MBS DynaPDF Plugin, Plugin Version: 8.0. **Function**: One of the Standard Pattern Constants.

Function: A PDF file created with the unregistered DynaPDF plugin showing an embedded PDF.
70.35. **CLASS DYNAPDFMEASUREMBS**

70.35  class DynaPDFMeasureMBS

70.35.1  class DynaPDFMeasureMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: The class for a measure dictionary. **Notes**: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.35.2  Methods

70.35.3  Angles as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: Number format array to measure angles.

70.35.4  Area as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: Number format array to measure areas.

70.35.5  Bounds as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: Array of numbers taken pairwise to describe the bounds for which geospatial transforms are valid.

70.35.6  Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: The private constructor.

70.35.7  Distance as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: Number format array to measure distances.
70.35.8  GPTS as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Required, an array of numbers that shall be taken pairwise, defining points in geographic space as degrees of latitude and longitude, respectively.

70.35.9  LPTS as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Optional, an array of numbers that shall be taken pairwise to define points in a 2D unit square.

70.35.10  Slope as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number format array for measurement of the slope of a line.

70.35.11  X as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number format array for measurement of change along the x-axis and, if Y is not present, along the y-axis as well.

70.35.12  Y as DynaPDFNumberFormatMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number format array for measurement of change along the y-axis.

70.35.13  Properties

70.35.14  AnglesCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number of objects in the array.
Notes: (Read and Write property)
70.35. **CLASS DYNAPDFMEASUREMBS**

### 70.35.15 AreaCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Number of objects in the array.
**Notes:** (Read and Write property)

### 70.35.16 BoundCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Number of values in the array.
**Notes:**
- Should be a multiple of two.
  - (Read and Write property)

### 70.35.17 CXY as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Optional, meaningful only when Y is present.
**Notes:** (Read and Write property)

### 70.35.18 DCS_EPSG as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Optional, either EPSG or WKT is set.
**Notes:** (Read and Write property)

### 70.35.19 DCS_IsSet as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** If true, the DCS members are set.
**Notes:** (Read and Write property)

### 70.35.20 DCS_Projected as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** If true, the DCS values contains a projected coordinate system.
70.35.21 DCS_WKT as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Optional ASCII string.
Notes: (Read and Write property)

70.35.22 DistanceCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number of objects in the array.
Notes: (Read and Write property)

70.35.23 GCS_EPSG as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Optional, either EPSG or WKT is set.
Notes: (Read and Write property)

70.35.24 GCS_Projected as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: If true, the GCS values contains a pojected coordinate system.
Notes: (Read and Write property)

70.35.25 GCS_WKT as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Optional ASCII string.
Notes: (Read and Write property)

70.35.26 GPTSCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number of values in the array.
70.35. **CLASS DYNAPDFMEASUREMBS**

**Notes:** (Read and Write property)

---

### 70.35.27 IsRectilinear as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** If true, the members of the rectilinear measure dictionary are set.  
**Notes:**  
The geospatial members otherwise.  
(Read and Write property)

---

### 70.35.28 LPTSCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Number of values in the array.  
**Notes:** (Read and Write property)

---

### 70.35.29 OriginX as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Origin of the measurement coordinate system.  
**Notes:** (Read and Write property)

---

### 70.35.30 OriginY as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Origin of the measurement coordinate system.  
**Notes:** (Read and Write property)

---

### 70.35.31 PDU1 as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Optional preferred linear display units.  
**Notes:** (Read and Write property)
70.35.32 PDU2 as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Optional preferred area display units.
**Notes:** (Read and Write property)

70.35.33 PDU3 as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Optional preferred angular display units.
**Notes:** (Read and Write property)

70.35.34 R as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** A text string expressing the scale ratio of the drawing.
**Notes:** (Read and Write property)

70.35.35 SlopeCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Number of objects in the array.
**Notes:** (Read and Write property)

70.35.36 XCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Number of objects in the array.
**Notes:** (Read and Write property)

70.35.37 YCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Number of objects in the array.
**Notes:** (Read and Write property)
70.36  class DynaPDFMovieActionMBS

70.36.1  class DynaPDFMovieActionMBS

Function: The class for a movie action.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

70.36.2  Methods

70.36.3  Constructor

Function: The private constructor.

70.36.4  FWPosition(index as Integer) as Single

Function: The position.
Notes: Index from 0 to 1.

70.36.5  FWScale(index as Integer) as Single

Function: The scaling.
Notes: Index from 0 to 1.

70.36.6  Properties

70.36.7  Annot as Integer

Function: Optional. The movie annotation handle identifying the movie that shall be played.
Notes:
Either Annot or Title should be set, but not both.
(Read only property)
70.36.8 Mode as String

Function: The mode.
Notes: (Read only property)

70.36.9 NextAction as Integer

Function: The handle to the next action.
Notes:
-1 or next action handle to be executed if any
(Read only property)

70.36.10 NextActionType as Integer

Function: The type of the next action.
Notes:
Only set if NextAction is >= 0.
(Read only property)

70.36.11 Operation as String

Function: The Operation.
Notes: (Read only property)

70.36.12 Rate as Single

Function: The playback rate.
Notes: (Read only property)
70.36. Class DynaPDFMovieActionMBS

70.36.13 ShowControls as Boolean

Function: Whether to show controls.
Notes: (Read only property)

70.36.14 Synchronous as Boolean

Function: Synchronous flag.
Notes: (Read only property)

70.36.15 Title as String

Function: The title of a movie annotation that shall be played.
Notes:
Either Annot or Title should be set, but not both.
(Read only property)

70.36.16 Volume as Single

Function: The volume.
Notes: (Read only property)
70.37  class DynaPDFNamedActionMBS

70.37.1  class DynaPDFNamedActionMBS

Function: The class for a named action.
Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.37.2  Methods

70.37.3  Constructor

Function: The private constructor.

70.37.4  Properties

70.37.5  Name as String

Function: The name of the action.
Notes:
Only set if Type = knaUserDefined.
(Read only property)

70.37.6  NewWindow as Integer

Function: Whether to show in a new window or not.
Notes:
-1 = viewer default, 0 = false, 1 = true.
(Read only property)
70.37. **CLASS DYNAPDFNAMEDACTIONMBS**

### 70.37.7 **NextAction as Integer**

**Function:** The handle to the next action.

**Notes:**

-1 or next action handle to be executed if any  
(Read only property)

### 70.37.8 **NextActionType as Integer**

**Function:** The type of the next action.

**Notes:**

Only set if NextAction is >= 0.  
(Read only property)

### 70.37.9 **Type as Integer**

**Function:** Known pre-defined actions.

**Notes:**

See kna* constants.  
(Read only property)
70.38.1 class DynaPDFNamedDestMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 

Function: A class for the Named Destination.

70.38.2 Properties

70.38.3 DestFile as String

Function: The destination file.
Notes: (Read only property)

70.38.4 DestPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 

Function: The destination page.
Notes: (Read only property)

70.38.5 DestPos as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 

Function: The destination position.
Notes: (Read only property)

70.38.6 DestType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 

Function: The destination type.
Notes: 
Values can be a kdt* constant.
(Read only property)
70.38. Name as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: The name of that destination.

Notes: This string is either Unicode or ANSI encoded. (Read only property)
70.39 class DynapdfNotInitializedExceptionMBS

70.39.1 class DynapdfNotInitializedExceptionMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: An exception for the case a function is called and the library is not initialized.

Notes:
Should only happen on the unsupported platforms.
Subclass of the RuntimeException class.
70.40.  CLASS DYNAPDFNUMBERFORMATMBS

70.40  class DynaPDFNumberFormatMBS

70.40.1  class DynaPDFNumberFormatMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
Function: The class for a number format.  
Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.40.2  Methods

70.40.3  Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
Function: The private constructor.

70.40.4  Properties

70.40.5  C as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
Function: The conversion factor used to multiply a value in partial units.  
Notes: (Read and Write property)

70.40.6  D as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
Function: A positive integer that shall specify the precision or denominator of a fractional amount.  
Notes: (Read and Write property)

70.40.7  F as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
Function: The number format.  
Notes: 

    can be kmnfDecimal, kmnfFractional, kmnfRound or kmnfTruncate.  
(Read and Write property)
70.40.8  FD as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If true, a fractional value formatted according to the D entry may not have its denominator reduced or low-order zeros truncated.  
**Notes:** (Read and Write property)

70.40.9  O as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The label position.  
**Notes:**  
Can be kmlpSuffix or kmlpPrefix.  
(Read and Write property)

70.40.10  PS as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Text to be concatenated to the left of the label specified by U.  
**Notes:** (Read and Write property)

70.40.11  RD as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Text for the decimal position in displaying numerical values.  
**Notes:** (Read and Write property)

70.40.12  RT as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Text to be used between orders of thousands in display of numerical values.  
**Notes:** (Read and Write property)

70.40.13  SS as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Text that shall be concatenated after the label specified by U.
70.40.14 U as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Label, should be a universally recognized abbreviation. **Notes:** (Read and Write property)

70.40.15 Constants

70.40.16 kmlpPrefix = 1

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the label position constants. **Notes:** Prefix

70.40.17 kmlpSuffix = 0

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the label position constants. **Notes:** Suffix

70.40.18 kmnfDecimal = 0

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the number formats. **Notes:** Decimal

70.40.19 kmnfFractional = 1

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the number formats. **Notes:** Fractional

70.40.20 kmnfRound = 2

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the number formats. **Notes:** Round
70.40.21 \ kmnfTruncate = 3

MBS DynaPDF Plugin, Plugin Version: 15.0. \textbf{Function:} One of the number formats. \textbf{Notes:} Truncate
70.41. class DynaPDFObjActionsMBS

70.41.1. class DynaPDFObjActionsMBS

Function: The class for an object action.
Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.41.2. Methods

70.41.3. Constructor

Function: The private constructor.

70.41.4. Properties

70.41.5. Action as Integer

Function: The handle to the action.
Notes: -1 or action handle to be executed if any
(Read only property)

70.41.6. ActionType as Integer

Function: The type of the action.
Notes: Only set if Action is $\geq 0$.
(Read only property)
70.41.7 Events as DynaPDFObjEventMBS

Function: Additional events if any.
Notes: (Read only property)
70.42. **CLASS DYNAPDOBJEVENTMBS**

70.42   **class DynaPDFObjEventMBS**

70.42.1   **class DynaPDFObjEventMBS**

**Function:** The class with information about an object event.
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.42.2   **Methods**

70.42.3   **Constructor**

**Function:** The private constructor.

70.42.4   **Properties**

70.42.5   **Action as Integer**

**Function:** Action to be executed.
**Notes:** (Read only property)

70.42.6   **ActionType as Integer**

**Function:** The type of the action.
**Notes:**
See kat* constants.
(Read only property)

70.42.7   **NextObject as DynaPDFObjEventMBS**

**Function:** Pointer to the next event if any.
**Notes:** (Read only property)
70.42.8 ObjEvent as Integer

Function: The event when the action should be executed.

Notes:

See koe* constants.
(Read only property)
70.43. class DynaPDFOCGContUsageMBS

70.43.1 class DynaPDFOCGContUsageMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The class for content usage properties of an optional layer.
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.43.2 Methods

70.43.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The private constructor.

70.43.4 Properties

70.43.5 ExportState as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The export state.
**Notes:**
0 = Off, 1 = On, PDF_MAX_INT = not set (2147483647)
(Read and Write property)

70.43.6 InfoCreator as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The application that created the group.
**Notes:** (Read and Write property)

70.43.7 InfoSubtype as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** A name defining the type of content, e.g. Artwork, Technical etc.
**Notes:** (Read and Write property)
70.43.8  LangPreferred as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The preferred state if there is a partial but no exact match of the lang id.
**Notes:**
0 = Off, 1 = On, PDF_MAX_INT (2147483647) = not set.
(Read and Write property)

70.43.9  Language as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** A language code as described at DynaPDFMBS.SetLanguage.
**Notes:** (Read and Write property)

70.43.10  PageElement as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** If the group contains a pagination artefact.
**Notes:** (Read and Write property)

70.43.11  PrintState as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The print state.
**Notes:**
0 = Off, 1 = On, PDF_MAX_INT = not set (2147483647).
(Read and Write property)

70.43.12  PrintSubtype as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The type of content that is controlled by the OCG, e.g. Trapping, PrintersMarks or Watermark.
**Notes:** (Read and Write property)
70.43. **CLASS DYNAPDFOCGCONTUSAGEMBS**

### 70.43.13 UserNamesCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The user names can be accessed with GetOCGUsageUserName.  
**Notes:** (Read and Write property)

### 70.43.14 UserType as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The user for whom the OCG is primarily intended.  
**Notes:**  
Can be KutIndividual, KutOrganization, KutTitle or KutNotSet. (constants defined in DynaPDFMBS)  
(Read and Write property)

### 70.43.15 ViewState as Integer

**Function:** The view state.  
**Notes:**  
0 = Off, 1 = On, PDF_MAX_INT (2147483647) = not set  
(Read and Write property)

### 70.43.16 ZoomMax as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Maximum zoom factor at which the OCG should be On.  
**Notes:**  
-1 = not set  
(Read and Write property)

### 70.43.17 ZoomMin as Single

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Minimum zoom factor at which the OCG should be On.  
**Notes:**  
-1 = not set  
(Read and Write property)
70.44. CLASS DYNAPDOCGMBS

70.44  class DynaPDFOCGMBS

70.44.1  class DynaPDFOCGMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The class for details of OCG layers.
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.44.2  Methods

70.44.3  Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The private constructor.

70.44.4  Properties

70.44.5  AppEvents as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** If non-zero, the layer is included in one or more app events which control the layer state.
**Notes:** Only valid if HaveContUsage is true.
see TOCAppEvent constants: kaeExport, kaePrint and kaeView. (constants defined in DynaPDFMBS)
(Read and Write property)

70.44.6  Categories as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The Usage Categories which control the layer state.
**Notes:** Only valid if HaveContUsage is true.
See UsageCategory constants: koucNone, koucExport, koucLanguage, koucPrint, koucUser, koucView or koucZoom. (constants defined in DynaPDFMBS)
(Read and Write property)
70.44.7 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The internal object reference.  
**Notes:** (Read and Write property)

70.44.8 HaveContUsage as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Whether the layer contains a Content Usage dictionary.  
**Notes:**  
see GetOCGContUsage function.  
(Read and Write property)

70.44.9 Intent as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The intent.  
**Notes:**  
See intent enumeration. Can be koiDesign, koiView, koiAll or koiEmpty. (constants defined in DynaPDFMBS)  
(Read and Write property)

70.44.10 IsAll as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** An accessor for intent state koiAll.  
**Notes:** (Read only property)

70.44.11 IsDesign as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** An accessor for intent state koiDesign.  
**Notes:** (Read only property)
70.44. **CLASS DYNAPDFOCGMBS**

### 70.44.12 IsEmpty as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** An accessor for intent state koiEmpty.  
**Notes:** (Read only property)

### 70.44.13 IsView as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** An accessor for intent state koiView.  
**Notes:** (Read only property)

### 70.44.14 IsVisible as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** An accessor for intent state koiVisible.  
**Notes:** (Read only property)

### 70.44.15 Name as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The layer name.  
**Notes:** (Read and Write property)
70.45  class DynaPDFOCLayerConfigMBS

70.45.1  class DynaPDFOCLayerConfigMBS

**Function:** The class for an optional content layer configuration.
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.45.2  Methods

70.45.3  Constructor

**Function:** The private constructor.

70.45.4  Properties

70.45.5  Intent as Integer

**Function:** The object intent.
**Notes:**
Possible values koiDesign, koiView, or koiAll.
(Read only property)

70.45.6  IsDefault as Boolean

**Function:** If true, this is the default configuration.
**Notes:** (Read only property)

70.45.7  Name as String

**Function:** Optional configuration name.
**Notes:** (Read only property)
70.45.8 NameLen as Integer

**Function:** Length in characters.

**Notes:** (Read only property)
70.46  class DynaPDFOCUINodeMBS

70.46.1  class DynaPDFOCUINodeMBS

Function: The class for an optional content user interface node.
Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.46.2  Methods

70.46.3  Constructor

Function: The private constructor.

70.46.4  Properties

70.46.5  Label as String

Function: Optional label.
Notes: (Read only property)

70.46.6  LabelLength as Integer

Function: Label Length in characters.
Notes: (Read only property)

70.46.7  NewNode as Boolean

Function: If true, a new child node must be created.
Notes: (Read only property)
**70.46.8 NextChild as Integer**

**Function:** If set, the next child node that must be loaded.  
**Notes:** (Read only property)

**70.46.9 NextItem as Integer**

**Function:** The next item handle in the list.  
**Notes:** (Read only property)

**70.46.10 OCG as Integer**

**Function:** Optional OCG handle.  
**Notes:**  
-1 if not set. See GetOCG method.  
(Read only property)
70.47 class DynaPDFOptimizeParamsMBS

70.47.1 class DynaPDFOptimizeParamsMBS

Function: The class for optimize parameters.

70.47.2 Methods

70.47.3 Constructor

Function: The constructor.

70.47.4 Properties

70.47.5 Filter1Bit as Integer

Function: Filter for black & white images.
Notes:
See kcf* constants. Default is kcfJPEG.
(Read and Write property)

70.47.6 FilterColor as Integer

Function: Filter for multi-channel images.
Notes:
See kcf* constants. Default is kcfJPEG.
(Read and Write property)

70.47.7 FilterGray as Integer

Function: The filter for gray image compression.
Notes:
See kcf* constants. Default is kcfJPEG.
(Read and Write property)

### 70.47.8 JP2KQuality as Integer

**Function:** The JPEG 2000 quality.  
**Notes:**  
Default is 80.  
(Read and Write property)

### 70.47.9 JPEGQuality as Integer

**Function:** The JPEG quality.  
**Notes:**  
Default is 80.  
(Read and Write property)

### 70.47.10 Min1BitRes as Integer

**Function:** Minimum resolution before scaling for one bit images.  
**Notes:**  
Default is 100.  
Can be zero to disable.  
(Read and Write property)

### 70.47.11 MinColorRes as Integer

**Function:** Minimum resolution before scaling for color images.  
**Notes:**  
Default is 100.  
Can be zero to disable.  
(Read and Write property)
70.47.12 MinGrayRes as Integer

Function: Minimum resolution before scaling for gray images.
Notes:
Default is 100 dpi.
Can be zero to disable.
(Read and Write property)

70.47.13 MinLineWidth as Single

Function: Minimum line width for lines.
Notes:
Zero means no hair line removal.
(Read and Write property)

70.47.14 Res1BitImages as Integer

Function: Resolution for 1 bit black & white images.
Notes:
Default is 150.
Can be zero to disable.
(Read and Write property)

70.47.15 ResColorImages as Integer

Function: Resolution for images with more than one color channel.
Notes:
Default is 150.
Can be zero to disable.
(Read and Write property)
70.47.16 ResGrayImages as Integer

Function: Resolution for Gray images.

Notes:

Default is 150.
Can be zero to disable.
(Read and Write property)
70.48 class DynaPDFOutputIntentMBS

70.48.1 class DynaPDFOutputIntentMBS

**Function:** The class for details on an output intent.
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.48.2 Methods

70.48.3 Constructor

**Function:** Private constructor.

70.48.4 Properties

70.48.5 Buffer as String

**Function:** ICC profile buffer (optional)
**Notes:** (Read and Write property)

70.48.6 BufferSize as Integer

**Function:** Buffer size in bytes.
**Notes:** (Read and Write property)

70.48.7 Info as String

**Function:** Info string or name of the ICC profile.
**Notes:** (Read and Write property)
70.48.8 NumComponents as Integer

Function: Number of components.
Notes: (Read and Write property)

70.48.9 OutputCondition as String

Function: Description of the output device.
Notes: (Read and Write property)

70.48.10 OutputConditionID as String

Function: Description of the output device.
Notes: (Read and Write property)

70.48.11 RegistryName as String

Function: The registry in which OutputConditionID is defined.
Notes: (Read and Write property)

70.48.12 SubType as String

Function: The sub type.
Notes:
GTS_PDFX, GTS_PDFA1, or ISO_PDFE1
(Read and Write property)
70.49 class DynapdfPageLabelMBS

70.49.1 class DynapdfPageLabelMBS

Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.49.2 Methods

70.49.3 Constructor

70.49.4 Properties

70.49.5 FirstPageNum as Integer

Notes:
Subsequent pages are numbered sequentially from this value.
(Read only property)

70.49.6 Format as Integer

Notes: (Read only property)

70.49.7 Prefix as String

Notes:
This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

70.49.8 PrefixLen as Integer

Notes: (Read only property)

70.49.9 PrefixUni as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Whether the prefix is in unicode.
Notes: (Read only property)

70.49.10 StartRange as Integer

Notes: (Read only property)
70.50  class DynaPDFPageMBS

70.50.1  class DynaPDFPageMBS

Function: The class for a DynaPDF page.
Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.50.2  Methods

70.50.3  BBox(type as Integer) as DynaPDFRectMBS

Function: Returns the requested bounding box.
Notes: use the constants kpbArtBox, kpbBleedBox, kpbCropBox, kpbMediaBox or kpbTrimBox.
If orientation gives you 90, 270, -90 or -270, you may want to swap width and height of the rectangle.

70.50.4  CalcPagePixelSize(DefScale as UInt32, Scale as single, FrameWidth as UInt32, FrameHeight as UInt32, Flags as UInt32, byref Width as UInt32, byref Height as UInt32)

Function: The function calculates the image size of a page exactly in the way as RenderPage() does, if called with the same parameters.
Example:

// your PDF environment
dim pdf as new DynaPDFMBS

// some PDF
dim file as FolderItem = SpecialFolder.Desktop.Child(“test.pdf”)

call pdf.CreateNewPDF(nil)

// We import all pages
call pdf.SetImportFlags(pdf.kifImportAsPage)
call pdf.OpenImportFile(file, 0, ””)
call pdf.ImportPDFFile(1,1.0,1.0)
// get first page
Dim p As DynaPDFPageMBS = pdf.GetPage(1)

// and calculate how big it would be:
Dim PageWidth, PageHeight As UInt32

Dim DefScale As UInt32 = DynaPDFMBS.kpsFitBest
Dim Scale As Single = 1.0
Dim Flags As Uint32 = DynaPDFRasterImageMBS.krfDefault

p.CalcPagePixelSize(DefScale, Scale, window1.Width, window1.Height, Flags, PageWidth, PageHeight)

MsgBox "PageWidth: " + Str(PageWidth) + vbCrLf + "PageHeight: " + Str(PageHeight)

Notes:
This makes it possible to create the image in the required size so that it can be rendered without a border.

70.50.5 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The private constructor.

70.50.6 GetWidthHeight(Flags as UInt32, byref Width as Single, byref Height as Single, Rotate as Integer = 0) as DynaPDFRectMBS

Function: Calculates page width and height.

70.50.7 Orientation as Integer

Function: Returns the page orientation.

70.50.8 SetBBox(type as integer, BBox as DynaPDFRectMBS) as Boolean

Function: Sets or changes the bounding box of a page.
CHAPTER 70. DYNAPDF

Notes:
This function is intended to be fast as possible. It requires no open page like DynaPDFMBS.SetBBox(), it
does not change the default media or crop box, and it does not adjust the current coordinate system if the
media box will be changed.

The function is useful if only one or more bounding boxes must be changed, without editing a page, or
when a specific area of a page should be rendered. In the latter case change the crop box and restore it to
the previous value when finish.
To delete a bounding box set the bounding box to 0, 0, 0, 0. The parameter BBox is required to be present,
it cannot be nil.

If the function succeeds the return value is true. If the function fails the return value is false.

70.50.9 Properties

70.50.10 Handle as Integer

Function: The internal object reference.
Notes: (Read only property)

70.50.11 Page as Integer

Function: The original page number used to query this page.
Notes: (Read only property)

70.50.12 PDF as DynaPDFMBS

Function: The reference back to parent dynaPDF object.
Notes: (Read only property)
70.50. **CLASS DYNAPDFPAGEMBS**

### 70.50.13 Constants

#### 70.50.14 kpbArtBox = 0

MBS DynaPDF Plugin, Plugin Version: 11.1. **Function:** One of the PDF box constants. **Notes:** Art box.

#### 70.50.15 kpbBleedBox = 1

MBS DynaPDF Plugin, Plugin Version: 11.1. **Function:** One of the PDF box constants. **Notes:** Bleed box.

#### 70.50.16 kpbCropBox = 2

MBS DynaPDF Plugin, Plugin Version: 11.1. **Function:** One of the PDF box constants. **Notes:** Crop Box.

#### 70.50.17 kpbMediaBox = 4

MBS DynaPDF Plugin, Plugin Version: 11.1. **Function:** One of the PDF box constants. **Notes:** Media Box.

#### 70.50.18 kpbTrimBox = 3

MBS DynaPDF Plugin, Plugin Version: 11.1. **Function:** One of the PDF box constants. **Notes:** Trim Box.
70.51  class DynaPDFPageStatisticMBS

70.51.1  class DynaPDFPageStatisticMBS

Function: A class for page statistics.
Notes:
You could count yourself with DynaPDFParseInterfaceMBS class and using the events.
This is just a convenience way to learn about whether for example there is an image on the page.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.51.2  Methods

70.51.3  Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The private constructor.

70.51.4  Properties

70.51.5  BezierCount as Integer

Function: The number of bezier curves.
Notes: (Read and Write property)

70.51.6  ClipPathCount as Integer

Function: The number of path clippings.
Notes: (Read and Write property)

70.51.7  ClosePathCount as Integer

Function: The number of paths closed.
Notes: (Read and Write property)
70.51. **CLASS DYNAPDFPAGESTATISTICMBS**

70.51.8 **DrawShadingCount as Integer**

**Function:** The number of shading drawings.
**Notes:** (Read and Write property)

70.51.9 **FontCount as Integer**

**Function:** The number of fonts used.
**Notes:** (Read and Write property)

70.51.10 **ImageCount as Integer**

**Function:** The number of images used.
**Notes:** (Read and Write property)

70.51.11 **LayerCount as Integer**

**Function:** The number of layers used.
**Notes:** (Read and Write property)

70.51.12 **LineCount as Integer**

**Function:** The number of lines.
**Notes:** (Read and Write property)

70.51.13 **PatternCount as Integer**

**Function:** The number of patterns used.
**Notes:** (Read and Write property)
70.51.14 RectangleCount as Integer

Function: The number of rectangles.
Notes: (Read and Write property)

70.51.15 TemplateCount as Integer

Function: The number of templates.
Notes: (Read and Write property)

70.51.16 TextCount as Integer

Function: The number of text fragments.
Notes: (Read and Write property)

70.51.17 TextLength as Integer

Function: The length in characters of the text on the page.
Notes: (Read and Write property)
70.52. **CLASS DYNAPDFPARSEINTERFACEMBS**

70.52** class DynaPDFParseInterfaceMBS**

70.52.1 **class DynaPDFParseInterfaceMBS**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for parsing pdf content. **Notes:** You need to implement the BeginTemplate event in order to get events for images, vector graphics and text on the templates used on the page.

70.52.2 **Events**

70.52.3 **ApplyPattern(ObjectPtr as Integer, Type as Integer, PatternPtr as Integer) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events. **Notes:**

Type is one of the following constants:

- kptColored = 0
- kptUnColored = 1
- kptShadingPattern = 2

70.52.4 **BeginLayer(OCHandle as Integer, InVisible as boolean) as Integer**

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Called when the PDF parser found a begin layer command. **Notes:**

The plugin will process the OCG object for you. So if handle is -1, there is no layer handle. If it is >= 0, you have a handle. If it is <0, something failed.

70.52.5 **BeginPattern(ObjectPtr as Integer, Fill as Boolean, PatternType as Integer, BBox as DynaPDFRectMBS, Matrix as DynapdfMatrixMBS, XStep as Double, YStep as Double) as Integer**

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events. **Notes:**
PatternType is one of the following constants:

- `kptColored` = 0
- `kptUnColored` = 1
- `kptShadingPattern` = 2

### 70.52.6 BeginTemplate(ObjectPtr as Integer, Handle as Integer, BBox as DynaPDFRectMBS, Matrix as DynapdfMatrixMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events. **Notes:** You need to implement this event in order to get text, images and vector graphics from inside templates.

### 70.52.7 BezierTo1(ObjectPtr as Integer, x1 as Double, y1 as Double, x3 as Double, y3 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events.

### 70.52.8 BezierTo2(ObjectPtr as Integer, x2 as Double, y2 as Double, x3 as Double, y3 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events.

### 70.52.9 BezierTo3(ObjectPtr as Integer, x1 as Double, y1 as Double, x2 as Double, y2 as Double, x3 as Double, y3 as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events.
70.52.10  ClipPath(ObjectPtr as Integer, EvenOdd as boolean, Mode as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events.
**Notes:** For the Mode parameter, the kfm* constants are used.

70.52.11  ClosePath(ObjectPtr as Integer, Mode as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events.
**Notes:** For the Mode parameter, the kfm* constants are used.

70.52.12  DrawShading(ObjectPtr as Integer, Type as Integer, Shading as Integer) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events.
**Notes:**
For the type parameter you use the kst* constants.

70.52.13  EndLayer(OCHandle as Integer, InVisible as boolean)

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Called when the PDF parser found an end layer command.

70.52.14  EndPattern

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events.

70.52.15  EndTemplate

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events.
70.52.16 InsertImage(image as DynaPDFImageMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: One of the parser events.
Notes: You can return zero on success or 1 to stop processing.

70.52.17 LineTo(ObjectPtr as Integer, x as Double, y as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: One of the parser events.

70.52.18 MoveTo(ObjectPtr as Integer, x as Double, y as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: One of the parser events.

70.52.19 MulMatrix(ObjectPtr as Integer, matrix as DynapdfMatrixMBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: A matrix multiplication was found.

70.52.20 Rectangle(ObjectPtr as Integer, x as Double, y as Double, w as Double, h as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: The parser found a rectangle.

70.52.21 RestoreGraphicState as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: One of the parser events.

70.52.22 SaveGraphicState as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: One of the parser events.
70.52.23  SetCharSpacing(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events.

70.52.24  SetExtGState(ObjectPtr as Integer, GS as DynapdfExtGState2MBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events.

70.52.25  SetFillColor(ObjectPtr as Integer, NumComps as Integer, Color1 as Double, Color2 as Double, Color3 as Double, Color4 as Double, Colors() as Double, ColorspaceType as Integer, ColorSpace as DynaPDF-ColorSpaceMBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events. **Notes:**

Colors array contains NumComps color values. First four values are provided directly with Color1, Color2, Color3 and Color4 parameters.

ColorSpaceType uses the kes* constants.

You can use ConvColor to convert colors to RGB or CMYK if needed.

70.52.26  SetFont(ObjectPtr as Integer, fontType as Integer, Embedded as boolean, FontName as string, Style as Integer, FontSize as Double, FontHandle as Integer, FontInfo as DynaPDFFontInfoMBS)

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events.

70.52.27  SetLeading(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events.
70.52.28 **SetLineCapStyle(ObjectPtr as Integer, Style as Integer)**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function**: One of the parser events.

70.52.29 **SetLineDashPattern(ObjectPtr as Integer, dash as memoryblock, NumValues as Integer, Phase as Integer)**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function**: One of the parser events.

70.52.30 **SetLineJoinStyle(ObjectPtr as Integer, Style as Integer)**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function**: One of the parser events.

70.52.31 **SetLineWidth(ObjectPtr as Integer, Value as Double)**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function**: One of the parser events.

70.52.32 **SetMiterLimit(ObjectPtr as Integer, Value as Double)**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function**: One of the parser events.

70.52.33 **SetStrokeColor(ObjectPtr as Integer, NumComps as Integer, Color1 as Double, Color2 as Double, Color3 as Double, Color4 as Double, Colors() as Double, ColorspaceType as Integer, ColorSpace as DynaPDFColorSpaceMBS)**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function**: One of the parser events.

**Notes:**
Colors array contains NumComps color values. First four values are provided directly with Color1, Color2, Color3 and Color4 parameters.
ColorSpaceType uses the kes* constants.
You can use ConvColor to convert colors to RGB or CMYK if needed.

70.52.34  SetTextDrawMode(ObjectPtr as Integer, Mode as Integer)

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events.

70.52.35  SetTextScale(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events.

70.52.36  SetWordSpacing(ObjectPtr as Integer, Value as Double)

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events.

70.52.37  ShowTextArrayA(ObjectPtr as Integer, Matrix as DynapdfMatrixMBS, Kerning() as DynapdfTextRecordAMBS, Count as Integer, Width as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events.

70.52.38  ShowTextArrayW(Source() as DynapdfTextRecordAMBS, Matrix as DynapdfMatrixMBS, Kerning() as DynapdfTextRecordWMBS, Count as Integer, Width as Double, Decoded as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the parser events.
70.53 class DynaPDFPointDataDictionaryMBS

70.53.1 class DynaPDFPointDataDictionaryMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The class for a dictionary with point data.
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.53.2 Methods

70.53.3 Arrays as DynaPDFPointDataMBS()

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The array of entries in the point data dictionary.

70.53.4 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The private constructor.

70.53.5 Properties

70.53.6 Count as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Number of point data arrays  
**Notes:** (Read and Write property)

70.53.7 Subtype as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The sub type for the point data.  
**Notes:**  
Should be Cloud.  
(Read and Write property)
70.54 class DynaPDFPointDataMBS

70.54.1 class DynaPDFPointDataMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The data class for point data dictionary entries.
Notes:
A point data dictionary specifies points in 2D space for geospatial measures. The parameter DataType specifies the type of points, such as LAT for latitude in degrees, LON for longitude in degrees, or ALT for altitude in metres.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.54.2 Methods

70.54.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The private constructor.

70.54.4 values as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Array with values.

70.54.5 Properties

70.54.6 DataType as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Data type as string.
Notes:
Specifies the type of points, such as LAT for latitude in degrees, LON for longitude in degrees, or ALT for altitude in metres.
(Read and Write property)
70.54.7 Index as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The index in the dictionary.
**Notes:** (Read and Write property)

70.54.8 ValCount as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Number of values in the array.
**Notes:** (Read and Write property)
70.55. **CLASS DYNAPDFPOINTMBS**

70.55  **class DynapdfPointMBS**

70.55.1  **class DynapdfPointMBS**

**Function:** The class for a point.

70.55.2  **Methods**

70.55.3  **Constructor**(x as Double = 0.0, y as Double = 0.0)

**Function:** The constructor.

70.55.4  **Properties**

70.55.5  **X as Double**

**Function:** The X value.
**Notes:** (Read and Write property)

70.55.6  **Y as Double**

**Function:** The Y value.
**Notes:** (Read and Write property)
70.56 class DynaPDFPrintParamsMBS

70.56.1 class DynaPDFPrintParamsMBS

Function: The class for additional print parameters.

70.56.2 Properties

70.56.3 Compress as Boolean

Function: Whether to compress images sent to printer.

Notes: Meaningful only for image output. If true, compressed images are send to the printer.
(Read and Write property)

70.56.4 FilterColor as Integer

Function: Compression filter to use for color images.

Notes: Meaningful only for image output. Supported filters on Windows: kcfFlate and kcfJPEG.
(Read and Write property)

70.56.5 FilterGray as Integer

Function: Compression filter to use for grayscale images.

Notes: Meaningful only for image output. Supported filters on Windows: kcfFlate and kcfJPEG.
(Read and Write property)

70.56.6 IgnoreDCSize as Boolean

Function: If true, PageSize is used to calculate the output format.
70.56. CLASS DYNAPDFPRINTPARAMSMB

Notes: (Read and Write property)

70.56.7 JPEGQuality as Integer

Function: JPEG Quality in percent (1..100).
Notes:
Zero means Default, which is 60%.
(Read and Write property)

70.56.8 MaxRes as Integer

Function: Maximum print resolution.
Notes:
Zero means Default, which is 600 DPI.
(Read and Write property)

70.56.9 PageSize as DynaPDFRectMBS

Function: The page size to use.
Notes:
Considered only, if IgnoreDCSize is set to true.
(Read and Write property)
70.57 class DynapdfPrintSettingsMBS

70.57.1 class DynapdfPrintSettingsMBS

Notes: This requires PDF 1.7.

70.57.2 Methods

70.57.3 PrintRanges(index as Integer) as Integer

Notes: If set, the array contains PrintRangesCount * 2 values. Each pair consists of the first and last pages in the sub-range. The first page in the PDF file is denoted by 0.

70.57.4 Properties

70.57.5 DuplexMode as Integer

Notes:
Use the kdpm* constants.
(Read only property)

70.57.6 NumCopies as Integer

Notes:
-1 means not set. Values larger than 5 are ignored in viewer applications.
(Read only property)
70.57.7 PickTrayByPDFSize as Integer

Function: The setting for picking the tray by the PDF size.
Notes: 
-1 means not set. 0 = false, 1 = true.
(Read only property)

70.57.8 PrintRangesCount as Integer

Notes: (Read only property)

70.57.9 PrintScaling as Integer

Function: The print scaling setting.
Notes: 
kdpmsNone means not set.
(Read only property)
70.58 class DynaPDFRasterImageMBS

70.58.1 class DynaPDFRasterImageMBS

**Function:** The class for advanced rendering options.

**Example:**

```plaintext
dim pdf as new DynaPDFMBS // make subclass to catch error event

dim f as FolderItem = SpecialFolder.Desktop.Child("dynapdf_help.pdf")

// create PDF
call pdf.CreateNewPDF(nil)

// set import flags
call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)

// open import file
call pdf.OpenImportFile(f, 0, ",")

// import all pdf pages
call pdf.ImportPDFFile(1, 1.0, 1.0)

dim PageCount as Integer = pdf.GetPageCount

// create rasterizer.
dim r as new DynaPDFRasterizerMBS(pdf, 1000,1000)

// create options
dim o as new DynaPDFRasterImageMBS

// fill white
o.InitWhite = true

// scale to fit
o.DefScale = o.kpsFitBest

// rotate
o.Flags = o.krfRotate90

// render all pages
for i as Integer = 1 to PageCount

dim p as DynaPDFPageMBS = pdf.GetPage(i)
if r.RenderPage(p, o) then

// save to disc
dim outfile as FolderItem = SpecialFolder.Desktop.Child("page " + Format(i,"0") + ".jpg")
call outfile.SaveAsJPEGMBS(r.Pic, 75)
```
Notes: This class is named RasterImage due to the name in the underlying DynaPDF library. A better name would be RasterizerOptions as it includes options for the rasterizer engine.

### 70.58.2 Properties

#### 70.58.3 ClipRect as DynaPDFRectMBS

**Function:** Optional clipping rectangle defined in device coordinates (Pixels)

**Notes:** (Read and Write property)

#### 70.58.4 DefScale as Integer

**Function:** Specifies how the page should be scaled into the image buffer.

**Notes:**

can be kpsFitBest, kpsFitHeight or kpsFitWidth.

(Read and Write property)

#### 70.58.5 DrawFrameRect as Boolean

**Function:** If true, the area outside the page’s bounding box is filled with the frame color.

**Notes:**

InitWhite can still be used, with or without a clipping rectangle.

(Read and Write property)

#### 70.58.6 Flags as Integer

**Function:** Flags for the raster operation.

**Notes:**
This is a bit mask. Flags can be combined with a binary or operator.
Use a combination of krf* constants.
(Read and Write property)

### 70.58.7 FrameColor as Integer

**Function:** The color for drawing the frame.
**Notes:**
Must be defined in the color space of the pixel format but in the natural component order, e.g. RGB.
(Read and Write property)

### 70.58.8 InitWhite as Boolean

**Function:** Whether to clear the buffer first.
**Notes:**
If true, the buffer is initialized with white color (default).
Must be set to false if you want to raster the page over an existing image.

When a clipping rectangle is set, only the area inside the clipping rectangle is initialized to white.
(Read and Write property)

### 70.58.9 Matrix as DynapdfMatrixMBS

**Function:** Optional transformation matrix.
**Notes:**
The matrix can be used to zoom into the page or to move the picture to a specific area in the image buffer.
(Read and Write property)

### 70.58.10 NumAnnots as Integer

**Function:** Number of rendered form annotations (excluding invisible annotation but annotations with no appearance are included)
70.58.11 NumBezierCurves as Integer

**Function:** Number of bezier curves which where rendered. Glyph outlines are not taken into account.

**Notes:** (Read and Write property)

70.58.12 NumClipPaths as Integer

**Function:** Number of clipping paths used in the page. Should be small as possible!

**Notes:** (Read and Write property)

70.58.13 NumFormFields as Integer

**Function:** Number of rendered form fields (excluding invisible fields but fields with no appearance are included)

**Notes:** (Read and Write property)

70.58.14 NumGlyphs as Integer

**Function:** When the number of glyphs equals NumTextRecords then there is probably some room for optimization...

**Notes:** (Read and Write property)

70.58.15 NumImages as Integer

**Function:** Number of images that were rendered.

**Notes:** (Read and Write property)
70.58.16  **NumLineTo as Integer**

**Function:** Number of LineTo operators.
**Notes:** (Read and Write property)

70.58.17  **NumPaths as Integer**

**Function:** Number of paths which were processed.
**Notes:** (Read and Write property)

70.58.18  **NumPatterns as Integer**

**Function:** Number of pattern which were processed.
**Notes:** (Read and Write property)

70.58.19  **NumRectangles as Integer**

**Function:** Number of rectangle operators.
**Notes:** (Read and Write property)

70.58.20  **NumRestoreGState as Integer**

**Function:** Should be equal to NumSaveGraphicStates.
**Notes:** (Read and Write property)

70.58.21  **NumSaveGState as Integer**

**Function:** The number of save graphics state operators.
**Notes:** (Read and Write property)
70.58. **CLASS DYNAPDFRASTERIMAGEMBS**

### 70.58.22 NumShadings as Integer

- **MBS DynaPDF Plugin**, **Plugin Version**: 11.2, **Console & Web**: Yes, **Mac**: Yes, **Win**: Yes, **Linux**: Yes.  
  **Function**: Number of shadings.  
  **Notes**: (Read and Write property)

### 70.58.23 NumSoftMasks as Integer

- **MBS DynaPDF Plugin**, **Plugin Version**: 11.1, **Console & Web**: Yes, **Mac**: Yes, **Win**: Yes, **Linux**: Yes.  
  **Function**: Number of soft masks that were processed.  
  **Notes**:  
  Alpha channels of images are not taken into account.  
  (Read and Write property)

### 70.58.24 NumTextRecords as Integer

- **MBS DynaPDF Plugin**, **Plugin Version**: 11.1, **Console & Web**: Yes, **Mac**: Yes, **Win**: Yes, **Linux**: Yes.  
  **Function**: Number of independent text records which were rendered.  
  **Notes**: (Read and Write property)

### 70.58.25 PageSpace as DynapdfMatrixMBS

- **MBS DynaPDF Plugin**, **Plugin Version**: 11.1, **Console & Web**: Yes, **Mac**: Yes, **Win**: Yes, **Linux**: Yes.  
  **Function**: The matrix represents the mapping from page space to device space.  
  **Notes**:  
  Output parameter.  
  This matrix is required when further objects should be drawn on the page, e.g. the bounding boxes.  
  (Read and Write property)

### 70.58.26 UpdateOnImageCoverage as Single

- **MBS DynaPDF Plugin**, **Plugin Version**: 11.1, **Console & Web**: Yes, **Mac**: Yes, **Win**: Yes, **Linux**: Yes.  
  **Function**: DynaPDF multiplies the output image area with this factor to determine when the window should be updated.  
  **Notes**:  
  The factor should be around 0.5 through 5.0. Larger values cause less frequently update events.  
  (Read and Write property)
70.58.27 UpdateOnPathCount as Integer

Function: Call OnUpdateWindow event when the UpdateOnPathCount limit was reached.
Notes:
Clipping paths increment the number too.
Only full paths are considered, independent of the number of vertices they contain. The value should be
larger than 50 and smaller than 10000.
(Read and Write property)

70.58.28 Yield as Boolean

Function: Whether to yield time to other threads.
Notes:
Set to true if you render page in a thread, so time is given to other threads.
(Read and Write property)

70.58.29 Events

70.58.30 UpdateWindow(r as DynaPDFRectMBS, pic as Variant) as Integer

Function: This event is called regularly so you can update your GUI.
Notes:
Please set UpdateOnPathCount and UpdateOnImageCoverage to use this event.
If you draw to a picture, the picture is passed as parameter for your convenience.
Pic is a variant so the plugin compiles in older Real Studio versions for console targets.

Returns -1 to stop the processing.

70.58.31 Constants

70.58.32 kpsFitBest = 2

MBS DynaPDF Plugin, Plugin Version: 11.1. Function: One of the constants to specify how the page
should be scaled into the image buffer.
70.58. CLASS DYNAPDFRASTERIMAGEMBS

Notes: Scale the page so that it fits fully into the image buffer.

70.58.33  kpsFitHeight = 1

MBS DynaPDF Plugin, Plugin Version: 11.1. Function: One of the constants to specify how the page should be scaled into the image buffer. Notes: Scale the page to the height of the image buffer.

70.58.34  kpsFitWidth = 0

MBS DynaPDF Plugin, Plugin Version: 11.1. Function: One of the constants to specify how the page should be scaled into the image buffer. Notes: Scale the page to the width of the image buffer.

70.58.35  krfClipToArtBox = 4

MBS DynaPDF Plugin, Plugin Version: 11.1. Function: One of the raster flag constants. Notes: Clip the page to the art box if any.

Only one of these clip flags must be set at time!

70.58.36  krfClipToBleedBox = 8

MBS DynaPDF Plugin, Plugin Version: 11.1. Function: One of the raster flag constants. Notes: Clip the page to the bleed box if any.

Only one of these clip flags must be set at time!

70.58.37  krfClipToTrimBox = &h00000010

MBS DynaPDF Plugin, Plugin Version: 11.1. Function: One of the raster flag constants. Notes:
Clip the page to the bleed box if any.

Only one of these clip flags must be set at time!

**70.58.38  krfCompositeWhite = & h00001000**

MBS DynaPDF Plugin, Plugin Version: 13.1. **Function:** One of the raster flag constants. **Notes:** Composite pixel formats with an alpha channel finally with a white background. The alpha channel is 255 everywhere after composition. This flag is mainly provided for debug purposes but it can also be useful if the image must be copied on screen with a function that doesn’t support alpha blending.

**70.58.39  krfDefault = 0**

MBS DynaPDF Plugin, Plugin Version: 11.1. **Function:** One of the raster flag constants. **Notes:** Render the page as usual

**70.58.40  krfDisableAAClipping = & h00200000**

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants. **Notes:** Disable Anti-Aliasing for clipping paths. This flag is the most important one since clipping paths cause often visible artefacts in PDF files with flattened transparency.

**70.58.41  krfDisableAAText = & h00400000**

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants. **Notes:** Disable Anti-Aliasing for text.

**70.58.42  krfDisableAAVector = & h00800000**

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants. **Notes:** Disable Anti-Aliasing for vector graphics.
70.58.43  krfDisableAntiAliasing = & h00E00000

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants. **Notes:** Fully disable Anti-Aliasing.

70.58.44  krfDisableBiLinearFilter = & h01000000

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants. **Notes:** Disable the BiLevel filter for images. Sometimes useful if sharp images are needed, e.g. for bar-codes.

70.58.45  krfExclAnnotations = & h00000020

MBS DynaPDF Plugin, Plugin Version: 11.1. **Function:** One of the raster flag constants. **Notes:** Don’t render annotations.

70.58.46  krfExclButtons = & h00004000

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants. **Notes:**

If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude buttons. If all fields should be skipped then set the flag rfExclFormFields instead.

70.58.47  krfExclCheckBoxes = & h00008000

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants. **Notes:**

Exclude check boxes.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude checkboxes. If all fields should be skipped then set the flag rfExclFormFields instead.

70.58.48  krfExclComboBoxes = & h00010000

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants. **Notes:**
Exclude combo boxes.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude combobox.
If all fields should be skipped then set the flag rfExclFormFields instead.

70.58.49 krfExclFormFields = & h00000040

70.58.50 krfExclListBoxes = & h00020000

MBS DynaPDF Plugin, Plugin Version: 15.0. Function: One of the raster flag constants. Notes:
Exclude listbox fields.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude listbox.
If all fields should be skipped then set the flag rfExclFormFields instead.

70.58.51 krfExclPageContent = & h00002000

MBS DynaPDF Plugin, Plugin Version: 14.4. Function: One of the raster flag constants. Notes: If set, only annotations and form fields will be rendered (if any).

70.58.52 krfExclSigFields = & h00080000

MBS DynaPDF Plugin, Plugin Version: 15.0. Function: One of the raster flag constants. Notes:
Exclude signature fields.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude signature fields.
If all fields should be skipped then set the flag rfExclFormFields instead.

70.58.53 krfExclTextFields = & h00040000

MBS DynaPDF Plugin, Plugin Version: 15.0. Function: One of the raster flag constants. Notes:
Exclude text fields.
If you want to render specific field types with RenderAnnotOrField() then use this flag to exclude text fields.
If all fields should be skipped then set the flag rfExclFormFields instead.

**70.58.54  krfIgnoreCropBox = 2**

MBS DynaPDF Plugin, Plugin Version: 11.1. **Function:** One of the raster flag constants.
**Notes:** Ignore the crop box and render anything inside the media box without clipping.

**70.58.55  krfInitBlack = & h00000800**

MBS DynaPDF Plugin, Plugin Version: 13.1. **Function:** One of the raster flag constants.
**Notes:** Initialize the image buffer to black before rendering (RGBA or GrayA must be initialized to black)

**70.58.56  krfRenderInvisibleText = & h02000000**

MBS DynaPDF Plugin, Plugin Version: 18.2. **Function:** One of the raster flag constants.
**Notes:** If set, treat text rendering mode Invisible as Normal.

**70.58.57  krfRotate180 = & h00000200**

MBS DynaPDF Plugin, Plugin Version: 11.3. **Function:** One of the raster flag constants.
**Notes:** Rotate the page 180 degrees.

**70.58.58  krfRotate270 = & h00000400**

MBS DynaPDF Plugin, Plugin Version: 11.3. **Function:** One of the raster flag constants.
**Notes:** Rotate the page 270 degrees.

**70.58.59  krfRotate90 = & h00000100**

MBS DynaPDF Plugin, Plugin Version: 11.3. **Function:** One of the raster flag constants.
**Example:**

```plaintext
dim pdf as new DynaPDFMBS // make subclass to catch error event
```
dim f as FolderItem = SpecialFolder.Desktop.Child("dynapdf_help.pdf")

    // create PDF
    call pdf.CreateNewPDF(nil)
    // set import flags
    call pdf.SetImportFlags(pdf.kifImportAll + pdf.kifImportAsPage)

    // open import file
    call pdf.OpenImportFile(f, 0, "")

    // import all pdf pages
    call pdf.ImportPDFFile(1, 1.0, 1.0)

dim PageCount as Integer = pdf.GetPageCount

    // create rasterizer.
    dim r as new DynaPDFRasterizerMBS(pdf, 1000,1000)

    // create options
    dim o as new DynaPDFRasterImageMBS

    // fill white
    o.InitWhite = true

    // scale to fit
    o.DefScale = o.kpsFitBest

    // rotate
    o.Flags = o.krfRotate90

    // render all pages
    for i as Integer = 1 to PageCount
        dim p as DynaPDFPageMBS = pdf.GetPage(i)
        if r.RenderPage(p, o) then
            // save to disc
            dim outfile as FolderItem = SpecialFolder.Desktop.Child("page " + Format(i,"0") + ".jpg")
            call outfile.SaveAsJPEGMBS(r.Pic, 75)
        end
    next

Notes: Rotate the page 90 degress.
70.58.60  krfScaleToBBox = & h00100000

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the raster flag constants. **Notes:**
Considered only, if the flag rfClipToArtBox, rfClipToBleedBox, or rfClipToTrimBox is set. If set, the picture size is set to the size of the wished bounding box.

70.58.61  krfScaleToMediaBox = 1

MBS DynaPDF Plugin, Plugin Version: 11.1. **Function:** One of the raster flag constants. **Notes:** Render the real paper format. Contents outside the crop box is clipped.

70.58.62  krfSkipUpdateBG = & h00000080

MBS DynaPDF Plugin, Plugin Version: 11.3. **Function:** One of the raster flag constants. **Notes:** Don’t generate an update event after initializing the background to white.
70.59 class DynaPDFRasterizerMBS

70.59.1 class DynaPDFRasterizerMBS

Function: The class for the rasterizer interface.

70.59.2 Methods

70.59.3 Abort

Function: Aborts raster process.
Notes: Stops the function RenderPage as soon as possible when RenderPage() is running in a separate thread.

70.59.4 AddRasImage(Filter as Integer) as boolean

Function: The function adds an image from the rasterizer to the current open image file.
Notes: The output image must be opened with CreateImage() beforehand.

70.59.5 AttachImageBuffer(Pic as Picture) as boolean

Function: Attaches a new image buffer of the same pixelformat.
Notes: Returns true on success.
See also:

- 70.59.6 AttachImageBuffer(Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) as boolean

70.59.6 AttachImageBuffer(Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) as boolean

Function: Attaches a new image buffer of the same pixelformat.
Notes:
70.59. **CLASS DYNAPDFRASTERIZERMBS**

For Pixelformat pass one of the kpx* constants.
You can pass Rows or Buffer, but the other memoryblock should be nil.
Returns true on success.
See also:

- 70.59.5 AttachImageBuffer(Pic as Picture) as boolean

### 70.59.7 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32)

**Function:** Initializes rasterizer targeting a device context.
**Notes:**
Special version to simplify rendering into a device context. It creates a DIB Section into which pages can be rendered.

See also:

- 70.59.8 Constructor(PDF as DynaPDFMBS, Pic as Picture)
- 70.59.9 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32)
- 70.59.10 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer)

### 70.59.8 Constructor(PDF as DynaPDFMBS, Pic as Picture)

**Function:** Creates a new rasterizer object targeting the given picture.

See also:

- 70.59.7 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32)
- 70.59.9 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32)
- 70.59.10 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer)

### 70.59.9 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32)

**Function:** Creates a new rasterizer object targeting the given memory area.
For Pixelformat pass one of the kpx* constants.
You can pass Rows or Buffer, but the other memoryblock should be nil.
See also:

- 70.59.7 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32) 12245
- 70.59.8 Constructor(PDF as DynaPDFMBS, Pic as Picture) 12245
- 70.59.10 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer) 12246

70.59.10 Constructor(PDF as DynaPDFMBS, Width as Integer, Height as Integer)

Function: The constructor.
Notes:
Creates a new picture as buffer for you with the given size.
PDF must not be nil and point to a valid DynaPDF context.
See also:

- 70.59.7 Constructor(PDF as DynaPDFMBS, DeviceContextHandle as Integer, Width as UInt32, Height as UInt32, PixFmt as UInt32) 12245
- 70.59.8 Constructor(PDF as DynaPDFMBS, Pic as Picture) 12245
- 70.59.9 Constructor(PDF as DynaPDFMBS, Rows as Memoryblock, Buffer as Memoryblock, Width as UInt32, Height as UInt32, ScanlineLen as Int32, PixelFormat as UInt32) 12245

70.59.11 Redraw(DeviceContextHandle as Integer, DestX as Integer, DestY as Integer)

Function: Because there is no direct access to the internal DIB Sesction when rendering into a device context, this function can be used to redraw the bitmap on the device context.
Notes:
If RenderPageEx() was called in a separate thread then this function can be called after the thread returned.
While the thread is running you can change the position by directly manipulating the coordinate variables which were passed to RenderPageEx().
The function calls the system function SetDIBitsToDevice() to copy the image into the device context.
**70.59.12 RenderPage(page as DynaPDFPageMBS, options as DynaPDFRasterImageMBS) as boolean**

**Function:** Renders a page of a PDF Document with the given options.
**Notes:** Returns true on success and false on failure.

**70.59.13 RenderPageEx(DeviceContextHandle as Integer, byref DestX as Integer, byref DestY as Integer, page as DynaPDFPageMBS, options as DynaPDFRasterImageMBS) as boolean**

**Function:** Renders a page into a device context.
**Notes:**
Only valid if you called Constructor with DeviceContextHandle.
Returns true on success.

**70.59.14 RenderPageMT(page as DynaPDFPageMBS, options as DynaPDFRasterImageMBS) as boolean**

**Function:** Renders a page of a PDF Document with the given options.
**Notes:**
Returns true on success and false on failure.

Same as RenderPage, but with additional multithreading.
Must be called inside a Xojo (Real Studio) thread so time yields to main thread and you can keep the GUI running.

As the actual transfer runs on a preemptive thread, the event UpdateWindow is called asynchronously and run a few milliseconds later.

Do not call other functions on this DynaPDFRasterizerMBS instance while RenderPageMT is running!
70.59.15 **ResizeBitmap(DeviceContextHandle as Integer, Width as Integer, Height as Integer) as boolean**

**Function:** Changes the size of the DIB Section.
**Notes:**
Only valid if you called Constructor with DeviceContextHandle.
Returns true on success.

70.59.16 **Properties**

70.59.17 **Handle as Integer**

**Function:** The internal object reference to the rasterizer object.
**Notes:**
If the constructor is successful, this value is not zero.
(Read only property)

70.59.18 **PDF as DynaPDFMBS**

**Function:** The reference back to parent dynaPDF object.
**Notes:** (Read only property)

70.59.19 **Pic as Picture**

**Function:** The target picture.
**Notes:** (Read only property)

70.59.20 **Constants**

70.59.21 **kpxf1Bit = 0**

MBS DynaPDF Plugin, Plugin Version: 11.1. **Function:** One of the pixel format constants.
**Notes:** 1 bit per pixel black and white.
70.59.22  kpxfABGR = 7

MBS DynaPDF Plugin, Plugin Version: 11.1. **Function:** One of the pixel format constants.  
**Notes:** ABGR.

70.59.23  kpxfARGB = 6

MBS DynaPDF Plugin, Plugin Version: 11.1. **Function:** One of the pixel format constants.  
**Notes:** ARGB

70.59.24  kpxfBGR = 3

MBS DynaPDF Plugin, Plugin Version: 11.1. **Function:** One of the pixel format constants.  
**Notes:** BGR

70.59.25  kpxfBGRA = 5

MBS DynaPDF Plugin, Plugin Version: 11.1. **Function:** One of the pixel format constants.  
**Notes:** BGRA

70.59.26  kpxfCMYK = 9

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the pixel format constants.  
**Notes:** CMYK without alpha

70.59.27  kpxfCMYKA = & h000000A

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the pixel format constants.  
**Notes:** CMYK with alpha

70.59.28  kpxfGray = 1

MBS DynaPDF Plugin, Plugin Version: 11.1. **Function:** One of the pixel format constants.  
**Notes:** 8 bit grayscale.
70.59.29  kpxfGrayA = 8

MBS DynaPDF Plugin, Plugin Version: 11.2. **Function:** One of the pixel format constants. **Notes:** 8 bit grayscale with alpha.

70.59.30  kpxfRGB = 2

MBS DynaPDF Plugin, Plugin Version: 11.1. **Function:** One of the pixel format constants. **Notes:** RGB

70.59.31  kpxfRGBA = 4

MBS DynaPDF Plugin, Plugin Version: 11.1. **Function:** One of the pixel format constants. **Notes:** RGBA

**Function:** The class to hold information about a raw image.

**Notes:** Used with InsertRawImageEx.

### 70.60.2 Methods

#### 70.60.3 setBuffer(data as MemoryBlock)

**Function:** Sets the buffer to point to the bytes in the memoryblock.

**Notes:** Size is optional. Some memoryblocks have no known size and there you need to specify one.

See also:

- 70.60.4 setBuffer(data as MemoryBlock, size as Int64)
- 70.60.5 setBuffer(data as Ptr)
- 70.60.6 setBuffer(data as Ptr, size as Int64)
- 70.60.7 setBuffer(data as string)
- 70.60.8 setBuffer(data as string, size as Int64)

#### 70.60.4 setBuffer(data as MemoryBlock, size as Int64)

**Function:** Sets the buffer to point to the bytes in the memoryblock.

**Notes:** Size is optional. Some memoryblocks have no known size and there you need to specify one.

See also:

- 70.60.3 setBuffer(data as MemoryBlock)
- 70.60.5 setBuffer(data as Ptr)
- 70.60.6 setBuffer(data as Ptr, size as Int64)
- 70.60.7 setBuffer(data as string)
- 70.60.8 setBuffer(data as string, size as Int64)
70.60.5  setBuffer(data as Ptr)

**Function:** Private method to set the buffer using a pointer to some memory.
**Notes:** This is a private method to make sure nobody passes a ptr instead of memoryblock or ptr+size.
See also:
- 70.60.3 setBuffer(data as MemoryBlock)
- 70.60.4 setBuffer(data as MemoryBlock, size as Int64)
- 70.60.6 setBuffer(data as Ptr, size as Int64)
- 70.60.7 setBuffer(data as string)
- 70.60.8 setBuffer(data as string, size as Int64)

70.60.6  setBuffer(data as Ptr, size as Int64)

**Function:** Sets the buffer using a pointer to some memory.
**Notes:** Please provide the right size.
See also:
- 70.60.3 setBuffer(data as MemoryBlock)
- 70.60.4 setBuffer(data as MemoryBlock, size as Int64)
- 70.60.5 setBuffer(data as Ptr)
- 70.60.7 setBuffer(data as string)
- 70.60.8 setBuffer(data as string, size as Int64)

70.60.7  setBuffer(data as string)

**Function:** Sets buffer to point to contents of this string.
**Notes:** If you specify a size, the size can be smaller than thing length to use only first part.
See also:
- 70.60.3 setBuffer(data as MemoryBlock)
- 70.60.4 setBuffer(data as MemoryBlock, size as Int64)
- 70.60.5 setBuffer(data as Ptr)
- 70.60.6 setBuffer(data as Ptr, size as Int64)
- 70.60.8 setBuffer(data as string, size as Int64)
70.60.8  setBuffer(data as string, size as Int64)

**Function:** Sets buffer to point to contents of this string.  
**Notes:** If you specify a size, the size can be smaller than thing length to use only first part.  
See also:

- 70.60.3 setBuffer(data as MemoryBlock)  
- 70.60.4 setBuffer(data as MemoryBlock, size as Int64)  
- 70.60.5 setBuffer(data as Ptr)  
- 70.60.6 setBuffer(data as Ptr, size as Int64)  
- 70.60.7 setBuffer(data as string)  

70.60.9  Properties

70.60.10  BitsPerComponent as Integer

**Function:** Bits per component.  
**Notes:**  
For example 8 for the usual RGB images.  
(Read and Write property)

70.60.11  Buffer as Ptr

**Function:** The buffer as pointer.  
**Notes:**  
Please use setBuffer methods to set this.  
(Read only property)

70.60.12  BufSize as Int64

**Function:** The buffer size.  
**Notes:** (Read only property)
70.60.13 CS as Integer

Function: Image color space.
Notes: (Read and Write property)

70.60.14 CSHandle as Integer

Function: Color space handle or -1.
Notes: (Read and Write property)

70.60.15 HasAlpha as Boolean

Function: The image has an alpha channel?
Notes: (Read and Write property)

70.60.16 Height as Integer

Function: Height in pixels.
Notes: (Read and Write property)

70.60.17 IsBGR as Boolean

Function: Windows bitmap format?
Notes: (Read and Write property)

70.60.18 Memory as MemoryBlock

Function: The memoryblock used with setBuffer.
Notes: (Read only property)
70.60.19 **MinIsWhite as Boolean**

**Function:** Whether image has value zero for white instead of black.

**Notes:**
- One bit images only.
- (Read and Write property)

70.60.20 **NumComponents as Integer**

**Function:** Number of components.

**Notes:**
- Maximum is 32 for DynaPDF.
- (Read and Write property)

70.60.21 **Stride as Integer**

**Function:** The number of bytes per row.

**Notes:**
- A negative value mirrors the image.
- (Read and Write property)

70.60.22 **String as String**

**Function:** The String used with setBuffer.

**Notes:** (Read only property)

70.60.23 **Width as Integer**

**Function:** Width in pixels.

**Notes:** (Read and Write property)
70.61 class DynapdfRectMBS

70.61.1 class DynapdfRectMBS

70.61.2 Methods

70.61.3 Constructor(left as Double = 0.0, top as Double = 0.0, right as Double = 0.0, bottom as Double = 0.0)

70.61.4 Properties

70.61.5 Bottom as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The bottom coordinate. Notes: (Read and Write property)

70.61.6 Left as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The left coordinate. Notes: (Read and Write property)

70.61.7 Right as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The right coordinate. Notes: (Read and Write property)
70.61.8 Top as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The top coordinate.  
**Notes:** (Read and Write property)

70.61.9 Width as Double

MBS DynaPDF Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The width of the rectangle.  
**Notes:**

This is the difference between right and left.

Height property is missing as it depends on the coordinate origin. For top-down coordinates you would calculate bottom - top while for bottom-up coordinates you calculate top - bottom.  
(Read and Write property)
70.62 class DynaPDFRelFileNodeMBS

70.62.1 class DynaPDFRelFileNodeMBS

Function: The information on a related file node.
Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.62.2 Methods

70.62.3 Constructor

Function: The private constructor.

70.62.4 Properties

70.62.5 EF as DynaPDFFileSpecMBS

Function: Embedded file.
Notes: (Read only property)

70.62.6 Name as String

Function: Name of this file specification.
Notes: (Read only property)

70.62.7 NextNode as DynaPDFRelFileNodeMBS

Function: Next node if any.
Notes: (Read only property)
70.63. class DynaPDFResetFormActionMBS

70.63.1. class DynaPDFResetFormActionMBS

Function: The class for reset form action.

Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.63.2. Methods

70.63.3. Constructor

Function: The private constructor.

70.63.4. Fields(index as Integer) as DynaPDFFieldExMBS

Function: Queries array of fields.

Notes: Index is from 0 to FieldsCount-1.

70.63.5. Properties

70.63.6. FieldsCount as Integer

Function: Number of fields in the array.

Notes: (Read only property)

70.63.7. Include as Boolean

Function: Include or exclude given fields?

Notes:

If true, the fields in the array must be reset. If false, these fields must be excluded.
(Read only property)
70.63.8 NextAction as Integer

Function: The next action.
Notes:
-1 or next action handle to be executed if any.
(Read only property)

70.63.9 NextActionType as Integer

Function: The type of the next action.
Notes:
See kat* constants.
(Read only property)
class DynaPDFSigDictMBS

**Function:** The class for details on signature fields.

### Properties

#### Cert as String

**Function:** X.509 Certificate when SubFilter is adbe.x509.rsa_sha1.
**Notes:** (Read and Write property)

#### ContactInfo as String

**Function:** Optional contact info string, e.g. an email address
**Notes:** (Read and Write property)

#### Contents as String

**Function:** The signature.
**Notes:**
This is either a DER encoded PKCS# 1 binary data object or a DER-encoded PKCS# 7 binary data object depending on the used SubFilter.
(Read and Write property)

#### Filter as String

**Function:** The name of the security handler, usually Adobe.PPKLite.
**Notes:** (Read and Write property)
70.64.7 Location as String

Function: Optional location of the signer.
Notes: (Read and Write property)

70.64.8 Name as String

Function: Optional signers name.
Notes: (Read and Write property)

70.64.9 PropAuthTime as Integer

Function: Optional. The number of seconds since the signer was last authenticated.
Notes: (Read and Write property)

70.64.10 PropAuthType as String

Function: Optional. The method that shall be used to authenticate the signer.
Notes: Valid values are PIN, Password, and Fingerprint.
(Read and Write property)

70.64.11 Reason as String

Function: Optional reason.
Notes: (Read and Write property)

70.64.12 Revision as Integer

Function: Optional, The version of the signature handler that was used to create the signature.
70.64.13 SignTime as String

Function: Date/Time string.
Notes: (Read and Write property)

70.64.14 SubFilter as String

Function: A name that describes the encoding of the signature value.
Notes: Should be adbe.x509.rsa.sha1, adbe.pkcs7.detached, or adbe.pkcs7.sha1.
(Read and Write property)

70.64.15 Version as Integer

Function: The version of the signature dictionary format.
Notes: (Read and Write property)
70.65 class DynaPDFSigParmsMBS

70.65.1 class DynaPDFSigParmsMBS

Function: The class for PDF signature parameters.

70.65.2 Properties

70.65.3 ContactInfo as String

Function: Optional, e.g. an email address.
Notes:
Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)

70.65.4 Encrypt as Boolean

Function: If true, the file will be encrypted.
Notes: (Read and Write property)

70.65.5 HashType as Integer

Function: The hash type: khtDetached or khtSHA1.
Notes: (Read and Write property)

70.65.6 KeyLen as Integer

Function: Key length to encrypt the file.
Notes:
This value is ignored if Encrypt is set to false.
On of the kkl* constants like kkl128bit.
(Read and Write property)
70.65. **Location as String**

**Function:** Optional location of the signer.
**Notes:**
Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)

70.65. **OpenPwd as String**

**Function:** Optional open password.
**Notes:**
This value is ignored if Encrypt is set to false.
(Read and Write property)

70.65. **OwnerPwd as String**

**Function:** Optional owner password.
**Notes:**
This value is ignored if Encrypt is set to false.
(Read and Write property)

70.65. **PKCS7ObjLen as Integer**

**Function:** Max length of the signed PKCS# 7 object.
**Notes:** (Read and Write property)

70.65. **Range1 as String**

**Function:** Hash or byte range.
**Notes:** (Read and Write property)
70.65.12 Range1Length as Integer

**Function:** Length of the buffer Range1.
**Notes:** (Read and Write property)

70.65.13 Range2 as String

**Function:** Second range value.
**Notes:**
Set only if HashType = htDetached.
(Read and Write property)

70.65.14 Range2Length as Integer

**Function:** Length of buffer Range2.
**Notes:** (Read and Write property)

70.65.15 Reason as String

**Function:** Optional reason why the file was signed.
**Notes:**
Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)

70.65.16 Restrict as Integer

**Function:** What should be restricted?
**Notes:**
This value is ignored if Encrypt is set to false.
A combination of krs* constants.
(Read and Write property)
70.65.17 Signer as String

Function: Optional, see manual.

Notes:

Internally this string is converted to ANSI or Unicode encoding.
(Read and Write property)
70.66 class DynaPDFStackMBS

70.66.1 class DynaPDFStackMBS

Notes: Before you can use it, call InitStack.

70.66.2 Methods

70.66.3 KerningAdvance(index as UInt32) as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Negative values move the cursor to the right.

70.66.4 KerningLength(index as UInt32) as Integer

70.66.5 KerningText(index as UInt32) as string

Notes:
May contain chr(0) characters.
Encoding is UTF8.

70.66.6 KerningWidth(index as UInt32) as Double

70.66.7  RawKernAdvance(index as UInt32) as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Negative values move the cursor to the right.

70.66.8  RawKernLength(index as UInt32) as Integer

70.66.9  RawKernText(index as UInt32) as string

70.66.10 Properties

70.66.11 CharSP as Double

Notes: (Read only property)

70.66.12 CIDFont as Boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: If true, a CID font is used to render the text.
Notes: It is not possible to replace a text with ReplacePageText() in this case. However, it is still possible to delete the text. If the text should be replaced use either ReplacePageTextEx() or WriteTextMatrixEx(). (Read only property)

70.66.13 ConvColors as Boolean

MBS DynaPDF Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
If true (default), all colors are converted to the destination color space DestSpace.

**Notes:**

The default color space is DeviceRGB. This variable can be changed after the structure has been initialized with InitStack(). If set to false, colors of complex color spaces are still converted into the alternate color space but the color space can then be changed arbitrary often. See also the description of FillCS.

(Read and Write property)

### 70.66.14 ctm as DynapdfMatrixMBS

**Function:** The transformation matrix.

**Notes:**

Pre-multiplied global transformation matrix.

(Read only property)

### 70.66.15 DeleteKerningAt as Integer

**Function:** This member can be used in combination with ReplacePageText().

**Notes:**

ReplacePageText() deletes or replaces normally always a complete text record but this is often not required especially if a text must be deleted or replaced in the middle or end of a kerning array. To make text replacement easier it is possible to preserve an arbitrary number of kerning records from deletion. The value of DeleteKerningAt represents the first array index which should be deleted. All kerning records above this index will be deleted too. Take a look into the demo examples/edit_text which is delivered with DynaPDF to determine how this member can be used.

(Read and Write property)

### 70.66.16 DestSpace as Integer

**Function:** The destination color space in which all colors should be converted.

**Notes:**

If ConvColor is set to false, the value of this member is ignored. If the destination color space should be DeviceCMYK initialize the members FillColor and StrokeColor with PDF_CMYK(0,0,0,255); which represents black.

(Read and Write property)
70.66.17 DrawMode as Integer

**Function:** The draw mode used to render the text.
**Notes:**
See SetTextDrawMode() for further information.
(Read only property)

70.66.18 Embedded as Boolean

**Function:** If true, the font is embedded.
**Notes:**
This information is very important if the text should be replaced. The function ReplacePageText() can be used if the font is not embedded and if the member CIDFont is false. Otherwise, the function ReplacePageTextEx() or WriteTextMatrixEx() must be used to replace the text, see the examples on the following pages for further information.
(Read only property)

70.66.19 FillColor as Integer

**Function:** The fill color represents the text color if the text draw mode is dmNormal.
**Notes:**
Depending on the draw mode the fill and stroke color can be invoked to render the text.
(Read only property)

70.66.20 FillCS as Integer

**Function:**
This is the current color space in which the color value of FillColor is defined.
**Notes:**
If ConvColor is set to true (default) the value is always equal to DestSpace. If ConvColor is set to false the fill color is still returned in a device color space but the color space can be changed arbitrary often. Colors of complex color spaces, such as Separation or DeviceN, are always converted into the alternate color space. If the original or alternate color space is an ICC based color space the color value is returned as is and the color space is set depending on the number of components. The ICC profile is not invoked to calculate the color value in the device color space. Future versions of DynaPDF maybe use the ICC profile to convert the color into device color space.

(Read only property)

**70.66.21 Font as DynaPDFFontMBS**

**Function:** Font object used to print the string. 
**Notes:**
Deprecated. Better use FontInfo property.

Reading this property creates a new object each time. 
Please put object in local variable and avoid querying the property value several times.
(Read only property)

**70.66.22 FontFlags as Integer**

**Function:** The PDF font flags. 
**Notes:** (Read and Write property)

**70.66.23 FontHandle as Integer**

**Function:** The internal font object handle. 
**Notes:**
In DynaPDF documentation named IFont, a pointer to the C object for the font.
(Read only property)
**CLASS DYNAPDFSTACKMBS**

### 70.66.24 FontInfo as DynaPDFFontInfoMBS

MBS DynaPDF Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Font object used to print the string. **Notes:** Reading this property creates a new object each time. Please put object in local variable and avoid querying the property value several times. (Read only property)

### 70.66.25 FontSize as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The font size used to display the text. **Notes:** (Read only property)

### 70.66.26 HScale as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Current horizontal scaling, info only. **Notes:** (Read only property)

### 70.66.27 KerningCount as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of kerning records. **Notes:** RawKern and Kerning contain always the same number of records. (Read only property)

### 70.66.28 Leading as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The leading is already included in the text transformation matrix tm. **Notes:** The value of leading must not be considered to calculate the text position. (Read only property)
70.66.29 LineWidth as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** The current line width; it can be ignored if the text is not stroked.  
**Notes:** (Read only property)

70.66.30 SpaceWidth as Double

MBS DynaPDF Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** The space width.  
**Notes:**
The space width can be used to determine whether a space character is emulated at a given position. A default space width is set if the font does not contain a space character. Note that many documents emulate spaces with kerning space. Such documents contain usually no space character. It is usually best to use the half space width to determine whether a space character is emulated. This is especially important if a document uses condensed fonts which contain no space character.  
(Read only property)

70.66.31 StrokeColor as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** The stoke color.  
**Notes:**
The stroke color can be ignored if the text draw mode is not dmStroke, dmFillStroke, dmStrokeClip or dmFillStrokeClip since it is then not used to render the text.  
(Read only property)

70.66.32 StrokeCS as Integer

MBS DynaPDF Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** This is the current color space in which the color value of StrokeColor is defined.  
**Notes:**
The color space is set in an identical manner like FillCS.  
(Read only property)
70.66.33  Text as String

**Function:** The raw text line that was found in the content stream.
**Notes:**
This string can contain single or multi-byte characters. This member should no longer be used to extract or replace text. Use the Kerning array instead.
(Read only property)

70.66.34  TextLen as Integer

**Function:** The string length in bytes, not characters!
**Notes:**
If TextLen is zero no text was found or an error occurred.
(Read only property)

70.66.35  TextRise as Double

**Function:** The text rise is already included in the text transformation matrix tm.
**Notes:**
The value is always 0.0.
(Read only property)

70.66.36  TextWidth as Double

**Function:** The text width measured in text space.
**Notes:**
This is the width of the entire kerning array incl. kerning space.
(Read only property)
70.66.37  \( \text{tm as DynapdfMatrixMBS} \)

**Function:** The transformation matrix.  
**Notes:**  
Pre-multiplied text transformation matrix.  
(Read only property)

70.66.38  \( \text{WordSP as Double} \)

**Function:** Current word spacing, info only.  
**Notes:** (Read only property)

70.66.39  \( \text{x as Double} \)

**Function:** The position.  
**Notes:**  
These members are no longer used. All positioning operators are already included in the text transformation matrix \( \text{tm} \).  
(Read only property)

70.66.40  \( \text{y as Double} \)

**Function:** The position.  
**Notes:**  
These members are no longer used. All positioning operators are already included in the text transformation matrix \( \text{tm} \).  
(Read only property)
70.67. **class DynaPDFSubmitFormActionMBS**

70.67.1 **class DynaPDFSubmitFormActionMBS**

**Function:** The class for submit form action details.

**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.67.2 **Methods**

70.67.3 **Constructor**

**Function:** The private constructor.

70.67.4 **Fields(index as Integer) as DynaPDFFieldExMBS**

**Function:** Queries array of field.

**Notes:** Index is from 0 to FieldCount-1.

70.67.5 **Properties**

70.67.6 **CharSet as String**

**Function:** Optional charset in which the form should be submitted.

**Notes:** (Read only property)

70.67.7 **FieldsCount as Integer**

**Function:** Number of fields in the array.

**Notes:** (Read only property)
70.67.8 Flags as Integer

Function: Various flags.
Notes:
See CreateSubmitAction() for further information.
(Read only property)

70.67.9 NextAction as Integer

Function: The next action.
Notes:
-1 or next action handle to be executed if any.
(Read only property)

70.67.10 NextActionType as Integer

Function: The type of the next action.
Notes:
See kat* constants.
(Read only property)

70.67.11 URL as String

Function: The URL of the script at the Web server that will process the submission.
Notes: (Read only property)
70.68 class DynaPDFSysFontMBS

70.68.1 class DynaPDFSysFontMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for system font info.
Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.68.2 Methods

70.68.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The private constructor.

70.68.4 NextFont as DynaPDFSysFontMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries next font in the chain of fonts.
Notes: Returns nil on the end of list.

70.68.5 Properties

70.68.6 BaseType as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Font type.
Notes:
Can be kfbtTrueType, kfbtType1, kfbtOpenType or kfbtStdFont.
(Read and Write property)

70.68.7 CIDOrdering as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: CID Ordering.
Notes:
OpenType CID fonts only.  
(Read and Write property)

### 70.68.8 CIDRegistry as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The CID Registry.  
**Notes:**  
OpenType CID fonts only  
(Read and Write property)

### 70.68.9 CIDSupplement as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The CID Supplement.  
**Notes:**  
OpenType CID fonts only  
(Read and Write property)

### 70.68.10 DataOffset as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Data offset.  
**Notes:**  
(Read and Write property)

### 70.68.11 FamilyName as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Family name.  
**Notes:**  
(Read and Write property)

### 70.68.12 FilePath as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Font file path.  
**Notes:**  
(Read and Write property)
70.68.13  FileSize as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: File size in bytes.
Notes: (Read and Write property)

70.68.14  Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The flags.
Notes: Can be combination of kefpAnsiPath, kefpUnicodePath, kefpEmbeddable and kefpEditable.
(Read and Write property)

70.68.15  FullName as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Full name.
Notes: (Read and Write property)

70.68.16  Index as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Zero based font index if stored in a TrueType collection.
Notes: (Read and Write property)

70.68.17  IsFixedPitch as Boolean

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: If true, the font is a fixed pitch font.
Notes: (Read and Write property)

70.68.18  Length1 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Length of the clear text portion of a Type1 font.
70.68.19 Length2 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Length of the eexec encrypted binary portion of a Type1 font.
**Notes:** (Read and Write property)

70.68.20 PostScriptName as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The Postscript name.
**Notes:** (Read and Write property)

70.68.21 Style as Integer

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Font style.
**Notes:**
See kfs* constants.
(Read and Write property)

70.68.22 UnicodeRange1 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Supported unicode ranges, part 1.
**Notes:** (Read and Write property)

70.68.23 UnicodeRange2 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Supported unicode ranges, part 2.
**Notes:** (Read and Write property)
70.68. CLASS DYNAPDFSYSFONTMBS

70.68.24 UnicodeRange3 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Supported unicode ranges, part 3.  
**Notes:** (Read and Write property)

70.68.25 UnicodeRange4 as UInt32

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Supported unicode ranges, part 4.  
**Notes:** (Read and Write property)

MBS DynaPDF Plugin, Plugin Version: 15.0. **Function:** One of the unicode range constants.
70.69 class DynaPDFTableMBS

70.69.1 class DynaPDFTableMBS

**Function:** The class for a table in DynaPDF.  
**Notes:**  
This tables are more for doing a layout, but can also be used to show a list or a worksheet like in Excel.  
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.69.2 Methods

70.69.3 AddColumn(left as boolean, width as Double) as Integer

**Function:** Adds a column to the table.  
See also AddColumn function in DynaPDF manual.

70.69.4 AddRow(height as Double = 0.0) as Integer

**Function:** Adds a row with given height.  
See also AddRow function in DynaPDF manual.

70.69.5 AddRows(count as UInt32, height as Double) as Integer

**Function:** Adds a couple of rows with given height.  
See also AddRows function in DynaPDF manual.

70.69.6 ClearColumn(Col as Integer, Types as Integer)

**Function:** The function deletes the content in the specified column in all rows.  
**Notes:** The parameter Types is described in ClearContent() below.  
See also ClearColumn function in DynaPDF manual.
70.69.7 ClearContent(Types as Integer)

**Function:** Clears content of table.
**Notes:** See kdc constants for possible flags.
See also ClearContent function in DynaPDF manual.

70.69.8 ClearRow(Row as Integer, Types as Integer)

**Function:** The function deletes the content in the specified row.
**Notes:** The parameter Types is described in ClearContent().
See also ClearRow function in DynaPDF manual.

70.69.9 Constructor

**Function:** The private constructor.

70.69.10 DeleteColumn(column as UInt32)

**Function:** Deletes the column.

70.69.11 DeleteRow(row as UInt32)

**Function:** Deletes the row with the given index.
See also DeleteRow function in DynaPDF manual.

70.69.12 DeleteRows

**Function:** Deletes all rows.
See also DeleteRows function in DynaPDF manual.
70.69.13  **DrawTable(x as Double, y as Double, MaxHeight as Double = 0.0) as Double**

**Function:** Draws the table at the given position into the PDF:  
See also `DrawTable` function in DynaPDF manual.

70.69.14  **GetFirstRow as Integer**

**Function:** Queries first row from last draw operation.  
See also `GetFirstRow` function in DynaPDF manual.

70.69.15  **GetFlags(Row as Integer, Column as Integer) as Integer**

**Function:** Queries flag for a cell, a column or a row.  
**Notes:** If Row is -1, only column flags are returned. If Column is -1, the row flags are returned for given row.  
See also `GetFlags` function in DynaPDF manual.

70.69.16  **GetNextHeight(MaxHeight as Double, byref NextRow as Integer) as Double**

**Function:** Queries the next row.  
**Example:**

```vba
dim pdf as new DynaPDFMBS  
call pdf.CreateNewPDF(nil)  
call pdf.Append  
// create dummy table with 20 rows, 1 column and 500 points width. 20 points per row by default.  
dim table as DynaPDFTableMBS = pdf.CreateTable(20, 1, 500.0, 20.0)  
// fill in dummy data  
for i as Integer = 1 to 20  
dim rowNum as Integer = table.AddRow  
call table.SetCellText(rowNum, 0, pdf.ktaLeft, table.kcoCenter, str(i))  
next  
// and do some calculations
```
dim nextrow as Integer  
dim h as Double = table.GetNextHeight(0, nextrow)  
MsgBox str(h)+” with no limit.”  

dim h2 as Double = table.GetNextHeight(200, nextrow)  
MsgBox str(h2)+” with limit of 200 and rows till ”+str(nextrow-1)  
break

Notes:
If MaxHeight is zero, returns the height of table.
If MaxHeight is the height of space available, plugin calculates the effective height of table and which row would be the next one.
Returns negative number on error.
See also GetNextHeight function in DynaPDF manual.

70.69.17 GetNextRow as Integer

**Function:** Queries next row of last draw operation.
See also GetNextRow function in DynaPDF manual.

70.69.18 GetNumCols as Integer

**Function:** Queries number of columns of last draw operation.
See also GetNumCols function in DynaPDF manual.

70.69.19 GetNumRows as Integer

**Function:** Queries number of rows of last draw operation.
See also GetNumRows function in DynaPDF manual.
70.69.20 GetTableHeight as Double

Function: Queries the table height.
See also GetTableHeight function in DynaPDF manual.

70.69.21 GetTableWidth as Double

Function: Calculates table width.
See also GetTableWidth function in DynaPDF manual.

70.69.22 HaveMore as boolean

Function: Whether there are more rows to draw.
Notes: If you draw a table, you can loop and fill pages until the whole table is drawn.
See also HaveMore function in DynaPDF manual.

70.69.23 SetBackColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

Function: Sets the back color of the table, a row or cells.
Example:

dim pdf as DynaPDFMBS // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0) // make some table

const allRows = -1
const allColumns = -1

// add a few rows
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)

// row 0 in 100% Cyan
call tbl.SetBackColor(0, allColumns, array(255,0,0,0), pdf.kcsDeviceCMYK)
// row 1 in 100% Cyan
call tbl.SetBackColor(1, allColumns, array(0, 255, 0, 0), pdf.kcsDeviceCMYK)  
  // row 2 in 100% Cyan
call tbl.SetBackColor(2, allColumns, array(0, 0, 255, 0), pdf.kcsDeviceCMYK)  
  // row 3 in RGB red with 50% transparency
call tbl.SetBackColor(3, allColumns, array(255, 0, 0))

Notes:
Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 70.69.24 SetBackColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

70.69.24 SetBackColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

Function: Sets the back color of the table, a row or cells.
Example:

dim pdf as DynaPDFMBS  // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0)  // make some table

// now fill all rows and columns with RGB red specified by integer values
const allRows = -1
const allColumns = -1
call tbl.SetBackColor(allRows, allColumns, 255, 0, 0)

Notes:
Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 70.69.23 SetBackColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean
**70.69.25** SetBackColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the back color of the table, a row or cells. **Example:**

```vbnet
dim pdf as DynaPDFMBS // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 100.0) // make some table

const allRows = -1
const allColumns = -1

// add a few rows
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)
rowNum = tbl.AddRow(-1.0)

// row 0 in 100% Cyan
call tbl.SetBackColorFloat(0, allColumns, array(1.0, 0.0, 0.0, 0.0), pdf.kcsDeviceCMYK)
// row 1 in 100% Cyan
call tbl.SetBackColorFloat(1, allColumns, array(0.0, 1.0, 0.0, 0.0), pdf.kcsDeviceCMYK)
// row 2 in 100% Cyan
call tbl.SetBackColorFloat(2, allColumns, array(0.0, 0.0, 1.0, 0.0), pdf.kcsDeviceCMYK)
// row 3 in RGB red
call tbl.SetBackColorFloat(3, allColumns, array(1.0, 0.0, 0.0))
```

**Notes:**

Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- **70.69.26** SetBackColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

**70.69.26** SetBackColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

MBS DynaPDF Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the back color of the table, a row or cells.
Example:

dim pdf as DynaPDFMBS // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0) // make some table

// now fill all rows and columns with RGB red specified by double values
const allRows = -1
const allColumns = -1
call tbl.SetBackColorFloat(allRows, allColumns, 1.0, 0.0, 0.0)

Notes:
Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 70.69.25 SetBackColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

70.69.27 SetBackColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

Function: Sets the back color of the table, a row or cells.
Example:

dim pdf as DynaPDFMBS // your PDF environment
dim tbl as DynaPDFTableMBS = pdf.CreateTable(3, 3, 500.0, 20.0) // make some table

// now fill all rows and columns with RGB red specified by RGB() call
const allRows = -1
const allColumns = -1

dim c as Integer = DynaPDFMBS.RGB(255, 0, 0)
call tbl.SetBackColorValue(allRows, allColumns, DynapdfMBS.kcsDeviceRGB, c)

Notes:
Default is none (transparent)
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

### 70.69.28 SetBorderColor

**SetBorderColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean**

**Function:** Sets the border color of the table, a row or cells.
**Notes:**
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:
- 70.69.29 SetBorderColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

### 70.69.29 SetBorderColor

**SetBorderColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean**

**Function:** Sets the border color of the table, a row or cells.
**Notes:**
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:
- 70.69.28 SetBorderColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

### 70.69.30 SetBorderColorFloat

**SetBorderColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean**

**Function:** Sets the border color of the table, a row or cells.
**Notes:**
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 70.69.31 SetBorderColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

70.69.31 SetBorderColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

Function: Sets the border color of the table, a row or cells.
Notes:
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 70.69.30 SetBorderColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

70.69.32 SetBorderColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

Function: Sets the border color of the table, a row or cells.
Notes:
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.
CHAPTER 70. DYNAPDF

70.69.33 SetBorderWidth(Row as Integer, Column as Integer, left as Double, top as Double, right as Double, bottom as Double) as boolean

Function: Sets the border width of the table, a row or cells.

Notes:
Default value is 0.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

70.69.34 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as FolderItem, index as Integer = 0) as boolean

Function: Sets the cell image.
See also SetCellImage function in DynaPDF manual.
See also:
• 70.69.35 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as string, index as Integer = 0) as boolean

70.69.35 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as string, index as Integer = 0) as boolean

Function: Sets the cell image.
See also SetCellImage function in DynaPDF manual.
See also:
• 70.69.34 SetCellImage(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as FolderItem, index as Integer = 0) as boolean

70.69.36 SetCellImageAnsi(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, path as string, index as Integer = 0) as boolean

Function: Sets cell image.
70.69.37 SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as MemoryBlock, index as Integer = 0) as boolean

Function: Sets cell image.
Example:

    dim PictureData as memoryblock // from database maybe?
    dim w as Double = 300 // destination size
    dim h as Double = 200
    dim row as Integer
    dim column as Integer
    
    dim table as DynaPDFTableMBS // your table
    
    call table.SetCellImageData(row, column, true, table.kcoCenter, table.kcoCenter, w, h, PictureData, 0)

See also:

- 70.69.38 SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as string, index as Integer = 0) as boolean

70.69.38 SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as string, index as Integer = 0) as boolean

Function: Sets cell image.
Example:

    dim PictureData as string // from database maybe?
    dim w as Double = 300 // destination size
    dim h as Double = 200
    dim row as Integer
    dim column as Integer
    
    dim table as DynaPDFTableMBS // your table
    
    call table.SetCellImageData(row, column, true, table.kcoCenter, table.kcoCenter, w, h, PictureData, 0)
See also:

- 70.69.37 `SetCellImageData(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, Width as Double, Height as Double, ImageData as MemoryBlock, index as Integer = 0) as boolean`

### 70.69.39 `SetCellOrientation(Row as Integer, Column as Integer, Orientation as Integer) as boolean`

**Function:** The function sets the cell orientation.
**Notes:** See dynapdf_help.pdf for details.
See also `SetCellOrientation` function in DynaPDF manual.

### 70.69.40 `SetCellPadding(Row as Integer, Column as Integer, left as Double, top as Double, right as Double, bottom as Double) as boolean`

**Function:** Sets the cell padding of the table, a row or cells.
**Notes:**
Default is zero.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

### 70.69.41 `SetCellSpacing(Row as Integer, Column as Integer, left as Double, top as Double, right as Double, bottom as Double) as boolean`

**Function:** Sets the cell spacing of the table, a row or cells.
**Notes:**
Default is zero.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

### 70.69.42 `SetCellTable(Row as Integer, Column as Integer, HAlign as Integer, VAlign as Integer, SubTable as DynaPDFTableMBS) as boolean`

**Function:** The function inserts a sub table into the specified cell.
**Notes:**
A sub table is always a foreground object that has a strong width and height. That means, if the cell is not large enough then it will be expanded.

Note that the function creates no copy of the table. Do not delete the sub table when it is used by another table.

In programming languages which use reference counting like Xojo, it is important to delete the tables in right order. Delete first the tables which contain references to sub tables. Finally, delete the sub tables.

If the function succeeds the return value is true. If the function fails the return value is false.

See dynapdf_help.pdf for details.

See also SetCellTable function in DynaPDF manual.

---

**`SetCellTemplate(Row as Integer, Column as Integer, ForeGround as boolean, HAlign as Integer, VAlign as Integer, TmplHandle as Integer, Width as Double = 0, Height as Double = 0) as boolean`**

**Function:** The function inserts a template into the specified cell.

**Notes:** See dynapdf_help.pdf for details.

See also SetCellTemplate function in DynaPDF manual.

---

**`SetCellText(Row as Integer, Column as Integer, HAlign as Integer, VAlign as Integer, text as string) as boolean`**

**Function:** Sets the text of a cell.

See also SetCellText function in DynaPDF manual.

---

**`SetCellTextAnsi(Row as Integer, Column as Integer, HAlign as Integer, VAlign as Integer, text as string) as boolean`**

**Function:** Sets the text of a cell with ANSI text.

---

**`SetColWidth(column as UInt32, Width as Double, ExtTable as Boolean) as boolean`**

**Function:** Sets the column width for a column.
See also SetColWidth function in DynaPDF manual.

### 70.69.47 SetFlags(Row as Integer, Column as Integer, Flags as Integer) as boolean

**Function:** Sets the flags for a cell.
**Notes:** If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFlags function in DynaPDF manual.

### 70.69.48 SetFont(Row as Integer, Column as Integer, name as string, Style as Integer, Embed as Boolean, CodePage as Integer) as boolean

**Function:** Sets the font of the table, a row or cells.
**Example:**
```vbnet
dim tbl as DynaPDFTableMBS // your table

    // set font for all cells
    call tbl.SetFont -1, -1, "Helvetica", pdf.kfsNone, true, pdf.kcpUnicode
    // set bold font for a special cell
    call tbl.SetFont rowNum, 2, "Helvetica", pdf.kfsBold, true, pdf.kcpUnicode
```

**Notes:**
Default is Helvetica, Code page 1252, Embed false.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFont function in DynaPDF manual.

### 70.69.49 SetFontAnsi(Row as Integer, Column as Integer, name as string, Style as Integer, Embed as Boolean, CodePage as Integer) as boolean

**Function:** Sets the font of the table, a row or cells.
**Notes:**
Default is Helvetica, Code page 1252, Embed false.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
70.69.00  **SetFontSelMode(Row as Integer, Column as Integer, value as Int32) as boolean**

**Function:** Sets the font selection mode of the table, a row or cells.
**Notes:**
Default is ksmFamilyName.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFontSelMode function in DynaPDF manual.

70.69.01  **SetFontSize(Row as Integer, Column as Integer, size as Double) as boolean**

**Function:** Sets the font size of the table, a row or cells.
**Notes:**
Default is 10.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetFontSize function in DynaPDF manual.

70.69.02  **SetGridHorizontalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean**

**Function:** Sets the horizontal grid color.
**Notes:**
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
Pass an integer for each channel with 0 to 255.
See also:
- 70.69.03 SetGridHorizontalColor(paramarray channels as Integer) as boolean

70.69.03  **SetGridHorizontalColor(paramarray channels as Integer) as boolean**

**Function:** Sets the horizontal grid color.
**Notes:**
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 70.69.52 SetGridHorizontalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

70.69.54 SetGridHorizontalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

Function: Sets the horizontal grid color.
Notes:
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 70.69.55 SetGridHorizontalColorFloat(paramarray channels as Double) as boolean

70.69.55 SetGridHorizontalColorFloat(paramarray channels as Double) as boolean

Function: Sets the horizontal grid color.
Notes:
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 70.69.54 SetGridHorizontalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

70.69.56 SetGridHorizontalColorValue(TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

Function: Sets the horizontal grid color.
Notes:
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.

70.69.57 SetGridVerticalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

Function: Sets the vertical grid color.
Notes:
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 70.69.58 SetGridVerticalColor(paramarray channels as Integer) as boolean

70.69.58 SetGridVerticalColor(paramarray channels as Integer) as boolean

Function: Sets the vertical grid color.
Notes:
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.
See also:

- 70.69.57 SetGridVerticalColor(channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean
CHAPTER 70. DYNAPDF

70.69.59  SetGridVerticalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

Function: Sets the vertical grid color.
Notes:
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

• 70.69.60 SetGridVerticalColorFloat(paramarray channels as Double) as boolean

70.69.60  SetGridVerticalColorFloat(paramarray channels as Double) as boolean

Function: Sets the vertical grid color.
Notes:
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

• 70.69.59 SetGridVerticalColorFloat(channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

70.69.61  SetGridVerticalColorValue(TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

Function: Sets the vertical grid color.
Notes:
Default is black.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.
70.69.62 SetGridWidth(h as Double, v as Double) as boolean

**Function:** Sets the grid width.
**Notes:**
Default is 0.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
See also SetGridWidth function in DynaPDF manual.

70.69.63 SetImageColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

**Function:** Sets the image color of the table, a row or cells.
**Notes:**
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
Pass an integer for each channel with 0 to 255.
See also:

- 70.69.64 SetImageColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

70.69.64 SetImageColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

**Function:** Sets the image color of the table, a row or cells.
**Notes:**
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
Pass an integer for each channel with 0 to 255.
See also:

- 70.69.63 SetImageColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean
70.69.65  SetImageColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

**Function:** Sets the image color of the table, a row or cells.

**Notes:**
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
Pass a double value for each channel with range 0.0 to 1.0.
See also:
- 70.69.66 SetImageColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

70.69.66  SetImageColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

**Function:** Sets the image color of the table, a row or cells.

**Notes:**
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
Pass a double value for each channel with range 0.0 to 1.0.
See also:
- 70.69.65 SetImageColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

70.69.67  SetImageColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

**Function:** Sets the image color.

**Notes:**
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.
Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with
gray color.

70.69.68  **SetPDF(pdf as DynaPDFMBS)**

**Function:** Sets the target PDF for this table.

70.69.69  **SetRowHeight(Row as Integer, value as Double) as boolean**

**Function:** Sets the row height of a row.  
See also **SetRowHeight** function in DynaPDF manual.

70.69.70  **SetTableWidth(Value as single, AdjustType as Integer, MinColWidth as single)**

**Function:** The function changes the width of the table.  
**Notes:**

At least one column must be modified when the width will be changed. The parameter AdjustType specifies how the column width should be modified. If the new width is larger, then the difference can be added to the left or right column, or all columns can get a unique width (TableWidth / NumColumns). The parameter MinColWidth is ignored in this case.

If the new width is smaller then the difference must be subtracted from the columns. The parameter MinColWidth specifies in this case the minimum width of columns that must be adjusted. It is only used if AdjustType is not set to kcoaUniqueWidth. The column widths are adjusted starting from the left or right side as specified. If the width of the first column is not large enough to subtract the difference, then the minimum column width is set to the column. This adjustment continues until the gap is zero. If the new table width is smaller as MinColWidth * NumColumns then the widths of the remaining columns will be set to zero. Such cases should be avoided since the column widths must be adjusted again when the table is drawn.

- kcoaUniqueWidth: Set the column widths to TableWidth / NumColumns
- kcoaAdjLeft: Adjust the widths starting from the left side
- kcoaAdjRight: Adjust the widths starting from the right side

See dynapdf_help manual for details.  
Returns true on success or false on failure.
See also SetTableWidth function in DynaPDF manual.

70.69.71 SetTextColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

Function: Sets the text color of the table, a row or cells.  
Notes:  
Default is black.  
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.  
See also:

- 70.69.72 SetTextColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

70.69.72 SetTextColor(Row as Integer, Column as Integer, paramarray channels as Integer) as boolean

Function: Sets the text color of the table, a row or cells.  
Notes:  
Default is black.  
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass an integer for each channel with 0 to 255.  
See also:

- 70.69.71 SetTextColor(Row as Integer, Column as Integer, channels() as Integer, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

70.69.73 SetTextColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

Function: Sets the text color of the table, a row or cells.  
Notes:
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 70.69.74 SetTextColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

70.69.74 SetTextColorFloat(Row as Integer, Column as Integer, paramarray channels as Double) as boolean

**Function:** Sets the text color of the table, a row or cells.
**Notes:**
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a double value for each channel with range 0.0 to 1.0.
See also:

- 70.69.73 SetTextColorFloat(Row as Integer, Column as Integer, channels() as Double, ExtColorSpace as Integer = 0, ColorSpaceHandle as Integer = 0) as boolean

70.69.75 SetTextColorValue(Row as Integer, Column as Integer, TPDFColorSpace as Integer, ColorValue as UInt32) as boolean

**Function:** Sets the horizontal grid color.
**Notes:**
Default is black.
If Row is -1, all rows are modified. If Column is -1, all columns are modified.

Pass a color space and a matching color value.
For example kcsDeviceRGB and RGB(r,g,b), kcsDeviceCMYK and CMYK(c,m,y,k) or kcsDeviceGray with gray color.
70.69.76 Properties

70.69.77 Parent as Variant

Function: Reference to parent object.  
Notes: (Read only property)

70.69.78 PDF as DynaPDFMBS

Function: Reference to parent PDF object.  
Notes: (Read only property)

70.69.79 Constants

70.69.80 kcctImage = 1

MBS DynaPDF Plugin, Plugin Version: 12.4. Function: One of the cell content type constants.  
Notes: Image.

70.69.81 kcctTable = 2

MBS DynaPDF Plugin, Plugin Version: 12.4. Function: One of the cell content type constants.  
Notes: Table.

70.69.82 kcctTemplate = 3

MBS DynaPDF Plugin, Plugin Version: 13.2. Function: One of the cell content type constants.  
Notes: Template.

70.69.83 kcctText = 0

MBS DynaPDF Plugin, Plugin Version: 12.4. Function: One of the cell content type constants.  
Notes: Text
70.69.84  kcoaAdjLeft = 1

MBS DynaPDF Plugin, Plugin Version: 13.2. **Function:** One of the column adjustment constants.  
**Notes:** Adjust the widths starting from the left side.

70.69.85  kcoaAdjRight = 2

MBS DynaPDF Plugin, Plugin Version: 13.2. **Function:** One of the column adjustment constants.  
**Notes:** Adjust the widths starting from the right side.

70.69.86  kcoaUniqueWidth = 0

MBS DynaPDF Plugin, Plugin Version: 13.2. **Function:** One of the column adjustment constants.  
**Notes:** Set the column widths to TableWidth / NumColumns.

70.69.87  kcoBottom = 1

MBS DynaPDF Plugin, Plugin Version: 12.4. **Function:** One of the cell orientation constants.  
**Notes:** Bottom

70.69.88  kcoCenter = 2

MBS DynaPDF Plugin, Plugin Version: 12.4. **Function:** One of the cell orientation constants.  
**Notes:** Center

70.69.89  kcoLeft = 0

MBS DynaPDF Plugin, Plugin Version: 12.4. **Function:** One of the cell orientation constants.  
**Notes:** Left

70.69.90  kcoRight = 1

MBS DynaPDF Plugin, Plugin Version: 12.4. **Function:** One of the cell orientation constants.  
**Notes:** Right
70.69.91 kcoTop = 0

MBS DynaPDF Plugin, Plugin Version: 12.4. **Function:** One of the cell orientation constants.  
**Notes:** Top

70.69.92 kdcAllCont = & h0000001F

MBS DynaPDF Plugin, Plugin Version: 12.4. **Function:** One of the delete option flags for ClearContent function.  
**Notes:** Delete all content types

70.69.93 kdcBackGround = & h20000000

MBS DynaPDF Plugin, Plugin Version: 12.4. **Function:** One of the delete option flags for ClearContent function.  
**Notes:** Delete background objects

70.69.94 kdcBoth = & h30000000

MBS DynaPDF Plugin, Plugin Version: 12.4. **Function:** One of the delete option flags for ClearContent function.  
**Notes:** Delete both foreground and background objects

70.69.95 kdcForeGround = & h10000000

MBS DynaPDF Plugin, Plugin Version: 12.4. **Function:** One of the delete option flags for ClearContent function.  
**Notes:** Delete foreground objects

70.69.96 kdcImage = 2

MBS DynaPDF Plugin, Plugin Version: 12.4. **Function:** One of the delete option flags for ClearContent function.  
**Notes:** Delete image.
70.69. **CLASS DYNAPDFTABLEMBS**

**70.69.97**  \( \text{kdcTable} = 8 \)

MBS DynaPDF Plugin, Plugin Version: 12.4. **Function:** One of the delete option flags for ClearContent function.
**Notes:** Delete table.

**70.69.98**  \( \text{kdcTemplate} = 4 \)

MBS DynaPDF Plugin, Plugin Version: 13.2. **Function:** One of the delete option flags for ClearContent function.
**Notes:** Template table.

**70.69.99**  \( \text{kdcText} = 1 \)

MBS DynaPDF Plugin, Plugin Version: 12.4. **Function:** One of the delete option flags for ClearContent function.
**Notes:**
Delete text.
Text is always a foreground object

**70.69.100**  \( \text{ktfAddFlags} = \& \text{h00000020} \)

MBS DynaPDF Plugin, Plugin Version: 15.2. **Function:** One of the cell flags.
**Notes:**
If used when setting flags, the flags are not replacing existing values, but added.
This way a call can set one flag and later another call can add a second flag without clearing first one.

**70.69.101**  \( \text{ktfDefault} = 0 \)

MBS DynaPDF Plugin, Plugin Version: 12.5. **Function:** One of the cell flags.
**Notes:** Default flag.

**70.69.102**  \( \text{ktfHeaderRow} = 2 \)

MBS DynaPDF Plugin, Plugin Version: 13.1. **Function:** One of the cell flags.
**Notes:** Header rows are drawn first after a page break occurred
70.69.103  ktfNoLineBreak = 4

MBS DynaPDF Plugin, Plugin Version: 13.2. **Function:** One of the cell flags.
**Notes:** Prohibit line breaks in cells with text. Can be set to the entire table, columns, rows, and cells.

70.69.104  ktfScaleToRect = 8

MBS DynaPDF Plugin, Plugin Version: 13.2. **Function:** One of the cell flags.
**Notes:**
If set, the specified output width and height represents the maximum size of the image or template. The image or template is scaled into this rectangle without changing the aspect ratio.
70.69.105  ktfStatic = 1

MBS DynaPDF Plugin, Plugin Version: 12.5. **Function:** One of the cell flags. **Notes:** This flag marks a row, column, or cell as static to avoid the deletion of the content with ClearContent().

70.69.106  ktfUseImageCS = & h00000010

MBS DynaPDF Plugin, Plugin Version: 13.2. **Function:** One of the cell flags. **Notes:** If set, images are inserted in the native image color space.
70.70 class DynapdfTextRecordAMBS

70.70.1 class DynapdfTextRecordAMBS

70.70.2 Properties

70.70.3 Advance as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The advance value for this text.
Notes: Negative values move the cursor the right, positive to the left

(Read only property)

70.70.4 Length as Integer

Notes: (Read and Write property)

70.70.5 Text as String

Notes: (Read and Write property)
70.71. Class DynapdfTextRecordWMBS

70.71.1 Class DynapdfTextRecordWMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for an unicode text.

70.71.2 Properties

70.71.3 Advance as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The advance value for this text.
**Notes:**
Negative values move the cursor the right, positive to the left

(Read only property)

70.71.4 Length as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Length in characters.
**Notes:** (Read and Write property)

70.71.5 Text as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Already translated Unicode string.
**Notes:** (Read and Write property)

70.71.6 Width as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** String width measured in text space.
**Notes:** (Read only property)
70.72 class DynaPDFURIActionMBS

70.72.1 class DynaPDFURIActionMBS

Function: The class for an URL action.
Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.72.2 Methods

70.72.3 Constructor

Function: The private constructor.

70.72.4 Properties

70.72.5 BaseURL as String

Function: Optional, if defined in the Catalog object.
Notes: (Read only property)

70.72.6 IsMap as Boolean

Function: A flag specifying whether to track the mouse position when the URI is resolved.
Notes: e.g. http://test.org?50,70.
(Read only property)

70.72.7 NextAction as Integer

Function: The handle to the next action.
Notes:
-1 or next action handle to be executed if any
(Read only property)

### 70.72.8 NextActionType as Integer

**Function:** The type of the next action.
**Notes:**
Only set if NextAction is >= 0.
(Read only property)

### 70.72.9 URI as String

**Function:** Uniform Resource Identifier.
**Notes:** (Read only property)
70.73 class DynaPDFViewportMBS

70.73.1 class DynaPDFViewportMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The viewport details class.
Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.73.2 Methods

70.73.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The private constructor.

70.73.4 Properties

70.73.5 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Bounding box.
Notes: (Read and Write property)

70.73.6 Measure as DynaPDFMeasureMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Optional measure dictionary.
Notes: (Read and Write property)

70.73.7 Name as String

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Optional name.
Notes: (Read and Write property)
70.73. **CLASS DYNAPDFVIEWPORTMBS**

70.73.8 **PtData as DynaPDFPointDataDictionaryMBS**

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The Point Data dictionary.

**Notes:** (Read and Write property)
70.74 class DynaPDFXFAStreamMBS

70.74.1 class DynaPDFXFAStreamMBS

Function: The class for a XFA stream.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

70.74.2 Methods

70.74.3 Constructor

Function: The private constructor.

70.74.4 Properties

70.74.5 Buffer as String

Function: XML Stream.
Notes: (Read and Write property)

70.74.6 Index as Integer

Function: The stream index.
Notes: (Read and Write property)

70.74.7 Name as String

Function: Stream name.
Notes: (Read and Write property)
70.74. **CLASS DYNAPDFXFASTREAMEMBS**

### 70.74.8 Size as Integer

**Function:** Buffer size in bytes.

**Notes:** (Read and Write property)
Chapter 71

EmailParser

71.1 class MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for a list of addresses.

71.1.2 Methods

71.1.3 Addresses as MimeAddressMBS()

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The array of addresses.
See also:

- 71.1.4 Addresses(index as Integer) as MimeAddressMBS

71.1.4 Addresses(index as Integer) as MimeAddressMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries address by index.
**Notes:** Index is zero based.
See also:

- 71.1.3 Addresses as MimeAddressMBS()
71.1.5 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses a text with addresses.

71.1.6 Properties

71.1.7 AddressesVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The array of addresses.

**Notes:**
This property is only to see array in debugger.
(Read only property)

71.1.8 Count as Integer

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of addresses in this list.

**Notes:** (Read only property)

71.1.9 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The address list as a string.

**Notes:** (Read only property)
71.2. **CLASS MIMEADDRESSMBS**

### 71.2.1 class MimeAddressMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for an address which can be an email or a group.

### 71.2.2 Methods

#### 71.2.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Parses an address from text.
**Example:**
```vba
    dim m as new MimeAddressMBS("=?utf-8?Q?M=C3BCller?= <zivi@mac.com>")
    MsgBox m.Mailbox.LabelDecoded
```

### 71.2.4 Properties

#### 71.2.5 Group as MimeGroupMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The group for this address.
**Notes:** (Read only property)

#### 71.2.6 isGroup as Boolean

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether this address is a group.
**Notes:** (Read only property)

#### 71.2.7 Mailbox as MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The mailbox for this address.
**Notes:** (Read only property)
71.2.8 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The address as a string.
**Notes:** (Read only property)
71.3.  CLASS MIMEATTACHMENTMBS

71.3  class MimeAttachmentMBS

71.3.1  class MimeAttachmentMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
The class for an attachment.
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin
functions.

71.3.2  Methods

71.3.3  Constructor

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
The private constructor.

71.3.4  Properties

71.3.5  Body as MimeBodyMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
The reference to the body of this attachment.
**Notes:**
The StringValue of the body has the attachment’s encoded data.
(Read and Write property)

71.3.6  ContentDescription as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
The content description.
**Notes:** (Read and Write property)

71.3.7  ContentDisposition as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
The content disposition.
**Notes:**
71.3.8 contentId as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The content ID for inline graphics.

**Notes:**
e.g. c1441531740.48804.1@MacbookPro-Christian.local
(Read and Write property)

71.3.9 ContentTransferEncoding as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The content transfer encoding.

**Notes:**
e.g. base64
(Read and Write property)

71.3.10 ContentType as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The content type.

**Notes:**
e.g. text/plain, charset=utf-8 or application/pdf; name="agb.pdf"
(Read and Write property)

71.3.11 Data as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The data for this attachment.

**Notes:**
Decoded for your convenience.
(Read and Write property)
71.3. CLASS MIMEATTACHMENTMBS

71.3.12 Filename as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The filename for this attachment.

**Notes:**
The class pulls this from various header fields and decodes it if necessary.
The file name may contain invalid characters for your platform.
Like double colons for OS X or backslash for Windows.
(Read and Write property)

71.3.13 Header as MimeHeaderMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The header details for this attachment.

**Notes:** (Read and Write property)

71.3.14 MimeType as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mime type of the attachment.

**Notes:**
e.g. "application/pdf" for a PDF file
See also MimeTypeToFileExtensionMBS function.
(Read and Write property)

71.3.15 MimeVersion as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mime version of the attachment.

**Notes:**
e.g. "1.0"
(Read and Write property)
71.4  class MimeBodyMBS

71.4.1  class MimeBodyMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a body of a mime entity.  
**Notes:** This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

71.4.2  Methods

71.4.3  Constructor

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

71.4.4  Parts as MimeEntityMBS()

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The array of parts.  
**Notes:** Mime Entities are organized often in a tree. The email is an entity and has sub entities for html, plain text and attachments.  
See also:

- 71.4.5 Parts(index as Integer) as MimeEntityMBS

71.4.5  Parts(index as Integer) as MimeEntityMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries part by index.  
**Notes:** Index is zero based.  
See also:

- 71.4.4 Parts as MimeEntityMBS()

71.4.6  Properties

71.4.7  epilogue as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The epilogue of the body.
71.4. CLASS MIMEBODYMBS

Notes: (Read only property)

71.4.8 PartsVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The array of parts.
Notes:
Mime Entities are organized often in a tree. The email is an entity and has sub entities for html, plain text and attachments.
This property is only to see array in debugger.
(Read only property)

71.4.9 preamble as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The preamble of the body.
Notes:
This is sometimes a message like: "This is a MIME encoded message."
(Read only property)

71.4.10 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The string value of the body.
Notes: (Read only property)
71.5 class MimeEmailMBS

71.5.1 class MimeEmailMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for an email.
**Notes:** Subclass of the MimeEntityMBS class.

71.5.2 Methods

71.5.3 Attachments as MimeAttachmentMBS()

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The array of attachments.
**Example:**
```vbscript
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

MsgBox str(m.Attachments.Ubound+1)+" attachments and "+str(m.Inlines.Ubound+1)+" inlines"
for each a as MimeAttachmentMBS in m.Inlines
  MsgBox "Inline: " + a.Filename
next
```

See also:

- 71.5.4 Attachments(index as Integer) as MimeAttachmentMBS

71.5.4 Attachments(index as Integer) as MimeAttachmentMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries attachment by index.
**Notes:** Index is zero based.
See also:

- 71.5.3 Attachments as MimeAttachmentMBS()

71.5.5 Constructor(Content as MemoryBlock)

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Parses an email from a memoryblock.
71.5. CLASS MIMEEMAILMBS

See also:

- 71.5.6 Constructor(Content as string)
- 71.5.7 Constructor(File as FolderItem)

71.5.6 Constructor(Content as string)

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses an email from a string.

**Example:**

```vbscript
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim b as BinaryStream = BinaryStream.Open(f)
dim s as string = b.Read(b.Length)
dim m as new MimeEmailMBS(s)

MsgBox m.Subject
```

See also:

- 71.5.5 Constructor(Content as MemoryBlock)
- 71.5.7 Constructor(File as FolderItem)

71.5.7 Constructor(File as FolderItem)

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses an email from a text file.

**Example:**

```vbscript
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

MsgBox m.Subject
```

See also:

- 71.5.5 Constructor(Content as MemoryBlock)
- 71.5.6 Constructor(Content as string)
71.5.8 DecodeInline(Text as String) as String

MBS CURL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Decodes a text with inline encoded text.

**Example:**

```vba
dim e,s as string
e = MimeEmailMBS.DecodeInline(s)
MsgBox e
```

**Notes:**
This is the function our plugin uses to decode names and subject in the email. You don’t need to use it unless you got subject/name encoded from somewhere else.

71.5.9 HTMLToPlainText(HTMLText as String) as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts html to plain text.

**Notes:**
This is the function our plugin uses internally to fill PlainText field for html only email. Removes HTML tags, decodes entities and adds returns where appropriated.

71.5.10 Inlines as MimeAttachmentMBS()

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The array of inline items.

**Example:**

```vba
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)
MsgBox str(m.Attachments.Ubound+1)+" attachments and "+str(m.Inlines.Ubound+1)+" inlines"
for each a as MimeAttachmentMBS in m.Inlines
MsgBox "Inline: " + a.Filename
next
```
**71.5. CLASS MIMEEMAILMBS**

**Notes:** Inline items are like attachments, but shown in the email and normally referenced by ID from the html text.
See also:

- 71.5.11 Inlines(index as Integer) as MimeAttachmentMBS

**71.5.11 Inlines(index as Integer) as MimeAttachmentMBS**

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries inline by index.
**Notes:** Index is zero based.
See also:

- 71.5.10 Inlines as MimeAttachmentMBS()

**71.5.12 Properties**

**71.5.13 AttachmentsVariant as Variant**

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The array of attachments.
**Notes:**
This property is only to see array in debugger.
(Read only property)

**71.5.14 Date as Date**

MBS CURL Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the sent date of the email.
**Notes:**
Can be undefined and return nil.
The plugin looks in email headers for a Date: header and parses the date.
The returned date is normalized to current time zone.
(Read only property)

**71.5.15 HTMLText as String**

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The html text of the email.
**Example:**
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

MsgBox m.HTMLText

**Notes:**
Decoded for your convenience.
You may want to use ReplaceLineEndings to make sure the line endings are what you need them to be.
(Read only property)

### 71.5.16 InlinesVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The array of inline items.
**Notes:**
Inline items are like attachments, but shown in the email and normally referenced by ID from the html text.
This property is only to see array in debugger.
(Read only property)

### 71.5.17 PlainText as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The plain text of the email.
**Example:**
```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)
MsgBox m.PlainText
```

**Notes:**
Decoded for your convenience.
You may want to use ReplaceLineEndings to make sure the line endings are what you need them to be.
(Read only property)
71.5.18  **RaiseUnknownFormatException** as Boolean

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to raise an exception when plugin finds encoding in email which is not in list of known encodings. **Notes:**

Used to find unknown encodings.  
(Read and Write property)

71.5.19  **ReceivedDate** as Date

MBS CURL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the receive date of the email. **Notes:**

Can be undefined and return nil.  
The plugin looks in email headers for a Receive: header and parses the date.  
The returned date is normalized to current time zone.  
(Read only property)

71.5.20  **Source** as String

MBS CURL Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The source code of the email parsed. **Notes:** (Read only property)

71.5.21  **Subject** as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The decoded subject line of the email. **Notes:** (Read only property)
71.6 class MimeEntityMBS

71.6.1 class MimeEntityMBS

Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

71.6.2 Methods

71.6.3 Constructor

71.6.4 Properties

71.6.5 Body as MimeBodyMBS

Notes: This may be quoted printable, base64 or otherwise encoded.
(Read only property)

71.6.6 BodyDecoded as String

Notes: (Read only property)

71.6.7 Header as MimeHeaderMBS

Notes:
71.6. CLASS MIMEENTITYMBS

The email itself has headers, but each entity in the mime tree has also headers.
(Read only property)
71.7 class MimeFieldMBS

71.7.1 class MimeFieldMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for a header field.

71.7.2 Methods

71.7.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Parses the text in a field.

71.7.4 Properties

71.7.5 Name as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The field name.
**Notes:** (Read only property)

71.7.6 Value as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The field value.
**Notes:** (Read only property)
71.8. CLASS MIMEGROUPMBS

71.8. class MimeGroupMBS

71.8.1 class MimeGroupMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for an email group.

