MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Closes the header output file for PerformMT.
**Notes:**
Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

58.10.7 CloseMTInputFile

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Closes the input file for PerformMT.
**Notes:**
Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

58.10.8 CloseMTOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Closes the output file for PerformMT.
**Notes:**
Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

58.10.9 CreateMTDebugOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a file where debug data is written to.
**Notes:**
Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

58.10.10 CreateMTHeaderOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a file where header data is written to.
**Notes:**
Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

58.10.11 CreateMTOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a file where output data is written to.
**Notes:**
Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

58.10.12 FileInfos as CURLNFileInfoMBS()

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries array with file information.
**Notes:** If you use OptionWildcard, you find after the transfer all CURLNFileInfoMBS objects for all the files/folders found.
58.10. CLASS CURLNMBS

58.10.13 FinishMime

Example:

```vbs
dim c as new CURLNMBS

// add mime
dim p as CURLMimePartMBS = c.AddMimePart

p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"

c.FinishMime
// now you can send...
```

Notes: Please call AddMimePart for each part you like to add and than finally FinishMime before calling perform.

58.10.14 FormAdd(FormControl1 as Integer, Text1 as string, FormControl2 as Integer, FormOptions() as Integer, Texts() as string)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Add a section to a multipart/formdata HTTP POST.
Example:

```vbs
dim c as new CURLNMBS
dim file1 as string = "my-face.jpg"
dim file2 as string = "your-face.jpg"
dim formOptions(-1) as Integer
dim formValues(-1) as string

const CURLFORM_COPYNAME = 1
const CURLFORM_ARRAY = 8
const CURLFORM_FILE = 10

'/* Add two file section using CURLFORM_ARRAY */
formOptions.Append CURLFORM_FILE
formValues.append file1
formOptions.Append CURLFORM_FILE
formValues.append file2
```
/* no option needed for the end marker */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues

Notes:
Lasterror is set.
See other FormAdd methods for details.

58.10.20 **FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string, FormOption4 as Integer, Number4 as Integer)**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Add a section to a multipart/formdata HTTP POST.

**Notes:**

Several FormAdd methods are there. Send a request to support if you need another parameter combination.

Lasterror is set.

FormAdd() is used to append sections when building a multipart/formdata HTTP POST (sometimes referred to as rfc1867-style posts). Append one section at a time until you've added all the sections you want included and then you call FormFinish.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with CURLOPT_HTTPHEADER as usual.

First, there are some basics you need to understand about multipart/formdata posts. Each part consists of at least a NAME and a CONTENTS part. If the part is made for file upload, there are also a stored CONTENT-TYPE and a FILENAME. Below, we'll discuss what options you use to set these properties in the parts you want to add to your post.

The options listed first are for making normal parts. The options from CURLFORM_FILE through CURLFORM_BUFFERLENGTH are for file upload parts.

**CURLFORM_COPYNAME:** followed by a string which provides the name of this part. libCURL copies the string so your application doesn't need to keep it around after this function call. If the name isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLFORM_NAMELENGTH.

**CURLFORM_PTRNAME:** followed by a string which provides the name of this part. libCURL will use the string and refer to the data in your application, so you must make sure it remains until CURL no longer needs it. If the name isn’t null terminated, or if you’d like it to contain zero bytes, you must set its length with CURLFORM_NAMELENGTH.

**CURLFORM_COPYCONTENTS:** followed by a string to the contents of this part, the actual data to send away. libCURL copies the provided data, so your application doesn’t need to keep it around after this function call. If the data isn’t null terminated, or if you’d like it to contain zero bytes, you must set the length of the name with CURLFORM_CONTENTSLENGTH.
CURLFORM_PTRCONTENTS:
followed by a string to the contents of this part, the actual data to send away. libCURL will use the string
and refer to the data in your application, so you must make sure it remains until CURL no longer needs
it. If the data isn’t null terminated, or if you’d like it to contain zero bytes, you must set its length with
CURLFORM_CONTENTSLENGTH.

CURLFORM_CONTENTSLENGTH:
followed by a long giving the length of the contents.

CURLFORM_FILECONTENT:
followed by a filename, causes that file to be read and its contents used as data in this part. This part does
not automatically become a file upload part simply because its data was read from a file.

CURLFORM_FILE:
followed by a filename, makes this part a file upload part. It sets the filename field to the basename of the
provided filename, it reads the contents of the file and passes them as data and sets the content-type if the
given file match one of the internally known file extensions. For CURLFORM_FILE the user may send one
or more files in one part by providing multiple CURLFORM_FILE arguments each followed by the filename
(and each CURLFORM_FILE is allowed to have a CURLFORM_CONTENTTYPE).

CURLFORM_CONTENTTYPE:
is used in combination with CURLFORM_FILE. Followed a string which provides the content-type for this
part, possibly instead of an internally chosen one.

CURLFORM_FILENAME:
is used in combination with CURLFORM_FILE. Followed a string, it tells libCURL to use the given string
as the filename in the file upload part instead of the actual file name.

CURLFORM_BUFFER:
is used for custom file upload parts without use of CURLFORM_FILE. It tells libCURL that the file contents
are already present in a buffer. The parameter is a string which provides the filename field in the content
header.

CURLFORM_BUFFERPTR:
is used in combination with CURLFORM_BUFFER. The parameter is the string to be uploaded. You must
also use CURLFORM_BUFFERLENGTH to set the number of bytes in the buffer. Keep the buffer variable
alive till the upload is finished.

CURLFORM_BUFFERLENGTH:
is used in combination with CURLFORM_BUFFER. The parameter is a long which gives the length of the
buffer.
CURLFORM_ARRAY:
Another possibility to send options to CURL_formadd() is the CURLFORM_ARRAY option, that passes an Integer Array and a String Array defining its value. Each element in the form is constructed using the option from the integer array and the value from the string array. All available options can be used in an array, except the CURLFORM_ARRAY option itself!

CURLFORM_CONTENTHEADER:
specifies extra headers for the form POST section. This takes a CURL_slist prepared in the usual way using CURL_slist_append and appends the list of headers to those libCURL automatically generates. The list must exist while the POST occurs, if you free it before the post completes you may experience problems.

PS: CURLFORM_FILE does not work in all CURL versions on all platforms due to a bug with integer numbers.

58.10.22 **FormAddField** *(fieldName as String, fieldValue as String, ContentType as String = "")*

MBS CURL Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Add a section to a multipart/formdata HTTP POST.

**Example:**

```dim d as new CURLNMBS
d.FormAddField("company", "Test, Inc.")```

**Notes:**

For fieldName and ContentType, we use UTF8 always. For fieldValue, we pass through whatever is in the string, so please make sure encoding is working. ContentType is optional.

58.10.23 **FormAddFile** *(fieldName as String, fileName as String, fileContent as string, ContentType as String = "")*

MBS CURL Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Add a section to a multipart/formdata HTTP POST.

**Example:**

```dim d as new CURLNMBS
d.FormAddFile("FileAttachment", "test.txt", "just a form test", "text/plain")```
Notes:
For fieldName, fileName and ContentType, we use UTF8 always. For fieldValue, we pass through whatever is in the string, so please make sure encoding is working.

Filename is ignored, if empty.
ContentType is optional.

58.10.24 FormData as String

MBS CURL Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Queries current form data. Notes: This is more for debugging as it builds form data as if we would send it.

58.10.25 FormFinish

Example:

```plaintext
dim c as new CURLNMB
dim namebuffer as string = "name buffer"
dim namelength as Integer = lenb(namebuffer)
dim buffer as string = "test buffer"
dim htmlbuffer as string = "<HTML>test buffer</HTML>"
dim htmlbufferlength as Integer = lenb(htmlbuffer)
dim file1 as string = "my-face.jpg"
dim file2 as string = "your-face.jpg"
dim formOptions(-1) as Integer
dim formValues(-1) as string
dim recordbuffer as string = "record buffer"
dim recordlength as Integer = lenb(recordbuffer)
```

const CURLOPT NOTHING = 0
const CURLOPT COPYNAME = 1
const CURLOPT PTRNAME = 2
const CURLOPT NAMELENGTH = 3
const CURLOPT COPYCONTENTS = 4
const CURLOPT PTRCONTENTS = 5
const CURLOPT CONTENTSLENGTH = 6
const CURLOPT FILECONTENT = 7
58.10. CLASS CURLNMBS

```c
const CURLOPT_ARRAY = 8
const CURLOPT_FILE = 10
const CURLOPT_BUFFER = 11
const CURLOPT_BUFFERPTR = 12
const CURLOPT_BUFFERLENGTH = 13
const CURLOPT_CONTENTTYPE = 14
const CURLOPT_CONTENTHEADER = 15
const CURLOPT_FILENAME = 16

/* Add simple name/content section */
c.FormAdd CURLOPT_COPYNAME, "name", CURLOPT_COPYCONTENTS, "content"

/* Add simple name/content/contenttype section */
c.FormAdd CURLOPT_COPYNAME, "htmlcode", CURLOPT_COPYCONTENTS, "<HTML><HTML>", CURLOPT_CONTENTTYPE,"text/html"

/* Add name/ptrcontent section */
c.FormAdd CURLOPT_COPYNAME, "name_for_ptrcontent", CURLOPT_PTRCONTENTS, buffer

/* Add ptrname/ptrcontent section */
c.FormAdd CURLOPT_PTRNAME, namebuffer, CURLOPT_PTRCONTENTS, buffer, CURLOPT_NAMELENGTH, namelength

/* Add name/ptrcontent/contenttype section */
c.FormAdd CURLOPT_COPYNAME, "html_code_with_hole", CURLOPT_PTRCONTENTS, htmlbuffer, CURLOPT_CONTENTTYPE, "text/html"

/* Add simple file section */
c.FormAdd CURLOPT_COPYNAME, "picture", CURLOPT_FILE, "my-face.jpg"

/* Add file/contenttype section */
c.FormAdd CURLOPT_COPYNAME, "picture", CURLOPT_FILE, "my-face.jpg", CURLOPT_CONTENTTYPE, "image/jpeg"

/* Add two file section */
c.FormAdd CURLOPT_COPYNAME, "picture", CURLOPT_FILE, "my-face.jpg", CURLOPT_FILE, "your-face.jpg"

/* Add two file section using CURLOPT_ARRAY */
formOptions.Append CURLOPT_FILE
formValues.append file1
formOptions.Append CURLOPT_FILE
formValues.append file2
```
CHAPTER 58. CURL

/* Add a buffer to upload */
c.FormAdd CURLFORM_COPYNAME, "name", CURLFORM_BUFFER, "data", CURLFORM_BUFFERPTR, recordbuffer, CURLFORM_BUFFERLENGTH, recordlength

/* no option needed for the end marker */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues

/* Add the content of a file as a normal post text value */
c.FormAdd CURLFORM_COPYNAME, "filecontent", CURLFORM_FILECONTENT, ".bashrc"

/* Set the form info */
c.FormFinish

Notes:
Lasterror is set.
The form is assigned to the HTTPPost property.

58.10.26 GetInfoActiveSocket as integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Receive the active socket used by this curl session.

Notes:
If the socket is no longer valid, -1 is returned. When you finish working with the socket, the Destructor closes
the socket and cleanup other resources associated with the handle. This is typically used in combination
with OptionConnectOnly.

This option was added as a replacement for GetInfoLastSocket since that one isn’t working on all platforms.

58.10.27 GetInfoAppConnectTime as Double

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The time stamp when app connected.

58.10.28 GetInfoCertInfo as CURLNListMBS()

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries information on the certificate chain.

Example:
dim c as new CURLNMBS

// do some transfer
c.OptionURL = "https://www.mbsplugins.de/

dim e as Integer = c.perform

// query certificate info
dim lists() as CURLNLListMBS = c.GetInfoCertInfo

for each l as CURLNLListMBS in lists
    MsgBox Join(l, EndOfLine)
next

MsgBox c.DebugData

58.10.29 GetInfoConditionUnmet as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Return if the time condition prevented the document to get transferred.

58.10.30 GetInfoConnectTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The time, in seconds, it took from the start until the connect to the remote host (or proxy) was completed. **Notes:** The Lasterror property is set. 0 for success.

58.10.31 GetInfoContentLengthDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The content-length of the download. **Notes:**
The Lasterror property is set. 0 for success. This is the value read from the Content-Length: field.

58.10.32 GetInfoContentLengthUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The specified size of the upload.
CHAPTER 58. CURL

Notes: The Lasterror property is set. 0 for success.

58.10.33 GetInfoContentType as string

Notes: The Lasterror property is set. 0 for success.
This is the value read from the Content-Type: field. If you get "", it means that the server didn’t send a valid Content-Type header or that the protocol used doesn’t support this.

58.10.34 GetInfoCookieList as CURLNListMBS

Notes: The Lasterror property is set. 0 for success.
If there are no cookies (cookies for the handle have not been enabled or simply none have been received) the result is nil.

58.10.35 GetInfoEffectiveURL as string

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The last used effective URL.
Notes: The Lasterror property is set. 0 for success.

58.10.36 GetInfoFileTime as Integer

Example:

// init CURL with options
dim d as new CURLNMBS
d.OptionFileTime = true
d.OptionURL = "http://www.monkeybreadsoftware.de/images/mbs.jpg"

// run query
dim e as Integer = d.Perform

// calculate date object
dim da as new Date(1970,1,1,0,0,0)

// show date
ResultText.text = str(d.GetInfoFileTime) + " " + da.ShortDate + " " + da.ShortTime

Notes:
The Lasterror property is set. 0 for success.
If you get -1, it can be because of many reasons (unknown, the server hides it or the server doesn’t support
the command that tells document time etc) and the time of the document is unknown. Note that you must
tell the server to collect this information before the transfer is made, by using the OptionFileTime option or
you will unconditionally get a -1 back. (Added in 7.5)

58.10.37 GetInfoFTPEntryPath as string

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Returns a string holding the path of the entry path.
Notes:
That is the initial path libCURL ended up in when logging on to the remote FTP server.
Empty string if unknown.

58.10.38 GetInfoHeaderSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The total size of all the headers received.
Notes: The Lasterror property is set. 0 for success.

58.10.39 GetInfoHTTPAuthAvail as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
A bitmask indicating the authentication method(s) available.
Notes:
The Lasterror property is set. 0 for success.
The meaning of the bits is explained in the HTTPAuth option.
58.10.40  GetInfoHTTPConnectCode as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last received proxy response code to a CONNECT request.

**Notes:**
The Lasterror property is set. 0 for success.

none

58.10.41  GetInfoHTTPVersion as integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get the http version used in the connection.

**Notes:** The returned value will be kHTTP_VERSION_1_0, kHTTP_VERSION_1_1, or kHTTP_VERSION_2_0, or 0 if the version can’t be determined.

58.10.42  GetInfoLastSocket as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Receive the last socket used by this CURL session.

**Notes:** If the socket is no longer valid, -1 is returned. When you finish working with the socket, the destructor will free the handle as usual and let libCURL close the socket and cleanup other resources associated with the handle. This is typically used in combination with OptionConnectOnly. (Added in 7.15.2)

NOTE: this API is not really working on win64, since the SOCKET type on win64 is 64 bit large while its 'long' is only 32 bits.

58.10.43  GetInfoLocalIP as string

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries local IP.

**Example:**

```vbs
    dim c as new CURLNMBS

    // do some transfer
c.OptionURL = "http://www.mbsplugins.de/
    dim e as Integer = c.perform

    // now check local IP
```
58.10.44  GetInfoLocalPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Return the local port of the most recent (primary) connection. **Example:**

dim c as new CURLNMBS

// do some transfer
c.OptionURL = ”http://www.mbsplugins.de/”
dim e as Integer = c.perform

// now check local IP and port
MsgBox c.GetInfoLocalIP+”:"+str(c.GetInfoLocalPort)

58.10.45  GetInfoNameLookupTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The time, in seconds, it took from the start until the name resolving was completed. **Notes:** The Lasterror property is set. 0 for success.

58.10.46  GetInfoNumConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** How many new connections libCURL had to create to achieve the previous transfer. **Notes:** The Lasterror property is set. 0 for success.

(only the successful connects are counted)
Combined with RedirectCount you are able to know how many times libCURL successfully reused existing connection(s) or not. See the Connection Options to see how libCURL tries to make persistent connections to save time.

58.10.47  GetInfoOSErrno as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The errno variable from a connect failure.
58.10.48 GetInfoPreTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The time, in seconds, it took from the start until the file transfer is just about to begin.
**Notes:**
The Lasterror property is set. 0 for success.
This includes all pre-transfer commands and negotiations that are specific to the particular protocol(s) involved.

58.10.49 GetInfoPrimaryIP as string

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Return the ip address of the most recent (primary) connection.
**Example:**
```vba
dim c as new CURLNMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/

dim e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryport)
```

58.10.50 GetInfoPrimaryPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Return the (remote) port of the most recent (primary) connection.
**Example:**
```vba
dim c as new CURLNMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/

dim e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryport)
```
58.10.51 GetInfoProtocol as integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get the protocol used in the connection.  
**Notes:** See kProtocol* constants.

58.10.52 GetInfoProxyAuthAvail as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A bitmask indicating the authentication method(s) available for your proxy authentication.  
**Notes:** The Lasterror property is set. 0 for success.

58.10.53 GetInfoProxySSLVerifyResult as integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get the result of the proxy certificate verification.  
**Notes:** receive the result of the certificate verification that was requested (using the OptionProxySSLVerifyPeer option. This is only used for HTTPS proxies.

58.10.54 GetInfoRedirectCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The total number of redirections that were actually followed.  
**Notes:** The Lasterror property is set. 0 for success.

58.10.55 GetInfoRedirectTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** the total time, in seconds, it took for all redirection steps include name lookup, connect, pretransfer and transfer before final transaction was started.  
**Notes:**  
The Lasterror property is set. 0 for success.  
RedirectTime contains the complete execution time for multiple redirections. (Added in 7.9.7)
58.10.56 GetInfoRedirectURL as string

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The redirection URL.

58.10.57 GetInfoRequestSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The total size of the issued requests.
**Notes:**
The Lasterror property is set. 0 for success.
This is so far only for HTTP requests. Note that this may be more than one request if FOLLOWLOCATION is true.

58.10.58 GetInfoResponseCode as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last received HTTP or FTP code.
**Notes:**
The Lasterror property is set. 0 for success.
This will be zero if no server response code has been received. Note that a proxy's CONNECT response should be read with GetInfoHTTPConnectCode and not this.

With HTTP transfer, a successful transfer reports 200 here. If the page is not found, you get 404. Or any other HTTP Response code.

58.10.59 GetInfoRTSPClientCSEQ as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Query RTSP Client sequence counter.

58.10.60 GetInfoRTSPCSEQRecv as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Query RTSP sequence counter received.
58.10.61 GetInfoRTSPServerCSEQ as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Query RTSP Server sequence counter.

58.10.62 GetInfoRTSPSessionID as string

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Query RTSP session ID.

58.10.63 GetInfoScheme as string

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get the URL scheme (sometimes called protocol) used in the connection

58.10.64 GetInfoSizeDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The total amount of bytes that were downloaded.
**Notes:**
The Lasterror property is set. 0 for success.
The amount is only for the latest transfer and will be reset again for each new transfer.

58.10.65 GetInfoSizeUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The total amount of bytes that were uploaded.
**Notes:** The Lasterror property is set. 0 for success.

58.10.66 GetInfoSpeedDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The average download speed that CURL measured for the complete download.
**Notes:** The Lasterror property is set. 0 for success.
58.10.67 GetInfoSpeedUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The average upload speed that CURL measured for the complete upload. **Notes:** The Lasterror property is set. 0 for success.

58.10.68 GetInfoSSLEngines as CURLNListMBS

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Receive a linked-list of OpenSSL crypto-engines supported. **Notes:** The Lasterror property is set. 0 for success. Note that engines are normally implemented in separate dynamic libraries. Hence not all the returned engines may be available at run-time.

58.10.69 GetInfoSSLVerifyResult as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** the result of the certification verification that was requested (using the SSLVerifyPeer option). **Notes:** The Lasterror property is set. 0 for success.

58.10.70 GetInfoStartTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** the time, in seconds, it took from the start until the first byte is just about to be transferred. **Notes:** The Lasterror property is set. 0 for success. This includes the pretransfer time and also the time the server needs to calculate the result.

58.10.71 GetInfoTotalTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The total time in seconds for the previous transfer, including name resolving, TCP connect etc. **Notes:** The Lasterror property is set. 0 for success.
58.10. CLASS CURLNMBS

58.10.72 LoadAPI

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the default CURL library.

**Notes:**
This method is called by the constructor. So you don’t need this except you want to test explicit with APILoaded whether the loading worked before you use the CURLNMBS class.

Loads the “libCURL.dll” Windows library (with SSL support this one max require OpenSSL). Loads on Mac OS X and Linux the libCURL file in /usr/lib.

58.10.73 LoadErrorString as string

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error string from the LoadLibrary function.

58.10.74 LoadLibrary(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the CURL library from the given path.

**Notes:**
You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.

Returns true on success.
See also:
- 58.10.75 LoadLibrary(path as string) as boolean

58.10.75 LoadLibrary(path as string) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the CURL library from the given path.

**Notes:**
You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.
Returns true on success.
See also:

- 58.10.74 LoadLibrary(file as folderitem) as boolean

58.10.76 OpenMTInputFile(file as folderitem, Offset as Integer = 0) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Opens input file for reading data while PerformMT runs.
Notes:
The read event is not called with PerformMT.
Offset is helpful for HTTP PUT requests with range, so you can start with an offset.
With 15.2 version of plugin, this also works with Perform.

58.10.77 Perform as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Perform a file transfer
Notes:
This function is called after all the options are set, and will perform the transfer as described in the options.

You can do any amount of calls to Perform. If you intend to transfer more than one file, you are even encouraged to do so. libCURL will then attempt to re-use the same connection for the following transfers, thus making the operations faster, less CPU intense and using less network resources. Just note that you will have to use the option properties between the invokes to set options for the following Perform.

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination, 60 for missing SSL settings, 1 for an unsupported protocol.

Possible values for the return value:

The error value -1 is used from the plugin to report that something is missing like OpenSSL dlls on Windows.

With SFTP, you can get logged error "Upload failed: Operation failed (4/-31)" when upload uses path to folder instead of file in URL.
58.10. **CLASS CURLNMBS**

### 58.10.78 PerformMT as Integer

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Perform a file transfer with preemptive multithreading.

**Notes:**

Same as Perform, but with additional multithreading.

Must be called inside a Xojo (Real Studio) thread so time yields to main thread and you can keep the GUI running.

As the actual transfer runs on a preemptive thread, the events Debug, Write, Header and Progress are called asynchronously and run a few milliseconds later. You can return true in Progress event to stop transfer, but you will get more events before the transfer is stopped.

You can call CreateMTDebugOutputFile, CreateMTHHeaderOutputFile and CreateMTOOutputFile before PerformMT to have output data be written into files. Call OpenMTInputFile to let the plugin read input data (form post or upload) from an input file.

Do not call other CURL functions on this CURLNMBS instance while PerformMT is running!

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination, 60 for missing SSL settings, 1 for an unsupported protocol.

To avoid trouble with app hanging on quit of application, be sure to set cancel property to true in window close event to cancel any pending transfer.

### 58.10.79 ReceiveData(byref data as Memoryblock, BytesToRead as Int64) as Int64

**Notes:**

This function receives raw data from the established connection. You may use it together with SendData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

The data memoryblock is a reference to your variable that will get the received data. BytesToRead is the maximum amount of data you can get in that buffer. The function returns the number of received bytes.

To establish the connection, set OptionConnectOnly = true before calling Perform. Note that ReceiveData does not work on connections that were created without this option.
The call will return kError_AGAIN if there is no data to read - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, wait for data to arrive.

Wait on the socket only if ReceiveData returns kError_AGAIN. The reason for this is libcurl or the SSL library may internally cache some data, therefore you should call ReceiveData until all data is read which would include any cached data.

Furthermore if you wait on the socket and it tells you there is data to read, ReceiveData may return CURLE_AGAIN if the only data that was read was for internal SSL processing, and no other data is available.

On success, sets lasterror to kError_OK (0), stores the received data into memory block, and returns the number of bytes it actually read.

On failure, returns zero and lasterror is set to the appropriate error code.

The function may return kError_AGAIN. In this case, use your operating system facilities to wait until data can be read, and retry.

Reading exactly 0 bytes indicates a closed connection.

If there’s no socket available to use from the previous transfer, this function returns kError_UNSUPPORTED_PROTOCOL.

58.10.80  Reset

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Re-initializes all options previously set on a specified CURL handle to the default values. **Notes:** It does not change the following information kept in the handle: live connections, the Session ID cache, the DNS cache, the cookies and shares.

58.10.81  SendData(data as Memoryblock) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sends raw data over a connection. **Notes:** This function sends arbitrary data over the established connection. You may use it together with ReceiveData to implement custom protocols using libcurl. This functionality can be particularly useful if you use...
proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

Provide the data to send via parameter. We return the number of bytes sent.

To establish the connection, set OptionConnectOnly = true option before calling Perform methods. Note that SendData will not work on connections that were created without this option.

The call will return kError_AGAIN if it’s not possible to send data right now - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, please wait.

Furthermore if you wait on the socket and it tells you it’s writable, SendData may return kError_AGAIN if the only data that was sent was for internal SSL processing, and no other data could be sent.

See also:

- 58.10.82 SendData(data as string) as Integer

58.10.82 SendData(data as string) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sends raw data over a connection.  
**Notes:**  
This function sends arbitrary data over the established connection. You may use it together with ReceiveData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

Provide the data to send via parameter. We return the number of bytes sent.

To establish the connection, set OptionConnectOnly = true option before calling Perform methods. Note that SendData will not work on connections that were created without this option.

The call will return kError_AGAIN if it’s not possible to send data right now - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, please wait.

Furthermore if you wait on the socket and it tells you it’s writable, SendData may return kError_AGAIN if the only data that was sent was for internal SSL processing, and no other data could be sent.

See also:

- 58.10.81 SendData(data as Memoryblock) as Integer
**58.10.83  SetInputData(data as MemoryBlock)**

MBS CURL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the input data.

**Notes:**
If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
See also:
- 58.10.84 SetInputData(data as string)

**58.10.84  SetInputData(data as string)**

MBS CURL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the input data.

**Notes:**
If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
See also:
- 58.10.83 SetInputData(data as MemoryBlock)

**58.10.85  SetOptionConnectTo(list() as string)**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set list of host:port:connect-to-host:connect-to-port, overrides the URL’s host:port (only for the network layer)

**58.10.86  SetOptionEmptyPassword**

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets an empty password.

**Notes:**
Normally you have no password unless you set it. But if you set a password with empty string, the plugin sets CURL to use no password. This method is to use an empty password.

58.10.87 SetOptionHTTP200Aliases(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A linked list of aliases to be treated as valid HTTP 200 responses. **Notes:** Some servers respond with a custom header response line. For example, IceCast servers respond with "ICY 200 OK". By including this string in your list of aliases, the response will be treated as a valid HTTP header line such as "HTTP/1.0 200 OK".

The alias itself is not parsed for any version strings. So if your alias is "MYHTTP/9.9", LibCURL will not treat the server as responding with HTTP version 9.9. Instead LibCURL will use the value set by option HTTPVersion.

The Lasterror property is set. 0 for success.

58.10.88 SetOptionHTTPHeader(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A linked list of HTTP headers to pass to the server in your HTTP request. **Example:**

```dim c as new CURLNMBS
c.SetOptionHTTPHeader array("Expect:", "Content-Type: text/xml", "SOAPAction: ""login""")```

**Notes:**

If you add a header that is otherwise generated and used by libCURL internally, your added one will be used instead. If you add a header with no contents as in 'Accept:' (no data on the right side of the colon), the internally used header will get disabled. Thus, using this option you can add new headers, replace internal headers and remove internal headers. To add a header with no contents, make the contents be two quotes: "". The headers included in the linked list must not be CRLF-terminated, because CURL adds CRLF after each header item. Failure to comply with this will result in strange bugs because the server will most likely ignore part of the headers you specified.

The first line in a request (containing the method, usually a GET or POST) is not a header and cannot be replaced using this option. Only the lines following the request-line are headers. Adding this method line in
this list of headers will only cause your request to send an invalid header.

Pass an empty array to this to reset back to no custom headers.

The Lasterror property is set. 0 for success.

58.10.89 SetOptionMailRecipients(list() as string)

MBS CURL Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the array of email recipient addresses.

58.10.90 SetOptionPostQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Pass an array to a list of FTP commands to pass to the server after your ftp transfer request.

**Example:**

```vbs
Dim d As CURLNMBS ' your CURL object
Dim ws() As String
ws.Append "RNFR Temp.txt"
ws.append "RNTO MyFile.txt"
d.SetOptionPostQuote(ws)
```

**Notes:**

Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.

If you want to do a ftp operation instead of download/upload/directory listing, please use SetOptionQuote.

58.10.91 SetOptionPreQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Pass an array to a list of FTP commands to pass to the server after the transfer type is set.

**Notes:**

Disable this operation again by using an empty array for this option. Before version 7.15.6, if you also set Nobody to true, this option didn’t work.
58.10.92 SetOptionProxyHeader(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set list of headers used for proxy requests only.

58.10.93 SetOptionQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Pass an array or a list of FTP commands to pass to the server prior to your ftp request. **Example:**

```
dim curl as new CURLNMBS
curl.SetOptionQuote array("DELE filename.txt")
```

**Notes:**
This will be done before any other FTP commands are issued (even before the CWD command).

Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.

58.10.94 SetOptionResolve(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Send linked-list of name:port:address sets.

58.10.95 SetOptionTelnetOptions(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Provide an array of variables to pass to the telnet negotiations. **Notes:**

The variables should be in the format `<option=value>`. libCURL supports the options 'TTYPE', 'XDISPLOC' and 'NEW_ENV'. See the TELNET standard for details.
CHAPTER 58. CURL

The Lasterror property is set. 0 for success.

58.10.96 SetPathCAInfo(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
A path holding one or more certificates to verify the peer with.
Example:

dim cacert as FolderItem // your cacert.pem file
dim CURL as new CURLMBS
CURL.OptionSSLVerifyHost = 2 // verify server
CURL.OptionSSLVerifyPeer = 1 // proofs certificate is authentic
CURL.SetPathCAInfo cacert

Notes:
This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL’s cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

58.10.97 SetPathCAPath(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
A path to the directory holding multiple CA certificates to verify the peer with.
Notes:
The certificate directory must be prepared using the openssl c_rehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
58.10. **SetPathCRLFile(path as folderitem)**

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the path with the concatenation of CRL (in PEM format) to use in the certificate validation that occurs during the SSL exchange.

**Notes:**

When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help in the verification process. When libCURL is built with OpenSSL support, X509_V_FLAG_CRL_CHECK and X509_V_FLAG_CRL_CHECK_ALL are both set, requiring CRL check against all the elements of the certificate chain if a CRL file is passed.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)

58.10.99 **SetPathIssuerCert(path as folderitem)**

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the path to a CA certificate in PEM format.

**Notes:**

If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail). (Added in 7.19.0)

58.10.100 **SetPathNetRCFile(path as folderitem)**

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the path to the file you want libCURL to use as .netrc file.

**Notes:**

If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the a .netrc file in the
current user’s home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

58.10.101  **SetupEmail(email as Variant) as boolean**

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets up existing CURL session for an email transfer.

**Example:**

```vbnet
dim e as new CURLEmailMBS

e.SetFrom "test@test.test", "Christian Miller"
e.Subject = "Hello World"
e.SMTPPassword = "xxx"
e.SMTPUsername = "xxx"
e.SetServer "smtp.test.test", true
e.AddTo "test@test.test", "Test Miller"
e.PlainText = "Hello World," + EndOfLine + "Smilies: "

dim c as new CURLNMBS

if c.SetupEmail(e) then

    dim er as Integer = c.Perform
    if er = 0 then
        MsgBox "Email sent"
    end if
end if
```

**Notes:**
You can set your own settings like proxy after this function call.
If you like you can reuse the email and CURL objects after you sent an email, change values and send another email.
Returns true on success or false on failure.
58.10. Class CURLNMBS

58.10.102 Properties

58.10.103 APILoaded as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the CURL library was loaded.

**Notes:**

The CURLNMBS constructor loads the library if it was not loaded before.

(Read only property)
const kError_FunctionMissing = -1
const kError_OK = 0
const kError_UNSUPPORTED_PROTOCOL, = 1
const kError_FailedInit, = 2
const kError_URL_Malformat, = 3
const kError_URL_MalformatUser, = 4 (NOT USED)
const kError_COULDN'T_RESOLVE_PROXY, = 5
const kError_COULDN'T_RESOLVE_HOST, = 6
const kError_COULDN'T_CONNECT, = 7
const kError_FTP_WEIRD_SERVER_REPLY, = 8
const kError_FTP_ACCESS_DENIED, = 9 a service was denied by the FTP server due to lack of access when login fails this is not returned.
const kError_FTP_USER_PASSWORD_INCORRECT, = 10
const kError_FTP_WEIRD_PASS_REPLY, = 11
const kError_FTP_WEIRD_USER_REPLY, = 12
const kError_FTP_WEIRD_PASV_REPLY, = 13
const kError_FTP_MALFORMAT_USER, = 14 (NOT USED)
const kError_COULDN'T_RESOLVE_PROXY, = 5
const kError_COULDN'T_RESOLVE_HOST, = 6
const kError_COULDN'T_CONNECT, = 7
const kError_FTP_WEIRD_SERVER_REPLY, = 8
const kError_FTP_ACCESS_DENIED, = 9 a service was denied by the FTP server due to lack of access when login fails this is not returned.
const kError_FTP_USER_PASSWORD_INCORRECT, = 10
const kError_FTP_WEIRD_PASS_REPLY, = 11
const kError_FTP_WEIRD_USER_REPLY, = 12
const kError_FTP_WEIRD_PASV_REPLY, = 13
const kError_FTP_MALFORMAT_USER, = 14 (NOT USED)
const kError_COULDN'T_RESOLVE_PROXY, = 5
const kError_COULDN'T_RESOLVE_HOST, = 6
const kError_COULDN'T_CONNECT, = 7
const kError_FTP_WEIRD_SERVER_REPLY, = 8
const kError_FTP_ACCESS_DENIED, = 9 a service was denied by the FTP server due to lack of access when login fails this is not returned.
58.10. CLASS CURLNMBS

58.10.104 Cancel as Boolean

MBS CURL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Tells CURL instance to cancel transfer as soon as possible.

**Notes:**
Especially when using PerformMT, you may see your app hang if user tries to quit application. To prevent the hang, please set Cancel = true in window close event. So when app quits and windows get destroyed, the PerformMT will see the Cancel being true and returns soon.
(Read and Write property)

58.10.105 CollectDebugData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to collect debug message data.

**Notes:**
If you set this property to true, you can grab the data from the transfer in the DebugData Property instead of collecting the pieces yourself in the DebugMessage event. Of course this is optional and you can still process data in DebugMessage event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

58.10.106 CollectHeaderData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to collect header data.

**Notes:**
If you set this property to true, you can grab the data from the transfer in the headerData Property instead of collecting the pieces yourself in the header event. Of course this is optional and you can still process data in header event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

58.10.107 CollectOutputData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to collect output data.

**Notes:**
If you set this property to true, you can grab the data from the transfer in the OutputData Property instead of collecting the pieces yourself in the write event. Of course this is optional and you can still process data
in write event. Due to memory limitation, collecting data will not work right if your app is running low on memory. (Read and Write property)

58.10.108 DebugData as String

MBS CURL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The debug data from CURL.

**Notes:**
If CollectDebugData property is true, the plugin puts the data received in debugMessage event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object. (Read only property)

58.10.109 Handle as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal handle of the CURL object.

**Notes:** (Read and Write property)

58.10.110 HeaderData as String

MBS CURL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The header data from CURL.

**Notes:**
If CollectHeaderData property is true, the plugin puts the data received in header event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object. (Read only property)

58.10.111 InputData as String

MBS CURL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The input data.

**Notes:**
If you set input data, you do not need to use Read, RestartRead or Seek events. The plugin will use the provided data for the upload. Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).
Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload. 
(Read and Write property)

58.10.112 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The lasterror from the library.
**Notes:**
Set in the constructor while doing initialization.
Check the kError* constants.
(Read and Write property)

58.10.113 LasterrorMessage as String

MBS CURL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The last error message.
**Notes:** (Read only property) 

58.10.114 LasterrorText as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The text for the lasterror code.
**Notes:**
Static string matched to the error code, so you have an idea what’s wrong.
(Read and Write property)

58.10.115 LibraryUsed as String

MBS CURL Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Which library is in use.
**Notes:**
This is for debugging only to see which library is in use.
(Read only property)
58.10.116 LibVersion as string

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a human readable string with the version number of libCURL and some of its important components (like OpenSSL version).
**Notes:** (Read only property)

58.10.117 OptionAbstractUnixSocket as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Path to an abstract Unix domain socket.
**Notes:** (Read and Write property)
See also ABSTRACT_UNIX_SOCKET option in CURL manual.

58.10.118 OptionAcceptEncoding as String

MBS CURL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the contents of the Accept-Encoding: header sent in a HTTP request, and enables decoding of a response when a Content-Encoding: header is received.
**Example:**
```vba
dim c as new CURLNMBS
    c.OptionAcceptEncoding = "deflate"
```
**Notes:**
Three encodings are supported: identity, which does nothing, deflate which requests the server to compress its response using the zlib algorithm, and gzip which requests the gzip algorithm. If a zero-length string is set, then an Accept-Encoding: header containing all supported encodings is sent.

This is a request, not an order; the server may or may not do it. This option must be set (to any non-NULL value) or else any unsolicited encoding done by the server is ignored. See the special file README.encoding for details (included with CURL source code).
(Read and Write property)
See also ACCEPT_ENCODING option in CURL manual.

58.10.119 OptionAcceptTimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Time-out accept operations (currently for FTP only) after this amount of milliseconds.
58.10. CLASS CURLNMBS

Notes: (Read and Write property)
See also ACCEPTTIMEOUT_MS option in CURL manual.

58.10.120 OptionAddressScope as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Pass an integer specifying the scope_id value to use when connecting to IPv6 link-local or site-local addresses.
Notes:
(Added in CURL 7.19.0)
(Read and Write property)
See also ADDRESS_SCOPE option in CURL manual.

58.10.121 OptionAppend as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
True tells the library to append to the remote file instead of overwrite it.
Notes:
This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also APPEND option in CURL manual.

58.10.122 OptionAutoReferer as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
When enabled, libCURL will automatically set the Referer: field in requests where it follows a Location: redirect.
Notes:
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also AUTOREFERER option in CURL manual.
58.10.123 OptionBufferSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Your preferred size (in bytes) for the receive buffer in libCURL.
Notes:
The main point of this would be that the write callback gets called more often and with smaller chunks. This is just treated as a request, not an order. You cannot be guaranteed to actually get the given size. (Added in 7.10)

This size is by default set as big as possible (OptionMaxWriteSize), so it only makes sense to use this option if you want it smaller.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also BUFFERSIZE option in CURL manual.

58.10.124 OptionCAInfo as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: A string naming a file holding one or more certificates to verify the peer with.
Notes:
This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL’s cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also CAINFO option in CURL manual.
58.10. **CLASS CURLNMBS**

### 58.10.125 **OptionCAPath as String**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string naming a directory holding multiple CA certificates to verify the peer with.

**Notes:**

The certificate directory must be prepared using the openssl c_rehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.

(Read and Write property)

See also **CAPATH** option in CURL manual.

### 58.10.126 **OptionCertInfo as boolean**

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set to true to enable libCURL’s certificate chain info gatherer.

**Notes:**

With this enabled, libCURL (if built with OpenSSL) will extract lots of information and data about the certificates in the certificate chain used in the SSL connection. This data is then possible to extract after a transfer using GetInfoCertInfo. (Added in 7.19.1)

(Read and Write property)

See also **CERTINFO** option in CURL manual.

### 58.10.127 **OptionConnectionTimeout as Integer**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximum time in seconds that you allow the connection to the server to take.

**Notes:**

This only limits the connection phase, once it has connected, this option is of no more use. Set to zero to disable connection timeout (it will then only timeout on the system’s internal timeouts). See also the OptionTimeout option.

(Read and Write property)

See also **CONNECTTIMEOUT** option in CURL manual.
58.10.128  OptionConnectionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
The maximum time in milli seconds that you allow the connection to the server to take.

**Notes:**
This only limits the connection phase, once it has connected, this option is of no more use. Set to zero to disable connection timeout (it will then only timeout on the system’s internal timeouts). See also the OptionTimeout option.
(Read and Write property)

58.10.129  OptionConnectOnly as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
A true tells the library to perform any required proxy authentication and connection setup, but no data transfer.

**Notes:**
This option is useful with the CURLNMBS.GetInfoLastSocket function. The library can set up the connection and then the application can obtain the most recently used socket for special data transfers. (Added in 7.15.2)
(Read and Write property)
See also CONNECT ONLY option in CURL manual.

58.10.130  OptionCookie as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
It will be used to set a cookie in the http request.

**Notes:**
The format of the string should be NAME=CONTENTS, where NAME is the cookie name and CONTENTS is what the cookie should contain.

If you need to set multiple cookies, you need to set them all using a single option and thus you need to concatenate them all in one single string. Set multiple cookies in one string like this: "name1=content1; name2=content2;" etc.

Using this option multiple times will only make the latest string override the previously ones.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIE option in CURL manual.
58.10.131 OptionCookieFile as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The cookie file content.
**Notes:**
It should contain the name of your file holding cookie data to read. The cookie data may be in Netscape / Mozilla cookie data format or just regular HTTP-style headers dumped to a file.

Given an empty or non-existing file or by passing the empty string (""), this option will enable cookies for this CURL handle, making it understand and parse received cookies and then use matching cookies in future request.

If you use this option multiple times, you just add more files to read. Subsequent files will add more cookies.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also COOKIEFILE option in CURL manual.

58.10.132 OptionCookieJar as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
File path where to write the cookies to.
**Notes:**
This will make libCURL write all internally known cookies to the specified file, when the object is destroyed. If no cookies are known, no file will be created. Specify "." to instead have the cookies written to stdout. Using this option also enables cookies for this session, so if you for example follow a location it will make matching cookies get sent accordingly.

If the cookie jar file can’t be created or written to, libCURL will not and cannot report an error for this. Using OptionVerbose or DebugFunction event will get a warning to display, but that is the only visible feedback you get about this possibly lethal situation.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.

(Read and Write property)
See also COOKIEJAR option in CURL manual.

58.10.133 OptionCookieList as String

Notes:
Cookie can be either in Netscape / Mozilla format or just regular HTTP-style header (Set-Cookie: ...) format. If CURL cookie engine was not enabled it will enable its cookie engine. Passing a magic string "ALL" will erase all cookies known by CURL. (Added in 7.14.1) Passing the special string "SESS" will only erase all session cookies known by CURL. (Added in 7.15.4)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIELIST option in CURL manual.

58.10.134 OptionCookieSession as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Set to true to mark this as a new cookie "session".
Notes:
It will force libCURL to ignore all cookies it is about to load that are "session cookies" from the previous session. By default, libCURL always stores and loads all cookies, independent if they are session cookies are not. Session cookies are cookies without expiry date and they are meant to be alive and existing for this "session" only.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIESSESSION option in CURL manual.
58.10. **CLASS CURLNMBS**

### 58.10.135 **OptionCRLF as Boolean**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert Unix newlines to CRLF newlines on transfers.

**Notes:**

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value. (Read and Write property)

See also CRLF option in CURL manual.

### 58.10.136 **OptionCRLFile as String**

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string naming a file with the concatenation of CRL (in PEM format) to use in the certificate validation that occurs during the SSL exchange.

**Notes:**

When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help in the verification process. When libCURL is built with OpenSSL support, X509_V_FLAG_CRL_CHECK and X509_V_FLAG_CRL_CHECK_ALL are both set, requiring CRL check against all the elements of the certificate chain if a CRL file is passed.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)

(Read and Write property)

See also CRLFILE option in CURL manual.

### 58.10.137 **OptionCustomRequest as String**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** It will be user instead of GET or HEAD when doing an HTTP request, or instead of LIST or NLST when doing an ftp directory listing.

**Example:**

```dim c as CURLNMBS ' your CURL instance

c.URL = "ftp://..."
c.customRequest = "MLSD" ' ftp advanced directory listing```
CHAPTER 58. CURL

Notes:
This is useful for doing DELETE or other more or less obscure HTTP requests. Don’t do this at will, make sure your server supports the command first.

Restore to the internal default by setting this to "".

Many people have wrongly used this option to replace the entire request with their own, including multiple headers and POST contents. While that might work in many cases, it will cause libCURL to send invalid requests and it could possibly confuse the remote server badly. Use CURLOPT_POST and OptionPostFields to set POST data. Use OptionHTTPHeader to replace or extend the set of headers sent by libCURL. Use OptionHTTPVersion to change HTTP version.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also CUSTOMREQUEST option in CURL manual.

58.10.138 OptionDefaultProtocol as String
MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Set the protocol used when curl is given a URL without a protocol.
Notes: (Read and Write property)
See also DEFAULT_PROTOCOL option in CURL manual.

58.10.139 OptionDirListOnly as Boolean
MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
For FTP and SFTP based URLs a parameter set to true tells the library to list the names of files in a directory, rather than performing a full directory listing that would normally include file sizes, dates etc.
Notes:
For POP3 a parameter of true tells the library to list the email message or messages on the POP3 server. This can be used to change the default behaviour of libCURL, when combined with a URL that contains a message ID, to perform a "scan listing" which can then be used to determine the size of an email.
Note: For FTP this causes a NLST command to be sent to the FTP server. Beware that some FTP servers list only files in their response to NLST; they might not include subdirectories and symbolic links.
Setting this option to true also implies a directory listing even if the URL doesn’t end with a slash, which otherwise is necessary.
Do NOT use this option if you also use OptionWildCardMatch as it will effectively break that feature then.

(Read and Write property)

See also DIRLISTONLY option in CURL manual.

58.10.140 OptionDNSCacheTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The timeout in seconds.

**Notes:**
Name resolves will be kept in memory for this number of seconds. Set to zero (0) to completely disable caching, or set to -1 to make the cached entries remain forever. By default, libCURL caches this info for 60 seconds.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

(Read and Write property)
See also DNS_CACHE_TIMEOUT option in CURL manual.

58.10.141 OptionDNSInterface as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set the name of the network interface that the DNS resolver should bind to.

**Notes:**
This must be an interface name (not an address). Set this option to "" to use the default setting (don’t bind to a specific interface).

(Read and Write property)
See also DNS_INTERFACE option in CURL manual.

58.10.142 OptionDNSLocalIPv4 as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set the local IPv4 address that the resolver should bind to.

**Notes:**
The argument should be of string and contain a single numerical IPv4 address as a string.
Set this option to "" to use the default setting (don’t bind to a specific IP address).

(Read and Write property)
See also DNS_LOCAL_IP4 option in CURL manual.
58.10.143 OptionDNSLocalIPv6 as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set the local IPv6 address that the resolver should bind to. **Notes:**
The argument should be of type string and contain a single IPv6 address as a string. Set this option to "" to use the default setting (don’t bind to a specific IP address). (Read and Write property) See also DNS_LOCAL_IPV6 option in CURL manual.

58.10.144 OptionDNSServers as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set the name servers to use for DNS resolution. **Notes:** (Read and Write property) See also DNS_SERVERS option in CURL manual.

58.10.145 OptionDNSShuffleAddresses as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to shuffle DNS addresses. **Notes:**
When a name is resolved and more than one IP address is returned, shuffle the order of all returned addresses so that they will be used in a random order. This is similar to the ordering behavior of gethostbyname which is no longer used on most platforms.

Addresses will not be reshuffled if a name resolution is completed using the DNS cache. DNSCacheTimeout property can be used together with this option to reduce DNS cache timeout or disable caching entirely if frequent reshuffling is needed.

Since the addresses returned will be reordered randomly, their order will not be in accordance with RFC 3484 or any other deterministic order that may be generated by the system’s name resolution implementation. This may have performance impacts and may cause IPv4 to be used before IPv6 or vice versa. Default is false. (Read and Write property) See also DNS_SHUFFLE_ADDRESSES option in CURL manual.
58.10. CLASS CURLNMBS

58.10.146 OptionEGDSocket as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The path name to the Entropy Gathering Daemon socket.

**Notes:**
It will be used to seed the random engine for SSL.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also EGDSOCKET option in CURL manual.

58.10.147 OptionExpect100TimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets Expect 100 timeout.

**Notes:**
Time to wait in milliseconds for a response to a HTTP request containing an Expect: 100-continue header before sending the data anyway.
(Read and Write property)
See also EXPECT 100_TIMEOUT_MS option in CURL manual.

58.10.148 OptionFailOnError as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True tells the library to fail silently if the HTTP code returned is equal to or larger than 400. The default action would be to return the page normally, ignoring that code.

**Notes:**
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

This method is not fail-safe and there are occasions where non-successful response codes will slip through, especially when authentication is involved (response codes 401 and 407).

You might get some amounts of headers transferred before this situation is detected, like for when a ”100-continue” is received as a response to a POST/PUT and a 401 or 407 is received immediately afterwards.
(Read and Write property)
See also FAILONERROR option in CURL manual.
58.10.149 OptionFileTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether filetime should be queried.

**Example:**

```vbnet
// init CURL with options
dim d as new CURLNMBS
d.OptionFileTime = true
d.OptionURL = ”http://www.monkeybreadsoftware.de/images/mbs.jpg”

// run query
dim e as Integer = d.Perform

// calculate date object
dim da as new date(1970,1,1,0,0,0)

// show date
ResultText.text=str(d.GetInfoFileTime)+” ”+da.ShortDate+” ”+da.ShortTime
```

**Notes:**

If it is true, libCURL will attempt to get the modification date of the remote document in this operation. This requires that the remote server sends the time or replies to a time querying command.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value. (Read and Write property)
See also FILETIME option in CURL manual.

58.10.150 OptionFollowLocation as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A boolean parameter tells the library to follow any Location: header that the server sends as part of an HTTP header.

**Example:**

```vbnet
dim c as new CURLNMBS
c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
```
Notes:
This means that the library will re-send the same request on the new location and follow new Location:
headers all the way until no more such headers are returned. OptionMaxRedirs can be used to limit the
number of redirects libCURL will follow.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FOLLOWLOCATION option in CURL manual.

58.10.151 OptionForbitReuse as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Set to true to make the next transfer explicitly close the connection when done.
Notes:
Normally, libCURL keep all connections alive when done with one transfer in case there comes a succeeding
one that can re-use them. This option should be used with caution and only if you understand what it does.
Set to false to have libCURL keep the connection open for possibly later re-use (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

58.10.152 OptionFreshConnect as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Set to true to make the next transfer use a new (fresh) connection by force.
Example:

```dim c as new CURLNMBS
c.OptionFreshConnect=True```

Notes:
If the connection cache is full before this connection, one of the existing connections will be closed as accord-
ing to the selected or default policy. This option should be used with caution and only if you understand
what it does. Set this to 0 to have libCURL attempt re-using an existing connection (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FRESH.CONNECT option in CURL manual.

58.10.153  OptionFTPAccount as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The FTP account name to use.
**Notes:**
When an FTP server asks for "account data" after user name and password has been provided, this data is
sent off using the ACCT command.
(Read and Write property)
See also FTP_ACCOUNT option in CURL manual.

58.10.154  OptionFTPAlternativeToUser as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The alternative username.
**Notes:**
Pass a string as parameter, pointing to a string which will be used to authenticate if the usual FTP "USER
user" and "PASS password" negotiation fails. This is currently only known to be required when connecting
to Tumbleweed’s Secure Transport FTPS server using client certificates for authentication. (Added in 7.15.5)
(Read and Write property)
See also FTP_ALTERNATIVE_TO_USER option in CURL manual.

58.10.155  OptionFTPAppend as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True tells the library to append to the remote file instead of overwrite it.
**Deprecation:** This item is deprecated and should no longer be used. You can use OptionAppend instead.
**Notes:**
This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
58.10. CLASS CURLNMBS

58.10.156 OptionFTPCreateMissingDirs as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
If the value is 1, CURL will attempt to create any remote directory that it fails to CWD into.
**Notes:**
CWD is the command that changes working directory. (Added in 7.10.7)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
Newer CURL Library versions allow a value of 2 to do a CWD after the directory was created, so this
property changed from boolean to integer.
(Read and Write property)
See also FTP_CREATE_MISSING_DIRS option in CURL manual.

58.10.157 OptionFTPFileMethod as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Pass an integer that should have one of the following values.
**Notes:**
This option controls what method libCURL should use to reach a file on a FTP(S) server. The argument
should be one of the following alternatives:

**URLFTPMethod_MULTICWD = 1**

libCURL does a single CWD operation for each path part in the given URL. For deep hierarchies this means
very many commands. This is how RFC1738 says it should be done. This is the default but the slowest
behavior.

**CURLFTPMethod_NOCWD = 2**

libCURL does no CWD at all. libCURL will do SIZE, RETR, STOR etc and give a full path to the server
for all these commands. This is the fastest behavior.

**CURLFTPMethod_SINGLECWD = 3**

libCURL does one CWD with the full target directory and then operates on the file ”normally” (like in the
multicwd case). This is somewhat more standards compliant than ‘nocwd’ but without the full penalty of
‘multicwd’.
(Read and Write property)
See also FTP_FILEMETHOD option in CURL manual.
58.10.158  **OptionFTPListOnly as Boolean**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True tells the library to just list the names of an ftp directory, instead of doing a full directory listing that would include file sizes, dates etc. **Deprecated:** This item is deprecated and should no longer be used. You can use OptionDirListOnly instead. **Notes:**

This causes an FTP NLST command to be sent. Beware that some FTP servers list only files in their response to NLST; they might not include subdirectories and symbolic links.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

58.10.159  **OptionFTPPort as String**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The port to use for ftp. **Notes:**

It will be used to get the IP address to use for the ftp PORT instruction. The PORT instruction tells the remote server to connect to our specified IP address. The string may be a plain IP address, a host name, an network interface name (under Unix) or just a '-' letter to let the library use your systems default IP address. Default FTP operations are passive, and thus won’t use PORT.

You disable PORT again and go back to using the passive version by setting this option to "".

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTPPORT option in CURL manual.

58.10.160  **OptionFTPResponseTimeout as Integer**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Causes CURL to set a timeout period (in seconds) on the amount of time that the server is allowed to take in order to generate a response message for a command before the session is considered hung. **Notes:**
While CURL is waiting for a response, this value overrides OptionTimeout. It is recommended that if used in conjunction with OptionTimeout, you set OptionFTPResponseTimeout to a value smaller than OptionTimeout. (Added in 7.10.8)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_RESPONSE_TIMEOUT option in CURL manual.

58.10.161 OptionFTPSkipPasvIP as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: If set to a non-zero value, it instructs libCURL to not use the IP address the server suggests in its 227-response to libCURL’s PASV command when libCURL connects the data connection.
Notes:
Instead libCURL will re-use the same IP address it already uses for the control connection. But it will use the port number from the 227-response. (Added in 7.14.2)

This option has no effect if PORT, EPRT or EPSV is used instead of PASV.
(Read and Write property)
See also FTP_SKIP_PASV_IP option in CURL manual.

58.10.162 OptionFTPSSL as Integer

Example:

```vbscript
dim c as CURLNMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

Deprecated: This item is deprecated and should no longer be used. You can use OptionUseSSL instead.
Notes:
Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the transfer.
These are all protocols that start out plain text and get "upgraded" to SSL using the STARTTLS command.
This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

(Read and Write property)
CHAPTER 58. CURL

CURLUSESSL

<table>
<thead>
<tr>
<th>Option</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CURLUSESSL_NONE</td>
<td>0</td>
<td>Don’t attempt to use SSL.</td>
</tr>
<tr>
<td>CURLUSESSL_TRY</td>
<td>1</td>
<td>Try using SSL, proceed as normal otherwise.</td>
</tr>
<tr>
<td>CURLUSESSL_CONTROL</td>
<td>2</td>
<td>Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.</td>
</tr>
<tr>
<td>CURLUSESSL_ALL</td>
<td>3</td>
<td>Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.</td>
</tr>
</tbody>
</table>

58.10.163 OptionFTPSSLAUTH as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

What kind of SSL authentication to use for FTP.

**Notes:**

Pass an integer using one of the values from below, to alter how libCURL issues "AUTH TLS" or "AUTH SSL" when FTP over SSL is activated (see CURLOPT FTP_SSL). (Added in 7.12.2)

kFTPAUTH_DEFAULT = 0

Allow libCURL to decide

kFTPAUTH_SSL = 1

Try "AUTH SSL" first, and only if that fails try "AUTH TLS"

kFTPAUTH_TLS = 2

Try "AUTH TLS" first, and only if that fails try "AUTH SSL"

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.

(Read and Write property)

See also FTPSSLAUTH option in CURL manual.

58.10.164 OptionFTPSSLCCC as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

If enabled, this option makes libCURL use CCC (Clear Command Channel).

**Notes:**

It shuts down the SSL/TLS layer after authenticating. The rest of the control channel communication will
be unencrypted. This allows NAT routers to follow the FTP transaction. Pass a long using one of the values below. (Added in 7.16.1)

```
CURLFTPSSL_CCC_NONE  0  Don’t attempt to use CCC.
CURLFTPSSL_CCC_PASSIVE 1  Do not initiate the shutdown, but wait for the server to do it. Do not send a reply.
CURLFTPSSL_CCC_ACTIVE  2  Initiate the shutdown and wait for a reply.
```

(Read and Write property)
See also FTP_SSL_CCC option in CURL manual.

### 58.10.165 OptionFTPUseEPRT as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If the value is true, it tells CURL to use the EPRT (and LPRT) command when doing active FTP downloads (which is enabled by CURLOPT_FTPPORT).

**Notes:**

Using EPRT means that it will first attempt to use EPRT and then LPRT before using PORT, but if you pass FALSE (zero) to this option, it will not try using EPRT or LPRT, only plain PORT. (Added in 7.10.5)

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.

(Read and Write property)
See also FTP_USE_EPRT option in CURL manual.

### 58.10.166 OptionFTPUseEPSV as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If the value is true, it tells CURL to use the EPSV command when doing passive FTP downloads (which it always does by default).

**Notes:**

Using EPSV means that it will first attempt to use EPSV before using PASV, but if you pass FALSE (zero) to this option, it will not try using EPSV, only plain PASV.

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.
CHAPTER 58. CURL

You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_USE_EPSV option in CURL manual.

58.10.167  OptionFTPusePret as Boolean

MBS CURL Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
If the value is true, it tells CURL to send a PRET command before PASV (and EPSV). Certain FTP servers,
mainly drftpd, require this non-standard command for directory listings as well as up and downloads in PASV
mode.
**Notes:**
Has no effect when using the active FTP transfers mode. (Added in 7.20.0)
(Read and Write property)
See also FTP_USE_PRET option in CURL manual.

58.10.168  OptionGet as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
If the true, this forces the HTTP request to get back to GET.
**Notes:**
usable if a POST, HEAD, PUT or a custom request have been used previously using the same CURL handle.

When setting OptionGet to a true value, it will automatically set OptionNoBody to true (since 7.14.1).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

58.10.169  OptionGSSAPIDelegation as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Allow GSSAPI credential delegation.
**Notes:** (Read and Write property)
See also GSSAPI_DELEGATION option in CURL manual.
58.10.170  **OptionHappyEyeballsTimeOutMS as Integer**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The happy eyeballs timeout.
**Notes:**
Head start in milliseconds to give happy eyeballs.
(Read and Write property)
See also **HAPPY_EYEBALLS_TIMEOUT_MS** option in CURL manual.

58.10.171  **OptionHAProxyProtocol as Boolean**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Wether to send an HAProxy PROXY protocol header.
**Notes:**
Set to true to tell the library to send an HAProxy PROXY protocol header at beginning of the connection.
The default action is not to send this header.
This option is primarily useful when sending test requests to a service that expects this header.
Most applications do not need this option.
Default false, do not send HAProxy PROXY protocol header.
(Read and Write property)
See also **HAPROXYPROTOCOL** option in CURL manual.

58.10.172  **OptionHeader as Boolean**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True tells the library to include the header in the body output.
**Notes:**
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
This is only relevant for protocols that actually have headers preceding the data (like HTTP).
(Read and Write property)
See also **HEADER** option in CURL manual.

58.10.173  **OptionHeaderOptions as Integer**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Pass in a bitmask of "header options".
**Notes:** (Read and Write property)
See also **HEADEROPT** option in CURL manual.

### 58.10.174 OptionHTTPAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Which http authentication to use.

**Notes:**

Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you want it to use. The available bits are listed below. If more than one bit is set, libCURL will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the UserPassword option. (Added in 7.10.6)

- **kAuthBASIC = 1**
  
  HTTP Basic authentication. This is the default choice, and the only method that is in wide-spread use and supported virtually everywhere. This is sending the user name and password over the network in plain text, easily captured by others.

- **kAuthDIGEST = 2**
  
  HTTP Digest authentication. Digest authentication is defined in RFC2617 and is a more secure way to do authentication over public networks than the regular old-fashioned Basic method.

- **kAuthGSSNEGOTIATE = 4**
  
  HTTP GSS-Negotiate authentication. The GSS-Negotiate (also known as plain "Negotiate") method was designed by Microsoft and is used in their web applications. It is primarily meant as a support for Kerberos5 authentication but may be also used along with another authentication methods. For more information see IETF draft draft-brezak-spnego-http-04.txt.

  You need to build libCURL with a suitable GSS-API library for this to work.

- **kAuthNTLM = 8**
  
  HTTP NTLM authentication. A proprietary protocol invented and used by Microsoft. It uses a challenge-response and hash concept similar to Digest, to prevent the password from being eavesdropped.

  You need to build libCURL with OpenSSL support for this option to work, or build libCURL on Windows.
58.10. CLASS CURLNMBS

kAuthANY = & hFFFFFFFF

This is a convenience macro that sets all bits and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

kAuthANYSAFE = & hFFFFFFFE

This is a convenience macro that sets all bits except Basic and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTPAUTH option in CURL manual.

58.10.175 OptionHTTPContentDecoding as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Pass a long to tell libCURL how to act on content decoding.
Notes:
If set to zero, content decoding will be disabled. If set to 1 it is enabled. Note however that libCURL has no default content decoding but requires you to use OptionEncoding for that. (added in 7.16.2)
(Read and Write property)
See also HTTP_CONTENT_DECODING option in CURL manual.

58.10.176 OptionHTTPProxyTunnel as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Set the parameter to true to get the library to tunnel all operations through a given HTTP proxy.
Notes:
There is a big difference between using a proxy and to tunnel through it. If you don’t know what this means, you probably don’t want this tunneling option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTP_PROXY_TUNNEL option in CURL manual.
58.10.177 OptionHTTPTransferDecoding as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Pass an integer to tell libCURL how to act on transfer decoding.

**Notes:**
If set to zero, transfer decoding will be disabled, if set to 1 it is enabled (default). libCURL does chunked transfer decoding by default unless this option is set to zero. (added in 7.16.2)
(Read and Write property)
See also HTTP_TRANSFER_DECODING option in CURL manual.

58.10.178 OptionHTTPVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set to one of the values described below.

**Notes:**
They force libCURL to use the specific HTTP versions. This is not sensible to do unless you have a good reason.

kHTTP_VERSION_NONE = 0

We don’t care about what version the library uses. libCURL will use whatever it thinks fit.

kHTTP_VERSION_1_0 = 1

Enforce HTTP 1.0 requests.

kHTTP_VERSION_1_1 = 2

Enforce HTTP 1.1 requests.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTP_VERSION option in CURL manual.
58.10. **CLASS CURLNMBS**

58.10.179 **OptionIgnoreContentLength as Boolean**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to ignore the Content-Length header.

**Notes:**
This is useful for Apache 1.x (and similar servers) which will report incorrect content length for files over 2 gigabytes. If this option is used, CURL will not be able to accurately report progress, and will simply stop the download when the server ends the connection. (added in 7.14.1)

(Read and Write property)
See also **IGNORE_CONTENT_LENGTH** option in CURL manual.

58.10.180 **OptionInFileSize as Int64**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** When uploading a file to a remote site, this option should be used to tell libCURL what the expected size of the infile is.

**Notes:**
Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read callback returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also **INFILESIZE** option in CURL manual.

58.10.181 **OptionInFileSizeLarge as Int64**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** When uploading a file to a remote site, this option should be used to tell libCURL what the expected size of the infile is.

**Deprecated:** This item is deprecated and should no longer be used. You can use OptionInFileSize instead.

**Notes:**
This value should be passed as a CURLOPT_oft.t. (Added in 7.11.0)

Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read callback returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
58.10.182 OptionInterface as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This set the interface name to use as outgoing network interface.

**Notes:**
The name can be an interface name, an IP address or a host name.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also INTERFACE option in CURL manual.

58.10.183 OptionIPResolve as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Allows an application to select what kind of IP addresses to use when resolving host names.

**Example:**
```
dim c as new CURLNMBS

c.OptionIPResolve = c.kIPRESOLVE_V4
```

**Notes:**
This is only interesting when using host names that resolve addresses using more than one version of IP.
The allowed values are:

- `kIPRESOLVE_WHATEVER = 0`
Default, resolves addresses to all IP versions that your system allows.

- `kIPRESOLVE_V4 = 1`
Resolve to ipv4 addresses.

- `kIPRESOLVE_V6 = 2`
Resolve to ipv6 addresses.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also IPRESOLVE option in CURL manual.

58.10.184  OptionIssuerCert as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
A string naming a file holding a CA certificate in PEM format.
Notes:
If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed
the one associated with the certificate provided by the option. This additional check is useful in multi-level
PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option. Otherwise,
the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the
setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSS-
LVerifyPeer has to be set too for the check to fail). (Added in 7.19.0)

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For
macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also ISSUERCERT option in CURL manual.

58.10.185  OptionKeepSendingOnError as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Wether to keep sending on error.
Notes:
Continue to send data if the server responds early with an HTTP status code >= 300
(Read and Write property)
See also KEEP_SENDING_ON_ERROR option in CURL manual.
10178

58.10.186

CHAPTER 58. CURL

OptionKeyPassword as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Set passphrase to private key.
Notes:
It will be used as the password required to use the OptionSSLKey or OptionSSHPrivateKeyfile private key.
You never needed a pass phrase to load a certificate but you need one to load your private key.
(Read and Write property)
See also KEYPASSWD option in CURL manual.

58.10.187

OptionKRB4Level as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Set the krb4 security level, this also enables krb4 awareness.
Deprecated: This item is deprecated and should no longer be used. You can use OptionKRBLevel instead.
Notes:
This is a string, ’clear’, ’safe’, ’confidential’ or ’private’. If the string is set but doesn’t match one of these,
’private’ will be used. Set the string to ”” to disable kerberos4. The kerberos support only works for FTP.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

58.10.188

OptionKRBLevel as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
FTP kerberos security level.
Notes:
Set the kerberos security level for FTP; this also enables kerberos awareness. This is a string that should
match one of the following: ’clear’, ’safe’, ’confidential’ or ’private’. If the string is set but doesn’t match
one of these, ’private’ will be used. Set the string to NULL to disable kerberos support for FTP.
(Read and Write property)
See also KRBLEVEL option in CURL manual.

58.10.189

OptionLocalPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
This sets the local port number of the socket used for connection.
Notes:


This can be used in combination with OptionInterface and you are recommended to use OptionLocalPortRange as well when this is set. Note that port numbers are only valid 1 - 65535. (Added in 7.15.2) (Read and Write property) See also LOCALPORT option in CURL manual.

58.10.190  OptionLocalPortRange as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This is the number of attempts libCURL should do to find a working local port number. Notes: It starts with the given OptionLocalPort and adds one to the number for each retry. Setting this value to 1 or below will make libCURL do only one try for exact port number. Note that port numbers by nature is a scarce resource that will be busy at times so setting this value to something too low might cause unnecessary connection setup failures. (Added in 7.15.2) (Read and Write property) See also LOCALPORTRANGE option in CURL manual.

58.10.191  OptionLoginOptions as String

MBS CURL Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Login options string to use for the transfer. Notes: For more information about the login options please see RFC 2384, RFC5092 and IETF draft draft-earhart-url-smtp-00.txt

CURLOPT_LOGIN_OPTIONS can be used to set protocol specific login options, such as the preferred authentication mechanism via "AUTH=NTLM" or "AUTH=*", and should be used in conjunction with the OptionUsername option. Only IMAP, POP3 and SMTP support login options. (Read and Write property) See also LOGIN OPTIONS option in CURL manual.

58.10.192  OptionLowSpeedLimit as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This property contains the transfer speed in bytes per second that the transfer should be below during OptionLowSpeedTime seconds for the library to consider it too slow and abort. Notes: The Lasterror property is set. 0 for success.
58.10.193 OptionLowSpeedTime as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This property contains the time in seconds that the transfer should be below the OptionLowSpeedLimit for
the library to consider it too slow and abort.
**Notes:**
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also LOW_SPEED_LIMIT option in CURL manual.

58.10.194 OptionMailAuth as String

MBS CURL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This string will be used to specify the authentication address (identity) of a submitted message that is being
relayed to another server.
**Notes:**
This optional parameter allows co-operating agents in a trusted environment to communicate the authen-
tication of individual messages and should only be used by the application program, using libCURL, if the
application is itself a mail server acting in such an environment. If the application is operating as such and
the AUTH address is not known or is invalid, then an empty string should be used for this parameter.

Unlike OptionMailFrom and SetOptionMailRecipients, the address should not be specified within a pair of
angled brackets (<>). However, if an empty string is used then a pair of brackets will be sent by libCURL
as required by RFC 2554.
(Read and Write property)
See also MAIL_AUTH option in CURL manual.

58.10.195 OptionMailFrom as String

MBS CURL Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A string that will be used to specify the sender address in a mail when sending an SMTP mail with libCURL.
**Notes:** (Read and Write property)
See also MAIL_FROM option in CURL manual.
58.10.196 OptionMaxConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The set number will be the persistent connection cache size.

**Notes:**
The set amount will be the maximum amount of simultaneously open connections that libCURL may cache. Default is 5, and there isn’t much point in changing this value unless you are perfectly aware of how this work and changes libCURL’s behaviour. This concerns connection using any of the protocols that support persistent connections.

When reaching the maximum limit, CURL closes the oldest one in the cache to prevent the number of open connections to increase.

If you already have performed transfers with this CURL handle, setting a smaller MAXCONNECTS than before may cause open connections to get closed unnecessarily.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXCONNECTS option in CURL manual.

58.10.197 OptionMaxFileSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This allows you to specify the maximum size (in bytes) of a file to download.

**Notes:**
If the file requested is larger than this value, the transfer will not start and kError_FILESIZE_EXCEEDED will be returned.

The file size is not always known prior to download, and for such files this option has no effect even if the file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXFILESIZE option in CURL manual.
58.10.198 OptionMaxFileSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This allows you to specify the maximum size (in bytes) of a file to download. **Deprecated:** This item is deprecated and should no longer be used. You can use OptionMaxFileSize instead. **Notes:**

If the file requested is larger than this value, the transfer will not start and kError_FILESIZE_EXCEEDED will be returned. (Added in 7.11.0)

The file size is not always known prior to download, and for such files this option has no effect even if the file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value. (Read and Write property)

58.10.199 OptionMaxRecvSpeed as Int64

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Defines the maximum download speed. **Notes:**

If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
(Read and Write property)
See also MAX_RECV_SPEED option in CURL manual.

58.10.200 OptionMaxRecvSpeedLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Defines the maximum download speed. **Deprecated:** This item is deprecated and should no longer be used. You can use OptionMaxRecvSpeed instead. **Notes:**

If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
(Read and Write property)
58.10. CLASS CURLNMBS

58.10.201  OptionMaxRedirs as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The set number will be the redirection limit.

**Example:**

```
dim c as new CURLNMBS

c.OptionFollowLocation = true

c.OptionMaxRedirs = 3
```

**Notes:**

If that many redirections have been followed, the next redirect will cause an error (kError_TOO_MANY_REDIRECTS). This option only makes sense if the CURLOPT_FOLLOWLOCATION is used at the same time. Added in 7.15.1: Setting the limit to 0 will make libCURL refuse any redirect. Set it to -1 for an infinite number of redirects (which is the default)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXREDIRS option in CURL manual.

58.10.202  OptionMaxSendSpeed as Int64

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Defines the maximum upload speed.

**Notes:**

If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
Value is in bytes per second.
Useful if you have a limited pipe and you’d like your transfer not to use your entire bandwidth.
Slowing down the transfer speed is also useful for lowering CPU consumption during transfers.
(Read and Write property)
See also MAX_SEND_SPEED option in CURL manual.

58.10.203  OptionMaxSendSpeedLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Defines the maximum upload speed.

**Deprecated:** This item is deprecated and should no longer be used. You can use OptionMaxSendSpeed instead.

**Notes:**
If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5) Value is in bytes per second.
Useful if you have a limited pipe and you’d like your transfer not to use your entire bandwidth. Slowing down the transfer speed is also useful for lowering CPU consumption during transfers. (Read and Write property)

58.10.204 OptionNetRC as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Controls usage of netrc file.

**Notes:**
This parameter controls the preference of libCURL between using user names and passwords from your textasciitilde /.netrc file, relative to user names and passwords in the URL supplied with OptionURL.

libCURL uses a user name (and supplied or prompted password) supplied with OptionUsername and OptionPassword in preference to any of the options controlled by this parameter.

An integer, set to one of the values described below.

**kNETRC_OPTIONAL = 1**

The use of your textasciitilde /.netrc file is optional, and information in the URL is to be preferred. The file will be scanned with the host and user name (to find the password only) or with the host only, to find the first user name and password after that machine, which ever information is not specified in the URL.

Undefined values of the option will have this effect.

**kNETRC_IGNORED = 0**

The library will ignore the file and use only the information in the URL.

This is the default.

**kNETRC_REQUIRED = 2**

This value tells the library that use of the file is required, to ignore the information in the URL, and to search the file with the host only.
Only machine name, user name and password are taken into account (init macros and similar things aren’t supported).

libCURL does not verify that the file has the correct properties set (as the standard Unix ftp client does). It should only be readable by user.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value. (Read and Write property)
See also NETRC option in CURL manual.

58.10.205  OptionNetRCFile as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string containing the full path name to the file you want libCURL to use as .netrc file.

**Notes:**
If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the a .netrc file in the current user’s home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you. (Read and Write property)
See also NETRC_FILE option in CURL manual.

58.10.206  OptionNewDirectoryPerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An integer, containing the value of the permissions that will be assigned to newly created directories on the remote server.

**Notes:**
The default value is 0755, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file://. (Added in 7.16.4)
Value must be octal, so use & o prefix for number. (Read and Write property)
See also NEW_DIRECTORY_PERMS option in CURL manual.
58.10.207 OptionNewFilePerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
An integer, containing the value of the permissions that will be assigned to newly created files on the remote server.

**Notes:**
- The default value is & o0644, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file:///.
- Be aware that you normally specify this in octal values. So use the & o prefix in Real Studio.
- (Added in 7.16.4)
- (Read and Write property)
- See also NEW_FILE_PERMS option in CURL manual.

58.10.208 OptionNoBody as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True tells the library to not include the body-part in the output.

**Notes:**
- This is only relevant for protocols that have separate header and body parts. On HTTP(S) servers, this will make libCURL do a HEAD request.
- To change request to GET, you should use OptionGet. Change request to POST with OptionPost etc.
- The Lasterror property is set. 0 for success.
- You can set this value and later you can read it, but you cannot read the default value.
- (Read and Write property)
- See also NOBODY option in CURL manual.

58.10.209 OptionNoProxy as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A string with a comma-separated list of hosts which do not use a proxy, if one is specified.

**Notes:**
- The only wildcard is a single * character, which matches all hosts, and effectively disables the proxy. Each name in this list is matched as either a domain which contains the hostname, or the hostname itself. For example, local.com would match local.com, local.com:80, and www.local.com, but not www.notlocal.com.
- (Added in 7.19.4)
- (Read and Write property)
- See also NOPROXY option in CURL manual.
58.10. **CLASS CURLNMBS**

58.10.210 **OptionNoSignal as Integer**

MBS CURL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to not use signals.

**Notes:**

If it is true, libCURL will not use any functions that install signal handlers or any functions that cause signals to be sent to the process. This option is mainly here to allow multi-threaded unix applications to still set/use all timeout options etc, without risking getting signals. (Added in 7.10)

If this option is set and libCURL has been built with the standard name resolver, timeouts will not occur while the name resolve takes place. Consider building libCURL with c-ares support to enable asynchronous DNS lookups, which enables nice timeouts for name resolves without signals.

Setting OptionNoSignal to true makes libCURL NOT ask the system to ignore SIGPIPE signals, which otherwise are sent by the system when trying to send data to a socket which is closed in the other end. libCURL makes an effort to never cause such SIGPIPEs to trigger, but some operating systems have no way to avoid them and even on those that have there are some corner cases when they may still happen, contrary to our desire. In addition, using CURLAUTH\_NTLM\_WB authentication could cause a SIGCHLD signal to be raised.

(Read and Write property)

See also NOSIGNAL option in CURL manual.

58.10.211 **OptionPassword as String**

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The password to use for the transfer.

**Notes:**

The OptionPassword option should be used in conjunction with the OptionUsername option.

(Read and Write property)

See also PASSWORD option in CURL manual.

58.10.212 **OptionPathAsIs as Boolean**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Pass path as it is and do not resolve dots.

**Notes:**

Do not squash dot-dot sequences.

(Read and Write property)

See also PATH\_AS\_IS option in CURL manual.
58.10.213 OptionPinnedPublicKey as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The public key in DER form used to validate the peer public key.

**Notes:**
Native path to key file.
This option is used only if SSLVerifyPeer is true.
(Read and Write property)
See also PINNEDPUBLICKEY option in CURL manual.

58.10.214 OptionPipeWait as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Wait/don’t wait for pipe/mutex to clarify.
**Notes:** (Read and Write property)
See also PIPEWAIT option in CURL manual.

58.10.215 OptionPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The remote port number to connect to, instead of the one specified in the URL or the default port for the used protocol.

**Notes:**
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PORT option in CURL manual.

58.10.216 OptionPost as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A boolean parameter tells the library to do a regular HTTP post.

**Notes:**
This will also make the library use the a ”Content-Type: application/x-www-form-urlencoded” header. (This is by far the most commonly used POST method).

Use the OptionPostFields option to specify what data to post.

Optionally, you can provide data to POST using the Read event but then you must make sure to not set
58.10. CLASS CURLNMBS

OptionPostFields to anything but "". When providing data with an event, you must transmit it using chunked transfer-encoding.

You can override the default POST Content-Type: header by setting your own with OptionHTTPHeader.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with OptionHTTPHeader as usual.

If you use POST to a HTTP 1.1 server, you can send data without knowing the size before starting the POST if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size in the request.

When setting CURLOPT_POST to a non-zero value, it will automatically set OptionNoBody to 0 (since 7.14.1).

If you issue a POST request and then want to make a HEAD or GET using the same re-used handle, you must explicitly set the new request type using OptionNoBody or OptionGet or similar.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also POST option in CURL manual.

58.10.217 OptionPostFields as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: A string which should be the full data to post in an HTTP POST operation.

Example:

```vbnet
dim xml as string // XML or JSON to send as payload
dim c as new CURLNMBS

c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
c.OptionPostFields = xml
c.OptionUserAgent = "Test App"
c.OptionPost = true

// for SOAP use right content type
c.SetOptionHTTPHeader array("Content-Type: application/soap+xml; charset=utf-8")
```
Notes:

You must make sure that the data is formatted the way you want the server to receive it. libCURL will not convert or encode it for you. Most web servers will assume this data to be url-encoded. Take note.