**Example:**

```vbs
MsgBox g.NameDecoded+" "+str(g.Count)
MsgBox g.Mailboxes(0).LabelDecoded
MsgBox g.Mailboxes(1).LabelDecoded
```

71.8.2 Methods

71.8.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses a group.

**Example:**

```vbs
MsgBox g.NameDecoded+" "+str(g.Count)
```

71.8.4 Mailboxes as MimeMailboxMBS()

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The array of mailboxes in this group.

See also:

- 71.8.5 Mailboxes(index as Integer) as MimeMailboxMBS

71.8.5 Mailboxes(index as Integer) as MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries a mailbox in the group.

**Example:**
```vbs```
```

MsgBox g.Mailboxes(0).LabelDecoded
MsgBox g.Mailboxes(1).LabelDecoded

See also:

- 71.8.4 Mailboxes as MimeMailboxMBS()

### 71.8.6 Properties

#### 71.8.7 Count as Integer

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of emails in this group. **Notes:** (Read only property)

#### 71.8.8 MailboxesVariant as Variant

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The array of mailboxes in this group. **Notes:** This property is only to see array in debugger. (Read only property)

#### 71.8.9 Name as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of the group. **Notes:** The name property has the raw name while the NameDecoded property has the decoded version for displaying to user. (Read only property)
71.8.10 NameDecoded as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The name of the group.
**Notes:**
The name property has the raw name while the NameDecoded property has the decoded version for displaying to user.
(Read only property)

71.8.11 StringValue as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The group as a string.
**Notes:** (Read only property)
71.9  class MimeHeaderMBS

71.9.1  class MimeHeaderMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for headers of a mime entity.
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin
functions.

71.9.2  Methods

71.9.3  Constructor

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

71.9.4  FieldByName(name as string) as MimeFieldMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Finds a field by name.
**Example:**

```vba
    dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
    dim m as new MimeEmailMBS(f)

    dim h as MimeHeaderMBS = m.Header
    MsgBox h.FieldByName("Date").Value
```

**Notes:** e.g. "Sat, 5 Sep 2015 23:52:13 +0200" for the date field.

71.9.5  Fields as MimeFieldMBS()

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The array of fields in this header.
**See also:**

- 71.9.6 Fields(index as Integer) as MimeFieldMBS
71.9. **CLASS MIMEHEADERMBS**

### 71.9.6 Fields(index as Integer) as MimeFieldMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries field by index.  
**Notes:** Index is zero based.  
See also:

- 71.9.5 Fields as MimeFieldMBS()

### 71.9.7 hasField(name as string) as boolean

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether a certain field exists.  
**Example:**

```vbnet
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
if h.hasField("Date") then
    MsgBox "Has date: " + h.FieldByName("Date").Value
end if
```

### 71.9.8 Properties

### 71.9.9 bcc as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The BCC address list.  
**Example:**

```vbnet
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
    // get BCC
    dim l as MimeAddressListMBS = h.BCC
    // get addresses
    dim a() as MimeAddressMBS = l.Addresses
    // get first one
    dim b as MimeAddressMBS = a(0)
    // assume it's an email and get it
    dim x as MimeMailboxMBS = b.Mailbox
    // and show to user with name and email
```
MsgBox x.LabelDecoded +" " + x.Email

**Notes:** (Read only property)

### 71.9.10 cc as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The CC address list.
**Example:**
```vba
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
// get CC
dim l as MimeAddressListMBS = h.CC
// get addresses
dim a() as MimeAddressMBS = l.Addresses
// get first one
dim b as MimeAddressMBS = a(0)
// assume it’s an email and get it
dim x as MimeMailboxMBS = b.Mailbox
// and show to user with name and email
MsgBox x.LabelDecoded +" " + x.Email
```

**Notes:** (Read only property)

### 71.9.11 ContentDescription as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The content description.
**Notes:** (Read only property)

### 71.9.12 ContentDisposition as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The content disposition.
**Notes:** (Read only property)
71.9. **CLASS MIMEHEADERMBS**

### 71.9.13 `contentId` as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The content ID for an inline graphic.

**Example:**
```vba
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.contentId
```

**Notes:** (Read only property)

### 71.9.14 `ContentTransferEncoding` as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The content transfer encoding.

**Notes:**
- e.g. `base64`
  (Read only property)

### 71.9.15 `ContentTransferEncodingMechanism` as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The content transfer encoding mechanism.

**Notes:**
- base64
  (Read only property)

### 71.9.16 `ContentType` as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The content type.

**Notes:**
- e.g. "multipart/alternative; boundary="Apple-Mail=._F9738882-571C-4469-8349-574115CE32F4"
  (Read only property)
71.9.17  from as MimeMailboxListMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The from address list.

**Example:**

```vbnet
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
// get from
dim l as MimeMailboxListMBS = h.from
// get mailboxes
dim a() as MimeMailboxMBS = l.Mailboxes
// get first one
dim b as MimeMailboxMBS = a(0)
// and show to user with name and email
MsgBox b.LabelDecoded + " " + b.Email
```

**Notes:** (Read only property)

71.9.18  messageid as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The message ID for this email.

**Example:**

```vbnet
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.messageid
```

**Notes:**

e.g. "<599782DA-09A0-4461-8474-2BE9F3197CAF@macsw.de>"
(Read only property)

71.9.19  MimeVersion as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mime version.
Example:

```vbnet
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.MimeVersion
```

Notes:

e.g. "1.0"
(Read only property)

### 71.9.20 replyto as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The replyto address field.

**Example:**

```vbnet
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
   // get replyto
dim l as MimeAddressListMBS = h.replyto
   // get addresses
dim a() as MimeAddressMBS = l.Addresses
   // get first one
dim b as MimeAddressMBS = a(0)
   // assume it's an email and get it
dim x as MimeMailboxMBS = b.Mailbox
   // and show to user with name and email
MsgBox x.LabelDecoded + " " + x.Email
```

Notes: (Read only property)

### 71.9.21 sender as MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The sender of the email.

**Example:**
dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
dim b as MimeMailboxMBS = h.sender
MsgBox b.Email

Notes:
May be different from "from" field.
(Read only property)

71.9.22 subject as String

Example:

dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.subject

Notes:
The subject property has the original subject line while the plugin provides the decoded subjected line in the subjectDecoded for display to user.
(Read only property)

71.9.23 subjectDecoded as String

Example:

dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
dim m as new MimeEmailMBS(f)

dim h as MimeHeaderMBS = m.Header
MsgBox h.subjectDecoded
Notes:

The subject property has the original subject line while the plugin provides the decoded subjected line in the subjectDecoded for display to user.
(Read only property)

71.9.24 too as MimeAddressListMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The TO receivers.

**Example:**

```vba
    dim f as FolderItem = SpecialFolder.Desktop.Child("test.eml")
    dim m as new MimeEmailMBS(f)

    dim h as MimeHeaderMBS = m.Header
    // get to
    dim l as MimeAddressListMBS = h.too
    // get addresses
    dim a() as MimeAddressMBS = l.Addresses
    // get first one
    dim b as MimeAddressMBS = a(0)
    // assume it’s an email and get it
    dim x as MimeMailboxMBS = b.Mailbox
    // and show to user with name and email
    MsgBox x.LabelDecoded + " " + x.Email
```

Notes:

Named "too" in this class as "to" is a reserved word.
(Read only property)
71.10 class MimeMailboxListMBS

71.10.1 class MimeMailboxListMBS

71.10.2 Methods

71.10.3 Constructor(TextToParse as String)

Example:

```vba
dim m as new MimeMailboxListMBS("=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>")
MsgBox str(m.Count)
```

71.10.4 Mailboxes as MimeMailboxMBS()

See also:

- 71.10.5 Mailboxes(index as Integer) as MimeMailboxMBS

71.10.5 Mailboxes(index as Integer) as MimeMailboxMBS

Notes: Index is zero based.

See also:

- 71.10.4 Mailboxes as MimeMailboxMBS()
71.10. **CLASS MIMEMAILBOXLISTMBS**

71.10.6  **Properties**

71.10.7  **Count as Integer**

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of mailboxes in list.

**Example:**

```vba
dim m as new MimeMailboxListMBS(“=?utf-8?Q?M=C3=B1ller?= <zivi@mac.com>”)
MsgBox str(m.Count)
```

**Notes:** (Read only property)

71.10.8  **MailboxesVariant as Variant**

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The array of mailboxes.

**Notes:**

This property is only to see array in debugger.
(Read only property)

71.10.9  **StringValue as String**

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The content of this list as a string.

**Notes:** (Read only property)
71.11 class MimeMailboxMBS

71.11.1 class MimeMailboxMBS

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for an email address.

**Example:**

dim m as new MimeMailboxMBS(“=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>”)
MsgBox m.LabelDecoded+” ”+m.Email

71.11.2 Methods

71.11.3 Constructor(TextToParse as String)

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses an email address.

**Example:**

dim m as new MimeMailboxMBS(“=?utf-8?Q?M=C3=BCller?= <zivi@mac.com>”)
MsgBox m.LabelDecoded+” ”+m.Email

71.11.4 Properties

71.11.5 Domain as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The domain name of the email address.

**Notes:** (Read only property)

71.11.6 Email as String

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The email address.

**Notes:**
Mailbox and Domain together.
(Read only property)
71.11. Class MIME\EMAILBOXMBS

71.11.7 Label as String

Notes:
Label is the raw value and LabelDecoded is the decoded value.
So please use LabelDecoded for display.
(Read only property)

71.11.8 LabelDecoded as String

Notes:
Label is the raw value and LabelDecoded is the decoded value.
So please use LabelDecoded for display.
(Read only property)

71.11.9 Mailbox as String

Notes: (Read only property)

71.11.10 Sourceroute as String

Notes: (Read only property)

71.11.11 StringValue as String

Notes: (Read only property)
Chapter 72

Encryption and Hash

72.1  class AESMBS

72.1.1  class AESMBS

Function: A class for AES encryption.

Example:

dim a as AESMBS
dim key as MemoryBlock
dim data as MemoryBlock

key=NewMemoryBlock(20)
key.CString(0)="Hello World!1234"  // 16 byte key for 128bit

a=new AESMBS

if a.SetKey(key, 128) then

data=NewMemoryBlock(20)
data.StringValue(0,16)="Hello World!"
MsgBox "Before: "+data.StringValue(0,16)
a.Encrypt(data)
MsgBox "After encryption: "+data.StringValue(0,16)
a.Decrypt(data)
MsgBox "After decryption: "+data.StringValue(0,16)
else
MsgBox "Failed"
end if
Notes:
For newer projects we recommend switching to CipherMBS class.

This class has low level functions like Encrypt. It also has mid level functions like EncryptCFB/CBC. For your convenience, we also have high level functions like EncryptString.

72.1.2 Methods

72.1.3 Decrypt(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

Function: Decryptes the first 16 bytes in the input memoryblock at the given offset and stores the result in the output memoryblock at the given offset.
Notes:
If odata is nil, idata is used for output.
This is ECB mode.

72.1.4 DecryptCBC(idata as memoryblock, LengthBytes as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

Function: Decryptes the 16 byte data blocks within LengthBytes bytes in the data.
Notes:
If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.

72.1.5 DecryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

Function: Decryptes the data in CFB1 mode.
Notes:
If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used. 
IVectorOffset saves the position in the IVector for the next call to this method. 
iOffset: offset in idata. 
oOffset: offset in odata. 
LengthBytes: Length of data in idata and odata. 

See also:

• 72.1.6 DecryptCFB1(idata as string, IVector as memoryblock=nil) as string

72.1.6 DecryptCFB1(idata as string, IVector as memoryblock=nil) as string

Function: Decrypts the data in CFB1 mode. 
Example:

dim a as new AESMBS

if a.SetKey("Hello World") then 
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB1(input)

if a.SetKey("Hello World") then 
dim decrypted as string = a.DecryptCFB1(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then 
MsgBox "OK"
end if
end if
end if

Notes: If IVector is nil, a vector filled with zeros is used. 
See also:

• 72.1.5 DecryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)
72.1.7 DecryptCFB128(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

**Function:** Decrypts the data in CFB128 mode. 
**Notes:**
- If odata is nil, idata is used for output.
- If IVector is nil, a vector filled with zeros is used.
- IVectorOffset saves the position in the IVector for the next call to this method.
- iOffset: offset in idata.
- oOffset: offset in odata.
- LengthBytes: Length of data in idata and odata.

Older plugin version had problems that they didn’t use key at all. So if you want to read old data encrypted with them, you need simply to decrypt without setting key.

See also:

- 72.1.8 DecryptCFB128(idata as string, IVector as memoryblock=nil) as string

72.1.8 DecryptCFB128(idata as string, IVector as memoryblock=nil) as string

**Function:** Decrypts the data in CFB128 mode. 
**Example:**

```plaintext
dim a as new AESMBS
if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB128(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB128(encrypted)
decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MsgBox "OK"
end if
end if
end if
```

**Notes:**
If IVector is nil, a vector filled with zeros is used.

Older plugin version had problems that they didn’t use key at all. So if you want to read old data encrypted with them, you need simply to decrypt without setting key.

See also:

- 72.1.7 DecryptCFB128(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

72.1.9 DecryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

**Function:** Decrypts the data in CFB8 mode.

**Notes:**

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

See also:

- 72.1.10 DecryptCFB8(idata as string, IVector as memoryblock=nil) as string

72.1.10 DecryptCFB8(idata as string, IVector as memoryblock=nil) as string

**Function:** Decrypts the data in CFB8 mode.

**Example:**

```vb
    dim a as new AESMBS

    if a.SetKey("Hello World") then
        dim input as string = "Hello World"
        dim encrypted as string = a.EncryptCFB8(input)

    if a.SetKey("Hello World") then
        dim decrypted as string = a.DecryptCFB8(encrypted)

    decrypted = DefineEncoding(decrypted, Encodings.ASCII)
```
if decrypted = input then
MsgBox "OK"
end if
end if
end if

Notes: If IVector is nil, a vector filled with zeros is used.
See also:

- 72.1.9 DecryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

72.1.11 DecryptECB(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

Function: Decrypts the 16 byte data block in the data.
Notes: If odata is nil, idata is used for output.

72.1.12 Encrypt(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

Function: Encryptes the first 16 bytes in the input memoryblock at the given offset and stores the result in the output memoryblock at the given offset.
Notes:
If odata is nil, idata is used for output.
This is ECB mode.

72.1.13 EncryptCBC(idata as memoryblock, LengthBytes as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

Function: Encryptes the 16 byte data blocks within LengthBytes bytes in the data.
Notes:
If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
72.1.14 EncryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

Function: Encryptes the data in CFB1 mode.
Notes:
If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

See also:

- 72.1.15 EncryptCFB1(idata as string, IVector as memoryblock=nil) as string

72.1.15 EncryptCFB1(idata as string, IVector as memoryblock=nil) as string

Function: Encryptes the data in CFB1 mode.
Example:

```vba
dim a as new AESMBS

if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB1(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB1(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)

if decrypted = input then
MsgBox "OK"
end if
end if
end if
```

Notes:
CHAPTER 72. ENCRYPTION AND HASH

If IVector is nil, a vector filled with zeros is used.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 72.1.14 EncryptCFB1(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

72.1.16 EncryptCFB128(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

Function: Encrypts the data in CFB128 mode.
Notes:
If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset saves the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 72.1.17 EncryptCFB128(idata as string, IVector as memoryblock=nil) as string

72.1.17 EncryptCFB128(idata as string, IVector as memoryblock=nil) as string

Function: Encrypts the data in CFB128 mode.
Example:

```vbnet
dim a as new AESMBS

if a.SetKey("Hello World") then
dim input as string = "Hello World"
dim encrypted as string = a.EncryptCFB128(input)

if a.SetKey("Hello World") then
dim decrypted as string = a.DecryptCFB128(encrypted)

decrypted = DefineEncoding(decrypted, Encodings.ASCII)
```
if decrypted = input then
MsgBox "OK"
end if
end if
end if

Notes:
If IVector is nil, a vector filled with zeros is used.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 72.1.16 EncryptCFB128(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

72.1.18 EncryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

Function: Encryptes the data in CFB8 mode.
Notes:
If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.
See also:

- 72.1.19 EncryptCFB8(idata as string, IVector as memoryblock=nil) as string

72.1.19 EncryptCFB8(idata as string, IVector as memoryblock=nil) as string

Function: Encryptes the data in CFB8 mode.
Example:
12382

CHAPTER 72. ENCRYPTION AND HASH

```
dim a as new AESMBS
if a.SetKey("Hello World") then
    dim input as string = "Hello World"
    dim encrypted as string = a.EncryptCFB8(input)
if a.SetKey("Hello World") then
    dim decrypted as string = a.DecryptCFB8(encrypted)
decrypted = DefineEncoding(decrypted, Encodings.ASCII)
if decrypted = input then
    MsgBox "OK"
end if
end if

Notes:
If IVector is nil, a vector filled with zeros is used.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 72.1.18 EncryptCFB8(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

12381

72.1.20 EncryptECB(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

Function: Encryptes the 16 byte data block in the data.
Notes: If odata is nil, idata is used for output.

72.1.21 EncryptOFB(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

Function: Encryptes the data in OFB mode.
```
72.1. CLASS AESMBS

Notes:
If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

72.1.22  SetKey(key as memoryblock, nBits as Integer) as boolean

Function: Sets the key.
Notes:
possible values for the bitcount:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>128</td>
<td>key is 16 bytes long</td>
</tr>
<tr>
<td>192</td>
<td>key is 24 bytes long</td>
</tr>
<tr>
<td>256</td>
<td>key is 32 bytes long</td>
</tr>
</tbody>
</table>

Plugin version 13.4 and newer pads this memoryblock with 00 bytes if string is shorter.
See also:

- 86.3.1 SetKey(key as string) as boolean

72.1.23  SetKey(key as string) as boolean

Function: Sets the key.
Example:

dim x,u,s as string
dim iv as MemoryBlock

s="Hello World"

// encrypt
s=ConvertEncoding(s,encodings.UTF8)

dim a as new AESMBS
call a.SetKey("1234567890123456")
iv = NewMemoryBlock(16)
x = a.EncryptCFB128(s, iv)

MsgBox x

// decrypt

iv = NewMemoryBlock(16)
u = a.DecryptCFB128(x, iv)

u = DefineEncoding(u, encodings.UTF8)

MsgBox u

Notes:
Please use 16, 24 or 32 byte long key strings.
Plugin version 13.4 and newer pads this string with 00 bytes if string is shorter.
See also:

- 72.1.22 SetKey(key as memoryblock, nBits as Integer) as boolean
72.2. class Argon2MBS

72.2.1 class Argon2MBS

**Function:** The class to calculate hashes using Argon2.

**Example:**

```plaintext
dim a as new Argon2MBS

a.OutputLength = 24
a.Password = "password"
a.Salt = "somesalt"
a.cost = 2
a.MemoryCost = 65536 // 64 Megabytes
a.Lanes = 4
a.Threads = 4

dim hash as string = a.Calc(a.kTypeI)
dim t as string = EncodeHex(hash)

if t = "45d7ac72e76f242b20b77b9bf9d5915894e669a24e6c6" then
  // ok
else
  Break // failed
end if
```

**Notes:**

You can use this class to calculate password hashes. Due to the cost associated to calculate it, the hash is difficult to brute force.

See

https://github.com/p-h-c/phc-winner-argon2

72.2.2 Methods

72.2.3 Calc(type as Integer = 0) as String

**Function:** Function that performs memory-hard hashing with certain degree of parallelism.

**Example:**
dim a as new Argon2MBS

a.OutputLength = 24
a.Password = "password"
a.Salt = "somesalt"
a.cost = 2
a.MemoryCost = 65536 // 64 Megabytes
a.Lanes = 4
a.Threads = 4

dim hash as string = a.Calc(a.kTypeI)
dim t as string = EncodeHex(hash)

if t = "45d7ac72e76f242b20b77b9bf9d5915894e669a24e6c6" then
  // ok
else
  Break // failed
end if

Notes:

Returns hash on success or empty string in case of error.
Lasterror is set.

72.2.4 Constructor

Function: The constructor.

72.2.5 Destructor

Function: Destructor.

72.2.6 Verify(Hash as String, type as Integer = 0) as boolean

Function: Verifies a password hash.
Example:
72.2. CLASS ARGON2MBS

```vbs
dim a as new Argon2MBS

a.OutputLength = 24
a.Password = "password"
a.Salt = "somesalt"
a.cost = 2
a.MemoryCost = 65536
a.Lanes = 4
a.Threads = 4

dim h as string = DecodeHex("45d7ac72e76f242b20b77b9bf9bf9d5915894e669a24e6c6")
if a.Verify(h, a.kTypeI) then
  // ok
  break
else
  // failed
  break
end if
```

### Notes:
- Returns true on success.
- Lasterror is set.

#### 72.2.7 Properties

#### 72.2.8 AssociatedData as String

**Function:** The associated data.
**Notes:** (Read and Write property)

#### 72.2.9 Cost as Integer

**Function:** The number of passes.
**Notes:** (Read and Write property)
72.2.10 Flags as Integer

Function: The flags.
Notes: (Read and Write property)

72.2.11 Lanes as Integer

Function: Number of lanes.
Notes: (Read and Write property)

72.2.12 LastError as Integer

Function: The last error code.
Notes: (Read and Write property)

72.2.13 LastErrorMessage as String

Function: The last error message.
Notes: (Read and Write property)

72.2.14 MemoryCost as Integer

Function: Amount of memory requested (KB).
Notes: In kilo bytes. Default is 1 MB.
(Read and Write property)

72.2.15 OutputLength as Integer

Function: The length of the hash.
72.2. **CLASS ARGON2MBS**

Notes: (Read and Write property)

---

### 72.2.16 Password as String

**Function:** The password to hash.
**Notes:** (Read and Write property)

---

### 72.2.17 Salt as String

**Function:** The salt.
**Notes:** (Read and Write property)

---

### 72.2.18 Secret as String

**Function:** The secret.
**Notes:** (Read and Write property)

---

### 72.2.19 Threads as Integer

**Function:** Maximum number of threads.
**Notes:** (Read and Write property)

---

### 72.2.20 Version as Integer

**Function:** The version of argon to use.
**Notes:**
Can be kVersion10 or kVersion13.
(Read and Write property)
72.2.21 Constants

72.2.22 kErrorAdPtrMismatch = -21

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the error constants. **Notes:** AssociatedData ptr is nil, but size > 0.

72.2.23 kErrorAdTooLong = -9

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the error constants. **Notes:** AssociatedData too long.

72.2.24 kErrorAdTooShort = -8

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the error constants. **Notes:** AssociatedData too short.

72.2.25 kErrorAllocateMemoryCbkNull = -24

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the error constants. **Notes:** Allocation failed.

72.2.26 kErrorDecodingFail = -32

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the error constants. **Notes:** Decoding failed.

72.2.27 kErrorDecodingLengthFail = -34

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the error constants. **Notes:** Decoding length failed.
72.2. CLASS ARGON2MBS

72.2.28 kErrorEncodingFail = -31

72.2.29 kErrorFreeMemoryCbkNull = -23

72.2.30 kErrorIncorrectParameter = -25

72.2.31 kErrorIncorrectType = -26

72.2.32 kErrorLanesTooFew = -16

72.2.33 kErrorLanesTooMany = -17

72.2.34 kErrorMemoryAllocationError = -22

72.2.35  kErrorMemoryTooLittle = -14

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the error constants.
**Notes:** Memory too little.

72.2.36  kErrorMemoryTooMuch = -15

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the error constants.
**Notes:** Memory too big.

72.2.37  kErrorMissingArgs = -30

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the error constants.
**Notes:** Missing Argument.

72.2.38  kErrorOk = 0

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the error constants.
**Notes:** Okay.

72.2.39  kErrorOutPtrMismatch = -27

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the error constants.
**Notes:** Output ptr is nil, but size >0.

72.2.40  kErrorOutputPtrNull = -1

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the error constants.
**Notes:** Output Ptr is nil.

72.2.41  kErrorOutputTooLong = -3

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the error constants.
**Notes:** Output too long.
72.2. CLASS ARGON2MBS

72.2.42 kErrorOutputTooShort = -2

72.2.43 kErrorPwdPtrMismatch = -18
MBS Encryption Plugin, Plugin Version: 16.4. Function: One of the error constants. Notes: Password ptr is nil, but size >0.

72.2.44 kErrorPwdTooLong = -5

72.2.45 kErrorPwdTooShort = -4

72.2.46 kErrorSaltPtrMismatch = -19
MBS Encryption Plugin, Plugin Version: 16.4. Function: One of the error constants. Notes: Salt ptr is nil, but size >0.

72.2.47 kErrorSaltTooLong = -7

72.2.48 kErrorSaltTooShort = -6
72.2.49 kErrorSecretPtrMismatch = -20

MBS Encryption Plugin, Plugin Version: 16.4. Function: One of the error constants. Notes: Secret ptr is nil, but size >0.

72.2.50 kErrorSecretTooLong = -11

72.2.51 kErrorSecretTooShort = -10

72.2.52 kErrorThreadFail = -33

72.2.53 kErrorThreadsTooFew = -28

72.2.54 kErrorThreadsTooMany = -29

72.2.55 kErrorTimeTooLarge = -13

72.2. **CLASS ARGON2MBS**

### 72.2.56 kErrorTimeTooSmall = -12

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the error constants.  
**Notes:** Time too small.

### 72.2.57 kErrorVerifyMismatch = -35

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the error constants.  
**Notes:** Verify Mismatch

### 72.2.58 kFlagClearMemory = 4

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the possible flags.  
**Notes:** Clear memory.

### 72.2.59 kFlagClearPassword = 1

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the possible flags.  
**Notes:** Clear password.

### 72.2.60 kFlagClearSecret = 2

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the possible flags.  
**Notes:** Clear Secret after hashing.

### 72.2.61 kFlagDefault = 4

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the possible flags.  
**Notes:** Default flags.

### 72.2.62 kMaxAssociatedDataLength = & hFFFFFFFF

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** Maximum associated data length in bytes.
72.2.63 \text{kMaxLanes} = \& \text{hFFFFFFFF}

MBS Encryption Plugin, Plugin Version: 16.4. \textbf{Function}: Maximum number of lanes (degree of parallelism)

72.2.64 \text{kMaxMemory} = \& \text{hFFFFFFFF}

72.2.65 \text{kMaxOutputLength} = \& \text{hFFFFFFFF}

72.2.66 \text{kMaxPasswordLength} = \& \text{hFFFFFFFF}

72.2.67 \text{kMaxSaltLength} = \& \text{hFFFFFFFF}

MBS Encryption Plugin, Plugin Version: 16.4. \textbf{Function}: Maximum salt length in bytes

72.2.68 \text{kMaxSecretLength} = \& \text{hFFFFFFFF}

72.2.69 \text{kMaxThreads} = \& \text{hFFFFFFFF}

72.2.70 \text{kMaxTime} = \& \text{hFFFFFFFF}

### 72.2.71 kMinAssociatedDataLength = 0

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** Minimum associated data length in bytes.

### 72.2.72 kMinLanes = 1

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** Minimum number of lanes (degree of parallelism)

### 72.2.73 kMinMemory = 8

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** Minimum and maximum number of memory blocks (each of BLOCK_SIZE bytes)

### 72.2.74 kMinOutputLength = 4

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** Minimum digest size in bytes.

### 72.2.75 kMinPasswordLength = 0

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** Minimum password length in bytes.

### 72.2.76 kMinSaltLength = 0

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** Minimum salt length in bytes

### 72.2.77 kMinSecretLength = 0

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** Minimum key length in bytes.

### 72.2.78 kMinThreads = 1

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** Minimum number of threads.
72.2.79 \( k\text{MinTime} = 1 \)

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** Minimum number of passes.

72.2.80 \( k\text{SyncPoints} = 4 \)

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** Number of synchronization points between lanes per pass.

72.2.81 \( k\text{TypeD} = 0 \)

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the types.
**Notes:** Argon2d is faster and uses data-depending memory access, which makes it highly resistant against GPU cracking attacks and suitable for applications with no threats from side-channel timing attacks (e.g. cryptocurrencies).

72.2.82 \( k\text{TypeI} = 1 \)

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the types.
**Notes:** Argon2i instead uses data-independent memory access, which is preferred for password hashing and password-based key derivation, but it is slower as it makes more passes over the memory to protect from tradeoff attacks.

72.2.83 \( k\text{Version10} = \& \text{h10} \)

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the version numbers.
**Notes:** Version 1.0

72.2.84 \( k\text{Version13} = \& \text{h13} \)

MBS Encryption Plugin, Plugin Version: 16.4. **Function:** One of the version numbers.
**Notes:** Version 1.3
72.3. CLASS BLOWFISHMBS

72.3  class BlowfishMBS

72.3.1  class BlowfishMBS

**Function:** A class for blowfish encryption.

**Example:**

dim s as string

    // create string with known encoding so we can later define encoding after decryption!
    s=ConvertEncoding("Hello",Encodings.UTF8)

    // encrypt with a key
    s=BlowfishMBS.Encrypt("MyKey",s)

    // encoding is not set for the result string, still RB can guess the encoding when displaying
    MsgBox s

    // decrypt with same key
    s=BlowfishMBS.Decrypt("MyKey",s)

    // encoding is not set for the result string, so change it back:
    s=DefineEncoding(s,encodings.UTF8)

    // show original Hello
    MsgBox s

**Notes:** For newer projects we recommend switching to CipherMBS class.

72.3.2  Methods

72.3.3  Decrypt(iodata as memoryblock)

**Function:** Lowest level function to decrypt data in a memoryblock.

**Notes:**
- input and output are in host endian format.
- memoryblock must be not nil and has a size of 8 bytes.

See also:

- 72.3.4 Decrypt(key as string, data as string) as string
72.3.4 Decrypt(key as string, data as string) as string

Function: Decrypts the data using blowfish and the given key.

Example:

dim s as string

// create string with known encoding so we can later define encoding after decryption!
s=ConvertEncoding("Hello",Encodings.UTF8)

// encrypt with a key
s=BlowfishMBS.Encrypt("MyKey",s)

// encoding is not set for the result string, still RB can guess the encoding when displaying
MsgBox s

// decrypt with same key
s=BlowfishMBS.Decrypt("MyKey",s)

// encoding is not set for the result string, so change it back:
s=DefineEncoding(s,encodings.UTF8)

// show original Hello
MsgBox s

Notes:

This is our convenience function to encode a string quickly. Using CFB64 mode and an all zero initializing vector.
If the lenb(result) is zero and lenb(data) is not zero, the memory was not sufficient.

Key can have any length, but 32 bytes (256 bits) are quite good.
The length of data is limited by the amount of available memory.
See also:

- 72.3.3 Decrypt(iodata as memoryblock)

72.3.5 DecryptCBC(data as string, byref temp as memoryblock) as string

Function: The continuing Blowfish decryption function.

Example:

dim b as new BlowfishMBS
72.3. CLASS BLOWFISHMBS

dim s as string = "UTYbBEZSMLfa0kvNDSla/n/GSUcA/545gp7LcA330Nw=="
dim x as string = DecodeBase64(s)

dim m as MemoryBlock = nil
b = new BlowfishMBS
b.SetKey "geheim"
dim t1 as string = b.DecryptCBC(x,m)

// shows SD10003$ $ 2012.03.16 11:00
MsgBox t1

Notes:
data: data to be decrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to
allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself an eight byte memoryblock with a starting value you want.
Be aware that this CBC method works with data in 8 byte blocks, so you need to unpad data if needed.
See also:

- 72.3.6 DecryptCBC(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer,
  ivec as memoryblock)

72.3.6 DecryptCBC(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock)

Function: The continuing Blowfish decryption function.
Notes:

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.

ivec should be a memoryblock of 8 bytes size which you create before calling the function for the first time.
On the next time you passed the same block, so the function can store data inside this memoryblock between
function calls.
Be aware that this CBC method works with data in 8 byte blocks, so you need to unpad data if needed.
See also:

- 72.3.5 DecryptCBC(data as string, byref temp as memoryblock) as string
72.3.7 DecryptCFB64(data as string, byref temp as memoryblock) as string

**Function:** The continuing Blowfish decryption function.

**Notes:**

- data: data to be decrypted
- temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.

You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

See also:

- 72.3.8 DecryptCFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer)

72.3.8 DecryptCFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer)

**Function:** The continuing Blowfish decryption function.

**Example:**

```vbnet
dim b as BlowfishMBS
b=new BlowfishMBS
b.SetKey "Key"
dim temp as MemoryBlock
dim s as string
s=b.EncryptCFB64("Hello World",temp)
MsgBox s
temp=nil // reset
s=b.DecryptCFB64(s,temp)
MsgBox s
```

**Notes:**

- idata: memoryblock for input data, 8 bytes in size and not nil.
72.3. **CLASS BLOWFISHMBS**

odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.
um: current position in ivec. Pass 0 as start value and pass the value you get back to the next function call.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.
See also:

- 72.3.7 DecryptCFB64(data as string, byref temp as memoryblock) as string

72.3.9 **DecryptECB(data as string) as string**

**Function:** The basic Blowfish decryption function.
**Notes:**
This function decrypts only 8 bytes. For more, please use other functions!

data: data to be decrypted
Returns "" on invalid input.
See also:

- 72.3.10 DecryptECB(idata as memoryblock, odata as memoryblock, offset as Integer)

72.3.10 **DecryptECB(idata as memoryblock, odata as memoryblock, offset as Integer)**

**Function:** The basic Blowfish encryption function.
**Notes:**
idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
See also:

- 72.3.9 DecryptECB(data as string) as string
72.3.11 DecryptOFB64(data as string, byref temp as memoryblock) as string

Function: The continuing Blowfish decryption function.
Notes:

- data: data to be decrypted
- temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

This is output feedback mode. Encryption is the same a decryption.
See also:

- 72.3.12 DecryptOFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer)

72.3.12 DecryptOFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer)

Function: The continuing Blowfish decryption function.
Example:

dim b as BlowfishMBS

b=new BlowfishMBS
b.SetKey "Key"

dim temp as MemoryBlock
dim s as string

s=b.EncryptCFB64("Hello World",temp)

MsgBox s

temp=nil // reset
s=b.DecryptCFB64(s,temp)

MsgBox s
72.3. **CLASS BLOWFISHMBS**

**Notes:**

idata: memoryblock for input data, 8 bytes in size and not nil.
odata: memoryblock for output data, 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.
um: current position in ivec. Pass 0 as start value and pass the value you get back to the next function call.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

This is output feedback mode. Encryption is the same a decryption.
See also:

- 72.3.11 DecryptOFB64(data as string, byref temp as memoryblock) as string

72.3.13 **Encrypt(iodata as memoryblock)**

**Function:** Lowest level function to encrypt data in a memoryblock.
**Notes:**

input and output are in host endian format.
memoryblock must be not nil and has a size of 8 bytes.
See also:

- 72.3.14 Encrypt(key as string, data as string) as string

72.3.14 **Encrypt(key as string, data as string) as string**

**Function:** Encrypts the data using blowfish and the given key.
**Example:**

```vba
dim v as string = "Hello World, this is just a test string"

// encrypt CFB64 with BlowfishMBS
dim b as new BlowfishMBS
dim Key as string = "1234567812345678"
dim r as string = b.Encrypt( key , v )
dim h as string = EncodeHex( r )
```

// and decrypt with OpenSSL
dim c as CipherMBS = CipherMBS.bf_cfb64

c.DecryptInit key

    dim d as string = c.ProcessString(r)
    d = d + c.FinalizeAsString

Break // see in debugger, v and d have same content

Notes:
This is our convenience function to decode a string quickly. Using CFB64 mode and an all zero initializing vector.
If the lenb(result) is zero and lenb(data) is not zero, the memory was not sufficient.

Key can have any length, but 32 bytes (256 bits) are quite good.
The length of data is limited by the amount of available memory.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 72.3.13 Encrypt(iodata as memoryblock)

72.3.15 EncryptCBC(data as string, byref temp as memoryblock) as string

Function: The continuing Blowfish encryption function.
Example:

dim m as memoryblock // temporary storage of current state
dim b as blowfishmbs
dim s as string

b=new blowfishmbs
b.SetKey "EinKey1234567890" // some key

s=b.EncryptCBC("Hallo",m)
s=s+b.EncryptCBC(" ",m)
s=s+b.EncryptCBC("Leute",m)
s=s+b.EncryptCBC("!",m)

Notes:
72.3. CLASS BLOWFISHMBS

data: data to be encrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself an eight byte memoryblock with a starting value you want.
Be aware that this CBC method works with data in 8 byte blocks, so you need to pad data if needed.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

• 72.3.16 EncryptCBC(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock)

72.3.16 EncryptCBC(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock)

Function: The continuing Blowfish encryption function.
Notes:
idata: memoryblock for input data, at least 8 bytes in size and not nil.
odata: memoryblock for output data, at least 8 bytes in size and not nil.
offset: offset in input and output memoryblocks
length: length of data in memoryblock in bytes. Multiply of 8.
ivec: memoryblock for temporary data, 8 bytes in size and not nil.

ivec should be a memoryblock of 8 bytes size which you create before calling the function for the first time.
On the next time you passed the same block, so the function can store data inside this memoryblock between function calls.
Be aware that this CBC method works with data in 8 byte blocks, so you need to pad data if needed.
See also:

• 72.3.15 EncryptCBC(data as string, byref temp as memoryblock) as string

72.3.17 EncryptCFB64(data as string, byref temp as memoryblock) as string

Function: The continuing Blowfish encryption function.
Notes:
data: data to be encrypted
temp: memoryblock for temporary data. Is created when called with nil value. Pass on following calls to
allow data to be shared between function calls.

Returns "" on invalid input.
You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.

- **72.3.22 EncryptOFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer)**

**72.3.22 EncryptOFB64(idata as memoryblock, odata as memoryblock, offset as Integer, length as Integer, ivec as memoryblock, byref num as Integer)**

**Function:** The continuing Blowfish encryption function.

**Notes:**
- idata: memoryblock for input data, 8 bytes in size and not nil.
- odata: memoryblock for output data, 8 bytes in size and not nil.
- offset: offset in input and output memoryblocks
- length: length of data in memoryblock in bytes. Multiply of 8.
- ivec: memoryblock for temporary data, 8 bytes in size and not nil.
- num: current position in ivec. Pass 0 as start value and pass the value you get back to the next function call.

Returns "" on invalid input.

You can create yourself a twelve byte memoryblock with a starting value you want. First four bytes are position and next 8 bytes the current vector.

This is output feedback mode. Encryption is the same a decryption.

See also:

- **72.3.21 EncryptOFB64(data as string, byref temp as memoryblock) as string**

**72.3.23 SetKey(key as string)**

**Function:** Sets the key to be used.

**Notes:** The longer the key, the better. Suggested is at least 16 bytes.
72.4.1 CalculateCRC16MemoryMBS(data as MemoryBlock, Start as UInt16 = 65535, Polynomial as UInt16 = &h1021, FinalXOR as UInt16 = 0, ReflectInput as boolean = false, ReflectOutput as boolean = false) as UInt16

MBS Util Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates a 16bit Checksum about the provided memoryblock. **Notes:**

- Start is the start value.
- Polynomial is what is xored to the value in each round.
- FinalXOR is an XOR we do on the end.
- If ReflectInput is true, we swap bits in input.
- If ReflectOutput is true, we swap bits in output (before final XOR).

Returns CRC value.

72.4.2 CalculateCRC16StringMBS(data as string, Start as UInt16 = 65535, Polynomial as UInt16 = &h1021, FinalXOR as UInt16 = 0, ReflectInput as boolean = false, ReflectOutput as boolean = false) as UInt16

MBS Util Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates a 16bit Checksum about the provided string. **Example:**

```vbnet
dim c as string = DecodeHex("3E440026201000D")
dim p as UInt16 = CalculateCRC16StringMBS(c, &hFFFF, &h1021, 0, true, true)
MsgBox hex(p)+" = 3E5A"
```

**Notes:**

- Start is the start value.
- Polynomial is what is xored to the value in each round.
- FinalXOR is an XOR we do on the end.
- If ReflectInput is true, we swap bits in input.
- If ReflectOutput is true, we swap bits in output (before final XOR).

Returns CRC value.
72.4.3 Adler32MemoryMBS(adler as UInt32, buf as memoryblock, offset as Integer, length as Integer) as UInt32

MBS Compression Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The adler32 hash function from the zlib library.
Notes:
Offset and length must be correct for your memory block or you will crash your application!

Update a running Adler-32 checksum with the bytes and return the updated checksum. If buf is nil, this function returns the required initial value for the checksum.
An Adler-32 checksum is almost as reliable as a CRC32 but can be computed much faster.

72.4.4 Adler32StringMBS(adler as UInt32, buf as string) as UInt32

MBS Compression Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The adler32 hash function from the zlib library.
Example:

```vbnet
dim b as binarystream // some stream
dim adler as Integer
dim data as string
dim originalAdler as Integer = 12345
adler=Adler32MemoryMBS(0,nil,0,0)
data=b.read(10000)
while data<>"
    adler=Adler32StringMBS(adler, data)
data=b.read(10000)
wend
if adler <>originalAdler then msgbox "Error in checksum!"
```

Notes:
Update a running Adler-32 checksum with the bytes and return the updated checksum. If buf is nil, this function returns the required initial value for the checksum.
An Adler-32 checksum is almost as reliable as a CRC32 but can be computed much faster.
72.4.5 **CRC32MemoryMBS(crc as UInt32, buf as memoryblock, offset as Integer, length as Integer) as UInt32**

MBS Compression Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The crc32 hash function from the zlib library. **Notes:**

Offset and length must be correct for your memoryblock or you will crash your application!

Update a running crc with the bytes and return the updated crc. If buf is nil, this function returns the required initial value for the crc. Pre- and post-conditioning (one’s complement) is performed within this function so it shouldn’t be done by the application.

72.4.6 **CRC32StringMBS(crc as UInt32, buf as string) as UInt32**

MBS Compression Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The crc32 hash function from the zlib library. **Example:**

```plaintext
dim originalCrc as Integer // original CRC
dim crc as Integer // new crc
dim data as string
dim b as binarystream

crc=0

data=b.read(10000)
while data<>””
  crc=CRC32StringMBS(crc, data)
data=b.read(10000)
wend

if crc <>originalCrc then msgbox "Error in checksum!"
```

**Notes:** Update a running crc with the bytes and return the updated crc. If buf is nil, this function returns the required initial value for the crc. Pre- and post-conditioning (one’s complement) is performed within this function so it shouldn’t be done by the application.

72.4.7 **CRC16MBS(data as string) as UInt16**

MBS Util Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates a 16bit Checksum about the provided string.
Example:

```vba
dim n1 as Integer = CRC16MBS("Hello World")
dim n2 as Integer = CRC16MBS("Hallo World")
```

MsgBox str(n1)+" "+str(n2)

Notes: Please note: Different CRC functions give different result. This is one specific 16 bit CRC function which may be or not be the one you need for your application.

### 72.4.8 CRC\_32InMemContMBS(address as Ptr, length as Integer, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates a 32bit Checksum about the provided memory address.

### 72.4.9 CRC\_32InMemMBS(address as Ptr, length as Integer) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates a 32bit Checksum about the provided memory address.

### 72.4.10 CRC\_32OfStrContMBS(s as String, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates a 32bit Checksum about the provided block of data.

### 72.4.11 CRC\_32OfStrMBS(s as String) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates a 32bit Checksum about the provided string.

Example:

```vba
dim n as Integer
n=CRC\_32OfStrMBS("Hello World")
' n is now 1243066710
```

Notes:
See the text "About-CRC" for details about this Checksum things. This function is also available as part of the memoryblock class.

About Checksums:

These functions calculate CRCs over a range of bytes in a MemoryBlock or in a String.

There are three versions of CRC calculation: One for 16 Bit, one for 32 Bit and one for 16 to 64 Bit wide checksums. If you are free to choose, I suggest that you use the 32 Bit version because of its accuracy and performance.

Some background on using checksums/CRCs: Checksums, such as CRCs, are used to quickly verify that a chunk of data has not been modified somehow without your control. To use it, you'd calculate the checksum (CRC) of your data, then store that checksum value (which only needs 2 to 8 bytes of storage) somewhere. Later, when retrieving your data, you calculate its checksum again and compare its value with the previously stored value. If it does not match, the data got somehow corrupted. If it matches, that it is quite likely, although not 100% sure, that the data is still in its original state.

There are 3 different CRC algorithms available:

- CRC.CCITT...() as Integer
- CRC.32...() as Integer
- CRC.Dillon...(bitWidth as Integer, ...) as String

The CCITT version calculates a rather classic 16 bit CRC. Unless you need that CRC for legacy data, I recommend not to use it, but rather use the CRC.32 version.

CRC.32 is the most common used algorithm for 32 bit wide CRCs. Be aware there are theoretically many other ways to calculate a CRC 32, however.

The Dillon algorithm is a smart routine to calculate CRCs in any width between 16 and 64 bit. This one is only useful if you find that a 32 bit CRC is not sufficient for your needs. If you can live with a plain 32 bit CRC, you should prefer the CRC.32 routines, because they are faster than the Dillon code.

The result, since it can be up to 64 bit in size, cannot be returned in an Integer (they can only hold 32 bit). Instead, the result is returned as a 8 byte value, stored in a 8 byte long string. To get the value of that string, you can copy the string into a MemoryBlock, and then access the parts of the 8 byte long value there. The demo project shows how to accomplish this.
The CRC code was developed and published by Matthew Dillon. Here's his web page with more information about it:
http://www.backplane.com/diablo/crc64.html

72.4.12 CRC_CCITTInMemContMBS(address as Ptr, length as Integer, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:**
Calculates a 16bit Checksum about the provided memory address.

72.4.13 CRC_CCITTInMemMBS(address as Ptr, length as Integer) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:**
Calculates a 16bit Checksum about the provided memory address.

72.4.14 CRC_CCITTOfStrContMBS(s as String, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:**
Calculates a 16bit Checksum about the provided string.

72.4.15 CRC_CCITTOfStrMBS(s as String) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:**
Calculates a 16bit Checksum about the provided string.

**Example:**

```vba
dim n as Integer
n=CRC_CCITTOfStrMBS(“Hello World”)
’ n is now 39210
```

72.4.16 CRC_DillonInMemMBS(bitWidth as Integer, address as Ptr, length as Integer) as String

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:**
Calculates a 16 to 64bit Checksum about the provided memory address.
72.4.17 CRC_DillonOfStrMBS(bitWidth as Integer, s as String) as String

MBS Util Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates a 16 to 64bit Checksum about the provided string. **Example:**

```vba
    dim s as string
    s=CRC_DillonOfStrMBS(64,"Hello World")
    ' s has now the 64bit checksum inside an 8 byte binary string
```

72.4.18 CRC_DillonUInt64InMemMBS(bitWidth as Integer, address as Ptr, length as Integer) as UInt64

MBS Util Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates a 16 to 64bit Checksum about the provided memory address.

72.4.19 CRC_DillonUInt64OfStrMBS(bitWidth as Integer, s as String) as UInt64

MBS Util Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates a 16 to 64bit Checksum about the provided string.

72.4.20 GetHash32MBS(s as string) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates some special Hash value. **Example:**

```vba
    MsgBox hex(GetHash32MBS("xskin-b013fafit_01-PELVIS-BODY.skn"))  // should show 67A53A4D
```

**Notes:**

The 255 char limit was in the original C function, but should be resolved for this plugin, so string longer than 255 chars will work. The original C code looks like this:

```c
    static UInt32 GetHash32 (StringPtr inString)
    {
        for (i = 1; i <= length; i++)
```
```c
int length = inString[0];
UInt32 hash = length + 1;
int i;
{
    hash = rlwinm(hash, 3, 0, 31) ^ tolower(inString[i]);
}
return hash;
}

Originally this was added for Cherie Benoit, which describes it like this:

"GetHash32MBS" duplicates the hashing function of Westlake Interactive's "Namer" application which creates LFN-style short filenames for use with the Macintosh version of "The Sims."

### 72.4.21 ModBusCalculateRTUMessageCRCMBS(data as string) as UInt16

**Example:**

```vbnet
dim m as new MemoryBlock(9)
m.UInt8Value(0) = 1 // start of package
m.UInt8Value(1) = 6 // command code
m.UInt8Value(2) = 0 // some data...
m.UInt8Value(3) = 0
m.UInt8Value(4) = 0
m.UInt8Value(5) = &h21

```
72.4.22 MD5MBS(data as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the MD5 message digest value of a memoryblock as 16 byte string.

72.4.23 MD5StringMBS(data as memoryblock) as string

MBS Encryption Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the MD5 message digest value of a string as hex string.

72.4.24 ValidateUUIDMBS(UUID as string, mode as Integer = 0, required- Version as Integer = 0) as string

MBS Util Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Validates the given UUID/GUID. **Example:**

// wrong
dim w1 as string = ValidateUUIDMBS("hello") // wrong due to missing {  
dim w2 as string = ValidateUUIDMBS("550e8400-e29b-11d4-a716-446655440000",1) // wrong with, with z  
dim w3 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d40716-446655440000 } ") // wrong with missing minus  
dim w4 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } ") // wrong with being too short  
dim w5 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } dssdsd",1) // wrong as it has extra chars on end  
dim w6 as string = ValidateUUIDMBS("550e8400-e29b-11d4-a716-446655440000",1,4) // wrong as not version 4  
dim w7 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-ffcc-34c70b24a668",1,4) // wrong as not version 4

// okay
dim o1 as string = ValidateUUIDMBS("550e8400-e29b-11d4-a716-446655440000",1)  
dim o2 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } ")  
dim o3 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-afcc-34c70b24a668",1)  
dim o4 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-afcc-34c70b24a668",3)  
dim o5 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } ", 2)  
dim o6 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } ", 2)  
dim o7 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d40716-446655440000 } ",4) // wrong with missing minus, but fixed  
dim o8 as string = ValidateUUIDMBS("550e8400-e29b-11d40716-446655440000 ",4) // wrong with missing { , but fixed  
dim o9 as string = ValidateUUIDMBS("6a12a4d5-e9e6-4568-afcc-34c70b24a668",4,4) // is version 4  
dim o10 as string = ValidateUUIDMBS("6a12a4d5-e9e6-1568-afcc-34c70b24a668",4,1) // is version 1
dim o11 as string = ValidateUUIDMBS(" { 550e8400-e29b-11d4-a716-446655440000 } dssdsd",1+4) // wrong as it has extra chars on end, but fixed

break // check in debugger

Notes:
If the UUID is valid, you get it back.
If the UUID is invalid, you get an empty string back.

Pass 1 in mode to not require braces around UUID. Pass 2 to ignore minus characters. Pass 3 to combine those two.
You can add 4 to have the GUID fixed a bit like adding braces and minus chars if missing.
The requiredVersion parameter can be 1 to 5 to indicate the required GUID version you want to have.

72.4.25  MD5MBS(data as string) as string

Function: Returns the MD5 message digest value of a string.
Example:
// Compare RB5 MD5 to the one from MBS

dim a,b as String

a=MD5("Hallo")

b=MD5MBS("Hallo")

msgbox str(StrComp(a,b,0))

Notes: Same as the MD5 function in RB5.

72.4.26  MD5StringMBS(data as string) as string

Function: Returns the MD5 message digest value of a string as hex string.
Example:
// Compare RB5 MD5 to the one from MBS
72.5. **CLASS CCCRYPTORMBS**

```vbnet
dim a,b as String
a=EncodingToHexMBS(MD5("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern"))
b=MD5StringMBS("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")
msgbox a+EndOfLine+b+EndOfLine+str(StrComp(a,b,0))
```

72.4.27 **CRC_DillonUInt64MBS**

```vbnet
DillonUInt64MBS(extends mem as memoryblock, bitWidth as Integer, offset as Integer, numBytes as Integer) as UInt64
```

MBS Util Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates a 16 to 64bit Checksum about the provided memory address. **Notes:** The 64bit integer version for RB 2006r4 and newer.

### 72.5 class CCCryptorMBS

#### 72.5.1 class CCCryptorMBS

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Generic interface for symmetric encryption. **Example:**

```vbnet
// initialize
dim h as new CCCryptorMBS(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0,"Hello12312345678")
if h.Lasterror<>0 then break

// destination memoryblock
dim m as new MemoryBlock(100)
dim Position as UInt64 = 0
dim BytesLeft as UInt64 = m.Size

// add a few bytes
dim q as UInt64 = 0
h.Update "Hello World!!1234", m, BytesLeft, q
if h.Lasterror<>0 then break
Position = Position + q
BytesLeft = BytesLeft - q
```
// now finalize:
q = 0

dim dp as ptr = m.AddressPtrMBS(Position)

h.Final dp, BytesLeft, q
if h.Lasterror<>0 then break

Position = Position + q
BytesLeft = BytesLeft - q

// and show result
dim d as string = m.StringValue(0, Position)
MsgBox EncodingToHexMBS(d)

Notes:

This interface provides access to a number of symmetric encryption algorithms. Symmetric encryption algorithms come in two "flavors" - block ciphers, and stream ciphers. Block ciphers process data (while both encrypting and decrypting) in discrete chunks of data called blocks; stream ciphers operate on arbitrary sized data.

The object declared in this interface, CCCryptorMBS, provides access to both block ciphers and stream ciphers with the same API; however some options are available for block ciphers that do not apply to stream ciphers.

The general operation of a CCCryptor is: initialize it with raw key data and other optional fields with Constructor(); process input data via one or more calls to Update(), each of which may result in output data being written to caller-supplied memory; and obtain possible remaining output data with Final(). The CCCryptor is disposed of via Destructor(), or it can be reused (with the same key data as provided to Constructor()) by calling Reset().

One option for block ciphers is padding, as defined in PKCS7; when padding is enabled, the total amount of data encrypted does not have to be an even multiple of the block size, and the actual length of plaintext is calculated during decryption.

Another option for block ciphers is Cipher Block Chaining, known as CBC mode. When using CBC mode, an Initialization Vector (IV) is provided along with the key when starting an encrypt or decrypt operation. If CBC mode is selected and no IV is provided, an IV of all zeroes will be used.

CCCryptorMBS also implements block bufferring, so that individual calls to Update() do not have to provide data whose length is aligned to the block size. (If padding is disabled, encrypting with block ciphers does require that the *total* length of data input to Update() call(s) be aligned to the block size.)
A given CCCryptorMBS can only be used by one thread at a time; multiple threads can use safely different CCCryptors at the same time.

This class uses the CommonCrypto interface which is available on Mac OS X 10.5 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don’t need to apply for an export license for this classes here.

### 72.5.2 Methods

#### 72.5.3 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as Ptr, keyLength as UInt64, iv as Ptr = nil)

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Create a cryptographic context.  
**Notes:**

- **operation:** Defines the basic operation: kCCEncrypt or kCCDecrypt.  
- **Algorithm:** Defines the algorithm.  
- **options:** A word of flags defining options.  
- **key:** Raw key material, length keyLength bytes.  

- **keyLength:** Length of key material. Must be appropriate for the selected operation and algorithm. Some algorithms provide for varying key lengths.

- **iv:** Initialization vector, optional. Used by block ciphers when Cipher Block Chaining (CBC) mode is enabled. If present, must be the same length as the selected algorithm’s block size. If CBC mode is selected (by the absence of the kCCOptionECBMode bit in the options flags) and no IV is present, a NULL (all zeroes) IV will be used. This parameter is ignored if ECB mode is used or if a stream cipher algorithm is selected.

Possible error is lasterror are kCCParamError and kCCMemoryFailure.  
See also:

- 72.5.4 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as String, iv as Ptr = nil)

#### 72.5.4 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as String, iv as Ptr = nil)

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Create a cryptographic context.  
**Example:**
// key length must be 16 bytes for AES128
dim key as string = "1234567890123456"

dim h as new CCCryptorMBS(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0, key)

if h.Lasterror<>0 then
    MsgBox "error: " + str(h.Lasterror)
else
    MsgBox "OK"
end if

Notes:

operation: Defines the basic operation: kCCEncrypt or kCCDecrypt.
Algorithm: Defines the algorithm.
options: A word of flags defining options.
key: Raw key material, length keyLength bytes.

keyLength: Length of key material. Must be appropriate for the selected operation and algorithm. Some algorithms provide for varying key lengths.

iv: Initialization vector, optional. Used by block ciphers when Cipher Block Chaining (CBC) mode is enabled. If present, must be the same length as the selected algorithm’s block size. If CBC mode is selected (by the absence of the kCCOptionECBMode bit in the options flags) and no IV is present, a NULL (all zeroes) IV will be used. This parameter is ignored if ECB mode is used or if a stream cipher algorithm is selected.

Possible error is lasterror are kCCParamError and kCCMemoryFailure.
See also:

- 72.5.3 Constructor(operation as Integer, Algorithm as Integer, options as Integer, key as Ptr, keyLength as UInt64, iv as Ptr = nil)

72.5.5  Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as Ptr, KeyLength as UInt64, IV as Ptr, DataIn as Ptr, DataInLength as UInt64, DataOut as Ptr, DataOutAvailable as UInt64, byref DataOutMoved as UInt64) as Integer

Example:
dim KeyString as string = "Hello12312345678"
dim InputString as string = "Hello World!1234"

dim InputMemory as MemoryBlock = InputString
dim KeyMemory as MemoryBlock = KeyString
dim IV as ptr = nil // default to zeros
dim OutputMemory as new MemoryBlock(100)
dim Size as UInt64 = 0

dim e as Integer = CCCryptorMBS.Crypt(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0, KeyMemory, KeyMemory.size, IV, InputMemory, InputMemory.size, OutputMemory, OutputMemory.size, size)

if e = CCCryptorMBS.kCCSuccess then
dim result as string = OutputMemory.StringValue(0, size)
MsgBox EncodingToHexMBS(result)
else
MsgBox "Error: " + str(e)
end if

Notes:
This basically performs a sequence of Constructor, Update, Final and Destructor.

Parameters:

Possible errors in lasterror:
kCCBufferTooSmall indicates insufficient space in the dataOut buffer. In this case, the dataOutMoved parameter will indicate the size of the buffer needed to complete the operation. The operation can be retried with minimal runtime penalty.
kCCAlignmentError indicates that dataInLength was not properly aligned. This can only be returned for block ciphers, and then only when decrypting or when encrypting with block with padding disabled.

See also:
• 72.5.6 Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as string, IV as Ptr, DataIn as string, byref DataOut as string) as Integer

72.5.6 Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as string, IV as Ptr, DataIn as string, byref DataOut as string) as Integer

Operation Defines the basic operation: kCCEncrypt or kCCDecrypt.
Algorithm Defines the encryption algorithm.
Options A word of flags defining options. See kCCOption constants.
Key Raw key material, length keyLength bytes.
keyLength Length of key material. Must be appropriate for the select algorithm. Some algorithms may provide for varying key lengths.
IV Initialization vector, optional. Used for Cipher Block Chaining (CBC) mode. If present, must be the same length as the selected algorithm’s block size. If CBC mode is selected (by the absence of any mode bits in the options flags) and no IV is present, a nil (all zeroes) IV will be used. This is ignored if ECB mode is used or if a stream cipher algorithm is selected.
dataIn Data to encrypt or decrypt, length dataInLength bytes.
dataInLength Length of data to encrypt or decrypt.
dataOut Result is written here. Allocated by caller. Encryption and decryption can be performed ”in-place”, with the same buffer used for input and output.
dataOutAvailable The size of the dataOut buffer in bytes.
dataOutMoved On successful return, the number of bytes written to dataOut. If kCCBufferTooSmall is returned as a result of insufficient buffer space being provided, the required buffer space is returned here.
kCCDecodeError Indicates improperly formatted ciphertext or a ”wrong key” error; occurs only during decrypt operations.

Example:

dim KeyString as string = "Hello12312345678"
dim InputString as string = "Hello World!1234"
dim IV as ptr = nil // default to zeros
dim Output as string = ""
dim e as Integer = CCCryptorMBS.Crypt(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0, KeyString, IV, InputString, Output)

if e = CCCryptorMBS.kCCSuccess then
MsgBox EncodingToHexMBS(Output)
else
MsgBox "Error: " + str(e)
end if

Notes:
This basically performs a sequence of Constructor, Update, Final and Destructor. This is the convenience function for Real Studio with using strings instead of data pointers.
Parameters:

- **Operation**: Defines the basic operation: kCCEncrypt or kCCDecrypt.
- **Algorithm**: Defines the encryption algorithm.
- **Options**: A word of flags defining options. See kCCOption constants.
- **Key**: Raw Key.
- **IV**: Initialization vector, optional. Used for Cipher Block Chaining (CBC) mode. If present, must be the same length as the selected algorithm’s block size. If CBC mode is selected (by the absence of any mode bits in the options flags) and no IV is present, a nil (all zeroes) IV will be used. This is ignored if ECB mode is used or if a stream cipher algorithm is selected.
- **dataIn**: Data to encrypt or decrypt.
- **dataOut**: Result is written here.

Possible errors in lasterror:
- kCCBufferTooSmall indicates insufficient space in the dataOut buffer. In this case, the dataOutMoved parameter will indicate the size of the buffer needed to complete the operation. The operation can be retried with minimal runtime penalty.
- kCCAlignmentError indicates that dataInLength was not properly aligned. This can only be returned for block ciphers, and then only when decrypting or when encrypting with block with padding disabled.

- kCCDecodeError Indicates improperly formatted ciphertext or a ”wrong key” error; occurs only during decrypt operations.

See also:

- 72.5.5 Crypt(Operation as Integer, Algorithm as Integer, Options as Integer, key as Ptr, KeyLength as UInt64, IV as Ptr, DataIn as Ptr, DataInLength as UInt64, DataOut as Ptr, DataOutAvailable as UInt64, byref DataOutMoved as UInt64) as Integer

### 72.5.7 Final(DataOut as Ptr, dataOutAvailable as UInt64, byref dataOutMoved as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: Finish an encrypt or decrypt operation, and obtain the (possible) final data output.

**Notes:**
- dataOut: Result is written here. Allocated by caller. Pass a memory block of right size.
- dataOutAvailable: The size of the dataOut buffer in bytes.
dataOutMoved: On successful return, the number of bytes written to dataOut.

LastError is set to:
- kCCBufferTooSmall indicates insufficient space in the dataOut buffer. The caller can use GetOutputLength() to determine the required output buffer size in this case. The operation can be retried; no state is lost when this is returned.
- kCCAlignmentError When decrypting, or when encrypting with a block cipher with padding disabled, kCCAlignmentError will be returned if the total number of bytes provided to Update() is not an integral multiple of the current algorithm’s block size.
- kCCDecodeError Indicates garbled ciphertext or the wrong key during decryption. This can only be returned while decrypting with padding enabled.

Except when kCCBufferTooSmall is returned, the CCCryptorMBS can no longer be used for subsequent operations unless Reset() is called on it.
It is not necessary to call Final() when performing symmetric encryption or decryption if padding is disabled, or when using a stream cipher.

### 72.5.8 GetOutputLength(inputLength as UInt64, Final as Boolean = true) as UInt64

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determine output buffer size required to process a given input size.

**Example:**
```
Dim h as new CCCryptorMBS(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, 0, 
"Hello12312345678")
MsgBox Str(h.GetOutputLength(1000))
```

**Notes:**

- **inputLength:** The length of data which will be provided to Update().

  - **Final:** If false, the returned value will indicate the output buffer space needed when `inputLength` bytes are provided to CCCryptorMBS.Update(). When `Final` is true, the returned value will indicate the total combined buffer space needed when `inputLength` bytes are provided to CCCryptorMBS.Update() and then CCCryptorMBS.Final() is called.

  Returns the maximum buffer space need to perform CCCryptorMBS.Update() and optionally CCCryptorMBS.Final().

Some general rules apply that allow clients of this module to know a priori how much output buffer space will be required in a given situation. For stream ciphers, the output size is always equal to the input size, and CCCryptorMBS.Final() never produces any data. For block ciphers, the output size will always be less than
72.5. CLASS CCCRYPTORMBS

or equal to the input size plus the size of one block. For block ciphers, if the input size provided to each call to CCCryptorMBS.Update() is an integral multiple of the block size, then the output size for each call to CCCryptorMBS.Update() is less than or equal to the input size for that call to CCCryptorMBS.Update(). CCCryptorMBS.Final() only produces output when using a block cipher with padding enabled.

72.5.9 Reset(iv as Ptr = nil)

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Reinitializes an existing CCCryptorRef with a (possibly) new initialization vector. Notes:
The key is unchanged. Not implemented for stream ciphers.

iv: Optional initialization vector; if present, must be the same size as the current algorithm’s block size.

The only possible errors are kCCParamError and kCCUnimplemented.
This can be called on a CCCryptorMBS with data pending (i.e. in a padded mode operation before Final is called); however any pending data will be lost in that case.

72.5.10 Update(dataIn as Ptr, dataInLength as UInt64, dataOut as Ptr, dataOutAvailable as UInt64, byref dataOutMoved as UInt64)

The result, if any, is written to a caller-provided buffer.

Parameters:

- dataIn: Data to process, length dataInLength bytes.
- dataInLength: Length of data to process.
- dataOut: Result is written here. Allocated by caller. Encryption and decryption can be performed ”in-place”, with the same buffer used for input and output.

- dataOutAvailable: The size of the dataOut buffer in bytes.

- dataOutMoved: On successful return, the number of bytes written to dataOut.
Possible error codes:
kCCBufferTooSmall indicates insufficient space in the dataOut buffer. The caller can use CCCryptorMBS.GetOutputLength() to determine the required output buffer size in this case. The operation can be retried; no state is lost when this is returned.

This routine can be called multiple times. The caller does not need to align input data lengths to block sizes; input is buffered as necessary for block ciphers. When performing symmetric encryption with block ciphers, and padding is enabled via kCCOptionPKCS7Padding, the total number of bytes provided by all the calls to this function when encrypting can be arbitrary (i.e., the total number of bytes does not have to be block aligned). However if padding is disabled, or when decrypting, the total number of bytes does have to be aligned to the block size; otherwise CCCryptMBS.Final() will return kCCAlignmentError. A general rule for the size of the output buffer which must be provided by the caller is that for block ciphers, the output length is never larger than the input length plus the block size. For stream ciphers, the output length is always exactly the same as the input length. See the discussion for CCCryptMBS.GetOutputLength() for more information on this topic. Generally, when all data has been processed, call CCCryptorMBS.Final(). In the following cases, the CCCryptorMBS.Final() is superfluous as it will not yield any data nor return an error:
1. Encrypting or decrypting with a block cipher with padding disabled, when the total amount of data provided to CCCryptorMBS.Update() is an integral multiple of the block size.
2. Encrypting or decrypting with a stream cipher.

See also:

• 72.5.11 Update(dataIn as String, dataOut as Ptr, dataOutAvailable as UInt64, byref dataOutMoved as UInt64)

72.5.11 Update(dataIn as String, dataOut as Ptr, dataOutAvailable as UInt64, byref dataOutMoved as UInt64)

Notes:
The result, if any, is written to a caller-provided buffer.

Parameters:

- **dataIn** Data to process, length dataInLength bytes.
- **dataInLength** Length of data to process.
- **dataOut** Result is written here. Allocated by caller. Encryption and decryption can be performed “in-place”, with the same buffer used for input and output.

- **dataOutAvailable** The size of the dataOut buffer in bytes.
dataOutMoved  On successful return, the number of bytes written to dataOut.

Possible error codes:
kCCBufferTooSmall indicates insufficient space in the dataOut buffer. The caller can use CCCryptorMBS.GetOutputLength() to determine the required output buffer size in this case. The operation can be retried; no state is lost when this is returned.

This routine can be called multiple times. The caller does not need to align input data lengths to block sizes; input is buffered as necessary for block ciphers. When performing symmetric encryption with block ciphers, and padding is enabled via kCCOptionPKCS7Padding, the total number of bytes provided by all the calls to this function when encrypting can be arbitrary (i.e., the total number of bytes does not have to be block aligned). However if padding is disabled, or when decrypting, the total number of bytes does have to be aligned to the block size; otherwise CCCryptorMBS.Final() will return kCCAlignmentError. A general rule for the size of the output buffer which must be provided by the caller is that for block ciphers, the output length is never larger than the input length plus the block size. For stream ciphers, the output length is always exactly the same as the input length. See the discussion for CCCryptorMBS.GetOutputLength() for more information on this topic. Generally, when all data has been processed, call CCCryptorMBS.Final().

In the following cases, the CCCryptorMBS.Final() is superfluous as it will not yield any data nor return an error:
1. Encrypting or decrypting with a block cipher with padding disabled, when the total amount of data provided to CCCryptorMBS.Update() is an integral multiple of the block size.
2. Encrypting or decrypting with a stream cipher.

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the block size constants.  
**Notes:** RC2 block size.

72.5.28  kCCBufferTooSmall = -4301

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the error constants.  
**Notes:** Insufficient buffer provided for specified operation.
72.5.29  kCCDecodeError = -4304

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the error constants.  
**Notes:** Input data did not decode or decrypt properly.

72.5.30  kCCDecrypt = 1

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the operation modes.  
**Notes:** Symmetric decryption.

72.5.31  kCCEncrypt = 0

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the operation modes.  
**Notes:** Symmetric encryption.

72.5.32  kCCKeySize3DES = 24

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the key size constants.  
**Notes:**  
Triple DES key size.  
DES and TripleDES have fixed key sizes.

72.5.33  kCCKeySizeAES128 = 16

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the key size constants.  
**Notes:**  
128 bit AES key size.  
AES has three discrete key sizes.

72.5.34  kCCKeySizeAES192 = 24

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the key size constants.  
**Notes:**  
192 bit AES key size.  
AES has three discrete key sizes.
72.5. **CLASS CCCRYPTORMBS**

72.5.35  **kCCKeySizeAES256 = 32**

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the key size constants.

**Notes:**

256 bit AES key size.
AES has three discrete key sizes.

72.5.36  **kCCKeySizeDES = 8**

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the key size constants.

**Notes:**

DES key size.
DES and TripleDES have fixed key sizes.

72.5.37  **kCCKeySizeMaxCAST = 16**

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the key size constants.

**Notes:**

CAST maximum key size.
CAST and RC4 have variable key sizes.

72.5.38  **kCCKeySizeMaxRC2 = 128**

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the key size constants.

**Notes:**

RC2 maximum key size.
CAST and RC4 have variable key sizes.

72.5.39  **kCCKeySizeMaxRC4 = 512**

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the key size constants.

**Notes:**

RC4 maximum key size.
CAST and RC4 have variable key sizes.
72.5.40  \text{kCCKeySizeMinCAST} = 5

MBS MacOSX Plugin, Plugin Version: 11.3. \textbf{Function}: One of the key size constants.  
\textbf{Notes}: 
CAST minimum key size. 
CAST and RC4 have variable key sizes.

72.5.41  \text{kCCKeySizeMinRC2} = 1

MBS MacOSX Plugin, Plugin Version: 11.3. \textbf{Function}: One of the key size constants.  
\textbf{Notes}: 
RC2 minimum key size. 
CAST and RC4 have variable key sizes.

72.5.42  \text{kCCKeySizeMinRC4} = 1

MBS MacOSX Plugin, Plugin Version: 11.3. \textbf{Function}: One of the key size constants.  
\textbf{Notes}: 
RC4 minimum key size. 
CAST and RC4 have variable key sizes.

72.5.43  \text{kCCMemoryFailure} = -4302

MBS MacOSX Plugin, Plugin Version: 11.3. \textbf{Function}: One of the error constants.  
\textbf{Notes}: Memory allocation failure.

72.5.44  \text{kCCOptionECBMode} = 2

MBS MacOSX Plugin, Plugin Version: 11.3. \textbf{Function}: One of the option constants.  
\textbf{Notes}: 
Electronic Code Book Mode. Default is CBC. 
Stream ciphers currently have no options
72.5.  CLASS CCCRYPTORMBS

72.5.45  kCCOptionPKCS7Padding = 1

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the option constants.

**Example:**

```vbnet
// initialize
dim h as new CCCryptorMBS(CCCryptorMBS.kCCEncrypt, CCCryptorMBS.kCCAlgorithmAES128, CCCryptorMBS.kCCOptionPKCS7Padding, "Hello12312345678")
if h.Lasterror<>0 then break

// destination memoryblock

dim m as new MemoryBlock(100)
dim Position as UInt64 = 0
dim BytesLeft as UInt64 = m.Size

// add a few bytes
dim q as UInt64 = 0

// due to padding, we don’t need to pass a multiple of block size
h.Update "Hello World!", m, BytesLeft, q
if h.Lasterror<>0 then break

Position = Position + q
BytesLeft = BytesLeft - q

// now finalize:
q = 0

dim dp as ptr = m.AddressPtrMBS(Position)

h.Final dp, BytesLeft, q
if h.Lasterror<>0 then break

Position = Position + q
BytesLeft = BytesLeft - q

// and show result
dim d as string = m.StringValue(0, Position)
MsgBox EncodingToHexMBS(d)
```

**Notes:**

Perform PKCS7 padding.
Stream ciphers currently have no options.
72.5.46  \textbf{kCCParamError} = -4300

MBS MacOSX Plugin, Plugin Version: 11.3. \textbf{Function}: One of the error constants. \textbf{Notes}: Illegal parameter value.

72.5.47  \textbf{kCCSuccess} = 0

MBS MacOSX Plugin, Plugin Version: 11.3. \textbf{Function}: One of the error constants. \textbf{Notes}: Operation completed normally.

72.5.48  \textbf{kCCUnimplemented} = -4305

MBS MacOSX Plugin, Plugin Version: 11.3. \textbf{Function}: One of the error constants. \textbf{Notes}: Function not implemented for the current algorithm.
72.6. CLASS CCHMACMBS

72.6 class CCHMacMBS

72.6.1 class CCHMacMBS

Example:

```vba
dim h as new CCHMacMBS(CCHMacMBS.kCCHmacAlgSHA1, "Hello")
h.Update "Hello World!"
dim m as MemoryBlock = h.Finalize
MsgBox EncodingToHexMBS(m)
```

Notes: This class uses the CommonCrypto interface which is available on Mac OS X 10.5 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don’t need to apply for an export license for this classes here.

72.6.2 Methods

72.6.3 Constructor(algorithm as Integer, key as memoryblock)

See also:

- 72.6.4 Constructor(algorithm as Integer, key as Ptr, keyLength as Uint64) 12439
- 72.6.5 Constructor(algorithm as Integer, key as string) 12439

- 72.6.5 Constructor(algorithm as Integer, key as string) 12439

72.6.5 Constructor(algorithm as Integer, key as string)

Example:

```vbnet
dim h as new CCHMacMBS(CCHMacMBS.kCCHmacAlgMD5, "Hello")
h.Update "Hello World!"
dim m as MemoryBlock = h.Finalize
MsgBox EncodingToHexMBS(m)
```

See also:

- 72.6.3 Constructor(algorithm as Integer, key as memoryblock) 12439
- 72.6.4 Constructor(algorithm as Integer, key as Ptr, keyLength as U1nt64) 12439

### 72.6.6 Final(macOut as Ptr)

**Notes:**

Writes mac to given pointer.

Please pass a memoryblock with 16 bytes for MD5 and 20 bytes for SHA1.

### 72.6.7 Finalize as Memoryblock

**Notes:** Returns digest. 16 bytes for MD5 and 20 bytes for SHA1.

### 72.6.8 Hmac(algorithm as Integer, key as Ptr, keyLength as Integer, data as Ptr, dataLength as Integer, MacOut as Ptr)

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Stateless, one-shot HMAC function.

**Notes:**

Make sure your memoryblock for key, data and macout have the right size and are not nil!
keyLength and dataLength are the size of key and data in bytes.

See also:

- 72.6.9 Hmac(algorithm as Integer, key as String, data as String) as String 12441
72.6. CLASS CCHMACMBS

72.6.9 Hmac(algorithm as Integer, key as String, data as String) as String

**Function:** Stateless, one-shot HMAC function.  
See also:

- 72.6.8 Hmac(algorithm as Integer, key as Ptr, keyLength as Integer, data as Ptr, dataLength as Integer,  
  MacOut as Ptr) 12440

72.6.10 Update(data as memoryblock)

**Function:** Process some data.  
**Notes:** Takes bytes in memoryblock.  
See also:

- 72.6.11 Update(data as Ptr, dataLength as UInt64) 12441  
- 72.6.12 Update(data as string) 12441

72.6.11 Update(data as Ptr, dataLength as UInt64)

**Function:** Process some data.  
**Notes:** Takes given bytes from pointer. You can pass a memoryblock there and pass the size of the memoryblock as length.  
See also:

- 72.6.10 Update(data as memoryblock) 12441  
- 72.6.12 Update(data as string) 12441

72.6.12 Update(data as string)

**Function:** Process some data.  
**Notes:** Takes bytes in string.  
See also:

- 72.6.10 Update(data as memoryblock) 12441  
- 72.6.11 Update(data as Ptr, dataLength as UInt64) 12441
72.6.13 Properties

72.6.14 Algorithm as Integer

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The algorithm passed in the constructor.

**Notes:**
see kCCHmacAlg* constants.
(Read and Write property)

72.6.15 Constants

72.6.16 kCCHmacAlgMD5 = 1

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the Algorithms selector constants.

72.6.17 kCCHmacAlgSHA1 = 0

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the Algorithms selector constants.

72.6.18 kCCHmacAlgSHA224 = 5

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the Algorithms selector constants.

72.6.19 kCCHmacAlgSHA256 = 2

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the Algorithms selector constants.

72.6.20 kCCHmacAlgSHA384 = 3

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the Algorithms selector constants.
72.6. CLASS CCHMACMBS

72.6.21 kCCHmacAlgSHA512 = 4

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** One of the Algorithms selector constants.

72.6.22 kCCMD5DigestLength = 16

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** The length of the SHA1 digest in bytes.

72.6.23 kCCSHA1DigestLength = 20

MBS MacOSX Plugin, Plugin Version: 11.3. **Function:** The length of the SHA1 digest in bytes.
72.7 class CCMD2MBS

72.7.1 class CCMD2MBS

Example:

```
dim s as new CCMD2MBS
s.Update "The quick brown fox jumps over the lazy dog"
```

```
dim m as MemoryBlock = s.Finalize
MsgBox EncodingToHexMBS(m)
```

Notes: This class uses the CommonCrypto interface which is available on Mac OS X 10.4 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don’t need to apply for an export license for this classes here.

72.7.2 Methods

72.7.3 Constructor

72.7.4 Finalize as Memoryblock

Notes: If you want to show the value to a human, please use EncodingToHexMBS function.

72.7.5 MD2(data as Ptr, dataLength as Integer) as Memoryblock

Notes: Simply pass in a memoryblock with data and the size in bytes and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

• 72.7.6 MD2(data as String) as Memoryblock
72.7. **CLASS CCMD2MBS**

### 72.7.6 MD2(data as String) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One-shot hash calculation with MD2.  
**Example:**

```vbs
dim m as MemoryBlock = CCMD2MBS.MD2("The quick brown fox jumps over the lazy dog")
MsgBox EncodingToHexMBS(m)
```

**Notes:** Simply pass in a string and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.  
See also:

- 72.7.5 MD2(data as Ptr, dataLength as Integer) as Memoryblock

### 72.7.7 Update(data as Ptr, dataLength as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Processes some data.  
**Notes:** Pass memoryblock and data length in bytes.  
See also:

- 72.7.8 Update(data as string)

### 72.7.8 Update(data as string)

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Processes some data.  
**Notes:** Pass string with data.  
See also:

- 72.7.7 Update(data as Ptr, dataLength as UInt64)
72.8 class CCMD4MBS

72.8.1 class CCMD4MBS

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for MD4 hash.

**Example:**

```vbscript
dim s as new CCMD4MBS
s.Update "The quick brown fox jumps over the lazy dog"

dim m as MemoryBlock = s.Finalize
MsgBox EncodingToHexMBS(m)
```

**Notes:** This class uses the CommonCrypto interface which is available on Mac OS X 10.4 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don’t need to apply for an export license for this classes here.

72.8.2 Methods

72.8.3 Constructor

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes the hash engine.

72.8.4 Finalize as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Finalizes hash and returns digest as memoryblock.

**Notes:** If you want to show the value to a human, please use EncodingToHexMBS function.

72.8.5 MD4(data as Ptr, dataLength as Integer) as Memoryblock

**Notes:** Simply pass in a memoryblock with data and the size in bytes and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.

See also:

- 72.8.6 MD4(data as String) as Memoryblock
72.8.   CLASS CCMD4MBS

72.8.6   MD4(data as String) as Memoryblock

**Example:**

dim m as MemoryBlock = CCMD4MBS.MD4("The quick brown fox jumps over the lazy dog")
MsgBox EncodingToHexMBS(m)

**Notes:** Simply pass in a string and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 72.8.5 MD4(data as Ptr, dataLength as Integer) as Memoryblock

72.8.7   Update(data as Ptr, dataLength as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Processes some data.

**Notes:** Pass memoryblock and data length in bytes.
See also:

- 72.8.8 Update(data as string)

72.8.8   Update(data as string)

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Processes some data.

**Notes:** Pass string with data.
See also:

- 72.8.7 Update(data as Ptr, dataLength as UInt64)
72.9  class CCMD5MBS

72.9.1  class CCMD5MBS

Example:

```vbs
dim s as new CCMD5MBS
s.Update "The quick brown fox jumps over the lazy dog"

dim m as MemoryBlock = s.Finalize
MsgBox EncodingToHexMBS(m)
```

Notes: This class uses the CommonCrypto interface which is available on Mac OS X 10.4 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don’t need to apply for an export license for this classes here.

72.9.2  Methods

72.9.3  Constructor

72.9.4  Finalize as Memoryblock

Notes: If you want to show the value to a human, please use EncodingToHexMBS function.

72.9.5  MD5(data as Ptr, dataLength as Integer) as Memoryblock

Notes: Simply pass in a memoryblock with data and the size in bytes and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.

See also:

* 72.9.6 MD5(data as String) as Memoryblock
72.9.6 MD5(data as String) as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One-shot hash calculation with MD5.

**Example:**
```vbnet
dim m as MemoryBlock = CCMD5MBS.MD5("The quick brown fox jumps over the lazy dog")
MsgBox EncodingToHexMBS(m)
```

**Notes:** Simply pass in a string and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.

See also:
- 72.9.5 MD5(data as Ptr, dataLength as Integer) as Memoryblock

72.9.7 Update(data as Ptr, dataLength as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Processes some data.

**Notes:** Pass memoryblock and data length in bytes.

See also:
- 72.9.8 Update(data as string)

72.9.8 Update(data as string)

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Processes some data.

**Notes:** Pass string with data.

See also:
- 72.9.7 Update(data as Ptr, dataLength as UInt64)
72.10 class CCSHA1MBS

72.10.1 class CCSHA1MBS

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for SHA-1 hash.  
**Example:**

```vbscript
dim s as new CCSHA1MBS  
s.Update "The quick brown fox jumps over the lazy dog"

dim m as MemoryBlock = s.Finalize  
MsgBox EncodingToHexMBS(m)
```

**Notes:** This class uses the CommonCrypto interface which is available on Mac OS X 10.4 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don’t need to apply for an export license for this classes here.

72.10.2 Methods

72.10.3 Constructor

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes the hash engine.

72.10.4 Finalize as Memoryblock

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Finalizes hash and returns digest as memoryblock.  
**Notes:** If you want to show the value to a human, please use EncodingToHexMBS function.

72.10.5 SHA1(data as Ptr, dataLength as Integer) as Memoryblock

**Notes:** Simply pass in a memoryblock with data and the size in bytes and receive digest as memoryblock.  
If you need to show digest to human, please use EncodingToHexMBS function.  
See also:

- 72.10.6 SHA1(data as String) as Memoryblock
72.10. CLASS CCSHA1MBS

72.10.6 SHA1(data as String) as Memoryblock

Example:

```vba
dim m as MemoryBlock = CCSHA1MBS.SHA1("The quick brown fox jumps over the lazy dog")
MsgBox EncodingToHexMBS(m)
```

Notes: Simply pass in a string and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.

See also:

- 72.10.5 SHA1(data as Ptr, dataLength as Integer) as Memoryblock

72.10.7 Update(data as Ptr, dataLength as UInt64)

Notes: Pass memoryblock and data length in bytes.

See also:

- 72.10.8 Update(data as string)

72.10.8 Update(data as string)

Notes: Pass string with data.

See also:

- 72.10.7 Update(data as Ptr, dataLength as UInt64)
CHAPTER 72. ENCRYPTION AND HASH

72.11 class CCSHA224MBS

72.11.1 class CCSHA224MBS

Example:

dim s as new CCSHA224MBS
s.Update "The quick brown fox jumps over the lazy dog"

dim m as MemoryBlock = s.Finalize
MsgBox EncodingToHexMBS(m)

Notes: This class uses the CommonCrypto interface which is available on Mac OS X 10.5 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don’t need to apply for an export license for this classes here.

72.11.2 Methods

72.11.3 Constructor

72.11.4 Finalize as Memoryblock

Notes: If you want to show the value to a human, please use EncodingToHexMBS function.

72.11.5 SHA224(data as Ptr, dataLength as Integer) as Memoryblock

Notes: Simply pass in a memoryblock with data and the size in bytes and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 72.11.6 SHA224(data as String) as Memoryblock
72.11.  CLASS CCSHA224MBS

72.11.6  SHA224(data as String) as Memoryblock

**Example:**

```vbnet
dim m as MemoryBlock = CCSHA224MBS.SHA224("The quick brown fox jumps over the lazy dog")
MsgBox EncodingToHexMBS(m)
```

**Notes:** Simply pass in a string and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.

See also:

- 72.11.5 SHA224(data as Ptr, dataLength as Integer) as Memoryblock

72.11.7  Update(data as Ptr, dataLength as UInt64)

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Processes some data.

**Notes:** Pass memoryblock and data length in bytes.

See also:

- 72.11.8 Update(data as string)

72.11.8  Update(data as string)

MBS MacOSX Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Processes some data.

**Notes:** Pass string with data.

See also:

- 72.11.7 Update(data as Ptr, dataLength as UInt64)
72.12 class CCSHA256MBS

72.12.1 class CCSHA256MBS

Example:

```vbnet
dim s as new CCSHA256MBS
s.Update "The quick brown fox jumps over the lazy dog"

dim m as MemoryBlock = s.Finalize
MsgBox EncodingToHexMBS(m)
```

Notes: This class uses the CommonCrypto interface which is available on Mac OS X 10.4 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don’t need to apply for an export license for this classes here.

72.12.2 Methods

72.12.3 Constructor

72.12.4 Finalize as Memoryblock

Notes: If you want to show the value to a human, please use EncodingToHexMBS function.

72.12.5 SHA256(data as Ptr, dataLength as Integer) as Memoryblock

Notes: Simply pass in a memoryblock with data and the size in bytes and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.

See also:

- 72.12.6 SHA256(data as String) as Memoryblock

72.13.6 SHA384(data as String) as Memoryblock

Example:

```pascal
dim m as MemoryBlock = CCSHA384MBS.SHA384("The quick brown fox jumps over the lazy dog")
MsgBox EncodingToHexMBS(m)
```

Notes: Simply pass in a string and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.

See also:

- 72.13.5 SHA384(data as Ptr, dataLength as Integer) as Memoryblock

72.13.7 Update(data as Ptr, dataLength as UInt64)

Notes: Pass memoryblock and data length in bytes.

See also:

- 72.13.8 Update(data as string)

72.13.8 Update(data as string)

Notes: Pass string with data.

See also:

- 72.13.7 Update(data as Ptr, dataLength as UInt64)
72.14 class CCSHA512MBS

72.14.1 class CCSHA512MBS

Example:

dim s as new CCSHA512MBS
s.Update "The quick brown fox jumps over the lazy dog"

dim m as MemoryBlock = s.Finalize
MsgBox EncodingToHexMBS(m)

Notes: This class uses the CommonCrypto interface which is available on Mac OS X 10.4 or newer and also on iOS. So you can use it to get the same results on both operation systems. Also as you simply use Apple provided encryption, you don’t need to apply for an export license for this classes here.

72.14.2 Methods

72.14.3 Constructor

72.14.4 Finalize as Memoryblock

Notes: If you want to show the value to a human, please use EncodingToHexMBS function.

72.14.5 SHA512(data as Ptr, dataLength as Integer) as Memoryblock

Notes: Simply pass in a memoryblock with data and the size in bytes and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 72.14.6 SHA512(data as String) as Memoryblock
72.14. CLASS CCSHA512MBS

72.14.6 SHA512(data as String) as Memoryblock

Example:

```vbs
dim m as MemoryBlock = CCSHA512MBS.SHA512(“The quick brown fox jumps over the lazy dog”) MsgBox EncodingToHexMBS(m)
```

Notes: Simply pass in a string and receive digest as memoryblock. If you need to show digest to human, please use EncodingToHexMBS function.
See also:

- 72.14.5 SHA512(data as Ptr, dataLength as Integer) as Memoryblock

72.14.7 Update(data as Ptr, dataLength as UInt64)

Notes: Pass memoryblock and data length in bytes.
See also:

- 72.14.8 Update(data as string)

72.14.8 Update(data as string)

Notes: Pass string with data.
See also:

- 72.14.7 Update(data as Ptr, dataLength as UInt64)
72.15  class CipherMBS

72.15.1  class CipherMBS

**Function:** The high level cipher class using OpenSSL encryption.  
**Example:**

```vbnet
dim c as CipherMBS = CipherMBS.aes_128_cfb128
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

dim a as new AESMBS

call a.SetKey CKey, 128

dim output2 as string = a.EncryptCFB128(data, CIV)

MsgBox EncodeHex(output1)+EndOfLine+EncodeHex(output2)
```

**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

72.15.2  Methods

72.15.3  aes_128_cbc as CipherMBS

**Function:** Returns the cipher.  
**Example:**

```vbnet
dim key as string = ”mysecretkey”
dim encrypted as string = ”6IcB9bpDwOjjONErhYQ6c7+Fb4qszsUNZVU0iThLYqOu7chJ7MG2nwSpRBuY0ZC3”

encrypted = DecodeBase64(encrypted)

dim c as CipherMBS = CipherMBS.aes_128_cbc
call c.DecryptInit key
```
dim s as string = c.ProcessString(Encrypted)+c.FinalizeAsString

Break // "In welcher Stadt steht das Bundeshaus?" is now in s.

72.15.4  aes_128_ccm as CipherMBS

Function: Returns the cipher.

72.15.5  aes_128_cfb1 as CipherMBS

Function: Returns the cipher.

72.15.6  aes_128_cfb128 as CipherMBS

Function: Returns the cipher.
Example:

dim c as CipherMBS = CipherMBS.aes_128_cfb128
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

dim a as new AESMBS
call a.SetKey CKey, 128
dim output2 as string = a.EncryptCFB128(data, CIV)

MsgBox EncodeHex(output1)+EndOfLine+EncodeHex(output2)
72.15.7  aes_128_cfb8 as CipherMBS

Function: Returns the cipher.

72.15.8  aes_128_ctr as CipherMBS

Function: Returns the cipher.

72.15.9  aes_128_ecb as CipherMBS

Function: Returns the cipher.

72.15.10 aes_128_gcm as CipherMBS

Function: Returns the cipher.

72.15.11 aes_128_ofb as CipherMBS

Function: Returns the cipher.

72.15.12 aes_128_xts as CipherMBS

Function: Returns the cipher.
Example:

dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.aes_128_xts
call c.EncryptInit Ckey, CIV
72.15. CLASS CIPHERMBS

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.aes_128_xts
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypted via " + c.Name + " as hex: " + EncodeHex(output1) + EndOfLine + "Decrypted: " + output2

72.15.13  aes_192_cbc as CipherMBS

**Function:** Returns the cipher.

72.15.14  aes_192_ccm as CipherMBS

**Function:** Returns the cipher.

72.15.15  aes_192_cfb1 as CipherMBS

**Function:** Returns the cipher.

72.15.16  aes_192_cfb128 as CipherMBS

**Function:** Returns the cipher.

72.15.17  aes_192_cfb8 as CipherMBS

**Function:** Returns the cipher.
72.15.18  aes_192_ctr as CipherMBS

Function: Returns the cipher.

72.15.19  aes_192_ecb as CipherMBS

Function: Returns the cipher.

72.15.20  aes_192_gcm as CipherMBS

Function: Returns the cipher.

72.15.21  aes_192_ofb as CipherMBS

Function: Returns the cipher.

72.15.22  aes_256_cbc as CipherMBS

Function: Returns the cipher.
Example:

    dim CKey as MemoryBlock = "1234567812345678"
    dim CIV as MemoryBlock
    dim data as string = "Hello World. Just a test!"

    dim c as CipherMBS = CipherMBS.aes_256_cbc
    call c.EncryptInit Ckey, CIV

    dim output1 as string = c.ProcessString(data)
    output1 = output1 + c.FinalizeAsString

    CIV = nil
72.15. **CLASS CIPHERMBS**

c = CipherMBS.aes_256_cbc

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypted via " + c.Name + " as hex: " + EncodeHex(output1) + EndOfLine + "Decrypted: " + output2

### 72.15.23 **aes_256_ccm as CipherMBS**

**Function:** Returns the cipher.

### 72.15.24 **aes_256_cfb1 as CipherMBS**

**Function:** Returns the cipher.

### 72.15.25 **aes_256_cfb128 as CipherMBS**

**Function:** Returns the cipher.

**Example:**

dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.aes_256_cfb128
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.aes_256_cfb128
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString
CHAPTER 72.  ENCRYPTION AND HASH

MsgBox "Encrypted via " + c.Name + " as hex: " + EncodeHex(output1) + EndOfLine + "Decrypted: " + output2

72.15.26 aes_256_cfb8 as CipherMBS

Function: Returns the cipher.

72.15.27 aes_256_ctr as CipherMBS

Function: Returns the cipher.

72.15.28 aes_256_ecb as CipherMBS

Function: Returns the cipher.
Example:

```vbs
Dim c As CipherMBS = CipherMBS.aes_256_ecb
Dim CKey As MemoryBlock = "1234567812345678"
Dim CIV As MemoryBlock
Dim data As String = "Hello World. Just a test!"

Call c.EncryptInit Ckey, CIV

Dim output1 As String = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

C = CipherMBS.aes_256_ecb
CIV = nil

Call c.DecryptInit Ckey, CIV

Dim output2 As String = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypted as hex: " + EncodeHex(output1) + EndOfLine + "Decrypted: " + output2
```
72.15. **CLASS CIPHERMBS**

72.15.29  **aes_256_gcm as CipherMBS**

**Function:** Returns the cipher.

72.15.30  **aes_256_ofb as CipherMBS**

**Function:** Returns the cipher.

72.15.31  **aes_256_xts as CipherMBS**

**Function:** Returns the cipher.

72.15.32  **bf_cbc as CipherMBS**

**Function:** Returns the cipher for Blowfish with CBC mode.

72.15.33  **bf_cfb64 as CipherMBS**

**Function:** Returns the cipher for Blowfish with CFB64 mode.

**Example:**

```vbscript
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.bf_cfb64
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.bf_cfb64
call c.DecryptInit Ckey, CIV
```
dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypred via "+c.Name+" as hex: "+EncodeHex(output1)+EndOfLine+"Decrypted: "+output2

### 72.15.34 bf_ecb as CipherMBS

**Function:** Returns the cipher for Blowfish with ECB mode.

### 72.15.35 bf_ofb as CipherMBS

**Function:** Returns the cipher for Blowfish with OFB mode.

### 72.15.36 BytesToKey(cipher as CipherMBS, digest as DigestMBS, Salt as MemoryBlock, InputKey as Memoryblock, IterationCount as Integer, byref OutputKey as memoryblock, byref IV as memoryblock) as boolean

**Function:** Derives a key and IV from a given input data.
**Notes:**
Returns true on success or false on failure.

BytesToKey() derives a key and IV from various parameters. type is the cipher to derive the key and IV for. md is the message digest to use. The salt parameter is used as a salt in the derivation: it should point to an 8 byte buffer or nil if no salt is used. data is a buffer containing datal bytes which is used to derive the keying data. count is the iteration count to use. The derived key and IV will be written to key and iv respectively.

A typical application of this function is to derive keying material for an encryption algorithm from a password in the data parameter.

Increasing the count parameter slows down the algorithm which makes it harder for an attacker to perform a brute force attack using a large number of candidate passwords.

If the total key and IV length is less than the digest length and MD5 is used then the derivation algorithm
is compatible with PKCS# 5 v1.5 otherwise a non standard extension is used to derive the extra data.

Newer applications should use more standard algorithms such as PBKDF2 as defined in PKCS# 5v2.1 for key derivation.

**Key Derivation Algorithm**

The key and IV is derived by concatenating D_1, D_2, etc until enough data is available for the key and IV. D_i is defined as:

\[
D_i = \text{HASH}^{\text{count}}(D_{i-1} \| \text{data} \| \text{salt})
\]

where \( \| \) denotes concatenation, D_0 is empty, HASH is the digest algorithm in use, HASH^1(data) is simply HASH(data), HASH^2(data) is HASH(HASH(data)) and so on.

The initial bytes are used for the key and the subsequent bytes for the IV.

**72.15.37 camellia_128_cbc as CipherMBS**

**72.15.38 camellia_128_cfb1 as CipherMBS**

**72.15.39 camellia_128_cfb128 as CipherMBS**

**72.15.40 camellia_128_cfb8 as CipherMBS**

72.15.41 camellia_128_ecb as CipherMBS

Function: Returns the cipher.

72.15.42 camellia_128_ofb as CipherMBS

Function: Returns the cipher.

72.15.43 camellia_192_cbc as CipherMBS

Function: Returns the cipher.

72.15.44 camellia_192_cfb1 as CipherMBS

Function: Returns the cipher.

72.15.45 camellia_192_cfb128 as CipherMBS

Function: Returns the cipher.

72.15.46 camellia_192_cfb8 as CipherMBS

Function: Returns the cipher.
72.15. **CLASS CIPHERMBS**

72.15.47 **camellia_192_ecb as CipherMBS**

**Function:** Returns the cipher.

72.15.48 **camellia_192_ofb as CipherMBS**

**Function:** Returns the cipher.

72.15.49 **camellia_256_cbc as CipherMBS**

**Function:** Returns the cipher.  
**Example:**

```vba
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.camellia_256_cbc
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.camellia_256_cbc
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypted via " + c.Name +" as hex:" + EncodeHex(output1) + EndOfLine + "Decrypted: " + output2
```

72.15.50 **camellia_256_cfb1 as CipherMBS**

**Function:** Returns the cipher.
72.15.51 camellia_256_cfb128 as CipherMBS

**Function:** Returns the cipher.

72.15.52 camellia_256_cfb8 as CipherMBS

**Function:** Returns the cipher.

72.15.53 camellia_256_ecb as CipherMBS

**Function:** Returns the cipher.

72.15.54 camellia_256_ofb as CipherMBS

**Function:** Returns the cipher.

72.15.55 cast5_cbc as CipherMBS

**Function:** Returns the cipher.

72.15.56 cast5_cfb64 as CipherMBS

**Function:** Returns the cipher.

72.15.57 cast5_ecb as CipherMBS

**Function:** Returns the cipher.
72.15. CLASS CIPHERMBS

72.15.58 cast5_ofb as CipherMBS

**Function:** Returns the cipher.

72.15.59 CipherByName(name as string) as CipherMBS

**Function:** Finds a cipher by name.
**Notes:**
Possible names:

72.15.60 CipherInit(key as memoryblock, IV as memoryblock, Encrypt as boolean) as Boolean

**Function:** Initializes the cipher for encryption or decryption.
**Notes:**
We added for 17.3 a new boolean result:

Returns true in case of success and key length is okay.
Returns false in case of failures like out of memory, wrong key length.

Even if key length is wrong, we initialize (as with older versions before) but may crop the key length to default length.
AES 128 uses 16 byte key length, AES 256 uses 32 byte key length.
Key and IV are both filled with zeros to reach the minimum length.
key: The key to use.
IV: Optional, the initial vector.

You can use IVLength and KeyLength properties to learn how long those should be.

### 72.15.61 Clear

**Function:** Clears the current state.

### 72.15.62 Constructor

**Function:** The private constructor.

### 72.15.63 DecryptInit(key as memoryblock, IV as memoryblock = nil) as Boolean

**Function:** Initializes the cipher for decrypting.

**Example:**

```vbnet
dim key as string = "mysecretkey"
dim encrypted as string = "6IcB9bpDwOjjONErhYQ6c7+Fb4qszsUNZVU0iTlHYqOu7chJ7MG2nwSpRBuY0ZC3"
encrypted = DecodeBase64(encrypted)
dim c as CipherMBS = CipherMBS.aes_128_cbc
call c.DecryptInit key
dim s as string = c.ProcessString(Encrypted)+c.FinalizeAsString
```

Break // "In welcher Stadt steht das Bundestag?" is now in `s`.

**Notes:**

We added for 17.3 a new boolean result:

Returns true in case of success and key length is okay.
72.15. **CLASS CIPHERMBS**

Returns false in case of failures like out of memory, wrong key length.

Even if key length is wrong, we initialize (as with older versions before) but may crop the key length to default length.

AES 128 uses 16 byte key length, AES 256 uses 32 byte key length.

Key and IV are both filled with zeros to reach the minimum length.

**key**: The key to use.

**IV**: Optional, the initial vector.

You can use IVLength and KeyLength properties to learn how long those should be.

### 72.15.64 **desx_cbc as CipherMBS**

**Function**: Returns the cipher for DESX algorithm in CBC mode.

### 72.15.65 **des_cbc as CipherMBS**

**Function**: Returns the cipher for DES in CBC.

### 72.15.66 **des_cfb1 as CipherMBS**

**Function**: Returns the cipher for DES in CFB.

### 72.15.67 **des_cfb64 as CipherMBS**

**Function**: Returns the cipher for DES in CFB.

### 72.15.68 **des_cfb8 as CipherMBS**

**Function**: Returns the cipher for DES in CFB.
72.15.69 des_ecb as CipherMBS

**Function:** Returns the cipher for DES in ECB.

72.15.70 des_ede as CipherMBS

**Function:** Returns the cipher.

72.15.71 des_ede3 as CipherMBS

**Function:** Returns the cipher.

72.15.72 des_ede3_cbc as CipherMBS

**Function:** Returns the cipher.

72.15.73 des_ede3_cfb1 as CipherMBS

**Function:** Returns the cipher.

72.15.74 des_ede3_cfb64 as CipherMBS

**Function:** Returns the cipher.
72.15.75  desede3_cfb8 as CipherMBS

Function: Returns the cipher.

72.15.76  desede3_ecb as CipherMBS

Function: Returns the cipher.

72.15.77  desede3_ofb as CipherMBS

Function: Returns the cipher.

72.15.78  desede_cbc as CipherMBS

Function: Returns the cipher.

72.15.79  desede_cfb64 as CipherMBS

Function: Returns the cipher.

72.15.80  desede_ecb as CipherMBS

Function: Returns the cipher.

72.15.81  desede_ofb as CipherMBS

Function: Returns the cipher.
72.15.82 des_ofb as CipherMBS

**Function:** Returns the cipher for DES in OFB.

72.15.83 EncryptInit(key as memoryblock, IV as memoryblock = nil) as Boolean

**Function:** Initializes the cipher for encrypting.

**Example:**
```vba
dim c as CipherMBS = CipherMBS.aes_128_cfb128
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output as string = c.ProcessString(data)
output = output + c.FinalizeAsString

MsgBox EncodeHex(output)
```

**Notes:**
We added for 17.3 a new boolean result:

- Returns true in case of success and key length is okay.
- Returns false in case of failures like out of memory, wrong key length.

Even if key length is wrong, we initialize (as with older versions before) but may crop the key length to default length.
AES 128 uses 16 byte key length, AES 256 uses 32 byte key length.
Key and IV are both filled with zeros to reach the minimum length.

- key: The key to use.
- IV: Optional, the initial vector.

You can use IVLength and KeyLength properties to learn how long those should be.
72.15.84 FinalizeAsMemory as memoryblock

Function: Finalizes en/decryption and returns last data.

72.15.85 FinalizeAsString as String

Function: Finalizes en/decryption and returns last data.
Example:

```vbs
dim c as CipherMBS = CipherMBS.aes_128_cfb128
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"
call c.EncryptInit Ckey, CIV

dim output as string = c.ProcessString(data)
output = output + c.FinalizeAsString
MsgBox EncodeHex(output)
```

Notes:
Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.

72.15.86 idea_cbc as CipherMBS

Function: Returns the cipher for IDEA encryption algorithm in CBC.

72.15.87 idea_cfb64 as CipherMBS

Function: Returns the cipher for IDEA encryption algorithm in CFB.
72.15.88 idea_ecb as CipherMBS

Function: Returns the cipher for IDEA encryption algorithm in ECB.

72.15.89 idea_ofb as CipherMBS

Function: Returns the cipher for IDEA encryption algorithm in OFB.

72.15.90 MaxBlockLength as Integer

Function: Maximum possible block length size for any cipher.

72.15.91 MaxIVLength as Integer

Function: Maximum possible IV vector size for any cipher.

72.15.92 MaxKeyLength as Integer

Function: Maximum possible key length size for any cipher.

72.15.93 ProcessFile(InputFile as FolderItem, OutputFile as FolderItem) as boolean

Function: Processes content of file.
Notes:
Plugin will start a preemptive thread to read in file and process all data in chunks and write to output file. Returns true on success or false on failure. May raise OutOfMemoryException or IOException. This function works best if called from a thread.
72.15. CLASS CIPHERMBS

72.15.94 ProcessMemory(data as memoryblock) as MemoryBlock

**Function:** Processes data in a memory block.
**Notes:** due to block sizes, the result may be longer or shorter than the input size.

72.15.95 ProcessString(data as String) as string

**Function:** Processes data in a string.
**Example:**
```vba
dim key as string = "mysecretkey"
dim encrypted as string = "6IcB9bpDwOjjONErhYQ6c7+Fb4qszsUNZVU0iThLYqOu7chJ7MG2nwSpRBUY0ZC3"
encrypted = DecodeBase64(encrypted)
dim c as CipherMBS = CipherMBS.aes_128_cbc
call c.DecryptInit key
dim s as string = c.ProcessString(Encrypted)+c.FinalizeAsString
Break // "In welcher Stadt steht das Bundeshaus?" is now in s.
```
**Notes:**
due to block sizes, the result may be longer or shorter than the input size.

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.

72.15.96 rc2_40_cbc as CipherMBS

**Function:** Returns the cipher.
72.15.97  rc2_64_cbc as CipherMBS

**Function:** Returns the cipher.

```vbscript
Dim CKey As MemoryBlock = "1234567812345678"
Dim CIV As MemoryBlock
Dim data As String = "Hello World. Just a test!"
Dim c As CipherMBS = CipherMBS.rc2_64_cbc
Call c.EncryptInit Ckey, CIV
Dim output1 As String = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString
CIV = Nothing
C = CipherMBS.rc2_64_cbc
Call c.DecryptInit Ckey, CIV
Dim output2 As String = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString
MsgBox "Encrypted as hex: " + EncodeHex(output1) + vbCrLf + "Decrypted: " + output2
```

72.15.98  rc2_cbc as CipherMBS

**Function:** Returns the cipher.
**Example:**
```vbscript
Dim CKey As MemoryBlock = "1234567812345678"
Dim CIV As MemoryBlock
Dim data As String = "Hello World. Just a test!"
Dim c As CipherMBS = CipherMBS.rc2_cbc
Call c.EncryptInit Ckey, CIV
Dim output1 As String = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString
CIV = Nothing
C = CipherMBS.rc2_cbc
Call c.DecryptInit Ckey, CIV
Dim output2 As String = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString
MsgBox "Encrypted as hex: " + EncodeHex(output1) + vbCrLf + "Decrypted: " + output2
```

72.15.99  rc2_cfb64 as CipherMBS

**Function:** Returns the cipher.
**Example:**
```vbscript
Dim CKey As MemoryBlock = "1234567812345678"
Dim CIV As MemoryBlock
Dim data As String = "Hello World. Just a test!"
Dim c As CipherMBS = CipherMBS.rc2_cfb64
Call c.EncryptInit Ckey, CIV
```
72.15. CLASS CIPHERMBS

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.rc2_cfb64
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypted as hex: " + EncodeHex(output1) + EndOfLine + "Decrypted: " + output2

72.15.100 rc2_ecb as CipherMBS

Function: Returns the cipher.
Example:

dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

dim c as CipherMBS = CipherMBS.rc2_ecb
call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

CIV = nil
c = CipherMBS.rc2_ecb
call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Encrypted as hex: " + EncodeHex(output1) + EndOfLine + "Decrypted: " + output2

72.15.101 rc2_ofb as CipherMBS

Function: Returns the cipher.
Example:
CHAPTER 72. ENCRYPTION AND HASH

72.15.102  rc4 as CipherMBS

Function: Returns the cipher.
Example:

dim c as CipherMBS = CipherMBS.rc4
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"
call c.EncryptInit Ckey, CIV
dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString
MsgBox "Encrypted as hex: " + EncodeHex(output1)
c = CipherMBS.rc4
CIV = nil
call c.DecryptInit Ckey, CIV
dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString
MsgBox "Decrypted: " + output2
72.15. CLASS CIPHERMBS

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: " + output2
**72.15.103  rc4_40 as CipherMBS**

**Function:** Returns the cipher.

**Example:**

```vba
dim c as CipherMBS = CipherMBS.rc4_40
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypted as hex: " + EncodeHex(output1)

c = CipherMBS.rc4_40
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: " + output2
```

---

**72.15.104  rc4_hmac_md5 as CipherMBS**

**Function:** Returns the cipher.

**Example:**

```vba
dim c as CipherMBS = CipherMBS.rc4_hmac_md5
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypted as hex: " + EncodeHex(output1)
```
72.15. CLASS CIPHERMBS

\[
c = \text{CipherMBS.}rc4\_hmac\_md5
\]
\[
\text{CIV} \,= \, \text{nil}
\]
\[
\text{call} \, \text{c.}\text{DecryptInit Ckey, CIV}
\]
\[
\begin{align*}
\text{dim} \, \text{output2 as string} & = \text{c.}\text{ProcessString(output1)} \\
\text{output2} & = \text{output2} + \text{c.}\text{FinalizeAsString}
\end{align*}
\]
\[
\text{MsgBox "Decrypted: "} + \text{output2}
\]

---

72.15.105 rc5\_32\_12\_16\_cbc as CipherMBS

**Function:** Returns the cipher.

**Example:**

\[
\begin{align*}
\text{dim} \, \text{c as CipherMBS} & = \text{CipherMBS.}rc5\_32\_12\_16\_cbc \\
\text{dim} \, \text{CKey as MemoryBlock} & = \text{"1234567812345678"} \\
\text{dim} \, \text{CIV as MemoryBlock} \\
\text{dim} \, \text{data as string} & = \text{"Hello World. Just a test!"}
\end{align*}
\]
\[
\text{call} \, \text{c.}\text{EncryptInit Ckey, CIV}
\]
\[
\begin{align*}
\text{dim} \, \text{output1 as string} & = \text{c.}\text{ProcessString(data)} \\
\text{output1} & = \text{output1} + \text{c.}\text{FinalizeAsString}
\end{align*}
\]
\[
\text{MsgBox "Encrypted as hex: "} + \text{EncodeHex(output1)}
\]
\[
\begin{align*}
\text{c} & = \text{CipherMBS.}rc5\_32\_12\_16\_cbc \\
\text{CIV} & = \text{nil}
\end{align*}
\]
\[
\text{call} \, \text{c.}\text{DecryptInit Ckey, CIV}
\]
\[
\begin{align*}
\text{dim} \, \text{output2 as string} & = \text{c.}\text{ProcessString(output1)} \\
\text{output2} & = \text{output2} + \text{c.}\text{FinalizeAsString}
\end{align*}
\]
\[
\text{MsgBox "Decrypted: "} + \text{output2}
\]

**Notes:** RC5 with CBC. 32 bit word size, 12 rounds, 16 byte key.
72.15.106  rc5_32_12_16_cfb64 as CipherMBS

Function: Returns the cipher.

Example:

dim c as CipherMBS = CipherMBS.rc5_32_12_16_cfb64
dim CKey as MemoryBlock = "1234567812345678"

dim CIV as MemoryBlock

dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypted as hex: " + EncodeHex(output1)

c = CipherMBS.rc5_32_12_16_cfb64
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: " + output2

Notes: RC5 with CFB64. 32 bit word size, 12 rounds, 16 byte key.

72.15.107  rc5_32_12_16_ecb as CipherMBS

Function: Returns the cipher.

Example:

dim c as CipherMBS = CipherMBS.rc5_32_12_16_ecb

dim CKey as MemoryBlock = "1234567812345678"

dim CIV as MemoryBlock

dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString
MsgBox "Encrypted as hex: " + EncodeHex(output1)

c = CipherMBS.rc5_32_12_16_ecb
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: " + output2

**Notes:** RC5 with ECB. 32 bit word size, 12 rounds, 16 byte key.

### 72.15.108 rc5_32_12_16_ofb as CipherMBS

**Function:** Returns the cipher.

**Example:**

dim c as CipherMBS = CipherMBS.rc5_32_12_16_ofb
dim CKey as MemoryBlock = "1234567812345678"
dim CIV as MemoryBlock
dim data as string = "Hello World. Just a test!"

call c.EncryptInit Ckey, CIV

dim output1 as string = c.ProcessString(data)
output1 = output1 + c.FinalizeAsString

MsgBox "Encrypted as hex: " + EncodeHex(output1)

c = CipherMBS.rc5_32_12_16_ofb
CIV = nil

call c.DecryptInit Ckey, CIV

dim output2 as string = c.ProcessString(output1)
output2 = output2 + c.FinalizeAsString

MsgBox "Decrypted: " + output2
Notes: RC5 with OFB. 32 bit word size, 12 rounds, 16 byte key.

72.15.109 seed_cbc as CipherMBS

Function: The cipher for a Seed CBC.

72.15.110 seed_cfb128 as CipherMBS

Function: Seed cipher for CFB128 mode.

72.15.111 seed_ecb as CipherMBS

Function: Cipher for seed ECB.

72.15.112 seed_ofb as CipherMBS

Function: Seed cipher for OFB mode.

72.15.113 SetPadding(padding as boolean)

Function: Enables padding.
Notes: On by default.

72.15.114 Properties

72.15.115 BlockSize as Integer

Function: Queries the block size for this cipher.
Notes: (Read only property)
72.15. CLASS CIPHERMBS

72.15.116 Encrypting as Boolean

**Function:** Whether the class is encrypting or decrypting.  
**Notes:**  
True if encrypting or false for decrypting.  
(Read only property)

72.15.117 Flags as Integer

**Function:** Queries the flags for the cipher.  
**Notes:** (Read only property)

72.15.118 IVLength as Integer

**Function:** Queries the size of the initialization vector.  
**Notes:** (Read only property)

72.15.119 KeyLength as Integer

**Function:** The key length.  
**Notes:** (Read and Write property)

72.15.120 Mode as Integer

**Function:** Queries cipher mode.  
**Notes:** (Read only property)

72.15.121 Name as String

**Function:** The name of the cipher engine.
72.15.122 Padding as Boolean

**Function:** Whether to apply padding or not.
**Example:**

```vbnet
dim c as CipherMBS = CipherMBS.aes_256_ctr

c.EncryptInit "Hello"

MsgBox "default: " + str(c.Padding)
c.Padding = false

MsgBox "set to false: " + str(c.Padding)
c.Padding = true

MsgBox "set to true: " + str(c.Padding)
```

**Notes:**
On by default.
(Read and Write property)

72.15.123 RC2KeyBits as Integer

**Function:** The number of bits for RC2.
**Notes:** (Read and Write property)

72.15.124 RC5Rounds as Integer

**Function:** The number of rounds for RC5.
**Notes:** (Read and Write property)
72.16. **CLASS DIGESTMBS**

72.16  **class DigestMBS**

72.16.1  **class DigestMBS**

**Function:** The OpenSSL class for calculating hashes.
**Example:**

```vbnet
dim d as DigestMBS = DigestMBS.MD5
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

72.16.2  **Methods**

72.16.3  **Clear**

**Function:** Clears the current state.

72.16.4  **Constructor**

**Function:** The private constructor.

72.16.5  **DigestByName(name as string) as DigestMBS**

**Function:** Queries a digest by name.
**Example:**

```vbnet
dim d as DigestMBS = DigestMBS.DigestByName("md5")
MsgBox str(d.Size)
```

**Notes:**
Returns nil if name is not registered.
May need string to be in upper case.

### 72.16.6 Final as memoryblock

**Function:** Finalizes the hash and returns it.

### 72.16.7 FinalText as String

**Function:** Finalizes the hash and returns it.
**Notes:** Returns text with hex encoding.

### 72.16.8 MD5 as DigestMBS

**Function:** Returns the cipher for MD5.
**Example:**
```
dim d as DigestMBS = DigestMBS.MD5
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

### 72.16.9 MDC2 as DigestMBS

**Function:** Returns the cipher for MDC2.
**Example:**
```
dim d as DigestMBS = DigestMBS.MDC2
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```
72.16. CLASS DIGESTMBS

72.16.10 Process(data as memoryblock)

Function: Adds more data to the hash.
See also:
- 72.16.11 Process(data as string) 12495
- 72.16.12 Process(file as FolderItem) as boolean 12495

72.16.11 Process(data as string)

Function: Adds more data to the hash.
See also:
- 72.16.10 Process(data as memoryblock) 12495
- 72.16.12 Process(file as FolderItem) as boolean 12495

72.16.12 Process(file as FolderItem) as boolean

Function: Processes content of file.
Notes:
Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns true on success or false on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
See also:
- 72.16.10 Process(data as memoryblock) 12495
- 72.16.11 Process(data as string) 12495

72.16.13 RipeMD160 as DigestMBS

Function: Returns the cipher for RipeMD160.
Example:

dim d as DigestMBS = DigestMBS.RipeMD160
d.Process ”Hello World”
dim result as string = EncodeHex(d.Final)
MsgBox result
72.16.14  SHA1 as DigestMBS

Function: Returns the cipher for SHA 1.
Example:

```vba
dim d as DigestMBS = DigestMBS.SHA1
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

72.16.15  SHA224 as DigestMBS

Function: Returns the cipher for SHA 224.
Example:

```vba
dim d as DigestMBS = DigestMBS.SHA224
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

72.16.16  SHA256 as DigestMBS

Function: Returns the cipher for SHA 256.
Example:

```vba
dim d as DigestMBS = DigestMBS.SHA256
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

72.16.17  SHA384 as DigestMBS

Function: Returns the cipher for SHA 384.
Example:
72.16. CLASS DIGESTMBS

```vbnet
dim d as DigestMBS = DigestMBS.SHA384
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

72.16.18 SHA512 as DigestMBS

**Function:** Returns the cipher for SHA512.
**Example:**
```vbnet
dim d as DigestMBS = DigestMBS.SHA512
d.Process "Hello World"
dim result as string = EncodeHex(d.Final)
MsgBox result
```

72.16.19 Properties

72.16.20 BlockSize as Integer

**Function:** Queries block size.
**Example:**
```vbnet
dim d as DigestMBS = DigestMBS.DigestByName("md5")
MsgBox str(d.BlockSize)
```

**Notes:** (Read only property)

72.16.21 Name as String

**Function:** The name of the digest engine.
**Notes:** (Read only property)
72.16.22  Size as Integer

**Function:** Queries size of digest.
**Example:**
```vbnet
dim d as DigestMBS = DigestMBS_SHA512
MsgBox str(d.Size)
```

**Notes:** (Read only property)
72.17. CLASS ECDHEMBS

72.17   class ECDHEMBS

72.17.1   class ECDHEMBS

Function: The class for ECDH key creation.
Notes:

Elliptic Curve Diffie Hellman (ECDH) is an Elliptic Curve variant of the standard Diffie Hellman algorithm. See Elliptic Curve Cryptography for an overview of the basic concepts behind Elliptic Curve algorithms. ECDH is used for the purposes of key agreement.

Constructor to create and map functions into the struct.
EC_Curve_NID An Elliptical Curve ID specified in the openssl header <openssl/obj_mac.h>. (e.g. NID_X9_62_prime256v1)

72.17.2   Methods

72.17.3   Constructor(CurveID as Integer)

Function: The constructor.
Notes: Creates a new key with the given CurveID, e.g. NID_X9_62_prime256v1.

72.17.4   DeriveSecretKey(peerKey as string) as string

Function: After receiving a public key from your peer, derive the secret key by combining the peer key with yours.
Notes: Returns a string (i.e. shared secret) that is the result of the EC DHE secret derivation. Never use a derived secret directly. Typically it is passed through some hash function to produce a key (e.g. SHA512).
peerKey: A string containing the peer’s public key.

72.17.5   Destructor

Function: The destructor.
Notes: Public keys and shared secrets should be copied before freeing memory as ecdhe owns the public
key and shared secret.

72.17.6 LastError as String

Function: The last error string.

72.17.7 PublicKey as string

Function: Queries the public key.
Example:
```
dim EC_Curve_ID as Integer = 415 // NID_X9_62_prime256v1
dim ec_dhe as new ECDHEMBS(EC_Curve_ID)
dim publicKey as string = ec_dhe.PublicKey
```
MsgBox publicKey

Notes: Returns a string (i.e. public key) to be shared with your peer; this can be accomplished over the network or by file.

72.17.8 Properties

72.17.9 CurveID as Integer

Function: The Curve ID used in constructor.
Notes: (Read only property)

72.17.10 CurveIDName as String

Function: The textual name of the used curve ID.
Notes: (Read only property)
**72.17. CLASS ECDHEMBS**

### 72.17.11 ParamsInfo as String

**Function:** Debug Information on the parameters used.
**Notes:** (Read only property)

### 72.17.12 PeerKeyInfo as String

**Function:** Debug Information on the peer key used.
**Notes:** (Read only property)

### 72.17.13 PrivateKeyInfo as String

**Function:** Debug Information on the private key used.
**Notes:** (Read only property)

### 72.17.14 Constants

#### 72.17.15 NID_secp112r1 = 704

MBS Encryption Plugin, Plugin Version: 13.4. **Function:** One of the curve constants.

72.17.61  NID_X9_62_c2pnb272w1 = 699

MBS Encryption Plugin, Plugin Version: 13.4. **Function:** One of the curve constants.

72.17.62  NID_X9_62_c2pnb304w1 = 700

MBS Encryption Plugin, Plugin Version: 13.4. **Function:** One of the curve constants.

72.17.63  NID_X9_62_c2pnb368w1 = 702

MBS Encryption Plugin, Plugin Version: 13.4. **Function:** One of the curve constants.

72.17.64  NID_X9_62_c2tnb191v1 = 688

MBS Encryption Plugin, Plugin Version: 13.4. **Function:** One of the curve constants.

72.17.65  NID_X9_62_c2tnb191v2 = 689

MBS Encryption Plugin, Plugin Version: 13.4. **Function:** One of the curve constants.
72.17.66 NID_X9_62_c2tnb191v3 = 690

72.17.67 NID_X9_62_c2tnb239v1 = 694

72.17.68 NID_X9_62_c2tnb239v2 = 695

72.17.69 NID_X9_62_c2tnb239v3 = 696

72.17.70 NID_X9_62_c2tnb359v1 = 701

72.17.71 NID_X9_62_c2tnb431r1 = 703

72.17.72 NID_X9_62_prime256v1 = 415

72.18 class ECKeyMBS

72.18.1 class ECKeyMBS

Function: The class for Elliptic Curve Digital Signature Algorithm.
Example:

const NID secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID secp192k1)

MsgBox key.Description

72.18.2 Methods

72.18.3 BuiltInCurves as Dictionary

Function: Queries built in curves.
Example:

// show curve IDs with description in listbox
dim d as Dictionary = ECKeyMBS.BuiltInCurves

for each key as Variant in d.keys
Listbox1.AddRow key, d.Value(key)
next

Notes:
The dictionary returned has as key the ID and the description as value.
The list looks like this:

72.18.4 Constructor

Function: The constructor.
72.18.5 Copy as ECKeyMBS

Function: Creates a copy of the key.

72.18.6 KeyByCurveName(CurveID as Integer) as ECKeyMBS

Function: Generates a new pair of private and public keys.
Example:
```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
```

MsgBox key.Description

Notes: You can use ReadPrivateKey and ReadPublicKey functions to get the keys.

72.18.7 OpenPrivateKey(Data as String) as ECKeyMBS

Function: Opens a private key.
Example:
```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
dim PrivateKeyData as string = key.PrivateKey

// read again
dim pub as ECKeyMBS = ECKeyMBS.OpenPrivateKey(PrivateKeyData)
MsgBox pub.Description
```

72.18.8 OpenPublicKey(Data as String, CurveID as Integer) as ECKeyMBS

Function: Opens a public key.
Example:
```
const NID_secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID_secp192k1)
```
72.18.  CLASS ECKEYMBS

dim pubKeyData as string = key.PublicKey

    // read again
    dim pub as ECKeyMBS = ECKeypMBS.OpenPublicKey(pubKeyData, NID_secp192k1)
    MsgBox pub.Description

72.18.9  PrivateKey as String

Function: Queries the private key.
Example:

    const NID_secp192k1 = 711
    dim key as ECKeyMBS = ECKeypMBS.KeyByCurveName(NID_secp192k1)
    dim Data as string = key.PrivateKey
    MsgBox EncodeBase64(data)

72.18.10  PublicKey as String

Function: Queries the public key.
Example:

    const NID_secp192k1 = 711
    dim key as ECKeyMBS = ECKeypMBS.KeyByCurveName(NID_secp192k1)
    dim Data as string = key.PublicKey
    MsgBox EncodeBase64(data)

72.18.11  Sign(Data as String) as String

Function: Signs the given data.
Example:

    const NID_secp192k1 = 711
    dim key as ECKeyMBS = ECKeypMBS.KeyByCurveName(NID_secp192k1)
    dim text as string = "Hello World"
    dim data as string = SHA512MBS.Hash(text)
    dim sig as string = key.Sign(data)
if key.Verify(data, sig) then
    MsgBox "Signature ok"
end if

Notes:
We highly recommend to use a hash like SHA-512 to preprocess the data.
Returns the signature as string on success.

72.18.12 Verify(SignatureData as String, Data as String) as Boolean

Function: Verifies the digital signature.
Example:
const NID secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID secp192k1)
dim text as string = "Hello World"
dim data as string = SHA512MBS.Hash(text)
dim sig as string = key.Sign(data)
if key.Verify(data, sig) then
    MsgBox "Signature ok"
end if

Notes:
Returns true on success. Returns false if data, signature and public key don’t belong together.
We highly recommend to use a hash like SHA-512 to preprocess the data.

72.18.13 Properties

72.18.14 Description as String

Function: Returns an user readable description text for the current key.
Example:
const NID secp192k1 = 711
dim key as ECKeyMBS = ECKeyMBS.KeyByCurveName(NID secp192k1)
MsgBox key.Description
Notes: (Read only property)

### 72.18.15 Flags as Integer

**Function:** The flag field.

**Notes:**

see OpenSSL for details.
(Read and Write property)

### 72.18.16 Size as Integer

**Function:** Returns size of key.

**Notes:** (Read only property)
SECG/WTLS curve over a 112 bit prime field
SECG curve over a 112 bit prime field
SECG curve over a 128 bit prime field

72.19  class EncryptMBS

72.19.1  class EncryptMBS

MBS Encryption Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This class does an encryption using a 104 Byte Key. **Deprecated:** This item is deprecated and should no longer be used. You can use CipherMBS instead. **Notes:**

Fixed with version 8.1 to work on 64-bit.

This class is kept for compatibility. On new projects please use the blowfishMBS class which offers more options. And two easy usable shared methods to quickly encrypt and decrypt.

Create a EncryptMBS Object using "e=new EncryptMBS". Then initialize it with your password using "e.init(password)". Now you can call Encode and Decode to get your data encrypted. The GetKey function is only for you to verify if it is working correctly. For the same password, you should always get the same key and the same result for the same data. **Known issues:**

The data length must be aligned to 8 bytes for best results. e.g. "Hello World!" has a length of 12 bytes and the encode function will only do the first 8 bytes.

The result on Mac and Windows is not the same! See also AESMBS class and BlowfishMBS class.

72.19.2  Methods

72.19.3  Decode(data as string) as string

MBS Encryption Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Decodes the string using the key. **Example:**

```vbs
dim e as new EncryptMBS

e.Init "password"
dim encoded as string = e.encode("Hello World")
MsgBox e.Decode(encoded)
```

**Notes:**

Does nothing without you calling Init before to generate a key. The result is not the same for BigEndian and LittleEndian CPUs.
The strings returned are marked to have the encoding Binary.

**72.19.4 Encode(data as string) as string**

MBS Encryption Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Encodes the string using the key.

**Example:**

```vbs
dim e as new EncryptMBS

e.Init "password"

msgbox e.encode("Hello World")
```

**Notes:**

Does nothing without you calling Init before to generate a key.
The result is a binary string which can contain any ASCII value and may not be printable.
The result is not the same for BigEndian and LittleEndian CPUs.
The strings returned are marked to have the encoding Binary.

Returned string does not contain text, but binary data. Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.

**72.19.5 Init(password as string)**

MBS Encryption Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Generates the key needed for encryption based on the provided keyword.

**Example:**

```vbs
dim e as new EncryptMBS
e.init("mypassword")
```

**72.19.6 Key as string**

MBS Encryption Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the key used inside the encryption object.

**Example:**
dim e as new EncryptMBS
e.Init "Hello"
msgbox e.key

Notes: Call Init to generate this key before.
72.20 class MD5DigestMBS

72.20.1 class MD5DigestMBS

Notes:
Same class as the one in RB5, so the same documentation:

The MD5Digest class enables you to process a string in segments. Pass each string segment to the Process method. The value property contains the current message digest and the clear method clears the MD5Digest object so that you can repeat the process.

The MD5 message digest algorithm takes a message of any length and produces a 128-bit "fingerprint" or message digest of the input string. The MD5 algorithm is useful for digital signature applications, where a large file must be processed in a secure manner before being encrypted with a secret key under a system such as RSA.

72.20.2 Methods

72.20.3 clear

MBS Encryption Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Resets the MD5Digest object so that you can start with a new data stream.

72.20.4 HashFile(file as FolderItem, Hex as boolean = true) as string

Notes:
Plugin will start a preemptive thread to read in file and process all data in chunks. Returns hash on success or empty string on failure. May raise OutOfMemoryException or IOException. This function works best if called from a thread. If hex is true, the result is encoded as hex string.
72.20. CLASS MD5DIGESTMBS

72.20.5 HMAC(key as string, data as string) as string

Function: Returns the a specific HASH based on the key and the data string.

72.20.6 MD5(data as memoryblock) as string

Function: Returns the MD5 message digest value of a string.
See also:
- 72.20.7 MD5(data as string) as string

72.20.7 MD5(data as string) as string

Function: Returns the MD5 message digest value of a string.
Example:
// Compare RB5 MD5 to the one from MBS

dim a,b as String

a=MD5("Hallo")
b=MD5DigestMBS.MD5("Hallo")

msgbox str(StrComp(a,b,0))

Notes: Same as the MD5 function in RB5.
See also:
- 72.20.6 MD5(data as memoryblock) as string

72.20.8 MD5String(data as memoryblock) as string

Function: Returns the MD5 message digest value of a memoryblock as hex string.
See also:
- 72.20.9 MD5String(data as string) as string
72.20.9  MD5String(data as string) as string

Function: Returns the MD5 message digest value of a string as hex string.
Example:

// Compare RB5 MD5 to the one from MBS

dim a,b as String

a=EncodingToHexMBS(MD5("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern"))
b=MD5DigestMBS.MD5String("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")

msgbox a+EndOfLine+b+EndOfLine+str(StrComp(a,b,0))

See also:

• 72.20.8 MD5String(data as memoryblock) as string

72.20.10  Process(data as memoryblock)

Function: Processes the given data.
See also:

• 72.20.11 Process(Data as string)

72.20.11  Process(Data as string)

Function: Processes the given data.
Example:

dim f as FolderItem
dim b as BinaryStream
dim s as string
dim m as new MD5DigestMBS
dim lines(-1) as string

// process file part by part (big files)

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

while not b.eof
72.20. CLASS MD5DIGESTMBS

```
s=b.Read(1000000)
m.Process s
wend

lines.append EncodingToHexMBS(m.Value) + " using plugin with MD5DigestMBS"

dim d as new MD5Digest

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

while not b.eof
s=b.Read(1000000)
d.Process s
wend

lines.append EncodingToHexMBS(d.Value) + " using RB with MD5Digest"

// process file in one chunk (small files)

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

s=b.Read(b.Length)

lines.append EncodingToHexMBS(MD5MBS(s)) + " using plugin with MD5MBS()"

f=SpecialFolder.Desktop.Child("test.jpg")
b=f.OpenAsBinaryFile(False)

s=b.Read(b.length)

lines.append EncodingToHexMBS(MD5(s)) + " using RB with MD5()"

MsgBox Join(lines,EndOfLine)
```

See also:

- 72.20.10 Process(data as memoryblock)
72.20.12 Properties

72.20.13 Value as string

MBS Encryption Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Contains the current message digest. Notes: (Read only property)
72.21.1 class OldAESMBS

MBS Encryption Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for AES encryption.

**Example:**

```vbscript
    dim a as OldAESMBS
    dim key as MemoryBlock
    dim data as MemoryBlock

    key=NewMemoryBlock(20)
    key.CString(0)="Hello World!1234" // 16 byte key for 128bit

    a=new OldAESMBS
    if a.SetKey(key, 128) then

        data=NewMemoryBlock(20)
        data.StringValue(0,16)="Hello World!"
        MsgBox "Before: "+data.StringValue(0,16)
        a.Encrypt(data)
        MsgBox "After encryption: "+data.StringValue(0,16)
        a.Decrypt(data)
        MsgBox "After decryption: "+data.StringValue(0,16)
    else
        MsgBox "Failed"
    end if
```

**Deprecated:** This item is deprecated and should no longer be used. You can use AESMBS instead. **Notes:**

Please don’t use this class. This class is deprecated and just kept for compatibility. This class will not be available in 64bit.

This class has low level functions like Encrypt. It also has mid level functions like EncryptCFB/CBC. For your convenience, we also have high level functions like EncryptString.
72.21.2 Methods

72.21.3 Decrypt(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

Function: Decrypts the first 16 bytes in the input memoryblock at the given offset and stores the result in the output memoryblock at the given offset.
Notes:
If odata is nil, idata is used for output.
This is ECB mode.

72.21.4 DecryptCBC(idata as memoryblock, LengthBytes as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

Function: Decrypts the 16 byte data blocks within LengthBytes bytes in the data.
Notes:
If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.

72.21.5 DecryptCFB(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

Function: Decrypts the data in CFB128 mode.
Notes:
If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset saves the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.
72.21.6 DecryptCFBOld(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

Function: Decrypts the data in CFB128 mode.
Notes:
If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset saves the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

72.21.7 DecryptString(idata as string, IVector as memoryblock=nil) as string

Function: Decrypts a string in CFB128 mode.
Example:

```
dim x,u,s as string
dim iv as MemoryBlock

s="Hello World"

// encrypt
s=ConvertEncoding(s,encodings.UTF8)

dim a as new OldAESMBS

call a.SetKey("1234567890123456")

iv=NewMemoryBlock(16)
x=a.EncryptString(s,iv)

MsgBox x

// decrypt

iv=NewMemoryBlock(16)
u=a.DecryptString(x,iv)
```
u=DefineEncoding(u,encodings.UTF8)

MsgBox u

Notes:
If IVector is nil, a vector filled with zeros is used.
The bytes from the string are read without checking the text encoding and the result string has no text
encoding assigned.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old
behavior is still accessible using the methods with the Old suffix.

72.21.8 DecryptStringOld(idata as string, IVector as memoryblock=nil) as string

Function: Decrypts a string in CFB128 mode.
Example:

    dim x,u,s as string
    dim iv as MemoryBlock

    s="Hello World"
    // encrypt
    s=ConvertEncoding(s,encodings.UTF8)

    dim a as new OldAESMBS
    call a.SetKey("1234567890123456")

    iv=NewMemoryBlock(16)
    x=a.EncryptString(s,iv)

    MsgBox x
    // decrypt

    iv=NewMemoryBlock(16)
    u=a.DecryptString(x,iv)

    u=DefineEncoding(u,encodings.UTF8)

    MsgBox u
Notes:

If IVector is nil, a vector filled with zeros is used. The bytes from the string are read without checking the text encoding and the result string has no text encoding assigned.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

72.21.9  Encrypt(idata as memoryblock, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

Function: Encrypts the first 16 bytes in the input memoryblock at the given offset and stores the result in the output memoryblock at the given offset.

Notes:

If odata is nil, idata is used for output.
This is ECB mode.

72.21.10 EncryptCBC(idata as memoryblock, LengthBytes as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

Function: Encrypts the 16 byte data blocks within LengthBytes bytes in the data.

Notes:

If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.

72.21.11 EncryptCFB(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

Function: Encrypts the data in CFB128 mode.

Notes:
If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

72.21.12 EncryptCFBOld(idata as memoryblock, LengthBytes as Integer, byref IVectorOffset as Integer, IVector as memoryblock=nil, odata as memoryblock=nil, iOffset as Integer=0, oOffset as Integer=0)

Function: Encrypts the data in CFB128 mode.
Notes:
If odata is nil, idata is used for output.
If IVector is nil, a vector filled with zeros is used.
IVectorOffset safes the position in the IVector for the next call to this method.
iOffset: offset in idata.
oOffset: offset in odata.
LengthBytes: Length of data in idata and odata.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

72.21.13 EncryptString(idata as string, IVector as memoryblock=nil) as string

Function: Encrypts a string in CFB128 mode.
Example:

```
dim x,u,s as string

dim iv as MemoryBlock

s="Hello World"

// encrypt
s=ConvertEncoding(s,encodings.UTF8)

dim a as new OldAESMBS
```
call a. SetKey("1234567890123456")

iv=NewMemoryBlock(16)
x=a.EncryptString(s,iv)

MsgBox x

// decrypt

iv=NewMemoryBlock(16)
u=a.DecryptString(x,iv)
u=DefineEncoding(u,encodings.UTF8)

MsgBox u

Notes:
If IVector is nil, a vector filled with zeros is used.
The bytes from the string are read without checking the text encoding and the result string has no text encoding assigned.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

72.21.14 EncryptStringOld(idata as string, IVector as memoryblock=nil) as string

Function: Encrypts a string in CFB128 mode.
Example:

dim x,u,s as string
dim iv as MemoryBlock

s="Hello World"

// encrypt
s=ConvertEncoding(s,encodings.UTF8)

dim a as new OldAESMBS
call a.SetKey("1234567890123456")
iv=NewMemoryBlock(16)
x=a.EncryptString(s,iv)

MsgBox x

// decrypt
iv=NewMemoryBlock(16)
u=a.DecryptString(x,iv)

u=DefineEncoding(u,encodings.UTF8)

MsgBox u

Notes:
If IVector is nil, a vector filled with zeros is used.
The bytes from the string are read without checking the text encoding and the result string has no text encoding assigned.

The old code until plugin version 9.4 had a bug in the CFB method. This was fixed for 9.5. But the old behavior is still accessible using the methods with the Old suffix.

72.21.15 SetKey(key as memoryblock, nBits as Integer) as boolean

Function: Sets the key.
Notes:
possible values for the bitcount:

128 key is 16 bytes long
192 key is 24 bytes long
256 key is 32 bytes long

See also:

• 72.21.16 SetKey(key as string) as boolean
72.21. CLASS OLDAESMBS

72.21.16 SetKey(key as string) as boolean

Function: Sets the key.

Example:

dim x,u,s as string
dim iv as MemoryBlock

s="Hello World"

// encrypt
s=ConvertEncoding(s, encodings.UTF8)

dim a as new OldAESMBS

call a.SetKey("1234567890123456")

iv=NewMemoryBlock(16)
x=a.EncryptString(s, iv)

MsgBox x

// decrypt

iv=NewMemoryBlock(16)
u=a.DecryptString(x, iv)
u=DefineEncoding(u, encodings.UTF8)

MsgBox u

Notes:

Please make sure the key has right text encoding to avoid unexpected results.
Please use 16, 24 or 32 byte long key strings.
See also:

- 72.21.15 SetKey(key as memoryblock, nBits as Integer) as boolean
72.22 class OpenSSLExceptionMBS

72.22.1 class OpenSSLExceptionMBS

**Function:** The OpenSSL class for error exceptions.

**Notes:** Subclass of the RuntimeException class.
72.23 module OpenSSLMBS

72.23.1 module OpenSSLMBS

Function: A module for OpenSSL functions.
Notes: Please request what you miss here.

72.23.2 Methods

72.23.3 ErrorString(ErrorCode as Integer) as string

Function: Queries the human readable error string for an OpenSSL error.
Example:

MsgBox OpenSSLMBS>ErrorString(336109761)

72.23.4 GeneratePrivateKey(Bits as Integer = 4096, Exp as Integer = 65537,
Password as string = ", Algorithm as string = "") as string

Function: Generates a new private key.
Example:

dim privateKey as string = OpenSSLMBS.GeneratePrivateKey
dim publicKey as string = OpenSSLMBS.GetPublicKey(privateKey)
break // got key pair

Notes:

Bit size of key should be high.
See RSA key documentation on the web about details.

In Plugin version 16.2 and later this function yields time to other Xojo threads.
Algorithm specifies the encryption algorithm for key encryption. See CipherMBS for cipher names, e.g.
"AES-128-CBC". (new in 17.5)
CHAPTER 72. ENCRYPTION AND HASH

72.23.5 GetPublicKey(PrivateKey as String, PrivateKeyPassword as string = "") as string

Function: Extracts public key from private key.
Example:

```
dim privateKey as string = OpenSSLMBS.GeneratePrivateKey
dim publicKey as string = OpenSSLMBS.GetPublicKey(privateKey)

break // got key pair
```

Notes: Optionally you can define a password for private key.

72.23.6 OpenSSLVersion as String

Function: Queries version of OpenSSL version.
Example:

```
MsgBox OpenSSLMBS.OpenSSLVersion
```

72.23.7 PKCS7Sign(flags as Integer, InputData as string, SignKey as string, PrivateKey as String, PrivateKeyPassword as string, intermediaCertsData() as string, OutputBinary as boolean) as string

Function: Signs with SMIME.
Example:

```
dim testPrivKey as string = ReadFile("passkey.pem")
dim testCertificate as string = ReadFile("passcertificate.pem")
dim data as string = ReadFile("test.txt")
dim privKeyPassword as string = "12345"

dim intermediateCertificates() as string
intermediateCertificates.Append ReadFile("WWDR.pem")
dim Sign as string = OpenSSLMBS.PKCS7Sign(0, data, testCertificate, testPrivKey, privKeyPassword, intermediateCertificates, true)

// write result
dim f as FolderItem = SpecialFolder.Desktop.Child("output")
```
72.23. MODULE OPENSSLMBS

dim b as BinaryStream = BinaryStream.Create(f, true)
b.Write sign

Notes:
Returns the signature. If OutputBinary is true, we use DER output, else text based output. intermediaCertsData array can be empty if you have no intermediate certificates.

72.23.8 PKCS7SignData(signcert as X509MBS, PrivateKey as PKeyMBS, certs() as X509MBS = nil, data as string, flags as Integer = 0) as string

Function: Signs with PKCS7.
Notes:
Returns the signature (binary format = DER).
intermediaCertsData array can be empty or nil if you have no intermediate certificates.

72.23.9 RSAPrivateDecrypt(data as string, PrivateKey as string, padding as Integer = 1, Password as string = "") as String

Function: Decrypts data using private key.
Example:

// encrypt with public, decrypt with private key

dim f1 as FolderItem = GetFolderItem("test.pem")
dim b1 as BinaryStream = BinaryStream.Open(f1)
dim PrivKey as string = B1.Read(b1.Length)

dim f2 as FolderItem = GetFolderItem("test.pub")
dim b2 as BinaryStream = BinaryStream.Open(f2)
dim PubKey as string = B2.Read(b2.Length)

dim UnencryptedData as string = "Hello World. This is just a test."
dim EncryptedData as string = OpenSSLMBS.RSAPublicEncrypt(UnencryptedData, PubKey)
dim decryptedData as string = OpenSSLMBS.RSAPrivateDecrypt(EncryptedData, PrivKey)

Break // check in debugger
CHAPTER 72. ENCRYPTION AND HASH

Notes:
See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only decrypt data if it’s <= length of key.

72.23.10  RSAPrivateEncrypt(data as string, PrivateKey as string, padding as 
Integer = 1, Password as string = ””) as String

Function: Encrypts data using private key.
Example:
// encrypt with private, decrypt with public key

dim f1 as FolderItem = GetFolderItem(”test.pem”)  
dim b1 as BinaryStream = BinaryStream.Open(f1)  
dim PrivKey as string = B1.Read(b1.Length)  

dim f2 as FolderItem = GetFolderItem(”test.pub”)  
dim b2 as BinaryStream = BinaryStream.Open(f2)  
dim PubKey as string = B2.Read(b2.Length)

dim UnencryptedData as string = ”Hello World. This is just a test.”
dim EncryptedData as string = OpenSSLMBS.RSAPrivateEncrypt(UnencryptedData, PrivKey)
dim decryptedData as string = OpenSSLMBS.RSAPublicDecrypt(EncryptedData, PubKey)

Break // check in debugger

Notes:
See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only encrypt data if it’s <= length of key.
**RSAPublicDecrypt**(data as string, PublicKey as string, padding as Integer = 1, Password as string = ””) as String

**Function:** Decrypts data using public key.

**Example:**

```vbnet
// encrypt with private, decrypt with public key

dim f1 as FolderItem = GetFolderItem(“test.pem”)  
dim b1 as BinaryStream = BinaryStream.Open(f1)  
dim PrivKey as string = B1.Read(b1.Length)

dim f2 as FolderItem = GetFolderItem(“test.pub”)  
dim b2 as BinaryStream = BinaryStream.Open(f2)  
dim PubKey as string = B2.Read(b2.Length)

dim UnencryptedData as string = ”Hello World. This is just a test.”
dim EncryptedData as string = OpenSSLMBS.RSAPrivateEncrypt(UnencryptedData, PrivKey)  
dim decryptedData as string = OpenSSLMBS.RSAPublicDecrypt(EncryptedData, PubKey)

Break // check in debugger
```

**Notes:**

See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only decrypt data if it’s \(<=\) length of key.

**RSAPublicEncrypt**(data as string, PublicKey as string, padding as Integer = 1, Password as string = ””) as String

**Function:** Encrypts data using public key.

**Example:**

```vbnet
// encrypt with public, decrypt with private key

dim f1 as FolderItem = GetFolderItem(“test.pem”)  
dim b1 as BinaryStream = BinaryStream.Open(f1)  
dim PrivKey as string = B1.Read(b1.Length)
```
dim f2 as FolderItem = GetFolderItem("test.pub")
dim b2 as BinaryStream = BinaryStream.Open(f2)
dim PubKey as string = B2.Read(b2.Length)

dim UnencryptedData as string = "Hello World. This is just a test."
dim EncryptedData as string = OpenSSLMBS.RSAPublicEncrypt(UnencryptedData, PubKey)
dim decryptedData as string = OpenSSLMBS.RSAPrivateDecrypt(EncryptedData, PrivKey)

Break // check in debugger

Notes:

See kPadding constants for Padding parameter.
Password is optional for decrypting encrypted keys.
Returns empty string on failure or raises exceptions.

RSA can only encrypt data if it’s <= length of key.

72.23.13 SignData(data as string, key as string, Password as string = "") as string

Function: Signs a piece of data with a given private key.
Example:

dim data as string // some data
dim test as string // the private key PEM file content
dim Signature as string = OpenSSLMBS.SignData(data, test)
msgbox EncodeHex(Signature)

Notes:

Returns signature. Use EncodeHex or EncodeBase64 to make a text representation.

Internally we make a SHA1 hash of the data, open the private RSA key and do a RSA sign operation. We return the raw key as a string bytes.
On any error, we return an empty string.
Optional you can pass a password to read password protected keys.
See also:

- 72.23.14 SignData(data as string, key as string, Password as string = ", Algorithm as Integer) as string
72.23.14 SignData(data as string, key as string, Password as string = "", Algorithm as Integer) as string

Function: Signs a piece of data with a given private key.
Example:

    dim test_pem as string = ReadFile("test.pem")
    dim test_pub as string = ReadFile("test.pub")
    dim data as string = ReadFile("Create Keys.rtf") // some data file
    dim signature as string

    // create signature
    Signature = OpenSSLMBS.SignData(data, test_pem, OpenSSLMBS.kAlgorithmSHA512)
    if Signature = "" then
        // failed
        break
    end if

    // verify with private key
    dim r1 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pem, OpenSSLMBS.kAlgorithmSHA256)

    // verify with public key
    dim r2 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pub, OpenSSLMBS.kAlgorithmSHA256)

Notes:
Returns signature. Use EncodeHex or EncodeBase64 to make a text representation.

Internally we make a hash of the data with given algorithm, open the private RSA key and do a RSA sign operation. We return the raw signature as a string bytes.
On any error, we return an empty string.
Optional you can pass a password to read password protected keys.
See also:
  • 72.23.13 SignData(data as string, key as string, Password as string = "") as string

72.23.15 VerifyData(data as string, Signature as string, Key as string, Password as string = "") as boolean

Function: Verifies a signature with given data and public key.
Notes:
Key can be the public or private key, but of course normally you use the public key.
Data is the raw data to compare against. A SHA1 hash is performed and verified with the signature.
Signature must be the string returned like from SignData function. If you used EncodeHex on it, you now
need to do DecodeHex.
Returns true if signature is valid and false on any other error.
Optional you can pass a password to read password protected keys.
See also:

- 72.23.16 VerifyData(data as string, Signature as string, Key as string, Password as string = "", Algorithm as Integer) as boolean

### 72.23.16 VerifyData(data as string, Signature as string, Key as string, Password as string = "", Algorithm as Integer) as boolean

**Function:** Verifies a signature with given data and public key.
**Example:**

```plaintext
dim test_pem as string = ReadFile("test.pem")
dim test_pub as string = ReadFile("test.pub")
dim data as string = ReadFile("Create Keys.rtf") // some data file
dim signature as string

// create signature
Signature = OpenSSLMBS.SignData(data, test_pem, OpenSSLMBS.kAlgorithmSHA512)
if Signature = "" then
    // failed
    break
end if

// verify with private key
dim r1 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pem, OpenSSLMBS.kAlgorithmSHA512)

// verify with public key
dim r2 as Boolean = OpenSSLMBS.VerifyData(data, signature, test_pub, OpenSSLMBS.kAlgorithmSHA512)
```

**Notes:**

Key can be the public or private key, but of course normally you use the public key.
Data is the raw data to compare against. A hash is performed with given algorithm and verified with the signature.
Signature must be the string returned like from SignData function. If you used EncodeHex on it, you now
need to do DecodeHex.
Returns true if signature is valid and false on any other error.
Optional you can pass a password to read password protected keys.
72.23. MODULE OPENSSLMBS

See also:

- 72.23.15 VerifyData(data as string, Signature as string, Key as string, Password as string = ") as boolean

72.23.17 Constants

72.23.18 kAlgorithmSHA1 = 1

MBS Encryption Plugin, Plugin Version: 16.0. **Function:** One of the hash algorithms. **Notes:** SHA 1.

72.23.19 kAlgorithmSHA224 = 2

MBS Encryption Plugin, Plugin Version: 16.0. **Function:** One of the hash algorithms. **Notes:** SHA 2 with 224bit.

72.23.20 kAlgorithmSHA256 = 3

MBS Encryption Plugin, Plugin Version: 16.0. **Function:** One of the hash algorithms. **Notes:** SHA 2 with 256bit.

72.23.21 kAlgorithmSHA384 = 4

MBS Encryption Plugin, Plugin Version: 16.0. **Function:** One of the hash algorithms. **Notes:** SHA 2 with 384bit.

72.23.22 kAlgorithmSHA512 = 5

MBS Encryption Plugin, Plugin Version: 16.0. **Function:** One of the hash algorithms. **Notes:** SHA 2 with 512bit.

72.23.23 kPaddingNone = 3

MBS Encryption Plugin, Plugin Version: 16.2. **Function:** One of the padding options for RSA encryption. **Notes:** Raw RSA encryption. This mode should only be used to implement cryptographically sound padding.
modes in the application code. Encrypting user data directly with RSA is insecure.

72.23.24 kPaddingPKCS1 = 1

MBS Encryption Plugin, Plugin Version: 16.2. **Function:** One of the padding options for RSA encryption. **Notes:** PKCS #1 v1.5 padding. This currently is the most widely used mode.

72.23.25 kPaddingPKCS1OAEP = 4

MBS Encryption Plugin, Plugin Version: 16.2. **Function:** One of the padding options for RSA encryption. **Notes:** EME-OAEP as defined in PKCS #1 v2.0 with SHA-1, MGF1 and an empty encoding parameter. This mode is recommended for all new applications.

72.23.26 kPaddingSSLv23 = 2

MBS Encryption Plugin, Plugin Version: 16.2. **Function:** One of the padding options for RSA encryption. **Notes:** PKCS #1 v1.5 padding with an SSL-specific modification that denotes that the server is SSL3 capable.

72.23.27 kPaddingX931 = 5

MBS Encryption Plugin, Plugin Version: 16.2. **Function:** One of the padding options for RSA encryption. **Notes:** X931 padding.
**72.24. MODULE PASSSIGNERMBS**

**72.24 module PassSignerMBS**

**72.24.1 module PassSignerMBS**

MBS MacExtras Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The module to sign iOS passes from a Mac app.  

**72.24.2 Methods**

**72.24.3 signPass(Pass as folderitem, CertSuffix as String, Output as folderitem, Zip as boolean = true) as boolean**

MBS MacExtras Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Sign a pass.  
**Notes:**  
Pass: Input folder with pass files.  
CertSuffix: The certificate suffix.  
Output: Where to store the new pass.  
Zip: If true, we do the last step to zip the pass.  
Returns true if signed or false if failed.  

**72.24.4 verifyPassSignature(pass as folderitem) as Boolean**

MBS MacExtras Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Verify a pass.  
**Notes:**  
Pass must point to the pass file (a zip archive).  
Returns true if verified and false if failed.
class PKeyMBS

class PKeyMBS

Function: The class for a public/private key.
Notes: Currently this class only implements a part of the PKey functionality of OpenSSL. If needed, we could add more. This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

Methods

Constructor

Function: The private constructor.
Notes: Creates a new empty key. This constructor is private to make sure you don’t create an object from this class by error. Please use designated functions to create objects.

Copy as PKeyMBS

Function: Creates a copy of the key.

PrivateKeyData as String

Function: The key as binary representation.
Notes: You can write this to a pem file.

PublicKeyData as String

Function: The key as binary representation.
72.25. CLASS PKEYMBS

Notes: You can write this to a pem file.

72.25.7 Properties

72.25.8 Bits as Integer

Function: Number of bits of key.  
Notes: (Read only property)

72.25.9 DescriptionParams as String

Function: The description of the parameters.  
Notes:  
This is only for human to read.  
(Read only property)

72.25.10 DescriptionPrivateKey as String

Function: The description of private/public key.  
Notes:  
If no private key is there, you only get the public key part here.  
This is only for human to read.  
(Read only property)

72.25.11 DescriptionPublicKey as String

Function: The description of public key.  
Notes:  
This is only for human to read.  
(Read only property)
72.25.12 Handle as Integer

**Function:** The handle to the key.
**Notes:** (Read and Write property)

72.25.13 ID as Integer

**Function:** The ID (type) of the key.
**Notes:** (Read only property)

72.25.14 PrivateKey as String

**Function:** Extracts the private key.
**Notes:**
This is the binary representation.
(Read only property)

72.25.15 PublicKey as String

**Function:** Extracts the public key.
**Notes:**
This is the binary representation.
(Read only property)

72.25.16 Size as Integer

**Function:** The size of the key in bytes.
**Notes:** (Read only property)
72.25  CLASS PKEYMBS

72.25.17  Type as Integer

**Function:** The type of key.
**Notes:** (Read only property)

72.25.18  TypeString as String

**Function:** The type of key as string.
**Notes:**
EC, DSA, RSA or DH.
(Read only property)
72.26 class RC4MBS

72.26.1 class RC4MBS

**Function:** An implementation of the RC4 algorithm.

**Example:**

```vbnet
dim r as RC4MBS

// Encrypt:
r = new RC4MBS("Key")

dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
dim EncryptedData as string = r.Crypt(OriginalData)
MsgBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC4MBS("Key")

dim UnencryptedData as string = r.Crypt(EncryptedData)
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData
```

**Notes:**

The source in RB is in the examples folder (see Crypto 1.5 via RB). This implementation inside the plugin is only to make the calculation faster.

In case RS will improve RB more to produce faster code, the plugin may be no longer needed.

72.26.2 Methods

72.26.3 Constructor(key as MemoryBlock)

**Function:** Initializes the class with the given key.

See also:

- 72.26.4 Constructor(key as string)
72.26. CLASS RC4MBS

72.26.4 Constructor(key as string)

Function: Initializes the class with the given key.
Example:

dim r as new RC4MBS("MyKey")
dim s as string = r.Crypt("MyData")

MsgBox EncodeHex(s)

Notes: Please make sure the key has right text encoding to avoid unexpected results.
See also:

• 72.26.3 Constructor(key as MemoryBlock)

72.26.5 Crypt(data as Memoryblock) as Memoryblock

Function: Encrypts or decrypts the given Memoryblock.
See also:

• 72.26.6 Crypt(data as string) as string

72.26.6 Crypt(data as string) as string

Function: Encrypts or decrypts the given string.
Example:

dim r as RC4MBS

// Encrypt:
r = new RC4MBS("Key")

dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
dim EncryptedData as string = r.Crypt(OriginalData)
MsgBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC4MBS("Key")

dim UnencryptedData as string = r.Crypt(EncryptedData)
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData
Notes:

Returned string does not contain text, but binary data.
Please do not store in text fields in database without using EncodeHex or EncodeBase64 to make it a text string.
See also:

- 72.26.5 Crypt(data as Memoryblock) as Memoryblock
72.27. CLASS RC5MBS

72.27  class RC5MBS

72.27.1  class RC5MBS

Function: The class for RC5 encryption.
Example:

dim r as RC5MBS

// Encrypt:
r = new RC5MBS("Key")

dim iv as MemoryBlock
dim num as Integer
dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
dim EncryptedData as string = r.encryptCFB64(OriginalData, iv, num)
MsgBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC5MBS("Key")

iv = nil
num = 0
dim UnencryptedData as string = r.decryptCFB64(EncryptedData, iv, num)
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData

Notes:
Do use to read existing RC5 encrypted things.
New projects may better use a better encryption.

72.27.2  Methods

72.27.3  Constructor(key as MemoryBlock, rounds as Integer = 16)

Function: The constructor.
Example:

dim r as new RC5MBS("MyKey")
dim s as string = r.Encrypt("MyData")
CHAPTER 72. ENCRYPTION AND HASH

MsgBox EncodeHex(s)

See also:

- 72.27.4 Constructor(key as string, rounds as Integer = 16)

72.27.4 Constructor(key as string, rounds as Integer = 16)

Function: The constructor.
Example:

```vbnet
dim r as new RC5MBS("MyKey")
dim s as string = r.Encrypt("MyData")
```

MsgBox EncodeHex(s)

Notes: Please make sure the key has right text encoding to avoid unexpected results.
See also:

- 72.27.3 Constructor(key as MemoryBlock, rounds as Integer = 16)

72.27.5 decrypt(data as Memoryblock) as Memoryblock

Function: Decrypts some data.
Notes: Low level variant without any block mode.
See also:

- 72.27.6 decrypt(data as string) as string

72.27.6 decrypt(data as string) as string

Function: Decrypts some data.
Notes:
Please make sure the key has right text encoding to avoid unexpected results.
Low level variant without any block mode.
See also:

- 72.27.5 decrypt(data as Memoryblock) as Memoryblock
72.27. **CLASS RC5MBS**

#### 72.27.7 `decryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock`

**Function:** Decrypts some data.

**Notes:** With Cipher Block Chaining mode.

See also:

- 72.27.8 `decryptCBC(data as string, iv as memoryblock = nil) as string`

#### 72.27.8 `decryptCBC(data as string, iv as memoryblock = nil) as string`

**Function:** Decrypts some data.

**Notes:**

Please make sure the key has right text encoding to avoid unexpected results.

With Cipher Block Chaining mode.

See also:

- 72.27.7 `decryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock`

#### 72.27.9 `decryptCFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock`

**Function:** Decrypts some data.

**Example:**

```plaintext
dim r as RC5MBS

// Encrypt:
r = new RC5MBS("Key")

dim iv as MemoryBlock
dim num as Integer
dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
dim EncryptedData as string = r.encryptCFB64(OriginalData, iv, num)
MsgBox EncodeHex(EncryptedData)

// Same for decrypt:
r = new RC5MBS("Key")

iv = nil
num = 0
dim UnencryptedData as string = r.decryptCFB64(EncryptedData, iv, num)
```
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData

**Notes:** with Cipher Feedback mode.
See also:

- 72.27.10 decryptCFB64(data as string, iv as memoryblock, byref num as Integer) as string

### 72.27.10 decryptCFB64(data as string, iv as memoryblock, byref num as Integer) as string

**Function:** Decrypts some data.
**Notes:**
Please make sure the key has right text encoding to avoid unexpected results.
with Cipher Feedback mode.
See also:

- 72.27.9 decryptCFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock

### 72.27.11 encrypt(data as Memoryblock) as Memoryblock

**Function:** Encrypts some data.
**Notes:** Low level variant without any block mode.
See also:

- 72.27.12 encrypt(data as string) as string

### 72.27.12 encrypt(data as string) as string

**Function:** Encrypts some data.
**Notes:**
Please make sure the key has right text encoding to avoid unexpected results.
Low level variant without any block mode.
See also:

- 72.27.11 encrypt(data as Memoryblock) as Memoryblock
72.27. CLASS RC5MBS

72.27.13 encryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock

Function: Encrypts some data.
Notes: With Cipher Block Chaining mode.
See also:

- 72.27.14 encryptCBC(data as string, iv as memoryblock = nil) as string

72.27.14 encryptCBC(data as string, iv as memoryblock = nil) as string

Function: Encrypts some data.
Notes:
Please make sure the key has right text encoding to avoid unexpected results.
With Cipher Block Chaining mode.
See also:

- 72.27.13 encryptCBC(data as Memoryblock, iv as memoryblock = nil) as Memoryblock

72.27.15 encryptCFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock

Function: Encrypts some data.
Example:

dim r as RC5MBS

    // Encrypt:
    r = new RC5MBS("Key")

dim iv as MemoryBlock
dim num as Integer
dim OriginalData as string = ConvertEncoding("Hello World!", encodings.UTF8)
dim EncryptedData as string = r.encryptCFB64(OriginalData, iv, num)
MsgBox EncodeHex(EncryptedData)

    // Same for decrypt:
    r = new RC5MBS("Key")

    iv = nil
    num = 0
dim UnencryptedData as string = r.decryptCFB64(EncryptedData, iv, num)
UnencryptedData = DefineEncoding(UnencryptedData, encodings.UTF8)
MsgBox UnencryptedData

Notes: with Cipher Feedback mode.

72.27. CLASS RC5MBS

- 72.27.17 encryptOFB64(data as Memoryblock, iv as memoryblock, byref num as Integer) as Memoryblock
72.28 class SHA1MBS

72.28.1 class SHA1MBS

**Function:** An implementation of the SHA1 algorithm to calculate hash values.

**Example:**

```vbs
Dim f As FolderItem
Dim b As BinaryStream
Dim s As String
Dim m As New SHA1MBS

// process file part by part (big files)

f = SpecialFolder.Desktop.Child("test.jpg")
b = f.OpenAsBinaryFile(False)

While Not b.EOF
    s = b.Read(1000000)
    m.Add s
    WEnd

MsgBox EncodingToHexMBS(m.Result) + " using plugin with SHA1MBS"
```

**Notes:**
The source in RB is in the examples folder (see Crypto 1.5 via RB). This implementation inside the plugin is only to make the calculation faster.
In case RS will improve RB more to produce faster code, the plugin may be no longer needed.

72.28.2 Methods

72.28.3 Add(data as string)

**Function:** Adds more input bytes to the current hash.

**Example:**

```vbs
Dim s As New SHA1MBS
s.Reset
```
s.Add "Hello"
s.Add "World"
dim e as string=s.Result

Notes: Lasterror is set.

### 72.28.4 Hash(data as string) as string

**Function:** Returns the hash string for the given key.
**Example:**
MsgBox EncodeHex(SHA1MBS.Hash("Hello World"))

Notes:
The string returned is 20 bytes long (if successful) and has the 5 integer properties stored inside (in big endian format) which make up the key.
Does change the current hash value stored in the class itself.

### 72.28.5 HashFile(file as FolderItem, Hex as boolean = true) as string

**Function:** Calculates hash from whole file.
**Notes:**
Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns hash on success or empty string on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
If hex is true, the result is encoded as hex string.

### 72.28.6 HashText(data as string) as string

**Function:** Returns the hash string for the given key.
**Example:**
MsgBox EncodeHex(SHA1MBS.Hash("Hello World"))
Notes:
The string returned is 20 bytes long (if successful) and has the 5 integer properties stored inside (in big endian format) which make up the key.
Does change the current hash value stored in the class itself.
Returns the digest as text string with hexadecimal digits.

### 72.28.7 HMAC(key as string, data as string) as string

**Function:** Returns the a specific HASH based on the key and the data string.

**Example:**

```vbnet
Function HMAC(key as string, data as string) As string
    // Implementation by Matthijs van Duin
    # pragma DisableBackgroundTasks

    dim ikey, okey, k as string
    dim temp, i as Integer

    if (lenB(key) > 64) then
        k = Hash(key)
    else
        k = key
    end if

    for i = 1 to 64
        temp = ascB(midB(k, i, 1))
        ikey = ikey + chrB(BitwiseXor(temp, & h36))
        okey = okey + chrB(BitwiseXor(temp, & h5C))
    next

    return Hash(okey + Hash(ikey + data))
End Function
```

// test code:

```vbnet
// de7c9b85b8b78aa6be8a7a36f70a90701c9db4d9
dim s as string = SHA1MBS.HMAC("key", "The quick brown fox jumps over the lazy dog")
MsgBox EncodeHex(s)

// fbdb1d1b18aa6c08324b7d64b71fb76370690e1d
s = SHA1MBS.HMAC("", ")
MsgBox EncodeHex(s)
```
72.28. CLASS SHA1MBS

Notes: Above is the source code of this function.

72.28.8 Reset

MBS Encryption Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Resets the current hash value.

72.28.9 Result as string

MBS Encryption Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the current hash value. **Notes:**
- Returns "" on any error.
- Lasterror is set.

72.28.10 ResultText as string

MBS Encryption Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the current hash value. **Notes:**
- Returns the digest as text string with hexadecimal digits.
- Returns "" on any error.
- Lasterror is set.
72.29 class SHA256MBS

72.29.1 class SHA256MBS

Function: A class to calculate SHA-256 hashes.

Example:

```vba
dim s3 as string = SHA256MBS.Hash("")
dim e3 as string = EncodingToHexMBS(s3)
dim e4 as string = SHA256MBS.HashText("")

if e3 <> "e3b0c44298fc1c149afbf4c8996fb92427ae41e4649b934ca495991b7852b855" then
    break
else if e3 <> e4 then
    break
else
    MsgBox "OK"
end if
```

72.29.2 Methods

72.29.3 Add(data as string)

Function: Adds data to the hash calculation.

Example:

```vba
dim s as new SHA256MBS

s.Add "Franz jagt im komplett"
s.Add " verwahrlosten Taxi quer"
s.Add " durch Bayern"

dim r as string = s.ResultText
if r = "d32b568cd1b96d459e7291ebf4b25d007f275c9f13149beeb782fac0716613f8" then
    MsgBox "OK"
else
    MsgBox "Failed"
end if
```

Notes: Using this method you can process huge amounts of data by passing them in small portions.
72.29.4 Hash(data as string) as string

Function: Convenience function to quickly create a hash for a given string.
Example:

```vbnet
dim s2 as string = SHA256MBS.Hash("Frank jagt im komplett verwahrlosten Taxi quer durch Bayern")
dim e2 as string = EncodingToHexMBS(s2)
if e2 = "78206a866dbb2bf017d8e34274aed01a8ce405b69d45db30bafa00f5eecd7d5e" then
    MsgBox "OK"
else
    MessageBox "Failed"
end if
```

Notes:

Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

72.29.5 HashFile(file as FolderItem, Hex as boolean = true) as string

Function: Calculates hash from whole file.
Notes:

Plugin will start a preemptive thread to read in file and process all data in chunks.
Returns hash on success or empty string on failure. May raise OutOfMemoryException or IOException.
This function works best if called from a thread.
If hex is true, the result is encoded as hex string.

72.29.6 HashText(data as string) as string

Function: Convenience function to quickly create a hash for a given string.
Example:

```vbnet
dim s1 as string = SHA256MBS.HashText("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")
if s1 = "d32b568cd1b96d459e7291ebf4b25d007f275c9f13149beeb782fac0716613f8" then
    MsgBox "OK"
else
    MessageBox "Failed"
end if
```
Notes: Returns the digest as text string with hexadecimal digits.

### 72.29.7 HMAC(key as string, data as string) as string

**Function:** Returns the a specific HASH based on the key and the data string.

### 72.29.8 Reset

**Function:** Resets the hash class so you can reuse it for the SHA-256 hash.

### 72.29.9 Result as string

**Function:** The final hash.
**Notes:**
Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

### 72.29.10 ResultText as string

**Function:** The final hash.
**Notes:** Returns the digest as text string with hexadecimal digits.
72.30 class SHA3MBS

72.30.1 class SHA3MBS

Function: A class to calculate SHA-3 hashes.
Example:

```vbs```
dim t as string = "The quick brown fox jumps over the lazy dog"
dim s as new SHA3MBS(1088, 512)
s.Add t
dim h as string = s.ResultText(32)
```

// shows 4d741b6f1eb29eb2a9b9911e82f56fb8d73b04959d3d9d222895df602b28aa15
MsgBox h

72.30.2 Methods

72.30.3 Add(data as memoryblock)

Function: Adds data to the hash calculation.
Notes: Using this method you can process huge amounts of data by passing them in small portions.
See also:

- 72.30.4 Add(data as string)

72.30.4 Add(data as string)

Function: Adds data to the hash calculation.
Notes: Using this method you can process huge amounts of data by passing them in small portions.
See also:

- 72.30.3 Add(data as memoryblock)

72.30.5 Constructor(Rate as UInt32, capacity as UInt32)

Function: The constructor.
Example:
dim s as new SHA3MBS(1088, 512) // 256 bit
s.Add "Compute Me"
s.Add "Me too"
dim h as string = s.ResultText(256/8)

Notes: See example project or SHA-3 documentation for useful values for Rate and Capacity.

72.30.6 Hash(data as string, Rate as UInt32, capacity as UInt32, outputLength as Integer) as string

Function: Convenience function to quickly create a hash for a given string.
Example:

dim t as string = "The quick brown fox jumps over the lazy dog"
dim h as string = SHA3MBS.Hash(t, 1088, 512, 32)

// encode as text to display
h = EncodeHex(h)
// shows 4d741b6f1eb29cb2a9b9911c82f56fa8d73b04959d3d9d222895df6c0b28aa15
MsgBox h

Notes:
Returns the digest as text string with hexadecimal digits.
Or empty string in case of any error.
Before you show it to the user, pass it through EncodingToHexMBS.

72.30.7 HashText(data as string, Rate as UInt32, capacity as UInt32, outputLength as Integer) as string

Function: Convenience function to quickly create a hash for a given string.
Example:

dim t as string = "The quick brown fox jumps over the lazy dog"
dim h as string = SHA3MBS.HashText(t, 1088, 512, 32)
72.30. **CLASS SHA3MBS**

// shows 4d741b6f1eb29cb2a9b9911c82f56fa8d73b04959d3d9d222895df6c0b28aa15
MsgBox h

**Notes:**

Returns the digest as text string with hexadecimal digits.
Or empty string in case of any error.

**72.30.8  Reset(Rate as UInt32, capacity as UInt32)**

**Function:** Resets the hash class so you can reuse it for another SHA-3 hash.

**72.30.9  Result(outputLength as Integer) as string**

**Function:** The final hash in the requested length.
**Notes:**

Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

**72.30.10 ResultText(outputLength as Integer) as string**

**Function:** The final hash in the requested length.
**Example:**

```vbnet
dim t as string = "The quick brown fox jumps over the lazy dog"
dim s as new SHA3MBS(1088, 512)
```

`s.Add t`

```vbnet
dim h as string = s.ResultText(32)
```

// shows 4d741b6f1eb29cb2a9b9911c82f56fa8d73b04959d3d9d222895df6c0b28aa15
MsgBox h

**Notes:** Returns the digest as text string with hexadecimal digits.
CHAPTER 72. ENCRYPTION AND HASH

72.31 class SHA512MBS

72.31.1 class SHA512MBS

**Function:** A class to calculate SHA-512 hashes.

**Example:**

```vba
dim s3 as string = SHA512MBS.Hash("")
dim e3 as string = EncodingToHexMBS(s3)

if e3 = "CF83E1357EEFB8BDF1542850D66D8007D620E4050B5715DC83F4A921D36CE9CE47D0D13C5D85F2B0FF8318D2E"
then
    MsgBox "OK"
else
    MsgBox "Failed"
end if
```

**Notes:** Using this method you can process huge amounts of data by passing them in small portions.

72.31.2 Methods

72.31.3 Add(data as string)

**Function:** Adds data to the hash calculation.

**Example:**

```vba
dim s as new SHA512MBS

s.Add "Franz jagt im komplett"
s.Add " verwahrlosten Taxi quer"
s.Add " durch Bayern"

dim r as string = s.ResultText

if r = "AF9ED2DE700433B803240A552B41B5A472A6EF3F1431A722B2063C75E9F07451F67A28E37D09CDE769424C96A"
then
    MsgBox "OK"
else
    MsgBox "Failed"
end if
```

**Notes:** Using this method you can process huge amounts of data by passing them in small portions.
72.31.4 Hash(data as string) as string

**Function:** Convenience function to quickly create a hash for a given string.
**Example:**

```vbs
dim s2 as string = SHA512MBS.Hash("Frank jagt im komplett verwahrlosten Taxi quer durch Bayern")
dim e2 as string = EncodingToHexMBS(s2)

if e2 = "90B30EF9902AE4C4691D2D78C2F8FA0AA785AFBC5545286B310F68E91DD2299C84A2484F0419FC5EAA7DE56B4F8D8C944CEB5F8EEA0A9EEFF918300B019C92"
then
    MsgBox "OK"
else
    MsgBox "Failed"
end if
```

**Notes:**
- Returns the digest as binary string.
- Before you show it to the user, pass it through EncodingToHexMBS.

72.31.5 HashFile(file as FolderItem, Hex as boolean = true) as string

**Function:** Calculates hash from whole file.
**Notes:**
- Plugin will start a preemptive thread to read in file and process all data in chunks.
- Returns hash on success or empty string on failure. May raise OutOfMemoryException or IOException.
- This function works best if called from a thread.
- If hex is true, the result is encoded as hex string.

72.31.6 HashText(data as string) as string

**Function:** Convenience function to quickly create a hash for a given string.
**Example:**

```vbs
dim s1 as string = SHA512MBS.HashText("Franz jagt im komplett verwahrlosten Taxi quer durch Bayern")

if s1 = "AF9ED2DE700433B803240A552B41B5A472A6EF3FE1431A722B2063C75E9F07451F67A28E37D09CDE769424C96268E90E06B0008A0A9E99A5B8C92"
then
    MsgBox "OK"
else
end if
```
Notes: Returns the digest as text string with hexadecimal digits.

72.31.7  Reset

Function: Resets the hash class so you can reuse it for the SHA-256 hash.

72.31.8  Result as string

Function: The final hash.
Notes:
Returns the digest as binary string.
Before you show it to the user, pass it through EncodingToHexMBS.

72.31.9  ResultText as string

Function: The final hash.
Notes: Returns the digest as text string with hexadecimal digits.
72.32. **MODULE TWOFIGSMB**

72.32 **module TwofishMBS**

72.32.1 **module TwofishMBS**

**Function:** The module for Twofish encryption.
**Notes:** You can use this class for compatibility to PHP.

72.32.2 **Methods**

72.32.3 **DecryptCBC(Key as MemoryBlock, InputData as MemoryBlock, IV as MemoryBlock) as MemoryBlock**

**Function:** Decrypts with CBC mode and memoryblocks.
**Example:**
```
// key is 16 bytes, so 128 bit
dim key as MemoryBlock = "Hello World 1234"
dim IV as MemoryBlock = "1234567812345678" // 16 byte IV

// some UTF-8 input
dim InputText as string = "Just a test."
dim InputData as MemoryBlock = ConvertEncoding(InputText, encodings.UTF8)

dim EncryptedData as MemoryBlock = TwofishMBS.EncryptCBC(key, InputData, IV)
dim DecryptedData as MemoryBlock = TwofishMBS.DecryptCBC(key, encryptedData, IV)

// restore encoding
dim Decryptedtext as String = DefineEncoding(DecryptedData, encodings.UTF8)

// remove trailing zeros
dim p as Integer = instrb(Decryptedtext, chrb(0))
if p >0 then
    Decryptedtext = leftb(Decryptedtext, p-1)
end if

// check
if Decryptedtext = InputText then
    MsgBox "OK"
else
    MsgBox "Failed"
end if
```
CHAPTER 72. ENCRYPTION AND HASH

Notes:

IV can be nil for using zeros.
IV size should be 16 bytes.
Key length should be 16 for 128 bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16 byte size. Else the plugin will fill up with zero bytes.
See also:

- 72.32.4 DecryptCBC(Key as String, InputData as String, IV as String) as String

72.32.4 DecryptCBC(Key as String, InputData as String, IV as String) as String

Function: Decrypts with CBC mode and strings.

Example:

// key is 16 bytes, so 128 bit
dim key as String = "Hello World 1234"
dim IV as String = "1234567812345678" // 16 byte IV

// some UTF-8 input
dim InputText as string = "Just a test. "
dim InputData as String = ConvertEncoding(InputText, encodings.UTF8)

dim EncryptedData as String = TwofishMBS.EncryptCBC(key, InputData, IV)
dim DecryptedData as String = TwofishMBS.DecryptCBC(key, encryptedData, IV)

// restore encoding
dim Decryptedtext as String = DefineEncoding(DecryptedData, encodings.UTF8)

// remove trailing zeros

dim p as Integer = instrb(Decryptedtext, chrb(0))
if p > 0 then
    Decryptedtext = leftb(Decryptedtext, p-1)
end if

// check
if Decryptedtext = InputText then
    MsgBox "OK"
else
    MsgBox "Failed"
end if
72.32. MODULE TWOFSHMB2S

IV can be empty for using zeros.
IV size should be 16 bytes.
Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.
See also:

• 72.32.3 DecryptCBC(Key as MemoryBlock, InputData as MemoryBlock, IV as MemoryBlock) as MemoryBlock

72.32.5 DecryptECB(Key as MemoryBlock, InputData as MemoryBlock) as MemoryBlock

Function: Decrypts with ECB mode and memoryblocks.
Example:

// key is 16 bytes, so 128 bit
dim key as MemoryBlock = "Hello World 1234"

// some UTF-8 input
dim InputText as string = "Just a test. 

dim InputData as MemoryBlock = ConvertEncoding(InputText, encodings.UTF8)

dim EncryptedData as MemoryBlock = TwofishMBS.EncryptECB(key, InputData)

dim DecryptedData as MemoryBlock = TwofishMBS.DecryptECB(key, encryptedData)

// restore encoding
dim Decryptedtext as String = DefineEncoding(DecryptedData, encodings.UTF8)

// remove training zeros

dim p as Integer = instrb(Decryptedtext, chrb(0))
if p > 0 then
    Decryptedtext = leftb(Decryptedtext, p-1)
end if

// check
if Decryptedtext = InputText then
    MsgBox "OK"
else
    MsgBox "Failed"
end if

Notes:

Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.
72.32.6  DecryptECB(Key as String, InputData as String) as String

**Function:** Decrypts with ECB mode and strings.  
**Example:**

// key is 16 bytes, so 128 bit  
dim key as string = "Hello World 1234"

// some UTF-8 input  
dim InputData as string = "Just a test. "  
InputData = ConvertEncoding(InputData, encodings.UTF8)

dim Encrypted as string = TwofishMBS.EncryptECB(key, InputData)  
dim Decrypted as string = TwofishMBS.DecryptECB(key, encrypted)

// restore encoding  
Decrypted = DefineEncoding(Decrypted, encodings.UTF8)

// remove trailing zeros  
dim p as Integer = instrb(Decrypted, chrb(0))  
if p >0 then  
Decrypted = leftb(Decrypted, p-1)  
end if

// check  
if Decrypted = InputData then  
MsgBox "OK"  
else  
MsgBox "Failed"  
end if

**Notes:**

Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.  
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.  
See also:

- 72.32.5 DecryptECB(Key as MemoryBlock, InputData as MemoryBlock) as MemoryBlock
72.32. MODULE TWOFOISHMBS

72.32.7 EncryptCBC(Key as MemoryBlock, InputData as MemoryBlock, IV as MemoryBlock) as MemoryBlock

**Example:**

```vba
// key is 16 bytes, so 128 bit
dim key as MemoryBlock = "Hello World 1234"
dim IV as MemoryBlock = "1234567812345678" // 16 byte IV

// some UTF-8 input
dim InputText as string = "Just a test."
dim InputData as MemoryBlock = ConvertEncoding(InputText, encodings.UTF8)

dim EncryptedData as MemoryBlock = TwofishMBS.EncryptCBC(key, InputData, IV)
dim DecryptedData as MemoryBlock = TwofishMBS.DecryptCBC(key, encryptedData, IV)

// restore encoding
dim DecryptedText as String = DefineEncoding(DecryptedData, encodings.UTF8)

// remove training zeros
dim p as Integer = instrb(DecryptedText, chrb(0))
if p > 0 then
    DecryptedText = leftb(DecryptedText, p-1)
end if

// check
if DecryptedText = InputText then
    MsgBox "OK"
else
    MsgBox "Failed"
end if
```

**Notes:**

IV can be nil for using zeros.
IV size should be 16 bytes.
Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.
See also:

- 72.32.8 EncryptCBC(Key as String, InputData as String, IV as String) as String
72.32.8 EncryptCBC(Key as String, InputData as String, IV as String) as String

Function: Encrypts with CBC mode and string.
Example:

// key is 16 bytes, so 128 bit
dim key as String = "Hello World 1234"
dim IV as String = "1234567812345678" // 16 byte IV

// some UTF-8 input
dim InputText as string = "Just a test. "
dim InputData as String = ConvertEncoding(InputText, encodings.UTF8)

dim EncryptedData as String = TwofishMBS.EncryptCBC(key, InputData, IV)
dim DecryptedData as String = TwofishMBS.DecryptCBC(key, encryptedData, IV)

// restore encoding
dim Decryptedtext as String = DefineEncoding(DecryptedData, encodings.UTF8)

// remove training zeros
dim p as Integer = instrb(Decryptedtext, chrb(0))
if p >0 then
Decryptedtext = leftb(Decryptedtext, p-1)
end if

// check
if Decryptedtext = InputText then
MsgBox "OK"
else
MsgBox "Failed"
end if

Notes:
IV can be empty for using zeros.
IV size should be 16 bytes.
Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.
See also:

- 72.32.7 EncryptCBC(Key as MemoryBlock, InputData as MemoryBlock, IV as MemoryBlock) as MemoryBlock
72.32. MODULE TWOFISHMBS

72.32.9 EncryptECB(Key as MemoryBlock, InputData as MemoryBlock) as MemoryBlock

Function: Encrypts with ECB mode and memoryblocks.
Example:

```vba
// key is 16 bytes, so 128 bit
dim key as MemoryBlock = "Hello World 1234"

// some UTF-8 input
dim InputText as string = "Just a test. 

dim InputData as MemoryBlock = ConvertEncoding(InputText, encodings.UTF8)

dim EncryptedData as MemoryBlock = TwofishMBS.EncryptECB(key, InputData)
dim DecryptedData as MemoryBlock = TwofishMBS.DecryptECB(key, encryptedData)

// restore encoding
dim DecryptedText as String = DefineEncoding(DecryptedData, encodings.UTF8)

// remove training zeros
dim p as Integer = instrb(DecryptedText, chrb(0))
if p >0 then
DecryptedText = leftb(DecryptedText, p-1)
end if

// check
if DecryptedText = InputText then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

Key length should be 16 for 128bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16byte size. Else the plugin will fill up with zero bytes.
See also:

- 72.32.10 EncryptECB(Key as String, InputData as String) as String

72.32.10 EncryptECB(Key as String, InputData as String) as String

Function: Encrypts with ECB mode and strings.
Example:
// key is 16 bytes, so 128 bit
dim key as string = "Hello World 1234"

// some UTF-8 input
dim InputData as string = "Just a test. "
InputData = ConvertEncoding(InputData, enodings.UTF8)

dim Encrypted as string = TwofishMBS.EncryptECB(key, InputData)
dim Decrypted as string = TwofishMBS.DecryptECB(key, encrypted)

// restore encoding
Decrypted = DefineEncoding(Decrypted, enodings.UTF8)

// remove training zeros
dim p as Integer = instrb(Decrypted, chrb(0))
if p > 0 then
Decrypted = leftb(Decrypted, p-1)
end if

// check
if Decrypted = InputData then
MsgBox "OK"
else
MsgBox "Failed"
end if

Notes:

Key length should be 16 for 128 bit, 24 for 192 bit or 32 for 256 bit.
InputData should be aligned to 16 byte size. Else the plugin will fill up with zero bytes.

72.33. **CLASS UUIDMBS**

### 72.33 class UUIDMBS

**72.33.1 class UUIDMBS**

MBS Util Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class to create Universally Unique Identifier.

**Example:**

```vbscript
dim u as UUIDMBS
u=new UUIDMBS
MsgBox EncodingToHexMBS(u.ValueString)
```

**Notes:**

This class creates a 128 bit UUID (or UID or GUID) which is random.

On Mac OS X: Uses CoreFoundation system functions from Mac OS X 10.3.
On Linux: Uses unix system functions (libuuid).
On Windows: Uses UUID functions from RPC functions (Rpcrt4.dll).

If you need to validate a GUID or UUID, please check the Validate function.

### 72.33.2 Methods

**72.33.3 randomUUID as UUIDMBS**

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a random v4 GUID.

**Example:**

```vbscript
for i as Integer = 1 to 20
Listbox1.AddRow UUIDMBS.randomUUID.ValueFormattedString
next
```

**Notes:**

This is using random numbers.
It is unlikely, but possible to have duplicates.
The UUID function checks for that.
CHAPTER 72. ENCRYPTION AND HASH

72.33.4 UUID as UUIDMBS

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Creates a new UUID with system functions.

Notes:
On Mac OS X: Uses CoreFoundation system functions from Mac OS X 10.3.
On Linux: Uses unix system functions (libuuid).
On Windows: Uses UUID functions from RPC functions (Rpcrt4.dll).

72.33.5 Validate(UUID as string, mode as Integer = 0, requiredVersion as Integer = 0) as string

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Validates the given UUID/GUID.

Example:

// wrong
dim w1 as string = UUIDMBS.Validate("hello") // wrong due to missing {

dim w2 as string = UUIDMBS.Validate("550e8400-e29b-11d4-a716-446655440000",1) // wrong with, with z

dim w3 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d40716-446655440000 } " )// wrong with missing minus

dim w4 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d4-a716-446655440000 } " )// wrong with being too short

dim w5 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d4-a716-446655440000 } dssdsd",1) // wrong as it has extra chars on end

dim w6 as string = UUIDMBS.Validate("550e8400-e29b-11d4-a716-446655440000",1,4) // wrong as not version 4

dim w7 as string = UUIDMBS.Validate("6a12a4d5-e9e6-4568-afcc-34c70b24a668",1,4) // wrong as not version 4

// okay

dim o1 as string = UUIDMBS.Validate("550e8400-e29b-11d4-a716-446655440000",1)

dim o2 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d4-a716-446655440000 } ")

dim o3 as string = UUIDMBS.Validate("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 1)

dim o4 as string = UUIDMBS.Validate("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 3)

dim o5 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d4-a716-446655440000 } ", 2)

dim o6 as string = UUIDMBS.Validate(" { 550e8400e29b11d4a716446655440000 } ", 2)

dim o7 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d40716-446655440000 } ",4) // wrong with missing minus, but fixed

dim o8 as string = UUIDMBS.Validate("550e8400-e29b-11d40716-446655440000 ",4) // wrong with missing { , but fixed

dim o9 as string = UUIDMBS.Validate("6a12a4d5-e9e6-4568-afcc-34c70b24a668", 4, 4) // is version 4

dim o10 as string = UUIDMBS.Validate("6a12a4d5-e9e6-1568-afcc-34c70b24a668", 4, 1) // is version 1

dim o11 as string = UUIDMBS.Validate(" { 550e8400-e29b-11d4-a716-446655440000 } dssdsd",1+4) // wrong as it has extra chars on end, but fixed
break // check in debugger

Notes:
If the UUID is valid, you get it back.
If the UUID is invalid, you get an empty string back.

Pass 1 in mode to not require braces around UUID. Pass 2 to ignore minus characters. Pass 3 to combine those two.
You can add 4 to have the GUID fixed a bit like adding braces and minus chars if missing.
The requiredVersion parameter can be 1 to 5 to indicate the required GUID version you want to have.

72.33.6 ValueFormattedString as String

MBS Util Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The UUID as a 38 character formatted hex string.
**Example:**
```
    dim u as new UUIDMBS
    MsgBox u.ValueFormattedString
```

**Notes:** example output: { D3ED4292-FC09-11DF-8AC5-7C6D628C4C29 }

72.33.7 ValueHexString as String

MBS Util Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The UUID as a 32 character long hex string.
**Example:**
```
    dim u as new UUIDMBS
    MsgBox u.ValueHexString
```

**Notes:** example output: DCACAF4EFC0911DF92E37C6D628C4C29
72.33.8 ValueMemory as Memoryblock

72.33.9 ValueString as String

**Example:**

```vbnet
Dim u As New UUIDMBS
MsgBox u.ValueString
```

**Notes:** This string is not for user display as it contains unreadable characters.

72.33.10 Properties

72.33.11 Lasterror as Integer

**Notes:**

-1 is for failure, 0 for okay.
Windows or Mac OS error codes else.
(Read and Write property)

72.33.12 Valid as Boolean

MBS Util Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the constructor was able to create an UUID.

**Notes:** (Read and Write property)
72.34  class X509MBS

72.34.1  class X509MBS

Function: The class for a X509 certificate.
Notes: Currently this class only implements a part of the X509 functionality of OpenSSL. If needed, we could add more.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

72.34.2  Methods

72.34.3  Constructor

Function: The private constructor.

72.34.4  Copy as X509MBS

Function: Creates a copy of the certificate.

72.34.5  Data as String

Function: The data of the certificate.
Notes: You can write this to a PEM file.

72.34.6  Open(Data as MemoryBlock) as X509MBS

Function: Opens a X509 PEM file.
Notes: Line endings must be LF, not CR.
See also:

- 72.34.7 Open(Data as String) as X509MBS
72.34.7  **Open(Data as String) as X509MBS**

**Function:** Opens a X509 PEM file.
**Notes:**
Please read file via binarystream and pass here as string.
Line endings must be LF, not CR.
See also:

- 72.34.6 Open(Data as MemoryBlock) as X509MBS

72.34.8  **ReadFromPkcs12(Data as String, Pass as String, byref PKey as PKeyMBS, byref Cert as X509MBS, byref certs() as X509MBS) as Boolean**

**Function:** Reads certificate and private key from a PKCS12 file.
**Example:**

```vbnet
dim f as FolderItem = FindFile("test.p12")
dim b as BinaryStream = BinaryStream.Open(f)
dim s as string = b.Read(b.Length)
dim c as X509MBS
dim p as PKeyMBS
dim others() as X509MBS
if X509MBS.ReadFromPkcs12(s, "HelloWorld", p, c, others) then
    MsgBox c.Name
end if
```

**Notes:**
Data is the content of the PKCS12 file.
Returns true on success or false on failure.

72.34.9  **Properties**

72.34.10  **Description as String**

**Function:** The textual description of the certificate.
**Notes:**
This is only for human to read.
72.34. **CLASS X509MBS**

(Read only property)

### 72.34.11 Handle as Integer

**Function:** The internal object reference.
**Notes:** (Read and Write property)

### 72.34.12 IssuerName as Dictionary

**Function:** The issuer name.
**Notes:** (Read only property)

### 72.34.13 Name as String

**Function:** The name of the certificate.
**Notes:** (Read only property)

### 72.34.14 PublicKey as PKeyMBS

**Function:** Extracts public key.
**Notes:** (Read only property)

### 72.34.15 SerialNumber as String

**Function:** The serial number as text.
**Notes:** (Read only property)

### 72.34.16 SubjectName as Dictionary

**Function:** The subject name.
Notes: (Read only property)

### 72.34.17 Version as Integer

**Function:** The version of the file.

**Notes:**
Currently usually 2 for version 3.
(Read only property)
Chapter 73

Endian

73.1 Globals

73.1.1 EndianS16_BtoLMBS(n as Int16) as Int16

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Converts between BigEndian, LowEndian and Native byte encoding.

**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

73.1.2 EndianS16_BtoNMBS(n as Int16) as Int16

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Converts between BigEndian, LowEndian and Native byte encoding.

**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 73.1.3 EndianS16_LtoBMBS(n as Int16) as Int16

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Converts between BigEndian, LowEndian and Native byte encoding.

**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

**Details:**
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 73.1.4 EndianS16_LtoNMBS(n as Int16) as Int16

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Converts between BigEndian, LowEndian and Native byte encoding.

**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

**Details:**
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 73.1.5 EndianS16_NtoBMBS(n as Int16) as Int16

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Converts between BigEndian, LowEndian and Native byte encoding.

**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
73.1. **GLOBALS**

EndianU16.LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 73.1.6 **EndianS16_NtoLMBS(n as Int16) as Int16**

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Converts between BigEndian, LowEndian and Native byte encoding.

**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16.LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 73.1.7 **EndianS32_BtoLMBS(n as Int32) as Int32**

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Converts between BigEndian, LowEndian and Native byte encoding.

**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16.LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

### 73.1.8 **EndianS32_BtoNMBS(n as Int32) as Int32**

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Converts between BigEndian, LowEndian and Native byte encoding.
Notes:

- **EndianS32_BtoNMBS(n as Integer) as Integer**
- **EndianU16_LtoBMBS(n as Integer) as Integer**

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

---

**73.1.9 EndianS32_LtoBMBS(n as Int32) as Int32**

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Converts between BigEndian, LowEndian and Native byte encoding. **Notes:**

- **EndianS32_BtoNMBS(n as Integer) as Integer**
- **EndianU16_LtoBMBS(n as Integer) as Integer**

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

73.1.25  EndianU32_NtoBMBS(n as UInt32) as UInt32

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Converts between BigEndian, LowEndian and Native byte encoding.
**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.
73.1.26  **EndianU32_NtoLMBS(n as UInt32) as UInt32**

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.  **Function:** Converts between BigEndian, LowEndian and Native byte encoding.

**Notes:**

e.g.:
EndianS32_BtoNMBS(n as Integer) as Integer
EndianU16_LtoBMBS(n as Integer) as Integer

**Details:**
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.
Chapter 74

Filemapping and Shared Memory

74.1  class FileMappingMBS

74.1.1  class FileMappingMBS

Function: 
The class for file mapping and shared memory access.

Notes: 
FilemappingMBS is a clever way to map the content of a file into memory without loading it. 
All applications are today loaded via mapping using the virtual memory manager. So your data is inside the file but some memory is used to cache it and you can access it as a memory block.

You can use this class in several ways:

1. file mapping read/write: Call the constructor with a file, open the file mapping and map memory in your process to read or write a file.
2. file mapping read/write with temporary files: You can create (multi gigabyte) temporary memory storage to store data too big for your application own address space.
3. a variant of 2 is to pass nil to the constructor on Windows to have the data stored in the swap files.
4. use Constructor without parameters and call CreateSharedMemory to create a shared memory object.
5. use Constructor without parameters and call OpenSharedMemory to access a shared memory object from another process.

For shared memory objects, be careful how you design it. Your shared memory should have a flag for editing, so one app does not edit while another app edits. Add a version value to check your application versions. Also add a value for the revision of the content so your apps can see modifications. Finally your app should handle the possibility that the application crashes while writing data. So the data can be in a bad state.
74.1.2 Methods

74.1.3 CloseFile

74.1.4 CloseFileMapping

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Closes the file mapping. Notes: Called by the destructor automatically. You close all views, than you close the file mapping and finally the file.

74.1.5 Constructor

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The dummy constructor used if you create a shared memory object. Notes: Use this constructor if you continue with OpenSharedMemory or CreateSharedMemory. See also:

- 74.1.6 Constructor(file as folderitem, write as boolean = false)

74.1.6 Constructor(file as folderitem, write as boolean = false)

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Opens or creates a file for file mapping. Notes: On Windows you can pass nil for the file parameter in order to have a file mapping using the swap files for back storage.

If write is true, the file is opened/created for write access. See also:

- 74.1.5 Constructor
74.1.7 CreateSharedMemory(name as string, Size as Int64) as boolean

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Creates a shared memory object with the given name.
Notes:
Returns true on success and false on failure. The name must be unique on the whole PC.

On success, you can call MapView to access memory.
isWriteable is set to true as shared memory objects are always read and write.

Fails if the shared memory object does exist. In this case, call OpenSharedMemory.
If your application crashes, on the next run the object will still exist on Mac OS X and Linux, so you need
  to open or delete & create it.

The Size should be a multiply of the page size (4096).
Sets DeleteSharedMemory to true so the object is deleted by the destructor. Set it to false if you don’t want
that behavior.

74.1.8 DeleteSharedMemory(name as string) as boolean

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. Function:
Deletes the shared memory object.
Notes:
Returns true on success and false on failure.
Called by the destructor if DeleteSharedMemory property is true.
See also:
  • 74.1.17 DeleteSharedMemory as Boolean

74.1.9 EnlargeFile(Size as Int64)

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Resizes the file to the given size.
Notes: This is for file mappings used as temporary storage with a temporary file. You use the Constructor
to create a temporary file. This file is enlarged to the size you need. Next you call OpenFileMapping and
MapView. To cleanup, you close all views and the file mapping. Now before you close the file, you should
call ShrinkFile. ShrinkFile reduces the file size to zero so the operation system doesn’t start flushing the
shared memory to the file. You can get this automatically if you set ShrinkFileOnClose to true.
74.1.10 MapView(mem as MemoryBlock, offset as Int64, Size as Int32) as FileMappingViewMBS

MBS Util Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maps a portion of the file mapping or shared memory object into your application’s address space. **Notes:**

Returns nil on any error.
Using invalid offset/size values can lead into a bad mapping.
Here you can pass your own memory block for back storage.
Make sure your memory is 4 or 64 KB aligned, depending on platform.
(Windows need 64 KB, Mac only 4 KB)
See also:

- 74.1.11 MapView(offset as Int64, Size as Int32) as FileMappingViewMBS

74.1.11 MapView(offset as Int64, Size as Int32) as FileMappingViewMBS

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maps a portion of the file mapping or shared memory object into your application’s address space. **Notes:**

Returns nil on any error.
Using invalid offset/size values can lead into a bad mapping.
(Windows need 64 KB, Mac only 4 KB)
See also:

- 74.1.10 MapView(mem as MemoryBlock, offset as Int64, Size as Int32) as FileMappingViewMBS

74.1.12 OpenFileMapping(MaxSize as Int64 = 0) as boolean

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a file mapping. **Notes:**

If MaxSize is zero, the file size is used for creating the mapping.
The Size should be a multiple of the page size (4096).

Returns true on success.
Do not call after using OpenSharedMemory or CreateSharedMemory as they open the file mapping for you.
74.1. CLASS FILEMAPPING MBS

74.1.13 OpenSharedMemory(name as string) as boolean

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Opens a shared memory object with the given name.
**Notes:**
Returns true on success and false on failure.

On success, you can call MapView to access memory.
isWriteable is set to true as shared memory objects are always read and write.

Fails if the shared memory object does not exist. In this case, call CreateSharedMemory.

74.1.14 ShrinkFile

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Resizes the file to be empty.
**Notes:** Useful if you used EnlargeFile before.

74.1.15 Properties

74.1.16 DeleteFileOnClose as Boolean

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether to delete the file in the destructor.
**Notes:**
Useful if a temporary file is used as backstore.
(Read and Write property)

74.1.17 DeleteSharedMemory as Boolean

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Whether to delete the shared memory object on closing.
**Notes:**
True by default after creating a shared memory object.

On Windows the shared memory objects exist as long as someone uses them.
On Mac OS X they live until you kill them even if your application is not running.
(Read and Write property)
See also:

- 74.1.8 DeleteSharedMemory(name as string) as boolean

74.1.18 File as FolderItem

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The file reference used for the backstore.
**Notes:** (Read only property)

74.1.19 isWriteable as Boolean

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether opened/created the file mapping with write permission.
**Notes:**
Opening files for reading only in order to read inside gives the operation system some optimization possibilities.
(Read only property)

74.1.20 Lasterror as Integer

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The last error code.
**Notes:**
On Windows typically a Windows error code.
On Linux and Mac OS X typically 0 for success and other values for errors.
(Read and Write property)

74.1.21 LasterrorString as String

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The string for the last error code.
**Notes:**
Only implemented for Windows.
Returns "" on any error.
(Read only property)
74.1.22 Name as String

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name used for a named shared memory object. **Notes:** (Read only property)

74.1.23 ShrinkFileOnClose as Boolean

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to call ShrinkFile automatically from the destructor. **Notes:**
Default false.
(Read and Write property)
74.2 class FileMappingViewMBS

74.2.1 class FileMappingViewMBS

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for a file mapping view.
**Notes:** You can using file mapping with a 10 GB bit file. Your application has only 4 GB of address space
and effectively you can only use 2 GB. So you can try to map in a few hundred mega bytes at a given time.
But you can move this view on the large file to read the whole file. But remember: File mapping is only
efficient if you read a little data form the file and jump a lot. For reading the whole file, use a binarystream.

74.2.2 Methods

74.2.3 FlushView

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Flushes all data to the backstore.
**Notes:** For file mappings, the modified pages are written back to the file now. Normally you won’t call this
and let the operation system decide when to write the data to the file.

74.2.4 UnmapView

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Frees the memory allocated by the view.
**Notes:** Called automaticaly be the destructor.

74.2.5 Properties

74.2.6 FlushOnClose as Boolean

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether to call FlushView for you in the destructor.
**Notes:** (Read and Write property)

74.2.7 Memory as Memoryblock

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The memoryblock for this view.
Example:

```vbnet
dim v as FileMappingViewMBS // your view
v.memory.cstring(0)="Hello World"
```

Notes:
The memoryblock has no known size and it becomes invalid once this view object is destroyed. So keep a reference around as long as you use the memoryblock.
(Read only property)

### 74.2.8 Offset as Int64

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The offset used to create this view.
**Notes:** (Read only property)

### 74.2.9 Parent as FileMappingMBS

**Notes:** (Read only property)

### 74.2.10 Size as Integer

MBS Util Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The size in bytes of this view.
**Notes:** (Read only property)
Chapter 75

Files

75.1 class ACLEntryMBS

75.1.1 class ACLEntryMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The class for an ACL entry. Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

75.1.2 Methods

75.1.3 Constructor

75.1.4 Copy(dest as ACLEntryMBS)

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Copy an ACL entry to another ACL entry. Notes: see also acl_copy_entry man page.
75.1.5 **GIDtoUUID(GID as Integer) as memoryblock**

MBS MacOSX Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries the UUID for a group id.  
**Notes:** Returns nil on any error.

75.1.6 **GroupFromGID(GID as Integer) as string**

MBS MacOSX Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries the group name for a Group ID.

75.1.7 **MaximalPermsetMask as UInt64**

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximal permset mask.  
**Notes:** see also acl_maximal_permset_mask_np man page.

75.1.8 **UIDtoUUID(UID as Integer) as memoryblock**

MBS MacOSX Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries the UUID for an user id.  
**Notes:** Returns nil on any error.

75.1.9 **UserFromUID(UID as Integer) as string**

MBS MacOSX Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries the user name for a UID.

75.1.10 **UUIDtoID(UUID as memoryblock, byref ID as Integer, byref Type as Integer) as boolean**

MBS MacOSX Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries the GID/UID for an UUID.  
**Notes:**  
Type is 0 for user and 1 for group.  
Returns true on success.
75.1.11 Properties

75.1.12 Handle as Integer

**Notes:** (Read only property)

75.1.13 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The last error code.  
**Notes:** (Read and Write property)

75.1.14 Parent as Variant

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The parent object.  
**Notes:** (Read only property)

75.1.15 FlagSet as ACLFlagSetMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get or Set the flag set.  
**Notes:**  
see also acl_get_flagset_np/acl_set_flagset_np man page.  
(Read and Write computed property)

75.1.16 PermSet as ACLPermSetMBS

**Notes:**  
see also acl_get_permset/acl_set_permset man page.  
(Read and Write computed property)
75.1.17 PermSetMask as UInt64

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get/Set the permission set mask.  
**Notes:**
see also acl_get_permset_mask_np/acl_set_permset_mask_np man page.  
(Read and Write computed property)

75.1.18 Qualifier as Memoryblock

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get/Set the qualifier.  
**Notes:**
Value is a 16byte big GUID as memoryblock.  
see also acl_set_qualifier/acl_get_qualifier man page.  
(Read and Write computed property)

75.1.19 TagType as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets or gets the the tag type.  
**Notes:**
see also acl_get_tag_type/acl_set_tag_type man page.  
(Read and Write computed property)

75.1.20 Constants

75.1.21 kACLExtendedAllow = 1

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the ACL entry tag type bits.

75.1.22 kACLExtendedDeny = 2

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the ACL entry tag type bits.
75.1.23  kACLUndefinedTag = 0

MBS MacOSX Plugin, Plugin Version: 13.5.  **Function:** One of the ACL entry tag type bits.
75.2  class ACLFlagSetMBS

75.2.1  class ACLFlagSetMBS

Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

75.2.2  Methods

75.2.3  Add(flag as Integer)

Notes: see also acl_add_flag_np man page.

75.2.4  Clear

Notes: see also acl_clear_flags_np man page.

75.2.5  Constructor

75.2.6  Delete(flag as Integer)

Notes: see also acl_delete_flag_np man page.
75.2. CLASS ACLFLAGSETMBS

75.2.7 HasFlag(flag as Integer) as Boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Checks if a flag is set in this flag set. **Notes:** see also acl_get_flag_np man page.

75.2.8 Properties

75.2.9 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference. **Notes:** (Read only property)

75.2.10 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The last error code. **Notes:** (Read and Write property)

75.2.11 Parent as Variant

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The parent object. **Notes:** (Read only property)

75.2.12 Constants

75.2.13 kACLEntryDirectoryInherit = 64

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the flag constants.

75.2.14 kACLEntryFileInherit = 32

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the flag constants.
75.2.15 kACLEntryInherited = 16

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the flag constants.

75.2.16 kACLEntryLimitInherit = 128

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the flag constants.

75.2.17 kACLEntryOnlyInherit = 256

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the flag constants.

75.2.18 kACLFlagDeferInherit = 1

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the flag constants.

75.2.19 kACLFlagNoInherit = 131072

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the flag constants.
75.3. class ACLPermSetMBS

75.3.1 class ACLPermSetMBS

Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

75.3.2 Methods

75.3.3 Add(perm as Integer)

Notes: see also acl_add_perm man page.

75.3.4 Clear

Notes: see also acl_clear_perms man page.

75.3.5 Constructor

75.3.6 Delete(perm as Integer)

Notes: see also acl_delete_perm man page.
CHAPTER 75. FILES

75.3.7 HasPerm(perm as Integer) as Boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Checks if permissions is included in this permission set. **Notes:** see also acl_get_perm_np man page.

75.3.8 Properties

75.3.9 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference. **Notes:** (Read only property)

75.3.10 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The last error code. **Notes:** (Read and Write property)

75.3.11 Parent as Variant

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The parent object. **Notes:** (Read only property)

75.3.12 Constants

75.3.13 kACLAddFile = 4

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the individual object access permissions.

75.3.14 kACLAddSubDirectory = 32

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the individual object access permissions.
75.3. CLASS ACLPERMSETMBS

75.3.15  kACLAppendData = 32

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the individual object access permissions.

75.3.16  kACLChangeOwner = 8192

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the individual object access permissions.

75.3.17  kACLDelete = 16

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the individual object access permissions.

75.3.18  kACLDeleteChild = 64

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the individual object access permissions.

75.3.19  kACLExecute = 8

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the individual object access permissions.

75.3.20  kACLListDirectory = 2

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the individual object access permissions.

75.3.21  kACLMaxEntries = 128

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** Maximum number of entries.

75.3.22  kACLReadAttributes = 128

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the individual object access permissions.
75.3.23 kACLReadData = 2

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the individual object access permissions.

75.3.24 kACLReadExtraAttributes = 512

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the individual object access permissions.

75.3.25 kACLReadSecurity = 2048

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the individual object access permissions.

75.3.26 kACLSearch = 8

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the individual object access permissions.

75.3.27 kACLWriteAttributes = 256

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the individual object access permissions.

75.3.28 kACLWriteData = 4

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the individual object access permissions.

75.3.29 kACLWriteExtraAttributes = 1024

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the individual object access permissions.

75.3.30 kACLWriteSecurity = 4096

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the individual object access permissions.
75.4. CLASS ACLRIGHTMBS

75.4 class ACLRightMBS

75.4.1 class ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for ACL rights.

75.4.2 Methods

75.4.3 Constructor(count as Integer)

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Allocates and initializes the working storage for an ACL of at least count ACL entries. **Notes:** see also acl_init man page.

See also:

- 75.4.4 Constructor(text as string)

75.4.4 Constructor(text as string)

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates new ACL from text representation. **Notes:** see also acl_from_text man page.

See also:

- 75.4.3 Constructor(count as Integer)

75.4.5 CopyData(Native as boolean = false) as String

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates external representation. **Notes:** see also acl_copy_int man page.

75.4.6 CreateEntry as ACLEntryMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new entry. **Notes:** see also acl_create_entry man page.

See also:

- 75.4.7 CreateEntry(entryIndex as Integer, tag_type as Integer = 1) as ACLEntryMBS
75.4.7 CreateEntry(entryIndex as Integer, tag_type as Integer = 1) as ACLEntryMBS

**Notes:** see also acl_create_entry man page.  
See also:
- 75.4.6 CreateEntry as ACLEntryMBS

75.4.8 DeleteEntry(entry as ACLEntryMBS)

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Deletes an entry.  
**Notes:** see also acl_delete_entry man page.

75.4.9 Duplicate as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a duplicate of this right set.  
**Notes:** see also acl_dup man page.

75.4.10 Entries as ACLEntryMBS()

MBS MacOSX Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries array with all entries in this ACL.  
**Notes:**  
Lasterror is set.  
see also acl_get_entry man page.

75.4.11 Entry(entryIndex as Integer) as ACLEntryMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries entry with given index.  
**Notes:**  
You can use constants kACLFirstEntry, kACLLastEntry or kACLNextEntry.  
see also acl_get_entry man page.
75.4. CLASS ACLRIGHTMBS

75.4.12 NewACL(count as Integer) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Allocates and initializes the working storage for an ACL of at least count ACL entries. **Notes:** see also acl_init man page.

75.4.13 NewACLFromExternal(data as string, native as boolean = false) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates new ACL object from external representation. **Notes:** see also acl_copy_ext man page.

75.4.14 NewACLFromFile(file as folderitem, type as Integer) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates ACL object from file. **Notes:** see also acl_get_file man page.

See also:
- 75.4.15 NewACLFromFile(path as string, type as Integer) as ACLRightMBS

75.4.15 NewACLFromFile(path as string, type as Integer) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates ACL object from file. **Notes:** see also acl_get_file man page.

See also:
- 75.4.14 NewACLFromFile(file as folderitem, type as Integer) as ACLRightMBS

75.4.16 NewACLFromFilePointer(FilePointer as Integer) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates ACL object from FilePointer. **Notes:** see also acl_get_fd man page.

See also:
- 75.4.17 NewACLFromFilePointer(FilePointer as Integer, type as Integer) as ACLRightMBS
75.4.17 NewACLFromFilePointer(FilePointer as Integer, type as Integer) as ACLRightMBS

See also:

- 75.4.16 NewACLFromFilePointer(FilePointer as Integer) as ACLRightMBS

75.4.18 NewACLFromLink(path as string, type as Integer) as ACLRightMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Creates ACL object from link. Notes: see also acl_get_link_up man page.

75.4.19 NewACLFromText(text as string) as ACLRightMBS

75.4.20 SetFile(Path as string, type as Integer) as boolean

75.4.21 SetFilePointer(FilePointer as Integer) as boolean

See also:

- 75.4.22 SetFilePointer(FilePointer as Integer, type as Integer) as boolean
75.4. CLASS ACLRIGHTMBS

75.4.22 SetFilePointer(FilePointer as Integer, type as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Applies this ACL to a file pointer. **Notes:** see also acl_set_fd_np man page.

See also:
- 75.4.21 SetFilePointer(FilePointer as Integer) as boolean

75.4.23 SetLink(Path as string, type as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Applies this ACL to a link file. **Notes:** see also acl_set_link_np man page.

75.4.24 Size as Int64

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries size of binary representation. **Notes:** see also acl_size man page.

75.4.25 Text as String

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries text representation of this ACL. **Notes:** see also acl_to_text man page.

75.4.26 Valid as boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Checks if ACL is valid in general. **Notes:** see also acl_valid man page.

75.4.27 ValidFile(Path as string, type as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Checks if ACL is valid for this file. **Notes:** see also acl_valid_file_np man page.
75.4.28 ValidFilePointer(FilePointer as Integer, type as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Checks if ACL is valid for this file pointer. **Notes:** see also acl_valid_fd_np man page.

---

75.4.29 Properties

75.4.30 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference. **Notes:** (Read only property)

---

75.4.31 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The last error code. **Notes:** (Read and Write property)

---

75.4.32 FlagSet as ACLFlagSetMBS

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get/Set the flag set. **Notes:** see also acl_get_flagset_np/acl_set_flagset_np man page. (Read and Write computed property)

---

75.4.33 Constants

75.4.34 kACLFirstEntry = 0

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the ACL Entry constants. **Notes:** Next entry.
75.4.35  kACLLastEntry = -2

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the ACL Entry constants.
**Notes:** Last entry.

75.4.36  kACLNextEntry = -1

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the ACL Entry constants.
**Notes:** Next entry.

75.4.37  kACLTypeAccess = 0

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the ACL types.
**Notes:** Posix 1003.1e type, not supported.

75.4.38  kACLTypeAFS = 2

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the ACL types.
**Notes:** No supported on Mac OS X, only for Linux/FreeBSD.

75.4.39  kACLTypeCODA = 3

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the ACL types.
**Notes:** No supported on Mac OS X, only for Linux/FreeBSD.

75.4.40  kACLTypeDefault = 1

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the ACL types.
**Notes:** Posix 1003.1e type, not supported.

75.4.41  kACLTypeExtended = 256

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the ACL types.
**Notes:** Extended ACL.
75.4.42 kACLTypeNTFS = 4

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the ACL types. **Notes:** No supported on Mac OS X, only for Linux/FreeBSD.

75.4.43 kACLTypeNWFS = 5

MBS MacOSX Plugin, Plugin Version: 13.5. **Function:** One of the ACL types. **Notes:** No supported on Mac OS X, only for Linux/FreeBSD.
75.5.1 ConsoleExecuteMBS(path as folderitem, arguments() as string, environment() as string) as Integer

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Executes a new application.

**Notes:**
Use WindowsShellExecuteMBS on Windows.

Launch GUI tools on Mac OS X using /bin/open.
Returned value is the PID of the new process.
If the execution fails you still get a PID, but this process is terminated in a few milliseconds.

- arguments must have at least one member.
- See also:
  - 75.5.2 ConsoleExecuteMBS(path as string, arguments() as string, environment() as string) as Integer

75.5.2 ConsoleExecuteMBS(path as string, arguments() as string, environment() as string) as Integer

MBS Util Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Executes a new application.

**Example:**

```plaintext
// launch an app using open

const sShellPath="/usr/bin/open"

dim a(1) as string
    dim e(-1) as string

    a(0)="open"  // must be the application name
    a(1)="/Applications/TextEdit.app"  // first parameter

    print str(ConsoleExecuteMBS(sShellPath,a,e))

// Launch app binary directly:

    dim aa(1) as string
    dim ee(-1) as string
```
**CHAPTER 75. FILES**

```vbnet
dim f as FolderItem

f=GetFolderItem("test.app").Child("Contents").Child("MacOS").Child("test")

aa(0)=f.ShellPath

print str(ConsoleExecuteMBS(f.ShellPath,aa,ee))
```

**Notes:**

Use WindowsShellExecuteMBS on Windows.

Launch GUI tools on Mac OS X using /bin/open.
Returned value is the PID of the new process.
If the execution fails you still get a PID, but this process is terminated in a few milliseconds.

Arguments must have at least one member.
See also:

- 75.5.1 ConsoleExecuteMBS(path as folderitem, arguments() as string, environment() as string) as Integer

**75.5.3 WindowsEjectVolumeMBS(driveLetter as string, byref status as Integer) as boolean**

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Unmounts and ejects the given drive.

**Example:**

```vbnet
// editField1 has the drive letter

dim status as Integer
dim b as Boolean = WindowsEjectVolumeMBS(EditField1.text, status)

if b then
    Select case status
        case 1
            MsgBox "Media in Drive " + EditField1.text + " has been ejected safely."
        case 2
            MsgBox "Media in Drive " + EditField1.text + " can be safely removed."
        else
            MsgBox "Failed?"
    end Select
else
    MsgBox "Failed."
```
75.5. GLOBALS

end if

Notes:
Status is set to 1 after an eject or 2 after an unmount without eject.
Returns true on success and false on failure.

75.5.4 ExchangeFilesMBS(first as folderitem, second as folderitem) as Integer

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. Function:
Exchanges two files.
Example:

```vbs
dim f1 as FolderItem = SpecialFolder.Desktop.Child("some picture.jpg")
dim f2 as FolderItem = SpecialFolder.Desktop.Child("another picture.jpg")

dim e as Integer = ExchangeFilesMBS(f1,f2)

MsgBox str(e) ' show error code (0=no error)
```

Notes:
On Mac swaps the contents of two files:

The ExchangeFilesMBS function allows programs to implement a "safe save" operation by creating and
writing a complete new file and swapping the contents. An folderitem, alias, FSSpec, or FSRef that refers
to the old file will now access the new data. The corresponding information in in-memory data structures
are also exchanged.

Either or both files may have open access paths. After the exchange, the access path will refer to the opposite
file’s data (that is, to the same data it originally referred, which is now part of the other file).

On Windows files are renamed so they exchange their paths.

PS: Real Studio does not notice the change, so the folderitems you pass should no longer be used. To access
the file, please make new folderitem with parent.truechild(filename).
75.5.5 **FolderItemToPathMBS(file as folderitem) as string**

MBS MacOSX Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a unix path for the given folderitem.

**Notes:**
Works only on Mac OS X.
This function is not very good, as Apple doesn’t document for FSRefMakePath what path it returns, which encoding the path uses (maybe UTF8) and when it fails.
(e.g. it currently doesn’t work for volumes)

75.5.6 **NewFolderItemFSRefMBS(fsref as memoryblock) as FolderItem**

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a FolderItem from a specified FSRef.

**Example:**
```
dim f,g as folderItem
dim m as memoryBlock

f=getfolderItem(""")

m=f.FSRefMBS

g=NewFolderItemFSRefMBS(m)
msgBox g.absolutePath // same path as f
```

**Notes:** Only useful for toolbox calls and on Mac OS 9 and later.

75.5.7 **NewFolderItemFSRefNameMBS(fsref as memoryblock,name as string) as FolderItem**

MBS Util Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a FolderItem from a specified FSRef.

**Notes:** Only useful for toolbox calls and on Mac OS 9 and later.

75.5.8 **NewFolderItemMBS(vRefNum as Integer, parID as Integer, name as String) as FolderItem**

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a FolderItem from a specified volume, the item’s directory ID and its name.
Notes: The vRefNum with value -1 is the boot volume on Mac OS.

75.5.9 NewVolumeFolderItemMBS(vRefNum as Integer) as FolderItem

Example:

```vba
dim f as folderItem
f=NewVolumeFolderItemMBS(-1)
msgBox f.absolutePath
```

Notes:
The vRefNum with value -1 is the boot volume on Mac OS.
Pass in the vRefNum of any mounted volume and it returns the Volume as a FolderItem.
Returns nil if the vRefNum was invalid.

75.5.10 PathToFolderItemMBS(path as string) as folderitem

MBS MacOSX Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem for the given unix path.
Notes:
Works only on Mac OS X.
This function is not very good, as Apple doesn't document which path is expected, which encoding the path should use (maybe UTF8) and when it fails.
(e.g. it currently doesn’t work for paths with "textasciitilde " inside)

75.5.11 VolResolveIDMBS(volume as FolderItem, id as Integer) as FolderItem

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
return a FolderItem for a passed FileID or DirID. If the item can not be resolved, nil is returned instead.
The first parameter specified the volume where you want to resolve the ID on.
Example:

```vba
dim f,g as folderItem
f=SpecialFolder.Desktop
```
g=VolResolveIDMBS(f,f.MacDirID)
msgBox f.absolutePath

**Notes:** This function returns a FolderItem for a passed FileID or DirID. If the item can not be resolved, nil is returned instead.
See also:

- 75.5.12 VolResolveIDMBS(vRefNum as Integer, id as Integer) as FolderItem

### 75.5.12 VolResolveIDMBS(vRefNum as Integer, id as Integer) as FolderItem

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
return a FolderItem for a passed FileID or DirID. If the item can not be resolved, nil is returned instead.
The first parameter specified the volume where you want to resolve the ID on.
**Example:**
```
Dim f,g as folderItem
f=SpecialFolder.Desktop
f=VolResolveIDMBS(f.macVRefNum,f.MacDirID)
msgBox f.absolutePath
```

**Notes:**
This function returns a FolderItem for a passed FileID or DirID. If the item can not be resolved, nil is returned instead.
The first parameter specified the volume where you want to resolve the ID on. There is a bug in RB which may say "type mismatch error" in RB. Than use the other variant of that function.
See also:

- 75.5.11 VolResolveIDMBS(volume as FolderItem, id as Integer) as FolderItem

### 75.5.13 AdminToolsMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Returns a folderitem to the admin tools folder on Windows.
**Notes:** Returns on Windows the common admin tools folder for domain = -32766 and user's admin tools folder if domain = -32763.
75.5. **GLOBALS**

### 75.5.14 CookiesMBS as folderitem

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns a folderitem to the Cookie folder on Windows.

### 75.5.15 HistoryMBS as folderitem

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns a folderitem to the history folder on Windows.

### 75.5.16 InternetCacheMBS as folderitem

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns a folderitem to the Internet Cache folder on Windows.

### 75.5.17 WindowsStartMenuMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns a folderitem to the start menu folder on Windows.

### 75.5.18 SetCurrentWorkingDirectoryMBS(path as folderitem) as boolean

MBS Util Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the current working directory for the application. **Example:**

```plaintext
MsgBox SpecialFolder.CurrentWorkingDirectory.AbsolutePath
call SetCurrentWorkingDirectoryMBS(SpecialFolder.Desktop)
MsgBox SpecialFolder.CurrentWorkingDirectory.AbsolutePath
```

**Notes:**

This is sometimes needed if some library references files relative to this current working directory. Returns true on success and false on failure.
75.5.19 GetDriveTypeMBS(path as string) as Integer

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Determines whether a disk drive is a removable, fixed, CD-ROM, RAM disk, or network drive.

**Example:**

```plaintext
if GetDriveTypeMBS("E:" ) = 4 then
  msgbox "network drive"
end if
```

**Notes:**

Path: The root directory for the drive.

Possible values:

- **0** Unknown: The drive type cannot be determined.
- **1** Error: The root path is invalid; for example, there is no volume mounted at the specified path.
- **2** Removable: The drive has removable media; for example, a floppy drive, thumb drive, or flash card reader.
- **3** Fixed: The drive has fixed media; for example, a hard disk drive or flash drive.
- **4** Remote: The drive is a remote (network) drive.
- **5** CD-ROM: The drive is a CD-ROM drive.
- **6** RAM Disk: The drive is a RAM disk.

---

75.6 class DADiskMBS

75.6.1 class DADiskMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a disk in Disk Arbitration.

**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.
75.6. CLASS DADISKMBS

75.6.2 Methods

75.6.3 BSDName as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Obtains the BSD device name for the specified disk.

**Example:**
```vba
dim session as new DASessionMBS
dim d as DADiskMBS = DADiskMBS.CreateFromVolume(session,volume(0))
MsgBox d.BSDName
```

75.6.4 Constructor

75.6.5 CreateFromBSDName(session as DASessionMBS, name as string) as DADiskMBS

**Notes:**
- session: The DASession in which to contact Disk Arbitration.
- name: The BSD device name.

Returns a reference to a new DADisk.

75.6.6 CreateFromVolume(session as DASessionMBS, volume as folderitem) as DADiskMBS

**Notes:** Creates a new disk object.
75.6.7 **CreateFromVolumePath**(session as DASessionMBS, path as string) as DADiskMBS

**Notes:**

- session: The DASession in which to contact Disk Arbitration.
- path: The BSD mount point.

Available in OS X v10.7 and later.

75.6.8 **Description as dictionary**

**Example:**

```vbnet
dim session as new DASessionMBS
dim d as DADiskMBS = DADiskMBS.CreateFromVolume(session,volume(0))
dim dic as Dictionary = d.Description
MsgBox dic.Value(d.kDADiskDescriptionVolumeNameKey)
```

**Notes:**

This function will contact Disk Arbitration to acquire the latest description of the specified disk, unless this function is called on a disk object passed within the context of an event, in which case the description is current as of that event.

Available in OS X v10.4 and later.

75.6.9 **kDADiskDescriptionBusNameKey** as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the description dictionary.

**Notes:** The value in the dictionary for this key is a String.

75.6.10 **kDADiskDescriptionBusPathKey** as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a String.

75.6.11 kDADiskDescriptionDeviceGUIDKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the description dictionary. Notes: The value in the dictionary for this key is a memoryblock.

75.6.12 kDADiskDescriptionDeviceInternalKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the description dictionary. Notes: The value in the dictionary for this key is a Boolean.

75.6.13 kDADiskDescriptionDeviceModelKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the description dictionary. Notes: The value in the dictionary for this key is a String.

75.6.14 kDADiskDescriptionDevicePathKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the description dictionary. Notes: The value in the dictionary for this key is a String.

75.6.15 kDADiskDescriptionDeviceProtocolKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the description dictionary. Notes: The value in the dictionary for this key is a String.

75.6.16 kDADiskDescriptionDeviceRevisionKey as string

75.6.17  kDADiskDescriptionDeviceUnitKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the description dictionary. Notes: The value in the dictionary for this key is a Number.

75.6.18  kDADiskDescriptionDeviceVendorKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the description dictionary. Notes: The value in the dictionary for this key is a String.

75.6.19  kDADiskDescriptionMediaBlockSizeKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the description dictionary. Notes: The value in the dictionary for this key is a Number.

75.6.20  kDADiskDescriptionMediaBSDMajorKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the description dictionary. Notes: The value in the dictionary for this key is a Number.

75.6.21  kDADiskDescriptionMediaBSDMinorKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the description dictionary. Notes: The value in the dictionary for this key is a Number.

75.6.22  kDADiskDescriptionMediaBSDNameKey as string

75.6. **CLASS DADISKMBS**

Notes: The value in the dictionary for this key is a String.

75.6.23  **kDADiskDescriptionMediaBSDUnitKey as string**

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a Number.

75.6.24  **kDADiskDescriptionMediaContentKey as string**

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a String.

75.6.25  **kDADiskDescriptionMediaEjectableKey as string**

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a Boolean.

75.6.26  **kDADiskDescriptionMediaIconKey as string**

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a Dictionary.

75.6.27  **kDADiskDescriptionMediaKindKey as string**

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a String.

75.6.28  **kDADiskDescriptionMediaLeafKey as string**

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the description dictionary.
Notes: The value in the dictionary for this key is a Boolean.

75.6.29 kDADiskDescriptionMediaNameKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the description dictionary. Notes: The value in the dictionary for this key is a String.

75.6.30 kDADiskDescriptionMediaPathKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the description dictionary. Notes: The value in the dictionary for this key is a String.

75.6.31 kDADiskDescriptionMediaRemovableKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the description dictionary. Notes: The value in the dictionary for this key is a Boolean.

75.6.32 kDADiskDescriptionMediaSizeKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the description dictionary. Notes: The value in the dictionary for this key is a Number.

75.6.33 kDADiskDescriptionMediaTypeKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the description dictionary. Notes: The value in the dictionary for this key is a String.

75.6.34 kDADiskDescriptionMediaUUIDKey as string

75.6.35  kDADiskDescriptionMediaWholeKey as string

Notes: The value in the dictionary for this key is a Boolean.

75.6.36  kDADiskDescriptionMediaWritableKey as string

Notes: The value in the dictionary for this key is a Boolean.

75.6.37  kDADiskDescriptionVolumeKindKey as string

Notes: The value in the dictionary for this key is a String.

75.6.38  kDADiskDescriptionVolumeMountableKey as string

Notes: The value in the dictionary for this key is a Boolean.

75.6.39  kDADiskDescriptionVolumeNameKey as string

Notes: The value in the dictionary for this key is a String.

75.6.40  kDADiskDescriptionVolumeNetworkKey as string

CHAPTER 75. FILES

Notes: The value in the dictionary for this key is a Boolean.

75.6.41 kDADiskDescriptionVolumePathKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the description dictionary. Notes: The value in the dictionary for this key is a folderitem.

75.6.42 kDADiskDescriptionVolumeUUIDKey as string

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the description dictionary. Notes: The value in the dictionary for this key is a CFUUIDMBS.

75.6.43 Options as Integer

75.6.44 SetOptions(options as Integer, value as boolean) as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Sets the options for the specified disk. Notes:

options: The options to set or clear.
value: Pass true to set options; otherwise pass false to clear options.
Returns result code.

75.6.45 WholeDisk as DADiskMBS

75.6.46 Properties

75.6.47 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference. **Notes:** (Read and Write property)
75.7 class DADissenterMBS

75.7.1 class DADissenterMBS

**Example:**
```
dim d as new DADissenterMBS(11, "Write Error")
```
MsgBox str(d.Status)+" "+d.StatusString

75.7.2 Methods

75.7.3 Constructor(status as Integer, s as string)

**Example:**
```
dim d as new DADissenterMBS(11, "Write Error")
```
MsgBox str(d.Status)+" "+d.StatusString

**Notes:**
status: The return code.
s: The return code string. Pass empty string for no reason.

75.7.4 Properties

75.7.5 Handle as Integer

**Notes:** (Read and Write property)
75.7.6 Status as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Obtains the return code. **Notes:** (Read only property)

75.7.7 StatusString as String

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Obtains the return code string. **Notes:** (Read only property)

75.7.8 Constants

75.7.9 kDAReturnBadArgument = & hF8DA0003

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the error constants. **Notes:** Bad Argument

75.7.10 kDAReturnBusy = & hF8DA0002

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the error constants. **Notes:** Busy

75.7.11 kDAReturnError = & hF8DA0001

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the error constants. **Notes:** Error

75.7.12 kDAReturnExclusiveAccess = & hF8DA0004

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the error constants. **Notes:** Exclusive Access
75.7.13 kDAReturnNoResources = & hF8DA0005

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the error constants.  
**Notes:** No Resources

75.7.14 kDAReturnNotFound = & hF8DA0006

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the error constants.  
**Notes:** Not found

75.7.15 kDAReturnNotMounted = & hF8DA0007

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the error constants.  
**Notes:** Not mounted

75.7.16 kDAReturnNotPermitted = & hF8DA0008

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the error constants.  
**Notes:** Not permitted

75.7.17 kDAReturnNotPrivileged = & hF8DA0009

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the error constants.  
**Notes:** Not privileged

75.7.18 kDAReturnNotReady = & hF8DA000A

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the error constants.  
**Notes:** Not ready

75.7.19 kDAReturnNotWritable = & hF8DA000B

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the error constants.  
**Notes:** Not writable
75.7. **CLASS DADISSENTERMBS**

### 75.7.20 kDAReturnSuccess = 0

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the error constants. **Notes:** Success

### 75.7.21 kDAReturnUnsupported = & hF8DA000C

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the error constants. **Notes:** Unsupported
75.8 class DarwinChmodMBS

75.8.1 class DarwinChmodMBS

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
A class to change the owner or mode of a file on Mac OS X.

**Example:**
```
dim c as DarwinChmodMBS
dim userfolder as FolderItem
dim darwinResult as Integer
dim s as string

C=new DarwinChmodMBS
userFolder=SpecialFolder.Desktop.Child("chmod.rb")
s=userFolder.unixpathMBS

darwinResult = c.chmod( s, & B111111111 ) // all rwx
// 1 = ———x
// 2 = ——–wx
// 7 = ——-rwx
// 8 = ——x—

darwinResult=c.lstat(s)

MsgBox s+""+str(darwinResult)+""+str(c.error)
```

75.8.2 Methods

75.8.3 chflags(path as string, flags as Integer) as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The file whose name is given by path has its flags changed to flags.

**Notes:**
The flags specified are formed by or'ing the following values

- **UF_NODUMP** 0x00000001 Do not dump the file.
- **UF_IMMUTABLE** 0x00000002 The file may not be changed.
- **UF_APPEND** 0x00000004 The file may only be appended to.
- **UF_OPAQUE** 0x00000008 Directory is opaque wrt. union
The "UF_IMMUTABLE" and "UF_APPEND" flags may be set or unset by either the owner of a file or the super-user.

The "SF_IMMUTABLE" and "SF_APPEND" flags may only be set or unset by the super-user. They may be set at any time, but normally may only be unset when the system is in single-user mode.

You can type "man 2 chflags" on the Mac OS X terminal for more details.

Upon successful completion, a value of 0 is returned. Otherwise, -1 is returned. Returns -2 on bad parameter or if function is not available.

Chflags() will fail if:

- ENOTDIR  A component of the path prefix is not a directory.
- ENAMETOOLONG  A component of a pathname exceeded \{ NAME_MAX \} characters, or an entire path name exceeded \{ PATH_MAX \} characters.
- ENOENT  The named file does not exist.
- EACCES  Search permission is denied for a component of the path prefix.
- ELOOP  Too many symbolic links were encountered in translating the pathname.
- EPERM  The effective user ID does not match the owner of the file and the effective user ID is not the super-user.
- EROFS  The named file resides on a read-only file system.
-EFAULT  Path points outside the process’s allocated address space.
- EIO  An I/O error occurred while reading from or writing to the file system.

75.8.4  chmod(path as string, mode as Integer) as Integer

Sets the file permission bits of the file specified by the pathname path to mode.

Example:

```dim f as FolderItem
dim g as FolderItem

f=SpecialFolder.Desktop.Child("test1")
g=SpecialFolder.Desktop.Child("test2")

dim d as DarwinChmodMBS
d=new DarwinChmodMBS
if d.stat(f.UnixpathMBS)=0 then // read mode```
if d.chmod(g.UnixpathMBS,d.mode)=0 then // set mode  
// worked  
end if  
end if

Notes:
Chmod() verifies that the process owner (user) either owns the file specified by path (or fd), or is the super-user. A mode is created from or’d permission bit masks like this:

<table>
<thead>
<tr>
<th>Bit</th>
<th>Description</th>
<th>Mask</th>
</tr>
</thead>
<tbody>
<tr>
<td>IRWXU</td>
<td>RWX mask for owner</td>
<td>&amp; o0000700</td>
</tr>
<tr>
<td>IRUSR</td>
<td>R for owner</td>
<td>&amp; o0000400</td>
</tr>
<tr>
<td>IWUSR</td>
<td>W for owner</td>
<td>&amp; o0000200</td>
</tr>
<tr>
<td>IXUSR</td>
<td>X for owner</td>
<td>&amp; o0000100</td>
</tr>
<tr>
<td>IRWXG</td>
<td>RWX mask for group</td>
<td>&amp; o0000070</td>
</tr>
<tr>
<td>IRGRP</td>
<td>R for group</td>
<td>&amp; o0000040</td>
</tr>
<tr>
<td>IWGRP</td>
<td>W for group</td>
<td>&amp; o0000020</td>
</tr>
<tr>
<td>IXGRP</td>
<td>X for group</td>
<td>&amp; o0000010</td>
</tr>
<tr>
<td>IRWXO</td>
<td>RWX mask for other</td>
<td>&amp; o0000007</td>
</tr>
<tr>
<td>IROTH</td>
<td>R for other</td>
<td>&amp; o0000004</td>
</tr>
<tr>
<td>IWOTH</td>
<td>W for other</td>
<td>&amp; o0000002</td>
</tr>
<tr>
<td>IXOTH</td>
<td>X for other</td>
<td>&amp; o0000001</td>
</tr>
<tr>
<td>ISUID</td>
<td>set user id on execution</td>
<td>&amp; o0004000</td>
</tr>
<tr>
<td>ISGID</td>
<td>set group id on execution</td>
<td>&amp; o0002000</td>
</tr>
<tr>
<td>ISVTX</td>
<td>save swapped text even after use</td>
<td>&amp; o0001000</td>
</tr>
</tbody>
</table>

The ISVTX (the sticky bit) indicates to the system which executable files are shareable (the default) and the system maintains the program text of the files in the swap area. The sticky bit may only be set by the super user on shareable executable files.

If mode ISVTX (the 'sticky bit') is set on a directory, an unprivileged user may not delete or rename files of other users in that directory. The sticky bit may be set by any user on a directory which the user owns or has appropriate permissions. For more details of the properties of the sticky bit, see sticky(8).

Writing or changing the owner of a file turns off the set-user-id and set-group-id bits unless the user is the super-user. This makes the system somewhat more secure by protecting set-user-id (set-group-id) files from remaining set-user-id (set-group-id) if they are modified, at the expense of a degree of compatibility.

You can type ”man 2 chmod” on the Mac OS X terminal for more details.

Upon successful completion, a value of 0 is returned. Otherwise, -1 is returned. Returns -2 on bad parameter or if function is not available.
Chmod() will fail and the file mode will be unchanged if:

- **ENOTDIR**: A component of the path prefix is not a directory.
- **ENAMETOOLONG**: A component of a pathname exceeded \{NAME_MAX\} characters, or an entire path name exceeded \{PATH_MAX\} characters.
- **ENOENT**: The named file does not exist.
- **EACCES**: Search permission is denied for a component of the path prefix.
- **ELOOP**: Too many symbolic links were encountered in translating the pathname.
- **EPERM**: The effective user ID does not match the owner of the file and the effective user ID is not the super-user.
- **EROFS**: The named file resides on a read-only file system.
- **EFAULT**: Path points outside the process’s allocated address space.
- **EIO**: An I/O error occurred while reading from or writing to the file system.

### 75.8.5 chown(path as string, uid as Integer, gid as Integer) as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The owner ID and group ID of the file (or link) named by path is changed as specified by the arguments owner (uid) and group (gid).

**Notes:**
The owner of a file may change the group to a group of which he or she is a member, but the change owner capability is restricted to the superuser.

Chown() clears the set-user-id and set-group-id bits on the file to prevent accidental or mischievous creation of set-user-id and set-group-id programs.

You can type "man 2 chmod" on the Mac OS X terminal for more details.

Upon successful completion, a value of 0 is returned. Otherwise, -1 is returned. Returns -2 on bad parameter or if function is not available.

Chown() will fail and the file or link will be unchanged if:

### 75.8.6 error as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the error code from the last operation.

**Notes:**
CHAPTER 75. FILES

ENOTDIR A component of the path prefix is not a directory.
ENAMETOOLONG A component of a pathname exceeded \{ NAME_MAX \} characters, or an entire path name exceeded \{ PATH_MAX \} characters.
ENOENT The named file does not exist.
EACCES Search permission is denied for a component of the path prefix.
ELOOP Too many symbolic links were encountered in translating the pathname.
EPERM The effective user ID is not the super-user.
EROFS The named file resides on a read-only file system.
EFAULT Path points outside the process’s allocated addressspace.
EIO An I/O error occurred while reading from or writing to the file system.

This function asks the operation system. It’s not a property like in other classes.

Error codes:

Returns -2 if function is not available.

75.8.7 lstat(path as string) as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The stat function obtains information about the file pointed to by path.
Example:

// we use truechild to not resolve the symbol link
dim f as FolderItem = SpecialFolder.Desktop.trueChild("test.rtf")

dim c as new DarwinChmodMBS
if c.lstat(f.UnixpathMBS) = 0 then
    // ok
    Break // see values in debugger
else
    MsgBox "failed"
end if

Notes: See stat for details.
75.8. **CLASS DARWINCHMODMBS**

75.8.8 **stat(path as string) as Integer**

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The stat function obtains information about the file pointed to by path.