This POST is a normal application/x-www-form-urlencoded kind (and libCURL will set that Content-Type by default when this option is used), which is the most commonly used one by HTML forms. See also the OptionPost. Using OptionPostFields implies OptionPost.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with CURLOPT_HTTPHEADER as usual.

To make multipart/formdata posts (aka rfc1867-posts), check out the OptionPost option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COPYPOSTFIELDS option in CURL manual.

### 58.10.218 OptionPostFieldSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The size of the post data.

**Notes:**
Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.

If you specify a size and no postfield string, the Read event will request data.
(Read and Write property)
See also POSTFIELDSIZE option in CURL manual.

### 58.10.219 OptionPostFieldSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The size of the post data. (64 bit version)

**Deprecated:** This item is deprecated and should no longer be used. You can use OptionPostFieldSize instead.

**Notes:**
Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.
If you specify a size and no postfield string, the Read event will request data.  
(Read and Write property)

58.10.220 OptionPostRedir as Integer

**Function:** A bitmask to control how libCURL acts on redirects after POSTs that get a 301 or 302 response back.  
**Notes:**  
A parameter with bit 0 set (value CURL\_REDIR\_POST\_301=1) tells the library to respect RFC 2616/10.3.2 and not convert POST requests into GET requests when following a 301 redirection.  Setting bit 1 (value CURL\_REDIR\_POST\_302=2) makes libCURL maintain the request method after a 302 redirect.  CURL\_REDIR\_POST\_ALL is a convenience define that sets both bits.  
The non-RFC behaviour is ubiquitous in web browsers, so the library does the conversion by default to maintain consistency.  However, a server may require a POST to remain a POST after such a redirection.  This option is meaningful only when setting OptionFollowLocation.  (Added in 7.17.1)  (This option was known as CURLOPT\_POST301 up to 7.19.0 as it only supported the 301 way before then)  
(Read and Write property)  
See also POSTREDIR option in CURL manual.

58.10.221 OptionPreProxy as String

**Function:** Name of pre proxy to use.  
**Notes:**  
(Read and Write property)  
See also PRE\_PROXY option in CURL manual.

58.10.222 OptionProtocols as Integer

**Function:** A bitmask of kProtocol\* constants.  
**Notes:**  
If used, this bitmask limits what protocols libCURL may use in the transfer.  This allows you to have a libCURL built to support a wide range of protocols but still limit specific transfers to only be allowed to use a subset of them.  By default libCURL will accept all protocols it supports.  See also OptionRedirProtocols.  (Added in 7.19.4)  
(Read and Write property)  
See also PROTOCOLS option in CURL manual.
58.10.223  OptionProxy as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set HTTP proxy to use.

**Example:**

```vba
dim c as CURLNMBS // your CURL object
dim psAddress as string // your proxy address
dim psPort as Integer // your proxy port

c.OptionProxy=psAddress
c.OptionProxyPort=psPort
c.OptionProxyType=c.kPROXY_HTTP
```

**Notes:**
The Lasterror property is set. 0 for success. 
You can set this value and later you can read it, but you cannot read the default value.

The parameter should be a string holding the host name or dotted IP address. To specify port number in this string, append : [port] to the end of the host name. The proxy string may be prefixed with [protocol] :// since any such prefix will be ignored. The proxy's port number may optionally be specified with the separate option ProxyHost.

When you tell the library to use an HTTP proxy, libCURL will transparently convert operations to HTTP even if you specify an FTP URL etc. This may have an impact on what other features of the library you can use, such as CURLOPT\_QUOTE and similar FTP specifics that don't work unless you tunnel through the HTTP proxy. Such tunneling is activated with HTTPProxyTunnel.

libCURL respects the environment variables http\_proxy, ftp\_proxy, all\_proxy etc, if any of those is set. The Proxy option does however override any possibly set environment variables.

Starting with 7.14.1, the proxy host string given in environment variables can be specified the exact same way as the proxy can be set with Proxy, include protocol prefix (http://) and embedded user + password.

You can use WinHTTPClientMBS class on Windows or CFProxyMBS on Mac to discover system proxy settings.
(Read and Write property)
See also PROXY option in CURL manual.
58.10. CLASS CURLNMBS

58.10.224 OptionProxyAuth as Integer

Notes:
Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you want it to use for your proxy authentication. If more than one bit is set, libCURL will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the ProxyUserPassword option. The bitmask can be constructed by or’ing together the bits listed above for the HTTPAuth option. As of this writing, only Basic, Digest and NTLM work. (Added in 7.10.7)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PROXYAUTH option in CURL manual.

58.10.225 OptionProxyCAInfo as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The CApath or CAfile used to validate the proxy certificate.
Notes:
Pass native file path.
This option is used only if CURLNMBS.OptionProxySSLVerifyPeer is true
(Read and Write property)
See also PROXY_CAINFO option in CURL manual.

58.10.226 OptionProxyCAPath as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The CApath directory used to validate the proxy certificate.
Notes:
Pass native file path.
This option is used only if CURLNMBS.OptionProxySSLVerifyPeer is true
(Read and Write property)
See also PROXY_CAPATH option in CURL manual.
**58.10.227 OptionProxyCRLFile as String**

**Notes:**  
Pass native file path.  
(Read and Write property)  
See also PROXY_CRLFILE option in CURL manual.

**58.10.228 OptionProxyKeyPassword as String**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Password for the SSL private key for proxy.  
**Notes:** (Read and Write property)  
See also PROXY_KEYPASSWD option in CURL manual.

**58.10.229 OptionProxyPassword as String**

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string which should be pointing to the password to use for the transfer while connecting to Proxy.  
**Notes:**  
The OptionProxyPassword option should be used in conjunction with the OptionProxyUsername option.  
(Added in 7.19.1)  
(Read and Write property)  
See also PROXYPASSWORD option in CURL manual.

**58.10.230 OptionProxyPinnedPublicKey as String**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The public key in DER form used to validate the proxy public key.  
**Notes:**  
This option is used only if CURLNMBS.OptionProxySSLVerifyPeer is true.  
Please path native file path to key file.  
(Read and Write property)  
See also PROXY_PINNEDPUBLICKEY option in CURL manual.
58.10.231 OptionProxyPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The proxy port to connect to unless it is specified in the proxy string OptionProxy.

**Notes:**
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

You can use OptionProxy with port, e.g. "12.34.56.78:8080" or pass port here and proxy without port. For some users it seems like the option with OptionProxy including port works better.
(Read and Write property)
See also PROXYPORT option in CURL manual.

58.10.232 OptionProxyServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Proxy Service Name.

**Notes:** (Read and Write property)
See also PROXY_SERVICE_NAME option in CURL manual.

58.10.233 OptionProxySSLCert as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Name of the file keeping your private SSL-certificate for proxy.

**Notes:** (Read and Write property)
See also PROXY_SSLCERT option in CURL manual.

58.10.234 OptionProxySSLCertType as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Type of the file keeping your SSL-certificate for proxy.

**Notes:**
Value can be "DER", "PEM" or "ENG".
(Read and Write property)
See also PROXY_SSLCERTTYPE option in CURL manual.
58.10.235  **OptionProxySSLCipherList as String**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specify which SSL ciphers to use for proxy.
**Notes:** (Read and Write property)
See also `PROXY_SSL_CIPHER_LIST` option in CURL manual.

58.10.236  **OptionProxySSLKey as String**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Name of the file keeping your private SSL-key for proxy.
**Notes:**
Pass native file path.
(Read and Write property)
See also `PROXY_SSLKEY` option in CURL manual.

58.10.237  **OptionProxySSLKeyType as String**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets type of the file keeping your private SSL-key for proxy.
**Notes:**
Value is DER, PEM or ENG.
(Read and Write property)
See also `PROXY_SSLKEYTYPE` option in CURL manual.

58.10.238  **OptionProxySSLOptions as Integer**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable/disable specific SSL features with a bitmask for proxy.
**Notes:** (Read and Write property)
See also `PROXY_SSL_OPTIONS` option in CURL manual.

58.10.239  **OptionProxySSLVerifyHost as Integer**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable SSL Host verification.
**Notes:**
58.10. **CLASS CURLNMBS**

Set if we should verify the Common name from the proxy certificate in ssl handshake, set 1 to check existence, 2 to ensure that it matches the provided hostname.  
(Read and Write property)  
See also `PROXY_SSL_VERIFYHOST` option in CURL manual.

---

**58.10.240 OptionProxySSLVerifyPeer as Integer**

**Function:** Set if we should verify the proxy in ssl handshake.  
**Notes:**  
set 1 to verify.  
(Read and Write property)  
See also `PROXY_SSL_VERIFYPEER` option in CURL manual.

---

**58.10.241 OptionProxySSLVersion as Integer**

**Function:** What version to specifically try to use for proxy.  
**Notes:**  
The available options are:

- **Default** 0: The default action. This will attempt to figure out the remote SSL protocol version, i.e. either SSLv3 or TLSv1 (but not SSLv2, which became disabled by default with 7.18.1).
- **TLSv1** 1: Force TLSv1.x
- **SSLv2** 2: Force SSLv2
- **SSLv3** 3: Force SSLv3
- **TLSv1.0** 4: Force TLSv1.0
- **TLSv1.1** 5: Force TLSv1.1
- **TLSv1.2** 6: Force TLSv1.2
- **TLSv1.3** 7: Force TLSv1.3

(Read and Write property)  
See also `PROXY_SSLVERSION` option in CURL manual.
58.10.242  OptionProxyTLSAuthPassword as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Password for authenticated TLS for proxy. **Notes:** (Read and Write property) See also PROXY_TLSAUTH_PASSWORD option in CURL manual.

58.10.243  OptionProxyTLSAuthType as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set authentication type for authenticated TLS for proxy. **Notes:** (Read and Write property) See also PROXY_TLSAUTH_TYPE option in CURL manual.

58.10.244  OptionProxyTLSAuthUsername as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set a username for authenticated TLS for proxy. **Notes:** (Read and Write property) See also PROXY_TLSAUTH_USERNAME option in CURL manual.

58.10.245  OptionProxyTransferMode as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If this integer value is set to 1 (one), it tells libCURL to set the transfer mode (binary or ASCII) for FTP transfers done via an HTTP proxy, by appending ;type=a or ;type=i to the URL. **Notes:** Without this setting, or it being set to 0 (zero, the default), OptionTransferText has no effect when doing FTP via a proxy. Beware that not all proxies support this feature. (Added in 7.18.0) (Read and Write property) See also PROXY_TRANSFER_MODE option in CURL manual.

58.10.246  OptionProxyType as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option is to set type of the proxy. **Notes:** The Lasterror property is set 0 for success.
58.10. CLASS CURLNMBS

You can set this value and later you can read it, but you cannot read the default value.

Available options for this are kPROXY_HTTP, kPROXY_SOCKS4 (added in 7.15.2) kPROXY_SOCKS5. The HTTP type is default.
(Read and Write property)
See also PROXYTYPE option in CURL manual.

58.10.247 OptionProxyUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string, which should be pointing to the user name to use for the transfer while connecting to Proxy.
**Notes:**
In order to specify the password to be used in conjunction with the user name use the OptionProxyPassword option.
(Read and Write property)
See also PROXYUSERNAME option in CURL manual.

58.10.248 OptionPut as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A non-zero parameter tells the library to use HTTP PUT to transfer data.
**Notes:**
The data should be set with OptionInFileSize.

This option is deprecated and starting with version 7.12.1 you should instead use OptionUpload.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PUT option in CURL manual.

58.10.249 OptionRandomFile as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A file name for the random file.
**Notes:**
The file will be used to read from to seed the random engine for SSL. The more random the specified file is, the more secure the SSL connection will become.
The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also RANDOM_FILE option in CURL manual.

58.10.250  OptionRange as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string which should contain the specified range you want.
**Notes:**
It should be in the format "X-Y", where X or Y may be left out. HTTP transfers also support several intervals, separated with commas as in "X-Y,N-M". Using this kind of multiple intervals will cause the HTTP server to send the response document in pieces (using standard MIME separation techniques). Pass a NULL to this option to disable the use of ranges.

The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also RANGE option in CURL manual.

58.10.251  OptionRedirProtocols as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An integer that holds a bitmask of kProtocol* constants.
**Notes:**
If used, this bitmask limits what protocols libCURL may use in a transfer that it follows to in a redirect when OptionFollowLocation is enabled. This allows you to limit specific transfers to only be allowed to use a subset of protocols in redirections. By default libCURL will allow all protocols except for FILE and SCP. This is a difference compared to pre-7.19.4 versions which unconditionally would follow to all protocols supported. (Added in 7.19.4)
(Read and Write property)
See also REDIR_PROTOCOLS option in CURL manual.
58.10.252 OptionReferer as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The referer to pass to the server.
**Notes:**
It will be used to set the Referer: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also REFERER option in CURL manual.

58.10.253 OptionRequestTarget as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The request target, instead of extracted from the URL.
**Notes:** (Read and Write property)
See also REQUEST_TARGET option in CURL manual.

58.10.254 OptionResumeFrom as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
It contains the offset in number of bytes that you want the transfer to start from.
**Notes:**
Set this option to 0 to make the transfer start from the beginning (effectively disabling resume). For FTP, set this option to -1 to make the transfer start from the end of the target file (useful to continue an interrupted upload).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also RESUME_FROM option in CURL manual.

58.10.255 OptionResumeFromLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
It contains the offset in number of bytes that you want the transfer to start from.
**58.10.256 OptionRTSPClientCSEQ as Integer**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Manually initialize the client RTSP CSeq for this handle. **Notes:** (Read and Write property) See also **RTSP_CLIENT_CSEQ** option in CURL manual.

**58.10.257 OptionRTSPRequest as Integer**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** RTSP request method (OPTIONS, SETUP, PLAY, etc...). **Notes:** (Read and Write property) See also **RTSP_REQUEST** option in CURL manual.

**58.10.258 OptionRTSPServerCSEQ as Integer**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Manually initialize the server RTSP CSeq for this handle. **Notes:** (Read and Write property) See also **RTSP_SERVER_CSEQ** option in CURL manual.

**58.10.259 OptionRTSPSessionID as String**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The RTSP session identifier. **Notes:** (Read and Write property) See also **RTSP_SESSION_ID** option in CURL manual.
58.10. CLASS CURLNMBS

58.10.260 OptionRTSPStreamURI as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The RTSP stream URI. **Notes:** (Read and Write property) See also RTSP_STREAM_URI option in CURL manual.

58.10.261 OptionRTSPTransport as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Transport: header to use in RTSP requests. **Notes:** (Read and Write property) See also RTSP_TRANSPORT option in CURL manual.

58.10.262 OptionSASLIR as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable/disable SASL initial response. **Notes:** (Read and Write property) See also SASL_IR option in CURL manual.

58.10.263 OptionServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Service Name. **Notes:** (Read and Write property) See also SERVICE_NAME option in CURL manual.

58.10.264 OptionSocks5Auth as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Bitmask of allowed auth methods for connections to SOCKS5 proxies. **Notes:** (Read and Write property) See also SOCKS5_AUTH option in CURL manual.
CHAPTER 58. CURL

58.10.265  OptionSocks5GSSAPINEC as Boolean

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** Whether to protect SOCKS5 connection is protected.

**Notes:**
Set to true to enable or false to disable. As part of the gssapi negotiation a protection mode is negotiated. The rfc1961 says in section 4.3/4.4 it should be protected, but the NEC reference implementation does not. If enabled, this option allows the unprotected exchange of the protection mode negotiation. (Added in 7.19.4).

(Read and Write property)
See also SOCKS5_GSSAPI_NEC option in CURL manual.

58.10.266  OptionSocks5GSSAPIService as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** A string holding the name of the service.

**Notes:**
The default service name for a SOCKS5 server is rcmd/server-fqdn. This option allows you to change it. (Added in 7.19.4)
(Read and Write property)
See also SOCKS5_GSSAPI_SERVICE option in CURL manual.

58.10.267  OptionSSHAuthTypes as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** Define the SSH authorization types.

**Notes:**
Pass a long set to a bitmask consisting of one or more of CURLSSH_AUTH_PUBLICKEY, CURLSSH_AUTH_PASSWORD, CURLSSH_AUTH_HOST, CURLSSH_AUTH_KEYBOARD. Set CURLSSH_AUTH_ANY to let libCURL pick one. (Added in 7.16.1)

**constants:**
CURLSSH_AUTH_ANY = & hFFFFFFFF
CURLSSH_AUTH_NONE = 0
CURLSSH_AUTH_PUBLICKEY = 1
CURLSSH_AUTH_PASSWORD = 2
CURLSSH_AUTH_HOST = 4
CURLSSH_AUTH_KEYBOARD = 8
CURLSSH_AUTH_DEFAULT = CURLSSH_AUTH_ANY
(Read and Write property)
See also SSH_AUTH_TYPES option in CURL manual.
58.10.**CLASS CURLNMBS**

### OptionSSHCompression as Boolean

**Notes:** (Read and Write property)
See also **SSH_COMPRESSION** option in CURL manual.

### OptionSSHHostPublicKeyMD5 as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string containing 32 hexadecimal digits with the 128 bit MD5 checksum of the remote host’s public key.
**Notes:**
libCURL will reject the connection to the host unless the md5sums match. This option is only for SCP and SFTP transfers. (Added in 7.17.1)
(Read and Write property)
See also **SSH_HOST_PUBLIC_KEY_MD5** option in CURL manual.

### OptionSSHKnownhosts as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string holding the file name of the known host file to use.
**Notes:**
The known hosts file should use the OpenSSH file format as supported by libssh2. If this file is specified, libCURL will only accept connections with hosts that are known and present in that file, with a matching public key. (Added in 7.19.6)
(Read and Write property)
See also **SSH_KNOWNHOSTS** option in CURL manual.

### OptionSSHPrivateKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Pass a path pointing to a file name for your private key.
**Notes:**
If not used, libCURL defaults to using textasciitilde /.ssh/id_dsa. If the file is password-protected, set the password with OptionSSLKeyPassword. (Added in 7.16.1)

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.
Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.

(Read and Write property)
See also **SSH_PRIVATE_KEYFILE** option in CURL manual.

### 58.10.272 OptionSSHPublicKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Pass a path pointing to a file name for your public key.

**Notes:**
If not used, libCURL defaults to using `textasciitilde/.ssh/id_dsa.pub`. (Added in 7.16.1)

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.

(Read and Write property)
See also **SSH_PUBLIC_KEYFILE** option in CURL manual.

### 58.10.273 OptionSSLCert as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The string should be the file name of your certificate.

**Notes:**
The default format is "PEM" and can be changed with OptionSSLCERTTYPE.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.

(Read and Write property)
See also **SSLCERT** option in CURL manual.
58.10. CLASS CURLNMBS

58.10.274 OptionSSLCertPassword as String

MBS CURL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The certificate password. **Deprecated:** This item is deprecated and should no longer be used. You can use OptionKeyPassword instead. **Notes:** (Read and Write property)

58.10.275 OptionSSLCertType as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The string should be the format of your certificate. **Notes:** Supported formats are "PEM" and "DER". (Added in 7.9.3)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLCERTTYPE option in CURL manual.

58.10.276 OptionSSLCipherList as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string holding the list of ciphers to use for the SSL connection. **Notes:** The list must be syntactically correct, it consists of one or more cipher strings separated by colons. Commas or spaces are also acceptable separators but colons are normally used, !, - and + can be used as operators. Valid examples of cipher lists include 'RC4-SHA', 'SHA1+DES', 'TLSv1' and 'DEFAULT'. The default list is normally set when you compile OpenSSL.

You’ll find more details about cipher lists on this URL:

http://www.openssl.org/docs/apps/ciphers.html

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSL_CIPHER_LIST option in CURL manual.
58.10.277 **OptionSSLEnableALPN as Integer**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable/disable TLS ALPN extension (http2 over ssl might fail without).  
**Notes:** (Read and Write property)  
See also SSL_ENABLE_ALPN option in CURL manual.

58.10.278 **OptionSSLEnableNPN as Integer**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable/disable TLS NPN extension (http2 over ssl might fail without)  
**Notes:** (Read and Write property)  
See also SSL_ENABLE_NPN option in CURL manual.

58.10.279 **OptionSSLEngine as String**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** It will be used as the identifier for the crypto engine you want to use for your private key.  
**Notes:**  
If the crypto device cannot be loaded, kError_SSL_ENGINE_NOTFOUND is returned.  
The Lasterror property is set. 0 for success.  
You can set this value and later you can read it, but you cannot read the default value.  
(Read and Write property)  
See also SSLENGINE option in CURL manual.

58.10.280 **OptionSSLEngineDefault as Integer**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the actual crypto engine as the default for (asymmetric) crypto operations.  
**Notes:**  
If the crypto device cannot be set, kError_SSL_ENGINE_SETFAILED is returned.  
The Lasterror property is set. 0 for success.  
You can set this value and later you can read it, but you cannot read the default value.  
(Read and Write property)  
See also SSLENGINE_DEFAULT option in CURL manual.
**58.10.281 OptionSSLFalseStart as Integer**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set if we should enable TLS false start. **Notes:** (Read and Write property) See also SSL_FALSESTART option in CURL manual.

**58.10.282 OptionSSLKey as String**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The string should be the file name of your private key. **Notes:**

The default format is "PEM" and can be changed with OptionSSLKEYTYPE.

The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you. (Read and Write property) See also SSLKEY option in CURL manual.

**58.10.283 OptionSSLKeyPassword as String**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The password required to use the OptionSSLKEY private key. **Deprecated:** This item is deprecated and should no longer be used. You can use OptionKeyPassword instead. **Notes:**

The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value. (Read and Write property)

**58.10.284 OptionSSLKeyType as String**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The string should be the format of your private key. **Notes:**

Supported formats are "PEM", "DER" and "ENG".
The format "ENG" enables you to load the private key from a crypto engine. In this case OptionSSLKEY is used as an identifier passed to the engine. You have to set the crypto engine with OptionSSLENGINE. "DER" format key file currently does not work because of a bug in OpenSSL.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value. (Read and Write property)
See also SSLKEYTYPE option in CURL manual.

**58.10.285 OptionSSLOptions as Integer**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable/disable specific SSL features with a bitmask. **Notes:** (Read and Write property)
See also SSL_OPTIONS option in CURL manual.

**58.10.286 OptionSSLSessionIDCache as Boolean**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to use the SSL session ID cache. **Notes:**
Pass false to disable libCURL's use of SSL session-ID caching. Set this to true to enable it. By default all transfers are done using the cache. Note that while nothing ever should get hurt by attempting to reuse SSL session-IDs, there seem to be broken SSL implementations in the wild that may require you to disable this in order for you to succeed. (Added in 7.16.0) (Read and Write property)
See also SSL_SESSIONID_CACHE option in CURL manual.

**58.10.287 OptionSSLVerifyHost as Integer**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option determines whether libCURL verifies that the server cert is for the server it is known as. **Notes:**
When negotiating an SSL connection, the server sends a certificate indicating its identity.

When OptionSSLVerifyHost is 2, that certificate must indicate that the server is the server to which you meant to connect, or the connection fails.

CURL considers the server the intended one when the Common Name field or a Subject Alternate Name
field in the certificate matches the host name in the URL to which you told CURL to connect.

When the value is 1, the certificate must contain a Common Name field, but it doesn’t matter what name it says. (This is not ordinarily a useful setting).

When the value is 0, the connection succeeds regardless of the names in the certificate.

The default, since 7.10, is 2.

The checking this option controls is of the identity that the server claims. The server could be lying. To control lying, see OptionSSLVerifyPeer.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSL_VERIFYHOST option in CURL manual.

58.10.288  OptionSSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Configure whether this CURL instance will verify the SSL peer certificate.
**Notes:**
This option determines whether CURL verifies the authenticity of the peer’s certificate. A value of 1 means CURL verifies; zero means it doesn’t. The default is nonzero, but before 7.10, it was zero.

When negotiating an SSL connection, the server sends a certificate indicating its identity. CURL verifies whether the certificate is authentic, i.e. that you can trust that the server is who the certificate says it is. This trust is based on a chain of digital signatures, rooted in certification authority (CA) certificates you supply. As of 7.10, CURL installs a default bundle of CA certificates and you can specify alternate certificates with the OptionCAINFO option or the OptionCAPATH option.

When OptionSSLVerifyPeer is nonzero, and the verification fails to prove that the certificate is authentic, the connection fails. When the option is zero, the connection succeeds regardless.

Authenticating the certificate is not by itself very useful. You typically want to ensure that the server, as authentically identified by its certificate, is the server you mean to be talking to. Use OptionSSLVerifyHost to control that.
(Read and Write property)
See also SSL_VERIFYPEER option in CURL manual.
58.10.289  OptionSSLVerifyStatus as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set if we should verify the certificate status.
**Notes:** (Read and Write property)
See also SSL_VERIFYSTATUS option in CURL manual.

58.10.290  OptionSSLVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
What version of SSL/TLS to attempt to use.
**Example:**
```
dim c as CURLNMBS
    c.OptionUseSSL = c.kFTPSSL_ALL
    c.OptionSSLVersion = c.kSSLVersionTLSv12
```

**Notes:**
The available options are:

- **kSSLVERSION_DEFAULT** = 0

  The default action. When libCURL built with OpenSSL, this will attempt to figure out the remote SSL protocol version. Unfortunately there are a lot of ancient and broken servers in use which cannot handle this technique and will fail to connect. When libCURL is built with GnuTLS, this will mean SSLv3.

- **kSSLVERSION_TLSv1** = 1
  Force TLSv1

- **kSSLVERSION_SSLv2** = 2
  Force SSLv2

- **kSSLVERSION_SSLv3** = 3
  Force SSLv3
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLVERSION option in CURL manual.

58.10.291 OptionStreamDepends as CURLNMBS

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set stream dependency on another CURL handle.
**Notes:** (Read and Write property)
See also STREAM_DEPENDS option in CURL manual.

58.10.292 OptionStreamDependsE as CURLNMBS

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set E-xclusive stream dependency on another CURL handle.
**Notes:** (Read and Write property)
See also STREAM_DEPENDS_E option in CURL manual.

58.10.293 OptionStreamWeight as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set stream weight, 1 - 256.
**Notes:**
Default is 16.
(Read and Write property)
See also STREAM_WEIGHT option in CURL manual.

58.10.294 OptionSuppressConnectHeaders as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Suppress proxy CONNECT response headers from user callbacks.
**Notes:** (Read and Write property)
See also SUPPRESS_CONNECT_HEADERS option in CURL manual.
58.10.295  OptionTCPFastOpen as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set TCP Fast Open.
**Notes:** (Read and Write property)
See also **TCP_FASTOPEN** option in CURL manual.

58.10.296  OptionTCPKeepAlive as Boolean

MBS CURL Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If set to true, TCP keepalive probes will be sent.
**Notes:**
The delay and frequency of these probes can be controlled by the OptionTCPKeepIdle and OptionTCPKeepInterval options, provided the operating system supports them. Set to false (default behavior) to disable keepalive probes (Added in 7.25.0).
(Read and Write property)
See also **TCP_KEEPALIVE** option in CURL manual.

58.10.297  OptionTCPKeepIdle as Integer

MBS CURL Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the delay, in seconds, that the operating system will wait while the connection is idle before sending keepalive probes.
**Notes:**
Not all operating systems support this option. (Added in 7.25.0)
(Read and Write property)
See also **TCP_KEEPIDLE** option in CURL manual.

58.10.298  OptionTCPKeepInterval as Integer

MBS CURL Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the interval, in seconds, that the operating system will wait between sending keepalive probes.
**Notes:**
Not all operating systems support this option. (Added in 7.25.0)
(Read and Write property)
See also **TCP_KEEPINTVL** option in CURL manual.
58.10. CLASS CURLNMBS

58.10.299 OptionTCPNoDelay as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An integer specifying whether the TCP_NODELAY option should be set or cleared (true = set, false = clear). **Notes:**
The option is cleared by default. This will have no effect after the connection has been established.

Setting this option will disable TCP’s Nagle algorithm. The purpose of this algorithm is to try to minimize the number of small packets on the network (where ”small packets” means TCP segments less than the Maximum Segment Size (MSS) for the network).

Maximizing the amount of data sent per TCP segment is good because it amortizes the overhead of the send. However, in some cases (most notably telnet or rlogin) small segments may need to be sent without delay. This is less efficient than sending larger amounts of data at a time, and can contribute to congestion on the network if overdone.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TCP_NODELAY option in CURL manual.

58.10.300 OptionTFTPBlockSize as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specify block size to use for TFTP data transmission. **Notes:**
Valid range as per RFC 2348 is 8-65464 bytes. The default of 512 bytes will be used if this option is not specified. The specified block size will only be used pending support by the remote server. If the server does not return an option acknowledgement or returns an option acknowledgement with no blksize, the default of 512 bytes will be used. (added in 7.19.4)
(Read and Write property)
See also TFTP_BLKSIZE option in CURL manual.

58.10.301 OptionTFTPNoOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether not send any tftp option requests to the server. **Notes:** (Read and Write property)
See also TFTP_NO_OPTIONS option in CURL manual.
58.10.302 OptionTimeCondition as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The Time condition option.

**Notes:**
This defines how the OptionTimeValue time value is treated. You can set this parameter to kTimeConditionIfModifiedSince (1) or kTimeConditionIfUnModifiedSince (2). This feature applies to HTTP and FTP.

The last modification time of a file is not always known and in such instances this feature will have no effect even if the given time condition would have not been met.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMECONDITION option in CURL manual.

58.10.303 OptionTimeOut as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The maximum time in seconds that you allow the libCURL transfer operation to take.

**Notes:**
Normally, name lookups can take a considerable time and limiting operations to less than a few minutes risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable time-outing system calls.

In unix-like systems, this might cause signals to be used unless CURLOPT_NOSIGNAL is set.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMEOUT option in CURL manual.

58.10.304 OptionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Pass a long as parameter containing the maximum time in milli seconds that you allow the libCURL transfer operation to take.

**Notes:**
Normally, name lookups can take a considerable time and limiting operations to less than a few minutes
risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable
time-outing system calls.
(Read and Write property)
See also `TIMEOUT_MS` option in CURL manual.

58.10.305 OptionTimeValue as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This should be the time in seconds since 1 jan 1970, and the time will be used in a condition as specified
with OptionTimeCondition.
**Notes:**
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also `TIMEVALUE` option in CURL manual.

58.10.306 OptionTLSAuthPassword as String

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the TSL authentication password.
**Notes:**
Please also set OptionTLSAuthType.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also `TLSAUTH_PASSWORD` option in CURL manual.

58.10.307 OptionTLSAuthType as String

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the TLS authentication type.
**Notes:**
You can set this to "SRP" to use Secure Remote Password authentication.
Please also set username and password.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also `TLSAUTH_TYPE` option in CURL manual.
58.10.308 OptionTLSAuthUsername as String

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the TSL authentication user name.

**Notes:**
Please also set OptionTLSAuthType.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_USERNAME option in CURL manual.

58.10.309 OptionTransferEncoding as Boolean

MBS CURL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Adds a request for compressed Transfer Encoding in the outgoing HTTP request.

**Notes:**
If the server supports this and so desires, it can respond with the HTTP response sent using a compressed Transfer-Encoding that will be automatically uncompressed by libCURL on reception.

Transfer-Encoding differs slightly from the Content-Encoding you ask for with OptionAcceptEncoding in that a Transfer-Encoding is strictly meant to be for the transfer and thus MUST be decoded before the data arrives in the client. Traditionally, Transfer-Encoding has been much less used and supported by both HTTP clients and HTTP servers.
(Read and Write property)
See also TRANSFER_ENCODING option in CURL manual.

58.10.310 OptionTransferText as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True tells the library to use ASCII mode for ftp transfers, instead of the default binary transfer.

**Notes:**
For win32 systems it does not set the stdout to binary mode. This option can be usable when transferring text data between systems with different views on certain characters, such as newlines or similar.

libCURL does not do a complete ASCII conversion when doing ASCII transfers over FTP. This is a known limitation/flaw that nobody has rectified. libCURL simply sets the mode to ascii and performs a standard transfer.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
58.10. CLASS CURLNMBS

(Read and Write property)
See also TRANSFERTEXT option in CURL manual.

58.10.311 OptionUnixSocketPath as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Path to Unix domain socket.
**Notes:** (Read and Write property)
See also UNIX_SOCKET_PATH option in CURL manual.

58.10.312 OptionUnrestrictedAuth as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A boolean parameter tells the library it can continue to send authentication (user+password) when following
locations, even when hostname changed.
**Notes:**
This option is meaningful only when setting FollowOption.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also UNRESTRICTED_AUTH option in CURL manual.

58.10.313 OptionUpload as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True tells the library to prepare for an upload.
**Notes:**
The OptionInFileSize or OptionInFileSizeLarge options are also interesting for uploads. If the protocol is
HTTP, uploading means using the PUT request unless you tell libCURL otherwise.

Using PUT with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header
with OptionHTTPHeader as usual.

If you use PUT to a HTTP 1.1 server, you can upload data without knowing the size before starting the
transfer if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked"
with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also UPLOAD option in CURL manual.

58.10.314 OptionURL as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The actual URL to deal with.

**Notes:**
If you need to pass username or password, please consider using the OptionUsername and OptionPassword
properties. If you username or password contains characters like @ or :, you must use those properties.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

The parameter should be a char * to a zero terminated string. The string must remain present until CURL
no longer needs it, as it doesn’t copy the string.

If the given URL lacks the protocol part ("http:/* or "ftp://" etc), it will attempt to guess which protocol
to use based on the given host name. If the given protocol of the set URL is not supported, libCURL
will return on error (kError_UNSUPORTED_PROTOCOL) when you call Perform. Use VersionInfo for
detailed info on which protocols that are supported.

The string given to CURLOPT_URL must be url-encoded and following the RFC 2396:
http://CURL.haxx.se/rfc/rfc2396.txt

CURLOPT_URL is the only option that must be set before Perform is called.
For file uploads or downloads, please include the file name in the URL.

Please do never include username and passwords in URLs, as those get often written to log files and would
reveal your credentials!
Instead use OptionUsername and OptionPassword.
(Read and Write property)
See also URL option in CURL manual.

58.10.315 OptionUserAgent as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The user agent string to pass to the server.
58.10. CLASS CURLNMBS

Notes:
It will be used to set the User-Agent: header in the http request sent to the remote server. This can be used
to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also USERAGENT option in CURL manual.

58.10.316 OptionUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The user name to be used in protocol authentication
**Notes:**
In order to specify the password to be used in conjunction with the user name use the OptionPassword option
(Read and Write property)
See also USERNAME option in CURL manual.

58.10.317 OptionUseSSL as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Request using SSL / TLS for the transfer.
**Notes:**
Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the
transfer.
These are all protocols that start out plain text and get "upgraded" to SSL using the STARTTLS command.
This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

<table>
<thead>
<tr>
<th>CURLUSESSL_NONE</th>
<th>0</th>
<th>Don’t attempt to use SSL.</th>
</tr>
</thead>
<tbody>
<tr>
<td>CURLUSESSL_TRY</td>
<td>1</td>
<td>Try using SSL, proceed as normal otherwise.</td>
</tr>
<tr>
<td>CURLUSESSL_CONTROL</td>
<td>2</td>
<td>Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.</td>
</tr>
<tr>
<td>CURLUSESSL_ALL</td>
<td>3</td>
<td>Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.</td>
</tr>
</tbody>
</table>

(Read and Write property)
See also USE_SSL option in CURL manual.
58.10.318 OptionVerbose as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether debug messages are sent to the DebugMessage event.

**Notes:**
Default is false.
You need to subclass the CURLNMBS class to add code in the DebugMessage event.
Or you set CollectDebugData = true and later query DebugData property.
Or you use CreateMTDebugOutpuFile to stream them to a file.
(Read and Write property)
See also VERBOSE option in CURL manual.

58.10.319 OptionWildCardMatch as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable wildcard matching.

**Notes:**
Set onoff to true if you want to transfer multiple files according to a file name pattern. The pattern can be specified as part of the OptionURL option, using an fnmatch-like pattern (Shell Pattern Matching) in the last part of URL (file name).

By default, libCURL uses its internal wildcard matching implementation. You can provide your own matching function by the CURLNMBS.FileNameMatch event.

A brief introduction of its syntax follows:

- **- ASTERISK**

  ftp://example.com/some/path/*.txt (for all txt’s from the root directory)

- **? - QUESTION MARK**

  Question mark matches any (exactly one) character.

  ftp://example.com/some/path/photo?.jpeg

- **[ - BRACKET EXPRESSION**

  The left bracket opens a bracket expression. The question mark and asterisk have no special meaning in a
bracket expression. Each bracket expression ends by the right bracket and matches exactly one character. Some examples follow:

\[
[\text{a-zA-Z0-9}] \text{ or } [\text{f-gF-G}] \quad \text{- character interval}
\]

\[
[\text{abc}] \quad \text{- character enumeration}
\]

\[
[^\text{abc}] \text{ or } ![\text{abc}] \quad \text{- negation}
\]

\[
[\{\text{name:}\}] \quad \text{class expression. Supported classes are alnum,lower, space, alpha, digit, print, upper, blank, graph, xdigit.}
\]

\[
[\{\{\}^{\ldots}\}] \quad \text{- special case - matches only ‘-‘, ‘ ‘, ‘\’, ‘!‘ or ‘’‘. These characters have no special purpose.}
\]

\[
[\\\\\\\\] \quad \text{- escape syntax. Matches ‘[‘, ‘]‘ or ‘.}
\]

Using the rules above, a file name pattern can be constructed:

ftp://example.com/some/path/ [ a-z [ :upper: ] \\\\\\\\\].jpeg

This feature is only supported for FTP download. Not for SFTP or HTTP.
(Read and Write property)
See also WILDCARDMATCH option in CURL manual.

58.10.320 OptionXOAuth2Bearer as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The XOAUTH2 bearer token.
Notes: (Read and Write property)
See also XOAUTH2_BEARER option in CURL manual.

58.10.321 OutputData as String

MBS CURL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The output data from CURL.
Notes:
If CollectOutputData property is true, the plugin puts the data received in write event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object.
(Read only property)

58.10.322 Paused as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Whether transfer is paused.
Notes:
You can set it to true while transfer runs to pause it.
(Read and Write property)

58.10.323 ProgressDownloadCurrent as Int64

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Bytes downloaded so far.
**Notes:** (Read only property)

58.10.324 ProgressDownloadTotal as Int64

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Bytes to download in total.
**Notes:** (Read only property)

58.10.325 ProgressPercent as Double

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Current download/upload progress in percent.
**Notes:**
Range from 0 to 100.
(Read only property)

58.10.326 ProgressUploadCurrent as Int64

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Bytes uploaded so far.
**Notes:** (Read only property)

58.10.327 ProgressUploadTotal as Int64

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Bytes to upload in total.
**Notes:** (Read only property)
58.10. CLASS CURLNMBS

58.10.328 Version as CURLNVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns a version object to a filled with information about various run-time features in libCURL. Notes: (Read only property)

58.10.329 YieldTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Whether plugin should yield time. Notes: If set the plugin will yield time to Realbasic back so threads and timers work while you download.

Seems like in RB 2009 this property only has effect if you run CURL in a thread. (Read and Write property)

58.10.330 Events

58.10.331 ChunkBegin(FileInfo as CURLNFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: The event called on begin of a new chunk. Notes: If splitting of data transfer is enabled, this callback is called before download of an individual chunk started. Note that parameter "remains" works only for FTP wildcard downloading (for now), otherwise is not used.

58.10.332 ChunkEnd(FileInfo as CURLNFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: Download of a chunk ended. Notes: If splitting of data transfer is enabled this callback is called after download of an individual chunk finished. This event is called for skipped or downloaded files.
58.10.333 DebugMessage(infotype as Integer, data as string, dataSize as Integer)

Notes:
You may need to set OptionVerbose to true.

infotype constants:

<table>
<thead>
<tr>
<th>Constant</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>kInfo_TEXT</td>
<td>0</td>
<td>The data is informational text.</td>
</tr>
<tr>
<td>kInfo_HEADER_IN</td>
<td>1</td>
<td>The data is header (or header-like) data received from the peer.</td>
</tr>
<tr>
<td>kInfo_HEADER_OUT</td>
<td>2</td>
<td>The data is header (or header-like) data sent to the peer.</td>
</tr>
<tr>
<td>kInfo_DATA_IN</td>
<td>3</td>
<td>The data is protocol data received from the peer.</td>
</tr>
<tr>
<td>kInfo_DATA_OUT</td>
<td>4</td>
<td>The data is protocol data sent to the peer.</td>
</tr>
<tr>
<td>kInfo_SSL_DATA_IN</td>
<td>5</td>
<td>The data is protocol data received from the peer.</td>
</tr>
<tr>
<td>kInfo_SSL_DATA_OUT</td>
<td>6</td>
<td>The data is protocol data sent to the peer.</td>
</tr>
</tbody>
</table>

If you set CollectDebugData, the plugin will collect the messages and provide them via the DebugData property. You can still use this event to write your own log instead of in addition.

58.10.334 FileNameMatch(Pattern as String, Name as String) as Integer

Notes:
If you don’t implement this event, you get the default implementation from CURL.
Return kFileNameMatchNoMatch, kFileNameMatchIsMatch or kFileNameMatchFailed.

58.10.335 Finished(Result as Integer)

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: The event called when transfer has finished.
Notes:
For Perform and PerformMT it is called before Perform function returns, so in PerformMT this is called on the thread.
For use with CURLNMultiMBS, it is called after TransferFinished event and before TransfersFinished event. If you want to modify GUI and use PeformMT, you may need to start a timer to do so.
58.10. CLASS CURLNMBS

58.10.336 Header(data as string, dataSize as Integer) as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
New Header data was received.
**Notes:**
You can get error 23 if you don’t return lenb(data) in this event.
Or just leave it empty so RB will not include it in your application the plugin will return lenb(data) itself.

If you set CollectHeaderData to true, the plugin will collect the messages and provide them via the Header-
Data property. You can still use this event to write your own log instead of in addition.

58.10.337 Progress(dltotal as Int64, dlnow as Int64, ultotal as Int64, ulnow as Int64, percent as Double) as boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
An event to report progress of ongoing transfers.
**Notes:**
This function gets called by libCURL with a frequent interval during operation (roughly once per second)
no matter if data is being transferred or not. Unknown/unused argument values passed to the callback will
be set to zero (like if you only download data, the upload size will remain 0).
Returning a true from this event will cause libCURL to abort the transfer and return kError_ABORTED_BY_CALLBACK.

You can run CURL from a thread to download several things at the same time or keep the GUI more
responsive. For better GUI, you can even call a method like app.DoEvents to get the GUI updated more
often.

When sending email, ultotal may be zero. In that case use OptionInFileSize to know size of email to upload.

58.10.338 Read(count as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This event gets called by libCURL as soon as it needs to read data in order to send it to the peer.
**Notes:**
Return the number of bytes requested. Never return a string with lenb(string)>count. You can return 0 to
inform about end of file.

If you stop the current transfer by returning 0 "pre-maturely" (i.e before the server expected it, like when
you’ve told you will upload N bytes and you upload less than N bytes), you may experience that the server
"hangs" waiting for the rest of the data that won’t come.
The read event may return `CURL_READFUNC_ABORT` (& h10000000) to stop the current operation immediately, resulting in a `kError_ABORTED_BY_CALLBACK` error code from the transfer (Added in 7.12.1)

This event is not called when using PerformMT.

If you provide Input data via `SetInputData` or `OpenMTInputFile` method, this event is not called and data is taken from the data you provided.

### 58.10.339 RestartRead() as boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An event to inform you that reading on the file needs to start at the beginning again.  
**Notes:**  
Return true on success.  
If you use a binarystream for reading you will have to set position to 0 in this event.

This event is not called when using PerformMT.

### 58.10.340 Seek(pos as Int64, whence as Integer) as Integer

MBS CURL Plugin, Plugin Version: 12.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Called when CURL needs to perform a seek.  
**Notes:**  
Normally only needed if you resume a download (Seek forward) or upload is reset (seek back).  
Whence is kSeekOriginCurrent, kSeekOriginEnd or kSeekOriginSet.  
Please return one of this constants: kSeekReturnCantSeek, kSeekReturnFail or kSeekReturnOk.

### 58.10.341 SSHKey(KnownKey as string, KnownKeyLength as Integer, KnownKeyType as Integer, FoundKey as string, FoundKeyLength as Integer, FoundKeyType as Integer, MatchStatus as Integer) as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event for known hosts callback for SFTP and SCP.  
**Notes:**  
KnownKey: The known key as string encoded with base64 if KnownKeyLength is zero, otherwise the "raw" data.
KnownKeyLength: The length of the key. Zero for base64 encoded key.
KnownKeyType: The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
FoundKey: The found key as string encoded with base64 if FoundKeyLength is zero, otherwise the "raw" data.
FoundKeyLength: The length of the key. Zero for base64 encoded key.
FoundKeyType: The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
MatchStatus: The status CURL found. (0 = OK, 1 = Mismatch, 2 = Missing)

Return one of the following values:

- CURLKHSTAT_FINE_ADD_TO_FILE 0 Fine and add to file
- CURLKHSTAT_FINE 1 Fine
- CURLKHSTAT_REJECT 2 reject the connection, return an error
- CURLKHSTAT_DEFER 3 do not accept it, but we can’t answer right now so this causes a CURLE_DEFER error but otherwise the connection will be left intact etc

### 58.10.342 Write(data as string, dataSize as Integer) as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event gets called by libCURL as soon as there is data received that needs to be saved. **Notes:**

Return the number of bytes actually taken care of. If that amount differs from the amount passed to your function, it'll signal an error to the library and it will abort the transfer and return kError_WRITE_ERROR.

This function may be called with zero bytes data if the transferred file is empty.

The event function will be passed as much data as possible in all invokes, but you cannot possibly make any assumptions. It may be one byte, it may be thousands. The maximum amount of data that can be passed to the write callback is defined in the CURL.h header file: CURL_MAX_WRITE_SIZE (16384).

If you set CollectOutputData to true, the plugin will automatically collect the data and provide it to you after the transfer with the OutputData property. This collecting feature will only work right, if there is enough free memory. You can of course still process data yourself in this event instead of in addition.

### 58.10.343 Constants

#### 58.10.344 kAUTH_ANY = & hFFFFFFFEF

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the authentication constants for the Option-HTTPAuth property.
Notes: all types set

58.10.345  kAUTH_ANYSAFE = \& hFFFFFFEE

MBS CURL Plugin, Plugin Version: 9.8.  Function: One of the authentication constants for the Option-
HTTPAuth property.

58.10.346  kAUTH_BASIC = 1

MBS CURL Plugin, Plugin Version: 9.8.  Function: One of the authentication constants for the Option-
HTTPAuth property.
Notes: Basic (default)

58.10.347  kAUTH_DIGEST = 2

MBS CURL Plugin, Plugin Version: 9.8.  Function: One of the authentication constants for the Option-
HTTPAuth property.
Notes: Digest

58.10.348  kAUTH_DIGEST_IE = 16

MBS CURL Plugin, Plugin Version: 15.2.  Function: One of the authentication constants for the Option-
HTTPAuth property.
Notes: HTTP Digest authentication with an IE flavor. Digest authentication is defined in RFC 2617 and is
a more secure way to do authentication over public networks than the regular old-fashioned Basic method.
The IE flavor is simply that libCURL will use a special "quirk" that IE is known to have used before version
7 and that some servers require the client to use.

58.10.349  kAUTH_GSSNEGOITIATE = 4

MBS CURL Plugin, Plugin Version: 9.8.  Function: One of the authentication constants for the Option-
HTTPAuth property.
Notes:
GSS-Negotiate
58.10. CLASS CURLNMBS

Please check SupportsGSSNEGOTIATE property in CURLVersionMBS class whether this is supported/implemented by your copy of the CURL library.

58.10.350 kAUTH_NEGOTIATE = 4

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the authentication constants for the OptionHTTPAuth property.

**Notes:**

HTTP Negotiate (SPNEGO) authentication. Negotiate authentication is defined in RFC 4559 and is the most secure way to perform authentication over HTTP.

You need to build libCURL with a suitable GSS-API library or SSPI on Windows for this to work.

58.10.351 kAUTH_NONE = 0

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the authentication constants for the OptionHTTPAuth property.

58.10.352 kAUTH_NTLN = 8

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the authentication constants for the OptionHTTPAuth property.

58.10.353 kAUTH_NTLN_WB = 32

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the authentication constants for the OptionHTTPAuth property.

**Notes:**

NTLM delegating to winbind helper. Authentication is performed by a separate binary application that is executed when needed. The name of the application is specified at compile time but is typically /usr/bin/ntlm_auth

Note that libCURL will fork when necessary to run the winbind application and kill it when complete, calling waitpid() to await its exit when done. On POSIX operating systems, killing the process will cause a SIGCHLD signal to be raised (regardless of whether OptionNoSignal is set), which must be handled intelligently by the application. In particular, the application must not unconditionally call wait() in its SIGCHLD signal handler to avoid being subject to a race condition. This behavior is subject to change in future versions of libCURL.
58.10.354  kAUTH_Only = & h80000000

MBS CURL Plugin, Plugin Version: 15.2.  Function: One of the authentication constants for the Option-HTTPAuth property.
Notes: This is a meta symbol. OR this value together with a single specific auth value to force libCURL to probe for un-restricted auth and if not, only that single auth algorithm is acceptable.

58.10.355  kChunkBeginFailed = 1

MBS CURL Plugin, Plugin Version: 15.2.  Function: One of the result values for the ChunkBegin event.
Notes: Failed, so we exit downloads.

58.10.356  kChunkBeginOK = 0

MBS CURL Plugin, Plugin Version: 15.2.  Function: One of the result values for the ChunkBegin event.
Notes: OK, download this file.

58.10.357  kChunkBeginSkip = 2

MBS CURL Plugin, Plugin Version: 15.2.  Function: One of the result values for the ChunkBegin event.
Notes: Skip the file.

58.10.358  kChunkEndFailed = 1

MBS CURL Plugin, Plugin Version: 15.2.  Function: One of the result values for the ChunkEnd event.
Notes: Failed, so we exit downloads.

58.10.359  kChunkEndOK = 0

MBS CURL Plugin, Plugin Version: 15.2.  Function: One of the result values for the ChunkEnd event.
Notes: Download success.
58.10.360  kError_ABORTED_BY_CALLBACK = 42

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.10.361  kError_AGAIN = 81

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** socket is not ready for send/recv, wait till it’s ready and try again (Added in CURL 7.18.2)

58.10.362  kError_BAD_CONTENT_ENCODING = 61

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** Unrecognized transfer encoding

58.10.363  kError_BADDOWNLOAD_RESUME = 36

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** couldn’t resume download

58.10.364  kError_BAD_FUNCTION_ARGUMENT = 43

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.10.365  kError_CHUNK_FAILED = 88

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Chunk callback reported error.

58.10.366  kError_CONV_FAILED = 75

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Conversion failed.
58.10.367  kError_CONV_REQD = 76

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. 
**Notes:** Not used with plugin.

58.10.368  kError_COULDNT_CONNECT = 7

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. 
**Notes:** Could not connect. Proxy set? Firewall open?

58.10.369  kError_COULDNT_RESOLVE_HOST = 6

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.10.370  kError_COULDNT_RESOLVE_PROXY = 5

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.10.371  kError_FAILED_INIT = 2

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.10.372  kError_FILESIZE_EXCEEDED = 63

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. 
**Notes:** Maximum file size exceeded

58.10.373  kError_FILE_COULDNT_READ_FILE = 37

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.
58.10. CLASS CURLNMBS

58.10.374  kError_FTP_ACCEPT_FAILED = 10

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the error constants for the Error event. **Notes:** While waiting for the server to connect back when an active FTP session is used, an error code was sent over the control connection or similar.

58.10.375  kError_FTP_ACCEPT_TIMEOUT = 12

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the error constants for the Error event. **Notes:** During an active FTP session while waiting for the server to connect, the OptionAcceptTimeoutMS (or the internal default) timeout expired.

58.10.376  kError_FTP_BAD_FILE_LIST = 87

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Unable to parse FTP file list.

58.10.377  kError_FTP_CANT_GET_HOST = 15

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.10.378  kError_FTP_COULDNT_RETR_FILE = 19

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.10.379  kError_FTP_COULDNT_SET_TYPE = 17

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.

58.10.380  kError_FTP_COULDNT_USE_REST = 31

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** the REST command failed
58.10.381 kError_FTP_PORT_FAILED = 30

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** FTP PORT operation failed.

58.10.382 kError_FTP_PRET_FAILED = 84

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** a PRET command failed.

58.10.383 kError_FTP_WEIRD_227_FORMAT = 14

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.10.384 kError_FTP_WEIRD_PASS_REPLY = 11

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.10.385 kError_FTP_WEIRD_PASV_REPLY = 13

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.10.386 kError_FTP_WEIRD_SERVER_REPLY = 8

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.10.387 kError_FUNCTION_NOT_FOUND = 41

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.10.388 kError_GOT NOTHING = 52

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** when this is a specific error.
58.10.389  \textit{kError\_HTTP2} = 16

MBS CURL Plugin, Plugin Version: 15.2. \textbf{Function}: One of the error constants for the Error event.  
\textbf{Notes}: A problem was detected in the HTTP2 framing layer. This is somewhat generic and can be one out of several problems, see the error buffer for details.

58.10.390  \textit{kError\_HTTP2\_STREAM} = 92

MBS CURL Plugin, Plugin Version: 18.2. \textbf{Function}: One of the error constants for the Error event.  
\textbf{Notes}: stream error in HTTP/2 framing layer

58.10.391  \textit{kError\_HTTP\_POST\_ERROR} = 34

MBS CURL Plugin, Plugin Version: 9.8. \textbf{Function}: One of the error constants for the Error event.

58.10.392  \textit{kError\_HTTP\_RETURNED\_ERROR} = 22

MBS CURL Plugin, Plugin Version: 9.8. \textbf{Function}: One of the error constants for the Error event.

58.10.393  \textit{kError\_INTERFACE\_FAILED} = 45

MBS CURL Plugin, Plugin Version: 9.8. \textbf{Function}: One of the error constants for the Error event.

58.10.394  \textit{kError\_LDAP\_CANNOT\_BIND} = 38

MBS CURL Plugin, Plugin Version: 9.8. \textbf{Function}: One of the error constants for the Error event.

58.10.395  \textit{kError\_LDAP\_INVALID\_URL} = 62

MBS CURL Plugin, Plugin Version: 9.8. \textbf{Function}: One of the error constants for the Error event.  
\textbf{Notes}: Invalid LDAP URL
58.10.396  
**kError_LDAP_SEARCH_FAILED = 39**

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.10.397  
**kError_LOGIN_DENIED = 67**

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. 
**Notes:** user, password or similar was not accepted and we failed to login

58.10.398  
**kError_NOT_BUILT_IN = 4**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the error constants for the Error event. 
**Notes:** A requested feature, protocol or option was not found built-in in this libCURL due to a build-time decision. This means that a feature or option was not enabled or explicitly disabled when libCURL was built and in order to get it to function you have to get a rebuilt libCURL.

58.10.399  
**kError_NO_CONNECTION_AVAILABLE = 89**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the error constants for the Error event. 
**Notes:** For internal use only, will never be returned by libCURL. 
No connection available, the session will be queued. (added in 7.30.0)

58.10.400  
**kError_OK = 0**

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.10.401  
**kError_OPERATION_TIMEDOUT = 28**

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.

58.10.402  
**kError_OUT_OF_MEMORY = 27**

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.
58.10. CLASS CURLNMBS

58.10.403 kError_PARTIAL_FILE = 18

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.10.404 kError_PEER_FAILED_VERIFICATION = 51

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.

58.10.405 kError_QUOTE_ERROR = 21

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.

58.10.406 kError_RANGE_ERROR = 33

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.

58.10.407 kError_READ_ERROR = 26

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** could open/read from file

58.10.408 kError_RECURSIVE_API_CALL = 93

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the error constants for the Error event. **Notes:** an api function was called from inside a callback/event.

58.10.409 kError_RECV_ERROR = 56

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** failure in receiving network data
58.10.410  kError_REMOTE_ACCESS_DENIED = 9

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.

58.10.411  kError_REMOTE_DISK_FULL = 70

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Out of disk space on server.

58.10.412  kError_REMOTE_FILE_EXISTS = 73

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** File already exists.

58.10.413  kError_REMOTE_FILE_NOT_FOUND = 78

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Remote file not found.

58.10.414  kError_RTSP_CSEQ_ERROR = 85

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Mismatch of RTSP CSeq numbers.

58.10.415  kError_RTSP_SESSION_ERROR = 86

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Mismatch of RTSP Session Identifiers

58.10.416  kError_SEND_ERROR = 55

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** Failed sending network data
58.10.417  kError_SEND_FAIL_REWIND = 65

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** Sending the data requires a rewind that failed

58.10.418  kError_SSH = 79

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Error from the SSH layer, somewhat generic so the error message will be of interest when this has happened.

58.10.419  kError_SSL_CACERT = 60

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:**

problem with the CA cert (path?)

You can often workaround by setting OptionSSLVerifyPeer = 0 and OptionSSLVerifyHost = 0. But that reduces security.

58.10.420  kError_SSL_CACERT_BADFILE = 77

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Could not load CACERT file, missing or wrong format.

58.10.421  kError_SSL_CERTPROBLEM = 58

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** problem with the local certificate

58.10.422  kError_SSL_CIPHER = 59

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** couldn’t use specified cipher
58.10.423 kError_SSL_CONNECT_ERROR = 35

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.  
**Notes:** wrong when connecting with SSL

58.10.424 kError_SSL_CRL_BADFILE = 82

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.  
**Notes:** Could not load CRL file, missing or wrong format (Added in 7.19.0)

58.10.425 kError_SSL_ENGINE_INITFAILED = 66

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.  
**Notes:** failed to initialise ENGINE

58.10.426 kError_SSL_ENGINE_NOTFOUND = 53

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.  
**Notes:** SSL crypto engine not found

58.10.427 kError_SSL_ENGINE_SETFAILED = 54

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.  
**Notes:** can not set SSL crypto engine as default

58.10.428 kError_SSL_INVALIDCERTSTATUS = 91

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the error constants for the Error event.  
**Notes:** invalid certificate status

58.10.429 kError_SSL_ISSUER_ERROR = 83

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.  
**Notes:** Issuer check failed. (Added in CURL 7.19.0)
58.10.430  kError_SSL_PINNEDPUBKEYNOTMATCH = 90

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the error constants for the Error event.  
**Notes:** specified pinned public key did not match.

58.10.431  kError_SSL_SHUTDOWN_FAILED = 80

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.  
**Notes:** Failed to shut down the SSL connection.

58.10.432  kError_TELNET_OPTION_SYNTAX = 49

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.  
See also:

- 58.10.433 kError_TELNET_OPTION_SYNTAX = 49

58.10.433  kError_TELNET_OPTION_SYNTAX = 49

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.  
**Notes:** Malformed telnet option  
See also:

- 58.10.432 kError_TELNET_OPTION_SYNTAX = 49

58.10.434  kError_TFTP_ILLEGAL = 71

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.  
**Notes:** Illegal TFTP operation.

58.10.435  kError_TFTP_NOSUCHUSER = 74

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.  
**Notes:** No such user.
58.10.436  kError_TFTP_NOTFOUND = 68

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** File not found on server.

58.10.437  kError_TFTP_PERM = 69

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Permission problem on server.

58.10.438  kError_TFTP_UNKNOWNID = 72

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Unknown transfer ID.

58.10.439  kError_TOO_MANY_REDIRECTS = 47

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** catch endless re-direct loops

58.10.440  kError_UNKNOWN_TELNET_OPTION = 48

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** User specified an unknown option

58.10.441  kError_UNSUPPORTED_PROTOCOL = 1

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.10.442  kError_UPLOAD_FAILED = 25

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.
58.10.443  kError_URL_MALFORMAT = 3

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.10.444  kError_USE_SSL_FAILED = 64

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. 
**Notes:** Requested FTP SSL level failed

58.10.445  kError_WRITE_ERROR = 23

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.10.446  kFileNameMatchFailed = 2

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the possible return values for FileNameMatch event. 
**Notes:** Failed.

58.10.447  kFileNameMatchIsMatch = 0

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the possible return values for FileNameMatch event. 
**Notes:** Is Match.

58.10.448  kFileNameMatchNoMatch = 1

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the possible return values for FileNameMatch event. 
**Notes:** No match.

58.10.449  kFormArray = 8

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.
58.10.450  kFormBuffer = 11
MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.10.451  kFormBufferLength = 13
MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.10.452  kFormBufferPtr = 12
MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.10.453  kFormContentHeader = 15
MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.10.454  kFormContentsLength = 6
MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.10.455  kFormContentType = 14
MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.10.456  kFormCopyContents = 4
MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.10.457  kFormCopyName = 1

**58.10.540**  kSSHAuthAgent = 16

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSH Authentication modes. **Notes:** agent (ssh-agent, pageant...)

**58.10.541**  kSSHAuthAny = -1

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSH Authentication modes. **Notes:** Any allowed

**58.10.542**  kSSHAuthDefault = -1

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSH Authentication modes. **Notes:** Default: Any

**58.10.543**  kSSHAuthGSSAPI = 32

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSH Authentication modes. **Notes:** gssapi (kerberos, ...)

**58.10.544**  kSSHAuthHost = 4

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSH Authentication modes. **Notes:** host key files

**58.10.545**  kSSHAuthKeyboard = 8

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSH Authentication modes. **Notes:** keyboard interactive
58.10. **CLASS CURLNMBS**

58.10.546  **kSSHAuthNone = 0**

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSH Authentication modes.  
**Notes:** none allowed, silly but complete

58.10.547  **kSSHAuthPassword = 2**

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSH Authentication modes.  
**Notes:** password

58.10.548  **kSSHAuthPublicKey = 1**

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSH Authentication modes.  
**Notes:** public/private key files

58.10.549  **kSSLVersionDefault = 0**

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the SSL Version constants for the OptionSSLVersion property.

58.10.550  **kSSLVersionSSLv2 = 2**

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the SSL Version constants for the OptionSSLVersion property.

58.10.551  **kSSLVersionSSLv3 = 3**

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the SSL Version constants for the OptionSSLVersion property.

58.10.552  **kSSLVersionTLSv1 = 1**

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the SSL Version constants for the OptionSSLVersion property.
58.10.553   kSSLVersionTLSv10 = 4

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the SSL Version constants for the OptionSSLVersion property.  
**Notes:** TLSv1.0 (Added in 7.34.0)

58.10.554   kSSLVersionTLSv11 = 5

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the SSL Version constants for the OptionSSLVersion property.  
**Notes:** TLSv1.1 (Added in 7.34.0)

58.10.555   kSSLVersionTLSv12 = 6

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the SSL Version constants for the OptionSSLVersion property.  
**Notes:** TLSv1.2 (Added in 7.34.0)

58.10.556   kSSLVersionTLSv13 = 7

MBS CURL Plugin, Plugin Version: 17.2. **Function:** One of the SSL Version constants for the OptionSSLVersion property.  
**Notes:** TLSv1.3

58.10.557   kTimeConditionIfModifiedSince = 1

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the time condition constants for the OptionTimeCondition property.

58.10.558   kTimeConditionIfUnModifiedSince = 2

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the time condition constants for the OptionTimeCondition property.
58.10.559  kTimeConditionNone = 0

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the time condition constants for the OptionTimeCondition property.
**Notes:** No condition.

58.10.560  kUseSSLall = 3

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL constants for the OptionFTPSSSL property.
**Notes:** Require SSL for all communication or fail with kError_FTP_SSL_FAILED.

58.10.561  kUseSSLcontrol = 2

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL constants for the OptionFTPSSSL property.
**Notes:** Require SSL for the control connection or fail with kError_FTP_SSL_FAILED.

58.10.562  kUseSSLnone = 0

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL constants for the OptionFTPSSSL property.
**Notes:** Don’t attempt to use SSL.

58.10.563  kUseSSLtry = 1

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL constants for the OptionFTPSSSL property.
**Notes:** Try using SSL, proceed as normal otherwise.
58.11 class CURLNMimePartMBS

58.11.1 class CURLNMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for mime parts.

**Notes:**
You can provide data via file path, folderitem, data in memoryblock or string.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

58.11.2 Methods

58.11.3 Constructor

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

58.11.4 Headers as String()

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries header.

58.11.5 SetHeaders(headers() as String)

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets header.

58.11.6 Properties

58.11.7 DataMemory as Memoryblock

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The mime part data source from memory data.
**Notes:** (Read and Write property)
58.11.8 DataString as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The mime part data source from memory data.
**Example:**
```vbs
dim c as new CURLNMBS

// add mime
dim p as CURLNMimePartMBS = c.AddMimePart

p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"

C.FinishMime
// now you can send...
```

**Notes:** (Read and Write property)

58.11.9 Encoding as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The mime data transfer encoder.
**Notes:**
If set to binary, 8bit, 7bit, base64 or quoted-printable, the matching encoding is applied.
(Read and Write property)

58.11.10 File as Folderitem

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The file to stream.
**Notes:**
When you set property, the plugin will open file and may raise IOException on failure.
(Read and Write property)
58.11.11 FileName as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The mime part remote file name.
**Notes:**
If mime type is not set, we pick extension from file name.
This includes gif, jpg, jpeg, png, svg, txt, htm, html, pdf and xml file extensions.
(Read and Write property)

58.11.12 FilePath as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The mime part data source from named file.
**Notes:** (Read and Write property)

58.11.13 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The last error code.
**Notes:** (Read and Write property)

58.11.14 MimeType as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The mime part type.
**Notes:** (Read and Write property)

58.11.15 Name as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The mime/form part name.
**Notes:** (Read and Write property)

58.11.16 Parent as Variant

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The parent object.
58.11. Constants

58.11.17 kEncoding7bit = "7bit"

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the encoding modes. **Notes:** 7bit

58.11.18 kEncoding8bit = "8bit"

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the encoding modes. **Notes:** 8bit

58.11.19 kEncodingBase64 = "base64"

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the encoding modes. **Notes:** Base64

58.11.20 kEncodingBinary = "binary"

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the encoding modes. **Notes:** Binary mode

58.11.21 kEncodingNone = ""

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the encoding modes. **Notes:** No mode, so data is passed through and header has no encoding defined.

58.11.22 kEncodingQuotedPrintable = "quoted-printable"

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the encoding modes. **Notes:** Quoted printable
58.11.24  kMimeTypeGIF = "image/gif"

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the mime types.
**Notes:** GIF

58.11.25  kMimeTypeHTML = "text/html"

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the mime types.
**Notes:** HTML

58.11.26  kMimeTypeJPEG = "image/jpeg"

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the mime types.
**Notes:** JPEG

58.11.27  kMimeTypePDF = "application/pdf"

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the mime types.
**Notes:** PDF

58.11.28  kMimeTypePNG = "image/png"

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the mime types.
**Notes:** PNG

58.11.29  kMimeTypeSVG = "image/svg+xml"

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the mime types.
**Notes:** SVG

58.11.30  kMimeTypeText = "text/plain"

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the mime types.
**Notes:** Text
58.11. CLASS CURLNMIMEPARTMBS

58.11.31  kMimeTypeXML = "application/xml"

MBS CURL Plugin, Plugin Version: 18.2. Function: One of the mime types. Notes: XML
58.12 class CURLNMissingFunctionExceptionMBS

58.12.1 class CURLNMissingFunctionExceptionMBS

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An exception raised if a CURL library function is not loaded. **Notes:**
If you call load library before you use the CURLNMBS Constructor, you should never see this. Subclass of the RuntimeException class.
58.13. **CLASS CURLNMULTIMBS**

### 58.13 class CURLNMultiMBS

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for multiple CURL transfers running in parallel.

#### 58.13.2 Methods

#### 58.13.3 AddCURL(CURL as CURLNMBS) as boolean

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Add a standard CURL handle to the multi stack.
**Notes:** Lasterror is set.

#### 58.13.4 CURLs as CURLNMBS()

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries list of current CURL instances.

#### 58.13.5 ErrorString(ErrorCode as Integer) as String

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries text message for a given error code.

#### 58.13.6 Perform

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Checks for things to see.
**Notes:**
When the app thinks there’s data available for CURL it calls this function to read/write whatever there is right now. This returns as soon as the reads and writes are done. This function does not require that there actually is data available for reading or that data can be written, it can be called just in case.
Lasterror is set. This only provides errors etc regarding the whole multi stack. There might still have occurred problems on individual transfers even when this returns OK.
Sets RunningTransfers property.

---

**58.13.7 RemoveCURL(CURL as CURLNMBS) as boolean**

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes a CURL handle from the multi stack again.  
**Notes:**  
Lasterror is set.  
Plugin calls this automatically when TransferFinished event was called.

---

**58.13.8 Properties**

**58.13.9 ChunkLengthPenaltySize as Int64**

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A connection with a chunk length longer than this will not be considered for pipelining.  
**Notes:** (Read and Write property)

---

**58.13.10 ContentLengthPenaltySize as Int64**

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A connection with a content-length longer than this will not be considered for pipelining.  
**Notes:** (Read and Write property)

---

**58.13.11 Handle as Integer**

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.  
**Notes:** (Read only property)

---

**58.13.12 Lasterror as Integer**

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code.  
**Notes:** (Read and Write property)
58.13. **MaxConnects as Integer**

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maximum number of entries in the connection cache.  
**Notes:** (Read and Write property)

58.13.14 **MaxHostConnections as Integer**

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maximum number of (pipelining) connections to one host.  
**Notes:** (Read and Write property)

58.13.15 **MaxPipelineLength as Integer**

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maximum number of requests in a pipeline.  
**Notes:** (Read and Write property)

58.13.16 **MaxTotalConnections as Integer**

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maximum number of open connections in total.  
**Notes:** (Read and Write property)

58.13.17 **Pipelining as Integer**

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set to 1 to enable pipelining for this multi handle.  
**Notes:**  
Only for HTTP protocol.  
Used to be a boolean property for 15.0 to 18.1, but changed to integer for 18.2.  
(Read and Write property)

58.13.18 **RunningTransfers as Integer**

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of running transfers.
58.13.19 Events

58.13.20 TransferFinished(CURL as CURLNMBS, result as Integer, RemainingFinishedTransfers as Integer)

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One transfer finished.

**Notes:**
Query CURL object for details.
Result is the result of the transfer as returned by Perform method of CURL object.
RemainingFinishedTransfers is how many transfers are also finished and will be called right after this event.

This event fires always when the queue is empty.
You may want to turn off the timer calling Perform method when this event fires.
Later you can start timer again if you call Add method.

58.13.21 TransfersFinished

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** All pending transfers finished.

58.13.22 Constants

58.13.23 kErrorAddedAlready = 7

MBS CURL Plugin, Plugin Version: 15.0. **Function:** One of the multi interface error codes.
**Notes:** An easy handle already added to a multi handle was attempted to get added - again.

58.13.24 kErrorBadEadyHandle = 2

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the multi interface error codes.
**Notes:** An easy handle was not good/valid.
58.13. **CLASS CURLNMULTIMBS**

58.13.25  **kErrorBadHandle = 1**  
MBS CURL Plugin, Plugin Version: 15.0. **Function:** One of the multi interface error codes.  
**Notes:** The passed-in handle is not a valid CURLM handle.

58.13.26  **kErrorBadSocket = 5**  
MBS CURL Plugin, Plugin Version: 15.0. **Function:** One of the multi interface error codes.  
**Notes:** The passed in socket argument did not match.

58.13.27  **kErrorCallPerform = -1**  
MBS CURL Plugin, Plugin Version: 15.0. **Function:** One of the multi interface error codes.  
**Notes:** Please call Perform soon to do some tasks.

58.13.28  **kErrorInternalError = 4**  
MBS CURL Plugin, Plugin Version: 15.0. **Function:** One of the multi interface error codes.  
**Notes:** This is a libCURL bug.

58.13.29  **kErrorOK = 0**  
MBS CURL Plugin, Plugin Version: 15.0. **Function:** One of the multi interface error codes.  
**Notes:** Everything OK.

58.13.30  **kErrorOutOfMemory = 3**  
MBS CURL Plugin, Plugin Version: 15.0. **Function:** One of the multi interface error codes.  
**Notes:** Running low on memory.

58.13.31  **kErrorRecursiveAPICall = 8**  
MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the multi interface error codes.  
**Notes:** An api function was called from inside an event.
58.13.32  kErrorUnknownOption = 6

MBS CURL Plugin, Plugin Version: 15.0. **Function:** One of the multi interface error codes.  
**Notes:** Tried to set unsupported option.

58.13.33  kPipeHTTP1 = 1

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the pipeline modes.  
**Notes:** Pipe with HTTP/1.1.

58.13.34  kPipeMultiPlex = 2

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the pipeline modes.  
**Notes:** Pipe with multiplex.

58.13.35  kPipeNothing = 0

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the pipeline modes.  
**Notes:** No piping.
58.14 class CURLNNotInitializedExceptionMBS

58.14.1 class CURLNNotInitializedExceptionMBS

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
An exception raised if CURL library is not initialized.

**Notes:**
If you call load library before you use the CURLMBS Constructor, you should never see this.
Subclass of the RuntimeException class.
58.15 class CURLNotInitializedExceptionMBS

58.15.1 class CURLNotInitializedExceptionMBS

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An exception raised if CURL library is not initialized.

**Notes:**

If you call load library before you use the CURLMBS Constructor, you should never see this.
Subclass of the RuntimeException class.
58.16  class CURLNSSLBackendMBS

58.16.1  class CURLNSSLBackendMBS

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for a SSL backend.  
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

58.16.2  Methods

58.16.3  Constructor

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

58.16.4  List as CURLNSSLBackendMBS()

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Lists the backends.  
**Example:**

```vbscript
dim list() as CURLNSSLBackendMBS = CURLNSSLBackendMBS.List

for each l as CURLNSSLBackendMBS in list
    MsgBox l.name
next
```

**Notes:** The list may not be available if called too late.

58.16.5  SetSSLBackend(id as Integer) as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the SSL backend.  
**Notes:**
When built with multiple SSL backends, SetSSLBackend() allows to choose one. This function can only be called once, and it must be called *before* CURL constructor().
The backend can be identified by the id (e.g. CURLSSLBACKEND_OPENSSL). The backend can also be specified via the name parameter (passing -1 as id). If both id and name are specified, the name will be ignored. If neither id nor name are specified, the function will fail with CURLSSLSET_UNKNOWN_BACKEND and set the "avail" pointer to the NULL-terminated list of available backends.

Upon success, the function returns kErrorOK.
If the specified SSL backend is not available, the function returns kErrorUnknownBackend.

The SSL backend can be set only once. If it has already been set, a subsequent attempt to change it will result in a kErrorTooLate.

Returns nil, if there are no backends to choose.
See also:

- 58.16.6 SetSSLBackend(name as string) as Integer

58.16.6 SetSSLBackend(name as string) as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the SSL backend.
**Notes:**
When built with multiple SSL backends, SetSSLBackend() allows to choose one. This function can only be called once, and it must be called *before* CURL constructor().

The backend can be identified by the id (e.g. CURLSSLBACKEND_OPENSSL). The backend can also be specified via the name parameter (passing -1 as id). If both id and name are specified, the name will be ignored. If neither id nor name are specified, the function will fail with CURLSSLSET_UNKNOWN_BACKEND and set the "avail" pointer to the NULL-terminated list of available backends.

Upon success, the function returns kErrorOK.
If the specified SSL backend is not available, the function returns kErrorUnknownBackend.

The SSL backend can be set only once. If it has already been set, a subsequent attempt to change it will result in a kErrorTooLate.

Returns nil, if there are no backends to choose.
See also:

- 58.16.5 SetSSLBackend(id as Integer) as Integer
58.16.7 Properties

58.16.8 ID as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The ID of this SSL backend.
**Notes:** (Read only property)

58.16.9 Name as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of this SSL backend.
**Notes:** (Read only property)

58.16.10 Constants

58.16.11 kErrorNoBackends = 3

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the error codes.
**Notes:** libcurl was built without any SSL support

58.16.12 kErrorOK = 0

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the error codes.
**Notes:** OK

58.16.13 kErrorTooLate = 2

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the error codes.
**Notes:** You can’t set SSL backend after SSL initialization.

58.16.14 kErrorUnknownBackend = 1

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the error codes.
**Notes:** Unknown backend name or ID.
**58.16.15** kSSLBackendAXTLS = 10

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL backend IDs.  
**Notes:** AXTLS

**58.16.16** kSSLBackendDarwinSSL = 9

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL backend IDs.  
**Notes:** DarwinSSL

**58.16.17** kSSLBackendGNUTLS = 2

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL backend IDs.  
**Notes:** GNUTLS

**58.16.18** kSSLBackendGSKIT = 5

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL backend IDs.  
**Notes:** GSKIT

**58.16.19** kSSLBackendMBEDTLS = 11

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL backend IDs.  
**Notes:** MBEDTLS

**58.16.20** kSSLBackendNone = 0

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL backend IDs.

**58.16.21** kSSLBackendNSS = 3

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL backend IDs.  
**Notes:** NSS
58.16.22  kSSLBackendOpenSSL = 1

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL backend IDs.
**Notes:** OpenSSL or BoringSSL

58.16.23  kSSLBackendPolarSSL = 6

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL backend IDs.
**Notes:** PolarSSL

58.16.24  kSSLBackendSChannel = 8

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL backend IDs.
**Notes:** SChannel

58.16.25  kSSLBackendWolfSSL = 7

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL backend IDs.
**Notes:** WolfSSL
58.17  class CURLNVersionMBS

58.17.1  class CURLNVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A class to hold version information from libCURL.

58.17.2  Methods

58.17.3  Constructor

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constructor.

58.17.4  Protocol(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
An array containing the names protocols that libCURL supports (using lowercase letters).
**Notes:**
The protocol names are the same as would be used in URLs.
Index is zero based.

58.17.5  Properties

58.17.6  brotliVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Brothli library version string.
**Notes:**
Empty if library is not used in the CURL library you use.
(Read and Write property)

58.17.7  brotliVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Version of brotli version.
58.17. **CLASS CURLVERSIONMBS**

**Notes:** (Read and Write property)

### 58.17.8 Features as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Bits which define what features libCURL can and can’t.

**Notes:**
Use the Supports Boolean properties instead.
Additional feature bits may be found in the libCURL documentation.
(Read and Write property)

### 58.17.9 Host as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
An ascii string showing what host information that this libCURL was built for.