**Example:**
```vbscript
dim d as DarwinChmodMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test")
d=new DarwinChmodMBS

if d.stat(f.UnixpathMBS)=0 then
    MsgBox hex(d.mode)
end if
```

**Notes:**
Read, write or execute permission of the named file is not required, but all directories listed in the path name leading to the file must be searchable.

Lstat() is like stat() except in the case where the named file is a symbolic link, in which case lstat() returns information about the link, while stat() returns information about the file the link references. Unlike other filesystem objects, symbolic links do not have an owner, group, access mode, times, etc. Instead, these attributes are taken from the directory that contains the link. The only attributes returned from an lstat() that refer to the symbolic link itself are the file type (S_IFLNK), size, blocks, and link count (always 1).

Information about the file is stored directly into the fields of the class if the function is successfull.

You can type "man 2 stat" on the Mac OS X terminal for more details.

Upon successful completion, a value of 0 is returned. Otherwise, -1 is returned. Returns -2 on bad parameter or if function is not available.

**75.8.9  Properties**

**75.8.10  blocks as Double**

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Number of blocks allocated for the file.
Notes:
The actual number of blocks allocated for the file in 512-byte units. As short symbolic links are stored in
the inode, this number may be zero.

Set by the stat and lstat function if it was successful.
(Read and Write property)

75.8.11 blocksize as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The optimal I/O block size for the file.
Notes:
Set by the stat and lstat function if it was successful.
(Read and Write property)

75.8.12 dev as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The device inode where the file resides on.
Notes:
Set by the stat and lstat function if it was successful.
(Read and Write property)

75.8.13 flags as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
User defined flags for the file.
Notes:
Set by the stat and lstat function if it was successful.
(Read and Write property)

75.8.14 gen as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The file generation number.
Notes:
Set by the stat and lstat function if it was successful. (Read and Write property)

### 75.8.15  **gid as Integer**

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The group-id of the owner of the file. **Notes:** Set by the stat and lstat function if it was successful. (Read and Write property)

### 75.8.16  **ino as Integer**

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The inode's number of the file. **Notes:** Set by the stat and lstat function if it was successful. (Read and Write property)

### 75.8.17  **mode as Integer**

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The inode protection mode of the file. **Notes:** Set by the stat and lstat function if it was successful.

Some Constants:

(Read and Write property)

### 75.8.18  **nlink as Integer**

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number or hard links to the file. **Notes:** Set by the stat and lstat function if it was successful.
75.8.19 rdev as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The device type, for special file inode.

**Notes:**
Set by the stat and lstat function if it was successful.
(Read and Write property)

75.8.20 size as Double

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The file size, in bytes.

**Notes:**
Set by the stat and lstat function if it was successful.
(Read and Write property)

75.8.21 uid as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The user-id of the owner of the file.

**Notes:**
Set by the stat and lstat function if it was successful.
(Read and Write property)
### Error Code Details

<table>
<thead>

<td>ENAMETOOLONG</td>
<td>File name too long</td>
</tr>
</tbody>
</table>

---

**Note:** The error codes should be rearranged based on their severity and type.
ENOTDIR  A component of the path prefix is not a directory.
ENAMETOOLONG  A component of a pathname exceeded \{ NAME_MAX \} characters, or an entire path name exceeded \{ PATH_MAX \} characters.
ENOENT  The named file does not exist.
EACCES  Search permission is denied for a component of the path prefix.
ELOOP  Too many symbolic links were encountered in translating the pathname.
EFAULT  Sb or name points to an invalid address.
EIO  An I/O error occurred while reading from or writing to the file system.

ISUID  0004000  set user id on execution
ISGID  0002000  set group id on execution
ISTXT  0001000  sticky bit

IRWXU  0000700  RWX mask for owner
IRUSR  0000400  R for owner
IWUSR  0000200  W for owner
IXUSR  0000100  X for owner

IRWXG  0000070  RWX mask for group
IRGRP  0000040  R for group
IWGRP  0000020  W for group
IXGRP  0000010  X for group

IRWKO  0000007  RWX mask for other
IROTH  0000004  R for other
IWOTh  0000002  W for other
IXOTH  0000001  X for other
75.9. **CLASS DARWINIFSTATINTERFACEMBS**

75.9 **class DarwinIFStatInterfaceMBS**

75.9.1 **class DarwinIFStatInterfaceMBS**

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
A class for the statistics of one interface.

**Example:**
```plaintext
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox it.name
```

**Notes:**
All this integer properties are internally unsigned and they may overflow.
Your application may need to take care for this.

75.9.2 **Properties**

75.9.3 **Baudrate as UInt32**

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The linespeed.

**Example:**
```plaintext
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.Baudrate)
```

**Notes:** (Read only property)

75.9.4 **Collisions as UInt64**

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The number of collisions on csma interfaces.

**Example:**
```plaintext
dim d as new DarwinIFStatMBS
call d.Update
```
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.Collisions)

Notes: (Read only property)

75.9.5 InputBytes as UInt64

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Total number of octets received.
Example:
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.InputBytes)

Notes: (Read only property)

75.9.6 InputErrors as UInt64

Example:
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.InputErrors)

Notes: (Read only property)

75.9.7 InputMulticasts as UInt64

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The number of packets received via multicast.
Example:
75.9.  CLASS DARWINIFSTATINTERFACEMBS

```
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.InputMulticasts)
```

Notes: (Read only property)

75.9.8  **InputPackets as UInt64**

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The number of packets received.
**Example:**
```
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.InputPackets)
```

Notes: (Read only property)

75.9.9  **MTU as UInt32**

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The maximum transmission unit.
**Example:**
```
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.MTU)
```

Notes:
Maximum size of a packet.
75.9.10  Name as String

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the interface.

**Example:**

```vbnet
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox it.Name
```

**Notes:**

e.g. lo0 for localhost, en0 for the first ethernet interface, fw0 for the first firewire interface, etc.

(Read and Write property)

75.9.11  OutputBytes as UInt64

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Total number of octets sent.

**Example:**

```vbnet
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.OutputBytes)
```

**Notes:** (Read only property)

75.9.12  OutputErrors as UInt64

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of output errors.

**Example:**

```vbnet
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.OutputErrors)
```
75.9. **CLASS** DARWINIFSTATINTERFACEMBS

**Notes:** (Read only property)

---

### 75.9.13 OutputMulticasts as UInt64

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of packets sent via multicast.

**Example:**

```vbs
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.OutputMulticasts)
```

**Notes:** (Read only property)

---

### 75.9.14 OutputPackets as UInt64

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of packets sent.

**Example:**

```vbs
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.OutputPackets)
```

**Notes:** (Read only property)

---

### 75.9.15 PhysicalType as Integer

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The physical network type.

**Example:**

```vbs
dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.PhysicalType)
```
75.9.16 Type as Integer

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The network type.

**Example:**

dim d as new DarwinIFStatMBS
call d.Update
dim it as DarwinIFStatInterfaceMBS = d.Item(0)
MsgBox str(it.type)

**Notes:**

e.g. ethernet, tokenring, etc

from if_types.h:

Interface types for benefit of parsing media address headers.
This list is derived from the SNMP list of ifTypes, currently documented in RFC1573.

75.10  class DarwinIFStatMBS

75.10.1  class DarwinIFStatMBS

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for network interface throughput statistics.

**Example:**
```
dim d as new DarwinIFStatMBS
call d.Update
MsgBox str(d.Count)
```

75.10.2  Methods

75.10.3  Item(index as Integer) as DarwinIFStatInterfaceMBS

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the statistics for the given interface.

**Example:**
```
dim d as new DarwinIFStatMBS
call d.Update
MsgBox str(d.Item(0).InputBytes)
```

**Notes:** Index goes from 0 to count-1.

75.10.4  Update as boolean

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Asks the system for new statistics.

**Example:**
```
dim d as new DarwinIFStatMBS
call d.Update
MsgBox str(d.Count)
```

**Notes:** Returns true on success.
75.10.5 Properties

75.10.6 Count as Integer

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The number of interfaces in the item array.

**Example:**
```plaintext
dim d as new DarwinIFStatMBS
call d.Update
MsgBox str(d.Count)
```

**Notes:** (Read only property)
CHAPTER 75. FILES

75.11 class DASessionMBS

75.11.1 class DASessionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The disk arbitration session class from Mac OS X. Notes: The session manages all the events and operations you may do on disks using Apple’s Disk Arbitration framework.

75.11.2 Methods

75.11.3 Constructor

75.11.4 Eject(disk as DADiskMBS, options as Integer = 0)

- disk: The disk object.
- options: The eject options.
- Calls Ejected event later with result.

75.11.5 IsClaimed(disk as DADiskMBS) as boolean

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Reports whether or not the disk is claimed. Notes:

- disk: The disk object.
- Returns true if the disk is claimed, otherwise false.

75.11.6 Mount(disk as DADiskMBS, path as string, options as Integer = 0)

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Mounts the volume at the specified disk object. Notes:
75.11. CLASS DASESSIONMBS

disk: The disk object.
path: The mount path. Pass empty string for a "standard" mount path.
options: The mount options.
Calls Mounted event later.

75.11.7 MountWithArguments(disk as DADiskMBS, path as string, arguments() as string, options as Integer = 0)

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Mounts the volume at the specified disk object, with the specified mount options. **Notes:**
disk: The disk object.
path: The mount path. Pass empty string for a "standard" mount path.
options: The mount options.
arguments: The list of mount options to pass to /sbin/mount -o.

75.11.8 Rename(disk as DADiskMBS, name as string, options as Integer = 0)

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Renames the volume at the specified disk object. **Notes:**
disk: The disk object.
options: The rename options.
Calls later the Renamed event with result.

75.11.9 Unclaim(disk as DADiskMBS)

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Unclaims the specified disk object.

75.11.10 Unmount(disk as DADiskMBS, options as Integer = 0)

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Unmounts the volume at the specified disk object. **Notes:**
disk: The disk object.
options: The unmount options.
75.11.11 Properties

75.11.12 Handle as Integer

**Notes:** (Read and Write property)

75.11.13 Events

75.11.14 Appeared(disk as DADiskMBS)

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called when a disk appears.  
**Notes:** disk: A disk object.

75.11.15 DescriptionChanged(disk as DADiskMBS, keys() as string)

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called whenever a disk description has changed.  
**Notes:**  
disk: A disk object.  
keys: A list of changed keys.

75.11.16 Disappeared(disk as DADiskMBS)

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called whenever a disk has disappeared.

75.11.17 Ejected(disk as DADiskMBS, dissenter as DADissenterMBS)

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event called after eject operation finished.  
**Notes:**
Disk: The disk object.

dissenter: A dissenter object on failure or nil on success.

### 75.11.18 Mounted(disk as DADiskMBS, dissenter as DADissenterMBS)

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event called after mount operation finished.

**Notes:**
disk: The disk object.
dissenter: A dissenter object on failure or nil on success.

### 75.11.19 Peek(disk as DADiskMBS)

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** A disk has been peeked.

### 75.11.20 Renamed(disk as DADiskMBS, dissenter as DADissenterMBS)

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called after the rename operation finished.

**Notes:**
disk: The disk object.
dissenter: A dissenter object on failure or nil on success.

### 75.11.21 Unmounted(disk as DADiskMBS, dissenter as DADissenterMBS)

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called after unmount operation finished.

**Notes:**
disk: The disk object.
dissenter: A dissenter object on failure or nil on success.
75.11.22  Constants

75.11.23  kDADiskClaimOptionDefault = 0

MBS MacOSX Plugin, Plugin Version: 13.2. Function: One of the claim option constants.
Notes: Default

75.11.24  kDADiskEjectOptionDefault = 0

MBS MacOSX Plugin, Plugin Version: 13.2. Function: One of the eject option constants.
Notes: Default

75.11.25  kDADiskMountOptionDefault = 0

Notes: Default

75.11.26  kDADiskMountOptionWhole = 1

Notes: Mount the volumes tied to the whole disk object.

75.11.27  kDADiskOptionDefault = 0

MBS MacOSX Plugin, Plugin Version: 13.2. Function: One of the options for disks.
Notes: Default

75.11.28  kDADiskOptionEjectUponLogout = 1

MBS MacOSX Plugin, Plugin Version: 13.2. Function: One of the options for disks.
Notes: Eject the disk upon logout.
75.11.29  kDADiskOptionMountAutomatic = 16
MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the options for disks. **Notes:** Mount the disk upon appearance.

75.11.30  kDADiskOptionMountAutomaticNoDefer = 32
MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the options for disks. **Notes:** Mount the disk upon appearance, even if no login.

75.11.31  kDADiskOptionPrivate = 256
MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the options for disks. **Notes:** Hides the disk from callbacks.

75.11.32  kDADiskRenameOptionDefault = 0
MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** Options for renaming. **Notes:** Default

75.11.33  kDADiskUnmountOptionDefault = 0
MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the options for unmounting. **Notes:** Default

75.11.34  kDADiskUnmountOptionForce = & h00080000
MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the options for unmounting. **Notes:** Unmount the volume even if files are still active.

75.11.35  kDADiskUnmountOptionWhole = 0
MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the options for unmounting. **Notes:** Unmount the volumes tied to the whole disk object.
75.12 class DirectorySizeMBS

75.12.1 class DirectorySizeMBS

MBS Util Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for size information about a folder.

**Example:**

```vba
// chose a folder
dim f as FolderItem = SelectFolder

// calculate
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)

// display
MsgBox str(d.FilesCount)+” files in ”+str(d.FolderCount)+” folder”
```

75.12.2 Methods

75.12.3 Add(d as DirectorySizeMBS)

MBS Util Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds the values of the given directory size object to the current one.

**Notes:**

Passing nil is okay and will be ignored.
This method was added to support counting several folders and adding the results to one central object.

75.12.4 close

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.

**Notes:**

There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)
75.12. **CLASS DIRECTORYSIZEMBS**

**75.12.5 Constructor**

MBS Util Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.

**75.12.6 Update(folder as folderitem, recursive as boolean, ticks as Integer) as boolean**

MBS Util Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the class. **Example:**

```vba
// chose a folder
dim f as FolderItem = SpecialFolder.Applications

// calculate
dim d as new DirectorySizeMBS

// update object
call d.Update(f, true, 0)

// display
MsgBox str(d.FilesCount) + " files and " + str(d.FolderCount) + " folders"
```

**Notes:**
The folder specified is searched for files and folders. Normally you’d better use CalculateDirectorySizeMBS.

Ticks is the count of ticks (1/60th second) which must pass till time is given to other threads. (e.g. 10)

Returns true if successfull.

If you call this function in a thread you can set the cancel property in a pushbutton event handler to stop this function.

**75.12.7 Properties**

**75.12.8 Cancel as Boolean**

MBS Util Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the Update function should stop as soon as possible. **Notes:** (Read and Write property)
75.12.9 CompressedSize as UInt64

MBS Util Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The size in bytes of all files.
**Notes:**
If a file is compressed, we add here the compressed size.
If a file is not compressed, we add the normal logical size.
Only used on Windows and only with QueryCompressedSizes = true.
(Read only property)

75.12.10 CountBundlesAsItem as Boolean

MBS Util Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Whether to count bundles as files.
**Example:**
```
// chose a folder
dim f as FolderItem = SpecialFolder.Applications

// calculate
dim d1 as new DirectorySizeMBS
d1.CountBundlesAsItem = true

call d1.Update(f, true, 0)

dim d2 as new DirectorySizeMBS
d2.CountBundlesAsItem = false

call d2.Update(f, true, 0)

// display
MsgBox "Normal count: " +str(D2.FilesCount)+" files and "+str(d2.FolderCount)+" folders"+EndOfLine+_
"With bundles as files: "+str(D1.FilesCount)+" files and "+str(d1.FolderCount)+" folders"
```

**Notes:**
Bundles like applications are counted as a single file if this property is true or as a folder with files inside if this property is false.
Default is false.
(Read and Write property)
75.12. **CLASS DIRECTORYSIZEMBS**

### 75.12.11 Directory as FolderItem

MBS Util Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The folder which was searched.  
**Notes:** (Read and Write property)

### 75.12.12 FilesCount as UInt64

MBS Util Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of files counted.  
**Example:**
```vba
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox str(d.FilesCount) + " files"
```

**Notes:**  
FilesCount=VisibleFilesCount+HiddenFilesCount  
(Read only property)

### 75.12.13 FolderCount as UInt64

MBS Util Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of folders counted.  
**Example:**
```vba
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox str(d.FolderCount) + " folder"
```

**Notes:**  
FolderCount=VisibleFolderCount+HiddenFolderCount  
(Read only property)

### 75.12.14 HiddenCompressedSize as UInt64

MBS Util Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The size in bytes of all hidden files.
Notes:
If a file is compressed, we add here the compressed size.
If a file is not compressed, we add the normal logical size.
Only used on Windows and only with QueryCompressedSizes = true.
(Read only property)

75.12.15  HiddenFilesCount as Integer

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The number of hidden files counted.
**Example:**
```vbs
Dim f As FolderItem = SpecialFolder.desktop
Dim d As DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox str(d.HiddenFilesCount) + " hidden files"
```

Notes:
A file is invisible if the Invisible flag is set for this file.
(Read and Write property)

75.12.16  HiddenFolderCount as Integer

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The number of folders.
**Example:**
```vbs
Dim f As FolderItem = SpecialFolder.desktop
Dim d As DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox str(d.HiddenFolderCount) + " hidden folders"
```

Notes:
A file is invisible if the Invisible flag is set for this file.
(Read and Write property)

75.12.17  HiddenItemCount as UInt64

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The number of invisible items.
**Example:**

```vbs
  dim f as FolderItem = SpecialFolder.desktop
  dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
  MsgBox str(d_HIDDENItemCount)+" hidden items"
```

**Notes:**

An item is invisible if the Invisible flag is set for this file.
HiddenItemCount=HiddenFolderCount+HiddenFilesCount
(Read only property)

---

**75.12.18 HiddenLogicalDataForkSize as UInt64**

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The logical size of the data forks of all hidden file in Bytes.

**Example:**

```vbs
  dim f as FolderItem = SpecialFolder.desktop
  dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
  MsgBox "Logical data fork size of hidden files: "+Format(d_HIDDENLogicalDataForkSize/1000000,"0")+" MB"
```

**Notes:** (Read and Write property)

---

**75.12.19 HiddenLogicalResourceForkSize as UInt64**

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The logical size of the resource forks of all hidden file in Bytes.

**Example:**

```vbs
  dim f as FolderItem = SpecialFolder.desktop
  dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
  MsgBox "Logical resource fork size of hidden files: "+Format(d_HIDDENLogicalResourceForkSize/1000000,"0")+" MB"
```

**Notes:** (Read and Write property)
75.12.20  **HiddenLogicalTotalSize as UInt64**

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The logical size of the all forks of all hidden file in Bytes.

**Example:**
```vbnet
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Logical total size of hidden files: " + Format(d.HiddenLogicalTotalSize/1000000,"0") + " MB"
```

**Notes:** (Read only property)

75.12.21  **HiddenPhysicalDataForkSize as UInt64**

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The physical size of the data forks of all hidden file in Bytes.

**Example:**
```vbnet
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Physical data fork size of hidden files: " + Format(d.HiddenPhysicalDataForkSize/1000000,"0") + " MB"
```

**Notes:** (Read and Write property)

75.12.22  **HiddenPhysicalResourceForkSize as UInt64**

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The physical size of the resource forks of all hidden file in Bytes.

**Example:**
```vbnet
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Physical resource fork size of hidden files: " + Format(d.HiddenPhysicalResourceForkSize/1000000,"0") + " MB"
```

**Notes:** (Read and Write property)
75.12. **CLASS DIRECTORYSZEMBS**

75.12.23 **HiddenPhysicalTotalSize as UInt64**

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The physical size of the both forks of all hidden file in Bytes.

**Example:**

```vbs
Dim f As FolderItem = SpecialFolder.desktop
Dim d As DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Physical total size of hidden files: "+Format(d.HiddenPhysicalTotalSize/1000000,"0")+" MB"
```

**Notes:** (Read only property)

75.12.24 **IgnoreHiddenFolderContent as Boolean**

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If this flag is set, the Update method will not count invisible files.

**Notes:** (Read and Write property)

75.12.25 **ItemCount as UInt64**

MBS Util Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of items counted.

**Example:**

```vbs
// chose a folder
Dim f As FolderItem = SpecialFolder.Music
// calculate size
Dim d As DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
// show number of files
MsgBox str(d.ItemCount)
```

**Notes:**

ItemCount=VisibleItemCount+HiddenItemCount

(Read only property)
75.12.26 LogicalDataForkSize as UInt64

MBS Util Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The logical data fork size in Bytes.

**Example:**
```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Logical data fork size of all files: " + Format(d.LogicalDataForkSize/1000000,"0") + " MB"
```

**Notes:** (Read only property)

75.12.27 LogicalResourceForkSize as UInt64

MBS Util Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The logical resource fork size in Bytes.

**Notes:**
```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Logical resource fork size of all files: " + Format(d.LogicalResourceForkSize/1000000,"0") + " MB"
```
(Read only property)

75.12.28 LogicalTotalSize as UInt64

MBS Util Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The logical total size in Bytes.

**Example:**
```
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Logical total size of all files: " + Format(d.LogicalTotalSize/1000000,"0") + " MB"
```

**Notes:**
(Read only property)
75.12. CLASS DIRECTORIESIZEMBS

75.12.29 PhysicalDataForkSize as UInt64

MBS Util Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The physical data fork size in Bytes.  
**Example:**

```vbnet
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Physical data fork size of all files: " + Format(d.PhysicalDataForkSize/1000000,"0") + " MB""
```

**Notes:** (Read only property)

75.12.30 PhysicalResourceForkSize as UInt64

MBS Util Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The physical resource fork size in Bytes.  
**Example:**

```vbnet
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Physical resource fork size of all files: " + Format(d.PhysicalResourceForkSize/1000000,"0") + " MB""
```

**Notes:** (Read only property)

75.12.31 PhysicalTotalSize as UInt64

MBS Util Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The physical total file size in Bytes.  
**Example:**

```vbnet
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Physical total size of all files: " + Format(d.VisiblePhysicalTotalSize/1000000,"0") + " MB"
```

**Notes:**

(Read only property)  
That’s what the Finder shows you.
### 75.12.32 QueryCompressedSizes as Boolean

MBS Util Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Whether to query compressed file sizes on Windows. **Notes:** (Read and Write property)

### 75.12.33 RecursionLimit as Integer

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: Yes. **Function:** The limit for recursion. **Notes:**
Default is -1 for no limit.
Zero means we do not recurse into subfolders.
Other values define how many recursion levels are allowed.
(Read and Write property)

### 75.12.34 RecursionMaxLevel as Integer

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: Yes. **Function:** The maximum levels of recursions we had for searching this folder. **Notes:** (Read and Write property)

### 75.12.35 VisibleCompressedSize as UInt64

MBS Util Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The size in bytes of all visible files. **Notes:**
If a file is compressed, we add here the compressed size.
If a file is not compressed, we add the normal logical size.
Only used on Windows and only with QueryCompressedSizes = true.
(Read only property)

### 75.12.36 VisibleFilesCount as Integer

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of visible files.
Example:

```vba
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox str(d.VisibleFilesCount)+” visible files"
```

Notes: (Read and Write property)

### 75.12.37 VisibleFolderCount as Integer

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of visible folders.

Example:

```vba
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox str(d.VisibleFolderCount)+” visible folders"
```

Notes: (Read and Write property)

### 75.12.38 VisibleItemCount as UInt64

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of visible items.

Example:

```vba
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox str(d.VisibleItemCount)+” visible items"
```

Notes:

Items are folders or files.
VisibleItemCount=VisibleFolderCount+VisibleFilesCount
(Read only property)
**75.12.39 VisibleLogicalDataForkSize as UInt64**

**Function:**  
The logical size of the data forks of all visible file in Bytes.  
**Example:**

```vbnet
dim f as FolderItem = SpecialFolder.desktop  
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)  
MsgBox "Logical data fork size of visible files: " + Format(d.VisibleLogicalDataForkSize/1000000,"0") + " MB"
```

**Notes:** (Read and Write property)

---

**75.12.40 VisibleLogicalResourceForkSize as UInt64**

**Function:**  
The logical size of the resource forks of all visible file in Bytes.  
**Example:**

```vbnet
dim f as FolderItem = SpecialFolder.desktop  
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)  
MsgBox "Logical resource fork size of visible files: " + Format(d.VisibleLogicalResourceForkSize/1000000,"0") + " MB"
```

**Notes:** (Read and Write property)

---

**75.12.41 VisibleLogicalTotalSize as UInt64**

**Function:**  
The logical size of both forks of all visible file in Bytes.  
**Example:**

```vbnet
dim f as FolderItem = SpecialFolder.desktop  
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)  
MsgBox "Logical total size of visible files: " + Format(d.VisibleLogicalTotalSize/1000000,"0") + " MB"
```

**Notes:** (Read only property)
75.12.42 VisiblePhysicalDataForkSize as UInt64

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The physical size of the data forks of all visible file in Bytes.
**Example:**
```vbnet
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Physical data fork size of visible files: " + Format(d.VisiblePhysicalDataForkSize/1000000,"0") + " MB"
```
**Notes:** (Read and Write property)

75.12.43 VisiblePhysicalResourceForkSize as UInt64

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The physical size of the resource forks of all visible file in Bytes.
**Example:**
```vbnet
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Physical resource fork size of visible files: " + Format(d.VisiblePhysicalResourceForkSize/1000000,"0") + " MB"
```
**Notes:** (Read and Write property)

75.12.44 VisiblePhysicalTotalSize as UInt64

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The physical size of the both forks of all visible file in Bytes.
**Example:**
```vbnet
dim f as FolderItem = SpecialFolder.desktop
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)
MsgBox "Physical total size of visible files: " + Format(d.VisiblePhysicalTotalSize/1000000,"0") + " MB"
```
**Notes:** (Read only property)
75.12.45 YieldTicks as Integer

MBS Util Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** How much time is given back to REALbasic for other ticks.

**Example:**

```plaintext
dim d as DirectorySizeMBS // your DirectorySizeMBS object
d.YieldTicks=6 // only use 1/10th of a second
```

**Notes:**

If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.

If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let REALbasic redraw a progressbar.

(Read and Write property)
75.13.1 module ExtendedAttributesMBS

Function: The module for working with extended attributes.

Example:

```vbs
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.rtf")

' keys starting with "com.apple.metadata:" are indexed by Spotlight
Call ExtendedAttributesMBS.SetAttribute(f, "com.apple.metadata:test", "testvalue")
```

Notes:

Linux support added for plugin version 16.4.
For Windows, please use LargeBinaryStreamMBS class to read/write streams.

75.13.2 Methods

75.13.3 Available as boolean

Function: Returns true if extended attribute functions are available.

75.13.4 GetAttribute(path as folderitem, name as string, options as Integer = 0) as Variant

Function: Get an extended attribute value.

Example:

```vbs
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.rtf")
Dim v As Variant = ExtendedAttributesMBS.GetAttribute(f, ExtendedAttributesMBS.kAttributeNameFinderComment)
Break // see comment string in debugger
```

Notes:

On Mac the extended attributes are normally formatted property lists, so please use the high level functions SetAttribute/GetAttribute. Raw functions are better for things like resourcefork or FinderInfo.
Extended attributes extend the basic attributes of files and directories in the file system. They are stored as name:data pairs associated with file system objects (files, directories, symlinks, etc).

The GetAttribute function retrieves all bytes of data from the extended attribute identified by name associated with path.

An extended attribute’s name is a simple UTF-8 string. position specifies an offset within the extended attribute. In the current implementation, this argument is only used with the resource fork attribute. For all other extended attributes, this parameter is reserved and should be zero.

On success, returns the data associated with name.

Options specify options for retrieving extended attributes:

- **kNoFollow** Do not follow symbolic links. getxattr() normally returns information from the target of path if it is a symbolic link. With this option, GetAttribute will return extended attribute data from the symbolic link instead.

- **kShowCompression**: GetAttribute will return HFS Plus Compression extended attribute name (if present) for the file referred to by path or fd.

On success, the value is returned. On failure, nil is returned and lasterror is set.

See also:

- 75.13.5 GetAttribute(path as string, name as string, options as Integer = 0) as Variant

### 75.13.5 GetAttribute(path as string, name as string, options as Integer = 0) as Variant

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get an extended attribute value.

**Notes:**

On Mac the extended attributes are normally formatted property lists, so please use the high level functions SetAttribute/GetAttribute. Raw functions are better for things like resourcefork or FinderInfo.

Extended attributes extend the basic attributes of files and directories in the file system. They are stored as name:data pairs associated with file system objects (files, directories, symlinks, etc).
The GetAttribute function retrieves all bytes of data from the extended attribute identified by name associated with path.

An extended attribute’s name is a simple UTF-8 string. position specifies an offset within the extended attribute. In the current implementation, this argument is only used with the resource fork attribute. For all other extended attributes, this parameter is reserved and should be zero.

On success, returns the data associated with name.

Options specify options for retrieving extended attributes:

- kNoFollow: Do not follow symbolic links. getxattr() normally returns information from the target of path if it is a symbolic link. With this option, GetAttribute will return extended attribute data from the symbolic link instead.

- kShowCompression: GetAttribute will return HFS Plus Compression extended attribute name (if present) for the file referred to by path or fd.

On success, the value is returned. On failure, nil is returned and lasterror is set.

See also:
- 75.13.4 GetAttribute(path as folderitem, name as string, options as Integer = 0) as Variant

75.13.6 GetRawAttribute(path as folderitem, name as string, options as Integer = 0) as memoryblock

Function: Get an extended attribute value.

Example:

dim f as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
dim value as MemoryBlock = ExtendedAttributesMBS.GetRawAttribute(f, ExtendedAttributesMBS.kAttributeFinderInfo)
break // see in debugger

Notes:

On Mac the extended attributes are normally formatted property lists, so please use the high level functions SetAttribute/GetAttribute. Raw functions are better for things like resourcefork or FinderInfo.
Extended attributes extend the basic attributes of files and directories in the file system. They are stored as name:data pairs associated with file system objects (files, directories, symlinks, etc).

The GetRawAttribute function retrieves all bytes of data from the extended attribute identified by name associated with path.

An extended attribute’s name is a simple UTF-8 string. position specifies an offset within the extended attribute. In the current implementation, this argument is only used with the resource fork attribute. For all other extended attributes, this parameter is reserved and should be zero.

On success, returns the data associated with name.

Options specify options for retrieving extended attributes:

- kNoFollow: Do not follow symbolic links. getxattr() normally returns information from the target of path if it is a symbolic link. With this option, GetRawAttribute will return extended attribute data from the symbolic link instead.

- kShowCompression: GetRawAttribute will return HFS Plus Compression extended attribute name (if present) for the file referred to by path or fd.

On success, the value is returned. On failure, nil is returned and lasterror is set.

See also:

- 75.13.7 GetRawAttribute(path as string, name as string, options as Integer = 0) as memoryblock

75.13.7 GetRawAttribute(path as string, name as string, options as Integer = 0) as memoryblock

Function: Get an extended attribute value.

Notes:

On Mac the extended attributes are normally formatted property lists, so please use the high level functions SetAttribute/GetAttribute. Raw functions are better for things like resourcefork or FinderInfo.

Extended attributes extend the basic attributes of files and directories in the file system. They are stored as name:data pairs associated with file system objects (files, directories, symlinks, etc).

The GetRawAttribute function retrieves all bytes of data from the extended attribute identified by name
An extended attribute’s name is a simple UTF-8 string. position specifies an offset within the extended attribute. In the current implementation, this argument is only used with the resource fork attribute. For all other extended attributes, this parameter is reserved and should be zero.

On success, returns the data associated with name.

Options specify options for retrieving extended attributes:

- **kNoFollow** Do not follow symbolic links. `getattr()` normally returns information from the target of path if it is a symbolic link. With this option, GetRawAttribute will return extended attribute data from the symbolic link instead.

- **kShowCompression**: GetRawAttribute will return HFS Plus Compression extended attribute name (if present) for the file referred to by path or fd.

On success, the value is returned. On failure, nil is returned and lasterror is set.

See also:

- 75.13.6 GetRawAttribute(path as folderitem, name as string, options as Integer = 0) as memoryblock

### 75.13.8 LastError as Integer

**Function:** The last error code.

**Notes:**

Possible error values:

### 75.13.9 LastErrorMessage as string

**Function:** The error message for the last error.
CHAPTER 75. FILES

EPERM 1 Attributes cannot be associated with this type of object. For example, attributes are not allowed for resource forks.
EIO 5 An I/O error occurred while reading from or writing to the file system.
E2BIG 7 The data size of the extended attribute is too large.
EACCES 13 Permissions denied
EFAULT 14 path or name points to an invalid address.
EEXIST 17 options contains XATTR_CREATE and the named attribute already exists.
ENOTDIR 20 A component of path’s prefix is not a directory.
EINVAL 22 name or options is invalid. name must be valid UTF-8 and options must make sense.
ENOSPC 28 Not enough space left on the file system.
ERANGE 34 The data size of the attribute is out of range (some attributes have size restrictions).
ENOTSUP 45 The file system does not support extended attributes or has the feature disabled.
ELOOP 62 Too many symbolic links were encountered resolving path.
ENOMEMETOOLONG 63 Name exceeded XATTR_MAXNAMELEN UTF-8 bytes, or a component of path exceeded NAME_MAX characters, or the entire path exceeded PATH_MAX characters.
ENOATTR 93 options is set to kReplace and the named attribute does not exist.

75.13.10 ListAttributes(path as folderitem, Options as Integer = 0) as string()

Function: List extended attribute names.

Example:

```vbnet
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
dim names() as string = ExtendedAttributesMBS.ListAttributes(f, ExtendedAttributesMBS.kNoFollow+ExtendedAttributesMBS.kShowCompression)
MsgBox Join(names, EndOfLine)
```

Notes:

Extended attributes extend the basic attributes associated with files and directories in the file system. They are stored as name:data pairs associated with file system objects (files, directories, symlinks, etc).

ListAttributes retrieves a list of names of extended attributes associated with the given path in the file system. The list will only include names of extended attributes to which the calling process has access.

Options controls how the attribute list is generated:
**75.13. MODULE EXTENDEDATTRIBUTESMBS**

kNoFollow: Do not follow symbolic links. ListAttributes normally lists attributes of the target of path if it is a symbolic link. With this option, ListAttributes will list attributes of the link itself.

kShowCompression: ListAttributes will list HFS Plus Compression extended attribute(s) (if present) for the file referred to by path.

On success returns array with names. If no accessible extended attributes are associated with the given path, the function returns empty array. Lasterror is set.

See also:

- 75.13.11 ListAttributes(path as string, Options as Integer = 0) as string()

**75.13.11 ListAttributes(path as string, Options as Integer = 0) as string()**

**Function:** List extended attribute names.

**Notes:**

Extended attributes extend the basic attributes associated with files and directories in the file system. They are stored as name:data pairs associated with file system objects (files, directories, symlinks, etc).

ListAttributes retrieves a list of names of extended attributes associated with the given path in the file system. The list will only include names of extended attributes to which the calling process has access.

Options controls how the attribute list is generated:

- kNoFollow: Do not follow symbolic links. ListAttributes normally lists attributes of the target of path if it is a symbolic link. With this option, ListAttributes will list attributes of the link itself.
- kShowCompression: ListAttributes will list HFS Plus Compression extended attribute(s) (if present) for the file referred to by path.

On success returns array with names. If no accessible extended attributes are associated with the given path, the function returns empty array. Lasterror is set.

See also:

- 75.13.10 ListAttributes(path as folderitem, Options as Integer = 0) as string()

**75.13.12 RemoveAttribute(path as folderitem, name as string, options as Integer = 0) as boolean**

**Function:** Remove an extended attribute value.

**Notes:**
Extended attributes extend the basic attributes associated with files and directories in the file system. They are stored as name:data pairs associated with file system objects (files, directories, symlinks, etc).

RemoveAttribute deletes the extended attribute name associated with path.

An extended attribute’s name is a simple UTF-8 string. Options is a bit mask specifying various options:

- **kNoFollow**: Do not follow symbolic links. Normally, removexattr() acts on the target of path if it is a symbolic link. With this option, RemoveAttribute will act on the link itself.

- **kShowCompression**: RemoveAttribute will remove HFS Plus Compression extended attribute name (if present) for the file referred to by path or fd.

On success, true is returned. On failure, false is returned and the lasterror value is set. See also:

- 75.13.13 RemoveAttribute(path as string, name as string, options as Integer = 0) as boolean

### 75.13.13 RemoveAttribute(path as string, name as string, options as Integer = 0) as boolean

**Function**: Remove an extended attribute value.

**Notes**:

Extended attributes extend the basic attributes associated with files and directories in the file system. They are stored as name:data pairs associated with file system objects (files, directories, symlinks, etc).

RemoveAttribute deletes the extended attribute name associated with path.

An extended attribute’s name is a simple UTF-8 string. Options is a bit mask specifying various options:

- **kNoFollow**: Do not follow symbolic links. Normally, removexattr() acts on the target of path if it is a symbolic link. With this option, RemoveAttribute will act on the link itself.

- **kShowCompression**: RemoveAttribute will remove HFS Plus Compression extended attribute name (if present) for the file referred to by path or fd.
On success, true is returned. On failure, false is returned and the lasterror value is set.

See also:
- 75.13.12 RemoveAttribute(path as folderitem, name as string, options as Integer = 0) as boolean

**75.13.14 SetAttribute(path as folderitem, name as string, data as Variant, options as Integer = 0) as boolean**

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Set an extended attribute value.

**Example:**
```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
call ExtendedAttributesMBS.SetAttribute(f, ExtendedAttributesMBS.kAttributeNameFinderComment, "Test Comment")
```

**Notes:**
On Mac the extended attributes are normally formatted property lists, so please use the high level functions SetAttribute/GetAttribute. Raw functions are better for things like resourcefork or FinderInfo.

Extended attributes extend the basic attributes associated with files and directories in the file system. They are stored as name:data pairs associated with file system objects (files, directories, symlinks, etc).

SetAttribute associates name and data together as an attribute of path.

An extended attribute’s name is a simple UTF-8 string. Data is a memoryblock with the data and contains textual or binary data to be associated with the extended attribute. Position specifies the offset within the extended attribute. In the current implementation, only the resource fork extended attribute makes use of this argument. For all others, position is reserved and should be set to zero.

Options controls how the attribute is set:

- **kNoFollow** Do not follow symbolic links. SetAttribute normally sets attributes on the target of path if it is a symbolic link. With this option, SetAttribute will act on the link itself.
- **kCreate** Fail if the named attribute already exists.
- **kReplace** Fail if the named attribute does not exist. Failure to specify kReplace or kCreate allows creation and replacement.

On some filesystems, such as HFS+, setting the extended attribute com.apple.ResourceFork will update the
modification time of the file.

Returns true on success and false on failure. Lasterror is set.
You may need to inform other applications like Finder that file changed and attributes need to be read.
See also:

- 75.13.15 SetAttribute(path as string, name as string, data as Variant, options as Integer = 0) as boolean

**75.13.15 SetAttribute(path as string, name as string, data as Variant, options as Integer = 0) as boolean**

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Set an extended attribute value.
**Notes:**
On Mac the extended attributes are normally formatted property lists, so please use the high level functions SetAttribute/GetAttribute. Raw functions are better for things like resourcefork or FinderInfo.

Extended attributes extend the basic attributes associated with files and directories in the file system. They are stored as name: data pairs associated with file system objects (files, directories, symlinks, etc).

SetAttribute associates name and data together as an attribute of path.

An extended attribute’s name is a simple UTF-8 string. Data is a memoryblock with the data and contains textual or binary data to be associated with the extended attribute. Position specifies the offset within the extended attribute. In the current implementation, only the resource fork extended attribute makes use of this argument. For all others, position is reserved and should be set to zero.

Options controls how the attribute is set:

- kNoFollow  Do not follow symbolic links. SetAttribute normally sets attributes on the target of path if it is a symbolic link. With this option, SetAttribute will act on the link itself.
- kCreate Fail if the named attribute already exists.
- kReplace Fail if the named attribute does not exist. Failure to specify kReplace or kCreate allows creation and replacement.

On some filesystems, such as HFS+, setting the extended attribute com.apple.ResourceFork will update the modification time of the file.
Returns true on success and false on failure. Lasterror is set.
You may need to inform other applications like Finder that file changed and attributes need to be read.
See also:

- 75.13.14 SetAttribute(path as folderitem, name as string, data as Variant, options as Integer = 0) as boolean

75.13.16 SetRawAttribute(path as folderitem, name as string, data as memoryblock, options as Integer = 0) as boolean

Function: Set an extended attribute value.
Notes:
On Mac the extended attributes are normally formatted property lists, so please use the high level functions SetAttribute/GetAttribute. Raw functions are better for things like resourcefork or FinderInfo.

Extended attributes extend the basic attributes associated with files and directories in the file system. They are stored as name:data pairs associated with file system objects (files, directories, symlinks, etc).

SetRawAttribute associates name and data together as an attribute of path.

An extended attribute's name is a simple UTF-8 string. Data is a memoryblock with the data and contains textual or binary data to be associated with the extended attribute. Position specifies the offset within the extended attribute. In the current implementation, only the resource fork extended attribute makes use of this argument. For all others, position is reserved and should be set to zero.

Options controls how the attribute is set:

kNoFollow  Do not follow symbolic links. SetRawAttribute normally sets attributes on the target of path if it is a symbolic link. With this option, SetRawAttribute will act on the link itself.
kCreate    Fail if the named attribute already exists.
kReplace   Fail if the named attribute does not exist. Failure to specify kReplace or kCreate allows creation and replacement.

On some filesystems, such as HFS+, setting the extended attribute com.apple.ResourceFork will update the modification time of the file.

Returns true on success and false on failure. Lasterror is set.
You may need to inform other applications like Finder that file changed and attributes need to be read.

• 75.13.17 SetRawAttribute(path as string, name as string, data as memoryblock, options as Integer = 0) as boolean

75.13.17 SetRawAttribute(path as string, name as string, data as memoryblock, options as Integer = 0) as boolean

Function: Set an extended attribute value.

Notes:

On Mac the extended attributes are normally formatted property lists, so please use the high level functions SetAttribute/GetAttribute. Raw functions are better for things like resourcefork or FinderInfo.

Extended attributes extend the basic attributes associated with files and directories in the file system. They are stored as name:data pairs associated with file system objects (files, directories, symlinks, etc).

SetRawAttribute associates name and data together as an attribute of path.

An extended attribute’s name is a simple UTF-8 string. Data is a memoryblock with the data and contains textual or binary data to be associated with the extended attribute. Position specifies the offset within the extended attribute. In the current implementation, only the resource fork extended attribute makes use of this argument. For all others, position is reserved and should be set to zero.

Options controls how the attribute is set:

kNoFollow  Do not follow symbolic links. SetRawAttribute normally sets attributes on the target of path if it is a symbolic link. With this option, SetRawAttribute will act on the link itself.

kCreate  Fail if the named attribute already exists.

kReplace  Fail if the named attribute does not exist. Failure to specify kReplace or kCreate allows creation and replacement.

On some filesystems, such as HFS+, setting the extended attribute com.apple.ResourceFork will update the modification time of the file.

Returns true on success and false on failure. Lasterror is set.

You may need to inform other applications like Finder that file changed and attributes need to be read.

See also:
75.13.18 Constants

75.13.19 kAttributeNameFinderComment = ”com.apple.metadata:kMDItemFinderComment”
MBS MacOSX Plugin, Plugin Version: 12.5. Function: The attribute name for the Finder Comment.

75.13.20 kAttributeNameFinderInfo = ”com.apple.FinderInfo”
MBS MacOSX Plugin, Plugin Version: 12.5. Function: The attribute name for the Finder Info.

75.13.21 kAttributeNameResourceFork = ”com.apple.ResourceFork”
MBS MacOSX Plugin, Plugin Version: 12.5. Function: The attribute name for the resource fork.

75.13.22 kCreate = 2
MBS MacOSX Plugin, Plugin Version: 12.5. Function: One of the option flags. Notes: Fail if the named attribute already exists.

75.13.23 kNoDefault = 16
MBS MacOSX Plugin, Plugin Version: 12.5. Function: One of the option flags.

75.13.24 kNoFollow = 1
MBS MacOSX Plugin, Plugin Version: 12.5. Function: One of the option flags. Notes: Do not follow symbolic links. ListAttributes normally lists attributes of the target of path if it is a symbolic link. With this option, ListAttributes will list attributes of the link itself.
75.13.25  kNoSecurity = 8

MBS MacOSX Plugin, Plugin Version: 12.5. **Function:** One of the option flags.

75.13.26  kReplace = 4

MBS MacOSX Plugin, Plugin Version: 12.5. **Function:** One of the option flags.  
**Notes:** Fail if the named attribute does not exist. Failure to specify kReplace or kCreate allows creation and replacement.

75.13.27  kShowCompression = 32

MBS MacOSX Plugin, Plugin Version: 12.5. **Function:** One of the option flags.  
**Notes:** ListAttributes will list HFS Plus Compression extended attribute(s) (if present) for the file referred to by path.
75.14. CLASS FILELISTMBS

75.14 class FileListMBS

75.14.1 class FileListMBS

MBS Util Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for a list of files. **Notes:** This class is made to get a list of files in a folder faster than by using a folderitem.

75.14.2 Methods

75.14.3 AttributeModificationDate(index as Integer) as Double

MBS Util Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute modification date of this file or directory. **Notes:** On Mac OS the UTC date (+0 time zone) Raises an exception if index is out of bounds. Index is zero based. See also:

- 75.14.4 AttributeModificationDate(index as Integer, UTC as boolean) as Date

75.14.4 AttributeModificationDate(index as Integer, UTC as boolean) as Date

MBS Util Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The attribute modification date of this file or directory. **Notes:** Either in UTC time zone or in local time zone. Raises an exception if index is out of bounds. Index is zero based. See also:

- 75.14.3 AttributeModificationDate(index as Integer) as Double

75.14.5 BackupDate(index as Integer) as Double

MBS Util Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The backup date of this file or directory. **Notes:** On Mac OS the UTC date (+0 time zone) See also:

- 75.14.6 BackupDate(index as Integer, UTC as boolean) as Date
75.14.6 BackupDate(index as Integer, UTC as boolean) as Date

MBS Util Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The backup date of this file or directory.

**Notes:**

Either in UTC time zone or in local time zone.
Raises an exception if index is out of bounds. Index is zero based.
See also:

- 75.14.5 BackupDate(index as Integer) as Double

75.14.7 Close

MBS Util Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.

**Notes:**

There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

75.14.8 Constructor

MBS Util Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** A dummy constructor used only for automatic plugin testing.

See also:

- 75.14.9 Constructor(filelist as FileListMBS, index as Integer, WinFilter as string = ””)
- 75.14.10 Constructor(folder as folderitem, WinFilter as string = ””)
- 75.14.11 Constructor(Path as String, WinFilter as string = ””)

75.14.9 Constructor(filelist as FileListMBS, index as Integer, WinFilter as string = ””)

MBS Util Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor which creates a new file list based on item in a given file list.

**Example:**

```
dim f1 as new FileListMBS(SpecialFolder.UserHome)
'MMsgBox f1.path

// search first index of a visible folder
```
75.14. CLASS FILELISTMBS

```vbnet
dim IndexOfDirectory as integer = 0
while f1.Directory(IndexOfDirectory) = false or f1.Visible(IndexOfDirectory) = false
    IndexOfDirectory = IndexOfDirectory + 1
wend

// list that folder
dim f2 as new FileListMBS(f1, IndexOfDirectory)
'MsgBox f2.path

// show first file and path
MsgBox f2.Name(0)+EndOfLine+f2.ItemPath(0)
```

Notes:

If count is 0 after the constructor the folder is invalid or empty.
On Windows the WinFilter allows you to pass a custom filter like "*.txt" to only find some files there.
See also:

- 75.14.8 Constructor
- 75.14.10 Constructor(folder as folderitem, WinFilter as string = "")
- 75.14.11 Constructor(Path as String, WinFilter as string = "")

75.14.10 Constructor(folder as folderitem, WinFilter as string = "")

MBS Util Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The constructor which creates a new file list based on the folder.

Notes:

If count is 0 after the constructor the folder is invalid or empty.
On Windows the WinFilter allows you to pass a custom filter like "*.txt" to only find some files there.
See also:

- 75.14.8 Constructor
- 75.14.9 Constructor(filelist as FileListMBS, index as Integer, WinFilter as string = "")
- 75.14.11 Constructor(Path as String, WinFilter as string = "")

75.14.11 Constructor(Path as String, WinFilter as string = ")

Notes:
If count is 0 after the constructor the directory path is invalid or empty.
On Windows the WinFilter allows you to pass a custom filter like “*.txt” to only find some files there.
See also:

- 75.14.8 Constructor
- 75.14.9 Constructor(filelist as FileListMBS, index as Integer, WinFilter as string = "")
- 75.14.10 Constructor(folder as folderitem, WinFilter as string = "")

75.14.12 CreationDate(index as Integer) as Double

MBS Util Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:**
The creation date.
**Notes:**
On Mac OS the UTC date (+0 time zone)
On Windows looks like local timezone.
See also:

- 75.14.13 CreationDate(index as Integer, UTC as boolean) as Date

75.14.13 CreationDate(index as Integer, UTC as boolean) as Date

MBS Util Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:**
The creation date.
**Notes:**
Either in UTC time zone or in local time zone.
Raises an exception if index is out of bounds. Index is zero based.
See also:

- 75.14.12 CreationDate(index as Integer) as Double

75.14.14 Creator(index as Integer) as string

MBS Util Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
The Mac Creator code of the item with the given index.
**Notes:**
Always "" on Windows and Linux.
Raises an exception if index is out of bounds. Index is zero based.
75.14. **CLASS FILELISTMBS**

### 75.14.15 `Directory(index as Integer) as boolean`

MBS Util Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the item with the given index is a folder.

**Notes:**

True if it is a folder and false if it is a file.

Raises an exception if index is out of bounds. Index is zero based.

### 75.14.16 `DisplayName(index as Integer) as string`

MBS Util Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The display name of the item with the given index.

**Notes:**

Asks the System for the display name of the item. Returns the normal name on any error.

As this call may cost quite some CPU time you may cache the value if you need it more often.

May return a Unicode string, so be careful with encoding.

Returns "" on any error.

Raises an exception if index is out of bounds. Index is zero based.

### 75.14.17 `FinderFlags(index as Integer) as Integer`

MBS Util Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Finder flags from Mac OS.

**Notes:**

On Windows and Linux value is 0.

The flag value is a set of bits with the following meaning:

### 75.14.18 `FSRef(index as Integer) as memoryblock`

MBS Util Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The FSRef used for this item.

**Notes:**

Returns nil if no FSRef is kept for this item.
On Mac OS there is a FSSpec or (FSRef and HFSUniStr255). Raises an exception if index is out of bounds. Index is zero based.

75.14.19  HFSUniStr255(index as Integer) as memoryblock

MBS Util Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The HFSUniStr255 used for this item. **Notes:** Returns nil if no HFSUniStr255 is kept for this item. On Mac OS there is a FSSpec or (FSRef and HFSUniStr255). Raises an exception if index is out of bounds. Index is zero based.

75.14.20  IsBundle(index as Integer) as Boolean

MBS Util Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Queries using LaunchServices whether this item is a folder and the root of a bundle. **Example:**

Protected Sub Dir(f as FolderItem)
    dim l as FileListMBS
    dim i,c as Integer

    // search subfolders and find bundles

    l=new FileListMBS(f)
    c=l.Count-1
    for i=0 to c
        // if bundle, show it in listbox
        if l.IsBundle(i) then
            ListBox1.AddRow l.Item(i).AbsolutePath
        elseif l.Directory(i) then

    end if
end Sub
// if sub folder, browse it
dir l.Item(i)
end if
next
End Sub

Notes: On Windows, Linux and Mac OS Classic always false.

75.14.21  **IsHardLinked(index as Integer) as boolean**

MBS Util Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Whether the file is a hard link.
**Notes:**
If two directory entries point to the same hard disc space, you have a file which has two directory entries, but only one storage.

This function returns true for files in a Time Machine backup which did not change since the last backup and share their disc space with the other backups.

Raises an exception if index is out of bounds. Index is zero based.

75.14.22  **Item(index as Integer) as folderitem**

MBS Util Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a folderitem for the item with the given index.
**Notes:**
Returns nil on any error.
The reason why you use this class is to avoid making folderitems which is slow, so don’t use this function too often.
Raises an exception if index is out of bounds. Index is zero based.
On Mac OS X you always get TrueItem behavior as the plugin doesn’t resolve aliases.

75.14.23  **ItemPath(index as Integer) as string**

MBS Util Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The native file path for an item.
CHAPTER 75. FILES

75.14.24 LastAccessDate(index as Integer) as Double

MBS Util Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last access date of this file or directory. **Notes:**

On Mac OS the UTC date (+0 time zone)
Raising an exception if index is out of bounds. Index is zero based.

To query Spotlight’s Last Open day, please check the FAQ for sample code.
See also:

- 75.14.25 LastAccessDate(index as Integer, UTC as boolean) as Date

75.14.25 LastAccessDate(index as Integer, UTC as boolean) as Date

MBS Util Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last access date of this file or directory. **Notes:**

Either in UTC time zone or in local time zone.
Raising an exception if index is out of bounds. Index is zero based.
To query Spotlight’s Last Open day, please check the FAQ for sample code.
See also:

- 75.14.24 LastAccessDate(index as Integer) as Double

75.14.26 LogicalDataLength(index as Integer) as Int64

MBS Util Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The logical file data length for the item with the given index. **Notes:**

Same value as folderitem.length, but works with files >2GB.
Raising an exception if index is out of bounds. Index is zero based.

75.14.27 LogicalResourceLength(index as Integer) as Int64

MBS Util Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The logical resource length of the item with the given index. **Notes:**

Raising an exception if index is out of bounds. Index is zero based.
75.14. CLASS FILELISTMBS

75.14.28  ModificationDate(index as Integer) as Double

Notes:
On Mac OS the UTC date (+0 time zone)
On Windows looks like local timezone.
Raises an exception if index is out of bounds. Index is zero based.
See also:

- 75.14.29 ModificationDate(index as Integer, UTC as boolean) as Date

75.14.29  ModificationDate(index as Integer, UTC as boolean) as Date

Notes:
Either in UTC time zone or in local time zone.
Raises an exception if index is out of bounds. Index is zero based.
See also:

- 75.14.28 ModificationDate(index as Integer) as Double

75.14.30  Name(index as Integer) as string

MBS Util Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The name of the item with the given index.
Notes:
May return a Unicode string, so be careful with encoding.
Returns "" on any error.
Raises an exception if index is out of bounds. Index is zero based.

75.14.31  NodeID(index as Integer) as Integer

Notes:
The node id is zero on Windows and Linux.
Raises an exception if index is out of bounds. Index is zero based.
75.14.32 ParentDirectoryID(index as Integer) as Integer

MBS Util Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** The Mac ID for the parent directory. **Notes:** Parent Directory ID is zero on Windows and Linux. Raises an exception if index is out of bounds. Index is zero based.

75.14.33 PhysicalDataLength(index as Integer) as Int64

MBS Util Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The physical data length of the item with the given index. **Notes:** Returns 0 on any error. Raises an exception if index is out of bounds. Index is zero based.

75.14.34 PhysicalResourceLength(index as Integer) as Int64

MBS Util Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The physical resource length of the item with the given index. **Notes:** Value is always 0 on Windows. Returns 0 on any error. Raises an exception if index is out of bounds. Index is zero based.

75.14.35 SortByCreationDate

MBS Util Plugin, Plugin Version: 6.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sorts items in list by creation date.

75.14.36 SortByModificationDate

MBS Util Plugin, Plugin Version: 6.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sorts items in list by modification date.
75.14.37 TrueItem(index as Integer) as folderitem

MBS Util Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a folderitem for the item with the given index.

**Notes:**

Returns nil on any error.
The reason why you use this class is to avoid making folderitems which is slow, so don’t use this function too often.

TrueItem will on Windows use GetTrueFolderItem instead of GetFolderItem so the link files are not resolved by Realbasic.

75.14.38 Type(index as Integer) as string

MBS Util Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** The Mac Type code of the item with the given index.

**Notes:**

Always "" on Windows and Linux.
Raises an exception if index is out of bounds. Index is zero based.

75.14.39 Visible(index as Integer) as boolean

MBS Util Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the item with the given index is visible.

**Notes:**

On Mac OS X, files with name starting with "." are considered to be invisible.
False on any error.
Raises an exception if index is out of bounds. Index is zero based.

75.14.40 WinFileAttributes(index as Integer) as Integer

MBS Util Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The file attributes for this file on Windows.

**Notes:**

Value is 0 on other platforms.
Raises an exception if index is out of bounds. Index is zero based.
75.14.41 Properties

75.14.42 Count as Integer

MBS Util Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of items found. **Notes:** So index goes from 0 to count-1 in all functions. (Read and Write property)

75.14.43 Folder as Folderitem

MBS Util Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The folderitem used in the constructor. **Notes:** (Read and Write property)

75.14.44 OK as Boolean

MBS Util Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the process of reading the directory content in the constructor was successful. **Notes:** Should be true on success. (Read and Write property)

75.14.45 Path as String

MBS Util Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The file path for the folder. **Notes:** The plugin makes sure it ends with slash or backslash. (Read and Write property)

75.14.46 TotalLogicalDataLength as Int64

MBS Util Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The sum of logical dats length for all items. **Notes:** (Read only property)
75.14.47  TotalLogicalResourceLength as Int64

MBS Util Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The sum of logical resource length for all items. **Notes:** (Read only property)

75.14.48  TotalPhysicalDataLength as Int64

MBS Util Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The sum of physical data length for all items. **Notes:** (Read only property)

75.14.49  TotalPhysicalResourceLength as Int64

MBS Util Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The sum of physical resource length for all items. **Notes:** (Read only property)
75.15 class FinderSelectionMBS

75.15.1 class FinderSelectionMBS

**Function:** A class to query the Finder for the current selection.

**Example:**

```vbnet
dim f as new FinderSelectionMBS
dim i,n as Integer
dim a(-1) as String
dim g as FolderItem

f.GetSelection
if f.LastError=0 then
    n=f.CountItems
    for i=1 to n
        g=f.Item(i)
        if g<>nil then
            a.Append g.DisplayName
        end if
    next
end if
MsgBox Join(a,EndOfLine)
```

75.15.2 Methods

75.15.3 CountItems as Integer

**Function:** Returns the number of items in the Finder selection.

**Example:**

```vbnet
dim f as new FinderSelectionMBS

f.GetSelection
MsgBox str(F.CountItems)
```

**Notes:** Returns 0 on any error.
75.15.4 GetSelection

Function: Asks the Finder for the current selection.
Example:

```vbnet
dim f as new FinderSelectionMBS
f.GetSelection
```

Notes: Lasterror is set.

75.15.5 Item(index as Integer) as folderitem

Function: Returns the item with the given index.
Example:

```vbnet
dim f as new FinderSelectionMBS
f.GetSelection
MsgBox f.Item(1).DisplayName ' display first item’s name
```

Notes:
Index is from 1 to count.
Lasterror is set.

75.15.6 Properties

75.15.7 LastError as Integer

Function: The last error code reported.
Example:

```vbnet
dim f as new FinderSelectionMBS
f.GetSelection
MsgBox str(F.LastError)
```
Notes:

A Mac OS error code.
(Read and Write property)
75.16  class FolderItem

75.16.1  class FolderItem

Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of Realbasic’s base classes.  
**Notes:** Handles access to files.

75.16.2  Methods

75.16.3  AddCustomIconMBS(icon as IconFamilyMBS, Compat as boolean) as Integer

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Adds a custom icon to a file.  
**Example:**

dim fo as FolderItem  
dim g as IconFamilyMBS  
dim p,m as Picture  
fo=SpecialFolder.Desktop.Child(“test.jpg”)  
// get some picture  
p=fo.OpenAsPicture  
  
// make a mask  
m=NewPicture(p.Width,p.Height,1)  
m.Graphics.ForeColor=rgb(0,0,0)  
m.Graphics.fillrect 0,0,m.Width,m.Height  
// You may prefer to make a picture and a mask centered within a quadratic picture  
g=newIconFamilyMBS // new family  
  
// Add icons  
g.Thumbnail32BitData=p  
g.Thumbnail8BitMask=m  
g.Large1BitData=p  
g.Large1BitMask=m  
g.Large32BitData=p  
g.Large4BitData=p  
g.Large8BitData=p  
g.Large8BitMask=m
g.Huge1BitData=p
g.Huge1BitMask=m
g.Huge32BitData=p
g.Huge4BitData=p
g.Huge8BitData=p
g.Huge8BitMask=m

g.Small1BitData=p
g.Small1BitMask=m
g.Small32BitData=p
g.Small4BitData=p
g.Small8BitData=p
g.Small8BitMask=m

// Save to file
MsgBox str(fo.AddCustomIconMBS(g, true))

Notes:
Requires Mac OS 8.5 or newer.
Returns a Mac OS error code, with 0 for no error and -1 for parameter error (Icon=nil or invalid folderitem).
If Compat=true then the old icon resources for Mac OS 7/8 will be generated.
For folders, please create an invisible file called "icon" inside the folder and add the icon to this file.
To change the icon, just add it a second time. This will overwrite the first icon.

Before setting icon, make sure you close all Binarystream, Textoutputstream or other classes which may have the file open.

Please use NSWorkspaceMBS.setIcon for newer projects.

75.16.4  AddedToDirectoryDateMBS as date

MBS Util Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the date the file was added to the folder.
**Notes:** Requires OS X 10.10 or newer.

75.16.5  AliasInfoMBS as AliasInfoMBS

MBS MacClassic Plugin, Plugin Version: 5.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Alias information about the folderitem if it is an alias file.
**Example:**
// select an alias file. use TrueChild so it’s not resolved
dim f as FolderItem = SpecialFolder.Desktop.TrueChild("Development")

// get alias info
dim a as AliasInfoMBS = f.AliasInfoMBS

// show info
MsgBox "alias points to " + a.TargetName + " in path " + a.PathString + " of volume " + a.VolumeName

Notes: Returns nil on any error.

75.16.6 BackupIsItemExcludedMBS(byref excludeByPath as boolean) as boolean

Function: Report whether or not an item is being excluded from backup.
Notes:
excludeByPath: pass a boolean variable to determine whether or not the given item is excluded as an absolute path or whether it is sticky to the item.

Returns true if the item or any of its ancestors are excluded from backup, false otherwise.

Require Mac OS X 10.5.

75.16.7 BackupSetItemExcludedMBS(exclude as boolean, excludeByPath as boolean) as Integer

Function: Add or remove an item from the list of items excluded from backup.
Notes:
When backing up, the backup daemon skips items marked by this call. If a folder is marked for exclusion, it and its contents are excluded from backup. When specifying by path, it is OK to pass a URL of an item/folder that does not exist yet.

Returns the error code. -1 is the error code in case the function is not available.
Require Mac OS X 10.5.
75.16.8 CalculateDirectorySizeMBS(recursive as boolean = false, ticks as Integer = 0, QueryCompressedSizes as boolean = false, RecursionLimit as Integer = -1) as DirectorySizeMBS

Example:

```
// chose a folder
dim f as FolderItem = SelectFolder

// calculate
dim d as DirectorySizeMBS = f.CalculateDirectorySizeMBS(True,0)

// display
MsgBox str(d.FilesCount)+” files in ”+str(d.FolderCount)+” folder”
```

Notes:

recursive: Whether to count items in the subfolders.
ticks: Whether to yield time to other threads. (See YieldTicks property)
QueryCompressedSizes: Whether to query compressed file sizes on Windows.
RecursionLimit: If positive, the recursion limit.

Returns nil on any error.

75.16.9 ColorSyncCountImageProfilesMBS as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: Use this function to obtain a count of the number of embeded profiles for a given image.
Notes:

Returns 0 if the function fails for any reason.
Requires ColorSync 2.6 or newer.

75.16.10 ColorSyncEmbedImageMBS(target as folderItem,replace as boolean,Profile as ColorSyncProfileMBS) as boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: This function will embed an image with an ICC profile.
Notes:

If target is a file, it specifies the resulting image. If this parameter is a folder, it specifies the location of the
resulting image which will have the same name as the original file. If this parameter is nil, the original file is modified.
If a file with the same name already exists, it will be replaced if this parameter replace is set to true.
Returns false if the function fails for any reason.
Requires ColorSync 2.6 or newer.

75.16.11 ColorSyncGetImageProfileMBS(index as Integer) as ColorSyncProfileMBS

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Use this function to obtain a specific embedded profile for a given image.
**Notes:**
Returns nil if the function fails for any reason.
Requires ColorSync 2.6 or newer.

75.16.12 ColorSyncImageColorSpaceMBS as string

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** What color space does this picture use?
**Example:**
```vbs
dim file as FolderItem
msgbox file.ColorSyncImageColorSpaceMBS
```

**Notes:**
Possible values:

Other values without a definition from Apple:

"3CLR", "4CLR", "5CLR", "6CLR", "7CLR", "8CLR", "NAME", "9CLR", "ACLR", "BCLR", "CCLR", "DCLR", "ECLR", "FCLR".

Requires ColorSync 2.6 or newer.
"XYZ"  The XYZ data color space.
"Lab"  The L*a*b* data color space.
"Luv"  The L*u*v* data color space.
"Yxy"  The Yxy data color space.
"RGB"  The RGB data color space.
"sRGB" The RGB data color space.
"GRAY" The Gray data color space.
"HSV"  The HSV data color space.
"HLS"  The HLS data color space.
"CMYK" The CMYK data color space.
"CMY"  The CMY data color space.
"MCH5" The five-channel multichannel (HiFi) data color space.
"MCH6" The six-channel multichannel (HiFi) data color space.
"MCH7" The seven-channel multichannel (HiFi) data color space.
"MCH8" The eight-channel multichannel (HiFi) data color space.

75.16.13 ColorSyncLinkImageMBS(target as folderitem,replace as boolean,quality as Integer,linkprofile as ColorSyncProfileMBS,linkintent as Integer) as boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Use this function to match an image file with a device link profile. 

**Notes:**

If target is a file, it specifies the resulting image. If this parameter is a folder, it specifies the location of the resulting image which will have the same name as the original file. If this parameter is nil, the original file is modified. 

If a file with the same name already exists, it will be replaced if this parameter replace is set to true. 

Returns false if the function fails for any reason. 

**Quality values:**

<table>
<thead>
<tr>
<th>Code</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>cmNormalMode</td>
<td>0</td>
<td>This is the default setting. Normal mode indicates that the CMM should use its default method to compromise between performance and resource requirements.</td>
</tr>
<tr>
<td>cmDraftMode</td>
<td>1</td>
<td>Draft mode indicates that the CMM should sacrifice quality, if necessary, to minimize resource requirements. Note that the default CMM currently produces the same results for both normal and draft mode.</td>
</tr>
<tr>
<td>cmBestMode</td>
<td>2</td>
<td>Best mode indicates that the CMM should maximize resource usage to ensure the highest possible quality.</td>
</tr>
</tbody>
</table>
Intent values:

- **cmPerceptual** 0: All the colors of a given gamut can be scaled to fit within another gamut. This intent is best suited to realistic images, such as photographic images.
- **cmRelativeColorimetric** 1: The colors that fall within the gamuts of both devices are left unchanged. This intent is best suited to logo images.
- **cmSaturation** 2: The relative saturation of colors is maintained from gamut to gamut. This intent is best suited to bar graphs and pie charts in which the actual color displayed is less important than its vividness.
- **cmAbsoluteColorimetric** 3: This approach is based on a device-independent color space in which the result is an idealized print viewed on a ideal type of paper having a large dynamic range and color gamut.

Requires ColorSync 2.6 or newer.

### 75.16.14 ColorSyncMatchImageMBS(target as folderitem,replace as boolean,quality as Integer,sourceprofile as ColorSyncProfileMBS,sourceintent as Integer,destprofile as ColorSyncProfileMBS) as boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Use this function to color match an image file.

**Example:**

```vbnet
dim f, gg as FolderItem
dim fo, fi as FolderItem
dim ip, op as ColorSyncProfileMBS
dim cw as ColorSyncWorldMBS
dim b as Boolean

gg = SpecialFolder.Desktop.truechild("aaa")
f = SpecialFolder.Desktop.Child("mdchen2.tif")

fo = GetFolderItem("Generic RGB Profile.icc")
fi = GetFolderItem("Generic CMYK Profile.icc")

ip = fi.OpenAsColorSyncProfileMBS
op = fo.OpenAsColorSyncProfileMBS

cw = new ColorSyncWorldMBS(ip, op)

b = f.ColorSyncMatchImageMBS(gg, true, 0, ip, 0, op)

window1.backdrop = gg.openaspicture
```
Notes:
If target is a file, it specifies the resulting image. If this parameter is a folder, it specifies the location of the resulting image which will have the same name as the original file. If this parameter is nil, the original file is modified.
If a file with the same name already exists, it will be replaced if this parameter replace is set to true.
Returns false if the function fails for any reason.

Quality values:

- **cmNormalMode**: 0  This is the default setting. Normal mode indicates that the CMM should use its default method to compromise between performance and resource requirements.
- **cmDraftMode**: 1  Draft mode indicates that the CMM should sacrifice quality, if necessary, to minimize resource requirements. Note that the default CMM currently produces the same results for both normal and draft mode.
- **cmBestMode**: 2  Best mode indicates that the CMM should maximize resource usage to ensure the highest possible quality.

Intent values:

- **cmPerceptual**: 0  All the colors of a given gamut can be scaled to fit within another gamut. This intent is best suited to realistic images, such as photographic images.
- **cmRelativeColorimetric**: 1  The colors that fall within the gamuts of both devices are left unchanged. This intent is best suited to logo images.
- **cmSaturation**: 2  The relative saturation of colors is maintained from gamut to gamut. This intent is best suited to bar graphs and pie charts in which the actual color displayed is less important than its vividness.
- **cmAbsoluteColorimetric**: 3  This approach is based on a device-independent color space in which the result is an idealized print viewed on a ideal type of paper having a large dynamic range and color gamut.

Requires ColorSync 2.6 or newer.

75.16.15 **ColorSyncProofImageMBS**(target as folderitem,replace as boolean,quality as Integer,sourceprofile as ColorSyncProfileMBS,sourceintent as Integer,destprofile as ColorSyncProfileMBS,proofprofile as ColorSyncProfileMBS) as boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function**: Use this function to proof an image file.

Notes:
If target is a file, it specifies the resulting image. If this parameter is a folder, it specifies the location of the resulting image which will have the same name as the original file. If this parameter is nil, the original file is modified. If a file with the same name already exists, it will be replaced if this parameter replace is set to true. Returns false if the function fails for any reason.

Quality values:

- **cmNormalMode** 0: This is the default setting. Normal mode indicates that the CMM should use its default method to compromise between performance and resource requirements.
- **cmDraftMode** 1: Draft mode indicates that the CMM should sacrifice quality, if necessary, to minimize resource requirements. Note that the default CMM currently produces the same results for both normal and draft mode.
- **cmBestMode** 2: Best mode indicates that the CMM should maximize resource usage to ensure the highest possible quality.

Intent values:

- **cmPerceptual** 0: All the colors of a given gamut can be scaled to fit within another gamut. This intent is best suited to realistic images, such as photographic images.
- **cmRelativeColorimetric** 1: The colors that fall within the gamuts of both devices are left unchanged. This intent is best suited to logo images.
- **cmSaturation** 2: The relative saturation of colors is maintained from gamut to gamut. This intent is best suited to bar graphs and pie charts in which the actual color displayed is less important than its vividness.
- **cmAbsoluteColorimetric** 3: This approach is based on a device-independent color space in which the result is an idealized print viewed on an ideal type of paper having a large dynamic range and color gamut.

Requires ColorSync 2.6 or newer.

75.16.16 ColorSyncSetImageProfileMBS(target as folderitem,replace as boolean,index as Integer/profile as ColorSyncProfileMBS) as boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Use this function to set a specific embedded profile for a given image. **Notes:**

If target is a file, it specifies the resulting image. If this parameter is a folder, it specifies the location of the resulting image which will have the same name as the original file. If this parameter is nil, the original file is modified.
If a file with the same name already exists, it will be replaced if this parameter replace is set to true. Returns false if the function fails for any reason. Requires ColorSync 2.6 or newer.

### 75.16.17 ColorSyncUnembedImageMBS(target as folderitem, replace as boolean)

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This function will remove any ICC profiles embedded in an image. **Notes:**

If target is a file, it specifies the resulting image. If this parameter is a folder, it specifies the location of the resulting image which will have the same name as the original file. If this parameter is nil, the original file is modified. If a file with the same name already exists, it will be replaced if this parameter replace is set to true. Returns false if the function fails for any reason. Requires ColorSync 2.6 or newer.

### 75.16.18 ColorSyncValidImageMBS as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Is this a valid image for ColorSync? **Notes:**

Return values:

- 0 Windows
- 1 No ColorSync 2.6 or newer
- 2 Not valid
- 3 Valid

You can look in the folder ColorSyncScriptingFolder which picture formats are supported. In Mac OS X 10.1.5 there are TIFF, JPEG and GIF.

(The ColorSyncScriptingFolder function is part of the MBS Plugin)

Requires ColorSync 2.6 or newer.
75.16. **CLASS FOLDERITEM**

### 75.16.19 **CompressedFileLengthMBS as int64**

MBS Util Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the length of the compressed file on disk.

**Example:**

```plaintext
filesize.text=format(file.CompressedFileLengthMBS,"0")
```

**Notes:** On Windows files can be compressed and this function returns the size of the compressed file. On Mac and for non compressed files on Windows this function returns the uncompressed size.

### 75.16.20 **CountMBS as Integer**

MBS MacClassic Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the number of items in this folder.

**Example:**

```plaintext
dim f as FolderItem = SpecialFolder.Desktop
MsgBox str(F.Count)+" vs. "+str(F.CountMBS)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use folderitem.Count instead.

**Notes:**
The count property of the REALbasic folderitem class is cached.
So if you create a file, the count property may not update.

If you need a more up to date value, you can use the CountMBS function to return the value the Mac OS system software returns.
On any error (e.g. invalid folderitem) the function returns 0.

Windows support added in 4.2dr2.

### 75.16.21 **CreateLargeBinaryStreamMBS(MacType as string, MacCreator as string) as LargeBinaryStreamMBS**

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a file as a LargeBinaryStreamMBS.

**Example:**

```plaintext
dim f as FolderItem // your file
dim l as LargeBinaryStreamMBS
```
l=f.CreateLargeBinaryStreamMBS("TEXT","ttxt")

Notes:
If there is already a file, it is deleted.
On Windows the parameters are ignored.
Returns nil on any error.

75.16.22 CreateResStreamMBS(MacType as string, MacCreator as string) as ResStreamMBS

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Creates a new ResStreamMBS.
Notes:
If there is already a file, it is deleted.
If the file could not be created it is deleted.
Returns nil on any error.

75.16.23 CreatorAppMBS as FolderItem

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the application that would be launched if you’d call the above Launch method, or NIL if no appropriate app can be located.
Example:

```vba
dim docfile as folderitem // your document file
dim appfile as folderitem
appfile=docfile.CreatorAppMBS
```

Notes:
This function doesn’t work with bundles and should be only used on Mac OS 9.
Use Launch service functions on Mac OS X.
See also:

- 75.16.24 CreatorAppMBS(creatorCode as String) as FolderItem
75.16.24 CreatorAppMBS(creatorCode as String) as FolderItem

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to the Application which created this file for the given creator code on the volume of the folderitem.

**Example:**

```
dim myvolume as folderitem // your volume
dim theFile as folderitem // your file
dim appfile as folderitem
dim ok as boolean
dim inFront as Boolean

appfile=myvolume.CreatorAppMBS("iCAB")
' or
ok = theFile.OpenWithAppMBS(myvolume.CreatorAppMBS("RSED"), inFront)
```

**Notes:**

Returns the application that would be launched if you’d call the above Launch method and if the file had the specified creator code. Returns NIL if no appropriate app can be located.

This method allows you to open a document with a creator code that you specify instead of having to locate the application by your own. Here’s an example on how to open any file with ResEdit (whose creator code is 'RSED'):

```
This function doesn’t work with bundles and should be only used on Mac OS 9.
Use Launch service functions on Mac OS X.
See also:
- 75.16.23 CreatorAppMBS as FolderItem
```

75.16.25 DarwinMediaClassMBS as string

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the class of the media.

**Example:**

```
dim f as FolderItem = SpecialFolder.Desktop

MsgBox f.DarwinMediaClassMBS
```

**Notes:**
Returns nil on any problem.

Possible values:

- kIODEMClass "IODEM"
- kIODVDMediaClass "IODVDMedia"
- kIOMediaClass "IOMedia"

### 75.16.26 DarwinMediaInfoMBS as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the info dictionary of the media.

**Example:**

```plaintext
// info for boot volume
dim info as CFDictionaryMBS = volume(0).DarwinMediaInfoMBS
if info = nil then
    beep // error
else
    CFSHOWMBS info // show in console

    dim RemovableKey as CFStringMBS = NewCFStringMBS("Removable")
    dim RemovableCFO as CFOBJECTMBS = info.Value(RemovableKey)
    dim RemovableCFB as CFbooleanMBS = CFbooleanMBS(RemovableCFO)
    dim Removable as Boolean = RemovableCFB.Value
    MsgBox "Removable: " + str(Removable)

    dim EjectableKey as CFStringMBS = NewCFStringMBS("Ejectable")
    dim EjectableCFO as CFOBJECTMBS = info.Value(EjectableKey)
    dim EjectableCFB as CFbooleanMBS = CFbooleanMBS(EjectableCFO)
    dim Ejectable as Boolean = EjectableCFB.Value
    MsgBox "Ejectable: " + str(Ejectable)

    dim SizeKey as CFStringMBS = NewCFStringMBS("Size")
    dim SizeCFO as CFOBJECTMBS = info.Value(SizeKey)
    dim SizeCFN as CFNumberMBS = CFNumberMBS(SizeCFO)
    dim Size as Double = SizeCFN.doubleValue / 1000000000.0
    MsgBox "Size: " + str(Size, "0.0") + " GB"
end if
```
Notes:

Returns nil on any problem.

example output for the example code above:

```latex
<CFDictionary 0x7d60510 [ 0xa01900e0 ] >{ type = fixed-mutable, count = 14, capacity = 14, pairs = (0 : <CFString 0x7d5ffe0 [ 0xa01900e0 ] >{ contents = "Leaf" } = <CFBoolean 0xa0190b98 [ 0xa01900e0 ] >{ value = false } 1 : <CFString 0x7d60160 [ 0xa01900e0 ] >{ contents = "Writable" } = <CFBoolean 0xa0190b90 [ 0xa01900e0 ] >{ value = true } 2 : <CFString 0x7d60310 [ 0xa01900e0 ] >{ contents = "BSD Minor" } = <CFNumber 0x7d60300 [ 0xa01900e0 ] >{ value = +0, type = kCFNumberSInt32Type } 6 : <CFString 0x7d60040 [ 0xa01900e0 ] >{ contents = "Preferred Block Size" } = <CFNumber 0x7d600b0 [ 0xa01900e0 ] >{ value = +512, type = kCFNumberSInt64Type } 11 : <CFString 0x7d604c0 [ 0xa01900e0 ] >{ contents = "BSD Major" } = <CFNumber 0x7d604b0 [ 0xa01900e0 ] >{ value = +14, type = kCFNumberSInt32Type } 13 : <CFString 0x7d603b0 [ 0xa01900e0 ] >{ contents = "BSD Name" } = <CFString 0x7d60110 [ 0xa01900e0 ] >{ contents = "disk0" } 14 : <CFString 0x7d600d0 [ 0xa01900e0 ] >{ contents = "Size" } = <CFNumber 0x7d60090 [ 0xa01900e0 ] >{ value = +163928604672, type = kCFNumberSInt64Type } 15 : <CFString 0x7d603f0 [ 0xa01900e0 ] >{ contents = "Content Hint" } = <CFString 0x7d5fe90 [ 0xa01900e0 ] >{ contents = "Internal.icns" } 16 : <CFString 0x7d60250 [ 0xa01900e0 ] >{ contents = "IOBundleResourceFile" } = <CFDictionary 0x7d60230 [ 0xa01900e0 ] >{ contents = "Apple_partition_scheme" } 17 : <CFString 0x7d601b0 [ 0xa01900e0 ] >{ contents = "IOMediaIcon" } = <CFDictionary 0x7d60120 [ 0xa01900e0 ] >{ contents = "Whole" } 19 : <CFString 0x7d603d0 [ 0xa01900e0 ] >{ contents = "BSD Unit" } = <CFNumber 0x7d603c0 [ 0xa01900e0 ] >{ value = +0, type = kCFNumberSInt32Type } 20 : <CFString 0x7d60200 [ 0xa01900e0 ] >{ contents = "Ejectable" } = <CFBoolean 0xa0190b98 [ 0xa01900e0 ] >{ value = false } 21 : <CFString 0x7d601a0 [ 0xa01900e0 ] >{ contents = "Content" } = <CFString 0x7d60190 [ 0xa01900e0 ] >{ contents = "" } 22 : <CFString 0x7d60120 [ 0xa01900e0 ] >{ contents = "" } )

If you don’t like all the CFDictionaryMBS methods, than use Dictionary function it to get a Xojo dictionary.
75.16.27 DarwinVolumeNameMBS as string

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the name of the volume from the BSD part of Mac OS X.
Example:
MsgBox Volume(0).DarwinVolumeNameMBS // shows here disk1s10

Notes:
Returns "" on any error.
The returned string is encoded as ASCII.

75.16.28 DeleteDataForkMBS

Notes:
Equal to open the file using a binarystream and setting the length property to 0.
On Mac OS a file can exist without a datafork, with a resource fork or even without any fork.

75.16.29 DeleteResourceForkMBS

Notes:
Equal to open the file using a ResStreamMBS and setting the length property to 0.
On Mac OS a file can exist without a datafork, with a resource fork or even without any fork.

75.16.30 DisplayPathMBS(delimiter as string = "/") as string

Example:

// Sample values in German:

// SnowLeopard/Programme/Dienstprogramme/Konsole

MsgBox SpecialFolder.Applications.Child("Utilities").Child("Console.app").DisplayPathMBS("/"
75.16. CLASS FOLDERITEM

// SnowLeopard/Benutzer/cs/Schreibtisch
MsgBox SpecialFolder.Desktop.DisplayPathMBS("/")

// SnowLeopard Programme Dienstprogramme Konsole
MsgBox SpecialFolder.Applications.Child("Utilities").Child("Console.app").DisplayPathMBS(" ")

// SnowLeopard Benutzer cs Schreibtisch
MsgBox SpecialFolder.Desktop.DisplayPathMBS(" ")

Notes: You can pass any string for delimiter. Good looks an arrow or just a slash.

75.16.31 DrawIconMBS(g as Graphics,x as Integer,y as Integer)

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Draws the icon of the folderitem on the position x/y inside the graphics object.

**Example:**
SpecialFolder.System.DrawIconMBS canvas1.graphics,0,0

Notes:
The works with masks.
For every other size than 32 pixels use DrawWideIcon.

75.16.32 DrawWideIconMBS(g as Graphics,x as Integer,y as Integer,width as Integer)

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Draws the icon of the folderitem on the position x/y inside the graphics object with the given width.

**Example:**
app.applicationfileMBS.DrawWideIconMBS(canvas1.graphics,0,0,128) 'for the nice OSX icons

Notes:
The works with masks.
Works even wonderfull with OSX Icons.
See also:

- 75.16.33 DrawWideIconMBS(g as Graphics,x as Integer,y as Integer,width as Integer, WindowsIconIndex as Integer)

75.16.33 DrawWideIconMBS(g as Graphics,x as Integer,y as Integer,width as Integer, WindowsIconIndex as Integer)

MBS Picture Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:**
Draws the icon of the folderitem on the position x/y inside the graphics object with the given width.
**Example:**

```pascal
app.applicationfileMBS.DrawWideIconMBS(canvas1.graphics,0,0,128,0) 'for the nice OSX icons
```

**Notes:**
The works with masks.
Works even wonderfull with OSX Icons.
The WindowsIconIndex parameter is only for Windows and specifies which icon from inside the file is picked.

If you draw this in a listbox cellbackground, you need to draw on the correct position:

```pascal
dim f as FolderItem
f=SpecialFolder.Desktop
f.DrawWideIconMBS(g,me.left,me.top+row*20,16)
Return true
```

try this in a listbox. The Graphics object there has a cliping and an offset which the plugin doesn’t know about.

Not supported for Cocoa target.
See also:

- 75.16.32 DrawWideIconMBS(g as Graphics,x as Integer,y as Integer,width as Integer)

75.16.34 EjectVolumeMBS(force as boolean, byref dissenterPID as Integer) as Integer

MBS MacClassic Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This routine ejects the volume specified by folderitem.
**Example:**
dim disk as FolderItem

dim c as Integer = VolumeCount - 1
for i as Integer = 0 to c
    dim v as FolderItem = volume(i)
    if v.Name = "testvolume" then
        disk = v
        exit
    end if
next

if disk = nil then
    MsgBox "Please change the name in this code."
else
    dim pid as Integer
    dim e as Integer = disk.EjectVolumeMBS(false, pid)

    if e=0 then
        MsgBox "Volume unmounted."
    else
        if pid=0 then
            MsgBox "Failed to unmount with error: " + str(e)
        else
            dim name as string
            dim p as new ProcessMBS // from Util plugin
            p.GetFirstProcess

            do
                if p.ProcessID = pid then
                    name = p.Name
                end if
            loop until not p.GetNextProcess

            if len(name) > 0 then
                MsgBox "Failed to unmount with error: " + str(e)
            else
                MsgBox "Failed to unmount.\n" + EndOfLine + EndOfLine + \"The application\" + name + \" is still using this volume.\n" + EndOfLine + \"Error: \" + str(e)
            end if
        end if
    end if
end if
end if
Notes:
If the volume cannot be ejected the pid of the process which denied the unmount will be returned in the
dissenter parameter. This routine returns after the eject is complete. Ejecting a volume will result in the
unmounting of other volumes on the same device.

force: Specify true if you want the volume forcibly unmounted. Force unmounting a volume will very likely
result in data loss since the volume will be ejected even if there are open files on it. This option should be
reserved for situations such as the backing store for a volume is gone (so the data is lost regardless).
dissenterPID: Optionally, pid of the process which denied the unmount if the unmount is denied.

Returns a Mac OS error code. 0 means no error and -1 is a plugin error if the function can’t be called. -47
is returned if the disc is in use.

PS: Seems like on my tests the pid is not set by Apple.

75.16.35 FilesMBS as FolderItem()

MBS Util Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns array of files in the given folder.

Example:
```
dim folder as FolderItem = SpecialFolder.Desktop
dim files() as FolderItem = folder.FilesMBS
MsgBox str(UBound(files)+1)+” files”
```

Notes: Similar to item() function, but returns all files with one call.

75.16.36 FinderUpdateMBS as Integer

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Updates the file or
folder in the Finder.

Notes:
Returns 0 for successfull and any Mac OS error code on a problem.
Returns -1 on Windows.
This function is called automatically when adding or removing an icon.
If you add a folder icon, use this function to update the Finder to display it.
75.16.37  FlushVolumeMBS as Integer

MBS MacClassic Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Asks the Mac OS to flush all write buffers to the disc.

75.16.38  FoldersMBS as FolderItem()

MBS Util Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns array of folders in the given folder.

**Example:**
```vba
dim folder as FolderItem = SpecialFolder.Desktop
dim folders() as FolderItem = folder.FoldersMBS
MsgBox str(UBound(folders)+1)+" folders"
```

**Notes:** Similar to item() function, but returns all folders with one call.

75.16.39  FontActivateMBS(OnlyLocal as boolean) as Integer

MBS Util Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Activates one font.

**Example:**
```vba
dim f as folderitem
dim e as Integer
f=SpecialFolder.Desktop.child(“MyWonderfulFont.dfont”)
e=f.FontActivateMBS(true)
```

```vba
select case e
case 0
 msgbox ”No error”
case -1
 MsgBox ”Parameter error. (Plugin)”
case 1 // Windows error
 MsgBox ”Parameter error. (System)”
case -43 // Mac error
 MsgBox ”File not found.”
case -50 // Mac error
 MsgBox ”Parameter error. (System)”
case -108 // Mac error
 MsgBox ”File is not a font file.”
else
```
MsgBox "Error: " + str(e)
end Select

Notes:
The folder item used here points to a font file.
If you want the Font Manager to make fonts not visible to all applications installed on the system, use the OnlyLocal property.

Requires Mac OS 9.0 or newer.
Returns -1 if this FontManager function was not found. 0 on success.

Some error codes for Mac:

0  No error.
-43 File not found.
-45 File locked.
-108 Out of memory.
-105 Already registered.

Fails in Xojo 2017 on Windows due to changes in Xojo’s way to handle fonts. The plugin still activates them, but Xojo doesn’t allow you to use fonts which haven’t been there earlier. See feedback case 46596.

\textbf{75.16.40} \texttt{FontDeactivateMBS(OnlyLocal as boolean) as Integer}

\textbf{Notes:}
The folder item used here points to font file.
The OnlyLocal must match the value which was used on registration.

Requires Mac OS 9.0 or newer, Windows 2000/XP.
Returns -1 if this FontManager function was not found. 0 on success.

An user reported that this does not work on Mac OS X 10.4.

Some error codes for Mac:
75.16. CLASS FOLDERITEM

0 No error.
-43 File not found.
-45 File locked.
-108 Out of memory.

On Windows you may need to call this function several times until all references of the file are freed.

75.16.41 FSRefMBS as memoryblock

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the FSRef to this folderitem as a memoryblock.
Notes:
Only useful for toolbox calls.
Requires Mac OS X or Mac OS 9.
If the folderitem’s file doesn’t exist, you get the parent folder’s FSRef.

75.16.42 FSRefNameMBS(byref name as string) as memoryblock

MBS Util Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the FSRef to this folderitem as a memoryblock.
Notes:
Only useful for toolbox calls.
Requires Mac OS X or Mac OS 9.
If the folderitem’s file doesn’t exist, you get the parent folder’s FSRef.
The name will be filled with the name of the item.

75.16.43 GetFileAttributeMBS as Integer

MBS MacClassic Plugin, Console & Web: Yes, Mac: No, Win: No, Linux: No. Function: Get the file attributes for the folderitem to the given value. Returns a negative if there is an error.
Notes:
Returns the flAttrib of a file. If you pass in a non-existing file or a folder, a negative error code is returned instead.
The flAttrib is a set of bits with the following meaning:

(See GetFileFlags for an example on how to check the bits)
bit 0, value 1  file is locked
bit 2, value 4  resource fork is open
bit 3, value 8  data fork is open
bit 4, value 16 item is a directory
bit 7, value 128 file (one or both forks) is open

On Mac OS X the information whether a file is open is not available.

75.16.44  GetFileFlagsMBS as Integer

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get the file flags for a folderitem.

**Example:**

```lisp
// For example, testing for a file being invible works like this:
dim fdFlags as Integer
dim fileIsInvisible as boolean
dim f as FolderItem  // file

fdFlags = f.GetFileFlagsMBS
if fdFlags < 0 then
    ’ ... oops, an error occurred
else
    fileIsInvisible = BitwiseAnd (fdFlags, & H4000) <> 0
end
```

**Notes:**

Returns the fdFlags of a file. If you pass in a non-existing file or a folder, a negative error code is returned instead.

The fdFlags is a set of bits with the following meaning:

75.16.45  GetFolderFlagsMBS as Integer

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get the folder flags for the folderitem to the given value. Returns a negative if there is an error.

**Notes:**

Returns the frFlags of a folder. If you pass in a non-existing folder, a negative error code is returned instead. The frFlags are similar to the fdFlags (see GetFileFlags), but only a subset of them is used with folders.
75.16. **CLASS FOLDERITEM**

<table>

</tbody>
</table>

75.16.46  **GetVolumeRefMBS as Integer**

MBS MacClassic Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the volume reference number. **Notes:** Returns zero in case of error.

75.16.47  **HasUnresolvedConflictsMBS as boolean**

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the iCloud file properties. **Notes:**

A boolean that contains true if this item has conflicts outstanding, false otherwise. Available in Mac OS X v10.7 and later.

75.16.48  **IconImageMBS(width as Integer, WindowsFlags as Integer=0) as picture**

MBS Picture Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns an picture with the icon image of a Folderitem. **Example:**

Backdrop=SpecialFolder.Desktop.IconImageMBS(512)

**Notes:**

May return a picture which is smaller as requested if the given picture size is not available. (Changed in v5.3 to return the requested size)
On Windows the icon picture is scaled to the requested size. (Actually the plugin can only get 32bit pixels wide icons on Windows as maximum)
Good sizes on Mac OS are 16, 32, 48 and 128 pixels.
Returns nil on low memory.

Version 8.6: Now reads the 32bit image data if possible.

You can pass flags for Windows options:

<table>
<thead>
<tr>
<th>Flag</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SHGFIADDOVERLAYS</td>
<td>&amp; h20</td>
<td>Apply the appropriate overlays to the file’s icon.</td>
</tr>
<tr>
<td>SHGFI_LINKOVERLAY</td>
<td>&amp; h8000</td>
<td>Adds the link overlay to the file’s icon.</td>
</tr>
<tr>
<td>SHGFIOPENICON</td>
<td>2</td>
<td>Retrieve the file’s open icon.</td>
</tr>
<tr>
<td>SHGFISELECTED</td>
<td>&amp; h10000</td>
<td>Blend the file’s icon with the system highlight color.</td>
</tr>
</tbody>
</table>

This function can fail if the file does not exist.
Added 1024 pixel support in 12.3 plugins.

On Windows, it may be that you get a 256 pixel icon with small icon on top left. This is simply how windows handles the case when no big icon is available.

### 75.16.49 IconMaskMBS(width as Integer, WindowsFlags as Integer=0) as picture

MBS Picture Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns an picture with the icon mask of a FolderItem.

**Example:**

Backdrop=SpecialFolder.Desktop.IconMaskMBS(512)

**Notes:**

May return a picture which is smaller as requested if the given picture size is not available. (Changed in v5.3 to return the requested size)
On Windows the icon picture is scaled to the requested size. (Actually the plugin can only get 32bit pixels wide icons on Windows as maximum)
Good sizes on Mac OS are 16, 32, 48 and 128 pixels.
Returns nil on low memory.

Please use with IconImageMBS and not with IconMBS function.
Version 8.6: Now reads the 8 bit alpha values if possible.
You can pass flags for Windows options:

- `SHGFI_ADDOVERLAYS = &h20` Apply the appropriate overlays to the file's icon.
- `SHGFI_LINKOVERLAY = &h8000` Adds the link overlay to the file’s icon.
- `SHGFI_OPENICON = 2` Retrieve the file’s open icon
- `SHGFI_SELECTED = &h10000` Blend the file’s icon with the system highlight color.

This function can fail if the file does not exist.
Added 1024 pixel support in 12.3 plugins.

On Windows, it may be that you get a 256 pixel icon with small icon on top left. This is simply how windows handles the case when no big icon is available.

### 75.16.50 IconMBS(width as Integer, WindowsFlags as Integer=0) as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a picture with the icon of a Folderitem for the given iconsiz.

**Example:**

Backdrop=SpecialFolder.Desktop.IconMBS(512)

// newer way for Mac apps:

// get image
dim n as NSImageMBS = NSWorkspaceMBS.iconForFile(SpecialFolder.desktop)
// set the size we want
n.setSize 512,512
// make a copy as picture
Backdrop = n.CopyPictureWithMask

**Notes:**

Changed in plugin version 7.7 to return a picture with mask of the given size.

On Windows the icon picture is scaled to the requested size. (Actually the plugin can only get 32bit pixels wide icons on Windows as maximum)

Version 8.6: Now reads the 32bit image data with 8 bit alpha values if possible.

You can pass flags for Windows options:
SHGFI_ADDOVERLAYS = & h20  Apply the appropriate overlays to the file’s icon.
SHGFI_LINKOVERLAY = & h8000  Adds the link overlay to the file’s icon.
SHGFI_OPENICON = 2  Retrieve the file’s open icon
SHGFI_SELECTED = & h10000  Blend the file’s icon with the system highlight color.

This function can fail if the file does not exist.
Please note that icons on alias files takes much longer to get than normal files.
Added 1024 pixel support in 12.3 plugins.

On Windows, it may be that you get a 256 pixel icon with small icon on top left. This is simply how windows handles the case when no big icon is available.

75.16.51  isApplicationMBS as boolean

MBS MacOSX Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  Function:  Whether the folderitem points to an application.
Example:

// try an application
dim file1 as FolderItem = SpecialFolder.Applications.Child("iTunes.app")
MsgBox "Bundle: " +str(file1.isBundleMBS)+EndOfLine+"Application: " +str(file1.isApplicationMBS)

// try some other file
dim file2 as FolderItem = SpecialFolder.Preferences.Child("com.apple.itunes.plist")
MsgBox "Bundle: " +str(file2.isBundleMBS)+EndOfLine+"Application: " +str(file2.isApplicationMBS)

Notes: Returns true if the folderitem points to an application on Mac.

75.16.52  isBundleMBS as boolean

Example:

// try an application
dim file1 as FolderItem = SpecialFolder.Applications.Child("iTunes.app")
MsgBox "Bundle: " +str(file1.isBundleMBS)+EndOfLine+"Application: " +str(file1.isApplicationMBS)

// try some other file
dim file2 as FolderItem = SpecialFolder.Preferences.Child("com.apple.itunes.plist")
MsgBox "Bundle: " +str(file2.isBundleMBS)+EndOfLine+"Application: " +str(file2.isApplicationMBS)
75.16. Notes:
Returns true if the folderitem points to a directory which is a bundle/package.
For example an application package (.app).

75.16.53 IsCompressedFileMBS as Boolean

MBS Util Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Is this file a compressed one?
**Notes:** On Windows you can compress individual files to double your harddisk, but no application may note, because this compression is transparent.

75.16.54 IsDownloadedMBS as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the iCloud file properties.
**Notes:**
A boolean that contains true if a local copy of this item exists, false otherwise.
Available in Mac OS X v10.7 and later.

75.16.55 IsDownloadingMBS as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the iCloud file properties.
**Notes:**
A boolean that contains true if a local copy of this item is currently being downloaded, false otherwise.
Available in Mac OS X v10.7 and later.

75.16.56 IsEjectableVolumeMBS as Boolean

MBS MacClassic Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if the file is on a ejectable volume.
**Example:**
```dim bool as Boolean
dim f as FolderItem = volume(0)```
bool=f.IsEjectableVolumeMBS

Notes:
If false is returned it may also be possible that the function is not available (on Mac OS X 10.2) or doesn’t make sense. So the volume may be ejectable even if false is returned.

For remote volumes, the eject flag is not set from Apple. That makes sense as those volume are not physically ejected, but just unmounted. So check IsOnRemoteVolumeMBS, too.

75.16.57 IsEncryptedFileMBS as Boolean

MBS Util Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Is this file an encrypted one?
**Notes:** On Windows you can encrypted individual files to secure your harddisk, but no application may note, because this encryption is transparent to them.

75.16.58 IsFileDataForkOpenReadWriteMBS as boolean

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Test whether a file is currently opened for read and write by an application.
**Notes:** This method tries to open the file with exclusive access. If this fails for access/permission errors, the function returns true.

75.16.59 IsFileResourceForkOpenReadWriteMBS as boolean

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Test whether a file is currently opened for read and write by an application.
**Notes:**
This method tries to open the file with exclusive access. If this fails for access/permission errors, the function returns true.
On Windows, the function result is always false.

75.16.60 IsOnRemoteVolumeMBS as Boolean

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if the file is on a remote volume.
75.16.61  IsUbiquitousItemMBS as boolean

Function: One of the iCloud file properties.
Example:
```vba
    dim f as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
    MsgBox "IsUbiquitousItemMBS: " + str(f.IsUbiquitousItemMBS)
```

Notes:
A boolean that contains true if this item is synchronized to cloud-based storage, false otherwise. Available in Mac OS X v10.7 and later.

75.16.62  IsUploadedMBS as boolean

Function: One of the iCloud file properties.
Notes:
A boolean that contains true if a copy of this item exists in cloud-based storage, false otherwise. Available in Mac OS X v10.7 and later.

75.16.63  IsUploadingMBS as boolean

Function: One of the iCloud file properties.
Notes:
A boolean that contains true if a local copy of this item is currently being uploaded, false otherwise. Available in Mac OS X v10.7 and later.

75.16.64  ItemsMBS as Folderitem()

Function: Returns array of items in the given folder.
Example:
dim folder as FolderItem = SpecialFolder.Desktop
dim Items() as FolderItem = folder.ItemsMBS
MsgBox str(UBound(Items)+1)+" items"

**Notes:** Similar to item() function, but returns all items with one call.

### 75.16.65 KindMBS as string

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a string about the kind of the document.

**Example:**

```vba
dim s as string
dim file as FolderItem = SpecialFolder.Desktop
s=file.KindMBS
MsgBox s
```

**Notes:**

e.g. for a Realbasic document on Mac OS X "REALbasic Document" or on Mac OS 9 something like "REALbasic 4.0.2fc6 Mac OS X Document".

This text may be localized.
Added Windows support in 12.4 plugins.

### 75.16.66 LaunchMBS(inFront as Boolean) as Boolean

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Launches a file.

**Notes:**

In Realbasic 4.5 Realsoftware introduces a new Launch variant: "Launch(inFront)". To be compatible I renamed the old Launch method to MBSLaunch and added a Launch method which is compatible to Realbasic's.

The return value is true if no immediate error occurred. It would be false, for instance, if the FolderItem object does not exists, is a folder, or is not allowed to be opened (can happen with files on network volumes, as well as in Mac OS X environments).
Added Windows support in version 3.4.
75.16. CLASS FOLDERITEM

75.16.67 LaunchServicesApplicationForItemMBS(role as Integer) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Return the application used to open an item.

**Example:**

dim f as FolderItem

f = GetFolderItem("itunes.tiff")

MsgBox f.LaunchServicesApplicationForItemMBS(-1).name

**Notes:**

Consults the binding tables to return the application that would be used to open the folderitem if it were double-clicked in the Finder. This application will be the user-specified override if appropriate or the default otherwise. If no application is known to LaunchServices suitable for opening this item, nil (kLSApplicationNotFoundErr) will be returned.

Constants you can use for the role parameter:

- kLSRolesNone = 1 no claim is made about support for this type/scheme
- kLSRolesViewer = 2 claim to be able to view this type/scheme
- kLSRolesEditor = 4 claim to be able to edit this type/scheme
- kLSRolesAll = -1 claim to do it all

75.16.68 LaunchServicesApplicationsForItemMBS(role as Integer) as LaunchServicesApplicationListMBS

MBS MacOSX Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a list of folderitems to applications that offer the requested role(s) for the input item.

**Example:**

dim l as LaunchServicesApplicationListMBS
dim f as FolderItem

f = GetFolderItem("text file")
l = f.LaunchServicesApplicationsForItemMBS(4)

if l<>nil then
    MsgBox str(l.Count)
    MsgBox l.Item(0).AbsolutePath
end if
Notes:
Requires Mac OS X 10.3.

If the folderitem is a file reference, it is treated as a document, and applications are selected based on the document’s type information. Otherwise, applications are selected based on the folderitem’s scheme.

Role:
The role(s) which must intersect with the role provided by an application for the specified item in order for the application to be included in the result. Pass kLSRolesAll if any role is acceptable.

Constants you can use for the role parameter:

- kLSRolesNone = 1 no claim is made about support for this type/scheme
- kLSRolesViewer = 2 claim to be able to view this type/scheme
- kLSRolesEditor = 4 claim to be able to edit this type/scheme
- kLSRolesAll = -1 claim to do it all

### 75.16.69  LaunchServicesCanApplicationAcceptItemMBS(TargetApp as folderitem, role as Integer, flags as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determine whether an item can accept another item.

**Example:**

```vba
dim appl,item as FolderItem

appl=LaunchServicesApplicationForInfoMBS("","","rb",-1)
item=GetFolderItem("file.rb")

MsgBox appl.Name

if item.LaunchServicesCanApplicationAcceptItemMBS(appl,-1,1) then
    MsgBox "accept"
else
    MsgBox "not accepted"
end if
```

Notes:
Returns whether TargetApp can accept this folderitem as in a drag and drop operation. If role is other than kLSRolesAll then make sure TargetApp claims to fulfill the requested role.

Constants you can use for the role parameter:

- kLSRolesNone = 1 no claim is made about support for this type/scheme
- kLSRolesViewer = 2 claim to be able to view this type/scheme
- kLSRolesEditor = 4 claim to be able to edit this type/scheme
- kLSRolesAll = -1 claim to do it all

Values for the flags:

- kLSAcceptDefault = 1
- kLSAcceptAllowLoginUI = 2 show UI to log in if necessary

75.16.70 LaunchServicesDisplayNameMBS as string

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Get the display name for a folderitem. Notes: Return a copy of the display name for a folderitem. Takes into consideration whether this item has a hidden extension or not.

75.16.71 LaunchServicesItemInfoMBS(WhichInfo as Integer) as LaunchServicesItemInfoMBS

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Return information about an item. Example:

```vba
Dim l As LaunchServicesItemInfoMBS
Dim f As FolderItem
f = SpecialFolder.Applications.Child("Mail.app")
l = f.LaunchServicesItemInfoMBS(-1)
If l.IsApplication Then // True for mail.app
    MsgBox "is Application"
End If
If l.IsContainer Then // True for mail.app
```
MsgBox "is Container"
end if

if l.IsPackage then  // True for mail.app
    MsgBox "is Package"
end if

Notes:

Returns as much or as little information as requested about the folderitem. Some information is available in a thread-safe manner, some is not.

Possible values you can combine for the WhichInfo parameter:

- kLSRequestExtension = & h01 Requests the item’s filename extension.
- kLSRequestTypeCreator = & h02 Requests the item’s file type and creator signature.
- kLSRequestBasicFlagsOnly = & h04 Requests all item-information flags that are not application-specific: that is, all except IsNativeApp, IsClassicApp, AppPrefersNative, AppPrefersClassic and AppIsScriptable.
- kLSRequestAppTypeFlags = & h08 Requests all application-specific item-information flags: that is, IsNativeApp, IsClassicApp, AppPrefersNative, AppPrefersClassic and AppIsScriptable.
- kLSRequestAllFlags = & h10 Requests all item-information flags.
- kLSRequestIconAndKind = & h20 Not used.
- kLSRequestExtensionFlagsOnly = & h40 Requests only the kLSItemInfoExtensionIsHidden item-information flag.
- kLSRequestAllInfo = -1

75.16.72 LaunchServicesKindStringMBS as string

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get the kind string for an item.
**Notes:** Returns the kind string as used in the Finder and elsewhere for the given folderitem.

75.16.73 LaunchServicesOpenMBS as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Launches the given item.
**Notes:** Returns the file or folder which was launched, e.g. the application for a file.
75.16.74 LaunchServicesRegisterMBS(update as boolean) as Integer

MBS MacOSX Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
If the specified folderitem refers to an application or other bundle claiming to handle documents or URLs, add the bundle’s document and URL claims to the Launch Services database.

**Notes:**
Requires Mac OS X 10.3.

Update: When false, LaunchServicesRegisterMBS does not register the item if it has already been registered and the current modification date of the item has not changed from when it was last registered. When true, the item’s registered info is updated, even if the modification has not changed.

Returns an error code:
An OSStatus value: noErr (0) - Success kLSNoRegistrationInfoErr (-10824) - The item does not contain info requiring registration kLSDataErr (-10817) - The item’s property list info is malformed. Returns -1 if the function is not available.

75.16.75 LogicalFileDataLengthMBS as int64

MBS Util Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the length of the logical disk space used for this file’s data fork.

**Example:**

dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

dim lines(-1) as string

lines.Append "Length: "+str(F.Length)
lines.Append "ResourceForkLength: "+str(F.ResourceForkLength)
lines.Append "LogicalFileDataLengthMBS: "+str(F.LogicalFileDataLengthMBS)
lines.Append "LogicalFileResLengthMBS: "+str(F.LogicalFileResLengthMBS)
lines.Append "LogicalFileTotalLengthMBS: "+str(F.LogicalFileTotalLengthMBS)
lines.Append "PhysicalFileDataLengthMBS: "+str(F.PhysicalFileDataLengthMBS)
lines.Append "PhysicalFileTotalLengthMBS: "+str(F.PhysicalFileTotalLengthMBS)

MsgBox Join(lines,EndOfString)

**Notes:**
This function works for files bigger than 2 GB which RB’s built in functions don’t. On Windows the physical size reported is equal to the logical size, because there is no function for the physical size.
75.16.76  LogicalFileResLengthMBS as int64

MBS Util Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the length of the logical disk space used for this file's resourcefork.

**Example:**

filesize.text=format(file.LogicalFileResLengthMBS,"0")

**Notes:**
This function works for files bigger than 2 GB which RB's built in functions don't.
On Windows the physical size reported is equal to the logical size, because there is no function for the physical size.

75.16.77  LogicalFileTotalLengthMBS as int64

MBS Util Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the length of the logical disk space used for this file's datafork.

**Example:**

filesize.text=format(file.LogicalFileTotalLengthMBS,"0")

**Notes:**
This function works for files bigger than 2 GB which RB's built in functions don't.
On Windows the physical size reported is equal to the logical size, because there is no function for the physical size.

75.16.78  LongPathMBS as string

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns the long path for the file.

**Example:**

dim f as folderitem = specialfolder.desktop.child("test.file")
msgbox f.longpathMBS

**Notes:**
75.16. CLASS FOLDERITEM

Should be the same as f.absolutepath
Works with Windows NT 4 or newer.

75.16.79 MacCopyObjectMBS(DestinationFolder as folderitem, DestinationName as string, byref Result as folderitem, Options as Integer) as Integer

Function: This routine will copy the source object into the destination directory.

Notes:
The source object can be a file or directory.

self: The source object to copy.
DestinationFolder: The destination directory for the copy.
DestinationName: The name for the new object in the destination directory. Pass "" to use the source object name.
result: Upon successful completion a ref to the newly created object. If source is a directory then target will be the corresponding object in the destination directory.
options: One or more FSFileOperation flags

Requires Mac OS X 10.4.

Use this constants:

kFSFileOperationDefaultOptions 0 Use the default options - no overwrite, fail if any source item cannot be read, cross volume moves OK.
kFSFileOperationOverwrite 1 Replace an item in the destDir that has the same name as an item being moved/copied there.
kFSFileOperationSkipSourcePermissionErrors 2 Skip items that cannot be read and continue copying/moving instead of failing the operation.
kFSFileOperationDoNotMoveAcrossVolumes 4 Do not perform a copy/delete to move an item across volume boundaries - fail the operation instead.
kFSFileOperationSkipPreflight 8 Skip the preflight for a directory move/copy. This will limit the status information that can be returned since the totals will not be calculated.

Returns a Mac OS error code. Error code -1 is from the plugin for invalid parameters or the function not being available.

75.16.80 MacIsHardLinkedMBS as boolean

Function: Whether the file is a hard link.

Notes:
If two directory entries point to the same hard disc space, you have a file which has two directory entries, but only one storage.

This function returns true for files in a Time Machine backup which did not change since the last backup and share their disc space with the other backups.

75.16.81 MacMoveObjectMBS(DestinationFolder as folderitem, DestinationName as string, byref Result as folderitem, Options as Integer) as Integer

**Function:** This routine will move the source object into the destination directory.

**Notes:**

The source object can be a file or directory. If a destName is provided then the object will be renamed as well as moved. By default a move across volumes will result in a copy and deletion of the original source. The kFSFileOperationDoNotMoveAcrossVolumes flag will cause cross volume moves to do nothing and return an error.

**self:** The source object to copy.
**DestinationFolder:** The destination directory for the copy.
**DestinationName:** The name for the new object in the destination directory. Pass ”” to use the source object name.
**result:** Upon successful completion a ref to the newly created object. If source is a directory then target will be the corresponding object in the destination directory.
**options:** One or more FSFileOperation flags

Requires Mac OS X 10.4.

Use this constants:

- **kFSFileOperationDefaultOptions** 0 Use the default options - no overwrite, fail if any source item cannot be read, cross volume moves OK.
- **kFSFileOperationOverwrite** 1 Replace an item in the destDir that has the same name as an item being moved/copied there.
- **kFSFileOperationSkipSourcePermissionErrors** 2 Skip items that cannot be read and continue copying/moving instead of failing the operation.
- **kFSFileOperationDoNotMoveAcrossVolumes** 4 Do not perform a copy/delete to move an item across volume boundaries - fail the operation instead.
- **kFSFileOperationSkipPreflight** 8 Skip the preflight for a directory move/copy. This will limit the status information that can be returned since the totals will not be calculated.

Returns a Mac OS error code. Error code -1 is from the plugin for invalid parameters or the function not being available.
75.16.82 MacMoveObjectToTrashMBS(byref Result as folderitem, Options as Integer) as Integer

**Function:**
This routine will move the source object into the trash.

**Notes:**
The source object can be a file or directory. If the volume the source object resides on does not support a trash folder then this call will return an error (this is the same circumstance that triggers the delete immediately behavior in the Finder).

**self:** The source object to move to the trash.

**result:** Upon successful completion a ref the object in the trash. If source is a directory then target will be the corresponding object in the destination directory.

**options:** One or more FSFileOperation flags

Requires Mac OS X 10.5.

Use this constants:

<table>
<thead>
<tr>
<th>Constant</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>kFSFileOperationDefaultOptions</td>
<td>0</td>
<td>Use the default options - no overwrite, fail if any source item cannot be read, cross volume moves OK.</td>
</tr>
<tr>
<td>kFSFileOperationOverwrite</td>
<td>1</td>
<td>Replace an item in the destDir that has the same name as an item being moved/copied there.</td>
</tr>
<tr>
<td>kFSFileOperationSkipSourcePermissionErrors</td>
<td>2</td>
<td>Skip items that cannot be read and continue copying/moving instead of failing the operation.</td>
</tr>
<tr>
<td>kFSFileOperationDoNotMoveAcrossVolumes</td>
<td>4</td>
<td>Do not perform a copy/delete to move an item across volume boundaries - fail the operation instead.</td>
</tr>
<tr>
<td>kFSFileOperationSkipPreflight</td>
<td>8</td>
<td>Skip the preflight for a directory move/copy. This will limit the status information that can be returned since the totals will not be calculated.</td>
</tr>
</tbody>
</table>

Returns a Mac OS error code. Error code -1 is from the plugin for invalid parameters or the function not being available.

75.16.83 MacNodeIDMBS as UInt32

**Function:**
The node ID for this file or folder.
75.16.84 **MacParentDirectoryIDMBS as UInt32**

75.16.85 **MacResolveNodeIDMBS(NodeID as UInt32) as folderitem**

*Example:*

```
// get a volume
dim f as FolderItem = volume(0)

// test with desktop
dim d as FolderItem = SpecialFolder.Desktop

// query node
dim NodeID as UInt32 = d.MacNodeIDMBS

// and search back
dim dest as FolderItem = f.MacResolveNodeIDMBS(nodeid)

MsgBox dest.AbsolutePath
```

*Notes:*

NodeIDs may not be supported on all volumes.
Returns nil on any error.

75.16.86 **NameExtensionMBS as string**

*Example:*

```
dim f as folderitem = SpecialFolder.desktop

MsgBox "Name: " + f.Name + EndOfLine + "Name extension: " + f.NameExtensionMBS + EndOfLine + "Name without extension: " + f.NameWithoutExtensionMBS

dim g as FolderItem = SpecialFolder.Desktop.Child("test.rbp")
```
MsgBox "Name: "+g.Name+EndOfLine+"Name extension: "+g.NameExtensionMBS+EndOfLine+"Name without extension: "+g.NameWithoutExtensionMBS

Notes:
If there is no extension, this string is empty.
The extension does not include the dot.

75.16.87 NameWithoutExtensionMBS as string

Example:

dim f as folderitem = SpecialFolder.desktop

MsgBox "Name: "+f.Name+EndOfLine+"Name extension: "+f.NameExtensionMBS+EndOfLine+"Name without extension: "+f.NameWithoutExtensionMBS

dim g as FolderItem = SpecialFolder.Desktop.Child("test.rbp")

MsgBox "Name: "+g.Name+EndOfLine+"Name extension: "+g.NameExtensionMBS+EndOfLine+"Name without extension: "+g.NameWithoutExtensionMBS

Notes: If there is no extension, the whole name is returned.

75.16.88 NewCGPDFDocumentMBS(MediaBox as CGRectMBS, title as string, author as string, creator as string) as CGPDFContextMBS

Example:

// create pdf
dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim r as new CGRectMBS(0,0,500,500)
dim c as CGContextMBS = file.NewCGPDFDocumentMBS(r, "My Title", "My Author", "My Creator")
if c<>Nil then

// create page
c.BeginPage r
// draw something
c.SetRGBFillColor(1.0, 0.0, 0.0, 1.0)
c.FillRect CGMakeRectMBS(100,100,100,100)

// close page
c.EndPage

// flush and show in PDF viewer
c = nil
file.Launch
end if

Notes:

Title, author and creator are all optional.
RB 4.5 should do this perfectly, but older RB versions may have problems.
(seems like the file must exist before calling this function)
Requires Mac OS X to work.

See also:

- 75.16.89 NewCGPDFDocumentMBS(MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean) as CGPDFContextMBS

- 75.16.90 NewCGPDFDocumentMBS(MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean, KeyLength as Integer) as CGPDFContextMBS

75.16.89 NewCGPDFDocumentMBS(MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean) as CGPDFContextMBS

MBS MacCG Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a PDF document.

**Example:**

// create pdf
dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim r as new CGRectMBS(0,0,500,500)
dim c as CGContextMBS = file.NewCGPDFDocumentMBS(r, "My Title", "My Author", "My Creator", "My Subject", "test.pdf.mac", "", "", true, true)

if c<>Nil then
// create page
c.BeginPage

// draw something
// SetRGBFillColor(1.0, 0.0, 0.0, 1.0)
c.SetRGBFillColor(1.0, 0.0, 0.0, 1.0)
c.FillRect CGMakeRectMBS(100,100,100,100)

// close page
// flush and show in PDF viewer
// nil

Notes:
Title, Author, Creator, Subject and Keywords parameters can be empty.

If OwnerPassword and UserPassword are filled in the PDF is encrypted and AllowsPrinting/AllowsCopy define what the user can do after he entered his password.

Requires Mac OS X to work.

See also:

- 75.16.88 NewCGPDFDocumentMBS(MediaBox as CGRectMBS, title as string, author as string, creator as string) as CGPDFContextMBS

- 75.16.90 NewCGPDFDocumentMBS(MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean, KeyLength as Integer) as CGPDFContextMBS

75.16.90 NewCGPDFDocumentMBS(MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean, KeyLength as Integer) as CGPDFContextMBS

**Function:**
Creates a PDF document.

**Example:**
/ create pdf
dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim r as new CGRectMBS(0,0,500,500)
dim c as CGContextMBS = file.NewCGPDFDocumentMBS(r, "My Title", "My Author", "My Creator", "My Subject", "test.pdf,mac", "owner", "user", false, false, 128)
if c<>Nil then

// create page
c.BeginPage r

// draw something
c.SetRGBFillColor(1.0, 0.0, 0.0, 1.0)
c.FillRect CGMakeRectMBS(100,100,100,100)

// close page
c.EndPage

// flush and show in PDF viewer
c = nil
file.Launch
end if

Notes:
Title, Author, Creator, Subject and Keywords parameters can be empty.

If OwnerPassword and UserPassword are filled in the PDF is encrypted and AllowsPrinting/AllowsCopy define what the user can do after he entered his password.

Keylength must be a value between 48 bit and 128 bit in 8 bit steps. 0 uses default value.

Requires Mac OS X to work.
See also:

- 75.16.88 NewCGPDFDocumentMBS(MediaBox as CGRectMBS, title as string, author as string, creator as string) as CGPDFContextMBS

- 75.16.89 NewCGPDFDocumentMBS(MediaBox as CGRectMBS, title as string, author as string, creator as string, subject as string, keywords as string, OwnerPassword as string, UserPassword as string, AllowsPrinting as boolean, AllowsCopy as boolean) as CGPDFContextMBS
**75.16. CLASS FOLDERITEM**

**75.16.91 NewCGPDFDocumentWithInfoMBS(MediaBox as CGRectMBS, info as object) as CGPDFContextMBS**

MBS MacCG Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a PDF document.

**Example:**

```vbnet
// create pdf
dim file as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim r as new CGRectMBS(0,0,500,500)

dim d as new CFMutableDictionaryMBS

d.Add NewCFStringMBS("kCGPDFContextTitle"), NewCFStringMBS("My Title")
d.Add NewCFStringMBS("kCGPDFContextAuthor"), NewCFStringMBS("My Author")
d.Add NewCFStringMBS("kCGPDFContextCreator"). NewCFStringMBS("My Creator")
d.Add NewCFStringMBS("kCGPDFContextSubject"). NewCFStringMBS("My Subject")
d.Add NewCFStringMBS("kCGPDFContextKeywords"). NewCFStringMBS("keyword,mac,pdf")

dim c as CGContextMBS = file.NewCGPDFDocumentWithInfoMBS(r, d)

if c<>Nil then
    // create page
    c.BeginPage r

    // draw something
    c.SetRGBFillColor(1.0, 0.0, 0.0, 1.0)
    c.FillRect CGMakeRectMBS(100,100,100,100)

    // close page
    c.EndPage

    // flush and show in PDF viewer
    c = nil
    file.Launch
end if
```

**Notes:**

The optional info parameter is a CFDictionaryMBS object and contains some information about the PDF file.

Keys for auxiliary info dictionary:

NewCFStringMBS("kCGPDFContextTitle")
The document’s title. Optional; if present, the value must be a CFString.
NewCFStringMBS("kCGPDFContextAuthor")
The name of the person who created this document. Optional; if present, the value must be a CFString.

NewCFStringMBS("kCGPDFContextCreator")
The name of the application that created the original data used to create this document. Optional; if present, the value must be a CFString.

NewCFStringMBS("kCGPDFContextOutputIntent")
The document’s output intent. Optional; if present, the value must be a CFDictionaryMBS. The dictionary is added to the PDF document in the /OutputIntents entry in the PDF file’s document catalog. The keys and values contained in the dictionary must match those specified in section 9.10.4 of the PDF 1.4 specification, ISO/DIS 15930-3 document published by ISO/TC 130, and Adobe Technical Note # 5413.

The following keys are supported:

"S" - The output intent subtype. This key is required; the value must be a CFString equal to "GTS_PDFX"; otherwise, the dictionary is ignored.

"OutputConditionIdentifier" - A string identifying the intended output device or production condition in a human- or machine-readable form. This key is required; the value must be a CFString. For best results, the string should be representable losslessly in ASCII encoding.

"OutputCondition" - A text string identifying the intended output device or production condition in a human-readable form. This key is optional; if present, the value must be a CFString.

"RegistryName" - A string identifying the registry in which the condition designated by "OutputConditionIdentifier" is defined. This key is optional; if present, the value must be a CFString. For best results, the string should be representable losslessly in ASCII encoding.

"Info" - A human-readable text string containing additional information or comments about the intended target device or production condition. This key is required if "OutputConditionIdentifier" does not specify a standard production condition; it is optional otherwise. If present, the value must be a CFString.

"DestOutputProfile" - An ICC profile stream defined the transformation from the PDF document’s source colors to output device colorants. This key is required if "OutputConditionIdentifier" does not specify a standard production condition; it is optional otherwise. If present, the value must be a ICC-based CGColorSpaceMBS.

NewCFStringMBS("kCGPDFContextOutputIntents")
The document’s output intents. Optional; if present, the value must be a CFArrayMBS containing one or
more CFDictionaryMBSs. The array is added to the PDF document in the /OutputIntents entry in the
PDF file’s document catalog. Each dictionary in the array must be of form specified above for the "kCG-
PDFContextOutputIntent" key, except that only the first dictionary in the array is required to contain the
"S" key with a value of "GTS_PDFX". If both the "kCGPDFContextOutputIntent" and "kCGPDFCon-
textOutputIntents" keys are specified, the former will be ignored.

More keys in CGPDFContext.h coming with Xcode.

75.16.92 OpenAsCGPDFDocumentMBS as CGPDFDocumentMBS

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Opens a PDF document.
Notes:
RB 4.5 should do this perfectly, but older RB versions may have problems with longer file names.
Requires Mac OS X to work.

75.16.93 OpenAsColorSyncProfileMBS as ColorSyncProfileMBS

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: Opens the file
as a ColorSync profile.

75.16.94 OpenAsGIFMBS as GIFMBS

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Opens a GIF file.
Notes:
Returns nil on any error.
QuickTime is not required!

75.16.95 OpenAsIconFamilyMBS as IconFamilyMBS

Notes:
Requires Mac OS 9 or newer.
This function is deprecated. Better you move to OpenAsIconsFamilyMBS.
CHAPTER 75. FILES

75.16.96 OpenAsIconsFamilyMBS as IconFamilyMBS

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Opens an icon file. **Notes:** Requires Mac OS 8.5 or newer.

75.16.97 OpenAsJPEGMBS as picture

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a picture from a JPEG file. **Notes:** A short version of OpenAsJPEG with fileposition=0 and allowdamage=false. See also:

- 75.16.98 OpenAsJPEGMBS(allowdamaged as Boolean) as picture
- 75.16.99 OpenAsJPEGMBS(allowdamaged as Boolean,fileposition as Integer) as picture

75.16.98 OpenAsJPEGMBS(allowdamaged as Boolean) as picture

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a picture from a JPEG file. **Notes:** A short version of OpenAsJPEG with fileposition=0. See also:

- 75.16.97 OpenAsJPEGMBS as picture
- 75.16.99 OpenAsJPEGMBS(allowdamaged as Boolean,fileposition as Integer) as picture

75.16.99 OpenAsJPEGMBS(allowdamaged as Boolean,fileposition as Integer) as picture

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a picture from a JPEG file. **Example:**

```vbnet
dim f as folderitem
f=SpecialFolder.Desktop.child("a great jpeg picture.jpg")
window1.backdrop=f.openasjpegMBS
```

**Notes:**

This method should read all JPEG files you can get, but I’ve only tested it for 32 bit color and 8 bit grayscale.
This method is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 120 KB big!

(REALbasic’s OpenAsPicture depends on QuickTime)

I wrote it mainly because Realbasic’s built in OpenAsJPEG code crashes badly if your picture is not full downloaded. For example if you have a webbrowser you can now show JPEGs while you download them. Normally you can see a good picture already with 50% of the data.

REALbasic’s OpenAsPicture in contrast crashes if the picture is not 100% downloaded or instead of a crash you get a white picture.

See the folder "jpeg load crashtest" in the examples.

The two parameters are both optional. The second is to give a file position to start reading. This way you can load several JPEGs from different file position from one file.

See also:

- 75.16.97 OpenAsJPEGMBS as picture
- 75.16.98 OpenAsJPEGMBS(allowdamaged as Boolean) as picture

**75.16.100  OpenAsLargeBinaryStreamMBS(write as Boolean) as LargeBinaryStreamMBS**

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a file as a LargeBinaryStreamMBS.

**Example:**

```
dim l as LargeBinaryStreamMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("testfile")
l = f.OpenAsLargeBinaryStreamMBS(true)
```

**Notes:** Returns nil on any error.

**75.16.101  OpenAsPNGMBS(gamma as single = 0.0, AllowDamaged as Boolean = false) as PNGPictureMBS**

**Example:**

...
dim f as folderitem
f = SpecialFolder.Desktop.child("a great picture.png")
window1.backdrop = f.OpenAsPNGMBS(0).pict

Notes:
This methods should read all PNG files you can get.

This method is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 130 KB big!
(REALbasic’s OpenAsPicture depends on QuickTime)

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma
A bad gamma value can give you a black image.

AllowDamaged: Whether to allow damaged PNG files to return a part of the image as picture.

75.16.102 OpenAsResStreamMBS(write as Boolean) as ResStreamMBS

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Opens a file’s resource-fork as a ResStreamMBS.
Notes: Returns nil on any error.
75.16. CLASS FOLDERITEM

75.16.103  OpenAsTiffMBS(HeaderOnly as boolean=false) as TiffPictureMBS

**Example:**

```basic
    dim f as FolderItem
    dim t as TiffPictureMBS

    f=SpecialFolder.Desktop.Child("008.tiff")
    t=f.OpenAsTiffMBS(true)

    if t<>Nil then
        messagebox str(t.width)+" x "+str(t.height)
    else
        MsgBox "Problem?"
    end if
```

**Notes:**

This method is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 270 KB big! (REALbasic’s OpenAsPicture depends on QuickTime). The plugin supports even more stuff like zlib compressed picture data or JPEGs embedded into TIFFs.

If the function returns nil, you can use a TiffPictureMBS subclass and use the methods there so you get error messages in the error event.

Setting HeaderOnly to true will ignore the actual picture data and load only the header data.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

75.16.104  OpenWithAppMBS(TheApplication as FolderItem, inFront as Boolean) as Boolean

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.  **Function:** Opens a file using the given application.

**Notes:**

Similar to Launch (see FolderItem.Launch), with the additional option to specify the application that should be used to open the FolderItem object. Passing nil in the app parameter is functionally identical to calling Launch.
Works with Graphicconverter, but not with Preview!?
Added Windows support in version 3.4.

75.16.105  ParentVolumeMBS as folderitem

MBS Util Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the folderitem for the volume the folderitem is pointing to.

75.16.106  PercentDownloadedMBS as Double

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the iCloud file properties. **Notes:**
An Number in the range 0-100 that tells what percentage of the file has been downloaded. Available in Mac OS X v10.7 and later.

75.16.107  PercentUploadedMBS as Double

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the iCloud file properties. **Notes:**
An Number in the range 0-100 that tells what percentage of the file has been uploaded. Available in Mac OS X v10.7 and later.

75.16.108  PermissionsMBS(OldWay as boolean) as PermissionsMBS

MBS MacOSX Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an object for the Permissions of a file. **Example:**
```dim f as FolderItem
dim p as PermissionsMBS

f=GetOpenFolderItem(“special/any”)
if f<>nil then
p=f.PermissionsMBS(true)
if p<>nil then // requires Mac OS X```
p.Access=& H6

if 0=p.SetPermissions(true) then
    MsgBox "Permissions set"
else
    MsgBox "Permissions could not be set"
end if

else
    MsgBox "We require Mac OS X"
end if

else
    ' nothing selected
end if

Notes:
You can use old API if you set Oldway=true. Than you set access value like in older version of the plugin.
If you set Oldway = false, you use the newer API which set unix permissions, but not the old ones.
The old way is not supported for 64bit.

75.16.109  PhysicalFileDataLengthMBS as int64

**Function:**
Returns the length of the physical disk space used for this file’s data fork.
**Example:**
```plaintext
filesize.text=format(file.PhysicalFileDataLengthMBS,"0")
```

Notes:
This function works for files bigger than 2 GB which RB’s built in functions don’t.
On Windows the physical size reported is equal to the logical size, because there is no function for the physical size.

75.16.110  PhysicalFileResLengthMBS as int64

**Function:**
Returns the length of the physical disk space used for this file’s resourcefork.
Example:
filesize.text=format(file.PhysicalFileResLengthMBS,"0")

Notes:
This function works for files bigger than 2 GB which RB’s built in functions don’t.
On Windows the physical size reported is equal to the logical size, because there is no function for the physical size.

75.16.111 PhysicalFileTotalLengthMBS as int64

MBS Util Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the length of the physical disk space used for this file.

**Example:**
filesize.text=format(file.PhysicalFileTotalLengthMBS,"0")

Notes:
This function works for files bigger than 2 GB which RB’s built in functions don’t.
On Windows the physical size reported is equal to the logical size, because there is no function for the physical size.

75.16.112 QuickLookMBS(MaxWidth as Integer = 500, MaxHeight as Integer = 500, IconMode as Boolean = false, ScaleFactor as Double = 1.0) as picture

**Example:**
dim f as FolderItem
f=SpecialFolder.Desktop.Child(”test.jpg”)

// shows the icon in 128x128 scaled by factor 4:
Backdrop=f.QuickLookMBS(128,128,true,4)

// shows the icon in default size:
Backdrop=f.QuickLookMBS(128,128,true,0)
// shows preview of image in 128x128 pixels.
Backdrop=f.QuickLookMBS(128,128,false,0)

// shows preview of image in 512x512 pixels.
Backdrop=f.QuickLookMBS(128,128,false,4)

// shows preview of image in 512x512 pixels.
Backdrop=f.QuickLookMBS(512,512,false,0)

// use Icon function in case no preview is available:
Backdrop=f.iconmbs(512)

Notes:

Returns nil if Quick Look does not support this file type. In that case you may use folderitem.Icon() with the given size.

MaxWidth and MacHeight specify the maximum desired size.
If ScaleFactor is bigger than zero, it is used. Else the default value is used.
If IconMode is true, QL will produce an icon (ie a thumbnail and all the icon decor, like shadows, curled corner, etc.).

If you look for a control to show quicklook preview like the finder, please check the QLPreviewPanelMBS window and the QLPreviewViewMBS control.

QuickLook does not provide images for items in special folders like temporary folders.

75.16.113 QuickLookMTMBS(MaxWidth as Integer = 500, MaxHeight as Integer = 500, IconMode as Boolean = false, ScaleFactor as Double = 1.0) as picture

Function: Creates a thumbnail for the designated file.
Notes:
Same as QuickLookMBS, but thread friendly.
Must be called inside a Xojo (Real Studio) thread so time yields to main thread and you can keep the GUI running.

QuickLook does not provide images for items in special folders like temporary folders.
75.16.114  RemoveCustomIconFromFileMBS as Integer

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Removes a custom icon from a file.

**Notes:**

Requires Mac OS 8.5 or newer.
Returns a Mac OS error code, with 0 for no error and -1 for parameter error (e.g. invalid folderitem).

75.16.115  SaveAs8BitAlphaPNGMBS(pic as picture, colors() as color, alphas() as Integer, gamma as single = 0.0) as boolean

MBS Images Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves a palette based RGB picture as a PNG file with alpha.

**Notes:**

Pic should have no mask.
Colors must be an array with 256 values defining the palette.
Alphas must be an array with 256 values specifying the alpha value for each palette entry. 255 is opaque and 0 is transparent.

Returns true on success and false on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

See also:

- 75.16.116 SaveAs8BitAlphaPNGMBS(pic as picture, colors() as color, alphas() as Integer, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean

75.16.116  SaveAs8BitAlphaPNGMBS(pic as picture, colors() as color, alphas() as Integer, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves a palette based RGB picture as a PNG file with alpha.

**Notes:**

Pic should have no mask.
Colors must be an array with 256 values defining the palette.
Alphas must be an array with 256 values specifying the alpha value for each palette entry. 255 is opaque and 0 is transparent.
Returns true on success and false on failure.

The gamma parameter defines what gamma correction is applied:
- positive value: use the value as the gamma correction
- zero: use default value (or value saved in file itself)
- negative value: do not correct gamma

If Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

```plaintext
const PNG_NO_FILTERS = 0
const PNG_FILTER_NONE = 8
const PNG_FILTER_SUB = 16
const PNG_FILTER_UP = 32
const PNG_FILTER_AVG = 64
const PNG_FILTER_PAETH = 128
const PNG_FILTER_ALL = 248
```

See also:

- 75.16.115 SaveAs8BitAlphaPNGMBS(pic as picture, colors() as color, alphas() as Integer, gamma as single = 0.0) as boolean

### 75.16.117 SaveAs8BitPNGMBS(pic as picture, colors() as color, gamma as single = 0.0) as boolean

MBS Images Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves a palette based RGB picture as a PNG file.

**Notes:**
- Pic should have no mask.
- Colors must be an array with 256 values defining the palette.

Returns true on success and false on failure.

The gamma parameter defines what gamma correction is applied:
- positive value: use the value as the gamma correction
- zero: use default value (or value saved in file itself)
- negative value: do not correct gamma

See also:

- 75.16.118 SaveAs8BitPNGMBS(pic as picture, colors() as color, gamma as single, Interlace as Boolean,
CHAPTER 75. FILES

75.16.118 SaveAs8BitPNGMBS(pic as picture, colors() as color, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean

Notes:

Pic should have no mask.
Colors must be an array with 256 values defining the palette.

Returns true on success and false on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

If Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

const PNG_NO_FILTERS = 0
const PNG_FILTER_NONE = 8
const PNG_FILTER_SUB = 16
const PNG_FILTER_UP = 32
const PNG_FILTER_AVG = 64
const PNG_FILTER_PAETH = 128
const PNG_FILTER_ALL = 248

See also:

• 75.16.117 SaveAs8BitPNGMBS(pic as picture, colors() as color, gamma as single = 0.0) as boolean

75.16.119 SaveAsGIFMBS(data as GIFMBS) as boolean

Notes:

Returns true on success and false on any error.
QuickTime is not required!
Please check for the lzw patent in your country before using this function as you may need to pay license fees.

### 75.16.120 SaveAsJPEGMBS(pic as picture, quality as Integer = 80) as boolean

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves a picture into a file using JPEG compression.  
**Example:**

```vbnet
dim pic as Picture = LogoMBS(500)
dim f as folderitem
f = SpecialFolder.Desktop.child("a great jpeg picture.jpg")
if f.SaveAsJPEGMBS(pic,75) then
    msgbox "Picture saved."
end if
```

**Notes:**

This method saves 32bit pictures to a file using JPEG Compression. Using the parameter you can specify the quality in range between 25 and 100%

This method is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!  
(REALbasic’s SaveAsJPEG depends on QuickTime)

See the "SaveJPEG without QuickTime" example.

As JPEG does not support alpha channel or mask, those are ignored.  
The second parameter is optional. There you can give a file position where to start writing. This way you can save several JPEGs to different file position inside one file.  
Use the JPEGExporterMBS class for more options.

### 75.16.121 SaveAsPNGMBS(pic as picture, gamma as single = 0.0) as boolean

**Notes:**

If pic has a mask, it is written to the file as alpha channel.

Returns true on success and false on failure.
The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma
See also:

- 75.16.122 SaveAsPNGMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean
- 75.16.123 SaveAsPNGMBS(pic as picture, mask as picture, gamma as single = 0.0) as boolean
- 75.16.124 SaveAsPNGMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean

75.16.122  SaveAsPNGMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean

**Notes:**
If pic has a mask, it is written to the file as alpha channel.

Returns true on success and false on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

If Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

```c
const PNG_NO_FILTERS     = 0
const PNG_FILTER_NONE    = 8
const PNG_FILTER_SUB     = 16
const PNG_FILTER_UP      = 32
const PNG_FILTER_AVG     = 64
const PNG_FILTER_PAETH   = 128
const PNG_FILTER_ALL     = 248
```

See also:

- 75.16.121 SaveAsPNGMBS(pic as picture, gamma as single = 0.0) as boolean
75.16. CLASS FOLDERITEM

- 75.16.123 SaveAsPNGMBS(pic as picture, mask as picture, gamma as single = 0.0) as boolean

- 75.16.124 SaveAsPNGMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean

75.16.123 SaveAsPNGMBS(pic as picture, mask as picture, gamma as single = 0.0) as boolean

**Example:**

```vba
// load
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim p as PNGPictureMBS = f.OpenAsPNGMBS

// save
dim g as FolderItem = SpecialFolder.Desktop.Child("output.png")
if g.SaveAsPNGMBS(p.Pict, p.Mask) then
    MsgBox "OK"
else
    MsgBox "Failed"
end if
```

**Notes:**

If mask is nil no alpha channel is written to the file.

Returns true on success and false on failure.

The gamma parameter defines what gamma correction is applied:
- positive value: use the value as the gamma correction
- zero: use default value (or value saved in file itself)
- negative value: do not correct gamma

See also:

- 75.16.121 SaveAsPNGMBS(pic as picture, gamma as single = 0.0) as boolean
- 75.16.122 SaveAsPNGMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean
- 75.16.124 SaveAsPNGMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean
CHAPTER 75. FILES

75.16.124 SaveAsPNGMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean

**Notes:**

If mask is nil no alpha channel is written to the file.

Returns true on success and false on failure.

The gamma parameter defines what gamma correction is applied:

- positive value: use the value as the gamma correction
- zero: use default value (or value saved in file itself)
- negative value: do not correct gamma

If Interlace is true the Adam7 interlacing is used.

**FilterType** specifies the filter:

```plaintext
const PNG_NO_FILTERS = 0
const PNG_FILTER_NONE = 8
const PNG_FILTER_SUB = 16
const PNG_FILTER_UP = 32
const PNG_FILTER_AVD = 64
const PNG_FILTER_PAETH = 128
const PNG_FILTER_ALL = 248
```

See also:

- 75.16.121 SaveAsPNGMBS(pic as picture, gamma as single = 0.0) as boolean 12779
- 75.16.122 SaveAsPNGMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as boolean 12780
- 75.16.123 SaveAsPNGMBS(pic as picture, mask as picture, gamma as single = 0.0) as boolean 12781

75.16.125 SetDesktopPictureMBS as Integer

MBS Picture Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Asks the Finder/Explorer to change the desktop picture.

**Notes:**

File must be a valid folderitem for an existing file.

Returns a Mac OS or Windows error code or -1 if the function is not available.
75.16. CLASS FOLDERITEM

75.16.126  SetFileFlagsMBS(flags as Integer) as Integer

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Set the file flags for the folderitem to the given value. Returns 0 if okay.

**Example:**

```vbs
dim f as FolderItem
dim err, fdFlags as Integer

// For example, clearing a file's hasCustomIcon flag works like this:
fldflags = f.GetFileFlagsMBS
if fdflags >= 0 then
    err = f.SetFileFlagsMBS(BitExclMBS(fdflags, 10))
    if err <> 0 then
        // ... oops, an error occurred
        // (for instance, the disk could be write protected)
    end
end
```

**Notes:**

Sets the fdFlags of a file. Returns an error code (or zero if no error occurred). Possible error conditions include "disk is write protected" and "file not found".

When changing flags of a file, use GetFileFlags to get the original flags, then clear or set the flags by using BitwiseAnd and BitwiseOr and call SetFileFlags to set the new flags.

75.16.127  SetFolderFlagsMBS(flags as Integer) as Integer

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Set the folder flags for the folderitem to the given value. Returns 0 if okay.

**Example:**

```vbs
Dim f As FolderItem = GetFolderItem("test") // some folder
If f.SetFolderFlagsMBS(BitwiseOr(f.GetFolderFlagsMBS, 4)) <> 0 Then
    MsgBox "Can’t set label to green."
End If
```

**Notes:**

Sets the frFlags of a folder. Returns an error code (or zero if no error occurred). Possible error conditions include "disk is write protected" and "folder not found".

When changing flags of a folder, use GetFolderFlags to get the original flags, then clear or set the flags by using BitwiseAnd and BitwiseOr and call SetFolderFlags to set the new flags.
with values 2, 4 and 8 in the flags, you control the label color in Finder. Example code above uses 4 which is green by default.

### 75.16.128 SetTagNamesMBS(tags() as string) as Integer

**Example:**

```vbnet
dim f as FolderItem = SpecialFolder.Desktop.Child(“test.xojo_binary_project”)  
dim Tags() as string = Array(“Hello”, ”World”)  
dim e as Integer = f.SetTagNamesMBS(tags)  
MsgBox ”SetTagNamesMBS: ”+str(e)
```

**Notes:**

- tags() is array with new tag names.
- Provides error code as return value and details about error in CFErrorMBS object.
- Requires Mac OS X 10.9 or newer.
- Please note that some tags may include chr(10) followed by a number to indicate which label color is used for compatibility to older OS X versions.

See also:

- 75.16.129 SetTagNamesMBS(tags() as string, byref e as CFErrorMBS) as Integer

### 75.16.129 SetTagNamesMBS(tags() as string, byref e as CFErrorMBS) as Integer

**Example:**

```vbnet
dim f as FolderItem = SpecialFolder.Desktop.Child(”test.xojo_binary_project”)  
dim Tags() as string = Array(”Hello”, ”World”)  
dim ce as CFErrorMBS  
dim e as Integer = f.SetTagNamesMBS(tags, ce)  
if ce <> nil then  
MsgBox ”SetTagNamesMBS: ”+str(e)+EndOfLine+ce.Description  
else  
MsgBox ”SetTagNamesMBS: ”+str(e)
```
**75.16. CLASS FOLDERITEM**

end if

**Notes:**

tags() is array with new tag names.
Provides error code as return value and details about error in CFErrorMBS object.
Requires Mac OS X 10.9 or newer.
Please note that some tags may include chr(10) followed by a number to indicate which label color is used for compatibility to older OS X versions.
See also:

- **75.16.128 SetTagNamesMBS(tags() as string) as Integer**

**75.16.130 ShortPathMBS as string**

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns the short path for the file.

**Example:**

```vba
dim f as folderitem = specialfolder.desktop.child("test.file")
msgbox f.ShortPathMBS
```

**Notes:**

In contrast to long path this is the short 8.3 path for Windows.
You need this for the WindowsMCI object.
Works with Windows NT 4 or newer.

**75.16.131 SpotLightFileInfoMBS(uti as string = "") as dictionary**

MBS MacOSX Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Runs the spotlight metadata importer for this file and returns the dictionary with the metadata found in the file.

**Example:**

```vba
dim f as FolderItem = SpecialFolder.Desktop.Child("test.numbers")
dim d as Dictionary = f.SpotLightFileInfoMBS
MsgBox "Title: " +d.Value("kMDItemTitle")
MsgBox "Text Content: " +d.Value("kMDItemTextContent")
```

**Notes:**
Returns nil on any error.
Works well with PDF, AppleWorks, Pages, Numbers, Word, Excel, Powerpoint and all other files, where you have an importer.
Does currently not find importers inside an application.

75.16.132  SpotLightLoadMDImporterMBS as boolean

MBS MacOSX Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**Loads another MDImporter.
**Example:**

```vbnet
dim f as FolderItem = GetFolderItem("/Developer/Applications/Xcode.app/Contents/Library/Spotlight/Source-Code.mdimporter", FolderItem.PathTypeShell)

if f.SpotLightLoadMDImporterMBS then
    MsgBox "Loaded SourceCode importer."
end if
```

**Notes:**
By default importers are loaded from /Library/Spotlight, textasciitilde /Library/Spotlight and /System/Library/Spotlight. You can load another importers using this method.
Returns true on success and false on failure.

75.16.133  SpotLightTextContentMBS(uti as string = ") as string

MBS MacOSX Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Runs the spotlight metadata importer for this file and returns the text content string for the file.
**Example:**

```vbnet
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
MsgBox f.SpotLightTextContentMBS
```

**Notes:**
Returns an empty string on any error.
Works well with PDF, AppleWorks, Pages, Numbers, Word, Excel, Powerpoint and all other files, where you have an importer.
Does currently not find importers inside an application.
75.16.134  TagNamesMBS as string()

MBS MacCF Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries tag names for a file or folder.

**Example:**

```vba
dim f as FolderItem = SpecialFolder.Desktop.Child("test.xojo_binary_project")
dim Tags() as string = f.TagNamesMBS
MsgBox "Tags: " +Join(tags, EndOfLine)
```

**Notes:**

Requires Mac OS X 10.9 or newer.
Optionally provides error information in CFErrorMBS object.
Please note that some tags may include chr(10) followed by a number to indicate which label color is used for compatibility to older OS X versions.

See also:

- 75.16.135 TagNamesMBS(byref e as CFErrorMBS) as string()

75.16.135  TagNamesMBS(byref e as CFErrorMBS) as string()

MBS MacCF Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries tag names for a file or folder.

**Example:**

```vba
dim f as FolderItem = SpecialFolder.Desktop.Child("test.xojo_binary_project")
dim ce as CFErrorMBS
dim Tags() as string = f.TagNamesMBS(ce)
if ce <>nil then
    MsgBox "Failed: "+ce.Description
else
    MsgBox "Tags: "+Join(tags, EndOfLine)
end if
```

**Notes:**

Requires Mac OS X 10.9 or newer.
Optionally provides error information in CFErrorMBS object.
Please note that some tags may include chr(10) followed by a number to indicate which label color is used for compatibility to older OS X versions.

See also:
75.16.136  **TrueFilesMBS as FolderItem()**

MBS Util Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns array of files in the given folder.
**Example:**
```
dim folder as FolderItem = SpecialFolder.Desktop
dim files() as FolderItem = folder.TrueFilesMBS
MsgBox str(UBound(files)+1)+" files"
```

**Notes:** Similar to trueitem() function, but returns all files with one call.

75.16.137  **TrueFoldersMBS as FolderItem()**

MBS Util Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns array of folders in the given folder.
**Example:**
```
dim folder as FolderItem = SpecialFolder.Desktop
dim folders() as FolderItem = folder.TrueFoldersMBS
MsgBox str(UBound(folders)+1)+" folders"
```

**Notes:** Similar to trueitem() function, but returns all folders with one call.

75.16.138  **TrueItemsMBS as FolderItem()**

MBS Util Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns array of items in the given folder.
**Example:**
```
dim folder as FolderItem = SpecialFolder.Desktop
dim Items() as FolderItem = folder.TrueItemsMBS
MsgBox str(UBound(Items)+1)+" items"
```

**Notes:** Similar to trueitem() function, but returns all items with one call.
**75.16. CLASS FOLDERITEM**

### 75.16.139 UnixpathMBS as string

MBS MacOSX Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the native path for the file.

**Example:**

```vbscript
dim sh as Shell
dim fi as FolderItem
dim s as String
dim t as TextConverter

sh = new Shell
fi = getfolderitem("test ") // or try some other file name

if fi = nil or fi.exists = false then
  beep
  return
end if

s="ls -al "" + fi.Unixpathmbs + ""

sh.Execute s
MsgBox sh.Result
```

**Notes:**

- test on the Desktop could be this:
  - On Mac OS X: /Users/cs/Desktop/test
  - On Mac OS 9: Mac OS 9:Desktop folder:test
  - On Windows: c:\windows\desktop\test

This function will return an empty string if the path can not be encoded in a Realbasic String. For my tests ICQ’s path which is includes the folder name ”ICQ 3.0 “ can not be converted to MacRoman for some reason.

On Mac OS X this function returns the posix path. So if you are looking for POSIXPathMBS or PosixPath this method is it.
This function should do the same as NativePath in Real Studio 2013r1.

### 75.16.140 UnMountVolumeMBS(force as boolean = false) as Integer

MBS MacClassic Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This routine unmounts the volume specified by the folderitem.

**Example:**
dim disk as FolderItem

dim c as Integer = VolumeCount - 1
for i as Integer = 0 to c
    dim v as FolderItem = volume(i)
    if v.Name = "monikajuchmes" then
        disk = v
        exit
    end if
next

if disk = nil then
    MsgBox "Please change the name in this code."
else
    dim e as Integer = disk.UnMountVolumeMBS

    if e=0 then
        MsgBox "Volume unmounted."
    else
        MsgBox "There was an error!"
    end if
end if

Notes:

If the volume cannot be unmounted the pid of the process which denied the unmount will be returned in the dissenterPID parameter.
This routine returns after the unmount is complete.

force: Specify true if you want the volume forcibly unmounted. Force unmounting a volume will very likely result in data loss since the volume will be ejected even if there are open files on it. This option should be reserved for situations such as the backing store for a volume is gone (so the data is lost regardless).

dissenterPID: Optionally, pid of the process which denied the unmount if the unmount is denied.

Returns a Mac OS error code. 0 means no error and -1 is a plugin error if the function can’t be called. -47 is returned if the disc is in use.

See also:

• 75.16.141 UnMountVolumeMBS(force as boolean, byref dissenterPID as Integer) as Integer
75.16.141  **UnmountVolumeMBS** (force as boolean, byref dissenterPID as Integer) as Integer

**Function:** This routine unmounts the volume specified by the folderitem.  
**Example:**

```vbs
    dim disk as FolderItem
    dim c as Integer = VolumeCount-1
    for i as Integer = 0 to c
        dim v as FolderItem = volume(i)
        if v.Name = "testvolume" then
            disk = v
            exit
        end if
    next

    if disk = nil then
        MsgBox "Please change the name in this code."
    else
        dim pid as Integer
        dim e as Integer = disk.UnMountVolumeMBS(false, pid)
        if e=0 then
            MsgBox "Volume unmounted."
        else
            if pid=0 then
                MsgBox "Failed to unmount with error: "+str(e)
            else
                dim name as string
                dim p as new ProcessMBS ' from Util plugin
                p.GetFirstProcess
                do
                    if p.ProcessID = pid then
                        name = p.Name
                    end if
                loop until not p.GetNextProcess
                if len(name)>0 then
                    MsgBox "Failed to unmount with error: "+str(e)
                else
                    MsgBox "Failed to unmount."+EndOfLine+"The application "+name++" is still using this volume."+EndOfLine+"Error: "+str(e)
                end if
```
CHAPTER 75. FILES

Notes:
If the volume cannot be unmounted the pid of the process which denied the unmount will be returned in
the dissenterPID parameter.
This routine returns after the unmount is complete.

force: Specify true if you want the volume forcibly unmounted. Force unmounting a volume will very likely
result in data loss since the volume will be ejected even if there are open files on it. This option should be
reserved for situations such as the backing store for a volume is gone (so the data is lost regardless).
dissenterPID: Optionally, pid of the process which denied the unmount if the unmount is denied.

Returns a Mac OS error code. 0 means no error and -1 is a plugin error if the function can’t be called. -47
is returned if the disc is in use.

PS: Seems like on my tests the pid is not set by Apple.
See also:

- 75.16.140 UnMountVolumeMBS(force as boolean = false) as Integer

75.16.142 VolGetFolderItemIDMBS(createFileIDs as Boolean = true) as Integer

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the
unique FileID or DirID of a FolderItem.
Notes:
Returns the unique FileID or DirID of a FolderItem. This ID is unique over all items on the same volume.
The value 2 always identifies the root directory, all negative values and positive ones above 15 are used for
user-created files and folders, while the values 3-15 are used internally by the File System (for the Desktop
Database, for example).
If the item does not exists, 0 (zero) is returned instead.

IDs for Folders can always be resolved back to a FolderItem using VolResolveID, while resolving FileIDs
only works when they’ve previously been created explicitly. To create a resolvable FileID, pass true to the
createFileIDs parameter. But be aware that if the FileID can not be created (because the disk is locked or
because the File System Format does not support it), the call will fail and a zero will be returned!

So, if you are just interested in reading the FileID, pass false to the second parameter. This will not fail
even there hasn’t been created a resolvable ID for that file yet.
75.16.143 VolSupportsCatSearchMBS as Boolean

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if this volume supports Catalog Search which only HFS(+) volumes does for now.

**Example:**

```vbs
dim v as folderitem
v=volume(0) 'boot volume
if v.VolSupportsCatSearchMBS then
  msgbox "CatSearchMBS class will be fast!"
end if
```

**Notes:** Returns true if the volume is valid and supports the CatSearchMBS functions. Returns false otherwise. From this you can tell whether a search will be fast or slow when using CatSearchOpen with the "allowRecursiveSearch" parameter set to true.

75.16.144 VolumeFreeSizeKBMBS as Int64

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the size on the free space on volume which the folderitem objects points to.

**Example:**

```vbs
msgBox "The volume with your system folder has "+str(specialfolder.system.volumeFreeSizeKBMBS)+" KBytes free."
```

**Deprecated:** This item is deprecated and should no longer be used. You can use VolumeFreeSizeMBS instead. **Notes:**

This can’t work with anything bigger than 2048 Gigabytes (until version 10.0).

Return value changed in version 10.0 from integer to SInt64.

Added Linux support in version 16.0.

75.16.145 VolumeFreeSizeMBS as Int64

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the size of the free space of the volume which the folderitem objects points to.

**Example:**
12794

CHAPTER 75. FILES

// 1. a short:
msgBox "The volume with your system folder has " + str(specialfolder.system.VolumeFreeSizeMBS) + " Bytes free."

// 2. a nicer:
dim d as Double
dim s as string

d = specialfolder.system.VolumeFreeSizeMBS

if d > 10000.0 then
    if d > 10000000.0 then
        if d > 10000000000.0 then
            s = format(d / 1024.0 / 1024.0 / 1024.0, "0") + " GigaBytes"
        else
            s = format(d / 1024.0 / 1024.0, "0") + " MegaBytes"
        end if
    else
        s = format(d / 1024.0, "0") + " KiloBytes"
    end if
else
    s = format(d, "0") + " Bytes"
end if

msgBox "On your drive with the system folder you have " + s + " free."

Notes:

This should be used to handle any volume size.
Return value changed in version 10.0 from double to SInt64.

Added Linux support in version 16.0.

75.16.146 VolumeInformationMBS as VolumeInformationMBS

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a VolumeInformationMBS object with detailed information about the volume where the folderitem’s file is located on.

**Notes:** May return nil on errors.
75.16. CLASS FOLDERITEM

75.16.147 VolumeSizeKBMBS as Int64

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the Size on the volume which the folderitem objects points to.

**Example:**

```
msgBox "The volume with your system folder is " + str(specialfolder.system.volumeSizeKBMBS) + " KB big."
```

**Deprecated:** This item is deprecated and should no longer be used. You can use VolumeSizeMBS instead.

**Notes:**
This can’t work with anything bigger than 2048 Gigabytes (until plugin version 10.0).
Return value changed in version 10.0 from integer to SInt64.

Added Linux support in version 16.0.

75.16.148 VolumeSizeMBS as Int64

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the size on the volume which the folderitem objects points to.

**Example:**

```
// 1. a short:
msgBox "The volume with your system folder is " + str(specialfolder.system.volumeSizeMBS) + " big."
// 2. a nicer:
dim d as Double
dim s as string
d=SpecialFolder.System.volumesizeMBS
if d>10000.0 then
    if d>1000000.0 then
        if d>1000000000.0 then
            s=format(d/1024.0/1024.0/1024.0,"0")+" GigaBytes"
        else
            s=format(d/1024.0/1024.0,"0")+" MegaBytes"
        end if
    else
        s=format(d/1024.0,"0")+" KiloBytes"
    end if
else
    s=format(d,"0")+" Bytes"
end if
msgBox "Your drive with the system folder is "+s+" big."
```
Notes:
This should be used to handle any volume size.
Return value changed in version 10.0 from double to SInt64.

Added Linux support in version 16.0.

75.16.149 VolumeSupportsHugeFilesMBS as Integer

Notes:
Some volumes only support 2 GB or 4 GB file size. Some can handle more than that up to 2 TB. Returns 0 if not supported, 1 if supported and -1 if unknown.

75.16.150 VolumeUUIDMBS as string

Notes: Requires Mac OS X 10.7 or newer.

75.16.151 WinThumbnailMBS(preferredSize as Integer = 512) as picture

Example:
```pascal
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Backdrop = f.WinThumbnailMBS
```
Notes:
preferredSize is the size you’d like to have. Resulting image can be smaller or bigger. Returns nil on any error. If user disabled thumbnails for explorer, the shell also provides none for us, just icons. Requires Windows Vista or newer.
75.16.152 Properties

75.16.153 AccessDateMBS(UTC as boolean = false) as date

MBS Util Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The access date of the file or folder.

**Example:**
```vbs
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
dim xd as date = f.AccessDateMBS
MsgBox xd.LongDate + " " + xd.LongTime
```

**Notes:**

Setting this value is not supported on Linux currently.

To query Spotlight’s Last Open day, please check the FAQ for sample code.
If UTC is true, you get/set date object where time is UTC.
(Read and Write computed property)

75.16.154 AttributeModificationDateMBS(UTC as boolean = false) as date

MBS Util Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The attribute modification date of the file or folder.

**Example:**
```vbs
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
dim xd as date = f.AttributeModificationDateMBS
MsgBox xd.LongDate + " " + xd.LongTime
```

**Notes:**

Attribute Modification dates are supported only on Mac OS X currently.
If UTC is true, you get/set date object where time is UTC.
(Read and Write computed property)

75.16.155 BackupDateMBS(UTC as boolean = false) as date

MBS Util Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The backup date of the file or folder.

**Example:**
```vbs
```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
dim xd as date = f.BackupDateMBS
MsgBox xd.LongDate+" "+xd.LongTime

Notes:
Backup dates are supported only on Mac OS X currently.
If UTC is true, you get/set date object where time is UTC.
(Read and Write computed property)

75.16.156 BackupItemExcludedMBS as boolean

Function: Whether or not an item is being excluded from backup.
Notes:
This is the easy method to just query whether a file is marked as being excluded from backup. You can
assign a boolean value to exclude (true) or include (false) the file.

Require Mac OS X 10.5. Returns false on all other operation systems.
(Read and Write computed property)

75.16.157 CommentMBS as string

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 
Function: The comment for that file.
Example:
dim f as folderitem // your file
f.CommentMBS="Hello world!"

Notes:
The comment is limited in Mac OS 9 to 200 chars. (The actual length depends on the file system.)
(Starting with plugin version 3.4 the Carbon code also reads and writes the Classic comment.)
On Realbasic 5.x the plugin version 3.4 converts the string to MacRoman encoding for the Classic comment.
This function sends an AppleEvent to the Finder. It may take some milliseconds.
(on Mac OS X)

Querying comment is not thread safe.
(Read and Write computed property)
75.16.158  CreationDateMBS(UTC as boolean = false) as date

MBS Util Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The creation date of the file or folder.

**Example:**

```vbs
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
dim xd as date = f.CreationDateMBS
MsgBox xd.LongDate+" "+xd.LongTime
```

**Notes:**
- Setting this value is not supported on Linux currently.
- If UTC is true, you get/set date object where time is UTC.
- (Read and Write computed property)

75.16.159  FinderLabelMBS as Integer

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the color code for the file.

**Example:**

```vbs
file.FinderLabelMBS=2
```

**Notes:**
- The file label is a number between 0 and 7 to give the file a color.
- Used in the Classic Finder for labels (and on Mac OS X for Finder replacement or Finder extending utilities)
- On reading the value you can get negative values like -43 if the file is not found.

To know labels and colors, please use NSWorkspaceMBS.fileLabelColors and NSWorkspaceMBS.fileLabels methods.
- (Read and Write computed property)

75.16.160  MacQuarantinePropertiesMBS as MacQuarantinePropertiesMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Gets or sets the quarantine options for a file.

**Example:**
```vbscript
dim f as FolderItem = SpecialFolder.Desktop.Child("test.app")

    // read value
    dim q as MacQuarantinePropertiesMBS = f.MacQuarantinePropertiesMBS
    MsgBox q.AgentName

    // set value
    q = new MacQuarantinePropertiesMBS
    q.AgentBundleIdentifier = "test.test"
    q.AgentName = "testing app"
    q.DataURL="http://www.monkeybreadsoftware.de/test.dmg"
    q.OriginURL="http://www.monkeybreadsoftware.de/"
    q.Type=q.kTypeWebDownload
    f.MacQuarantinePropertiesMBS = q

    // clear
    f.MacQuarantinePropertiesMBS = nil
```

**Notes:**
Requires Mac OS X 10.5.
(Read and Write computed property)

---

### 75.16.161 ModificationDateMBS(UTC as boolean = false) as date

MBS Util Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The modification date of the file or folder.

**Example:**
```vbscript
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
dim xd as date = f.ModificationDateMBS
MsgBox xd.LongDate+" "+xd.LongTime
```

**Notes:**
Setting this value is not supported on Linux currently.
If UTC is true, you get/set date object where time is UTC.
(Read and Write computed property)
75.17.  CLASS LARGEBINARYSTREAMMBS

75.17  class LargeBinaryStreamMBS

75.17.1  class LargeBinaryStreamMBS

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Allows you to access files with more than 2GB in size.

75.17.2  Methods

75.17.3  Allocate(count as int64, flags as Integer) as int64

MBS Util Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Allocates disk space for this file.

**Example:**
```pascal
dim l as LargeBinaryStreamMBS // your stream
dim d as int64

d=l.Allocate(1024*1024*1024,2) // 1 GB
```

**Notes:**
Only for Mac OS.
The flags can be like this:

<table>
<thead>
<tr>
<th>Flag Name</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AllocDefaultFlags</td>
<td>0</td>
<td>as much as possible, not contiguous</td>
</tr>
<tr>
<td>AllocAllOrNothingMask</td>
<td>1</td>
<td>allocate all of the space, or nothing</td>
</tr>
<tr>
<td>AllocContiguousMask</td>
<td>2</td>
<td>new space must be one contiguous piece</td>
</tr>
<tr>
<td>AllocNoRoundUpMask</td>
<td>4</td>
<td>don’t round up allocation to clump size</td>
</tr>
</tbody>
</table>

Note that the length property is not changed because the space is not used.

75.17.4  close

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.

**Notes:**
There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)
75.17.5 Create(file as FolderItem, MacType as string, MacCreator as string) as LargeBinaryStreamMBS

MBS Util Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a file as a LargeBinaryStreamMBS.

**Example:**

```vba
dim f as FolderItem // your file
dim l as LargeBinaryStreamMBS
l = LargeBinaryStreamMBS.Create(f, "TEXT", "ttxt")
```

**Notes:**

If there is already a file, it is deleted.
On Windows the parameters are ignored.
Returns nil on any error.

See also:

- 75.17.6 Create(path as string, MacType as string, MacCreator as string, WinShareMode as Integer = 0) as LargeBinaryStreamMBS

75.17.6 Create(path as string, MacType as string, MacCreator as string, WinShareMode as Integer = 0) as LargeBinaryStreamMBS

MBS Util Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a file as a LargeBinaryStreamMBS.

**Example:**

```vba
dim l as LargeBinaryStreamMBS
l = LargeBinaryStreamMBS.Create("C:\test.txt", "", ")
```

**Notes:**

If there is already a file, it is deleted.
On Windows the parameters are ignored.
Returns nil on any error.

See also:

- 75.17.5 Create(file as FolderItem, MacType as string, MacCreator as string) as LargeBinaryStreamMBS
75.17. CLASS LARGEBINARYSTREAMMBS

75.17.7 CreateResStream(file as folderitem, MacType as string, MacCreator as string) as ResStreamMBS

MBS Util Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new ResStreamMBS.

**Notes:**
- If there is already a file, it is deleted.
- If the file could not be created it is deleted.
- Returns nil on any error.

See also:
- 75.17.8 CreateResStream(path as string, MacType as string, MacCreator as string) as ResStreamMBS

75.17.8 CreateResStream(path as string, MacType as string, MacCreator as string) as ResStreamMBS

MBS Util Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new ResStreamMBS.

**Notes:**
- If there is already a file, it is deleted.
- If the file could not be created it is deleted.
- Returns nil on any error.

See also:
- 75.17.7 CreateResStream(file as folderitem, MacType as string, MacCreator as string) as ResStreamMBS

75.17.9 DeleteDataFork(file as folderitem)

MBS Util Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Deletes the data fork of a file.

**Notes:**
- Equal to open the file using a binarystream and setting the length property to 0.
- On Mac OS a file can exist without a datafork, with a resource fork or even without any fork.

75.17.10 DeleteResourceFork(file as folderitem)

**Notes:**
Equal to open the file using a ResStreamMBS and setting the length property to 0.
On Mac OS a file can exist without a datafork, with a resource fork or even without any fork.

75.17.11  Flush

MBS Util Plugin, Plugin Version: 5.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Makes sure every bit of the stream is written to disc.
**Notes:** Only for Mac OS X.

75.17.12  LockFileExclusive as boolean

MBS Util Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Locks the file so no other app can access it.
**Notes:**
Returns true on success.
It may be possible that there is still a way around the lock.

75.17.13  Open(file as folderitem, write as Boolean) as LargeBinaryStreamMBS

MBS Util Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Opens a file as a LargeBinaryStreamMBS.
**Example:**
```dim l as LargeBinaryStreamMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("testfile")
l = LargeBinaryStreamMBS.Open(f, true)
```

**Notes:** Returns nil on any error.
See also:
- 75.17.14 Open(path as string, write as Boolean, WinShareMode as Integer = 0) as LargeBinaryStreamMBS

75.17.14  Open(path as string, write as Boolean, WinShareMode as Integer = 0) as LargeBinaryStreamMBS

MBS Util Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Opens a file as a LargeBinaryStreamMBS.
75.17. CLASS LARGEBINARYSTREAMMBS

Example:

```csharp
// write to parallel port:
Dim b As LargeBinaryStreamMBS = LargeBinaryStreamMBS.Open("LPT1", true, 3)
b.Write "Hello World"
b.Close
```

Notes:

Returns nil on any error.
For special cases, you may need to allow Shared Read or Write and for that case, we have WinShareMode parameter.
For WinShareMode, you can pass 1 for shared reading, 2 for shared writing, 4 for shared deletion. Or combine those. Passing zero prevents sharing.
See also:

- 75.17.13 Open(file as folderitem, write as Boolean) as LargeBinaryStreamMBS

75.17.15 OpenAsResStream(file as folderitem, write as Boolean) as ResStreamMBS

MBS Util Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Opens a file’s resourcefork as a ResStreamMBS.
Notes: Returns nil on any error.
See also:

- 75.17.16 OpenAsResStream(path as string, write as Boolean) as ResStreamMBS

75.17.16 OpenAsResStream(path as string, write as Boolean) as ResStreamMBS

MBS Util Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Opens a file’s resourcefork as a ResStreamMBS.
Notes: Returns nil on any error.
See also:

- 75.17.15 OpenAsResStream(file as folderitem, write as Boolean) as ResStreamMBS

75.17.17 QueryDiskGeometry(byref Cylinders as Int64, byref MediaType as Integer, byref TracksPerCylinder as Integer, byref SectorsPerTrack as Integer, byref BytesPerSector as Integer) as boolean

MBS Util Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries disk size on Windows.
Notes:
This function is only useful on Windows and only if you opened a physical disc. Returns true on success.

### 75.17.18 Read(count as Integer) as string

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads bytes into a string. 
**Example:**
```
    dim b as LargeBinaryStreamMBS // your stream
    dim s as string

    s=b.read(5)
```

### 75.17.19 ReadBlock(count as Integer) as memoryblock

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads bytes into a memoryblock. 
**Example:**
```
    dim b as LargeBinaryStreamMBS // your stream
    dim s as memoryblock

    s=b.read(5)
```

### 75.17.20 Readbyte as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads an 8bit Byte from the stream. 
**Example:**
```
    dim b as LargeBinaryStreamMBS // your stream
    dim i as Integer

    i=B.readbyte
```
75.17.21 ReadLong as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a signed 32bit Integer from the stream.

**Example:**
```vba
dim b as LargeBinaryStreamMBS '// your stream
dim i as Integer

i=B.readlong
```

**Notes:** This function is affected by the LittleEndian Setting.

---

75.17.22 ReadShort as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a signed 16bit Integer from the stream.

**Example:**
```vba
dim b as LargeBinaryStreamMBS '// your stream
dim i as Integer

i=B.readshort
```

**Notes:** This function is affected by the LittleEndian Setting.

---

75.17.23 UnlockFileExclusive as boolean

MBS Util Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unlocks the file so other applications can possibly access it.

**Notes:** Returns true on success.

---

75.17.24 WinCreateStream(file as folderitem, StreamName as String, Win-ShareMode as Integer = 0) as LargeBinaryStreamMBS

**Example:**
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
dim l as LargeBinaryStreamMBS = LargeBinaryStreamMBS.WinCreateStream(f, "test")
if l = nil then
    MsgBox "Error"
else
    l.Write "Hello"
    l.close
end if

Notes: Returns nil in case of error.

75.17.25 WinDeleteStream(file as folderitem, StreamName as String) as boolean

Example:
    dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
    if LargeBinaryStreamMBS.WinDeleteStream(f) then
        MsgBox "OK"
    else
        MsgBox "Error"
    end if

Notes: Returns true on success.

75.17.26 WinOpenStream(file as folderitem, StreamName as String, write as Boolean, WinShareMode as Integer = 0) as LargeBinaryStreamMBS

Example:
    dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
    dim l as LargeBinaryStreamMBS = LargeBinaryStreamMBS.WinOpenStream(f, "test", false)
    if l = nil then
        MsgBox "Error"
    else
        MsgBox l.Read(l.Length)
    end if
75.17. Notes: Returns nil in case of error.

75.17.27 Write(data as string)

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes bytes from a string to file.

75.17.28 WriteBlock(data as memoryblock, count as Integer)

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes count bytes from a memoryblock to file.
**Example:**
```
dim b as LargeBinaryStreamMBS // your stream
dim m as memoryblock
b.writeblock m, m.size
```

75.17.29 WriteByte(data as Integer)

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes a byte to file.

75.17.30 WriteLong(data as Integer)

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes an 32bit integer to file.
**Notes:** This method is affected by the LittleEndian Setting.

75.17.31 WriteShort(data as Integer)

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes an 16bit integer to file.
**Notes:** This method is affected by the LittleEndian Setting.
75.17.32 Properties

75.17.33 CanWrite as boolean

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if you are allowed to write.

**Notes:**
Even if you open a file for write you may still not be allowed to write if the permissions of the file don’t allow you to write.
(Read only property)

75.17.34 EOF as boolean

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if you are at the end of the stream.

**Notes:**
You can set this property to truncate the file.
(Read only property)

75.17.35 Lasterror as Integer

MBS Util Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code.

**Notes:**
The values are platform dependent, but zero is no error everywhere.
(Read and Write property)

75.17.36 Length as Int64

MBS Util Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the current length of the file.

**Notes:**
You can truncate the stream by setting this property.
Can’t be set on Linux currently.
(Read and Write property)
75.17.37  LittleEndian as boolean

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** Specifies if Integers and Shorts shall be converted in their endianness when read or written.

**Notes:**
See Realbasics binarystream for more details.
For native platform you may set "littleendian=targetwin32".
(Read and Write property)

75.17.38  Position as Int64

**Notes:**
You can set the current file stream position using this property.
(Read and Write property)

75.17.39  Yield as Boolean

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether time should be given to other threads.

**Notes:**
If true on Mac OS X CPU time will be given to other threads while read or write operations are pending.
To have an effect you need to call read/write methods in a thread.
(Read and Write property)
75.18 class MacFileOperationMBS

75.18.1 class MacFileOperationMBS

MBS MacClassic Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This class allows you to perform asynchronous file operations on Mac OS X 10.4 like copy and move. **Notes:** Available in Mac OS X 10.4.

75.18.2 Methods

75.18.3 Cancel

MBS MacClassic Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Cancels the specified FSFileOperation. **Notes:** Lasterror is set.

75.18.4 CopyObject(Item as folderitem, DestinationFolder as folderitem, DestinationName as string, Options as Integer, statusChangeInterval as Double)

MBS MacClassic Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This routine will start an asynchronous copy of the object specified by Item to the directory specified by DestinationFolder. **Notes:**

If DestinationName is provided then the new object will be renamed to DestinationName. If DestinationName is empty then the name of the source object will be used.

You will receive StatusChanged events.

Options: One or more FSFileOperation flags
statusChangeInterval: The minimum time between callbacks within a single stage of an operation in seconds.

75.18.5 CopyObjectSync(SourceItem as folderitem, DestinationFolder as folderitem, DestinationName as string, byref Result as folderitem, Options as Integer) as Integer

MBS MacClassic Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This routine will copy the source object into the destination directory.
Notes:

The source object can be a file or directory.

self: The source object to copy.
DestinationFolder: The destination directory for the copy.
DestinationName: The name for the new object in the destination directory. Pass "" to use the source object name.
result: Upon successful completion a ref to the newly created object. If source is a directory then target will be the corresponding object in the destination directory.
options: One or more FSFileOperation flags

Requires Mac OS X 10.4.

Use this constants:

<table>
<thead>
<tr>
<th>Constant</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>kFSFileOperationDefaultOptions</td>
<td>0 Use the default options - no overwrite, fail if any source item cannot be read, cross volume moves OK.</td>
</tr>
<tr>
<td>kFSFileOperationOverwrite</td>
<td>1 Replace an item in the destDir that has the same name as an item being moved/copied there.</td>
</tr>
<tr>
<td>kFSFileOperationSkipSourcePermissionErrors</td>
<td>2 Skip items that cannot be read and continue copying/moving instead of failing the operation.</td>
</tr>
<tr>
<td>kFSFileOperationDoNotMoveAcrossVolumes</td>
<td>4 Do not perform a copy/delete to move an item across volume boundries - fail the operation instead.</td>
</tr>
<tr>
<td>kFSFileOperationSkipPreflight</td>
<td>8 Skip the preflight for a directory move/copy. This will limit the status information that can be returned since the totals will not be calculated.</td>
</tr>
</tbody>
</table>

Returns a Mac OS error code. Error code -1 is from the plugin for invalid parameters or the function not being available.

75.18.6 MoveObject(Item as folderitem, DestinationFolder as folderitem, DestinationName as string, Options as Integer, statusChangeInterval as Double)

Function: This routine will start an asynchronous move of the object specified by source to the directory specified by DestinationFolder.

Notes:

If DestinationName is provided then the new object will be renamed to destName. If DestinationName is empty then the name of the source object will be used.

By default a move across volumes will result in a copy and deletion of the original source. The kFSFileOperationDoNotMoveAcrossVolumes flag will cause cross volume moves to do nothing and return an error.
Options: One or more FSFileOperation flags
statusChangeInterval: The minimum time between callbacks within a single stage of an operation in seconds.

**75.18.7** MoveObjectSync(SourceItem as folderitem, DestinationFolder as folderitem, DestinationName as string, byref Result as folderitem, Options as Integer) as Integer

**Function:** This routine will move the source object into the destination directory.

**Notes:**

The source object can be a file or directory. If a destName is provided then the object will be renamed as well as moved. By default a move across volumes will result in a copy and deletion of the original source. The kFSFileOperationDoNotMoveAcrossVolumes flag will cause cross volume moves to do nothing and return an error.

- **self:** The source object to copy.
- **DestinationFolder:** The destination directory for the copy.
- **DestinationName:** The name for the new object in the destination directory. Pass "" to use the source object name.
- **result:** Upon successful completion a ref to the newly created object. If source is a directory then target will be the corresponding object in the destination directory.
- **options:** One or more FSFileOperation flags

Requires Mac OS X 10.4.

Use this constants:

- **kFSFileOperationDefaultOptions** 0 Use the default options - no overwrite, fail if any source item cannot be read, cross volume moves OK.
- **kFSFileOperationOverwrite** 1 Replace an item in the destDir that has the same name as an item being moved/copied there.
- **kFSFileOperationSkipSourcePermissionErrors** 2 Skip items that cannot be read and continue copying/moving instead of failing the operation.
- **kFSFileOperationDoNotMoveAcrossVolumes** 4 Do not perform a copy/delete to move an item across volume boundaries - fail the operation instead.
- **kFSFileOperationSkipPreflight** 8 Skip the preflight for a directory move/copy. This will limit the status information that can be returned since the totals will not be calculated.

Returns a Mac OS error code. Error code -1 is from the plugin for invalid parameters or the function not being available.
75.18. CLASS MACFILEOPERATIONMBS

75.18.8 MoveObjectToTrash(Item as folderitem, Options as Integer, statusChangeInterval as Double)

Function: This routine will start an asynchronous move of the object specified by source to the trash.
Notes:
If the volume the source object resides on does not support a trash folder then the operation will return an error (this is the same circumstance that triggers the delete immediately behavior in the Finder).
Options: One or more FSFileOperation flags
statusChangeInterval: The minimum time between callbacks within a single stage of an operation in seconds.

75.18.9 MoveObjectToTrashSync(SourceItem as folderitem, byref Result as folderitem, Options as Integer) as Integer

Function: This routine will move the source object into the trash.
Notes:
The source object can be a file or directory. If the volume the source object resides on does not support a trash folder then this call will return an error (this is the same circumstance that triggers the delete immediately behavior in the Finder).
self: The source object to move to the trash.
result: Upon successful completion a ref the object in the trash. If source is a directory then target will be the corresponding object in the destination directory.
options: One or more FSFileOperation flags
Requires Mac OS X 10.5.

Use this constants:

<table>
<thead>
<tr>
<th>Constant</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>kFSFileOperationDefaultOptions</td>
<td>0 Use the default options - no overwrite, fail if any source item cannot be read, cross volume moves OK.</td>
</tr>
<tr>
<td>kFSFileOperationOverwrite</td>
<td>1 Replace an item in the destDir that has the same name as an item being moved/copied there.</td>
</tr>
<tr>
<td>kFSFileOperationSkipSourcePermissionErrors</td>
<td>2 Skip items that cannot be read and continue copying/moving instead of failing the operation.</td>
</tr>
<tr>
<td>kFSFileOperationDoNotMoveAcrossVolumes</td>
<td>4 Do not perform a copy/delete to move an item across volume boundries - fail the operation instead.</td>
</tr>
<tr>
<td>kFSFileOperationSkipPreflight</td>
<td>8 Skip the preflight for a directory move/copy. This will limit the status information that can be returned since the totals will not be calculated.</td>
</tr>
</tbody>
</table>
Returns a Mac OS error code. Error code -1 is from the plugin for invalid parameters or the function not being available.

See WindowsFileCopyMBS for similar function for Windows.

### 75.18.10 Status as MacFileOperationStatusMBS

MBS MacClassic Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This routine returns the current status of an FileOperation.  
**Notes:**  
Lasterror is set.  
Returns nil on any error.

### 75.18.11 Properties

#### 75.18.12 Handle as Integer

**Notes:** (Read and Write property)

#### 75.18.13 LastError as Integer

**Notes:**  
Users report that you get error -50 (parameter error) if you reuse a file operation object for a new operation. So maybe create a new instance for each operation?  
(Read and Write property)

### 75.18.14 Events

#### 75.18.15 StatusChanged(status as MacFileOperationStatusMBS)

MBS MacClassic Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event is called whenever the status changed.
75.18.16 Constants

75.18.17 kFSFileOperationDefaultOptions=0

Notes: Use the default options - no overwrite, fail if any source item cannot be read, cross volume moves OK.

75.18.18 kFSFileOperationDoNotMoveAcrossVolumes=4

Notes: Do not perform a copy/delete to move an item across volume boundaries - fail the operation instead.

75.18.19 kFSFileOperationOverwrite=1

Notes: Replace an item in the destDir that has the same name as an item being moved/copied there.

75.18.20 kFSFileOperationSkipPreflight=8

Notes: Skip the preflight for a directory move/copy. This will limit the status information that can be returned since the totals will not be calculated.

75.18.21 kFSFileOperationSkipSourcePermissionErrors=2

Notes: Skip items that cannot be read and continue copying/moving instead of failing the operation.

75.18.22 kFSOperationStageComplete=3

MBS MacClassic Plugin, Plugin Version: 9.2. Function: One of the constants for the stage.
Notes: Operation is done.
75.18.23  kFSOperationStagePreflighting=1

MBS MacClassic Plugin, Plugin Version: 9.2. **Function:** One of the constants for the stage. **Notes:** Operation is calculating sizes and number of items involved in the operation.

75.18.24  kFSOperationStageRunning=2

MBS MacClassic Plugin, Plugin Version: 9.2. **Function:** One of the constants for the stage. **Notes:** Operation is in progress.

75.18.25  kFSOperationStageUndefined=0

MBS MacClassic Plugin, Plugin Version: 9.2. **Function:** One of the constants for the stage. **Notes:** Operation has not started yet.
75.19.  CLASS MACFILEOPERATIONSTATUSMBS

75.19  class MacFileOperationStatusMBS

75.19.1  class MacFileOperationStatusMBS

**Function:** This class represents the status of a file operation.  
**Notes:** Available in Mac OS X 10.4.

75.19.2  Properties

75.19.3  BytesComplete as Int64

**Function:** The number of bytes that have been moved/copied by this operation at the time the status call was made.  
**Notes:**  
During the preflight stage this value represents the currently known number of bytes that will be copied/moved.  
Value is -1 if undefined.  
(Read only property)

75.19.4  BytesRemaining as Int64

**Function:** The number of bytes that remain to be moved/copied by this operation at the time the status call was made.  
**Notes:**  
Value is -1 if undefined.  
This value is not available for a directory operation if kFSFileOperationSkipPreflight was specified.  
(Read only property)

75.19.5  CurrentItem as FolderItem

**Function:** A folderitem to item operation is currently processing.  
**Notes:**  
If the operation is complete then currentItem refers to the target item (the new item corresponding to the source item in the destination directory).  
(Read and Write property)
75.19.6  Error as Integer

Function: The error code.
Notes:
Either noErr (0) or an error value which caused the operation to fail.
(Read and Write property)

75.19.7  Handle as Integer

Function: Queries internal object reference.
Example:
```java
dim status as MacFileOperationStatusMBS // your status object
dim d as CFDictionaryMBS = CFDictionaryMBS.dictionaryWithHandle(status.Handle)
dim dd as Dictionary = d.Dictionary
```
Notes:
Value is a CFDictionaryRef reference.
(Read and Write property)

75.19.8  ObjectsComplete as Int64

Function: The number of objects that have been moved/copied by this operation at the time the status call was made.
Notes:
Value is -1 if undefined.
During the preflight stage this value represents the currently known number of objects that will be copied/moved.
(Read only property)

75.19.9  ObjectsRemaining as Int64

Function: The number of objects that remain to be moved/copied by this operation at the time the status call was made.
Notes:
Value is -1 if undefined.

This value is not available for a directory operation if kFSFileOperationSkipPreflight was specified.
(Read only property)

75.19.10 Stage as Integer

Function: Current stage of the operation.
Notes:
See this constants for possible values:
kFSOperationStageComplete
kFSOperationStagePreflighting
kFSOperationStageRunning
kFSOperationStageUndefined
(Read and Write property)

75.19.11 Throughput as Int64

Function: The current throughput for the operation in bytes per second.
Notes:
Value is -1 if undefined.
(Read only property)

75.19.12 TotalBytes as Int64

Function: The total number of bytes that will be moved/copied by this operation.
Notes:
This value is not available for a directory operation if kFSFileOperationSkipPreflight was specified.
Value is -1 if undefined.
(Read only property)
75.19.13  **TotalObjects as Int64**

**Function:** The total number of objects that will be moved/copied by this operation.

**Notes:**
- Value is -1 if undefined.
- This value is not available for a directory operation if kFSFileOperationSkipPreflight was specified.

(Read only property)

75.19.14  **TotalUserVisibleObjects as Int64**

**Function:** The total number of user visible objects that will be moved/copied by this operation.

**Notes:**
- Value is -1 if undefined.
- This value is not available for a directory operation if kFSFileOperationSkipPreflight was specified. A packaged application is one user visible object even though it is made up of multiple files and directories.

(Read only property)

75.19.15  **UserVisibleObjectsComplete as Int64**

**Function:** The number of user visible objects that have been moved/copied by this operation at the time the status call was made.

**Notes:**
- Value is -1 if undefined.
- During the preflight stage this value represents the currently known number of objects that will be copied/moved. A packaged application is one user visible object even though it is made up of multiple files and directories.

(Read only property)

75.19.16  **UserVisibleObjectsRemaining as Int64**

**Function:** The number of user visible objects that remain to be moved/copied by this operation at the time the status call was made.

**Notes:**
Value is -1 if undefined.

This value is not available for a directory operation if kFSFileOperationSkipPreflight was specified. A pack-
aged application is one user visible object even though it is made up of multiple files and directories.
(Read only property)
75.20  class MacQuarantinePropertiesMBS

75.20.1  class MacQuarantinePropertiesMBS

Function: The class for quarantine options.
Example:

```vbscript
dim f as FolderItem = SpecialFolder.Desktop.Child(“test.app”)

// read value
dim q as MacQuarantinePropertiesMBS = f.MacQuarantinePropertiesMBS
MsgBox q.AgentName

// set value
q = new MacQuarantinePropertiesMBS
  q.AgentBundleIdentifier = ”test.test”
  q.AgentName = ”testing app”
  q.DataURL=”http://www.monkeybreadsoftware.de/test.dmg”
  q.OriginURL=”http://www.monkeybreadsoftware.de/”
  q.Type=q.kTypeWebDownload

f.MacQuarantinePropertiesMBS = q

// clear
f.MacQuarantinePropertiesMBS = nil
```

Notes: Requires Mac OS X 10.5.

75.20.2  Properties

75.20.3  AgentBundleIdentifier as String

Function: The bundle identifier of the quarantining agent, if available.
Example:

```vbscript
dim f as FolderItem = SpecialFolder.Desktop.Child(“test.app”)
dim q as MacQuarantinePropertiesMBS = f.MacQuarantinePropertiesMBS
MsgBox q.AgentBundleIdentifier
```
75.20. **CLASS MACQUARANTINEPROPERTIESMBS**

Notes:
When setting quarantine properties, this value is set automatically if the it is undefined. The automatic value is the main bundle identifier of the current process.
(Read and Write property)

### 75.20.4 AgentName as String

**Function:** The name of the quarantining agent (application or program).
**Example:**

```vbs
    Dim f As FolderItem = SpecialFolder.Desktop.Child("test.app")
    Dim q As MacQuarantinePropertiesMBS = f.MacQuarantinePropertiesMBS
    MsgBox q.AgentName
```

Notes:
When setting quarantine properties, this value is set automatically to the current process name if this value is not defined.
(Read and Write property)

### 75.20.5 DataURL as String

**Function:** The URL from which the data for the quarantined item data was actually streamed or downloaded, if available.
**Notes:**

```vbs
    Dim f As FolderItem = SpecialFolder.Desktop.Child("test.app")
    Dim q As MacQuarantinePropertiesMBS = f.MacQuarantinePropertiesMBS
    MsgBox q.DataURL
```

(Read and Write property)

### 75.20.6 Dic as Variant

**Function:** The original dictionary from Mac OS X.
**Notes:**
This is a CFDictionaryMBS object which we provide for debugging.
You can pass it to CFShowMBS to print on console.
75.20.7 **OriginURL as String**

**Function:** The URL of the resource originally hosting the quarantined item, from the user’s point of view.

**Example:**
```vba
    dim f as FolderItem = SpecialFolder.Desktop.Child("test.app")
    dim q as MacQuarantinePropertiesMBS = f.MacQuarantinePropertiesMBS
    MsgBox q.OriginURL
```

**Notes:**
For web downloads, this property is the URL of the web page on which the user initiated the download. For attachments, this property is the URL of the resource to which the quarantined item was attached (e.g. the email message, calendar event, etc.). The origin URL may be a file URL for local resources, or a custom URL to which the quarantining application will respond when asked to open it. The quarantining application should respond by displaying the resource to the user. Note: The origin URL should not be set to the data URL, or the quarantining application may start downloading the file again if the user choses to view the origin URL while resolving a quarantine warning.

(Read and Write property)

75.20.8 **TimeStamp as Date**

**Function:** The date and time the item was quarantined.

**Example:**
```vba
    dim f as FolderItem = SpecialFolder.Desktop.Child("test.app")
    dim q as MacQuarantinePropertiesMBS = f.MacQuarantinePropertiesMBS
    MsgBox q.TimeStamp.LongDate+ " "+q.TimeStamp.LongTime
```

**Notes:**
When setting quarantine properties, this property is set automatically to the current date and time if this value is not set.

(Read and Write property)
75.20. **CLASS MACQUARANTINEPROPERTIESMBS**

### 75.20.9 Type as String

**Function:** A symbolic string identifying the why the item is quarantined, if available.  
**Example:**
```vbscript
dim f as FolderItem = SpecialFolder.Desktop.Child("test.app")
dim q as MacQuarantinePropertiesMBS = f.MacQuarantinePropertiesMBS
MsgBox q.Type
```

**Notes:** (Read and Write property)

### 75.20.10 Constants

#### 75.20.11 kTypeCalendarEventAttachment = ”LSQuarantineTypeCalendarEventAttachment”

MBS MacFrameworks Plugin, Plugin Version: 9.8. **Function:** One of the type constants.

#### 75.20.12 kTypeEmailAttachment = ”LSQuarantineTypeEmailAttachment”

MBS MacFrameworks Plugin, Plugin Version: 9.8. **Function:** One of the type constants.

#### 75.20.13 kTypeInstantMessageAttachment = ”LSQuarantineTypeInstantMessageAttachment”

MBS MacFrameworks Plugin, Plugin Version: 9.8. **Function:** One of the type constants.

#### 75.20.14 kTypeOtherAttachment = ”LSQuarantineTypeOtherAttachment”

MBS MacFrameworks Plugin, Plugin Version: 9.8. **Function:** One of the type constants.

#### 75.20.15 kTypeOtherDownload = ”LSQuarantineTypeOtherDownload”

MBS MacFrameworks Plugin, Plugin Version: 9.8. **Function:** One of the type constants.
75.20.16 kTypeWebDownload = "LSQuarantineTypeWebDownload"

MBS MacFrameworks Plugin, Plugin Version: 9.8. **Function:** One of the type constants.
75.21. CLASS PERMISSIONSMBS

75.21   class PermissionsMBS

75.21.1   class PermissionsMBS

MBS MacOSX Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Gives access to the current Permissions of a file.

**Example:**

dim p as PermissionsMBS
p=file.PermissionsMBS(false)

75.21.2   Methods

75.21.3   SetPermissions(OldWay as boolean) as Integer

MBS MacOSX Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the Permissions.

**Notes:**

Returns -1 if function is not available.

Any other value is a Mac OS error code including 0 for success. You can use the MacErrorString function to get some details on the error code.

You may not have enough Permissions to set Permissions!

You can use old API if you set Oldway=true. Than you read access value like in older version of the plugin.

If you set Oldway = false, you use the newer API which read unix permissions, but not the old ones.

The old way is not supported for 64bit.

75.21.4   Properties

75.21.5   Access as Integer

MBS MacOSX Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The access mode for this file.

**Notes:**

Only set if you use older API.

Some constants:

(Read and Write property)
AccessOwner & h80000000 User is owner of directory
AccessBlankAccess & h10000000 Directory has blank access privileges
AccessUserWrite & h04000000 User has write privileges
AccessUserRead & h02000000 User has read privileges
AccessUserSearch & h01000000 User has search privileges
AccessEveryoneWrite & h00040000 Everyone has write privileges
AccessEveryoneRead & h00020000 Everyone has read privileges
AccessEveryoneSearch & h00010000 Everyone has search privileges
AccessGroupWrite & h00000400 Group has write privileges
AccessGroupRead & h00000200 Group has read privileges
AccessGroupSearch & h00000100 Group has search privileges
AccessOwnerWrite & h00000004 Owner has write privileges
AccessOwnerRead & h00000002 Owner has read privileges
AccessOwnerSearch & h00000001 Owner has search privileges

75.21.6 GroupID as Integer

MBS MacOSX Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** The Group ID for this file.
**Notes:**
costants:

knoGroup 0

(Read and Write property)

75.21.7 Mode as Integer

MBS MacOSX Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** The unix file mode.
**Notes:**
Only set if you use newer API.
(Read and Write property)

75.21.8 UserID as Integer

MBS MacOSX Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** The User ID for this file.
**Example:**
75.21.  CLASS PERMISSIONSMBS

dim f as FolderItem

f=SpecialFolder.Desktop

MsgBox str(f.PermissionsMBS(true).UserID) ' 501

Notes:

e.g. User 501 is normally the first user.

constants:

    knoUser     0,
    kadministratorUser  1

(Read and Write property)
class ResourceForkMBS

class ResourceForkMBS

Function: This class is for reading/writing resource forks on Mac.

Example:

dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.Create(f)

r.AddResource "Hello World", "TEXT", 128, "just a test"

Notes:

It is a replacement for ResourceFork class in Real Studio which has been removed for Cocoa and Console targets in Real Studio version 2012r2.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

Methods

AddResource(Data as Memoryblock, ResourceType as String, ID as Integer, Name as String)

Function: Adds a resource of the Type specified, using the Name and ID specified and fills it with the Data specified.

Notes: We added this method to avoid extra conversion from memoryblock to string when adding data.
See also:

• 75.22.4 AddResource(Data as String, ResourceType as String, ID as Integer, Name as String)

AddResource(Data as String, ResourceType as String, ID as Integer, Name as String)

Function: Adds a resource of the Type specified, using the Name and ID specified and fills it with the Data specified.

Example:

dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.Create(f)
75.22. CLASS RESOURCEFORKMBS

r.AddResource "Hello World", "TEXT", 128, "just a test"

See also:

- 75.22.3 AddResource(Data as Memoryblock, ResourceType as String, ID as Integer, Name as String)

75.22.5 Close

MBS MacClassic Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Closes the open resource fork. **Notes:** The resource fork will be closed automatically when the instance is destroyed.

75.22.6 Constructor

75.22.7 Create(file as folderitem, UseDataFork as boolean = false) as ResourceForkMBS

MBS MacClassic Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new ResourceFork. **Example:**

```pascal
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rs"c)
dim r as ResourceForkMBS = ResourceForkMBS.Create(f)
r.AddResource "Hello World", "TEXT", 128, "just a test"
```

**Notes:**

If the file has a resource fork, it is deleted first.
If the file does not exist, it is created.
Returns nil on any error.
If UseDataFork is true, the resources are read/write from data fork.
75.22.8 GetIndResource(ResourceType as String, index as Integer) As String

Function: Returns the specified resource as a string.
Example:

```vbs
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
Dim r As ResourceForkMBS = ResourceForkMBS.create(f)
r.AddResource "Hello World", "TEXT", 128, "just a test"
Dim s As String = r.GetIndResource("TEXT", 0)
MsgBox s
```

Notes: Index is zero based.

75.22.9 GetNamedResource(ResourceType as String, Name as String) As String

Function: Returns the specified resource as a string.
Example:

```vbs
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
Dim r As ResourceForkMBS = ResourceForkMBS.create(f)
r.AddResource "Hello World", "TEXT", 128, "just a test"
Dim s As String = r.GetNamedResource("TEXT", "just a test")
MsgBox s
```

75.22.10 GetResource(ResourceType as String, ID as Integer) As String

Function: Returns the specified resource as a string.
Example:

```vbs
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
Dim r As ResourceForkMBS = ResourceForkMBS.create(f)
r.AddResource "Hello World", "TEXT", 128, "just a test"
Dim s As String = r.GetResource("TEXT", 128)
```
75.22.11 GetResourceMemory(ResourceType as String, ID as Integer) As Memoryblock

**Function:** Returns the specified resource as a Memoryblock.
**Example:**
```vbnet
dim f as FolderItem = SpecialFolder.Desktop.Child(“test.rsrc”)
dim r as ResourceForkMBS = ResourceForkMBS.create(f)
r.AddResource “Hello World”, ”TEXT”, 128, ”just a test”
dim s as MemoryBlock = r.GetResourceMemory(”TEXT”, 128)
MsgBox s
```

75.22.12 Open(file as folderitem, Write as boolean, UseDataFork as boolean = false) as ResourceForkMBS

**Function:** Opens the resource fork of the FolderItem.
**Example:**
```vbnet
dim f as FolderItem = SpecialFolder.Desktop.Child(“test.rsrc”)
dim r as ResourceForkMBS = ResourceForkMBS.Open(f, false)
MsgBox str(r.TypeCount)+” types in file”
```

**Notes:**
If the FolderItem has no resource fork, OpenResourceFork returns Nil.
Access to the resourcefork is supported only on Macintosh.
If UseDataFork is true, the resources are read/write from data fork.

75.22.13 RemoveResource(ResourceType as String, ID as Integer)

**Function:** Removes the specified resource from the resource fork.
**Example:**
75.22.14 ResourceCount(ResourceType as String) as Integer

Function: Returns the number of resources of the specified type.
Example:

dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.Create(f)

r.AddResource "Hello World", "TEXT", 128, "just a test"
MsgBox str(r.TypeCount) + " resources"
r.RemoveResource "TEXT", 128
MsgBox str(r.TypeCount) + " resources"

75.22.15 ResourceID(ResourceType as String, index as Integer) as Integer

Function: Returns the resource ID as an Integer based on the Type and Index passed.
Example:

dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.Create(f)

r.AddResource "Hello World", "TEXT", 128, "just a test"

MsgBox str(r.ResourceID("TEXT", 0)) // shows 128

Notes: This list is zero-based.
75.22. CLASS RESOURCEFORKMBS

75.22.16 ResourceName(ResourceType as String, index as Integer) As String

Function: Returns the resource name as a string based on the Type and the zero-based index to that type.
Example:

```vbnet
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.Create(f)
r.AddResource "Hello World", "TEXT", 128, "just a test"
MsgBox r.ResourceName("TEXT", 0)
```

75.22.17 ResourceSizeOnDisk(ResourceType as String, ID as Integer) as Integer

Function: Queries the size on disk for a given resource.
Example:

```vbnet
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.Create(f)
r.AddResource "Hello World", "TEXT", 128, "just a test"
MsgBox str(r.ResourceSizeOnDisk("TEXT", 128)) + " bytes"
```

75.22.18 ResourceType(index as Integer) As String

Function: Returns the resource type as a string based on the Index passed.
Example:

```vbnet
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.Create(f)
r.AddResource "Hello World", "TEXT", 128, "just a test"
MsgBox r_RESOURCETYPE(0)
```

Notes: This list is zero-based.
**75.22.19  UniqueID(RESOURCE as String) as Integer**

MBS MacClassic Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Finds an unique ID for a given resource type.
**Example:**

```vbnet
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.create(f)
MsgBox str(R.UniqueID("TEXT"))
```

**75.22.20  Properties**

**75.22.21  Handle as Integer**

MBS MacClassic Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal handle to the resource fork.
**Notes:** (Read only property)

**75.22.22  LastError as Integer**

MBS MacClassic Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The last error code.
**Example:**

```vbnet
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.Open(f, false) // open read only
r.AddResource "Hello World", "TEXT", 128, "just a test"
MsgBox str(R.LastError) // shows -61, write permission error
```

**Notes:**

All methods set this property.
(Read and Write property)

**75.22.23  Modified as Boolean**

MBS MacClassic Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the resource fork has been modified by you.
75.22. CLASS RESOURCEFORKMBS

Notes: (Read only property)

75.22.24 TypeCount as Integer

Example:

dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.create(f)

r.AddResource "Hello World", "TEXT", 128, "just a test"

MsgBox str(r.TypeCount) // shows 1

Notes: (Read only property)

75.22.25 Writable as Boolean

MBS MacClassic Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Whether the resourcefork was opened writable.

Notes: (Read only property)

75.22.26 ResourceAttributes(ResourceType as String, ID as Integer) as Integer

Example:

dim f as FolderItem = SpecialFolder.Desktop.Child("test.rsrc")
dim r as ResourceForkMBS = ResourceForkMBS.create(f)

r.AddResource "Hello World", "TEXT", 128, "just a test"

MsgBox str(r.ResourceAttributes("TEXT", 128))
// shows 2 which means it has been changed and need to be written to disk soon

Notes: (Read and Write computed property)
75.22.27 ResourceLocked(ResourceType as String, ID as Integer) as boolean

MBS MacClassic Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Used to get and set the locked attribute of the resource. **Notes:** (Read and Write computed property)

75.22.28 ResourcePreload(ResourceType as String, ID as Integer) as boolean

MBS MacClassic Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Used to get and set the Preload attribute of the resource. **Notes:** (Read and Write computed property)

75.22.29 ResourceProtected(ResourceType as String, ID as Integer) as boolean

MBS MacClassic Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Used to get and set the Protected attribute of the resource. **Notes:** (Read and Write computed property)

75.22.30 ResourcePurgeable(ResourceType as String, ID as Integer) as boolean

MBS MacClassic Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Used to get and set the Purgeable attribute of the resource. **Notes:** (Read and Write computed property)

75.22.31 ResourceSysHeap(ResourceType as String, ID as Integer) as boolean

MBS MacClassic Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Used to get and set the SysHeap attribute of the resource. **Notes:** (Read and Write computed property)
75.23. CLASS ResStreamMBS

75.23  class ResStreamMBS

75.23.1  class ResStreamMBS

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Allows you to access a resourcefork in its binary representation.

**Notes:**

Useful to copy the resourcefork faster from one file to another.

Subclass of the LargeBinaryStreamMBS class.
75.24 class StdinMBS

75.24.1 class StdinMBS

MBS Util Plugin, Plugin Version: 6.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A class to read from stdin.

**Example:**

```plaintext
dim s as new StdoutMBS
dim r as new StdinMBS
dim v,n as Integer

s.Write "Integer: ",
n=r.ReadInteger(v)
print "integer read: " + str(v)
print "integer count: " + str(n)

dim d as Double

s.Write "Double: ",
n=r.ReadDouble(d)
print "double read: " + str(d)
print "double count: " + str(n)

dim t as string

s.Write "String: ",
n=r.ReadString(t)
print "string read: " + t
print "string count: " + str(n)

do
s.Write "Character (type a and return to end): ",
n=r.GetCharacter
print "got character: " + str(n)
loop until n=65 or n=97
```
75.24.2 Methods

75.24.3 AttachConsole(ProcessID as Integer = -1) as Integer

MBS Util Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Attaches the calling process to the console of the specified process.

**Notes:**
ProcessId: The identifier of the process whose console is to be used. This parameter can be one of the following values.

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>pid</td>
<td>Use the console of the specified process.</td>
</tr>
<tr>
<td>-1</td>
<td>Use the console of the parent of the current process.</td>
</tr>
</tbody>
</table>

Returns Windows error code or zero for success.

A process can be attached to at most one console. If the calling process is already attached to a console, the error code returned is ERROR_ACCESS_DENIED (5). If the specified process does not have a console, the error code returned is ERROR_INVALID_HANDLE (6). If the specified process does not exist, the error code returned is ERROR_GEN_FAILURE (31).

75.24.4 Flush

75.24.5 FreeConsole as Integer

MBS Util Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Detaches the calling process from its console.

**Notes:**
Returns Windows error code or zero for success.

A process can be attached to at most one console. If the calling process is not already attached to a console, the error code returned is ERROR_INVALID_PARAMETER (87). A process can use the FreeConsole function to detach itself from its console. If other processes share the console, the console is not destroyed, but the process that called FreeConsole cannot refer to it. A console is closed when the last process attached to it terminates or calls FreeConsole.
it can call the AllocConsole function to create a new console or AttachConsole to attach to another console.

### 75.24.6 GetCharacter as Integer

MBS Util Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Reads in one character and returns the ASCII code.
**Notes:** Returns one if a value was read and 0 if not.

### 75.24.7 Read(count as Integer) as string

MBS Util Plugin, Plugin Version: 6.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Reads data from stdin.
**Notes:** Data is returned in binary encoding.

### 75.24.8 ReadDouble(byref value as Double) as Integer

MBS Util Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Reads a double from the console.
**Notes:** Returns one if a value was read and 0 if not.

### 75.24.9 ReadInteger(byref value as Integer) as Integer

MBS Util Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Reads an integer from the console.
**Notes:** Returns one if a value was read and 0 if not.

### 75.24.10 ReadString(byref value as string) as Integer

MBS Util Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Reads a string from the console.
**Notes:**
This string is limited to 4095 characters.
Returns one if a value was read and 0 if not.
75.24.11 Properties

75.24.12 Echo as Boolean

Example:

// try this on Mac/Linux GUI/Console app with the app launched from Terminal, 
// or in console app on Windows launched from command prompt

dim s as new StdoutMBS
s.Write "Hello World"+chr(10)

dim t as string

dim n as integer = StdinMBS.ReadString(t)
s.Write chr(10)
s.Write "Read with echo: "+t+chr(10)

StdinMBS.Echo = false

n = StdinMBS.ReadString(t)
s.Write chr(10)
s.Write "Read without echo: "+t+chr(10)

StdinMBS.Echo = true

Notes:

You can disable echo for password input.
By default it is enabled.
(Read and Write property)

75.24.13 IsReady as boolean

MBS Util Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. Function: Checks whether there is data waiting in input buffer to be read.

Notes:

If IsReady returns false and you would call ReadString method, the app could be blocked until user types something on console.
(Read only property)
75.25  class StdoutMBS

75.25.1  class StdoutMBS

MBS Util Plugin, Plugin Version: 6.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A class to write to stdout.

**Example:**

```vbs
dim s as new StdoutMBS
dim r as new StdinMBS
dim v,n as Integer

s.Write "Integer: 

n=r.ReadInteger(v)

print "integer read: "+str(v)
print "integer count: "+str(n)

dim d as Double

s.Write "Double: 

n=r.ReadDouble(d)

print "double read: "+str(d)
print "double count: "+str(n)

dim t as string

s.Write "String: 

n=r.ReadString(t)

print "string read: "+t
print "string count: "+str(n)

do
s.Write "Character (type a and return to end): 

n=r.GetCharacter

print "got character: "+str(n)
loop until n=65 or n=97
```
75.25.2 Methods

75.25.3 AttachConsole(ProcessID as Integer = -1) as Integer

MBS Util Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Attaches the calling process to the console of the specified process.

**Notes:**
ProcessId: The identifier of the process whose console is to be used. This parameter can be one of the following values.

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>pid</td>
<td>Use the console of the specified process.</td>
</tr>
<tr>
<td>-1</td>
<td>Use the console of the parent of the current process.</td>
</tr>
</tbody>
</table>

Returns Windows error code or zero for success.

A process can be attached to at most one console. If the calling process is already attached to a console, the error code returned is ERROR_ACCESS_DENIED (5). If the specified process does not have a console, the error code returned is ERROR_INVALID_HANDLE (6). If the specified process does not exist, the error code returned is ERROR_GEN_FAILURE (31).

75.25.4 Flush

MBS Util Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Makes sure that all data written using Write is already on the console.

75.25.5 FreeConsole as Integer

MBS Util Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Detaches the calling process from its console.

**Notes:**
Returns Windows error code or zero for success.

A process can be attached to at most one console. If the calling process is not already attached to a console, the error code returned is ERROR_INVALID_PARAMETER (87). A process can use the FreeConsole function to detach itself from its console. If other processes share the console, the console is not destroyed, but the process that called FreeConsole cannot refer to it. A console is closed when the last process attached to it terminates or calls FreeConsole. After a process calls FreeConsole,
it can call the AllocConsole function to create a new console or AttachConsole to attach to another console.

75.25.6 Write(data as string)

MBS Util Plugin, Plugin Version: 6.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Writes data to stdout.
**Notes:** You have to make sure your data is in good text encoding.
75.26  class VolumeInformationMBS

75.26.1  class VolumeInformationMBS

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Detailed information on Mac volumes.
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

75.26.2  Methods

75.26.3  Constructor

75.26.4  Properties

75.26.5  Blocksize as Integer

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The size of an allocation block, in bytes.
**Notes:**
This field is only appropriate for volume formats (such as HFS and HFS Plus) that allocate space in fixed-size pieces; other volume formats may not have a similar concept, and may set this field to zero.
(Read only property)

75.26.6  DataForkClumpSize as Integer

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Default data fork clump size.
**Notes:**
When a fork is automatically grown as it is written, the File Manager attempts to allocate space that is a multiple of the clump size. This field is zero for volume formats that don’t support the notion of a clump size.
(Read only property)
75.26.7 DefaultVolume as boolean

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Is this the default volume?
**Notes:**
Not supported if LimitedInformation is false.
(This property requires Mac OS 9 or newer)
(Read only property)

75.26.8 DriveNumber as Integer

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The drive number for the drive (drive queue element) associated with the volume.
**Notes:** (Read only property)

75.26.9 DriverRefNum as Integer

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The driver reference number for the drive (drive queue element) associated with the volume.
**Notes:** (Read only property)

75.26.10 FileCount as Integer

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The total number of files on the volume, or 0 if unknown.
**Notes:** (Read only property)

75.26.11 FilesOpen as boolean

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Are there files open on this volume?
**Notes:**
For the boot volume false!
Not supported if LimitedInformation is false.
(This property requires Mac OS 9 or newer)
(Read only property)
75.26. CLASS VOLUMEINFORMATIONMBS

75.26.12 FileSystemID as Integer

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Identifies the filesystem implementation that is handling the volume; this is zero for HFS and HFS Plus volumes.

**Notes:** (Read only property)

75.26.13 FolderCount as Integer

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The total number of folders on the volume, or 0 if unknown. Note that no root directory counts.

**Notes:** (Read only property)

75.26.14 freeBlocks as Int64

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of unused allocation blocks on the volume.

**Notes:**
This field is only appropriate for volume formats (such as HFS and HFS Plus) that allocate space in fixed-size pieces; other volume formats may not have a similar concept, and may set this field to zero.
(Read only property)

75.26.15 Freebytes as Int64

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of bytes of free space on the volume.

**Notes:**
On Mac OS versions before 9.0, this returns never a number bigger than 2 GBytes, even if the disc is bigger.
(Read only property)

75.26.16 HardwareLocked as boolean

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** is the volume locked by hardware?

**Notes:**
Not supported if LimitedInformation is false.
(This property requires Mac OS 9 or newer)
(Read only property)
75.26.17 LimitedInformation as boolean

**Function:** True if some properties are not filled.
**Notes:**
Not all values are supported on Mac OS 8.6
(Read only property)

75.26.18 Name as String

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 
**Function:** The name of the volume.
**Notes:**
The name is returned in 16bit Unicode.
RB 4.5 should know how to handle that.
(Read only property)

75.26.19 NextAllocation as Integer

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 
**Function:** A hint for where to start searching for free space during an allocation.
**Notes:**
This field is only appropriate for volume formats (such as HFS and HFS Plus) that allocate space in fixed-size pieces; other volume formats may not have a similar concept, and may set this field to zero.
(Read only property)

75.26.20 NextCatalogID as Integer

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 
**Function:** The next unused catalog node ID.
**Notes:**
Some volume formats (such as HFS and HFS Plus) use a monotonically increasing number for the catalog node ID (i.e. File ID or Directory ID) of newly created files and directories. For those volume formats, the nextCatalogID is the next file/directory ID that will be assigned. For other volume formats, this field will be zero.
(Read only property)
75.26.21 ResourceForkClumpSize as Integer

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Default resource fork clump size.

**Notes:**
When a fork is automatically grown as it is written, the File Manager attempts to allocate space that is a multiple of the clump size. This field is zero for volume formats that don’t support the notion of a clump size.

(Read only property)

75.26.22 Root as Folderitem

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A folderitem to the root of this volume.

**Notes:**
Not supported if LimitedInformation is false.
(This property requires Mac OS 9 or newer)
(Read only property)

75.26.23 RootFSRef as memoryblock

MBS MacClassic Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The root folderitem as FSRef packed into a memoryblock.

**Notes:** (Read only property)

75.26.24 Signature as Integer

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This field is used to distinguish between volume formats supported by a single filesystem implementation.

**Notes:**
Example values:

<table>
<thead>
<tr>
<th>Format</th>
<th>Signature</th>
</tr>
</thead>
<tbody>
<tr>
<td>HFS</td>
<td>h4244 &quot;BD&quot;</td>
</tr>
<tr>
<td>HFS+</td>
<td>h482B &quot;H+&quot;</td>
</tr>
</tbody>
</table>

(Read only property)
75.26.25 SoftwareLocked as boolean

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** is the volume locked by software?
**Notes:**
Not supported if LimitedInformation is false.
(This property requires Mac OS 9 or newer)
(Read only property)

75.26.26 Totalblocks as Int64

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The total number of allocation blocks on the volume.
**Notes:**
This field is only appropriate for volume formats (such as HFS and HFS Plus) that allocate space in fixed-size pieces; other volume formats may not have a similar concept, and may set this field to zero.
(Read only property)

75.26.27 Totalbytes as Int64

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The size of the volume in bytes.
**Notes:**
On Mac OS versions before 9.0, this returns never a number bigger than 2 GBytes, even if the disc is bigger.
(Read only property)
5.27.1 class WindowsDiskChangeMBS

MBS Win Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class to get events for media or devices being added/inserted or removed.

5.27.2 Methods

5.27.3 Constructor

MBS Win Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The constructor.

5.27.4 Properties

5.27.5 Valid as Boolean

MBS Win Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Whether the constructor registered the events successfully. **Notes:** (Read and Write property)

5.27.6 Events

5.27.7 DriveAdded(Path as string)

MBS Win Plugin, Plugin Version: 13.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The event to notify you about drive being added.

5.27.8 DriveRemoved(Path as string)

MBS Win Plugin, Plugin Version: 13.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The event to notify you about drive being removed.
CHAPTER 75. FILES

75.27.9 MediaInserted(Path as string)

MBS Win Plugin, Plugin Version: 13.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The event to notify you about media being added.

75.27.10 MediaRemoved(Path as string)

MBS Win Plugin, Plugin Version: 13.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The event to notify you about media being removed. **Notes:** You may get the event multiple times.
75.28. **CLASS WINDOWSDRIVENOTIFICATIONMBS**

75.28. **class WindowsDriveNotificationMBS**

75.28.1 **class WindowsDriveNotificationMBS**

MBS Win Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class to detect devices being mounted/unmounted in Windows.

75.28.2 **Events**

75.28.3 **DeviceArrival(Path as string)**

MBS Win Plugin, Plugin Version: 15.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** A device arrived. **Notes:** Path may be path to USB device or path to mount point. For USB sticks you get both.

75.28.4 **DeviceRemoved(Path as string)**

MBS Win Plugin, Plugin Version: 15.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** A device was removed. **Notes:** Path may be path to USB device or path to mount point. For USB sticks you get both.
module WindowsJunctionMBS

module WindowsJunctionMBS

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: This module implements various functions for links. Notes: Symbol links (link files), Hard links (several directory entries for one file on disc) and junctions (show content of one folder inside another folder). Some operations need Administrator permissions. Check lasterror in case of trouble. Error 1314 for example is permissions problem. See also WindowsShortCutMBS and WindowsInternetShortCutMBS classes. For Mac see also CFBookmarkMBS and MacAliasMBS classes.

Methods

CreateHardLink(NewFile as folderitem, TargetFile as folderitem) as boolean

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: Establishes a hard link between an existing file and a new file. Example:

dim file as FolderItem = SpecialFolder.Desktop.Child("test.exe")
dim nfile as FolderItem = SpecialFolder.Desktop.Child("hello.exe")

if WindowsJunctionMBS.CreateHardLink(nfile, file) then
    MsgBox "OK"
end if

Notes:
This function is only supported on the NTFS file system, and only for files, not directories.

NewFile: The name of the new file. Function fails if NewFile exists already. This parameter cannot specify the name of a directory.
TargetFile: The name of the existing file. This parameter cannot specify the name of a directory.
Returns true on success. Lasterror is set.

The maximum number of hard links that can be created with this function is 1023 per file. If more than 1023 links are created for a file, an error results.

Any directory entry for a file that is created with CreateFile or CreateHardLink is a hard link to an associated file. An additional hard link that is created with the CreateHardLink function allows you to have multiple directory entries for a file, that is, multiple hard links to the same file, which can be different names in the same directory, or the same or different names in different directories. However, all hard links to a file must be on the same volume.

Because hard links are only directory entries for a file, many changes to that file are instantly visible to applications that access it through the hard links that reference it. However, the directory entry size and attribute information is updated only for the link through which the change was made.

The security descriptor belongs to the file to which a hard link points. The link itself is only a directory entry, and does not have a security descriptor. Therefore, when you change the security descriptor of a hard link, you change the security descriptor of the underlying file, and all hard links that point to the file allow the newly specified access. You cannot give a file different security descriptors on a per-hard-link basis.

Use DeleteFile to delete hard links (folderitem.delete in Real Studio). You can delete them in any order regardless of the order in which they are created.

Flags, attributes, access, and sharing that are specified in CreateFile operate on a per-file basis. That is, if you open a file that does not allow sharing, another application cannot share the file by creating a new hard link to the file.

When you create a hard link on the NTFS file system, the file attribute information in the directory entry is refreshed only when the file is opened, or when GetFileInformationByHandle is called with the handle of a specific file.

Symbolic link behaviorIf the path points to a symbolic link, the function creates a hard link to the target.

Lasterror is set. Returns true on success.

---

75.29.4 CreateJunction(JunctionDir as folderitem, TargetDir as folderitem) as boolean

**Example:**

```vbs
dim file as FolderItem = SpecialFolder.Desktop.Child("test")
dim nfile as FolderItem = SpecialFolder.System

if WindowsJunctionMBS.CreateJunction(file, nfile) then
    MsgBox "OK"
else
    MsgBox "Error"
end if
```

---
**Notes:** Lasterror is set. Returns true on success.

### 75.29.5 CreateSymbolicLink(NewFile as folderitem, TargetFile as folderitem) as boolean

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a symbolic link.

**Example:**

```vbnet
dim file as FolderItem = SpecialFolder.Desktop.Child("test.lnk")
dim nfile as FolderItem = SpecialFolder.Desktop.Child("test.txt")

if WindowsJunctionMBS.CreateSymbolicLink(file, nfile) then
    MsgBox "Ok"
end if
```

**Notes:**

- **NewFile:** The symbolic link to be created.
- **TargetFile:** The name of the target for the symbolic link to be created. If TargetFile has a device name associated with it, the link is treated as an absolute link; otherwise, the link is treated as a relative link.
- **TargetIsDirectory:** Indicates whether the link target, TargetFile, is a directory. (Pass true for a directory).

Returns true on success. False on failure. Lasterror is set.

If the function fails, the return value is zero. To get extended error information, call GetLastError.

Symbolic links can either be absolute or relative links. Absolute links are links that specify each portion of the path name; relative links are determined relative to where relativelink specifiers are in a specified path. Relative links are specified using the following conventions:

- **Dot (. and ..) conventions** for example, ".\..\" resolves the path relative to the parent directory.
- **Names with no slashes (\) for example, "tmp" resolves the path relative to the current directory.**
- **Root relative** for example, "\Windows\System32" resolves to "current drive:\Windows\System32".
- **Current working directory relative** for example, if the current working directory is C:\Windows\System32, "C:File.txt" resolves to "C:\Windows\System32\File.txt".

If you specify a current working directory relative link, it is created as an absolute link, due to the way the
current working directory is processed based on the user and the thread.

This function can fail due to missing permissions.

- 75.29.6 CreateSymbolicLink(NewFile as folderitem, TargetFile as string, TargetIsDirectory as Boolean) as boolean

75.29.6 CreateSymbolicLink(NewFile as folderitem, TargetFile as string, TargetIsDirectory as Boolean) as boolean

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Creates a symbolic link.

**Notes:**

NewFile: The symbolic link to be created.
TargetFile: The name of the target for the symbolic link to be created. If TargetFile has a device name
associated with it, the link is treated as an absolute link; otherwise, the link is treated as a relative link.
TargetIsDirectory: Indicates whether the link target, TargetFile, is a directory. (Pass true for a directory).

Returns true on success. False on failure. Lasterror is set.

If the function fails, the return value is zero. To get extended error information, call GetLastError.

Symbolic links can either be absolute or relative links. Absolute links are links that specify each portion of
the path name; relative links are determined relative to where relativelink specifiers are in a specified path.
Relative links are specified using the following conventions:

- Dot (. and ..) conventions for example, "..\" resolves the path relative to the parent directory.
- Names with no slashes (\) for example, "tmp" resolves the path relative to the current directory.
- Root relative for example, "\Windows\System32" resolves to "current drive:\Windows\System32".
- Current working directory relative for example, if the current working directory is C:\Windows\System32,"C:File.txt" resolves to "C:\Windows\System32\File.txt".

If you specify a current working directory relative link, it is created as an absolute link, due to the way the
current working directory is processed based on the user and the thread.

This function can fail due to missing permissions.
See also:

- 75.29.5 CreateSymbolicLink(NewFile as folderitem, TargetFile as folderitem) as boolean
75.29.7 DeleteJunction(JunctionDir as folderitem) as boolean

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Deletes the junction.

**Example:**

```vbscript
dim file as FolderItem = SpecialFolder.Desktop.Child("test")
if WindowsJunctionMBS.DeleteJunction(file) then
    MsgBox "Ok"
end if
```

**Notes:** Folder is not deleted.

75.29.8 GetJunctionTarget(JunctionDir as folderitem) as string

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Checks whether a directory is a directory junction.

**Example:**

```vbscript
dim file as FolderItem = SpecialFolder.Desktop.Child("test")
msgbox WindowsJunctionMBS.GetJunctionTarget(file)
```

**Notes:** Lasterror is set. Returns path of junction target.

75.29.9 IsDirectoryJunction(JunctionDir as folderitem) as boolean

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Checks whether a directory is a directory junction.

**Example:**

```vbscript
dim file as FolderItem = SpecialFolder.Desktop.Child("test")
if WindowsJunctionMBS.IsDirectoryJunction(file) then
    MsgBox "Is junction."
else
    MsgBox "Is no junction."
end if
```
Notes:

Returns true if this file is a junction.
Lasterror is set.

75.29.10 Lasterror as Integer

Notes:

Value is 0 for no error
-1 for some parameter error or not implemented inside plugin.
other values are windows error codes.
75.30  class WindowsVolumeInformationMBS

75.30.1  class WindowsVolumeInformationMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Detailed information on Windows volumes.

75.30.2  Methods

75.30.3  Constructor

MBS Win Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A dummy constructor used only for automatic plugin testing. **Notes:** Uses "C:" as path and does the same as the other constructor. See also:

- 75.30.4 Constructor(path as string)

75.30.4  Constructor(path as string)

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Fills the class with information about the given volume. **Example:**

Function Window1.ToString(v as Variant) As string
return v
End Function

Sub Window1.Open
    dim w as WindowsVolumeInformationMBS
    w=new WindowsVolumeInformationMBS("C:\")
    pname.text=w.name
    pfsName.text=w.FileSystemName
    pmaxLen.text=toString(w.maxNameLength)
    pcasePres.text=toString(w.CaseIsPreserved)
    pcaseSens.text=toString(w.caseSensitive)
    punicode.text=toString(w.SupportsUnicodeFilenames)
    pcompressed.text=toString(w.IsCompressedVolume)
    pfileCompress.text=toString(w.SupportsFileCompression)
    pfileEncrypt.text=toString(w.SupportsFileEncryption)
    pserial.text=hex(w.serial)
End Sub
Notes: Path must something like "C:\" or "\MyServer\MyShare\".

- 75.30.3 Constructor

75.30.5 Properties

75.30.6 CaseIsPreserved as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: The file system preserves the case of filenames when it places a name on disk.
Notes: (Read only property)

75.30.7 CaseSensitive as boolean

Notes: (Read only property)

75.30.8 FileSystemName as string

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: The name of the filesystem.
Notes:
For example "FAT" or "NTFS".
(Read only property)

75.30.9 IsCompressedVolume as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: The specified volume is a compressed volume; for example a DoubleSpace volume.
Notes:
A volume is only SupportsFileCompression or IsCompressedVolume, but never both together.
(Read only property)
75.30.10 MaxNameLength as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The maximum length of a file name on this volume.

**Notes:**
Should be 255 on normal Windows disks.
(Read only property)

75.30.11 Name as string

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The volume name if the volume is named.

**Notes:** (Read only property)

75.30.12 Path as string

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The path used in the constructor.

**Notes:** (Read only property)

75.30.13 Serial as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The volume serial number.

**Example:**

```vbnet
dim w as WindowsVolumeInformationMBS
w=new WindowsVolumeInformationMBS("C:\")
MsgBox hex(w.Serial)
```

**Notes:**
This serial is set to a random name on formatting and can be changed later using some special tools.
(Read only property)
75.30.14 SupportsFileCompression as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The file system supports file-based compression.
**Notes:**
A volume is only SupportsFileCompression or IsCompressedVolume, but never both together.
(Read only property)

75.30.15 SupportsFileEncryption as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The file system supports the Encrypted File System (EPS).
**Notes:** (Read only property)

75.30.16 SupportsUnicodeFilenames as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The file system supports Unicode in filenames as they appear on disk.
**Notes:** (Read only property)

75.30.17 Valid as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Was the constructor successful?
**Notes:**
May fail on bad file paths.
(Read only property)
Chapter 76

Folder Change Watching

76.1 class FolderChangedNotificationMBS

76.1.1 class FolderChangedNotificationMBS

MBS MacOSX Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class to receive notifications

**Deprecation:** This item is deprecated and should no longer be used. You can use FSEventsMBS instead.

**Notes:**
It’s only for Mac OS X!
And not every application does send notifications around.
Please use FSEventsMBS for getting better results. This class is deprecated.

76.1.2 Methods

76.1.3 Directory as folderitem

MBS MacOSX Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem for the directory observed.

**Notes:**
Returns nil on any error.
Lasterror is set.
76.1.4 Notify(dir as folderitem)

MBS MacOSX Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Notifies the system about a modification you made in the given directory.
Notes: Lasterror is set.

76.1.5 NotifyAll

MBS MacOSX Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Notifies the system about a modification you made on several directories.
Notes:
Used by installers which may change hundreds of directories.
Lasterror is set.

76.1.6 NotifyByPath(path as string)

MBS MacOSX Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Notifies the system about a modification you made in the given directory.
Notes:
Path should be a valid Mac OS X path.
Lasterror is set.

76.1.7 Subscribe(dir as folderitem)

MBS MacOSX Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Subscribes the class to observe a specified directory.
Notes: Lasterror is set.
See also:

- 76.1.8 Subscribe(dir as folderitem, flags as Integer)

76.1.8 Subscribe(dir as folderitem, flags as Integer)

MBS MacOSX Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Subscribes the class to observe a specified directory.
Notes:
Lasterror is set.
76.1. CLASS FOLDERCHANGEDNOTIFICATIONMBS

Constants for the flags parameter:

- kFNNoImplicitAllSubscription 1 Specify this option if you do not want to receive notifications on this subscription when FNNotifyAll is called; by default any subscription is also implicitly a subscription to wildcard notifications.
- kFNNotifyInBackground 2 Specify this option if you want to receive notifications on this subscription when your application is in background. By default notifications will be coalesced and delivered when your application becomes foreground.

See also:

- 76.1.7 Subscribe(dir as folderitem)

76.1.9 SubscribeByPath(path as string)

MBS MacOSX Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Subscribes the class to observe a specified directory.

**Notes:**
Lasterror is set.
Path must be a valid Mac OS X path.
See also:

- 76.1.10 SubscribeByPath(path as string, flags as Integer)

76.1.10 SubscribeByPath(path as string, flags as Integer)

MBS MacOSX Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Subscribes the class to observe a specified directory.

**Notes:**
Lasterror is set.
Path must be a valid Mac OS X path.

Constants for the flags parameter:

- kFNNoImplicitAllSubscription 1 Specify this option if you do not want to receive notifications on this subscription when FNNotifyAll is called; by default any subscription is also implicitly a subscription to wildcard notifications.
- kFNNotifyInBackground 2 Specify this option if you want to receive notifications on this subscription when your application is in background. By default notifications will be coalesced and delivered when your application becomes foreground.

See also:
76.1.11 Unsubscribe

MBS MacOSX Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Unsubscribes the current directory.

**Notes:**
Lasterror is set.
This method is called for you by the destructor of the class.

76.1.12 Properties

76.1.13 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The handle to the notification object.

**Notes:**
For toolbox development: It’s a FNSubscriptionRef.
(Read and Write property)

76.1.14 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The last error code reported.

**Notes:**
0 if successful, -1 if the function is not available or parameters are bad.
Else a Mac OS error code.
(Read and Write property)

76.1.15 Events

76.1.16 DirectoryChanged(message as Integer, flags as Integer)

MBS MacOSX Plugin, Plugin Version: 3.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Out directory changed or some directories changed.

**Notes:**
An installer application may send a notification without a specified directory. In this case the event is called and the observed directory may not be changed!
message: An indication of what happened
flags: Options about delivery of the notification (typically 0)

Only one message value is defined:
const kFNDirectoryModifiedMessage = 1
CHAPTER 76. FOLDER CHANGE WATCHING

76.2 class FSEventsMBS

76.2.1 class FSEventsMBS

Function: A class for the Mac OS X 10.5 feature called FSEvents which can be used to monitor a folder hierarchy for changes.

Notes:

The text below is from the Apple documentation (With some plugin related modifications). The plugin does currently not support the device related functions, but that can be added later if you need it.

This class provides a mechanism to notify clients about directories they ought to re-scan in order to keep their internal data structures up-to-date with respect to the true state of the file system. (For example, when files or directories are created, modified, or removed.) It sends these notifications "in bulk", possibly notifying the client of changes to several directories in a single callback. By using the API, clients can notice such changes quickly, without needing to resort to recursive polling/scanning of the file system.

Much like kqueues, the FSEvents API allows an application to find near-immediately when the contents of a particular directory has changed. However, unlike kqueues, the FSEvents API allows the application to monitor the whole file system hierarchy rooted at a specified directory (and still get precise per-directory notifications) – to do this with the kqueues API would require the client to monitor each directory individually.

Clients can register interest in a chunk of the filesystem hierarchy and will receive callbacks from their runloop whenever an event occurs that modifies the filesystem therein. The callback will indicate the exact directory in which the event occurred, so the client only has to scan that directory for updated info, not all its children. Clients can supply a "latency" parameter that tells how long to wait after an event occurs before forwarding it; this reduces the volume of events and reduces the chance that the client will see an "intermediate" state, like those that arise when doing a "safe save" of a file, creating a package, or downloading a file via Safari.

The lifecycle of an FSEventStream consists of these stages:

1. new FSEventsMBS(...) -> Creates an FSEventStream.

2. Start() -> Starts receiving events and servicing them from the client’s runloop(s) using the callback supplied by the client when the stream was created. If a value was supplied for the sinceWhen parameter then "historical" events will be sent via your callback first, then a HistoryDone event, then "contemporary" events will be sent on an ongoing basis (as though you had supplied kFSEventStreamEventIdSinceNow for sinceWhen).

3. Stop() -> Stops the stream, ensuring the client’s callback will not be called again for this stream. After stopping the stream, it can be restarted seamlessly via Start() without missing any events.
Once the event stream has been started, the following calls can be used:

GetLatestEventId() - Initially, this returns the sinceWhen value supplied when the stream was created; thereafter, it is updated with the highest-numbered event ID mentioned in the current batch of events just before invoking the client’s callback. Clients can store this value persistently as long as they also store the UUID for the device (obtained via CopyUUIDForDevice()). Clients can then later supply this event ID as the sinceWhen parameter to CreateRelativeToDevice(), as long as its UUID matches what you stored. This works because the FSEvents service stores events in a persistent, per-volume database. In this regard, the stream of event IDs acts like a global, system-wide clock, but bears no relation to any particular timebase.

FlushAsync() - Requests that the fseventsd daemon send any events it has already buffered (via the latency parameter to one of the constructors). This occurs asynchronously; clients will not have received all the callbacks by the time this call returns to them.

FlushSync() - Requests that the fseventsd daemon send any events it has already buffered (via the latency parameter to one of the constructors). Then runs the runloop in its private mode till all events that have occurred have been reported (via the clients callback). This occurs synchronously; clients will have received all the callbacks by the time this call returns to them.

GetDeviceBeingWatched() - Gets the dev.t value supplied when the stream was created with CreateRelativeToDevice(), otherwise 0.

CopyPathsBeingWatched() - Gets the paths supplied when the stream was created with one of the constructors.

Calls that can be made without a stream:

CopyUUIDForDevice() - Gets a UUID that uniquely identifies the FSEvents database for that volume. If the database gets discarded then its replacement will have a different UUID so that clients will be able to detect this situation and avoid trying to use event IDs that they stored as the sinceWhen parameter to the FSEventStreamCreate...() functions.

GetCurrentEventId() - Gets the most recently generated event ID, system-wide (not just for one stream).

GetLastEventIdForDeviceBeforeTime() - Gets the last event ID for the given device that was returned before the given time. This is conservative in the sense that if you then use the returned event ID as the sinceWhen parameter of CreateRelativeToDevice() that you will not miss any events that happened since that time. On the other hand, you might receive some (harmless) extra events.

PurgeEventsForDeviceUpToEventId() - Purges old events from the persistent per-volume database main-
CHAPTER 76. FOLDER CHANGE WATCHING

tained by the service. You can combine this with GetLastEventIdForDeviceBeforeTime(). Can only be called by the root user.

For Windows, you can use WindowsDirectoryWatcherMBS class.

76.2.2 Methods

76.2.3 Available as Boolean

Function: Whether the FSEvent functions are working.
Example:

if FSEventMBS.Available then
   MsgBox "available"
else
   MsgBox "not available"
end if

Notes: True on Mac OS X 10.5 and false on other versions and operation systems.

76.2.4 Constructor(DeviceToWatch as Integer, path as string, sinceWhen as UInt64, latency as Double, flags as Integer)

Function: Creates a new FS event stream object for a particular device with the given parameters.
Notes:
In order to start receiving callbacks you must also call Start().

deviceToWatch:
A dev_t corresponding to the device which you want to receive notifications from. Use GetDeviceID to get such a device ID.

pathsToWatchRelativeToDevice:
A string, specifying a relative path to a directory on the device identified by the dev parameter. The path should be relative to the root of the device. For example, if a volume "MyData" is mounted at "/Volumes/MyData" and you want to watch "/Volumes/MyData/Pictures/July", specify a path string of "Pictures/July". To watch the root of a volume pass a path of "" (the empty string).
sinceWhen:
The service will supply events that have happened after the given event ID. To ask for events "since now" pass the constant kFSEventStreamEventIdSinceNow. Often, clients will supply the highest-numbered FSEventStreamEventId they have received in a callback, which they can obtain via the GetLatestEventId() accessor. Do not pass zero for sinceWhen, unless you want to receive events for every directory modified since "the beginning of time" – an unlikely scenario.

latency:
The number of seconds the service should wait after hearing about an event from the kernel before passing it along to the client via its event. Specifying a larger value may result in more effective temporal coalescing, resulting in fewer callbacks.

flags:
Flags that modify the behavior of the stream being created.

On success the handle property is not 0.

- 76.2.6 Constructor(path as folderitem, sinceWhen as UInt64, latency as Double, flags as Integer) 12878
- 76.2.7 Constructor(path as string, sinceWhen as UInt64, latency as Double, flags as Integer) 12879
- 76.2.8 Constructor(paths() as folderitem, sinceWhen as UInt64, latency as Double, flags as Integer) 12880
- 76.2.9 Constructor(paths() as string, sinceWhen as UInt64, latency as Double, flags as Integer) 12880

76.2.5 Constructor(DeviceToWatch as Integer, paths() as string, sinceWhen as UInt64, latency as Double, flags as Integer)

Function: Creates a new FS event stream object with the given parameters.
Notes:
In order to start receiving callbacks you must also call Start.

paths: The folders you want to watch. (more exactly the root folders of the folder hierarchies you want to watch)

sinceWhen: The service will supply events that have happened after the given event ID. To ask for events "since now" pass the constant kFSEventStreamEventIdSinceNow. Often, clients will supply the highest-numbered FSEventStreamEventId they have received in a callback, which they can obtain via the GetLatestEventId() accessor. Do not pass zero for sinceWhen, unless you want to receive events for every directory modified since "the beginning of time" – an unlikely scenario.
latency: The number of seconds the service should wait after hearing about an event from the kernel before passing it along to the client via its callback. Specifying a larger value may result in more effective temporal coalescing, resulting in fewer callbacks and greater overall efficiency.

flags: Flags that modify the behavior of the stream being created.

76.2.7 Constructor(path as string, sinceWhen as UInt64, latency as Double, flags as Integer)

Function: Creates a new FS event stream object with the given parameters.
Notes:
In order to start receiving callbacks you must also call Start.

path: The folder you want to watch. (more exactly the root folder of the folder hierarchy you want to watch)
sinceWhen: The service will supply events that have happened after the given event ID. To ask for events "since now" pass the constant kFSEventStreamEventIdSinceNow. Often, clients will supply the highest-numbered FSEventStreamEventId they have received in a callback, which they can obtain via the GetLatestEventId() accessor. Do not pass zero for sinceWhen, unless you want to receive events for every directory modified since "the beginning of time" – an unlikely scenario.
latency: The number of seconds the service should wait after hearing about an event from the kernel before passing it along to the client via its callback. Specifying a larger value may result in more effective temporal coalescing, resulting in fewer callbacks and greater overall efficiency.
flags: Flags that modify the behavior of the stream being created.
See also:
- 76.2.4 Constructor(DeviceToWatch as Integer, path as string, sinceWhen as UInt64, latency as Double, flags as Integer) 12876
- 76.2.5 Constructor(DeviceToWatch as Integer, paths() as string, sinceWhen as UInt64, latency as Double, flags as Integer) 12877
- 76.2.6 Constructor(path as folderitem, sinceWhen as UInt64, latency as Double, flags as Integer) 12878
- 76.2.8 Constructor(paths() as folderitem, sinceWhen as UInt64, latency as Double, flags as Integer) 12879
- 76.2.9 Constructor(paths() as string, sinceWhen as UInt64, latency as Double, flags as Integer) 12880

76.2.8 Constructor(paths() as folderitem, sinceWhen as UInt64, latency as Double, flags as Integer)

Function: Creates a new FS event stream object with the given parameters.
Notes:
In order to start receiving callbacks you must also call Start.

paths: The folders you want to watch. (more exactly the root folders of the folder hierarchies you want to watch)
sinceWhen: The service will supply events that have happened after the given event ID. To ask for events "since now" pass the constant kFSEventStreamEventIdSinceNow. Often, clients will supply the highest-numbered FSEventStreamEventId they have received in a callback, which they can obtain via the GetLatestEventId() accessor. Do not pass zero for sinceWhen, unless you want to receive events for every directory modified since "the beginning of time" – an unlikely scenario.
latency: The number of seconds the service should wait after hearing about an event from the kernel before passing it along to the client via its callback. Specifying a larger value may result in more effective temporal coalescing, resulting in fewer callbacks and greater overall efficiency.
flags: Flags that modify the behavior of the stream being created.