**Notes:**
As discovered by a configure script or set by the build environment.
e.g. ”powerpc-apple-darwin8.0”
(Read and Write property)

### 58.17.10 iconvVersionNumber as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Version number of iconv library.

**Notes:** (Read and Write property)

### 58.17.11 libidnVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Version of LibIDN used.

**Notes:**
Empty if library is not used in the CURL library you use.
(Read and Write property)
58.17.12 libsshVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Version of LibSSH2 used.
**Notes:** Empty if library is not used in the CURL library you use. (Read and Write property)

58.17.13 LibZVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An ascii string (there is no numerical version).
**Notes:** If libCURL has no libz support, this is "".
  e.g. "1.2.3"
  (Read and Write property)

58.17.14 ProtocolCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of entries in the Protocol array.
**Notes:** (Read and Write property)

58.17.15 SSLVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An ascii string for the OpenSSL version used.
**Notes:** If libCURL has no SSL support, this is "".
  e.g. "OpenSSL/0.9.7l"
  (Read and Write property)

58.17.16 SupportsASYNCHDNS as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL was built with support for asynchronous name lookups, which allows more exact timeouts (even on Windows) and less blocking when using the multi interface.
**Notes:**
58.17. **CLASS CURLVERSIONMBS**

(added in 7.10.7)
(Read only property)

### 58.17.17 SupportsBrotri as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Brotri features are present.
**Notes:** (Read only property)

### 58.17.18 SupportsConv as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Character conversions supported.
**Notes:** (Read only property)

### 58.17.19 SupportsGSSAPI as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Built against a GSS-API library.
**Notes:** (Read only property)

### 58.17.20 SupportsGSSNEGOTIATE as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL supports HTTP GSS-Negotiate
**Notes:**
(added in 7.10.6)
(Read only property)

### 58.17.21 SupportsHTTP2 as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether currently used CURL library supports HTTP2.
**Example:**

```vbnet
dim c as new CURLNMBS
dim v as CURLNVersionMBS = c.version
```
if v.SupportsHTTP2 then
MsgBox "HTTP2 is supported"
else
MsgBox "HTTP2 is not supported"
end if

Notes:
While our CURL Plugin with CURLNMBS plugin may not support this currently, you could use LoadLibrary function to load a CURL library supporting it.
(Read only property)

58.17.22 SupportsHTTPSProxy as Boolean
Notes: (Read only property)

58.17.23 SupportsIDN as Boolean
MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Whether libCURL was built with support for IDNA, domain names with international letters.
Notes: (Added in 7.12.0)
(Read only property)

58.17.24 SupportsIPV6 as Boolean
Notes: (Read only property)

58.17.25 SupportsKERBEROS4 as Boolean
58.17. **CLASS CURLVERSIONMBS**

Notes: (Read only property)

---

### 58.17.26 SupportsKerberos5 as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Kerberos V5 auth is supported.  
**Notes:** (Read only property)

---

### 58.17.27 SupportsLARGEFILE as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL was built with support for large files.  
**Notes:**

(Added in 7.11.1)  
(Read only property)

---

### 58.17.28 SupportsLIBZ as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL supports HTTP deflate using libz  
**Notes:**

(Added in 7.10)  
(Read only property)

---

### 58.17.29 SupportsMultiSSL as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Multiple SSL backends available.  
**Notes:** (Read only property)

---

### 58.17.30 SupportsNTLM as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL supports HTTP NTLM  
**Example:**

---
dim c as new CURLNMBS
dim v as CURLNVersionMBS = c.Version

MsgBox "SupportsNTLM: " +str(v.SupportsNTLM)

Notes:
(added in 7.10.6)
(Read only property)

58.17.31 SupportsNTLMWB as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
NTLM delegation to winbind helper is supported.
**Notes:** (Read only property)

58.17.32 SupportsPSL as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Mozilla’s Public Suffix List, used for cookie domain verification.
**Notes:** (Read only property)

58.17.33 SupportsSPNEGO as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether libCURL was built with support for SPNEGO authentication
**Notes:**
(Simple and Protected GSS-API Negotiation Mechanism, defined in RFC 2478.) (added in 7.10.8)
(Read only property)

58.17.34 SupportsSSL as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether libCURL supports SSL (HTTPS/FTPS)
**Notes:**
(Added in 7.10)
(Read only property)
58.17.35  SupportsSSPI as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL was built with support for SSPI.
**Notes:**
This is only available on Windows and makes libCURL use Windows-provided functions for NTLM authentication. It also allows libCURL to use the current user and the current user’s password without the app having to pass them on. (Added in 7.13.2)
(Read only property)

58.17.36  SupportsTLSAUTHSRP as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** TLS-SRP auth is supported.
**Notes:** (Read only property)

58.17.37  SupportsUnixSockets as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unix domain sockets support.
**Notes:** (Read only property)

58.17.38  Version as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An ascii string for the libCURL version.
**Notes:**
e.g. "7.13.1"
(Read and Write property)

58.17.39  VersionNumber as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The version of libCURL as number.
**Notes:**
a 24 bit number created like this:
"<8 bits major number>| <8 bits minor number>| <8 bits patch number>".
Version 7.9.8 is therefore returned as 0x070908.
(Read and Write property)
58.18. CLASS CURLSFILEINFOMBS

58.18 class CURLSFileInfoMBS

58.18.1 class CURLSFileInfoMBS

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for file information.
**Notes:** Content of this structure depends on information which is known and is achievable (e.g. by FTP LIST parsing).

58.18.2 Properties

58.18.3 Date as Date

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The timestamp as a date object.
**Notes:**
As of plugin version 15.2 the CURL library does not parse the timestamp. So for some timestamp formats we have code in our plugin to do the parsing from the TimeString property. But this is limited. No seconds and the year is a guess. Files newer in the year than today are from last year and other files from current year. The server doesn’t provide year details.
(Read only property)

58.18.4 FileName as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The file name.
**Notes:** (Read only property)

58.18.5 FileType as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The file type.
**Notes:** (Read only property)

58.18.6 Flags as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The flags.
Notes:
Flags define which fields are set.
Also you can just use the Has properties for same information.
(Read only property)

58.18.7  GID as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The group ID.
**Notes:** (Read only property)

58.18.8  GroupString as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The group string.
**Notes:** (Read only property)

58.18.9  HardLinks as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The hard link count.
**Notes:** (Read only property)

58.18.10  HasFileName as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True if filename property is valid.
**Notes:** (Read only property)

58.18.11  HasFileType as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True if filetype property is valid.
**Notes:** (Read only property)
58.18.12 HasGID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if GID property is valid. **Notes:** (Read only property)

58.18.13 HasHardLinks as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if hardlinks property is valid. **Notes:** (Read only property)

58.18.14 HasPermissions as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if permissions property is valid. **Notes:** (Read only property)

58.18.15 HasSize as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if size property is valid. **Notes:** (Read only property)

58.18.16 HasTime as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if time and date properties have values. **Notes:** (Read only property)

58.18.17 HasUID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if UID field has a value. **Notes:** (Read only property)
58.18.18 IsDirectory as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if entry is a directory.  
**Notes:**  
Same as FileType = FileTypeDirectory.  
(Read only property)

58.18.19 IsFile as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if entry is a regular file.  
**Notes:**  
Same as FileType = FileTypeFile.  
(Read only property)

58.18.20 Permissions as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The permission value.  
**Notes:** (Read only property)

58.18.21 PermissionString as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The permission string.  
**Notes:** (Read only property)

58.18.22 Size as Int64

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The file size.  
**Notes:** (Read only property)
58.18.23 Target as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The target for a symlink. Notes: (Read only property)

58.18.24 Time as Int64

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The time value. Notes: (Read only property)

58.18.25 TimeString as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The time string parsed. Notes: (Read only property)

58.18.26 UID as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The user ID. Notes: (Read only property)

58.18.27 UserString as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The user ID as text. Notes: (Read only property)

58.18.28 Constants

58.18.29 FileTypeDeviceBlock = 3

MBS CURL Plugin, Plugin Version: 15.2. Function: One of the file type constants. Notes: Block Device
58.18.30  *FileTypeDeviceChar = 4*

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the file type constants.  
**Notes:** Character Device

58.18.31  *FileTypeDirectory = 1*

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the file type constants.  
**Notes:** Directory

58.18.32  *FileTypeDoor = 7*

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the file type constants.  
**Notes:** Door, is possible only on Sun Solaris now.

58.18.33  *FileTypeFile = 0*

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the file type constants.  
**Notes:** Regular file

58.18.34  *FileTypeNamedPipe = 5*

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the file type constants.  
**Notes:** Named Pipe

58.18.35  *FileTypeSocket = 6*

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the file type constants.  
**Notes:** Socket

58.18.36  *FileTypeSymlink = 2*

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the file type constants.  
**Notes:** Symbolic links
58.18.37  **FileTypeUnknown = 8**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the file type constants.  
**Notes:** Unknown file type. Should never occur.

58.18.38  **FlagKnownFileName = 1**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants.  
**Notes:** Filename Known

58.18.39  **FlagKnownFileType = 2**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants.  
**Notes:** File Type Known

58.18.40  **FlagKnownGID = 32**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants.  
**Notes:** GID Known

58.18.41  **FlagKnownHardLinks = 128**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants.  
**Notes:** Hardlink Count Known

58.18.42  **FlagKnownPermissions = 8**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants.  
**Notes:** Permissions Known

58.18.43  **FlagKnownSize = 64**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants.  
**Notes:** Size Known
58.18.44 FlagKnownTime = 4

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants.  
**Notes:** Time Known

58.18.45 FlagKnownUID = 16

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants.  
**Notes:** UID Known
58.19. CLASS CURLSLISTMBS

58.19.1 class CURLSListMBS

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: A class to hold a list of strings from the CURL library.
Notes: Data is copied for this list, so you can just keep it around.

58.19.2 Methods

58.19.3 Item(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns the item with the given index.
Notes: Index is zero based.

58.19.4 List as String()

58.19.5 Operator_Convert as String()

58.19.6 Properties

58.19.7 Count as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Number of items in this list.
Notes: (Read only property)
58.20 class CURLSMBS

58.20.1 class CURLSMBS

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A class to wrap libCURL.

**Notes:**
We have two variants:

CURLS* classes include a static CURL library with SSL and SSH.
CURLN* classes include a static CURL library with native SSL on Mac and Windows.
CURL* classes without S need you to supply your own CURL library.

All variants can load a custom CURL library or use the one from the system on Mac and Linux.
If no library is loaded or included, the plugin will try to load the system one in constructor.

from the website libCURL website:
http://CURL.haxx.se/libCURL/

libCURL is a free and easy-to-use client-side URL transfer library, supporting FTP, FTPS, HTTP, HTTPS,
SCP, SFTP, TFTP, TELNET, DICT, FILE and LDAP. libCURL supports SSL certificates, HTTP POST,
HTTP PUT, FTP uploading, HTTP form based upload, proxies, cookies, user+password authentication
(Basic, Digest, NTLM, Negotiate, Kerberos4), file transfer resume, http proxy tunneling and more!

libCURL is highly portable, it builds and works identically on numerous platforms, including Solaris,
NetBSD, FreeBSD, OpenBSD, Darwin, HPUX, IRIX, AIX, Tru64, Linux, UnixWare, HURD, Windows,
Amiga, OS/2, BeOs, Mac OS X, Ultrix, QNX, OpenVMS, RISC OS, Novell NetWare, DOS and more...

libCURL is free, thread-safe, IPv6 compatible, feature rich, well supported, fast, thoroughly documented
and is already used by many known, big and successful companies and numerous applications.

On Linux you may need to install libraries like ldap: apt-get install libldap-2.4.2:i386

58.20.2 Methods

58.20.3 AddMimePart as CURLSMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Adds a new blank mime part.

**Notes:** Returns mime object, so you can set properties.
58.20.4 ClearData

MBS CURL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears data properties.  
**Notes:** Resets OutputData, DebugData and HeaderData.

58.20.5 CloseMTDebugOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes the debug output file for PerformMT.  
**Notes:**  
Call after PerformMT finished.  
With 15.2 version of plugin, this also works with Perform.

58.20.6 CloseMTHeaderOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes the header output file for PerformMT.  
**Notes:**  
Call after PerformMT finished.  
With 15.2 version of plugin, this also works with Perform.

58.20.7 CloseMTInputFile

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes the input file for PerformMT.  
**Notes:**  
Call after PerformMT finished.  
With 15.2 version of plugin, this also works with Perform.

58.20.8 CloseMTOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes the output file for PerformMT.  
**Notes:**
Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

58.20.9 CreateMTDebugOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a file where debug data is written to.
**Notes:**
Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

58.20.10 CreateMTHeaderOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a file where header data is written to.
**Notes:**
Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

58.20.11 CreateMTOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a file where output data is written to.
**Notes:**
Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

58.20.12 FileInfos as CURLSFileInfoMBS()

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries array with file information.
**Notes:** If you use OptionWildcard, you find after the transfer all CURLSFileInfoMBS objects for all the files/folders found.
58.20.13 FinishMime

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finishes mime data. **Example:**

```vbnet
dim c as new CURLSMBS

// add mime
dim p as CURLMimePartMBS = c.AddMimePart

p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"

c.FinishMime

// now you can send...
```

**Notes:** Please call AddMimePart for each part you like to add and than finally FinishMime before calling perform.

58.20.14 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, FormOptions() as Integer, Texts() as string)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Add a section to a multipart/formdata HTTP POST. **Example:**

```vbnet
dim c as new CURLSMBS

dim file1 as string = "my-face.jpg"
dim file2 as string = "your-face.jpg"
dim formOptions(-1) as Integer
dim formValues(-1) as string

const CURLFORM_COPYNAME = 1
const CURLFORM_ARRAY = 8
const CURLFORM_FILE = 10

'/* Add two file section using CURLFORM_ARRAY */
formOptions.Append CURLFORM_FILE
formValues.append file1
formOptions.Append CURLFORM_FILE
formValues.append file2
```
CHAPTER 58. CURL

`c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues`

Notes:

LastError is set.

See other FormAdd methods for details.

CHAPTER 58. CURL

58.20.20 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string, FormOption4 as Integer, Number4 as Integer)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Add a section to a multipart/formdata HTTP POST.

**Notes:**
Several FormAdd methods are there. Send a request to support if you need another parameter combination.

LastError is set.

FormAdd() is used to append sections when building a multipart/formdata HTTP POST (sometimes referred to as rfc1867-style posts). Append one section at a time until you've added all the sections you want included and then you call FormFinish.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with CURLOPT_HTTPHEADER as usual.

First, there are some basics you need to understand about multipart/formdata posts. Each part consists of at least a NAME and a CONTENTS part. If the part is made for file upload, there are also a stored CONTENT-TYPE and a FILENAME. Below, we'll discuss what options you use to set these properties in the parts you want to add to your post.

The options listed first are for making normal parts. The options from CURLOPT_FILE through CURLOPT_CHANNELDATA are for file upload parts.

**CURLFORM_COPYNAME:**
followed by a string which provides the name of this part. libCURL copies the string so your application doesn't need to keep it around after this function call. If the name isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLOPT_NAMELENGTH.

**CURLFORM_PTRNAME:**
followed by a string which provides the name of this part. libCURL will use the string and refer to the data in your application, so you must make sure it remains until CURL no longer needs it. If the name isn't null terminated, or if you'd like it to contain zero bytes, you must set its length with CURLOPT_NAMELENGTH.

**CURLFORM_COPYCONTENTS:**
followed by a string to the contents of this part, the actual data to send away. libCURL copies the provided data, so your application doesn't need to keep it around after this function call. If the data isn't null terminated, or if you'd like it to contain zero bytes, you must set the length of the name with CURLOPT_CONTENTSLENGTH.
CURLFORM_PTRCONTENTS:
followed by a string to the contents of this part, the actual data to send away. libCURL will use the string and refer to the data in your application, so you must make sure it remains until CURL no longer needs it. If the data isn’t null terminated, or if you’d like it to contain zero bytes, you must set its length with CURLFORM_CONTENTSLENGTH.

CURLFORM_CONTENTSLENGTH:
followed by a long giving the length of the contents.

CURLFORM_FILECONTENT:
followed by a filename, causes that file to be read and its contents used as data in this part. This part does not automatically become a file upload part simply because its data was read from a file.

CURLFORM_FILE:
followed by a filename, makes this part a file upload part. It sets the filename field to the basename of the provided filename, it reads the contents of the file and passes them as data and sets the content-type if the given file match one of the internally known file extensions. For CURLFORM_FILE the user may send one or more files in one part by providing multiple CURLFORM_FILE arguments each followed by the filename (and each CURLFORM_FILE is allowed to have a CURLFORM_CONTENTTYPE).

CURLFORM_CONTENTTYPE:
is used in combination with CURLFORM_FILE. Followed a string which provides the content-type for this part, possibly instead of an internally chosen one.

CURLFORM_FILENAME:
is used in combination with CURLFORM_FILE. Followed a string, it tells libCURL to use the given string as the filename in the file upload part instead of the actual file name.

CURLFORM_BUFFER:
is used for custom file upload parts without use of CURLFORM_FILE. It tells libCURL that the file contents are already present in a buffer. The parameter is a string which provides the filename field in the content header.

CURLFORM_BUFFERPTR:
is used in combination with CURLFORM_BUFFER. The parameter is the string to be uploaded. You must also use CURLFORM_BUFFERLENGTH to set the number of bytes in the buffer. Keep the buffer variable alive till the upload is finished.

CURLFORM_BUFFERLENGTH:
is used in combination with CURLFORM_BUFFER. The parameter is a long which gives the length of the buffer.
CURLFORM_ARRAY:
Another possibility to send options to CURL_formadd() is the CURLFORM_ARRAY option, that passes an Integer Array and a String Array defining its value. Each element in the form is constructed using the option from the integer array and the value from the string array. All available options can be used in an array, except the CURLFORM_ARRAY option itself!

CURLFORM_CONTENTHEADER:
specifies extra headers for the form POST section. This takes a CURL_slist prepared in the usual way using CURL_slist_append and appends the list of headers to those libCURL automatically generates. The list must exist while the POST occurs, if you free it before the post completes you may experience problems.

PS: CURLFORM_FILE does not work in all CURL versions on all platforms due to a bug with integer numbers.

- 58.20.14 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, FormOptions() as Integer, Texts() as string) 10305
- 58.20.15 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string) 10306
- 58.20.16 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Number3 as Integer) 10307
- 58.20.17 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Number3 as Integer, FormOption4 as Integer, Number4 as Integer) 10308
- 58.20.18 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Number3 as Integer, FormOption4 as Integer, Text4 as string) 10308
- 58.20.19 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string) 10309
- 58.20.21 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string) 10312

58.20.21 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string)

MBS CURL Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Add a section to a multipart/formdata HTTP POST.
Notes:
Lasterror is set.
See other FormAdd methods for details.
See also:
58.20.22 FormAddField(fieldName as String, fieldValue as String, ContentType as String = "")

MBS CURL Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Add a section to a multipart/formdata HTTP POST.
**Example:**
```
    dim d as new CURLSMBS
d.FormAddField("company", "Test, Inc.")
```

**Notes:**
For fieldName and ContentType, we use UTF8 always. For fieldValue, we pass through whatever is in the string, so please make sure encoding is working. 
ContentType is optional.

58.20.23 FormAddFile(fieldName as String, fileName as String, fileContent as string, ContentType as String = "")

MBS CURL Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Add a section to a multipart/formdata HTTP POST.
**Example:**
```
    dim d as new CURLSMBS
d.FormAddFile("FileAttachment", "test.txt", "just a form test", "text/plain")
```
Notes:
For fieldName, fileName and ContentType, we use UTF8 always. For fieldValue, we pass through whatever is in the string, so please make sure encoding is working.

Filename is ignored, if empty.
ContentType is optional.

58.20.24 FormData as String

MBS CURL Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries current form data.
**Notes:** This is more for debugging as it builds form data as if we would send it.

58.20.25 FormFinish

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Finishes constructing a form.
**Example:**

```vba
dim c as new CURLSMBS
dim namebuffer as string = "name buffer"
dim namelength as Integer = lenb(namebuffer)
dim buffer as string = "test buffer"
dim htmlbuffer as string = "<HTML>test buffer</HTML>"
dim htmlbufferlength as Integer = lenb(htmlbuffer)
dim file1 as string = "my-face.jpg"
dim file2 as string = "your-face.jpg"
dim formOptions(-1) as Integer
dim formValues(-1) as string
dim recordbuffer as string = "record buffer"
dim recordlength as Integer = lenb(recordbuffer)

const CURLFORM NOTHING = 0
const CURLFORM COPYNAME = 1
const CURLFORM PTRNAME = 2
const CURLFORM NAMELENGTH = 3
const CURLFORM COPYCONTENTS = 4
const CURLFORM PTRCONTENTS = 5
const CURLFORM CONTENTSLENGTH = 6
const CURLFORM FILECONTENT = 7
```
const CURLFORM_ARRAY = 8
const CURLFORM_FILE = 10
const CURLFORM_BUFFER = 11
const CURLFORM_BUFFERPTR = 12
const CURLFORM_BUFFERLENGTH = 13
const CURLFORM_CONTENTTYPE = 14
const CURLFORM_FILENAME = 16

'/* Add simple name/content section */
c.FormAdd CURLFORM_COPYNAME, "name", CURLFORM_COPYCONTENTS, "content"

'/* Add simple name/content/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "htmlcode", CURLFORM_COPYCONTENTS, "<HTML></HTML>", CURLFORM_CONTENTTYPE, "text/html"

'/* Add name/ptrcontent section */
c.FormAdd CURLFORM_PTRNAME, "name_for_ptrcontent", CURLFORM_PTRCONTENTS, buffer

'/* Add ptrname/ptrcontent section */
c.FormAdd CURLFORM_PTRNAME, namebuffer, CURLFORM_PTRCONTENTS, buffer, CURLFORM_NAMELENGTH, namelength

'/* Add name/ptrcontent/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "html_code_with_hole", CURLFORM_PTRCONTENTS, htmlbuffer, CURLFORM_CONTENTSLENGTH, htmlbufferlength, CURLFORM_CONTENTTYPE, "text/html"

'/* Add simple file section */
c.FormAdd CURLFORM_COPYNAME, "picture", CURLFORM_FILE, "my-face.jpg"

'/* Add file/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "picture", CURLFORM_FILE, "my-face.jpg", CURLFORM_CONTENTTYPE, "image/jpeg"

'/* Add two file section */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_FILE, "my-face.jpg", CURLFORM_FILE, "your-face.jpg"

'/* Add two file section using CURLFORM_ARRAY */
formOptions.Append CURLFORM_FILE
formValues.append file1
formOptions.Append CURLFORM_FILE
formValues.append file2
'/* Add a buffer to upload */
c.FormAdd CURLFORM_COPYNAME, "name", CURLFORM_BUFFER, "data", CURLFORM_BUFFERPTR, recordbuffer, CURLFORM_BUFFERLENGTH, recordlength

'/* no option needed for the end marker */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues

'/* Add the content of a file as a normal post text value */
c.FormAdd CURLFORM_COPYNAME, "filecontent", CURLFORM_FILECONTENT, ".bashrc"

'/* Set the form info */

c.FormFinish

Notes:
Lasterror is set.
The form is assigned to the HTTPPost property.

58.20.26 GetInfoActiveSocket as integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Receive the active socket used by this curl session.

**Notes:**
If the socket is no longer valid, -1 is returned. When you finish working with the socket, the Destructor closes
the socket and cleanup other resources associated with the handle. This is typically used in combination
with OptionConnectOnly.

This option was added as a replacement for GetInfoLastSocket since that one isn’t working on all platforms.

58.20.27 GetInfoAppConnectTime as Double

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The time stamp when app connected.

58.20.28 GetInfoCertInfo as CURLSListMBS()

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries information on the certificate chain.

**Example:**
58.20. **CLASS CURLSMBS**

dim c as new CURLSMBS

// do some transfer
c.OptionURL = "https://www.mbsplugins.de/"
dim e as Integer = c.perform

// query certificate info
dim lists() as CURLSListMBS = c.GetInfoCertInfo

for each l as CURLSListMBS in lists
    MsgBox Join(l, EndOfLine)
next

MsgBox c.DebugData

---

**58.20.29 GetInfoConditionUnmet as Integer**

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Return if the time condition prevented the document to get transferred.

---

**58.20.30 GetInfoConnectTime as Double**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The time, in seconds, it took from the start until the connect to the remote host (or proxy) was completed. **Notes:** The Lasterror property is set. 0 for success.

---

**58.20.31 GetInfoContentLengthDownload as Double**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The content-length of the download.
**Notes:**
The Lasterror property is set. 0 for success.
This is the value read from the Content-Length: field.

---

**58.20.32 GetInfoContentLengthUpload as Double**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The specified size of the upload.
Notes: The Lasterror property is set. 0 for success.

58.20.33 GetInfoContentType as string

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The content-type of the downloaded object. Notes: The Lasterror property is set. 0 for success. This is the value read from the Content-Type: field. If you get "", it means that the server didn’t send a valid Content-Type header or that the protocol used doesn’t support this.

58.20.34 GetInfoCookieList as CURLSListMBS

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: A linked-list of all cookies CURL knows (expired ones, too). Notes: The Lasterror property is set. 0 for success. If there are no cookies (cookies for the handle have not been enabled or simply none have been received) the result is nil.

58.20.35 GetInfoEffectiveURL as string

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The last used effective URL. Notes: The Lasterror property is set. 0 for success.

58.20.36 GetInfoFileTime as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: the remote time of the retrieved document (in number of seconds since 1 Jan 1970 in the GMT/UTC time zone). Example:

```plaintext
// init CURL with options
dim d as new CURLSMBS
d.OptionFileTime = true
d.OptionURL = "http://www.monkeybreadsoftware.de/images/mbs.jpg"

// run query
```
58.20. CLASS CURLSMBS

\[
dim \ e \ as \ Integer = d.\text{Perform}
\]

// calculate date object
\[
dim \ da as new date(1970,1,1,0,0,0)
da.\text{TotalSeconds} = da.\text{TotalSeconds} + d.\text{GetInfoFileTime}
\]

// show date
ResultText.text = str(d.\text{GetInfoFileTime}) + " " + da.\text{ShortDate} + " " + da.\text{ShortTime}

Notes:
The Lasterror property is set. 0 for success.
If you get -1, it can be because of many reasons (unknown, the server hides it or the server doesn’t support
the command that tells document time etc) and the time of the document is unknown. Note that you must
tell the server to collect this information before the transfer is made, by using the OptionFileTime option or
you will unconditionally get a -1 back. (Added in 7.5)

58.20.37 GetInfoFTPEntryPath as string

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. \textbf{Function:}
Returns a string holding the path of the entry path.
Notes:
That is the initial path libCURL ended up in when logging on to the remote FTP server.
Empty string if unknown.

58.20.38 GetInfoHeaderSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. \textbf{Function:}
The total size of all the headers received.
Notes: The Lasterror property is set. 0 for success.

58.20.39 GetInfoHTTPAuthAvail as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. \textbf{Function:}
A bitmask indicating the authentication method(s) available.
Notes:
The Lasterror property is set. 0 for success.
The meaning of the bits is explained in the HTTPAuth option.
58.20.40  GetInfoHTTPConnectCode as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The last received proxy response code to a CONNECT request.
**Notes:**
The Lasterror property is set. 0 for success.

58.20.41  GetInfoHTTPVersion as integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get the http version used in the connection.
**Notes:** The returned value will be kHTTP_VERSION_1_0, kHTTP_VERSION_1_1, or kHTTP_VERSION_2_0, or 0 if the version can’t be determined.

58.20.42  GetInfoLastSocket as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Receive the last socket used by this CURL session.
**Notes:**
If the socket is no longer valid, -1 is returned. When you finish working with the socket, the destructor will free the handle as usual and let libCURL close the socket and cleanup other resources associated with the handle. This is typically used in combination with OptionConnectOnly. (Added in 7.15.2)

NOTE: this API is not really working on win64, since the SOCKET type on win64 is 64 bit large while its 'long' is only 32 bits.

58.20.43  GetInfoLocalIP as string

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries local IP.
**Example:**
```vba
dim c as new CURLSMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/

dim e as Integer = c.perform

// now check local IP
```
58.20.44 GetInfoLocalPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Return the local port of the most recent (primary) connection.

**Example:**
```vbs
Dim c As New CURLSMBS

// do some transfer
C.OptionURL = "http://www.mbsplugins.de/"
Dim e As Integer = c.perform

// now check local IP and port
MsgBox c.GetInfoLocalIP + ";" + Str(c.GetInfoLocalPort)
```

58.20.45 GetInfoNameLookupTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The time, in seconds, it took from the start until the name resolving was completed.

**Notes:** The Lasterror property is set. 0 for success.

58.20.46 GetInfoNumConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
How many new connections libCURL had to create to achieve the previous transfer.

**Notes:**
The Lasterror property is set. 0 for success.
(only the successful connects are counted)
Combined with RedirectCount you are able to know how many times libCURL successfully reused existing connection(s) or not. See the Connection Options to see how libCURL tries to make persistent connections to save time.

58.20.47 GetInfoOSErrno as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The errno variable from a connect failure.
Notes: The Lasterror property is set. 0 for success.

58.20.48 GetInfoPreTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The time, in seconds, it took from the start until the file transfer is just about to begin.
**Notes:**
The Lasterror property is set. 0 for success.
This includes all pre-transfer commands and negotiations that are specific to the particular protocol(s) involved.

58.20.49 GetInfoPrimaryIP as string

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Return the ip address of the most recent (primary) connection.
**Example:**
```vba
dim c as new CURLSMBS
// do some transfer
c.OptionURL = "http://www.mbsplugins.de/
dim e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryPort)
```

58.20.50 GetInfoPrimaryPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Return the (remote) port of the most recent (primary) connection.
**Example:**
```vba
dim c as new CURLSMBS
// do some transfer
c.OptionURL = "http://www.mbsplugins.de/
dim e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryPort)
```
58.20.51 GetInfoProtocol as integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get the protocol used in the connection. **Notes:** See kProtocol* constants.

58.20.52 GetInfoProxyAuthAvail as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A bitmask indicating the authentication method(s) available for your proxy authentication. **Notes:** The Lasterror property is set. 0 for success.

58.20.53 GetInfoProxySSLVerifyResult as integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get the result of the proxy certificate verification. **Notes:** receive the result of the certificate verification that was requested (using the OptionProxySSLVerifyPeer option. This is only used for HTTPS proxies.

58.20.54 GetInfoRedirectCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The total number of redirections that were actually followed. **Notes:** The Lasterror property is set. 0 for success.

58.20.55 GetInfoRedirectTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** the total time, in seconds, it took for all redirection steps include name lookup, connect, pretransfer and transfer before final transaction was started. **Notes:** The Lasterror property is set. 0 for success. RedirectTime contains the complete execution time for multiple redirections. (Added in 7.9.7)
58.20.56  **GetInfoRedirectURL as string**

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The redirection URL.

58.20.57  **GetInfoRequestSize as Integer**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The total size of the issued requests. **Notes:**

The Lasterror property is set. 0 for success.
This is so far only for HTTP requests. Note that this may be more than one request if FOLLOWLOCATION is true.

58.20.58  **GetInfoResponseCode as Integer**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last received HTTP or FTP code. **Notes:**

The Lasterror property is set. 0 for success.
This will be zero if no server response code has been received. Note that a proxy’s CONNECT response should be read with GetInfoHTTPConnectCode and not this.

With HTTP transfer, a successful transfer reports 200 here. If the page is not found, you get 404. Or any other HTTP Response code.

58.20.59  **GetInfoRTSPClientCSEQ as Integer**

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Query RTSP Client sequence counter.

58.20.60  **GetInfoRTSPCSEQRecv as Integer**

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Query RTSP sequence counter received.
58.20.61 GetInfoRTSPServerCSEQ as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Query RTSP Server sequence counter.

58.20.62 GetInfoRTSPSessionID as string

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Query RTSP session ID.

58.20.63 GetInfoScheme as string

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get the URL scheme (sometimes called protocol) used in the connection.

58.20.64 GetInfoSizeDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The total amount of bytes that were downloaded.
**Notes:**
The Lasterror property is set. 0 for success.
The amount is only for the latest transfer and will be reset again for each new transfer.

58.20.65 GetInfoSizeUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The total amount of bytes that were uploaded.
**Notes:** The Lasterror property is set. 0 for success.

58.20.66 GetInfoSpeedDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The average download speed that CURL measured for the complete download.
**Notes:** The Lasterror property is set. 0 for success.
58.20.67 GetInfoSpeedUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The average upload speed that CURL measured for the complete upload.
**Notes:** The Lasterror property is set. 0 for success.

58.20.68 GetInfoSSLEngines as CURLSListMBS

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Receive a linked-list of OpenSSL crypto-engines supported.
**Notes:**
The Lasterror property is set. 0 for success.
Note that engines are normally implemented in separate dynamic libraries. Hence not all the returned engines may be available at run-time.

58.20.69 GetInfoSSLVerifyResult as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
the result of the certification verification that was requested (using the SSLVerifyPeer option).
**Notes:** The Lasterror property is set. 0 for success.

58.20.70 GetInfoStartTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
the time, in seconds, it took from the start until the first byte is just about to be transferred.
**Notes:**
The Lasterror property is set. 0 for success.
This includes the pretransfer time and also the time the server needs to calculate the result.

58.20.71 GetInfoTotalTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The total time in seconds for the previous transfer, including name resolving, TCP connect etc.
**Notes:** The Lasterror property is set. 0 for success.
58.20. CLASS CURLSMBS

58.20.72 LoadAPI

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the default CURL library.

**Notes:**
This method is called by the constructor. So you don’t need this except you want to test explicit with APILoaded whether the loading worked before you use the CURLSMBS class.

Loads the “libCURL.dll” Windows library (with SSL support this one max require OpenSSL).
Loads on Mac OS X and Linux the libCURL file in `/usr/lib`.

58.20.73 LoadErrorString as string

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error string from the LoadLibrary function.

58.20.74 LoadLibrary(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the CURL library from the given path.

**Notes:**
You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.

Returns true on success.

See also:

- 58.20.75 LoadLibrary(path as string) as boolean

58.20.75 LoadLibrary(path as string) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the CURL library from the given path.

**Notes:**
You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.
Returns true on success.
See also:

- 58.20.74 LoadLibrary(file as folderitem) as boolean

58.20.76 OpenMTInputFile(file as folderitem, Offset as Integer = 0) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Opens input file for reading data while PerformMT runs.
**Notes:**
The read event is not called with PerformMT.
Offset is helpful for HTTP PUT requests with range, so you can start with an offset.
With 15.2 version of plugin, this also works with Perform.

58.20.77 Perform as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Perform a file transfer
**Notes:**
This function is called after all the options are set, and will perform the transfer as described in the options.

You can do any amount of calls to Perform. If you intend to transfer more than one file, you are even encouraged to do so. libCURL will then attempt to re-use the same connection for the following transfers, thus making the operations faster, less CPU intense and using less network resources. Just note that you will have to use the option properties between the invokes to set options for the following Perform.

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination, 60 for missing SSL settings, 1 for an unsupported protocol.

Possible values for the return value:

The error value -1 is used from the plugin to report that something is missing like OpenSSL dlls on Windows.

With SFTP, you can get logged error "Upload failed: Operation failed (4/-31)" when upload uses path to folder instead of file in URL.
58.20. CLASS CURLSMBS

58.20.78 PerformMT as Integer

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Perform a file transfer with preemptive multithreading.

**Notes:**
Same as Perform, but with additional multithreading.
Must be called inside a Xojo (Real Studio) thread so time yields to main thread and you can keep the GUI running.

As the actual transfer runs on a preemptive thread, the events Debug, Write, Header and Progress are called asynchronously and run a few milliseconds later. You can return true in Progress event to stop transfer, but you will get more events before the transfer is stopped.

You can call CreateMTDebugOutputFile, CreateMTHHeaderOutputFile and CreateMTOoutputFile before PerformMT to have output data be written into files. Call OpenMTInputFile to let the plugin read input data (form post or upload) from an input file.

Do not call other CURL functions on this CURLSMBS instance while PerformMT is running!

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination, 60 for missing SSL settings, 1 for an unsupported protocol.

To avoid trouble with app hanging on quit of application, be sure to set cancel property to true in window close event to cancel any pending transfer.

58.20.79 ReceiveData(byref data as Memoryblock, BytesToRead as Int64) as Int64

**Notes:**
This function receives raw data from the established connection. You may use it together with SendData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

The data memoryblock is a reference to your variable that will get the received data. BytesToRead is the maximum amount of data you can get in that buffer. The function returns the number of received bytes.

To establish the connection, set OptionConnectOnly = true before calling Perform. Note that ReceiveData does not work on connections that were created without this option.
The call will return kError AGAIN if there is no data to read - the socket is used in non-blocking mode internally. When kError AGAIN is returned, wait for data to arrive.

Wait on the socket only if ReceiveData returns kError AGAIN. The reason for this is libcurl or the SSL library may internally cache some data, therefore you should call ReceiveData until all data is read which would include any cached data.

Furthermore if you wait on the socket and it tells you there is data to read, ReceiveData may return CURLE AGAIN if the only data that was read was for internal SSL processing, and no other data is available.

On success, sets lasterror to kError_OK (0), stores the received data into memory block, and returns the number of bytes it actually read.

On failure, returns zero and lasterror is set to the appropriate error code.

The function may return kError AGAIN. In this case, use your operating system facilities to wait until data can be read, and retry.

Reading exactly 0 bytes indicates a closed connection.

If there’s no socket available to use from the previous transfer, this function returns kError UNSUPPORTED_PROTOCOL.

58.20.80 Reset

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Re-initializes all options previously set on a specified CURL handle to the default values. Notes: It does not change the following information kept in the handle: live connections, the Session ID cache, the DNS cache, the cookies and shares.

58.20.81 SendData(data as Memoryblock) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Sends raw data over a connection. Notes: This function sends arbitrary data over the established connection. You may use it together with ReceiveData to implement custom protocols using libcurl. This functionality can be particularly useful if you use
proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

Provide the data to send via parameter. We return the number of bytes sent.

To establish the connection, set OptionConnectOnly = true option before calling Perform methods. Note that SendData will not work on connections that were created without this option.

The call will return kError_AGAIN if it’s not possible to send data right now - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, please wait.

Furthermore if you wait on the socket and it tells you it’s writable, SendData may return kError_AGAIN if the only data that was sent was for internal SSL processing, and no other data could be sent.

See also:

• 58.20.82 SendData(data as string) as Integer

58.20.82 SendData(data as string) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sends raw data over a connection. **Notes:**

This function sends arbitrary data over the established connection. You may use it together with ReceiveData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

Provide the data to send via parameter. We return the number of bytes sent.

To establish the connection, set OptionConnectOnly = true option before calling Perform methods. Note that SendData will not work on connections that were created without this option.

The call will return kError_AGAIN if it’s not possible to send data right now - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, please wait.

Furthermore if you wait on the socket and it tells you it’s writable, SendData may return kError_AGAIN if the only data that was sent was for internal SSL processing, and no other data could be sent.

See also:

• 58.20.81 SendData(data as Memoryblock) as Integer
58.20.83 SetInputData(data as MemoryBlock)

MBS CURL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the input data.

**Notes:**
If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
See also:

- 58.20.84 SetInputData(data as string)

58.20.84 SetInputData(data as string)

MBS CURL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the input data.

**Notes:**
If you set input data, you do not need to use Read, RestartRead or Seek events.
The plugin will use the provided data for the upload.
Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.
See also:

- 58.20.83 SetInputData(data as MemoryBlock)

58.20.85 SetOptionConnectTo(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set list of host:port:connect-to-host:connect-to-port, overrides the URL’s host:port (only for the network layer)

58.20.86 SetOptionEmptyPassword

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets an empty password.

**Notes:**
Normally you have no password unless you set it. But if you set a password with empty string, the plugin sets CURL to use no password. This method is to use an empty password.

58.20.87 SetOptionHTTP200Aliases(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: A linked list of aliases to be treated as valid HTTP 200 responses.
Notes:
Some servers respond with a custom header response line. For example, IceCast servers respond with "ICY 200 OK". By including this string in your list of aliases, the response will be treated as a valid HTTP header line such as "HTTP/1.0 200 OK".

The alias itself is not parsed for any version strings. So if your alias is "MYHTTP/9.9", LibCURL will not treat the server as responding with HTTP version 9.9. Instead LibCURL will use the value set by option HTTPVersion.

The Lasterror property is set. 0 for success.

58.20.88 SetOptionHTTPHeader(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: A linked list of HTTP headers to pass to the server in your HTTP request.
Example:
```
Dim c As New CURLSMBS
C.SetOptionHTTPHeader Array("Expect:", "Content-Type: text/xml", "SOAPAction: ""login""")
```

Notes:
If you add a header that is otherwise generated and used by libCURL internally, your added one will be used instead. If you add a header with no contents as in 'Accept:' (no data on the right side of the colon), the internally used header will get disabled. Thus, using this option you can add new headers, replace internal headers and remove internal headers. To add a header with no contents, make the contents be two quotes: "". The headers included in the linked list must not be CRLF-terminated, because CURL adds CRLF after each header item. Failure to comply with this will result in strange bugs because the server will most likely ignore part of the headers you specified.

The first line in a request (containing the method, usually a GET or POST) is not a header and cannot be replaced using this option. Only the lines following the request-line are headers. Adding this method line in
this list of headers will only cause your request to send an invalid header.

Pass an empty array to this to reset back to no custom headers.

The Lasterror property is set. 0 for success.

**58.20.89 SetOptionMailRecipients(list() as string)**

MBS CURL Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the array of email recipient addresses.

**58.20.90 SetOptionPostQuote(list() as string)**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Pass an array to a list of FTP commands to pass to the server after your ftp transfer request.

**Example:**

dim d as CURLSMBS // your CURL object

dim ws() As String
ws.Append "RNFR Temp.txt"
ws.append "RNTO MyFile.txt"
d.SetOptionPostQuote(ws)

**Notes:**
Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.
If you want to do a ftp operation instead of download/upload/directory listing, please use SetOptionQuote.

**58.20.91 SetOptionPreQuote(list() as string)**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Pass an array to a list of FTP commands to pass to the server after the transfer type is set.

**Notes:**
Disable this operation again by using an empty array for this option. Before version 7.15.6, if you also set Nobody to true, this option didn’t work.
The Lasterror property is set. 0 for success.

58.20.92 **SetOptionProxyHeader(list() as string)**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set list of headers used for proxy requests only.

58.20.93 **SetOptionQuote(list() as string)**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Pass an array or a list of FTP commands to pass to the server prior to your ftp request. **Example:**

```dim curl as new CURLSMBS
curl.SetOptionQuote array("DELE filename.txt")```

**Notes:**
This will be done before any other FTP commands are issued (even before the CWD command).

Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.

58.20.94 **SetOptionResolve(list() as string)**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Send linked-list of name:port:address sets.

58.20.95 **SetOptionTelnetOptions(list() as string)**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Provide an array of variables to pass to the telnet negotiations. **Notes:**

The variables should be in the format `<option=value>`. libCURL supports the options 'TTYPE', 'XDISPLOC' and 'NEW_ENV'. See the TELNET standard for details.
The Lasterror property is set. 0 for success.

### 58.20.96 SetPathCAInfo(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A path holding one or more certificates to verify the peer with.

**Example:**

```plaintext
dim cacert as FolderItem // your cacert.pem file
dim CURL as new CURLMBS
CURL.OptionSSLVerifyHost = 2 // verify server
CURL.OptionSSLVerifyPeer = 1 // proofs certificate is authentic
CURL.SetPathCAInfo cacert
```

**Notes:**

This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL’s cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

### 58.20.97 SetPathCAPath(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A path to the directory holding multiple CA certificates to verify the peer with.

**Notes:**

The certificate directory must be prepared using the openssl c_rehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
58.20.98 **SetPathCRLFile**(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the path with the concatenation of CRL (in PEM format) to use in the certificate validation that occurs during the SSL exchange.

**Notes:**
When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help in the verification process. When libCURL is built with OpenSSL support, X509 V_FLAG_CRL_CHECK and X509 V_FLAG_CRL_CHECK_ALL are both set, requiring CRL check against all the elements of the certificate chain if a CRL file is passed.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)

58.20.99 **SetPathIssuerCert**(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the path to a CA certificate in PEM format.

**Notes:**
If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail). (Added in 7.19.0)

58.20.100 **SetPathNetRCFile**(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the path to the file you want libCURL to use as .netrc file.

**Notes:**
If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the a .netrc file in the
current user’s home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

58.20.101 SetupAWS(AWSAccessKeyId as String, AWSSecretAccessKey as String, 
Region as String, Service as String, Path as String, Domain as String, 
Verb as String, HashedPayload as String = ””, Headers() as String
= nil) as boolean

MBS CURL Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Setup CURL to transfer to Amazon Webservices.
**Notes:**
This implements AWS4-HMAC-SHA256 signature for credentials, sets authentication, URL, HTTP Headers 
and other parameters.
For upload or post, please set input parameters first.

Returns true on success or false on failure.

58.20.102 SetupEmail(email as Variant) as boolean

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Setups existing CURL session for an email transfer.
**Example:**

```vbnet
dim e as new CURLEmailMBS

e.SetFrom "test@test.test", "Christian Miiler"
e.Subject = "Hello World "
e.SMTPPassword = "xxx"
e.SMTPUsername = "xxx"
e.SetServer "smtp.test.test", true
e.AddTo "test@test.test", "Test Miiler"
e.PlainText = "Hello World," + EndOfLine + "Smilies: "

dim c as new CURLSMBS

if c.SetupEmail(e) then

dim er as Integer = c.Perform
if er = 0 then
MsgBox "Email sent"
```

end if
end if

Notes:
You can set your own settings like proxy after this function call.
If you like you can reuse the email and CURL objects after you sent an email, change values and send another
email.
Returns true on success or false on failure.
const kError_FunctionMissing = -1
const kError_OK = 0
const kError_UNSUPPORTED_PROTOCOL, = 1

58.20.103 UseSystemCertificates as Integer

MBS CURL Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Read certificate from system and installs them in CURL session.

**Notes:**
For macOS and Windows we load the available certificates from keychain or Windows Certificate Store and pass them to CURL. This is better than having no certificates at all.
Even better is normally to provide a cacert.pem file with only the expected certificates.

Returns number of certificates loaded.

58.20.104 Properties

58.20.105 APILoaded as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the CURL library was loaded.

**Notes:**
The CURLSMBS constructor loads the library if it was not loaded before.
(Read only property)

58.20.106 Cancel as Boolean

MBS CURL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Tells CURL instance to cancel transfer as soon as possible.

**Notes:**
Especially when using PerformMT, you may see your app hang if user tries to quit application. To prevent the hang, please set Cancel = true in window close event. So when app quits and windows get destroyed, the PerformMT will see the Cancel being true and returns soon.
(Read and Write property)

58.20.107 CollectDebugData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to collect debug message data.

**Notes:**
If you set this property to true, you can grab the data from the transfer in the DebugData Property instead of collecting the pieces yourself in the DebugMessage event. Of course this is optional and you can still
process data in DebugMessage event. Due to memory limitation, collecting data will not work right if your app is running low on memory. (Read and Write property)

58.20.108  CollectHeaderData as Boolean

Notes: If you set this property to true, you can grab the data from the transfer in the headerData Property instead of collecting the pieces yourself in the header event. Of course this is optional and you can still process data in header event. Due to memory limitation, collecting data will not work right if your app is running low on memory. (Read and Write property)

58.20.109  CollectOutputData as Boolean

Notes: If you set this property to true, you can grab the data from the transfer in the OutputData Property instead of collecting the pieces yourself in the write event. Of course this is optional and you can still process data in write event. Due to memory limitation, collecting data will not work right if your app is running low on memory. (Read and Write property)

58.20.110  DebugData as String

Notes: If CollectDebugData property is true, the plugin puts the data received in debugMessage event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object. (Read only property)
58.20.111 Handle as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal handle of the CURL object. **Notes:** (Read and Write property)

58.20.112 HeaderData as String

MBS CURL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The header data from CURL. **Notes:**
If CollectHeaderData property is true, the plugin puts the data received in header event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object. (Read only property)

58.20.113 InputData as String

MBS CURL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The input data. **Notes:**
If you set input data, you do not need to use Read, RestartRead or Seek events. The plugin will use the provided data for the upload. Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).
Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload. (Read and Write property)

58.20.114 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The lasterror from the library. **Notes:**
Set in the constructor while doing initialization. Check the kError* constants. (Read and Write property)
58.20. **CLASS CURLSMBS**

58.20.115 **LastErrorMessage as String**

MBS CURL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error message. **Notes:** (Read only property)

58.20.116 **LasterrorText as String**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The text for the lasterror code. **Notes:** Static string matched to the error code, so you have an idea what’s wrong. (Read and Write property)

58.20.117 **LibraryUsed as String**

MBS CURL Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Which library is in use. **Notes:** This is for debugging only to see which library is in use. (Read only property)

58.20.118 **LibVersion as string**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a human readable string with the version number of libCURL and some of its important components (like OpenSSL version). **Notes:** (Read only property)

58.20.119 **OptionAbstractUnixSocket as String**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Path to an abstract Unix domain socket. **Notes:** (Read and Write property) See also **ABSTRACT_UNIX_SOCKET** option in CURL manual.
58.20.120  OptionAcceptEncoding as String

MBS CURL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the contents of the Accept-Encoding: header sent in a HTTP request, and enables decoding of a response when a Content-Encoding: header is received.

**Example:**
```pascal
dim c as new CURLSMBS
c.OptionAcceptEncoding = "deflate"
```

**Notes:**
Three encodings are supported: identity, which does nothing, deflate which requests the server to compress its response using the zlib algorithm, and gzip which requests the gzip algorithm. If a zero-length string is set, then an Accept-Encoding: header containing all supported encodings is sent.

This is a request, not an order; the server may or may not do it. This option must be set (to any non-NULL value) or else any unsolicited encoding done by the server is ignored. See the special file README.encoding for details (included with CURL source code).

(Read and Write property)
See also ACCEPT_ENCODING option in CURL manual.

58.20.121  OptionAcceptTimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Time-out accept operations (currently for FTP only) after this amount of milliseconds.

**Notes:** (Read and Write property)
See also ACCEPTTIMEOUT_MS option in CURL manual.

58.20.122  OptionAddressScope as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Pass an integer specifying the scope_id value to use when connecting to IPv6 link-local or site-local addresses.

**Notes:**
(Added in CURL 7.19.0)
(Read and Write property)
See also ADDRESS_SCOPE option in CURL manual.
58.20. **CLASS CURLSMBS**

### 58.20.123 OptionAppend as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True tells the library to append to the remote file instead of overwrite it.

**Notes:**

This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also **APPEND** option in CURL manual.

### 58.20.124 OptionAutoReferer as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** When enabled, libCURL will automatically set the Referer: field in requests where it follows a Location: redirect.

**Notes:**

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also **AUTOREFERER** option in CURL manual.

### 58.20.125 OptionBufferSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Your preferred size (in bytes) for the receive buffer in libCURL.

**Notes:**

The main point of this would be that the write callback gets called more often and with smaller chunks. This is just treated as a request, not an order. You cannot be guaranteed to actually get the given size. (Added in 7.10)

This size is by default set as big as possible (OptionMaxWriteSize), so it only makse sense to use this option if you want it smaller.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also **BUFFERSIZE** option in CURL manual.
58.20.126 OptionCAInfo as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string naming a file holding one or more certificates to verify the peer with.

**Notes:**
This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL’s cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also CAINFO option in CURL manual.

58.20.127 OptionCAPath as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string naming a directory holding multiple CA certificates to verify the peer with.

**Notes:**
The certificate directory must be prepared using the openssl crehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also CAPATH option in CURL manual.
58.20.128 OptionCertInfo as boolean

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set to true to enable libCURL’s certificate chain info gatherer.  
**Notes:** 
With this enabled, libCURL (if built with OpenSSL) will extract lots of information and data about the certificates in the certificate chain used in the SSL connection. This data is then possible to extract after a transfer using GetInfoCertInfo. (Added in 7.19.1)  
(Read and Write property)  
See also CERTINFO option in CURL manual.

58.20.129 OptionConnectionTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximum time in seconds that you allow the connection to the server to take.  
**Notes:** 
This only limits the connection phase, once it has connected, this option is of no more use. Set to zero to disable connection timeout (it will then only timeout on the system’s internal timeouts). See also the OptionTimeout option.  
(Read and Write property)  
See also CONNECTTIMEOUT option in CURL manual.

58.20.130 OptionConnectionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximum time in milli seconds that you allow the connection to the server to take.  
**Notes:** 
This only limits the connection phase, once it has connected, this option is of no more use. Set to zero to disable connection timeout (it will then only timeout on the system’s internal timeouts). See also the OptionTimeout option.  
(Read and Write property)

58.20.131 OptionConnectOnly as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A true tells the library to perform any required proxy authentication and connection setup, but no data transfer.  
**Notes:** 
This option is useful with the CURLSMBS.GetInfoLastSocket function. The library can set up the connec-
tion and then the application can obtain the most recently used socket for special data transfers. (Added in 7.15.2)
(Read and Write property)
See also CONNECT ONLY option in CURL manual.

58.20.132 OptionCookie as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
It will be used to set a cookie in the http request.
**Notes:**
The format of the string should be NAME=CONTENTS, where NAME is the cookie name and CONTENTS is what the cookie should contain.

If you need to set multiple cookies, you need to set them all using a single option and thus you need to concatenate them all in one single string. Set multiple cookies in one string like this: "name1=content1; name2=content2;" etc.

Using this option multiple times will only make the latest string override the previously ones.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIE option in CURL manual.

58.20.133 OptionCookieFile as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The cookie file content.
**Notes:**
It should contain the name of your file holding cookie data to read. The cookie data may be in Netscape / Mozilla cookie data format or just regular HTTP-style headers dumped to a file.

Given an empty or non-existing file or by passing the empty string (""), this option will enable cookies for this CURL handle, making it understand and parse received cookies and then use matching cookies in future request.

If you use this option multiple times, you just add more files to read. Subsequent files will add more cookies.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also **COOKIEFILE** option in CURL manual.

### 58.20.134 OptionCookieJar as String

**MBS CURL Plugin, Plugin Version:** 9.8, **Console & Web:** Yes, **Mac:** Yes, **Win:** Yes, **Linux:** Yes. 
**Function:** File path where to write the cookies to.

**Notes:**
This will make libCURL write all internally known cookies to the specified file, when the object is destroyed. If no cookies are known, no file will be created. Specify "-" to instead have the cookies written to stdout.
Using this option also enables cookies for this session, so if you for example follow a location it will make matching cookies get sent accordingly.

If the cookie jar file can’t be created or written to, libCURL will not and cannot report an error for this. Using OptionVerbose or DebugFunction event will get a warning to display, but that is the only visible feedback you get about this possibly lethal situation.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also **COOKIEJAR** option in CURL manual.

### 58.20.135 OptionCookieList as String

**MBS CURL Plugin, Plugin Version:** 9.8, **Console & Web:** Yes, **Mac:** Yes, **Win:** Yes, **Linux:** Yes. 
**Function:** The cookie string.

**Notes:**
Cookie can be either in Netscape / Mozilla format or just regular HTTP-style header (Set-Cookie: ...) format. If CURL cookie engine was not enabled it will enable its cookie engine. Passing a magic string "ALL" will erase all cookies known by CURL. (Added in 7.14.1) Passing the special string "SESS" will only erase all session cookies known by CURL. (Added in 7.15.4)

The Lasterror property is set. 0 for success.
10352

CHAPTER 58. CURL

You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIELIST option in CURL manual.

58.20.136 OptionCookieSession as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set to true to mark this as a new cookie "session".
**Notes:**
It will force libCURL to ignore all cookies it is about to load that are "session cookies" from the previous
session. By default, libCURL always stores and loads all cookies, independent if they are session cookies are
not. Session cookies are cookies without expiry date and they are meant to be alive and existing for this
"session" only.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIESESSION option in CURL manual.

58.20.137 OptionCRLF as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Convert Unix newlines to CRLF newlines on transfers.
**Notes:**
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also CRLF option in CURL manual.

58.20.138 OptionCRLFile as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A string naming a file with the concatenation of CRL (in PEM format) to use in the certificate validation
that occurs during the SSL exchange.
**Notes:**
When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help
in the verification process. When libCURL is built with OpenSSL support, X509_V_FLAG_CRL_CHECK
and X509_V_FLAG_CRL_CHECK_ALL are both set, requiring CRL check against all the elements of the
certificate chain if a CRL file is passed.
This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)

(Read and Write property)
See also CRLFILE option in CURL manual.

58.20.139 OptionCustomRequest as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** It will be user instead of GET or HEAD when doing an HTTP request, or instead of LIST or NLST when doing an ftp directory listing.

**Example:**

```vba
dim c as CURLSMBS // your CURL instance

c.URL = "ftp://..."
c.customRequest = "MLSD" // ftp advanced directory listing
```

**Notes:**

This is useful for doing DELETE or other more or less obscure HTTP requests. Don’t do this at will, make sure your server supports the command first.

Restore to the internal default by setting this to "".

Many people have wrongly used this option to replace the entire request with their own, including multiple headers and POST contents. While that might work in many cases, it will cause libCURL to send invalid requests and it could possibly confuse the remote server badly. Use CURLOPT_POST and OptionPostFields to set POST data. Use OptionHTTPHeader to replace or extend the set of headers sent by libCURL. Use OptionHTTPVersion to change HTTP version.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

(Read and Write property)
See also CUSTOMREQUEST option in CURL manual.
58.20.140 OptionDefaultProtocol as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set the protocol used when curl is given a URL without a protocol.
**Notes:** (Read and Write property)
See also DEFAULT_PROTOCOL option in CURL manual.

58.20.141 OptionDirListOnly as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
For FTP and SFTP based URLs a parameter set to true tells the library to list the names of files in a directory,
rather than performing a full directory listing that would normally include file sizes, dates etc.
**Notes:**
For POP3 a parameter of true tells the library to list the email message or messages on the POP3 server.
This can be used to change the default behaviour of libCURL, when combined with a URL that contains a
message ID, to perform a "scan listing" which can then be used to determine the size of an email.

Note: For FTP this causes a NLST command to be sent to the FTP server. Beware that some FTP servers
list only files in their response to NLST; they might not include subdirectories and symbolic links.

Setting this option to true also implies a directory listing even if the URL doesn’t end with a slash, which
otherwise is necessary.

Do NOT use this option if you also use OptionWildCardMatch as it will effectively break that feature then.
(Read and Write property)
See also DIRLISTONLY option in CURL manual.

58.20.142 OptionDNSCacheTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The timeout in seconds.
**Notes:**
Name resolves will be kept in memory for this number of seconds. Set to zero (0) to completely disable
caching, or set to -1 to make the cached entries remain forever. By default, libCURL caches this info for 60
seconds.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also DNS_CACHE_TIMEOUT option in CURL manual.
58.20.143 OptionDNSInterface as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set the name of the network interface that the DNS resolver should bind to.

**Notes:**
This must be an interface name (not an address). Set this option to "" to use the default setting (don’t bind to a specific interface).
(Read and Write property)
See also DNS_INTERFACE option in CURL manual.

58.20.144 OptionDNSLocalIPv4 as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set the local IPv4 address that the resolver should bind to.

**Notes:**
The argument should be of string and contain a single numerical IPv4 address as a string. Set this option to "" to use the default setting (don’t bind to a specific IP address).
(Read and Write property)
See also DNS_LOCAL_IP4 option in CURL manual.

58.20.145 OptionDNSLocalIPv6 as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set the local IPv6 address that the resolver should bind to.

**Notes:**
The argument should be of type string and contain a single IPv6 address as a string. Set this option to "" to use the default setting (don’t bind to a specific IP address).
(Read and Write property)
See also DNS_LOCAL_IP6 option in CURL manual.

58.20.146 OptionDNSServers as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set the name servers to use for DNS resolution.

**Notes:** (Read and Write property)
See also DNS_SERVERS option in CURL manual.
CHAPTER 58. CURL

58.20.147  OptionDNSShuffleAddresses as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to shuffle DNS addresses.

**Notes:**

When a name is resolved and more than one IP address is returned, shuffle the order of all returned addresses so that they will be used in a random order. This is similar to the ordering behavior of gethostbyname which is no longer used on most platforms.

Addresses will not be reshuffled if a name resolution is completed using the DNS cache. DNSCacheTimeout property can be used together with this option to reduce DNS cache timeout or disable caching entirely if frequent reshuffling is needed.

Since the addresses returned will be reordered randomly, their order will not be in accordance with RFC 3484 or any other deterministic order that may be generated by the system’s name resolution implementation. This may have performance impacts and may cause IPv4 to be used before IPv6 or vice versa.

Default is false.

(Read and Write property)

See also DNS_SHUFFLE_ADDRESSES option in CURL manual.

58.20.148  OptionEGDSocket as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The path name to the Entropy Gathering Daemon socket.

**Notes:**

It will be used to seed the random engine for SSL.

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.

(Read and Write property)

See also EGDSOCKET option in CURL manual.

58.20.149  OptionExpect100TimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets Expect 100 timeout.

**Notes:**

Time to wait in milliseconds for a response to a HTTP request containing an Expect: 100-continue header before sending the data anyway.

(Read and Write property)
See also EXPECT\_100\_TIMEOUT\_MS option in CURL manual.

### 58.20.150 OptionFailOnError as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True tells the library to fail silently if the HTTP code returned is equal to or larger than 400. The default action would be to return the page normally, ignoring that code.

**Notes:**
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

This method is not fail-safe and there are occasions where non-succesful response codes will slip through, especially when authentication is involved (response codes 401 and 407).

You might get some amounts of headers transferred before this situation is detected, like for when a ”100-continue” is received as a response to a POST/PUT and a 401 or 407 is received immediately afterwards. (Read and Write property)
See also FAILONERROR option in CURL manual.

### 58.20.151 OptionFileTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether filetime should be querried.

**Example:**
```vbnet
// init CURL with options
dim d as new CURLSMBS
d.OptionFileTime = true
d.OptionURL = ”http://www.monkeybreadsoftware.de/images/mbs.jpg”

// run query
dim e as Integer = d.Perform

// calculate date object
dim da as new date(1970,1,1,0,0,0)

// show date
ResultText.text=str(d.GetInfoFileTime)+” ”+da.ShortDate+” ”+da.ShortTime
```

**Notes:**
If it is true, libCURL will attempt to get the modification date of the remote document in this operation. This requires that the remote server sends the time or replies to a time querying command.

The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value. (Read and Write property) See also FILETIME option in CURL manual.

58.20.152 OptionFollowLocation as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: A boolean parameter tells the library to follow any Location: header that the server sends as part of an HTTP header. Example:

```dim c as new CURLSMBS
c.OptionFollowLocation = true
c.OptionMaxRedirs = 3```

Notes: This means that the library will re-send the same request on the new location and follow new Location: headers all the way until no more such headers are returned. OptionMaxRedirs can be used to limit the number of redirects libCURL will follow.

The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value. (Read and Write property) See also FOLLOWLOCATION option in CURL manual.

58.20.153 OptionForbitReuse as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Set to true to make the next transfer explicitly close the connection when done. Notes: Normally, libCURL keep all connections alive when done with one transfer in case there comes a succeeding one that can re-use them. This option should be used with caution and only if you understand what it does. Set to false to have libCURL keep the connection open for possibly later re-use (default behavior). The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value. (Read and Write property)

58.20.154 OptionFreshConnect as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Set to true to make the next transfer use a new (fresh) connection by force.

Example:

dim c as new CURLSMBS

c.OptionFreshConnect=True

Notes:
If the connection cache is full before this connection, one of the existing connections will be closed as according to the selected or default policy. This option should be used with caution and only if you understand what it does. Set this to 0 to have libCURL attempt re-using an existing connection (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value. (Read and Write property)
See also FRESHCONNECT option in CURL manual.

58.20.155 OptionFTPAccount as String

Notes:
When an FTP server asks for ”account data” after user name and password has been provided, this data is sent off using the ACCT command.
(Read and Write property)
See also FTPACCOUNT option in CURL manual.

58.20.156 OptionFTPAutomaticalToUser as String

Notes:
Pass a string as parameter, pointing to a string which will be used to authenticate if the usual FTP "USER user" and "PASS password" negotiation fails. This is currently only known to be required when connecting to Tumbleweed’s Secure Transport FTPS server using client certificates for authentication. (Added in 7.15.5) (Read and Write property)
See also FTP_ALTERNATIVE_TO_USER option in CURL manual.

58.20.157 OptionFTPAppend as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True tells the library to append to the remote file instead of overwrite it.
**Deprecated:** This item is deprecated and should no longer be used. You can use OptionAppend instead.
**Notes:**
This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

58.20.158 OptionFTPCreateMissingDirs as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
If the value is 1, CURL will attempt to create any remote directory that it fails to CWD into.
**Notes:**
CWD is the command that changes working directory. (Added in 7.10.7)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
Newer CURL Library versions allow a value of 2 to do a CWD after the directory was created, so this property changed from boolean to integer.
(Read and Write property)
See also FTP_CREATE_MISSING_DIRS option in CURL manual.

58.20.159 OptionFTPFileMethod as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Pass an integer that should have one of the following values.
**Notes:**
This option controls what method libCURL should use to reach a file on a FTP(S) server. The argument should be one of the following alternatives:
URLFTPMETHOD_MULTICWD = 1

libCURL does a single CWD operation for each path part in the given URL. For deep hierarchies this means very many commands. This is how RFC1738 says it should be done. This is the default but the slowest behavior.

CURLFTPMETHOD_NOCWD = 2

libCURL does no CWD at all. libCURL will do SIZE, RETR, STOR etc and give a full path to the server for all these commands. This is the fastest behavior.

CURLFTPMETHOD_SINGLECWD = 3

libCURL does one CWD with the full target directory and then operates on the file "normally" (like in the multicwd case). This is somewhat more standards compliant than 'nocwd' but without the full penalty of 'multicwd'.

(Read and Write property)
See also FTP_FILEMETHOD option in CURL manual.

58.20.160 OptionFTPListOnly as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True tells the library to just list the names of an ftp directory, instead of doing a full directory listing that would include file sizes, dates etc. **Deprecated:** This item is deprecated and should no longer be used. You can use OptionDirListOnly instead. **Notes:**

This causes an FTP NLST command to be sent. Beware that some FTP servers list only files in their response to NLST; they might not include subdirectories and symbolic links.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

58.20.161 OptionFTPPort as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The port to use for ftp. **Notes:**
It will be used to get the IP address to use for the ftp PORT instruction. The PORT instruction tells the remote server to connect to our specified IP address. The string may be a plain IP address, a host name, an network interface name (under Unix) or just a '-' letter to let the library use your systems default IP address. Default FTP operations are passive, and thus won’t use PORT.

You disable PORT again and go back to using the passive version by setting this option to "".

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTPPORT option in CURL manual.

### 58.20.162 OptionFTPPResponseTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Causes CURL to set a timeout period (in seconds) on the amount of time that the server is allowed to take in order to generate a response message for a command before the session is considered hung.

**Notes:**
While CURL is waiting for a response, this value overrides OptionTimeout. It is recommended that if used in conjunction with OptionTimeout, you set OptionFTPPResponseTimeout to a value smaller than OptionTimeout. (Added in 7.10.8)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_RESPONSE_TIMEOUT option in CURL manual.

### 58.20.163 OptionFTPSkipPasvIP as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
If set to a non-zero value, it instructs libCURL to not use the IP address the server suggests in its 227-response to libCURL's PASV command when libCURL connects the data connection.

**Notes:**
Instead libCURL will re-use the same IP address it already uses for the control connection. But it will use the port number from the 227-response. (Added in 7.14.2)

This option has no effect if PORT, EPRT or EPSV is used instead of PASV.
(Read and Write property)
See also FTP_SKIP_PASV_IP option in CURL manual.
**58.20.164 OptionFTPSSL as Integer**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Request using SSL / TLS for the transfer.

**Example:**

```vbnet
dim c as CURLSMBS
    c.OptionUseSSL = c.kFTPSSL_ALL
    c.OptionSSLVersion = c.kSSLVersionTLSv12
```

**Deprecated:** This item is deprecated and should no longer be used. You can use OptionUseSSL instead.

**Notes:**

Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the transfer.

These are all protocols that start out plain text and get "upgraded" to SSL using the STARTTLS command. This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

<table>
<thead>
<tr>
<th>CURLUSESSL_NONE</th>
<th>0</th>
<th>Don’t attempt to use SSL.</th>
</tr>
</thead>
<tbody>
<tr>
<td>CURLUSESSL_TRY</td>
<td>1</td>
<td>Try using SSL, proceed as normal otherwise.</td>
</tr>
<tr>
<td>CURLUSESSL_CONTROL</td>
<td>2</td>
<td>Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.</td>
</tr>
<tr>
<td>CURLUSESSL_ALL</td>
<td>3</td>
<td>Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.</td>
</tr>
</tbody>
</table>

(Read and Write property)

**58.20.165 OptionFTPSSLAuth as Integer**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** What kind of SSL authentication to use for FTP.

**Notes:**

Pass an integer using one of the values from below, to alter how libCURL issues "AUTH TLS" or "AUTH SSL" when FTP over SSL is activated (see CURLOPT_FTP_SSL). (Added in 7.12.2)

kFTPAUTH_DEFAULT = 0

Allow libCURL to decide

kFTPAUTH_SSL = 1

Try "AUTH SSL" first, and only if that fails try "AUTH TLS"
kFTPAUTH_TLS = 2

Try "AUTH TLS" first, and only if that fails try "AUTH SSL"

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTPSSLAUTH option in CURL manual.

### 58.20.166 OptionFTPSSLC CCC as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
If enabled, this option makes libCURL use CCC (Clear Command Channel).

**Notes:**
It shuts down the SSL/TLS layer after authenticating. The rest of the control channel communication will be unencrypted. This allows NAT routers to follow the FTP transaction. Pass a long using one of the values below. (Added in 7.16.1)

<table>
<thead>
<tr>
<th>Option</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CURLFTPSSL_CCC_NONE</td>
<td>0</td>
<td>Don’t attempt to use CCC.</td>
</tr>
<tr>
<td>CURLFTPSSL_CCC_PASSIVE</td>
<td>1</td>
<td>Do not initiate the shutdown, but wait for the server to do it. Do not send a reply.</td>
</tr>
<tr>
<td>CURLFTPSSL_CCC_ACTIVE</td>
<td>2</td>
<td>Initiate the shutdown and wait for a reply.</td>
</tr>
</tbody>
</table>

(Read and Write property)
See also FTP_SSL_CCC option in CURL manual.

### 58.20.167 OptionFTPUseEPRT as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
If the value is true, it tells CURL to use the EPRT (and LPRT) command when doing active FTP downloads (which is enabled by CURLOPT_FTPPORT).

**Notes:**
Using EPRT means that it will first attempt to use EPRT and then LPRT before using PORT, but if you pass FALSE (zero) to this option, it will not try using EPRT or LPRT, only plain PORT. (Added in 7.10.5)

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
58.20. CLASS CURLSMBS

(Read and Write property)
See also FTP_USE_EPRT option in CURL manual.

58.20.168 OptionFTPUseEPSV as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
If the value is true, it tells CURL to use the EPSV command when doing passive FTP downloads (which it always does by default).
**Notes:**
Using EPSV means that it will first attempt to use EPSV before using PASV, but if you pass FALSE (zero) to this option, it will not try using EPSV, only plain PASV.

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_USE_EPSV option in CURL manual.

58.20.169 OptionFTPusePret as Boolean

MBS CURL Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
If the value is true, it tells CURL to send a PRET command before PASV (and EPSV). Certain FTP servers, mainly drftpd, require this non-standard command for directory listings as well as up and downloads in PASV mode.
**Notes:**
Has no effect when using the active FTP transfers mode. (Added in 7.20.0)
(Read and Write property)
See also FTP_USE_PRET option in CURL manual.

58.20.170 OptionGet as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
If the true, this forces the HTTP request to get back to GET.
**Notes:**
usable if a POST, HEAD, PUT or a custom request have been used previously using the same CURL handle.

When setting OptionGet to a true value, it will automatically set OptionNoBody to true (since 7.14.1).
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

58.20.171  OptionGSSAPIDelegation as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
 Allow GSSAPI credential delegation.
**Notes:** (Read and Write property)
See also GSSAPI_DELEGATION option in CURL manual.

58.20.172  OptionHappyEyeballsTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The happy eyeballs timeout.
**Notes:**
Head start in milliseconds to give happy eyeballs.
(Read and Write property)
See also HAPPY_EYEBALLS_TIMEOUT_MS option in CURL manual.

58.20.173  OptionHAProxyProtocol as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Wether to send an HAProxy PROXY protocol header.
**Notes:**
Set to true to tell the library to send an HAProxy PROXY protocol header at beginning of the connection.
The default action is not to send this header.
This option is primarily useful when sending test requests to a service that expects this header.
Most applications do not need this option.
Default false, do not send HAProxy PROXY protocol header.
(Read and Write property)
See also HAPROXYPROTOCOL option in CURL manual.

58.20.174  OptionHeader as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True tells the library to include the header in the body output.
Notes:

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

This is only relevant for protocols that actually have headers preceding the data (like HTTP).
(Read and Write property)
See also HEADER option in CURL manual.

58.20.175 OptionHeaderOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Pass in a bitmask of “header options”.
Notes: (Read and Write property)
See also HEADEROPT option in CURL manual.

58.20.176 OptionHTTPAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Which http authentication to use.
Notes:
Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you
want it to use. The available bits are listed below. If more than one bit is set, libCURL will first query
the site to see what authentication methods it supports and then pick the best one you allow it to use. For
some methods, this will induce an extra network round-trip. Set the actual name and password with the
UserPassword option. (Added in 7.10.6)

kAuthBASIC = 1

HTTP Basic authentication. This is the default choice, and the only method that is in wide-spread use and
supported virtually everywhere. This is sending the user name and password over the network in plain text,
easily captured by others.

kAuthDIGEST = 2

HTTP Digest authentication. Digest authentication is defined in RFC2617 and is a more secure way to do
authentication over public networks than the regular old-fashioned Basic method.

kAuthGSSNEGOTIATE = 4
HTTP GSS-Negotiate authentication. The GSS-Negotiate (also known as plain "Negotiate") method was designed by Microsoft and is used in their web applications. It is primarily meant as a support for Kerberos5 authentication but may be also used along with another authentication methods. For more information see IETF draft draft-brezak-spnego-http-04.txt.

You need to build libCURL with a suitable GSS-API library for this to work.

kAuthNTLM = 8

HTTP NTLM authentication. A proprietary protocol invented and used by Microsoft. It uses a challenge-response and hash concept similar to Digest, to prevent the password from being eavesdropped.

You need to build libCURL with OpenSSL support for this option to work, or build libCURL on Windows.

kAuthANY = & hFFFFFFFF

This is a convenience macro that sets all bits and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

kAuthANYSAFE = & hFFFFFFFE

This is a convenience macro that sets all bits except Basic and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTPAUTH option in CURL manual.

58.20.177 OptionHTTPContentDecoding as Integer

Notes:
If set to zero, content decoding will be disabled. If set to 1 it is enabled. Note however that libCURL has no default content decoding but requires you to use OptionEncoding for that. (added in 7.16.2)
(Read and Write property)
See also HTTPCONTENTDECODING option in CURL manual.
58.20.178  OptionHTTPProxyTunnel as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set the parameter to true to get the library to tunnel all operations through a given HTTP proxy.

**Notes:**
There is a big difference between using a proxy and to tunnel through it. If you don’t know what this means, you probably don’t want this tunneling option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTPPROXYTUNNEL option in CURL manual.

58.20.179  OptionHTTPTransferDecoding as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Pass an integer to tell libCURL how to act on transfer decoding.

**Notes:**
If set to zero, transfer decoding will be disabled, if set to 1 it is enabled (default). libCURL does chunked transfer decoding by default unless this option is set to zero. (added in 7.16.2)
(Read and Write property)
See also HTTP_TRANSFER_DECODING option in CURL manual.

58.20.180  OptionHTTPVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set to one of the values described below.

**Notes:**
They force libCURL to use the specific HTTP versions. This is not sensible to do unless you have a good reason.

kHTTP_VERSION_NONE = 0
We don’t care about what version the library uses. libCURL will use whatever it thinks fit.

kHTTP_VERSION_1_0 = 1
Enforce HTTP 1.0 requests.
kHTTP_VERSION_1_1 = 2

Enforce HTTP 1.1 requests.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTP_VERSION option in CURL manual.

58.20.181 OptionIgnoreContentLength as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to ignore the Content-Length header.

**Notes:**
This is useful for Apache 1.x (and similar servers) which will report incorrect content length for files over 2 gigabytes. If this option is used, CURL will not be able to accurately report progress, and will simply stop the download when the server ends the connection. (added in 7.14.1)
(Read and Write property)
See also IGNORE_CONTENT_LENGTH option in CURL manual.

58.20.182 OptionInFileSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** When uploading a file to a remote site, this option should be used to tell libCURL what the expected size of the infile is.

**Notes:**
Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read callback returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also INFILESIZE option in CURL manual.

58.20.183 OptionInFileSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** When uploading a file to a remote site, this option should be used to tell libCURL what the expected size of the infile is.
58.20. **CLASS CURLSMBS**

**Deprecated:** This item is deprecated and should no longer be used. You can use OptionInFileSize instead.

**Notes:**

This value should be passed as a CURL_off_t. (Added in 7.11.0)

Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read callback returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

---

**58.20.184 OptionInterface as String**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This set the interface name to use as outgoing network interface.

**Notes:**

The name can be an interface name, an IP address or a host name.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also INTERFACE option in CURL manual.

---

**58.20.185 OptionIPResolve as Integer**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Allows an application to select what kind of IP addresses to use when resolving host names.

**Example:**

```pascal
dim c as new CURLSMBS
c.OptionIPResolve = c.kIPRESOLVE_V4
```

**Notes:**

This is only interesting when using host names that resolve addresses using more than one version of IP.
The allowed values are:

kIPRESOLVE_WHATEVER = 0
Default, resolves addresses to all IP versions that your system allows.

kIPRESOLVE_V4 = 1

Resolve to ipv4 addresses.

kIPRESOLVE_V6 = 2

Resolve to ipv6 addresses.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also IPRESOLVE option in CURL manual.

**58.20.186 OptionIssuerCert as String**

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A string naming a file holding a CA certificate in PEM format.

**Notes:**
If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail). (Added in 7.19.0)

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also ISSUERCERT option in CURL manual.
58.20.187  OptionKeepSendingOnError as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Wether to keep sending on error.

**Notes:**
Continue to send data if the server responds early with an HTTP status code $\geq 300$
(Read and Write property)
See also `KEEP_SENDING_ON_ERROR` option in CURL manual.

58.20.188  OptionKeyPassword as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set passphrase to private key.

**Notes:**
It will be used as the password required to use the OptionSSLKey or OptionSSHPrivateKeyfile private key.
You never needed a pass phrase to load a certificate but you need one to load your private key.
(Read and Write property)
See also `KEYPASSWD` option in CURL manual.

58.20.189  OptionKRB4Level as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set the krb4 security level, this also enables krb4 awareness.

**Deprecated:** This item is deprecated and should no longer be used. You can use OptionKRB4Level instead.

**Notes:**
This is a string, 'clear', 'safe', 'confidential' or 'private'. If the string is set but doesn’t match one of these,
'private' will be used. Set the string to "" to disable kerberos4. The kerberos support only works for FTP.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

58.20.190  OptionKRB4Level as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
FTP kerberos security level.

**Notes:**
Set the kerberos security level for FTP; this also enables kerberos awareness. This is a string that should
match one of the following: 'clear', 'safe', 'confidential' or 'private'. If the string is set but doesn’t match
one of these, 'private' will be used. Set the string to NULL to disable kerberos support for FTP.
(Read and Write property)
See also KRLEVEL option in CURL manual.

58.20.191 OptionLocalPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This sets the local port number of the socket used for connection.
**Notes:**
This can be used in combination with OptionInterface and you are recommended to use OptionLocalPortRange as well when this is set. Note that port numbers are only valid 1 - 65535. (Added in 7.15.2)
(Read and Write property)
See also LOCALPORT option in CURL manual.

58.20.192 OptionLocalPortRange as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This is the number of attempts libCURL should do to find a working local port number.
**Notes:**
It starts with the given OptionLocalPort and adds one to the number for each retry. Setting this value to 1 or below will make libCURL do only one try for exact port number. Note that port numbers by nature is a scarce resource that will be busy at times so setting this value to something too low might cause unnecessary connection setup failures. (Added in 7.15.2)
(Read and Write property)
See also LOCALPORTRANGE option in CURL manual.

58.20.193 OptionLoginOptions as String

MBS CURL Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Login options string to use for the transfer.
**Notes:**
For more information about the login options please see RFC 2384, RFC5092 and IETF draft draft-earhart-url-smtp-00.txt
CURLOPT_LOGIN_OPTIONS can be used to set protocol specific login options, such as the preferred authentication mechanism via "AUTH=NTLM" or "AUTH=*", and should be used in conjunction with the OptionUserName option.
Only IMAP, POP3 and SMTP support login options.
(Read and Write property)
58.20. **CLASS CURLSMBS**

See also **LOGIN_OPTIONS** option in CURL manual.

### 58.20.194 OptionLowSpeedLimit as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This property contains the transfer speed in bytes per second that the transfer should be below during OptionLowSpeedTime seconds for the library to consider it too slow and abort.