See also:

- 76.2.4 Constructor(DeviceToWatch as Integer, path as string, sinceWhen as UInt64, latency as Double, flags as Integer) 12876
- 76.2.5 Constructor(DeviceToWatch as Integer, paths() as string, sinceWhen as UInt64, latency as Double, flags as Integer) 12877
- 76.2.6 Constructor(path as folderitem, sinceWhen as UInt64, latency as Double, flags as Integer) 12878
- 76.2.7 Constructor(path as string, sinceWhen as UInt64, latency as Double, flags as Integer) 12879
- 76.2.9 Constructor(paths() as string, sinceWhen as UInt64, latency as Double, flags as Integer) 12880

76.2.9 Constructor(paths() as string, sinceWhen as UInt64, latency as Double, flags as Integer)

Function: Creates a new FS event stream object for a particular device with the given parameters.  
Notes:  
In order to start receiving callbacks you must also call Start().  

deviceToWatch:  
A dev_t corresponding to the device which you want to receive notifications from. Use GetDeviceID to get such a device ID.

pathsToWatchRelativeToDevice:  
An array of strings, each specifying a relative path to a directory on the device identified by the dev parameter. The paths should be relative to the root of the device. For example, if a volume "MyData" is mounted at "/Volumes/MyData" and you want to watch "/Volumes/MyData/Pictures/July", specify a path string of "Pictures/July". To watch the root of a volume pass a path of "" (the empty string).
sinceWhen:
The service will supply events that have happened after the given event ID. To ask for events "since now" pass the constant kFSEventStreamEventIdSinceNow. Often, clients will supply the highest-numbered FSEventStreamEventId they have received in a callback, which they can obtain via the GetLatestEventId() accessor. Do not pass zero for sinceWhen, unless you want to receive events for every directory modified since "the beginning of time" – an unlikely scenario.

latency:
The number of seconds the service should wait after hearing about an event from the kernel before passing it along to the client via its event. Specifying a larger value may result in more effective temporal coalescing, resulting in fewer callbacks.

flags:
Flags that modify the behavior of the stream being created.

On success the handle property is not 0.

### 76.2.10 Description as string

MBS MacFrameworks Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a string containing the description of the stream. **Notes:** For debugging only.

### 76.2.11 DeviceBeingWatched as Integer

MBS MacFrameworks Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Fetches the dev_t supplied when the stream was created using a Device ID. **Notes:** Returns 0 if there was an error.
76.2.12 ExclusionPaths as String()

Function: Queries exclusion paths.

76.2.13 FlushAsync as UInt64

Function: Flushes all events.
Notes:
Asks the FS Events service to flush out any events that have occurred but have not yet been delivered, due to the latency parameter that was supplied when the stream was created. This flushing occurs asynchronously – do not expect the events to have already been delivered by the time this call returns. FlushAsync() can only be called after the stream has been started, via Start().

Returns The largest event id of any event ever queued for this stream, otherwise zero if no events have been queued for this stream.

76.2.14 FlushSync

Function: Flushes all events.
Notes: Asks the FS Events service to flush out any events that have occurred but have not yet been delivered, due to the latency parameter that was supplied when the stream was created. This flushing occurs synchronously – by the time this call returns, your callback will have been invoked for every event that had already occurred at the time you made this call. FlushSync() can only be called after the stream has been started, via Start().

76.2.15 GetAbsoluteTime(theDate as date) as Double

Function: Creates an absolute time value based on the system time zone and the values in the date object.
Example:

```
dim d as new date
MsgBox str(FSEventsMBS.GetAbsoluteTime(d))
```

Notes: Returns 0 if the date parameter is nil or invalid.
76.2.16 GetCurrentEventId as UInt64

Function: Fetches the most recently generated event ID, system-wide (not just for one stream).
Notes: By the time it is returned to your application even newer events may have already been generated.

76.2.17 GetDeviceID(volume as folderitem) as Integer

Function: Returns the device ID for the volume the folderitem points to.
Example:

```v
dim v as FolderItem
v=volume(0)
MsgBox str(FSEventsMBS.GetDeviceID(v))
```

Notes: Returns 0 on any error.

76.2.18 GetLastEventIdForDeviceBeforeTime(DeviceID as Integer, theTime as Double) as UInt64

Function: Gets the last event ID for the given device that was returned before the given time.
Example:

```v
dim d as new date
MsgBox str(FSEventsMBS.GetLastEventIdForDeviceBeforeTime(1,d.TotalSeconds))
```

Notes: This is conservative in the sense that if you then use the returned event ID as the sinceWhen parameter of the constructor that you will not miss any events that happened since that time. On the other hand, you might receive some (harmless) extra events. Beware: there are things that can cause this to fail to be accurate. For example, someone might change the system’s clock (either backwards or forwards). Or an external drive might be used on different systems without perfectly synchronized clocks.
76.2.19 GetLatestEventId as UInt64

**Function:** Fetches the sinceWhen property of the stream.
**Notes:** Upon receiving an event (and just before invoking the client's callback) this attribute is updated to the highest-numbered event ID mentioned in the event.

76.2.20 kFSEventStreamEventIdSinceNow as UInt64

**Function:** A special value to pass in if you mean the event ID for now.
**Notes:** Returns & hFFFFFFFFFFFFFFF.

76.2.21 PathsBeingWatched as String()

**Function:** Returns an array with the paths being watched.
**Notes:** Works only on the RB Versions which support arry creation in plugins.

76.2.22 PurgeEventsForDeviceUpToEventId(DeviceID as Integer, EventID as UInt64) as boolean

**Function:** Purges old events from the persistent per-volume database maintained by the service.
**Notes:** Can only be called by the root user.

76.2.23 SetExclusionPaths(paths() as String) as boolean

**Function:** Sets the exclusion paths.
**Notes:**
Sets directories to be filtered from the EventStream.
A maximum of 8 directories maybe specified.

Requires OS X 10.9 or newer.
Returns true on success or false on failure.
76.2. CLASS FSEVENTSMBS

76.2.24 Show

Function: Prints a description of the supplied stream to stderr.
Notes: For debugging only.

76.2.25 Start as boolean

Function: Attempts to register with the FS Events service to receive events per the parameters in the stream.
Notes:
Once started, the stream can be stopped via Stop().

Returns true if it succeeds, otherwise False if it fails. It ought to always succeed, but in the event it does not then your code should fall back to performing recursive scans of the directories of interest as appropriate.

76.2.26 Stop

Function: Unregisters with the FS Events service.
Notes: The client callback will not be called for this stream while it is stopped. Stop() can only be called if the stream has been started, via Start(). Once stopped, the stream can be restarted via Start(), at which point it will resume receiving events from where it left off ("sinceWhen").

76.2.27 UUIDForDevice(DeviceID as Integer) as memoryblock

Function: Gets the UUID associated with a device, or nil if not possible (for example, on read-only device).
Notes: A (non-nil) UUID uniquely identifies a given stream of FSEvents. If this (non-nil) UUID is different than one that you stored from a previous run then the event stream is different (for example, because FSEvents were purged, because the disk was erased, or because the event ID counter wrapped around back to zero). A nil return value indicates that "historical" events are not available, i.e., you should not supply a "sinceWhen" value to the constructor other than kFSEventStreamEventIdSinceNow.
76.2.28 Properties

76.2.29 Handle as Integer

**Function:** The internal stream handle used.
**Notes:** (Read only property)

76.2.30 Running as Boolean

**Function:** Whether this object has been started.
**Notes:**
This is set to true when you call Start and set to false when you call Stop.
(Read only property)

76.2.31 Events

76.2.32 Callback(index as Integer, count as Integer, path as string, flags as Integer, eventID as UInt64)

**Function:** The callback received when something changed.
**Notes:**
The plugin receives count events. This event is called count times with index going from 0 to count-1.
Path is the unix file path for the folder. A path might be "/" if either of these flags is set for the event:
kFSEventStreamEventFlagUserDropped, kFSEventStreamEventFlagKernelDropped.
Flags: Flags to specify why the event was called. If no flags are set, then there was some change in the
directory at the specific path supplied in this event.
eventID: The event ID for this change. Each event ID comes from the most recent event being reported in the
corresponding directory named in the path parameter. Event IDs all come from a single global source. They
are guaranteed to always be increasing, usually in leaps and bounds, even across system reboots and moving
drives from one machine to another. Just before invoking your callback your stream is updated so that calling
the accessor GetLatestEventId() will return the largest of the values passed in the eventIds parameter; if you
were to stop processing events from this stream after this callback and resume processing them later from
a newly-created FSEventStream, this is the value you would pass for the sinceWhen parameter to constructor.
76.2.33 Constants

76.2.34 kFSEventStreamCreateFlagFileEvents = 16

MBS MacFrameworks Plugin, Plugin Version: 11.3. **Function:** One of the constants used to create a stream. **Notes:**
Request file-level notifications. Your stream will receive events about individual files in the hierarchy you’re watching instead of only receiving directory level notifications. Use this flag with care as it will generate significantly more events than without it.

Available in Mac OS X 10.7 or newer.

76.2.35 kFSEventStreamCreateFlagIgnoreSelf = 8

MBS MacFrameworks Plugin, Plugin Version: 11.3. **Function:** One of the constants used to create a stream. **Notes:**
Don’t send events that were triggered by the current process. This is useful for reducing the volume of events that are sent. It is only useful if your process might modify the file system hierarchy beneath the path(s) being monitored. Note: this has no effect on historical events, i.e., those delivered before the HistoryDone sentinel event.

Available in Mac OS X 10.7 or newer.

76.2.36 kFSEventStreamCreateFlagMarkSelf = 32

MBS MacFrameworks Plugin, Plugin Version: 16.0. **Function:** One of the constants used to create a stream. **Notes:** Tag events that were triggered by the current process with the “OwnEvent” flag. This is only useful if your process might modify the file system hierarchy beneath the path(s) being monitored and you wish to know which events were triggered by your process. Note: this has no effect on historical events, i.e., those delivered before the HistoryDone sentinel event.

76.2.37 kFSEventStreamCreateFlagNoDefer = 2

MBS MacFrameworks Plugin, Plugin Version: 8.1. **Function:** One of the constants used to create a stream. **Notes:** Affects the meaning of the latency parameter. If you specify this flag and more than latency seconds have elapsed since the last event, your app will receive the event immediately. The delivery of the event resets the latency timer and any further events will be delivered after latency seconds have elapsed. This flag is useful for apps that are interactive and want to react immediately to changes but avoid getting swamped by notifications when changes are occurring in rapid succession. If you do not specify this flag,
then when an event occurs after a period of no events, the latency timer is started. Any events that occur during the next latency seconds will be delivered as one group (including that first event). The delivery of the group of events resets the latency timer and any further events will be delivered after latency seconds. This is the default behavior and is more appropriate for background, daemon or batch processing apps.

76.2.38 kFSEventStreamCreateFlagNone = 0

MBS MacFrameworks Plugin, Plugin Version: 8.1. Function: One of the constants used to create a stream.

76.2.39 kFSEventStreamCreateFlagUseCFTypes = 1

MBS MacFrameworks Plugin, Plugin Version: 8.1. Function: One of the constants used to create a stream. Notes: The plugin uses this one internally.

76.2.40 kFSEventStreamCreateFlagUseExtendedData = 64

MBS MacFrameworks Plugin, Plugin Version: 17.4. Function: One of the constants used to create a stream. Notes:
Requires kFSEventStreamCreateFlagUseCFTypes and instructs the framework to invoke your callback function with CF types but, instead of passing it a CFArrayMBS of CFStringMBSs, a CFArrayMBS of CFDictionaryMBSs is passed. Each dictionary will contain the event path and possibly other "extended data" about the event. See the kFSEventStreamEventExtendedData*Key definitions for the set of keys that may be set in the dictionary.
For macOS 10.13 or newer.

76.2.41 kFSEventStreamCreateFlagWatchRoot = 4

MBS MacFrameworks Plugin, Plugin Version: 8.1. Function: One of the constants used to create a stream. Notes: Request notifications of changes along the path to the path(s) you’re watching. For example, with this flag, if you watch "/foo/bar" and it is renamed to "/foo/bar.old", you would receive a RootChanged event. The same is true if the directory "/foo" were renamed. The event you receive is a special event: the path for the event is the original path you specified, the flag kFSEventStreamEventFlagRootChanged is set and event ID is zero. RootChanged events are useful to indicate that you should rescan a particular hierarchy because it changed completely (as opposed to the things inside of it changing). If you want to track the current location of a directory, it is best to open the directory before creating the stream so that you have a file descriptor for it and can issue an F_GETPATH fcntl() to find the current path.
76.2.42  kFSEventStreamEventFlagEventIdsWrapped = 8

MBS MacFrameworks Plugin, Plugin Version: 8.1.  **Function:** One of the flag values you can get on the callback event.  
**Notes:** If kFSEventStreamEventFlagEventIdsWrapped is set, it means the 64-bit event ID counter wrapped around. As a result, previously-issued event ID's are no longer valid arguments for the sinceWhen parameter of the constructors.

76.2.43  kFSEventStreamEventFlagHistoryDone = 16

MBS MacFrameworks Plugin, Plugin Version: 8.1.  **Function:** One of the flag values you can get on the callback event.  
**Notes:** Denotes a sentinel event sent to mark the end of the "historical" events sent as a result of specifying a sinceWhen value in the constructor call that created this event stream. (It will not be sent if kFSEventStreamEventIdSinceNow was passed for sinceWhen.) After invoking the client’s callback with all the "historical" events that occurred before now, the client’s callback will be invoked with an event where the kFSEventStreamEventFlagHistoryDone flag is set. The client should ignore the path supplied in this callback.

76.2.44  kFSEventStreamEventFlagItemChangeOwner = & h00004000

MBS MacFrameworks Plugin, Plugin Version: 11.3.  **Function:** One of the flags passed when you use FileEvents and a file changes.  
**Notes:** File changed owner.

76.2.45  kFSEventStreamEventFlagItemCloned = & h00400000

MBS MacFrameworks Plugin, Plugin Version: 17.4.  **Function:** One of the flags passed when you use FileEvents and a file changes.  
**Notes:**  
The file system object at the specific path supplied in this event is a clone or was cloned.  
(This flag is only ever set if you specified the FileEvents flag when creating the stream.)

76.2.46  kFSEventStreamEventFlagItemCreated = & h00000100

MBS MacFrameworks Plugin, Plugin Version: 11.3.  **Function:** One of the flags passed when you use FileEvents and a file changes.  
**Notes:** File created.
76.2.47  kFSEventStreamEventFlagItemFinderInfoMod = & h00002000

MBS MacFrameworks Plugin, Plugin Version: 11.3. **Function:** One of the flags passed when you use FileEvents and a file changes.  
**Notes:** File meta data in Finder info have changed.

76.2.48  kFSEventStreamEventFlagItemInodeMetaMod = & h00000400

MBS MacFrameworks Plugin, Plugin Version: 11.3. **Function:** One of the flags passed when you use FileEvents and a file changes.  
**Notes:** File meta data in inode have changed.

76.2.49  kFSEventStreamEventFlagItemIsDir = & h00020000

MBS MacFrameworks Plugin, Plugin Version: 11.3. **Function:** One of the flags passed when you use FileEvents and a file changes.  
**Notes:** File is a folder.

76.2.50  kFSEventStreamEventFlagItemIsFile = & h00010000

MBS MacFrameworks Plugin, Plugin Version: 11.3. **Function:** One of the flags passed when you use FileEvents and a file changes.  
**Notes:** File is a regular file.

76.2.51  kFSEventStreamEventFlagItemIsHardlink = & h00100000

MBS MacFrameworks Plugin, Plugin Version: 16.0. **Function:** One of the flags passed when you use FileEvents and a file changes.  
**Notes:**
Indicates the object at the specified path supplied in this event is a hard link.  
(This flag is only ever set if you specified the FileEvents flag when creating the stream.)

76.2.52  kFSEventStreamEventFlagItemIsLastHardlink = & h00200000

MBS MacFrameworks Plugin, Plugin Version: 16.0. **Function:** One of the flags passed when you use FileEvents and a file changes.  
**Notes:**
76.2. CLASS FSEVENTSMBS

Indicates the object at the specific path supplied in this event was the last hard link. (This flag is only ever set if you specified the FileEvents flag when creating the stream.)

76.2.53 kFSEventStreamEventFlagItemIsSymlink = & h00040000

MBS MacFrameworks Plugin, Plugin Version: 11.3. **Function:** One of the flags passed when you use FileEvents and a file changes. **Notes:** File is a symlink.

76.2.54 kFSEventStreamEventFlagItemModified = & h00001000

MBS MacFrameworks Plugin, Plugin Version: 11.3. **Function:** One of the flags passed when you use FileEvents and a file changes. **Notes:** File modified.

76.2.55 kFSEventStreamEventFlagItemRemoved = & h00000200

MBS MacFrameworks Plugin, Plugin Version: 11.3. **Function:** One of the flags passed when you use FileEvents and a file changes. **Notes:** File deleted.

76.2.56 kFSEventStreamEventFlagItemRenamed = & h00000800

MBS MacFrameworks Plugin, Plugin Version: 11.3. **Function:** One of the flags passed when you use FileEvents and a file changes. **Notes:** File renamed.

76.2.57 kFSEventStreamEventFlagItemXattrMod = & h00008000

MBS MacFrameworks Plugin, Plugin Version: 11.3. **Function:** One of the flags passed when you use FileEvents and a file changes. **Notes:** Extended attributes changed.
CHAPTER 76. FOLDER CHANGE WATCHING

76.2.58  kFSEventStreamEventFlagKernelDropped = 4

MBS MacFrameworks Plugin, Plugin Version: 8.1. **Function:** One of the flag values you can get on the callback event.

**Notes:** The kFSEventStreamEventFlagUserDropped or kFSEventStreamEventFlagKernelDropped flags may be set in addition to the kFSEventStreamEventFlagMustScanSubDirs flag to indicate that a problem occurred in buffering the events (the particular flag set indicates where the problem occurred) and that the client must do a full scan of any directories (and their subdirectories, recursively) being monitored by this stream. If you asked to monitor multiple paths with this stream then you will be notified about all of them. Your code need only check for the kFSEventStreamEventFlagMustScanSubDirs flag; these flags (if present) only provide information to help you diagnose the problem.

76.2.59  kFSEventStreamEventFlagMount = 64

MBS MacFrameworks Plugin, Plugin Version: 8.1. **Function:** One of the flag values you can get on the callback event.

**Notes:** Denotes a special event sent when a volume is mounted. The path in the event is the path to the newly-mounted volume. You will receive one of these notifications for every volume mount event inside the kernel (independent of DiskArbitration). Beware that a newly-mounted volume could contain an arbitrarily large directory hierarchy. Avoid pitfalls like triggering a recursive scan of a non-local filesystem, which you can detect by checking for the absence of the MNT_LOCAL flag in the fflags returned by statfs(). Also be aware of the MNT_DONTBROWSE flag that is set for volumes which should not be displayed by user interface elements.

76.2.60  kFSEventStreamEventFlagMustScanSubDirs = 1

MBS MacFrameworks Plugin, Plugin Version: 8.1. **Function:** One of the flag values you can get on the callback event.

**Notes:** Your application must rescan not just the directory given in the event, but all its children, recursively. This can happen if there was a problem whereby events were coalesced hierarchically. For example, an event in /Users/jsmith/Music and an event in /Users/jsmith/Pictures might be coalesced into an event with this flag set and path=/Users/jsmith. If this flag is set you may be able to get an idea of whether the bottleneck happened in the kernel (less likely) or in your client (more likely) by checking for the presence of the informational flags kFSEventStreamEventFlagUserDropped or kFSEventStreamEventFlagKernelDropped.

76.2.61  kFSEventStreamEventFlagNone = 0

MBS MacFrameworks Plugin, Plugin Version: 8.1. **Function:** The constant to specify that no flags are used.
76.2.62  kFSEventStreamEventFlagOwnEvent = & h00080000

MBS MacFrameworks Plugin, Plugin Version: 16.0. **Function:** One of the flags passed when you use FileEvents and a file changes. **Notes:** Indicates the event was triggered by the current process. (This flag is only ever set if you specified the MarkSelf flag when creating the stream.)

76.2.63  kFSEventStreamEventFlagRootChanged = 32

MBS MacFrameworks Plugin, Plugin Version: 8.1. **Function:** One of the flag values you can get on the callback event. **Notes:** Denotes a special event sent when there is a change to one of the directories along the path to one of the directories you asked to watch. When this flag is set, the event ID is zero and the path corresponds to one of the paths you asked to watch (specifically, the one that changed). The path may no longer exist because it or one of its parents was deleted or renamed. Events with this flag set will only be sent if you passed the flag kFSEventStreamCreateFlagWatchRoot to the constructor when you created the stream.

76.2.64  kFSEventStreamEventFlagUnmount = 128

MBS MacFrameworks Plugin, Plugin Version: 8.1. **Function:** One of the flag values you can get on the callback event. **Notes:** Denotes a special event sent when a volume is unmounted. The path in the event is the path to the directory from which the volume was unmounted. You will receive one of these notifications for every volume unmount event inside the kernel. This is not a substitute for the notifications provided by the DiskArbitration framework; you only get notified after the unmount has occurred. Beware that unmounting a volume could uncover an arbitrarily large directory hierarchy, although Mac OS X never does that.

76.2.65  kFSEventStreamEventFlagUserDropped = 2

MBS MacFrameworks Plugin, Plugin Version: 8.1. **Function:** One of the flag values you can get on the callback event. **Notes:** The kFSEventStreamEventFlagUserDropped or kFSEventStreamEventFlagKernelDropped flags may be set in addition to the kFSEventStreamEventFlagMustScanSubDirs flag to indicate that a problem occurred in buffering the events (the particular flag set indicates where the problem occurred) and that the client must do a full scan of any directories (and their subdirectories, recursively) being monitored by this stream. If you asked to monitor multiple paths with this stream then you will be notified about all of them. Your code need only check for the kFSEventStreamEventFlagMustScanSubDirs flag; these flags (if present) only provide information to help you diagnose the problem.
76.3  class WindowsDirectoryChangeMBS

76.3.1  class WindowsDirectoryChangeMBS

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for directory change information. **Notes:** For Mac, you can use FSEventsMBS class.

76.3.2  Properties

76.3.3  Action as Integer

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The type of change that has occurred. **Notes:** See kAction constants. (Read and Write property)

76.3.4  Filename as String

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The file path. **Notes:** For speed reasons we give you string, not folderitem. (Read and Write property)

76.3.5  Constants

76.3.6  kActionAdded = 1

MBS Win Plugin, Plugin Version: 12.0. **Function:** One of the type constants. **Notes:** The file was added to the directory.

76.3.7  kActionModified = 3

MBS Win Plugin, Plugin Version: 12.0. **Function:** One of the type constants. **Notes:** The file was modified. This can be a change in the time stamp or attributes.
76.3.8  **kActionRemoved = 2**

MBS Win Plugin, Plugin Version: 12.0. **Function:** One of the type constants.  
**Notes:** The file was removed from the directory.

76.3.9  **kActionRenamedNewName = 5**

MBS Win Plugin, Plugin Version: 12.0. **Function:** One of the type constants.  
**Notes:** The file was renamed and this is the new name.

76.3.10 **kActionRenamedOldName = 4**

MBS Win Plugin, Plugin Version: 12.0. **Function:** One of the type constants.  
**Notes:** The file was renamed and this is the old name.
CHAPTER 76. FOLDER CHANGE WATCHING

76.4 class WindowsDirectoryWatcherMBS

76.4.1 class WindowsDirectoryWatcherMBS

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for watching folders on Windows for changes.
**Notes:** Create an object, add a few directories you want to watch and wait for changes being reported by NextChange method.

76.4.2 Methods

76.4.3 AddDirectory(path as folderitem, Recursive as boolean, Flags as Integer) as Boolean

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Schedules a directory for watching.
**Notes:**
- path: Path to folder to watch.
- Recursive: Whether to watch subdirectories.
- Flags: What to watch for. Please combine kNotifyChange* constants with bitwiseOr.

Returns false on error and true on success.
You can add several directories to a watcher.
See also:

- 76.4.4 AddDirectory(path as string, Recursive as boolean, Flags as Integer) as Boolean

76.4.4 AddDirectory(path as string, Recursive as boolean, Flags as Integer) as Boolean

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Schedules a directory for watching.
**Notes:**
- path: Path to folder to watch.
- Recursive: Whether to watch subdirectories.
- Flags: What to watch for. Please combine kNotifyChange* constants with bitwiseOr.

Returns false on error and true on success.
You can add several directories to a watcher.
See also:
76.4. AddDirectory(path as folderitem, Recursive as boolean, Flags as Integer) as Boolean

76.4.5 Constructor

76.4.6 NextChange as WindowsDirectoryChangeMBS

Notes: Call this method in a loop in a timer until it returns nil. This way you can get all the changes.

76.4.7 Constants

76.4.8 kNotifyChangeAttributes = 4

MBS Win Plugin, Plugin Version: 12.0. Function: One of the flag constants. Notes: Any attribute change in the watched directory or subtree causes a change notification wait operation to return.

76.4.9 kNotifyChangeCreation = 64

MBS Win Plugin, Plugin Version: 12.0. Function: One of the flag constants. Notes: Any change to the creation time of files in the watched directory or subtree causes a change notification wait operation to return.

76.4.10 kNotifyChangeDirName = 2

MBS Win Plugin, Plugin Version: 12.0. Function: One of the flag constants. Notes: Any directory-name change in the watched directory or subtree causes a change notification wait operation to return. Changes include creating or deleting a directory.
76.4.11 \textit{kNotifyChangeFilename} = 1

MBS Win Plugin, Plugin Version: 12.0. \textbf{Function:} One of the flag constants. 
\textbf{Notes:} Any file name change in the watched directory or subtree causes a change notification wait operation to return. Changes include renaming, creating, or deleting a file.

76.4.12 \textit{kNotifyChangeLastAccess} = 32

MBS Win Plugin, Plugin Version: 12.0. \textbf{Function:} One of the flag constants. 
\textbf{Notes:} Any change to the last access time of files in the watched directory or subtree causes a change notification wait operation to return. 

Be careful: This flag is very performance consuming as you get a lot of events!

76.4.13 \textit{kNotifyChangeLastWrite} = 16

MBS Win Plugin, Plugin Version: 12.0. \textbf{Function:} One of the flag constants. 
\textbf{Notes:} Any change to the last write-time of files in the watched directory or subtree causes a change notification wait operation to return. The operating system detects a change to the last write-time only when the file is written to the disk. For operating systems that use extensive caching, detection occurs only when the cache is sufficiently flushed.

76.4.14 \textit{kNotifyChangeSecurity} = 256

MBS Win Plugin, Plugin Version: 12.0. \textbf{Function:} One of the flag constants. 
\textbf{Notes:} Any security-descriptor change in the watched directory or subtree causes a change notification wait operation to return.

76.4.15 \textit{kNotifyChangeSize} = 8

MBS Win Plugin, Plugin Version: 12.0. \textbf{Function:} One of the flag constants. 
\textbf{Notes:} Any file-size change in the watched directory or subtree causes a change notification wait operation to return. The operating system detects a change in file size only when the file is written to the disk. For operating systems that use extensive caching, detection occurs only when the cache is sufficiently flushed.
76.5.  CLASS WINDOWS FOLDER CHANGEMBS

76.5  class WindowsFolderChangeMBS

76.5.1  class WindowsFolderChangeMBS

MBS Win Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The class to get notifications for folder changes on Windows.
**Notes:** On Mac OS X 10.5 you can use the FSEventsMBS class and on older Mac OS X the class Folder-
ChangedNotificationMBS.

76.5.2  Methods

76.5.3  Constructor(path as folderitem, subtree as boolean, FilterFlags as Integer)

MBS Win Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The constructor to start the notification service.
**Notes:**
path: The full path of the directory to be watched.
subtree: If this parameter is true, the function monitors the directory tree rooted at the specified directory;
if it is false, it monitors only the specified directory.
FilterFlags: The filter conditions that satisfy a change notification wait. This parameter can be one or more
of the constants in this class.

Requires Windows 2000.

76.5.4  Properties

76.5.5  ChangeCount as Integer

MBS Win Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The number of calls to the Changed event.
**Notes:** (Read and Write property)

76.5.6  Handle as Integer

MBS Win Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The internal handle of the notification.
**Notes:** (Read and Write property)
76.5.7 Events

76.5.8 Changed

MBS Win Plugin, Plugin Version: 8.5. Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Something has changed in the given folder.

76.5.9 Constants

76.5.10 ChangeAttribute=4

MBS Win Plugin, Plugin Version: 8.5. **Function:** One of the flags for the constructor. **Notes:** Any attribute change in the watched directory or subtree causes a change notification wait operation to return.

76.5.11 ChangeDir=2

MBS Win Plugin, Plugin Version: 8.5. **Function:** One of the flags for the constructor. **Notes:** Any directory-name change in the watched directory or subtree causes a change notification wait operation to return. Changes include creating or deleting a directory.

76.5.12 ChangeFile=1

MBS Win Plugin, Plugin Version: 8.5. **Function:** One of the flags for the constructor. **Notes:** Any file name change in the watched directory or subtree causes a change notification wait operation to return. Changes include renaming, creating, or deleting a file name.

76.5.13 ChangeSecurity=256

MBS Win Plugin, Plugin Version: 8.5. **Function:** One of the flags for the constructor. **Notes:** Any security-descriptor change in the watched directory or subtree causes a change notification wait operation to return.

76.5.14 ChangeSize=8

MBS Win Plugin, Plugin Version: 8.5. **Function:** One of the flags for the constructor. **Notes:** Any file-size change in the watched directory or subtree causes a change notification wait opera-
tion to return. The operating system detects a change in file size only when the file is written to the disk. For operating systems that use extensive caching, detection occurs only when the cache is sufficiently flushed.

76.5.15 ChangeWrite=16

MBS Win Plugin, Plugin Version: 8.5. **Function:** One of the flags for the constructor. **Notes:** Any change to the last write-time of files in the watched directory or subtree causes a change notification wait operation to return. The operating system detects a change to the last write-time only when the file is written to the disk. For operating systems that use extensive caching, detection occurs only when the cache is sufficiently flushed.
Chapter 77

Fonts

77.1 class FontFamilyFontIteratorMBS

77.1.1 class FontFamilyFontIteratorMBS

MBS MacCF Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** A class to list all Fonts inside a font family.

**Notes:**

Requires Mac OS 9.0 or newer.
This class has been deprecated. Future plugins will offer CoreText classes for similar functions.
Deprecated: Please move to NSFontMBS class.

77.1.2 Methods

77.1.3 close

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

**Notes:**

There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)
CHAPTER 77. FONTS

77.1.4 NextFont as FontMBS

MBS MacCF Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the next font. **Notes:** Requires Mac OS 9.0 or newer. See also:

- 77.1.5 NextFont(byref style as Integer, byref size as Integer) as FontMBS

77.1.5 NextFont(byref style as Integer, byref size as Integer) as FontMBS

MBS MacCF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the next font and reports the style and size of the font. **Notes:** Requires Mac OS 9.0 or newer.

Font Style constants:

- normal = 0
- bold = 1
- italic = 2
- underline = 4
- outline = 8
- shadow = 16
- condense = 32
- extend = 64

If size=0 the font is a vector based font. See also:

- 77.1.4 NextFont as FontMBS

77.1.6 Reset

MBS MacCF Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Resets this object to return the first font family on the next call to NextFont. **Notes:** Requires Mac OS 9.0 or newer.
77.2. **CLASS FONTFAMILYITERATORMBS**

**77.2 class FontFamilyIteratorMBS**

**77.2.1 class FontFamilyIteratorMBS**

MBS MacCF Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** A class to list all Font Families.

**Notes:**

Requires Mac OS 9.0 or newer. This class has been deprecated. Future plugins will offer CoreText classes for similar functions. Deprecated: Please move to NSFontMBS class.

**77.2.2 Methods**

**77.2.3 close**

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

**Notes:**

There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you. (e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

**77.2.4 NextFontFamily as FontFamilyMBS**

MBS MacCF Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the next font family.

**Notes:** Requires Mac OS 9.0 or newer.

**77.2.5 Reset**

MBS MacCF Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Resets this object to return the first font family on the next call to NextFontFamily.

**Notes:** Requires Mac OS 9.0 or newer.
77.3 class FontFamilyMBS

77.3.1 class FontFamilyMBS

MBS MacCF Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** A class to get detailed information about a font family.

**Notes:**

Requires Mac OS 9.0 or newer.
This class has been deprecated. Future plugins will offer CoreText classes for similar functions.
Deprecated: Please move to NSFontMBS class.

77.3.2 Methods

77.3.3 Encoding as Integer

MBS MacCF Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The text encoding of this font family.

**Notes:**

Requires Mac OS 9.0 or newer.

Some example values for common encodings:

- MacRoman 0 Also sometimes for ASCII or binary data used.
- WindowsLatin1 & h0500 ANSI codepage 1252
- 7bit ASCII & h0600 ASCII
- ISOLatin1 & h0201 ISO 8859-1
- NextStepLatin & h0B01 NextStep encoding
- Unicode & h0100 16 bit Unicode
- UTF8 & h08000100 8 bit Unicode

77.3.4 Font(Style as Integer) as FontMBS

MBS MacCF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Queries the font used for this font family which has the given style.

**Notes:**

Returns nil on any error.

Font Style constants:
77.3. **CLASS FONTFAMILYMBS**

normal = 0
bold = 1
italic = 2
underline = 4
outline = 8
shadow = 16
condense = 32
extend = 64

See also:

- 77.3.5 Font(Style as Integer, byref IntrinsicStyle as Integer) as FontMBS

---

**77.3.5 Font(Style as Integer, byref IntrinsicStyle as Integer) as FontMBS**

MBS MacCF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Queries the font used for this font family which has the given style. **Notes:**

IntrinsicStyle returns the effective style.
Returns nil on any error.

Font Style constants:

normal = 0
bold = 1
italic = 2
underline = 4
outline = 8
shadow = 16
condense = 32
extend = 64

See also:

- 77.3.4 Font(Style as Integer) as FontMBS
77.3.6  FontContainer(Style as Integer, Size as Integer) as folderitem

MBS MacCF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Obtains the font container associated with a font family instance.

**Example:**

```vbscript
dim f as new FontFamilyIteratorMBS
dim fo as FontFamilyMBS
dim file as FolderItem

fo=f.NextFontFamily

// shows name of first font family
MsgBox fo.Name

// style: 0 (normal)
// size: 0
file=fo.FontContainer(0, 0)

// shows file for font family
MsgBox file.AbsolutePath
```

**Notes:** You need to pass in a valid style and size.

77.3.7  FontFamilyResource(Style as Integer, Size as Integer) as string

MBS MacCF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Obtains the font family resource for a font family.

**Notes:** You need to pass in a valid style and size.

77.3.8  Fonts as FontFamilyFontIteratorMBS

MBS MacCF Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns an Interator to list all fonts of this font family.

**Notes:** Requires Mac OS 9.0 or newer.
77.3. **CLASS FONTFAMILYMBS**

### 77.3.9 GenerationCount as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
If the font family changes this generation count is updated.

**Notes:**
You can use this function in conjunction with the iteration functions to identify changes made to the font database.

Requires Mac OS 9.0 or newer.

### 77.3.10 Name as string

MBS MacCF Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The name of this font family.

**Notes:**
On RB 4.5 the encoding is set. For older RB versions you need to set the encoding yourself using the encoding function of this class.
Requires Mac OS 9.0 or newer.

### 77.3.11 Properties

#### 77.3.12 Handle as Integer

MBS MacCF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
The internal fontfamily handle for this object.

**Notes:** (Read only property)
CHAPTER 77. FONTS

77.4 class FontIteratorMBS

77.4.1 class FontIteratorMBS

MBS MacCF Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** A class to list all Font Families.

**Notes:**

Requires Mac OS 9.0 or newer.

This class has been deprecated. Future plugins will offer CoreText classes for similar functions.

Deprecated: Please move to NSFontMBS class.

77.4.2 Methods

77.4.3 close

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

**Notes:**

There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.

(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

77.4.4 NextFont as FontMBS

MBS MacCF Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the next font family.

**Notes:** Requires Mac OS 9.0 or newer.

77.4.5 Reset

MBS MacCF Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Resets this object to return the first font family on the next call to NextFont.

**Notes:** Requires Mac OS 9.0 or newer.
77.5.  CLASS FONTMBS

77.5  class FontMBS

77.5.1  class FontMBS

MBS MacCF Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: A class to get detailed information about a Font.
Notes:
Requires Mac OS 9.0 or newer.
This class has been deprecated. Future plugins will offer CoreText classes for similar functions.
Deprecated: Please move to NSFontMBS class.

77.5.2  Methods

77.5.3  FontFamily as FontFamilyMBS

Notes:
Returns nil on any error.
The optional style parameter returns which style this font has related to the font family. (normal QuickDraw constants apply like: bold=1 and italic=2)
See also:

• 77.5.4 FontFamily(byref style as Integer) as FontFamilyMBS

77.5.4  FontFamily(byref style as Integer) as FontFamilyMBS

Notes:
Returns nil on any error.
The optional style parameter returns which style this font has related to the font family. (normal QuickDraw constants apply like: bold=1 and italic=2)
See also:

• 77.5.3 FontFamily as FontFamilyMBS

77.5.5  GenerationCount as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: If the font changes this generation count is updated.
Notes:

You can use this function in conjunction with the iteration functions to identify changes made to the font database.

Requires Mac OS 9.0 or newer.

77.5.6 GetApplicationFont as Integer

MBS MacCF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function:
The GetApplicationFont function returns the font family ID of the current application font.
Notes: The GetApplicationFont function returns the current value of the global variable ApFontID, which
is the font family ID of the current application font. This is the font family ID that has been mapped to 1
by the system software.

77.5.7 GetApplicationFontName as string

MBS MacCF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function:
Returns the family name of the application font.
Notes:
Returns "" on any error.

The font name has MacRoman encoding as the plugin doesn’t know it better. This assumption will fail on
asian computers, so take the ID from GetApplicationFont and lookup the right name with the font family
classes in our plugins.

77.5.8 GetFontName(FontNumber as Integer) as string

MBS MacCF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function:
The GetFontName function returns the name of a font family that has a specified family ID number.
Example:
// shows system font name:
'M MsgBox FontMBS.GetFontName(0) // RB 5.5
MsgBox FontMBS.GetFontName(0) // RB 2008

Notes:
Returns "" on any error.

The font name has MacRoman encoding as the plugin doesn’t know it better. This assumption will fail on asian computers, so take the ID and lookup the right name with the font family classes in our plugins.

### 77.5.9 GetFontNumber(Name as string) as Integer

MBS MacCF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the font family ID for a specified font family name.

**Notes:**
Given a font name, the GetFontNumber function returns the font family ID for the font family. If the font specified in the parameter name does not exist, it returns 0.

Returns 0 on any error.

### 77.5.10 GetSystemFont as Integer

MBS MacCF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
The GetSystemFont function determines the font family ID of the current system font.

**Notes:**
The GetSysFont function returns the current value of the global variable SysFontFam, which is the font family ID of the current system font. This is the font family ID that has been mapped to 0 by the system software.

Returns 0 on any error.

### 77.5.11 GetSystemFontName as string

MBS MacCF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the system font name.

**Notes:**
Returns "" on any error.

The font name has MacRoman encoding as the plugin doesn’t know it better. This assumption will fail on asian computers, so take the ID from GetSystemFont and lookup the right name with the font family classes in our plugins.
77.5.12 Properties

77.5.13 File as Folderitem

MBS MacCF Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The location of the Font’s file.
**Notes:**
The property file provides a reference to the Font suitcase rather than the PostScript outline file for ‘LWFN’ class fonts. This means that there is no single function implemented to obtain the data stored in the PostScript outline file.
Requires Mac OS 9.0 or newer.
(Read only property)

77.5.14 Format as string

MBS MacCF Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The Font file format.
**Notes:**
**Results:**

"true"   TrueType Font
"typ1"   PostScript Font
"LWFN"   PostScript Type 1 Font
"OTTO"   PostScript compact Font format (CFF) Font

Requires Mac OS 9.0 or newer.
(Read only property)

77.5.15 Handle as Integer

MBS MacCF Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The internal font handle for this object.
**Notes:** (Read only property)
77.6. **GLOBALS**

77.6  Globals

77.6.1  **FontGenerationCountMBS as Integer**

MBS MacCF Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Any operation that adds, deletes, or modifies one or more font families or fonts triggers an update of the global generation count.

**Notes:**
You can use this function in conjunction with the iteration functions to identify changes made to the font database.

Requires Mac OS 9.0 or newer.

77.6.2  **GetFontFamilyMBS(name as string) as FontFamilyMBS**

MBS MacCF Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the FontFamily with the given name.

**Notes:**
Requires Mac OS 9.0 or newer.
Returns nil on any error.

Renamed in plugin version 3.3 to GetFontFamilyMBS instead of FontFamilyMBS.
Deprecated: Please move to NSFontMBS class.

77.7  class **WindowsFontDialogMBS**

77.7.1  class **WindowsFontDialogMBS**

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The class for the standard font dialog for Windows.

**Notes:**
Creates a Font dialog box that enables the user to choose attributes for a logical font. These attributes include a font family and associated font style, a point size, effects (underline, strikeout, and text color), and a script (or character set).

see also
77.7.2 Methods

77.7.3 ChooseFont as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
Creates a Font dialog box that enables the user to choose attributes for a logical font.
**Notes:**
- Returns true if user pressed OK button.
- Lasterror is set.
- Returns false or sets lasterror to zero for cancel.

77.7.4 CloseDialog

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
Close the dialog.
**Notes:** Can be called from various events to close the dialog programmatically.

77.7.5 Query

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
Queries current dialog values into properties.

77.7.6 Update

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
Updates dialog with current properties.

77.7.7 Properties

77.7.8 Bold as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
The bold value.
**Notes:** (Read and Write property)
77.7.9 CurrentFont as WindowsFontFamilyMBS

**Notes:**
You may need to call Query to get current state from dialog.
This returns a copy, so changes to the font object are not going back.
(Read only property)

77.7.10 DialogHandle as Integer

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Internal window handle for dialog.

**Notes:** (Read and Write property)

77.7.11 Effects as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Wether to show text effect controls.

**Notes:**
Causes the dialog box to display the controls that allow the user to specify strikeout, underline, and text color options. If this flag is set, you can use the textColor member to specify the initial text color. You can use the StrikeThrough and Underline members to specify the initial settings of the strikeout and underline check boxes. ChooseFont can use these members to return the user’s selections.
(Read and Write property)

77.7.12 FontName as String

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The font name of current font.

**Notes:** (Read and Write property)

77.7.13 FontType as Integer

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The type of the selected font when ChooseFont returns.

**Notes:**
This member can be one or more of the following values:
FontTypeBold, FontTypeItalic, FontTypePrinter, FontTypeRegular, FontTypeScreen and FontTypeSimulator.
(Read and Write property)

77.7.14  ForceFontExist as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
Wether to only allow existing fonts.

**Notes:**
ChooseFont should indicate an error condition if the user attempts to select a font or style that is not listed in the dialog box.
(Read and Write property)

77.7.15  Height as Integer

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
The height, in logical units, of the font’s character cell or character.

**Notes:**
The character height value (also known as the em height) is the character cell height value minus the internal-leading value. The font mapper interprets the value specified in lfHeight in the following manner.

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>&gt;0</td>
<td>The font mapper transforms this value into device units and matches it against the cell height of the available fonts.</td>
</tr>
<tr>
<td>0</td>
<td>The font mapper uses a default height value when it searches for a match.</td>
</tr>
<tr>
<td>&lt;0</td>
<td>The font mapper transforms this value into device units and matches its absolute value against the character height of the available fonts.</td>
</tr>
</tbody>
</table>

For all height comparisons, the font mapper looks for the largest font that does not exceed the requested size.
This mapping occurs when the font is used for the first time.
(Read and Write property)

77.7.16  Italic as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
Wether font is italic.
77.7. **Last**Error as Integer

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
The last error code.
**Notes:** (Read and Write property)

77.7.18 **Limit**Size as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
Wether to limit font sizes.
**Notes:**
ChooseFont should select only font sizes within the range specified by the MinSize and MaxSize members.
(Read and Write property)

77.7.19 **Max**Size as Integer

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
The maximum allowed font size.
**Notes:**
Setting this also sets LimitSize to true.
(Read and Write property)

77.7.20 **Min**Size as Integer

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
The minimum allowed font size.
**Notes:**
Setting this also sets LimitSize to true.
(Read and Write property)

77.7.21 **No**FontSimulations as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
Wether ChooseFont should not display or allow selection of font simulations.
77.7.22  NoInitialFaceSelection as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No.  **Function:**
Wether to show initial font selection.

**Notes:**
When initializing the dialog box controls, use this flag to prevent the dialog box from displaying an initial
selection for the font name combo box. This is useful when there is no single font name that applies to the
text selection.
(Read and Write property)

77.7.23  NoInitialSizeSelection as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No.  **Function:**
Wether to show initialize size.

**Notes:**
When initializing the dialog box controls, use this flag to prevent the dialog box from displaying an initial
selection for the Font Size combo box. This is useful when there is no single font size that applies to the
text selection.
(Read and Write property)

77.7.24  NoInitialStyleSelection as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No.  **Function:**
Whether to show initial style options.

**Notes:**
When initializing the dialog box controls, use this flag to prevent the dialog box from displaying an initial
selection for the Font Style combo box. This is useful when there is no single font style that applies to the
text selection.
(Read and Write property)

77.7.25  NoVectorFonts as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No.  **Function:**
Wether ChooseFont should not allow vector font selections.
**Notes:** (Read and Write property)
77.7.26 NoVerticalFonts as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Whether the Font dialog box lists only horizontally oriented fonts. **Notes:** (Read and Write property)

77.7.27 OnlyFixedPitchFonts as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Whether ChooseFont should enumerate and allow selection of only fixed-pitch fonts. **Notes:** (Read and Write property)

77.7.28 OnlyTrueTypeFonts as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Whether ChooseFont should only enumerate and allow the selection of TrueType fonts. **Notes:** (Read and Write property)

77.7.29 Parent as Window

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The parent window. **Notes:** The window that owns the dialog box. This member can be any valid window, or it can be nil if the dialog box has no owner. (Read and Write property)

77.7.30 ScalableFontsOnly as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Whether to only allow scalable fonts. **Notes:** Specifies that ChooseFont should allow only the selection of scalable fonts. Scalable fonts include vector fonts, scalable printer fonts, TrueType fonts, and fonts scaled by other technologies. (Read and Write property)
77.7.31  ShowApply as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
Wether to show Apply button.
**Notes:**
Causes the dialog box to display the Apply button.
Clicking Apply button does trigger Apply event.
(Read and Write property)

77.7.32  ShowInactiveFonts as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
Wether to display hidden fonts.
**Notes:**
ChooseFont can additionally display fonts that are set to Hide in Fonts Control Panel.
(Read and Write property)

77.7.33  Size as Double

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
The size of the font.
**Notes:** (Read and Write property)

77.7.34  Strikethrough as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
Wether font is stroke through.
**Notes:** (Read and Write property)

77.7.35  TextColor as Color

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
The text color for the font.
**Notes:**
Only used if Effects is true.
(Read and Write property)
77.7.40  Underline as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
Wether font is underlined.
**Notes:** (Read and Write property)

77.7.41  Weight as Integer

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
The weight of the font in the range 0 through 1000.
**Notes:**
For example, 400 is normal and 700 is bold. If this value is zero, a default weight is used.

The following values are defined for convenience.

<table>
<thead>
<tr>
<th>Value</th>
<th>Weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>FW_DONTCARE</td>
<td>0</td>
</tr>
<tr>
<td>FW_THIN</td>
<td>100</td>
</tr>
<tr>
<td>FW_EXTRALIGHT</td>
<td>200</td>
</tr>
<tr>
<td>FW_ULTRALIGHT</td>
<td>200</td>
</tr>
<tr>
<td>FW_LIGHT</td>
<td>300</td>
</tr>
<tr>
<td>FW_NORMAL</td>
<td>400</td>
</tr>
<tr>
<td>FW_REGULAR</td>
<td>400</td>
</tr>
<tr>
<td>FW_MEDIUM</td>
<td>500</td>
</tr>
<tr>
<td>FW_SEMIBOLD</td>
<td>600</td>
</tr>
<tr>
<td>FW_DEMIBOLD</td>
<td>600</td>
</tr>
<tr>
<td>FW_BOLD</td>
<td>700</td>
</tr>
<tr>
<td>FW_EXTRABOLD</td>
<td>800</td>
</tr>
<tr>
<td>FW_ULTRABOLD</td>
<td>800</td>
</tr>
<tr>
<td>FW_HEAVY</td>
<td>900</td>
</tr>
<tr>
<td>FW_BLACK</td>
<td>900</td>
</tr>
</tbody>
</table>

(Read and Write property)

77.7.42  Events

77.7.43  Apply

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
The user pressed apply.
Notes: Our plugin automatically calls query for you to get current values from dialog into properties.

77.7.40 BoundsChanged

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
The bounds changed.

77.7.41 BoundsChanging

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
The bounds are changing.

77.7.42 GotFocus

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
The window got focus.

77.7.43 Hide

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
The window is hidden.

77.7.44 Init

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
The dialog initialized.
**Notes:** You can work with dialog via DialogHandle property.

77.7.45 LostFocus

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
The window lost focus.
77.7.46 Show

MBS Win Plugin, Plugin Version: 17.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
The window is shown.

77.7.47 Constants

77.7.48 **FontTypeBold = & h100**

MBS Win Plugin, Plugin Version: 17.3. **Function:** One of the font type constants. **Notes:** The font weight is bold.

77.7.49 **FontTypeItalic = & h200**

MBS Win Plugin, Plugin Version: 17.3. **Function:** One of the font type constants. **Notes:** The italic font attribute is set.

77.7.50 **FontTypePrinter = & h4000**

MBS Win Plugin, Plugin Version: 17.3. **Function:** One of the font type constants. **Notes:** The font is a printer font.

77.7.51 **FontTypeRegular = & h400**

MBS Win Plugin, Plugin Version: 17.3. **Function:** One of the font type constants. **Notes:** The font weight is normal.

77.7.52 **FontTypeScreen = & h2000**

MBS Win Plugin, Plugin Version: 17.3. **Function:** One of the font type constants. **Notes:** The font is a screen font.
77.7.53  FontTypeSimulator = & h8000

MBS Win Plugin, Plugin Version: 17.3. **Function:** One of the font type constants.  
**Notes:** The font is simulated by the graphics device interface (GDI).
77.8. **CLASS WINDOWSFONTFAMILYMBS**

### 77.8.1 class WindowsFontFamilyMBS

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The class for details on Windows fonts.

**Example:**

```vbnet
dim lines(-1) as string

for each f as WindowsFontFamilyMBS in WindowsFontFamilyMBS.AllFonts
    lines.append f.LogFontFullName
next

MsgBox Join(lines, EndOfLine)
```

**Notes:** The font list is the same as font() function in Real Studio as far as we see.

### 77.8.2 Methods

#### 77.8.3 AllFonts as WindowsFontFamilyMBS()

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Queries all fonts on this windows machine.

**Example:**

```vbnet
dim lines(-1) as string

for each f as WindowsFontFamilyMBS in WindowsFontFamilyMBS.AllFonts
    lines.append f.LogFontFullName
next

MsgBox Join(lines, EndOfLine)
```

- 77.8.4 AllFonts(fonts() as WindowsFontFamilyMBS) as Integer
CHAPTER 77. FONTS

77.8.4 AllFonts(fonts() as WindowsFontFamilyMBS) as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function:
Queries all fonts on this windows machine.
Notes:
Returns the number of fonts found and sets the font objects in the array.
if the array is too short, you get the first ubound(fonts)+1 fonts set there.
See also:
  • 77.8.3 AllFonts as WindowsFontFamilyMBS()

77.8.5 AxisMaxValue(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function:
The maximum value for this axis.
Notes:
Index is from zero to NumberOfAxes-1.
Only available for truetype fonts.

77.8.6 AxisMinValue(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function:
The minimum value for this axis.
Notes:
Index is from zero to NumberOfAxes-1.
Only available for truetype fonts.

77.8.7 AxisName(index as Integer) as string

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function:
The name of the axis.
Notes:
Index is from zero to NumberOfAxes-1.
Only available for truetype fonts.
77.8.8 DesignVectorValues(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
An array specifying the values of the axes of a multiple master OpenType font.
**Notes:** This array corresponds to the axes* arrays.

77.8.9 FontsOfFamily(family as string) as WindowsFontFamilyMBS()

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Queries all fonts of the given font family on this windows machine.
See also:
- 77.8.10 FontsOfFamily(family as string, fonts() as WindowsFontFamilyMBS) as Integer

77.8.10 FontsOfFamily(family as string, fonts() as WindowsFontFamilyMBS) as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Queries all fonts of the given font family on this windows machine.
**Notes:**
Returns the number of fonts found and sets the font objects in the array.
if the array is too short, you get the first ubound(fonts)+1 fonts set there.
See also:
- 77.8.9 FontsOfFamily(family as string) as WindowsFontFamilyMBS()

77.8.11 Properties

77.8.12 CodepageBitfield as MemoryBlock

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
A 64-bit, code-page bitfield (CPB) that identifies a specific character set or code page. #
**Notes:**
Code pages are in the lower 32 bits of this bitfield. The high 32 are used for non-Windows code pages. For more information, see Code Page Bitfields.

Only available for truetype fonts.
(Read only property)

**CHAPTER 77. FONTS**

### 77.8.13 FontType as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The type of the font.  
**Notes:**  
This parameter can be a combination of these values:

- DEVICE_FONTTYPE
- RASTER_FONTTYPE
- TRUETYPE_FONTTYPE

(Read only property)

### 77.8.14 LogFontBold as Boolean

MBS Win Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Whether font is bold.  
**Notes:**  
Setting to false, will set Weight to 400, setting to true will set Weight to 700. Returns true if Weight is equal or more than 700.  
(Read only property)

### 77.8.15 LogFontCharSet as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The character set. The following values are predefined.  
**Notes:**  
The following values are predefined.

- ANSI_CHARSET
- BALTIC_CHARSET
- CHINESEBIG5_CHARSET
- DEFAULT_CHARSET
- EASTEUROPE_CHARSET
- GB2312_CHARSET
- GREEK_CHARSET
- HANGUL_CHARSET
- MAC_CHARSET
- OEM_CHARSET
- RUSSIAN_CHARSET
- SHIFTJIS_CHARSET
- SYMBOL_CHARSET
Korean language edition of Windows:

JOHAB_CHARSET

Middle East language edition of Windows:

ARABIC_CHARSET
HEBREW_CHARSET

Thai language edition of Windows:

THAI_CHARSET

The OEM_CHARSET value specifies a character set that is operating-system dependent.

DEFAULT_CHARSET is set to a value based on the current system locale. For example, when the system locale is English (United States), it is set as ANSI_CHARSET.

Fonts with other character sets may exist in the operating system. If an application uses a font with an unknown character set, it should not attempt to translate or interpret strings that are rendered with that font.

This parameter is important in the font mapping process. To ensure consistent results, specify a specific character set. If you specify a typeface name in the lfFaceName member, make sure that the lfCharSet value matches the character set of the typeface specified in lfFaceName.
(Read only property)

77.8.16 LogFontClipPrecision as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The clipping precision.

**Notes:**
The clipping precision defines how to clip characters that are partially outside the clipping region. It can be one or more of the following values.

For more information about the orientation of coordinate systems, see the description of the nOrientation parameter.
<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>CLIP_CHARACTER_PRECIS</td>
<td>Not used.</td>
</tr>
<tr>
<td>CLIP_DEFAULT_PRECIS</td>
<td>Specifies default clipping behavior.</td>
</tr>
<tr>
<td>CLIP_DFA_DISABLE</td>
<td>Windows XP SP1: Turns off font association for the font. Note that this flag is not guaranteed to have any effect on any platform after Windows Server 2003.</td>
</tr>
<tr>
<td>CLIP_EMBEDDED</td>
<td>You must specify this flag to use an embedded read-only font.</td>
</tr>
<tr>
<td>CLIP_LHANGLES</td>
<td>When this value is used, the rotation for all fonts depends on whether the orientation of the coordinate system is left-handed or right-handed. If not used, device fonts always rotate counterclockwise, but the rotation of other fonts is dependent on the orientation of the coordinate system.</td>
</tr>
<tr>
<td>CLIP_MASK</td>
<td>Not used.</td>
</tr>
<tr>
<td>CLIP_DFA_OVERRIDE</td>
<td>Turns off font association for the font. This is identical to CLIP_DFA_DISABLE, but it can have problems in some situations; the recommended flag to use is CLIP_DFA_DISABLE.</td>
</tr>
<tr>
<td>CLIP_STROKE_PRECIS</td>
<td>Not used by the font mapper, but is returned when raster, vector, or TrueType fonts are enumerated. For compatibility, this value is always returned when enumerating fonts.</td>
</tr>
</tbody>
</table>

(Read only property)

### 77.8.17 LogFontEscapement as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The angle, in tenths of degrees, between the escapement vector and the x-axis of the device. **Notes:** The escapement vector is parallel to the base line of a row of text.

When the graphics mode is set to GM_ADVANCED, you can specify the escapement angle of the string independently of the orientation angle of the string’s characters.

When the graphics mode is set to GM_COMPATIBLE, LogFontEscapement specifies both the escapement and orientation. You should set LogFontEscapement and LogFontOrientation to the same value.

(Read only property)

### 77.8.18 LogFontFaceName as String

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string that specifies the typeface name of the font. **Notes:** (Read only property)
77.8.19  LogFontFullName as String

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The unique name of the font.
**Notes:**
For example, ABC Font Company TrueType Bold Italic Sans Serif.
(Read only property)

77.8.20  LogFontHeight as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The height, in logical units, of the font’s character cell or character.
**Notes:**
The character height value (also known as the em height) is the character cell height value minus the internal-leading value. The font mapper interprets the value specified in lfHeight in the following manner.

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>&gt;0</td>
<td>The font mapper transforms this value into device units and matches it against the cell height of the available fonts.</td>
</tr>
<tr>
<td>0</td>
<td>The font mapper uses a default height value when it searches for a match.</td>
</tr>
<tr>
<td>&lt;0</td>
<td>The font mapper transforms this value into device units and matches its absolute value against the character height of the available fonts.</td>
</tr>
</tbody>
</table>

For all height comparisons, the font mapper looks for the largest font that does not exceed the requested size.
This mapping occurs when the font is used for the first time.
(Read only property)

77.8.21  LogFontItalic as Boolean

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
An italic font if set to true.
**Notes:** (Read only property)
77.8.22 LogFontOrientation as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The angle, in tenths of degrees, between each character’s base line and the x-axis of the device.
**Notes:** (Read only property)

77.8.23 LogFontOutPrecision as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The output precision.
**Notes:**
The output precision defines how closely the output must match the requested font’s height, width, character orientation, escapement, pitch, and font type. It can be one of the following values.

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>OUT_CHARACTER_PRECIS</td>
<td>Not used.</td>
</tr>
<tr>
<td>OUT_DEFAULT_PRECIS</td>
<td>Specifies the default font mapper behavior.</td>
</tr>
<tr>
<td>OUTDEVICE_PRECIS</td>
<td>Instructs the font mapper to choose a Device font when the system contains multiple fonts with the same name.</td>
</tr>
<tr>
<td>OUTOUTLINE_PRECIS</td>
<td>This value instructs the font mapper to choose from TrueType and other outline-based fonts.</td>
</tr>
<tr>
<td>OUTPS_ONLY_PRECIS</td>
<td>Instructs the font mapper to choose from only PostScript fonts. If there are no PostScript fonts installed in the system, the font mapper returns to default behavior.</td>
</tr>
<tr>
<td>OUTRASTER_PRECIS</td>
<td>Instructs the font mapper to choose a raster font when the system contains multiple fonts with the same name.</td>
</tr>
<tr>
<td>OUTSTRING_PRECIS</td>
<td>This value is not used by the font mapper, but it is returned when raster fonts are enumerated.</td>
</tr>
<tr>
<td>OUTSTROKE_PRECIS</td>
<td>This value is not used by the font mapper, but it is returned when TrueType, other outline-based fonts, and vector fonts are enumerated.</td>
</tr>
<tr>
<td>OUTTT_ONLY_PRECIS</td>
<td>Instructs the font mapper to choose from only TrueType fonts. If there are no TrueType fonts installed in the system, the font mapper returns to default behavior.</td>
</tr>
<tr>
<td>OUTTT_PRECIS</td>
<td>Instructs the font mapper to choose a TrueType font when the system contains multiple fonts with the same name.</td>
</tr>
</tbody>
</table>

Applications can use the OUTDEVICE_PRECIS, OUTRASTER_PRECIS, OUTTT_PRECIS, and OUTPS_ONLY_PRECIS values to control how the font mapper chooses a font when the operating system contains more than one font with a specified name. For example, if an operating system contains a font named Symbol in raster and TrueType form, specifying OUTTT_PRECIS forces the font mapper to choose the TrueType version. Specifying OUTTT_ONLY_PRECIS forces the font mapper to choose a TrueType font, even if it must substitute a TrueType font of another name.
(Read only property)
77.8.24 LogFontPitchAndFamily as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The pitch and family of the font.

**Notes:**
The two low-order bits specify the pitch of the font and can be one of the following values.

- DEFAULT_PITCH
- FIXED_PITCH
- VARIABLE_PITCH

Bits 4 through 7 of the member specify the font family and can be one of the following values.

- FF_DECORATIVE
- FF_DONTCARE
- FF_MODERN
- FF_ROMAN
- FF_SCRIPT
- FF_SWISS

The proper value can be obtained by using the Boolean OR operator to join one pitch constant with one family constant.

Font families describe the look of a font in a general way. They are intended for specifying fonts when the exact typeface desired is not available. The values for font families are as follows.

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>FF_DECORATIVE</td>
<td>Novelty fonts. Old English is an example.</td>
</tr>
<tr>
<td>FF_DONTCARE</td>
<td>Use default font.</td>
</tr>
<tr>
<td>FF_MODERN</td>
<td>Fonts with constant stroke width (monospace), with or without serifs. Monospace fonts are usually modern. Pica, Elite, and CourierNew are examples.</td>
</tr>
<tr>
<td>FF_ROMAN</td>
<td>Fonts with variable stroke width (proportional) and with serifs. MS Serif is an example.</td>
</tr>
<tr>
<td>FF_SCRIPT</td>
<td>Fonts designed to look like handwriting. Script and Cursive are examples.</td>
</tr>
<tr>
<td>FF_SWISS</td>
<td>Fonts with variable stroke width (proportional) and without serifs. MS Sans Serif is an example.</td>
</tr>
</tbody>
</table>

(Read only property)
77.8.25 LogFontQuality as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The output quality. **Notes:**
The output quality defines how carefully the graphics device interface (GDI) must attempt to match the logical-font attributes to those of an actual physical font. It can be one of the following values.

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>ANTIALIASED_QUALITY</td>
<td>Font is always antialiased if the font supports it and the size of the font is not too small or too large.</td>
</tr>
<tr>
<td>CLEARTYPE_QUALITY</td>
<td>If set, text is rendered (when possible) using ClearType antialiasing method. See Remarks for more information.</td>
</tr>
<tr>
<td>DEFAULT_QUALITY</td>
<td>Appearance of the font does not matter.</td>
</tr>
<tr>
<td>DRAFT_QUALITY</td>
<td>Appearance of the font is less important than when PROOF_QUALITY is used. For GDI raster fonts, scaling is enabled, which means that more font sizes are available, but the quality may be lower. Bold, italic, underline, and strikeout fonts are synthesized if necessary.</td>
</tr>
<tr>
<td>NONANTIALIASED_QUALITY</td>
<td>Font is never antialiased.</td>
</tr>
<tr>
<td>PROOF_QUALITY</td>
<td>Character quality of the font is more important than exact matching of the logical-font attributes. For GDI raster fonts, scaling is disabled and the font closest in size is chosen. Although the chosen font size may not be mapped exactly when PROOF_QUALITY is used, the quality of the font is high and there is no distortion of appearance. Bold, italic, underline, and strikeout fonts are synthesized if necessary.</td>
</tr>
</tbody>
</table>

(Read only property)

77.8.26 LogFontScript as String

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The script, that is, the character set, of the font. For example, Cyrillic. **Notes:** (Read only property)

77.8.27 LogFontStrikeOut as Boolean

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
A strikeout font if set to true. **Notes:** (Read only property)
77.8.28 LogFontStyle as String

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The style of the font. For example, Bold Italic.
**Notes:** (Read only property)

77.8.29 LogFontUnderline as Boolean

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
An underlined font if set to true.
**Notes:** (Read only property)

77.8.30 LogFontWeight as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The weight of the font in the range 0 through 1000.
**Notes:**
For example, 400 is normal and 700 is bold. If this value is zero, a default weight is used.

The following values are defined for convenience.

<table>
<thead>
<tr>
<th>Value</th>
<th>Weight</th>
</tr>
</thead>
<tbody>
<tr>

(Read only property)
77.8.31 LogFontWidth as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The average width, in logical units, of characters in the font.
**Notes:**
If LogFontWidth is zero, the aspect ratio of the device is matched against the digitization aspect ratio of
the available fonts to find the closest match, determined by the absolute value of the difference.
(Read only property)

77.8.32 NumberOfAxes as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Number of axes for a specified multiple master font.
**Notes:**
The axes arrays contains information on all the axes of a multiple master font.
Only available for truetype fonts.
(Read only property)

77.8.33 NumberOfDesignVectors as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The design vectors are used by an application to specify values for the axes of a multiple master font.
**Notes:**  (Read only property)

77.8.34 TextMetricAscent as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The ascent (units above the base line) of characters.
**Notes:** (Read only property)

77.8.35 TextMetricAverageCharWidth as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The average width of characters in the font (generally defined as the width of the letter x).
**Notes:**
This value does not include overhang required for bold or italic characters.
(Read only property)
### 77.8.36 TextMetricAverageWidth as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The average width of characters in the font, in notional units.
**Notes:**
This value should be compared with the value of the TextMetricSizeEM member.
Only available for truetype fonts.
(Read only property)

### 77.8.37 TextMetricBreakChar as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The value of the character to be used to define word breaks for text justification.
**Notes:** (Read only property)

### 77.8.38 TextMetricCellHeight as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The height, in notional units, of the font.
**Notes:**
This value should be compared with the value of the TextMetricSizeEM member.
Only available for truetype fonts.
(Read only property)

### 77.8.39 TextMetricCharSet as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The character set of the font.
**Notes:** (Read only property)

### 77.8.40 TextMetricDefaultChar as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The value of the character to be substituted for characters that are not in the font.
**Notes:** (Read only property)
77.8.41 TextMetricDescent as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The descent (units below the base line) of characters.
**Notes:** (Read only property)

77.8.42 TextMetricDigitizedAspectX as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The horizontal aspect of the device for which the font was designed.
**Notes:** (Read only property)

77.8.43 TextMetricDigitized AspectY as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The vertical aspect of the device for which the font was designed.
**Notes:**
The ratio of the tmDigitizedAspectX and tmDigitizedAspectY members is the aspect ratio of the device for which the font was designed.
(Read only property)

77.8.44 TextMetricExternalLeading as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The amount of extra leading (space) that the application adds between rows.
**Notes:**
Since this area is outside the font, it contains no marks and is not altered by text output calls in either OPAQUE or TRANSPARENT mode. The designer may set this member to zero.
(Read only property)

77.8.45 TextMetricFirstChar as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The value of the first character defined in the font.
**Notes:** (Read only property)
77.8.46 TextMetricFlags as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies whether the font is italic, underscored, outlined, bold, and so forth. **Notes:**

May be any reasonable combination of the following values.

<table>
<thead>
<tr>
<th>Bit</th>
<th>Name</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>NTMITALIC</td>
<td>italic</td>
</tr>
<tr>

<td>NTM_MULTIPLEMASTER</td>
<td>multiple master font</td>
</tr>
<tr>
<td>20</td>
<td>NTM_TYPE1</td>
<td>Type 1 font</td>
</tr>
<tr>
<td>21</td>
<td>NTM_DSIG</td>
<td>font with a digital signature. This allows traceability and ensures that the font has been tested and is not corrupted</td>
</tr>
</tbody>
</table>

Only available for truetype fonts. (Read only property)

77.8.47 TextMetricHeight as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The height (ascent + descent) of characters. **Notes:** (Read only property)

77.8.48 TextMetricInternalLeading as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The amount of leading (space) inside the bounds set by the tmHeight member. **Notes:**

Accent marks and other diacritical characters may occur in this area. The designer may set this member to zero. (Read only property)
77.8.49  **TextMetricItalic as Boolean**

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** An italic font if set to true.
**Notes:** (Read only property)

77.8.50  **TextMetricLastChar as Integer**

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The value of the last character defined in the font.
**Notes:** (Read only property)

77.8.51  **TextMetricMaxCharWidth as Integer**

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The width of the widest character in the font.
**Notes:** (Read only property)

77.8.52  **TextMetricOverhang as Integer**

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The extra width per string that may be added to some synthesized fonts.
**Notes:**

When synthesizing some attributes, such as bold or italic, graphics device interface (GDI) or a device may have to add width to a string on both a per-character and per-string basis. For example, GDI makes a string bold by expanding the spacing of each character and overstriking by an offset value; it italicizes a font by shearing the string. In either case, there is an overhang past the basic string. For bold strings, the overhang is the distance by which the overstrike is offset. For italic strings, the overhang is the amount the top of the font is sheared past the bottom of the font.

The TextMetricOverhang member enables the application to determine how much of the character width returned by a GetTextExtentPoint32 function call on a single character is the actual character width and how much is the per-string extra width. The actual width is the extent minus the overhang.
**Notes:** (Read only property)
77.8.53  **TextMetricPitchAndFamily as Integer**

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The pitch and family of the selected font.

**Notes:**

The low-order bit (bit 0) specifies the pitch of the font. If it is 1, the font is variable pitch (or proportional). If it is 0, the font is fixed pitch (or monospace). Bits 1 and 2 specify the font type. If both bits are 0, the font is a raster font; if bit 1 is 1 and bit 2 is 0, the font is a vector font; if bit 1 is 0 and bit 2 is set, or if both bits are 1, the font is some other type. Bit 3 is 1 if the font is a device font; otherwise, it is 0.

The four high-order bits designate the font family. The TextMetricPitchAndFamily member can be combined with the hexadecimal value 0xF0 by using the bitwise AND operator and can then be compared with the font family names for an identical match. For more information about the font families, see LogFontPitchAndFamily.

(Read only property)

77.8.54  **TextMetricSizeEM as Integer**

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The size of the em square for the font.

**Notes:**

This value is in notional units (that is, the units for which the font was designed). Only available for truetype fonts.

(Read only property)

77.8.55  **TextMetricStruckOut as Boolean**

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** An strikeout font if set to true.

**Notes:** (Read only property)

77.8.56  **TextMetricUnderlined as Boolean**

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** An underline font if set to true.

**Notes:** (Read only property)
77.8.57 TextMetricWeight as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: The weight of the font. Notes: (Read only property)

77.8.58 UnicodeSubsetBitfield as MemoryBlock

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: A 128-bit Unicode subset bitfield (USB) identifying up to 126 Unicode subranges. Notes: Each bit, except the two most significant bits, represents a single subrange. The most significant bit is always 1 and identifies the bitfield as a font signature; the second most significant bit is reserved and must be 0. Unicode subranges are numbered in accordance with the ISO 10646 standard. For more information, see Unicode Subset Bitfields. http://msdn.microsoft.com/en-us/library/dd374090(v=vs.85).aspx

Only available for truetype fonts. (Read only property)

77.8.59 Constants

77.8.60 ANSI_CHARSET = 0

MBS Win Plugin, Plugin Version: 11.0. Function: One of the constants for the LogFontCharSet property.

77.8.61 ANTIALIASED_QUALITY = 4

MBS Win Plugin, Plugin Version: 11.0. Function: One of the constants for the LogFontQuality property. Notes: Enables antialiasing for the font. The display driver must support antialiased text for this setting to work.

77.8.62 ARABIC_CHARSET = 178

MBS Win Plugin, Plugin Version: 11.0. Function: One of the constants for the LogFontCharSet property.
77.8.3  **BALTIC_CHARSET = 186**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontCharSet property.

77.8.4  **CHINESEBIG5_CHARSET = 136**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontCharSet property.

77.8.5  **CLIP_CHARACTER_PRECIS = 1**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontClipPrecision property.
**Notes:** Not used.

77.8.6  **CLIP_DEFAULT_PRECIS = 0**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontClipPrecision property.
**Notes:** Specifies default clipping behavior.

77.8.7  **CLIP_EMBEDDED = 128**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the clip constants.

77.8.8  **CLIP_LHANGLES = 16**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the clip constants.

77.8.9  **CLIP_MASK = & h15**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the clip constants.
CHAPTER 77. FONTS

77.8.70 CLIP_STROKE_PRECIS = 2

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontClipPrecision property.  
**Notes:** Not used by the font mapper, but is returned when raster, vector, or TrueType fonts are enumerated.

77.8.71 CLIP_TT_ALW AYS = 32

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the clip constants.

77.8.72 DEFAULT_CHARSET = 1

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontCharSet property.

77.8.73 DEFAULT_PITCH = 0

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the pitch constants.

77.8.74 DEFAULT_QUALITY = 0

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontQuality property.  
**Notes:** Appearance of the font does not matter.

77.8.75 DEVICE_FONTTYPE = &h002

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the FontType property.

77.8.76 DRAFT_QUALITY = 1

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontQuality property.  
**Notes:** For GDI raster fonts, scaling is enabled, which means that more font sizes are available, but the quality may be lower. Bold, italic, underline, and strikeout fonts are synthesized if necessary.
77.8. EASTEUROPE_CHARSET = 238

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontCharSet property.

77.8.78 **FF_DECORATIVE = 80**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontPitchAndFamily property.
**Notes:** Novelty fonts, for example, Old English.

77.8.79 **FF_DONTCARE = 0**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontPitchAndFamily property.
**Notes:** Do not care or do not know.

77.8.80 **FF_MODERN = 48**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontPitchAndFamily property.
**Notes:** Fonts with constant stroke width (monospace), with or without serifs. Monospace fonts are usually modern, for example, Pica, Elite, and Courier New.

77.8.81 **FF_ROMAN = 16**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontPitchAndFamily property.
**Notes:** Fonts with variable stroke width (proportional) and with serifs, for example, Serif.

77.8.82 **FF_SCRIPT = 64**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontPitchAndFamily property.
**Notes:** Fonts designed to look like handwriting, for example, Script and Cursive.
77.8.83  **FF_SWISS = 32**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontPitchAndFamily property.
**Notes:** Fonts with variable stroke width (proportional) and without serifs, for example, Sans Serif.

77.8.84  **FIXED_PITCH = 1**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the pitch constants.

77.8.85  **FW_BLACK = 900**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontWeight property.

77.8.86  **FW_BOLD = 700**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontWeight property.

77.8.87  **FW_DEMIBOLD = 600**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontWeight property.

77.8.88  **FW_DONTCARE = 0**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontWeight property.

77.8.89  **FW_EXTRABOLD = 800**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontWeight property.

77.8.90  **FW_EXTRALIGHT = 200**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontWeight property.
77.8.1 FW_HEAVY = 900
MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontWeight property.

77.8.2 FW_LIGHT = 300
MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontWeight property.

77.8.3 FW_MEDIUM = 500
MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontWeight property.

77.8.4 FW_NORMAL = 400
MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontWeight property.

77.8.5 FW_REGULAR = 400
MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontWeight property.

77.8.6 FW_SEMI_BOLD = 600
MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontWeight property.

77.8.7 FW_THIN = 100
MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontWeight property.

77.8.8 FW_ULTRABOLD = 800
MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontWeight property.
**77.8.99**  FW_ULTRALIGHT = 200

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontWeight property.

**77.8.100**  GB2312_CHARSET = 134

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontCharSet property.

**77.8.101**  GREEK_CHARSET = 161

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontCharSet property.

**77.8.102**  HANGEUL_CHARSET = 129

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontCharSet property.

**77.8.103**  HANGUL_CHARSET = 129

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontCharSet property.

**77.8.104**  HEBREW_CHARSET = 177

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontCharSet property.
77.8.105  **JOHAB_CHARSET = 130**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontCharSet property.

77.8.106  **MAC_CHARSET = 77**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontCharSet property.

77.8.107  **MONO_FONT = 8**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the pitch constants.

77.8.108  **NONANTIALIASED_QUALITY = 3**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontQuality property. **Notes:** Forces use of draft quality when the HKEY_LOCAL_MACHINE\System\GDI\Fontsmeoothing registry key is present.

77.8.109  **NTM_BOLD = & h00000020**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the flag constants for the TextMetricFlags property. **Notes:** bold

77.8.110  **NTM_DSIG = & h00200000**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the flag constants for the TextMetricFlags property. **Notes:** Font with a digital signature. This allows traceability and ensures that the font has been tested and is not corrupted.

77.8.111  **NTM_ITALIC = & h00000001**

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the flag constants for the TextMetricFlags property.
77.8.112  NTM_MULTIPLEMESTER = & h00080000

MBS Win Plugin, Plugin Version: 11.0. Function: One of the flag constants for the TextMetricFlags property.
Notes: multiple master font

77.8.113  NTM_NONNEGATIVE_AC = & h00010000

MBS Win Plugin, Plugin Version: 11.0. Function: One of the flag constants for the TextMetricFlags property.
Notes: no glyph in a font at any size has a negative A or C space.

77.8.114  NTM_PS_OPENTYPE = & h00020000

MBS Win Plugin, Plugin Version: 11.0. Function: One of the flag constants for the TextMetricFlags property.
Notes: PostScript OpenType font

77.8.115  NTM_REGULAR = & h0000040

MBS Win Plugin, Plugin Version: 11.0. Function: One of the flag constants for the TextMetricFlags property.
Notes: regular

77.8.116  NTM_TT_OPENTYPE = & h00040000

MBS Win Plugin, Plugin Version: 11.0. Function: One of the flag constants for the TextMetricFlags property.
Notes: TrueType OpenType font

77.8.117  NTM_TYPE1 = & h00100000

MBS Win Plugin, Plugin Version: 11.0. Function: One of the flag constants for the TextMetricFlags property.
Notes: Type 1 font

77.8.118   OEM_CHARSET = 255

MBS Win Plugin, Plugin Version: 11.0. Function: One of the constants for the LogFontCharSet property.

77.8.119   OUT_CHARACTER_PRECIS = 2

MBS Win Plugin, Plugin Version: 11.0. Function: One of the constants for the LogFontOutPrecision property.

77.8.120   OUT_DEFAULT_PRECIS = 0

MBS Win Plugin, Plugin Version: 11.0. Function: One of the constants for the LogFontOutPrecision property.
   Notes: Specifies the default font mapper behavior.

77.8.121   OUT_DEVICE_PRECIS = 5

MBS Win Plugin, Plugin Version: 11.0. Function: One of the constants for the LogFontOutPrecision property.

77.8.122   OUT_OUTLINE_PRECIS = 8

MBS Win Plugin, Plugin Version: 11.0. Function: One of the constants for the LogFontOutPrecision property.

77.8.123   OUT_PS_ONLY_PRECIS = 10

MBS Win Plugin, Plugin Version: 11.0. Function: One of the constants for the LogFontOutPrecision property.
77.8.124 OUT_RASTER_PRECIS = 6

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontOutPrecision property.
**Notes:** Instructs the font mapper to choose a raster font when the system contains multiple fonts with the same name.

77.8.125 OUT_SCREEN_OUTLINE_PRECIS = 9

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontOutPrecision property.

77.8.126 OUT_STRING_PRECIS = 1

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontOutPrecision property.
**Notes:** This value is not used by the font mapper, but it is returned when raster fonts are enumerated.

77.8.127 OUT_STROKE_PRECIS = 3

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontOutPrecision property.

77.8.128 OUT_TT_ONLY_PRECIS = 7

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontOutPrecision property.

77.8.129 OUT_TT_PRECIS = 4

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontOutPrecision property.
77.8.130  PROOF_QUALITY = 2

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontQuality property.

77.8.131  RASTER_FONTTYPE = & h0001

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the FontType property.

77.8.132  RUSSIAN_CHARSET = 204

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontCharSet property.

77.8.133  SHIFTJIS_CHARSET = 128

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontCharSet property.

77.8.134  SYMBOL_CHARSET = 2

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontCharSet property.

77.8.135  THAI_CHARSET = 222

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontCharSet property.

77.8.136  TRUETYPE_FONTTYPE = & h004

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the FontType property.

77.8.137  TURKISH_CHARSET = 162

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontCharSet property.
77.8.138   VARIABLE_PITCH = 2

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the pitch constants.

77.8.139   VIETNAMESE_CHARSET = 163

MBS Win Plugin, Plugin Version: 11.0. **Function:** One of the constants for the LogFontCharSet property.
Chapter 78

GameKit

78.1 class GameKitMBS

78.1.1 class GameKitMBS

**Function:** The central plugin class for GameKit.

**Notes:**

Events from various objects end here, so you can implement them in a central subclass of GameKitMBS.
For most events, we carry a "tag as Variant" parameter, so you can pass a window, some object or whatever value you need.

Also we defined that matchdata is a dictionary. This way you can store various values inside including arrays (e.g. array of variant). As data is serialized over the network, you can’t pass Real Studio objects.

The plugin makes sure that all events run on the main thread, so please make sure you don’t block main thread.
Please create only one instance of your GameKitMBS subclass.

GameKit classes are available in OS X v10.8 and later.
Please review Apple’s documentation for more details and a guide.
78.1.2 Methods

78.1.3 Available as boolean

 Function:  True if the class is available.
 Notes:  Should always be true on Mac OS X 10.8 and newer.

78.1.4 GKErrorDomain as string

 Function:  The Game Kit framework error domain.
 Notes:  For NSErrorMBS.

78.1.5 showBannerWithTitle(title as string, message as string, duration as Double, tag as Variant)

 Function:  Displays a banner to the player for a specified period of time.
 Notes:  
 title:  The title of the banner.
 message:  A secondary message to be displayed.
 duration:  The amount of time that the banner should be displayed to the player.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.Notification-BannerCompleted event.

See also:
  • 78.1.6 showBannerWithTitle(title as string, message as string, tag as Variant)

78.1.6 showBannerWithTitle(title as string, message as string, tag as Variant)

 Function:  Displays a banner to the player.
 Notes:  
 title:  The title of the banner.
 message:  A secondary message to be displayed.
When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.NotificationBannerCompleted event.

See also:

- 78.1.5 showBannerWithTitle(title as string, message as string, duration as Double, tag as Variant)

78.1.7 Events

78.1.8 acceptInviteCompleted(match as GKTurnBasedMatchMBS, error as NSErrorMBS, tag as Variant)

Function: The event to be called after the match is successfully created.
Notes:

match: A newly initialized match object that contains a list of players for the match. If an error occurred, this value is nil.
error: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.

Called by GKTurnBasedMatchMBS.acceptInvite.
Available on Mac OS X 10.8.2 and newer.

78.1.9 achievementViewControllerDidFinish(viewController as Variant)

Function: Called when the user dismisses the achievements screen. (required)
Notes:

viewController: The achievement view controller whose interface was dismissed by the player. (GKAchievementViewControllerMBS)

Your should dismiss the view controller. If your game paused any gameplay or other activities, it can restart those services in this method.
78.1.10 `addPlayersToMatchCompleted(MatchMaker as GKMatchmakerMBS, match as GKMatchMBS, matchRequest as GKMatchRequestMBS, error as NSErrorMBS, tag as Variant)`

Function: Called by GKMatchmakerMBS.addPlayersToMatch when matchmaking completes.
Notes: error: If matchmaking was successful, this parameter contains nil. Otherwise, this parameter holds an error object that describes the error that occurred.

78.1.11 `authenticateCompleted(localPlayer as GKLocalPlayerMBS, error as NSErrorMBS, tag as Variant)`

Function: Called by GKLocalPlayerMBS.authenticate when the player has authenticated or when an error occurs.
Notes: error: This parameter is nil if the player successfully authenticated. Otherwise, it contains an error object that describes the error that occurred.

78.1.12 `authenticateHandler(LocalPlayer as GKLocalPlayerMBS, viewController as NSViewControllerMBS, error as NSErrorMBS, tag as Variant, viewControllerHandle as Integer)`

Function: The event called when game center needs authentication.
Notes:

viewController: This parameter is nil if the authentication process is complete. Otherwise, it contains a view controller that your game should display to the player.
error: This parameter contains an error object that describes any error that occurred.

Your game should authenticate the player as early as possible after launching, ideally as soon as you can present a user interface to the player. For example, your game may be launched because the player accepted an invitation to join a match or to take a turn in a turn-based match, so you want your game to authenticate the player and process the match invitation as quickly as possible. After you set a handler, authentication begins automatically and is repeated when your game moves to the background and then back to the foreground.

During the authentication process, Game Kit calls your handler one or more times to handle specific authentication events. Your handler must handle three kinds of events:

- If the device does not have an authenticated player, Game Kit passes a view controller to your authenticate handler. When presented, this view controller displays the authentication user interface. Your
game should pause other activities that require user interaction (such as your game loop), present this view controller and then return. When the player finishes interacting with it, the view controller is dismissed automatically.

- If the authentication process succeeded, the GKLocalPlayer singleton object’s authenticated property is set to true and the object’s other properties are set to match those of the connected player.

- If the authentication process failed, the GKLocalPlayer singleton object’s authenticated property is set to false and the object’s other properties are cleared.

Each time the authentication handler is called, the data stored in the local player singleton object may have changed. A new player may have logged into the device or the player may have simply logged out from Game Center. Because of both of these possibilities, your authentication handler must be prepared to update any other objects that assume that a particular player is logged in. For more information, see "Authenticating the Local Player in a Multitasking Application" in Game Center Programming Guide.

Available on Mac OS X 10.8.2 and newer.

**78.1.13 challengesViewControllerDidFinish**(viewController as Variant)

Function: The challengesViewController did finish.
Notes:
Called by GKChallengesViewControllerMBS if needed.
Available on Mac OS X 10.8.2 and newer.

**78.1.14 chooseBestHostPlayerCompleted**(match as GKMatchMBS, playerID as string, tag as Variant)

Function: Called when GKMatchMBS.chooseBestHostPlayer completes.
Notes:
playerID: The player identifier for the player with the best estimated network performance, or nil if a player could not currently be determined.

Available on Mac OS X 10.8.2 and newer.
78.1.15 `declineInviteCompleted(match as GKTurnBasedMatchMBS, error as NSErrorMBS, tag as Variant)`

**Function:** The event to be called after the match is successfully created.

**Notes:**

error: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.

Called by GKTurnBasedMatchMBS.declineInvite.
Available on Mac OS X 10.8.2 and newer.

78.1.16 `didRequestMatchWithOtherPlayers(players() as GKPlayerMBS)`

MBS MacFrameworks Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: No, Linux: No.

**Function:** Initiates a match from Game Center with the requested players. (required)

**Notes:**

player: The GKPlayer object containing the current players information.
playersToInvite: An array of GKPlayer objects containing the player identifiers to invite to the match.

When this method is called, you should create a new match using the player identifiers provided and present a GKTurnBasedMatchmakerViewController.

Available in OS X v10.10 and later.

78.1.17 `endMatchInTurnWithMatchDataCompleted(match as GKTurnBasedMatchMBS, matchData as Dictionary, error as NSErrorMBS, tag as Variant)`

**Function:** Called by GKTurnBasedMatchMBS.endMatchInTurnWithMatchData after the match is successfully ended.

**Notes:** If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.
78.1.18  **endTurnWithNextParticipant** (match as GKTurnBasedMatchMBS, nextParticipant as GKTurnBasedParticipantMBS, matchData as Dictionary, error as NSErrorMBS, tag as Variant)

**Function:** Called by GKTurnBasedMatchMBS.endTurnWithNextParticipant after the data is uploaded to Game Center.  
**Notes:** If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.

78.1.19  **endTurnWithNextParticipantsCompleted** (match as GKTurnBasedMatchMBS, nextParticipants() as GKTurnBasedParticipantMBS, timeout as Double, matchData as Dictionary, error as NSErrorMBS, tag as Variant)

**Function:** The event to be called after the data is uploaded to the server.  
**Notes:**  
Called by GKTurnBasedMatchMBS.participantQuitInTurnWithOutcome.

error: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.

Available on Mac OS X 10.8.2 and newer.

78.1.20  **findMatchForRequestCompleted** (MatchMaker as GKMatchmakerMBS, request as GKMatchRequestMBS, match as GKMatchMBS, TurnBasedMatch as GKTurnBasedMatchMBS, error as NSErrorMBS, tag as Variant)

**Function:** Called when the match has been created.  
**Notes:**  
This is either called by GKMatchmakerMBS.findMatchForRequest or GKTurnBasedMatchMBS.findMatchForRequest.

match: If matchmaking was successful, this parameter contains the created match. Otherwise, this parameter is nil.  
error: If matchmaking was successful, this parameter contains nil. Otherwise, this parameter holds an error object that describes the error that occurred.
78.1.21  findPlayersForHostedMatchRequestCompleted(MatchMaker as GKMatchmakerMBS, request as GKMatchRequestMBS, playerIDs() as string, error as NSErrorMBS, tag as Variant)

Function: Called by GKMatchmakerMBS.findPlayersForHostedMatchRequest when the match has been created.  
Notes:  
players: If matchmaking was successful, this parameter contains an array of players to connect into the match. Otherwise, this parameter is nil.  
error: If matchmaking was successful, this parameter contains nil. Otherwise, this parameter holds an error object that describes the error that occurred.

78.1.22  friendRequestComposeViewControllerDidFinish(viewController as Variant)

Function: The compose view has finished.  
Notes: viewController: The GKFriendRequestComposeViewControllerMBS object.

78.1.23  gameCenterViewControllerDidFinish(gameCenterViewController as Variant)

Function: Called when gameCenterViewController did finish.  
Notes: Available on Mac OS X 10.8.2 and newer.

78.1.24  handleInviteFromGameCenter(playersToInvite() as string)

Function: Sent when the local player receives an invitation to join a new turn-based match.  
Notes:  
playersToInvite: An array of player identifiers for the players to initially invite to the game.

When you receive this message, your game should create a new GKMatchRequestMBS object and assign the playersToInvite parameter to the match request’s playersToInvite property. Then, your game can either call the GKTurnBasedMatchMBS class method findMatchForRequest to find a match programatically or it can use the request to instantiate a new GKTurnBasedMatchmakerViewControllerMBS object to show a
78.1.1 CLASS GAMEKITMBS

user interface to the player.

78.1.25 handleMatchEnded(match as GKTurnBasedMatchMBS)

Function: Sent when a match the local player is participating in has ended.
Notes:

match: The match that just ended.

When you receive this message, it should display the match’s final results to the player and allow the player the option of saving or removing the match data from Game Center.

78.1.26 handleTurnEventForMatch(match as GKTurnBasedMatchMBS, didBecomeActive as boolean)

Function: Sent when it is the local player’s turn to act in a turn-based match.
Notes:

match: A match object containing the current state of the match.

didBecomeActive: New parameter valid on Mac OS X 10.8.2 and newer.

78.1.27 Invited(MatchMaker as GKMatchmakerMBS, acceptedInvite as GKInviteMBS, playersToInvite() as string)

Function: Called by GKMatchmakerMBS when an invitation is received from another player.
Notes:

acceptedInvite: The invitation accepted by the player.
playersToInvite: A list of player identifiers for additional players to invite into the game.

An game responds to an invitation by allocating and initializing a GKMatchmakerViewControllerMBS ob-
ject, passing the invitation object and the list of player identifiers as parameters. For more information, see Game Kit Programming Guide.

If your game receives an invitation while your game is running, it should clean up any existing gameplay (including disconnecting from any current matches) and then process the invitation.

78.1.28 inviteeResponseHandler(MatchRequest as GKMatchRequestMBS, PlayerID as string, response as Integer, tag as Variant)

Function: The event called when an response from an invited player is returned to your game.
Notes:
playerID: The identifier for the player.
response: The nature of the response. See GKInviteeResponse* constants.

Available on Mac OS X 10.8.2 and newer.

78.1.29 leaderboardViewControllerDidFinish(viewController as Variant)

Function: The leaderboard view has finished.
Notes: viewController: The GKLeaderboardViewControllerMBS object.

78.1.30 loadAchievementDescriptionsCompleted(achievements() as GKAchievementDescriptionMBS, error as NSErrorMBS, tag as Variant)

Function: Called by GKAchievementDescriptionMBS.loadAchievementDescriptions when the download is completed.
Notes:
descriptions: An array of description objects for the achievements in your game. If an error occurred, this value may be non-empty. In this case, the array holds whatever descriptions were downloaded by Game Kit before the error occurred.
error: If an error occurred, this error object describes the error. If the operation completed successfully, this value is nil.
78.1.31 loadAchievementsCompleted(achievements() as GKAchievementMBS, error as NSErrorMBS, tag as Variant)

**Function:** Called by GKAchievementMBS.loadAchievements when the download is completed.
**Notes:**
- achievements: An array of achievement objects that represents all progress reported to Game Center for the local player. If an error occurred, this parameter may be non-empty, in which case the array holds whatever achievement information Game Kit was able to fetch.
- error: If an error occurred, this object describes the error. If the operation completed successfully, this value is nil.

78.1.32 loadCategoriesCompleted(categories() as string, titles() as string, error as NSErrorMBS, tag as Variant)

**Function:** Called by GKLeaderboardMBS.loadCategories when the categories have been retrieved from the server.
**Notes:**
- categories: An array of strings that provides the categories to your game. If an error occurred, this value may be non-empty. In this case, the array holds whatever data Game Kit was able to download before the error occurred.
- titles: An array of strings that provides localized titles for each category. If an error occurred, this value may be non-empty. In this case, the array holds whatever data Game Kit was able to download before the error occurred.
- error: If an error occurred, this error object describes the error. If the operation completed successfully, the value is nil.

78.1.33 loadDefaultLeaderboardCategoryIDCompleted(LocalPlayer as GKLocalPlayerMBS, categoryID as string, error as NSErrorMBS, tag as Variant)

**Function:** The loadDefaultLeaderboardCategoryID method completed.
**Notes:**
- categoryID: The category ID string for the local player’s default leaderboard.
- error: If an error occurred, this parameter holds an error object that explains the error. Otherwise, the value of this parameter is nil.

Available on Mac OS X 10.8.2 and newer.
78.1.34  loadFriendPlayersCompleted(localPlayer as GKLocalPlayerMBS, friendPlayers() as GKPlayerMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called by GKLocalPlayerMBS.loadFriendPlayers.
Notes: friendPlayers: An array of GKPlayer objects containing the player identifiers for the players that are friends of the local player. If an error occurred, this value can be non-nil. In that case, the array contains the data that Game Kit was able to download before the error occurred.
error: If an error occurred, this parameter holds an error object that explains the error. Otherwise, the value of this parameter is nil.

78.1.35  loadFriendsCompleted(localPlayer as GKLocalPlayerMBS, friends() as string, error as NSErrorMBS, tag as Variant)

Function: Called by GKLocalPlayerMBS.loadFriends when the request completes.
Notes: friends: An array of player identifiers for the players that are friends of the local player. If an error occurred, this value can be non-empty. In that case, the array contains the data that Game Kit was able to download before the error occurred.
error: If an error occurred, this parameter holds an error object that explains the error. Otherwise, the value of this parameter is nil.

78.1.36  loadImageCompleted(description as GKAchievementDescriptionMBS, image as NSImageMBS, error as NSErrorMBS, tag as Variant)

Function: Called by GKAchievementDescriptionMBS.loadImage when the download is completed.
Notes: image: The downloaded image. If an error occurred, this value is nil.
error: If an error occurred, this error object describes the error. If the operation completed successfully, this value is nil.

78.1.37  loadLeaderboardsCompleted(Leaderboards() as GKLeaderboardMBS, error as NSErrorMBS, tag as Variant)

Function: Leaderboards have been loaded.
Notes: Available on Mac OS X 10.8.2 and newer.

78.1.38  loadMatchDataCompleted(match as GKTurnBasedMatchMBS, matchData as Dictionary, error as NSErrorMBS, tag as Variant)

Function: Called by GKTurnBasedMatchMBS.loadMatchData after the match data has been retrieved from the server.
Notes:
matchData: The data stored on Game Center that reflects the current state of the match. If an error occurred, this value is nil.
error: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.

78.1.39  loadMatchesCompleted(matches() as GKTurnBasedMatchMBS, error as NSErrorMBS, tag as Variant)

Function: Called by GKTurnBasedMatchMBS.loadMatches after the matches are retrieved from the server.
Notes:
matches: An array of match objects that hold the requested matches. If an error occurred, this value may be non-empty. In this case, the array holds whatever match data could be retrieved from Game Center before the error occurred.
error: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.

78.1.40  loadMatchWithIDCompleted(TurnBasedMatch as GKTurnBasedMatchMBS, matchID as string, error as NSErrorMBS, tag as Variant)

Function: The event to be called after the match is retrieved from the server.
Notes:
Called when GKTurnBasedMatchMBS.loadMatchWithID finishes.
matchID: The identifier for the turn-based match.
match: If the operation completed successfully, this parameter holds the match. If an error occurred, the value is nil.
error: If an error occurred, this error object describes the error. If the operation was completed successfully,
the value is nil.

Available on Mac OS X 10.8.2 and newer.

78.1.41  loadPhotoForSizeCompleted(player as GKPlayerMBS, size as Integer, photo as NSImageMBS, error as NSErrorMBS, tag as Variant)

Function: Called by GKPlayerMBS.loadPhotoForSize when the player data is retrieved from Game Center.
Notes:
photo: An image for the player. If an error occurred, this may still be non-nil. In this case, the image reflects an image cached by Game Kit on the device.
error: If an error occurred, this error object describes the error. If the operation completed successfully, this is nil.

78.1.42  loadPlayersForIdentifiersCompleted(identifiers() as string, players() as GKPlayerMBS, error as NSErrorMBS, tag as Variant)

Function: Called by GKPlayerMBS.loadPlayersForIdentifiers when the player data is retrieved from Game Center.
Notes:
players: An array of GKPlayer objects, one per identifier. If an error occurred, this may be non-empty. In that case, the array holds whatever data Game Kit was able to retrieve for the requested players.
error: If an error occurred, this error object describes the error. If the operation completed successfully, this is nil.

78.1.43  loadReceivedChallengesCompleted(challenges() as GKChallengeMBS, error as NSErrorMBS, tag as Variant)

Function: Called when loadReceivedChallenges finished.
Notes:
challenges: An array of challenge objects that represents all challenges made to the local player. If an error occurred, this parameter may be non-nil, in which case the array holds whatever challenge information Game Kit was able to fetch.
error: If an error occurred, this object describes the error. If the operation completed successfully, this value is nil.
Available on Mac OS X 10.8.2 and newer.

78.1.44  **loadScoresCompleted(Leaderboard as GKLeaderboardMBS, scores() as GKScoreMBS, error as NSErrorMBS, tag as Variant)**

**Function:** Called by GKLeaderboardMBS.loadScores after the scores are retrieved from the server.  
**Notes:**

- **scores:** An array of score objects that hold the requested scores. If an error occurred, this value may be non-nil. In this case, the array holds whatever score data could be retrieved from Game Center before the error occurred.  
- **error:** If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.

78.1.45  **localPlayerDidCompleteChallenge(challenge as GKChallengeMBS)**

**Function:** Called when the local player has completed one of their challenges, triggered by a push notification from the server.  
**Notes:**

Received only while the game is running.  
Available on Mac OS X 10.8.2 and newer.

78.1.46  **localPlayerDidReceiveChallenge(challenge as GKChallengeMBS)**

**Function:** Called when the local player has received a challenge, triggered by a push notification from the server.  
**Notes:**

Received only while the game is running.  
Available on Mac OS X 10.8.2 and newer.

78.1.47  **localPlayerDidSelectChallenge(challenge as GKChallengeMBS)**

**Function:** Called when the user clicks a challenge notification banner or the "Play Now" button for a challenge inside Game Center, causing the game to launch.  
**Notes:**
Also called when the user clicks a challenge banner inside the game.
Available on Mac OS X 10.8.2 and newer.

### 78.1.48 `matchConnectionWithPlayerFailed(match as GKMatchMBS, playerID as string, error as NSErrorMBS)`

**Function:** Called when the match fails to connect to a player.
**Notes:**
- `match`: The match that received the error.
- `player`: The identifier for the player whose connection failed.
- `error`: The error that occurred.

This method is called if the match was unable to send a transmission to another player in the match.

### 78.1.49 `matchDidChangeState(match as GKMatchMBS, playerID as string, state as Integer)`

**Function:** Called when a player connects to or disconnects from the match.
**Notes:**
- `match`: The match that the player is connected to.
- `player`: The identifier for the player whose state changed.
- `state`: The state the player moved to. (see constants in GKMatchMBS)

Your game implements this method to be notified when players connect to or disconnect from the match.

### 78.1.50 `matchDidFailWithError(match as GKMatchMBS, error as NSErrorMBS)`

**Function:** Called when the match cannot connect to any other players.
**Notes:**
- `match`: The match that received the error.
- `error`: The error that occurred.

This method is called if the match cannot connect to any other players associated with the match. It usually means a serious networking error has occurred.
78.1.51  **matchDidReceiveData**(match as GKMatchMBS, data as Dictionary, playerID as string)

**Function:** Called when data is received from a player. (required)
**Notes:**
match: The match that received the data.
data: The data sent by the player.
player: The string identifier for the player that sent the data.

Important: Data received from other players should be treated as untrusted data. Be sure to validate the data you receive from the match and write your code carefully to avoid security vulnerabilities. See the Secure Coding Guide for more information.

78.1.52  **matchEnded**(player as GKPlayerMBS, match as GKTurnBasedMatchMBS)

MBS MacFrameworks Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: No, Linux: No.
**Function:** Called when the match has ended. (required)
**Notes:**
player: The GKPlayer object containing the current players information.
match: The GKTurnBasedMatch object containing the current game data.

Available in OS X v10.10 and later.

78.1.53  **matchForInviteCompleted**(Matchmaker as GKMatchmakerMBS, invite as GKInviteMBS, match as GKMatchMBS, error as NSErrorMBS, tag as Variant)

**Function:** Called by matchForInvite on completion.
**Notes:**
Match provides the new match object on success.

Possible reasons for error:
1. Communications failure.
2. Invite cancelled.
Available on Mac OS X 10.8.2 and newer.
78.1.54 matchmakerViewControllerDidFailWithError(viewController as Variant, error as NSErrorMBS)

Function: Called when the view controller encounters an unrecoverable error. (required)
Notes:
viewController: The view controller that received the error. (GKMatchmakerViewControllerMBS)
error: An error object that describes the error.

78.1.55 matchmakerViewControllerDidFindMatch(viewController as Variant, match as GKMatchMBS)

Function: Called when a peer-to-peer match is found.
Notes:
viewController: The view controller that performed the matchmaking. (GKMatchmakerViewControllerMBS)
match: A completed match.

This method is called when the view controller’s hosted property is false. Although optional in the protocol, if your game attaches a delegate to the view controller for a peer-to-peer match, the view controller expects your game to provide an implementation of this method.

78.1.56 matchmakerViewControllerDidFindPlayers(viewController as Variant, playerIDs() as string)

Function: Called when a hosted match is found.
Notes:
viewController: The view controller that performed the matchmaking. (GKMatchmakerViewControllerMBS)
players: An array of identifier strings for the matched players.

This method is called when the view controller’s hosted property is true. Although optional in the protocol, if your game attaches a delegate to the view controller for a hosted match, the view controller expects your game to provide an implementation of this method.

The view controller returns the list of players to your game by calling this method. Your game is responsible for connecting these players to your own server and then using that server to relay messages between the players.
78.1.57  `matchmakerViewControllerDidReceiveAcceptFromHostedPlayer(viewController as Variant, playerID as string)`

**Function:** Called when a player in a hosted match accepts the invitation.

**Notes:**

`viewController`: The view controller that accepted the invitation. (GKMatchmakerViewControllerMBS)

`playerID`: The identifier of the accepting player.

After a player accepts an invitation, that player’s device should connect to your server. Once the connection is established, your game should call the view controller’s `setHostedPlayer` method to update the player’s connection status.

78.1.58  `matchmakerViewControllerWasCancelled(viewController as Variant)`

**Function:** Called when the user cancels the matchmaking request (required)

**Notes:**

`viewController`: The view controller that received the cancellation. (GKMatchmakerViewControllerMBS)

78.1.59  `matchShouldReinvitePlayer(match as GKMatchMBS, playerID as string) as boolean`

**Function:** Called when a player in a two-player match was disconnected.

**Notes:**

`match`: The match that lost the player.

`playerID`: The identifier for the player whose connection failed.

Your game should return true if it wants Game Kit to attempt to reconnect the player, false if it wants to terminate the match.

Occasionally, players may get disconnected from a match. If your game implements this method in the match delegate and the match only contains two players, Game Kit calls this method after a player gets disconnected. If your delegate allows Game Kit to reconnect to the other player, it reconnects the other player. Your `matchDidChangeState` event is called when the other player is reconnected.
78.1.60 NotificationBannerCompleted(title as string, message as string, duration as Double, tag as Variant)

Function: Called by GameKitMBS.showBannerWithTitle after the banner is reported.
Notes: Duration is only passed if it was sent with the newer method on Mac OS X 10.8.2 and newer.

78.1.61 participantQuitInTurnWithOutcomeCompleted(match as GKTurnBasedMatchMBS, matchOutcome as Integer, nextParticipant as GKTurnBasedParticipantMBS, nextParticipants() as GKTurnBasedParticipantMBS, timeout as Double, matchData as Dictionary, error as NSErrorMBS, tag as Variant)

Function: The event to be called after the data is uploaded to the server.
Notes:
Called by GKTurnBasedMatchMBS.participantQuitInTurnWithOutcome.
error: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.
Available on Mac OS X 10.8.2 and newer.

78.1.62 participantQuitOutOfTurnWithOutcomeCompleted(match as GKTurnBasedMatchMBS, matchOutcome as Integer, error as NSErrorMBS, tag as Variant)

Function: Called by GKTurnBasedMatchMBS.participantQuitOutOfTurnWithOutcome called after the data is uploaded to the server.
Notes: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.

78.1.63 PlayerAuthenticationDidChange(player as GKPlayerMBS)

Function: Player’s authentication changed.
78.1.64 playerChanged(player as GKPlayerMBS)

**Function:** The player changed.

78.1.65 playerStateUpdate(playerID as string, state as Integer, tag as Variant)

**Function:** Called when the state of any participant in the chat changes (including the local player).
**Notes:**
- player: The player identifier for the player whose status changed.
- state: The new state of the player.
  You need to call enablePlayerStateUpdate to receive events.

78.1.66 queryActivityCompleted(MatchMaker as GKMatchmakerMBS, activity as Integer, error as NSErrorMBS, tag as Variant)

**Function:** Called by GKMatchmakerMBS.queryActivity when query is done.
**Notes:**
- activity: The amount of activity in the player group.
- error: If the search completed successfully, this parameter is nil; otherwise, this parameter holds an error object that describes the error that occurred.

78.1.67 queryPlayerGroupActivityCompleted(MatchMaker as GKMatchmakerMBS, playerGroup as Integer, activity as Integer, error as NSErrorMBS, tag as Variant)

**Function:** Called by GKMatchmakerMBS.queryPlayerGroupActivity when the search completes.
**Notes:**
- activity: The amount of activity in the player group.
- error: If the search completed successfully, this parameter is nil; otherwise, this parameter holds an error object that describes the error that occurred.
78.1.68 receivedTurnEventForMatch(player as GKPlayerMBS, match as GKTurnBasedMatchMBS, didBecomeActive as boolean)

MBS MacFrameworks Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Activates the players turn. (required)
Notes:
This method is called when the it becomes the players turn. It is also called when any of the following events happen:

- The current turn has a time-out associated with it and the turn is about to expire.
- Player accepts an invite from another player.
- Turn was passed to another player. In this case, didBecomeActive is false.
- Match data is saved by another player.
- Player receives a reminder.

Available in OS X v10.10 and later.

78.1.69 recipientResponseHandler(MatchRequest as GKMatchRequestMBS, Player as GKPlayerMBS, response as Integer, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is called whenever you programmatically invite specific players to join a match.
Notes:
It is called once for each player invited to the match. Typically, your game uses the responses to update the custom user interface. For example, you want the player to be able to perform any of the following tasks:

- Start the match.
- Invite an additional set of specific players.
- Use matchmaking to fill the remaining match slots.

Available in OS X v10.10 and later.
78.1.70 remakeCompleted(TurnMatch as GKTurnBasedMatchMBS, match as GKMatchMBS, error as NSErrorMBS, tag as Variant)

Function: Called when GKMatchMBS.rematch completes.
Notes:
match: The new match. If an error occurred, this parameter’s value is nil.
error: If an error occurred, this parameter holds an error object that describes the problem. If the match
was successfully recreated, this parameter’s value is nil.

Available on Mac OS X 10.8.2 and newer.

78.1.71 remotePlayerDidCompleteChallenge(challenge as GKChallengeMBS)

Function: Called when a non-local player has completed a challenge issued by the local player.
Notes:
Triggered by a push notification from the server. Received when a challenge notification banner is clicked,
or while the game is running.
Available on Mac OS X 10.8.2 and newer.

78.1.72 removeCompleted(match as GKTurnBasedMatchMBS, error as NSErrorMBS, tag as Variant)

Function: Called by GKTurnBasedMatchMBS.remove on completion.
Notes:
If an error occurred, this error object describes the error. If the operation was completed successfully, the
value is nil.
Tag is the parameter you passed to remove method.

78.1.73 reportAchievementCompleted(score as GKAchievementMBS, error as NSErrorMBS, tag as Variant)

Function: Called by GKAchievementMBS.reportAchievement after the operation completes.
Notes: error: If the operation was successful, this value is nil; otherwise, this parameter holds an object
that describes the problem that occurred.
78.1.74 reportAchievementsCompleted(achievements() as GKAchievementMBS, error as NSErrorMBS, tag as Variant)

Function: Called when GKAchievementMBS.reportAchievements completes.
Notes: Available on Mac OS X 10.8.2 and newer.

78.1.75 reportScoreCompleted(score as GKScoreMBS, error as NSErrorMBS, tag as Variant)

Function: Called by GKScoreMBS.reportScore after the score is reported.
Notes: error: If an error occurred, this parameter holds an error object that describes the problem. If the score was successfully reported, this parameter’s value is nil.

78.1.76 reportScoresCompleted(Scores() as GKScoreMBS, error as NSErrorMBS, tag as Variant)

Function: Reporting scores completed.
Notes:
scores: An array of score objects to report to Game Center.
error: If an error occurred, this parameter holds an error object that describes the problem. If the score was successfully reported, this parameter’s value is nil.

Available on Mac OS X 10.8.2 and newer.

78.1.77 resetAchievementsCompleted(error as NSErrorMBS, tag as Variant)

Function: Called by GKAchievementMBS.resetAchievements when the reset action is completed.
Notes: error: If the operation was successful, this value is nil; otherwise, this parameter holds an object that describes the problem that occurred.
**78.1.78** `saveCurrentTurnWithMatchDataCompleted(match as GKTurnBasedMatchMBS, matchData as Dictionary, error as NSErrorMBS, tag as Variant)`

**Function:** The event to be called after the data is uploaded to Game Center.

**Notes:**
- error: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.
- matchData: The game-specific state for the match.

Available on Mac OS X 10.8.2 and newer.

**78.1.79** `selectChallengeablePlayerIDsCompleted(Achievement as GKAchievementMBS, playerIDs() as string, challengeablePlayerIDs() as string, error as NSErrorMBS, tag as Variant)`

**Function:** Called by GKAchievementMBS.selectChallengeablePlayerIDs on completion.

**Notes:** Available on Mac OS X 10.8.2 and newer.

**78.1.80** `setDefaultLeaderboardCategoryIDCompleted(LocalPlayer as GKLocalPlayerMBS, categoryID as string, error as NSErrorMBS, tag as Variant)`

**Function:** Called by GKLocalPlayerMBS.setDefaultLeaderboardCategoryID when completed.

**Notes:** Available on Mac OS X 10.8.2 and newer.

**78.1.81** `setDefaultLeaderboardCompleted(categoryID as string, error as NSErrorMBS, tag as Variant)`

**Function:** Called by GKLeaderboardMBS.setDefaultLeaderboard after the scores are retrieved from the server.

**Notes:**
- error: If an error occurred, this error object describes the error. If the operation was completed successfully, the value is nil.
78.1.82 shouldShowBannerForLocallyCompletedChallenge(challenge as GKChallengeMBS) as boolean

Function: Whether to show banner for locally completed challenge.
Notes:
If the method returns true, a challenge banner (like an achievement or welcome banner – not a notification center banner) is displayed. If false, then no banner is displayed. Default behavior for non-implementing apps is true.
Available on Mac OS X 10.8.2 and newer.

78.1.83 shouldShowBannerForLocallyReceivedChallenge(challenge as GKChallengeMBS) as boolean

Function: Whether to show banner for locally received challenge.
Notes:
If the method returns true, a challenge banner (like an achievement or welcome banner – not a notification center banner) is displayed when a challenge is received in-game for the local player. If false, then no banner is displayed, and localPlayerDidSelectChallenge will not be called for that challenge. Default behavior for non-implementing apps is true.
Available on Mac OS X 10.8.2 and newer.

78.1.84 shouldShowBannerForRemotelyCompletedChallenge(challenge as GKChallengeMBS) as boolean

Function: Whether to show banner for remotely completed challenge.
Notes:
If the method returns true, a challenge banner (like an achievement or welcome banner – not a notification center banner) is displayed. If false, then no banner is displayed. Default behavior for non-implementing apps is true.
Available on Mac OS X 10.8.2 and newer.
78.1. startBrowsingForNearbyPlayersCompleted(Matchmaker as GKMatchmakerMBS, playerID as string, reachable as boolean, tag as Variant)

Function: Called when startBrowsingForNearbyPlayers method found a player.
Notes: Available on Mac OS X 10.8.2 and newer.

78.1. turnBasedMatchmakerViewControllerDidFailWithError(viewController as Variant, error as NSErrorMBS)

Function: Called when an error occurs. (required)
Notes:
viewController: The view controller that received an error. (GKTurnBasedMatchmakerViewControllerMBS)
error: An error object that describes the error.

Your game should dismiss the view controller.

78.1. turnBasedMatchmakerViewControllerDidFindMatch(viewController as Variant, match as GKTurnBasedMatchMBS)

Function: Called when the player selected a match to view. (required)
Notes:
viewController: The view controller that found a match. (GKTurnBasedMatchmakerViewControllerMBS)
match: The match that the player selected.

Your game should dismiss the view controller and use the match object to show the current state of the match to the player.

78.1. turnBasedMatchmakerViewControllerPlayerQuitForMatch(viewController as Variant, match as GKTurnBasedMatchMBS)

Function: Called when a player chooses to quit the match. (required)
Notes:
viewController: The view controller that the player interacted with. (GKTurnBasedMatchmakerViewControllerMBS)
match: The match the player has chosen to quit.

When this method is called, the player is the current participant in the match, but that player has chosen to resign the match instead of taking a turn. Your game should dismiss the view controller, set an outcome for the player, and then call the match’s `participantQuitInTurnWithOutcome` method.

### 78.1.89 `turnBasedMatchmakerViewControllerWasCancelled(viewController as Variant)`

**Function:** Called when the player cancels matchmaking. (required)

**Notes:**

`viewController`: The view controller that the player canceled. (GKTurnBasedMatchmakerViewControllerMBS)

Your game should dismiss the view controller.

### 78.1.90 Constants

#### 78.1.91 `GKErrorAuthenticationInProgress = 7`

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the GameKit error constants.

**Notes:** The local player is currently authenticating.

#### 78.1.92 `GKErrorCancelled = 2`

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the GameKit error constants.

**Notes:** The requested operation was canceled.

#### 78.1.93 `GKErrorChallengeInvalid = 19`

MBS MacFrameworks Plugin, Plugin Version: 13.0. **Function:** One of the GameKit error constants.

**Notes:**

The challenge was invalid.

Available on Mac OS X 10.8.2 and newer.
78.1.94  **GKErrorCommunicationsFailure = 3**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the GameKit error constants.  
**Notes:** An error occurred when communicating with Game Center.

78.1.95  **GKErrorGameUnrecognized = 15**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the GameKit error constants.  
**Notes:** Game Center does not recognize the application that made the request. Make sure the bundle identifier is set properly for the application.

78.1.96  **GKErrorInvalidCredentials = 5**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the GameKit error constants.  
**Notes:** The operation failed because the player’s user name or password or both are incorrect.

78.1.97  **GKErrorInvalidParameter = 17**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the GameKit error constants.  
**Notes:** One or more of the parameters was incorrect.  
For example, this error code may be returned if your application attempts to post a score and provides a category string that does not match a category you configured for your leaderboards on iTunes Connect.

78.1.98  **GKErrorInvalidPlayer = 8**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the GameKit error constants.  
**Notes:** A player object or identifier is invalid.

78.1.99  **GKErrorMatchRequestInvalid = 13**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the GameKit error constants.  
**Notes:** The match request’s properties are impossible to fulfill. For example, the minimum number of players cannot be larger than the maximum number of players.
CHAPTER 78. GAMEKIT

78.1.100 GKErrorNotAuthenticated = 6

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the GameKit error constants. **Notes:** The local player has not been authenticated.

78.1.101 GKErrorNotSupported = 16

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the GameKit error constants. **Notes:** The device does not support Game Center.

78.1.102 GKErrorOffline = 25

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the GameKit error constants. **Notes:** The user went offline.
In Mac OS X 10.8.2 and newer this constant has value 25. In older versions it has value 19.

78.1.103 GKErrorParentalControlsBlocked = 10

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the GameKit error constants.  **Notes:** The feature has been blocked by the user.

78.1.104 GKErrorScoreNotSet = 9

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the GameKit error constants. **Notes:** A score value was not set before attempting to post the score.
78.1.105  **GKErrorTurnBasedInvalidParticipant = 22**

MBS MacFrameworks Plugin, Plugin Version: 13.0. **Function:** One of the GameKit error constants. **Notes:**

One of the participant objects you provided was invalid.
Available on Mac OS X 10.8.2 and newer.

78.1.106  **GKErrorTurnBasedInvalidState = 24**

MBS MacFrameworks Plugin, Plugin Version: 13.0. **Function:** One of the GameKit error constants. **Notes:**

The requested operation could not be completed because the session is in an invalid state.
Available on Mac OS X 10.8.2 and newer.

78.1.107  **GKErrorTurnBasedInvalidTurn = 23**

MBS MacFrameworks Plugin, Plugin Version: 13.0. **Function:** One of the GameKit error constants. **Notes:**

The requested operation could not be completed because the specified participant does not have the required turn state.
Available on Mac OS X 10.8.2 and newer.

78.1.108  **GKErrorTurnBasedMatchDataTooLarge = 20**

MBS MacFrameworks Plugin, Plugin Version: 13.0. **Function:** One of the GameKit error constants. **Notes:**

Your game submitted data that exceeded the maximum size that Game Center permits for a turn-based game.
Available on Mac OS X 10.8.2 and newer.

78.1.109  **GKErrorTurnBasedTooManySessions = 21**

MBS MacFrameworks Plugin, Plugin Version: 13.0. **Function:** One of the GameKit error constants. **Notes:**

The requested operation could not be completed because it would exceed the maximum number of sessions.
Available on Mac OS X 10.8.2 and newer.
78.1.110  GKErrorUnderage = 14

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the GameKit error constants.  
**Notes:** The feature is disabled because the local player is underage.

78.1.111  GKErrorUnexpectedConnection = 18

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the GameKit error constants.  
**Notes:** An unexpected player has connected to a match.

78.1.112  GKErrorUnknown = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the GameKit error constants.  
**Notes:** An unexpected error occurred.

78.1.113  GKErrorUserDenied = 4

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the GameKit error constants.  
**Notes:** The operation was denied by the user.

78.1.114  GKInviteeResponseAccepted = 0

MBS MacFrameworks Plugin, Plugin Version: 13.0. **Function:** One of the possible responses from an invitation to a remote player. 
**Notes:**

The player accepted the invitation.

Available on Mac OS X 10.8.2 and newer.

78.1.115  GKInviteeResponseDeclined = 1

MBS MacFrameworks Plugin, Plugin Version: 13.0. **Function:** One of the possible responses from an invitation to a remote player. 
**Notes:**

The player rejected the invitation.

Available on Mac OS X 10.8.2 and newer.
78.1.116  GKInviteeResponseFailed = 2

MBS MacFrameworks Plugin, Plugin Version: 13.0. **Function:** One of the possible responses from an invitation to a remote player.
**Notes:**
The invitation was unable to be delivered.
Available on Mac OS X 10.8.2 and newer.