**Notes:**
- The Lasterror property is set. 0 for success.
- You can set this value and later you can read it, but you cannot read the default value.
- (Read and Write property)
- See also **LOW_SPEED_LIMIT** option in CURL manual.

### 58.20.195 OptionLowSpeedTime as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This property contains the time in seconds that the transfer should be below the OptionLowSpeedLimit for the library to consider it too slow and abort.

**Notes:**
- The Lasterror property is set. 0 for success.
- You can set this value and later you can read it, but you cannot read the default value.
- (Read and Write property)
- See also **LOW_SPEED_TIME** option in CURL manual.

### 58.20.196 OptionMailAuth as String

MBS CURL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This string will be used to specify the authentication address (identity) of a submitted message that is being relayed to another server.

**Notes:**
- This optional parameter allows co-operating agents in a trusted environment to communicate the authentication of individual messages and should only be used by the application program, using libCURL, if the application is itself a mail server acting in such an environment. If the application is operating as such and the AUTH address is not known or is invalid, then an empty string should be used for this parameter.
- Unlike OptionMailFrom and SetOptionMailRecipients, the address should not be specified within a pair of angled brackets (<>). However, if an empty string is used then a pair of brackets will be sent by libCURL as required by RFC 2554.
- (Read and Write property)
See also MAIL_AUTH option in CURL manual.

### 58.20.197 OptionMailFrom as String

MBS CURL Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string that will be used to specify the sender address in a mail when sending an SMTP mail with libCURL.
**Notes:** (Read and Write property)
See also MAIL_FROM option in CURL manual.

### 58.20.198 OptionMaxConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The set number will be the persistent connection cache size.
**Notes:**
The set amount will be the maximum amount of simultaneously open connections that libCURL may cache.
Default is 5, and there isn’t much point in changing this value unless you are perfectly aware of how this work and changes libCURL’s behaviour. This concerns connection using any of the protocols that support persistent connections.

When reaching the maximum limit, CURL closes the oldest one in the cache to prevent the number of open connections to increase.

If you already have performed transfers with this CURL handle, setting a smaller MAXCONNECTS than before may cause open connections to get closed unnecessarily.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXCONNECTS option in CURL manual.

### 58.20.199 OptionMaxFileSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This allows you to specify the maximum size (in bytes) of a file to download.
**Notes:**
If the file requested is larger than this value, the transfer will not start and kError_FILESIZE_EXCEEDED will be returned.
The file size is not always known prior to download, and for such files this option has no effect even if the
file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXFILESIZE option in CURL manual.

**58.20.200 OptionMaxFileSizeLarge as Int64**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This allows you to specify the maximum size (in bytes) of a file to download.
**Deprecated:** This item is deprecated and should no longer be used. You can use OptionMaxFileSize
instead. **Notes:**
If the file requested is larger than this value, the transfer will not start and kError_FILESIZEDEEXCEEDED
will be returned. (Added in 7.11.0)

The file size is not always known prior to download, and for such files this option has no effect even if the
file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

**58.20.201 OptionMaxRecvSpeed as Int64**

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Defines the maximum download speed.
**Notes:**
If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the
transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited
speed. (Added in 7.15.5)
(Read and Write property)
See also MAX_RECV_SPEED option in CURL manual.

**58.20.202 OptionMaxRecvSpeedLarge as Int64**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Defines the maximum download speed.
CHAPTER 58. CURL

**Deprecated:** This item is deprecated and should no longer be used. You can use OptionMaxRecvSpeed instead. **Notes:**

If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)

(Read and Write property)

### 58.20.203 OptionMaxRedirs as Integer

**Function:** The set number will be the redirection limit.

**Example:**

```csharp
dim c as new CURLSMBS

c.OptionFollowLocation = true

c.OptionMaxRedirs = 3
```

**Notes:**

If that many redirections have been followed, the next redirect will cause an error (kError_TOO_MANY_REDIRECTS). This option only makes sense if the CURLOPT_FOLLOWLOCATION is used at the same time. Added in 7.15.1: Setting the limit to 0 will make libCURL refuse any redirect. Set it to -1 for an infinite number of redirects (which is the default)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXREDIRS option in CURL manual.

### 58.20.204 OptionMaxSendSpeed as Int64

**Function:** Defines the maximum upload speed.

**Notes:**

If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)

Value is in bytes per second.
Useful if you have a limited pipe and you’d like your transfer not to use your entire bandwidth. Slowing down the transfer speed is also useful for lowering CPU consumption during transfers.
(Read and Write property)
See also MAX_SEND_SPEED option in CURL manual.

58.20.205 OptionMaxSendSpeedLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Defines the maximum upload speed. Deprecated: This item is deprecated and should no longer be used. You can use OptionMaxSendSpeed instead. Notes: If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5) Value is in bytes per second. Useful if you have a limited pipe and you’d like your transfer not to use your entire bandwidth. Slowing down the transfer speed is also useful for lowering CPU consumption during transfers. (Read and Write property)

58.20.206 OptionNetRC as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Controls usage of netrc file. Notes: This parameter controls the preference of libCURL between using user names and passwords from your textasciitilde /.netrc file, relative to user names and passwords in the URL supplied with OptionURL.

libCURL uses a user name (and supplied or prompted password) supplied with OptionUsername and OptionPassword in preference to any of the options controlled by this parameter.

An integer, set to one of the values described below.

kNETRC_OPTIONAL = 1

The use of your textasciitilde /.netrc file is optional, and information in the URL is to be preferred. The file will be scanned with the host and user name (to find the password only) or with the host only, to find the first user name and password after that machine, which ever information is not specified in the URL.

Undefined values of the option will have this effect.

kNETRC_IGNORED = 0
The library will ignore the file and use only the information in the URL.

This is the default.

\[ k\text{NETRC}_\text{REQUIRED} = 2 \]

This value tells the library that use of the file is required, to ignore the information in the URL, and to search the file with the host only.

Only machine name, user name and password are taken into account (init macros and similar things aren't supported).

libCURL does not verify that the file has the correct properties set (as the standard Unix ftp client does). It should only be readable by user.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also NETRC option in CURL manual.

\section*{58.20.207 \hspace{1em} OptionNetRCFile as String}

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. \textbf{Function:} A string containing the full path name to the file you want libCURL to use as .netrc file.
\textbf{Notes:}
If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the a .netrc file in the current user's home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also NETRC\_FILE option in CURL manual.
58.20. CLASS CURLSMBS

58.20.208 OptionNewDirectoryPerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
An integer, containing the value of the permissions that will be assigned to newly created directories on the
remote server.

**Notes:**
The default value is 0755, but any valid value can be used. The only protocols that can use this are sftp://,
scp://, and file:///. (Added in 7.16.4)
Value must be octal, so use & o prefix for number.
(Read and Write property)
See also NEW_DIRECTORY_PERMS option in CURL manual.

58.20.209 OptionNewFilePerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
An integer, containing the value of the permissions that will be assigned to newly created files on the remote
server.

**Notes:**
The default value is & o0644, but any valid value can be used. The only protocols that can use this are sftp://,
scp://, and file:///. (Added in 7.16.4)
Be aware that you normally specify this in octal values. So use the & o prefix in Real Studio.
(Read and Write property)
See also NEW_FILE_PERMS option in CURL manual.

58.20.210 OptionNoBody as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True tells the library to not include the body-part in the output.

**Notes:**
This is only relevant for protocols that have separate header and body parts. On HTTP(S) servers, this will
make libCURL do a HEAD request.

To change request to GET, you should use OptionGet. Change request to POST with OptionPost etc.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also NOBODY option in CURL manual.
58.20.211 OptionNoProxy as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string with a comma- separated list of hosts which do not use a proxy, if one is specified. **Notes:**
The only wildcard is a single * character, which matches all hosts, and effectively disables the proxy. Each name in this list is matched as either a domain which contains the hostname, or the hostname itself. For example, local.com would match local.com, local.com:80, and www.local.com, but not www.notlocal.com. (Added in 7.19.4) (Read and Write property) See also NOPROXY option in CURL manual.

58.20.212 OptionNoSignal as Integer

MBS CURL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to not use signals. **Notes:**
If it is true, libCURL will not use any functions that install signal handlers or any functions that cause signals to be sent to the process. This option is mainly here to allow multi-threaded unix applications to still set/use all timeout options etc, without risking getting signals. (Added in 7.10)

If this option is set and libCURL has been built with the standard name resolver, timeouts will not occur while the name resolve takes place. Consider building libCURL with c-ares support to enable asynchronous DNS lookups, which enables nice timeouts for name resolves without signals.

Setting OptionNoSignal to true makes libCURL NOT ask the system to ignore SIGPIPE signals, which otherwise are sent by the system when trying to send data to a socket which is closed in the other end. libCURL makes an effort to never cause such SIGPIPEs to trigger, but some operating systems have no way to avoid them and even on those that have there are some corner cases when they may still happen, contrary to our desire. In addition, using CURLAUTH_NTLM_WB authentication could cause a SIGCHLD signal to be raised. (Read and Write property) See also NOSIGNAL option in CURL manual.

58.20.213 OptionPassword as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The password to use for the transfer. **Notes:**
The OptionPassword option should be used in conjunction with the OptionUsername option. (Read and Write property)
58.20. **CLASS CURLSMBS**

See also **PASSWORD** option in CURL manual.

58.20.214 **OptionPathAsIs as Boolean**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Pass path as it is and do not resolve dots.

**Notes:**
Do not squash dot-dot sequences.

(Read and Write property)
See also **PATH AS IS** option in CURL manual.

58.20.215 **OptionPinnedPublicKey as String**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The public key in DER form used to validate the peer public key.

**Notes:**
Native path to key file.
This option is used only if SSLVerifyPeer is true.
(Read and Write property)
See also **PINNEDPUBLICKEY** option in CURL manual.

58.20.216 **OptionPipeWait as Boolean**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Wait/don’t wait for pipe/mutex to clarify.

**Notes:** (Read and Write property)
See also **PIPEWAIT** option in CURL manual.

58.20.217 **OptionPort as Integer**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The remote port number to connect to, instead of the one specified in the URL or the default port for the used protocol.

**Notes:**
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
58.20.218 OptionPost as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A boolean parameter tells the library to do a regular HTTP post.

**Notes:**
This will also make the library use the a "Content-Type: application/x-www-form-urlencoded" header. (This is by far the most commonly used POST method).

Use the OptionPostFields option to specify what data to post.

Optionally, you can provide data to POST using the Read event but then you must make sure to not set OptionPostFields to anything but "". When providing data with an event, you must transmit it using chunked transfer-encoding.

You can override the default POST Content-Type: header by setting your own with OptionHTTPHeader.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with OptionHTTPHeader as usual.

If you use POST to a HTTP 1.1 server, you can send data without knowing the size before starting the POST if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size in the request.

When setting CURLOPT_POST to a non-zero value, it will automatically set OptionNoBody to 0 (since 7.14.1).

If you issue a POST request and then want to make a HEAD or GET using the same re-used handle, you must explicitly set the new request type using OptionNoBody or OptionGet or similar.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also **POST** option in CURL manual.
58.20.219  OptionPostFields as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A string which should be the full data to post in an HTTP POST operation.

**Example:**

```dim xml as string // XML or JSON to send as payload
dim c as new CURLSMBS

c.OptionFollowLocation = true

c.OptionMaxRedirs = 3

c.OptionPostFields = xml

c.OptionUserAgent = "Test App"
c.OptionPost = true

// for SOAP use right content type
c.SetOptionHTTPHeader array("Content-Type: application/soap+xml; charset=utf-8")
```

**Notes:**

You must make sure that the data is formatted the way you want the server to receive it. libCURL will not convert or encode it for you. Most web servers will assume this data to be url-encoded. Take note.

This POST is a normal application/x-www-form-urlencoded kind (and libCURL will set that Content-Type by default when this option is used), which is the most commonly used one by HTML forms. See also the OptionPost. Using OptionPostFields implies OptionPost.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with CURLOPT_HTTPHEADER as usual.

To make multipart/formdata posts (aka rfc1867-posts), check out the OptionPost option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COPYPOSTFIELDS option in CURL manual.

58.20.220  OptionPostFieldSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The size of the post data.

**Notes:**
Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.

If you specify a size and no postfield string, the Read event will request data.
(Read and Write property)
See also POSTFIELDSIZE option in CURL manual.

58.20.221 OptionPostFieldSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The size of the post data. (64 bit version) **Deprecated:** This item is deprecated and should no longer be used. You can use OptionPostFieldSize instead. **Notes:**
Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.

If you specify a size and no postfield string, the Read event will request data.
(Read and Write property)

58.20.222 OptionPostRedir as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A bitmask to control how libCURL acts on redirects after POSTs that get a 301 or 302 response back.
**Notes:**
A parameter with bit 0 set (value CURL_REDIR_POST_301=1) tells the library to respect RFC 2616/10.3.2 and not convert POST requests into GET requests when following a 301 redirection. Setting bit 1 (value CURL_REDIR_POST_302=2) makes libCURL maintain the request method after a 302 redirect. CURL_REDIR_POST_ALL is a convenience define that sets both bits.

The non-RFC behaviour is ubiquitous in web browsers, so the library does the conversion by default to maintain consistency. However, a server may require a POST to remain a POST after such a redirection. This option is meaningful only when setting OptionFollowLocation. (Added in 7.17.1) (This option was known as CURLOPT_POST301 up to 7.19.0 as it only supported the 301 way before then) (Read and Write property)
See also POSTREDIR option in CURL manual.
58.20.223  **OptionPreProxy as String**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Name of pre proxy to use.  
**Notes:** (Read and Write property)  
See also **PRE.PROXY** option in CURL manual.

58.20.224  **OptionProtocols as Integer**

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A bitmask of kProtocol\(^*\) constants.  
**Notes:**  
If used, this bitmask limits what protocols libCURL may use in the transfer. This allows you to have a libCURL built to support a wide range of protocols but still limit specific transfers to only be allowed to use a subset of them. By default libCURL will accept all protocols it supports. See also OptionRedirProtocols.  
(Added in 7.19.4)  
(Read and Write property)  
See also **PROTOCOLS** option in CURL manual.

58.20.225  **OptionProxy as String**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set HTTP proxy to use.  
**Example:**

```plaintext
dim c as CURLSMBS  // your CURL object  
dim psAddress as string  // your proxy address  
dim psPort as Integer  // your proxy port
```

c.OptionProxy=psAddress  
c.OptionProxyPort=psPort  
c.OptionProxyType=c.kPROXY_HTTP

**Notes:**  
The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value.  
The parameter should be a string holding the host name or dotted IP address. To specify port number in this string, append \([:]\) [ port ] to the end of the host name. The proxy string may be prefixed with \([ protocol \) :// since any such prefix will be ignored. The proxy's port number may optionally be specified with the
separate option ProxyHost.

When you tell the library to use an HTTP proxy, libCURL will transparently convert operations to HTTP even if you specify an FTP URL etc. This may have an impact on what other features of the library you can use, such as CURLOPT_QUOTE and similar FTP specifics that don’t work unless you tunnel through the HTTP proxy. Such tunneling is activated with HTTPProxyTunnel.

libCURL respects the environment variables http_proxy, ftp_proxy, all_proxy etc, if any of those is set. The Proxy option does however override any possibly set environment variables.

Starting with 7.14.1, the proxy host string given in environment variables can be specified the exact same way as the proxy can be set with Proxy, include protocol prefix (http://) and embedded user + password.

You can use WinHTTPClientMBS class on Windows or CFProxyMBS on Mac to discover system proxy settings.
(Read and Write property)
See also PROXY option in CURL manual.

58.20.226 OptionProxyAuth as Integer

Notes:
Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you want it to use for your proxy authentication. If more than one bit is set, libCURL will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the ProxyUserPassword option. The bitmask can be constructed by or’ing together the bits listed above for the HTTPAuth option. As of this writing, only Basic, Digest and NTLM work. (Added in 7.10.7)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PROXYAUTH option in CURL manual.

58.20.227 OptionProxyCAInfo as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The CApath or CAfile used to validate the proxy certificate.
Notes:
58.20. **CLASS CURLSMBS**

Pass native file path. This option is used only if CURLSMBS.OptionProxySSLVerifyPeer is true (Read and Write property). See also **PROXY_CAIINFO** option in CURL manual.

### 58.20.228 OptionProxyCAPath as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The CApath directory used to validate the proxy certificate.

**Notes:**
Pass native file path. This option is used only if CURLSMBS.OptionProxySSLVerifyPeer is true (Read and Write property). See also **PROXY_CAPATH** option in CURL manual.

### 58.20.229 OptionProxyCRLFile as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
CRL file for proxy.

**Notes:**
Pass native file path. (Read and Write property)
See also **PROXY_CRLFILE** option in CURL manual.

### 58.20.230 OptionProxyKeyPassword as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Password for the SSL private key for proxy.

**Notes:** (Read and Write property)
See also **PROXY_KEYPASSWD** option in CURL manual.

### 58.20.231 OptionProxyPassword as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A string which should be pointing to the password to use for the transfer while connecting to Proxy.

**Notes:**
The OptionProxyPassword option should be used in conjunction with the OptionProxyUsername option. (Added in 7.19.1)
### 58.20.232 OptionProxyPinnedPublicKey as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The public key in DER form used to validate the proxy public key. **Notes:** This option is used only if CURLSMBS.OptionProxySSLVerifyPeer is true. Please path native file path to key file. (Read and Write property) See also PROXY_PINNEDPUBLICKEY option in CURL manual.

### 58.20.233 OptionProxyPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The proxy port to connect to unless it is specified in the proxy string OptionProxy. **Notes:** The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value. You can use OptionProxy with port, e.g. "12.34.56.78:8080" or pass port here and proxy without port. For some users it seems like the option with OptionProxy including port works better. (Read and Write property) See also PROXYPORT option in CURL manual.

### 58.20.234 OptionProxyServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Proxy Service Name. **Notes:** (Read and Write property) See also PROXY_SERVICE_NAME option in CURL manual.

### 58.20.235 OptionProxySSLCert as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Name of the file keeping your private SSL-certificate for proxy. **Notes:** (Read and Write property)
58.20. CLASS CURLSMBS

See also PROXY_SSLCERT option in CURL manual.

58.20.236 OptionProxySSLCertType as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Type of the file keeping your SSL-certificate for proxy.

**Notes:**
Value can be "DER", "PEM" or "ENG".
(Read and Write property)
See also PROXY_SSLCERTTYPE option in CURL manual.

58.20.237 OptionProxySSLCipherList as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specify which SSL ciphers to use for proxy.

**Notes:** (Read and Write property)
See also PROXY_SSL_CIPHER_LIST option in CURL manual.

58.20.238 OptionProxySSLKey as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Name of the file keeping your private SSL-key for proxy.

**Notes:**
Pass native file path.
(Read and Write property)
See also PROXY_SSLKEY option in CURL manual.

58.20.239 OptionProxySSLKeyType as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets type of the file keeping your private SSL-key for proxy.

**Notes:**
Value is DER, PEM or ENG.
(Read and Write property)
See also PROXY_SSLKEYTYPE option in CURL manual.
58.20.240 OptionProxySSLOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable/disable specific SSL features with a bitmask for proxy. **Notes:** (Read and Write property) See also `PROXY_SSL_OPTIONS` option in CURL manual.

58.20.241 OptionProxySSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable SSL Host verification. **Notes:** Set if we should verify the Common name from the proxy certificate in ssl handshake, set 1 to check existence, 2 to ensure that it matches the provided hostname. (Read and Write property) See also `PROXY_SSL_VERIFYHOST` option in CURL manual.

58.20.242 OptionProxySSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set if we should verify the proxy in ssl handshake. **Notes:** set 1 to verify. (Read and Write property) See also `PROXY_SSL_VERIFYPEER` option in CURL manual.

58.20.243 OptionProxySSLVersion as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** What version to specifically try to use for proxy. **Notes:** The available options are:

(Read and Write property) See also `PROXY_SSLVERSION` option in CURL manual.
58.20. **CLASS CURLSMBS**

Default 0 The default action. This will attempt to figure out the remote SSL protocol version, i.e. either SSLv3 or TLSv1 (but not SSLv2, which became disabled by default with 7.18.1).

TLSv1 1 Force TLSv1.x
SSLv2 2 Force SSLv2
SSLv3 3 Force SSLv3
TLSv1.0 4 Force TLSv1.0
TLSv1.1 5 Force TLSv1.1
TLSv1.2 6 Force TLSv1.2
TLSv1.3 7 Force TLSv1.3

58.20.244 **OptionProxyTLSAuthToken** as String

**Notes:** (Read and Write property)
See also PROXY_TLSAUTH_PASSWORD option in CURL manual.

58.20.245 **OptionProxyTLSAuthTokenType** as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set authentication type for authenticated TLS for proxy.
**Notes:** (Read and Write property)
See also PROXY_TLSAUTH_TYPE option in CURL manual.

58.20.246 **OptionProxyTLSAuthTokenUsername** as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set a username for authenticated TLS for proxy.
**Notes:** (Read and Write property)
See also PROXY_TLSAUTH_USERNAME option in CURL manual.

58.20.247 **OptionProxyTransferMode** as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If this integer value is set to 1 (one), it tells libCURL to set the transfer mode (binary or ASCII) for FTP transfers done via an HTTP proxy, by appending ;type=a or ;type=i to the URL.
**Notes:**
Without this setting, or it being set to 0 (zero, the default), OptionTransferText has no effect when doing FTP via a proxy. Beware that not all proxies support this feature. (Added in 7.18.0) (Read and Write property) See also PROXY_TRANSFER_MODE option in CURL manual.

58.20.248 OptionProxyType as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This option is to set type of the proxy.
Notes:
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Available options for this are kPROXY_HTTP, kPROXY.SOCKS4 (added in 7.15.2) kPROXY.SOCKS5. The HTTP type is default. (Read and Write property) See also PROXYTYPE option in CURL manual.

58.20.249 OptionProxyUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: A string, which should be pointing to the user name to use for the transfer while connecting to Proxy.
Notes:
In order to specify the password to be used in conjunction with the user name use the OptionProxyPassword option. (Read and Write property) See also PROXYUSERNAME option in CURL manual.

58.20.250 OptionPut as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: A non-zero parameter tells the library to use HTTP PUT to transfer data.
Notes:
The data should be set with OptionInFileSize.
This option is deprecated and starting with version 7.12.1 you should instead use OptionUpload.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PUT option in CURL manual.

58.20.251 OptionRandomFile as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A file name for the random file.
**Notes:**
The file will be used to read from to seed the random engine for SSL. The more random the specified file is,
the more secure the SSL connection will become.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For
macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also RANDOM_FILE option in CURL manual.

58.20.252 OptionRange as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A string which should contain the specified range you want.
**Notes:**
It should be in the format “X-Y”, where X or Y may be left out. HTTP transfers also support several
intervals, separated with commas as in ”X-Y,N-M”. Using this kind of multiple intervals will cause the
HTTP server to send the response document in pieces (using standard MIME separation techniques). Pass
a NULL to this option to disable the use of ranges.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also RANGE option in CURL manual.

58.20.253 OptionRedirProtocols as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
An integer that holds a bitmask of kProtocol* constants.
CHAPTER 58. CURL

Notes:
If used, this bitmask limits what protocols libCURL may use in a transfer that it follows to in a redirect when OptionFollowLocation is enabled. This allows you to limit specific transfers to only be allowed to use a subset of protocols in redirections. By default libCURL will allow all protocols except for FILE and SCP. This is a difference compared to pre-7.19.4 versions which unconditionally would follow to all protocols supported. (Added in 7.19.4)
(Read and Write property)
See also REDIR_PROTOCOLS option in CURL manual.

58.20.254 OptionReferer as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The referer to pass to the server.
Notes:
It will be used to set the Referer: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also REFERER option in CURL manual.

58.20.255 OptionRequestTarget as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The request target, instead of extracted from the URL.
Notes: (Read and Write property)
See also REQUEST_TARGET option in CURL manual.

58.20.256 OptionResumeFrom as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
It contains the offset in number of bytes that you want the transfer to start from.
Notes:
Set this option to 0 to make the transfer start from the beginning (effectively disabling resume). For FTP, set this option to -1 to make the transfer start from the end of the target file (useful to continue an interrupted upload).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also RESUME_FROM option in CURL manual.

58.20.257 OptionResumeFromLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
It contains the offset in number of bytes that you want the transfer to start from.
**Deprecated:** This item is deprecated and should no longer be used. You can use OptionResumeFrom instead. **Notes:**
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

58.20.258 OptionRTSPClientCSEQ as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Manually initialize the client RTSP CSeq for this handle. **Notes:** (Read and Write property)
See also RTSP_CLIENT_CSEQ option in CURL manual.

58.20.259 OptionRTSPRequest as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
RTSP request method (OPTIONS, SETUP, PLAY, etc...). **Notes:** (Read and Write property)
See also RTSP_REQUEST option in CURL manual.

58.20.260 OptionRTSPServerCSEQ as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Manually initialize the server RTSP CSeq for this handle. **Notes:** (Read and Write property)
See also RTSP_SERVER_CSEQ option in CURL manual.
58.20.261  OptionRTSPSessionID as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The RTSP session identifier.
**Notes:** (Read and Write property)
See also RTSP_SESSION_ID option in CURL manual.

58.20.262  OptionRTSPStreamURI as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The RTSP stream URI.
**Notes:** (Read and Write property)
See also RTSP_STREAM_URI option in CURL manual.

58.20.263  OptionRTSPTransport as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The Transport: header to use in RTSP requests.
**Notes:** (Read and Write property)
See also RTSP_TRANSPORT option in CURL manual.

58.20.264  OptionSASLIR as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Enable/disable SASL initial response.
**Notes:** (Read and Write property)
See also SASL_IR option in CURL manual.

58.20.265  OptionServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Service Name.
**Notes:** (Read and Write property)
See also SERVICE_NAME option in CURL manual.
58.20.266  OptionSocks5Auth as Integer

**Notes:**  
(Read and Write property)  
See also SOCKS5_AUTH option in CURL manual.

58.20.267  OptionSocks5GSSAPINEC as Boolean

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to protect SOCKS5 connection is protected.  
**Notes:**  
Set to true to enable or false to disable. As part of the gssapi negotiation a protection mode is negotiated. The rfc1961 says in section 4.3/4.4 it should be protected, but the NEC reference implementation does not. If enabled, this option allows the unprotected exchange of the protection mode negotiation. (Added in 7.19.4).  
(Read and Write property)  
See also SOCKS5_GSSAPI_NEC option in CURL manual.

58.20.268  OptionSocks5GSSAPIService as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string holding the name of the service.  
**Notes:**  
The default service name for a SOCKS5 server is rcmd/server-fqdn. This option allows you to change it.  
(Added in 7.19.4)  
(Read and Write property)  
See also SOCKS5_GSSAPI_SERVICE option in CURL manual.

58.20.269  OptionSSHAuthTypes as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Define the SSH authorization types.  
**Notes:**  
Pass a long set to a bitmask consisting of one or more of CURLSSH_AUTH_PUBLICKEY, CURLSSH_AUTH_PASSWORD, CURLSSH_AUTH_HOST, CURLSSH_AUTH_KEYBOARD. Set CURLSSH_AUTH_ANY to let libCURL pick one. (Added in 7.16.1)  
  
constants:  
CURLSSH_AUTH_ANY = & hFFFFFFFF
58.20.270 OptionSSHCompression as Boolean

58.20.271 OptionSSHHostPublicKeyMD5 as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: A string containing 32 hexadecimal digits with the 128 bit MD5 checksum of the remote host’s public key. Notes: libCURL will reject the connection to the host unless the md5sums match. This option is only for SCP and SFTP transfers. (Added in 7.17.1) (Read and Write property) See also SSH_HOST_PUBLIC_KEY_MD5 option in CURL manual.

58.20.272 OptionSSHKnownhosts as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: A string holding the file name of the known_host file to use. Notes: The known_hosts file should use the OpenSSH file format as supported by libssh2. If this file is specified, libCURL will only accept connections with hosts that are known and present in that file, with a matching public key. (Added in 7.19.6) (Read and Write property) See also SSH_KNOWNHOSTS option in CURL manual.
58.20. CLASS CURLSMBS

58.20.273 OptionSSHPPrivateKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Pass a path pointing to a file name for your private key.

**Notes:**

If not used, libCURL defaults to using `textasciitilde /.ssh/id_dsa`. If the file is password-protected, set the password with OptionSSLPKeyPassword. (Added in 7.16.1)

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.

(Read and Write property)

See also `SSH_PRIVATE_KEYFILE` option in CURL manual.

58.20.274 OptionSSHPublicKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Pass a path pointing to a file name for your public key.

**Notes:**

If not used, libCURL defaults to using `textasciitilde /.ssh/id_dsa.pub`. (Added in 7.16.1)

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.

(Read and Write property)

See also `SSH_PUBLIC_KEYFILE` option in CURL manual.

58.20.275 OptionSSLCert as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The string should be the file name of your certificate.

**Notes:**

The default format is "PEM" and can be changed with OptionSSLCERTTYPE.
The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSLCERT option in CURL manual.

58.20.276 OptionSSLCertPassword as String

MBS CURL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The certificate password.
**Deprecated:** This item is deprecated and should no longer be used. You can use OptionKeyPassword instead. **Notes:** (Read and Write property)

58.20.277 OptionSSLCertType as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The string should be the format of your certificate.
**Notes:**
Supported formats are "PEM" and "DER". (Added in 7.9.3)

The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLCERTTYPE option in CURL manual.

58.20.278 OptionSSLCipherList as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A string holding the list of ciphers to use for the SSL connection.
**Notes:**
The list must be syntactically correct, it consists of one or more cipher strings separated by colons. Commas or spaces are also acceptable separators but colons are normally used, !, - and + can be used as operators. Valid examples of cipher lists include 'RC4-SHA', 'SHA1+DES', 'TLSv1' and 'DEFAULT'. The default list is normally set when you compile OpenSSL.
You'll find more details about cipher lists on this URL:

http://www.openssl.org/docs/apps/ciphers.html

The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value. (Read and Write property)
See also SSL_CIPHER_LIST option in CURL manual.

### 58.20.279 OptionSSLEnableALPN as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable/disable TLS ALPN extension (http2 over ssl might fail without).
**Notes:** (Read and Write property)
See also SSL_ENABLE_ALPN option in CURL manual.

### 58.20.280 OptionSSLEnableNPN as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable/disable TLS NPN extension (http2 over ssl might fail without)
**Notes:** (Read and Write property)
See also SSL_ENABLE_NPN option in CURL manual.

### 58.20.281 OptionSSLEngine as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** It will be used as the identifier for the crypto engine you want to use for your private key.
**Notes:**
If the crypto device cannot be loaded, kError_SSL_ENGINE_NOTFOUND is returned.

The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value. (Read and Write property)
See also SSLENGINE option in CURL manual.
### 58.20.282 OptionSSLEngineDefault as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the actual crypto engine as the default for (asymmetric) crypto operations. **Notes:**
If the crypto device cannot be set, kError_SSL_ENGINESETFAILED is returned.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLENGINE_DEFAULT option in CURL manual.

### 58.20.283 OptionSSLFalseStart as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set if we should enable TLS false start. **Notes:** (Read and Write property)
See also SSL_FALSESTART option in CURL manual.

### 58.20.284 OptionSSLKey as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The string should be the file name of your private key. **Notes:**
The default format is ”PEM” and can be changed with OptionSSLKEYTYPE.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also SSLKEY option in CURL manual.

### 58.20.285 OptionSSLKeyPassword as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The password required to use the OptionSSLKEY private key.
58.20. **CLASS CURLSMBS**

**Deprecated:** This item is deprecated and should no longer be used. You can use `OptionKeyPassword` instead. **Notes:**

The `Lasterror` property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

---

### 58.20.286 OptionSSLKeyType as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The string should be the format of your private key.

**Notes:**
Supported formats are "PEM", "DER" and "ENG".

The format "ENG" enables you to load the private key from a crypto engine. In this case `OptionSSLKEY` is used as an identifier passed to the engine. You have to set the crypto engine with `OptionSSLENGINE`. "DER" format key file currently does not work because of a bug in OpenSSL.

The `Lasterror` property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also `SSLKEYTYPE` option in CURL manual.

---

### 58.20.287 OptionSSLOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Enable/disable specific SSL features with a bitmask.

**Notes:** (Read and Write property)
See also `SSL_OPTIONS` option in CURL manual.

---

### 58.20.288 OptionSSLSessionIDCache as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether to use the SSL session ID cache.

**Notes:**
Pass false to disable libCURL’s use of SSL session-ID caching. Set this to true to enable it. By default all transfers are done using the cache. Note that while nothing ever should get hurt by attempting to reuse SSL session-IDs, there seem to be broken SSL implementations in the wild that may require you to disable this in order for you to succeed. (Added in 7.16.0)
(Read and Write property)
58.20.289 OptionSSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This option determines whether libCURL verifies that the server cert is for the server it is known as. Notes: When negotiating an SSL connection, the server sends a certificate indicating its identity. When OptionSSLVerifyHost is 2, that certificate must indicate that the server is the server to which you meant to connect, or the connection fails.

CURL considers the server the intended one when the Common Name field or a Subject Alternate Name field in the certificate matches the host name in the URL to which you told CURL to connect.

When the value is 1, the certificate must contain a Common Name field, but it doesn’t matter what name it says. (This is not ordinarily a useful setting).

When the value is 0, the connection succeeds regardless of the names in the certificate.

The default, since 7.10, is 2.

The checking this option controls is of the identity that the server claims. The server could be lying. To control lying, see OptionSSLVerifyPeer.

The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value. (Read and Write property) See also SSL_VERIFYHOST option in CURL manual.

58.20.290 OptionSSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Configure whether this CURL instance will verify the SSL peer certificate. Notes: This option determines whether CURL verifies the authenticity of the peer’s certificate. A value of 1 means CURL verifies; zero means it doesn’t. The default is nonzero, but before 7.10, it was zero.
When negotiating an SSL connection, the server sends a certificate indicating its identity. CURL verifies whether the certificate is authentic, i.e., that you can trust that the server is who the certificate says it is. This trust is based on a chain of digital signatures, rooted in certification authority (CA) certificates you supply. As of 7.10, CURL installs a default bundle of CA certificates and you can specify alternate certificates with the OptionCAINFO option or the OptionCAPATH option.

When OptionSSLVerifyPeer is nonzero, and the verification fails to prove that the certificate is authentic, the connection fails. When the option is zero, the connection succeeds regardless.

Authenticating the certificate is not by itself very useful. You typically want to ensure that the server, as authentically identified by its certificate, is the server you mean to be talking to. Use OptionSSLVerifyHost to control that.

(Read and Write property)
See also SSL_VERIFYPEER option in CURL manual.

58.20.291 OptionSSLVerifyStatus as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Set if we should verify the certificate status. Notes: (Read and Write property)
See also SSL_VERIFYSTATUS option in CURL manual.

58.20.292 OptionSSLVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: What version of SSL/TLS to attempt to use. Example:

```vbscript
dim c as CURLSMBS
C.c.OptionUseSSL = c.kFTPSSL_ALL
C.c.OptionSSLVersion = c.kSSLVersionTLSv12
```

Notes:
The available options are:

kSSLVERSION_DEFAULT = 0

The default action. When libCURL built with OpenSSL, this will attempt to figure out the remote SSL protocol version. Unfortunately there are a lot of ancient and broken servers in use which cannot handle
this technique and will fail to connect. When libCURL is built with GnuTLS, this will mean SSLv3.

kSSLVERSION_TLSv1 = 1

Force TLSv1

kSSLVERSION_SSLv2 = 2

Force SSLv2

kSSLVERSION_SSLv3 = 3

Force SSLv3

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLVERSION option in CURL manual.

58.20.293 OptionStreamDepends as CURLSMBS

Notes: (Read and Write property)
See also STREAM_DEPENDS option in CURL manual.

58.20.294 OptionStreamDependsE as CURLSMBS

Notes: (Read and Write property)
See also STREAM_DEPENDS_E option in CURL manual.

58.20.295 OptionStreamWeight as Integer

Notes:
58.20. **CLASS CURLSMBS**  

Default is 16.  
(Read and Write property)  
See also **STREAM_WEIGHT** option in CURL manual.

### 58.20.296 OptionSuppressConnectHeaders as Boolean

**Function:** Suppress proxy CONNECT response headers from user callbacks.  
**Notes:** (Read and Write property)  
See also **SUPPRESS_CONNECT_HEADERS** option in CURL manual.

### 58.20.297 OptionTCPFastOpen as Integer

**Function:** Set TCP Fast Open.  
**Notes:** (Read and Write property)  
See also **TCP_FASTOPEN** option in CURL manual.

### 58.20.298 OptionTCPKeepAlive as Boolean

**Function:** If set to true, TCP keepalive probes will be sent.  
**Notes:**  
The delay and frequency of these probes can be controlled by the OptionTCPKeepIdle and OptionTCPKeepInterval options, provided the operating system supports them. Set to false (default behavior) to disable keepalive probes (Added in 7.25.0).  
(Read and Write property)  
See also **TCP_KEEPALIVE** option in CURL manual.

### 58.20.299 OptionTCPKeepIdle as Integer

**Function:** Sets the delay, in seconds, that the operating system will wait while the connection is idle before sending keepalive probes.  
**Notes:**  
Not all operating systems support this option. (Added in 7.25.0)  
(Read and Write property)  
See also **TCP_KEEPIDLE** option in CURL manual.
CHAPTER 58. CURL

58.20.300 OptionTCPKeepInterval as Integer

MBS CURL Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the interval, in seconds, that the operating system will wait between sending keepalive probes.

**Notes:**
Not all operating systems support this option. (Added in 7.25.0)
(Read and Write property)
See also TCP_KEEPINTVL option in CURL manual.

58.20.301 OptionTCPNoDelay as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An integer specifying whether the TCP_NODELAY option should be set or cleared (true = set, false = clear).

**Notes:**
The option is cleared by default. This will have no effect after the connection has been established.

Setting this option will disable TCP’s Nagle algorithm. The purpose of this algorithm is to try to minimize the number of small packets on the network (where "small packets" means TCP segments less than the Maximum Segment Size (MSS) for the network).

Maximizing the amount of data sent per TCP segment is good because it amortizes the overhead of the send. However, in some cases (most notably telnet or rlogin) small segments may need to be sent without delay. This is less efficient than sending larger amounts of data at a time, and can contribute to congestion on the network if overdone.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TCP_NODELAY option in CURL manual.

58.20.302 OptionTFTPBlockSize as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specify block size to use for TFTP data transmission.

**Notes:**
Valid range as per RFC 2348 is 8-65464 bytes. The default of 512 bytes will be used if this option is not specified. The specified block size will only be used pending support by the remote server. If the server does not return an option acknowledgement or returns an option acknowledgement with no blksize, the default of 512 bytes will be used. (added in 7.19.4)
58.20. **CLASS CURLSMBS**

(Read and Write property)
See also **TFTP_BLKSIZE** option in CURL manual.

### 58.20.303 OptionTFTPNoOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether not send any tftp option requests to the server. **Notes:** (Read and Write property) See also **TFTP_NO_OPTIONS** option in CURL manual.

### 58.20.304 OptionTimeCondition as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Time condition option. **Notes:**

This defines how the OptionTimeValue time value is treated. You can set this parameter to kTimeConditionIfModifiedSince (1) or kTimeConditionIfUnModifiedSince (2). This feature applies to HTTP and FTP.

The last modification time of a file is not always known and in such instances this feature will have no effect even if the given time condition would have not been met.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value. (Read and Write property) See also **TIMECONDITION** option in CURL manual.

### 58.20.305 OptionTimeOut as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximum time in seconds that you allow the libCURL transfer operation to take. **Notes:**

Normally, name lookups can take a considerable time and limiting operations to less than a few minutes risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable time-outing system calls.

In unix-like systems, this might cause signals to be used unless CURLOPT_NOSIGNAL is set.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMEOUT option in CURL manual.

58.20.306 OptionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Pass a long as parameter containing the maximum time in milli seconds that you allow the libCURL transfer operation to take.
**Notes:**
Normally, name lookups can take a considerable time and limiting operations to less than a few minutes risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable time-outing system calls.
(Read and Write property)
See also TIMEOUT_MS option in CURL manual.

58.20.307 OptionTimeValue as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This should be the time in seconds since 1 jan 1970, and the time will be used in a condition as specified with OptionTimeCondition.
**Notes:**
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMEVALUE option in CURL manual.

58.20.308 OptionTLSAuthPassword as String

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the TSL authentication password.
**Notes:**
Please also set OptionTLSAuthType.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_PASSWORD option in CURL manual.
58.20.309  OptionTLSAuthType as String

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the TLS authentication type.

**Notes:**
- You can set this to "SRP" to use Secure Remote Password authentication.
- Please also set username and password.
- The Lasterror property is set. 0 for success.
- You can set this value and later you can read it, but you cannot read the default value.
  (Read and Write property)
- See also **TLSAUTH_TYPE** option in CURL manual.

58.20.310  OptionTLSAuthUsername as String

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the TSL authentication user name.

**Notes:**
- Please also set OptionTLSAuthType.
- The Lasterror property is set. 0 for success.
- You can set this value and later you can read it, but you cannot read the default value.
  (Read and Write property)
- See also **TLSAUTH_USERNAME** option in CURL manual.

58.20.311  OptionTransferEncoding as Boolean

MBS CURL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Adds a request for compressed Transfer Encoding in the outgoing HTTP request.

**Notes:**
- If the server supports this and so desires, it can respond with the HTTP response sent using a compressed
  Transfer-Encoding that will be automatically uncompressed by libCURL on reception.

- Transfer-Encoding differs slightly from the Content-Encoding you ask for with OptionAcceptEncoding in
  that a Transfer-Encoding is strictly meant to be for the transfer and thus MUST be decoded before the
  data arrives in the client. Traditionally, Transfer-Encoding has been much less used and supported by both
  HTTP clients and HTTP servers.
  (Read and Write property)
- See also **TRANSFER_ENCODING** option in CURL manual.
58.20.312  OptionTransferText as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True tells the library to use ASCII mode for ftp transfers, instead of the default binary transfer. **Notes:**

For win32 systems it does not set the stdout to binary mode. This option can be usable when transferring text data between systems with different views on certain characters, such as newlines or similar.

libCURL does not do a complete ASCII conversion when doing ASCII transfers over FTP. This is a known limitation/flaw that nobody has rectified. libCURL simply sets the mode to ascii and performs a standard transfer.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value. (Read and Write property)
See also TRANSFERTEXT option in CURL manual.

58.20.313  OptionUnixSocketPath as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Path to Unix domain socket. **Notes:** (Read and Write property)
See also UNIX_SOCKET_PATH option in CURL manual.

58.20.314  OptionUnrestrictedAuth as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A boolean parameter tells the library it can continue to send authentication (user+password) when following locations, even when hostname changed. **Notes:**

This option is meaningful only when setting FollowOption.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value. (Read and Write property)
See also UNRESTRICTED_AUTH option in CURL manual.
58.20. **CLASS CURLSMBS**

### 58.20.315 OptionUpload as Boolean

**MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.**

**Function:**

True tells the library to prepare for an upload.

**Notes:**

The OptionInFileSize or OptionInFileSizeLarge options are also interesting for uploads. If the protocol is HTTP, uploading means using the PUT request unless you tell libCURL otherwise.

Using PUT with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with OptionHTTPHeader as usual.

If you use PUT to a HTTP 1.1 server, you can upload data without knowing the size before starting the transfer if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size.

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.

(Read and Write property)

See also **UPLOAD** option in CURL manual.

### 58.20.316 OptionURL as String

**MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.**

**Function:**

The actual URL to deal with.

**Notes:**

If you need to pass username or password, please consider using the OptionUsername and OptionPassword properties. If you username or password contains characters like @ or :, you must use those properties.

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.

The parameter should be a char * to a zero terminated string. The string must remain present until CURL no longer needs it, as it doesn’t copy the string.

If the given URL lacks the protocol part ("http://" or "ftp://" etc), it will attempt to guess which protocol to use based on the given host name. If the given protocol of the set URL is not supported, libCURL will return on error (kError_UNSUPPORTED_PROTOCOL) when you call Perform. Use VersionInfo for detailed info on which protocols that are supported.

The string given to CURLOPT_URL must be url-encoded and following the RFC 2396:
CURLOPT_URL is the only option that must be set before Perform is called.
For file uploads or downloads, please include the file name in the URL.

Please do never include username and passwords in URLs, as those get often written to log files and would reveal your credentials!
Instead use OptionUsername and OptionPassword.
(Read and Write property)
See also URL option in CURL manual.

58.20.317 OptionUserAgent as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The user agent string to pass to the server.
**Notes:**
It will be used to set the User-Agent: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also USERAGENT option in CURL manual.

58.20.318 OptionUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The user name to be used in protocol authentication
**Notes:**
In order to specify the password to be used in conjunction with the user name use the OptionPassword option
(Read and Write property)
See also USERNAME option in CURL manual.

58.20.319 OptionUseSSL as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Request using SSL / TLS for the transfer.
**Notes:**
Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the transfer.
These are all protocols that start out plain text and get "upgraded" to SSL using the STARTTLS command. This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

```
CURLUSESSL_NONE 0  Don't attempt to use SSL.
CURLUSESSL_TRY 1  Try using SSL, proceed as normal otherwise.
CURLUSESSL_CONTROL 2  Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.
CURLUSESSL_ALL 3  Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.
```

(Read and Write property)
See also USE_SSL option in CURL manual.

---

**58.20.320 OptionVerbose as Boolean**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether debug messages are sent to the DebugMessage event.

**Notes:**
- Default is false.
- You need to subclass the CURLSMBS class to add code in the DebugMessage event.
- Or you set CollectDebugData = true and later query DebugData property.
- Or you use CreateMTDebugOutputFile to stream them to a file.

(Read and Write property)
See also VERBOSE option in CURL manual.

---

**58.20.321 OptionWildCardMatch as Boolean**

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable wildcard matching.

**Notes:**
- Set onoff to true if you want to transfer multiple files according to a file name pattern. The pattern can be specified as part of the OptionURL option, using an fnmatch-like pattern (Shell Pattern Matching) in the last part of URL (file name).

By default, libCURL uses its internal wildcard matching implementation. You can provide your own matching function by the CURLSMBS.FileNameMatch event.

A brief introduction of its syntax follows:
ftp://example.com/some/path/*.{txt} (for all txt’s from the root directory)

? - QUESTION MARK

Question mark matches any (exactly one) character.

ftp://example.com/some/path/photo?.jpeg

[ - BRACKET EXPRESSION

The left bracket opens a bracket expression. The question mark and asterisk have no special meaning in a bracket expression. Each bracket expression ends by the right bracket and matches exactly one character. Some examples follow:

[ a-zA-Z0-9 ] or [ f-gF-G ] - character interval
[ abc ] - character enumeration
[ ^abc ] or [ !abc ] - negation
[ [ :name: ] ] class expression. Supported classes are alnum, lower, space, alpha, digit, print, upper, blank, graph, xdigit,
[ ] [ -!^] - special case - matches only ‘-’, ‘!’ or ‘^’. These characters have no special purpose.
[ \[ \] \] ] - escape syntax. Matches ‘ [’, ‘ ]’ or ‘\’.

Using the rules above, a file name pattern can be constructed:

This feature is only supported for FTP download. Not for SFTP or HTTP.
(Read and Write property)
See also WILDCARDMATCH option in CURL manual.

58.20.322 OptionXOAuth2Bearer as String

Notes: (Read and Write property)
See also XOAUTH2_BEARER option in CURL manual.
58.20.323  **OutputData as String**

MBS CURL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The output data from CURL.

**Notes:**

If CollectOutputData property is true, the plugin puts the data received in write event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object.

(Read only property)

58.20.324  **Paused as Boolean**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether transfer is paused.

**Notes:**

You can set it to true while transfer runs to pause it.

(Read and Write property)

58.20.325  **ProgressDownloadCurrent as Int64**

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Bytes downloaded so far.

**Notes:** (Read only property)

58.20.326  **ProgressDownloadTotal as Int64**

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Bytes to download in total.

**Notes:** (Read only property)

58.20.327  **ProgressPercent as Double**

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Current download/upload progress in percent.

**Notes:**

Range from 0 to 100.

(Read only property)
58.20.328  ProgressUploadCurrent as Int64

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Bytes uploaded so far.
**Notes:** (Read only property)

58.20.329  ProgressUploadTotal as Int64

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Bytes to upload in total.
**Notes:** (Read only property)

58.20.330  Version as CURLSVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a version object to a filled with information about various run-time features in libCURL.
**Notes:** (Read only property)

58.20.331  YieldTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether plugin should yield time.
**Notes:**
If set the plugin will yield time to Realbasic back so threads and timers work while you download.
Seems like in RB 2009 this property only has effect if you run CURL in a thread.
(Read and Write property)

58.20.332  Events

58.20.333  ChunkBegin(FileInfo as CURLSFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The event called on begin of a new chunk.
**Notes:** If splitting of data transfer is enabled, this callback is called before download of an individual chunk started. Note that parameter "remains" works only for FTP wildcard downloading (for now), otherwise is
not used.

58.20.334 ChunkEnd(FileInfo as CURLSFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Download of a chunk ended.
**Notes:**
If splitting of data transfer is enabled this callback is called after download of an individual chunk finished. This event is called for skipped or downloaded files.

58.20.335 DebugMessage(infotype as Integer, data as string, dataSize as Integer)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A debug event to get data of ongoing process.
**Notes:**
You may need to set OptionVerbose to true.

infotype constants:

<table>
<thead>
<tr>
<th>infotype</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>kInfo_TEXT</td>
<td>0</td>
<td>The data is informational text.</td>
</tr>
<tr>
<td>kInfo_HEADER_IN</td>
<td>1</td>
<td>The data is header (or header-like) data received from the peer.</td>
</tr>
<tr>
<td>kInfo_HEADER_OUT</td>
<td>2</td>
<td>The data is header (or header-like) data sent to the peer.</td>
</tr>
<tr>
<td>kInfo_DATA_IN</td>
<td>3</td>
<td>The data is protocol data received from the peer.</td>
</tr>
<tr>
<td>kInfo_DATA_OUT</td>
<td>4</td>
<td>The data is protocol data sent to the peer.</td>
</tr>
<tr>
<td>kInfo_SSL_DATA_IN</td>
<td>5</td>
<td>The data is protocol data received from the peer.</td>
</tr>
<tr>
<td>kInfo_SSL_DATA_OUT</td>
<td>6</td>
<td>The data is protocol data sent to the peer.</td>
</tr>
</tbody>
</table>

If you set CollectDebugData, the plugin will collect the messages and provide them via the DebugData property. You can still use this event to write your own log instead of in addition.

58.20.336 FileNameMatch(Pattern as String, Name as String) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Match a file against a pattern.
**Notes:**
If you don’t implement this event, you get the default implementation from CURL. Return kFileNameMatchNoMatch, kFileNameMatchIsMatch or kFileNameMatchFailed.

58.20.337 Finished(Result as Integer)

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: The event called when transfer has finished. Notes: For Perform and PerformMT it is called before Perform function returns, so in PerformMT this is called on the thread. For use with CURLSMultiMBS, it is called after TransferFinished event and before TransfersFinished event. If you want to modify GUI and use PeformMT, you may need to start a timer to do so.

58.20.338 Header(data as string, dataSize as Integer) as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: New Header data was received. Notes: You can get error 23 if you don’t return lenb(data) in this event. Or just leave it empty so RB will not include it in your application the plugin will return lenb(data) itself. If you set CollectHeaderData to true, the plugin will collect the messages and provide them via the Header-Data property. You can still use this event to write your own log instead of in addition.

58.20.339 Progress(dltotal as Int64, dlnow as Int64, ultotal as Int64, ulnow as Int64, percent as Double) as boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: An event to report progress of ongoing transfers. Notes: This function gets called by libCURL with a frequent interval during operation (roughly once per second) no matter if data is being transferred or not. Unknown/unused argument values passed to the callback will be set to zero (like if you only download data, the upload size will remain 0). Returning a true from this event will cause libCURL to abort the transfer and return kError_ABORTED_BY_CALLBACK. You can run CURL from a thread to download several things at the same time or keep the GUI more responsive. For better GUI, you can even call a method like app.DoEvents to get the GUI updated more often.
When sending email, ultotal may be zero. In that case use OptionInFileSize to know size of email to upload.

**58.20.340 Read(count as Integer) as string**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

This event gets called by libCURL as soon as it needs to read data in order to send it to the peer.

**Notes:**

Return the number of bytes requested. Never return a string with lenb(string) > count. You can return 0 to inform about end of file.

If you stop the current transfer by returning 0 “pre-maturely” (i.e before the server expected it, like when you’ve told you will upload N bytes and you upload less than N bytes), you may experience that the server “hangs” waiting for the rest of the data that won’t come.

The read event may return CURL_READFUNC_ABORT (& h10000000) to stop the current operation immediately, resulting in a kError_ABORTED_BY_CALLBACK error code from the transfer (Added in 7.12.1)

This event is not called when using PerformMT.

If you provide Input data via SetInputData or OpenMTInputFile method, this event is not called and data is taken from the data you provided.

**58.20.341 RestartRead() as boolean**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

An event to inform you that reading on the file needs to start at the beginning again.

**Notes:**

Return true on success.

If you use a binarystream for reading you will have to set position to 0 in this event.

This event is not called when using PerformMT.

**58.20.342 Seek(pos as Int64, whence as Integer) as Integer**

MBS CURL Plugin, Plugin Version: 12.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Called when CURL needs to perform a seek.

**Notes:**
Normally only needed if you resume a download (Seek forward) or upload is reset (seek back).
Whence is kSeekOriginCurrent, kSeekOriginEnd or kSeekOriginSet.
Please return one of this constants: kSeekReturnCantSeek, kSeekReturnFail or kSeekReturnOk.

58.20.343 \texttt{SSHKey(KnownKey as string, KnownKeyLength as Integer, KnownKeyType as Integer, FoundKey as string, FoundKeyLength as Integer, FoundKeyType as Integer, MatchStatus as Integer) as Integer}

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The event for known hosts callback for SFTP and SCP.
**Notes:**
- **KnownKey:** The known key as string encoded with base64 if KnownKeyLength is zero, otherwise the "raw" data.
- **KnownKeyLength:** The length of the key. Zero for base64 encoded key.
- **KnownKeyType:** The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
- **FoundKey:** The found key as string encoded with base64 if FoundKeyLength is zero, otherwise the "raw" data.
- **FoundKeyLength:** The length of the key. Zero for base64 encoded key.
- **FoundKeyType:** The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
- **MatchStatus:** The status CURL found. (0 = OK, 1 = Mismatch, 2 = Missing)

Return one of the following values:

- \texttt{CURLKHSTAT_FINE_ADD_TO_FILE} 0 Fine and add to file
- \texttt{CURLKHSTAT_FINE} 1 Fine
- \texttt{CURLKHSTAT_REJECT} 2 reject the connection, return an error
- \texttt{CURLKHSTAT_DEFER} 3 do not accept it, but we can’t answer right now so this causes a CURLE_DEFER error but otherwise the connection will be left intact etc

58.20.344 \texttt{Write(data as string, dataSize as Integer) as Integer}

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This event gets called by libCURL as soon as there is data received that needs to be saved.
**Notes:**
Return the number of bytes actually taken care of. If that amount differs from the amount passed to your function, it’ll signal an error to the library and it will abort the transfer and return kError_WRITE_ERROR.

This function may be called with zero bytes data if the transferred file is empty.

The event function will be passed as much data as possible in all invokes, but you cannot possibly make any
assumptions. It may be one byte, it may be thousands. The maximum amount of data that can be passed to the write callback is defined in the CURL.h header file: CURL_MAX_WRITE_SIZE (16384).

If you set CollectOutputData to true, the plugin will automatically collect the data and provide it to you after the transfer with the OutputData property. This collecting feature will only work right, if there is enough free memory. You can of course still process data yourself in this event instead of in addition.

58.20.345 Constants

58.20.346 kAUTH_ANY = & hFFFFFFFEEF

Notes: all types set

58.20.347 kAUTH_ANYSAFE = & hFFFFFFFEF

58.20.348 kAUTH_BASIC = 1

Notes: Basic (default)

58.20.349 kAUTH_DIGEST = 2

Notes: Digest

58.20.350 kAUTH_DIGEST_IE = 16

MBS CURL Plugin, Plugin Version: 15.2. Function: One of the authentication constants for the Option-HTTPAuth property.
Notes: HTTP Digest authentication with an IE flavor. Digest authentication is defined in RFC 2617 and is
a more secure way to do authentication over public networks than the regular old-fashioned Basic method. The IE flavor is simply that libCURL will use a special "quirk" that IE is known to have used before version 7 and that some servers require the client to use.

58.20.351  kAUTH_GSSNEGOTIATE = 4

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the authentication constants for the Option-HTTPAuth property.

**Notes:**

GSS-Negotiate

Please check SupportsGSSNEGOTIATE property in CURLSVersionMBS class whether this is supported/implemented by your copy of the CURL library.

58.20.352  kAUTH_NEGOTIATE = 4

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the authentication constants for the Option-HTTPAuth property.

**Notes:**

HTTP Negotiate (SPNEGO) authentication. Negotiate authentication is defined in RFC 4559 and is the most secure way to perform authentication over HTTP.

You need to build libCURL with a suitable GSS-API library or SSPI on Windows for this to work.

58.20.353  kAUTH_NONE = 0

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the authentication constants for the Option-HTTPAuth property.

58.20.354  kAUTH_NTLM = 8

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the authentication constants for the Option-HTTPAuth property.
58.20. **CLASS CURLSMBS**

58.20.355  **kAUTH_NTLM_WB = 32**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the authentication constants for the Option-HTTPAuth property.

**Notes:**

NTLM delegating to winbind helper. Authentication is performed by a separate binary application that is executed when needed. The name of the application is specified at compile time but is typically /usr/bin/ntlm_auth

Note that libCURL will fork when necessary to run the winbind application and kill it when complete, calling waitpid() to await its exit when done. On POSIX operating systems, killing the process will cause a SIGCHLD signal to be raised (regardless of whether OptionNoSignal is set), which must be handled intelligently by the application. In particular, the application must not unconditionally call wait() in its SIGCHLD signal handler to avoid being subject to a race condition. This behavior is subject to change in future versions of libCURL.

58.20.356  **kAUTH_Only = & h80000000**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the authentication constants for the Option-HTTPAuth property.

**Notes:** This is a meta symbol. OR this value together with a single specific auth value to force libCURL to probe for un-restricted auth and if not, only that single auth algorithm is acceptable.

58.20.357  **kChunkBeginFailed = 1**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the result values for the ChunkBegin event.

**Notes:** Failed, so we exit downloads.

58.20.358  **kChunkBeginOK = 0**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the result values for the ChunkBegin event.

**Notes:** OK, download this file.

58.20.359  **kChunkBeginSkip = 2**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the result values for the ChunkBegin event.

**Notes:** Skip the file.
58.20.360  kChunkEndFailed = 1

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the result values for the ChunkEnd event. **Notes:** Failed, so we exit downloads.

58.20.361  kChunkEndOK = 0

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the result values for the ChunkEnd event. **Notes:** Download success.

58.20.362  kError_ABORTED_BY_CALLBACK = 42

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.20.363  kError AGAIN = 81

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** socket is not ready for send/recv, wait till it’s ready and try again (Added in CURL 7.18.2)

58.20.364  kError_BAD_CONTENT_ENCODING = 61

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** Unrecognized transfer encoding

58.20.365  kError_BAD_DOWNLOAD_RESUME = 36

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** couldn’t resume download

58.20.366  kError_BAD_FUNCTION_ARGUMENT = 43

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.
58.20. CLASS CURLSMBS

58.20.367  kError_CHUNK_FAILED = 88

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Chunk callback reported error.

58.20.368  kError_CONV_FAILED = 75

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Conversion failed.

58.20.369  kError_CONV_REQD = 76

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Not used with plugin.

58.20.370  kError_COULDN'T_CONNECT = 7

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** Could not connect. Proxy set? Firewall open?

58.20.371  kError_COULDN'T_RESOLVE_HOST = 6

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.20.372  kError_COULDN'T_RESOLVE_PROXY = 5

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.20.373  kError_FAILED_INIT = 2

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.
58.20.374 \text{ kError_FILESIZE_EXCEEDED} = 63

MBS CURL Plugin, Plugin Version: 9.8. \textbf{Function:} One of the error constants for the Error event.  
\textbf{Notes:} Maximum file size exceeded

58.20.375 \text{ kError_FILE_COULDNT_READ_FILE} = 37

MBS CURL Plugin, Plugin Version: 9.8. \textbf{Function:} One of the error constants for the Error event.

58.20.376 \text{ kError_FTP_ACCEPT_FAILED} = 10

MBS CURL Plugin, Plugin Version: 15.2. \textbf{Function:} One of the error constants for the Error event.  
\textbf{Notes:} While waiting for the server to connect back when an active FTP session is used, an error code was sent over the control connection or similar.

58.20.377 \text{ kError_FTP_ACCEPT_TIMEOUT} = 12

MBS CURL Plugin, Plugin Version: 15.2. \textbf{Function:} One of the error constants for the Error event.  
\textbf{Notes:} During an active FTP session while waiting for the server to connect, the OptionAcceptTimeoutMS (or the internal default) timeout expired.

58.20.378 \text{ kError_FTP_BAD_FILE_LIST} = 87

MBS CURL Plugin, Plugin Version: 11.2. \textbf{Function:} One of the error constants for the Error event.  
\textbf{Notes:} Unable to parse FTP file list.

58.20.379 \text{ kError_FTP_CANT_GET_HOST} = 15

MBS CURL Plugin, Plugin Version: 9.8. \textbf{Function:} One of the error constants for the Error event.

58.20.380 \text{ kError_FTP_COULDNT_RETR_FILE} = 19

MBS CURL Plugin, Plugin Version: 9.8. \textbf{Function:} One of the error constants for the Error event.
58.20.381 kError_FTP_COULDN'T_SET_TYPE = 17

MBS CURL Plugin, Plugin Version: 11.2. Function: One of the error constants for the Error event.

58.20.382 kError_FTP_COULDN'T_USE_REST = 31

Notes: the REST command failed

58.20.383 kError_FTP_PORT_FAILED = 30

Notes: FTP PORT operation failed

58.20.384 kError_FTP_PRET_FAILED = 84

MBS CURL Plugin, Plugin Version: 11.2. Function: One of the error constants for the Error event.
Notes: a PRET command failed

58.20.385 kError_FTP_WEIRD_227_FORMAT = 14

58.20.386 kError_FTP_WEIRD_PASS_REPLY = 11

58.20.387 kError_FTP_WEIRD_PASV_REPLY = 13

58.20.388  kError_FTP_WEIRD_SERVER_REPLY = 8

58.20.389  kError_FUNCTION_NOT_FOUND = 41

58.20.390  kError_GOT NOTHING = 52

MBS CURL Plugin, Plugin Version: 9.8. Function: One of the error constants for the Error event. Notes: when this is a specific error

58.20.391  kError_HTTP2 = 16

MBS CURL Plugin, Plugin Version: 15.2. Function: One of the error constants for the Error event. Notes: A problem was detected in the HTTP2 framing layer. This is somewhat generic and can be one out of several problems, see the error buffer for details.

58.20.392  kError_HTTP2_STREAM = 92

MBS CURL Plugin, Plugin Version: 18.2. Function: One of the error constants for the Error event. Notes: stream error in HTTP/2 framing layer

58.20.393  kError_HTTP_POST_ERROR = 34

58.20.394  kError_HTTP_RETURNED_ERROR = 22

58.20.395  kError_INTERFACE_FAILED = 45
MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.20.396  kError_LDAP_CANNOT_BIND = 38
MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.20.397  kError_LDAP_INVALID_URL = 62
MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** Invalid LDAP URL

58.20.398  kError_LDAP_SEARCH_FAILED = 39
MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.20.399  kError_LOGIN_DENIED = 67
MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** user, password or similar was not accepted and we failed to login

58.20.400  kError_NOT_BUILT_IN = 4
MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the error constants for the Error event. **Notes:** A requested feature, protocol or option was not found built-in in this libCURL due to a build-time decision. This means that a feature or option was not enabled or explicitly disabled when libCURL was built and in order to get it to function you have to get a rebuilt libCURL.

58.20.401  kError_NO_CONNECTION_AVAILABLE = 89
MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the error constants for the Error event. **Notes:**
For internal use only, will never be returned by libCURL.
No connection available, the session will be queued. (added in 7.30.0)

58.20.402 kError_OK = 0

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.20.403 kError_OPERATION_TIMEDOUT = 28

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.

58.20.404 kError_OUT_OF_MEMORY = 27

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.20.405 kError_PARTIAL_FILE = 18

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.20.406 kError_PEER_FAILED_VERIFICATION = 51

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.

58.20.407 kError_QUOTE_ERROR = 21

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.

58.20.408 kError_RANGE_ERROR = 33

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.
58.20. CLASS CURLSMBS

58.20.409  kError_READ_ERROR = 26

MBS CURL Plugin, Plugin Version: 9.8. Function: One of the error constants for the Error event. Notes: could open/read from file

58.20.410  kError_RECURSIVE_API_CALL = 93

MBS CURL Plugin, Plugin Version: 18.2. Function: One of the error constants for the Error event. Notes: an api function was called from inside a callback/event.

58.20.411  kError_RECV_ERROR = 56

58.20.412  kErrorREMOTE_ACCESS_DENIED = 9

MBS CURL Plugin, Plugin Version: 11.2. Function: One of the error constants for the Error event.

58.20.413  kError_REMOTE_DISK_FULL = 70

MBS CURL Plugin, Plugin Version: 11.2. Function: One of the error constants for the Error event. Notes: Out of disk space on server.

58.20.414  kError_REMOTE_FILE_EXISTS = 73

58.20.415  kError_REMOTE_FILE_NOT_FOUND = 78

MBS CURL Plugin, Plugin Version: 11.2. Function: One of the error constants for the Error event. Notes: Remote file not found.
58.20.416 kError_RTSP_CSEQ_ERROR = 85

MBS CURL Plugin, Plugin Version: 11.2. Function: One of the error constants for the Error event.
Notes: Mismatch of RTSP CSeq numbers.

58.20.417 kError_RTSP_SESSION_ERROR = 86

MBS CURL Plugin, Plugin Version: 11.2. Function: One of the error constants for the Error event.
Notes: mismatch of RTSP Session Identifiers

58.20.418 kError_SEND_ERROR = 55

Notes: failed sending network data

58.20.419 kError_SEND_FAIL_REWIND = 65

Notes: Sending the data requires a rewind that failed

58.20.420 kError_SSH = 79

MBS CURL Plugin, Plugin Version: 11.2. Function: One of the error constants for the Error event.
Notes: Error from the SSH layer, somewhat generic so the error message will be of interest when this has happened.

58.20.421 kError_SSL_CACERT = 60

Notes:
problem with the CA cert (path?)

You can often workaround by setting OptionSSLVerifyPeer = 0 and OptionSSLVerifyHost = 0. But that reduces security.
kError_SSL_CACERT_BADFILE = 77

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Could not load CACERT file, missing or wrong format.

kError_SSL_CERTPROBLEM = 58

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** problem with the local certificate

kError_SSL_CIPHER = 59

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** couldn’t use specified cipher

kError_SSL_CONNECT_ERROR = 35

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** wrong when connecting with SSL

kError_SSL_CRL_BADFILE = 82

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Could not load CRL file, missing or wrong format (Added in 7.19.0)

kError_SSL_ENGINE_INITFAILED = 66

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** failed to initialise ENGINE

kError_SSL_ENGINE_NOTFOUND = 53

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** SSL crypto engine not found
58.20.429 kError_SSL_ENGINE_SETFAILED = 54

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** can not set SSL crypto engine as default

58.20.430 kError_SSL_INVALIDCERTSTATUS = 91

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the error constants for the Error event. **Notes:** invalid certificate status

58.20.431 kError_SSL_ISSUER_ERROR = 83

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Issuer check failed. (Added in CURL 7.19.0)

58.20.432 kError_SSL_PINNEDPUBKEYNOTMATCH = 90

58.20.559  kTimeConditionIfModifiedSince = 1

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the time condition constants for the TimeCondition property.

58.20.560  kTimeConditionIfUnModifiedSince = 2

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the time condition constants for the TimeCondition property.

58.20.561  kTimeConditionNone = 0

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the time condition constants for the TimeCondition property.
**Notes:** No condition.

58.20.562  kUseSSLall = 3

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL constants for the OptionFTPSSSL property.
**Notes:** Require SSL for all communication or fail with kError_FTP_SSL_FAILED.
58.20.563  kUseSSLcontrol = 2

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL constants for the OptionFTPSSL property.  
**Notes:** Require SSL for the control connection or fail with kError_FTP_SSL_FAILED.

58.20.564  kUseSSLnone = 0

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL constants for the OptionFTPSSL property.  
**Notes:** Don’t attempt to use SSL.

58.20.565  kUseSSLtry = 1

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL constants for the OptionFTPSSL property.  
**Notes:** Try using SSL, proceed as normal otherwise.
58.21 class CURLSMimePartMBS

58.21.1 class CURLSMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for mime parts.

**Notes:**
You can provide data via file path, folderitem, data in memoryblock or string.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

58.21.2 Methods

58.21.3 Constructor

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

58.21.4 Headers as String()

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries header.

58.21.5 SetHeaders(headers() as String)

58.21.6 Properties

58.21.7 DataMemory as Memoryblock

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mime part data source from memory data.

**Notes:** (Read and Write property)
58.21.8 DataString as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The mime part data source from memory data.
**Example:**
```plaintext
dim c as new CURLSMBS

// add mime
dim p as CURLSMimePartMBS = c.AddMimePart

p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"

C.FinishMime
// now you can send...
```

**Notes:** (Read and Write property)

58.21.9 Encoding as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The mime data transfer encoder.
**Notes:**
If set to binary, 8bit, 7bit, base64 or quoted-printable, the matching encoding is applied.
(Read and Write property)

58.21.10 File as Folderitem

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The file to stream.
**Notes:**
When you set property, the plugin will open file and may raise IOException on failure.
(Read and Write property)
58.21.11 FileName as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mime part remote file name.

**Notes:**
If mime type is not set, we pick extension from file name.
This includes gif, jpg, jpeg, png, svg, txt, htm, html, pdf and xml file extensions.
(Read and Write property)

58.21.12 FilePath as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mime part data source from named file.

**Notes:** (Read and Write property)

58.21.13 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code.

**Notes:** (Read and Write property)

58.21.14 MimeType as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mime part type.

**Notes:** (Read and Write property)

58.21.15 Name as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mime/form part name.

**Notes:** (Read and Write property)

58.21.16 Parent as Variant

58.21.17 Constants

58.21.18 kEncoding7bit = "7bit"

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the encoding modes. **Notes:** 7bit

58.21.19 kEncoding8bit = "8bit"

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the encoding modes. **Notes:** 8bit

58.21.20 kEncodingBase64 = "base64"

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the encoding modes. **Notes:** Base64

58.21.21 kEncodingBinary = "binary"

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the encoding modes. **Notes:** Binary mode

58.21.22 kEncodingNone = ""

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the encoding modes. **Notes:** No mode, so data is passed through and header has no encoding defined.

58.21.23 kEncodingQuotedPrintable = "quoted-printable"

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the encoding modes. **Notes:** Quoted printable
58.21.24  kMimeTypeGIF = ”image/gif”

MBS CURL Plugin, Plugin Version: 18.2. Function: One of the mime types.
Notes: GIF

58.21.25  kMimeTypeHTML = ”text/html”

MBS CURL Plugin, Plugin Version: 18.2. Function: One of the mime types.
Notes: HTML

58.21.26  kMimeTypeJPEG = ”image/jpeg”

MBS CURL Plugin, Plugin Version: 18.2. Function: One of the mime types.
Notes: JPEG

58.21.27  kMimeTypePDF = ”application/pdf”

MBS CURL Plugin, Plugin Version: 18.2. Function: One of the mime types.
Notes: PDF

58.21.28  kMimeTypePNG = ”image/png”

MBS CURL Plugin, Plugin Version: 18.2. Function: One of the mime types.
Notes: PNG

58.21.29  kMimeTypeSVG = ”image/svg+xml”

MBS CURL Plugin, Plugin Version: 18.2. Function: One of the mime types.
Notes: SVG

58.21.30  kMimeTypeText = ”text/plain”

MBS CURL Plugin, Plugin Version: 18.2. Function: One of the mime types.
Notes: Text
58.21.31  kMimeTypeXML = "application/xml"

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the mime types.  
**Notes:** XML
58.22 class CURLSMissingFunctionExceptionMBS

58.22.1 class CURLSMissingFunctionExceptionMBS

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
An exception raised if a CURL library function is not loaded.

**Notes:**
If you call load library before you use the CURLSMBS Constructor, you should never see this.
Subclass of the RuntimeException class.
58.23. **CLASS CURLSMULTIMBS**

58.23  **class CURLSMultiMBS**

58.23.1  **class CURLSMultiMBS**

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for multiple CURL transfers running in parallel.

58.23.2  **Methods**

58.23.3  **AddCURL(CURL as CURLSMBS) as boolean**

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Add a standard CURL handle to the multi stack.
**Notes:** Lasterror is set.

58.23.4  **CURLs as CURLSMBS()**

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries list of current CURL instances.

58.23.5  **ErrorString(ErrorCode as Integer) as String**

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries text message for a given error code.

58.23.6  **Perform**

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Checks for things to see.
**Notes:**
When the app thinks there’s data available for CURL it calls this function to read/write whatever there is right now. This returns as soon as the reads and writes are done. This function does not require that there actually is data available for reading or that data can be written, it can be called just in case.

Lasterror is set. This only provides errors etc regarding the whole multi stack. There might still have occurred problems on individual transfers even when this returns OK.
CHAPTER 58. CURL

Sets RunningTransfers property.

58.23.7  RemoveCURL(CURL as CURLSMBS) as boolean

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes a CURL handle from the multi stack again.  
**Notes:**  
Lasterror is set.  
Plugin calls this automatically when TransferFinished event was called.

58.23.8  Properties

58.23.9  ChunkLengthPenaltySize as Int64

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A connection with a chunk length longer than this will not be considered for pipelining.  
**Notes:** (Read and Write property)

58.23.10  ContentLengthPenaltySize as Int64

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A connection with a content-length longer than this will not be considered for pipelining.  
**Notes:** (Read and Write property)

58.23.11  Handle as Integer

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.  
**Notes:** (Read only property)

58.23.12  Lasterror as Integer

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code.  
**Notes:** (Read and Write property)
58.23.  CLASS CURLSMULTIMBS

58.23.13  MaxConnects as Integer

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maximum number of entries in the connection cache. 
**Notes:** (Read and Write property)

58.23.14  MaxHostConnections as Integer

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maximum number of (pipelining) connections to one host. 
**Notes:** (Read and Write property)

58.23.15  MaxPipelineLength as Integer

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maximum number of requests in a pipeline. 
**Notes:** (Read and Write property)

58.23.16  MaxTotalConnections as Integer

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maximum number of open connections in total. 
**Notes:** (Read and Write property)

58.23.17  Pipelining as Integer

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set to 1 to enable pipelining for this multi handle. 
**Notes:**
Only for HTTP protocol. 
Used to be a boolean property for 15.0 to 18.1, but changed to integer for 18.2. 
(Read and Write property)

58.23.18  RunningTransfers as Integer

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of running transfers.
58.23.19 Events

58.23.20 TransferFinished(CURL as CURLSMBS, result as Integer, RemainingFinishedTransfers as Integer)

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
One transfer finished.
**Notes:**
Query CURL object for details.
Result is the result of the transfer as returned by Perform method of CURL object.
RemainingFinishedTransfers is how many transfers are also finished and will be called right after this event.

This event fires always when the queue is empty.
You may want to turn off the timer calling Perform method when this event fires.
Later you can start timer again if you call Add method.

58.23.21 TransfersFinished

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
All pending transfers finished.

58.23.22 Constants

58.23.23 kErrorAddedAlready = 7

MBS CURL Plugin, Plugin Version: 15.0. **Function:** One of the multi interface error codes.
**Notes:** An easy handle already added to a multi handle was attempted to get added - again.

58.23.24 kErrorBadEadyHandle = 2

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the multi interface error codes.
**Notes:** An easy handle was not good/valid.
58.23. **CLASS CURLSMULTIMBS**

**58.23.25** kErrorBadHandle = 1

MBS CURL Plugin, Plugin Version: 15.0. **Function:** One of the multi interface error codes. **Notes:** The passed-in handle is not a valid CURLM handle.

**58.23.26** kErrorBadSocket = 5

MBS CURL Plugin, Plugin Version: 15.0. **Function:** One of the multi interface error codes. **Notes:** The passed in socket argument did not match.

**58.23.27** kErrorCallPerform = -1

MBS CURL Plugin, Plugin Version: 15.0. **Function:** One of the multi interface error codes. **Notes:** Please call Perform soon to do some tasks.

**58.23.28** kErrorInternalError = 4

MBS CURL Plugin, Plugin Version: 15.0. **Function:** One of the multi interface error codes. **Notes:** This is a libCURL bug.

**58.23.29** kErrorOK = 0

MBS CURL Plugin, Plugin Version: 15.0. **Function:** One of the multi interface error codes. **Notes:** Everything OK.

**58.23.30** kErrorOutOfMemory = 3

MBS CURL Plugin, Plugin Version: 15.0. **Function:** One of the multi interface error codes. **Notes:** Running low on memory.

**58.23.31** kErrorRecursiveAPICall = 8

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the multi interface error codes. **Notes:** An api function was called from inside an event.
58.23.32 kErrorUnknownOption = 6

MBS CURL Plugin, Plugin Version: 15.0. **Function:** One of the multi interface error codes. **Notes:** Tried to set unsupported option.

58.23.33 kPipeHTTP1 = 1

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the pipeline modes. **Notes:** Pipe with HTTP/1.1.

58.23.34 kPipeMultiPlex = 2

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the pipeline modes. **Notes:** Pipe with multiplex.

58.23.35 kPipeNothing = 0

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the pipeline modes. **Notes:** No piping.
58.24. **CLASS CURLSNOTINITIALIZEDEXCEPTIONMBS**

---

### 58.24 class CURLSNotInitializedExceptionMBS

**MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.**

**Function:**
An exception raised if CURL library is not initialized.

**Notes:**
If you call load library before you use the CURLMBS Constructor, you should never see this.
Subclass of the RuntimeException class.
58.25 class CURLSSLBackendMBS

58.25.1 class CURLSSLBackendMBS

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a SSL backend.

**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

58.25.2 Methods

58.25.3 Constructor

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

58.25.4 List as CURLSSLBackendMBS()

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Lists the backends.

**Example:**

```
dim list() as CURLSSLBackendMBS = CURLSSLBackendMBS.List

for each l as CURLSSLBackendMBS in list
    MsgBox l.name
next
```

**Notes:** The list may not be available if called too late.

58.25.5 SetSSLBackend(id as Integer) as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the SSL backend.

**Notes:**

When built with multiple SSL backends, SetSSLBackend() allows to choose one. This function can only be called once, and it must be called *before* CURL constructor().
The backend can be identified by the id (e.g. CURLSSLBACKEND_OPENSSL). The backend can also be specified via the name parameter (passing -1 as id). If both id and name are specified, the name will be ignored. If neither id nor name are specified, the function will fail with CURLSSLSETUNKNOWN_BACKEND and set the "avail" pointer to the NULL-terminated list of available backends.

Upon success, the function returns kErrorOK.
If the specified SSL backend is not available, the function returns kErrorUnknownBackend.

The SSL backend can be set only once. If it has already been set, a subsequent attempt to change it will result in a kErrorTooLate.

Returns nil, if there are no backends to choose.

- 58.25.6 SetSSLBackend(name as string) as Integer

### 58.25.6 SetSSLBackend(name as string) as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the SSL backend.

**Notes:**
When built with multiple SSL backends, SetSSLBackend() allows to choose one. This function can only be called once, and it must be called *before* CURL constructor().

The backend can be identified by the id (e.g. CURLSSLBACKEND_OPENSSL). The backend can also be specified via the name parameter (passing -1 as id). If both id and name are specified, the name will be ignored. If neither id nor name are specified, the function will fail with CURLSSLSETUNKNOWN_BACKEND and set the "avail" pointer to the NULL-terminated list of available backends.

Upon success, the function returns kErrorOK.
If the specified SSL backend is not available, the function returns kErrorUnknownBackend.

The SSL backend can be set only once. If it has already been set, a subsequent attempt to change it will result in a kErrorTooLate.

Returns nil, if there are no backends to choose.
See also:

- 58.25.5 SetSSLBackend(id as Integer) as Integer
58.25.7 Properties

58.25.8 ID as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The ID of this SSL backend. **Notes:** (Read only property)

58.25.9 Name as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of this SSL backend. **Notes:** (Read only property)

58.25.10 Constants

58.25.11 kErrorNoBackends = 3

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the error codes. **Notes:** libcurl was built without any SSL support

58.25.12 kErrorOK = 0

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the error codes. **Notes:** OK

58.25.13 kErrorTooLate = 2

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the error codes. **Notes:** You can’t set SSL backend after SSL initialization.

58.25.14 kErrorUnknownBackend = 1

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the error codes. **Notes:** Unknown backend name or ID.
58.25.15  kSSLBackendAXTLS = 10

MBS CURL Plugin, Plugin Version: 18.2. **Function**: One of the SSL backend IDs.  
**Notes**: AXTLS

58.25.16  kSSLBackendDarwinSSL = 9

MBS CURL Plugin, Plugin Version: 18.2. **Function**: One of the SSL backend IDs.  
**Notes**: DarwinSSL

58.25.17  kSSLBackendGNUTLS = 2

MBS CURL Plugin, Plugin Version: 18.2. **Function**: One of the SSL backend IDs.  
**Notes**: GNUTLS

58.25.18  kSSLBackendGSKIT = 5

MBS CURL Plugin, Plugin Version: 18.2. **Function**: One of the SSL backend IDs.  
**Notes**: GSKIT

58.25.19  kSSLBackendMBEDTLS = 11

MBS CURL Plugin, Plugin Version: 18.2. **Function**: One of the SSL backend IDs.  
**Notes**: MBEDTLS

58.25.20  kSSLBackendNone = 0

MBS CURL Plugin, Plugin Version: 18.2. **Function**: One of the SSL backend IDs.  

58.25.21  kSSLBackendNSS = 3

MBS CURL Plugin, Plugin Version: 18.2. **Function**: One of the SSL backend IDs.  
**Notes**: NSS
58.25.22  kSSLBackendOpenSSL = 1

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL backend IDs. **Notes:** OpenSSL or BoringSSL

58.25.23  kSSLBackendPolarSSL = 6

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL backend IDs. **Notes:** PolarSSL

58.25.24  kSSLBackendSChannel = 8

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL backend IDs. **Notes:** SChannel

58.25.25  kSSLBackendWolfSSL = 7

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL backend IDs. **Notes:** WolfSSL
**58.26. class CURLSSSLBackendMBS**

**58.26.1 class CURLSSSLBackendMBS**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for a SSL backend.
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

**58.26.2 Methods**

**58.26.3 Constructor**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

**58.26.4 List as CURLSSSLBackendMBS()**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Lists the backends.
**Example:**
```vba
dim list() as CURLSSSLBackendMBS = CURLSSSLBackendMBS.List

for each l as CURLSSSLBackendMBS in list
    MsgBox l.name
next
```

**Notes:** The list may not be available if called too late.

**58.26.5 SetSSLBackend(id as Integer) as Integer**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the SSL backend.
**Notes:**
When built with multiple SSL backends, SetSSLBackend() allows to choose one. This function can only be called once, and it must be called *before* CURL constructor().
The backend can be identified by the id (e.g. CURLSSLBACKEND_OPENSSL). The backend can also be specified via the name parameter (passing -1 as id). If both id and name are specified, the name will be ignored. If neither id nor name are specified, the function will fail with CURLSSLSETUNKNOWN_BACKEND and set the "avail" pointer to the NULL-terminated list of available backends.

Upon success, the function returns kErrorOK. If the specified SSL backend is not available, the function returns kErrorUnknownBackend.

The SSL backend can be set only once. If it has already been set, a subsequent attempt to change it will result in a kErrorTooLate.

Returns nil, if there are no backends to choose.

58.26.18  kSSLBackendGSKIT = 5

MBS CURL Plugin, Plugin Version: 18.2. **Function**: One of the SSL backend IDs.  
**Notes**: GSKIT

58.26.19  kSSLBackendMBEDTLS = 11

MBS CURL Plugin, Plugin Version: 18.2. **Function**: One of the SSL backend IDs.  
**Notes**:MBEDTLS

58.26.20  kSSLBackendNone = 0

MBS CURL Plugin, Plugin Version: 18.2. **Function**: One of the SSL backend IDs.  

58.26.21  kSSLBackendNSS = 3

MBS CURL Plugin, Plugin Version: 18.2. **Function**: One of the SSL backend IDs.  
**Notes**: NSS
58.26.22 kSSLBackendOpenSSL = 1

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL backend IDs. **Notes:** OpenSSL or BoringSSL

58.26.23 kSSLBackendPolarSSL = 6

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL backend IDs. **Notes:** PolarSSL

58.26.24 kSSLBackendSChannel = 8

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL backend IDs. **Notes:** SChannel

58.26.25 kSSLBackendWolfSSL = 7

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL backend IDs. **Notes:** WolfSSL
58.27 class CURLSVersionMBS

58.27.1 class CURLSVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class to hold version information from libCURL.

58.27.2 Methods

58.27.3 Constructor

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.

58.27.4 Protocol(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An array containing the names protocols that libCURL supports (using lowercase letters). 
**Notes:**
The protocol names are the same as would be used in URLs.
Index is zero based.

58.27.5 Properties

58.27.6 brotliVersion as String

**Notes:**
Empty if library is not used in the CURL library you use.
(Read and Write property)

58.27.7 brotliVersionNumber as Integer

58.27. **CLASS CURLSVERSIONMBS**

**Notes:** (Read and Write property)

### 58.27.8 Features as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Bits which define what features libCURL can and can’t.

**Notes:**
Use the Supports Boolean properties instead.
Additional feature bits may be found in the libCURL documentation.
(Read and Write property)

### 58.27.9 Host as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An ascii string showing what host information that this libCURL was built for.

**Notes:**
As discovered by a configure script or set by the build environment.
e.g. "powerpc-apple-darwin8.0"
(Read and Write property)

### 58.27.10 iconvVersionNumber as Integer

**Notes:** (Read and Write property)

### 58.27.11 libidnVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Version of LibIDN used.

**Notes:**
Empty if library is not used in the CURL library you use.
(Read and Write property)
58.27.12  libsshVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Version of LibSSH2 used.
**Notes:**
Empty if library is not used in the CURL library you use.
(Read and Write property)

58.27.13  LibZVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An ascii string (there is no numerical version).
**Notes:**
If libCURL has no libz support, this is "".
e.g. "1.2.3"
(Read and Write property)

58.27.14  ProtocolCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of entries in the Protocol array.
**Notes:** (Read and Write property)

58.27.15  SSLVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An ascii string for the OpenSSL version used.
**Notes:**
If libCURL has no SSL support, this is "".
e.g. "OpenSSL/0.9.7l"
(Read and Write property)

58.27.16  SupportsASYNCHDNS as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL was built with support for asynchronous name lookups, which allows more exact timeouts (even on Windows) and less blocking when using the multi interface.
**Notes:**
58.27. **CLASS CURLSVERSIONMBS**

(added in 7.10.7)
(Read only property)

### 58.27.17 SupportsBrothli as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Brothli features are present.
**Notes:** (Read only property)

### 58.27.18 SupportsConv as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Character conversions supported.
**Notes:** (Read only property)

### 58.27.19 SupportsGSSAPI as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Built against a GSS-API library.
**Notes:** (Read only property)

### 58.27.20 SupportsGSSNEGOTIATE as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether libCURL supports HTTP GSS-Negotiate
**Notes:**
(added in 7.10.6)
(Read only property)

### 58.27.21 SupportsHTTP2 as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether currently used CURL library supports HTTP2.
**Example:**
```dim c as new CURLSMBS
dim v as CURLSVersionsMBS = c.version```
if v.SupportsHTTP2 then
    MsgBox "HTTP2 is supported"
else
    MsgBox "HTTP2 is not supported"
end if

Notes:
While our CURL Plugin with CURLSMBS plugin may not support this currently, you could use LoadLibrary function to load a CURL library supporting it.
(Read only property)

### 58.27.22 SupportsHTTPSProxy as Boolean

**Notes:** (Read only property)

### 58.27.23 SupportsIDN as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL was built with support for IDNA, domain names with international letters.
**Notes:**
(Added in 7.12.0)
(Read only property)

### 58.27.24 SupportsIPV6 as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL supports IPv6
**Notes:** (Read only property)

### 58.27.25 SupportsKERBEROS4 as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL supports kerberos4 (when using FTP).
58.27. **CLASS CURLSVERSIONMBS**

**Notes:** (Read only property)

58.27.26 **SupportsKerberos5 as Boolean**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Kerberos V5 auth is supported. **Notes:** (Read only property)

58.27.27 **SupportsLARGEFILE as Boolean**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL was built with support for large files. **Notes:**

(Added in 7.11.1)  
(Read only property)

58.27.28 **SupportsLIBZ as Boolean**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL supports HTTP deflate using libz **Notes:**

(Added in 7.10)  
(Read only property)

58.27.29 **SupportsMultiSSL as Boolean**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Multiple SSL backends available. **Notes:** (Read only property)

58.27.30 **SupportsNTLM as Boolean**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL supports HTTP NTLM  
**Example:**
dim c as new CURLSMBS
dim v as CURLSVersionMBS = c.Version

MsgBox "SupportsNTLM: " + str(v.SupportsNTLM)

Notes:
(added in 7.10.6)
(Read only property)

58.27.31  SupportsNTLMWB as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
NTLM delegation to winbind helper is supported.
**Notes:** (Read only property)

58.27.32  SupportsPSL as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Mozilla’s Public Suffix List, used for cookie domain verification.
**Notes:** (Read only property)

58.27.33  SupportsSPNEGO as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether libCURL was built with support for SPNEGO authentication
**Notes:**
(Simple and Protected GSS-API Negotiation Mechanism, defined in RFC 2478.) (added in 7.10.8)
(Read only property)

58.27.34  SupportsSSL as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether libCURL supports SSL (HTTPS/FTPS)
**Notes:**
(Added in 7.10)
(Read only property)
58.27.35  **SupportsSSPI as Boolean**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL was built with support for SSPI.  
**Notes:**  
This is only available on Windows and makes libCURL use Windows-provided functions for NTLM authentication. It also allows libCURL to use the current user and the current user’s password without the app having to pass them on. (Added in 7.13.2)  
(Read only property)

58.27.36  **SupportsTLSAUTHSRP as Boolean**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** TLS-SRP auth is supported.  
**Notes:** (Read only property)

58.27.37  **SupportsUnixSockets as Boolean**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unix domain sockets support.  
**Notes:** (Read only property)

58.27.38  **Version as String**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An ascii string for the libCURL version.  
**Notes:**  
e.g. ”7.13.1”  
(Read and Write property)

58.27.39  **VersionNumber as Integer**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The version of libCURL as number.  
**Notes:**
a 24 bit number created like this:
<8 bits major number>|<8 bits minor number>|<8 bits patch number>.
Version 7.9.8 is therefore returned as 0x070908.
(Read and Write property)
58.28 class CURLVersionMBS

58.28.1 class CURLVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class to hold version information from libCURL.

58.28.2 Methods

58.28.3 Constructor

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.

58.28.4 Protocol(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An array containing the names protocols that libCURL supports (using lowercase letters).

**Notes:**
The protocol names are the same as would be used in URLs.
Index is zero based.

58.28.5 Properties

58.28.6 brotliVersion as String

**Notes:**
Empty if library is not used in the CURL library you use.
(Read and Write property)

58.28.7 brotliVersionNumber as Integer

58.28.8 Features as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Bits which define what features libCURL can and can’t.

**Notes:**
Use the Supports Boolean properties instead.
Additional feature bits may be found in the libCURL documentation.
(Read and Write property)

58.28.9 Host as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An ascii string showing what host information that this libCURL was built for.

**Notes:**
As discovered by a configure script or set by the build environment.
e.g. "powerpc-apple-darwin8.0"
(Read and Write property)

58.28.10 iconvVersionNumber as Integer

**Notes:** (Read and Write property)

58.28.11 libidnVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Version of LibIDN used.

**Notes:**
Empty if library is not used in the CURL library you use.
(Read and Write property)
58.28. CLASS CURLVERSIONMBS

58.28.12  libsshVersion as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Version of LibSSH2 used.
**Notes:**
Empty if library is not used in the CURL library you use.
(Read and Write property)

58.28.13  LibZVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An ascii string (there is no numerical version).
**Notes:**
If libCURL has no libz support, this is "".
e.g. "1.2.3"
(Read and Write property)

58.28.14  ProtocolCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of entries in the Protocol array.
**Notes:** (Read and Write property)

58.28.15  SSLVersion as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An ascii string for the OpenSSL version used.
**Notes:**
If libCURL has no SSL support, this is "".
e.g. "OpenSSL/0.9.7l"
(Read and Write property)

58.28.16  SupportsASYNCHDNS as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL was built with support for asynchronous name lookups, which allows more exact timeouts (even on Windows) and less blocking when using the multi interface.
**Notes:**
58.28.17  **SupportsBrotili as Boolean**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Brotili features are present. **Notes:** (Read only property)

58.28.18  **SupportsConv as Boolean**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Character conversions supported. **Notes:** (Read only property)

58.28.19  **SupportsGSSAPI as Boolean**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Built against a GSS-API library. **Notes:** (Read only property)

58.28.20  **SupportsGSSNEGOTIATE as Boolean**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL supports HTTP GSS-Negotiate. **Notes:** (added in 7.10.6) (Read only property)

58.28.21  **SupportsHTTP2 as Boolean**

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether currently used CURL library supports HTTP2. **Example:**

```dim c as new CURLMBS
dim v as CURLVersionMBS = c.version```
if v.SupportsHTTP2 then
  MsgBox "HTTP2 is supported"
else
  MsgBox "HTTP2 is not supported"
end if

Notes:
While our CURL Plugin with CURLMBS plugin may not support this currently, you could use LoadLibrary function to load a CURL library supporting it. (Read only property)

58.28.22 SupportsHTTPSProxy as Boolean

**Notes:** (Read only property)

58.28.23 SupportsIDN as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL was built with support for IDNA, domain names with international letters. 
**Notes:** (Added in 7.12.0) (Read only property)

58.28.24 SupportsIPV6 as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL supports IPv6 
**Notes:** (Read only property)

58.28.25 SupportsKERBEROS4 as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL supports kerberos4 (when using FTP).
58.28.26  SupportsKerberos5 as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Kerberos V5 auth is supported.  
**Notes:** (Read only property)

58.28.27  SupportsLARGEFILE as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL was built with support for large files.  
**Notes:**
(Added in 7.11.1)  
(Read only property)

58.28.28  SupportsLIBZ as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL supports HTTP deflate using libz  
**Notes:**
(Added in 7.10)  
(Read only property)

58.28.29  SupportsMultiSSL as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Multiple SSL backends available.  
**Notes:** (Read only property)

58.28.30  SupportsNTLM as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL supports HTTP NTLM  
**Example:**
58.28. **CLASS CURLVERSIONMBS**

```vbscript
dim c as new CURLMBS
dim v as CURLVersionMBS = c.Version
MsgBox "SupportsNTLM: "+str(v.SupportsNTLM)
```

**Notes:**

(added in 7.10.6)
(Read only property)

### 58.28.31 SupportsNTLMWB as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** NTLM delegation to winbind helper is supported.

**Notes:** (Read only property)

### 58.28.32 SupportsPSL as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Mozilla’s Public Suffix List, used for cookie domain verification.

**Notes:** (Read only property)

### 58.28.33 SupportsSPNEGO as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL was built with support for SPNEGO authentication

**Notes:**

(Simple and Protected GSS-API Negotiation Mechanism, defined in RFC 2478.) (added in 7.10.8)
(Read only property)

### 58.28.34 SupportsSSL as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether libCURL supports SSL (HTTPS/FTPS)

**Notes:**

(Added in 7.10)
(Read only property)
58.28.35 SupportsSSPI as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether libCURL was built with support for SSPI.

**Notes:**
This is only available on Windows and makes libCURL use Windows-provided functions for NTLM authentication. It also allows libCURL to use the current user and the current user’s password without the app having to pass them on. (Added in 7.13.2)
(Read only property)

58.28.36 SupportsTLSAUTHSRP as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
TLS-SRP auth is supported.

**Notes:** (Read only property)

58.28.37 SupportsUnixSockets as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Unix domain sockets support.

**Notes:** (Read only property)

58.28.38 Version as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
An ascii string for the libCURL version.

**Notes:**
e.g. "7.13.1"
(Read and Write property)

58.28.39 VersionNumber as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The version of libCURL as number.

**Notes:**
a 24 bit number created like this:

\(<8 \text{ bits major number}> | <8 \text{ bits minor number}> | <8 \text{ bits patch number}>\).

Version 7.9.8 is therefore returned as 0x070908.

(Read and Write property)
58.29  Globals

58.29.1  FileExtensionToMimeTypeMBS(FileExtension as String) as string

MBS CURL Plugin, Plugin Version: 15.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds a mime type for a file extension.

**Example:**

```vbs
dim FileExtension as string = MimeTypeToFileExtensionMBS("application/pdf")
dim MimeType as string = FileExtensionToMimeTypeMBS("pdf")
```

**Notes:**

Please report any missing mime type in our lookup table, so we can add more.
See also **MimeTypeToFileExtensionMBS**.
Returns empty string if not found.

58.29.2  MimeTypeToFileExtensionMBS(MimeType as String) as string

MBS CURL Plugin, Plugin Version: 15.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns file extension for given mime type.

**Example:**

```vbs
dim FileExtension as string = MimeTypeToFileExtensionMBS("application/pdf")
dim MimeType as string = FileExtensionToMimeTypeMBS("pdf")
```

**Notes:**

Extension is returned with dot prefix.
Please report any missing file extensions in our lookup table, so we can add more.
See also **FileExtensionToMimeTypeMBS**.
Returns empty string if not found.
Chapter 59

Currency, Date and Time Format

59.1  Globals

59.1.1  CDblMBS(text as string, byref value as Double, locale as string = ")
as boolean

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Parses a double value from a text with given locale.

**Example:**
```vba
    dim value as Double
    if CDblMBS("12,345", value, "de_DE") then
        MsgBox str(value)
    end if
```

**Notes:**
- Returns true on success and false on failure.
- Value is set to the value detected.
- Raises exception on invalid locale.

59.1.2  FormatDateMBS(format as string, value as date, locale as string = ")
as string

MBS Util Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Formats a date with C time formatting functions.

**Example:**
// for Mac, Windows and Linux we usually have different locale names
dim fr as string
# if TargetMacOS then
fr = "fr_FR"
# elseif TargetWin32 then
fr = "fra"
# elseif TargetLinux
fr = "fr_FR.UTF8"
# else
?
# endif

dim d as new date
MsgBox FormatDateMBS("% x % X", d, fr)

Notes:
locale is the name of the locale to use. You can pass empty string to use default/current locale.
Format is a format string like for strftime command in C.

The format specification is a string and may contain special character sequences called conversion speci-
fications, each of which is introduced by a '%' character and terminated by some other character known as a
conversion specifier character. All other character sequences are ordinary character sequences.

The characters of ordinary character sequences (including the null byte) are copied verbatim from format to
s. However, the characters of conversion specifications are replaced as follows:

Some conversion specifications can be modified by preceding the conversion specifier character by the E or
O modifier to indicate that an alternative format should be used. If the alternative format or specification
does not exist for the current locale, the behavior will be as if the unmodified conversion specification were
used. (SU) The Single UNIX Specification mentions %Ec, %EC, %Ex, %EX, %Ey, %EY, %Od, %Oe,
%OH, %OI, %Om, %OM, %OS, %Ou, %OU, %OV, %Ov, %OW, %Oy, where the effect of the O
modifier is to use alternative numeric symbols (say, roman numerals), and that of the E modifier is to use a
locale-dependent alternative representation.

59.1.3 FormatMBS(format as string, value as Double, locale as string = "") as
string

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Formats a double value.
Example:
MsgBox FormatMBS("% 1.2f", 12.345, "de_DE")

Notes:
locale is the name of the locale to use. You can pass empty string to use default/current locale.
Format is a format string like for printf command in C.

The FormatMBS formats the value under control of the format. The format is a character string which
contains three types of objects: plain characters, which are simply copied to standard output, character
escape sequences which are converted and copied to the standard output, and format specifications, each of
which causes printing of the next successive argument.

Character escape sequences are in backslash notation as defined in the ANSI X3.159-1989 ("ANSI C89"),
with extensions. The characters and their meanings are as follows:

Each format specification is introduced by the percent character ("% "). The remainder of the format spec-
ification includes, in the following order:

Zero or more of the following flags:

59.1.4 ParseDateMBS(format as string, text as string, byref value as date,
locale as string = "") as boolean

MBS Util Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Parses a date.
Example:

    dim s as string = "2013-11-12 18:31:01"
dim f as string = "% Y-% m-% d % H:% M:% S"
dim d as date

    if ParseDateMBS(f, s, d) then
        MsgBox d.LongDate + " " + d.LongTime
    end if

Notes:
locale is the name of the locale to use. You can pass empty string to use default/current locale.
Format is a format string like for strftime command in C.

On success returns true. But even for half parsed dates you can find values in date.
Locale not supported on Windows.
The plugin does not support parsing time zones.

The ParseDateMBS function is the converse function to FormateDateMBS and converts the character string pointed to by s to values which are stored in the date, using the format specified by format. Here format is a character string that consists of field descriptors and text characters, reminiscent of scanf (in C++). Each field descriptor consists of a % character followed by another character that specifies the replacement for the field descriptor. All other characters in the format string must have a matching character in the input string, except for whitespace, which matches zero or more whitespace characters in the input string. There should be whitespace or other alphanumeric characters between any two field descriptors.

The ParseDateMBS function processes the input string from left to right. Each of the three possible input elements (whitespace, literal, or format) are handled one after the other. If the input cannot be matched to the format string the function stops. The remainder of the format and input strings are not processed.

The supported input field descriptors are listed below. In case a text string (such as a weekday or month name) is to be matched, the comparison is case insensitive. In case a number is to be matched, leading zeros are permitted but not required.

Some field descriptors can be modified by the E or O modifier characters to indicate that an alternative format or specification should be used. If the alternative format or specification does not exist in the current locale, the unmodified field descriptor is used.

The E modifier specifies that the input string may contain alternative locale-dependent versions of the date and time representation:

Returns true on success. If the functions fails to match all of the format string and therefore an error occurred the function returns false.

Before libc 5.4.13 whitespace (and the 'n' and 't' specifications) was not handled, no 'E' and 'O' locale modifier characters were accepted, and the 'C' specification was a synonym for the 'c' specification.

The 'y' (year in century) specification is taken to specify a year in the 20th century by libc4 and libc5. It is taken to be a year in the range 1950-2049 by glibc 2.0. It is taken to be a year in 1969-2068 since glibc 2.1.

For reasons of symmetry, glibc tries to support for ParseDateMBS the same format characters as for FormatDateMBS. (In most cases the corresponding fields are parsed, but no field in tm is changed.) This leads to

Similarly, because of GNU extensions to FormatDateMBS, % k is accepted as a synonym for % H, and % l should be accepted as a synonym for % I, and % P is accepted as a synonym for % p. Finally

The glibc implementation does not require whitespace between two field descriptors.
59.2. CLASS LOCALEMBS

59.2. class LocaleMBS

59.2.1. class LocaleMBS

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The plugin class which provides parameters for formatting numbers, especially currency values.

**Example:**
```vbscript
dim l as LocaleMBS = LocaleMBS.Locale("de_DE")
MsgBox l.CurrencySymbol
```

**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

59.2.2. Methods

59.2.3. Constructor

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

59.2.4. Locale(Locale as string = "") as LocaleMBS

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries C locale for the given locale name.

**Example:**
```vbscript
dim l as LocaleMBS = LocaleMBS.Locale("de_DE")
MsgBox l.CurrencySymbol
```

**Notes:**
Returns nil if no locale for that name was found.

If name is empty, you get current locale. If you use locale name "C", you get the default C locale.
The locale name depends on the OS. For Mac and Linux you can see available locales in /usr/share/locale directory.
For Windows, please take a look here:
59.2.5 Properties

59.2.6 CurrencySymbol as String

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The local currency symbol.
**Example:**
```vbscript
dim l as LocaleMBS = LocaleMBS.Locale("de_DE")
MsgBox l.CurrencySymbol
```
**Notes:** (Read only property)

59.2.7 DecimalPoint as String

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The decimal point character, except for currency values, cannot be an empty string.
**Notes:** (Read only property)

59.2.8 FracDigits as Integer

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The number of digits after the decimal point in the local style for currency values.
**Notes:** (Read only property)

59.2.9 Grouping as String

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The sizes of the groups of digits, except for currency values.
**Notes:**
This is a string where the asc value gives the actual value, representing group size from low order digit groups to high order (right to left). The list may be terminated with 0 or CHAR_MAX. If the list is terminated with 0, the last group size before the 0 is repeated to account for all the digits. If the list is terminated with CHAR_MAX, no more grouping is performed.

See example project for a function to decode.
(Read only property)
59.2. CLASS LOCALEMBS

59.2.10 IntCurrSymbol as String

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The standardized international currency symbol. **Notes:** (Read only property)

59.2.11 IntFracDigits as Integer

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of digits after the decimal point in an international-style currency value. **Notes:** (Read only property)

59.2.12 IntNegCSPrecedes as Integer

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if the currency symbol precedes the currency value for negative values, false if it follows. **Notes:** For internationally formatted monetary quantities. (Read only property)

59.2.13 IntNegSepBySpace as Integer

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if a space is inserted between the currency symbol and the currency value for negative values, false otherwise. **Notes:** For internationally formatted monetary quantities. (Read only property)

59.2.14 IntNegSignPosition as Integer

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the NegativeSign with respect to a negative quantity and the CurrencySymbol. **Notes:** For internationally formatted monetary quantities.
CHAPTER 59. CURRENCY, DATE AND TIME FORMAT

59.2.15 IntPosCSPrecedes as Integer

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if the currency symbol precedes the currency value for nonnegative values, false if it follows. 
**Notes:** For internationally formatted monetary quantities. 
(Read only property)

59.2.16 IntPosSepBySpace as Integer

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if a space is inserted between the currency symbol and the currency value for nonnegative values, false otherwise. 
**Notes:** For internationally formatted monetary quantities. 
(Read only property)

59.2.17 IntPosSignPosition as Integer

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the PositiveSign with respect to a nonnegative quantity and the CurrencySymbol. 
**Notes:** For internationally formatted monetary quantities. 
Possible values:

(Read only property)

59.2.18 monDecimalPoint as String

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The decimal point character for currency values.
59.2. CLASS LOCALEMBS

Notes: (Read only property)

59.2.19  monGrouping as String

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Like grouping but for currency values. **Notes:** (Read only property)

59.2.20  monThousandsSep as String

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The separator for digit groups in currency values. **Notes:** (Read only property)

59.2.21  Name as String

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of the locale. **Notes:** The name may be different to the one you asked for as some locales are mapped to others internally. (Read only property)

59.2.22  NegativeSign as String

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The character used to denote negative currency values, usually a minus sign. **Notes:** (Read only property)

59.2.23  NegCSPrecedes as Boolean

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if the currency symbol precedes the currency value for negative values, false if it follows. **Notes:** (Read only property)
59.2.24 NegSepBySpace as Boolean

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if a space is inserted between the currency symbol and the currency value for negative values, false otherwise. **Notes:** (Read only property)

59.2.25 NegSignPosition as Integer

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the NegativeSign with respect to a negative quantity and the CurrencySymbol. **Notes:** Possible values: (Read only property)

59.2.26 PosCSPrecedes as Boolean

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if the currency symbol precedes the currency value for nonnegative values, false if it follows. **Notes:** (Read only property)

59.2.27 PositiveSign as String

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The character used to denote nonnegative currency values, usually the empty string. **Notes:** (Read only property)

59.2.28 PosSepBySpace as Boolean

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if a space is inserted between the currency symbol and the currency value for nonnegative values, false otherwise. **Notes:** (Read only property)
59.2. CLASS LOCALEMBS

59.2.29 PosSignPosition as Integer

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The location of the PositiveSign with respect to a nonnegative quantity and the CurrencySymbol.
**Notes:**
Possible values:

(Read only property)

59.2.30 ThousandsSep as String

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The separator between groups of digits before the decimal point, except for currency values.
**Notes:** (Read only property)
% a  The abbreviated weekday name according to the current locale.
% A  The full weekday name according to the current locale.
% b  The abbreviated month name according to the current locale.
% B  The full month name according to the current locale.
% c  The preferred date and time representation for the current locale.
% C  The century number (year/100) as a 2-digit integer. (SU)
% d  The day of the month as a decimal number (range 01 to 31).
% D  Equivalent to % m/% d/% y. (Yech-for Americans only. Americans should note that in other countries % d/% m/% y is rather common. This means that in international context this format is ambiguous and should not be used.)
% e  Like % d, the day of the month as a decimal number, but a leading zero is replaced by a space. (SU)
% E  Modifier: use alternative format, see below. (SU)
% F  Equivalent to % Y-%m-%d (the ISO 8601 date format). (C99)
% G  The ISO 8601 week-based year (see NOTES) with century as a decimal number. The 4-digit year corresponding to the ISO week number (see % V). This has the same format and value as % Y, except that if the ISO week number belongs to the previous or next year, that year is used instead. (TZ)
% g  Like % G, but without century, that is, with a 2-digit year (00-99). (TZ)
% h  Equivalent to % b. (SU)
% H  The hour as a decimal number using a 24-hour clock (range 00 to 23).
% I  The hour as a decimal number using a 12-hour clock (range 01 to 12).
% j  The day of the year as a decimal number (range 001 to 366).
% k  The hour (24-hour clock) as a decimal number (range 0 to 23); single digits are preceded by a blank. (See also % H.) (TZ)
% l  The hour (12-hour clock) as a decimal number (range 1 to 12); single digits are preceded by a blank. (See also % I.) (TZ)
% m  The month as a decimal number (range 01 to 12).
% M  The minute as a decimal number (range 00 to 59).
% n  A newline character. (SU)
% O  Modifier: use alternative format, see below. (SU)
% p  Either "AM" or "PM" according to the given time value, or the corresponding strings for the current locale. Noon is treated as "PM" and midnight as "AM".
% P  Like % p but in lowercase: "am" or "pm" or a corresponding string for the current locale. (GNU)
% r  The time in a.m. or p.m. notation. In the POSIX locale this is equivalent to % I:%M:%S %p. (SU)
% R  The time in 24-hour notation (% H:%M). (SU) For a version including the seconds, see % T below.
% s  The number of seconds since the Epoch, 1970-01-01 00:00:00 +0000 (UTC). (TZ)
% S  The second as a decimal number (range 00 to 60). (The range is up to 60 to allow for occasional leap seconds.)
% t  A tab character. (SU)
% T  The time in 24-hour notation (% H:%M:%S). (SU)
% u  The day of the week as a decimal, range 1 to 7, Monday being 1. See also % w. (SU)
% U  The week number of the current year as a decimal number, range 00 to 53, starting with the first Sunday as the first day of week 01. (SU)
% v  The ISO 8601 week number (see NOTES) of the current year as a decimal number, range 01 to 53, where week 1 is the first week that has at least 4 days in the new year. See also % U and % W. (SU)
% w  The day of the week as a decimal, range 0 to 6, Sunday being 0. See also % u.
% W  The week number of the current year as a decimal number, range 00 to 53, starting with the first Monday as the first day of week 01. (SU)
% x  The preferred date representation for the current locale without the time.
% X  The preferred time representation for the current locale without the date.
% y  The year as a decimal number without a century (range 00 to 99).
% Y  The year as a decimal number including the century.
% z  The +hhmm or -hhmm numeric timezone (that is, the hour and minute offset from UTC). (SU)
% Z  The timezone or name or abbreviation.
% +  The date and time in date(1) format. (TZ) (Not supported in glibc2.)
% % A literal '%' character.
\a Write a <bell>character.
\b Write a <backspace>character.
\c Ignore remaining characters in this string.
\f Write a <form-feed>character.
\n Write a <new-line>character.
\r Write a <carriage return>character.
\t Write a <tab>character.
\v Write a <vertical tab>character.
\\ Write a backslash character.
\num or \0num Write an 8-bit character whose ASCII value is the 1-, 2-, or 3-digit octal number num.
% % The % character.
% a or % A The weekday name according to the current locale, in abbreviated form or the full name.
% b or % B or % h The month name according to the current locale, in abbreviated form or the full name.
% c The date and time representation for the current locale.
% C The century number (0-99).
% d or % e The day of month (1-31).
% D Equivalent to % m/% d/% y. (This is the American style date, very confusing to non-Americans, especially since % d/% m/% y is widely used in Europe. The ISO 8601 standard format is % Y-% m-% d.)
% H The hour (0-23).
% I The hour on a 12-hour clock (1-12).
% j The day number in the year (1-366).
% m The month number (1-12).
% M The minute (0-59).
% n Arbitrary whitespace.
% p The locale’s equivalent of AM or PM. (Note: there may be none.)
% r The 12-hour clock time (using the locale’s AM or PM). In the POSIX locale equivalent to % I:% M:% S % p. If t_fmt_ampm is empty in the LC_TIME part of the current locale then the behavior is undefined.
% R Equivalent to % H:% M.
% S The second (0-60; 60 may occur for leap seconds; earlier also 61 was allowed).
% t Arbitrary whitespace.
% T Equivalent to % H:% M:% S.
% U The week number with Sunday the first day of the week (0-53). The first Sunday of January is the first day of week 1.
% w The weekday number (0-6) with Sunday = 0.
% W The week number with Monday the first day of the week (0-53). The first Monday of January is the first day of week 1.
% x The date, using the locale’s date format.
% X The time, using the locale’s time format.
% y The year within century (0-99). When a century is not otherwise specified, values in the range 69-99 refer to years in the twentieth century (1969-1999); values in the range 00-68 refer to years in the twenty-first century (2000-2068).
% Y The year, including century (for example, 1991).
% Ec  The locale’s alternative date and time representation.
% EC  The name of the base year (period) in the locale’s alternative representation.
% Ex  The locale’s alternative date representation.
% EX  The locale’s alternative time representation.
% Ey  The offset from % EC (year only) in the locale’s alternative representation.
% EY  The full alternative year representation. The O modifier specifies that the
      numerical input may be in an alternative locale-dependent format:
% Od or % Oe  The day of the month using the locale’s alternative numeric symbols; leading
              zeros are permitted but not required.
% OH  The hour (24-hour clock) using the locale’s alternative numeric symbols.
% OI  The hour (12-hour clock) using the locale’s alternative numeric symbols.
% Om  The month using the locale’s alternative numeric symbols.
% OM  The minutes using the locale’s alternative numeric symbols.
% OS  The seconds using the locale’s alternative numeric symbols.
% OU  The week number of the year (Sunday as the first day of the week) using the
      locale’s alternative numeric symbols.
% Ow  The number of the weekday (Sunday=0) using the locale’s alternative numeric
      symbols.
% OW  The week number of the year (Monday as the first day of the week) using the
      locale’s alternative numeric symbols.
% Oy  The year (offset from % C) using the locale’s alternative numeric symbols.
% F   Equivalent to % Y-% m-% d, the ISO 8601 date format.
% g   The year corresponding to the ISO week number, but without the century
      (0-99).
% G   The year corresponding to the ISO week number. (For example, 1991.)
% u   The day of the week as a decimal number (1-7, where Monday = 1).
% V   The ISO 8601:1988 week number as a decimal number (1-53). If the week
      (starting on Monday) containing 1 January has four or more days in the new
      year, then it is considered week 1. Otherwise, it is the last week of the previous
      year, and the next week is week 1.
% z   An RFC-822/ISO 8601 standard timezone specification.
% Z   The timezone name.

% s   The number of seconds since the Epoch, 1970-01-01 00:00:00 +0000 (UTC).
      Leap seconds are not counted unless leap second support is available.
0  Parentheses around the entire string.
1  Before the string.
2  After the string.
3  Just before CurrencySymbol.
4  Just after CurrencySymbol.

0  Parentheses around the entire string.
1  Before the string.
2  After the string.
3  Just before CurrencySymbol.
4  Just after CurrencySymbol.

0  Parentheses around the entire string.
1  Before the string.
2  After the string.
3  Just before CurrencySymbol.
4  Just after CurrencySymbol.

0  Parentheses around the entire string.
1  Before the string.
2  After the string.
3  Just before CurrencySymbol.
4  Just after CurrencySymbol.
59.3. **CLASS NSLOCALEDATEMBS**

59.3  **class NSLocaleDateMBS**

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for a date format.  
**Notes:** Should be used with the NSLocaleMBS class, but can be used on its own, too.

59.3.2  **Methods**

59.3.3  **Constructor**

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The default constructor.  
**Notes:** Creates a different object than the once you get by the NSLocaleMBS class. But this date information you get than works on Mac OS X 10.0. The NSLocaleMBS class is Mac OS X 10.4 only.  
See also:

- 59.3.4 Constructor(locale as NSLocaleMBS)

59.3.4  **Constructor(locale as NSLocaleMBS)**

MBS MacBase Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.  
**Example:**

```plaintext
dim n1 as new NSLocaleDateMBS
dim n2 as new NSLocaleDateMBS(NSLocaleMBS.currentLocale)
dim n3 as new NSLocaleDateMBS(NSLocaleMBS.systemLocale)

break // see differences in debugger
```

**Notes:** Initializes the object for a given locale.  
See also:

- 59.3.3 Constructor

59.3.5  **eraSymbols as string()**

MBS MacBase Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the array of era symbols.  
**Example:**
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.eraSymbols

MsgBox join(s, ", ")

// shows for example "v. Chr., n. Chr." (in Germany)
// shows for example "BC, AD" (in USA)
// shows for example "av. J.-C., ap. J.-C." (in France)

Notes:
for example, "BCE", "CE" in the USA.
On error returns an empty array.

59.3.6 longEraSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the long era symbols for the receiver.
Example:

dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.longEraSymbols

MsgBox join(s, ", ")

// shows for example "v. Chr., n. Chr." (in Germany)
// shows for example "Before Christ, Anno Domini" (in USA)
// shows for example "avant Jsus-Christ, aprs Jsus-Christ" (in France)

Notes:
An array containing strings representing the era symbols for the receiver (for example, { "Before Common Era", "Common Era" } ).
Available in Mac OS X v10.5 and later.

59.3.7 monthSymbols as string()

Example:
59.3. **CLASS NSLOCALEDATEMBS**

```vba
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.monthSymbols
MsgBox join(s,",")

// shows for example "Januar, Februar, Mrz, April, Mai, Juni, Juli, August, September, Oktober, November, Dezember" (in Germany)
// shows for example "January, February, March, April, May, June, July, August, September, October, November, December" (in USA)
// shows for example "janvier, fvrier, mars, avril, mai, juin, juillet, aot, septembre, octobre, novembre, dcembre" (in France)
```

**Notes:** On error returns an empty array.

### 59.3.8 `quarterSymbols as string()`

MBS MacBase Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the quarter symbols for the receiver.

**Example:**

```vba
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.quarterSymbols
MsgBox join(s,",")

// shows for example "1. Quartal, 2. Quartal, 3. Quartal, 4. Quartal" (in Germany)
// shows for example "1st quarter, 2nd quarter, 3rd quarter, 4th quarter" (in USA)
// shows for example "1er trimestre, 2e trimestre, 3e trimestre, 4e trimestre" (in France)
```

**Notes:** Available in Mac OS X v10.5 and later.

### 59.3.9 `shortMonthSymbols as string()`

MBS MacBase Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the array of short month.

**Example:**

```vba
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
```

```vba
define m as string
m = "January, February, March, April, May, June, July, August, September, October, November, December"
MsgBox join(s, ",")
```
CHAPTER 59. CURRENCY, DATE AND TIME FORMAT

59.3.10 shortQuarterSymbols as string()

Example:

```vb
Dim l As New NSLocaleMBS
Dim n As NSLocaleDateMBS = l.DateLong
Dim s(-1) As String = n.shortQuarterSymbols
MsgBox Join(s, ",")

// shows for example "Q1, Q2, Q3, Q4" (in Germany)
// shows for example "Q1, Q2, Q3, Q4" (in USA)
// shows for example "T1, T2, T3, T4" (in France)
```

Notes: Available in Mac OS X v10.5 and later.

59.3.11 shortStandaloneMonthSymbols as string()

Example:

```vb
Dim l As New NSLocaleMBS
Dim n As NSLocaleDateMBS = l.DateLong
Dim s(-1) As String = n.shortStandaloneMonthSymbols
MsgBox Join(s, ",")

// shows for example "Jan, Feb, Mr, Apr, Mai, Jun, Jul, Aug, Sep, Okt, Nov, Dez" (in Germany)
```

Notes: On error returns an empty array.
59.3. CLASS NSLOCALEDATEMBS

// shows for example ”Jan, Feb, Mar, Apr, May, Jun, Jul, Aug, Sep, Oct, Nov, Dec” (in USA)
// shows for example ”janv., fvr., mars, avr., mai, juin, juil., aot, sept., oct., nov., dc.” (in France)

Notes: Available in Mac OS X v10.5 and later.

59.3.12 shortStandaloneQuarterSymbols as string()

Example:

```vbscript
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.shortStandaloneQuarterSymbols
MsgBox join(s, ", ")
```

// shows for example ”Q1, Q2, Q3, Q4” (in Germany)
// shows for example ”Q1, Q2, Q3, Q4” (in USA)
// shows for example ”T1, T2, T3, T4” (in France)

Notes: Available in Mac OS X v10.5 and later.

59.3.13 shortStandaloneWeekdaySymbols as string()

Example:

```vbscript
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.shortStandaloneWeekdaySymbols
MsgBox join(s, ", ")
```

// shows for example ”So., Mo., Di., Mi., Do., Fr., Sa.” (in Germany)
// shows for example ”Sun, Mon, Tue, Wed, Thu, Fri, Sat” (in USA)
// shows for example ”dim., lun., mar., mer., jeu., ven., sam.” (in France)

Notes: Available in Mac OS X v10.5 and later.
59.3.14  shortWeekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Sets the short weekday symbols.

**Example:**

```vba
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.shortWeekdaySymbols

MsgBox join(s, ", ")
```

// shows for example "So., Mo., Di., Mi., Do., Fr., Sa." (in Germany)
// shows for example "Sun, Mon, Tue, Wed, Thu, Fri, Sat" (in USA)
// shows for example "dim., lun., mar., mer., jeu., ven., sam." (in France)

**Notes:** On error returns an empty array.

59.3.15  standaloneMonthSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the standalone month symbols for the receiver.

**Example:**

```vba
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.standaloneMonthSymbols

MsgBox join(s, ", ")
```

// shows for example "Januar, Februar, Mrz, April, Mai, Juni, Juli, August, September, Oktober, November, Dezember" (in Germany)
// shows for example "January, February, March, April, May, June, July, August, September, October, November, December" (in USA)
// shows for example "janvier, fvrier, mars, avril, mai, juin, juillet, aot, septembre, octobre, novembre, dcembre" (in France)

**Notes:** Available in Mac OS X v10.5 and later.
59.3.16 standaloneQuarterSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the standalone quarter symbols for the receiver.

**Example:**
```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.standaloneQuarterSymbols

MsgBox join(s, ", ")
```

// shows for example "1. Quartal, 2. Quartal, 3. Quartal, 4. Quartal" (in Germany)
// shows for example "1st quarter, 2nd quarter, 3rd quarter, 4th quarter" (in USA)
// shows for example "1er trimestre, 2e trimestre, 3e trimestre, 4e trimestre" (in France)

**Notes:** Available in Mac OS X v10.5 and later.

59.3.17 standaloneWeekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the array of standalone weekday symbols for the receiver.

**Example:**
```
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.standaloneWeekdaySymbols

MsgBox join(s, ", ")
```

// shows for example "Sonntag, Montag, Dienstag, Mittwoch, Donnerstag, Freitag, Samstag" (in Germany)
// shows for example "Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, Saturday" (in USA)
// shows for example "dimanche, lundi, mardi, mercredi, jeudi, vendredi, samedi" (in France)

**Notes:** Available in Mac OS X v10.5 and later.

59.3.18 veryShortMonthSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the very short month symbols for the receiver.

**Example:**
`dim l as new NSLocaleMBS`
`dim n as NSLocaleDateMBS = l.DateLong`
`dim s(-1) as string = n.veryShortMonthSymbols`

`MsgBox join(s,"",")`

// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in Germany)
// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in USA)
// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in France)

**Notes:** Available in Mac OS X v10.5 and later.

### 59.3.19 veryShortStandAloneMonthSymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the very short month symbols for the receiver. **Example:**

`dim l as new NSLocaleMBS`
`dim n as NSLocaleDateMBS = l.DateLong`
`dim s(-1) as string = n.veryShortStandAloneMonthSymbols`

`MsgBox join(s,"",")`

// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in Germany)
// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in USA)
// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in France)

**Notes:** Available in Mac OS X v10.5 and later.

### 59.3.20 veryShortStandAloneWeekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the array of very short standalone weekday symbols for the receiver. **Example:**

`dim l as new NSLocaleMBS`
`dim n as NSLocaleDateMBS = l.DateLong`
`dim s(-1) as string = n.veryShortStandAloneWeekdaySymbols`

`MsgBox join(s,"",")`

// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in Germany)
// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in USA)
// shows for example "J, F, M, A, M, J, J, A, S, O, N, D" (in France)
59.3. class NSLocaleDateMBS

// shows for example "S, M, D, M, D, F, S" (in Germany)
// shows for example "S, M, T, W, T, F, S" (in USA)
// shows for example "D, L, M, M, J, V, S" (in France)

Notes: Available in Mac OS X v10.5 and later.

59.3.21 veryShortWeekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the array of very short weekday symbols for the receiver.

Example:

dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.veryShortWeekdaySymbols

MsgBox Join(s," ","")

// shows for example "S, M, D, M, D, F, S" (in Germany)
// shows for example "S, M, T, W, T, F, S" (in USA)
// shows for example "D, L, M, M, J, V, S" (in France)

Notes: Available in Mac OS X v10.5 and later.

59.3.22 weekdaySymbols as string()

MBS MacBase Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the array of weekday symbols for the receiver.

Example:

dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong
dim s(-1) as string = n.weekdaySymbols

MsgBox Join(s," ","")

// shows for example "Sonntag, Montag, Dienstag, Mittwoch, Donnerstag, Freitag, Samstag" (in Germany)
// shows for example "Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, Saturday" (in USA)
// shows for example "dimanche, lundi, mardi, mercredi, jeudi, vendredi, samedi" (in France)
Notes: Available in Mac OS X v10.4 and later.

59.3.23 Properties

59.3.24 AMSymbol as String

Example:
```plaintext
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong

MsgBox n.AMSymbol // shows for example "vorm." (in Germany)
```

Notes: (Read only property)

59.3.25 dateFormat as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the date format string.
Example:
```plaintext
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong

MsgBox n.dateFormat // shows for example: "d. MMMM yyyy" (in Germany)
```

Notes:

Format of this string (if object was made with new):

If you got this object from NSLocale, it uses a different format.
(Read only property)
59.3. **CLASS NSLOCALEDATEMBS**

59.3.26 **PMSymbol as String**

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the PM symbol.

**Example:**

```vbs
dim l as new NSLocaleMBS
dim n as NSLocaleDateMBS = l.DateLong

MsgBox n.PMSymbol // shows for example "nachm." (in Germany)
```

**Notes:** (Read only property)
59.4 class NSLocaleMBS

59.4.1 class NSLocaleMBS

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The class for Cocoa localization data.
**Example:**
```
dim n as NSLocaleMBS
n=NSLocaleMBS.currentLocale
MsgBox n.CountryCode
```
**Notes:** Available in Mac OS X v10.4 and later.

59.4.2 Methods

59.4.3 autoupdatingCurrentLocale as NSLocaleMBS

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the current logical locale for the current user.
**Notes:**
The current logical locale for the current user. The locale is formed from the settings for the current user’s chosen system locale overlaid with any custom settings the user has specified in System Preferences.

The object always reflects the current state of the current user’s locale settings.

Settings you get from this locale do change as the user’s settings change (contrast with currentLocale).

Note that if you cache values based on the locale or related information, those caches will of course not be automatically updated by the updating of the locale object.

Available in Mac OS X v10.5 and later.

59.4.4 availableLocaleIdentifiers as string()

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns an array of strings, each of which identifies a locale available on the system.
Example:

MsgBox join(NSLocaleMBS.availableLocaleIdentifiers,", ")

// shows "zh_Hans_CN, sq_AL, he_IL, uz_Latn, en_CA, zh, kk_Cyrl, sr_Cyrl,
// fr_CA, sr_Cyrl_RS, fr_LU, bg_BG, es_ES, da DK, el_CY, ja_JP, kok_IN,
// nl_MT, fr_JP, de LU, uz_Cyril pt_PT, af, ms_MY, ml_BE, es_US, en_PH,
// zh_HK, be, sr_Latn BA, es CR, ca, vi_VN, zh_Hant HK, bg, gu_IN, si_LK,
// am, or_IN, en_ZA, ar YE, da, uk_UA, ar OM, es PE, cs CZ, kk Cyril KZ,
// de_AT, lv LV, en NZ, ar BH, ar, en AU, az Cyril de, as, bn, zh Hans SG,
// es PY, es EC, ne_IN, pa Guru IN, fa, sw KE, es AR, az, fr FR,
// en US POSIX, sr Cyril BA, cs, zh Hans, en ES, ga, en PK, ar LB, el,

// ar KW, haw US, sr Cyril ME, es PA, es CO, kl GL, sr Latn, uz, ur IN,
// zh Hant MO, ha Latn NG, es GT, tr TR, fa IR, pl PL, sv FI, ar DZ"

Notes: Available in Mac OS X v10.4 and later.

59.4.5 canonicalLanguageIdentifierFromString(s as string) as string

MBS MacBase Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

Returns a canonical language identifier by mapping an arbitrary locale identification string to the canonical identifier.

**Notes:**

s: A string representation of an arbitrary locale identifier.

Returns a string that represents the canonical language identifier for the specified arbitrary locale identifier. Available in Mac OS X v10.6 and later.
59.4.6 canonicalLocaleIdentifierFromString(s as string) as string

Notes: Available in Mac OS X v10.4 and later.

59.4.7 characterDirectionForLanguage(isoLangCode as string) as Integer

Notes: Returns the character direction for the language. See constants for possible values. If the appropriate direction can't be determined NSLocaleLanguageDirectionUnknown is returned.
Available in Mac OS X v10.6 and later.

59.4.8 commonISOCurrencyCodes as string()

Example:
MsgBox join(NSLocaleMBS.commonISOCurrencyCodes, ", ")
// shows "AED, AFN, ALL, AMD, ANG, AOA, ARS, AUD, AWG, AZN, 
// BAM, BBD, BDT, BGN, BHD, BIF, BMD, BND, BOB, BRL, BSD, BTN, 
// BWP, BYR, BZD, CAD, CDF, CHF, CLP, CNY, COP, CRC, CUP, CVE, 
// CZK, DJF, DDK, DOP, DZD, EEP, EGP, ERN, ETB, EUR, FJD, FKP, 
// GBP, GEL, GHS, GIP, GMD, GNF, GTQ, GWP, GYD, HKD, HNL, HRK, 
// HTG, HUF, IDR, ILS, INR, IQD, IRR, ISK, JMD, JOD, JPY, KES, 
// KGS, KHR, KMF, KPW, KRW, KWD, KYD, KZT, LAK, LBP, LKR, LRD, 
// LSL, LTL, LVL, LYD, MAD, MDL, MGA, MKD, MMK, MNT, MOP, MRO, 
// MUR, MVR, MWK, MXN, MYR, MZN, NAD, NGN, NIO, NOK, NPR, 
// NZD, OMR, PAB, PEN, PGK, PHP, PKR, PLN, PYG, QAR, RON, RSD, 
// RUB, RWF, SAR, SBD, SCR, SDG, SEK, SGD, SHP, SKK, SLL, SOS, 
// SRD, STD, SVC, SYP, SZL, THB, TJS, TMM, TND, TOP, TRY, TTD, 
// TWD, TZS, UAH, UGX, USD, UYU, UZS, VEF, VND, VUV, WST, XAF, 
// XCD, XOF, XPF, YER, ZAR, ZMK, ZWD"

Notes:
Common codes may include, for example, AED, AUD, BZD, DKK, EUR, GBP, JPY, KES, MXN, OMR,
59.4. CLASS NSLOCALEMBS

STD, USD, XCD, and ZWD.
Available in Mac OS X v10.5 and later.

59.4.9 Constructor

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The default constructor.

**Notes:**
Available in Mac OS X v10.4 and later.
Loads the same values for this object as if you just take the object from NSLocaleMBS.currentLocale.
See also:

* 59.4.10 Constructor(Identifier as string)

59.4.10 Constructor(Identifier as string)

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.

**Example:**

```vba
Dim a(-1) As String = NSLocaleMBS.AvailableLocaleIdentifiers

// show all identifiers:
Dim s(-1) As String
s.Append "All available Locale Identifiers:"

Dim c As Integer = UBound(a)
For i As Integer = 0 To c
    Dim identifier As String = a(i)
    s.Append identifier
Next

MsgBox Join(s)

// now show the currency symbols:

Redim s(-1)
s.Append "All Currency symbols:"

Dim c As Integer = UBound(a)
For i As Integer = 0 To c
    Dim identifier As String = a(i)
    Dim n As New NSLocaleMBS(identifier)
    s.Append n.CurrencySymbol
Next
```

```
CHAPTER 59. CURRENCY, DATE AND TIME FORMAT

Next

MsgBox Join(s)

Notes:
Available in Mac OS X v10.4 and later.
Pass in the country identifier which you get with the availableLocaleIdentifiers function.
See also:
- 59.4.9 Constructor

59.4.11 currentLocale as NSLocaleMBS

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the logical locale for the current user.

Notes:
Available in Mac OS X v10.4 and later.

The logical locale for the current user. The locale is formed from the settings for the current user’s chosen system locale overlaid with any custom settings the user has specified in System Preferences.

This method may return a retained cached object.

Discussion:
Settings you get from this locale do not change as System Preferences are changed so that your operations are consistent. Typically you perform some operations on the returned object and then allow it to be disposed of. Moreover, since the returned object may be cached, you do not need to hold on to it indefinitely.

59.4.12 displayName(key as string, value as string) as string

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the display name for the given value.

**Example:**

```dim displayNameString as string

// The first uses the fr_FR locale.

dim frLocale as new NSLocaleMBS("fr_FR")

displayNameString = frLocale.displayName(frLocale.NSLocaleIdentifier, "fr_FR")```
MsgBox "display name for fr_FR in fr_FR: " + displayNameString
// shows: "display name for fr_FR in fr_FR: franais (France)"

displayNameString = frLocale.displayName(frLocale.NSLocaleIdentifier, "en_US")
MsgBox "display name for en_US in fr_FR: " + displayNameString
// shows: "display name for en_US in fr_FR: anglais (tats-Unis)"

// The following example uses the en_GB locale.

dim gbLocale as new NSLocaleMBS("en_US")

displayNameString = gbLocale.displayName(frLocale.NSLocaleIdentifier, "fr_FR")
MsgBox "display name for fr_FR in en_US: " + displayNameString
// shows: "display name for fr_FR in en_US: French (France)"

displayNameString = gbLocale.displayName(frLocale.NSLocaleIdentifier, "en_US")
MsgBox "display name for en_US in en_US: " + displayNameString
// shows: "display name for en_US in en_US: English (United States)"

Notes:

Not all locale property keys have values with display name values.

You can use the NSLocaleIdentifier key to get the name of a locale in the language of another locale, as illustrated in the example code above.

59.4.13 ExemplarCharacterSet as Variant

Example:

dim n as NSLocaleMBS = NSLocaleMBS.currentLocale

MsgBox n.ExemplarCharacterSet.StringValue
// shows "ABCDEFGHIJKLMNOPQRSTUVWXYZabcdefghijklmnopqrstuvwxyz" in Germany

Notes:

Returns a NSCharacterSetMBS object.
Available in Mac OS X v10.4 and later.
59.4.14 GetString(key as string) as string

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a string for one of the NSLocate keys.

**Notes:**
Available in Mac OS X v10.4 and later.
This keys can be found int he NSLocale reference from Apple.

59.4.15 ISOCountryCodes as string()

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array of strings that represents all known legal country codes.

**Example:**

MsgBox join(NSLocaleMBS.ISOCountryCodes, ", ")

```
// shows "AD, AE, AF, AG, AI, AL, AM, AN, AO, AQ, AR, AS, AT, AU,
// AW, AX, AZ, BA, BB, BD, BE, BF, BG, BH, BI, BJ, BL, BM, BN, BO,
// BR, BS, BT, BV, BW, BY, BZ, CA, CC, CD, CF, CG, CH, CI, CK, CL,
// CM, CN, CO, CR, CU, CV, CX, CY, CZ, DE, DJ, DK, DM, DO, DZ, EC,
// EE, EG, EH, ER, ES, ET, FI, FJ, FK, FM, FO, FR, GA, GB, GD, GE,
// GF, GG, GH, GI, GL, GM, GN, GP, GQ, GR, GS, GT, GU, GW, GY, HK,
// HM, HN, HR, HT, HU, ID, IE, IL, IN, IO, IQ, IR, IS, IT, JE,
// JM, JO, JP, KE, KG, KH, KI, KM, KN, KP, KR, KW, KY, KZ, LA, LB,
// LC, LI, LK, LR, LS, LT, LU, LV, LY, MA, MC, MD, ME, MF, MG, MH,
// MK, ML, MM, MN, MO, MP, MQ, MR, MS, MT, MU, MV, MW, MX, MY, MZ,
// NA, NC, NE, NF, NG, NI, NL, false, NP, NR, NU, NZ, OM, PA, PE, PF,
// PG, PH, PK, PL, PM, PN, PR, PS, PT, PW, PY, QA, RE, RO, RS, RU,
// RW, SA, SB, SC, SD, SE, SG, SH, SI, SJ, SK, SL, SM, SN, SO, SR,
// ST, SV, SY, SZ, TC, TD, TF, TG, TH, TJ, TK, TL, TM, TN, TO, TR,
// TT, TV, TW, TZ, UA, UG, UM, US, UY, UZ, VA, VC, VE, VG, VI, VN,
// VU, WF, WS, YE, YT, ZA, ZM, ZW"
```

**Notes:**
Available in Mac OS X v10.4 and later.
Note that many of country codes do not have any supporting locale data in Mac OS X.

59.4.16 ISOCurrencyCodes as string()

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array of strings that represents all known legal ISO currency codes.
59.4. CLASS NSLOCALEMBS

Example:

MsgBox join(NSLocaleMBS.ISOCurrencyCodes, ", " )

// shows "ADP, AED, AFA, AFN, ALK, ALL, AMD, ANG, AOA, AOK, AON, AOR, // ARA, ARP, ARS, ATS, AUD, AWG, AZM, AZN, BAD, BAM, BBD, BDT, BGN, // BEF, BEL, BGL, BGR, BHD, BIF, BMD, BND, BOB, BOG, BOV, BRB, // BRC, BRE, BRL, BTN, BRR, BSD, BTN, BWP, BYB, BYN, BZD, CAD, // CDF, CHE, CHF, CHW, CLF, CLP, CNX, CNY, COP, CRC, CSD, CSK, // CUP, CVE, CYP, CZK, DEM, DJF, DKK, DOP, DZD, ECS, ECV, EEP, // EGP, GEL, GHS, GIP, GMD, GNF, GNS, GQF, GTD, GWE, GWP, // GYD, HKD, HNL, HRD, HUF, IDR, IEP, ILS, INR, IQD, // IRR, ISK, JPY, JOD, JPY, KES, KGS, KHR, KMF, KPW, KRW, KWD, // KYD, KZT, LAK, LBP, LKR, LRD, LSL, LTM, LTT, LUC, LUF, LUL, // LVL, LVR, LYD, MAD, MAF, MDL, MGA, MGF, MKD, MLE, MMK, MNT, MOP, // MRU, MTL, MTP, MVR, MWK, MXN, MXP, MYR, MZM, MZN, // NAD, NGN, NIC, NIO, NLG, NOK, NPR, NZD, OMR, PAB, PEN, PES, // PGK, PHP, PRK, PLN, PLZ, PYG, QAR, RHD, ROL, RON, RSD, RUB, // RUR, RWF, SAR, SBD, SCR, SDG, SDN, SEK, SHF, SIT, SKK, // SLL, SOS, STD, SUR, SVC, SYP, SZL, TJS, TMT, // TND, TOP, TPO, TRY, TWD, TZS, UAH, UAK, UGS, UGX, USD, // USN, UUS, UYP, UYU, UZS, VEC, VEF, VND, VUV, WST, XAF, XAG, // XAU, XBA, XBB, XBC, XBD, XCD, XDR, XEU, XFO, XFR, XOF, XPD, XPF, // XPT, XRE, XTS, XXX, YDD, YER, YUD, YUM, YUN, ZAL, ZAR, ZMK, ZRN, // ZRZ, ZWD"

Notes:

Available in Mac OS X v10.4 and later.

Note that some of the currency codes may not have any supporting locale data in Mac OS X.

59.4.17 ISOLanguageCodes as string()

Example:

MsgBox join(NSLocaleMBS.ISOLanguageCodes, ", " )

// shows "aa, ab, ace, ach, ada, ady, ae, af, afa, afh, ain, ak, akk, // alg, alt, am, an, ang, anp, apa, ar, arc, arn, arp, art, arw, // as, ast, ath, aus, av, awa, ay, az, ba, bad, bai, bal, ban, bas, // bat, be, bej, bem, ber, bg, bh, bho, bi, bik, bin, bla, bm, bn, bnt,
CHAPTER 59. CURRENCY, DATE AND TIME FORMAT

Available in Mac OS X v10.4 and later.

Note that many of the language codes will not have any supporting locale data in Mac OS X.

59.4.18 lineDirectionForLanguage(isoLangCode as string) as Integer

Function:
Returns the line direction for the specified ISO language code.

Notes:
Returns the line direction for the language. See constants for possible values. If the appropriate direction
59.4. CLASS NSLOCALEMBS

Can't be determined NSLocaleLanguageDirectionUnknown is returned.

Available in Mac OS X v10.6 and later.

59.4.19 localeIdentifier as string

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the identifier for the receiver.

**Notes:**
The identifier for the receiver. This may not be the same string that the locale was created with, since NSLocale may canonicalize it.

Available in Mac OS X v10.4 and later.

59.4.20 localeIdentifierFromWindowsLocaleCode(code as Integer) as string

MBS MacBase Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a locale identifier from a Windows locale code.

**Notes:** Available in Mac OS X v10.6 and later.

59.4.21 NSBuddhistCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the calendar indentifiers.

**Notes:**
Identifier for the Buddhist calendar.
Available in Mac OS X v10.4 and later.

59.4.22 NSChineseCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the calendar indentifiers.

**Notes:**
Identifier for the Chinese calendar (unsupported).

Note that the Chinese calendar is not supported in Mac OS X v10.4-10.5. Although you can create a calendar
using this constant, the object will not function correctly.

Available in Mac OS X v10.4 and later.

59.4.23  NSGregorianCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the calendar identifiers.

**Notes:**
Identifier for the Gregorian calendar.
Available in Mac OS X v10.4 and later.

59.4.24  NSHebrewCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the calendar identifiers.

**Notes:**
Identifier for the Hebrew calendar.
Available in Mac OS X v10.4 and later.

59.4.25  NSIndianCalendar as string

MBS MacBase Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the calendar identifiers.

**Notes:**
Identifier for the Indian calendar.
Available in Mac OS X v10.6 and later.

59.4.26  NSIslamicCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the calendar identifiers.

**Notes:**
59.4. CLASS NSLOCALEMBS

Identifier for the Islamic calendar.

Available in Mac OS X v10.4 and later.

59.4.27 NSIslamicCivilCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the calendar identifiers.  
**Notes:**  
Identifier for the Islamic civil calendar.

Available in Mac OS X v10.4 and later.

59.4.28 NSISO8601Calendar as string

MBS MacBase Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the calendar identifiers.  
**Notes:**  
Identifier for the ISO8601. The ISO8601 calendar is not yet implemented.

Available in Mac OS X v10.6 and later.

59.4.29 NSJapaneseCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the calendar identifiers.  
**Notes:**  
Identifier for the Japanese calendar.  
Available in Mac OS X v10.4 and later.

59.4.30 NSLocaleAlternateQuotationBeginDelimiterKey as string

MBS MacBase Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the displayName and GetString functions.  
**Notes:**
The key for the alternating begin quotation symbol associated with the locale. In some locales, when quotations are nested, the quotation characters alternate. Thus, NSLocaleQuotationBeginDelimiterKey, then NSLocaleAlternateQuotationBeginDelimiterKey, etc.

The corresponding value is a string.
Available in Mac OS X v10.6 and later.

59.4.31 NSLocaleAlternateQuotationEndDelimiterKey as string

MBS MacBase Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
One of the constants for the displayName and GetString functions.
Notes:
The key for the alternating enda quotation symbol associated with the locale. In some locales, when quotations are nested, the quotation characters alternate. Thus, NSLocaleQuotationEndDelimiterKey, then NSLocaleAlternateQuotationEndDelimiterKey, etc.

The corresponding value is a string.
Available in Mac OS X v10.6 and later.

59.4.32 NSLocaleCalendar as string

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
One of the calendar indentifiers.

59.4.33 NSLocaleCollationIdentifier as string

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
One of the constants for the displayName and GetString functions.

59.4.34 NSLocaleCollatorIdentifier as string

MBS MacBase Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
One of the constants for the displayName and GetString functions.
Notes:
The key for the collation identifier for the locale.
The corresponding value is a string. If unknown, "" is returned.
59.4. **CLASS NSLOCALEMBS**

Available in Mac OS X v10.6 and later.

### 59.4.35 **NSLocaleCountryCode as string**

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the displayName and GetString functions.

### 59.4.36 **NSLocaleCurrencyCode as string**

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the displayName and GetString functions.

### 59.4.37 **NSLocaleCurrencySymbol as string**

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the displayName and GetString functions.

### 59.4.38 **NSLocaleDecimalSeparator as string**

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the displayName and GetString functions.

### 59.4.39 **NSLocaleExemplarCharacterSet as string**

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the displayName and GetString functions.

### 59.4.40 **NSLocaleGroupingSeparator as string**

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the displayName and GetString functions.
59.4.41  NSLocaleIdentifier as string

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the displayName and GetString functions.

**Example:**

```plaintext
dim n as new NSLocaleMBS("de")
MsgBox n.displayName(n.NSLocaleIdentifier, "en")
```

59.4.42  NSLocaleLanguageCode as string

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the displayName and GetString functions.

59.4.43  NSLocaleMeasurementSystem as string

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the displayName and GetString functions.

59.4.44  NSLocaleQuotationBeginDelimiterKey as string

MBS MacBase Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the displayName and GetString functions.

**Notes:**

The key for the begin quotation symbol associated with the locale.
The corresponding value is a string.
Available in Mac OS X v10.6 and later.

59.4.45  NSLocaleQuotationEndDelimiterKey as string

MBS MacBase Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the displayName and GetString functions.

**Notes:**

The key for the begin quotation symbol associated with the locale.
The corresponding value is string.
Available in Mac OS X v10.6 and later.
59.4. CLASS NSLOCALEMBS

59.4.46 NSLocaleScriptCode as string

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the constants for the displayName and GetString functions.

59.4.47 NSLocaleUsesMetricSystem as string

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the constants for the displayName and GetString functions.

59.4.48 NSLocaleVariantCode as string

MBS MacBase Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the constants for the displayName and GetString functions.

59.4.49 NSPersianCalendar as string

MBS MacBase Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the calendar indentifiers.
**Notes:**
Identifier for the Persian calendar.
Available in Mac OS X v10.6 and later.

59.4.50 NSRepublicOfChinaCalendar as string

MBS MacBase Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the calendar indentifiers.
**Notes:**
Identifier for the Republic of China (Taiwan) calendar.

A Chinese calendar can be created, and one can do calendrical calculations with it, but it should not be used
for formatting as the necessary underlying functionality is not functioning correctly yet.

Available in Mac OS X v10.6 and later.
**59.4.51 preferredLanguages as string()**

MBS MacBase Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the user’s language preference order as an array of strings.

**Example:**

```plaintext
MsgBox join(NSLocaleMBS.preferredLanguages," ",")
```

// shows "de, en, fr, es, it, pt, pt-PT, nl, sv, nb, da, fi, ru, pl, zh-Hans, ja, zh-Hant, ko"

**Notes:**

The user’s language preference order as an array of String objects, each of which is a canonicalized IETF BCP 47 language identifier.

Available in Mac OS X v10.5 and later.

This is the language the user prefers. To get the country linked to the number and date formats, use the CountryCode property.

**59.4.52 systemLocale as NSLocaleMBS**

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the "root", canonical locale, that contains fixed "backstop" settings that provide values for otherwise undefined keys.

**Notes:** Available in Mac OS X v10.4 and later.

**59.4.53 windowsLocaleCodeFromLocaleIdentifier(s as string) as Integer**

MBS MacBase Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a Window locale code from the locale identifier.

**Notes:** Available in Mac OS X v10.6 and later.

**59.4.54 Properties**

**59.4.55 CollationIdentifier as String**

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The collation associated with the locale.

**Example:**
59.4. CLASS NSLOCALEMBS

dim n as new NSLocaleMBS

MsgBox n.CollationIdentifier // shows "" in Germany

Notes:
Available in Mac OS X v10.4 and later.
(Read only property)

59.4.56 CountryCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The country code.
**Example:**

dim n as new NSLocaleMBS

MsgBox n.CountryCode // shows "DE" in Germany

Notes:
An example value might be "ES".
Available in Mac OS X v10.4 and later.

This code here is the country where the number and date settings belong to. This is not the language the user has. To get the languages, check the preferredLanguages array.
(Read only property)

59.4.57 CurrencyCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The currency code associated with the locale.
**Example:**

dim n as new NSLocaleMBS

MsgBox n.CurrencyCode // shows "EUR" in Germany

Notes:
CHAPTER 59. CURRENCY, DATE AND TIME FORMAT

Available in Mac OS X v10.4 and later.
(Read only property)

59.4.58 CurrencySymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The currency symbol associated with the locale.
Example:

```dim n as new NSLocaleMBS
MsgBox n.CurrencySymbol // shows "$" in Germany```

Notes:
Available in Mac OS X v10.4 and later.
(Read only property)

59.4.59 DateFull as NSLocaleDateMBS

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The full date format.
Notes:
Available in Mac OS X v10.4 and later.
(Read only property)

59.4.60 DateLong as NSLocaleDateMBS

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The long date format.
Notes:
Available in Mac OS X v10.4 and later.
(Read only property)

59.4.61 DateMedium as NSLocaleDateMBS

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The medium date format.
59.4. CLASS NSLOCALEMBS

Notes:
Available in Mac OS X v10.4 and later.
(Read only property)

59.4.62 DateShort as NSLocaleMBS

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The short date format.

**Example:**
MsgBox NSLocaleMBS.currentLocale.DateShort.dateFormat
// in Germany: "dd.MM.yy"

Notes:
Available in Mac OS X v10.4 and later.
(Read only property)

59.4.63 DecimalSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The decimal separator associated with the locale.

**Example:**
dim n as new NSLocaleMBS
MsgBox n.DecimalSeparator // shows ",," in Germany

Notes:
Available in Mac OS X v10.4 and later.
(Read only property)

59.4.64 GroupingSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The numeric grouping separator associated with the locale.

**Example:**
dim n as new NSLocaleMBS

MsgBox n.GroupingSeparator // shows "." in Germany

Notes:
Available in Mac OS X v10.4 and later.
(Read only property)

59.4.65 Identifier as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The locale identifier.
**Example:**

dim n as new NSLocaleMBS

MsgBox n.Identifier // shows "de_DE" in Germany

Notes:
An example value might be "es_ES_PREEURO".
Available in Mac OS X v10.4 and later.
(Read only property)

59.4.66 LanguageCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The language code.
**Example:**

dim n as new NSLocaleMBS

MsgBox n.LanguageCode // shows "de" in Germany

Notes:
An example value might be "es".
Available in Mac OS X v10.4 and later.
(Read only property)
59.4. **CLASS NSLOCALEMBS**

59.4.67 **MeasurementSystem as String**

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The measurement system associated with the locale.

**Example:**

```vbnet
dim n as new NSLocaleMBS
MsgBox n.MeasurementSystem // shows "Metric" in Germany
```

**Notes:**

Available in Mac OS X v10.4 and later.
(Read only property)

59.4.68 **NumberCurrency as NSLocaleNumberMBS**

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The currency style for number formatting.

**Notes:**

Available in Mac OS X v10.4 and later.
(Read only property)

59.4.69 **NumberDecimal as NSLocaleNumberMBS**

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies a decimal style for numbers.

**Notes:**

Available in Mac OS X v10.4 and later.
(Read only property)

59.4.70 **NumberPercent as NSLocaleNumberMBS**

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The percent style for number formatting.

**Notes:**

Available in Mac OS X v10.4 and later.
(Read only property)
59.4.71 NumberScientific as NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies a scientific style for numbers. **Notes:**
Available in Mac OS X v10.4 and later. (Read only property)

59.4.72 NumberSpellOut as NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies a spell-out format; for numbers, "23" becomes "twenty-three". **Notes:**
Available in Mac OS X v10.4 and later. (Read only property)

59.4.73 ScriptCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The locale script code. **Example:**
```vbs
dim n as new NSLocaleMBS
MsgBox n.ScriptCode // shows "" in Germany
```

**Notes:**
Available in Mac OS X v10.4 and later. (Read only property)

59.4.74 UsesMetricSystem as Boolean

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The flag that indicates whether the locale uses the metric system. **Example:**
```vbs
dim n as new NSLocaleMBS
dim v as Variant
```
v=n.UsesMetricSystem
MsgBox v // shows "True" in Germany

Notes:
Available in Mac OS X v10.4 and later.
(Read only property)

59.4.75 VariantCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The locale variant code. **Example:**

dim n as new NSLocaleMBS

MsgBox n.VariantCode // shows "" in Germany

Notes:
An example value might be "PREEURO". Available in Mac OS X v10.4 and later.
(Read only property)

59.4.76 Constants

59.4.77 NSLocaleLanguageDirectionBottomToTop = 4

MBS MacBase Plugin, Plugin Version: 9.6. **Function:** One of the constants describing the text direction for a language. **Notes:**
The language direction is from bottom to top. Available in Mac OS X v10.6 and later.

59.4.78 NSLocaleLanguageDirectionLeftToRight = 1

MBS MacBase Plugin, Plugin Version: 9.6. **Function:** One of the constants describing the text direction for a language. **Notes:**
The language direction is from left to right.
Available in Mac OS X v10.6 and later.

59.4.79  **NSLocaleLanguageDirectionRightToLeft** = 2

MBS MacBase Plugin, Plugin Version: 9.6. **Function:** One of the constants describing the text direction for a language.
**Notes:**
The language direction is from right to left.
Available in Mac OS X v10.6 and later.

59.4.80  **NSLocaleLanguageDirectionTopToBottom** = 3

MBS MacBase Plugin, Plugin Version: 9.6. **Function:** One of the constants describing the text direction for a language.
**Notes:**
The language direction is from top to bottom.
Available in Mac OS X v10.6 and later.

59.4.81  **NSLocaleLanguageDirectionUnknown** = 0

MBS MacBase Plugin, Plugin Version: 9.6. **Function:** One of the constants describing the text direction for a language.
**Notes:**
The direction of the language is unknown.
Available in Mac OS X v10.6 and later.
59.5. **CLASS NSLOCALENUMBERMBS**

59.5 class NSLocaleNumberMBS

59.5.1 class NSLocaleNumberMBS

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for a number format.
**Notes:** Should be used with the NSLocaleMBS class, but can be used on its own, too.

59.5.2 Methods

59.5.3 Constructor

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:**
- Loads values.
- No the same values as if you get when using this class with NSLocaleMBS.
- See also:

- 59.5.4 Constructor(locale as NSLocaleMBS)

59.5.4 Constructor(locale as NSLocaleMBS)

MBS MacBase Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Example:**
```
    dim n1 as new NSLocaleNumberMBS
    dim n2 as new NSLocaleNumberMBS(NSLocaleMBS.currentLocale)
    dim n3 as new NSLocaleNumberMBS(NSLocaleMBS.systemLocale)

    break // see differences in debugger
```

**Notes:** Initializes the object for a given locale.
See also:

- 59.5.3 Constructor
59.5.5 Properties

59.5.6 alwaysShowsDecimalSeparator as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that indicates whether the receiver always shows a decimal separator, even if the number is an integer.

**Notes:** (Read and Write property)

59.5.7 currencyCode as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the currency code.

**Example:**

```dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency
MsgBox n.currencycode
// shows for example: e.g "EUR" (in Germany)
```

**Notes:**

A currency code is a three-letter code that is, in most cases, composed of a country’s two-character Internet country code plus an extra character to denote the currency unit. For example, the currency code for the Australian dollar is "AUD". Currency codes are based on the ISO 4217 standard.

Available in Mac OS X v10.4 and later.

(Read and Write property)

59.5.8 currencyDecimalSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the currency decimal separator as a string.

**Example:**

```dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency
MsgBox n.currencyDecimalSeparator
// shows for example: e.g "," (in Germany)
```
59.5.9 currencyGroupingSeparator as String

MBS MacBase Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The currency grouping separator for the receiver. 
**Notes:**
Available in Mac OS X v10.5 and later.
(Read and Write property)

59.5.10 currencySymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the local currency symbol.
**Example:**
```lisp
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency
MsgBox n.currencycode
// shows for example: e.g "" (in Germany)
```
**Notes:** (Read and Write property)

59.5.11 decimalSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a string containing the character to represent decimal separators.
**Example:**
```lisp
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency
MsgBox n.decimalSeparator
// shows for example: e.g "," (in Germany)
```
**Notes:** (Read and Write property)
59.5.12 exponentSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the string used as an exponent symbol.
**Example:**
```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency
MsgBox n.exponentSymbol
// shows for example: e.g "E" (in Germany)
```

**Notes:**
The exponent symbol is the "E" or "e" in the scientific notation of numbers, as in 1.0e+56.
(Read and Write property)

59.5.13 format as String

MBS MacBase Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The format used by the receiver.
**Notes:** (Read and Write property)

59.5.14 groupingSeparator as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a string containing the grouping separator.
**Example:**
```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency
MsgBox n.groupingSeparator
// shows for example: e.g "." (in Germany)
```

**Notes:**
For example, the grouping separator used in the United States is the comma ("10,000") whereas in France it is the period ("10.000").
59.5. **CLASS NSLOCALENUMBERMBS**

(Read and Write property)

59.5.15 **hasThousandSeparators as Boolean**

MBS MacBase Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that indicates whether the receiver’s format includes thousand separators.  
**Notes:** (Read and Write property)

59.5.16 **internationalCurrencySymbol as String**

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the international currency symbol.  
**Example:**

```vbnet
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency
MsgBox n.internationalCurrencySymbol
// shows for example: e.g "EUR" (in Germany)
```

**Notes:**

A country typically has a local currency symbol and an international currency symbol. The local symbol is used within the country, while the international currency symbol is used in international contexts to specify that country’s currency unambiguously. The international currency symbol is often represented by a Unicode code point.  
(Read and Write property)

59.5.17 **Lenient as Boolean**

MBS MacBase Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that indicates whether the receiver uses heuristics to guess at the date which is intended by a string.  
**Notes:** (Read and Write property)

59.5.18 **localizesFormat as Boolean**

MBS MacBase Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that indicates whether the receiver localizes formats.
59.5.19  minusSign as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the string used to represent the minus sign.
**Example:**
```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency
MsgBox n.minusSign
// shows for example: e.g ”-“ (in Germany)
```

**Notes:** (Read and Write property)

59.5.20  negativeFormat as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the format used to display negative numbers.
**Example:**
```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency
MsgBox n.negativeFormat
// shows for example: e.g ”#,#,0.00” (in Germany)
```

**Notes:** (Read and Write property)

59.5.21  negativeInfinitySymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the symbol used to represent negative infinity.
**Example:**
```
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency
MsgBox n.negativeInfinitySymbol
```
59.5. CLASS NSLOCALENUMBERMBS

// shows for example: e.g "" (in Germany)

Notes: (Read only property)

59.5.22 negativePrefix as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the string which is inserted as a prefix to negative values.
Example:

```vba
dim l as new NSLocaleMBS
dim n as NLSLocaleNumberMBS = l.NumberCurrency
MsgBox n.negativePrefix
// shows for example: e.g "-" (in Germany)
```

Notes: (Read and Write property)

59.5.23 negativeSuffix as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the string which adds as a suffix to negative values.
Example:

```vba
dim l as new NSLocaleMBS
dim n as NLSLocaleNumberMBS = l.NumberCurrency
MsgBox n.negativeSuffix
// shows for example: e.g "" (in Germany)
```

Notes: (Read and Write property)

59.5.24 nilSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the string used to represent a nil value.
Example:
CHAPTER 59. CURRENCY, DATE AND TIME FORMAT

```vbnet
Dim l As New NSLocaleMBS
Dim n As NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.nilSymbol
// shows for example: e.g "" (in Germany)

Notes: (Read only property)
```

### 59.5.25 notANumberSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the symbol used to represent NaN ("not a number") when it converts values.

**Example:**
```
Dim l As New NSLocaleMBS
Dim n As NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.notANumberSymbol
// shows for example: e.g "NaN" (in Germany)
```

Notes: (Read only property)

### 59.5.26 paddingCharacter as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a string containing the padding character.

**Example:**
```
Dim l As New NSLocaleMBS
Dim n As NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.paddingCharacter
// shows for example: e.g "*" (in Germany)
```

Notes: (Read and Write property)
59.5.27 PartialStringValidationEnabled as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that indicates whether partial string validation is enabled. **Notes:** (Read and Write property)

59.5.28 percentSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the string that is used to represent the percent symbol. **Example:**

```vbnet
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency
MsgBox n.percentSymbol
// shows for example: e.g ”% ” (in Germany)
```

**Notes:** (Read and Write property)

59.5.29 perMillSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the string that is used for the per-thousands symbol. **Example:**

```vbnet
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency
MsgBox n.perMillSymbol
// shows for example: e.g ”‰” (in Germany)
```

**Notes:** (Read and Write property)

59.5.30 plusSign as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the string used for the plus sign. **Example:**

```vbnet
CHAPTER 59. CURRENCY, DATE AND TIME FORMAT

dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.plusSign
// shows for example: e.g ”+” (in Germany)

Notes: (Read and Write property)

59.5.31 positiveFormat as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns the format used to display positive numbers.
Example:
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.negativeFormat
// shows for example: e.g ”# ,# # 0.00 ” (in Germany)

Notes: (Read and Write property)

59.5.32 positiveInfinitySymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns the string used for the positive infinity symbol.
Example:
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency

MsgBox n.positiveInfinitySymbol
// shows for example: e.g ”” (in Germany)

Notes: (Read only property)
59.5.33 positivePrefix as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the string used as the prefix for positive values.