78.1.117  GKInviteeResponseIncompatible = 3

MBS MacFrameworks Plugin, Plugin Version: 13.0. **Function:** One of the possible responses from an invitation to a remote player.
**Notes:**
The invitee is not running a compatible version of your game.
Available on Mac OS X 10.8.2 and newer.

78.1.118  GKInviteeResponseNoAnswer = 5

MBS MacFrameworks Plugin, Plugin Version: 13.0. **Function:** One of the possible responses from an invitation to a remote player.
**Notes:**
The invitation timed out without an answer.
Available on Mac OS X 10.8.2 and newer.

78.1.119  GKInviteeResponseUnableToConnect = 4

MBS MacFrameworks Plugin, Plugin Version: 13.0. **Function:** One of the possible responses from an invitation to a remote player.
**Notes:**
The invitee could not be contacted.
Available on Mac OS X 10.8.2 and newer.

78.1.120  GKInviteRecipientResponseAccepted = 0

MBS MacFrameworks Plugin, Plugin Version: 15.0. **Function:** One of the possible responses from an invitation to a remote player.
**Notes:**
The player accepted the invitation.
Available in OS X v10.10 and later.

78.1.121 GKInviteRecipientResponseDeclined = 1

MBS MacFrameworks Plugin, Plugin Version: 15.0. **Function:** One of the possible responses from an invitation to a remote player.

**Notes:**
The player rejected the invitation.
Available in OS X v10.10 and later.

78.1.122 GKInviteRecipientResponseFailed = 2

MBS MacFrameworks Plugin, Plugin Version: 15.0. **Function:** One of the possible responses from an invitation to a remote player.

**Notes:**
The invitation was unable to be delivered.
Available in OS X v10.10 and later.

78.1.123 GKInviteRecipientResponseIncompatible = 3

MBS MacFrameworks Plugin, Plugin Version: 15.0. **Function:** One of the possible responses from an invitation to a remote player.

**Notes:**
The invitee is not running a compatible version of your game.
Available in OS X v10.10 and later.

78.1.124 GKInviteRecipientResponseNoAnswer = 5

MBS MacFrameworks Plugin, Plugin Version: 15.0. **Function:** One of the possible responses from an invitation to a remote player.

**Notes:**
The invitation timed out without an answer.
Available in OS X v10.10 and later.
78.1.125  GKInviteRecipientResponseUnableToConnect = 4

MBS MacFrameworks Plugin, Plugin Version: 15.0. **Function:** One of the possible responses from an invitation to a remote player.  
**Notes:**

The invitee could not be contacted.  
Available in OS X v10.10 and later.
78.2 class GKAchievementChallengeMBS

78.2.1 class GKAchievementChallengeMBS

Function: A GKAchievementChallenge is a challenge to a player to complete a specific achievement.
Notes:
Subclass of the GKChallengeMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

78.2.2 Methods

78.2.3 achievement as GKAchievementMBS

Function: The achievement the player must complete.
Notes: (read-only)

78.2.4 Constructor

Function: The private constructor.
78.3. class GKAchievementDescriptionMBS

78.3.1 class GKAchievementDescriptionMBS

Function: An GK AchievementDescription object holds text and images used to display an achievement to
the player.
Notes:
During development, you create achievement descriptions by editing them in iTunes Connect. At runtime,
your game retrieve these descriptions from Game Center. Usually, your game only needs to download achieve-
ment descriptions when it wants to present a custom achievement user interface to the player.

see also
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

78.3.2 Methods

78.3.3 achievedDescription as string

Function: A localized description of the completed achievement. (read-only)

78.3.4 Available as boolean

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

78.3.5 Constructor

Function: The private constructor.

78.3.6 groupIdentifier as string

Function: The group identifier for the achievement, if one exists.
78.3.7  identifier as string

Function: A unique string used to identify the achievement. (read-only)
Notes: The GKAchievementDescription property holds the identifier string you created for the achievement on iTunes Connect.

78.3.8  image as NSImageMBS

Function: An image to display for the completed achievement. (read-only)
Notes: The value of this property is undefined until after the image is loaded. See loadImage.

78.3.9  incompleteAchievementImage as NSImageMBS

Function: A common image for incomplete achievements.

78.3.10  isHidden as boolean

Function: A Boolean value that states whether this achievement should be visible to players. (read-only)
Notes: If the value of this property is false, this achievement is always visible to the user. If true, the achievement is not displayed in any of the standard achievement user interface screens. It remains hidden until the first time your game reports progress towards completing this achievement.

78.3.11  isReplayable as boolean

Function: Whether or not the achievement will be reported by the game when the user earns it again.
Notes:
This allows the achievement to be used for challenges when the recipient has previously earned it. Available on Mac OS X 10.8.2 and newer.
78.3.12  **loadAchievementDescriptions(tag as Variant = nil)**

**Function:** Downloads the achievement descriptions from Game Center.

**Notes:** When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadAchievementDescriptionsCompleted event.

---

78.3.13  **loadImage(tag as Variant = nil)**

**Function:** Loads the image property for a completed achievement.

**Notes:**
Your game should call loadImage for each achievement the user has completed. Your game should display the placeholder image until the image is successfully downloaded. After the event is called, the description’s image property holds the same image object that is returned to the event.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadImageCompleted event.

---

78.3.14  **maximumPoints as Integer**

**Function:** The number of points earned by completing this achievement. (read-only)

---

78.3.15  **placeholderCompletedAchievementImage as NSImageMBS**

**Function:** A common image for completed achievements.

**Notes:** When an achievement is completed, your game can display this image until the custom image for an achievement finishes loading.

---

78.3.16  **title as string**

**Function:** A localized title for the achievement. (read-only)
78.3.17  **unachievedDescription as string**

**Function:** A localized description of the achievement, to be used when the achievement has not been completed. (read-only)

78.3.18  **Properties**

78.3.19  **Handle as Integer**

**Function:** The internal object reference.
**Notes:** (Read and Write property)
78.4  class GKAchievementMBS

78.4.1  class GKAchievementMBS

Function: Your game uses a GKAchievement object to communicate with Game Center about a local
player’s progress towards completing an achievement.
Notes:
see also

78.4.2  Methods

78.4.3  Available as boolean

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

78.4.4  Constructor(identifier as string)

Function: Initializes a new achievement object.
Notes:
identifier: A string that identifies the achievement you want to update.

Your game initializes a new achievement object only when it has not previously reported progress for that
achievement. If your game has previously reported progress on an achievement, you should retrieve the
achievement object by calling the loadAchievementsWithCompletionHandler class method and update the
progress on that object instead.

78.4.5  isCompleted as boolean

Function: A Boolean value that states whether the player has completed the achievement. (read-only)
Notes: The value of this property is true if the percentComplete property is equal to 100.0; otherwise, it is false.
78.4.6 isHidden as boolean

**Function:** A Boolean value that states whether this achievement is normally kept secret from the player. (read-only)

**Notes:** On a newly initialized achievement object, the property’s value is invalid. If the achievement object was returned to your game by the loadAchievementsWithCompletionHandler class method, the value of this property matches the value you set in iTunes Connect for that achievement. The value in this property is identical to the value found in the hidden property for an GKAchievementDescriptionMBS object that shares the same achievement identifier.

78.4.7 issueChallengeToPlayers(playerIDs() as string, message as string)

**Function:** Use this method to issue GKScoreChallenges and GKAchievementChallenges to an array of playerIDs.

**Notes:**

Players may not issue challenges to themselves nor to non-friends. Please see the GameKit reference documentation for further details on these methods.

Available on Mac OS X 10.8.2 and newer.

78.4.8 lastReportedDate as date

**Function:** The last time that the achievement was successfully reported to Game Center. (read-only)

**Notes:** On a newly initialized achievement object, this property holds the current date.

78.4.9 loadAchievements(tag as Variant = nil)

**Function:** Retrieves previously submitted achievement progress from Game Center.

**Notes:** When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadAchievementsCompleted event.

78.4.10 reportAchievement(tag as Variant = nil)

**Function:** Reports the player’s progress to Game Center.
When the player makes progress towards completing an achievement, your game should communicate the player’s progress to Game Center by calling this method. An achievement object is implicitly tied to the local player that was authenticated when the object was created; your game should only report progress when the same local player is still authenticated on the device.

Note: To avoid using network bandwidth unnecessarily, only report an achievement when the user has actually advanced the progress they have made towards completing it.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.reportAchievementCompleted.

When the progress is successfully reported, the achievement is made visible if it was previously hidden. The percent_complete and last_reported_date property values stored on Game Center are updated if the new percent_complete value is greater than the value previously stored on Game Center. If the value of the percent_complete property was equal to 100.0, then the achievement is marked as completed and a banner may be shown to the player.

If the error is a network error and your game is running on iOS 4.3 or earlier, your game should periodically attempt to report the progress until the achievement is successfully reported. On iOS 5.0 and later and on OS X, the background reporting task automatically handles network errors on your game’s behalf.

### 78.4.11 `reportAchievements(achievements() as GKAchievementMBS, tag as Variant = nil)`

**Function:** Report an array of achievements to the server.

**Notes:**

Percent complete is required. Points, completed state are set based on percent_complete. isHidden is set to false anytime this method is invoqued. Date is optional. Error will be nil on success.

Possible reasons for error:
1. Local player not authenticated.
2. Communications failure.
3. Reported Achievement does not exist.

Later calls GameKitMBS.reportAchievementsCompleted event.
Available on Mac OS X 10.8.2 and newer.
### resetAchievements(tag as Variant = nil)

**Function:** Resets all achievement progress for the local player.  
**Notes:**  
Calling this class method deletes all progress towards achievements previously reported for the local player. Hidden achievements that were previously visible are now hidden again.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.resetAchievementsCompleted event.

### selectChallengeablePlayerIDs(playerIDs() as string, tag as Variant = nil)

**Function:** Given a list of playerIDs, return a subset of that list containing only playerIDs that are eligible to receive a challenge for the achievement.  
**Notes:**  
Available on Mac OS X 10.8.2 and newer.  
Calls later GameKitMBS.selectChallengeablePlayerIDsCompleted event when completed.

### Properties

#### Handle as Integer

**Function:** The internal object reference.  
**Notes:** (Read and Write property)

#### identifier as string

**Function:** A string used to uniquely identify the specific achievement the object refers to.  
**Notes:**  
The identifier property must match the identifier string for an achievement you created for your game on iTunes Connect.  
(Read and Write computed property)
78.4. CLASS GKACHIEVEMENTMBS

78.4.17 percentComplete as Double

Function: A percentage value that states how far the player has progressed on this achievement.

Notes:
The default value for a newly initialized achievement object is 0.0. The range of legal values is between 0.0 and 100.0, inclusive.
(Read and Write computed property)

78.4.18 showsCompletionBanner as boolean

Function: A Boolean value that states whether a banner is displayed when the achievement is completed.

Notes:
When an achievement is completed and the value of this property is true, a notification banner is displayed to the player to inform them of the completed achievement. If the value of this property is false, there is no visual indication that the achievement is completed. Your game should set this property to false only when it wants to provide its own visual indicator that the achievement was earned. The default value is false.
(Read and Write computed property)
CHAPTER 78. GAMEKIT

78.5 class GKAchievementViewControllerMBS

78.5.1 class GKAchievementViewControllerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An GKAchievementViewController object provides a standard user interface to display achievement progress for the local player.

**Notes:**

see also

Subclass of the NSViewControllerMBS class.

78.5.2 Methods

78.5.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
78.6. CLASS GKCHALLENGEMBS

78.6 class GKChallengeMBS

78.6.1 class GKChallengeMBS

Function: A GKChallenge object represents a challenge issued by a player to another player.

Notes:

Important: Your game must authenticate a local player before you can use any Game Center classes. If there is no authenticated player, your game receives a GKErrorNotAuthenticated error. For more information on authentication see Game Center Programming Guide.

Players use the Game Center app to issue and view challenges. However, your game can also customize its challenge behaviors in a number of ways:

- You can load the list of challenges issued to the local player by calling the loadReceivedChallenges shared method. For example, you might do this to display the challenges in your game’s user interface.

- Your app can issue challenges using a GKScoreMBS or GKAchievementMBS object. Your game should only issue challenges when the local player initiates the action in your user interface.

- Your game can be notified when new challenge events are received. See GameKitMBS events.

You never subclass the GKChallengeMBS class directly. However, subclasses of GKChallengeMBS represent specific kinds of challenges. Two challenge types exist:

A GKScoreChallengeMBS is a challenge to beat a score the local player earned in a leaderboard.
A GKAchievementChallengeMBS is a challenge to complete an achievement that the local player has already completed.

Available on Mac OS X 10.8.2 and newer.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

78.6.2 Methods

78.6.3 Available as boolean

Function: Whether this class is available.
Notes: Returns true on Mac OS X 10.8.2 and newer.
78.6.4 completionDate as date

Function: The date the challenge was completed. (read-only).
Notes:
If the challenge is not complete, this value is nil.
Available on Mac OS X 10.8.2 and newer.

78.6.5 Constructor

Function: The private constructor.
Notes:
Available on Mac OS X 10.8.2 and newer.
This constructor is private to make sure you don’t create an object from this class by error. Please use
designated functions to create objects.

78.6.6 decline

Function: Declines a challenge.
Notes:
If your game implements a custom user interface to display challenges, it should include controls that allow
a player to decline a challenge. If the player uses your user interface to decline a challenge, call this method.
Available on Mac OS X 10.8.2 and newer.

78.6.7 issueDate as date

Function: The date the challenge was issued. (read-only).
Notes: Available on Mac OS X 10.8.2 and newer.

78.6.8 issuingPlayerID as string

Function: The player identifier for the player who issued the challenge. (read-only).
78.6.9  loadReceivedChallenges(tag as Variant = nil)

Function: Loads the list of outstanding challenges.
Notes:
Available on Mac OS X 10.8.2 and newer.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKit.loadReceivedChallengesCompleted event.

78.6.10  message as string

Function: A text message that describes the challenge. (read-only).
Notes: Available on Mac OS X 10.8.2 and newer.

78.6.11  receivingPlayerID as string

Function: The player identifier for the player who received the challenge. (read-only).
Notes: Available on Mac OS X 10.8.2 and newer.

78.6.12  state as Integer

Function: The current state of the challenge. (read-only).
Notes:
See GKChallengeState* constants.
Available on Mac OS X 10.8.2 and newer.
78.6.13 Properties

78.6.14 Handle as Integer

Function: The internal object reference.  
Notes:  
Available on Mac OS X 10.8.2 and newer.  
(Read and Write property)

78.6.15 Constants

78.6.16 GKChallengeStateCompleted = 2

MBS MacFrameworks Plugin, Plugin Version: 13.0.  
Function: Possible states that a challenge can live in.  
Notes:  
The receiving player successfully completed the challenge.  
Available on Mac OS X 10.8.2 and newer.

78.6.17 GKChallengeStateDeclined = 3

MBS MacFrameworks Plugin, Plugin Version: 13.0.  
Function: Possible states that a challenge can live in.  
Notes:  
The receiving player declined the challenge.  
Available on Mac OS X 10.8.2 and newer.

78.6.18 GKChallengeStateInvalid = 0

MBS MacFrameworks Plugin, Plugin Version: 13.0.  
Function: Possible states that a challenge can live in.  
Notes:  
An error occurred. The state of this challenge is not valid.  
Available on Mac OS X 10.8.2 and newer.

78.6.19 GKChallengeStatePending = 1

MBS MacFrameworks Plugin, Plugin Version: 13.0.  
Function: Possible states that a challenge can live in.  
Notes:
The challenge has been issued, but is not yet completed nor declined. Available on Mac OS X 10.8.2 and newer.
78.7 class GKChallengesViewControllerMBS

78.7.1 class GKChallengesViewControllerMBS

**Function:** View controller that provides the standard user interface for challenges.

**Notes:**

Present modally from the top view controller.
Calls GameKit.challengesViewControllerDidFinish if needed.
Available on Mac OS X 10.8.2 and newer.
Subclass of the NSViewControllerMBS class.

78.7.2 Methods

78.7.3 Constructor

**Function:** The constructor.
78.8. class GKDialogControllerMBS

78.8.1 class GKDialogControllerMBS

Function: The GKDialogController class provides the ability to present Game Center view controller classes on OS X.
Notes:
To present a view controller, instantiate a new GKDialogControllerMBS object or use the singleton object provided by the sharedDialogController class method. Set the parentWindow property of the dialog controller to the window that should display the view controller’s contents. Then, call the dialog controller’s presentViewController* methods, passing in the view controller object to be presented. Later, when the view controller’s contents should be hidden, call the dialog controller’s dismiss method.

see also
Subclass of the NSResponderMBS class.

78.8.2 Methods

78.8.3 Constructor

Function: The constructor.

78.8.4 dismiss

Function: Dismisses the currently displayed view controller.

78.8.5 parentWindow as NSWindowMBS

Function: The window that view controllers presented by the dialog controller are displayed in.
Notes: Your app must set this property before presenting a view controller. The window must be at least 800 x 600.
CHAPTER 78. GAMEKIT

78.8.6 presentViewController(GKViewController as NSViewControllerMBS) as boolean

Function: Presents a view controller in the dialog controller’s window.
Notes:
viewController: A Game Center view controller.

Returns true if the view controller was presented, false if an error occurred.
The contents of the window are covered by the view controller’s contents until the view controller is dismissed.

78.8.7 setParentWindow(parentWindow as NSWindowMBS)

Function: Sets the parent window.
See also:
• 78.8.8 setParentWindow(parentWindow as Window)

78.8.8 setParentWindow(parentWindow as Window)

Function: Sets the parent window to the given Real Studio Window.
Notes: Should work fine in Cocoa, but may fail in Carbon.
See also:
• 78.8.7 setParentWindow(parentWindow as NSWindowMBS)

78.8.9 sharedDialogController as GKDialogControllerMBS

Function: Retrieves the shared instance of the dialog controller.
Notes: Game Kit provides the shared dialog controller as a convenience. Your game can either use the
shared dialog controller provided by this method, or it can instantiate its own GKDialogController object
and configure it. You might create multiple GKDialogController objects when each should be presented in
its own window.
78.9. CLASS GKRIENDREQUESTCOMPOSEVIEWCONTROLLERMBS

78.9 class GKFriendRequestComposeViewControllerMBS

78.9.1 class GKFriendRequestComposeViewControllerMBS

**Function:** Your game uses the GKFriendRequestComposeViewController class to present a screen that allows the local player to send friend requests to other players.  
**Notes:**

see also

Subclass of the NSViewControllerMBS class.

78.9.2 Methods

78.9.3 addRecipientsWithEmailAddresses(playerIDs() as string)

**Function:** Add recipients to the request.  
**Notes:**

If you don’t specify at least one recipient before presenting the view, the recipients field will be made firstResponder, to encourage the user to add some.

If you add more than maxNumberOfRecipients recipients, these methods will throw an exception.

78.9.4 addRecipientsWithPlayerIDs(playerIDs() as string)

**Function:** Add recipients to the request.  
**Notes:**

If you don’t specify at least one recipient before presenting the view, the recipients field will be made firstResponder, to encourage the user to add some.

If you add more than maxNumberOfRecipients recipients, these methods will throw an exception.

78.9.5 Constructor

**Function:** The constructor.
78.9.6 maxNumberOfRecipients as UInt64

**Function:** Get the maximum number of recipients permitted.

78.9.7 setMessage(message as string)

**Function:** Specify the message sent to the invitee. A default message will be used if you don’t specify one.
class GKGameCenterViewControllerMBS

**Function:** The GKGameCenterViewControllerMBS class aggregates many common Game Center features into a single user interface.

**Notes:**
It replaces GKAchievementViewControllerMBS and GKLeaderboardViewControllerMBS as the preferred way to show Game Center content in your game.

Important: Your application must authenticate a local player before you can use any Game Center classes. If there is no authenticated player, your application receives a GKErrorNotAuthenticated error. For more information on authentication, see Game Center Programming Guide.

To display the Game Center screen, initialize a new GKGameCenterViewController object and set its delegate. Optionally, you can choose to configure the view controller further to specify which content is initially displayed. Then present the view controller. Your delegate is called when the user dismisses the screen.

Your game should pause other activities before presenting the Game Center user interface.

Available on Mac OS X 10.8.2 and newer.
Subclass of the NSViewControllerMBS class.

### 78.10.2 Methods

#### 78.10.3 Constructor

**Function:** The constructor.

**Notes:** Available on Mac OS X 10.8.2 and newer.

### 78.10.4 Properties

#### 78.10.5 leaderboardCategory as string

**Function:** The named leaderboard that is displayed by the view controller.

**Notes:**

The category property must either be empty or it must match a category identifier you defined when you created your leaderboards on iTunes Connect. If empty, the view displays scores for the aggregate leaderboard. Default is empty.

When the leaderboard is presented, the value of this property determines which leaderboard content is displayed to the player. As the player changes which leaderboard content they view, the leaderboardCategory property is automatically updated. For example, to preserve the player’s selections, you can read the leaderboardCategory property after the screen is dismissed, and set that value the next time you initialize the view controller.

Available on Mac OS X 10.8.2 and newer.
(Read and Write computed property)

78.10.6  leaderboardTimeScope as Integer

Function: A time filter used to restrict which scores are displayed to the player.
Notes:
This property determines which view of the summary screen is displayed to the player. The default value is GKLeaderboardTimeScopeAllTime, which shows the best score each player has earned. For more information on time scopes, see GKLeaderboardMBS Class.

When the leaderboard is presented, the value of this property determines the initial tab that is displayed to the player. As the player changes which tab they view, the leaderboardTimeScope property is automatically updated. For example, to preserve the player’s selections, you can read the leaderboardTimeScope property after the screen is dismissed, and set that value the next time you initialize the view controller.

Available on Mac OS X 10.8.2 and newer.
(Read and Write computed property)

78.10.7  viewState as Integer

Function: The content displayed by the Game Center controller.
Notes:
See State* constants for possible values. When you first present the Game Center view controller, the content displayed by the view controller is determined by this property. If the player navigates to different content, the view state is automatically updated. For example, to preserve the player’s selections, you can read the viewState property after the screen is dismissed, and set that value the next time you initialize the view controller.
Available on Mac OS X 10.8.2 and newer.
(Read and Write computed property)

78.10.8 Constants

78.10.9 StateAchievements = 1

MBS MacFrameworks Plugin, Plugin Version: 13.0. **Function:** Possible values for the viewState property.  
**Notes:**
Indicates that the view controller presents achievements content.
Available on Mac OS X 10.8.2 and newer.

78.10.10 StateChallenges = 2

MBS MacFrameworks Plugin, Plugin Version: 13.0. **Function:** Possible values for the viewState property.  
**Notes:**
Indicates that the view controller presents challenges content.
Available on Mac OS X 10.8.2 and newer.

78.10.11 StateDefault = -1

MBS MacFrameworks Plugin, Plugin Version: 13.0. **Function:** Possible values for the viewState property.  
**Notes:**
Indicates that the view controller should present the default screen.
Available on Mac OS X 10.8.2 and newer.

78.10.12 StateLeaderboards = 0

MBS MacFrameworks Plugin, Plugin Version: 13.0. **Function:** Possible values for the viewState property.  
**Notes:**
Indicates that the view controller presents leaderboard content. The leaderboardCategory and leaderboard- 
TimeScope properties affect the appearance of this view state.
Available on Mac OS X 10.8.2 and newer.
78.11  class GKInviteMBS

78.11.1  class GKInviteMBS

Function: Your game receives invitations from other players through the GKInvite class.
Notes:
Your game never directly creates GKInvite objects. Instead, invitations are created by Game Kit and delivered to your game. To receive invitations from Game Center, your game sets an invitation handler.

The properties of the invitation object describe the match the local player is being invited to join.

78.11.2  Methods

78.11.3  Available as boolean

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

78.11.4  Constructor

Function: The constructor.

78.11.5  inviter as string

Function: The identifier for the player who invited the local user to join a match. (read-only)

78.11.6  isHosted as boolean

Function: A Boolean value that states whether the game is hosted. (read-only)
Notes: If the value of the hosted property is true, this is a hosted match. If the value is false, this is a peer-to-peer match. The default is false.
78.11.7 playerAttributes as UInt32

Function: Player attributes from inviter’s match request.
Notes: Available on Mac OS X 10.8.2 and newer.

78.11.8 playerGroup as Integer

Function: Player group from inviter’s match request.
Notes: Available on Mac OS X 10.8.2 and newer.

78.11.9 Properties

78.11.10 Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)
78.12 class GKLeaderboardMBS

78.12.1 class GKLeaderboardMBS

Function: A GKLeaderboard object represents a programmatic query to retrieve scores from Game Center.

Notes:
Your game uses GKLeaderboard objects when it wants to analyze scoring information or when it wants to create its own custom leaderboard screens.

see also

78.12.2 Methods

78.12.3 Available as boolean

Function: True if the class is available.

Notes: Should always be true on Mac OS X 10.8 and newer.

78.12.4 Constructor

Function: Initializes a default leaderboard request.

Notes: A leaderboard object initialized with this method uses the playerScope, timeScope, and range properties to search Game Center for scores.

See also:
• 78.12.5 Constructor(playerIDs() as string)

78.12.5 Constructor(playerIDs() as string)

Function: Initializes a leaderboard request to retrieve the scores of a specific group of players.

Notes:
playerIDs: An array of strings that holds the player identifier strings of the players to retrieve.

A leaderboard object initialized with this method ignores the playerScope and range properties. Instead, it
retrieves scores for the specific list of players whose IDs are included in the playerIDs parameter. See also:

- 78.12.4 Constructor

### 78.12.6 `groupIdentifier` as string

**Function:** Set when leaderboards have been designated a game group; set when loadLeaderboards has been called for leaderboards that support game groups.

**Notes:** Available on Mac OS X 10.8.2 and newer.

### 78.12.7 `isLoading` as boolean

**Function:** A Boolean value that indicates whether the leaderboard object is retrieving scores. (read-only)

**Notes:** The value of the loading property is true if the leaderboard object has any pending requests for scores.

### 78.12.8 `loadCategories(tag as Variant = nil)`

**Function:** Loads the list of leaderboard categories along with their corresponding localized titles.

**Notes:**

You use this class method to retrieve the category identifiers and titles you configured for your leaderboards on iTunes Connect. To create a leaderboard query that targets a particular category, set the category property to one of the strings returned by this method.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadCategoriesCompleted event.

### 78.12.9 `loadLeaderboards(tag as Variant = nil)`

**Function:** Loads the leaderboards.

**Notes:**

Calls GameKitMBS.loadLeaderboardsCompleted later when completed.

Available on Mac OS X 10.8.2 and newer.
78.12.10  **loadScores(tag as Variant = nil)**

**Function:** Retrieves a set of scores from Game Center.

**Notes:**

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadScoresCompleted event.

You can call this method multiple times; each call represents a different query against the scores stored on Game Center. If you post multiple load operations using the same leaderboard object, any properties that are updated by loading scores reflect the last query that completed. The order that achievement queries are processed is arbitrary.

78.12.11  **localPlayerScore as GKScoreMBS**

**Function:** The score earned by the local player. (read-only)

**Notes:** This property is invalid until a call to loadScores is completed. Afterward, it contains a score object representing the local player’s score on the leaderboard.

78.12.12  **maxRange as Integer**

**Function:** The size of the leaderboard. (read-only)

**Notes:** This property is invalid until a call to loadScores is completed. Afterward, it contains the total number of entries available to return to your game given the filters you applied to the query.

78.12.13  **scores as GKScoreMBS()**

**Function:** The list of scores returned by the search. (read-only)

**Notes:** This property is invalid until a call to loadScores is complete. Afterward, it contains the same score objects that were returned to the completion handler.
setDefaultLeaderboard(categoryID as string, tag as Variant = nil)

Function: Sets the default leaderboard for the local player.
Notes:
categoryID: The named leaderboard that should be the new default leaderboard for the local player.

The default leaderboard is used whenever your game uses a GKScore object to report a score to Game Center without explicitly setting the score object’s category property. The default leaderboard is normally set in iTunes Connect when you configure your game. However, your game can use this class method to override the default leaderboard that appears for the local player.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.setDefaultLeaderboardCompleted event.

If an error occurs and was a network error, your game should periodically resend the request until it completes.

title as string

Function: The localized title for the leaderboard. (read-only)
Notes: This property is invalid until a call to loadScores is complete. Afterward, it contains the localized title that matches the category property of the leaderboard object.

Properties

Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)

category as string

Function: The named leaderboard to retrieve information from.
Notes:
If non-empty, Game Center only returns scores with a matching category value. If empty, this property is ignored. Default is empty.
(Read and Write computed property)

### 78.12.19 playerScope as Integer

*Function:* A filter used to restrict the search to a subset of the players on Game Center.

*Notes:* The playerScope property is ignored if the leaderboard request was initialized using the Constructor method. Otherwise, the playerScope property determines which players are included in the request for high scores. The default is GKLeaderboardPlayerScopeGlobal. See Leaderboard Player Scope constants for more information.
(Read and Write computed property)

### 78.12.20 range as NSRangeMBS

*Function:* The numerical score rankings to return from the search.

*Notes:* The range property is ignored if the leaderboard request was initialized using the Constructor method. Otherwise, the range property is used to filter which scores are returned to your game. For example, if you specified a range of [1,10], after the search is complete, your game receives the top ten scores. The default range is [1,25].

The minimum index is 1. The maximum length is 100.
(Read and Write computed property)

### 78.12.21 timeScope as Integer

*Function:* A filter used to restrict the search to scores that were posted within a specific period of time.

*Notes:* This property determines how far back in time the search looks for scores. The default value is GKLeaderboardTimeScopeAllTime. See Leaderboard Time Scope for more information.
(Read and Write computed property)
78.12.22 Constants

78.12.23 GKLeaderboardPlayerScopeFriendsOnly = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One for the constants for the scope of players to be searched for scores. Notes: Only friends of the local player should be considered when generating the list of scores.

78.12.24 GKLeaderboardPlayerScopeGlobal = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One for the constants for the scope of players to be searched for scores. Notes: All players on Game Center should be considered when generating the list of scores.

78.12.25 GKLeaderboardTimeScopeAllTime = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the constants for period of time to which a player’s best score is restricted. Notes: Each player’s best score is returned.

78.12.26 GKLeaderboardTimeScopeToday = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the constants for period of time to which a player’s best score is restricted. Notes: Each player is restricted to scores recorded in the past 24 hours.

78.12.27 GKLeaderboardTimeScopeWeek = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the constants for period of time to which a player’s best score is restricted. Notes: Each player is restricted to scores recorded in the past week.
78.13 class GKLeaderboardViewControllerMBS

78.13.1 class GKLeaderboardViewControllerMBS

**Function:** The GKLeaderboardViewController class provides a standard user interface that displays high scores to the player.

**Notes:**

see also

Subclass of the NSViewControllerMBS class.

78.13.2 Methods

78.13.3 Constructor

**Function:** The constructor.

78.13.4 Properties

78.13.5 category as string

**Function:** The category.

**Notes:** (Read and Write computed property)

78.13.6 timeScope as Integer

**Function:** The time scope.

**Notes:** (Read and Write computed property)
78.14. class GKLocalPlayerMBS

78.14.1 class GKLocalPlayerMBS

**Function:** The GKLocalPlayer class is a special subclass of GKPlayer that represents the authenticated player running your game on the local device.

**Notes:**
At any given time, only one player may be authenticated on the device; this player must log out before another player can log in.

Your game must authenticate the local player before using any Game Center features. Authenticating the player ensures that the player has created an account and is connected to Game Center. To authenticate the local player, retrieve the shared instance of the local player by calling the localPlayer class method, and then call the authenticateWithCompletionHandler: method.

You can see whether the local player is authenticated by reading the local player’s authenticated property. If authenticated is true, then the local player’s other properties are valid, and you can call other Game Center methods.

Call the loadFriendsWithCompletionHandler: method to retrieve the player identifiers for the local player’s friends.

Subclass of the GKPlayerMBS class.

78.14.2 Methods

78.14.3 authenticate(tag as Variant = nil)

**Function:** Prompts the player to confirm their identity.

**Deprecated:** This item is deprecated and should no longer be used. You can use SetAuthenticateHandler instead.

**Notes:**
When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.authenticate-Completed event.

Your game should authenticate the player as early as possible after launching, ideally as soon as you can present a user interface to the player. For example, your game may be launched because the player accepted an invitation to join a match or to take a turn in a turn-based match, so you want your game to authenticate the player and process the match invitation as quickly as possible.
If there is not an authenticated player on the device when your game calls this method, Game Kit displays a user interface that allows the player to sign in with their credentials (or to create a new account if he or she has never used Game Center). Your game should pause other activities that require user interaction (such as a real time game loop) before attempting to authenticate the local player.

Each time the completion handler is called, the data stored in the the GKLocalPlayer singleton object may have changed. A new player may have logged into the device or the player may have simply logged out from Game Center. Because of both of these possibilities, your completion handler must be prepared update any state of the game that assumes that a particular player is logged in if it discovers that the local player has changed. For more information, see "Authenticating the Local Player in a Multitasking Application" in Game Kit Programming Guide.

Deprecated in Mac OS X 10.9.

### 78.14.4 Constructor

**MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.**

**Function:** Creates new object pointing to the shared instance of the local player.

### 78.14.5 friends as string()

**MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.**

**Function:** A list of player identifiers for the local player’s friends. (read-only)

**Notes:** This property is invalid until a call to loadFriends succeeds.

### 78.14.6 GKPlayerAuthenticationDidChangeNotificationName as string

**MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.**

**Function:** The notificartion name fo the notification to inform about an authentication change.

**Notes:** Posted after the authenticated property of the shared local player object changes.

### 78.14.7 loadDefaultLeaderboardCategoryID(tag as Variant = nil)

**MBS MacFrameworks Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.**

**Function:** Loads the category identifier for the local player’s default leaderboard.

**Notes:**

Calls later GameKitMBS.loadDefaultLeaderboardCategoryIDCompleted event.
When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadDefaultLeaderboardCategoryIDCompleted event.

Available on Mac OS X 10.8.2 and newer.

### 78.14.8 loadFriendPlayers(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.

**Function:** Retrieves a list of player identifiers for the local players friends.

**Notes:**

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your completion handler. The completion handler is always called on the main thread.

Available in OS X v10.10 and later.
Calls later loadFriendPlayersCompleted event in GameKitMBS class.

### 78.14.9 loadFriends(tag as Variant = nil)

**Function:** Retrieves a list of player identifiers for the local player’s friends.

**Notes:**

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadFriendsCompleted.

Once this call is completed, the friends property is set to the same list of players returned in the completion event.

### 78.14.10 localPlayer as GKLocalPlayerMBS

**Function:** Retrieves the shared instance of the local player.

**Notes:** You never directly create a local player object. Instead, you retrieve the singleton object by calling this method.
78.14.11 SetAuthenticateHandler(tag as Variant = nil)

Function: Sets the handler called to process an authentication-related event with GameKitMBS.authenticateHandler.
Notes:
Calls later GameKitMBS.authenticateHandler.
Available on Mac OS X 10.8.2 and newer.

78.14.12 setDefaultLeaderboardCategoryID(categoryID as string, tag as Variant = nil)

Function: Sets the category identifier for the local player's default leaderboard.
Notes:
categoryID: The category ID string for one of your game's leaderboards.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.setDefaultLeaderboardCategoryIDCompleted event.

The default leaderboard is configured in iTunes Connect as part of configuring your game's leaderboards. All players normally start with this leaderboard as the default leaderboard. Calling this method changes the default leaderboard only for the local player.

Available on Mac OS X 10.8.2 and newer.

78.14.13 Properties

78.14.14 isAuthenticated as boolean

Function: A Boolean value that indicates whether a local player is currently signed in to Game Center.
(read-only)
Notes:
Before using other Game Center features, your game must authenticate the local player. Your game can read this property elsewhere in your game to confirm that the local player is authenticated.

Important Even after the local player has successfully authenticated their credentials, the value of this prop-
erty can change. For example, if your game is switched into the background, the player could launch the Game Center game and sign out of Game Center. To be notified when the value of this property changes, your game should register to receive the GKPlayerAuthenticationDidChangeNotificationName notification (or use GameKitMBS.PlayerAuthenticationDidChange event).
(Read only property)

78.14.15 isUnderage as boolean

Function: A Boolean value that declares whether the local player is underage. (read-only)
Notes: Some Game Center features are disabled if the local player is underage. Your game can test this property if it wants to disable some of its own features based on the player’s age.
(Read only property)
78.15 class GKMatchmakerMBS

78.15.1 class GKMatchmakerMBS

Function: The GKMatchmaker class is used to programmatically create matches to other players and to receive match invitations sent by other players.
Notes:

78.15.2 Methods

78.15.3 addPlayersToMatch(match as GKMatchMBS, matchRequest as GKMatchRequestMBS, tag as Variant = nil)

Function: Adds players to an existing match.
Notes:
mismatch: A previously created match.
mismatchRequest: The parameters for the new match request.
This method updates an existing match object by adding additional players.
When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.addPlayersToMatchCompleted event.

78.15.4 Available as boolean

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

78.15.5 cancel

Function: Cancels a pending matchmaking request.
78.15. **CLASS GKMATCHMAKERMBS**

Notes: The completion event receives a callback with a GKErrorCancelled error.

### 78.15.6 cancelInviteToPlayer(playerID as string)

**Function:** Cancel a pending invitation to a player.
**Notes:** Available on Mac OS X 10.8.2 and newer.

### 78.15.7 Constructor

**Function:** The constructor.

### 78.15.8 Destructor

**Function:** The destructor.

### 78.15.9 findMatchForRequest(request as GKMatchRequestMBS, tag as Variant = nil)

**Function:** Initiates a request to find players for a peer-to-peer match.
**Notes:**
When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.findMatchForRequestCompleted event.

The match request’s playersToInvite property is ignored; to invite a specific set of players to the match, you must display the standard user interface.

### 78.15.10 findPlayersForHostedMatchRequest(request as GKMatchRequestMBS, tag as Variant = nil)

**Function:** Initiates a request to find players for a hosted match.
request: The configuration for the desired match.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.findPlayersForHostedMatchRequestCompleted event. When the event is called, your game should connect those players to your own server.

The match request’s playersToInvite property is ignored; to invite a specific set of players to the match, you must display the standard user interface.

### 78.15.11 finishMatchmakingForMatch(match as GKMatchMBS)

**Function:** Call this when finished with all programmatic P2P invites/matchmaking, for compatibility with connected players using GKMatchmakerViewController.
**Notes:** Available on Mac OS X 10.8.2 and newer.

### 78.15.12 matchForInvite(invite as GKInviteMBS, tag as Variant = nil)

**Function:** Get a match for an accepted invite.
**Notes:**

Calls later GameKitMBS.matchForInviteCompleted event.

Possible reasons for error:
1. Communications failure.
2. Invite cancelled.

Available on Mac OS X 10.8.2 and newer.

### 78.15.13 maxPlayersAllowedForMatchOfType(type as Integer) as Integer

**Function:** To determine the maximum allowed players for each type of match supported.
**Notes:** Available on Mac OS X 10.8.2 and newer.
78.15. **CLASS GKMATCHMAKER MBS**

78.15.14  `queryActivity(tag as Variant = nil)`

**Function:** Initiates a search for activity in all player groups.

**Notes:**

A query allows your game to see how many players have recently searched for a match, across all player groups.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.queryActivityCompleted event.

78.15.15  `queryPlayerGroupActivity(playerGroup as Integer, tag as Variant = nil)`

**Function:** Queries Game Center for the activity in a player group.

**Notes:**

playerGroup: A number that uniquely identifies a subset of players of your game.

A query allows your game to see how many players have recently searched for a match. As a result, you can present a user interface that shows the relative activity in each player group. For example, if one group sees less activity than others, you might display a warning so that players are aware that finding a match may take longer.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.queryPlayerGroupActivityCompleted event.

78.15.16  `sharedMatchmaker as GKMatchmakerMBS`

**Function:** Returns the singleton matchmaker instance.

**Notes:** Games do not create a GKMatchmaker object. Instead, they retrieve the shared singleton by calling this method.
78.15.17  startBrowsingForNearbyPlayers(tag as Variant = nil)

**Function:** Start browsing for nearby players that can be invited to a match.
**Notes:**
The GameKitMBS.startBrowsingForNearbyPlayersCompleted event will be called for each player found with
a compatible game. It may be called more than once for the same player if that player ever becomes un-
reachable (e.g. moves out of range). You should call stopBrowsingForNearbyPlayers when finished browsing.

Available on Mac OS X 10.8.2 and newer.

78.15.18  stopBrowsingForNearbyPlayers

**Function:** Stop browsing for nearby players.
**Notes:** Available on Mac OS X 10.8.2 and newer.

78.15.19  Properties

78.15.20  Handle as Integer

**Function:** The internal object reference.
**Notes:** (Read and Write property)

78.15.21  Constants

78.15.22  GKMatchTypeHosted = 1

MBS MacFrameworks Plugin, Plugin Version: 13.0. **Function:** One of the match types.
**Notes:**
Hosted Match
Available on Mac OS X 10.8.2 and newer.
78.15.23  GKMatchTypePeerToPeer = 0

MBS MacFrameworks Plugin, Plugin Version: 13.0. **Function:** One of the match types. **Notes:**
Peer to Peer Match.
Available on Mac OS X 10.8.2 and newer.

78.15.24  GKMatchTypeTurnBased = 2

MBS MacFrameworks Plugin, Plugin Version: 13.0. **Function:** One of the match types. **Notes:**
Turn based match.
Available on Mac OS X 10.8.2 and newer.
78.16  **class GKMatchmakerViewControllerMBS**

78.16.1  **class GKMatchmakerViewControllerMBS**

**Function:** The GKMatchmakerViewController class is used to present a standard user interface to the player.
**Notes:**
This interface allows them to invite friends to a match or to allow Game Center to fill the remaining players needed for a match.

see also:
Subclass of the NSViewControllerMBS class.

78.16.2  **Methods**

78.16.3  **addPlayersToMatch(match as GKMatchMBS)**

**Function:** Adds a player to the match.
**Notes:**
match: An existing match that you want to add players to.

Your game calls this method prior to presenting the view controller to the player. Calling this method instructs the view controller to add new players to the provided match rather than creating a new match.

When called, this method sets the delegate on the match to nil and updates the view controller’s user interface to display the players already connected to the match.

Important Only one device connected to the match should call this method.

78.16.4  **Constructor**

**Function:** The private constructor.
See also:
78.16. **CLASS GKMATCHMAKERVIEWCONTROLLERMBS**

- 78.16.5 Constructor(invite as GKInviteMBS)
- 78.16.6 Constructor(request as GKMatchRequestMBS)

### 78.16.5 Constructor(invite as GKInviteMBS)

**Function:** Initializes a matchmaker view controller to respond to an invitation received from another player.

**Notes:**
- invite: The invitation received from the other player.

The user is allowed to join the match that the user was invited to, but is not allowed to invite others to the match.

See also:
- 78.16.4 Constructor
- 78.16.6 Constructor(request as GKMatchRequestMBS)

### 78.16.6 Constructor(request as GKMatchRequestMBS)

**Function:** Initializes a matchmaker view controller to create a new match.

**Notes:**
- request: A request containing the characteristics for the desired match.

Your game uses this Constructor when it wants the local user to create a new match.

See also:
- 78.16.4 Constructor
- 78.16.5 Constructor(invite as GKInviteMBS)

### 78.16.7 matchRequest as GKMatchRequestMBS

**Function:** The configuration for the desired match. (read-only)

### 78.16.8 setHostedPlayer(playerID as string, connected as boolean)

**Function:** Updates a player’s status on the view to show that the player has connected or disconnected
CHAPTER 78. GAMEKIT

from your server.

Notes:

playerID: The identifier string for a player that connected to the external server.
connected: Optional, a Boolean value that states whether the player is connected to the hosted match.

When setting up a hosted match, each device should instantiate a matchmaker view controller and display
it to the player. Then, when a new player connects to your server, your server should notify all participating
devices already connected to your server. Each participating device should then call this method to update
that player’s status in the matchmaking interface. Similarly, if a player disconnects from the server, your
server should inform each device so that the devices can update their user interface.

78.16.9 Properties

78.16.10 DefaultInvitationMessage as string

Function: The default invitation message used to initialize an invitation.
Notes:
Your game sets this property to change the default invitation text displayed when the local player creates a
new invitation. The local player may edit the text before sending the invitation.
(Read and Write computed property)

78.16.11 Hosted as boolean

Function: A Boolean value that indicates whether the match is hosted or peer-to-peer.
Notes:
The value of the hosted property determines which events of GameKitMBS are called when the match is
complete. If true, this is a hosted match, and the delegate’s matchmakerViewControllerDidFindPlayers
method is to provide the list of players to your game. If false, this is a peer-to-peer match, and matchmak-
erViewControllerDidCreateMatch is called with a GKMatch object. The default value is false.

Hosted matches require you to provide a server that hosts the participants in the match.
(Read and Write computed property)
78.17. class GKMatchMBS

78.17.1 class GKMatchMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A GKMatch object provides a peer-to-peer connection between a group of players that are connected through Game Center.

**Notes:**
Matches provide both data and voice services. Your application never directly allocates GKMatch objects. Instead, your application uses the GKMatchmaker class to programmatically find a match with other interested players or a GKMatchmakerViewController object to display a user interface to the player.

After your application receives a match object, you must set a delegate and then wait until the other participants are connected to the match. You can read the expectedPlayerCount property to determine how many players have not connected to the match.

Your application transmits data to other players by calling either the sendDataToAllPlayers method or the sendDataToPlayer method. To transmit and receive voice data, call voiceChatWithName to create one or more voice channels.

When you are finished with the match, call the match’s disconnect method.

78.17.2 Methods

78.17.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** True if the class is available.

**Notes:** Should always be true on Mac OS X 10.8 and newer.

78.17.4 chooseBestHostPlayer(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determines the best player in the game to act as the server for a client-server match.

**Notes:**
Calling this method causes Game Kit to attempt to estimate which player has the best overall network connection using a variety of metrics such as bandwidth, latency and network reliability. Typically, you call this method when your game implements a client-server model on top of the match’s peer-to-peer connection. See "Designing Your Network Game" in Game Center Programming Guide.
When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GKMatchMBS.chooseBestHostPlayerCompleted event.

### 78.17.5 Constructor

**MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.**  
**Function:** The constructor.

### 78.17.6 disconnect

**MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.**  
**Function:** Disconnects the local player from the match.  
**Notes:** Your application should call disconnect before releasing the match object. Calling disconnect notifies other players that you have left the match.

### 78.17.7 expectedPlayerCount as Integer

**MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.**  
**Function:** The remaining number of players who have not yet connected to the match. (read-only)  
**Notes:** The value of this property is decremented whenever a player connects to the match. When its value reaches zero, all expected players are connected, and your game can begin the match.

### 78.17.8 playerIDs as string()

**MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.**  
**Function:** The player identifiers for the players in the match. (read-only)  
**Notes:** The playerIDs property initially includes the player identifiers for any players already connected to the match; the array may initially be empty. As each player connects to the match, that player’s player identifier is added to the array.

### 78.17.9 rematch(tag as Variant = nil)

**MBS MacFrameworks Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.**  
**Function:** Create a new match with the list of players from an existing match.  
**Notes:**
Calling this method uses auto-matching to recreate a previous match. A new match with the same set of players is created and returned. If your game attempts to recreate matches using this method, each instance of your game on each device should call this method.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GKGameKitMBS.rematch-Completed event.

### 78.17.10 sendDataToAllPlayers(data as Dictionary, mode as Integer, byref error as NSErrorMBS) as boolean

**Function:** Transmits data to all players connected to the match.

**Notes:**

- **data:** The game data to send.
- **mode:** The mechanism used to send the data.
- **error:** If the data could not be queued, on return, this parameter holds an NSError object describing the error.

Return true if the data was successfully queued for transmission; false if the match was unable to queue the data.

The match queues the data and transmits it when the network becomes available.

### 78.17.11 sendDataToPlayers(players() as string, data as Dictionary, mode as Integer, byref error as NSErrorMBS) as boolean

**Function:** Transmits data to a list of connected players.

**Notes:**

- **data:** The game data to be sent.
- **players:** An array containing the identifier strings for the list of players who should receive the data.
- **mode:** The mechanism used to send the data.
- **error:** If the data could not be queued, on return, this parameter holds an NSError object describing the error.

Returns true if the data was successfully queued for transmission; false if the match was unable to queue the data.

The match queues the data and transmits it when the network becomes available.
78.17.12 voiceChatWithName(name as string) as GKVoiceChatMBS

Function: Joins a voice channel.
Notes: Returns an voice chat object for the voice channel, or nil if an error occurred.

Calling this method joins a voice channel, creating it if necessary. Your application should retain the voice
chat object returned by this method. All participants who join a channel with the same name are connected
to each other.

A single match can have multiple voice chat channels, and any player in the match can join multiple channels
simultaneously. For example, a team-based game might create a channel for each team, and a single channel
that includes all of the players.

Voice chat objects are dependent on the network connection provided by the match. When the player dis-
connects from the match, all voice channels associated with that match stop working. Typically, you should
release any voice channels you joined before calling calling disconnect on the match.

Parental controls may prevent a player from joining a voice chat. If the player is not permitted to join the
voice channel, a nil object is returned to your application.

78.17.13 Properties

78.17.14 Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)

78.17.15 Constants

78.17.16 GKMatchSendDataReliable = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the mechanism constants used to
transmit data to other players.
Notes: The data is sent continuously until it is successfully received by the intended recipients or the connection
times out.
Reliable transmissions are delivered in the order they were sent. Use this when you need to guarantee delivery.

**78.17.17 GKMatchSendDataUnreliable = 1**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the mechanism constants used to transmit data to other players.

**Notes:**
The data is sent once and is not sent again if a transmission error occurs. Data transmitted unreliably may be received out of order by recipients. Use this for small packets of data that must arrive quickly to be useful to the recipient.

**78.17.18 GKPlayerStateConnected = 1**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the state constants.

**Notes:** Connected to the match.

**78.17.19 GKPlayerStateDisconnected = 2**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the state constants.

**Notes:** Disconnected from the match.

**78.17.20 GKPlayerStateUnknown = 0**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the state constants.

**Notes:** Initial player state.
78.18  class GKMatchRequestMBS

78.18.1  class GKMatchRequestMBS

Function: A GKMatchRequest object is used to specify the parameters for a new match.  
Notes: A GKMatchRequest object is passed to the GKMatchmaker object to programmatically search for 
other players, or to a GKMatchmakerViewController (GKMatchmakerPanel on OS X) object when your 
game wants to present the default user interface to the player.

78.18.2  Methods

78.18.3  Available as boolean

Function: True if the class is available.  
Notes: Should always be true on Mac OS X 10.8 and newer.

78.18.4  Constructor

Function: The constructor.

78.18.5  playersToInvite as string()

Function: A list of players to invite to the match.  
Notes: If empty (the default), no players are invited. If non-empty, Game Kit populates the match with 
the provided list of players.

78.18.6  recipients as GKPlayerMBS()

MBS MacFrameworks Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  
Function: A list of player identifiers for players to invite to the match.  
Notes:  
The property holds an array of GKPlayer objects, each of which contains an identifier for a player on Game 
Center. If the value of the property is non-nil, when you use the request to create a match, Game Center 
invites those players to the match. No automatching is done and the GKMatchRequestmaxPlayers and
minPlayers properties are ignored. If nil (the default), no players are invited. The exact behavior for matchmaking depends on the kind of match being created and the class used to create the match. For more information, see Game Center Programming Guide.

Available in OS X v10.10 and later.

### 78.18.7 SetInviteeResponseHandler(tag as Variant = nil)

**Function:** Sets the invitee response handler for this match request.
**Notes:**

An invitee response handler is called whenever you programmatically invite specific players to join a match. It is called once for each player invited to the match. Typically, your game uses the responses to update the custom user interface. For example, you want the player to be able to perform any of the following tasks:

- Start the match.
- Invite an additional set of specific players.
- Use matchmaking to fill the remaining match slots.

Available on Mac OS X 10.8.2 and newer.

### 78.18.8 setPlayersToInvite(playerIDs() as string)

**Function:** Sets the list of players to invite to the match.
**Notes:** If empty (the default), no players are invited. If non-empty, Game Kit populates the match with the provided list of players.

### 78.18.9 SetRecipientResponseHandler(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** Sets the event to be called when a response from an invited player is returned to your game.
**Notes:** Once event is installed, the plugin can call GameKitMBS.recipientResponseHandler event for this match request.
78.18.10 setRecipients(players() as GKPlayerMBS)

MBS MacFrameworks Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the list of player identifiers for players to invite to the match.
Notes:
The property holds an array of GKPlayer objects, each of which contains an identifier for a player on Game Center. If the value of the property is non-nil, when you use the request to create a match, Game Center invites those players to the match. No automatching is done and the GKMatchRequestmaxPlayers and minPlayers properties are ignored. If nil (the default), no players are invited. The exact behavior for matchmaking depends on the kind of match being created and the class used to create the match. For more information, see Game Center Programming Guide.

Available in OS X v10.10 and later.

78.18.11 Properties

78.18.12 Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)

78.18.13 defaultNumberOfPlayers as Integer

Function: The default number of players for the match.
Notes:
If this property is not set, then the default number of players is equal to the value stored in the maxPlayers property. The default number of players determines the number of invitees shown in the standard matchmaking user interface. The player can choose to override this to add or remove slots.

Available on Mac OS X 10.8.2 and newer.
(Read and Write computed property)

78.18.14 inviteMessage as string

Function: Message sent to invited players, may be modified if using Game Center UI.
Notes:
78.18. CLASS GKMATCHREQUESTMBS

Available on Mac OS X 10.8.2 and newer.
(Read and Write computed property)

78.18.15 maxPlayers as Integer

Function: The maximum number of players to join the match.
Notes:
The maximum number of players must be equal or greater than the minimum number of players. The maximum number of players may be no more than 4 for a peer-to-peer match and no more than 16 for a hosted match.
(Read and Write computed property)

78.18.16 minPlayers as Integer

Function: The minimum number of players to join the match.
Notes:
The minimum number of players must be at least 2.
(Read and Write computed property)

78.18.17 playerAttributes as UInt32

Function: A mask that specifies the role that the local player would like to play in the game.
Notes:
If this value is 0 (the default), this property is ignored. If the value is nonzero, then automatching uses the value as a mask that restricts the role the player can play in the group. Automatching with player attributes follows two rules:

A new player can only be added to the match if the bitwise AND of that player’s mask and the mask of any player already in the match equals & h00000000.
Players are added to the match until the bitwise OR of the masks of all the players in the match equals & hFFFFFFFF.
(Read and Write computed property)
78.18.18 playerGroup as Integer

Function: A number identifying a subset of players allowed to join the match.

Notes:

If your game sets the playerGroup property, only players whose requests share the same playerGroup value are automatched by Game Center. You can use any values you want for player groups. For example, you could define different playerGroup values to implement any of the following filters:

- A game could restrict players based on skill level.
- A game that provides multiple games could use it to filter players into the specific game they want to play.
- A game with multiple victory conditions (for example, Capture-The-Flag, Survival) could match players to others interested in the same rules.
- A game that provides bonus content through in-app purchase could match players who own the same content with each other.

(Read and Write computed property)
78.19. **CLASS GKPLAYERMBS**

**78.19 class GKPlayerMBS**

**78.19.1 class GKPlayerMBS**

**Function:** GKPlayer objects provide information about a player connected to Game Center.
**Notes:**
see also
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

**78.19.2 Methods**

**78.19.3 Available as boolean**

**Function:** True if the class is available.
**Notes:** Should always be true on Mac OS X 10.8 and newer.

**78.19.4 Constructor**

**Function:** The private constructor.

**78.19.5 GKPlayerDidChangeNotificationName as string**

**Function:** The name of the notification posted when a player object’s data changes.
**Notes:** Used internally for GameKitMBS.playerChanged event.

**78.19.6 loadPhotoForSize(size as Integer, tag as Variant = nil)**

**Function:** Loads a photo depicting this player from Game Center.
**Notes:**
size: A constant that determines the size of the photo to load.
When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadPhotoForSizeCompleted.

Important The size of the image returned to your game is dependent on both the constant you provided in the initial request and the user interface idiom of the device your game is running on.

### 78.19.7 loadPlayersForIdentifiers(identifiers() as string, tag as Variant = nil)

**Function:** Loads information from Game Center about a list of players.  
**Notes:**

identifiers: An array of strings, each a unique identifier for a Game Center player.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadPlayersForIdentifiersCompleted event.

### 78.19.8 Properties

#### 78.19.9 alias as string

**Function:** A string chosen by the player to identify themselves to other players. (read-only)  
**Notes:**

Your game uses the alias property when it wants to display a user-visible string for a particular player.  
(Read only property)

#### 78.19.10 displayName as String

MBS MacFrameworks Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  
**Function:** A string to display for the player.  
**Notes:**

The display name for a player depends on whether the player is a friend of the local player authenticated on the device. If the player is a friend of the local player, then the display name is the actual name of the player. If the player is not a friend, then the display name is the players alias.  
Available in Mac OS X 10.8 and newer.  
(Read only property)
78.19.11  Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)

78.19.12  isFriend as boolean

Function: A Boolean value that indicates whether the local player has identified this player as a friend.
(Read-only)
Notes:
The Game Center application allows players to declare other players as friends.
(Read only property)

78.19.13  playerID as string

Function: A string assigned by Game Center to uniquely identify a player. (Read-only)
Notes:
The player identifier should not be displayed to the user. Your game should use this string whenever it needs
to persistently store information for a specific player.

Do not make assumptions about the contents of the player identifier string. Its format and length are subject
to change.
(Read only property)

78.19.14  Constants

78.19.15  GKPhotoSizeNormal = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the size constants of a photo loaded
by Game Center.
Notes: Load a normal sized photo.
78.19.16  GKPhotoSizeSmall = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the size constants of a photo loaded by Game Center.  
**Notes:** Load a small photo.
78.20. **CLASS GKSCORECHALLENGEMBS**

### 78.20 class GKScoreChallengeMBS

**MBS MacFrameworks Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.**

**Function:** A GKScoreChallenge object represents a challenge based on a score in a leaderboard.

**Notes:**

To complete the challenge, the player must score an equal or better score than the score used to create the challenge. When a player beats a score challenge, a new score challenge is automatically issued to the player that issued the challenge unless there is already a pending score challenge that requires a better score.

Available on Mac OS X 10.8.2 and newer.

Subclass of the GKChallengeMBS class.

This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

### 78.20.2 Methods

#### 78.20.3 Constructor

**MBS MacFrameworks Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.**

**Function:** The private constructor.

**Notes:**

Available on Mac OS X 10.8.2 and newer.

This constructor is private to make sure you don’t create an object from this class by error. Please use designated functions to create objects.

#### 78.20.4 score as GKScoreMBS

**MBS MacFrameworks Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.**

**Function:** The score to beat. (read-only)

**Notes:** Available on Mac OS X 10.8.2 and newer.
78.21 class GKScoreMBS

78.21.1 class GKScoreMBS

Function: A GKScore class holds information for a score that was earned by the player.
Notes:
Your game creates GKScore objects to post scores to a leaderboard on Game Center. When your game retrieves score information from a leaderboard those scores are returned as GKScore objects.

see also

78.21.2 Methods

78.21.3 Available as boolean

Function: True if the class is available.
Notes: Should always be true on Mac OS X 10.8 and newer.

78.21.4 Constructor(category as string)

Function: Initializes a score object.
Notes:
Category: A category identifier for a specific leaderboard you’ve configured on iTunes Connect. Must not be "".
Your game explicitly allocates and initializes a score object when it needs to report a new score to Game Center.

78.21.5 date as date

Function: The date and time when the score was earned. (read-only)
Notes: When you initialize the new score object, the date property is automatically set to the current date
78.21. **CLASS GKSCOREMBS**

and time.

### 78.21.6 `formattedValue as string`

**Function:** Returns the player’s score as a localized string. (read-only)

**Notes:**

This property is invalid on a newly initialized score object. On a score returned from Game Kit, it contains a formatted string based on the player’s score. You control the formatting of this string by configuring your leaderboards on iTunes Connect.

Never convert the value property into a string; always configure your leaderboard and call this method to receive the formatted string.

### 78.21.7 `issueChallengeToPlayers(playerIDs() as string, message as string)`

**Function:** Use this method to issue GKScoreChallenges and GKAchievementChallenges to an array of playerIDs.

**Notes:**

Players may not issue challenges to themselves nor to non-friends. Please see the GameKit reference documentation for further details on these methods.

Available on Mac OS X 10.8.2 and newer.

### 78.21.8 `playerID as string`

**Function:** The player identifier for the player that earned the score. (read-only)

**Notes:** When you initialize a new score object, the playerID property is set to the identifier for the local player. If you read the property on a score object retrieved from Game Center, playerID identifies the player who recorded that score.

### 78.21.9 `rank as Integer`

**Function:** The position of the score in the results of a leaderboard search. (read-only)

**Notes:** The value of this property is undefined on a newly initialized GKScore object. It is only valid on score objects received from Game Center. The rank property represents the position of the score in the
returned results, with 1 being the best score, 2 being the second best, and so on.

78.21.10  reportScore(tag as Variant = nil)

Function: Reports a score to Game Center.
Notes:
The value property must be set before calling this method.

When this method is called, it creates a new background task to handle the request. The method then returns
control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.reportScoreCompleted.

If the score object successfully reports progress to Game Center, your game may release it. Otherwise, your
game should inspect the error. If the error is a network error and your game is running on iOS 4.3 or earlier,
your game should periodically attempt to report the progress until the score is successfully reported. On
iOS 5.0 and later and on OS X, the background reporting task automatically handles network errors on your
game’s behalf.

78.21.11  reportScores(scores() as GKScoreMBS, tag as Variant = nil)

Function: Reports a list of scores to Game Center.
Notes:
scores: An array of score objects to report to Game Center.

Calls later GameKitMBS.reportScoresCompleted on completion.

Use this class method whenever you need to submit multiple scores at the same time. Calling this method
reports each of the scores, exactly as if you called the reportScore method on each score object in the array.
However, the entire operation can typically be processed more efficiently using this method, and the com-
pletion handler is only called once.
Available on Mac OS X 10.8.2 and newer.
78.21. **CLASS GKSCOREMBS**

### 78.21.12 Properties

#### 78.21.13 Handle as Integer

**Function:** The internal object reference.
**Notes:** (Read and Write property)

#### 78.21.14 category as string

**Function:** The leaderboard that this score belongs to.
**Notes:**
The category string must match an identifier you created when you defined your leaderboards on iTunes Connect.
(Read and Write computed property)

#### 78.21.15 context as UInt64

**Function:** An integer value used by your game.
**Notes:**
The context property allows your game to associate an arbitrary 64-bit unsigned integer value with the score data reported to Game Center. You decide how this integer value is interpreted by your game. For example, your game might use the context property to store flags that provide game-specific details about a player’s score, or it might use the context as a key to some other data stored on the device or on your own server. In either case, your game typically uses this information when it displays a custom leaderboard to the player.
(Read and Write computed property)

#### 78.21.16 shouldSetDefaultLeaderboard as boolean

**Function:** A Boolean value that indicates whether this score should also update the default leaderboard.
**Notes:**
If the value of this property is true, when the score is reported to Game Center, Game Center also updates the default leaderboard to match the value stored in the category property of the score object. This matches the behavior of the GKLeaderboardMBS class’s setDefaultLeaderboard class method. If the value of this property is true, the default leaderboard is not changed by reporting the score. The default value of this property is false.
78.21.17  value as Int64

Function: The score earned by the player.
Notes:
You can use any algorithm you want to to calculate scores in your game. The value provided by a score
object must match the formatting string configured for your leaderboard on iTunes Connect. Your game
must set the value property before reporting a score, otherwise an error is returned.
(Read and Write computed property)
78.22. Class GKTurnBasedMatchmakerViewControllerMBS

78.22.1 Class GKTurnBasedMatchmakerViewControllerMBS

**Function:** The GKTurnBasedMatchmakerViewController class displays a user interface that allows players to manage the turn-based matches that they are participating in.  
**Notes:**  
see also https://developer.apple.com/library/mac/#documentation/GameKit/Reference/GKTurnBasedMatchmakerViewController_Ref/Reference/Reference.html

See also GameKitMBS.turnBasedMatchmakerViewController* events.  
Subclass of the NSViewControllerMBS class.

78.22.2 Methods

78.22.3 Constructor

**Function:** The private constructor.  
See also:

- 78.22.4 Constructor(request as GKMatchRequestMBS)

78.22.4 Constructor(request as GKMatchRequestMBS)

**Function:** Initializes a new matchmaker view controller.  
**Notes:** request: A match request with parameters for the match.  
See also:

- 78.22.3 Constructor

78.22.5 Properties

78.22.6 showExistingMatches as boolean

**Function:** A Boolean value that determines whether the view controller shows existing matches.  
**Notes:**
If the value of this property is true, the view controller shows matches that are already in progress. If the value of this property is false, the view controller only offers the ability to create new matches. The default value is true.
(Read and Write computed property)
78.23. class GKTurnBasedMatchMBS

78.23.1 class GKTurnBasedMatchMBS

**Function:** The GKTurnBasedMatch class allows your game to implement turn-based matches between sets of players on Game Center.

**Notes:**

A turn-based match uses a store-and-forward approach to share data between the participants. When a player participating in the match performs actions to advance the state of the match, your game uploads data to Game Center that defines the new state of the match and tells Game Center which player act next in the match. Later, when the next player launches your game, it downloads the match data from Game Center and continues the match. Players continue to take turns acting (based on whatever internal logic your game implements) until the match ends. A key advantage of turn-based matches is that a player may participate in multiple matches simultaneously.

see also

78.23.2 Methods

78.23.3 acceptInvite(tag as Variant = nil)

**Function:** Programmatically accept an invitation to a turn-based match.

**Notes:**

When this method is called, it creates a background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.acceptInvite-Completed event.

Available on Mac OS X 10.8.2 and newer.

78.23.4 Available as boolean

**Function:** True if the class is available.

**Notes:** Should always be true on Mac OS X 10.8 and newer.
78.23.5 Constructor

Function: The constructor.

78.23.6 creationDate as date

Function: The date that the match was created. (read-only)

78.23.7 currentParticipant as GKTurnBasedParticipantMBS

Function: The participant whose turn it is to act next. (read-only)
Notes: After a match starts and until it ends, the current player is the one who needs to take action to
drive the match to completion. Other players are not allowed to change the state of the match.

78.23.8 declineInvite(tag as Variant = nil)

Function: Programmatically decline an invitation to a turn-based match.
Notes:
When this method is called, it creates a background task to handle the request. The method then returns
control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.declineInvite-
Completed event.

Available on Mac OS X 10.8.2 and newer.

78.23.9 endMatchInTurnWithMatchData(matchData as Dictionary, tag as Variant = nil)

Function: Ends the match.
Notes:
matchData: The end state for the match.
Calling this method ends the match for all players. This method may only be called by the current participant. Before your game calls this method, the matchOutcome property on each participant object stored in the participants property must have been set to a value other than GKTurnBasedMatchOutcomeNone.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.endMatchInTurnWithMatchDataCompleted event.

78.23.10 endTurnWithNextParticipant(nextParticipant as GKTurnBasedParticipantMBS, matchData as Dictionary, tag as Variant = nil)

Function: Updates the data stored on Game Center for the current match.
Notes:
nextParticipant: The next player in the match who needs to take an action. It must be one of the object’s stored in the match’s participants property.
matchData: The game-specific state for the match.
completionHandler

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls the GameKitMBS.endTurnWithNextParticipant event.

78.23.11 endTurnWithNextParticipants(nextParticipants() as GKTurnBasedParticipantMBS, timeout as Double, matchData as Dictionary, tag as Variant = nil)

Function: Updates the data stored on Game Center for the current match.
Notes:
nextParticipants: An array of participant objects reflecting the order in which the players should act next. Each object in the array must be one of the objects stored in the match’s participants property.
timeout: The length of time the next player has to complete their turn.
matchData: The game-specific state for the match.

If the next player to act does not take their turn in the specified interval, the next player in the array receives a notification to act. This process continues until a player takes a turn or the last player in the list is notified.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.end-
TurnWithNextParticipantsCompleted event.

Available on Mac OS X 10.8.2 and newer.

78.23.12 findMatchForRequest(request as GKMatchRequestMBS, tag as Variant = nil)

**Function:** Programmatically searches for a new match to join.  
**Notes:**  
request: A match request that specifies the properties that the new match must fulfill.

When this method is called, it creates a background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.findMatchForRequest2Completed event.

This method may either create a new match or it may place the player into an existing match that does not yet have its full complement of players and needs a new player to advance the match further. Regardless of how the player is placed in the match, the local player is always the current participant in the returned match. Your game should immediately display the match in its user interface and allow the player to take a turn.

78.23.13 loadMatchData(tag as Variant = nil)

**Function:** Loads the game-specific data associated with a match.  
**Notes:** When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadMatchDataCompleted event.

78.23.14 loadMatches(tag as Variant = nil)

**Function:** Loads the set of turn-based matches involving the local player and creates a match object for each match.  
**Notes:** When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.loadMatchesCompleted event.
78.23. **CLASS GKTURNBASEDMATCHMBS**

### 78.23.15 loadMatchWithID(matchID as string, tag as Variant = nil)

**Function:** Loads a specific match.

**Notes:**

matchID: The identifier for the turn-based match.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.loadMatchWithIDCompleted event.

Available on Mac OS X 10.8.2 and newer.

### 78.23.16 matchData as Dictionary

**Function:** Game-specific data that reflects the details of the match. (read-only)

**Notes:**

Although Game Center knows who is participating in the match and who is expected to act next, it does not know anything about your game’s internal logic. Your game provides the match data and all the programming logic required to interpret it. This data should include the current state of the game and provide any necessary details about what actions the current player is expected to take. It can also be helpful for your game to record information about recent moves made by other players. The game can then replay those moves visually for the player to show exactly how the match reached the state it is in now.

Your game never directly updates the match state associated with this property. Instead, when the data is updated to reflect the actions of the current player, your game serializes the updated state into dictionary and calls one of the match’s instance methods that transmit the updated state to Game Center.

The value of this property is nil until after your game calls the loadMatchDataWithCompletionHandler: method and the load task is complete. After this task completes, the matchData property holds the data that the last player to act transmitted to Game Center.

### 78.23.17 matchDataMaximumSize as Integer

**Function:** Returns the limit the Game Center servers place on the size of the match data. (read-only)

**Notes:**

Game Kit returns an error if your game sends updated data larger than this value.
78.23.18 matchID as string

Function: A string that uniquely identifies the match. (read-only)
Notes: This string is not intended to be displayed to players. Your game should use this string whenever it needs to refer to a specific match. For example, if you want your game to store additional information on a device, it might store it in a database using the match ID as a key.

78.23.19 message as string

Function: A message displayed to all players in the match.
Notes:
The message property is displayed by the standard user interface; this allows your game to use the message to inform players of the current state of the match.

Important This property can be changed only by an instance of your game associated with the current player. If an instance of your game associated with another player in the match attempts to write to this property, an exception is thrown.

78.23.20 participantQuitInTurnWithOutcome(matchOutcome as Integer, nextParticipant as GKTurnBasedParticipantMBS, matchData as Dictionary, tag as Variant = nil)

Function: Resigns the current player from the match without ending the match.
Notes:
matchOutcome: The end outcome of the current player in the match.
nextParticipant: The next player in the match who needs to take an action. It must be one of the object's stored in the match's participants property.
matchData: A dictionary the game-specific state for the match.

Your game calls this method on an instance of your game that is processing the current player's turn, but that player has left the match. For example, the player may have willingly resigned from the match or that player may have been eliminated by the other players (based on your game's internal logic).
When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.participantQuitInTurnWithOutcome event.

See also:

- **78.23.21 participantQuitInTurnWithOutcome(matchOutcome as Integer, nextParticipants() as GKTurnBasedParticipantMBS, timeout as Double, matchData as Dictionary, tag as Variant = nil)**

```
78.23.21 participantQuitInTurnWithOutcome(matchOutcome as Integer, nextParticipants() as GKTurnBasedParticipantMBS, timeout as Double, matchData as Dictionary, tag as Variant = nil)
```

**Function:** Resigns the current player from the match without ending the match.

**Notes:**

- matchOutcome: The end outcome of the current player in the match.
- nextParticipants: An array of participant objects reflecting the order in which the players should act next. Each object in the array must be one of the objects stored in the match's participants property.
- timeout: The length of time the next player has to complete their turn.
- matchData: The game-specific state for the match.

Your game calls this method on an instance of your game that is processing the current player’s turn, but that player has left the match. For example, the player may have willingly resigned from the match or that player may have been eliminated by the other players (based on your game’s internal logic).

If the next player to act does not take their turn in the specified interval, the next player in the array receives a notification to act. This process continues until a player takes a turn or the last player in the list is notified.

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.participantQuitInTurnWithOutcomeCompleted event.

Available on Mac OS X 10.8.2 and newer.

See also:

- **78.23.20 participantQuitInTurnWithOutcome(matchOutcome as Integer, nextParticipant as GKTurnBasedParticipantMBS, matchData as Dictionary, tag as Variant = nil)**
78.23.22 participantQuitOutOfTurnWithOutcome(matchOutcome as Integer, tag as Variant = nil)

**Function:** Resigns the player from the match when that player is not the current player. This action does not end the match.
**Notes:**
matchOutcome: The end outcome of the current player in the match.
If the local player decided they wanted to resign from the match but is not the current participant in the match, your game calls this method.
When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.participantQuitOutOfTurnWithOutcomeCompleted event.

78.23.23 participants as GKTurnBasedParticipantMBS()

**Function:** Information about the players participating in the match. (read-only)
**Notes:**
The elements of this array are GKTurnBasedParticipantMBS objects representing each participant in the match. Your game uses these objects to retrieve more information about the participants in the match. Your game also uses one of the objects in this array as a parameter whenever it calls a method that sets a different participant to act in the match.
The size of the array and the order in which the participants appear in the array are set when the match is first created, and never changes. When a match is first created, some participants may not hold actual players yet. Game Center searches for a player to fill that spot in the match only after your game sets that participant as the current player.

78.23.24 rematch(tag as Variant = nil)

**Function:** Create a new match with the list of players from an existing match.
**Notes:**
Calling this method uses auto-matching to recreate a previous match. A new match with the same set of players is created and returned. If your game attempts to recreate matches using this method, each instance of your game on each device should call this method.
When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GKGameKitMBS.rematchCompleted event.

### 78.23.25 remove(tag as Variant = nil)

**Function:** Programmatically removes a match from Game Center.  
**Notes:**  
Even after a player’s participation in a match ends, the data associated with the match continues to be stored on Game Center. Storing the data on Game Center allows the player to continue to watch the match’s progress, or even see the final state of the match when it ends. However, players may also want to delete matches that they have finished playing. If you choose not to use the standard matchmaker user interface, your game should offer the ability to delete a finished match from Game Center. When a player chooses to delete a match from Game Center, call this method. It is a programming error to call this method on a match that has the local player as an active participant.  

When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls GameKitMBS.removeCompleted event passing the tag. Keep in mind that the completion handler may be called on a thread other than the one originally used to invoke the method. This means that the code in your block needs to be thread-safe.  

When the task completes, the match is no longer visible to the local player whose device made the call. Other players involved in the match still see the match.

### 78.23.26 saveCurrentTurnWithMatchData(matchData as Dictionary, tag as Variant = nil)

**Function:** Update the match data without advancing the game to another player.  
**Notes:**  
Available on Mac OS X 10.8.2 and newer.  

matchData: The game-specific state for the match.  

This method updates the match data stored on Game Center. Call this method when the current player takes an action that advances the state of the match but does not end the player’s turn. For example, if your game has a fog-of-war mechanic, you might call this method when the player revealed new information on the map.
When this method is called, it creates a new background task to handle the request. The method then returns control to your game. Later, when the task is complete, Game Kit calls your GameKitMBS.saveCurrentTurnWithMatchDataCompleted event.

### 78.23.27 status as Integer

**Function:** The current state of the match. (read-only)

### 78.23.28 TimeoutDefault as Double

**Function:** Indicates that the player has one week to take a turn.  
**Example:**  
MsgBox str(GKTurnBasedMatchMBS.TimeoutDefault)

**Notes:**  
One of the common values for turn timeouts.  
Available on Mac OS X 10.8.2 and newer.  
Currently this function returns 604800 seconds (7 weeks), but this may change in the future.

### 78.23.29 TimeoutNone as Double

**Function:** Indicates that the player’s turn never times out.  
**Example:**  
MsgBox str(GKTurnBasedMatchMBS.TimeoutNone)

**Notes:**  
One of the common values for turn timeouts.  
Available on Mac OS X 10.8.2 and newer.  
Currently this function returns 0 seconds, but this may change in the future.
CLASS GKTURNBASEDMATCHMBS

Properties

Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)

Constants

GKTurnBasedMatchStatusEnded = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the states a match can enter.
Notes: The match has been completed.

GKTurnBasedMatchStatusMatching = 3

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the states a match can enter.
Notes: The match is currently being played.

GKTurnBasedMatchStatusOpen = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the states a match can enter.
Notes: Game Center is still searching for other players to join the match.

GKTurnBasedMatchStatusUnknown = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the states a match can enter.
Notes: The match is in an unexpected state.

GKTurnBasedParticipantStatusActive = 4

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the states the participant is in during the match.
Notes: The participant has joined the match and is an active player in it.
78.23.38  **GKTurnBasedParticipantStatusDeclined = 2**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the states the participant is in during the match.  
**Notes:** The participant declined the invitation to join the match. When any participant declines an invitation to join a match, the match is automatically terminated.

78.23.39  **GKTurnBasedParticipantStatusDone = 5**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the states the participant is in during the match.  
**Notes:** The participant has exited the match. Your game sets the matchOutcome property to state why the participant left the match.

78.23.40  **GKTurnBasedParticipantStatusInvited = 1**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the states the participant is in during the match.  
**Notes:** The participant was invited to the match, but has not responded to the invitation.

78.23.41  **GKTurnBasedParticipantStatusMatching = 3**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the states the participant is in during the match.  
**Notes:** The participant is an unfilled position in the match that Game Center promises to fill when needed. When your game sets this participant as the current participant in the match, Game Center fills the position and updates the status and playerID properties.

78.23.42  **GKTurnBasedParticipantStatusUnknown = 0**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the states the participant is in during the match.  
**Notes:** The participant is in an unexpected state.
78.24. **CLASS GKTURNBASEDPARTICIPANTMBS**

### 78.24 class GKTurnBasedParticipantMBS

**Function:** A GKTurnBasedParticipant object stores information for a participant in a turn-based match.  
**Notes:**
Your game never creates objects of this class directly; instead it retrieves an array of GKTurnBasedParticipant objects from an GKTurnBasedMatch object.

Most information stored by a GKTurnBasedParticipant object is read-only, and is provided by Game Kit to assist you in implementing your game logic. However, the matchOutcome property is quite important; before your game may end a match, it must set the matchOutcome property in every GKTurnBasedParticipant object associated with the match.

This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

### 78.24.2 Methods

### 78.24.3 Constructor

**Function:** The private constructor.

### 78.24.4 Properties

#### 78.24.5 Handle as Integer

**Function:** The internal object reference.  
**Notes:** (Read and Write property)

#### 78.24.6 lastTurnDate as date

**Function:** The date and time that this participant last took a turn in the game. (read-only)  
**Notes:**
The value of this property is invalid until the participant first takes a turn in the match.  
(Read only property)
78.24.7 matchOutcome as Integer

Function: The end-state of this participant in the match.
Notes:
Initially, this property holds GKTurnBasedMatchOutcomeNone. Before your game can end a match, it
must set the match outcome to some other value that reflects the outcome of this participant when he or
she left the match. Your game must use any of the values provided in the "GKTurnBasedMatchOutcome"
enumerated type. Optionally, it may also use an OR operation to include a custom match outcome for
your specific game. Game Center does not use the custom value; it exists to allow your game to provide
additional information at the end of the match. The custom value must fit in the range provided by the
GKTurnBasedMatchOutcomeCustomRange constant.
(Read and Write property)

78.24.8 player as GKPlayerMBS

MBS MacFrameworks Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The GKPlayer object that identifies this participant. (read-only)
Notes:
The value of this property may be nil if this slot in the match has not yet been filled by an actual player.
Available in OS X v10.10 and later.
(Read only property)

78.24.9 playerID as string

Function: The player identifier for this participant. (read-only)
Notes:
The value of this property may be nil if this slot in the match has not been filled by an actual player.
(Read only property)

78.24.10 status as Integer

Function: The current status of the participant. (read-only)
Notes:
This property is updated by Game Kit to reflect the status of the participant.
(Read only property)
78.24. CLASS GKTURNBASEDPARTICIPANTMBS

78.24.11 timeoutDate as date

Function: The date and time that the participant’s turn times out. (read-only)
Notes:
If a timeout was set when the turn state was advanced, this property holds when the player’s turn expires. Otherwise, this property is nil.
Available on Mac OS X 10.8.2 and newer.
(Read only property)

78.24.12 Constants

78.24.13 GKTurnBasedMatchOutcomeCustomRange = & h00FF0000

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the states the participant was in when they left the match.
Notes: A mask used to allow your game to provide its own custom outcome. Any custom value must fit inside the mask.

78.24.14 GKTurnBasedMatchOutcomeFirst = 6

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the states the participant was in when they left the match.
Notes: The participant finished first.

78.24.15 GKTurnBasedMatchOutcomeFourth = 9

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the states the participant was in when they left the match.
Notes: The participant finished fourth.

78.24.16 GKTurnBasedMatchOutcomeLost = 3

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the states the participant was in when they left the match.
Notes: The participant lost the match.
78.24.17  GKTurnBasedMatchOutcomeNone = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the states the participant was in when they left the match.  
**Notes:** The participant’s outcome has not been set yet (typically because the match is still in progress).

78.24.18  GKTurnBasedMatchOutcomeQuit = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the states the participant was in when they left the match.  
**Notes:** The participant forfeited the match.

78.24.19  GKTurnBasedMatchOutcomeSecond = 7

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the states the participant was in when they left the match.  
**Notes:** The participant finished second.

78.24.20  GKTurnBasedMatchOutcomeThird = 8

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the states the participant was in when they left the match.  
**Notes:** The participant finished third.

78.24.21  GKTurnBasedMatchOutcomeTied = 4

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the states the participant was in when they left the match.  
**Notes:** The participant tied the match.

78.24.22  GKTurnBasedMatchOutcomeTimeExpired = 5

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the states the participant was in when they left the match.  
**Notes:** The participant was ejected from the match because he or she did not act in a timely fashion.
78.24.23  GKTurnBasedMatchOutcomeWon = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the states the participant was in when they left the match.
**Notes:** The participant won the match.

78.24.24  GKTurnBasedParticipantStatusActive = 4

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the states the participant is in during the match.
**Notes:** The participant has joined the match and is an active player in it.

78.24.25  GKTurnBasedParticipantStatusDeclined = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the states the participant is in during the match.
**Notes:** The participant declined the invitation to join the match. When any participant declines an invitation to join a match, the match is automatically terminated.

78.24.26  GKTurnBasedParticipantStatusDone = 5

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the states the participant is in during the match.
**Notes:** The participant has exited the match. Your game sets the matchOutcome property to state why the participant left the match.

78.24.27  GKTurnBasedParticipantStatusInvited = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the states the participant is in during the match.
**Notes:** The participant was invited to the match, but has not responded to the invitation.

78.24.28  GKTurnBasedParticipantStatusMatching = 3

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the states the participant is in during the match.
**Notes:** The participant is an unfilled position in the match that Game Center promises to fill when needed.
When your game sets this participant as the current participant in the match, Game Center fills the position and updates the status and playerID properties.

78.24.29  GKTurnBasedParticipantStatusUnknown = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the states the participant is in during the match.

**Notes:** The participant is in an unexpected state.
**78.25. CLASS GKVOICECHATMBS**

**78.25  class GKVoiceChatMBS**

**78.25.1  class GKVoiceChatMBS**

**Function:** A GKVoiceChat object provides a voice channel that allows a set of players in a match to speak with each other.

**Notes:**

Available in OS X v10.8 and later.

**78.25.2  Methods**

**78.25.3  Available as boolean**

**Function:** True if the class is available.

**Notes:** Should always be true on Mac OS X 10.8 and newer.

**78.25.4  Constructor**

**Function:** The constructor for a new voice chat.

**78.25.5  enablePlayerStateUpdate(tag as Variant = nil)**

**Function:** Enables player state update event in GameKitMBS class.

**Notes:**

You enable GameKit.playerStateUpdate event to be called when the state of any participant in the chat changes (including the local player). The event receives the following parameters:

player: The player identifier for the player whose status changed.
state: The new state of the player.
78.25.6 isVoIPAllowed as boolean

**Function:** Returns whether voice chat is allowed to be used on the device.
**Notes:**
True if voice chat is available to the game.

Some countries or phone carriers may restrict the availability of voice over IP services. Before retrieving a GKVoiceChat object, your game should first check to see whether voice over IP is permitted on the device.

78.25.7 name as string

**Function:** The name of the voice chat (read-only).

78.25.8 playerIDs as string()

**Function:** An array of player identifiers for the players connected to the channel. (read-only)

78.25.9 setMute(mute as boolean, playerID as string)

**Function:** Mutes a participant in the chat.
**Notes:**
isMuted: Determines whether the player is to be muted or not.
player: The player identifier string for a player in the match.

While a player is muted, the local player does not hear voice data transmitted by that player.

78.25.10 start

**Function:** Starts communication with other participants in the voice chat.
**Notes:**
When start is called, the voice chat connects to the channel and notifies other connected players that the local player joined the chat. When the voice chat object is connected, it plays voice data from other participants.
in the channel. It sends voice data to other participants when its active property is true.

A device only connects to the channel when the device has a microphone and is connected via wi-fi. However, your game may configure and start a voice chat channel when the device is not currently capable of using voice chat. If conditions change to allow voice chat for example, the device connects to a wi-fi network the GKVoiceChat object automatically connects to the channel.

### 78.25.11 stop

**Function:** Ends communication with other participants in the voice chat.

**Notes:** When stop is called, the voice chat object disconnects from the other players. You should call stop on a channel before releasing it.

### 78.25.12 Properties

#### 78.25.13 Handle as Integer

**Function:** The internal object reference.

**Notes:** (Read and Write property)

#### 78.25.14 active as boolean

**Function:** A Boolean value that states whether the channel is sampling the microphone.

**Notes:**

When active is true, the voice chat samples the microphone and transmits the voice data to other players connected to the channel. Default value is false.

Only one GKVoiceChat object is allowed to sample the microphone at any given time. When your game sets the active property to true on a voice chat object, the previous voice chat object that owned the microphone (if there was one) sets its active property to false.

Available in OS X v10.8 and later.

(Read and Write computed property)
78.25.15 volume as Double

Function: The volume level for the voice channel.
Notes:
All voice data received from other participants is mixed and then scaled by the volume property. The volume property has a range between 0.0 and 1.0, inclusive. A volume level of 0.0 means the entire channel is muted; a value of 1.0 plays voice samples at full volume. The default value is 1.0.
(Read and Write computed property)

78.25.16 Constants

78.25.17 GKVoiceChatPlayerConnected = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the states returned to your game about other players in a voice chat.
Notes: A new player connected to the chat.

78.25.18 GKVoiceChatPlayerConnecting = 4

MBS MacFrameworks Plugin, Plugin Version: 13.0. Function: One of the states returned to your game about other players in a voice chat.
Notes: A new player is connecting to the chat.

78.25.19 GKVoiceChatPlayerDisconnected = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the states returned to your game about other players in a voice chat.
Notes: A player left the chat.

78.25.20 GKVoiceChatPlayerSilent = 3

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the states returned to your game about other players in a voice chat.
Notes: A player stopped speaking.
MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the states returned to your game about other players in a voice chat.
**Notes:** A player began speaking.
Chapter 79

GIF

79.1 Globals

79.1.1 GifStringToGifMBS(data as string) as GIFMBS

MBS Images Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a Gif GIFPictureMBS from memory. **Notes:**

- Returns nil on any error.
- Else it should be identical to the folderitem function.

There is a link bug in RB. So if this function always returns nil, you may need a line like "dim g as new GifMBS" to fix it.

79.1.2 GifStringToPictureMBS(data as string) as Picture

MBS Images Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a Gif picture from memory and returns first picture with mask. **Notes:**

- Returns nil on any error.
- Not always a mask is available.

There is a link bug in RB. So if this function always returns nil, you may need a line like "dim g as new GifMBS" to fix it.

13085
79.2 class GifBlockMBS

79.2.1 class GifBlockMBS

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for a gif block. **Notes:** May have a GIFPictureMBS or an extension, but not both.

79.2.2 Methods

79.2.3 Clone as GifBlockMBS

MBS Images Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a clone of the object.

79.2.4 Properties

79.2.5 Extension as GifExtensionMBS

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The extension data of this gif block. **Notes:** (Read and Write property)

79.2.6 Intro as Integer

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The intro value of the gif block. **Notes:** The type of data. (Read and Write property)

79.2.7 Picture as GifPictureMBS

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The GIFPictureMBS data of this gif block. **Notes:**
Not all blocks have a picture, so this property can be nil.
(Read and Write property)
79.3 class GifDataMBS

79.3.1 class GifDataMBS

79.3.2 Methods

79.3.3 Clone as GifDataMBS

MBS Images Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a clone of the object.

79.3.4 Properties

79.3.5 DataMemory as Memoryblock

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The data as a memoryblock. **Notes:** (Read and Write property)

79.3.6 DataString as String

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The data as a string. **Notes:** (Read and Write property)

79.3.7 Length as Integer

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The length in bytes of this data. **Notes:** Returns 0 on any error. (Read only property)
79.4 class GifExtensionMBS

79.4.1 class GifExtensionMBS

79.4.2 Methods

79.4.3 Add(data as GifDataMBS)

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a data object to this extension.

79.4.4 Clone as GifExtensionMBS

MBS Images Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a clone of the object.

79.4.5 Data(index as Integer) as GifDataMBS

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The data of this extension.
**Notes:** Index is 0 based.

79.4.6 Properties

79.4.7 Count as Integer

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of data objects attached to this extension.
**Notes:**
Returns 0 on any error.
(Read only property)
79.4.8 FirstData as GifDataMBS

MBS Images Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first data.
**Notes:**
Same as calling Data(0), but this property is visible in the debugger which makes debugging easier.
(Read only property)

79.4.9 Marker as Integer

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The marker field of this extension.
**Notes:** (Read and Write property)
79.5. **CLASS GIFMBS**

### 79.5 class GIFMBS

*Function:* A class for reading or writing gif files.

**Notes:** There are patents on the lzw compression used in this class for writing gif files. This patents may be timeout out for some countries, but please check for your target countries.

#### 79.5.2 Methods

**79.5.3 Add(block as GifBlockMBS)**

*Function:* Adds a block to this gif object.

**79.5.4 Block(index as Integer) as GifBlockMBS**

*Function:* The blocks attached to this gif object.

**Notes:** Index is 0 based.

**79.5.5 Clone as GIFMBS**

*Function:* Creates a clone of the object.

**79.5.6 MakeFirstMask as picture**

*Function:* Searches the first picture in this gif object and returns the matching mask.

**Notes:** Returns nil on any error.

**79.5.7 MakeFirstPicture as picture**

*Function:* Searches the first picture in this gif object and returns this picture.
Notes:
Returns nil on any error.
There is not always a mask available!

79.5.8 MakeFirstPictureWithMask as picture

MBS Images Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Searches the first picture in this gif object and returns this picture with mask (if exists).

Notes:
Returns nil on any error.
There is not always a mask available!

79.5.9 Properties

79.5.10 Count as Integer

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Number of blocks attached to this gif object.

Notes:
Not every block has a picture attached, so this is not the picture count.
(Read only property)

79.5.11 FirstBlock as GifBlockMBS

MBS Images Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first block.

Notes:
Same as calling Block(0), but this property is visible in the debugger which makes debugging easier.
(Read only property)

79.5.12 Header as String

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The header string for this gif object.

Notes:
e.g. ”GIF89a”
79.5. **CLASS GIFMBS**

(Read and Write property)

### 79.5.13 Screen as GifScreenMBS

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The screen object attached to this gif object.  
**Notes:** (Read and Write property)
79.6 class GifPaletteMBS

79.6.1 class GifPaletteMBS

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for a color palette.

**Example:**

```vba
dim p as new GifPaletteMBS
p.Count = 256
p.Value(0)=& cFFEECC
MsgBox hex(p.red(0))+" "+hex(p.Green(0))+" "+hex(p.Blue(0))
```

**Notes:** Maximum 256 colors.

79.6.2 Methods

79.6.3 Clone as GifPaletteMBS

MBS Images Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a clone of the object.

79.6.4 Properties

79.6.5 Count as Integer

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of colors in this palette.

**Example:**

```vba
dim p as new GifPaletteMBS
p.Count = 256
```

**Notes:**

Value is 2, 4, 16 or 256.
79.6.6 Blue(index as Integer) as Integer

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The array of the blue color components in this color palette.

**Example:**
```vba
dim p as new GifPaletteMBS
p.Count = 1
p.Value(0)=& cFFEECC
MsgBox str(p.blue(0))
```

**Notes:**
Index from 0 to count-1. (ignores bad indexes)
Value from 0 to 255.
(Read and Write computed property)

79.6.7 Green(index as Integer) as Integer

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The array of the green color components in this color palette.

**Example:**
```vba
dim p as new GifPaletteMBS
p.Count = 1
p.Value(0)=& cFFEECC
MsgBox str(p.green(0))
```

**Notes:**
Index from 0 to count-1. (ignores bad indexes)
Value from 0 to 255.
(Read and Write computed property)
### 79.6.8 Red(index as Integer) as Integer

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The array of the red color components in this color palette.

**Example:**
```vba
Dim p As New GifPaletteMBS
p.Count = 1
p.Value(0) = &HFFEECC
MsgBox Str(p.red(0))
```

**Notes:**
- Index from 0 to count-1. (ignores bad indexes)
- Value from 0 to 255.
- (Read and Write computed property)

### 79.6.9 Value(index as Integer) as color

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The colors in this palette.

**Example:**
```vba
Dim p As New GifPaletteMBS
p.Count = 1
p.Value(0) = &HFFEECC
MsgBox Hex(p.value(0))
```

**Notes:**
- Index from 0 to count-1. (ignores bad indexes)
- (Read and Write computed property)
79.7. CLASS GIFPICTUREMBS

79.7  class GIFPictureMBS

79.7.1  class GIFPictureMBS

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A class for a gif GIFPictureMBS.

79.7.2  Methods

79.7.3  Clone as GifPictureMBS

MBS Images Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a clone of the object.

79.7.4  CopyData as memoryblock

MBS Images Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the data of this picture object.
**Notes:** Returns a new memoryblock with a copy of the data so you can modify it.

79.7.5  MakeMask as picture

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Searches the matching mask for this picture and returns it as picture.
**Notes:** May return nil.
See also:

* 79.7.6 MakeMask(TransparentColorIndex as Integer) as picture

79.7.6  MakeMask(TransparentColorIndex as Integer) as picture

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a mask for this picture based on the current transparent color index.
**Notes:** Returns nil on low memory.
See also:

* 79.7.5 MakeMask as picture

## 79.7.7 MakePicture as picture

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Reads the picture and returns it.
**Notes:** Returns nil on any error.

## 79.7.8 PixelData(row as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The raw Pixel data for a given row.
**Notes:**
Row is 0 based.
Returns nil on any error.

## 79.7.9 Properties

### 79.7.10 Data as Memoryblock

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The data of this GIFPictureMBS as a big memoryblock.
**Notes:** (Read and Write property)

### 79.7.11 HasPalette as Boolean

MBS Images Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether we have a color map (palette).
**Notes:**
This property was named HasCMap in older plugin versions.
(Read and Write property)

### 79.7.12 Height as Integer

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Height in pixels.
**Notes:** (Read and Write property)
79.7.13 Interlace as Boolean

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the GIFPictureMBS is interlaced.  
**Notes:** Interlacing makes GIFPictureMBS loading faster in a browser, but requires the newer GIF format 89a.  
(Read and Write property)

79.7.14 Left as Integer

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The x position of the GIFPictureMBS.  
**Notes:** On an animation gif each GIFPictureMBS may have it’s own position.  
(Read and Write property)

79.7.15 Palette as GifPaletteMBS

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The palette for this GIFPictureMBS.  
**Notes:** (Read and Write property)

79.7.16 PaletteDepth as Integer

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The depth of the palette of this GIFPictureMBS.  
**Notes:** Value should be 2, 4, 16 or 256.  
(Read and Write property)

79.7.17 Sorted as Boolean

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the color palette is sorted.  
**Notes:** (Read and Write property)
79.7.18  Top as Integer

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The y position of this GIFPictureMBS.
**Notes:**
On an animation gif each GIFPictureMBS may have it’s own position.
(Read and Write property)

79.7.19  Width as Integer

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The width of the GIFPictureMBS in pixels.
**Notes:** (Read and Write property)
79.8.  CLASS GIFSCREENMBS

79.8  class GifScreenMBS

79.8.1  class GifScreenMBS

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for the gif screen information.

79.8.2  Methods

79.8.3  Clone as GifScreenMBS

MBS Images Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a clone of the object.

79.8.4  Properties

79.8.5  Aspect as Integer

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The aspect ration of this GIFPictureMBS.
**Notes:** (Read and Write property)

79.8.6  BackgroundColor as Integer

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Index of the background color for this GIFPictureMBS.
**Notes:** (Read and Write property)

79.8.7  ColorResolution as Integer

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The color resolution of the screen area.
**Notes:** (Read and Write property)
79.8.8 **HasPalette as Boolean**

MBS Images Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this screen defines a palette. **Notes:** (Read and Write property)

79.8.9 **Height as Integer**

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The height of the screen area used. **Notes:** (Read and Write property)

79.8.10 **Palette as GifPaletteMBS**

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The color palette to use for the screen area used. **Notes:** (Read and Write property)

79.8.11 **PaletteDepth as Integer**

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The palette depth of the screen area used. **Notes:** (Read and Write property)

79.8.12 **Sorted as Boolean**

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the color palette is sorted. **Notes:** (Read and Write property)

79.8.13 **Width as Integer**

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The width of the screen area used. **Notes:** (Read and Write property)
Chapter 80

Graphics & Pictures

80.1 class Graphics

80.1.1 class Graphics

Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Extends Xojo’s Graphics Class.

80.1.2 Methods

80.1.3 DrawCGImageMBS(image as CGImageMBS, r as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Draws a CGImageMBS in a normal graphics object.

**Example:**

```vbnet
Sub Paint(g As Graphics)
    dim im as CGImageMBS
    dim f as FolderItem
    dim p as CGDataProviderMBS

    f=SpecialFolder.Desktop.Child(“picture017.jpg”)
    p=CGDataProviderMBS.CreateWithFile(f)
    im=CGCreateImageFromJPEGDataProviderMBS(p,nil,true,0)

    g.DrawCGImageMBS im,CGMakeRectMBS(0,0,im.Range,im.Range)
End Sub
```

**Deprecated:** This item is deprecated and should no longer be used. You can use CGContextMBS instead.
Notes: Note that the destination rectangle uses CG coordinates.

80.1.4 DrawCGImageXYMBS(image as CGImageMBS, x as Integer, y as Integer)

MBS MacCG Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Draws a CGImageMBS in a normal graphics object. Deprecated: This item is deprecated and should no longer be used. You can use CGContextMBS instead.
Notes: Note that the destination point uses CG coordinates.
See also:
- 80.1.5 DrawCGImageXYMBS(image as CGImageMBS, x as Integer, y as Integer, w as Integer, h as Integer)

80.1.5 DrawCGImageXYMBS(image as CGImageMBS, x as Integer, y as Integer, w as Integer, h as Integer)

MBS MacCG Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Draws a CGImageMBS in a normal graphics object. Deprecated: This item is deprecated and should no longer be used. You can use CGContextMBS instead.
Notes: Note that the destination point uses CG coordinates.
See also:
- 80.1.4 DrawCGImageXYMBS(image as CGImageMBS, x as Integer, y as Integer)

80.1.6 DrawCGPDFDocumentMBS(pdf as CGPDFDocumentMBS, r as CGRectMBS, page as Integer)

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: Draws a PDF on the graphics object inside the given rectangle.
Notes: Requires Mac OS X to work.

If destination is scaled page size, you need to also scale the rectangle here.
See also:
- 80.1.7 DrawCGPDFDocumentMBS(pdf as CGPDFDocumentMBS, r as CGRectMBS, page as Integer, InterpolationQuality as Integer, Antialias as boolean, FontSmoothing as Boolean)
80.1.7  **DrawCGPDFDocumentMBS**
(pdf as CGPDFDocumentMBS, r as CGRectMBS, page as Integer, InterpolationQuality as Integer, Antialias as boolean, FontSmoothing as Boolean)

MBS MacCG Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Draws a PDF on the graphics object inside the given rectangle. **Notes:** Requires Mac OS X to work.

You can pass for interpolation:

0  Let the context decide.
1  Never interpolate.
2  Low quality, fast interpolation.
4  Medium quality, slower than kCGInterpolationLow.
3  Highest quality, slower than kCGInterpolationMedium.

Set Antialias to true to allow anti aliasing and to false to disallow. Set FontSmoothing to true to allow font smoothing and false to disallow it.

If destination is scaled page size, you need to also scale the rectangle here. See also:

- 80.1.6 DrawCGPDFDocumentMBS(pdf as CGPDFDocumentMBS, r as CGRectMBS, page as Integer)

80.1.8  **DrawRotatedTextMBS**
(Rotation as Double, text as string, x as Integer, y as Integer, Center as Boolean = false, alpha as Double = 1.0, NoSwapY as boolean = false, FontWidth as Integer = 0)

MBS Util Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Draws rotated text. **Example:**

```vba
Sub Paint(g As Graphics)

g.DrawRotatedTextMBS 45, "Hello World", 100, 100

End Sub
```
Notes:

Rotation is the angle in degree.
Currently only supported for Mac OS X and Windows in GUI applications.

The plugin does not see the clipping offset for the graphics object. So for graphics objects from printer or canvas, you need to offset the position. Seems like with a Canvas the coordinates are relative to canvas in Cocoa, but relative to Windows in Carbon.

We have the optional parameter Center which tells the plugin to center the rotated text, so the rotation point is in the middle of the text.
The plugin queries Bold, Italic, Underline, ForeColor, TextUnit, TextSize or TextFont.

Alpha gives the alpha value for Mac OS X. Can be 1.0 (Full color) to 0.0 (no color).

On Mac targets the Y coordinate needs to be swapped internally from top down coordinates to bottom up coordinates. As this does not work 100% correct on printers (the plugin doesn’t know page margins), you can provide correct Y coordinate yourself and pass NoSwapY = true. (added in plugin version 13.1)
On Windows the OS function used (ExtTextOut) does not support multiple lines.

FontWidth is only for Windows to define the width of the font. Default is 0 to use default width.
The average width, in logical units, of characters in the font. If FontWidth is zero, the aspect ratio of the device is matched against the digitization aspect ratio of the available fonts to find the

On Windows for drawing in a picture, make sure the font size and font name are set. Else it may not draw.

80.1.9 DrawWindowsIconMBS(file as folderitem, IconID as Integer, x as Integer, y as Integer, w as Integer, h as Integer) as boolean

MBS Win Plugin, Plugin Version: 10.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. Function:
Draws a windows icon on the given rectangle.
Notes:
The folderitem should point to a file with icons (exe, dll, ico or something else). If IconID is zero, the first icon is used. Else IconID is the id of the icon.
If w or h is 0, the default size is used.
Returns true on success and false on failure.
80.1.10 MeasureRotatedTextMBS(text as string, byref Width as Double, byref Height as Double, FontWidth as Integer = 0) as Boolean

MBS Util Plugin, Plugin Version: 17.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Measure size of text.  
**Notes:**  
This is compatible to text drawing in DrawRotatedTextMBS, so you can use it to calculate the required space.  
No rotation is used for measurement.  
Returns true on success and false on failure.

80.1.11 PaintdesktopMBS

MBS Picture Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Draws on Windows the desktop into the current graphics port.  
**Notes:** May not draw a desktop picture.

80.1.12 StretchBltMBS(nXOriginDest as Integer, nYOriginDest as Integer, nWidthDest as Integer, nHeightDest as Integer, source as graphics, nXOriginSrc as Integer, nYOriginSrc as Integer, nWidthSrc as Integer, nHeightSrc as Integer, dwRop as Integer) as boolean

MBS Win Plugin, Plugin Version: 6.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The StretchBlt function copies a bitmap from a source rectangle into a destination rectangle, stretching or compressing the bitmap to fit the dimensions of the destination rectangle, if necessary.  
**Notes:**  
This is just a wrapper to the StretchBlt function from the Windows API.  

The system stretches or compresses the bitmap according to the stretching mode currently set in the destination device context.

**Parameters:**

**Return Values**

If the function succeeds, the return value is true.  
If the function fails, the return value is false.

**Possible operation modes:**
nXOriginDest  Specifies the x-coordinate, in logical units, of the upper-left corner of the destination rectangle.
nYOriginDest  Specifies the y-coordinate, in logical units, of the upper-left corner of the destination rectangle.
nWidthDest    Specifies the width, in logical units, of the destination rectangle.
nHeightDest   Specifies the height, in logical units, of the destination rectangle.
hdcSrc        The source device context.
nXOriginSrc   Specifies the x-coordinate, in logical units, of the upper-left corner of the source rectangle.
nYOriginSrc   Specifies the y-coordinate, in logical units, of the upper-left corner of the source rectangle.
nWidthSrc     Specifies the width, in logical units, of the source rectangle.
nHeightSrc    Specifies the height, in logical units, of the source rectangle.
dwRop         Specifies the raster operation to be performed. Raster operation codes define how the system combines colors in output operations that involve a brush, a source bitmap, and a destination bitmap. See BitBlt for a list of common raster operation codes (ROPs). Note that the CAPTUREBLT ROP generally cannot be used for printing device contexts.

80.1.13  StretchDIBitsMBS(XDest as Integer, YDest as Integer, DestWidth as Integer, DestHeight as Integer, XSource as Integer, YSource as Integer, SourceWidth as Integer, SourceHeight as Integer, Bits as memoryblock, ImageWidth as Integer, ImageHeight as Integer, ImageBitCount as Integer) as boolean

MBS Picture Plugin, Plugin Version: 10.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. Function: The StretchDIBits function copies the color data for a rectangle of pixels in a DIB image to the specified destination rectangle.
Example:

```vbs
dim m as MemoryBlock
dim p,q as Picture

p=NewPicture(100,100,32)
p.Graphics.FillRect 0,0,100,100
// Make a new MemoryBlock
m=NewMemoryBlock(100*100*3) // 3 bytes per Pixel
// Copy RGB without alpha
```
SRCCOPY & h00CC0020 dest = source
SRCOPIA & h00EE0086 dest = source OR dest
SRCAND & h008800C6 dest = source AND dest
SRCINVERT & h00660046 dest = source XOR dest
SRCERASE & h00440328 dest = source AND (NOT dest)
NOTSRCCOPY & h00330008 dest = (NOT source)
NOTSRCERASE & h001100A6 dest = (NOT src) AND (NOT dest)
MERGECOPY & h00C800CA dest = (source AND pattern)
MERGEPAINT & h00B80226 dest = (NOT source) OR dest
PATCOPY & h00F00021 dest = pattern
PATPAINT & h00FBA0A9 dest = DPMono

PATINVERT & h005A0049 dest = pattern XOR dest

DSTINVERT & h00550009 dest = (NOT dest)
BLACKNESS & h00080042 dest = BLACK
WHITENESS & h00FF0062 dest = WHITE
NOMIRRORBITMAP & h80080000 Do not Mirror the bitmap in this call.
CAPTUREBLT & h40000000 Include layered windows.

Copies the source rectangle directly to the destination rectangle.
Combines the colors of the source and destination rectangles by using the Boolean OR operator.
Combines the colors of the source and destination rectangles by using the Boolean AND operator.
Combines the colors of the source and destination rectangles by using the Boolean AND operator.
Combines the colors of the source and destination rectangles by using the Boolean OR operator.
Copies the inverted source rectangle to the destination.
Copies the inverted source rectangle to the destination.
Copies the colors of the source and destination rectangles by using the Boolean OR operator and then inverts the resultant color.
Combines the colors of the source and destination rectangles by using the Boolean AND operator.
Merges the colors of the source rectangle with the brush currently selected in hdcDest, by using the Boolean AND operator.
Merges the colors of the inverted source rectangle with the colors of the destination rectangle by using the Boolean OR operator.
Copies the brush currently selected in hdcDest, into the destination bitmap.
Combines the colors of the brush currently selected in hdcDest, with the colors of the inverted source rectangle by using the Boolean OR operator. The result of this operation is combined with the colors of the destination rectangle by using the Boolean OR operator.
Combines the colors of the brush currently selected in hdcDest, with the colors of the destination rectangle by using the Boolean XOR operator.
Inverts the destination rectangle.
Fills the destination rectangle using the color associated with index 0 in the physical palette. (This color is black for the default physical palette.)
Fills the destination rectangle using the color associated with index 1 in the physical palette. (This color is white for the default physical palette.)
Prevents the bitmap from being mirrored.
Includes any windows that are layered on top of your window in the resulting image. By default, the image only contains your window. Note that this generally cannot be used for printing device contexts.

if p.CopyBGRtoMemoryblockMBS(m,0) then

dim XDest as Integer = 0
dim YDest as Integer = 0
dim DestWidth as Integer = 100
dim DestHeight as Integer = 100
dim XSource as Integer = 0
dim YSource as Integer = 0
dim SourceWidth as Integer = 100
dim SourceHeight as Integer = 100
dim Bits as memoryblock = m
dim ImageWidth as Integer = 100
dim ImageHeight as Integer = 100
dim ImageBitCount as Integer = 24

call g.StretchDIBitsMBS(XDest, YDest, DestWidth, DestHeight, XSource, YSource, SourceWidth, SourceHeight, bits, ImageWidth, ImageHeight, ImageBitCount)
end if

Notes:
If the destination rectangle is larger than the source rectangle, this function stretches the rows and columns
of color data to fit the destination rectangle. If the destination rectangle is smaller than the source rectangle, this function compresses the rows and columns by using the specified raster operation.

You specify the dest rectangle in the graphics object, the source rectangle in the picture, the memoryblock with the bits, the size of the image and the bit count of the image (24 or 32).

The origin of a bottom-up DIB is the bottom-left corner; the origin of a top-down DIB is the upper-left corner.

StretchDIBits creates a mirror image of a bitmap if the signs of the nSrcWidth and nDestWidth parameters, or if the nSrcHeight and nDestHeight parameters differ. If nSrcWidth and nDestWidth have different signs, the function creates a mirror image of the bitmap along the x-axis. If nSrcHeight and nDestHeight have different signs, the function creates a mirror image of the bitmap along the y-axis.

Returns true on success and false on failure.

80.1.14  WinApplyDevModeMBS(devmode as WindowsDeviceModeMBS) as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Updates the specified printer or plotter device context (graphics) using the specified information.

**Notes:**

Returns true on success.

This function cannot be used to change the driver name, device name, or the output port. When the user changes the port connection or device name, the application must delete the original graphics and create a new graphics object with the new information.

Windows seems not to allow changing graphics object for printer while a page is open, so use WinEndPageMBS to close page before changing settings.

80.1.15  WindowsGraphicsInfoMBS as WindowsGraphicsInfoMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Query information about graphics object on Windows.

**Notes:** Returns nil on any error.
80.1. CLASS GRAPHICS

80.1.16 WinEndPageMBS as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. Function:
The EndPage function notifies the device that the application has finished writing to a page.
Notes:
This function is typically used to direct the device driver to advance to a new page.
Returns true on success.

This is a blocking or synchronous function and might not return immediately. How quickly this function
returns depends on run-time factors such as network status, print server configuration, and printer driver
implementation-factors that are difficult to predict when writing an application. Calling this function from a
thread that manages interaction with the user interface could make the application appear to be unresponsive.

Use the WinApplyDevModeMBS function to change the device mode, if necessary, after calling the EndPage
function. Note that a call to WinApplyDevModeMBS resets all device context attributes back to default val-
ues. Neither EndPage nor StartPage resets the device context attributes. Device context attributes remain
constant across subsequent pages. You do not need to re-select objects and set up the mapping mode again
before printing the next page; however, doing so will produce the same results and reduce code differences
between versions of Windows.

When a page in a spooled file exceeds approximately 350 MB, it may fail to print and not send an error
message. For example, this can occur when printing large EMF files. The page size limit depends on many
factors including the amount of virtual memory available, the amount of memory allocated by calling pro-
cesses, and the amount of fragmentation in the process heap.

80.1.17 WinStartPageMBS as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. Function:
The StartPage function prepares the printer driver to accept data.
Notes:
Returns true on success.

This is a blocking or synchronous function and might not return immediately. How quickly this function
returns depends on run-time factors such as network status, print server configuration, and printer driver
implementation-factors that are difficult to predict when writing an application. Calling this function from a
thread that manages interaction with the user interface could make the application appear to be unresponsive.

The system disables the WinApplyDevModeMBS function between calls to the StartPage and EndPage
functions. This means that you cannot change the device mode except at page boundaries. After calling
EndPage, you can call WinApplyDevModeMBS to change the device mode, if necessary. Note that a call to
WinApplyDevModeMBS resets all device context attributes back to default values.

Neither EndPage nor StartPage resets the device context attributes. Device context attributes remain constant across subsequent pages. You do not need to re-select objects and set up the mapping mode again before printing the next page; however, doing so will produce the same results and reduce code differences between versions of Windows.
80.2.1 NewPictureReaderMBS(pic as picture) as PictureReaderMBS

**Example:**

```vba
dim pic as Picture = LogoMBS(500)
dim p as PictureReaderMBS
dim m as MemoryBlock
dim r,g,b,rRow,gRow,bRow,h1,w1,x,y,bpp as Integer

// Create a new picture reader
p=NewPictureReaderMBS(pic)

h1=p.Height-1
w1=p.Width-1

bpp=p.BytesPerPixel
rRow=p.RedOffset
gRow=p.GreenOffset
bRow=p.BlueOffset
// in each row the red, blue and green channels have different offsets.
// but offsets are platform dependend

dim sum as Double

for y=0 to h1
    // Get data in memory. This Memoryblock has a size property of 0!
m=p.Data(y)
r=rRow
g=gRow
b=bRow

    for x=0 to w1
        sum = sum + m.UInt8Value(r)
        sum = sum + m.UInt8Value(g)
        sum = sum + m.UInt8Value(b)

        r=r+bpp
g=g+bpp
b=b+bpp
    next
next
```
// show the sum of all pixels:
MsgBox "Sum with plugin is: " + str(sum)

// now try same in RB code:

dim surface as RGBSurface = pic.RGBSurface
dim c as color

sum = 0.0

for y = 0 to h1
    for x = 0 to w1
        c = surface.Pixel(x, y)
        sum = sum + c.red
        sum = sum + c.Green
        sum = sum + c.Blue

    next

next

surface = nil

MsgBox "Sum with RB Code is: " + str(sum)
quit

Notes:
Returns nil on failure.
Please report if nil is returned as it should work always (except for low memory).

80.2.2 NewPictureWriterMBS(width as Integer, height as Integer, AlphaChannel as boolean = false) as PictureWriterMBS

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Creates a new picture writer.
Example:

dim p as PictureWriterMBS
dim m as MemoryBlock
dim r,g,b,rRow,gRow,bRow,h1,w1,x,y,bpp as Integer

// Create a new picture writer
p=PictureWriterMBS(512,512)

h1=p.Height-1
w1=p.Width-1

bpp=p.BytesPerPixel
rRow=p.RedOffset
gRow=p.GreenOffset
bRow=p.BlueOffset
// in each row the red, blue and green channels have different offsets.
// but offsets are platform dependend

for y=0 to h1
  // Get data in memory. This Memoryblock has a size property of 0!
  m=p.Data(y)
  r=rRow
g=gRow
b=bRow

for x=0 to w1
  m.UInt8Value(r)=x\2
  m.UInt8Value(g)=y\2
  m.UInt8Value(b)=x*y\2

r=r+bpp
g=g+bpp
b=b+bpp
next
next

// Use Render to make a picture object
dim pic as Picture = p.Render
Backdrop = pic

Notes:
Returns nil on failure (low memory).
If alpha is requested, but not possible in the given version of Xojo (or Real Studio), we return a picture without.
CHAPTER 80. GRAPHICS & PICTURES

80.2.3 MemoryblockARGBtoPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer, LittleEndian as boolean) as picture

Example:

const kAlphaOffset=0 ' (BigEndian) and 3 (LittleEndian)
dim m as MemoryBlock
dim p,q,k as Picture

p=NewPicture(100,100,32)
p.Graphics.FillRect 0,0,100,100
p.mask.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 4 bytes per Pixel

// copy RGB and leave room for alpha
if p.CopyARGBtoMemoryblockMBS(m,0,false,-1) then
    'MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if

// copy green channel from mask image into Memoryblock
if p.mask.CopyGtoMemoryblockMBS(m,kAlphaOffset,4) then
    'MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if

// make the picture from this Memoryblock
q=MemoryblockARGBtoPictureMBS(m,0,100,100,0)

// make the mask from this Memoryblock
k=MemoryblockGrayToPictureMBS(m,kAlphaOffset,100,100,4)

// combine picture and mask
q.Mask.Graphics.DrawPicture k,0,0
Backdrop=q

Notes:
Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.
The function will crash if the memoryblock is too small. Needs width*height*4 bytes in the memoryblock.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

LittleEndian specifies whether the image is stored in ARGB (BigEndian) or BGRA (LittleEndian) mode.

80.2.4 MemoryblockRGBtoPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer) as picture

Example:

```vbs
dim m as MemoryBlock
dim p,q as Picture

p=NewPicture(100,100,32)
p.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*3) // 3 bytes per Pixel

// Copy RGB without alpha
if p.CopyRGBtoMemoryblockMBS(m,0) then

q=MemoryblockRGBtoPictureMBS(m,0,100,100)
Backdrop=q

end if
```

Notes:
Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*3 bytes in the memoryblock.
Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

### 80.2.5 BlendPicturesMBS(source as picture, sourcpercent as Double, dest as picture, destpercent as Double) as picture

**Example:**

```plaintext
dim a,b,c as picture

a=newpicture(100,100,32)
b=newpicture(100,100,32)
' ... draw something in a and b
c=newpicture(100,100,32)
c=BlendPicturesMBS(a,0.5,b,0.5)
```

**Notes:**
Percent is in range from 0 to 1. Values out of this range may work, but you get strange results.

Reason for returning nil:
- One of the two pictures used is nil.
- One of the pictures is not a 32bit bitmap picture.
- The two parameter pictures have not the same size as the others.

### 80.2.6 BlendPicturesWithMaskMBS(source as picture, dest as picture, mask as picture) as picture

**Example:**

```plaintext
dim a,b,c,m as picture

a=newpicture(100,100,32)
b=newpicture(100,100,32)
m=newpicture(100,100,32)
' ... draw something in a and b
c=BlendPicturesWithMaskMBS(a,b,m)
```
Notes:
The mask defines how much from one picture is used.

Reason for returning false:
- One of the three pictures used is nil.
- One of the pictures is not a 32bit bitmap picture.
- The three parameter pictures have not the same size as the others.

80.2.7 CombinePicturesMBS(red as picture, blue as picture, green as picture) as picture

MBS Picture Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Combines the red, green and blue channels of three images into the a new one. **Notes:** Returns nil on any error.

80.2.8 MergePictureMBS(source1 as picture, source2 as picture) as picture

MBS Picture Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Merges the two pictures into one. **Example:**

```rb
// in RB this method would work like this:

dim i,j as Integer
dim col2 as color
dim r1,r2,g1,g2,b1,b2 as Integer
dim dest as Picture // destination
dim source1, source2 as Picture // source pictures

col2 = source1.graphics.pixel(i,j)
r1 = col2.red
g1 = col2.green
b1 = col2.blue

col2 = source2.graphics.pixel(i,j)
r2 = col2.red
g2 = col2.green
b2 = col2.blue

dest.graphics.pixel(i,j) = RGB(max(r1,r2), max(g1,g2), max(b1,b2))
```
Notes:
Masks are ignored.
Returns nil on low memory.
Both pictures must have the same size and not be nil.

80.2.9 NewPictureWithColorMBS(width as Integer, height as Integer, c as color) as picture

MBS Picture Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new picture and fills it with the given color.
**Example:**

```plaintext
window1.backdrop = NewPictureWithColorMBS(200, 200, & c3366CC)
```

Notes: This function is mostly to check if the picture writer code in our plugins work.