**Example:**
```
Dim l As New NSLocaleMBS
Dim n As NSLocaleNumberMBS = l.NumberCurrency
MsgBox n.positivePrefix
// shows for example: e.g "" (in Germany)
```

**Notes:** (Read and Write property)

59.5.34 positiveSuffix as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the string used as the suffix for positive values.

**Example:**
```
Dim l As New NSLocaleMBS
Dim n As NSLocaleNumberMBS = l.NumberCurrency
MsgBox n.positiveSuffix
// shows for example: e.g " " (in Germany)
```

**Notes:** (Read and Write property)

59.5.35 thousandSeparator as String

MBS MacBase Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that indicates whether the receiver’s format includes thousand separators.

**Notes:** (Read and Write property)

59.5.36 usesGroupingSeparator as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that indicates whether the receiver uses the grouping separator.
59.5.37  usesSignificantDigits as Boolean

MBS MacBase Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: A Boolean value that indicates whether the receiver uses significant digits. Notes: (Read and Write property)

59.5.38  zeroSymbol as String

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the string used as the zero symbol. Example:

```vba
dim l as new NSLocaleMBS
dim n as NSLocaleNumberMBS = l.NumberCurrency
MsgBox n.zeroSymbol
// shows for example: e.g "0" (in Germany)
```

Notes: (Read and Write property)
59.6.  CLASS WINLOCALIZATIONMBS

59.6  class WinLocalizationMBS

59.6.1  class WinLocalizationMBS

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A class for details about the current localization

**Example:**

```vbnet
dim l as WinLocalizationMBS
l=new WinLocalizationMBS
```

**Notes:**

This class has a constructor to specify whether you want unicode or not.

You may write yourself functions to acquire the details you need in your application from the Windows and from the Mac classes.
Also you may consider to update your values as the user may change them while your application is running.

59.6.2  Methods

59.6.3  AbbreviatedDayName(index as Integer) as string

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The localized name of the day.

**Notes:**

Index from 0 to 6.
e.g. on a German Windows XP system: AbbreviatedDayName(0)=”Mo"

59.6.4  AbbreviatedMonthName(index as Integer) as string

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The localized month name.

**Notes:**

Index from 0 to 12. 0=January, 11=December, 12=13th month if exists.
e.g. on a German Windows XP system: AbbreviatedMonthName(0)=”Jan”
59.6.5 Constructor

MBS Win Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The constructor to get the values for the current locale.

**Notes:**

There are four constructors:

- You can pass nothing to get the current locale.
- You can pass a Locale Identifier.
- You can pass a LanguageID and a SortID.
- You can pass a PrimaryLanguageID and a SubLanguageID combined with a SortID.

Use the LANG_* constants for the PrimaryLanguageID, the SUBLANG_* constants for the SubLanguageID and the SORT_* constants for the SortID.

**See also:**

- 59.6.6 Constructor(LanguageID as Integer, SortID as Integer)
- 59.6.7 Constructor(LCID as Integer)
- 59.6.8 Constructor(PrimaryLanguage as Integer, SubLanguage as Integer, SortID as Integer)

59.6.6 Constructor(LanguageID as Integer, SortID as Integer)

MBS Win Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor to query values for a given language.

**Notes:**

There are four constructors:

- You can pass nothing to get the current locale.
- You can pass a Locale Identifier.
- You can pass a LanguageID and a SortID.
- You can pass a PrimaryLanguageID and a SubLanguageID combined with a SortID.

Use the LANG_* constants for the PrimaryLanguageID, the SUBLANG_* constants for the SubLanguageID and the SORT_* constants for the SortID.

**See also:**

- 59.6.5 Constructor
- 59.6.7 Constructor(LCID as Integer)
- 59.6.8 Constructor(PrimaryLanguage as Integer, SubLanguage as Integer, SortID as Integer)
59.6. **CLASS WINLOCALIZATIONMBS**

### 59.6.7 Constructor(LCID as Integer)

MBS Win Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor to query values for a given language.  
**Notes:**  
There are four constructors:

- You can pass nothing to get the current locale.
- You can pass a Locale Identifier.
- You can pass a LanguageID and a SortID.
- You can pass a PrimaryLanguageID and a SubLanguageID combined with a SortID.

Use the LANG_* constants for the PrimaryLanguageID, the SUBLANG_* constants for the SubLanguageID and the SORT_* constants for the SortID.  
See also:

- 59.6.5 Constructor  
- 59.6.6 Constructor(LanguageID as Integer, SortID as Integer)  
- 59.6.8 Constructor(PrimaryLanguage as Integer, SubLanguage as Integer, SortID as Integer)

### 59.6.8 Constructor(PrimaryLanguage as Integer, SubLanguage as Integer, SortID as Integer)

MBS Win Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor to query values for a given language.  
**Notes:**  
There are four constructors:

- You can pass nothing to get the current locale.
- You can pass a Locale Identifier.
- You can pass a LanguageID and a SortID.
- You can pass a PrimaryLanguageID and a SubLanguageID combined with a SortID.

Use the LANG_* constants for the PrimaryLanguageID, the SUBLANG_* constants for the SubLanguageID and the SORT_* constants for the SortID.  
See also:
59.6.9 LongDayName(index as Integer) as string

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The localized name of the day.
**Notes:**
Index from 0 to 6.
e.g. on a German Windows XP system: LongDayName(0)="Montag"

59.6.10 LongMonthName(index as Integer) as string

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The localized month name.
**Notes:**
Index from 0 to 12. 0=January, 11=December, 12=13th month if exists.
e.g. on a German Windows XP system: LongMonthName(0)="Januar"

59.6.11 Properties

59.6.12 CalendarTypeSpecifier as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Current calendar type.
**Notes:**
This type can be one of these values:

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Gregorian (as in United States)</td>
</tr>
<tr>
<td>2</td>
<td>Gregorian (English strings always)</td>
</tr>
<tr>
<td>3</td>
<td>Era: Year of the Emperor (Japan)</td>
</tr>
<tr>
<td>4</td>
<td>Era: Year of Taiwan Region</td>
</tr>
<tr>
<td>5</td>
<td>Tangun Era (Korea)</td>
</tr>
</tbody>
</table>
59.6. **CLASS WINLOCALIZATIONMBS**

 e.g. on a German Windows XP system: "1"
 (Read only property)

---

### 59.6.13 **CalendarTypeSpecifier2 as String**

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Additional calendar types.

**Notes:**

This can be a zero-separated list of one or more of these calendars type values:

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>No additional types valid</td>
</tr>
<tr>
<td>1</td>
<td>Gregorian (as in United States)</td>
</tr>
<tr>
<td>2</td>
<td>Gregorian (English strings always)</td>
</tr>
<tr>
<td>3</td>
<td>Era: Year of the Emperor (Japan)</td>
</tr>
<tr>
<td>4</td>
<td>Era: Year of Taiwan Region</td>
</tr>
<tr>
<td>5</td>
<td>Tangun Era (Korea)</td>
</tr>
</tbody>
</table>

 e.g. on a German Windows XP system: ""
 (Read only property)

---

### 59.6.14 **CountryCode as String**

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Country code, based on international phone codes, also referred to as IBM country codes.

**Notes:**

The maximum number of characters allowed for this string is 6.
 e.g. on a German Windows XP system: "49"
 (Read only property)

---

### 59.6.15 **CountryNameAbbreviated as String**

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Abbreviated name of the country from the ISO Standard 3166.

**Notes:**

 e.g. on a German Windows XP system: "DEU"
59.6.16 CountryNameAbbreviatedISO as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** ISO abbreviated country name.

**Notes:**
e.g. on a German Windows XP system: "DE"

(Read only property)

59.6.17 CountryNameEnglish as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Full English name of the country.

**Notes:**
This is always restricted to characters mappable into the ASCII 127-character subset.
e.g. on a German Windows XP system: "English"

(Read only property)

59.6.18 CountryNameLocalized as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Full localized name of the country.

**Notes:**
e.g. on a German Windows XP system: "Deutschland"

(Read only property)

59.6.19 CountryNameNative as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Native name of the country.

**Notes:**
e.g. on a German Windows XP system: "Deutschland"

(Read only property)
59.6. **CLASS WINLOCALIZATIONMBS**

### 59.6.20 CurrencyDecimalSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Character(s) used as the monetary decimal separator. **Notes:**

- e.g. on a German Windows XP system: ","
- (Read only property)

### 59.6.21 CurrencyDigitsInternational as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Number of fractional digits for the international monetary format. **Notes:**

- The maximum number of characters allowed for this string is 3.
- e.g. on a German Windows XP system: "2"
- (Read only property)

### 59.6.22 CurrencyDigitsLocalized as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Number of fractional digits for the local monetary format. **Notes:**

- The maximum number of characters allowed for this string is 3.
- e.g. on a German Windows XP system: "2"
- (Read only property)

### 59.6.23 CurrencyGroupingMode as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sizes for each group of monetary digits to the left of the decimal. **Notes:**

- An explicit size is needed for each group; sizes are separated by semicolons. If the last value is zero, the preceding value is repeated. To group thousands, specify 3;0, for example.
- e.g. on a German Windows XP system: "3;0"
- (Read only property)
59.6.24 CurrencyNameEnglish as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The full English name of the currency associated with the locale.
**Notes:**
e.g. on a German Windows XP system: "Euro"
Introduced with Windows 2000.
(Read only property)

59.6.25 CurrencyNameNative as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The native name of the currency associated with the locale.
**Notes:**
e.g. on a German Windows XP system: "Euro"
Introduced with Windows 2000.
(Read only property)

59.6.26 CurrencyNegativeMode as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Negative currency mode.
**Notes:**
The maximum number of characters allowed for this string is 3. The mode can be one of the following values:
e.g. on a German Windows XP system: "8"
(Read only property)

59.6.27 CurrencyPositiveMode as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Positive currency mode.
**Notes:**
The maximum number of characters allowed for this string is 2. The mode can be one of the following values:
e.g. on a German Windows XP system: "3"
(Read only property)
59.6. **CLASS WINLOCALIZATIONMBS**

<table>
<thead>
<tr>
<th>Value</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>($ 1.1)</td>
</tr>
<tr>
<td>1</td>
<td>$ 1.1</td>
</tr>
<tr>
<td>2</td>
<td>$ 1.1</td>
</tr>
<tr>
<td>3</td>
<td>$ 1.1</td>
</tr>
<tr>
<td>4</td>

<tr>
<td>3</td>
<td>Suffix, 1-char. separation</td>
</tr>
</tbody>
</table>

59.6.28 **CurrencySymbolInternational as String**

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Three characters of the international monetary symbol specified in ISO 4217, "Codes for the Representation of Currencies and Funds," followed by the character separating this string from the amount.

**Example:**

```vbnet
Dim WinLoc As WinLocalizationMBS
dim s as string

WinLoc=New WinLocalizationMBS

s=WinLoc.CurrencySymbolLocalized
msgbox str(lenb(s))+” ”+str(len(s))+” ”+s
s=WinLoc.CurrencySymbolInternational
msgbox str(lenb(s))+” ”+str(len(s))+” ”+s
```
CHAPTER 59. CURRENCY, DATE AND TIME FORMAT

Notes:

e.g. on a German Windows XP system: "EUR"
(Read only property)

59.6.29 CurrencySymbolLocalized as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
String used as the local monetary symbol.

**Example:**

Dim WinLoc As WinLocalizationMBS
dim s as string

WinLoc=New WinLocalizationMBS

s=WinLoc.CurrencySymbolLocalized
msgbox str(lenb(s))+""+str(len(s))+""+s
s=WinLoc.CurrencySymbolInternational
msgbox str(lenb(s))+""+str(len(s))+""+s

Notes:

e.g. on a German Windows XP system: ""
(Read only property)

59.6.30 CurrencyThousandSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Character(s) used as the monetary separator between groups of digits to the left of the decimal.

**Notes:**

e.g. on a German Windows XP system: "."
(Read only property)

59.6.31 DateLeadingZerosDay as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Specifier for leading zeros in day fields.

**Notes:**
The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>No leading zeros for days</td>
</tr>
<tr>
<td>1</td>
<td>Leading zeros for days</td>
</tr>
</tbody>
</table>

*Note:* e.g. on a German Windows XP system: "1"  
(Read only property)

**59.6.32**  
**DateLeadingZerosMonth as String**

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifier for leading zeros in month fields.  
**Notes:**  
The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>No leading zeros for months</td>
</tr>
<tr>
<td>1</td>
<td>Leading zeros for months</td>
</tr>
</tbody>
</table>

*Note:* e.g. on a German Windows XP system: "1"  
(Read only property)

**59.6.33**  
**DateLongFormatOrdering as String**

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Long date format-ordering specifier.  
**Notes:**  
The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

*Note:* e.g. on a German Windows XP system: "1"  
(Read only property)
59.6.34 DateLongFormatString as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Long date formatting string for this locale.

**Notes:**

The string can consist of a combination of day, month, and year format pictures defined in the Day, Month, Year, and Era Format Pictures table in National Language Support Constants and any string of characters enclosed in single quotes. Characters in single quotes remain as given.

E.g. on a German Windows XP system: "dddd, d. MMMM yyyy"
(Read only property)

59.6.35 DateSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Character(s) for the date separator.

**Notes:**

E.g. on a German Windows XP system: "."
(Read only property)

59.6.36 DateShortFormatOrdering as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Short date format-ordering specifier.

**Notes:**

The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Month-Day-Year</td>
</tr>
<tr>
<td>1</td>
<td>Day-Month-Year</td>
</tr>
<tr>
<td>2</td>
<td>Year-Month-Day</td>
</tr>
</tbody>
</table>
59.6. CLASS WINLOCALIZATIONMBS

59.6.37 DateShortFormatString as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Short date formatting string for this locale. **Example:**

```vba
dim w as new WinLocalizationMBS
MsgBox w.DateShortFormatString
```

**Notes:**
The string can consist of a combination of day, month, and year format pictures defined in Day, Month, Year, and Era Format Pictures table in National Language Support Constants. e.g. on a German Windows XP system: "dd.MM.yyyy" (Read only property)

59.6.38 DateShortYearMonth as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Year/Month formatting string for the locale. **Notes:**
This string shows the proper format for a date string that contains only the year and the month. e.g. on a German Windows XP system: "MMMM yyyy" Introduced with Windows 2000. (Read only property)

59.6.39 DecimalSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Character(s) used as the decimal separator. **Notes:**
e.g. on a German Windows XP system: "," (Read only property)
59.6.40  DefaultCodePageANSI as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** American National Standards Institute (ANSI) code page associated with this locale. **Notes:**

The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "1252"
(Read only property)

59.6.41  DefaultCodePageEBCDIC as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Default EBCDIC code page associated with the locale. **Notes:**

The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "20273"
Introduced with Windows 2000.
(Read only property)

59.6.42  DefaultCodePageMac as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Original equipment manufacturer (OEM) code page associated with the country. **Notes:**

The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "10000"
(Read only property)

59.6.43  DefaultCodePageOEM as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Original equipment manufacturer (OEM) code page associated with the locale. **Notes:**

The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "850"
(Read only property)
59.6. CLASS WINLOCALIZATIONMBS

59.6.44 DefaultCountryCode as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Country code for the principal country in this locale.

**Notes:**
This is provided so that partially specified locales can be completed with default values. The maximum number of characters allowed for this string is 6.
e.g. on a German Windows XP system: "49"
(Read only property)

59.6.45 DefaultLanguageID as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Language identifier for the principal language spoken in this locale.

**Notes:**
This is provided so that partially specified locales can be completed with default values. The maximum number of characters allowed for this string is 5.
e.g. on a German Windows XP system: "0407"
(Read only property)

59.6.46 DigitGrouping as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Sizes for each group of digits to the left of the decimal.

**Notes:**
An explicit size is needed for each group; sizes are separated by semicolons. If the last value is zero, the preceding value is repeated. To group thousands, specify 3:0, for example.
e.g. on a German Windows XP system: "3;0"
(Read only property)

59.6.47 DigitSubstitution as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Unkown.

**Notes:**
0 = context, 1 = none, 2 = national
e.g. on a German Windows XP system: "1"
Introduced with Windows 2000.
59.6.48  FirstDayOfWeek as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Specifier for the first day in a week.

**Notes:**
Value from 0 to 6.
e.g. on a German Windows XP system: "0"
(Read only property)

59.6.49  FirstWeekOfYear as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Specifier for the first week of the year.

**Notes:**
The specifier can be one of these values:

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Week containing 1/1 is the first week of that year.</td>
</tr>
<tr>
<td>1</td>
<td>First full week following 1/1 is the first week of that year.</td>
</tr>
<tr>
<td>2</td>
<td>First week containing at least 4 days is the first week of that year.</td>
</tr>
</tbody>
</table>

e.g. on a German Windows XP system: "2"
(Read only property)

59.6.50  LanguageID as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Language identifier indicating the language.

**Notes:**
The maximum number of characters allowed for this string is 5.
e.g. on a German Windows XP system: "0407"
(Read only property)
59.6. CLASS WINLOCALIZATIONMBS

59.6.51 LanguageNameAbbreviated as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Abbreviated name of the language, created by taking the 2-letter language abbreviation from the ISO Standard 639 and adding a third letter, as appropriate, to indicate the sublanguage.

**Notes:**

e.g. on a German Windows XP system: "DEU"
(Read only property)

59.6.52 LanguageNameAbbreviatedISO as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** ISO abbreviated language name.

**Notes:**

e.g. on a German Windows XP system: "de"
(Read only property)

59.6.53 LanguageNameEnglish as String

**Notes:**

This is always restricted to characters mappable into the ASCII 127-character subset.

e.g. on a German Windows XP system: "German"
(Read only property)

59.6.54 LanguageNameLocalized as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Full localized name of the language.

**Notes:**

e.g. on a German Windows XP system: "Deutsch (Deutschland)"
(Read only property)
59.6.55  LanguageNameNativ as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Native name of the language.
**Notes:**
e.g. on a German Windows XP system: "Deutsch"
(Read only property)

59.6.56  LeadingZeros as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Specifier for leading zeros in decimal fields.
**Notes:**
The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>No leading zeros</td>
</tr>
<tr>
<td>1</td>
<td>Leading zeros</td>
</tr>
</tbody>
</table>

e.g. on a German Windows XP system: "1"
(Read only property)

59.6.57  ListItemSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Character(s) used to separate list items.
**Notes:**
For example, a comma is used in many locales.
e.g. on a German Windows XP system: ",;"
(Read only property)

59.6.58  MeasureSystem as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
System of measurement.
**Notes:**
This value is 0 if the metric system (Systme International d’Units, or S.I.) is used and 1 if the U.S. system is used. The maximum number of characters allowed for this string is 2.

e.g. on a German Windows XP system: "0"

(Read only property)

59.6.59  NativeASCII0to9 as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Native equivalents to ASCII 0 through 9.

**Notes:**

e.g. on a German Windows XP system: "0123456789"

(Read only property)

59.6.60  NegativeNumberMode as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Negative number mode.

**Notes:**

The mode can be one of these values:

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>(1.1)</td>
</tr>
<tr>
<td>1</td>
<td>1.1</td>
</tr>
<tr>
<td>2</td>
<td>1.1</td>
</tr>
<tr>
<td>3</td>
<td>1.1</td>
</tr>
<tr>
<td>4</td>
<td>1.1</td>
</tr>
</tbody>
</table>

e.g. on a German Windows XP system: "1"

(Read only property)

59.6.61  NegSepBySpace as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Separation of monetary symbol in a negative monetary value.

**Notes:**

This value is 1 if the monetary symbol is separated by a space from the negative amount, 0 if it is not. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "1"
(Read only property)

**59.6.62 NegSymPrecedes as String**

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Position of monetary symbol in a negative monetary value.

**Notes:**
This value is 1 if the monetary symbol precedes the negative amount, 0 if it follows it. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "0"
(Read only property)

**59.6.63 NumberOfFraction as String**

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Number of fractional digits.

**Notes:**
The maximum number of characters allowed for this string is 3.
e.g. on a German Windows XP system: "2"
(Read only property)

**59.6.64 Papersize as String**

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Default paper size associated with the locale.

**Notes:**
Possible values:

1  Letter
5  Legal
8  DIN A3
9  DIN A4

e.g. on a German Windows XP system: "9"
Introduced with Windows 2000.
59.6. CLASS WINLOCALIZATIONMBS

(Read only property)

59.6.65 PosSepBySpace as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Separation of monetary symbol in a positive monetary value.

**Notes:**
This value is 1 if the monetary symbol is separated by a space from a positive amount, 0 if it is not. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "1"
(Read only property)

59.6.66 PosSymPrecedes as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Position of monetary symbol in a positive monetary value.

**Notes:**
This value is 1 if the monetary symbol precedes the positive amount, 0 if it follows it. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "0"
(Read only property)

59.6.67 SignNegative as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** String value for the negative sign.

**Notes:**
e.g. on a German Windows XP system: ".-"
(Read only property)

59.6.68 SignNegativePosition as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Formatting index for negative values.

**Notes:**
This index uses the same values as SignPositivePosition. The maximum number of characters allowed for this string is 2.
e.g. on a German Windows XP system: "1"
(Read only property)

59.6.69  **SignPositive as String**

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
String value for the positive sign.

**Notes:**
e.g. on a German Windows XP system: ""
(Read only property)

59.6.70  **SignPositivePosition as String**

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Formatting index for positive values.

**Notes:**
The maximum number of characters allowed for this string is 2. The index can be one of the following values:

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Parentheses surround the amount and the monetary symbol.</td>
</tr>
<tr>
<td>1</td>
<td>The sign string precedes the amount and the monetary symbol.</td>
</tr>
<tr>
<td>2</td>
<td>The sign string succeeds the amount and the monetary symbol.</td>
</tr>
<tr>
<td>3</td>
<td>The sign string immediately precedes the monetary symbol.</td>
</tr>
<tr>
<td>4</td>
<td>The sign string immediately succeeds the monetary symbol.</td>
</tr>
</tbody>
</table>

e.g. on a German Windows XP system: "1"
(Read only property)

59.6.71  **Sortname as String**

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The full localized name of the sort for the given locale ID.

**Notes:**
e.g. on a German Windows XP system: "Wrterbuch"
Introduced with Windows 2000.
(Read only property)
### 59.6.72 ThousandSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Character(s) used to separate groups of digits to the left of the decimal.  
**Notes:**  
e.g. on a German Windows XP system: "."  
(Read only property)

### 59.6.73 TimeAM as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** String for the AM designator.  
**Notes:**  
e.g. on a German Windows XP system: ""  
(Read only property)

### 59.6.74 TimeCenturyFormatSpecifier as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifier for full 4-digit century.  
**Notes:**  
The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:  

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Abbreviated 2-digit century</td>
</tr>
<tr>
<td>1</td>
<td>Full 4-digit century</td>
</tr>
</tbody>
</table>

e.g. on a German Windows XP system: "1"  
(Read only property)

### 59.6.75 TimeFormatSpecifier as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Time format specifier.  
**Notes:**
The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>AM / PM 12-hour format</td>
</tr>
<tr>
<td>1</td>
<td>24-hour format</td>
</tr>
</tbody>
</table>

e.g. on a German Windows XP system: "1"  
(Read only property)

59.6.76  **TimeLeadingZeros as String**

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifier for leading zeros in time fields.  
**Notes:**  
The maximum number of characters allowed for this string is 2. The specifier can be one of the following values:

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>No leading zeros for hours</td>
</tr>
<tr>
<td>1</td>
<td>Leading zeros for hours</td>
</tr>
</tbody>
</table>

e.g. on a German Windows XP system: "1"  
(Read only property)

59.6.77  **TimeMarkerPosition as String**

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Unknown.  
**Notes:**  
e.g. on a German Windows XP system: "0"  
(Read only property)
59.6. CLASS WINLOCALIZATIONMBS

59.6.78 TimePM as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** String for the PM designator.  
**Notes:**  
e.g. on a German Windows XP system: 
(Read only property)

59.6.79 TimeSeparator as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Character(s) for the time separator.  
**Notes:**  
e.g. on a German Windows XP system:  
(Read only property)

59.6.80 TimeShortFormatString as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Time formatting strings for this locale.  
**Notes:**  
The string can consist of a combination of the hour, minute, and second format pictures defined in the Hour, Minute, and Second Format Pictures table in National Language Support Constants.  
e.g. on a German Windows XP system: "HH:mm:ss"  
(Read only property)

59.6.81 Constants

59.6.82 LANG_AFRIKAANS = & h36

MBS Win Plugin, Plugin Version: 9.1. **Function:** One of the constants for the LanguageID.

59.6.83 LANG_ALBANIAN = & h1c

MBS Win Plugin, Plugin Version: 9.1. **Function:** One of the constants for the LanguageID.
59.6.84  LANG_ARABIC = 1
MBS Win Plugin, Plugin Version: 9.1. **Function:** One of the constants for the LanguageID.

59.6.85  LANG_ARMENIAN = & h2b
MBS Win Plugin, Plugin Version: 9.1. **Function:** One of the constants for the LanguageID.

59.6.86  LANG_ASSAMESE = & h4d
MBS Win Plugin, Plugin Version: 9.1. **Function:** One of the constants for the LanguageID.

59.6.87  LANG_AZERI = & h2c
MBS Win Plugin, Plugin Version: 9.1. **Function:** One of the constants for the LanguageID.

59.6.88  LANG_BASQUE = & h2d
MBS Win Plugin, Plugin Version: 9.1. **Function:** One of the constants for the LanguageID.

59.6.89  LANG_BELARUSIAN = & h23
MBS Win Plugin, Plugin Version: 9.1. **Function:** One of the constants for the LanguageID.

59.6.90  LANG_BENGALI = & h45
MBS Win Plugin, Plugin Version: 9.1. **Function:** One of the constants for the LanguageID.

Chapter 60

Data Types

60.1 class ComplexDoubleMBS

60.1.1 class ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for complex numbers.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(4,7)
dim sum as ComplexDoubleMBS = c+d
```

MsgBox sum.str

60.1.2 Methods

60.1.3 abs as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The absolute value of the complex number.
Example:

```
dim c as new ComplexDoubleMBS(1,2)
MsgBox str(c.abs)
```
60.1.4  Add(c as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Adds the given value to this complex number.  
See also:  
• 60.1.5 Add(x as Double)

60.1.5  Add(x as Double)

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Adds the given value to this complex number.  
See also:  
• 60.1.4 Add(c as ComplexDoubleMBS)

60.1.6  arg as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Return phase angle of complex.  
**Example:**  
```vbnet
dim c as new ComplexDoubleMBS(1,2)  
MsgBox str(c.arg)
```

60.1.7  conj as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Returns complex conjugate.  
**Example:**  
```vbnet
dim c as new ComplexDoubleMBS(1,2)  
dim e as ComplexDoubleMBS = c.conj  
MsgBox e.str
```

60.1.8  Constructor(other as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Creates a new complex number with the values from the given one.  
**Example:**
60.1. CLASS COMPLEXDOUBLEMBS

```vba
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(c)

d.Add 1 ' modify second object
MsgBox "d: " + d.str + ", c: " + c.str
```

See also:

- 60.1.9 Constructor(x as Double = 0.0, y as Double = 0.0)

60.1.9 Constructor(x as Double = 0.0, y as Double = 0.0)

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: Creates a new complex number with the given values. **Example**:

```vba
dim c as new ComplexDoubleMBS(1,2)
MsgBox str(c.Real) + "+" + str(c.Imag)
```

See also:

- 60.1.8 Constructor(other as ComplexDoubleMBS)

60.1.10 cos as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: Return cosine of complex. **Example**:

```vba
dim c as new ComplexDoubleMBS(1,2)
MsgBox c.cos.str
```

60.1.11 cosh as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function**: Return hyperbolic cosine of complex. **Example**:

```vba
dim c as new ComplexDoubleMBS(1,2)
MsgBox c.cosh.str
```
60.1.12 Divide(c as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Divides this complex number by the given complex number.

See also:
- 60.1.13 Divide(x as Double)

60.1.13 Divide(x as Double)

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Divides this complex number by the given value.

See also:
- 60.1.12 Divide(c as ComplexDoubleMBS)

60.1.14 exp as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Return exponential of complex.

**Notes:**

dim c as new ComplexDoubleMBS(1,2)
MsgBox c.exp.str

60.1.15 log as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Return natural logarithm of complex.

**Example:**

dim c as new ComplexDoubleMBS(10,10)
MsgBox c.log.str

60.1.16 log10 as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Return common logarithm of complex.
Example:

```vbs```
dim c as new ComplexDoubleMBS(10,0)
MsgBox c.log10.str
```

60.1.17 Multiply(c as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Multiplies this complex number with the given value.
See also:

- 60.1.18 Multiply(x as Double)

60.1.18 Multiply(x as Double)

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Multiplies this complex number with the given value.
See also:

- 60.1.17 Multiply(c as ComplexDoubleMBS)

60.1.19 norm as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Return norm of complex number.
Example:

```vbs```
dim c as new ComplexDoubleMBS(1,2)
MsgBox str(c.norm)
```

60.1.20 Operator_Add(c as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** This method is called by Real Studio in order to add two complex numbers.
Example:

```vbs```
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c+d
MsgBox e.str
```
60.1.21  Operator_Add(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: This method is called by Real Studio in order to add a value to this complex number.
Example:

dim c as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c+2
MsgBox e.str

See also:

• 60.1.20 Operator_Add(c as ComplexDoubleMBS) as ComplexDoubleMBS

60.1.22  Operator_Compare(c as ComplexDoubleMBS) as Integer

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Compares two complex numbers.
Example:

dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(1,2)
if c = d then
    MsgBox "equal"
else
    MsgBox "not equal"
end if

60.1.23  Operator_Divide(c as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: This method is called by Real Studio in order to divide one complex number by another.
Example:
60.1. CLASS COMPLEXDOUBLEMBS

```vbnet
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c/d
MsgBox e.str
```

See also:

- 60.1.24 Operator_Divide(x as Double) as ComplexDoubleMBS

60.1.24 Operator_Divide(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** This method is called by Real Studio in order to divide a complex number by the given value.
**Example:**

```vbnet
dim c as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c/2
MsgBox e.str
```

See also:

- 60.1.23 Operator_Divide(c as ComplexDoubleMBS) as ComplexDoubleMBS

60.1.25 Operator_Multiply(c as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** This method is called by Real Studio in order to multiply two complex numbers.
**Example:**

```vbnet
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c*d
MsgBox e.str
```

See also:

- 60.1.26 Operator_Multiply(x as Double) as ComplexDoubleMBS
60.1.26 Operator_Multiply(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: This method is called by Real Studio in order to multiply a double to a complex number.
Example:

```vbscript
dim c as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c*2
MsgBox e.str
```

See also:

- 60.1.25 Operator_Multiply(c as ComplexDoubleMBS) as ComplexDoubleMBS

60.1.27 Operator_Power(x as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: This method is called by Real Studio in order to calculate the power of two complex numbers.
Example:

```vbscript
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c^d
MsgBox e.str
```

60.1.28 Operator_Subtract(c as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: This method is called by Real Studio in order to subtract one complex number from another.
Example:

```vbscript
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c-d
MsgBox e.str
```

See also:

- 60.1.29 Operator_Subtract(x as Double) as ComplexDoubleMBS
60.1. CLASS COMPLEXDOUBLEMBS

60.1.29 Operator_Subtract(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: This method is called by Real Studio in order to subtract the given value from this complex number.
Example:

```vbnet
dim c as new ComplexDoubleMBS(3,4)
dim e as ComplexDoubleMBS = c - 2
MsgBox e.str
```

See also:

- 60.1.28 Operator_Subtract(c as ComplexDoubleMBS) as ComplexDoubleMBS

60.1.30 PI as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The PI constant.
Example:

```vbnet
MsgBox str(ComplexDoubleMBS.PI)
```

60.1.31 polar(rho as Double, theta as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new complex number with the given polar coordinate.
Example:

```vbnet
MsgBox ComplexDoubleMBS.polar(10, 0.5).str
```

60.1.32 pow(x as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Return complex power.
Example:

```vbnet
dim c as new ComplexDoubleMBS(1,2)
dim d as new ComplexDoubleMBS(2,0)
dim m as ComplexDoubleMBS = c.pow(d)
```
MsgBox "c: " + c.str + EndOfLine + "d: " + d.str + EndOfLine + "c^d: " + m.str

See also:

- 60.1.33 pow(x as Double) as ComplexDoubleMBS
- 60.1.34 pow(x as Double, y as ComplexDoubleMBS) as ComplexDoubleMBS

60.1.33 pow(x as Double) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Return complex power.
Example:

dim c as new ComplexDoubleMBS(1,2)
dim m as ComplexDoubleMBS = c.pow(2)

MsgBox "c: " + c.str + EndOfLine + "c^2: " + m.str

See also:

- 60.1.32 pow(x as ComplexDoubleMBS) as ComplexDoubleMBS
- 60.1.34 pow(x as Double, y as ComplexDoubleMBS) as ComplexDoubleMBS

60.1.34 pow(x as Double, y as ComplexDoubleMBS) as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Calculates the power of the given values.
Example:

dim x as new ComplexDoubleMBS(2,3)
dim c as ComplexDoubleMBS = ComplexDoubleMBS.pow(2, x)

MsgBox c.str

See also:

- 60.1.32 pow(x as ComplexDoubleMBS) as ComplexDoubleMBS
- 60.1.33 pow(x as Double) as ComplexDoubleMBS
60.1.35  **sin as ComplexDoubleMBS**

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Return sine of complex.  
**Example:**
```vbnet
dim c as new ComplexDoubleMBS(1,2)  
MsgBox c.sin.str  
```

60.1.36  **sinh as ComplexDoubleMBS**

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Return hyperbolic sine of complex.  
**Example:**
```vbnet
dim c as new ComplexDoubleMBS(1,2)  
MsgBox c.sinh.str  
```

60.1.37  **sqrt as ComplexDoubleMBS**

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Return square root of complex.  
**Example:**
```vbnet
dim c as new ComplexDoubleMBS(1,2)  
dim r as ComplexDoubleMBS = c.sqrt  
dim m as ComplexDoubleMBS = r*r  
MsgBox "number: "+c.str+"root: "+r.str+"back: "+m.str  
```

60.1.38  **str as string**

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Shows the number in an human readable format.  
**Example:**
```vbnet
dim c as new ComplexDoubleMBS(1,2)  
MsgBox c.str  
```
CHAPTER 60. DATA TYPES

Notes: The actual format can change.

60.1.39 Subtract(c as ComplexDoubleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Subtracts the given complex number from this complex number.
See also:

- 60.1.40 Subtract(x as Double)

60.1.40 Subtract(x as Double)

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Subtracts the given value from this complex number.
See also:

- 60.1.39 Subtract(c as ComplexDoubleMBS)

60.1.41 tan as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Return tangent of complex.
Example:

dim c as new ComplexDoubleMBS(1,2)
MsgBox c.tan.str

60.1.42 tanh as ComplexDoubleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Return hyperbolic tangent of complex.
Example:

dim c as new ComplexDoubleMBS(1,2)
MsgBox c.tanh.str
60.1.43 Properties

60.1.44 Imag as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: Get or set the imaginary part of the complex number.

Example:

```vba
dim c as new ComplexDoubleMBS(1,2)
MsgBox str(c.Imag)
```

Notes: (Read and Write property)

60.1.45 Real as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: Get or set the real part of the complex number.

Example:

```vba
dim c as new ComplexDoubleMBS(1,2)
MsgBox str(c.Real)
```

Notes: (Read and Write property)
60.2 class ComplexSingleMBS

60.2.1 class ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: A class for complex numbers.

Example:

dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(4,7)

dim sum as ComplexSingleMBS = c+d

MsgBox sum.str

60.2.2 Methods

60.2.3 abs as single

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: The absolute value of the complex number.

Example:

dim c as new ComplexSingleMBS(1,2)
MsgBox str(c.abs)

60.2.4 Add(c as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: Adds the given value to this complex number.

See also:

- 60.2.5 Add(x as single)

60.2.5 Add(x as single)

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: Adds the given value to this complex number.

See also:

- 60.2.4 Add(c as ComplexSingleMBS)
60.2. CLASS COMPLEXSINGLEMBS

60.2.6 arg as single

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Return phase angle of complex.
**Example:**
```vba
dim c as new ComplexSingleMBS(1,2)
MsgBox str(c.arg)
```

60.2.7 conj as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns complex conjugate.
**Example:**
```vba
dim c as new ComplexSingleMBS(1,2)
dim e as ComplexSingleMBS = c.conj
MsgBox e.str
```

60.2.8 Constructor(other as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Creates a new complex number with the values from the given one.
**Example:**
```vba
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(c)
d.Add 1 // modify second object
MsgBox "d: "+d.str+", c: "+c.str
```

See also:

- 60.2.9 Constructor(x as single = 0.0, y as single = 0.0)

60.2.9 Constructor(x as single = 0.0, y as single = 0.0)

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Creates a new complex number with the given values.
**Example:**
dim c as new ComplexSingleMBS(1,2)
MsgBox str(c.Real) + " " + str(c.Imag)

See also:

- 60.2.8 Constructor(other as ComplexSingleMBS)

60.2.10 cos as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Return cosine of complex.  
**Example:**

dim c as new ComplexSingleMBS(1,2)
MsgBox c.cos.str

60.2.11 cosh as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Return hyperbolic cosine of complex.  
**Example:**

dim c as new ComplexSingleMBS(1,2)
MsgBox c.cosh.str

60.2.12 Divide(c as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Divides this complex number by the given complex number.  
See also:

- 60.2.13 Divide(x as single)

60.2.13 Divide(x as single)

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Divides this complex number by the given value.  
See also:
60.2.14  exp as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Return exponential of complex.
Notes:
dim c as new ComplexSingleMBS(1,2)
MsgBox c.exp.str

60.2.15  log as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Return natural logarithm of complex.
Example:
dim c as new ComplexSingleMBS(10,10)
MsgBox c.log.str

60.2.16  log10 as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Return common logarithm of complex.
Example:
dim c as new ComplexSingleMBS(10,0)
MsgBox c.log10.str

60.2.17  Multiply(c as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Multiplies this complex number with the given value.
See also:
• 60.2.18 Multiply(x as single)
**60.2.18 Multiply(x as single)**

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Multiplies this complex number with the given value.
See also:

- 60.2.17 Multiply(c as ComplexSingleMBS)

**60.2.19 norm as single**

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Return norm of complex number.
**Example:**
```vbscript
dim c as new ComplexSingleMBS(1,2)
MsgBox str(c.norm)
```

**60.2.20 Operator_Add(c as ComplexSingleMBS) as ComplexSingleMBS**

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** This method is called by Real Studio in order to add two complex numbers.
**Example:**
```vbscript
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c+d
MsgBox e.str
```

See also:

- 60.2.21 Operator_Add(x as single) as ComplexSingleMBS

**60.2.21 Operator_Add(x as single) as ComplexSingleMBS**

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** This method is called by Real Studio in order to add a value to this complex number.
**Example:**
```vbscript
dim c as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c+2
MsgBox e.str
```
60.2. CLASS COMPLEXSINGLEMBS

See also:

- 60.2.20 Operator_Add(c as ComplexSingleMBS) as ComplexSingleMBS

60.2.22 Operator_Compare(c as ComplexSingleMBS) as Integer

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: Compares two complex numbers.

Example:

```vbnet
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(1,2)
if c = d then
    MsgBox "equal"
else
    MsgBox "not equal"
eend if
```

60.2.23 Operator_Divide(c as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: This method is called by Real Studio in order to divide one complex number by another.

Example:

```vbnet
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c/d
MsgBox e.str
```

See also:

- 60.2.24 Operator_Divide(x as single) as ComplexSingleMBS

60.2.24 Operator_Divide(x as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: This method is called by Real Studio in order to divide a complex number by the given value.

Example:
\begin{verbatim}
dim c as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c/2
MsgBox e.str
\end{verbatim}

See also:

- 60.2.23 Operator\_Divide(c as ComplexSingleMBS) as ComplexSingleMBS

\textbf{60.2.25 Operator\_Multiply(c as ComplexSingleMBS) as ComplexSingleMBS}

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

\textbf{Function:} This method is called by Real Studio in order to multiply two complex numbers.

\textbf{Example:}
\begin{verbatim}
dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c*d
MsgBox e.str
\end{verbatim}

See also:

- 60.2.26 Operator\_Multiply(x as single) as ComplexSingleMBS

\textbf{60.2.26 Operator\_Multiply(x as single) as ComplexSingleMBS}

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

\textbf{Function:} This method is called by Real Studio in order to multiply a single to a complex number.

\textbf{Example:}
\begin{verbatim}
dim c as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c*2
MsgBox e.str
\end{verbatim}

See also:

- 60.2.25 Operator\_Multiply(c as ComplexSingleMBS) as ComplexSingleMBS

\textbf{60.2.27 Operator\_Power(x as ComplexSingleMBS) as ComplexSingleMBS}

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

\textbf{Function:} This method is called by Real Studio in order to calculate the power of two complex numbers.
Example:

dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = cˆd
MsgBox e.str

60.2.28 Operator_Subtract(c as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: This method is called by Real Studio in order to subtract one complex number from another.
Example:

dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c-d
MsgBox e.str

See also:

- 60.2.29 Operator_Subtract(x as single) as ComplexSingleMBS

60.2.29 Operator_Subtract(x as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: This method is called by Real Studio in order to subtract the given value from this complex number.
Example:

dim c as new ComplexSingleMBS(3,4)
dim e as ComplexSingleMBS = c-2
MsgBox e.str

See also:

- 60.2.28 Operator_Subtract(c as ComplexSingleMBS) as ComplexSingleMBS

60.2.30 PI as Double

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The PI constant.
CHAPTER 60. DATA TYPES

Example:
MsgBox str(ComplexSingleMBS.PI)

60.2.31 polar(rho as single, theta as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new complex number with the given polar coordinate.
Example:
MsgBox ComplexSingleMBS.polar(10, 0.5).str

60.2.32 pow(x as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Return complex power.
Example:

dim c as new ComplexSingleMBS(1,2)
dim d as new ComplexSingleMBS(2,0)
dim m as ComplexSingleMBS = c.pow(d)

MsgBox "c: " +c.str+EndOfLine+"d: " +d.str+EndOfLine+"c^d: " +m.str

See also:

- 60.2.33 pow(x as single) as ComplexSingleMBS
- 60.2.34 pow(x as single, y as ComplexSingleMBS) as ComplexSingleMBS

60.2.33 pow(x as single) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Return complex power.
Example:

dim c as new ComplexSingleMBS(1,2)
dim m as ComplexSingleMBS = c.pow(2)

MsgBox "c: " +c.str+EndOfLine+"c^2: " +m.str
60.2. CLASS COMPLEXSINGLEMBS

See also:

- 60.2.32 pow(x as ComplexSingleMBS) as ComplexSingleMBS  
- 60.2.34 pow(x as single, y as ComplexSingleMBS) as ComplexSingleMBS

60.2.34 pow(x as single, y as ComplexSingleMBS) as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Calculates the power of the given values.
Example:

```
dim x as new ComplexSingleMBS(2,3)
dim c as ComplexSingleMBS = ComplexSingleMBS.pow(2, x)
```

MsgBox c.str

See also:

- 60.2.32 pow(x as ComplexSingleMBS) as ComplexSingleMBS  
- 60.2.33 pow(x as single) as ComplexSingleMBS

60.2.35 sin as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Return sine of complex.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox c.sin.str
```

60.2.36 sinh as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Return hyperbolic sine of complex.
Example:

```
dim c as new ComplexSingleMBS(1,2)
MsgBox c.sinh.str
```
60.2.37 sqrt as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Return square root of complex.
Example:

dim c as new ComplexSingleMBS(1,2)
dim r as ComplexSingleMBS = c.sqrt
dim m as ComplexSingleMBS = r*r

MsgBox "number: "+c.str+EndOfLine+"root: "+r.str+EndOfLine+"back: "+m.str

60.2.38 str as string

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Shows the number in an human readable format.
Example:

dim c as new ComplexSingleMBS(1,2)
MsgBox c.str

Notes: The actual format can change.

60.2.39 Subtract(c as ComplexSingleMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Subtracts the given complex number from this complex number.
See also:

• 60.2.40 Subtract(x as single)

60.2.40 Subtract(x as single)

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Subtracts the given value from this complex number.
See also:
60.2. CLASS COMPLEXSINGLEMBS

- 60.2.39 Subtract(c as ComplexSingleMBS)

60.2.41 tan as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Return tangent of complex.
**Example:**
```vbnet
dim c as new ComplexSingleMBS(1,2)
MsgBox c.tan.str
```

60.2.42 tanh as ComplexSingleMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Return hyperbolic tangent of complex.
**Example:**
```vbnet
dim c as new ComplexSingleMBS(1,2)
MsgBox c.tanh.str
```

60.2.43 Properties

60.2.44 Imag as single

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Get or set the imaginary part of the complex number.
**Example:**
```vbnet
dim c as new ComplexSingleMBS(1,2)
MsgBox str(c.Imag)
```

**Notes:** (Read and Write property)

60.2.45 Real as single

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Get or set the real part of the complex number.
**Example:**
\textbf{Notes:} (Read and Write property)
60.3. GLOBALS

60.3  Globals

60.3.1  FFTDoubleAbsMBS(x as MemoryBlock, N as Integer = -1) as Double()

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Performs a Fast Fourier Transformation and applies abs operation on result.
Notes:
Memoryblock contains DoubleValue values (8 byte each).
If N is not provided, the plugin chooses a value.
See also:
• 60.3.2 FFTDoubleAbsMBS(x() as ComplexDoubleMBS, N as Integer = -1) as Double() 10641
• 60.3.3 FFTDoubleAbsMBS(x() as Double, N as Integer = -1) as Double() 10641

60.3.2  FFTDoubleAbsMBS(x() as ComplexDoubleMBS, N as Integer = -1) as Double()

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Performs a Fast Fourier Transformation and applies abs operation on result.
Notes: If N is not provided, the plugin chooses a value.
See also:
• 60.3.1 FFTDoubleAbsMBS(x as MemoryBlock, N as Integer = -1) as Double() 10641
• 60.3.3 FFTDoubleAbsMBS(x() as Double, N as Integer = -1) as Double() 10641

60.3.3  FFTDoubleAbsMBS(x() as Double, N as Integer = -1) as Double()

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Performs a Fast Fourier Transformation and applies abs operation on result.
Notes: If N is not provided, the plugin chooses a value.
See also:
• 60.3.1 FFTDoubleAbsMBS(x as MemoryBlock, N as Integer = -1) as Double() 10641
• 60.3.2 FFTDoubleAbsMBS(x() as ComplexDoubleMBS, N as Integer = -1) as Double() 10641

60.3.4  FFTDoubleMBS(x() as ComplexDoubleMBS, N as Integer = -1) as ComplexDoubleMBS()

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Performs a Fast Fourier Transformation.
Notes: If N is not provided, the plugin chooses a value.
See also:
60.3.5 FFTDoubleMBS(x() as Double, N as Integer = -1) as ComplexDoubleMBS()

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Performs a Fast Fourier Transformation.
Notes: If N is not provided, the plugin chooses a value.
See also:
• 60.3.4 FFTDoubleMBS(x() as ComplexDoubleMBS, N as Integer = -1) as ComplexDoubleMBS() 10641

60.3.6 FFTSingleAbsMBS(x as MemoryBlock, N as Integer = -1) as single()

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Performs a Fast Fourier Transformation and applies abs operation on result.
Notes: Memoryblock contains SingleValue values (4 byte each).
If N is not provided, the plugin chooses a value.
See also:
• 60.3.7 FFTSingleAbsMBS(x() as ComplexSingleMBS, N as Integer = -1) as single() 10642
• 60.3.8 FFTSingleAbsMBS(x() as single, N as Integer = -1) as single() 10642

60.3.7 FFTSingleAbsMBS(x() as ComplexSingleMBS, N as Integer = -1) as single()

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Performs a Fast Fourier Transformation and applies abs operation on result.
Notes: If N is not provided, the plugin chooses a value.
See also:
• 60.3.6 FFTSingleAbsMBS(x as MemoryBlock, N as Integer = -1) as single() 10642
• 60.3.8 FFTSingleAbsMBS(x() as single, N as Integer = -1) as single() 10642

60.3.8 FFTSingleAbsMBS(x() as single, N as Integer = -1) as single()

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Performs a Fast Fourier Transformation and applies abs operation on result.
Notes: If N is not provided, the plugin chooses a value.
See also:
60.4. CLASS INTEGERHASHSETITERATORMBS

- 60.3.6 FFTSingleAbsMBS(x as MemoryBlock, N as Integer = -1) as single()
- 60.3.7 FFTSingleAbsMBS(x() as ComplexSingleMBS, N as Integer = -1) as single()

60.3.9 FFTSingleMBS(x() as ComplexSingleMBS, N as Integer = -1) as ComplexSingleMBS()

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Performs a Fast Fourier Transformation.

See also:

- 60.3.10 FFTSingleMBS(x() as single, N as Integer = -1) as ComplexSingleMBS()

60.3.10 FFTSingleMBS(x() as single, N as Integer = -1) as ComplexSingleMBS()

MBS DataTypes Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Performs a Fast Fourier Transformation.

**Notes:** If N is not provided, the plugin chooses a value.

See also:

- 60.3.9 FFTSingleMBS(x() as ComplexSingleMBS, N as Integer = -1) as ComplexSingleMBS()

60.4 class IntegerHashSetIteratorMBS

60.4.1 class IntegerHashSetIteratorMBS

**Function:** The iterator for the IntegerHashSet class.

**Example:**

```vbnet
// Create a map
dim m as new IntegerHashSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerHashSetIteratorMBS = m.first
dim e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)
```

60.4.2 Methods

60.4.3 isEqual(other as IntegerHashSetIteratorMBS) as boolean

Function: Returns true if both iterators are equal.
Example:

// Create a map
dim m as new IntegerHashSetMBS
m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerHashSetIteratorMBS = m.first
dim e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)
i.MoveNext
wend

60.4.4 isNotEqual(other as IntegerHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if both iterators are not equal.
Example:

// Create a map
dim m as new IntegerHashSetMBS
m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
60.4. CLASS INTEGERHASHSETITERATORMBS

dim i as IntegerHashSetIteratorMBS = m.first
dim e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)
i.MoveNext
wend

60.4.5 Key as Integer

60.4.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Moves the iterator to the next item.

Example:

// Create a map
dim m as new IntegerHashSetMBS
m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerHashSetIteratorMBS = m.first
dim e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)
i.MoveNext
wend
60.5  class IntegerHashSetMBS

60.5.1  class IntegerHashSetMBS

**Function:** An alternative dictionary class for a hash set with integers.

**Example:**

dim s as new IntegerHashSetMBS

s.insert 1
s.insert 2

MsgBox str(s.Count) // shows 2

**Notes:** You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

60.5.2  Methods

60.5.3  Clear

**Function:** Erases all of the elements.

60.5.4  Constructor

**Function:** The default constructor.

See also:

- 60.5.5 Constructor(Keys() as Integer)

60.5.5  Constructor(Keys() as Integer)

**Function:** Creates a new set from the values in the array.

**Notes:** If the array has duplicates, the later elements overwrite the earlier keys.

See also:

- 60.5.4 Constructor
60.5.6 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts how often a key is used in this set.

60.5.7 find(key as Integer) as IntegerHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds the key and returns an iterator. **Notes:** Returns the same value as the last method if the item was not found.

60.5.8 first as IntegerHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the beginning of the set. **Example:**

```vbnet
// Create a map
dim m as new IntegerHashSetMBS
m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerHashSetIteratorMBS = m.first
dim e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)
i.MoveNext
wend
```

60.5.9 insert(key as Integer)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a value to the set.
60.5.10 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns the value of key for the Indexth sequential item. Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.5.11 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns all the keys as an array. Example:

```vbnet
dim m as new IntegerHashSetMBS
m.insert(1)
m.insert(2)
for each v as Integer in m.Keys
    MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

60.5.12 last as IntegerHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns an iterator pointing to the end of the set. Example:

```vbnet
// Create a map
dim m as new IntegerHashSetMBS
m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerHashSetIteratorMBS = m.first
dim e as IntegerHashSetIteratorMBS = m.last

// Show all keys and values
```
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend

60.5.13 lookup(key as Integer) as boolean

Function: Checks whether an element with the given key exists in this set.
Example:

dim set as new IntegerHashSetMBS

set.insert 1
set.insert 2

MsgBox str(set.lookup(3)) // shows false as value is missing
MsgBox str(set.lookup(1)) // shows true as value is found

Notes: Returns true if yes and false if no.

60.5.14 Remove(first as IntegerHashSetIteratorMBS, last as IntegerHashSetIteratorMBS)

Function: Erases all elements in a range.
See also:

- 60.5.15 Remove(key as Integer) as Integer
- 60.5.16 Remove(pos as IntegerHashSetIteratorMBS)

60.5.15 Remove(key as Integer) as Integer

Function: Erases the element with the given key.
See also:

- 60.5.14 Remove(first as IntegerHashSetIteratorMBS, last as IntegerHashSetIteratorMBS)
- 60.5.16 Remove(pos as IntegerHashSetIteratorMBS)
60.5.16 Remove(pos as IntegerHashSetIteratorMBS)

Function: Erases the element pointed to by the pos iterator.

See also:
- 60.5.14 Remove(first as IntegerHashSetIteratorMBS, last as IntegerHashSetIteratorMBS)
- 60.5.15 Remove(key as Integer) as Integer

60.5.17 Properties

60.5.18 BinCount as Integer

Function: The number of bins the hash table uses.

Example:

```vba
dim v as new IntegerHashSetMBS
v.insert 1
v.insert 5
MsgBox str(v.BinCount)
```

Notes:
This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

60.5.19 Count as Integer

Function: The number of items in this set.

Example:

```vba
dim set as new IntegerHashSetMBS
set.insert 1
set.insert 2
MsgBox str(set.Count)
```
60.5. CLASS INTEGERHASHSETMBS

Notes: (Read only property)

60.5.20 Empty as Boolean

Function: True if the size is zero. 
Notes: (Read only property)

60.5.21 MaxSize as Integer

Function: Returns the largest possible size for this set. 
Notes:
Value is -1 if no limit is defined. 
(Read only property)
60.6 class IntegerOrderedSetIteratorMBS

60.6.1 class IntegerOrderedSetIteratorMBS

Function: The iterator for the IntegerOrderedSet class.

Example:

// Create a map
dim m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerOrderedSetIteratorMBS = m.first
dim e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)
i.MoveNext
wend

60.6.2 Methods

60.6.3 isEqual(other as IntegerOrderedSetIteratorMBS) as boolean

Function: Returns true if both iterators are equal.

Example:

// Create a map
dim m as new IntegerOrderedSetMBS

m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerOrderedSetIteratorMBS = m.first
dim e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)
i.MoveNext
wend

60.6.4 isNotEqual(other as IntegerOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns true if both iterators are not equal.
**Example:**

```plaintext
// Create a map
dim m as new IntegerOrderedSetMBS
m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerOrderedSetIteratorMBS = m.first
dim e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend
```

60.6.5 Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the current key.

60.6.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the iterator to the next item.
**Example:**

```
// Create a map
dim m as new IntegerOrderedSetMBS
```
m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerOrderedSetIteratorMBS = m.first
dim e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)
i.MoveNext
wend

60.6.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the iterator to the previous item.
60.7. **CLASS INTEGERORDEREDSETMBS**

60.7  **class IntegerOrderedSetMBS**

60.7.1  **class IntegerOrderedSetMBS**

**Function:** An alternative dictionary class for an ordered set with integers.  
**Example:**

```plaintext
dim s as new IntegerOrderedSetMBS  
s.insert 1  
s.insert 2  
MsgBox str(s.Count) // shows 2
```

**Notes:** You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

60.7.2  **Methods**

60.7.3  **Clear**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases all of the elements.

60.7.4  **Constructor**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The default constructor.  
See also:

- 60.7.5 Constructor(Keys() as Integer)

60.7.5  **Constructor(Keys() as Integer)**

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new set from the values in the array.  
**Notes:** If the array has duplicates, the later elements overwrite the earlier keys.  
See also:

- 60.7.4 Constructor
60.7.6 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts how often a key is used in this set.

60.7.7 find(key as Integer) as IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds the key and returns an iterator. **Notes:** Returns the same value as the last method if the item was not found.

60.7.8 first as IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the beginning of the set. **Example:**

```vba
// Create a map
dim m as new IntegerOrderedSetMBS
m.insert(1)
m.insert(2)
m.insert(3)

// get iterators pointing to first and after last element
dim i as IntegerOrderedSetIteratorMBS = m.first
dim e as IntegerOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)
i.MoveNext
wend
```

60.7.9 insert(key as Integer)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a value to the set.
60.7. **CLASS INTEGERORDEREDSETMBS**

### 60.7.10 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value of key for the Indexth sequential item. **Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

### 60.7.11 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns all the keys as an array. **Example:**

```vbp
' Create a map
Dim m As New IntegerOrderedSetMBS
m.insert(1)
m.insert(2)

For Each v As Integer In m.Keys
    MsgBox Str(v)
Next
```

**Notes:** The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

### 60.7.12 last as IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the end of the set. **Example:**

```vbp
' Create a map
Dim m As New IntegerOrderedSetMBS
m.insert(1)
m.insert(2)
m.insert(3)

' get iterators pointing to first and after last element
Dim i As IntegerOrderedSetIteratorMBS = m.first
Dim e As IntegerOrderedSetIteratorMBS = m.last

' Show all keys and values
```
while i.isNotEqual(e)
MsgBox str(i.Key)
i.MoveNext
wend

60.7.13 lookup(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks whether an element with the given key exists in this set. **Example:**

dim set as new IntegerOrderedSetMBS

set.insert 1
set.insert 2

MsgBox str(set.lookup(3)) // shows false as value is missing
MsgBox str(set.lookup(1)) // shows true as value is found

**Notes:** Returns true if yes and false if no.

60.7.14 LowerBound(key as Integer) as IntegerOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator for the first element whose key is not less than k.

60.7.15 Remove(first as IntegerOrderedSetIteratorMBS, last as IntegerOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases all elements in a range. **See also:**

- 60.7.16 Remove(key as Integer) as Integer
- 60.7.17 Remove(pos as IntegerOrderedSetIteratorMBS)
60.7. **CLASS INTEGERORDEREDSETMBS**

60.7.16 **Remove(key as Integer) as Integer**

**Function:** Erases the element with the given key.  
See also:

- 60.7.15 Remove(first as IntegerOrderedSetIteratorMBS, last as IntegerOrderedSetIteratorMBS)  
- 60.7.17 Remove(pos as IntegerOrderedSetIteratorMBS)

60.7.17 **Remove(pos as IntegerOrderedSetIteratorMBS)**

**Function:** Erases the element pointed to by the pos iterator.  
See also:

- 60.7.15 Remove(first as IntegerOrderedSetIteratorMBS, last as IntegerOrderedSetIteratorMBS)  
- 60.7.16 Remove(key as Integer) as Integer

60.7.18 **UpperBound(key as Integer) as IntegerOrderedSetIteratorMBS**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator for the first element whose key is greater than k.

60.7.19 **Properties**

60.7.20 **Count as Integer**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of items in this set.  
**Example:**

```basic
    dim set as new IntegerOrderedSetMBS

    set.insert 1
    set.insert 2

    MsgBox str(set.Count)
```

**Notes:** (Read only property)
60.7.21 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if the size is zero.  
**Notes:** (Read only property)

60.7.22 MaxSize as Integer

**Function:** Returns the largest possible size for this set.  
**Notes:**  
Value is -1 if no limit is defined.  
(Read only property)
60.8. class IntegerToIntegerHashMapIteratorMBS

60.8.1 class IntegerToIntegerHashMapIteratorMBS

Function: The iterator for the IntegerToIntegerHashMap class.

Example:

```vba
// Create a map
dim m as new IntegerToIntegerHashMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerHashMapIteratorMBS = m.first
dim e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" -"+str(i.Value)
i.MoveNext
wend
```

60.8.2 Methods

60.8.3 isEqual(other as IntegerToIntegerHashMapIteratorMBS) as boolean

Function: Returns true if both iterators are equal.

Example:

```vba
// Create a map
dim m as new IntegerToIntegerHashMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerHashMapIteratorMBS = m.first
dim e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
```
while i.isEqual(e) = false
MsgBox str(i.Key) + " - > " + str(i.Value)
i.MoveNext
wend

60.8.4 `isNotEqual(other as IntegerToIntegerHashMapIteratorMBS)` as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if both iterators are not equal. **Example:**

```vbnet
// Create a map
dim m as new IntegerToIntegerHashMapMBS
m.value(1) = 2
m.value(2) = 4
m.value(3) = 8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerHashMapIteratorMBS = m.first
dim e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key) + " - > " + str(i.Value)
i.MoveNext
wend
```

60.8.5 `Key as Integer`

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the current key.

60.8.6 `MoveNext`

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the iterator to the next item. **Example:**

```vbnet
// Create a map
dim m as new IntegerToIntegerHashMapMBS
```
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerHashMapIteratorMBS = m.first
dim e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key) + “ -> ” + str(i.Value)
i.MoveNext
wend

60.8.7 Properties

60.8.8 Value as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The value of the current item in the iterator. Notes: (Read and Write computed property)
60.9 class IntegerToIntegerHashMapMBS

60.9.1 class IntegerToIntegerHashMapMBS

**Function:** An alternative dictionary class for a hash map with integers as keys and values. 
**Example:**

```
Dim s As New IntegerToIntegerHashMapMBS
s.Value(1) = 3
s.Value(2) = 4

MsgBox Str(s.Count) // shows 2

MsgBox Str(s.Value(1) + s.Value(2)) // shows 7
```

**Notes:** You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

60.9.2 Methods

60.9.3 AddKeys(targetArray() As Integer)

**Function:** Similar to keys, but adds keys to the given array. 
**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.9.4 AddValues(targetArray() As Integer)

**Function:** Similar to values, but adds values to the given array. 
**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.9.5 Clear

**Function:** Erases all of the elements.
60.9.6 **Clone as IntegerToIntegerHashMapMBS**

**Function:** Creates a copy of this map.

60.9.7 **CloneDictionary as Dictionary**

**Function:** Creates a copy of this map as a dictionary.

60.9.8 **Constructor**

**Function:** The default constructor.
**See also:**
- 60.9.9 Constructor(dic as dictionary)
- 60.9.10 Constructor(other as IntegerToIntegerHashMapMBS)

60.9.9 **Constructor(dic as dictionary)**

**Function:** Creates a new map with the keys and values from the dictionary.
**See also:**
- 60.9.8 Constructor
- 60.9.10 Constructor(other as IntegerToIntegerHashMapMBS)

60.9.10 **Constructor(other as IntegerToIntegerHashMapMBS)**

**Function:** Creates a new map with the keys and values from the existing map.
**See also:**
- 60.9.8 Constructor
- 60.9.9 Constructor(dic as dictionary)
60.9.11  **CountKey(key as Integer) as Integer**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts how often a key is used in this map.

60.9.12  **find(key as Integer) as IntegerToIntegerHashMapIteratorMBS**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds the key and returns an iterator.
**Notes:** Returns the same value as the last method if the item was not found.

60.9.13  **first as IntegerToIntegerHashMapIteratorMBS**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the beginning of the map.
**Example:**

```vbnet
// Create a map
dim m as new IntegerToIntegerHashMapMBS
  m.value(1)=2
  m.value(2)=4
  m.value(3)=8

  // get iterators pointing to first and after last element
  dim i as IntegerToIntegerHashMapIteratorMBS = m.first
  dim e as IntegerToIntegerHashMapIteratorMBS = m.last

  // Show all keys and values
  while i.isNotEqual(e)
    MsgBox i.Key & ” ->” & i.Value
    i.MoveNext
  wend
```

60.9.14  **hasKey(key as Integer) as boolean**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns True if Key is in the map and False if it is not. Returns a Boolean.
60.9.15  **Key(index as Integer) as Integer**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value of key for the Indexth sequential item. **Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.9.16  **Keys as Integer()**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns all the keys as an array. **Example:**

```vba
dim m as new IntegerToIntegerHashMapMBS

m.Value(1)=5
m.Value(2)=7

for each v as Integer in m.keys
    MsgBox str(v)
next
```

**Notes:** The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

60.9.17  **last as IntegerToIntegerHashMapIteratorMBS**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the end of the map. **Example:**

```vba
// Create a map
dim m as new IntegerToIntegerHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerHashMapIteratorMBS = m.first
dim e as IntegerToIntegerHashMapIteratorMBS = m.last

// Show all keys and values
```
while i.isNotEqual(e) 
MsgBox str(i.Key)+" ->"+str(i.Value) 
i.MoveNext 
wend

60.9.18 lookup(key as Integer, defaultvalue as Integer) as Integer

Function: Looks up the passed value of Key.
Example:
dim map as new IntegerToIntegerHashMapMBS
map.value(10)=1
map.value(100)=2
map.value(1000)=3

MsgBox str(map.lookup(5,0)) // shows 0 as value is missing
MsgBox str(map.lookup(10,0)) // shows 1 as value is found

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

60.9.19 Operator_Convert as Dictionary

Function: Creates a copy of the map as dictionary.

60.9.20 Remove(first as IntegerToIntegerHashMapIteratorMBS, last as IntegerToIntegerHashMapIteratorMBS)

Function: Erases all elements in a range.
See also:

- 60.9.21 Remove(key as Integer) as Integer
- 60.9.22 Remove(pos as IntegerToIntegerHashMapIteratorMBS)
60.9. CLASS INTEGERTOINTEGERHASHMAPMBS

60.9.21 Remove(key as Integer) as Integer

Function: Erases the element with the given key.
See also:
  - 60.9.20 Remove(first as IntegerToIntegerHashMapIteratorMBS, last as IntegerToIntegerHashMapIteratorMBS)
  - 60.9.22 Remove(pos as IntegerToIntegerHashMapIteratorMBS)

60.9.22 Remove(pos as IntegerToIntegerHashMapIteratorMBS)

Function: Erases the element pointed to by the pos iterator.
See also:
  - 60.9.20 Remove(first as IntegerToIntegerHashMapIteratorMBS, last as IntegerToIntegerHashMapIteratorMBS)
  - 60.9.21 Remove(key as Integer) as Integer

60.9.23 ValueAtIndex(index as Integer) as Integer

Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.9.24 Values as Integer()

Function: Returns all the values as an array
Example:
```vba
dim m as new IntegerToIntegerHashMapMBS

m.Value(1)=5
m.Value(2)=7

for each v as Integer in m.Values
    MsgBox str(v)
next
```
Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

### 60.9.25 Properties

#### 60.9.26 BinCount as Integer

**Function:** The number of bins the hash table uses.

**Example:**

```vbnet
dim v as new IntegerToIntegerHashMapMBS

v.value(1)=10
v.value(2)=20

MsgBox str(v.BinCount)
```

**Notes:**

This is a measure of the hash table size, independent of the number of items the Dictionary contains. (Read only property)

#### 60.9.27 Count as Integer

**Function:** The number of items in this map.

**Example:**

```vbnet
dim map as new IntegerToIntegerHashMapMBS

map.Value(1)=3
map.Value(2)=4

MsgBox str(map.Count)
```

**Notes:** (Read only property)
60.9. **CLASS INTEGERTOINTEGERHASHMAPMBS**

### 60.9.28 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if the size is zero.  
**Notes:** (Read only property)

### 60.9.29 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the largest possible size for this map.  
**Notes:**  
Value is -1 if no limit is defined.  
(Read only property)

### 60.9.30 value(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value associated with the given key.  
**Notes:**  
If you query for a key which does not exist, a KeyNotFoundException is raised.  
(Read and Write computed property)
60.10  class IntegerToIntegerOrderedMapIteratorMBS

60.10.1  class IntegerToIntegerOrderedMapIteratorMBS

**Function:**  The iterator for the `IntegerToIntegerOrderedMap` class.
**Example:**

```vba
// Create a map
dim m as new IntegerToIntegerOrderedMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerOrderedMapIteratorMBS = m.first
dim e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" -"+str(i.Value)
i.MoveNext
wend
```

60.10.2  Methods

60.10.3  isEqual(other as IntegerToIntegerOrderedMapIteratorMBS) as boolean

**Function:**  Returns true if both iterators are equal.
**Example:**

```vba
// Create a map
dim m as new IntegerToIntegerOrderedMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerOrderedMapIteratorMBS = m.first
dim e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
```
60.10.4  isNotEqual(other as IntegerToIntegerOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Returns true if both iterators are not equal.

**Example:**

```vbscript
// Create a map
dim m as new IntegerToIntegerOrderedMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerOrderedMapIteratorMBS = m.first
dim e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+” -”+str(i.Value)
i.MoveNext
wend
```

60.10.5  Key as Integer

**Function:** Returns the current key.

60.10.6  MoveNext

**Function:** Moves the iterator to the next item.

**Example:**

```vbscript
// Create a map
dim m as new IntegerToIntegerOrderedMapMBS
```
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerOrderedMapIteratorMBS = m.first
dim e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
  MsgBox str(i.Key) + " -> " + str(i.Value)
i.MoveNext
wend

60.10.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the iterator to the previous item.

60.10.8 Properties

60.10.9 Value as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value of the current item in the iterator.

**Notes:** (Read and Write computed property)
60.11.  CLASS INTEGERTOINTEGERORDEREDMAPMBS

60.11  class IntegerToIntegerOrderedMapMBS

60.11.1  class IntegerToIntegerOrderedMapMBS

Function: An alternative dictionary class for an ordered map for integers for keys and values.
Example:

dim s as new IntegerToIntegerHashMapMBS
s.Value(1)=3
s.Value(2)=4

MsgBox str(s.Count) // shows 2

MsgBox str(s.Value(1)+s.Value(2)) // shows 7

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether
you prefer a higher speed with the HashMap class.

60.11.2  Methods

60.11.3  AddKeys(targetArray() as Integer)

Function: Similar to keys, but adds keys to the given array.
Notes: For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys
function returns always nil.

60.11.4  AddValues(targetArray() as Integer)

Function: Similar to values, but adds values to the given array.
Notes: For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys
function returns always nil.

60.11.5  Clear

Function: Erases all of the elements.
60.11.6 Clone as IntegerToIntegerOrderedMapMBS

Function: Creates a copy of this map.

60.11.7 CloneDictionary as Dictionary

Function: Creates a copy of this map as a dictionary.

60.11.8 Constructor

Function: The default constructor.
See also:
- 60.11.9 Constructor(dic as dictionary)
- 60.11.10 Constructor(other as IntegerToIntegerOrderedMapMBS)

60.11.9 Constructor(dic as dictionary)

Function: Creates a new map with the keys and values from the dictionary.
See also:
- 60.11.8 Constructor
- 60.11.10 Constructor(other as IntegerToIntegerOrderedMapMBS)

60.11.10 Constructor(other as IntegerToIntegerOrderedMapMBS)

Function: Creates a new map with the keys and values from the existing map.
See also:
- 60.11.8 Constructor
- 60.11.9 Constructor(dic as dictionary)
60.11. CLASS INTEGRERTOINTEGERORDEREDMAPMBS

60.11.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts how often a key is used in this map.

60.11.12 find(key as Integer) as IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds the key and returns an iterator. **Notes:** Returns the same value as the last method if the item was not found.

60.11.13 first as IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the beginning of the map. **Example:**

```plaintext
// Create a map
dim m as new IntegerToIntegerOrderedMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerOrderedMapIteratorMBS = m.first
dim e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+” - >”+str(i.Value)
i.MoveNext
wend
```

60.11.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns True if Key is in the map and False if it is not. Returns a Boolean.
60.11.15   **Key(index as Integer) as Integer**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value of key for the Indexth sequential item.  **Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.11.16   **Keys as Integer()**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns all the keys as an array.  **Example:**

```vba
dim m as new IntegerToIntegerOrderedMapMBS
m.Value(1)=5
m.Value(2)=7

for each v as Integer in m.keys
    MsgBox str(v)
next
```

**Notes:** The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

60.11.17   **last as IntegerToIntegerOrderedMapIteratorMBS**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the end of the map.  **Example:**

```vba
// Create a map
dim m as new IntegerToIntegerOrderedMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToIntegerOrderedMapIteratorMBS = m.first
dim e as IntegerToIntegerOrderedMapIteratorMBS = m.last

// Show all keys and values
```
while i.isNotEqual(e)
MsgBox str(i.Key)+” ->”+str(i.Value)
i.MoveNext
wend

60.11.18  lookup(key as Integer, defaultValue as Integer) as Integer

Function:  Looks up the passed value of Key.
Example:
dim map as new IntegerToIntegerOrderedMapMBS

map.value(10)=1
map.value(100)=2
map.value(1000)=3

MsgBox str(map.lookup(5,0))  // shows 0 as value is missing
MsgBox str(map.lookup(10,0))  // shows 1 as value is found

Notes:  If Key is found, it returns the corresponding value.  If Key is not found, it returns the passed defaultValue.

60.11.19  LowerBound(key as Integer) as IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version:  8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  Function:  Returns an iterator for the first element whose key is not less than k.

60.11.20  Operator_Convert as Dictionary

**60.11.21** Remove(first as IntegerToIntegerOrderedMapIteratorMBS, last as IntegerToIntegerOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases all elements in a range.

See also:
- 60.11.22 Remove(key as Integer) as Integer
- 60.11.23 Remove(pos as IntegerToIntegerOrderedMapIteratorMBS)

**60.11.22** Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases the element with the given key.

See also:
- 60.11.21 Remove(first as IntegerToIntegerOrderedMapIteratorMBS, last as IntegerToIntegerOrderedMapIteratorMBS)
- 60.11.23 Remove(pos as IntegerToIntegerOrderedMapIteratorMBS)

**60.11.23** Remove(pos as IntegerToIntegerOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases the element pointed to by the pos iterator.

See also:
- 60.11.21 Remove(first as IntegerToIntegerOrderedMapIteratorMBS, last as IntegerToIntegerOrderedMapIteratorMBS)
- 60.11.22 Remove(key as Integer) as Integer

**60.11.24** UpperBound(key as Integer) as IntegerToIntegerOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator for the first element whose key is greater than k.

**60.11.25** ValueAtIndex(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value with the given index.
60.11. CLASS INTEGERTOINTEGERORDEREDMAPMBS

**Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

### 60.11.26 Values as Integer()

**Function:** Returns all the values as an array

**Example:**

```vbnet
dim m as new IntegerToIntegerOrderedMapMBS

m.Value(1)=5
m.Value(2)=7

for each v as Integer in m.Values
    MsgBox str(v)
next
```

**Notes:** The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

### 60.11.27 Properties

#### 60.11.28 Count as Integer

**Function:** The number of items in this map.

**Example:**

```vbnet
dim map as new IntegerToIntegerOrderedMapMBS

map.Value(1)=3
map.Value(2)=4

MsgBox str(map.Count)
```

**Notes:** (Read only property)
60.11.29  Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if the size is zero. **Notes:** (Read only property)

60.11.30  MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the largest possible size for this map. **Notes:** Value is -1 if no limit is defined. (Read only property)

60.11.31  value(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value associated with the given key. **Notes:** If you query for a key which does not exist, a KeyNotFoundException is raised. (Read and Write computed property)
60.12. class IntegerToStringHashMapIteratorMBS

60.12.1 class IntegerToStringHashMapIteratorMBS

**Function:** The iterator for the IntegerToStringHashMap class.

**Example:**

```vba
// Create a map
dim m as new IntegerToStringHashMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringHashMapIteratorMBS = m.first
dim e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
  MsgBox str(i.Key)+" - >"+i.Value
  i.MoveNext
wend
```

60.12.2 Methods

60.12.3 isEqual(other as IntegerToStringHashMapIteratorMBS) as boolean

**Function:** Returns true if both iterators are equal.

**Example:**

```vba
// Create a map
dim m as new IntegerToStringHashMapMBS

m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringHashMapIteratorMBS = m.first
dim e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
```
while i.isEqual(e) = false
MsgBox str(i.Key)+” -”+i.Value
i.MoveNext
wend

60.12.4  isNotEqual(other as IntegerToStringHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if both iterators are not equal. **Example:**

```vba
// Create a map
dim m as new IntegerToStringHashMapMBS
m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!

// get iterators pointing to first and after last element
dim i as IntegerToStringHashMapIteratorMBS = m.first
dim e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+” -”+i.Value
i.MoveNext
wend
```

60.12.5  Key as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the current key.

60.12.6  MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the iterator to the next item. **Example:**

```vba
// Create a map
dim m as new IntegerToStringHashMapMBS
```
m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringHashMapIteratorMBS = m.first
dim e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" ->"+i.Value
    i.MoveNext
wend

60.12.7 Properties

60.12.8 Value as string

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value of the current item in the iterator.
**Notes:** (Read and Write computed property)
60.13 class IntegerToStringHashMapMBS

60.13.1 class IntegerToStringHashMapMBS

**Function:** An alternative dictionary class for a hash map with integers as keys and strings as values.

**Example:**

```vbnet
dim s as new IntegerToStringHashMapMBS

s.Value(1)="Hello"
s.Value(2)="World"

MsgBox str(s.Count) // shows 2
MsgBox s.Value(1)+" " +s.Value(2) // shows "Hello World"
```

**Notes:** You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

60.13.2 Methods

60.13.3 AddKeys(targetArray() as Integer)

**Function:** Similar to keys, but adds keys to the given array.

**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.13.4 AddValues(targetArray() as string)

**Function:** Similar to values, but adds values to the given array.

**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.13.5 Clear

**Function:** Erases all of the elements.
60.13.6 **Clone as IntegerToStringHashMapMBS**

**Function:** Creates a copy of this map.

60.13.7 **CloneDictionary as Dictionary**

**Function:** Creates a copy of this map as a dictionary.

60.13.8 **Constructor**

**Function:** The default constructor.

See also:

- 60.13.9 Constructor(dic as dictionary)
- 60.13.10 Constructor(other as IntegerToStringHashMapMBS)

60.13.9 **Constructor(dic as dictionary)**

**Function:** Creates a new map with the keys and values from the dictionary.

See also:

- 60.13.8 Constructor
- 60.13.10 Constructor(other as IntegerToStringHashMapMBS)

60.13.10 **Constructor(other as IntegerToStringHashMapMBS)**

**Function:** Creates a new map with the keys and values from the existing map.

See also:

- 60.13.8 Constructor
- 60.13.9 Constructor(dic as dictionary)
60.13.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts how often a key is used in this map.

60.13.12 find(key as Integer) as IntegerToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds the key and returns an iterator. **Notes:** Returns the same value as the last method if the item was not found.

60.13.13 first as IntegerToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the beginning of the map. **Example:**

```vba
// Create a map
dim m as new IntegerToStringHashMapMBS
m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!

// get iterators pointing to first and after last element
dim i as IntegerToStringHashMapIteratorMBS = m.first
dim e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" - >"+i.Value
    i.MoveNext
wend
```

60.13.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns True if Key is in the map and False if it is not. Returns a Boolean.
60.13.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value of key for the Indexth sequential item. **Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.13.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns all the keys as an array. **Example:**

```vbs
dim m as new IntegerToStringHashMapMBS
m.Value(1)="Hello"
m.Value(2)="World"

for each v as Integer in m.keys
    MsgBox str(v)
next
```

**Notes:** The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

60.13.17 last as IntegerToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the end of the map. **Example:**

```vbs
// Create a map
dim m as new IntegerToStringHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"
m.Value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringHashMapIteratorMBS = m.first
dim e as IntegerToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" -\>"+i.Value
i.MoveNext
wend

60.13.18  lookup(key as Integer, defaultValue as string) as string

Function: Looks up the passed value of Key.
Example:
dim map as new IntegerToStringOrderedMapMBS

map.value(10)="Hello"
map.value(100)="World"
map.value(1000)="!"

MsgBox str(map.lookup(5,"?")) // shows "?" as value is missing
MsgBox str(map.lookup(10,"?")) // shows "Hello" as value is found

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

60.13.19  Operator_Convert as Dictionary

Function: Creates a copy of the map as dictionary.

60.13.20  Remove(first as IntegerToStringHashMapIteratorMBS, last as IntegerToStringHashMapIteratorMBS)

Function: Erases all elements in a range.
See also:

- 60.13.21 Remove(key as Integer) as Integer
- 60.13.22 Remove(pos as IntegerToStringHashMapIteratorMBS)
60.13. CLASS INTEGERTOSTRINGHASHMAPMBS

60.13.21 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases the element with the given key. See also:

- 60.13.20 Remove(first as IntegerToStringHashMapIteratorMBS, last as IntegerToStringHashMapIteratorMBS) 10690
- 60.13.22 Remove(pos as IntegerToStringHashMapIteratorMBS) 10691

60.13.22 Remove(pos as IntegerToStringHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases the element pointed to by the pos iterator. See also:

- 60.13.20 Remove(first as IntegerToStringHashMapIteratorMBS, last as IntegerToStringHashMapIteratorMBS) 10690
- 60.13.21 Remove(key as Integer) as Integer 10691

60.13.23 ValueAtIndex(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value with the given index. **Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.13.24 Values as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns all the values as an array. **Example:**

```vbnet
dim m as new IntegerToStringHashMapMBS
m.Value(1)="Hello"
m.Value(2)="World"
for each v as string in m.Values
MsgBox v
next
```
**Notes:** The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

### 60.13.25 Properties

#### 60.13.26 BinCount as Integer

**Function:** The number of bins the hash table uses.
**Example:**
```vbs
dim v as new IntegerToStringHashMapMBS
v.value(1)="Hello"
v.value(2)="World"
MsgBox str(v.BinCount)
```

**Notes:**
This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

### 60.13.27 Count as Integer

**Function:** The number of items in this map.
**Example:**
```vbs
dim map as new IntegerToStringHashMapMBS
map.Value(1)="Hello"
map.Value(2)="World"
MsgBox str(map.Count)
```

**Notes:** (Read only property)
60.13.28 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: True if the size is zero. Notes: (Read only property)

60.13.29 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns the largest possible size for this map. Notes: Value is -1 if no limit is defined. (Read only property)

60.13.30 value(key as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The value associated with the given key. Notes: If you query for a key which does not exist, a KeyNotFoundException is raised. (Read and Write computed property)
60.14 **class IntegerToStringOrderedMapIteratorMBS**

60.14.1 **class IntegerToStringOrderedMapIteratorMBS**

**Function:** The iterator for the IntegerToStringOrderedMap class.  
**Example:**

```vbnet
' Create a map  
dim m as new IntegerToStringOrderedMapMBS

m.value(1)="Hello"  
m.value(2)="World"  
m.value(3)="!"

' get iterators pointing to first and after last element  
dim i as IntegerToStringOrderedMapIteratorMBS = m.first  
dim e as IntegerToStringOrderedMapIteratorMBS = m.last

' Show all keys and values  
while i.isNotEqual(e)  
    MsgBox str(i.Key) + " - " + i.Value  
i.MoveNext
wend
```

60.14.2 **Methods**

60.14.3 **isEqual(other as IntegerToStringOrderedMapIteratorMBS) as boolean**

**Function:** Returns true if both iterators are equal.  
**Example:**

```vbnet
' Create a map  
dim m as new IntegerToStringOrderedMapMBS

m.value(1)="Hello"  
m.value(2)="World"  
m.value(3)="!"

' get iterators pointing to first and after last element  
dim i as IntegerToStringOrderedMapIteratorMBS = m.first  
dim e as IntegerToStringOrderedMapIteratorMBS = m.last

' Show all keys and values
```
while i.isEqual(e) = false
MsgBox str(i.Key) + " - > " + i.Value
i.MoveNext
wend

### 60.14.4 isNotEqual(other as IntegerToStringOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns true if both iterators are not equal.
**Example:**

```vba
// Create a map
dim m as new IntegerToStringOrderedMapMBS
m.value(1) = "Hello"
m.value(2) = "World"
m.value(3) = "!

// get iterators pointing to first and after last element
dim i as IntegerToStringOrderedMapIteratorMBS = m.first
dim e as IntegerToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key) + " - > " + i.Value
i.MoveNext
wend
```

### 60.14.5 Key as Integer

**Function:** Returns the current key.

### 60.14.6 MoveNext

**Function:** Moves the iterator to the next item.
**Example:**

```vba
// Create a map
dim m as new IntegerToStringOrderedMapMBS
```
m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!"

// get iterators pointing to first and after last element
dim i as IntegerToStringOrderedMapIteratorMBS = m.first
dim e as IntegerToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
  MsgBox str(i.Key)+" ->"+i.Value
  i.MoveNext
wend

60.14.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the iterator to the previous item.

60.14.8 Properties

60.14.9 Value as string

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value of the current item in the iterator.  
**Notes:** (Read and Write computed property)
60.15. **CLASS INTEGERTOSTRINGORDEREDMAPMBS**

60.15  **class IntegerToStringOrderedMapMBS**

60.15.1  **class IntegerToStringOrderedMapMBS**

**Function:** An alternative dictionary class for an ordered map with integer keys and string values.  
**Example:**

```vbnet
dim s as new IntegerToStringOrderedMapMBS

s.Value(1)="Hello"
s.Value(2)="World"

MsgBox str(s.Count) // shows 2
MsgBox s.Value(1)+" " +s.Value(2) // shows "Hello World"
```

**Notes:** You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

60.15.2  **Methods**

60.15.3  **AddKeys(targetArray() as Integer)**

**Function:** Similar to keys, but adds keys to the given array.  
**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.15.4  **AddValues(targetArray() as string)**

**Function:** Similar to values, but adds values to the given array.  
**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.15.5  **Clear**

**Function:** Erases all of the elements.
60.15.6  Clone as IntegerToStringOrderedMapMBS

**Function:** Creates a copy of this map.

60.15.7  CloneDictionary as Dictionary

**Function:** Creates a copy of this map as a dictionary.

60.15.8  Constructor

**Function:** The default constructor.
See also:
- 60.15.9 Constructor(dic as dictionary) 10698
- 60.15.10 Constructor(other as IntegerToStringOrderedMapMBS) 10698

60.15.9  Constructor(dic as dictionary)

**Function:** Creates a new map with the keys and values from the dictionary.
See also:
- 60.15.8 Constructor 10698
- 60.15.10 Constructor(other as IntegerToStringOrderedMapMBS) 10698

60.15.10  Constructor(other as IntegerToStringOrderedMapMBS)

**Function:** Creates a new map with the keys and values from the existing map.
See also:
- 60.15.8 Constructor 10698
- 60.15.9 Constructor(dic as dictionary) 10698
60.15. **CLASS INTEGERSTRINGORDEREDMAPMBS**

### 60.15.11 **CountKey(key as Integer) as Integer**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts how often a key is used in this map.

### 60.15.12 **find(key as Integer) as IntegerToStringOrderedMapIteratorMBS**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds the key and returns an iterator. **Notes:** Returns the same value as the last method if the item was not found.

### 60.15.13 **first as IntegerToStringOrderedMapIteratorMBS**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the beginning of the map. **Example:**

```vbscript
// Create a map
dim m as new IntegerToStringOrderedMapMBS
m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!

// get iterators pointing to first and after last element
dim i as IntegerToStringOrderedMapIteratorMBS = m.first
dim e as IntegerToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" ->"+i.Value
    i.MoveNext
wend
```

### 60.15.14 **hasKey(key as Integer) as boolean**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns True if Key is in the map and False if it is not. Returns a Boolean.
60.15.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value of key for the Indexth sequential item. **Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.15.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns all the keys as an array. **Example:**

```vbnet
dim m as new IntegerToStringOrderedMapMBS
m.Value(1)="Hello"
m.Value(2)="World"
for each v as Integer in m.keys
    MsgBox str(v)
next
```

**Notes:** The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

60.15.17 last as IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the end of the map. **Example:**

```vbnet
// Create a map
dim m as new IntegerToStringOrderedMapMBS
m.value(1)="Hello"
m.value(2)="World"
m.value(3)="!

// get iterators pointing to first and after last element
dim i as IntegerToStringOrderedMapIteratorMBS = m.first
dim e as IntegerToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
```
while i.isNotEqual(e)
MsgBox str(i.Key)+" -">" +i.Value
i.MoveNext
wend

60.15.18  lookup(key as Integer, defaultValue as string) as string

Function: Looks up the passed value of Key.
Example:

dim map as new IntegerToStringOrderedMapMBS

map.value(10)="Hello"
map.value(100)="World"
map.value(1000)="!

MsgBox str(map.lookup(5,"?")) // shows "?" as value is missing
MsgBox str(map.lookup(10,"?")) // shows "Hello" as value is found

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed default Value.

60.15.19  LowerBound(key as Integer) as IntegerToStringOrderedMapIteratorMBS

Function: Returns an iterator for the first element whose key is not less than k.

60.15.20  Operator_Convert as Dictionary

Function: Creates a copy of the map as dictionary.
60.15.21 Remove(first as IntegerToStringOrderedMapIteratorMBS, last as IntegerToStringOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases all elements in a range. See also:

* 60.15.22 Remove(key as Integer) as Integer
* 60.15.23 Remove(pos as IntegerToStringOrderedMapIteratorMBS)

60.15.22 Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases the element with the given key. See also:

* 60.15.21 Remove(first as IntegerToStringOrderedMapIteratorMBS, last as IntegerToStringOrderedMapIteratorMBS)
* 60.15.23 Remove(pos as IntegerToStringOrderedMapIteratorMBS)

60.15.23 Remove(pos as IntegerToStringOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases the element pointed to by the pos iterator. See also:

* 60.15.21 Remove(first as IntegerToStringOrderedMapIteratorMBS, last as IntegerToStringOrderedMapIteratorMBS)
* 60.15.22 Remove(key as Integer) as Integer

60.15.24 UpperBound(key as Integer) as IntegerToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator for the first element whose key is greater than k.

60.15.25 ValueAtIndex(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value with the given index. **Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first
60.15.26 Values as string()

**Function:** Returns all the values as an array

**Example:**

```vbscript
dim m as new IntegerToStringOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as string in m.Values
    MsgBox v
next
```

**Notes:** The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

60.15.27 Properties

60.15.28 Count as Integer

**Function:** The number of items in this map.

**Example:**

```vbscript
dim map as new IntegerToStringOrderedMapMBS

map.Value(1)="Hello"
map.Value(2)="World"

MsgBox str(map.Count)
```

**Notes:** (Read only property)
60.15.29 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if the size is zero.  
**Notes:** (Read only property)

60.15.30 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the largest possible size for this map.  
**Notes:**  
Value is -1 if no limit is defined.  
(Read only property)

60.15.31 value(key as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value associated with the given key.  
**Notes:**  
If you query for a key which does not exist, a KeyNotFoundException is raised.  
(Read and Write computed property)
60.16. CLASS INTEGERTOTEXTHASHMAPITERATORMBS

60.16  class IntegerToTextHashMapIteratorMBS

60.16.1  class IntegerToTextHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
Function: The iterator for the IntegerToTextHashMapMBS class.

60.16.2  Methods

60.16.3  isEqual(other as IntegerToTextHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
Function: Returns true if both iterators are equal.

60.16.4  isNotEqual(other as IntegerToTextHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
Function: Returns true if both iterators are not equal.

60.16.5  Key as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
Function: Returns the current key.

60.16.6  MoveNext

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
Function: Moves the iterator to the next item.

60.16.7  Properties

60.16.8  Value as text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
Function: The value of the current item in the iterator.
Notes: (Read and Write computed property)
60.17. **CLASS INTEGERTOTEXTHASHMAPMBS**

60.17  **class IntegerToTextHashMapMBS**

60.17.1  **class IntegerToTextHashMapMBS**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** An alternative dictionary class for a hash map with integers as keys and texts as values.  
**Example:**

```vbnet
dim s as new IntegerToTextHashMapMBS
s.Value(1)="Hello"
s.Value(2)="World"
MsgBox str(s.Count) // shows 2
MsgBox s.Value(1)+" " +s.Value(2) // shows "Hello World"
```

**Notes:** You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

60.17.2  **Methods**

60.17.3  **AddKeys(targetArray() as Integer)**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Similar to keys, but adds keys to the given array.  
**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.17.4  **AddValues(targetArray() as text)**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Similar to values, but adds values to the given array.  
**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.17.5  **Clear**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Erases all of the elements.
60.17.6 Clone as IntegerToTextHashMapMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of this map.

60.17.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of this map as a dictionary.

60.17.8 Constructor

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The default constructor.
See also:

- 60.17.9 Constructor(dic as dictionary) 10708
- 60.17.10 Constructor(other as IntegerToTextHashMapMBS) 10708

60.17.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new map with the keys and values from the dictionary.
See also:

- 60.17.8 Constructor 10708
- 60.17.10 Constructor(other as IntegerToTextHashMapMBS) 10708

60.17.10 Constructor(other as IntegerToTextHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new map with the keys and values from the existing map.
See also:

- 60.17.8 Constructor 10708
- 60.17.9 Constructor(dic as dictionary) 10708
60.17. CLASS INTEGERTOTEXTHASHMAPMBS

60.17.11  CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Counts how often a key is used in this map.

60.17.12  find(key as Integer) as IntegerToTextHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Finds the key and returns an interator.  
**Notes:** Returns the same value as the last method if the item was not found.

60.17.13  first as IntegerToTextHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Returns an iterator pointing to the beginning of the map.

60.17.14  hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Returns True if Key is in the map and False if it is not.  Returns a Boolean.

60.17.15  Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Returns the value of key for the Indexth sequential item.  
**Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.17.16  Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Returns all the keys as an array.  
**Notes:** The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.
60.17.17  last as IntegerToTextHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the end of the map.

60.17.18  lookup(key as Integer, defaultvalue as text) as text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Looks up the passed value of Key. **Notes:** If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

60.17.19  Operator 
\_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of the map as dictionary.

60.17.20  Remove(first as IntegerToTextHashMapIteratorMBS, last as IntegerToTextHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases all elements in a range. **See also:**

- 60.17.21 Remove(key as Integer) as Integer
- 60.17.22 Remove(pos as IntegerToTextHashMapIteratorMBS)

60.17.21  Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases the element with the given key. **See also:**

- 60.17.20 Remove(first as IntegerToTextHashMapIteratorMBS, last as IntegerToTextHashMapIteratorMBS)
- 60.17.22 Remove(pos as IntegerToTextHashMapIteratorMBS)
60.17. **CLASS INTEGERTOTEXTHASHMAPMBS**

60.17.22 **Remove(pos as IntegerToTextHashMapIteratorMBS)**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Erases the element pointed to by the pos iterator.

See also:

- 60.17.20 Remove(first as IntegerToTextHashMapIteratorMBS, last as IntegerToTextHashMapIteratorMBS)
- 60.17.21 Remove(key as Integer) as Integer

60.17.23 **ValueAtIndex(index as Integer) as text**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns the value with the given index.
**Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.17.24 **Values as text()**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns all the values as an array
**Notes:** The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

60.17.25 **Properties**

60.17.26 **BinCount as Integer**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The number of bins the hash table uses.
**Notes:**
This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

60.17.27 **Count as Integer**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The number of items in this map.
60.17.28 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** True if the size is zero.
**Notes:** (Read only property)

60.17.29 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns the largest possible size for this set.
**Notes:**
Value is -1 if no limit is defined.
(Read only property)

60.17.30 value(key as Integer) as text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The value associated with the given key.
**Notes:**
If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)
60.18. CLASS INTEGERTOTEXTORDEREDMAPITERATORMBS

60.18  class IntegerToTextOrderedMapIteratorMBS

60.18.1  class IntegerToTextOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** The iterator for the IntegerToTextOrderedMapMBS class.

60.18.2  Methods

60.18.3  isEqual(other as IntegerToTextOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Returns true if both iterators are equal.

60.18.4  isNotEqual(other as IntegerToTextOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Returns true if both iterators are not equal.

60.18.5  Key as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Returns the current key.

60.18.6  MoveNext

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Moves the iterator to the next item.

60.18.7  MovePrev

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Moves the iterator to the previous item.
60.18.8 Properties

60.18.9 Value as Text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The value of the current item in the iterator.

**Notes:** (Read and Write computed property)
60.19.  

### 60.19.1  
**class IntegerToTextOrderedMapMBS**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** An alternative dictionary class for an ordered map with integer keys and text values.  
**Example:**

```vbnet
    dim s as new IntegerToTextOrderedMapMBS
    s.Value(1)="Hello"
    s.Value(2)="World"
    MsgBox str(s.Count)  // shows 2
    MsgBox s.Value(1)+" " +s.Value(2)  // shows "Hello World"
```

**Notes:** You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

### 60.19.2  
**Methods**

#### 60.19.3  
**AddKeys(targetArray() as Integer)**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Similar to keys, but adds keys to the given array.  
**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

#### 60.19.4  
**AddValues(targetArray() as Text)**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Similar to values, but adds values to the given array.  
**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

### 60.19.5  
**Clear**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Erases all of the elements.
CHAPTER 60. DATA TYPES

60.19.6 Clone as IntegerToTextOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Creates a copy of this map.

60.19.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Creates a copy of this map as a dictionary.

60.19.8 Constructor

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The default constructor. See also:
- 60.19.9 Constructor(dic as dictionary) 10716
- 60.19.10 Constructor(other as IntegerToTextOrderedMapMBS) 10716

60.19.9 Constructor(dic as dictionary)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Creates a new map with the keys and values from the dictionary. See also:
- 60.19.8 Constructor 10716
- 60.19.10 Constructor(other as IntegerToTextOrderedMapMBS) 10716

60.19.10 Constructor(other as IntegerToTextOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Creates a new map with the keys and values from the existing map. See also:
- 60.19.8 Constructor 10716
- 60.19.9 Constructor(dic as dictionary) 10716
60.19.11  **CountKey(key as Integer) as Integer**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Counts how often a key is used in this map.

60.19.12  **find(key as Integer) as IntegerToTextOrderedMapIteratorMBS**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Finds the key and returns an interator.
**Notes:** Returns the same value as the last method if the item was not found.

60.19.13  **first as IntegerToTextOrderedMapIteratorMBS**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns an iterator pointing to the beginning of the map.

60.19.14  **hasKey(key as Integer) as boolean**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns True if Key is in the map and False if it is not. Returns a Boolean.

60.19.15  **Key(index as Integer) as Integer**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns the value of key for the Indexth sequential item.
**Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.19.16  **Keys as Integer()**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns all the keys as an array.
**Notes:** The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.
60.19.17  last as IntegerToTextOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns an iterator pointing to the end of the map.

60.19.18  lookup(key as Integer, defaultValue as Text) as Text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Looks up the passed value of Key.
**Notes:** If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

60.19.19  LowerBound(key as Integer) as IntegerToTextOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns an iterator for the first element whose key is not less than k.

60.19.20  Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Creates a copy of the map as dictionary.

60.19.21  Remove(first as IntegerToTextOrderedMapIteratorMBS, last as IntegerToTextOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Erases all elements in a range.
See also:
- 60.19.22 Remove(key as Integer) as Integer
- 60.19.23 Remove(pos as IntegerToTextOrderedMapIteratorMBS)

60.19.22  Remove(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Erases the element with the given key.
See also:
60.19. **CLASS INTEGERTOTEXTORDEREDMAPMBS**

- 60.19.21 `Remove(first as IntegerToTextOrderedMapIteratorMBS, last as IntegerToTextOrderedMapIteratorMBS)`
- 60.19.23 `Remove(pos as IntegerToTextOrderedMapIteratorMBS)`

60.19.23 **Remove(pos as IntegerToTextOrderedMapIteratorMBS)**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Erases the element pointed to by the pos iterator.

See also:
- 60.19.21 `Remove(first as IntegerToTextOrderedMapIteratorMBS, last as IntegerToTextOrderedMapIteratorMBS)`
- 60.19.22 `Remove(key as Integer) as Integer`

60.19.24 **UpperBound(key as Integer) as IntegerToTextOrderedMapIteratorMBS**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns an iterator for the first element whose key is greater than k.

60.19.25 **ValueAtIndex(index as Integer) as Text**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns the value with the given index.
**Notes:** If there is no indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.19.26 **Values as Text()**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns all the values as an array.
**Notes:** The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

60.19.27 **Properties**

60.19.28 **Count as Integer**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The number of items in this map.
CHAPTER 60. DATA TYPES

Notes: (Read only property)

60.19.29 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if the size is zero.
Notes: (Read only property)

60.19.30 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the largest possible size for this set.
Notes:
Value is -1 if no limit is defined.
(Read only property)

60.19.31 value(key as Integer) as Text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The value associated with the given key.
Notes:
If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)
60.20  class IntegerToVariantHashMapIteratorMBS

60.20.1  class IntegerToVariantHashMapIteratorMBS

Function: The iterator for the IntegerToVariantHashMap class.
Example:

// Create a map
dim m as new IntegerToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantHashMapIteratorMBS = m.first
dim e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+” -”+i.Value
    i.MoveNext
wend

60.20.2  Methods

60.20.3  isEqual(other as IntegerToVariantHashMapIteratorMBS) as boolean

Function: Returns true if both iterators are equal.
Example:

// Create a map
dim m as new IntegerToVariantHashMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantHashMapIteratorMBS = m.first
dim e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+” -”+i.Value
i.MoveNext
wend

60.20.4 isNotEqual(other as IntegerToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns true if both iterators are not equal.
Example:

// Create a map
dim m as new IntegerToVariantHashMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantHashMapIteratorMBS = m.first
dim e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+” -”+i.Value
i.MoveNext
wend

60.20.5 Key as Integer

60.20.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Moves the iterator to the next item.
Example:

// Create a map
dim m as new IntegerToVariantHashMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantHashMapIteratorMBS = m.first
dim e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" -"+i.Value
    i.MoveNext
wend

60.20.7 Properties

60.20.8 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value of the current item in the iterator. **Notes:** (Read and Write computed property)
60.21 class IntegerToVariantHashMapMBS

60.21.1 class IntegerToVariantHashMapMBS

Function: An alternative dictionary class for a hash map with integers as keys and variants as values.

Example:

dim s as new IntegerToVariantHashMapMBS

s.Value(1)="Hello"
s.Value(2)="World"

MsgBox str(s.Count) // shows 2

MsgBox s.Value(1)+" " +s.Value(2) // shows "Hello World"

Notes: You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

60.21.2 Methods

60.21.3 AddKeys(targetArray() as Integer)

Function: Similar to keys, but adds keys to the given array.

Notes: For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.21.4 AddValues(targetArray() as Variant)

Function: Similar to values, but adds values to the given array.

Notes: For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.21.5 Clear

Function: Erases all of the elements.
60.21.6 Clone as IntegerToVariantHashMapMBS

Function: Creates a copy of this map.

60.21.7 CloneDictionary as Dictionary

Function: Creates a copy of this map as a dictionary.

60.21.8 Constructor

Function: The default constructor.
See also:
- 60.21.9 Constructor(dic as dictionary)
- 60.21.10 Constructor(other as IntegerToVariantHashMapMBS)

60.21.9 Constructor(dic as dictionary)

Function: Creates a new map with the keys and values from the dictionary.
See also:
- 60.21.8 Constructor
- 60.21.10 Constructor(other as IntegerToVariantHashMapMBS)

60.21.10 Constructor(other as IntegerToVariantHashMapMBS)

Function: Creates a new map with the keys and values from the existing map.
See also:
- 60.21.8 Constructor
- 60.21.9 Constructor(dic as dictionary)
60.21.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts how often a key is used in this map.

60.21.12 find(key as Integer) as IntegerToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds the key and returns an iterator. **Notes:** Returns the same value as the last method if the item was not found.

60.21.13 first as IntegerToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the beginning of the map. **Example:**

```javascript
// Create a map
dim m as new IntegerToVariantHashMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantHashMapIteratorMBS = m.first
dim e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+” - >”+i.Value
    i.MoveNext
wend
```

60.21.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns True if Key is in the map and False if it is not. Returns a Boolean.
60.21. **CLASS INTEGERTOVARIANTHASHMAPMBS**

### 60.21.15 Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value of key for the Indexth sequential item. **Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

### 60.21.16 Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns all the keys as an array. **Example:**

```vbnet
dim m as new IntegerToVariantHashMapMBS
m.Value(1)="Hello"
m.Value(2)="World"
for each v as Integer in m.keys
    MsgBox str(v)
next
```

**Notes:** The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

### 60.21.17 last as IntegerToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the end of the map. **Example:**

```vbnet
// Create a map
dim m as new IntegerToVariantHashMapMBS
m.Value(1)=2
m.Value(2)=4
m.Value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantHashMapIteratorMBS = m.first
dim e as IntegerToVariantHashMapIteratorMBS = m.last

// Show all keys and values
```

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key) + " ->" + i.Value
i.MoveNext
wend

60.21.18  lookup(key as Integer, defaultvalue as Variant) as Variant

Function: Looks up the passed value of Key.  
Example:

dim map as new IntegerToVariantHashMapMBS

map.value(10)=1  
map.value(100)=2  
map.value(1000)=3  

MsgBox str(map.lookup(5,0)) // shows 0 as value is missing  
MsgBox str(map.lookup(10,0)) // shows 1 as value is found

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

60.21.19  Operator_Convert as Dictionary

Function: Creates a copy of the map as dictionary.

60.21.20  Remove(first as IntegerToVariantHashMapIteratorMBS, last as IntegerToVariantHashMapIteratorMBS)

Function: Erases all elements in a range.  
See also:

• 60.21.21 Remove(key as Integer) as Integer
• 60.21.22 Remove(pos as IntegerToVariantHashMapIteratorMBS)
60.21. **CLASS INTEGERTOVARIANThASHMAPMBS**

60.21.21 **Remove(key as Integer) as Integer**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases the element with the given key.

See also:

- 60.21.20 Remove(first as IntegerToVariantHashMapIteratorMBS, last as IntegerToVariantHashMapIteratorMBS)
- 60.21.22 Remove(pos as IntegerToVariantHashMapIteratorMBS)

60.21.22 **Remove(pos as IntegerToVariantHashMapIteratorMBS)**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases the element pointed to by the pos iterator.

See also:

- 60.21.20 Remove(first as IntegerToVariantHashMapIteratorMBS, last as IntegerToVariantHashMapIteratorMBS)
- 60.21.21 Remove(key as Integer) as Integer

60.21.23 **ValueAtIndex(index as Integer) as Variant**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value with the given index.

**Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.21.24 **Values as Variant()**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns all the values as an array.

**Example:**

```// Create a map```
```dim m as new IntegerToVariantHashMapMBS```

```m.Value(1)="Hello"
m.Value(2)="World"
```

```for each v as Variant in m.Keys```
```MsgBox v```
```next```
Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

60.21.25 Properties

60.21.26 BinCount as Integer

Function: The number of bins the hash table uses.
Example:

```v
Dim v as new IntegerToVariantHashMapMBS
v.Value(1)="Hello"
v.Value(2)="World"
MsgBox str(v.BinCount)
```

Notes:
This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

60.21.27 Count as Integer

Function: The number of items in this map.
Example:

```v
Dim map as new IntegerToVariantHashMapMBS
map.Value(1)=3
map.Value(2)=4
MsgBox str(map.Count)
```

Notes: (Read only property)
60.21. **CLASS INTEGERTOVARIANTHASHMAPMBS**

### 60.21.28 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if the size is zero.  
**Notes:** (Read only property)

### 60.21.29 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the largest possible size for this map.  
**Notes:**  
Value is -1 if no limit is defined.  
(Read only property)

### 60.21.30 `value(key as Integer) as Variant`

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value associated with the given key.  
**Notes:**  
If you query for a key which does not exist, a KeyNotFoundException is raised.  
(Read and Write computed property)
60.22  class IntegerToVariantOrderedMapIteratorMBS

60.22.1  class IntegerToVariantOrderedMapIteratorMBS

**Function:** The iterator for the IntegerToVariantOrderedMap class.  
**Example:**

```vba
// Create a map
dim m as new IntegerToVariantOrderedMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantOrderedMapIteratorMBS = m.first
dim e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" - >"+i.Value
    i.MoveNext
wend
```

60.22.2  Methods

60.22.3  isEqual(other as IntegerToVariantOrderedMapIteratorMBS) as boolean

**Function:** Returns true if both iterators are equal.  
**Example:**

```vba
// Create a map
dim m as new IntegerToVariantOrderedMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantOrderedMapIteratorMBS = m.first
dim e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
```

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key)+” -”+i.Value
i.MoveNext
wend

60.22.4 isNotEqual(other as IntegerToVariantOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Returns true if both iterators are not equal. 
**Example:**

```vba
// Create a map
dim m as new IntegerToVariantOrderedMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantOrderedMapIteratorMBS = m.first
dim e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+” -”+i.Value
i.MoveNext
wend
```

60.22.5 Key as Integer

**Function:** Returns the current key.

60.22.6 MoveNext

**Function:** Moves the iterator to the next item. 
**Example:**

```vba
// Create a map
dim m as new IntegerToVariantOrderedMapMBS
```
m.value(1)=2
m.value(2)=4
m.value(3)=8

    // get iterators pointing to first and after last element
    dim i as IntegerToVariantOrderedMapIteratorMBS = m.first
    dim e as IntegerToVariantOrderedMapIteratorMBS = m.last

    // Show all keys and values
    while i.isNotEqual(e)
        MsgBox str(i.Key)+" ->"+i.Value
        i.MoveNext
    wend

60.22.7 MovePrev

    MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the iterator to the previous item.

60.22.8 Properties

60.22.9 Value as Variant

    MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value of the current item in the iterator. **Notes:** (Read and Write computed property)
60.23. **CLASS INTEGERTOVARIANTORDEREDMAPMBS**

60.23  class IntegerToVariantOrderedMapMBS

60.23.1  class IntegerToVariantOrderedMapMBS

**Function:** An alternative dictionary class for an ordered map with integers as keys and variants as values.  
**Example:**

```vba
Dim s As New IntegerToVariantOrderedMapMBS

s.Value(1) = "Hello"
s.Value(2) = "World"

MsgBox str(s.Count) ' shows 2

MsgBox s.Value(1) + " " + s.Value(2) ' shows "Hello World"
```

**Notes:** You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

60.23.2  Methods

60.23.3  AddKeys(targetArray() as Integer)

**Function:** Similar to keys, but adds keys to the given array.  
**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.23.4  AddValues(targetArray() as Variant)

**Function:** Similar to values, but adds values to the given array.  
**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.23.5  Clear

**Function:** Erases all of the elements.
60.23.6 Clone as IntegerToVariantOrderedMapMBS

**Function:** Creates a copy of this map.

60.23.7 CloneDictionary as Dictionary

**Function:** Creates a copy of this map as a dictionary.

60.23.8 Constructor

**Function:** The default constructor.
See also:
- 60.23.9 Constructor(dic as dictionary) 10736
- 60.23.10 Constructor(other as IntegerToVariantOrderedMapMBS) 10736

60.23.9 Constructor(dic as dictionary)

**Function:** Creates a new map with the keys and values from the dictionary.
See also:
- 60.23.8 Constructor 10736
- 60.23.10 Constructor(other as IntegerToVariantOrderedMapMBS) 10736

60.23.10 Constructor(other as IntegerToVariantOrderedMapMBS)

**Function:** Creates a new map with the keys and values from the existing map.
See also:
- 60.23.8 Constructor 10736
- 60.23.9 Constructor(dic as dictionary) 10736
60.23. **CLASS INTEGERTOVARIANTORDEREDMAPMBS**

### 60.23.11 CountKey(key as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts how often a key is used in this map.

### 60.23.12 find(key as Integer) as IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds the key and returns an iterator. **Notes:** Returns the same value as the last method if the item was not found.

### 60.23.13 first as IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the beginning of the map. **Example:**

```vba
// Create a map
dim m as new IntegerToVariantOrderedMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantOrderedMapIteratorMBS = m.first
dim e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+” - >”+i.Value
    i.MoveNext
wend
```

### 60.23.14 hasKey(key as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns True if Key is in the map and False if it is not. Returns a Boolean.
60.23.15  Key(index as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns the value of key for the Indexth sequential item. Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.23.16  Keys as Integer()

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns all the keys as an array. Example:

```vbs
dim m as new IntegerToVariantOrderedMapMBS
m.Value(1)="Hello"
m.Value(2)="World"

for each v as Integer in m.keys
    MsgBox str(v)
next
```

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

60.23.17  last as IntegerToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns an iterator pointing to the end of the map. Example:

```vbs
// Create a map
dim m as new IntegerToVariantOrderedMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as IntegerToVariantOrderedMapIteratorMBS = m.first
dim e as IntegerToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
```
while i.isNotEqual(e)
MsgBox str(i.Key) + " ->" + i.Value
i.MoveNext
wend

60.23.18 **lookup(key as Integer, defaultValue as Variant) as Variant**

**Function:** Looks up the passed value of Key.  
**Example:**
```
    dim map as new IntegerToVariantOrderedMapMBS
    
    map.value(10)=1
    map.value(100)=2
    map.value(1000)=3
    
    MsgBox str(map.lookup( 5,0)) // shows 0 as value is missing
    MsgBox str(map.lookup( 10,0)) // shows 1 as value is found
```

**Notes:** If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

60.23.19 **LowerBound(key as Integer) as IntegerToVariantOrderedMapIteratorMBS**

**Function:** Returns an iterator for the first element whose key is not less than k.

60.23.20 **Operator_Convert as Dictionary**

**Function:** Creates a copy of the map as dictionary.
60.23.21 Remove(first as IntegerToVariantOrderedMapIteratorMBS, last as IntegerToVariantOrderedMapIteratorMBS)

**Function:** Erases all elements in a range.  
See also:  
- 60.23.22 Remove(key as Integer) as Integer
- 60.23.23 Remove(pos as IntegerToVariantOrderedMapIteratorMBS)

60.23.22 Remove(key as Integer) as Integer

**Function:** Erases the element with the given key.  
See also:  
- 60.23.21 Remove(first as IntegerToVariantOrderedMapIteratorMBS, last as IntegerToVariantOrderedMapIteratorMBS)
- 60.23.23 Remove(pos as IntegerToVariantOrderedMapIteratorMBS)

60.23.23 Remove(pos as IntegerToVariantOrderedMapIteratorMBS)

**Function:** Erases the element pointed to by the pos iterator.  
See also:  
- 60.23.21 Remove(first as IntegerToVariantOrderedMapIteratorMBS, last as IntegerToVariantOrderedMapIteratorMBS)
- 60.23.22 Remove(key as Integer) as Integer

60.23.24 UpperBound(key as Integer) as IntegerToVariantOrderedMapIteratorMBS

**Function:** Returns an iterator for the first element whose key is greater than k.

60.23.25 ValueAtIndex(index as Integer) as Variant

**Function:** Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.23.26 Values as Variant()

Function: Returns all the values as an array
Example:

```vba
// Create a map
dim m as new IntegerToVariantOrderedMapMBS
m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Keys
    MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

60.23.27 Properties

60.23.28 Count as Integer

Function: The number of items in this map.
Example:

```vba
dim map as new IntegerToVariantOrderedMapMBS

map.Value(1)=3
map.Value(2)=4

MsgBox str(map.Count)
```

Notes: (Read only property)
60.23.29 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: True if the size is zero. Notes: (Read only property)

60.23.30 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns the largest possible size for this map. Notes: Value is -1 if no limit is defined. (Read only property)

60.23.31 value(key as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The value associated with the given key. Notes: If you query for a key which does not exist, a KeyNotFoundException is raised. (Read and Write computed property)
60.24. CLASS STACKDOUBLEMBS

60.24 class StackDoubleMBS

60.24.1 class StackDoubleMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for a stack of doubles.
Example:

dim s as new StackDoubleMBS
call s.Push 5
MsgBox str(s.Top)

60.24.2 Methods

60.24.3 Bottom as Double

MBS DataTypes Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the bottom item of the stack and returns the value.
Example:

dim s as new StackDoubleMBS
call s.Push 5
MsgBox str(s.Bottom)

60.24.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Clears the stack.
Example:

dim s as new StackDoubleMBS
call s.Push 5
s.Clear

if s.IsEmpty then
MsgBox "OK"
end if
60.24.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The destructor.

**Notes:**
There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

60.24.6 Contains(o as Double) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Returns true if one of the items on the stack is equal to the given double value.

**Example:**
```
dim s as new StackDoubleMBS

call s.Push 5

if s.Contains(5) then
    MsgBox "found. OK"
else
    MsgBox "not found. Failed"
end if
```

60.24.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Counts how much items are on the stack.

**Example:**
```
dim s as new StackDoubleMBS

MsgBox str(s.Deep)
call s.Push 5
MsgBox str(s.Deep)
```
60.24. Pop as Double

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Removes the top item of the stack and returns the value.
**Example:**
```
   dim s as new StackDoubleMBS
   call s.Push 5
   MsgBox str(s.pop)
```

**Notes:** Returns 0 on any error.

60.24.9 PopBottom as Double

MBS DataTypes Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Removes the bottom item of the stack and returns the value.
**Example:**
```
   dim s as new StackDoubleMBS
   call s.Push 5
   MsgBox str(s.PopBottom)
```

60.24.10 Push(o as Double) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Pushes a value on the stack.
**Example:**
```
   dim s as new StackDoubleMBS

   call s.Push 5
```

**Notes:**

Returns true if successful.
May fail on low memory.
### 60.24.11 Top as Double

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Returns the value of the top item on the stack.

**Example:**
```vbnet
dim s as new StackDoubleMBS
call s.Push 5
MsgBox str(s.Top)
```

**Notes:** Returns 0 on any error.

### 60.24.12 Properties

#### 60.24.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Returns true if the stack is empty.

**Example:**
```vbnet
dim s as new StackDoubleMBS
if s.IsEmpty then
    MsgBox "IsEmpty ok"
else
    MsgBox "IsEmpty failed"
end if
call s.Push 5
if s.IsEmpty then
    MsgBox "IsEmpty failed"
else
    MsgBox "IsEmpty ok"
end if
```

**Notes:** (Read only property)
60.25 class StackIntegerMBS

60.25.1 class StackIntegerMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for a stack of integers.
Example:

dim s as new StackIntegerMBS

call s.Push 5

MsgBox str(S.Top)

60.25.2 Methods

60.25.3 Bottom as Integer

MBS DataTypes Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the bottom item of the stack and returns the value.
Example:

dim s as new StackIntegerMBS

call s.Push 5

MsgBox str(s.Bottom)

60.25.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Clears the stack.
Example:

dim s as new StackIntegerMBS

call s.Push 5

s.Clear

if s.IsEmpty then
MsgBox "OK"
60.25.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The destructor.
Notes:
There is no need to call this method except you want to free all resources of this object now without waiting
for Realbasic to do it for you.
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

60.25.6 Contains(o as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if one of the items on the stack is equal to the given integer value.
Example:

dim s as new StackIntegerMBS

call s.Push 5

if s.Contains(5) then
    MsgBox "found. OK"
else
    MsgBox "not found. Failed"
end if

60.25.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Counts how much items are on the stack.
Example:

dim s as new StackIntegerMBS

MsgBox str(s.Deep)

call s.Push 5

MsgBox str(s.Deep)
60.25.8 Pop as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Removes the top item of the stack and returns the value.
**Example:**
```vba
dim s as new StackIntegerMBS

call s.Push 5

MsgBox str(s.pop)
```

**Notes:** Returns 0 on any error.

60.25.9 PopBottom as Integer

MBS DataTypes Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Removes the bottom item of the stack and returns the value.
**Example:**
```vba
dim s as new StackIntegerMBS

call s.Push 5

MsgBox str(s.PopBottom)
```

60.25.10 Push(o as Integer) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Pushes a value on the stack.
**Example:**
```vba
dim s as new StackIntegerMBS

call s.Push 5
```

**Notes:**
60.25.11 Top as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns the value of the top item on the stack.
**Example:**
```plaintext
dim s as new StackIntegerMBS

call s.Push 5

MsgBox str(S.Top)
```

**Notes:** Returns 0 on any error.

60.25.12 Properties

60.25.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns true if the stack is empty.
**Example:**
```plaintext
dim s as new StackIntegerMBS

if s.IsEmpty then
    MsgBox "IsEmpty ok"
else
    MsgBox "IsEmpty failed"
end if

call s.Push 5

if s.IsEmpty then
    MsgBox "IsEmpty failed"
else
    MsgBox "IsEmpty ok"
end if
```
60.25. CLASS STACKINTEGERMBS

Notes: (Read only property)
60.26  class StackObjectMBS

60.26.1  class StackObjectMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function:  A class for a stack of objects.
Example:

```vba
dim s as new StackObjectMBS
call s.Push window1
MsgBox window(s.top).title
```

60.26.2  Methods

60.26.3  Bottom as object

MBS DataTypes Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function:  Returns the bottom item of the stack and returns the value.
Example:

```vba
dim s as new StackObjectMBS
call s.Push window1
MsgBox window(s.Bottom).title
```

60.26.4  clear

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function:  Clears the stack.
Example:

```vba
dim s as new StackObjectMBS
call s.Push window1
s.Clear

if s.IsEmpty then
    MsgBox "OK"
end if
```
60.26.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The destructor.

**Notes:**
There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

60.26.6 Contains(o as object) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns true if one of the object references on the stack is equal to the given object reference.

**Example:**
```ruby
dim s as new StackObjectMBS

call s.Push window1

if s.Contains(window1) then
  MsgBox "found. OK"
else
  MsgBox "not found. Failed"
end if
```

60.26.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Counts how much items are on the stack.

**Example:**
```ruby
dim s as new StackObjectMBS

MsgBox str(s.Deep)

call s.Push window1

MsgBox str(s.Deep)
```
60.26.8  Pop as object

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes the top item of the stack and returns the value.
Example:

```plaintext
dim s as new StackObjectMBS
call s.Push window1
MsgBox window(s.pop).title
```

Notes: Returns nil on any error.

60.26.9  PopBottom as object

MBS DataTypes Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes the bottom item of the stack and returns the value.
Example:

```plaintext
dim s as new StackObjectMBS
call s.Push window1
MsgBox window(s.PopBottom).title
```

60.26.10  Push(o as object) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Pushes a value on the stack.
Example:

```plaintext
dim s as new StackObjectMBS
call s.Push window1
```

Notes:
Returns true if successful.
May fail on low memory.
Does not push nil.
60.26. **CLASS STACKOBJECTMBS**

60.26.11 **Top as object**

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns the value of the top item on the stack.
**Example:**
```
dim s as new StackObjectMBS
call s.Push window1
MsgBox window(s.top).title
```

**Notes:** Returns nil on any error.

60.26.12 **Properties**

60.26.13 **IsEmpty as Boolean**

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns true if the stack is empty.
**Example:**
```
dim s as new StackObjectMBS

if s.IsEmpty then
MsgBox "IsEmpty ok"
else
MsgBox "IsEmpty failed"
end if

call s.Push window1

if s.IsEmpty then
MsgBox "IsEmpty failed"
else
MsgBox "IsEmpty ok"
end if
```

**Notes:** (Read only property)
60.27 class StackSingleMBS

60.27.1 class StackSingleMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for a stack of singles.
Example:

dim s as new StackSingleMBS

call s.Push 5

MsgBox str(S.Top)

60.27.2 Methods

60.27.3 Bottom as single

MBS DataTypes Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the bottom item of the stack and returns the value.
Example:

dim s as new StackSingleMBS

call s.Push 5

MsgBox str(s.Bottom)

60.27.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Clears the stack.
Example:

dim s as new StackSingleMBS

call s.Push 5

s.Clear

if s.IsEmpty then
MsgBox "OK"
end if

60.27.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The destructor.
Notes:
There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

60.27.6 Contains(o as single) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if one of the items on the stack is equal to the given single value.
Example:

dim s as new StackSingleMBS

call s.Push 5

if s.Contains(5) then
    MsgBox "found. OK"
else
    MsgBox "not found. Failed"
end if

60.27.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Counts how much items are on the stack.
Example:

dim s as new StackSingleMBS

MsgBox str(s.Deep)
call s.Push 5
MsgBox str(s.Deep)
60.27.8 Pop as single

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Removes the top item of the stack and returns the value.
**Example:**
```vbnet
dim s as new StackSingleMBS

call s.Push 5

MsgBox str(s.Pop)
```

**Notes:** Returns 0 on any error.

60.27.9 PopBottom as single

MBS DataTypes Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Removes the bottom item of the stack and returns the value.
**Example:**
```vbnet
dim s as new StackSingleMBS

call s.Push 5

MsgBox str(S.PopBottom)
```

60.27.10 Push(o as single) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Pushes a value on the stack.
**Example:**
```vbnet
dim s as new StackSingleMBS

call s.Push 5
```

**Notes:**
60.27. CLASS STACKSINGLEMBS

Returns true if successful.
May fail on low memory.

60.27.11 Top as single

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Returns the value of the top item on the stack.  
**Example:**

```
dim s as new StackSingleMBS

call s.Push 5

MsgBox str(S.Top)
```

**Notes:** Returns 0 on any error.

60.27.12 Properties

60.27.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Returns true if the stack is empty.  
**Example:**

```
dim s as new StackSingleMBS

if s.IsEmpty then
  MsgBox "IsEmpty ok"
else
  MsgBox "IsEmpty failed"
end if

call s.Push 5

if s.IsEmpty then
  MsgBox "IsEmpty failed"
else
  MsgBox "IsEmpty ok"
end if
```
Notes: (Read only property)
60.28. CLASS STACKSTRINGMBS

60.28 class StackStringMBS

60.28.1 class StackStringMBS

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for a stack of strings.
Example:

```vbnet
dim s as new StackStringMBS
call s.Push "Hello"
MsgBox s.Pop
```

60.28.2 Methods

60.28.3 Bottom as string

MBS DataTypes Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the bottom item of the stack and returns the value.
Example:

```vbnet
dim s as new StackStringMBS
call s.Push "Hello"
MsgBox s.Bottom
```

60.28.4 clear

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Clears the stack.
Example:

```vbnet
dim s as new StackStringMBS

call s.Push "abc"
s.Clear

if s.IsEmpty then
MsgBox "OK"
end if
```
60.28.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The destructor.
**Notes:**
There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

60.28.6 Contains(o as string) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns true if one of the string references on the stack is equal to the given double reference.
**Example:**
```plaintext
dim s as new StackStringMBS

call s.Push "Hello"

if s.Contains("Hello") then
    MsgBox "found. OK"
else
    MsgBox "not found. Failed"
end if
```

60.28.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Counts how much items are on the stack.
**Example:**
```plaintext
dim s as new StackStringMBS

MsgBox str(s.Deep)

call s.Push "Hello"

MsgBox str(s.Deep)
```
60.28.8 Pop as string

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Removes the top item of the stack and returns the value.
**Example:**
```vbscript
dim s as new StackStringMBS
call s.Push "Hello"
MsgBox s.Pop
```

**Notes:** Returns "" on any error.

60.28.9 PopBottom as string

MBS DataTypes Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Removes the bottom item of the stack and returns the value.
**Example:**
```vbscript
dim s as new StackStringMBS
call s.Push "Hello"
MsgBox s.PopBottom
```

60.28.10 Push(o as string) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Pushes a value on the stack.
**Example:**
```vbscript
dim s as new StackStringMBS
call s.Push "Hello"
```

**Notes:**
Returns true if successful.
May fail on low memory.
60.28.11 Top as string

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the value of the top item on the stack.
Example:
```
dim s as new StackStringMBS
call s.Push "Hello"
MsgBox s.Top
```

Notes: Returns "" on any error.

60.28.12 Properties

60.28.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the stack is empty.
Example:
```
dim s as new StackStringMBS

if s.IsEmpty then
    MsgBox "IsEmpty ok"
else
    MsgBox "IsEmpty failed"
end if

call s.Push "Hello"

if s.IsEmpty then
    MsgBox "IsEmpty failed"
else
    MsgBox "IsEmpty ok"
end if
```

Notes: (Read only property)
60.29. **CLASS STACKVARIANTMBS**

60.29  **class StackVariantMBS**

60.29.1  **class StackVariantMBS**

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** A class for a stack of variants.

**Example:**

```vba
dim s as new StackVariantMBS

call s.Push 5

MsgBox s.PopBottom
```

60.29.2  **Methods**

60.29.3  **Bottom as Variant**

MBS DataTypes Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Returns the bottom item of the stack and returns the value.

**Example:**

```vba
dim s as new StackVariantMBS

call s.Push 5

MsgBox s.Bottom
```

60.29.4  **clear**

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Clears the stack.

**Example:**

```vba
dim s as new StackVariantMBS

call s.Push 5

s.Clear

if s.IsEmpty then
    MsgBox "OK"
```
60.29.5 close

MBS DataTypes Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The destructor.

**Notes:**

There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

60.29.6 Contains(o as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Returns true if one of the variant references on the stack is equal to the given variant reference.

**Example:**

```vbp
dim s as new StackObjectMBS

call s.Push window1

if s.Contains(window1) then
    MsgBox "found. OK"
else
    MsgBox "not found. Failed"
end if
```

60.29.7 Deep as Integer

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Counts how much items are on the stack.

**Example:**

```vbp
dim s as new StackVariantMBS

MsgBox str(s.Deep)

call s.Push window1

MsgBox str(s.Deep)
```
60.29.8  Pop as Variant

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes the top item of the stack and returns the value.
Example:

```vbs
dim s as new StackVariantMBS
call s.Push 5
MsgBox s.pop
```

Notes: Returns nil on any error.

60.29.9  PopBottom as Variant

MBS DataTypes Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes the bottom item of the stack and returns the value.
Example:

```vbs
dim s as new StackVariantMBS
call s.Push 5
MsgBox s.PopBottom
```

60.29.10  Push(o as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Pushes a value on the stack.
Example:

```vbs
dim s as new StackVariantMBS
call s.Push 5
```

Notes:
Returns true if successfull.
May fail on low memory.

60.29.11 Top as Variant

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns the value of the top item on the stack.
**Example:**
```vbnet
dim s as new StackVariantMBS

call s.Push 5

MsgBox s.top
```

**Notes:** Returns nil on any error.

60.29.12 Properties

60.29.13 IsEmpty as Boolean

MBS DataTypes Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns true if the stack is empty.
**Example:**
```vbnet
dim s as new StackVariantMBS

if s.IsEmpty then
    MsgBox "IsEmpty ok"
else
    MsgBox "IsEmpty failed"
end if

call s.Push 5

if s.IsEmpty then
    MsgBox "IsEmpty failed"
else
    MsgBox "IsEmpty ok"
end if
60.29. CLASS STACKVARIANTMBS

Notes: (Read only property)
60.30 class StringHashSetIteratorMBS

60.30.1 class StringHashSetIteratorMBS

Function: The iterator for the StringHashSet class.

Example:

// Create a map
dim m as new StringHashSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringHashSetIteratorMBS = m.first
dim e as StringHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox i.Key
    i.MoveNext
wend

60.30.2 Methods

60.30.3 isEqual(other as StringHashSetIteratorMBS) as boolean

Function: Returns true if both iterators are equal.

Example:

// Create a map
dim m as new StringHashSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringHashSetIteratorMBS = m.first
dim e as StringHashSetIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox i.Key
i.MoveNext
wend

60.30.4 isNotEqual(other as StringHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Returns true if both iterators are not equal.  
**Example:**

```vbs
// Create a map
dim m as new StringHashSetMBS

m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringHashSetIteratorMBS = m.first
dim e as StringHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
  MsgBox i.Key
  i.MoveNext
wend
```

60.30.5 Key as string

**Function:** Returns the current key.

60.30.6 MoveNext

**Function:** Moves the iterator to the next item.  
**Example:**

```vbs
// Create a map
dim m as new StringHashSetMBS
```
m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringHashSetIteratorMBS = m.first
dim e as StringHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox i.Key
    i.MoveNext
wend
60.31.1 class StringHashSetMBS

**Function:** An alternative dictionary class for a hash set with strings. 
**Example:**
```vba
dim s as new StringHashSetMBS
s.insert "test"
s.insert "Test"
MsgBox str(s.Count) // shows 2
```

**Notes:**
All text comparison is done either case sensitive or insensitive. Defined in constructor. 
You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

60.31.2 Methods

60.31.3 Clear

**Function:** Erases all of the elements.

60.31.4 Constructor(CaseSensitive as Boolean = true)

**Function:** The default constructor. 
**Notes:** If CaseSensitive is true, the comparison of texts or strings is case sensitive. 
See also:
- 60.31.5 Constructor(Keys() as string)

60.31.5 Constructor(Keys() as string)

**Function:** Creates a new set from the values in the array.
CHAPTER 60. DATA TYPES

Example:

```vbscript
dim s() as string = array(“Hello”, “World”, “test”)

dim set as new StringHashSetMBS(s)

MsgBox str(set.Count)+” entries: ” +Join(set.keys,”, ”)
```

Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 60.31.4 Constructor(CaseSensitive as Boolean = true)

60.31.6 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Counts how often a key is used in this set.

60.31.7 find(key as string) as StringHashSetIteratorMBS

Notes: Returns the same value as the last method if the item was not found.

60.31.8 first as StringHashSetIteratorMBS

Example:

```vbscript
// Create a map
dim m as new StringHashSetMBS

m.insert(“1”)
m.insert(“2”)
m.insert(“3”)

// get iterators pointing to first and after last element
dim i as StringHashSetIteratorMBS = m.first
dim e as StringHashSetIteratorMBS = m.last

// Show all keys and values
```
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend

60.31.9  insert(key as string)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a value to the set.

60.31.10  Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value of key for the Indexth sequential item. **Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.31.11  Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns all the keys as an array. **Example:**

```dim m as new StringHashSetMBS
m.insert("1")
m.insert("2")
for each v as string in m.Keys
MsgBox v
next```

**Notes:** The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.
60.31.12 last as StringHashSetIteratorMBS

**Function:** Returns an iterator pointing to the end of the set.

**Example:**

```plaintext
// Create a map
dim m as new StringHashSetMBS
m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringHashSetIteratorMBS = m.first
dim e as StringHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox i.Key
    i.MoveNext
wend
```

60.31.13 lookup(key as string) as boolean

**Function:** Checks whether an element with the given key exists in this set.

**Example:**

```plaintext
dim set as new StringHashSetMBS
set.insert "Hello"
set.insert "World"

MsgBox str(set.lookup("missed")) // shows false as value is missing
MsgBox str(set.lookup("Hello")) // shows true as value is found
```

**Notes:** Returns true if yes and false if no.
60.31. **CLASS STRINGHASHSETMBS**

**60.31.14 Remove(first as StringHashSetIteratorMBS, last as StringHashSetIteratorMBS)**

**Function:** Erases all elements in a range.
See also:
- 60.31.15 Remove(key as string) as Integer
- 60.31.16 Remove(pos as StringHashSetIteratorMBS)

**60.31.15 Remove(key as string) as Integer**

**Function:** Erases the element with the given key.
See also:
- 60.31.14 Remove(first as StringHashSetIteratorMBS, last as StringHashSetIteratorMBS)
- 60.31.16 Remove(pos as StringHashSetIteratorMBS)

**60.31.16 Remove(pos as StringHashSetIteratorMBS)**

**Function:** Erases the element pointed to by the pos iterator.
See also:
- 60.31.14 Remove(first as StringHashSetIteratorMBS, last as StringHashSetIteratorMBS)
- 60.31.15 Remove(key as string) as Integer

**60.31.17 Properties**

**60.31.18 BinCount as Integer**

**Function:** The number of bins the hash table uses.
**Example:**

```vbs
    dim v as new StringHashSetMBS
    v.insert "1"
    v.insert "Hello"
    MsgBox str(v.BinCount)
```
Notes:
This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

60.31.19 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether text/string comparison is case sensitive.
Example:

dim s1 as new StringHashSetMBS(true)
dim s2 as new StringHashSetMBS(false)

s1.insert ”a”
s1.insert ”A”

s2.insert ”a”
s2.insert ”A”

MsgBox str(s1.Count)+” “+str(s2.Count)

Notes: (Read only property)

60.31.20 Count as Integer

Function: The number of items in this set.
Example:

dim set as new StringHashSetMBS

set.insert ”a”
set.insert ”b”

MsgBox str(set.Count)

Notes: (Read only property)
60.31.21 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if the size is zero.  
**Notes:** (Read only property)

60.31.22 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the largest possible size for this set.  
**Notes:**  
Value is -1 if no limit is defined.  
(Read only property)
CHAPTER 60. DATA TYPES

60.32 class StringOrderedSetIteratorMBS

60.32.1 class StringOrderedSetIteratorMBS

Function: The iterator for the StringOrderedSet class.

Example:

```vbs```
// Create a map
dim m as new StringOrderedSetMBS

m.insert("1")

m.insert("2")

m.insert("3")

// get iterators pointing to first and after last element
dim i as StringOrderedSetIteratorMBS = m.first
dim e as StringOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox i.Key
    i.MoveNext
wend
```

60.32.2 Methods

60.32.3 isEqual(other as StringOrderedSetIteratorMBS) as boolean

Function: Returns true if both iterators are equal.

Example:

```vbs```
// Create a map
dim m as new StringOrderedSetMBS

m.insert("1")

m.insert("2")

m.insert("3")

// get iterators pointing to first and after last element
dim i as StringOrderedSetIteratorMBS = m.first
dim e as StringOrderedSetIteratorMBS = m.last

// Show all keys and values
```
while i.isEqual(e) = false
MsgBox i.Key
i.MoveNext
wend

60.32.4  isNotEqual(other as StringOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if both iterators are not equal. **Example:**

```vbnet
// Create a map
dim m as new StringOrderedSetMBS
m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringOrderedSetIteratorMBS = m.first
dim e as StringOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

60.32.5  Key as string

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the current key.

60.32.6  MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the iterator to the next item. **Example:**

```vbnet
// Create a map
dim m as new StringOrderedSetMBS
```
m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringOrderedSetIteratorMBS = m.first
dim e as StringOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox i.Key
    i.MoveNext
wend

60.32.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the iterator to the previous item.
60.33.  CLASS STRINGORDEREDSETMBS

60.33  class StringOrderedSetMBS

60.33.1  class StringOrderedSetMBS

Function: An alternative dictionary class for an ordered set of strings.
Example:

```vba
dim s as new StringOrderedSetMBS
s.insert "test"
s.insert "Test"
MsgBox str(s.Count) // shows 2
```

Notes:
All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

60.33.2  Methods

60.33.3  Clear

60.33.4  Constructor(CaseSensitive as Boolean = true)

Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 60.33.5 Constructor(Keys() as string)

60.33.5  Constructor(Keys() as string)

Example:

```vbs
    dim s() as string = array("Hello", "World", "test")
    dim set as new StringOrderedSetMBS(s)
    MsgBox str(set.Count)+" entries: " +Join(set.keys," ")
```

Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 60.33.4 Constructor(CaseSensitive as Boolean = true)

60.33.6 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Counts how often a key is used in this set.

60.33.7 find(key as string) as StringOrderedSetIteratorMBS

Notes: Returns the same value as the last method if the item was not found.

60.33.8 first as StringOrderedSetIteratorMBS

Example:

```vbs
    // Create a map
    dim m as new StringOrderedSetMBS
    m.insert("1")
    m.insert("2")
    m.insert("3")

    // get iterators pointing to first and after last element
    dim i as StringOrderedSetIteratorMBS = m.first
    dim e as StringOrderedSetIteratorMBS = m.last

    // Show all keys and values
```
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend

60.33.9 insert(key as string)

60.33.10 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns the value of key for the Indexth sequential item. Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.33.11 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns all the keys as an array. Example:

dim m as new StringOrderedSetMBS

m.insert("1")
m.insert("2")

for each v as string in m.Keys
MsgBox v
next

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.
60.33.12 last as StringOrderedSetIteratorMBS

Function: Returns an iterator pointing to the end of the set.
Example:

```vbnet
// Create a map
dim m as new StringOrderedSetMBS
m.insert("1")
m.insert("2")
m.insert("3")

// get iterators pointing to first and after last element
dim i as StringOrderedSetIteratorMBS = m.first
dim e as StringOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox i.Key
    i.MoveNext
wend
```

60.33.13 lookup(key as string) as boolean

Function: Checks whether an element with the given key exists in this set.
Example:

dim set as new StringOrderedSetMBS

set.insert "Hello"
set.insert "World"

MsgBox str(set.lookup("missed")) // shows false as value is missing
MsgBox str(set.lookup("Hello")) // shows true as value is found

Notes: Returns true if yes and false if no.
60.33. **CLASS STRINGORDEREDSETMBS**

60.33.14 **LowerBound(key as string) as StringOrderedSetIteratorMBS**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator for the first element whose key is not less than k.

60.33.15 **Remove(first as StringOrderedSetIteratorMBS, last as StringOrderedSetIteratorMBS)**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases all elements in a range.

See also:

- 60.33.16 Remove(key as string) as Integer

- 60.33.17 Remove(pos as StringOrderedSetIteratorMBS)

60.33.16 **Remove(key as string) as Integer**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases the element with the given key.

See also:

- 60.33.15 Remove(first as StringOrderedSetIteratorMBS, last as StringOrderedSetIteratorMBS)

- 60.33.17 Remove(pos as StringOrderedSetIteratorMBS)

60.33.17 **Remove(pos as StringOrderedSetIteratorMBS)**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases the element pointed to by the pos iterator.

See also:

- 60.33.15 Remove(first as StringOrderedSetIteratorMBS, last as StringOrderedSetIteratorMBS)

- 60.33.16 Remove(key as string) as Integer

60.33.18 **UpperBound(key as string) as StringOrderedSetIteratorMBS**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator for the first element whose key is greater than k.
60.33.19 Properties

60.33.20 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Whether text/string comparison is case sensitive.
**Example:**
```vba
dim s1 as new StringOrderedSetMBS(true)
dim s2 as new StringOrderedSetMBS(false)
```
```vba
s1.insert "a"
s1.insert "A"
s2.insert "a"
s2.insert "A"
```
```vba
MsgBox str(s1.Count)+" "+str(s2.Count)
```

**Notes:** (Read only property)

60.33.21 Count as Integer

**Function:** The number of items in this set.
**Example:**
```vba
dim set as new StringOrderedSetMBS

set.insert "a"
set.insert "b"
```
```vba
MsgBox str(set.Count)
```

**Notes:** (Read only property)

60.33.22 Empty as Boolean

**Function:** True if the size is zero.
**Notes:** (Read only property)
60.33.23  MaxSize as Integer

**Function:** Returns the largest possible size for this set.
**Notes:**
Value is -1 if no limit is defined.
(Read only property)
60.34 class StringToStringHashMapIteratorMBS

60.34.1 class StringToStringHashMapIteratorMBS

Function: The iterator for the StringToStringHashMap class.

Example:

```vbnet
// Create a map
dim m as new StringToStringHashMapMBS
m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!

// get iterators pointing to first and after last element
dim i as StringToStringHashMapIteratorMBS = m.first
dim e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key) + " -" + i.Value
    i.MoveNext
wend
```

60.34.2 Methods

60.34.3 isEqual(other as StringToStringHashMapIteratorMBS) as boolean

Function: Returns true if both iterators are equal.

Example:

```vbnet
// Create a map
dim m as new StringToStringHashMapMBS
m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!

// get iterators pointing to first and after last element
dim i as StringToStringHashMapIteratorMBS = m.first
dim e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
```
while i.isEqual(e) = false
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend

60.34.4  isNotEqual(other as StringToNullahMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function**: Returns true if both iterators are not equal. 

**Example**: 
``` vbnet
// Create a map
dim m as new StringToNullahMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!

// get iterators pointing to first and after last element
dim i as StringToNullahMapIteratorMBS = m.first
dim e as StringToNullahMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" ->"+i.Value
i.MoveNext
wend
```

60.34.5  Key as string

**Function**: Returns the current key. 

60.34.6  MoveNext

**Function**: Moves the iterator to the next item. 

**Example**: 
``` vbnet
// Create a map
dim m as new StringToNullahMapMBS
```
m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringHashMapIteratorMBS = m.first
dim e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+ " ->"+i.Value
    i.MoveNext
wend

60.34.7 Properties

60.34.8 Value as string

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value of the current item in the iterator. **Notes:** (Read and Write computed property)
60.35  class StringToStringHashMapMBS

60.35.1  class StringToStringHashMapMBS

**Function:** An alternative dictionary class for a hash map with strings as keys and values.  
**Example:**

```vbnet
dim s as new StringToStringHashMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

**Notes:**

All text comparison is done either case sensitive or insensitive. Defined in constructor.  
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

60.35.2  Methods

60.35.3  AddKeys(targetArray() as string)

**Function:** Similar to keys, but adds keys to the given array.  
**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.35.4  AddValues(targetArray() as string)

**Function:** Similar to values, but adds values to the given array.  
**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.
60.35.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases all of the elements.

60.35.6 Clone as StringToStringHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of this map.

60.35.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of this map as a dictionary.

**Example:**

```vbnet
dim d as new Dictionary
d.Value("Hello") = "World"

// convert o map
dim m as new StringToStringHashMapMBS(d)
MsgBox str(m.Count)

// convert back
dim o as Dictionary = m.CloneDictionary
MsgBox o.Value("Hello")
```

60.35.8 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The default constructor.

**Notes:** If CaseSensitive is true, the comparison of texts or strings is case sensitive.

See also:

- 60.35.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)
- 60.35.10 Constructor(other as StringToStringHashMapMBS)
60.35.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

Function: Creates a new map with the keys and values from the dictionary.
Example:

```vbnet
' convert to map
Dim m As New StringToStringHashMapMBS(d)
MsgBox Str(m.Count)

' convert back
Dim o As Dictionary = m.CloneDictionary
MsgBox o.Value("Hello")
```

See also:

- 60.35.8 Constructor(CaseSensitive as Boolean = true)
- 60.35.10 Constructor(other as StringToStringHashMapMBS)

60.35.10 Constructor(other as StringToStringHashMapMBS)

Function: Creates a new map with the keys and values from the existing map.
Example:

```vbnet
' convert to map
Dim m As New StringToStringHashMapMBS(d)
MsgBox Str(m.Count)

' convert back
Dim o As StringToStringHashMapMBS = m.Clone
MsgBox o.Value("Hello")
```

See also:

- 60.35.8 Constructor(CaseSensitive as Boolean = true)
- 60.35.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)
### 60.35.11 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts how often a key is used in this map.

### 60.35.12 find(key as string) as StringToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds the key and returns an iterator. **Notes:** Returns the same value as the last method if the item was not found.

### 60.35.13 first as StringToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the beginning of the map. **Example:**

```vba
// Create a map
dim m as new StringToStringHashMapMBS
m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!

// get iterators pointing to first and after last element
dim i as StringToStringHashMapIteratorMBS = m.first
dim e as StringToStringHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" -"+i.Value
    i.MoveNext
wend
```

### 60.35.14 hasKey(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns True if Key is in the map and False if it is not. Returns a Boolean.
60.35. CLASS STRINGTOSTRINGHASHMAPMBS

60.35.15 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value of key for the Indexth sequential item. **Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.35.16 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns all the keys as an array. **Example:**
```
    dim m as new StringToStringHashMapMBS
    m.Value("1")="Hello"
    m.Value("2")="World"
    for each v as string in m.Keys
        MsgBox str(v)
    next
```
**Notes:** The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

60.35.17 last as StringToStringHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the end of the map. **Example:**
```
    // Create a map
    dim m as new StringToStringHashMapMBS
    m.value("1")="Hello"
    m.value("2")="World"
    m.value("3")="!"
    // get iterators pointing to first and after last element
    dim i as StringToStringHashMapIteratorMBS = m.first
    dim e as StringToStringHashMapIteratorMBS = m.last
    // Show all keys and values
```
while i.isNotEqual(e)
        MsgBox str(i.Key) + " - > " + i.Value
        i.MoveNext
wend

60.35.18  lookup(key as string, defaultValue as string) as string

Function: Looks up the passed value of Key.
Example:

        dim map as new StringToStringHashMapMBS

        map.value("a") = "Hello"
        map.value("b") = "World"
        map.value("c") = "!

        MsgBox str(map.lookup("d","?"))  // shows "?" as value is missing
        MsgBox str(map.lookup("a","?"))  // shows "Hello" as value is found

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed default Value.

60.35.19  Operator Convert as Dictionary

Function: Creates a copy of the map as dictionary.
Example:

        dim d as new Dictionary
        d.Value("Hello") = "World"

        // convert o map
        dim m as StringToStringHashMapMBS = d
        MsgBox str(m.Count)

        // convert back
        dim o as Dictionary = m
        MsgBox o.Value("Hello")
60.35. CLASS STRINGTOSTRINGHASHMAPMBS

60.35.20 Remove(first as StringToStringHashMapIteratorMBS, last as StringToStringHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases all elements in a range.

See also:

- 60.35.21 Remove(key as string) as Integer
- 60.35.22 Remove(pos as StringToStringHashMapIteratorMBS)

60.35.21 Remove(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases the element with the given key.

See also:

- 60.35.20 Remove(first as StringToStringHashMapIteratorMBS, last as StringToStringHashMapIteratorMBS)
- 60.35.22 Remove(pos as StringToStringHashMapIteratorMBS)

60.35.22 Remove(pos as StringToStringHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases the element pointed to by the pos iterator.

See also:

- 60.35.20 Remove(first as StringToStringHashMapIteratorMBS, last as StringToStringHashMapIteratorMBS)
- 60.35.21 Remove(key as string) as Integer

60.35.23 ValueAtIndex(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value with the given index.

**Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.35.24 Values as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns all the values as an array
Example:

dim m as new StringToStringHashMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Values
    MsgBox str(v)
next

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

60.35.25 Properties

60.35.26 BinCount as Integer

Function: The number of bins the hash table uses.
Example:

dim v as new StringToStringHashMapMBS

v.value("1")="Hello"
v.value("2")="World"

MsgBox str(v.BinCount)

Notes:  
This is a measure of the hash table size, independent of the number of items the Dictionary contains.  
(Read only property)

60.35.27 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
Function: Whether text/string comparison is case sensitive.
Example:

dim s1 as new StringToStringHashMapMBS(true)  
dim s2 as new StringToStringHashMapMBS(false)
s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count) + " " + str(s2.Count)

Notes: (Read only property)

60.35.28 Count as Integer

Function: The number of items in this map.
Example:

```vba
Dim map As New StringToStringHashMapMBS
map.Value("?") = "?"
map.Value("Hello") = "World"
MsgBox str(map.Count)
```

Notes: (Read only property)

60.35.29 Empty as Boolean

Function: True if the size is zero.
Notes: (Read only property)

60.35.30 MaxSize as Integer

Function: Returns the largest possible size for this map.
Notes: Value is -1 if no limit is defined.
60.35.31  value(key as string) as string

Function: The value associated with the given key.

Notes:
If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)
**60.36. CLASS STRINGTOSTRINGORDEREDMAPITERATORMBS**

**60.36 class StringToStringOrderedMapIteratorMBS**

**Function:** The iterator for the StringToStringOrderedMap class.

**Example:**

```vbnet
// Create a map
dim m as new StringToStringOrderedMapMBS
m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!

// get iterators pointing to first and after last element
dim i as StringToStringOrderedMapIteratorMBS = m.first
dim e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" ->"+i.Value
    i.MoveNext
wend
```

**60.36.2 Methods**

**60.36.3 isEqual(other as StringToStringOrderedMapIteratorMBS) as boolean**

**Function:** Returns true if both iterators are equal.

**Example:**

```vbnet
// Create a map
dim m as new StringToStringOrderedMapMBS
m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!

// get iterators pointing to first and after last element
dim i as StringToStringOrderedMapIteratorMBS = m.first
dim e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
```
while i.isEqual(e) = false
MsgBox str(i.Key)+" -"+i.Value
i.MoveNext
wend

60.36.4 isNotEqual(other as StringToStringOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Returns true if both iterators are not equal. 
**Example:**

// Create a map
dim m as new StringToStringOrderedMapMBS
m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!

// get iterators pointing to first and after last element
dim i as StringToStringOrderedMapIteratorMBS = m.first
dim e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e) = false
MsgBox str(i.Key)+" -"+i.Value
i.MoveNext
wend

60.36.5 Key as string

**Function:** Returns the current key.

60.36.6 MoveNext

**Function:** Moves the iterator to the next item. 
**Example:**

// Create a map
dim m as new StringToStringOrderedMapMBS
m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringOrderedMapIteratorMBS = m.first
dim e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" >"+i.Value
    i.MoveNext
wend

60.36.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the iterator to the previous item.

60.36.8 Properties

60.36.9 Value as string

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value of the current item in the iterator.

**Notes:** (Read and Write computed property)
60.37  class StringToStringOrderedMapMBS

60.37.1  class StringToStringOrderedMapMBS

Function: An alternative dictionary class for an ordered map with strings for keys and values.
Example:

```vba
dim s as new StringToStringOrderedMapMBS
s.Value("Test")="Hello"
s.Value("test")="World"
MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"
MsgBox str(s.Count) // shows 4
```

Notes:
All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you
prefer a higher speed with the HashMap class.

60.37.2  Methods

60.37.3  AddKeys(targetArray() as string)

Function: Similar to keys, but adds keys to the given array.
Notes: For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys
function returns always nil.

60.37.4  AddValues(targetArray() as string)

Function: Similar to values, but adds values to the given array.
Notes: For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys
function returns always nil.
60.37.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases all of the elements.

60.37.6 Clone as StringToStringOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of this map.

60.37.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of this map as a dictionary.

60.37.8 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The default constructor. **Notes:** If CaseSensitive is true, the comparison of texts or strings is case sensitive. See also:

- 60.37.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 10807
- 60.37.10 Constructor(other as StringToStringOrderedMapMBS) 10807

60.37.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new map with the keys and values from the dictionary. See also:

- 60.37.8 Constructor(CaseSensitive as Boolean = true) 10807
- 60.37.10 Constructor(other as StringToStringOrderedMapMBS) 10807

60.37.10 Constructor(other as StringToStringOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new map with the keys and values from the existing map. See also:
60.37.11 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts how often a key is used in this map.

60.37.12 find(key as string) as StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds the key and returns an iterator. **Notes:** Returns the same value as the last method if the item was not found.

60.37.13 first as StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the beginning of the map. **Example:**

```vbnet
// Create a map
dim m as new StringToStringOrderedMapMBS
m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!

// get iterators pointing to first and after last element
dim i as StringToStringOrderedMapIteratorMBS = m.first
dim e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" - >"+i.Value
    i.MoveNext
wend
```
60.37. **CLASS STRINGTOSTRINGORDEREDMAPMBS**

### 60.37.14 hasKey(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns True if Key is in the map and False if it is not. Returns a Boolean.

### 60.37.15 Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value of key for the Indexth sequential item. **Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

### 60.37.16 Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns all the keys as an array. **Example:**

```plaintext
dim m as new StringToStringOrderedMapMBS
m.Value("1")="Hello"
m.Value("2")="World"
for each v as string in m.Keys
    MsgBox str(v)
next
```

**Notes:** The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

### 60.37.17 last as StringToStringOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the end of the map. **Example:**

```plaintext
// Create a map
dim m as new StringToStringOrderedMapMBS
m.value("1")="Hello"
m.value("2")="World"
```
m.value("3")="!"

// get iterators pointing to first and after last element
dim i as StringToStringOrderedMapIteratorMBS = m.first
dim e as StringToStringOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key) + " ->" + i.Value
    i.MoveNext
wend

60.37.18  lookup(key as string, defaultValue as string) as string

Function: Looks up the passed value of Key.
Example:

dim map as new StringToStringOrderedMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!

MsgBox str(map.lookup("d","?"))  // shows "?" as value is missing
MsgBox str(map.lookup("a","?"))  // shows "Hello" as value is found

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed default Value.

60.37.19  LowerBound(key as string) as StringToStringOrderedMapIteratorMBS

Function: Returns an iterator for the first element whose key is not less than k.