80.2.10 RenderSamplesMBS(Samples as memoryblock, SampleCount as Integer, Smooth as Integer, Width as Integer, Height as Integer, outlinewidth as Integer, BackColor as color=& c88B5C4, ForeColor as color=& c274C5A, OutLineColor as color=& c203F4E, Bits as Integer = 8, AutoScale as boolean = false) as Picture

MBS Picture Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Renders audio samples into a picture.
**Notes:**
Samples has one byte for each audio value and 2 bytes for each stereo sample.
SampleCount: Number of Samples. = Samples.size/2
Smooth: How smooth the samples should be made.
Width: Width of picture
Height: Height of picture
outlinewidth: The width of the outline (0=no outline)
BackColor: The back color.
ForeColor: the fore color.
OutLineColor: The color for the outline.
Bits: Pass 7 for signed bytes, 8 for unsigned bytes, 15 for signed shorts and 16 for unsigned short values. Pass -32 for Float32 and -64 for Float64.
AutoScale: Whether to scale automatically depending on highest values.
80.2. Global Functions

80.2.11 TintPictureMBS(source as picture, GreyBase as color, SepiaBase as color) as picture

MBS Picture Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Tints the image.

**Example:**

// The code does the same thing as this Realbasic code:

```vbnet
Sub TintPicture(theImg as Picture, pGreyBase as Color, pSepiaBase as Color)
    Dim theRGBSurface as RGBSurface
    Dim theWidth, theHeight as Integer
    Dim pColor as Color
    Dim x, y as Integer
    Dim theGrey as Integer

    Dim SepiaBaseR as Double
    Dim SepiaBaseG as Double
    Dim SepiaBaseB as Double

    Dim GreyBaseR as Double
    Dim GreyBaseG as Double
    Dim GreyBaseB as Double

    SepiaBaseR = pSepiaBase.Red / 255.0
    SepiaBaseG = pSepiaBase.Green / 255.0
    SepiaBaseB = pSepiaBase.Blue / 255.0

    GreyBaseR = pGreyBase.Red / 255.0
    GreyBaseG = pGreyBase.Green / 255.0
    GreyBaseB = pGreyBase.Blue / 255.0

    theRGBSurface = theImg.RGBSurface

    theWidth = theImg.Width - 1
    theHeight = theImg.Height - 1

    For x = 0 to theWidth
        For y = 0 to theHeight
            pColor = theImg.RGBSurface.Pixel(x, y)
            theGrey = (GreyBaseR * pColor.Red) + (GreyBaseG * pColor.Green) + (GreyBaseB * pColor.Blue)
            theImg.RGBSurface.Pixel(x, y) = RGB(theGrey * SepiaBaseR, theGrey * SepiaBaseG, theGrey * SepiaBaseB)
        Next
    Next
End Sub
```
Notes:
You can use the code to do something like a Sepia effect.
Returns a new picture on success.

80.2.12 BlendPicturesMBS(result as picture, source as picture, sourcepercent as Double, dest as picture, destpercent as Double, x as Integer, y as Integer, width as Integer, height as Integer) as boolean

**Example:**
```plaintext
dim a,b,c as picture

a=newpicture(100,100,32)
b=newpicture(100,100,32)
' ... draw something in a and b
c=newpicture(100,100,32)
call BlendPicturesMBS(c, a,0.5,b,0.5, 0, 0, 100, 100)
```

Notes:
Percent is in range from 0 to 1. Values out of this range may work, but you get strange results.

Reason for returning false:
- One of the pictures used is nil.
- The result picture must be a 24 bit or a 32 bit picture.
- The two parameter pictures have not the same size as the others.

80.2.13 BlendPicturesWithMaskMBS(result as picture, source as picture, dest as picture, mask as picture, x as Integer, y as Integer, width as Integer, height as Integer) as boolean

**Example:**
```plaintext
dim a,b,c,m as picture
```
a=newpicture(100,100,32)
b=newpicture(100,100,32)
m=newpicture(100,100,32)
' ... draw something in a and b
call BlendPicturesWithMaskMBS(c,a,b,m,0,0,a.width,a.height)

Notes:
The mask defines how much from one picture is used.

Reason for returning false:
- One of the pictures used is nil.
- The result picture must be a 24 bit or a 32 bit picture.
- The three parameter pictures have not the same size as the others.

80.2.14 BlendPicturesWithMaskWithBackgroundMBS(SourceImage As Picture, DestImage As Picture, Mask As Picture, Result As Picture, X as Integer, Y as Integer, Width as Integer, Height as Integer) as boolean

Notes:
If DestImage is nil, white is used for the background.
If no mask is specified, a full black mask is used.
Result must be valid picture of right size.

Result must be a 24bit or 32bit picture.
See also:
- 80.2.15 BlendPicturesWithMaskWithBackgroundMBS(SourceImage As Picture, DestImage As Picture, Mask As Picture, Result As Picture, X as Integer, Y as Integer, Width as Integer, Height as Integer, BackgroundColour As Color) as boolean

80.2.15 BlendPicturesWithMaskWithBackgroundMBS(SourceImage As Picture, DestImage As Picture, Mask As Picture, Result As Picture, X as Integer, Y as Integer, Width as Integer, Height as Integer, BackgroundColour As Color) as boolean

Notes:
If DestImage is nil, BackgroundColour is used for the background.
If no mask is specified, a full black mask is used.
Result must be a valid picture of right size.

Result must be a 24bit or 32bit picture.
See also:

- 80.2.14 BlendPicturesWithMaskWithBackgroundMBS(SourceImage As Picture, DestImage As Picture, Mask As Picture, Result As Picture, X as Integer, Y as Integer, Width as Integer, Height as Integer) as boolean

80.2.16 DiffPicturesMBS(source as picture, dest as picture, square as boolean)
               as picture

Example:

    // our test Picture
    dim p as Picture = LogoMBS(500)

    // compress with JPEG and 10%
    dim d as string = PictureToJPEGStringMBS(p, 10)

    // decompress
    dim q as Picture = JPEGStringToPictureMBS(d, true)

    // compare them
    window1.Backdrop = DiffPicturesMBS(p, q, true)

Notes:
Source and dest pictures must have same size. If square, the error is squared, so you see it much better.

Returns nil in case not enough memory is available or pictures do not have same size or are nil.

If both pictures are equal, all pixels in the returned picture are black.
See also Picture.isBlackMBS, and Picture.CompareMBS.
80.2.17  ColorizePictureMBS(Pict As Picture, Mask As Picture, foreR as Double, foreG as Double, foreB as Double, foreA as Double, backR as Double, backG as Double, backB as Double, backA as Double) as boolean

MBS Picture Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:**
Colorizes a picture.

**Example:**

```vbs
Dim p As Picture = SpecialFolder.Pictures.Child("test2.tif").OpenAsPicture

If ColorizePictureMBS(p, p.mask, 1.0, 0.0, 0.0, 1.0, 0.0, 0.0, 1.0, 0.1) Then
  Backdrop = p
End If
```

**Notes:**
The given pictures are edited. As editing pictures works only on Mac and Windows if the pictures are 24 or 32 bit, this does not work on Linux. Returns true on success and false on failure.

80.2.18  PictureCombineMBS(DestImage As Picture, Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Copies pixels from one picture into another picture with some options.

**Notes:**
Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the
image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

• 80.2.20 PictureCombineMBS(DestImage As Picture, Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color, MaskColour As color) as boolean
• 80.2.21 PictureCombineMBS(DestImage As Picture, Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer) as boolean
• 80.2.22 PictureCombineMBS(DestImage As Picture, Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean
• 80.2.23 PictureCombineMBS(DestImage As Picture, Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean) as boolean
• 80.2.24 PictureCombineMBS(DestImage As Picture, Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color) as boolean
• 80.2.25 PictureCombineMBS(DestImage As Picture, Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color, MaskColour As color) as boolean
80.2.26 PictureCombineMBS(DestImage As Picture, Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer) as boolean

80.2.27 PictureCombineMBS(DestImage As Picture, Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean

**80.2.19 PictureCombineMBS**

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Copies pixels from one picture into another picture with some options.

**Example:**

```vbnet
dim DestImage As Picture
dim Image As Picture
dim Mask As Picture
dim DestX as Integer=100
dim DestY as Integer=100
dim SourceX as Integer=0
dim SourceY as Integer=0
dim Width as Integer=500
dim Height as Integer=500

image=LogoMBS(500)
Mask=nil
DestImage=NewPicture(700,700,32)

if PictureCombineMBS(DestImage, image, Mask, DestX, DestY, SourceX, SourceY, Width, Height, true,&
    c777777, & c777777) then
    window1.Backdrop=DestImage
end if
```

**Notes:**

Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels are copied to the destination picture.
2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

80.2.25 PictureCombineMBS(DestImage As Picture, Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color, MaskColour As color) as boolean 13138

80.2.26 PictureCombineMBS(DestImage As Picture, Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer) as boolean 13140

80.2.27 PictureCombineMBS(DestImage As Picture, Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean 13142

80.2.20 PictureCombineMBS(DestImage As Picture, Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color, MaskColour As color) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies pixels from one picture into another picture with some options.

**Notes:**

Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

**Parameters:**

- Image: the source picture, must not be nil.
- PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

80.2.22  PictureCombineMBS(DestImage As Picture, Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean

80.2.  GLOBALS

Example:

dim DestImage As Picture
dim Image As Picture
dim Mask As Picture
dim DestX as Integer=100
dim DestY as Integer=100
dim SourceX as Integer=0
dim SourceY as Integer=0
dim Width as Integer=500
dim Height as Integer=500

image=LogoMBS(500)
Mask=nil
DestImage=NewPicture(700,700,32)

if PictureCombineMBS(DestImage,image,Mask,DestX,DestY,SourceX,SourceY,Width,Height,true, & & h777777, & h777777) then
  window1Backdrop=DestImage
end if

Notes:

Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
CHAPTER 80. GRAPHICS & PICTURES

SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

- 80.2.27 PictureCombineMBS(DestImage As Picture, Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean
80.2.23 PictureCombineMBS(DestImage As Picture, Image As Picture, Pre-MultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean) as boolean

MBS Picture Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies pixels from one picture into another picture with some options.

**Notes:**
Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

**Parameters:**
- **Image:** the source picture, must not be nil.
- **PreMultipliedSource:** Optional parameter. If true the image must be premultiplied. Default is false.
- **Mask:** the mask picture, can be nil.
- **DestX:** destination position
- **DestY:** destination position
- **SourceX:** source position
- **SourceY:** source position
- **Width:** width of the area to copy
- **Height:** height of the area to copy
- **UseColours:** whether to use the mask colour.
- **ForeColour:** the fore colour, optional, can be integer or color
- **MaskColour:** the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

MBS Picture Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies pixels from one picture into another picture with some options. **Notes:** Returns true on success and false on failure.
This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels are copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the pixels are filled with the foreground color applying the mask.

4. As the last variation the pixels are copied and the foreground color, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
- Image: the source picture, must not be nil.
- PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
- Mask: the mask picture, can be nil.
- DestX: destination position
- DestY: destination position
- SourceX: source position
- SourceY: source position
- Width: width of the area to copy
- Height: height of the area to copy
- UseColours: whether to use the mask color.
- ForeColour: the foreground color, optional, can be integer or color
- MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

80.2.28 `PictureCopyPixelFastMBS(DestImage As Picture, Source As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer) as boolean`

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Copies pixels from one picture into another picture with some options. **Example:**

```plaintext
const x=100  // mouse coordinates for example
const y=100

dim p,logo as picture
```
logo=LogoMBS(500)

p=NewPicture(800,800,32)

p.Graphics.FillRect 0,0,p.Width,p.Height

if PictureCopyPixelFastMBS(p, logo, x-logo.Width/2, y-logo.Height/2, 0, 0, logo.Width, logo.Height) then
  ' ok
else
  beep
end if

window1.Backdrop=p

Notes:
Returns true on success and false on failure.

Parameters:
Source: the source picture, must not be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy

The destination image (self) can be either 24 bit or 32 bit.
The source image can have any bit depth and may be converted to 24 or 32 bit.

80.2.29 NewPictureEditorMBS(pic as picture) as PictureEditorMBS

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Creates a new picture editor editing the given picture.
Example:

dim l as Picture = LogoMBS(500)
dim p as PictureEditorMBS

p = NewPictureEditorMBS(l)
80.2.30 NewPictureMBS(width as Integer, height as Integer, pixeltype as Integer, buffer as memoryblock, rowbytes as Integer) as picture

MBS Picture Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a picture from a memory block.

**Notes:**
This wraps the REALBuildPictureFromBuffer plugin function and copies the pixels.

rowbytes must be the number of bytes per row. Typical width*3 or width*4.

Pixeltype constants:

```
kRBPixelRGB24 = 1  3 bytes/pixel: Red, Green, Blue
kRBPixelBGR24 = 2  3 bytes/pixel: Blue, Green, Red
kRBPixelXRGB32 = 3  4 bytes/pixel: Unused, Red, Green, Blue
kRBPixelBGRX32 = 4  4 bytes/pixel: Blue, Green, Red, Unused
```

80.2.31 NewPictureWriterMBS(pic as picture, width as Integer, height as Integer) as PictureWriterMBS

MBS Picture Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new picture writer.

**Notes:**
Returns nil on failure (low memory).
If you provide an existing picture we reuse it if it has the right size. But you can pass nil to get a new one always.

80.2.32 GetMBfromPictureMBS(pic as picture, mask as picture, mode as string) as memoryblock

MBS Picture Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a memoryblock from the picture data with the given format.

**Example:**
dim p as Picture = LogoMBS(500)
dim m as MemoryBlock = GetMBfromPictureMBS(p, p.mask, "RGB32")

Notes:
Returns nil on any error.
Mode can be a string with the following strings: RGB16, ARGB16, RGB16_565, ARGB32, RGB32, RGB24 or MASK8.
See the example project "Picture To Memoryblock.rbp" for the RB code matching the plugin code.
See also:

80.2.33 GetMBfromPictureMBS(pic as picture, mode as string) as memoryblock

80.2.33 GetMBfromPictureMBS(pic as picture, mode as string) as memoryblock
MBS Picture Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Creates a memoryblock from the picture data with the given format.
Example:
dim p as Picture = LogoMBS(500)
dim m as MemoryBlock = GetMBfromPictureMBS(p, "RGB32")

Notes: Same as the other GetMBfromPictureMBS function, but takes the mask from the picture.
See also:

• 80.2.32 GetMBfromPictureMBS(pic as picture, mask as picture, mode as string) as memoryblock

80.2.34 MemoryblockABGRtoPictureMBS(dest as picture, source as memoryblock, offset as Integer, width as Integer, height as Integer) as picture
MBS Picture Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Copies image data from a memoryblock into a picture object.
Notes:
Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.
The function will crash if the memoryblock is too small. Needs width*height*4 bytes in the memoryblock.
In the dest picture parameter you can provide a picture to draw in. If the picture is no big enough or nil, a
new one is created.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.
See also:

- 80.2.35 MemoryblockABGRtoPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer) as picture

### 80.2.35 MemoryblockABGRtoPictureMBS

MBS Picture Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a memoryblock into a picture object.

**Example:**

```vba
// Create a picture with mask:
dim p as Picture = LogoMBS(200)
dim g as Graphics = p.mask.Graphics

    g.ForeColor = & c FFFFFF
    g.FillRect 0,0,g.Width,g.Height

    g.ForeColor = & c 000000
    g.Filloval 0,0,g.Width,g.Height

    // convert to memoryblock
    dim m as new MemoryBlock(4 * p.Width * p.Height)
    if p.CopyABGRtoMemoryblockMBS(m, 0, p.Mask) then
        // convert back
        Backdrop = MemoryblockABGRtoPictureMBS(m, 0, p.Width, p.Height)
    break // look into memoryblock with debugger
end if
```

**Notes:**

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*4 bytes in the memoryblock.
Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

80.2.36 MemoryblockARGBtoPictureMBS(dest as picture, source as memoryblock, offset as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a memoryblock into a picture object.

**Example:**

```vbs
dim m as MemoryBlock
dim p,q as Picture

p=NewPicture(100,100,32)
p.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 3 bytes per Pixel

// Copy RGB without alpha
if p.CopyARGBtoMemoryblockMBS(m,0,0) then

dim x as Picture = NewPicture(100,100,32)
q=MemoryblockARGBtoPictureMBS(x, m,0,100,100)
Backdrop=q
if x=q then
    window1.Title = "reused picture"
else
    window1.Title = "created new picture"
end if
end if
```

**Notes:**

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.
The function will crash if the memoryblock is too small. Needs width*height*4 bytes in the memoryblock.

In the dest picture parameter you can provide a picture to draw in. If the picture is no big enough or nil, a new one is created.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the data the pointer points to.

The function will crash if the data is too small where the pointer points to. Needs width*height*4 bytes in the memory pointed to by pointer plus offset.

In the dest picture parameter you can provide a picture to draw in. If the picture is no big enough or nil, a new one is created.

If FlipVertically is true the image is flipped. New in version 9.4.

Does not access the mask inside the image!
See also:

- 80.2.61 PtrRGBAtoPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer, FlipVertically as boolean=false) as picture
80.2.61  

PtrRGBAtoPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer, FlipVertically as boolean=false) as picture

**Function:**  
Copies image data from a pointer into a picture object.  

**Notes:**  
- Returns nil on any error.  
- source should not be nil.  
- offset should be 0 or bigger and is the start position in the data the pointer points to.  

The function will crash if the data is too small where the pointer points to. Needs width*height*4 bytes in the memory pointed to by pointer plus offset.  

If FlipVertically is true the image is flipped. New in version 9.4.  

Does not access the mask inside the image!  
Data is copied from memory block to the new picture, not referenced.  

See also:  
- 80.2.60  

80.2.62  

PtrRGBtoPictureMBS(dest as picture, source as Ptr, offset as Integer, width as Integer, height as Integer) as picture

**Function:**  
Copies image data from a pointer into a picture object.  

**Notes:**  
- Returns nil on any error.  
- source should not be nil.  
- offset should be 0 or bigger and is the start position in the data the pointer points to.  

In the dest picture parameter you can provide a picture to draw in. If the picture is no big enough or nil, a new one is created.  

The function will crash if the data is too small where the pointer points to. Needs width*height*3 bytes in the memory pointed to by pointer plus offset.  

Does not access the mask inside the image!  
Data is copied from memory block to the new picture, not referenced.  

See also:
80.2.63  

**PtrRGBtoPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer) as picture**

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a pointer into a picture object. **Notes:**

- Returns nil on any error.
- source should not be nil.
- offset should be 0 or bigger and is the start position in the data the pointer points to.

The function will crash if the data is too small where the pointer points to. Needs width*height*3 bytes in the memory pointed to by pointer plus offset.

Does not access the mask inside the image!

Data is copied from memory block to the new picture, not referenced.

See also:

- 80.2.62  

80.2.64  

**MandelbrotSetMBS(Threading as Integer, width as Integer, height as Integer, fx as Double = 4.0, fy as Double = 4.0, dx as Double = -2.0, dy as Double = -2.0, dest as picture = nil) as picture**

MBS Picture Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates the mandelbrot picture. **Example:**

Backdrop = MandelbrotSetMBS(0, 300, 300)

**Notes:**

- Threaded parameter specifies how many threads you want to use:
- A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

Width & Height specify the output image size.

fx and fy are the scale values and dx/dy specify the the position of the mandelbrot image.
You can pass destination picture. If dest is not nil and size matches, the plugin reuses the picture object which increases performance as no new picture is created.

### 80.2.65 BinaryStringtoPictureMBS(data as String) as Picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates the picture back from the binary data inside the string.

**Example:**

```plaintext
dim pic as Picture = LogoMBS(500)

// encode
dim s as string = PicturetoBinaryStringMBS(pic)

// decode
Backdrop = BinaryStringtoPictureMBS(s)
```

**Notes:**

Deprecated. Please do not use for old projects and convert existing images into a new format, e.g. PNG.

The format of the binary encoded picture data:

- 0 Kenn, PPIC for Packed Picture
- 4 Length of whole block
- 8 Width (BigEndian)
- 12 Height (BigEndian)
- 16 Depth (BigEndian, 32 for 32bit)
- 20 Offset of the binary data. maybe 40.
- 24 Reserved for future use. Should be 0.
- 40 Pixel Data, packed R, G, B in one byte per Subpixel.

300x300 Pixels will make up 300*300+40 ->270040 Bytes.

This method does not require Quicktime or any other OS Service, but it does no compression.

May be a good way to store pictures crossplatform inside a database. As Valentina can do its own Zip based compression, this may be a wonderfull way to store pictures uncompressed (or lossless compressed) inside the database.

Does not handle mask or alpha channel.
80.2.66  PicturetoBinaryStringMBS(p as picture) as string

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a string with the picture content for saving.

**Example:**

```vba
Dim s As String
Dim pic As Picture = LogoMBS(100)

s = PicturetoBinaryStringMBS(pic)
```

**Notes:**

Deprecated. Please do not use for old projects and convert existing images into a new format, e.g. PNG.

The format of the binary encoded picture data:

- + 0 Kenn, PPIC for Packed Picture
- + 4 Length of whole block
- + 8 Width (BigEndian)
- +12 Height (BigEndian)
- +16 Depth (BigEndian, 32 for 32bit)
- +20 Offset of the binary data. maybe 40.
- +24 Reserved for future use. Should be 0.
- +40 Pixel Data, packed R, G, B in one byte per Subpixel.

300x300 Pixels will make up 300*300+40 -> 270040 Bytes.

This method does not require Quicktime or any other OS Service, but it does no compression. Does not handle mask or alpha channel.

May be a good way to store pictures crossplatform inside a database. As Valentina can do its own Zip based compression, this may be a wonderfull way to store pictures uncompressed (or lossless compressed) inside the database.

The returned string has the encoding set to binary (no encoding). If you want to concat the string with another you should check the encoding. If you don’t handle that RB may convert the JPEG data to UTF8 (Unicode) which will destroy it.
80.3. CLASS PALETTECALCULATORMBS

80.2.67 WindowsDrawPictureIntoDeviceContextMBS(pic as picture, HDC as Integer, x as Integer, y as Integer, w as Integer, h as Integer, Transparent as boolean)

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Draws a Real Studio Picture into a HDC on Windows.

**Example:**

```
// get a picture
dim logo as Picture = LogoMBS(500)

// get HDC
dim h as Integer = g.Handle(g.HandleTypeHDC)

// and draw into it
WindowsDrawPictureIntoDeviceContextMBS(logo, h, 0, 0, 500, 500, false)
```

**Notes:**
Some SDKs from other companies give you sometimes HDC value to draw your stuff inside. You can prepare a Real Studio picture and copy it into the HDC. Specify rectangle and whether to use transparency.

80.3 class PaletteCalculatorMBS

80.3.1 class PaletteCalculatorMBS

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This class allows you to calculate an 8 bit image from a RGB image and back.

**Notes:**
You can create the best matching palette for a given image. If you have several images which should share the same palette, you can draw them first on one big picture before calculating the

80.3.2 Methods

80.3.3 CountColors as Integer

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts how many different colors are in the palette.
80.3.4 CreatePicturePalette(Pic as picture) as Integer

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a picture palette based on the picture. **Notes:** This function checks which colors are very often used in the image and builds a palette which may be better for this image than the default system palette.

80.3.5 GetIndexOfColor(col as color) as Integer

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches the index in the palette for the given color. **Notes:** Returns -1 if the color is not found. See also:

- 80.3.6 GetIndexOfColor(r as Integer, g as Integer, b as Integer) as Integer

80.3.6 GetIndexOfColor(r as Integer, g as Integer, b as Integer) as Integer

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches the index in the palette for the given color. **Notes:** Returns -1 if the color is not found. See also:

- 80.3.5 GetIndexOfColor(col as color) as Integer

80.3.7 GetNearestIndexOfColor(col as color) as Integer

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches the index in the palette for the best matching color. **Notes:** The best color is the color with the lowest value:

\[ \text{value} = (r - \text{col(index).red})^2 + (g - \text{col(index).green})^2 + (b - \text{col(index).blue})^2 \]

Returns -1 if the color is not found (should never happen). See also:

- 80.3.8 GetNearestIndexOfColor(r as Integer, g as Integer, b as Integer) as Integer
80.3. GetNearestIndexOfColor(r as Integer, g as Integer, b as Integer) as Integer

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches the index in the palette for the best matching color. **Notes:**
The best color is the color with the lowest value:
value=(r-col(index).red)ˆ2+(g-col(index).green)ˆ2+(b-col(index).blue)ˆ2

Returns -1 if the color is not found (should never happen).
See also:
- 80.3.7 GetNearestIndexOfColor(col as color) as Integer

80.3.9 Transform(mem as memoryblock, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Transforms a 8 bit picture to a RGB picture. **Notes:**
The memoryblock must have the 8 bit picture data inside with each row being width bytes big. The memoryblock must have at least width*height bytes.

Returns nil on any error.
See also:
- 80.3.10 Transform(Pic as picture) as memoryblock

80.3.10 Transform(Pic as picture) as memoryblock

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a memoryblock with 8 bit picture data. **Notes:**
The resulting memoryblock has width*height bytes. Each RGB color in the picture is looked up in the palette and used to fill the memoryblock.
See also:
- 80.3.9 Transform(mem as memoryblock, width as Integer, height as Integer) as picture
80.3.11 TransformBetterDithering(Pic as picture) as memoryblock

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: Creates a memoryblock with 8 bit picture data. **Notes**: The resulting memoryblock has width*height bytes. Each RGB color in the picture is looked up in the palette and used to fill the memoryblock. This method uses dithering to make the picture looking better than with a better transform using code like Floyd-Steinberg.

80.3.12 TransformFastDithering(Pic as picture) as memoryblock

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: Creates a memoryblock with 8 bit picture data. **Notes**: The resulting memoryblock has width*height bytes. Each RGB color in the picture is looked up in the palette and used to fill the memoryblock. This method uses dithering to make the picture looking better than with a simple transform.

80.3.13 Properties

80.3.14 Count as Integer

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: How many colors are inside this PaletteMBS. **Notes**: This property should be 2, 4, 16 or 256. Default is 256. (Read and Write property)

80.3.15 Col(i as Integer) as color

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: The color array. **Notes**: Index goes from 0 to count-1. (Read and Write computed property)
80.4. **CLASS PICTURE**

### 80.4 class Picture

#### 80.4.1 class Picture

Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Extends Realbasic’s Picture Class.

#### 80.4.2 Methods

### 80.4.3 AddSteganographyMBS(flags as Integer, data as Memoryblock) as Picture

**Example:**

```vbnet
dim p as Picture = LogoMBS(500)
// this example uses chr(0) as end marker
dim s as string = “Hello World. This is just a test.” + chr(0)
dim pic as Picture = p.AddSteganographyMBS(1, s)

dim data as MemoryBlock = pic.SteganographyMBS(1)
dim d as string = data.CString(0)

MsgBox d
```

**Notes:**

Flags can be a combination of red (& h100), green (& h010) and blue (& h001). Returns a new picture or nil. The existing picture is not modified.

If you like to store data, please encrypt them and include some way that you find your data again, detect length of data, verify it’s okay via checksum and than decrypt your data. Please store image in a loss less format like PNG. Function does not handle mask or alpha channel.

### 80.4.4 AddSteganographyPictureMBS(flags as Integer, data as Picture) as Picture

**Example:**
const AllChannels = & h111

dim p as new Picture(500, 500, 32)

dim w as new window1
w.Title = "white"
w.Backdrop = p

dim l as Picture = LogoMBS(500)

w = new window1
w.Title = "Logo"
w.Backdrop = l

// adds picture. You will normally not see the modification
dim x as Picture = p.AddSteganographyPictureMBS(AllChannels, l)

w = new window1
w.Title = "Logo hidden in white picture"
w.Backdrop = x

// as we store in lowest bit, this picture will look strange
dim y as Picture = x.SteganographyPictureMBS(AllChannels)

w = new window1
w.Title = "Logo extracted"
w.Backdrop = y

Notes:

Flags can be a combination of red (& h100), green (& h010) and blue (& h001).
Returns a new picture or nil. The existing picture is not modified.

Function does not handle mask or alpha channel.

80.4.5 AutoLevelCopyMBS as picture

Applies auto levels on the picture.

Notes:

The histogram is built, white and back points are searched and all pixels adjusted.
Returns nil on any error.
Thanks to Jeff Thoman for his code.
This version of the method makes a copy of the picture so it works on any kind of picture.

Renamed in version 9.2 from AutoLevelMBS to AutoLevelCopyMBS.

### 80.4.6 AutoLevelMBS as boolean

MBS Picture Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Applies auto levels on the picture. **Notes:**
The histogram is built, white and back points are searched and all pixels adjusted. Returns true on success and false on any error.
Thanks to Jeff Thoman for his code.

This version of the method modifies the pixels on the picture. Works on 32bit and 24bit pictures.

If you get a type mismatch error on using this function, you may want to use AutoLevelCopyMBS which is the old behavior.

### 80.4.7 BitmapMBS as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the picture as a bitmap picture. **Example:**
```plaintext
dim p,r as picture
r=LogoMBS(500)
p=r.BitmapMBS
canvas1.backdrop=p
```

**Notes:**
A Realbasic picture object may contain an icon, a bitmap, a picture handle or something else what Realbasic will support as a picture in the future. The picture editing functions of this plugin can only work with bitmap pictures and this clone function creates such pictures for you. This function takes a look on the picture and returns it unchanged if it is already a bitmap, but if not, the picture is Cloned as a bitmap. If you prefer to get a copy of the picture as a bitmap picture, use clone instead.
app.resourceFork.getpicture(148) is the about picture of REALbasic in the 4.5 release. This may change in future releases, so you will get nil. But using this picture will make the plugin download smaller.

The Cloned picture does not have a mask.

80.4.8 BlueChannelMBS as picture

MBS Picture Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The blue channel of the picture copied into a new picture.
**Example:**
```c
dim p as Picture = LogoMBS(500)
Backdrop = p.BlueChannelMBS
```

80.4.9 BlurMBS(Radius as Double, yield as Integer = 0) as picture

MBS Picture Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Applies a blur effect to the image.
**Example:**
```c
dim p as Picture = LogoMBS(500)
window1.Backdrop = p.BlurMBS(2)
```

**Notes:**
This is not a gaussian blur, but a faster box blur.
Returns nil on any error.

80.4.10 BMPDataMBS(ResolutionValueDPI as Integer=72) as string

MBS Picture Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a String with the BMP File content for the given picture.
**Example:**
```c
// Make a picture
dim p as Picture = LogoMBS(100)

// Encode as BMP
dim s as string = p.BMPDataMBS
```
// display length in title
Title = str(lenb(s))

// and display picture
Backdrop= BMPStringtoPictureMBS(s)

Notes:
Does not handle masks.
Returns an empty string on any error.

80.4.11 CalcSteganographyMBS(flags as Integer) as Integer

MBS Picture Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calculates the steganography size.
**Example:**
```vbscript
dim p as Picture = LogoMBS(500)

dim size1 as Integer = p.CalcSteganographyMBS(& h100)
MsgBox "Red only: " +str(size1)

dim size2 as Integer = p.CalcSteganographyMBS(& h111)
MsgBox "RGB only: " +str(size2)
```

Notes:
Returns number of bytes that can be stored in an image of the size of this picture.
Flags can be a combination of red (& h100), green (& h010) and blue (& h001).

80.4.12 CGColorSpaceMBS as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 13.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Queries the colorspace profile for a picture.
**Example:**
```vbscript
dim p as new Picture(32,32,32)
dim c as CGColorSpaceMBS = p.CGColorSpaceMBS
MsgBox c.Name
```

Notes: Only for Cocoa targets.
80.4.13 ChangeBrightnessAbsoluteMBS(Brightness as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the brightness of an image.

**Example:**

```// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeBrightnessAbsoluteMBS(30)
```

```// show in window
window1.Backdrop = n```

**Notes:**

To every pixel component the value is added.
Returns nil if the picture is no bitmap picture.
See also:

- 80.4.14 ChangeBrightnessAbsoluteMBS(BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture

80.4.14 ChangeBrightnessAbsoluteMBS(BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the brightness of an image.

**Example:**

```// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeBrightnessAbsoluteMBS(10, 20, 30)
```

```// show in window
window1.Backdrop = n```

**Notes:**

To every pixel component the value is added.
Returns nil if the picture is no bitmap picture.
PS: This function may be optimized, if someone needs it to be faster.

Basicly Picture.ChangeBrightnessAbsoluteMBS does this:

for each pixel in picture
pixel.red = pixel.red + r
pixel.green = pixel.green + g
pixel.blue = pixel.blue + b
next

and it limits the pixel values to the range 0 to 255.

See also:

- 80.4.13 ChangeBrightnessAbsoluteMBS(Brightness as Double) as picture

80.4.15 ChangeBrightnessLinearMBS(Brightness as Double) as picture

Example:

```vba
// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeBrightnessLinearMBS(30)

// show in window
window1.Backdrop = n
```

Notes:

Value is fraction of change. Range -255 to 255. For example 127 would move all colors half the way to white. Returns nil if the picture is no bitmap picture.

See also:

- 80.4.16 ChangeBrightnessLinearMBS(BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture
80.4.16 ChangeBrightnessLinearMBS(BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the brightness of an image linear.

**Example:**
```vbnet
// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeBrightnessLinearMBS(10,20,30)

// show in window
window1.Backdrop = n
```

**Notes:**
Returns nil if the picture is no bitmap picture.

PS: This function may be optimized, if someone needs it to be faster (e.g. using Altivec).

See also:
- 80.4.15 ChangeBrightnessLinearMBS(Brightness as Double) as picture

80.4.17 ChangeContrastBrightnessAbsoluteMBS(Contrast as Double, Brightness as Double) as picture

MBS Picture Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the brightness and contrast of an image.

**Example:**
```vbnet
// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeContrastBrightnessAbsoluteMBS(0.5,30)

// show in window
window1.Backdrop = n
```

**Notes:** Returns nil if the picture is no bitmap picture.

See also:
- 80.4.18 ChangeContrastBrightnessAbsoluteMBS(ContrastRed as Double, ContrastGreen as Double, ContrastBlue as Double, BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture
80.4.18 ChangeContrastBrightnessAbsoluteMBS(ContrastRed as Double, ContrastGreen as Double, ContrastBlue as Double, BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture

MBS Picture Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the brightness and contrast of an image.

**Example:**

```vbscript
// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeContrastBrightnessAbsoluteMBS(0.5, 0.5, 0.5, 10, 20, 30)

// show in window
window1.Backdrop = n
```

**Notes:** Returns nil if the picture is no bitmap picture.

See also:

- 80.4.17 ChangeContrastBrightnessAbsoluteMBS(Contrast as Double, Brightness as Double) as picture

80.4.19 ChangeContrastBrightnessLinearMBS(Contrast as Double, Brightness as Double) as picture

MBS Picture Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the brightness and contrast of an image linear.

**Example:**

```vbscript
// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeContrastBrightnessLinearMBS(0.5,30)

// show in window
window1.Backdrop = n
```

**Notes:**

Returns nil if the picture is no bitmap picture.

Contrast range is 0 to 1.0.
Brightness range is -255 to 255.

See also:
80.4.20  ChangeContrastBrightnessLinearMBS(ContrastRed as Double, ContrastGreen as Double, ContrastBlue as Double, BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture

Example:

```vba
// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeContrastBrightnessLinearMBS(0.5, 0.5, 0.5, 10, 20, 30)

// show in window
window1.Backdrop = n
```

Notes:

Returns nil if the picture is no bitmap picture.
Contrast range is 0 to 1.0.
Brightness range is -255 to 255.
See also:

- 80.4.19 ChangeContrastBrightnessLinearMBS(Contrast as Double, Brightness as Double) as picture

80.4.21  ChangeContrastMBS(Contrast as Double) as picture

Example:

```vba
// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeContrastMBS(-0.5)

// show in window
window1.Backdrop = n
```
80.4. CLASS PICTURE

Notes:

All three color channels are handled with the same contrast change. Returns a picture on success or nil on any error. Parameters can have any value.
(values >=0.0 will add contrast, values below 0.0 will reduce contrast till gray picture at -1.0, values below -1.0 will add contrast again and also invert the picture)
See also:

- 80.4.22 ChangeContrastMBS(ContrastRed as Double, ContrastGreen as Double, ContrastBlue as Double) as picture

80.4.22 ChangeContrastMBS(ContrastRed as Double, ContrastGreen as Double, ContrastBlue as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the contrast of the picture.

**Example:**

```plaintext
// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeContrastMBS(-0.5,0.0,0.5)

// show in window
window1Backdrop = n
```

Notes:

Three different values, one for each channel. Returns a picture on success or nil on any error. (values >=0.0 will add contrast, values below 0.0 will reduce contrast till gray picture at -1.0, values below -1.0 will add contrast again and also invert the picture)
See also:

- 80.4.21 ChangeContrastMBS(Contrast as Double) as picture

80.4.23 ChangeCustomMBS(a as Double, b as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the picture with custom values.

**Notes:**

Uses this formula:

NewPixelComponent=OldPixelComponent*a+b

See also:
80.4.24  ChangeCustomMBS(Ra as Double, Rb as Double, Ga as Double, Gb as Double, Ba as Double, Bb as Double) as picture

MBS Picture Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the picture with custom values.

**Notes:**

Uses this formula:
NewPixelComponent=OldPixelComponent*a+b

See also:

- 80.4.23 ChangeCustomMBS(a as Double, b as Double) as picture

80.4.25  ChangeSaturationMBS(Amount as Integer) as picture

MBS Picture Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a copy of the picture with a changed saturation.

**Notes:**

Range of amount is from -255 to 255.

Value 0 does nothing.

Value -255 returns a gray level picture.

80.4.26  cloneMBS as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clones the picture as a bitmap.

**Example:**

```realbasic
dim p,r as picture
r=LogoMBS(500)
p=r.clonembs
canvas1.backdrop=p
```

**Notes:**

A Realbasic picture object may contain an icon, a bitmap, a picture handle or something else what Realbasic will support as a picture in the future.

The picture editing functions of this plugin can only work with bitmap pictures and this clone function
80.4. **CLASS PICTURE**

creates such pictures for you.
If a picture is a bitmap can be easily tested with the graphics property like this:

```vbnet
if p.graphics=nil then // if no bitmap
  p=p.cloneMBS // make one
end if
```

app.resourceFork.getpicture(148) is the about picture of REALbasic in the 4.5 release. This may change in future releases, so you will get nil. But using this picture will make the plugin download smaller.

The Cloned picture does not have a mask.
See FAQ entry "How to duplicate a picture with mask or alpha channel?" on how to duplicate with mask. See also:

- 80.4.27 CloneMBS(NewMask as Picture) as picture 13187
- 80.4.28 CloneMBS(NewMask as Picture, width as Integer, height as Integer) as picture 13187
- 80.4.29 CloneMBS(width as Integer, height as Integer) as picture 13188

### 80.4.27 CloneMBS(NewMask as Picture) as picture

MBS Picture Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clones the picture as a bitmap. **Notes:** Same as CloneMBS, but adds the mask. See also:

- 80.4.26 cloneMBS as picture 13186
- 80.4.28 CloneMBS(NewMask as Picture, width as Integer, height as Integer) as picture 13187
- 80.4.29 CloneMBS(width as Integer, height as Integer) as picture 13188

### 80.4.28 CloneMBS(NewMask as Picture, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clones the picture as a bitmap. **Notes:** Same as CloneMBS, but adds the mask. See also:

- 80.4.26 cloneMBS as picture 13186
- 80.4.27 CloneMBS(NewMask as Picture) as picture 13187
- 80.4.29 CloneMBS(width as Integer, height as Integer) as picture 13188
80.4.29 CloneMBS(width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clones the picture as a bitmap with given size.

**Example:**

```realbasic
dim p,r as picture
r=LogoMBS(500)
p=r.clonembs(100,100)
canvas1.backdrop=p
```

**Notes:**

A Realbasic picture object may contain an icon, a bitmap, a picture handle or something else what Realbasic will support as a picture in the future.
The picture editing functions of this plugin can only work with bitmap pictures and this clone function creates such pictures for you.
If a picture is a bitmap can be easily tested with the graphics property like this:

```realbasic
if p.graphics=nil then // if no bitmap
  p=p.clonembs // make one
end if
```

app.resourceFork.getpicture(148) is the about picture of REALbasic in the 4.5 release. This may change in future releases, so you will get nil. But using this picture will make the plugin download smaller.

The Cloned picture does not have a mask or alpha channel.
See FAQ entry "How to duplicate a picture with mask or alpha channel?" on how to duplicate with mask.

80.4.30 ColorizeMBS(hue as Double, sat as Double, light as Double) as picture

MBS Picture Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Colorizes a picture.

**Notes:**

Hue, Sat and Light in range 0.0 to 1.0 please.
Returns new picture.
80.4.31  **ColornessMBS**(threshold as Integer = 10) as Double

MBS Picture Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calculates the color coverage of the picture.

**Example:**

```vbscript
dim file as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim pic as Picture = Picture.Open(file)
MsgBox str(pic.ColornessMBS)
```

**Notes:**
Counts how many pixels have color and returns percentage depending on a given threshold.
Changed in 12.3pr5 to ignore nearly black pictures when counting.

80.4.32  **CombineMBS**(Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:**
Copies pixels from one picture into another picture with some options.

**Notes:**
Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

**Parameters:**
- Image: the source picture, must not be nil.
- Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

- 80.4.41 CombineMBS(Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean
80.4. CombineMBS(Mode as Integer, SecondPicture As Picture, X as Integer = 0, Y as Integer = 0, Width as Integer = 0, Height as Integer = 0) as picture

80.4.33 CombineMBS(Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Copies pixels from one picture into another picture with some options.

**Example:**

```plaintext
dim DestImage As Picture
dim Image As Picture
dim Mask As Picture
dim DestX as Integer=100
dim DestY as Integer=100
dim SourceX as Integer=0
dim SourceY as Integer=0
dim Width as Integer=500
dim Height as Integer=500
dim UseColours as Boolean = true
dim ForeColour as color = & c FF0000

image=LogoMBS(500)
Mask=nil
DestImage=NewPicture(700,700,32)

if DestImage.CombineMBS(image,Mask,DestX,DestY,SourceX,SourceY,Width,Height,UseColours,ForeColour)
    window1.Backdrop=DestImage
end if
```

**Notes:**

Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.
3. If the mask color is not defined, the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

MBS Picture Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies pixels from one picture into another picture with some options.

**Notes:**
Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

**Parameters:**
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

Notes:
Returns true on success and false on failure.
This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
- **Image**: the source picture, must not be nil.
- **PreMultipliedSource**: Optional parameter. If true the image must be premultiplied. Default is false.
- **Mask**: the mask picture, can be nil.
- **DestX**: destination position
- **DestY**: destination position
- **SourceX**: source position
- **SourceY**: source position
- **Width**: width of the area to copy
- **Height**: height of the area to copy
- **UseColours**: whether to use the mask colour.
- **ForeColour**: the fore colour, optional, can be integer or color
- **MaskColour**: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

**80.4.42 CombineMBS(Mode as Integer, SecondPicture As Picture, X as Integer = 0, Y as Integer = 0, Width as Integer = 0, Height as Integer = 0) as picture**

MBS Picture Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Combines pixels of two images with the given mode.

**Example:**
dim pic as picture // some picture
dim other as picture // some other picture
dim result as picture = pic.CombineMBS(1, other)

// effects are made like this. If you have a suggestion for a new effect,
// send your suggestion to MBS support:
Function Combine(x as Integer, y as Integer) as Integer
Return BitwiseXor(x,y)
End Function

Notes:
Each pixel is sent through an operation for each channel.
X, Y, Width and Height can limit effect of a certain portion of the source image.

Modes:

1   Bitwise XOR
2   Bitwise OR
3   Bitwise AND
4   Min
5   Max
6   AddPin (add with limit)
7   AddOver (add with overflow)
8   Difference
9   Difference squared (with limit 255)
10  Sub Pin (sub with limit)

80.4.40 CombineMBS(Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer) as boolean

80.4.41 CombineMBS(Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean

80.4.43 CombinePixelMBS(Mode as Integer, SecondPicture As Picture) as picture

MBS Picture Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Combines pixels of two images with the given mode.

**Example:**

```vbs
dim pic as picture ' some picture
dim other as picture ' some other picture
dim result as picture = pic.CombinePixelMBS(1, other)

// effects are made like this. If you have a suggestion for a new effect,
// send your suggestion to MBS support:
Function Combine(x as color, y as color) As color
Return rgb(x.red+y.red, x.green+y.green, x.blue+y.blue)
End Function
```

**Notes:**

Each pixel is sent through an operation.
Modes:

1. Average (50% first and 50% second picture)
2. Gray
3. LighterPixel
4. DarkerPixel
5. Difference Max
6. Difference Max Squared

80.4.44 CompareBrightnessMBS(other as picture, mode as Integer, threshold as Integer) as Double

MBS Picture Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compares two pictures in brightness.

**Example:**

```pascal
Dim p as Picture = NewPicture(100, 100, 32)
Dim q as Picture = NewPicture(100, 100, 32)

Dim diff as Double = p.CompareBrightnessMBS(q, 0, 0)
```

MsgBox str(Diff) // shows 0 = equal

**Notes:**

Returns the percent of difference: Number of pixels where the squared color difference is bigger than the threshold divided by the total number of pixels.

If width and height are not equal, the result is 1.0.

If you need to check the mask also, please call this method a second time for the masks.

Modes:

- 0: \( y = 0.33 \times R + 0.5 \times G + 0.16 \times B \) Faster version of 3
- 1: \( y = 0.375 \times R + 0.5 \times G + 0.125 \times B \) Faster version of 3
- 2: \( y = 0.2126 \times R + 0.7152 \times G + 0.0722 \times B \) Photometric/digital ITU-R
- 3: \( y = 0.299 \times R + 0.587 \times G + 0.114 \times B \) Digital CCIR601

Mode 2 and 3 uses doubles and mode 0 and 1 use integers so they should be faster.

Still Mode 0 and 1 are just approximation formulas which trade accuracy for performance.
Only compares raw pixels without checking mask or alpha channel.

### 80.4.45 CompareMBS(other as picture, threshold as Integer) as Double

MBS Picture Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Compresses two pictures.

**Example:**

```plaintext
dim p as picture = newPicture(100,100,32)
dim q as Picture = NewPicture(100,100,32)

dim diff as Double = p.CompareMBS(q, 0)
MsgBox str(Diff) // shows 0 = equal
p.Graphics.ForeColor = & c FF0000
p.Graphics.FillRect 0, 0, p.Width, p.Height
q.Graphics.ForeColor = & c FF0001
q.Graphics.FillRect 0, 0, q.Width, q.Height

dim diff1 as Double = p.CompareMBS(q, 0)
dim diff2 as Double = p.CompareMBS(q, 2)
MsgBox str(Diff1) + "+" + str(Diff2) // shows 1 (all pixels different) and shows 0 (all equal)
```

**Notes:**

Returns the percent of difference: Number of pixels where the squared color difference is bigger than the threshold divided by the total number of pixels.

If width and height are not equal, the result is 1.0.

If you need to check the mask also, please call this method a second time for the masks.

Only compares raw pixels without checking mask or alpha channel.

### 80.4.46 CopyABGRtoMemoryblockMBS(destination as memoryblock, offset as Integer, AlphaValue as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Copies raw image data into a memoryblock.
Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock.

Does not access the mask inside the image!

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

The X variant of this method does not touch the alpha channel in the memoryblock and the A variant changes the alpha value to the given value.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line. See also:

- 80.4.47 CopyABGRtoMemoryblockMBS(destination as memoryblock, offset as Integer, MaskForAlpha as picture, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

80.4.47 CopyABGRtoMemoryblockMBS(destination as memoryblock, offset as Integer, MaskForAlpha as picture, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

Example:

```vba
// Create a picture with mask:
dim p as Picture = LogoMBS(200)
dim g as Graphics = p.mask.Graphics

g.ForeColor = & c FFFFFF
g.FillRect 0,0,g.Width,g.Height
g.ForeColor = & c 000000
```
g.Filloval 0,0,g.Width,g.Height

// convert to memoryblock
dim m as new MemoryBlock(4 * p.Width * p.Height)

if p.CopyABGRtoMemoryblockMBS(m, 0, p.Mask) then
  // convert back
  Backdrop = MemoryblockABGRtoPictureMBS(m, 0, p.Width, p.Height)
break // look into memoryblock with debugger
endif

Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.
MaskForAlpha should not be nil and be the mask for this image.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock. Mask and Picture must have equal size.
The mask is used to fill alpha channel.

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line. See also:

- 80.4.46 CopyABGRtoMemoryblockMBS(destination as memoryblock, offset as Integer, AlphaValue as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

80.4.48 CopyARGBtoMemoryblockMBS(destination as memoryblock, offset as Integer, AlphaValue as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies raw image data into a memoryblock.
Example:

```vbnet
dim m as MemoryBlock
dim p,q as Picture

p=NewPicture(100,100,32)
p.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 3 bytes per Pixel

// Copy RGB without alpha
if p.CopyARGBtoMemoryblockMBS(m,0,0) then

dim x as Picture = NewPicture(100,100,32)
q=MemoryblockARGBtoPictureMBS(x, m,0,100,100)

Backdrop=q
if x=q then
  window1.Title = "reused picture"
else
  window1.Title = "created new picture"
end if
end if
```

Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock.

Does not access the mask inside the image!

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

The X variant of this method does not touch the alpha channel in the memoryblock and the A variant changes the alpha value to the given value.
StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. If Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line. See also:

- 80.4.49 CopyARGBtoMemoryblockMBS(destination as memoryblock, offset as Integer, LittleEndian as boolean, AlphaValue as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean
- 80.4.50 CopyARGBtoMemoryblockMBS(destination as memoryblock, offset as Integer, MaskForAlpha as picture, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

80.4.49 CopyARGBtoMemoryblockMBS(destination as memoryblock, offset as Integer, LittleEndian as boolean, AlphaValue as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies raw image data into a memoryblock.

**Example:**

```vbnet
dim m as MemoryBlock
dim p as Picture

p=NewPicture(100,100,32)
p.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 4 bytes per Pixel

// copy RGB and leave room for alpha
if p.CopyARGBtoMemoryblockMBS(m,0,false,-1) then
    MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if
```

**Notes:**

Returns true on success.

destination should not be nil.

offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the
memoryblock.

Does not access the mask inside the image!

LittleEndian specifies whether the image is stored in ARGB (BigEndian) or BGRA (LittleEndian) mode.

If Alphavalue is in range of 0 to 255 the alpha value of all pixel is set to this value. If the AlphaValue is outside this range the alpha value is not touched for all pixels.

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

Example:

```vba
// Create a picture with mask:
dim p as Picture = LogoMBS(200)
dim g as Graphics = p.mask.Graphics

g.ForeColor = & c FFFFFF
g.FillRect 0,0,g.Width,g.Height

g.ForeColor = & c 000000
g.Filloval 0,0,g.Width,g.Height
```
// convert to memoryblock
dim m as new MemoryBlock(4 * p.Width * p.Height)

if p.CopyARGBtoMemoryblockMBS(m, 0, p.Mask) then
  // convert back
  Backdrop = MemoryblockARGBtoPictureMBS(m, 0, p.Width, p.Height)

break // look into memoryblock with debugger
end if

Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.
MaskForAlpha should not be nil and be the mask for this image.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock. Mask and Picture must have equal size.
The mask is used to fill alpha channel.

CHAPTER 80. GRAPHICS & PICTURES

80.4.53  CopyBGRtoMemoryblockMBS(destination as memoryblock, offset as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Copies raw image data into a memoryblock. Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*3 bytes in the memoryblock.

Does not access the mask inside the image!

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

StartLine and EndLine define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

80.4.54  CopyBGRXtoMemoryblockMBS(destination as memoryblock, offset as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Copies raw image data into a memoryblock. Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock.

Does not access the mask inside the image!
This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

The X variant of this method does not touch the alpha channel in the memoryblock and the A variant changes the alpha value to the given value.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. If Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield > 0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

**80.4.55 CopyBtoMemoryblockMBS(destination as memoryblock, offset as Integer, PixelByteSize as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean**

MBS Picture Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies raw image data into a memoryblock.

**Example:**

```vbs
const kAlphaOffset=0 ' (BigEndian) and 3 (LittleEndian)
dim m as MemoryBlock
dim p as Picture

p=NewPicture(100,100,32)
p.Graphics.FillRect 0,0,100,100
p.mask.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 4 bytes per Pixel

// copy RGB and leave room for alpha
if p.CopyARGBtoMemoryblockMBS(m,0,false,-1) then
    MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if

// copy Blue channel from mask image into Memoryblock
if p.mask.CopyBtoMemoryblockMBS(m,kAlphaOffset,4) then
    MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if
```
Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.
PixelByteSize is normally 4 for 32bit per Pixel.
By using a different offset you can have this function working correctly on non BigEndian platforms.
The function will crash if the memoryblock is too small. Needs picture.width*picture.height*PixelByteSize bytes in the memoryblock.
Mask images in RB are all gray so it does not matter which channel you copy to get the alpha channel. This function takes the blue channel from the source image.

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1.
if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

80.4.56 CopyGtoMemoryblockMBS(destination as memoryblock, offset as Integer, PixelByteSize as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Copies raw image data into a memoryblock.
Example:

const kAlphaOffset=0 ' (BigEndian) and 3 (LittleEndian)
dim m as MemoryBlock
dim p as Picture

p=NewPicture(100,100,32)
p.Graphics.FillRect 0,0,100,100
p.mask.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 4 bytes per Pixel

// copy RGB and leave room for alpha
if p.CopyARGBtoMemoryblockMBS(m,0,false,-1) then
MsgBox EncodingToHexMBS(m.StringValue(0,99))
// copy green channel from mask image into Memoryblock
if p.mask.CopyGtoMemoryblockMBS(m,kAlphaOffset,4) then
    MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if

Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.
PixelByteSize is normally 4 for 32bit per Pixel.
By using a different offset you can have this function working correctly on non BigEndian platforms.
The function will crash if the memoryblock is too small. Needs picture.width*picture.height*PixelByteSize
bytes in the memoryblock.
Mask images in RB are all gray so it does not matter which channel you copy to get the alpha channel. This
function takes the green channel from the source image.

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse
memoryblocks for batch processing images as long as the memoryblock is big enough.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1.
if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other
threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other
threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

80.4.57 CopyMaskMBS as picture

MBS Picture Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Copies the mask of the picture into a new and independend picture object.
Example:
    dim p as Picture

    p=NewPicture(300,300,32)
    p.Graphics.ForeColor=& cFF0000
    p.Graphics.FillRect 0,0,300,300
    p.mask.Graphics.FillRect 0,0,300,300
p.mask.Graphics.Filloval 0,0,300,300

Backdrop=p.CopyMaskMBS

**Notes:** Returns nil on low memory.

### 80.4.58 CopyPictureMBS as picture

MBS Picture Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a clone of picture. **Notes:** Can duplicate mask and alpha channel.

### 80.4.59 CopyPictureWithMaskMBS as picture

MBS Picture Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the picture into a new and independent picture object with mask. **Example:**

```pascal
dim p as Picture

p=NewPicture(300,300,32)

p.Graphics.ForeColor=& cFF0000
p.Graphics.FillRect 0,0,300,300

p.mask.Graphics.FillRect 0,0,300,300

p.mask.Graphics.Filloval 0,0,300,300

Backdrop=p.CopyPictureWithMaskMBS
```

**Notes:** Returns nil on low memory.

### 80.4.60 CopyPictureWithoutMaskMBS as picture

MBS Picture Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the picture into a new and independent picture object without the mask.
80.4.  CLASS PICTURE

Example:

dim p as Picture

p=NewPicture(300,300,32)

p.Graphics.ForeColor=& cFF0000
p.Graphics.FillRect 0,0,300,300

p.mask.Graphics.Fillrect 0,0,300,300

p.mask.Graphics.Filloval 0,0,300,300

Backdrop=p.CopyPictureWithoutMaskMBS

Notes: Returns nil on low memory.

80.4.61  CopyPixelFastMBS(Source As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer) as boolean

Example:

const x=100 // mouse coordinates for example
const y=100

dim p,logo as picture

logo=LogoMBS(500)

p=NewPicture(800,800,32)

p.Graphics.FillRect 0,0,p.Width,p.Height

if p.CopyPixelFastMBS(logo, x-logo.Width/2, y-logo.Height/2, 0, 0, logo.Width, logo.Height) then ' ok
else
beep
end if
Notes:

Returns true on success and false on failure.

Parameters:
Source: the source picture, must not be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy

The destination image (self) can be either 24 bit or 32 bit.
The source image can have any bit depth and may be converted to 24 or 32 bit.

80.4.62  CopyRGBAtoMemoryblockMBS(destination as memoryblock, offset as Integer, AlphaValue as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Copies raw image data into a memoryblock.
Example:

```plaintext
// get some picture
dim pic as Picture = LogoMBS(500)
// and a memoryblock of 1000 by 1000 pixels with 4 bytes per pixel
dim m as new MemoryBlock(1000* 1000 *4)

// calculate some offset for the image with 50 rows from top and 60 pixels from left
dim Offset50Lines as Integer = 1000*4 *50 +60*4

// copy picture to memoryblock
if pic.CopyRGBAtoMemoryblockMBS(m, Offset50Lines, 127, 0, pic.Height-1, 0, 4*1000) then
  // show MemoryBlock content
  Backdrop = MemoryblockRGBAtoPictureMBS(nil, m, 0, 1000, 1000)
end if
```
Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock.

Does not access the mask inside the image!

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

The X variant of this method does not touch the alpha channel in the memoryblock and the A variant changes the alpha value to the given value.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line. See also:

- 80.4.63 CopyRGBAtoMemoryblockMBS(destination as memoryblock, offset as Integer, MaskForAlpha as picture, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

80.4.63 CopyRGBAtoMemoryblockMBS(destination as memoryblock, offset as Integer, MaskForAlpha as picture, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

Example:

```// Create a picture with mask:
dim p as Picture = LogoMBS(200)
dim g as Graphics = p.mask.Graphics

g.ForeColor = & c FFFFFF
g.FillRect 0,0,g.Width,g.Height

g.ForeColor = & c 000000```

g.Filloval 0,0,g.Width,g.Height

// convert to memoryblock
dim m as new MemoryBlock(4 * p.Width * p.Height)

if p.CopyRGBAtoMemoryblockMBS(m, 0, p.Mask) then
    // convert back
    Backdrop = MemoryblockRGBAtoPictureMBS(m, 0, p.Width, p.Height)

break // look into memoryblock with debugger
end if

Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.
MaskForAlpha should not be nil and be the mask for this image.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock. Mask and Picture must have equal size.
The mask is used to fill alpha channel.

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. If Endline is -1, we use picture.height-1 internally. 80.4.64 CopyRGBtoMemoryblockMBS(destination as memoryblock, offset as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

Example:
**80.4. CLASS PICTURE**

```vbscript
dim m as MemoryBlock
dim p as Picture

p=NewPicture(100,100,32)
p.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*3) // 3 bytes per Pixel

// Copy RGB without alpha
if p.CopyRGBtoMemoryblockMBS(m,0) then
  MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if
```

**Notes:**

- Returns true on success.
- Destination should not be nil.
- Offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*3 bytes in the memoryblock.

- Does not access the mask inside the image!

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

// copy RGB and leave room for alpha
if p.CopyARGBtoMemoryblockMBS(m,0,false,-1) then
MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if

// copy Red channel from mask image into Memoryblock
if p.mask.CopyRtoMemoryblockMBS(m,kAlphaOffset,4) then
MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if

Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.
PixelByteSize is normally 4 for 32bit per Pixel.
By using a different offset you can have this function working correctly on non BigEndian platforms.
The function will crash if the memoryblock is too small. Needs picture.width*picture.height*PixelByteSize
bytes in the memoryblock.
Mask images in RB are all gray so it does not matter which channel you copy to get the alpha channel. This
function takes the red channel from the source image.

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse
memoryblocks for batch processing images as long as the memoryblock is big enough.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1.
if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other
threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other
threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

80.4.67  CopyXBGRtoMemoryblockMBS(destination as memoryblock, offset as
Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as
Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Copies raw image data into a memoryblock.
Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the
memoryblock.
CHAPTER 80. GRAPHICS & PICTURES

Does not access the mask inside the image!

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

The X variant of this method does not touch the alpha channel in the memoryblock and the A variant changes the alpha value to the given value.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. If Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

80.4.68 CopyXRGBtoMemoryblockMBS(destination as memoryblock, offset as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies raw image data into a memoryblock.

**Notes:**

Returns true on success.

destination should not be nil.

offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock.

Does not access the mask inside the image!

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

The X variant of this method does not touch the alpha channel in the memoryblock and the A variant changes the alpha value to the given value.

Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other
80.4. **CLASS PICTURE**

threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

---

**80.4.69  CountColorMBS(col as color) as Integer**

MBS Picture Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts the pixels with the given colors.

**Example:**

```vba
dim p as Picture
dim n1,n2 as Integer

p=NewPicture(300,300,32)

p.Graphics.ForeColor=&cFF0000
p.Graphics.FillRect 0,0,100,100

n1=p.CountColorMBS(&cFF0000)
n2=p.CountColorMBS(&cFFFFFF)

if n1=100*100 then
    if n2=300*300-100*100 then
        MsgBox "OK"
    else
        MsgBox "white failed"
    end if
else
    MsgBox "red failed"
end if
```

**Notes:** Returns the number of pixels found.

---

**80.4.70  CountColorsMBS(byref red as memoryblock, byref blue as memoryblock, byref green as memoryblock, byref count as Integer)**

MBS Picture Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts the color parts of each pixel.

**Notes:**

red, blue and green are filled with 1024 bytes big memoryblocks. One 4 byte integer for each color value possible.

Count is filled with the number of pixels processed.
80.4.71  **DrawPictureFMBS(pic as picture, x as Double, y as Double, alpha as Double = 1.0, yield as Integer = 0) as boolean**

**Notes:**  
Supports a mask on the picture.  
Returns true on success.

80.4.72  **ExtractColorMBS(SearchColor as color, ReplaceWithColor as color, BackGroundColor as color) as picture**

MBS Picture Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches the first color and writes matching pixels with the second color.  
**Example:**

```vba
dim p as Picture  
p=NewPicture(300,300,32)  
p.Graphics.ForeColor=& cFF0000  
p.Graphics.FillRect 000,100,100,100  
p.Graphics.ForeColor=& c00FF00  
p.Graphics.FillRect 100,100,100,100  
p.Graphics.ForeColor=& c0000FF  
p.Graphics.FillRect 200,100,100,100  
p.Graphics.ForeColor=& c777700  
p.Graphics.FillRect 100,200,100,100  
// shows just a violet box on the left  
backdrop=p.ExtractColorMBS(& cFF0000,& cFF00FF,& c000000)  
```

**Notes:**  
All pixels which do not match the search color are written to the new picture using the given background color.  
Returns nil on any error.
80.4. CLASS PICTURE

80.4.73 ExtractColorRectangleMaskMBS as picture

MBS Picture Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a mask picture with all the rectangles marked visible which contain color.

**Example:**

```plaintext
dim invertedpic as picture
dim pic as Picture

pic=NewPicture(300,300,32)
pic.graphics.drawpicture LogoMBS(100), 150,50

Backdrop=pic.ExtractColorRectangleMaskMBS
// marks black where the logo is drawn
```

**Notes:**

If you have a picture which is mostly gray and you need to find a color picture inside, this method can be helpful.

In the returned picture all pixels are black which belong to a rectangle which contains color pixels in the original picture.

See also:

- 80.4.74 ExtractColorRectangleMaskMBS(left as Integer,top as Integer,width as Integer,height as Integer) as picture

80.4.74 ExtractColorRectangleMaskMBS(left as Integer,top as Integer,width as Integer,height as Integer) as picture

MBS Picture Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a mask picture with all the rectangles marked visible which contain color.

**Notes:**

If you have a picture which is mostly gray and you need to find a color picture inside, this method can be helpful.

In the returned picture all pixels are black which belong to a rectangle which contains color pixels in the original picture.

All pixel outside the rectangle specified will be white.

See also:

- 80.4.73 ExtractColorRectangleMaskMBS as picture
**80.4.75 FindPictureMBS**

FindPictureMBS(pic as picture, byref x as Integer, byref y as Integer, StartX as Integer = 0, StartY as Integer = 0, Tolerance as Integer = 3) as boolean

MBS Picture Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Finds the given picture inside the picture.

**Example:**

```plaintext
// this is search image
dim p as new Picture(20,20,32)
p.Graphics.ForeColor = & c0000FF
p.Graphics.FillRect 0, 0, 20, 20

// this is target image
dim q as new Picture(500, 500, 32)

// with some color at Random position
q.Graphics.ForeColor = & c0000FF
q.Graphics.FillRect rnd*480, rnd*480, 30, 30

// do a search
dim x, y as Integer
if q.FindPictureMBS(p, x,y) then
    // found image, so draw rectangle there
    q.Graphics.ForeColor = & cFF0000
end if

window1.Backdrop = q
```

**Notes:**

Returns true on success and fills x/y variables.
Pixels are compared exactly, so a little bit color correction and make the picture being not found.

StartX/StartY can give start position. Tolerance defines how much two pixel component values can differ and still be considered the same. This helps with color matching and other drawings which may alter pixels a little bit.
If function returns true, you can use x+1, y as the new start position and search again.
80.4.76 GetMaskMBS(create as boolean = true) as picture

MBS Picture Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the mask for that picture.

**Notes:**
Same as Picture.Mask in Real Studio, but over the Plugin API.
We added it to test for leaks in plugin API.

80.4.77 GrayScale2MBS(mode as Integer) as boolean

MBS Picture Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Turns picture into grayscale.

**Example:**
```
dim l as Picture = LogoMBS(500)
if l.GrayScale2MBS(0) then
    Backdrop = l
end if
```

**Notes:**
Returns true on success and false on failure.

**Modes:**

<table>
<thead>
<tr>
<th>Mode</th>
<th>Formula</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>$y = 0.33 * R + 0.5 * G + 0.16 * B$</td>
<td>Faster version of 3</td>
</tr>
<tr>
<td>1</td>
<td>$y = 0.375 * R + 0.5 * G + 0.125 * B$</td>
<td>Faster version of 3</td>
</tr>
<tr>
<td>2</td>
<td>$y = 0.2126 * R + 0.7152 * G + 0.0722 * B$</td>
<td>Photometric/digital ITU-R</td>
</tr>
<tr>
<td>3</td>
<td>$y = 0.299 * R + 0.587 * G + 0.114 * B$</td>
<td>Digital CCIR601</td>
</tr>
</tbody>
</table>

Mode 2 and 3 uses doubles and mode 0 and 1 use integers so they should be faster.
Still Mode 0 and 1 are just approximation formulas which trade accuracy for performace.

GrayScaleMBS makes a copy of the picture while GrayScale2MBS edits in-place.

80.4.78 GrayScaleMBS(mode as Integer) as picture

MBS Picture Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a grayscale copy of the picture.

**Example:**
dim l as Picture = LogoMBS(500)
Backdrop = l.GrayScaleMBS(0)

Notes:
If you have a mask on the picture, you need to draw that mask in the new picture’s mask if you want to keep it.

Modes:

<table>
<thead>
<tr>
<th>Mode</th>
<th>Formula</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>( y = 0.33 \times R + 0.5 \times G + 0.16 \times B )</td>
<td>Faster version of 3</td>
</tr>
<tr>
<td>1</td>
<td>( y = 0.375 \times R + 0.5 \times G + 0.125 \times B )</td>
<td>Faster version of 3</td>
</tr>
<tr>
<td>2</td>
<td>( y = 0.2126 \times R + 0.7152 \times G + 0.0722 \times B )</td>
<td>Photometric/digital ITU-R</td>
</tr>
<tr>
<td>3</td>
<td>( y = 0.299 \times R + 0.587 \times G + 0.114 \times B )</td>
<td>Digital CCIR601</td>
</tr>
</tbody>
</table>

Mode 2 and 3 uses doubles and mode 0 and 1 use integers so they should be faster.
Still Mode 0 and 1 are just approximation formulas which trade accuracy for performance.

GrayScaleMBS makes a copy of the picture while GrayScale2MBS edits in-place.

80.4.79 GreenChannelMBS as picture

MBS Picture Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The green channel of the picture copied into a new picture.

**Example:**

```dim p as Picture = LogoMBS(500)
Backdrop = p.GreenChannelMBS```

80.4.80 HashMBS as UInt32

MBS Picture Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calculates CRC 32 over all pixels.

**Example:**

```dim p as new Picture(100, 100, 32)
dim hash1 as UInt32 = p.HashMBS
// one black pixel
p.Graphics.Pixel(50, 50) = & c000000```
```
dim hash2 as UInt32 = p.HashMBS
MsgBox hex(hash1)+” ”+hex(hash2)
```

**Notes:**
You can use hash to see if two pictures have 100% identical pixel values. Changing just one pixel should give different number.
Does not include alpha channel or mask for the hash, but only RGB channels.

### 80.4.81 HasMaskMBS as boolean

MBS Picture Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this picture has a mask or not.
**Notes:** Returns true if yes or false if not.

### 80.4.82 HMirrorMBS as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Mirrors the picture horizontally (flip).
**Example:**
```
// load picture
dim f as FolderItem = SpecialFolder.Desktop.Child(“test.png”)
dim p as PNGPictureMBS = f.OpenAsPNGMBS

// get parts
dim pic as Picture = p.Pict.HMirrorMBS
dim mask as Picture = p.mask.HMirrorMBS

// save as png
dim g as FolderItem = SpecialFolder.Desktop.Child(“output.png”)
call g.SaveAsPNGLCMS(pic, mask, 0)

// now apply mask to show it
pic.Mask = mask
Backdrop = pic
```

**Notes:**
This method returns a copy of the picture mirrored.
80.4.83  **HMirrorPictureMBS as boolean**

MBS Picture Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Mirrors the picture horizontally (flip).  
**Example:**

```vbnet
if pic.HMirrorPictureMBS then // mirror picture
canvas1.backdrop=pic
else
canvas1.backdrop=pic.HMirrorMBS // mirror a copy
end if
```

**Notes:** This method mirrors the picture data itself. Returns true on success and false on failure. Only bitmap pictures can be mirrored this way.

80.4.84  **InvertGrayMBS as picture**

MBS Picture Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Inverts the gray pixels inside the picture.  
**Example:**

```vbnet
dim invertedpic as picture
dim pic as picture

pic=LogoMBS(500)
invertedpic=pic.InvertGrayMBS

Backdrop=invertedpic
```

**Notes:** Returns nil on any error.  
See also:

- 80.4.85 InvertGrayMBS(left as Integer,top as Integer,width as Integer,height as Integer) as picture
80.4. CLASS PICTURE

80.4.85 InvertGrayMBS(left as Integer,top as Integer,width as Integer,height as Integer) as picture

```vbnet
dim invertedpic as picture
dim pic as picture

pic=LogoMBS(500)
invertedpic=pic.InvertGrayMBS(0,0,250,250)

Backdrop=invertedpic
```

Notes:
Returns nil on any error.
The part of the picture which is not inverted will be all black.
See also:

- 80.4.84 InvertGrayMBS as picture

80.4.86 InvertMBS as picture

MBS Picture Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Inverts the whole picture. Example:

```vbnet
dim invertedpic as picture
dim pic as picture

pic=LogoMBS(500)
invertedpic=pic.InvertMBS

Backdrop=invertedpic
```

Notes: Returns nil on any error.
See also:

- 80.4.87 InvertMBS(left as Integer,top as Integer,width as Integer,height as Integer) as picture
**80.4.87 InvertMBS**(left as Integer, top as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Inverts the picture.

**Example:**

```plaintext
dim invertedpic as picture
dim pic as picture

pic=LogoMBS(500)
invertedpic=pic.InvertMBS(0,0,250,250)
Backdrop=invertedpic
```

**Notes:**

- Returns nil on any error.
- The part of the picture which is not inverted will be all black.

See also:

- 80.4.86 InvertMBS as picture

---

**80.4.88 isBlackMBS** as boolean

MBS Picture Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the picture has only black pixels.

**Example:**

```plaintext
dim p as Picture

// test white
p=NewPicture(100,100,32)
MsgBox "isBlackMBS: "+str(p.isBlackMBS)+EndOfLine+"isWhiteMBS: "+str(p.isWhiteMBS)

// test black
p.Graphics.ForeColor=& c000000
p.Graphics.FillRect 0,0,100,100
MsgBox "isBlackMBS: "+str(p.isBlackMBS)+EndOfLine+"isWhiteMBS: "+str(p.isWhiteMBS)

// test red
p.Graphics.ForeColor=& cFF0000
p.Graphics.FillRect 0,0,100,100
MsgBox "isBlackMBS: "+str(p.isBlackMBS)+EndOfLine+"isWhiteMBS: "+str(p.isWhiteMBS)
```
80.4. **CLASS PICTURE**

See also:

- 80.4.89 isBlackMBS(left as Integer, top as Integer, width as Integer, height as Integer) as boolean

80.4.89  **isBlackMBS(left as Integer, top as Integer, width as Integer, height as Integer) as boolean**

MBS Picture Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the picture has only black pixels in the given rectangle.

See also:

- 80.4.88 isBlackMBS as boolean

80.4.90  **isGrayMBS(tolerance as Integer = 0) as boolean**

MBS Picture Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if a picture has only shades of gray in all pixels.

**Example:**

```vbs
dim p as new Picture(100,100,32)

// 1. test white picture
if p.isGrayMBS then
    MsgBox "white picture is gray."
end if

// 2. test gray picture
dim g as Graphics = p.Graphics
g.ForeColor = & c777777
g.FillRect 0, 0, 100, 100
if p.isGrayMBS then
    MsgBox "gray picture is gray."
end if

// 3. test gray picture with tolerance
g.ForeColor = & c777778
g.FillRect 0, 0, 100, 100
if p.isGrayMBS(0) then
    MsgBox "gray (not correct)"
else
    MsgBox "not gray (correct)"
```
end if

if p.isGrayMBS(1) then
    MsgBox "gray (correct)"
else
    MsgBox "not gray (not correct)"
end if

// 4. test gray picture with over tolerance
g.ForeColor = & c777779
g.FillRect 0, 0, 100, 100

if p.isGrayMBS(0) then
    MsgBox "gray (not correct)"
else
    MsgBox "not gray (correct)"
end if

if p.isGrayMBS(1) then
    MsgBox "gray (not correct)"
else
    MsgBox "not gray (correct)"
end if

Notes:
Tolerance defines how big the difference between two channels can be. Typically a value smaller than 5.
Pass 0 if you need exact gray scales.
Like the difference between & c000000 and & c000001 is not visible to most people, it can be ignored often.
See also:

- 80.4.91 isGrayMBS(tolerance as Integer, left as Integer,top as Integer,width as Integer,height as Integer) as boolean

80.4.91  isGrayMBS(tolerance as Integer, left as Integer, top as Integer, width as Integer, height as Integer) as boolean

MBS Picture Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if a picture has only shades of gray in all pixels.

Notes:
Tolerance defines how big the difference between two channels can be. Typically a value smaller than 5.
Pass 0 if you need exact gray scales.
Like the difference between & c000000 and & c000001 is not visible to most people, it can be ignored often.
See also:
80.4.92  isWhiteMBS as boolean

MBS Picture Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the picture has only white pixels.

**Example:**

```vba
dim p as Picture

// test white
p=NewPicture(100,100,32)
MsgBox "isBlackMBS: "+str(p.isBlackMBS)+EndOfLine+"isWhiteMBS: "+str(p.isWhiteMBS)

// test black
p.Graphics.ForeColor=& c000000
p.Graphics.FillRect 0,0,100,100
MsgBox "isBlackMBS: "+str(p.isBlackMBS)+EndOfLine+"isWhiteMBS: "+str(p.isWhiteMBS)

// test red
p.Graphics.ForeColor=& cFF0000
p.Graphics.FillRect 0,0,100,100
MsgBox "isBlackMBS: "+str(p.isBlackMBS)+EndOfLine+"isWhiteMBS: "+str(p.isWhiteMBS)
```

See also:

- 80.4.93 isWhiteMBS(left as Integer,top as Integer,width as Integer,height as Integer) as boolean 13245

80.4.93  isWhiteMBS(left as Integer,top as Integer,width as Integer,height as Integer) as boolean

MBS Picture Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the picture has only white pixels in the given rectangle.

See also:

- 80.4.92 isWhiteMBS as boolean 13245

80.4.94  MakeHBITMAPMBS as Ptr

MBS Picture Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns a HBITMAP handle to the picture.

**Notes:**
Warning: This function works only right on HDIB pictures.

The picture is cloned but both pictures may use the same binary data in background.

You will have to free this handle with DeleteObject:
Declare Function DeleteObject Lib "gdi32" (hObject as Integer) as Integer

80.4.95  MirrorMBS as picture

MBS Picture Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Mirrors the picture vertically and horizontally.
**Example:**

```
canvas1.backdrop=pic.MirrorMBS
```

**Notes:**
Same as rotation by 180 degree.
This method returns a copy of the picture mirrored.
Returns nil on low memory.

80.4.96  MirrorPictureMBS as boolean

MBS Picture Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Mirrors the picture vertically and horizontally.
**Example:**

```
if pic.MirrorPictureMBS then // mirror picture
    canvas1.backdrop=pic
else
    canvas1.backdrop=pic.MirrorMBS // mirror a copy
end if
```

**Notes:**
Same as rotation by 180 degree.
This method mirrors the picture data itself. Returns true on success and false on failure. Only bitmap pictures can be mirrored this way.
80.4. CLASS PICTURE

80.4.97 RedChannelMBS as picture

MBS Picture Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The red channel of the picture copied into a new picture.

**Example:**

```vba
dim p as Picture = LogoMBS(500)
Backdrop = p.RedChannelMBS
```

80.4.98 ReplaceBlueChannelMBS(BlueChannel as picture) as picture

MBS Picture Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a copy of the picture with the blue channel replaced with the blue channel of the given picture.

**Notes:** Returns nil on low memory.

80.4.99 ReplaceColorMBS(SearchColor as color, ReplaceWithColor as color) as picture

MBS Picture Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searchs the given color and replaces it with the second color.

**Example:**

```vba
dim p as Picture
p=NewPicture(300,300,32)
p.Graphics.ForeColor=& cFF0000
p.Graphics.FillRect 000,100,100,100
p.Graphics.ForeColor=& c00FF00
p.Graphics.FillRect 100,100,100,100
p.Graphics.ForeColor=& c0000FF
p.Graphics.FillRect 200,100,100,100
p.Graphics.ForeColor=& c777700
p.Graphics.FillRect 100,200,100,100

// shows a violet box on the left. Other pixels unchanged
backdrop=p.ReplaceColorMBS(& c FF0000,& c FF00FF)
```

**Notes:**
All other pixels are copied to the new picture.
Returns nil on any error.

80.4.100 ReplaceGreenChannelMBS(GreenChannel as picture) as picture

MBS Picture Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a copy of the picture with the green channel replaced with the green channel of the given picture. **Notes:** Returns nil on low memory.

80.4.101 ReplaceRedChannelMBS(RedChannel as picture) as picture

MBS Picture Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a copy of the picture with the red channel replaced with the red channel of the given picture. **Notes:** Returns nil on low memory.

80.4.102 Rotate180MBS as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Rotates the picture by 180 counter clockwise. **Example:**

```vbnet
dim p,r as picture
r=LogoMBS(500)
p=r.cloneMBS
canvas1.backdrop=p.Rotate180MBS
```

**Notes:**
You may use the function picture.bitmap to make sure that the picture is a bitmap, because this function works only for bitmap pictures.

app.resourceFork.getpicture(148) is the about picture of REALbasic in the 4.5 release. This may change in future releases, so you will get nil. But using this picture will make the plugin download smaller.
80.4. CLASS PICTURE

80.4.103 Rotate270MBS as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Rotates the picture by 270 counter clockwise.

**Example:**

```pascal
dim p,r as picture
r=LogoMBS(500)
p=r.cloneMBS
canvas1.backdrop=p.Rotate270MBS
```

**Notes:**

You may use the function picture.bitmap to make sure that the picture is a bitmap, because this function works only for bitmap pictures.

app.resourceFork.getpicture(148) is the about picture of REALbasic in the 4.5 release. This may change in future releases, so you will get nil. But using this picture will make the plugin download smaller.

80.4.104 Rotate90MBS as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Rotates the picture by 90 counter clockwise.

**Example:**

```pascal
dim p,r as picture
r=LogoMBS(500)
p=r.cloneMBS
canvas1.backdrop=p.Rotate90MBS
```

**Notes:**

You may use the function picture.bitmap to make sure that the picture is a bitmap, because this function works only for bitmap pictures.

app.resourceFork.getpicture(148) is the about picture of REALbasic in the 4.5 release. This may change in future releases, so you will get nil. But using this picture will make the plugin download smaller.
80.4.105  **RotateImageAndMaskMBS**(angle as Double, cut as boolean = False) as picture

MBS Picture Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Rotates the picture by angle counter clockwise.  
**Notes:**  
Internally uses RotateMBS.  
Works with masked and alpha channel pictures, but is faster with masked pictures.  
Returns nil on any error.  
if cut is true, the image is cut to the original size.

80.4.106  **RotateMBS**(angle as Double, background as color = & cFFFFFFFF) as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Rotates the picture by angle counter clockwise.  
**Example:**

```
dim p,r as picture  
r=LogoMBS(500)  
p=r.cloneMBS  
canvas1.backdrop=p.RotateMBS(42.3,rgb(255,255,255))  
```

**Notes:**  
The area around the picture is filled using the backcolor.

You may use the function picture.bitmap to make sure that the picture is a bitmap, because this function works only for bitmap pictures.

app.resourceFork.getpicture(148) is the about picture of REALbasic in the 4.5 release. This may change in future releases, so you will get nil. But using this picture will make the plugin download smaller.

Alpha channel support is half done. If it's working for you, please enjoy it. If not, please report.

80.4.107  **RotateMemoryMBS**(angle as Double) as Int64

MBS Picture Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the memory needed to rotate the picture with the given angle.  
**Notes:** RotateMBS needs temporary buffers and fails if somewhere between memory is low.
80.4.108  **ScaleImageAndMaskMBS**<br>(width as Integer, height as Integer, AntiAlias as boolean=false, YieldTicks as Integer=0) as picture

MBS Picture Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**<br>Scales the picture to the new size including mask (in case one exists).<br>**Notes:**<br>This is a self made algorithm which produces nice pictures on all platforms.<br>It is slower than QuickDraw on Mac OS, but nicer than drawpicture on Windows.<br>Returns nil on low memory or invalid width and height values.<br><br>AntiAlias is set to false if width<=self.width or height<=self.height.<br><br>If YieldTicks is 0, no time is given to other threads in your application. If it is a value >0, this time is waited before a thread switch is done. Setting it to 1 will give away control to another thread after 1/60th of a second. We recommend a value of 3 to 5 for a good reponsibility of your application.

80.4.109  **ScaleMBS**<br>(width as Integer, height as Integer, AntiAlias as boolean=false, YieldTicks as Integer=0) as picture

MBS Picture Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**<br>Scales the picture to the new size.<br>**Example:**

```plaintext
dim pic as new Picture(100,100,32)
pic.Graphics.ForeColor=& cFF0000
pic.Graphics.FillOval 0,0,100,100

dim scaledPic as picture = pic.ScaleMBS(200,200)

// show scaledPic
window1.backdrop = scaledPic
```

**Notes:**<br>This is a self made algorithm which produces nice pictures on all platforms.<br>It is slower than QuickDraw on Mac OS, but nicer than drawpicture on Windows.<br>Returns nil on low memory or invalid width and height values.
AntiAlias is set to false if width<=self.width or height<=self.height.

If YieldTicks is 0, no time is given to other threads in your application. If it is a value >0, this time is waited before a thread switch is done. Setting it to 1 will give away control to another thread after 1/60th of a second. We recommend a value of 3 to 5 for a good responsibility of your application.

Scaling down does not use antialias. If you need full antialias, please use ScalingMBS function.

If input and output size is equal, you get your picture back unchanged. This function does not handle mask or alpha channel. Please use pictures with mask and scale image and mask separately.

**80.4.110 ScalingMBS(mode as Integer, width as Integer, height as Integer, yield as Integer = 0) as picture**

MBS Picture Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Scales the picture to the given size.

**Example:**

```plaintext
dim p as Picture

p=LogoMBS(1000)

p=p.ScalingMBS(2, 4000, 4000)

backdrop=p
```

**Notes:**
On low memory this function can return nil or the image may look bad. (e.g. all black)
The memory used for the temporary storage is original height * new width * 12 bytes plus some extra.
For scaling with the same size as the picture already has, the scaling is still performed.

Returns nil ony error. (e.g. destwidth=0)

**Modes:**

This function does not handle mask or alpha channel. Please use pictures with mask and scale image and mask separately.
80.4. CLASS PICTURE

triangle
box, nearest neighbor
lanczos 3
lanczos 8
mitchell
poly 3
cubic

80.4.111 ScrollHorizontalMBS(delta as Integer, wrap as boolean, scrollmask as boolean) as boolean

dim p as Picture
p=LogoMBS(500) // any bitmap image
if p.ScrollHorizontalMBS(100,true,false) then
Title="ok"
end if
Backdrop=p

Notes:
Returns true on success and false on failure.
Works only on Mac OS and Windows with 32bit bitmap images.
scrollmask defines whether a mask (if one exists) is also scrolled.
Wrap will define whether the image will wrap on the edges. If wrap is enabled on Mac, the whole thing speeds up.

80.4.112 ScrollMBS(deltaX as Integer, deltaY as Integer, wrap as boolean, scrollmask as boolean) as boolean

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. Function: Combines calls to ScrollHorizontalMBS and ScrollVerticalMBS. Notes:
Returns true on success and false on failure. Works only on Mac OS and Windows with 32bit bitmap images. scrollmask defines whether a mask (if one exists) is also scrolled. Wrap will define whether the image will wrap on the edges. If wrap is enabled on Mac, the whole thing speeds up.

80.4.113 ScrollVerticalMBS(delta as Integer, wrap as boolean, scrollmask as boolean) as boolean

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Scrolls the image data vertically. **Example:**

```basic
dim p as Picture
p=LogoMBS(500) // any bitmap image
if p.ScrollVerticalMBS(100,true,false) then
    Title="ok"
end if
Backdrop=p
```

Notes:

Returns true on success and false on failure. Works only on Mac OS and Windows with 32bit bitmap images. scrollmask defines whether a mask (if one exists) is also scrolled. Wrap will define whether the image will wrap on the edges. If wrap is enabled on Mac, the whole thing speeds up.

80.4.114 SetSteganographyMBS(flags as Integer, data as Memoryblock) as boolean

MBS Picture Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds steganography to an existing picture. **Example:**

```basic
dim p as Picture = LogoMBS(500)
// this example uses chr(0) as end marker
dim s as string = "Hello World. This is just a test." + chr(0)
if p.SetSteganographyMBS(1, s) then
```

Notes:

Returns true on success and false on failure. Works only on Mac OS and Windows with 32bit bitmap images. scrollmask defines whether a mask (if one exists) is also scrolled. Wrap will define whether the image will wrap on the edges. If wrap is enabled on Mac, the whole thing speeds up.
80.4. CLASS PICTURE

```vba
    dim data as MemoryBlock = p.SteganographyMBS(1)
    dim d as string = data.CString(0)

    Backdrop = p
    Break
    end if
```

**Notes:**

Flags can be a combination of red (& h100), green (& h010) and blue (& h001).
Returns true on success or false on failure.
If memoryblock provided is nil, this function fails.

If you like to store data, please encrypt them and include some way that you find your data again, detect length of data, verify it’s okay via checksum and than decrypt your data.
Please store image in a loss less format like PNG.
Function does not handle mask or alpha channel.

80.4.115 SetSteganographyPictureMBS(flags as Integer, data as Picture) as boolean

MBS Picture Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds steganography to an existing picture.
**Example:**

```vba
    const AllChannels = & h111

    dim p as new Picture(500, 500, 32)
    dim l as Picture = LogoMBS(500)

    dim w as new window1
    w.Title = "Logo"
    w.Backdrop = l

    // adds picture. You will normally not see the modification
    if p.SetSteganographyPictureMBS(AllChannels, l) then

        w = new window1
        w.Title = "Logo hidden in white picture"
        w.Backdrop = p

        // as we store in lowest bit, this picture will look strange
        dim y as Picture = p.SteganographyPictureMBS(AllChannels)
```

w = new window1
w.Title = "Logo extracted"
w.Backdrop = y
end if

Notes:
Flags can be a combination of red (& h100), green (& h010) and blue (& h001).
Returns true on success or false on failure.

Function does not handle mask or alpha channel.

80.4.116 SobelChannelsMBS(Red as boolean, Green as Boolean, Blue as boolean,
direction1 as Integer = 1, direction2 as Integer = 3, swap as boolean = false) as picture

MBS Picture Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Calculates the sobel operator.
Example:
dim m as Picture = LogoMBS(500)

// only green
Backdrop = m.SobelChannelsMBS(false, true, false)

Notes:
Useful for edge detection.
See also SobelMBS function which takes similar operators.
You can set Red/Blue/Green parameters to define which channel is modified and which channel is just
copied.
Pictures look quite funny. The channel who got the edge detection has bigger areas black or white so other
colors in other channels have much more visible effect.

80.4.117 SobelMBS(direction1 as Integer = 1, direction2 as Integer = 3, swap
as boolean = false, gray as boolean = true) as picture

MBS Picture Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Calculates the sobel operator.
Example:
80.4.  CLASS PICTURE

`dim m as Picture = LogoMBS(500)`

Backdrop = m.SobelMBS

**Notes:**

Useful for edge detection.

direction1: The direction for first matrix.
direction2: The direction for first matrix.
swap: If false, you get white on black. If true you get black on white.
gray: whether to output gray image instead of RGB image.

Possible Matrix values:
-1: negative identity:
0: identity
1: west
2: east
3: north
4: south
5: south east
6: north west
7: north east
8: south west

You can add 10 to the 8 direction matrixes to get more weight.

80.4.118  SteganographyMBS(flags as Integer) as Memoryblock

MBS Picture Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries steganography information inside the picture.

**Example:**

```vbs
dim p as Picture = LogoMBS(500)

dim s as string = "Hello World. This is just a test." + chr(0)
if p.SetSteganographyMBS(1, s) then

dim data as MemoryBlock = p.SteganographyMBS(1)
dim d as string = data.CString(0)

Backdrop = p
Break
```
CHAPTER 80. GRAPHICS & PICTURES

Notes: Flags can be a combination of red (& h100), green (& h010) and blue (& h001).

80.4.119 SteganographyPictureMBS(flags as Integer) as Picture

Example:

```vba
const AllChannels = & h111
dim p as new Picture(500, 500, 32)
dim w as new window1
w.Title = "white"
w.Backdrop = p
dim l as Picture = LogoMBS(500)
w = new window1
w.Title = "Logo"
w.Backdrop = l

// adds picture. You will normally not see the modification
dim x as Picture = p.AddSteganographyPictureMBS(AllChannels, l)
w = new window1
w.Title = "Logo hidden in white picture"
w.Backdrop = x

// as we store in lowest bit, this picture will look strange
dim y as Picture = x.SteganographyPictureMBS(AllChannels)
w = new window1
w.Title = "Logo extracted"
w.Backdrop = y
```

Notes: Flags can be a combination of red (& h100), green (& h010) and blue (& h001).
80.4.120 **ThreadedTransformMBS(Threaded as Integer, Map() as color, dest as picture = nil) as picture**

MBS Picture Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a transformation to the picture.

**Example:**

```vba
dim p as Picture = LogoMBS(500)

dim map(-1) as color

for r as Integer = 0 to 255
    for g as Integer = 0 to 255
        for b as Integer = 0 to 255
            // index is r*65536+g*256+b
            // we swap colors: r gives g, g gives b, b gives r
            map.Append rgb(g,b,r)
        next
    next
next

Backdrop=p.ThreadedTransformMBS(0, map)
```

**Notes:**

Threaded parameter specifies how many threads you want to use:
A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

For each color in the source picture the red, blue and green values are used as index (blue+green*256+blue*65536) in the arrays to get the new color value.

The arrays should have \(2^{24}\) entries.

You can pass destination picture. If dest is not nil and size matches, the plugin reuses the picture object which increases performance as no new picture is created.

See also:

- 80.4.121 **ThreadedTransformMBS(Threaded as Integer, Map() as Integer, dest as picture = nil) as picture**
- 80.4.122 **ThreadedTransformMBS(Threaded as Integer, RedMap as memoryblock, GreenMap as memoryblock, BlueMap as memoryblock, dest as picture = nil) as picture**
- 80.4.123 **ThreadedTransformMBS(Threaded as Integer, RedMap() as Integer, GreenMap() as Integer,
80.4.121 ThreadedTransformMBS(Threaded as Integer, Map() as Integer, dest as picture = nil) as picture

MBS Picture Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a transformation to the picture.

**Example:**

```vba
dim p as Picture = LogoMBS(500)

dim map(-1) as Integer

for r as Integer = 0 to 255
    for g as Integer = 0 to 255
        for b as Integer = 0 to 255
            // index is r*65536+g*256+b
            // we swap colors: r gives g, g gives b, b gives r
            map.Append g*65536+b*256+r
        next
    next
next

Backdrop=p.ThreadedTransformMBS(0, map)
```

**Notes:**

Threaded parameter specifies how many threads you want to use:
A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

For each color in the source picture the red, blue and green values are used as index (blue+green*256+blue*65536) in the arrays to get the new color value.

The arrays should have 2^24 entries.

You can pass destination picture. If dest is not nil and size matches, the plugin reuses the picture object which increases performance as no new picture is created.

See also:

- 80.4.120 ThreadedTransformMBS(Threaded as Integer, Map() as color, dest as picture = nil) as picture

80.4. **CLASS PICTURE**

oryblock, BlueMap as memoryblock, dest as picture = nil) as picture

• 80.4.123 ThreadedTransformMBS(Threaded as Integer, RedMap() as Integer, GreenMap() as Integer, BlueMap() as Integer, dest as picture = nil) as picture

80.4.122 ThreadedTransformMBS(Threaded as Integer, RedMap as memoryblock, GreenMap as memoryblock, BlueMap as memoryblock, dest as picture = nil) as picture

MBS Picture Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a transformation to the picture.

**Example:**

```vba
dim p as Picture = LogoMBS(500)

dim red as MemoryBlock = NewMemoryBlock(256)
dim green as MemoryBlock = NewMemoryBlock(256)
dim blue as MemoryBlock = NewMemoryBlock(256)

for i as Integer=0 to 255
    red.Byte(i)=i/2
    green.Byte(i)=i/2
    blue.Byte(i)=i/2
next

Backdrop=p.ThreadedTransformMBS(0, red, green, blue)
```

**Notes:**

Threaded parameter specifies how many threads you want to use:
A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

For each color in the source picture the red, blue and green values are used as index in the memoryblocks to get the new color value.

The memoryblocks must have a size of 256 Bytes.

You can pass destination picture. If dest is not nil and size matches, the plugin reuses the picture object which increases performance as no new picture is created.

See also:

• 80.4.120 ThreadedTransformMBS(Threaded as Integer, Map() as color, dest as picture = nil) as picture
80.4.123 ThreadedTransformMBS(Threaded as Integer, RedMap() as Integer, GreenMap() as Integer, BlueMap() as Integer, dest as picture = nil) as picture

MBS Picture Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a transformation to the picture.

**Example:**

```vba
dim p as Picture = LogoMBS(500)

dim red(-1) as Integer
dim green(-1) as Integer
dim blue(-1) as Integer

for i as Integer=0 to 255
  red.Append i/2
  green.Append i/2
  blue.Append i/2
next

Backdrop=p.ThreadedTransformMBS(0, red, green, blue)
```

**Notes:**

Threaded parameter specifies how many threads you want to use:
A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

For each color in the source picture the red, blue and green values are used as index in the arrays to get the new color value.

The arrays should have 256 entries.

You can pass destination picture. If dest is not nil and size matches, the plugin reuses the picture object which increases performance as no new picture is created.

See also:

- 80.4.120 ThreadedTransformMBS(Threaded as Integer, Map() as color, dest as picture = nil) as picture
80.4.124 ThresholdMBS(Threshold as integer) as picture

MBS Picture Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates black and white picture. **Notes:**
With threshold value you define threshold in range from 0 to 255. Normally you use 127 for turning picture to black & white.

80.4.125 TransformColorsMBS(red as memoryblock, blue as memoryblock, green as memoryblock, dest as picture = nil) as picture

MBS Picture Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies a transform table to the pixels. **Notes:**
Red, blue and green are 256 byte big memoryblocks with one byte for each value.

In RB the function does this:
color=rgb(red.byte [ color.red ] , green.byte [ color.green ] , blue.byte [ color.blue ] )

If you pass a destination picture and it has right size, the plugin will recycle that instead of creating a new one to increase performance.

80.4.126 TrimMBS(left as Integer, top as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Trims the picture to the given rectangle. **Example:**
```dim p as Picture = LogoMBS(500)`
Backdrop = p.TrimMBS(100,100,300,300)`
Notes:
This method does not handle the mask.
So \texttt{p.Trim(0,0,p.width,\texttt{p.height})} will give you a copy of the image pixels without mask.
left and top are zero based.

Use \texttt{TrimWithMaskMBS} if you need the mask to be trimmed.
Returns nil on low memory or bad parameters.

80.4.127 \texttt{TrimWithMaskMBS(left as Integer, top as Integer, width as Integer, height as Integer) as picture}

MBS Picture Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. \textbf{Function:} Trims the picture to the given rectangle.
\textbf{Example:}
\begin{verbatim}
dim p as picture
dim someimage as Picture = LogoMBS(100)
p=someimage.TrimWithMaskMBS(100,200,300,400)
\end{verbatim}

Notes:
left and top are zero based.
Returns nil on low memory or bad parameters.

80.4.128 \texttt{VMirrorMBS as picture}

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. \textbf{Function:} Mirrors the picture vertically.
\textbf{Example:}
\begin{verbatim}
canvas1.backdrop=pic.VMirrorMBS
\end{verbatim}

Notes:
This method returns a copy of the picture mirrored.
Returns nil on low memory.
80.4. **CLASS PICTURE**

80.4.129 **VMirrorPictureMBS as boolean**

MBS Picture Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Mirrors the picture vertically.

**Example:**

```pascal
if pic.VMirrorPictureMBS then // mirror picture
  canvas1.backdrop=pic
else
  canvas1.backdrop=pic.VMirrorMBS // mirror a copy
end if
```

**Notes:** This method mirrors the picture data itself. Returns true on success and false on failure. Only bitmap pictures can be mirrored this way.

80.4.130 **Properties**

80.4.131 **EmbeddedMaskMBS**(swap as boolean) as picture

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Read or write a picture mask.

**Example:**

```pascal
// Export a mask picture:

dim f as FolderItem
dim t as TiffPictureMBS
dim m,p as Picture
dim q as QTGraphicsExporterMBS

p=NewPicture(100,100,32)
p.Graphics.ForeColor=rgb(100,100,100)
p.Graphics.fillrect 0,0,100,100
p.Graphics.ForeColor=rgb(255,0,0)
p.Graphics.fillrect 20,20,80,30
m=NewPicture(100,100,32)
m.Graphics.ForeColor=rgb(255,255,255)
m.Graphics.FillRect 0,0,30,100
m.Graphics.ForeColor=rgb(200,200,200)
m.Graphics.FillRect 30,0,30,100
m.Graphics.ForeColor=rgb(100,100,100)
m.Graphics.FillRect 60,0,30,100

p.EmbeddedMaskMBS(true)=m
```
p.Mask.Graphics.DrawPicture m,0,0 // just for showing as a backdrop

q=new QTGraphicsExporterMBS

q.OpenExporter("TIFF")
q.Density=32
q.InputPicture=p
q.CompressionQuality=1024
q.OutputFile=SpecialFolder.Desktop.Child("Hello.tif")
title=str(q.Export)

Backdrop=p

**Notes:**

Only useful on 32bit images.
Realbasic takes white for transparent, so you may need to swap this to black using the swap parameter.

Windows support removed somewhere in version 10.4 with internal changes. If you need this, please tell us. (Read and Write computed property)
80.5.  CLASS PICTURECONVOLUTIONMBS

80.5  class PictureConvolutionMBS

80.5.1  class PictureConvolutionMBS

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
A class for a Picture Convolution.

**Example:**

```plaintext
// blur

dim l as Picture = LogoMBS(500)
dim p as new PictureConvolutionMBS

p.hor(0) = 0.2
p.hor(1) = 0.2
p.hor(2) = 0.2
p.hor(3) = 0.2
p.hor(4) = 0.2

p.ver(0) = 0.2
p.ver(1) = 0.2
p.ver(2) = 0.2
p.ver(3) = 0.2
p.ver(4) = 0.2

p.ValueCount=5

p.SourcePicture=l

dim t as Integer=ticks
call p.run(7)
t=ticks-t

Title=str(t)

Backdrop=p.DestinationPicture
```

80.5.2  Methods

80.5.3  close

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
The destructor.

**Notes:**
There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you. (e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

### 80.5.4 Run(channels as Integer) as boolean

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the picture effect.  
**Notes:** Fails if the pictures are not bitmap pictures. Source and Destination can be equal. If you provide a destination picture, the dimensions of source and destination must be equal.

Channels is a combination of 1, 2 and 4. 1 for Red, 2 for Green and 4 for Blue. The border (one pixel thick) is not filled in the destination picture.

This method does the following for each pixel:

```plaintext
// first horizontal fill the temporary picture
r=0
g=0
b=0

if RedChannel then
  r = r + sourcepicture.pixel(x-1,y).red * Hor(0)
  r = r + sourcepicture.pixel(x ,y).red * Hor(1)
  r = r + sourcepicture.pixel(x+1,y).red * Hor(2)
else
  r = sourcepicture.pixel(x,y)
end if

if GreenChannel then
  g = g + sourcepicture.pixel(x-1,y).green * Hor(0)
  g = g + sourcepicture.pixel(x ,y).green * Hor(1)
  g = g + sourcepicture.pixel(x+1,y).green * Hor(2)
else
  g = sourcepicture.pixel(x,y)
end if

if BlueChannel then
  b = b + sourcepicture.pixel(x-1,y).blue * Hor(0)
  b = b + sourcepicture.pixel(x ,y).blue * Hor(1)
  b = b + sourcepicture.pixel(x+1,y).blue * Hor(2)
```

else
b = sourcepicture.pixel(x,y)
end if

tempppicture.pixel(x,y)=rgb(r,g,b)

// now back from temporary picture to the destination picture

r=0
g=0
b=0

if RedChannel then
r = r + tempppicture.pixel(x,y-1).red * Ver(0)
r = r + tempppicture.pixel(x,y ).red * Ver(1)
r = r + tempppicture.pixel(x,y+1).red * Ver(2)
else
r = tempppicture.pixel(x,y)
end if

if GreenChannel then
g = g + tempppicture.pixel(x,y-1).green * Ver(0)
g = g + tempppicture.pixel(x,y ).green * Ver(1)
g = g + tempppicture.pixel(x,y+1).green * Ver(2)
else
g = tempppicture.pixel(x,y)
end if

if BlueChannel then
b = b + tempppicture.pixel(x,y-1).blue * Ver(0)
b = b + tempppicture.pixel(x,y ).blue * Ver(1)
b = b + tempppicture.pixel(x,y+1).blue * Ver(2)
else
b = tempppicture.pixel(x,y)
end if

destinationpicture.pixel(x,y)=rgb(r,g,b)
80.5.5 Properties

80.5.6 DestinationPicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The destination picture.
**Notes:**
If you set this property, use a bitmap picture equal in size to the source picture.
If this property is nil, the Run method will create a picture.
(Read and Write property)

80.5.7 SourcePicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The source picture.
**Notes:**
Must be a bitmap picture.
(you can use the picture.BitmapMBS function for this)
(Read and Write property)

80.5.8 ValueCount as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The number of values set in the Hor and Ver array.
**Example:**
```vbnet
dim p as new PictureConvolutionMBS

p.Hor(0)=0.25
p.Hor(1)=0.5
p.Hor(2)=0.25
p.ValueCount=3
```

**Notes:**
The index in the arrays goes from 0 to ValueCount-1.
Default is 3.
Use values like 1, 3, 5, 7, 9, 11, 13, 15, 17 or 19.
(Read and Write property)
80.5.9  **Hor(index as UInt32) as Double**

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The horizontal factors.

**Notes:**
Index from 0 to 19.
(Read and Write computed property)

80.5.10  **Ver(index as UInt32) as Double**

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The vertical factors.

**Notes:**
Index from 0 to 19.
(Read and Write computed property)
80.6 class PictureEditorMBS

80.6.1 class PictureEditorMBS

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** class to edit picture data as a memoryblock in place.
**Notes:** This is the same code the plugin uses to edit pictures.

80.6.2 Methods

80.6.3 Data(Row as Integer) as MemoryBlock

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The memoryblock with the original image data of the given row.
**Notes:**
Changes here will be visible in the picture.
This memoryblock has a size property with value 0!
No bound checking can be done by Realbasic on this memoryblock.

80.6.4 Properties

80.6.5 AllData as Memoryblock

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The memoryblock with the original image data.
**Notes:**
Changes here will be visible in the picture.
This memoryblock has a size property with value 0!
No bound checking can be done by Realbasic on this memoryblock.

Returns nil for console pictures.
(Read only property)

80.6.6 AllDataCopy as Memoryblock

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the data for the current picture into a new memoryblock.
**Notes:**
Changes to this memoryblock will not be visible in the original picture.
(Read only property)

80.6.7  **BlueOffset as Integer**

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The platform dependend offset of the blue channel in the RGB data.
**Notes:**
A value between 0 and 3.
(Read only property)

80.6.8  **BytesPerPixel as Integer**

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Number of bytes per pixel.
**Notes:**
Most times 4, but for some platforms 3.
(Read only property)

80.6.9  **DataPtr as Integer**

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The memory address where the data is stored.
**Notes:**
Maybe useful for declares.
Returns nil for console pictures.
(Read only property)

80.6.10  **GreenOffset as Integer**

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The platform dependend offset of the green channel in the RGB data.
**Notes:**
A value between 0 and 3.
(Read only property)
CHAPTER 80. GRAPHICS & PICTURES

80.6.11 HasAlphaChannel as Boolean

MBS Picture Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether an alpha channel exists. **Notes:** (Read only property)

80.6.12 Height as Integer

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The height of the image in pixels. **Notes:** (Read only property)

80.6.13 Picture as Picture

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The original picture reference. **Notes:** (Read only property)

80.6.14 RedOffset as Integer

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The platform dependent offset of the red channel in the RGB data. **Notes:**
A value between 0 and 3. (Read only property)

80.6.15 RowBytes as Integer

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The width of an image row in bytes. **Notes:**
RowBytes can be width*bytesPerPixel, but often it is not. (Read only property)
80.6.16 Width as Integer

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The width of the image in pixels. **Notes:** (Read only property)
80.7 class PictureLut3DMBS

80.7.1 class PictureLut3DMBS

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for doing a LUT 3D on a picture.

80.7.2 Methods

80.7.3 close

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.
**Notes:**
There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

80.7.4 Run as boolean

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the picture effect.
**Notes:** Fails if the pictures are not bitmap pictures. Source and Destination can be equal. If you provide a destination picture, the dimensions of source and destination must be equal.

80.7.5 Properties

80.7.6 DestinationPicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destination picture.
**Notes:**
If you set this property, use a bitmap picture equal in size to the source picture.
If this property is nil, the Run method will create a picture.
(Read and Write property)
80.7. CLASS PICTURELUT3DMBS

80.7.7 MaxX as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The maximal x coordinate to use.
**Notes:**
If 0 the width of the source picture defines this value.
(Read and Write property)

80.7.8 MaxY as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The maximal y coordinate to use.
**Notes:**
If 0 the height of the source picture defines this value.
(Read and Write property)

80.7.9 MinX as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The minimal x coordinate to use.
**Notes:**
Default is 0.
(Read and Write property)

80.7.10 MinY as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The minimal y coordinate to use.
**Notes:**
Default is 0.
(Read and Write property)

80.7.11 SourcePicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The source picture.
**Notes:**
80.7.12  Table(r as UInt32, g as UInt32, b as UInt32, x as UInt32) as Double

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**  The lut table.

**Notes:**

Indexes r, g and b go from 0 to 16 while x goes from 0 to 2.
(Read and Write computed property)
80.8.  

80.8. CLASS PICTUREMATRIX3DMBS

80.8  class PictureMatrix3DMBS

80.8.1  class PictureMatrix3DMBS

Function:  
A class for doing a 3D picture matrix.

80.8.2  Methods

80.8.3  close

Function:  
The destructor.  
Notes:  
There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.  
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

80.8.4  Run as boolean

Function:  
Runs the picture effect.  
Notes:  
Fails if the pictures are not bitmap pictures. Source and Destination can be equal. If you provide a destination picture, the dimensions of source and destination must be equal.

80.8.5  Properties

80.8.6  DestinationPicture as Picture

Function:  
The destination picture.  
Notes:  
If you set this property, use a bitmap picture equal in size to the source picture.  
If this property is nil, the Run method will create a picture.  
(Read and Write property)
80.8.7 MaxX as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximal x coordinate to use.  
**Notes:**  
If 0 the width of the source picture defines this value.  
(Read and Write property)

80.8.8 MaxY as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximal y coordinate to use.  
**Notes:**  
If 0 the height of the source picture defines this value.  
(Read and Write property)

80.8.9 MinX as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minimal x coordinate to use.  
**Notes:**  
Default is 0.  
(Read and Write property)

80.8.10 MinY as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minimal y coordinate to use.  
**Notes:**  
Default is 0.  
(Read and Write property)

80.8.11 SourcePicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The source picture.  
**Notes:**
80.8. **CLASS PICTUREMATRIX3DMBS**

Must be a bitmap picture.
(you can use the picture.BitmapMBS function for this)
(Read and Write property)

80.8.12 **Matrix(x as UInt32, y as UInt32) as Double**

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The matrix to use.
**Notes:**
The indexes x and y are 0 based.
(Read and Write computed property)
80.9 class PictureMatrixMBS

80.9.1 class PictureMatrixMBS

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for matrix operations on a picture. **Notes:** Can be used e.g. to sharpen a picture.

80.9.2 Methods

80.9.3 close

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor. **Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you. (e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

80.9.4 Run as boolean

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the process. **Notes:** Returns true on success.

80.9.5 RunRGB(red as boolean, green as boolean, blue as boolean) as boolean

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the process for the given channels. **Notes:** Returns true on success. A few combinations are optimized for faster processing. Still more optimization is possible.
80.9.6 Properties

80.9.7 DestinationPicture as Picture

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The destination picture.

**Notes:**
If this property is nil, a new picture will be placed here inside the Run method.
If you place a picture here, please use one created with newpicture with a 32bit depth.
(Read and Write property)

80.9.8 Displacement as Integer

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The displacement value.

**Notes:**
See the example project for details.
(Read and Write property)

80.9.9 MaxX as Integer

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The maximum x coordinate to use.

**Notes:**
Just for limiting the working area to a part of the picture.
(Read and Write property)

80.9.10 MaxY as Integer

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The maximum y coordinate to use.

**Notes:**
Just for limiting the working area to a part of the picture.
(Read and Write property)
80.9.11 MinX as Integer

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minimum x coordinate to use. **Notes:** Just for limiting the working area to a part of the picture. (Read and Write property)

80.9.12 MinY as Integer

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minimum y coordinate to use. **Notes:** Just for limiting the working area to a part of the picture. (Read and Write property)

80.9.13 ScaleFactor as Double

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A scaling factor. **Notes:** See the example project for details. (Read and Write property)

80.9.14 SourcePicture as Picture

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The source picture. **Notes:** The run method will fail if this picture is not a 32bit deep picture created with newpicture. (Read and Write property)

80.9.15 Matrix(x as UInt32, y as UInt32) as Integer

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The matrix used. **Notes:**

X and Y are in range from 0 to 4. Values >255 are used for empty cells. (Read and Write computed property)
80.10  class PictureMinMaxMBS

80.10.1  class PictureMinMaxMBS

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A class to find the minimum/maximum pixel values.

**Example:**

```vbnet
dim pic as Picture = LogoMBS(500)
dim m as new PictureMinMaxMBS

if m.FindAll(pic) then
    break // check values in debugger
end if
```

**Notes:**
This class offers several Find functions.
Please choose carefully which one you use as it’s faster to use e.g. `FindRed` instead of `FindMinRed` and `FindMaxRed` together.

80.10.2  Methods

80.10.3  FindAll(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Searches for the minimum and maximum pixels.

**Notes:** Sets all fields.

80.10.4  FindBlue(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Searches for the minimum and maximum blue pixels.

**Notes:** Sets `BlueMaxX`, `BlueMax`, `BlueMinX`, `BlueMinY`, `BlueMin` and `BlueMaxY`.

80.10.5  FindGreen(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Searches for the minimum and maximum green pixels.
Notes: Sets GreenMaxX, GreenMax, GreenMinX, GreenMinY, GreenMin and GreenMaxY.

80.10.6  FindMaxAll(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Searches for the maximum pixels.  
**Notes:** Sets RedMaxX, RedMax, RedMaxY, GreenMaxX, GreenMax, GreenMaxY, BlueMaxX, BlueMax and BlueMaxY.

80.10.7  FindMaxBlue(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Searches for the maximum blue pixel.  
**Notes:** Sets BlueMaxX, BlueMax and BlueMaxY.

80.10.8  FindMaxGreen(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Searches for the maximum green pixel.  
**Notes:** Sets GreenMaxX, GreenMax and GreenMaxY.

80.10.9  FindMaxRed(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Searches for the maximum red pixel.  
**Notes:** Sets RedMaxX, RedMax and RedMaxY.

80.10.10  FindMaxSum(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Searches for the maximum sum pixel.  
**Notes:**  
The sum of a pixel is the sum of all color channels of this pixel (red+Sum+blue).  
Sets SumMaxX, SumMax and SumMaxY.
CHAPTER 80. GRAPHICS & PICTURES

80.10.11 FindMinAll(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the minimum pixels.
**Notes:** Sets RedMinX, RedMin, RedMinY, GreenMinX, GreenMin, GreenMinY, BlueMinX, BlueMin and BlueMinY.

80.10.12 FindMinBlue(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the minimum blue pixel.
**Notes:** Sets BlueMinX, BlueMin and BlueMinY.

80.10.13 FindMinGreen(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the minimum green pixel.
**Notes:** Sets GreenMinX, GreenMin and GreenMinY.

80.10.14 FindMinRed(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the minimum red pixel.
**Notes:** Sets RedMinX, RedMin and RedMinY.

80.10.15 FindMinSum(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the minimum sum pixel.
**Notes:** The sum of a pixel is the sum of all color channels of this pixel (red+green+blue).
Sets SumMinX, SumMin and SumMinY.

80.10.16 FindRed(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the minimum and maximum red pixels.
80.10. CLASS PICTUREMINMAXMBS

Notes: Sets RedMaxX, RedMax, RedMinX, RedMinY, RedMin and RedMaxY.

80.10.17 FindSum(p as picture) as boolean

Notes:
The sum of a pixel is the sum of all color channels of this pixel (red+Sum+blue).
Sets SumMaxX, SumMax, SumMinX, SumMinY, SumMin and SumMaxY.

80.10.18 Properties

80.10.19 BlueMax as Integer

Notes:
Range: 0 to 255.
(Read and Write property)

80.10.20 BlueMaxX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The location of the pixel with the maximum blue value.

Notes:
Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

80.10.21 BlueMaxY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The location of the pixel with the maximum blue value.

Notes:
Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)
80.10.22  BlueMin as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minimum blue color value. **Notes:**
Range: 0 to 255.
(Read and Write property)

80.10.23  BlueMinX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the minimum blue value. **Notes:**
Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

80.10.24  BlueMinY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the minimum blue value. **Notes:**
Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)

80.10.25  GreenMax as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximum green color value. **Notes:**
Range: 0 to 255
(Read and Write property)

80.10.26  GreenMaxX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the maximum green value. **Notes:**
80.10. CLASS PICTUREMINMAXMBS

Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

80.10.27 GreenMaxY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The location of the pixel with the maximum green value.
**Notes:**
Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)

80.10.28 GreenMin as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The minimum green color value.
**Notes:**
Range: 0 to 255
(Read and Write property)

80.10.29 GreenMinX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The location of the pixel with the minimum green value.
**Notes:**
Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

80.10.30 GreenMinY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The location of the pixel with the minimum green value.
**Notes:**
Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)
80.10.31 RedMax as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The maximum red color value.  
**Notes:**
Range: 0 to 255  
(Read and Write property)

80.10.32 RedMaxX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The location of the pixel with the maximum red value.  
**Notes:**
Range: 0 to Picture.Width-1. Set to -1 on any error.  
(Read and Write property)

80.10.33 RedMaxY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The location of the pixel with the maximum red value.  
**Notes:**
Range: 0 to Picture.Height-1. Set to -1 on any error.  
(Read and Write property)

80.10.34 RedMin as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The minimum red color value.  
**Notes:**
Range: 0 to 255  
(Read and Write property)

80.10.35 RedMinX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The location of the pixel with the minimum red value.  
**Notes:**
80.10. **CLASS PICTUREMINMAXMBS**

Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

---

**80.10.36 RedMinY as Integer**

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The location of the pixel with the minimum red value.
**Notes:**
Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)

---

**80.10.37 SumMax as Integer**

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The maximum sum color value.
**Notes:**
sum=red+blue+green
Range: 0 to 765
(Read and Write property)

---

**80.10.38 SumMaxX as Integer**

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The location of the pixel with the maximum sum value.
**Notes:**
Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

---

**80.10.39 SumMaxY as Integer**

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The location of the pixel with the maximum sum value.
**Notes:**
Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)
80.10.40 SumMin as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minimum sum color value.  
**Notes:**  
\[ \text{sum} = \text{red} + \text{blue} + \text{green} \]  
Range: 0 to 765  
(Read and Write property)

80.10.41 SumMinX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the minimum sum value.  
**Notes:**  
Range: 0 to Picture.Width-1. Set to -1 on any error.  
(Read and Write property)

80.10.42 SumMinY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the minimum sum value.  
**Notes:**  
Range: 0 to Picture.Height-1. Set to -1 on any error.  
(Read and Write property)
**80.11.1 class PictureReaderMBS**

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class to read picture data as a memoryblock.

**Example:**

```vba
dim pic as Picture = LogoMBS(500)
dim p as PictureReaderMBS
dim m as MemoryBlock
dim r,g,b,rRow,gRow,bRow,h1,w1,x,y,bpp as Integer

// Create a new picture reader
p=NewPictureReaderMBS(pic)

h1=p.Height-1
w1=p.Width-1

bpp=p.BytesPerPixel
rRow=p.RedOffset
gRow=p.GreenOffset
bRow=p.BlueOffset
// in each row the red, blue and green channels have different offsets.
// but offsets are platform dependend

dim sum as Double

for y=0 to h1
  // Get data in memory. This Memoryblock has a size property of 0!
m=p.Data(y)
r=rRow
g=gRow
b=bRow

  for x=0 to w1
    sum = sum + m.UInt8Value(r)
    sum = sum + m.UInt8Value(g)
    sum = sum + m.UInt8Value(b)

    r=r+bpp
g=g+bpp
b=b+bpp
  next
next
```
CHAPTER 80. GRAPHICS & PICTURES

// show the sum of all pixels:
MsgBox "Sum with plugin is: " + str(sum)

// now try same in RB code:

dim surface as RGBSurface = pic.RGBSurface
dim c as color

sum = 0.0

for y=0 to h1
  for x=0 to w1
    c = surface.Pixel(x,y)
    sum = sum + c.red
    sum = sum + c.Green
    sum = sum + c.Blue
  next
next

surface = nil

MsgBox "Sum with RB Code is: " + str(sum)
quit

Notes: This is the same code the plugin uses to read pictures.

80.11.2 Methods

80.11.3 Data(Row as Integer) as MemoryBlock

MBS Picture Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The memoryblock with the original image data for this row.

Notes:

Changes here will be visible in the picture. (except for platforms where a copy is made of the data)
This memoryblock has a size property with value 0!
No bound checking can be done by Realbasic on this memoryblock.
See also:

• 80.11.7 Data as Memoryblock
80.11.4 Properties

80.11.5 BlueOffset as Integer

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The platform dependent offset of the blue channel in the RGB data. **Notes:** A value between 0 and 3. (Read only property)

80.11.6 BytesPerPixel as Integer

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of bytes per pixel. **Notes:** Most times 4, but for some platforms 3. (Read only property)

80.11.7 Data as Memoryblock

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The memoryblock with the original image data. **Notes:** Changes here will be visible in the picture. (except for platforms where a copy is made of the data) This memoryblock has a size property with value 0! No bound checking can be done by Realbasic on this memoryblock. Returns nil for console pictures. (Read only property) See also:

- 80.11.3 Data(Row as Integer) as MemoryBlock

80.11.8 DataCopy as Memoryblock

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the data for the current picture into a new memoryblock. **Notes:** (Read only property)