60.37.20  Operator Convert as Dictionary

Function: Creates a copy of the map as dictionary.
60.37.21  Remove(first as StringToStringOrderedMapIteratorMBS, last as StringToStringOrderedMapIteratorMBS)

**Function:** Erases all elements in a range.  
See also:
- 60.37.22 Remove(key as string) as Integer  
- 60.37.23 Remove(pos as StringToStringOrderedMapIteratorMBS)

60.37.22  Remove(key as string) as Integer

**Function:** Erases the element with the given key.  
See also:
- 60.37.21 Remove(first as StringToStringOrderedMapIteratorMBS, last as StringToStringOrderedMapIteratorMBS)  
- 60.37.23 Remove(pos as StringToStringOrderedMapIteratorMBS)

60.37.23  Remove(pos as StringToStringOrderedMapIteratorMBS)

**Function:** Erases the element pointed to by the pos iterator.  
See also:
- 60.37.21 Remove(first as StringToStringOrderedMapIteratorMBS, last as StringToStringOrderedMapIteratorMBS)  
- 60.37.22 Remove(key as string) as Integer

60.37.24  UpperBound(key as string) as StringToStringOrderedMapIteratorMBS

**Function:** Returns an iterator for the first element whose key is greater than k.

60.37.25  ValueAtIndex(index as Integer) as string

**Function:** Returns the value with the given index.  
**Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first
item has the index zero.

### 60.37.26 Values as string()

**Function:** Returns all the values as an array

**Example:**

```vbs
dim m as new StringToStringOrderedMapMBS

m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Values
    MsgBox str(v)
next
```

**Notes:** The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

### 60.37.27 Properties

#### 60.37.28 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Whether text/string comparison is case sensitive.

**Example:**

```vbs
dim s1 as new StringToStringOrderedMapMBS(true)
dim s2 as new StringToStringOrderedMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

**Notes:** (Read only property)
### 60.37.29 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of items in this map.

**Example:**

```vbs
Dim map As New StringToStringOrderedMapMBS
map.Value("?") = "?
map.Value("Hello") = "World"
MsgBox Str(map.Count)
```

**Notes:** (Read only property)

### 60.37.30 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if the size is zero.

**Notes:** (Read only property)

### 60.37.31 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the largest possible size for this map.

**Notes:**

Value is -1 if no limit is defined.
(Read only property)

### 60.37.32 value(key as string) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value associated with the given key.

**Notes:**

If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)
60.38 class StringToVariantHashMapIteratorMBS

60.38.1 class StringToVariantHashMapIteratorMBS

**Function:** The iterator for the StringToVariantHashMap class. 
**Example:**

```plaintext
// Create a map
Dim m As New StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!

// get iterators pointing to first and after last element
Dim i As StringToVariantHashMapIteratorMBS = m.first
Dim e As StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
While i.isNotEqual(e)
    MsgBox str(i.Key)+" -"+i.Value
    i.MoveNext
Wend
```

60.38.2 Methods

60.38.3 isEqual(other as StringToVariantHashMapIteratorMBS) as boolean

**Function:** Returns true if both iterators are equal. 
**Example:**

```plaintext
// Create a map
Dim m As New StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!

// get iterators pointing to first and after last element
Dim i As StringToVariantHashMapIteratorMBS = m.first
Dim e As StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
```
while i.isEqual(e) = false
MsgBox str(i.Key)+” -”+i.Value
i.MoveNext
wend

60.38.4 isNotEqual(other as StringToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Returns true if both iterators are not equal. 
**Example:**

// Create a map
dim m as new StringToVariantHashMapMBS
m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!

// get iterators pointing to first and after last element
dim i as StringToVariantHashMapIteratorMBS = m.first
dim e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+” -”+i.Value
i.MoveNext
wend

60.38.5 Key as string

**Function:** Returns the current key. 

60.38.6 MoveNext

**Function:** Moves the iterator to the next item. 
**Example:**

// Create a map
dim m as new StringToVariantHashMapMBS
m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!

// get iterators pointing to first and after last element
dim i as StringToVariantHashMapIteratorMBS = m.first
dim e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" ->"+i.Value
    i.MoveNext
wend

60.38.7 Properties

60.38.8 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The value of the current item in the iterator. Notes: (Read and Write computed property)
60.39  class StringToVariantHashMapMBS

60.39.1  class StringToVariantHashMapMBS

**Function:** An alternative dictionary class for a hash map with strings as keys and variants as values.  
**Example:**

```
dim s as new StringToVariantHashMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

**Notes:**  
All text comparison is done either case sensitive or insensitive. Defined in constructor.  
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you  
prefer a higher speed with the HashMap class.

60.39.2  Methods

60.39.3  AddKeys(targetArray() as string)

**Function:** Similar to keys, but adds keys to the given array.  
**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys  
function returns always nil.

60.39.4  AddValues(targetArray() as Variant)

**Function:** Similar to values, but adds values to the given array.  
**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys  
function returns always nil.
60.39.5  Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases all of the elements.

60.39.6  Clone as StringToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of this map.

60.39.7  CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of this map as a dictionary.

60.39.8  Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The default constructor.  
**Notes:** If CaseSensitive is true, the comparison of texts or strings is case sensitive.  
See also:
- 60.39.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)  
- 60.39.10 Constructor(other as StringToVariantHashMapMBS)

60.39.9  Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new map with the keys and values from the dictionary.  
See also:
- 60.39.8 Constructor(CaseSensitive as Boolean = true)  
- 60.39.10 Constructor(other as StringToVariantHashMapMBS)

60.39.10  Constructor(other as StringToVariantHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new map with the keys and values from the existing map.  
See also:
60.39. CLASS STRINGTOVARIANTHASHMAPMBS

- 60.39.8 Constructor(CaseSensitive as Boolean = true)
- 60.39.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

60.39.11 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Counts how often a key is used in this map.

60.39.12 find(key as string) as StringToVariantHashMapIteratorMBS

Notes: Returns the same value as the last method if the item was not found.

60.39.13 first as StringToVariantHashMapIteratorMBS

Example:

```vbs
// Create a map
dim m as new StringToVariantHashMapMBS
m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!

// get iterators pointing to first and after last element
dim i as StringToVariantHashMapIteratorMBS = m.first
dim e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" -">" +i.Value
    i.MoveNext
wend
```
60.39.14  hasKey(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns True if Key is in the map and False if it is not. Returns a Boolean.

60.39.15  Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value of key for the Indexth sequential item. 

**Example:**
```v
dim v as new StringToVariantHashMapMBS
v.Value("Hello") = "World"
MsgBox v.Key(0) + ": " + v.ValueAtIndex(0)
```

**Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.39.16  Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns all the keys as an array. 

**Example:**
```v
dim m as new StringToVariantHashMapMBS
m.Value("1") = "Hello"
m.Value("2") = "World"
for each v as string in m.Keys
    MsgBox str(v)
next
```

**Notes:** The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.
60.39. **CLASS STRINGTOVARIANTHASHMAPMBS**

60.39.17 **last** as StringToVariantHashMapIteratorMBS

**Function:** Returns an iterator pointing to the end of the map.  
**Example:**

```vbnet
// Create a map
dim m as new StringToVariantHashMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!

// get iterators pointing to first and after last element
dim i as StringToVariantHashMapIteratorMBS = m.first
dim e as StringToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" -> " + i.Value
    i.MoveNext
wend
```

60.39.18 **lookup(key as string, defaultvalue as Variant) as Variant**

**Function:** Looks up the passed value of Key.  
**Example:**

```vbnet
dim map as new StringToVariantHashMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!

MsgBox str(map.lookup("d","?"))) // shows "?" as value is missing
MsgBox str(map.lookup("a","?"))) // shows "Hello" as value is found
```

**Notes:** If Key is found, it returns the corresponding value. If Key is not found, it returns the passed default value.
60.39.19 Operator_Convert as Dictionary

Function: Creates a copy of the map as dictionary.

60.39.20 Remove(first as StringToVariantHashMapIteratorMBS, last as StringToVariantHashMapIteratorMBS)

Function: Erases all elements in a range.  
See also:

• 60.39.21 Remove(key as string) as Integer 10822
• 60.39.22 Remove(pos as StringToVariantHashMapIteratorMBS) 10822

60.39.21 Remove(key as string) as Integer

Function: Erases the element with the given key.  
See also:

• 60.39.20 Remove(first as StringToVariantHashMapIteratorMBS, last as StringToVariantHashMapIteratorMBS) 10822
• 60.39.22 Remove(pos as StringToVariantHashMapIteratorMBS) 10822

60.39.22 Remove(pos as StringToVariantHashMapIteratorMBS)

Function: Erases the element pointed to by the pos iterator.  
See also:

• 60.39.20 Remove(first as StringToVariantHashMapIteratorMBS, last as StringToVariantHashMapIteratorMBS) 10822
• 60.39.21 Remove(key as string) as Integer 10822

60.39.23 ValueAtIndex(index as Integer) as Variant

Function: Returns the value with the given index.  
Example:
dim v as new StringToVariantHashMapMBS
v.Value("Hello") = "World"
MsgBox v.Key(0)+": " +v.ValueAtIndex(0)

Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.39.24 Values as Variant()

Function: Returns all the values as an array
Example:

dim m as new StringToVariantHashMapMBS
m.Value("1") = "Hello"
m.Value("2") = "World"

for each v as string in m.Values
    MsgBox str(v)
next

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

60.39.25 Properties

60.39.26 BinCount as Integer

Function: The number of bins the hash table uses.
Example:

dim v as new StringToVariantHashMapMBS
v.value("1") = "Hello"
v.value("2") = "World"

MsgBox str(v.BinCount)
Notes:
This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

60.39.27 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether text/string comparison is case sensitive.
Example:

```vba
dim s1 as new StringToVariantHashMapMBS(true)
dim s2 as new StringToVariantHashMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count) + " " + str(s2.Count)
```

Notes: (Read only property)

60.39.28 Count as Integer

Function: The number of items in this map.
Example:

```vba
dim map as new StringToVariantHashMapMBS

map.Value("?" ) = "?"
map.Value("Hello") = "World"

MsgBox str(map.Count)
```

Notes: (Read only property)
60.39. **CLASS STRINGTOVARIANTHASHMAPMBS**

60.39.29 **Empty as Boolean**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if the size is zero. **Notes:** (Read only property)

60.39.30 **MaxSize as Integer**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the largest possible size for this map. **Notes:**

Value is -1 if no limit is defined. (Read only property)

60.39.31 **value(key as string) as Variant**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value associated with the given key. **Example:**

```vbnet
dim v as new StringToVariantHashMapMBS
v.Value("Hello") = "World"
MsgBox v.Key(0) + ": " + v.ValueAtIndex(0)
```

**Notes:**

If you query for a key which does not exist, a KeyNotFoundException is raised. (Read and Write computed property)
CHAPTER 60. DATA TYPES

60.40  class StringToVariantOrderedMapIteratorMBS

60.40.1  class StringToVariantOrderedMapIteratorMBS

**Function:** The iterator for the StringToVariantOrderedMap class.

**Example:**

```vbscript
// Create a map
dim m as new StringToVariantOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!

// get iterators pointing to first and after last element
dim i as StringToVariantOrderedMapIteratorMBS = m.first
dim e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key) + " - > " + i.Value
    i.MoveNext
wend
```

60.40.2  Methods

60.40.3  isEqual(other as StringToVariantOrderedMapIteratorMBS) as boolean

**Function:** Returns true if both iterators are equal.

**Example:**

```vbscript
// Create a map
dim m as new StringToVariantOrderedMapMBS

m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!

// get iterators pointing to first and after last element
dim i as StringToVariantOrderedMapIteratorMBS = m.first
dim e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key) + " - > " + i.Value
    i.MoveNext
wend
```
while i.isEqual(e) = false
MsgBox str(i.Key)+" -" + i.Value
i.MoveNext
wend

60.40.4 isNotEqual(other as StringToVariantOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns true if both iterators are not equal.

**Example:**
// Create a map
dim m as new StringToVariantOrderedMapMBS
m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!

// get iterators pointing to first and after last element
dim i as StringToVariantOrderedMapIteratorMBS = m.first
dim e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key)+" -" + i.Value
i.MoveNext
wend

60.40.5 Key as string

**Function:** Returns the current key.

60.40.6 MoveNext

**Function:** Moves the iterator to the next item.

**Example:**
// Create a map
dim m as new StringToVariantOrderedMapMBS
m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!

// get iterators pointing to first and after last element
dim i as StringToVariantOrderedMapIteratorMBS = m.first
dim e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" =>"+i.Value
    i.MoveNext
wend

60.40.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the iterator to the previous item.

60.40.8 Properties

60.40.9 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value of the current item in the iterator. **Notes:** (Read and Write computed property)
60.41.  CLASS STRINGTOVARIANTORDEREDMAPMBS

60.41  class StringToVariantOrderedMapMBS

60.41.1  class StringToVariantOrderedMapMBS

Function: An alternative dictionary class for an ordered map with strings as keys and variants as values.
Example:

```rb
dim s as new StringToVariantOrderedMapMBS

s.Value(“Test”)=”Hello”
s.Value(“test”)=”World”

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding(“test”, encodings.UTF16))=”Just a”
s.Value(ConvertEncoding(“Test”, encodings.UTF16))=”test”

MsgBox str(s.Count) // shows 4
```

Notes:
All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

60.41.2  Methods

60.41.3  AddKeys(targetArray() as string)

Function: Similar to keys, but adds keys to the given array.
Notes: For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.41.4  AddValues(targetArray() as Variant)

Function: Similar to values, but adds values to the given array.
Notes: For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.
60.41.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases all of the elements.

60.41.6 Clone as StringToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of this map.

60.41.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of this map as a dictionary.

60.41.8 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The default constructor. **Notes:** If CaseSensitive is true, the comparison of texts or strings is case sensitive. See also:

- 60.41.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 10830
- 60.41.10 Constructor(other as StringToVariantOrderedMapMBS) 10830

60.41.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new map with the keys and values from the dictionary. See also:

- 60.41.8 Constructor(CaseSensitive as Boolean = true) 10830
- 60.41.10 Constructor(other as StringToVariantOrderedMapMBS) 10830

60.41.10 Constructor(other as StringToVariantOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new map with the keys and values from the existing map. See also:
60.41. **CLASS STRINGTOVARIANTORDEREDMAPMBS**

- 60.41.8 Constructor(CaseSensitive as Boolean = true)  
- 60.41.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

### 60.41.11 CountKey(key as string) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts how often a key is used in this map.

### 60.41.12 find(key as string) as StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds the key and returns an iterator.  
**Notes:** Returns the same value as the last method if the item was not found.

### 60.41.13 first as StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the beginning of the map.  
**Example:**

```vba
// Create a map
dim m as new StringToVariantOrderedMapMBS
m.value("1")="Hello"
m.value("2")="World"
m.value("3")="!

// get iterators pointing to first and after last element
dim i as StringToVariantOrderedMapIteratorMBS = m.first
dim e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" - >"+i.Value
    i.MoveNext
wend
```
60.41.14  hasKey(key as string) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns True if Key is in the map and False if it is not. Returns a Boolean.

60.41.15  Key(index as Integer) as string

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value of key for the Indexth sequential item. **Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.41.16  Keys as string()

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns all the keys as an array. **Example:**

```vba
dim m as new StringToVariantOrderedMapMBS
m.Value("1")="Hello"
m.Value("2")="World"

for each v as string in m.Keys
    MsgBox v
next
```

**Notes:** The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

60.41.17  last as StringToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the end of the map. **Example:**

```vba
// Create a map
dim m as new StringToVariantOrderedMapMBS
m.value("1")="Hello"
m.value("2")="World"
```
m.value("3")="!

// get iterators pointing to first and after last element
dim i as StringToVariantOrderedMapIteratorMBS = m.first
dim e as StringToVariantOrderedMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" - >"+i.Value
    i.MoveNext
wend

60.41.18 lookup(key as string, defaultValue as Variant) as Variant

Function: Looks up the passed value of Key.
Example:

    dim map as new StringToVariantOrderedMapMBS

    map.value("a")="Hello"
    map.value("b")="World"
    map.value("c")="!

    MsgBox str(map.lookup( "d","?")) // shows "?" as value is missing
    MsgBox str(map.lookup( "a","?")) // shows "Hello" as value is found

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

60.41.19 LowerBound(key as string) as StringToVariantOrderedMapIteratorMBS

Function: Returns an iterator for the first element whose key is not less than k.

60.41.20 Operator_Convert as Dictionary

Function: Creates a copy of the map as dictionary.
CHAPTER 60. DATA TYPES

60.41.21 Remove(first as StringToVariantOrderedMapIteratorMBS, last as StringToVariantOrderedMapIteratorMBS)

**Function:** Erases all elements in a range. 
See also:

- 60.41.22 Remove(key as string) as Integer
- 60.41.23 Remove(pos as StringToVariantOrderedMapIteratorMBS)

60.41.22 Remove(key as string) as Integer

**Function:** Erases the element with the given key. 
See also:

- 60.41.21 Remove(first as StringToVariantOrderedMapIteratorMBS, last as StringToVariantOrderedMapIteratorMBS)
- 60.41.23 Remove(pos as StringToVariantOrderedMapIteratorMBS)

60.41.23 Remove(pos as StringToVariantOrderedMapIteratorMBS)

**Function:** Erases the element pointed to by the pos iterator. 
See also:

- 60.41.21 Remove(first as StringToVariantOrderedMapIteratorMBS, last as StringToVariantOrderedMapIteratorMBS)
- 60.41.22 Remove(key as string) as Integer

60.41.24 UpperBound(key as string) as StringToVariantOrderedMapIteratorMBS

**Function:** Returns an iterator for the first element whose key is greater than k.

60.41.25 ValueAtIndex(index as Integer) as Variant

**Function:** Returns the value with the given index. 
**Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first
item has the index zero.

### 60.41.26 Values as Variant()

**Function:** Returns all the values as an array
**Example:**
```vbnet
dim m as new StringToVariantOrderedMapMBS
m.Value("1")="Hello"
m.Value("2")="World"
for each v as string in m.Values
    MsgBox v
next
```

**Notes:** The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

### 60.41.27 Properties

#### 60.41.28 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Whether text/string comparison is case sensitive.
**Example:**
```vbnet
dim s1 as new StringToVariantOrderedMapMBS(true)
dim s2 as new StringToVariantOrderedMapMBS(false)
s1.value("a") = "1"
s1.value("A") = "2"
s2.value("a") = "1"
s2.value("A") = "2"
MsgBox str(s1.Count)+" "+str(s2.Count)
```

**Notes:** (Read only property)
60.41.29  Count as Integer

**Function:** The number of items in this map.  
**Example:**

```vbnet
dim map as new StringToVariantOrderedMapMBS
map.Value("?")="?"
map.Value("Hello")="World"
MsgBox str(map.Count)
```

**Notes:** (Read only property)

60.41.30  Empty as Boolean

**Function:** True if the size is zero.  
**Notes:** (Read only property)

60.41.31  MaxSize as Integer

**Function:** Returns the largest possible size for this map.  
**Notes:**  
Value is -1 if no limit is defined.  
(Read only property)

60.41.32  value(key as string) as Variant

**Function:** The value associated with the given key.  
**Notes:**  
If you query for a key which does not exist, a KeyNotFoundException is raised.  
(Read and Write computed property)
60.42. **CLASS TEXTHASHSETITERATORMBS**

60.42  **class TextHashSetIteratorMBS**

60.42.1  **class TextHashSetIteratorMBS**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The iterator for the TextHashSetMBS class.

60.42.2  **Methods**

60.42.3  **isEqual(other as TextHashSetIteratorMBS) as boolean**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Returns true if both iterators are equal.

60.42.4  **isNotEqual(other as TextHashSetIteratorMBS) as boolean**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Returns true if both iterators are not equal.

60.42.5  **Key as Text**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Returns the current key.

60.42.6  **MoveNext**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Moves the iterator to the next item.
60.43 class TextHashSetMBS

60.43.1 class TextHashSetMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** An alternative dictionary class for an ordered hash set of texts. 

**Example:**

```vbs
dim s as new TextHashSetMBS
s.insert "test"
s.insert "Test"
MsgBox str(s.Count) // shows 2
```

**Notes:**

All string comparison is done either case sensitive or insensitive. See parameter in constructor. 
You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

60.43.2 Methods

60.43.3 Clear

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Erases all of the elements.

60.43.4 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** The default constructor. 
**Notes:** If CaseSensitive is true, the comparison of texts or strings is case sensitive. 
See also:

- 60.43.5 Constructor(Keys() as Text)

60.43.5 Constructor(Keys() as Text)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Creates a new set from the values in the array.
60.43. CLASS TEXTHASHSETMBS

Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 60.43.4 Constructor(CaseSensitive as Boolean = true)

60.43.6 CountKey(key as Text) as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Counts how often a key is used in this set.

60.43.7 find(key as Text) as TextHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Finds the key and returns an iterator.
Notes: Returns the same value as the last method if the item was not found.

60.43.8 first as TextHashSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns an iterator pointing to the beginning of the set.

60.43.9 insert(key as Text)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds a value to the set.

60.43.10 Key(index as Integer) as Text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.43.11 Keys as Text()

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns all the keys as an array.
Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

60.43.12 last as TextHashSetIteratorMBS

60.43.13 lookup(key as Text) as boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Checks whether an element with the given key exists in this set. Notes: Returns true if yes and false if no.

60.43.14 Remove(first as TextHashSetIteratorMBS, last as TextHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Erases all elements in a range. See also:

- 60.43.15 Remove(key as Text) as Integer
- 60.43.16 Remove(pos as TextHashSetIteratorMBS)

60.43.15 Remove(key as Text) as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Erases the element with the given key. See also:

- 60.43.14 Remove(first as TextHashSetIteratorMBS, last as TextHashSetIteratorMBS)
- 60.43.16 Remove(pos as TextHashSetIteratorMBS)

60.43.16 Remove(pos as TextHashSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Erases the element pointed to by the pos iterator. See also:
60.43. CLASS TEXTHASHSETMBS

- 60.43.14 Remove(first as TextHashSetIteratorMBS, last as TextHashSetIteratorMBS)
- 60.43.15 Remove(key as Text) as Integer

60.43.17 Properties

60.43.18 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The number of bins the hash table uses.
**Notes:**
This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)

60.43.19 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Whether text/string comparison is case sensitive.
**Example:**
```vba
dim s1 as new TextHashSetMBS(true)
dim s2 as new TextHashSetMBS(false)

s1.insert ”a”
s1.insert ”A”
s2.insert ”a”
s2.insert ”A”

MsgBox str(s1.Count)+” ”+str(s2.Count)
```

**Notes:** (Read only property)

60.43.20 Count as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The number of items in this set.
**Notes:** (Read only property)
60.43.21 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if the size is zero.
Notes: (Read only property)

60.43.22 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the largest possible size for this set.
Notes:
Value is -1 if no limit is defined.
(Read only property)
60.44. **CLASS TEXTORDEREDSETITERATORMBS**

60.44  **class TextOrderedSetIteratorMBS**

60.44.1  **class TextOrderedSetIteratorMBS**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The iterator for the TextOrderedSetMBS class.

60.44.2  **Methods**

60.44.3  **isEqual(other as TextOrderedSetIteratorMBS) as boolean**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if both iterators are equal.

60.44.4  **isNotEqual(other as TextOrderedSetIteratorMBS) as boolean**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if both iterators are not equal.

60.44.5  **Key as Text**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the current key.

60.44.6  **MoveNext**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the iterator to the next item.

60.44.7  **MovePrev**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the iterator to the previous item.
60.45 class TextOrderedSetMBS

60.45.1 class TextOrderedSetMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** An alternative dictionary class for an ordered set of texts.

**Example:**

```vbnet
dim s as new TextOrderedSetMBS

s.insert "test"
s.insert "Test"

MsgBox str(s.Count) // shows 2
```

**Notes:**

All string comparison is done either case sensitive or insensitive. See parameter in constructor.
You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer
a higher speed with the HashSet class.

60.45.2 Methods

60.45.3 Clear

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Erases all of the elements.

60.45.4 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The default constructor.

**Notes:** If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:

- 60.45.5 Constructor(Keys() as Text)

60.45.5 Constructor(Keys() as Text)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Creates a new set from the values in the array.
60.45. CLASS TEXTORDEREDSETMBS

Notes: If the array has duplicates, the later elements overwrite the earlier keys.
See also:

- 60.45.4 Constructor(CaseSensitive as Boolean = true)

60.45.6 CountKey(key as Text) as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Counts how often a key is used in this set.

60.45.7 find(key as Text) as TextOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Finds the key and returns an iterator.
Notes: Returns the same value as the last method if the item was not found.

60.45.8 first as TextOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns an iterator pointing to the beginning of the set.

60.45.9 insert(key as Text)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds a value to the set.

60.45.10 Key(index as Integer) as Text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.45.11 Keys as Text()

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns all the keys as an array.
Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

60.45.12 last as TextOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns an iterator pointing to the end of the set.

60.45.13 lookup(key as Text) as boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Checks whether an element with the given key exists in this set.
Notes: Returns true if yes and false if no.

60.45.14 LowerBound(key as Text) as TextOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns an iterator for the first element whose key is not less than k.

60.45.15 Remove(first as TextOrderedSetIteratorMBS, last as TextOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Erases all elements in a range.
See also:

- 60.45.16 Remove(key as Text) as Integer 10846
- 60.45.17 Remove(pos as TextOrderedSetIteratorMBS) 10847

60.45.16 Remove(key as Text) as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Erases the element with the given key.
See also:

- 60.45.15 Remove(first as TextOrderedSetIteratorMBS, last as TextOrderedSetIteratorMBS) 10846
- 60.45.17 Remove(pos as TextOrderedSetIteratorMBS) 10847
60.45. CLASS TEXTORDEREDSETMBS

60.45.17 Remove(pos as TextOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Erases the element pointed to by the pos iterator.

See also:

- 60.45.15 Remove(first as TextOrderedSetIteratorMBS, last as TextOrderedSetIteratorMBS)
- 60.45.16 Remove(key as Text) as Integer

60.45.18 UpperBound(key as Text) as TextOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Returns an iterator for the first element whose key is greater than k.

60.45.19 Properties

60.45.20 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Whether text/string comparison is case sensitive.

**Example:**

```vba
dim s1 as new TextOrderedSetMBS(true)
dim s2 as new TextOrderedSetMBS(false)

s1.insert "a"
s1.insert "A"

s2.insert "a"
s2.insert "A"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

**Notes:** (Read only property)

60.45.21 Count as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The number of items in this set.

**Notes:** (Read only property)
60.45.22 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if the size is zero.
Notes: (Read only property)

60.45.23 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the largest possible size for this set.
Notes:
Value is -1 if no limit is defined.
(Read only property)
60.46. CLASS TEXTTOTEXTHASHMAPITERATORMBS

60.46. class TextToTextHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The iterator for the TextToTextHashMapMBS class.

60.46.2. Methods

60.46.3. isEqual(other as TextToTextHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns true if both iterators are equal.

60.46.4. isNotEqual(other as TextToTextHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns true if both iterators are not equal.

60.46.5. Key as Text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns the current key.

60.46.6. MoveNext

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Moves the iterator to the next item.

60.46.7. Properties

60.46.8. Value as Text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The value of the current item in the iterator.
Notes: (Read and Write computed property)
60.47. class TextToTextHashMapMBS

60.47.1. class TextToTextHashMapMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** An alternative dictionary class for a hash map with texts as keys and values.
**Example:**
```vba
dim s as new TextToTextHashMapMBS
s.Value(“Test”)=”Hello”
s.Value(“test”)=”World”
MsgBox str(s.Count) // shows 2
```

**Notes:**
All text comparison is done either case sensitive or insensitive. Defined in constructor.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

60.47.2. Methods

60.47.3. AddKeys(targetArray() as Text)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Similar to keys, but adds keys to the given array.
**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.47.4. AddValues(targetArray() as Text)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Similar to values, but adds values to the given array.
**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.
60.47.5 Clear

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Erases all of the elements.

60.47.6 Clone as TextToTextHashMapMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Creates a copy of this map.

60.47.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Creates a copy of this map as a dictionary.

60.47.8 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The default constructor.
**Notes:** If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:
- 60.47.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 10852
- 60.47.10 Constructor(other as TextToTextHashMapMBS) 10852

60.47.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Creates a new map with the keys and values from the dictionary.
See also:
- 60.47.8 Constructor(CaseSensitive as Boolean = true) 10852
- 60.47.10 Constructor(other as TextToTextHashMapMBS) 10852

60.47.10 Constructor(other as TextToTextHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Creates a new map with the keys and values from the existing map.
See also:
60.47. CLASS TEXTTOTEXTHASHMAPMBS

- 60.47.8 Constructor(CaseSensitive as Boolean = true)
- 60.47.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

60.47.11 CountKey(key as Text) as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Counts how often a key is used in this map.

60.47.12 find(key as Text) as TextToTextHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Finds the key and returns an interator.
**Notes:** Returns the same value as the last method if the item was not found.

60.47.13 first as TextToTextHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns an iterator pointing to the beginning of the map.

60.47.14 hasKey(key as Text) as boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns True if Key is in the map and False if it is not. Returns a Boolean.

60.47.15 Key(index as Integer) as Text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns the value of key for the Indexth sequential item.
**Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.47.16 Keys as Text()

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns all the keys as an array.
Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

**60.47.17 last as TextToTextHashMapIteratorMBS**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Returns an iterator pointing to the end of the map.

**60.47.18 lookup(key as Text, defaultValue as Text) as Text**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Looks up the passed value of Key.  
**Notes:** If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

**60.47.19 Operator Convert as Dictionary**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Creates a copy of the map as dictionary.

**60.47.20 Remove(first as TextToTextHashMapIteratorMBS, last as TextToTextHashMapIteratorMBS)**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Erases all elements in a range.  
See also:

- 60.47.21 Remove(key as Text) as Integer

- 60.47.22 Remove(pos as TextToTextHashMapIteratorMBS)

**60.47.21 Remove(key as Text) as Integer**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Erases the element with the given key.  
See also:

- 60.47.20 Remove(first as TextToTextHashMapIteratorMBS, last as TextToTextHashMapIteratorMBS)
60.47.22 Remove(pos as TextToTextHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Erases the element pointed to by the pos iterator.
See also:

- 60.47.20 Remove(first as TextToTextHashMapIteratorMBS, last as TextToTextHashMapIteratorMBS) 10854
- 60.47.21 Remove(key as Text) as Integer 10854

60.47.23 ValueAtIndex(index as Integer) as Text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the value with the given index.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first
item has the index zero.

60.47.24 Values as Text()

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns all the values as an array
Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use
this method with For Each to loop through all the values.

60.47.25 Properties

60.47.26 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The number of bins the hash table uses.
Notes:
This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)
60.47.27 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Whether text/string comparison is case sensitive. 
**Example:**
```vbnet
dim s1 as new TextToTextHashMapMBS(true) 
dim s2 as new TextToTextHashMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count) + " " + str(s2.Count)
```

**Notes:** (Read only property)

60.47.28 Count as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** The number of items in this map. 
**Notes:** (Read only property)

60.47.29 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** True if the size is zero. 
**Notes:** (Read only property)

60.47.30 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Returns the largest possible size for this set. 
**Notes:**
Value is -1 if no limit is defined. 
(Read only property)
60.47. CLASS TEXTTOTEXTHASHMAPMBS

60.47.31 value(key as Text) as Text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The value associated with the given key.

**Notes:**

If you query for a key which does not exist, a KeyNotFoundException is raised.

(Read and Write computed property)
60.48 class TextToTextOrderedMapIteratorMBS

60.48.1 class TextToTextOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The iterator for the TextToTextOrderedMapMBS class.

60.48.2 Methods

60.48.3 isEqual(other as TextToTextOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if both iterators are equal.

60.48.4 isNotEqual(other as TextToTextOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if both iterators are not equal.

60.48.5 Key as Text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the current key.

60.48.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the iterator to the next item.

60.48.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the iterator to the previous item.
60.48.8 Properties

60.48.9 Value as Text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The value of the current item in the iterator.

**Notes:** (Read and Write computed property)
60.49  class TextToTextOrderedMapMBS

60.49.1  class TextToTextOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An alternative dictionary class for an ordered map with texts for keys and values.
Example:

dim s as new TextToTextOrderedMapMBS
s.Value("Test")="Hello"
s.Value("test")="World"
MsgBox str(s.Count)  // shows 2

Notes:
All text comparison is done either case sensitive or insensitive.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

60.49.2  Methods

60.49.3  AddKeys(targetArray() as Text)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Similar to keys, but adds keys to the given array.
Notes: For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.49.4  AddValues(targetArray() as Text)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Similar to values, but adds values to the given array.
Notes: For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.
60.49. CLASS TEXTTOTEXTORDEREDMAPMBS

60.49.5 Clear

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Erases all of the elements.

60.49.6 Clone as TextToTextOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Creates a copy of this map.

60.49.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Creates a copy of this map as a dictionary.

60.49.8 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The default constructor.
**Notes:** If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:
- 60.49.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)
- 60.49.10 Constructor(other as TextToTextOrderedMapMBS)

60.49.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Creates a new map with the keys and values from the dictionary.
See also:
- 60.49.8 Constructor(CaseSensitive as Boolean = true)
- 60.49.10 Constructor(other as TextToTextOrderedMapMBS)

60.49.10 Constructor(other as TextToTextOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Creates a new map with the keys and values from the existing map.
See also:
60.49.11  **CountKey(key as Text) as Integer**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Counts how often a key is used in this map.

60.49.12  **find(key as Text) as TextToTextOrderedMapIteratorMBS**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Finds the key and returns an iterator.
**Notes:** Returns the same value as the last method if the item was not found.

60.49.13  **first as TextToTextOrderedMapIteratorMBS**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns an iterator pointing to the beginning of the map.

60.49.14  **hasKey(key as Text) as boolean**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns True if Key is in the map and False if it is not. Returns a Boolean.

60.49.15  **Key(index as Integer) as Text**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns the value of key for the Indexth sequential item.
**Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.49.16  **Keys as Text()**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns all the keys as an array.
Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

60.49.17 last as TextToTextOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns an iterator pointing to the end of the map.

60.49.18 lookup(key as Text, defaultvalue as Text) as Text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Looks up the passed value of Key.
Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

60.49.19 LowerBound(key as Text) as TextToTextOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns an iterator for the first element whose key is not less than k.

60.49.20 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of the map as dictionary.

60.49.21 Remove(first as TextToTextOrderedMapIteratorMBS, last as TextToTextOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Erases all elements in a range.
See also:

- 60.49.22 Remove(key as Text) as Integer
- 60.49.23 Remove(pos as TextToTextOrderedMapIteratorMBS)
60.49.22 Remove(key as Text) as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Erases the element with the given key.

See also:

- 60.49.21 Remove(first as TextToTextOrderedMapIteratorMBS, last as TextToTextOrderedMapIteratorMBS) 10863
- 60.49.23 Remove(pos as TextToTextOrderedMapIteratorMBS) 10864

60.49.23 Remove(pos as TextToTextOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Erases the element pointed to by the pos iterator.

See also:

- 60.49.21 Remove(first as TextToTextOrderedMapIteratorMBS, last as TextToTextOrderedMapIteratorMBS) 10863
- 60.49.22 Remove(key as Text) as Integer 10864

60.49.24 UpperBound(key as Text) as TextToTextOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Returns an iterator for the first element whose key is greater than k.

60.49.25 ValueAtIndex(index as Integer) as Text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Returns the value with the given index.

**Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.49.26 Values as Text()

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Returns all the values as an array

**Notes:** The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.
60.49.28 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether text/string comparison is case sensitive.
Notes:

dim s1 as new TextToTextOrderedMapMBS(true)
dim s2 as new TextToTextOrderedMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
(Read only property)

60.49.29 Count as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The number of items in this map.
Notes: (Read only property)

60.49.30 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if the size is zero.
Notes: (Read only property)

60.49.31 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the largest possible size for this set.
Notes:
Value is -1 if no limit is defined.
(Read only property)
60.49.32 value(key as Text) as Text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: The value associated with the given key.

Notes: If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)
60.50. CLASS TEXTTOVARIANTHASHMAPITERATORMBS

60.50.1 class TextToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** The iterator for the TextToVariantHashMapMBS class.

60.50.2 Methods

60.50.3 isEqual(other as TextToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Returns true if both iterators are equal.

60.50.4 isNotEqual(other as TextToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Returns true if both iterators are not equal.

60.50.5 Key as Text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Returns the current key.

60.50.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Moves the iterator to the next item.

60.50.7 Properties

60.50.8 Value as Variant

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** The value of the current item in the iterator.
Notes: (Read and Write computed property)
60.51. class TextToVariantHashMapMBS

60.51.1 class TextToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** An alternative dictionary class for a hash map with strings as keys and variants as values.

**Example:**

```vba
dim s as new TextToVariantHashMapMBS

s.Value("Hello") = "Hallo"
s.Value("World") = "Leute"

MsgBox str(s.Count) // shows 2

MsgBox s.Value("Hello") + " " + s.Value("World") // shows "Hallo Leute"
MsgBox s.Key(1) + " " + s.Key(0) // shows "Hello World"
MsgBox s.ValueAtIndex(1) + " " + s.ValueAtIndex(0) // shows "Hallo Leute"
```

**Notes:**

All text comparison is done either case sensitive or insensitive.
You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

60.51.2 Methods

60.51.3 AddKeys(targetArray() as Text)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Similar to keys, but adds keys to the given array.

**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.51.4 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Similar to values, but adds values to the given array.

**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.
60.51.5 Clear

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Erases all of the elements.

60.51.6 Clone as TextToVariantHashMapMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of this map.

60.51.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of this map as a dictionary.

60.51.8 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:
- 60.51.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true) 10870
- 60.51.10 Constructor(other as TextToVariantHashMapMBS) 10870

60.51.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new map with the keys and values from the dictionary.
See also:
- 60.51.8 Constructor(CaseSensitive as Boolean = true) 10870
- 60.51.10 Constructor(other as TextToVariantHashMapMBS) 10870

60.51.10 Constructor(other as TextToVariantHashMapMBS)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new map with the keys and values from the existing map.
See also:
60.51.11 CountKey(key as Text) as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Counts how often a key is used in this map.

60.51.12 find(key as Text) as TextToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Finds the key and returns an iterator.
Notes: Returns the same value as the last method if the item was not found.

60.51.13 first as TextToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns an iterator pointing to the beginning of the map.

60.51.14 hasKey(key as Text) as boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

60.51.15 Key(index as Integer) as Text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.51.16 Keys as Text()

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns all the keys as an array.
Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

60.51.17 last as TextToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Returns an iterator pointing to the end of the map.

60.51.18 lookup(key as Text, defaultValue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Looks up the passed value of Key. 
**Notes:** If Key is found, it returns the corresponding value. If Key is not found, it returns the passed default Value.

60.51.19 Operator Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Creates a copy of the map as dictionary.

60.51.20 Remove(first as TextToVariantHashMapIteratorMBS, last as TextToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Erases all elements in a range. 
See also:

- 60.51.21 Remove(key as Text) as Integer 10872
- 60.51.22 Remove(pos as TextToVariantHashMapIteratorMBS) 10873

60.51.21 Remove(key as Text) as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Erases the element with the given key. 
See also:

- 60.51.20 Remove(first as TextToVariantHashMapIteratorMBS, last as TextToVariantHashMapIteratorMBS) 10872
60.51. CLASS TEXTTOVARIANTHASHMAPMBS

- 60.51.22 Remove(pos as TextToVariantHashMapIteratorMBS)

60.51.22 Remove(pos as TextToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: Erases the element pointed to by the pos iterator.

See also:

- 60.51.20 Remove(first as TextToVariantHashMapIteratorMBS, last as TextToVariantHashMapIteratorMBS)
- 60.51.21 Remove(key as Text) as Integer

60.51.23 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: Returns the value with the given index.

Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.51.24 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: Returns all the values as an array

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

60.51.25 Properties

60.51.26 BinCount as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: The number of bins the hash table uses.

Notes:
This is a measure of the hash table size, independent of the number of items the Dictionary contains.
(Read only property)
60.51.27 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Whether text/string comparison is case sensitive.
**Example:**

```vbnet
dim s1 as new TextToVariantHashMapMBS(true)
dim s2 as new TextToVariantHashMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

**Notes:** (Read only property)

60.51.28 Count as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The number of items in this map.
**Notes:** (Read only property)

60.51.29 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** True if the size is zero.
**Notes:** (Read only property)

60.51.30 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns the largest possible size for this set.
**Notes:**
Value is -1 if no limit is defined.
(Read only property)
MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The value associated with the given key.

**Notes:**
If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)
60.52 class TextToVariantOrderedMapIteratorMBS

60.52.1 class TextToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The iterator for the TextToVariantOrderedMapMBS class.

60.52.2 Methods

60.52.3 isEqual(other as TextToVariantOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if both iterators are equal.

60.52.4 isNotEqual(other as TextToVariantOrderedMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if both iterators are not equal.

60.52.5 Key as Text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the current key.

60.52.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Moves the iterator to the next item.

60.52.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Moves the iterator to the previous item.
60.52.8 Properties

60.52.9 Value as Variant

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The value of the current item in the iterator.

**Notes:** (Read and Write computed property)
60.53  class TextToVariantOrderedMapMBS

60.53.1  class TextToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** An alternative dictionary class for an ordered map with texts as keys and variants as values.

**Example:**

```vbnet
dim s as new TextToVariantOrderedMapMBS

s.Value("Hello") = "Hallo"
s.Value("World") = "Leute"

MsgBox str(s.Count) // shows 2

MsgBox s.Value("Hello")+" " +s.Value("World") // shows "Hallo Leute"
MsgBox s.Key(1)+" " +s.Key(0) // shows "Hello World"
MsgBox s.ValueAtIndex(1)+" " +s.ValueAtIndex(0) // shows "Hallo Leute"
```

**Notes:**

All text comparison is done either case sensitive or insensitive.

You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

60.53.2  Methods

60.53.3  AddKeys(targetArray() as Text)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Similar to keys, but adds keys to the given array.

**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.53.4  AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Similar to values, but adds values to the given array.

**Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.
60.53.5 Clear

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Erases all of the elements.

60.53.6 Clone as TextToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of this map.

60.53.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of this map as a dictionary.

60.53.8 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The default constructor.
Notes: If CaseSensitive is true, the comparison of texts or strings is case sensitive.
See also:
- 60.53.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)
- 60.53.10 Constructor(other as TextToVariantOrderedMapMBS)

60.53.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new map with the keys and values from the dictionary.
See also:
- 60.53.8 Constructor(CaseSensitive as Boolean = true)
- 60.53.10 Constructor(other as TextToVariantOrderedMapMBS)

60.53.10 Constructor(other as TextToVariantOrderedMapMBS)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new map with the keys and values from the existing map.
See also:
60.53.11 CountKey(key as Text) as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Counts how often a key is used in this map.

60.53.12 find(key as Text) as TextToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Finds the key and returns an iterator.
Notes: Returns the same value as the last method if the item was not found.

60.53.13 first as TextToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns an iterator pointing to the beginning of the map.

60.53.14 hasKey(key as Text) as boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns True if Key is in the map and False if it is not. Returns a Boolean.

60.53.15 Key(index as Integer) as Text

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the value of key for the Indexth sequential item.
Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.53.16 Keys as Text()

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns all the keys as an array.
Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

60.53.17 last as TextToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns an iterator pointing to the end of the map.

60.53.18 lookup(key as Text, defaultValue as Variant) as Variant

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Looks up the passed value of Key.
Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.

60.53.19 LowerBound(key as Text) as TextToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns an iterator for the first element whose key is not less than k.

60.53.20 Operator_Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of the map as dictionary.

60.53.21 Remove(first as TextToVariantOrderedMapIteratorMBS, last as TextToVariantOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Erases all elements in a range.
See also:

- 60.53.22 Remove(key as Text) as Integer
- 60.53.23 Remove(pos as TextToVariantOrderedMapIteratorMBS)
60.53.22 Remove(key as Text) as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Erases the element with the given key.

See also:
- 60.53.21 Remove(first as TextToVariantOrderedMapIteratorMBS, last as TextToVariantOrderedMapIteratorMBS)
- 60.53.23 Remove(pos as TextToVariantOrderedMapIteratorMBS)

60.53.23 Remove(pos as TextToVariantOrderedMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Erases the element pointed to by the pos iterator.

See also:
- 60.53.21 Remove(first as TextToVariantOrderedMapIteratorMBS, last as TextToVariantOrderedMapIteratorMBS)
- 60.53.22 Remove(key as Text) as Integer

60.53.24 UpperBound(key as Text) as TextToVariantOrderedMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Returns an iterator for the first element whose key is greater than k.

60.53.25 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Returns the value with the given index.

**Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.53.26 Values as Variant()

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Returns all the values as an array

**Notes:** The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.
60.53.27 Properties

60.53.28 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether text/string comparison is case sensitive.
Example:

```plaintext
dim s1 as new TextToVariantOrderedMapMBS(true)
dim s2 as new TextToVariantOrderedMapMBS(false)

s1.value("a") = "1"
s1.value("A") = "2"
s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count)+" "+str(s2.Count)
```

Notes: (Read only property)

60.53.29 Count as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The number of items in this map.
Notes: (Read only property)

60.53.30 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if the size is zero.
Notes: (Read only property)

60.53.31 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the largest possible size for this set.
Notes: Value is -1 if no limit is defined.
60.53.32  value(key as Text) as Variant

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The value associated with the given key.

**Notes:**

If you query for a key which does not exist, a KeyNotFoundException is raised.

(Read and Write computed property)
class VariantHashSetIteratorMBS

Function: The iterator for the VariantHashSet class.

Example:

```vbs
// Create a map
dim m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantHashSetIteratorMBS = m.first
dim e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox i.Key
    i.MoveNext
wend
```

Methods

isEqual(other as VariantHashSetIteratorMBS) as boolean

Function: Returns true if both iterators are equal.

Example:

```vbs
// Create a map
dim m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantHashSetIteratorMBS = m.first
dim e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
```
while i.isEqual(e) = false
MsgBox i.Key
i.MoveNext
wend

60.54.4 isNotEqual(other as VariantHashSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Returns true if both iterators are not equal. 
**Example:**

// Create a map
dim m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantHashSetIteratorMBS = m.first
dim e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend

60.54.5 Key as Variant

**Function:** Returns the current key.

60.54.6 MoveNext

**Function:** Moves the iterator to the next item. 
**Example:**

// Create a map
dim m as new VariantHashSetMBS
m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantHashSetIteratorMBS = m.first
dim e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox i.Key
    i.MoveNext
wend
60.55 class VariantHashSetMBS

60.55.1 class VariantHashSetMBS

**Function:** An alternative dictionary class for a hash set with variants.  
**Example:**
```
    Dim s As New VariantHashSetMBS
    s.Insert "test"
    s.Insert "Test"
    MsgBox s.Count // shows 2
    s.Insert ConvertEncoding( "test", encodings.UTF16)
    s.Insert ConvertEncoding( "Test", encodings.UTF16)
    MsgBox s.Count // shows 4
```

**Notes:**
When using variants for keys, you may get better results if all keys used have the same data type to improve comparison.
All text comparison is done either case sensitive or insensitive. Defined in constructor.  
You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

60.55.2 Methods

60.55.3 Clear

**Function:** Erases all of the elements.

60.55.4 Constructor(CaseSensitive as Boolean = true)

**Function:** The default constructor.  
**Notes:** If CaseSensitive is true, the comparison of texts or strings is case sensitive.  
See also:
60.55. **CLASS VARIANTHASHSETMBS**

- **60.55.5 Constructor(Keys() as string)**
- **60.55.6 Constructor(Keys() as Variant)**

### 60.55.5 Constructor(Keys() as string)

**Function:** Creates a new set from the values in the array.
**Notes:** If the array has duplicates, the later elements overwrite the earlier keys.
See also:
- **60.55.4 Constructor(CaseSensitive as Boolean = true)**
- **60.55.6 Constructor(Keys() as Variant)**

### 60.55.6 Constructor(Keys() as Variant)

**Function:** Creates a new set from the values in the array.
**Notes:** If the array has duplicates, the later elements overwrite the earlier keys.
See also:
- **60.55.4 Constructor(CaseSensitive as Boolean = true)**
- **60.55.5 Constructor(Keys() as string)**

### 60.55.7 CountKey(key as Variant) as Integer

**Function:** Counts how often a key is used in this set.

### 60.55.8 find(key as Variant) as VariantHashSetIteratorMBS

**Function:** Finds the key and returns an iterator.
**Notes:** Returns the same value as the last method if the item was not found.

### 60.55.9 first as VariantHashSetIteratorMBS

**Function:** Returns an iterator pointing to the beginning of the set.
**Example:**
// Create a map
dim m as new VariantHashSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantHashSetIteratorMBS = m.first
dim e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox i.Key
    i.MoveNext
wend

60.55.10  **insert(key as Variant)**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a value to the set.

60.55.11  **Key(index as Integer) as Variant**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value of key for the Indexth sequential item. **Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.55.12  **Keys as Variant()**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns all the keys as an array. **Example:**

dim m as new VariantHashSetMBS

m.insert("1")
m.insert("2")

for each v as Variant in m.Keys
60.55. CLASS VARIANTHASHSETMBS

MsgBox v
next

Notes: The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

60.55.13  last as VariantHashSetIteratorMBS

Function: Returns an iterator pointing to the end of the set.
Example:

// Create a map
dim m as new VariantHashSetMBS
m.insert(1.0)  // double
m.insert("Hello")  // string
m.insert(3)  // integer

// get iterators pointing to first and after last element
dim i as VariantHashSetIteratorMBS = m.first
dim e as VariantHashSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox i.Key
    i.MoveNext
wend

60.55.14  lookup(key as Variant) as boolean

Function: Checks whether an element with the given key exists in this set.
Example:

dim set as new VariantHashSetMBS

set.insert "Hello"
set.insert "World"

MsgBox str(set.lookup("missed"))  // shows false as value is missing
MsgBox str(set.lookup("Hello"))  // shows true as value is found
Notes: Returns true if yes and false if no.

60.55.15  Remove(first as VariantHashSetIteratorMBS, last as VariantHashSetIteratorMBS)

Function: Erases all elements in a range.
See also:

- 60.55.16 Remove(key as Variant) as Integer 10892
- 60.55.17 Remove(pos as VariantHashSetIteratorMBS) 10892

60.55.16  Remove(key as Variant) as Integer

Function: Erases the element with the given key.
See also:

- 60.55.15 Remove(first as VariantHashSetIteratorMBS, last as VariantHashSetIteratorMBS) 10892
- 60.55.17 Remove(pos as VariantHashSetIteratorMBS) 10892

60.55.17  Remove(pos as VariantHashSetIteratorMBS)

Function: Erases the element pointed to by the pos iterator.
See also:

- 60.55.15 Remove(first as VariantHashSetIteratorMBS, last as VariantHashSetIteratorMBS) 10892
- 60.55.16 Remove(key as Variant) as Integer 10892

60.55.18  Properties

60.55.19  BinCount as Integer

Function: The number of bins the hash table uses.
Example:
60.55. CLASS VARIANTHASHSETMBS

dim v as new VariantHashSetMBS

v.insert "1"
v.insert "Hello"

MsgBox str(v.BinCount)

Notes:
This is a measure of the hash table size, independent of the number of items the Dictionary contains. (Read only property)

60.55.20 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
Function: Whether text/string comparison is case sensitive.  
Example:

dim s1 as new VariantHashSetMBS(true)
dim s2 as new VariantHashSetMBS(false)

s1.insert("a")
s1.insert("A")

s2.insert("a")
s2.insert("A")

MsgBox str(s1.Count)+" +"+str(s2.Count)

Notes: (Read only property)

60.55.21 Count as Integer

Function: The number of items in this set.
Example:

dim set as new VariantHashSetMBS

set.insert 1
set.insert 2

```
MsgBox str(set.Count)
```

**Notes:** (Read only property)

### 60.55.22 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if the size is zero.  
**Notes:** (Read only property)

### 60.55.23 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the largest possible size for this set.  
**Notes:** Value is -1 if no limit is defined.  
(Read only property)
60.56. class VariantOrderedSetIteratorMBS

60.56.1 class VariantOrderedSetIteratorMBS

Function: The iterator for the VariantOrderedSet class.

Example:

// Create a map
dim m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantOrderedSetIteratorMBS = m.first
dim e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox i.Key
    i.MoveNext
wend

60.56.2 Methods

60.56.3 isEqual(other as VariantOrderedSetIteratorMBS) as boolean

Function: Returns true if both iterators are equal.

Example:

// Create a map
dim m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantOrderedSetIteratorMBS = m.first
dim e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox i.Key
i.MoveNext
wend

60.56.4  isNotEqual(other as VariantOrderedSetIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if both iterators are not equal. **Example:**

```vba
// Create a map
dim m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantOrderedSetIteratorMBS = m.first
dim e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox i.Key
i.MoveNext
wend
```

60.56.5  Key as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the current key.

60.56.6  MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the iterator to the next item. **Example:**

```vba
// Create a map
dim m as new VariantOrderedSetMBS
```
m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantOrderedSetIteratorMBS = m.first
dim e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox i.Key
    i.MoveNext
wend

60.56.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the iterator to the previous item.
60.57 class VariantOrderedSetMBS

60.57.1 class VariantOrderedSetMBS

**Function:** An alternative dictionary class for an ordered set with variants.

**Example:**

```vba
dim s as new VariantOrderedSetMBS

s.insert "test"
s.insert "Test"

MsgBox str(s.Count) // shows 2

s.insert ConvertEncoding("test",encodings.UTF16)
s.insert ConvertEncoding("Test",encodings.UTF16)

MsgBox str(s.Count) // shows 4
```

**Notes:**

When using variants for keys, you may get better results if all keys used have the same data type to improve comparison.

All text comparison is done either case sensitive or insensitive. Defined in constructor.

You can choose whether you want to keep the set ordered using the OrderedSet class or whether you prefer a higher speed with the HashSet class.

60.57.2 Methods

60.57.3 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases all of the elements.

60.57.4 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The default constructor.

**Notes:** If CaseSensitive is true, the comparison of texts or strings is case sensitive.

See also:
60.57. CLASS VARIANTORDEREDSETMBS 10899

- 60.57.5 Constructor(Keys() as string) 10899
- 60.57.6 Constructor(Keys() as Variant) 10899

60.57.5 Constructor(Keys() as string)

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new set from the values in the array. **Notes:** If the array has duplicates, the later elements overwrite the earlier keys. See also:

- 60.57.4 Constructor(CaseSensitive as Boolean = true) 10898
- 60.57.6 Constructor(Keys() as Variant) 10899

60.57.6 Constructor(Keys() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new set from the values in the array. **Notes:** If the array has duplicates, the later elements overwrite the earlier keys. See also:

- 60.57.4 Constructor(CaseSensitive as Boolean = true) 10898
- 60.57.5 Constructor(Keys() as string) 10899

60.57.7 CountKey(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts how often a key is used in this set.

60.57.8 find(key as Variant) as VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds the key and returns an interator. **Notes:** Returns the same value as the last method if the item was not found.

60.57.9 first as VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the beginning of the set. **Example:**
// Create a map
dim m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantOrderedSetIteratorMBS = m.first
dim e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox i.Key
    i.MoveNext
wend

60.57.10 insert(key as Variant)

60.57.11 Key(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns the value of key for the Indexth sequential item. Notes: If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.57.12 Keys as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns all the keys as an array. Example:

dim m as new VariantOrderedSetMBS
m.insert("1")
m.insert("2")

for each v as Variant in m.Keys
**60.57. **CLASS VARIANTORDEREDSETMBS

MsgBox v
next

**Notes:** The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.

**60.57.13 last as VariantOrderedSetIteratorMBS**

**Function:** Returns an iterator pointing to the end of the set.
**Example:**

```vba
// Create a map
dim m as new VariantOrderedSetMBS

m.insert(1.0) // double
m.insert("Hello") // string
m.insert(3) // integer

// get iterators pointing to first and after last element
dim i as VariantOrderedSetIteratorMBS = m.first
dim e as VariantOrderedSetIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox i.Key
    i.MoveNext
wend
```

**60.57.14 lookup(key as Variant) as boolean**

**Function:** Checks whether an element with the given key exists in this set.
**Example:**

```vba
dim set as new VariantOrderedSetMBS
set.insert "Hello"
set.insert "World"

MsgBox str(set.lookup("missed")) // shows false as value is missing
MsgBox str(set.lookup("Hello")) // shows true as value is found
```
Notes: Returns true if yes and false if no.

60.57.15 LowerBound(key as Variant) as VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator for the first element whose key is not less than k.

60.57.16 Remove(first as VariantOrderedSetIteratorMBS, last as VariantOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases all elements in a range. See also:

- 60.57.17 Remove(key as Variant) as Integer
- 60.57.18 Remove(pos as VariantOrderedSetIteratorMBS)

60.57.17 Remove(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases the element with the given key. See also:

- 60.57.16 Remove(first as VariantOrderedSetIteratorMBS, last as VariantOrderedSetIteratorMBS)
- 60.57.18 Remove(pos as VariantOrderedSetIteratorMBS)

60.57.18 Remove(pos as VariantOrderedSetIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases the element pointed to by the pos iterator. See also:

- 60.57.16 Remove(first as VariantOrderedSetIteratorMBS, last as VariantOrderedSetIteratorMBS)
- 60.57.17 Remove(key as Variant) as Integer
60.57.19 UpperBound(key as Variant) as VariantOrderedSetIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator for the first element whose key is greater than k.

**Properties**

60.57.21 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether text/string comparison is case sensitive. **Example:**

```vbnet
dim s1 as new VariantOrderedSetMBS(true)
dim s2 as new VariantOrderedSetMBS(false)
s1.insert("a")
s1.insert("A")
s2.insert("a")
s2.insert("A")
MsgBox str(s1.Count)+" "+str(s2.Count)
```

**Notes:** (Read only property)

60.57.22 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of items in this set. **Example:**

```vbnet
dim set as new VariantOrderedSetMBS
set.insert 1
set.insert 2
MsgBox str(set.Count)
```

**Notes:** (Read only property)
60.57.23 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: True if the size is zero. Notes: (Read only property)

60.57.24 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns the largest possible size for this set. Notes:

Value is -1 if no limit is defined. (Read only property)
60.58.1 class VariantToVariantHashMapIteratorMBS

Function: The iterator for the VariantToVariantHashMap class.
Example:

```vba
// Create a map
dim m as new VariantToVariantHashMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantHashMapIteratorMBS = m.first
dim e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+” -”+str(i.Value)
i.MoveNext
wend
```

60.58.2 Methods

60.58.3 isEqual(other as VariantToVariantHashMapIteratorMBS) as boolean

Function: Returns true if both iterators are equal.
Example:

```vba
// Create a map
dim m as new VariantToVariantHashMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantHashMapIteratorMBS = m.first
dim e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
```
while i.isEqual(e) = false  
MsgBox str(i.Key)+” -”+str(i.Value)  
i.MoveNext  
wend

60.58.4  isNotEqual(other as VariantToVariantHashMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if both iterators are not equal.
Example:
// Create a map  
dim m as new VariantToVariantHashMapMBS
m.value(1)=2  
m.value(2)=4  
m.value(3)=8

// get iterators pointing to first and after last element  
dim i as VariantToVariantHashMapIteratorMBS = m.first  
dim e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values  
while i.isNotEqual(e)  
MsgBox str(i.Key)+” -”+str(i.Value)  
i.MoveNext  
wend

60.58.5  Key as Variant

Function: Returns the current key.

60.58.6  MoveNext

Function: Moves the iterator to the next item.
Example:
// Create a map  
dim m as new VariantToVariantHashMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantHashMapIteratorMBS = m.first
dim e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key) + " ->" + str(i.Value)
i.MoveNext
wend

60.58.7 Properties

60.58.8 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The value of the current item in the iterator. Notes: (Read and Write computed property)
60.59 class VariantToVariantHashMapMBS

60.59.1 class VariantToVariantHashMapMBS

Function: An alternative dictionary class for an hash map with variants and keys and values.

Example:

dim s as new VariantToVariantHashMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4

Notes:

Think of this class like the reimplementation for dictionary class with being case sensitive.

When using variants for keys, you may get better results if all keys used have the same data type to improve comparison.

All text comparison is done either case sensitive or insensitive. Defined in constructor.

You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

60.59.2 Methods

60.59.3 AddKeys(targetArray() as Variant)

Function: Similar to keys, but adds keys to the given array.

Notes: For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.
60.59. CLASS VARIANTTOTARIANTTHASHMAPMBS

60.59.4 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Similar to values, but adds values to the given array. **Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.59.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases all of the elements.

60.59.6 Clone as VARIANTTOTARIANTTHASHMAPMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of this map.

60.59.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of this map as a dictionary.

60.59.8 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The default constructor. **Notes:** If CaseSensitive is true, the comparison of texts or strings is case sensitive. See also:

- 60.59.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)
- 60.59.10 Constructor(other as VARIANTTOTARIANTTHASHMAPMBS)

60.59.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new map with the keys and values from the dictionary. See also:
60.59.8 Constructor(CaseSensitive as Boolean = true)

60.59.10 Constructor(other as VariantToVariantHashMapMBS)

60.59.10 Constructor(other as VariantToVariantHashMapMBS)

**Function:** Creates a new map with the keys and values from the existing map. 
See also:

- 60.59.8 Constructor(CaseSensitive as Boolean = true)
- 60.59.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

60.59.11 CountKey(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts how often a key is used in this map.

60.59.12 find(key as Variant) as VariantToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds the key and returns an iterator. 
**Notes:** Returns the same value as the last method if the item was not found.

60.59.13 first as VariantToVariantHashMapIteratorMBS

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator pointing to the beginning of the map. 
**Example:**

```vbnet
// Create a map
dim m as new VariantToVariantHashMapMBS
m.value(1) = 2
m.value(2) = 4
m.value(3) = 8

// get iterators pointing to first and after last element
dim i as VariantToVariantHashMapIteratorMBS = m.first
dim e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
```
while i.isNotEqual(e)
MsgBox str(i.Key) + " -> " + str(i.Value)
i.MoveNext
wend

60.59.14 hasKey(key as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns True if Key is in the map and False if it is not. Returns a Boolean.

60.59.15 Key(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value of key for the Indexth sequential item. **Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.59.16 Keys as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns all the keys as an array. **Example:**

```vbs
// Create a map
dim m as new VariantToVariantHashMapMBS

m.Value(1) = "Hello"
m.Value(2) = "World"

for each v as Variant in m.Keys
    MsgBox v
next
```

**Notes:** The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.
### 60.59.17 last as VariantToVariantHashMapIteratorMBS

**Function:** Returns an iterator pointing to the end of the map.  
**Example:**

```vbs
// Create a map
dim m as new VariantToVariantHashMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantHashMapIteratorMBS = m.first
dim e as VariantToVariantHashMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" - >"+str(i.Value)
i.MoveNext
wend
```

### 60.59.18 lookup(key as Variant, defaultvalue as Variant) as Variant

**Function:** Looks up the passed value of Key.  
**Example:**

```vbs
dim map as new VariantToVariantHashMapMBS
map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!

MsgBox str(map.lookup("d","?")) // shows "?" as value is missing
MsgBox str(map.lookup("a","?")) // shows "Hello" as value is found
```

**Notes:** If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.
60.59. **CLASS VARIANTTOVARIANTHASHMAPMBS**

### 60.59.19 Operator Convert as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of the map as dictionary.

### 60.59.20 Remove(first as VariantToVariantHashMapIteratorMBS, last as VariantToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases all elements in a range. See also:

- 60.59.21 Remove(key as Variant) as Integer
- 60.59.22 Remove(pos as VariantToVariantHashMapIteratorMBS)

### 60.59.21 Remove(key as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases the element with the given key. See also:

- 60.59.20 Remove(first as VariantToVariantHashMapIteratorMBS, last as VariantToVariantHashMapIteratorMBS)
- 60.59.22 Remove(pos as VariantToVariantHashMapIteratorMBS)

### 60.59.22 Remove(pos as VariantToVariantHashMapIteratorMBS)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases the element pointed to by the pos iterator. See also:

- 60.59.20 Remove(first as VariantToVariantHashMapIteratorMBS, last as VariantToVariantHashMapIteratorMBS)
- 60.59.21 Remove(key as Variant) as Integer

### 60.59.23 ValueAtIndex(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value with the given index. **Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first
item has the index zero.

60.59.24 Values as Variant()

Function: Returns all the values as an array

Example:

```vbs
// Create a map
dim m as new VariantToVariantHashMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Values
    MsgBox v
next
```

Notes: The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

60.59.25 Properties

60.59.26 BinCount as Integer

Function: The number of bins the hash table uses.

Example:

```vbs
dim v as new VariantToVariantHashMapMBS

v.value(1)="Hello"
v.value(2)="World"

MsgBox str(v.BinCount)
```

Notes: This is a measure of the hash table size, independent of the number of items the Dictionary contains. (Read only property)
60.59.27 CaseSensitive as Boolean

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Whether text/string comparison is case sensitive.

**Example:**
```vbs
Dim s1 As New VariantToVariantHashMapMBS(True)
Dim s2 As New VariantToVariantHashMapMBS(False)

s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count) + " " + str(s2.Count)
```

**Notes:** (Read only property)

60.59.28 Count as Integer

**Function:** The number of items in this map.

**Example:**
```vbs
Dim map As New VariantToVariantHashMapMBS

map.Value(1) = true
map.Value("Hello") = "World"

MsgBox str(map.Count)
```

**Notes:** (Read only property)

60.59.29 Empty as Boolean

**Function:** True if the size is zero.

**Notes:** (Read only property)
60.59.30 MaxSize as Integer

Function: Returns the largest possible size for this map.
Notes:
Value is -1 if no limit is defined.
(Read only property)

60.59.31 value(key as Variant) as Variant

Function: The value associated with the given key.
Notes:
If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)
60.60. CLASS VARIANTTOVARIANTMAPITERATORMBS

60.60 class VariantToVariantMapIteratorMBS

60.60.1 class VariantToVariantMapIteratorMBS

Function: The iterator for the VariantToVariantMap class.
Example:

// Create a map
dim m as new VariantToVariantOrderedMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantMapIteratorMBS = m.first
dim e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+” -”+str(i.Value)
i.MoveNext
wend

60.60.2 Methods

60.60.3 isEqual(other as VariantToVariantMapIteratorMBS) as boolean

Function: Returns true if both iterators are equal.
Example:

// Create a map
dim m as new VariantToVariantOrderedMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantMapIteratorMBS = m.first
dim e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isEqual(e) = false
MsgBox str(i.Key) + " ->" + str(i.Value)
i.MoveNext
wend

60.60.4 isNotEqual(other as VariantToVariantMapIteratorMBS) as boolean

MBS DataTypes Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns true if both iterators are not equal. Example:

// Create a map
dim m as new VariantToVariantOrderedMapMBS
m.value(1) = 2
m.value(2) = 4
m.value(3) = 8

// get iterators pointing to first and after last element
dim i as VariantToVariantMapIteratorMBS = m.first
dim e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
MsgBox str(i.Key) + " ->" + str(i.Value)
i.MoveNext
wend

60.60.5 Key as Variant

60.60.6 MoveNext

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Moves the iterator to the next item. Example:

// Create a map
dim m as new VariantToVariantOrderedMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantMapIteratorMBS = m.first
dim e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend

60.60.7 MovePrev

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Moves the iterator to the previous item.

60.60.8 Properties

60.60.9 Value as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The value of the current item in the iterator. Notes: (Read and Write computed property)
60.61 class VariantToVariantOrderedMapMBS

60.61.1 class VariantToVariantOrderedMapMBS

**Function:** An alternative dictionary class for an ordered map with variants as keys and values.

**Example:**

```vbnet
dim s as new VariantToVariantOrderedMapMBS

s.Value("Test")="Hello"
s.Value("test")="World"

MsgBox str(s.Count) // shows 2

s.Value(ConvertEncoding("test",encodings.UTF16))="Just a"
s.Value(ConvertEncoding("Test",encodings.UTF16))="test"

MsgBox str(s.Count) // shows 4
```

**Notes:**

Think of this class like the reimplementation for dictionary class with being case sensitive and with storing items ordered.

When using variants for keys, you may get better results if all keys used have the same data type to improve comparison.

All text comparison is done either case sensitive or insensitive. Defined in constructor.

You can choose whether you want to keep the map ordered using the OrderedMap class or whether you prefer a higher speed with the HashMap class.

60.61.2 Methods

60.61.3 AddKeys(targetArray() as Variant)

**Function:** Similar to keys, but adds keys to the given array.

**Notes:** For older Realbasic version 2007/2008 where the plugin can't create an array, so the values and keys function returns always nil.
60.61.4 AddValues(targetArray() as Variant)

MBS DataTypes Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Similar to values, but adds values to the given array. **Notes:** For older Realbasic version 2007/2008 where the plugin can’t create an array, so the values and keys function returns always nil.

60.61.5 Clear

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases all of the elements.

60.61.6 Clone as VariantToVariantOrderedMapMBS

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of this map.

60.61.7 CloneDictionary as Dictionary

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of this map as a dictionary.

60.61.8 Constructor(CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The default constructor. **Notes:** If CaseSensitive is true, the comparison of texts or strings is case sensitive. See also:

- 60.61.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

- 60.61.10 Constructor(other as VariantToVariantOrderedMapMBS)

60.61.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new map with the keys and values from the dictionary. See also:
60.61.10 Constructor(other as VariantToVariantOrderedMapMBS)

**Function:** Creates a new map with the keys and values from the existing map.

See also:
- 60.61.8 Constructor(CaseSensitive as Boolean = true)
- 60.61.9 Constructor(dic as dictionary, CaseSensitive as Boolean = true)

60.61.11 CountKey(key as Variant) as Integer

**Function:** Counts how often a key is used in this map.

60.61.12 find(key as Variant) as VariantToVariantMapIteratorMBS

**Function:** Finds the key and returns an iterator.
**Notes:** Returns the same value as the last method if the item was not found.

60.61.13 first as VariantToVariantMapIteratorMBS

**Function:** Returns an iterator pointing to the beginning of the map.

**Example:**

```vba
// Create a map
dim m as new VariantToVariantOrderedMapMBS
m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantMapIteratorMBS = m.first
dim e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
```
while i.isNotEqual(e)
MsgBox str(i.Key)+" -"+str(i.Value)
i.MoveNext
wend

60.61.14 hasKey(key as Variant) as boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns True if Key is in the map and False if it is not. Returns a Boolean.

60.61.15 Key(index as Integer) as Variant

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value of key for the Indexth sequential item. **Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.61.16 Keys as Variant()

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns all the keys as an array. **Example:**

```vba
// Create a map
dim m as new VariantToVariantOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Keys
    MsgBox v
next
```

**Notes:** The order is stable and matches the order returned by the Values method at least until the Dictionary is modified. Use this method with For Each to loop through all the keys.
60.61.17  last as VariantToVariantMapIteratorMBS

Function: Returns an iterator pointing to the end of the map.
Example:

// Create a map
dim m as new VariantToVariantOrderedMapMBS

m.value(1)=2
m.value(2)=4
m.value(3)=8

// get iterators pointing to first and after last element
dim i as VariantToVariantMapIteratorMBS = m.first
dim e as VariantToVariantMapIteratorMBS = m.last

// Show all keys and values
while i.isNotEqual(e)
    MsgBox str(i.Key)+" ->"+str(i.Value)
i.MoveNext
wend

60.61.18  lookup(key as Variant, defaultValue as Variant) as Variant

Function: Looks up the passed value of Key.
Example:

dim map as new VariantToVariantOrderedMapMBS

map.value("a")="Hello"
map.value("b")="World"
map.value("c")="!

MsgBox str(map.lookup("d","?"))  // shows "?" as value is missing
MsgBox str(map.lookup("a","?"))  // shows "Hello" as value is found

Notes: If Key is found, it returns the corresponding value. If Key is not found, it returns the passed defaultValue.
60.61.19  **LowerBound(key as Variant) as VariantToVariantMapIteratorMBS**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator for the first element whose key is not less than k.

60.61.20  **Operator Convert as Dictionary**

MBS DataTypes Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of the map as dictionary.

60.61.21  **Remove(first as VariantToVariantMapIteratorMBS, last as VariantToVariantMapIteratorMBS)**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases all elements in a range.

See also:

- 60.61.22 Remove(key as Variant) as Integer
- 60.61.23 Remove(pos as VariantToVariantMapIteratorMBS)

60.61.22  **Remove(key as Variant) as Integer**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases the element with the given key.

See also:

- 60.61.21 Remove(first as VariantToVariantMapIteratorMBS, last as VariantToVariantMapIteratorMBS)
- 60.61.23 Remove(pos as VariantToVariantMapIteratorMBS)

60.61.23  **Remove(pos as VariantToVariantMapIteratorMBS)**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Erases the element pointed to by the pos iterator.

See also:

- 60.61.21 Remove(first as VariantToVariantMapIteratorMBS, last as VariantToVariantMapIteratorMBS)
- 60.61.22 Remove(key as Variant) as Integer
60.61.24 **UpperBound(key as Variant) as VariantToVariantMapIteratorMBS**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an iterator for the first element whose key is greater than k.

60.61.25 **ValueAtIndex(index as Integer) as Variant**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value with the given index. **Notes:** If there is no Indexth item in the map, a call generates an OutOfBoundsException error. The first item has the index zero.

60.61.26 **Values as Variant()**

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns all the values as an array **Example:**

```vbscript
// Create a map
dim m as new VariantToVariantOrderedMapMBS

m.Value(1)="Hello"
m.Value(2)="World"

for each v as Variant in m.Values
    MsgBox v
next
```

**Notes:** The order is stable and matches the order returned by Keys at least until the Map is modified. Use this method with For Each to loop through all the values.

60.61.27 **Properties**

60.61.28 **CaseSensitive as Boolean**

MBS DataTypes Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether text/string comparison is case sensitive. **Example:**

```vbscript
dim s1 as new VariantToVariantOrderedMapMBS(true)
dim s2 as new VariantToVariantOrderedMapMBS(false)
```
s1.value("a") = "1"
s1.value("A") = "2"

s2.value("a") = "1"
s2.value("A") = "2"

MsgBox str(s1.Count) + " " + str(s2.Count)

Notes: (Read only property)

60.61.29 Count as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The number of items in this map. Example:

dim map as new VariantToVariantOrderedMapMBS

map.Value(1)=true
map.Value("Hello")="World"

MsgBox str(map.Count)

Notes: (Read only property)

60.61.30 Empty as Boolean

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: True if the size is zero. Notes: (Read only property)

60.61.31 MaxSize as Integer

MBS DataTypes Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns the largest possible size for this map. Notes:

Value is -1 if no limit is defined.
60.61.32 value(key as Variant) as Variant

Function: The value associated with the given key.

Notes: If you query for a key which does not exist, a KeyNotFoundException is raised.
(Read and Write computed property)
Chapter 61

DDE

61.1 class DDEBinaryDataMBS

61.1.1 class DDEBinaryDataMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Binary Data for DDEMBS conversation. **Notes:** Be carefully: This objects for data received inside a DDEMBS Event are read only. Passing an object to a function normally destroys it.

61.1.2 Methods

61.1.3 Mem as memoryblock

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the data as a memoryblock.

61.1.4 size as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the size of this data object.
61.1.5 Str as string

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the data as a string.

61.1.6 Properties

61.1.7 Handle as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The handle for this data.
**Notes:** (Read and Write property)

61.1.8 Release as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** whether the destructor will release the data handle or not.
**Notes:** (Read and Write property)
61.2. class DDEContextInfoMBS

61.2.1 class DDEContextInfoMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Details for a connection.

61.2.2 Properties

61.2.3 Ansi as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** whether the other side works with Ansi strings (the normal ones).

**Notes:**
Currently this DDEMBS Classes are only tested for ANSI Systems. And I’m not sure if REALbasic itself does handle Unicode correctly on Windows.
(Read and Write property)

61.2.4 CountryID as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The country ID for this connection.

**Notes:**
Some Windows country constants:

(Read and Write property)

61.2.5 Flags as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Flags for this connection.

**Notes:**
Currently not used by Windows.
(Read and Write property)
61.2.6 LangID as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The language ID for this connection.
**Notes:**
Some Windows language constants:

(Read and Write property)

61.2.7 Security as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A user defined security code.
**Notes:**
A security value, which may be anything you need.
Maybe a code to verify that it is your app or the encryption code?
(Read and Write property)

61.2.8 Unicode as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** whether the other side works with Unicode strings.
**Notes:**
Currently this DDEMBS Classes are only tested for ANSI Systems. And I’m not sure if REALbasic itself does handle Unicode correctly on Windows.
(Read and Write property)

61.3. CLASS DDEMBS

61.3 class DDEMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gives access to Windows DDE functions.
**Notes:** DDE on Windows is like AppleEvents on Mac OS, but not so comfortable.

61.3.2 Methods

61.3.3 clientTransaction(type as Integer, topic as DDEStringMBS) as DDEBinaryDataMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Runs a Transaction with the server.
**Notes:** Short version of ClientTransaction with datatype=CF_TEXT and data=nil.
See also:
- 61.3.4 clientTransaction(type as Integer, topic as DDEStringMBS, data as DDEBinaryDataMBS) as DDEBinaryDataMBS
- 61.3.5 clientTransaction(type as Integer, topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as DDEBinaryDataMBS

61.3.4 clientTransaction(type as Integer, topic as DDEStringMBS, data as DDEBinaryDataMBS) as DDEBinaryDataMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Runs a Transaction with the server.
**Notes:** Short version of ClientTransaction with datatype=CF_TEXT.
See also:
- 61.3.3 clientTransaction(type as Integer, topic as DDEStringMBS) as DDEBinaryDataMBS
- 61.3.5 clientTransaction(type as Integer, topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as DDEBinaryDataMBS

61.3.5 clientTransaction(type as Integer, topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Runs a Transaction with the server.
**Example:**
// List all Excel Topics

    dim d as DDEMBS
    dim s, topic as DDEStringMBS
    dim g as DDEStringMBS
    dim m as DDEBinaryDataMBS
    dim t, enter, z as string
    dim i, c as Integer

    list.deleteAllRows
    d=new DDEMBS
    if d.InitClient then
        s=d.newDDEString("Excel")
        topic=d.newDDEString("System")
        if topic<>nil and s<>nil and d.ConnectToServer(s,topic) then
            g=d.newDDEString("Topics")
            if g<>nil then
                m=d.ClientTransaction(d.XTYP_REQUEST,g)
                if m<>nil then
                    t=m.str
                    t=left(t,len(t)-1) // remove chr(0) at end
                    enter=chr(9)
                    c=countfields(t,Enter)
                    for i=1 to c
                        z=nthfield(t,enter,i)
                        list.addRow z
                    next
                    list.listindex=0
                else
                    msgBox "Failed to transfer."
                end if
            else
                msgBox "Fail to create second string."
            end if
        else
            msgBox "Fail to create connect."
        end if
    else
        msgBox "Fail to init for Client."
    end if

Notes:
61.3. CLASS DDEMBS

Use this ClientTransaction if the application returns a value or ClientTransactionBoolean if it returns a boolean.
Data and Datatype are optional. If no datatype is set, the datatype is set to the value of CF_TEXT.
See also:

- 61.3.3 clientTransaction(type as Integer, topic as DDEStringMBS) as DDEBinaryDataMBS
- 61.3.4 clientTransaction(type as Integer, topic as DDEStringMBS, data as DDEBinaryDataMBS) as DDEBinaryDataMBS

61.3.6 clientTransactionBoolean(type as Integer, topic as DDEStringMBS) as Boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Runs a Transaction with the server.
**Notes:** Short version of ClientTransactionBoolean with datatype=CF_TEXT and data=nil.
See also:

- 61.3.7 clientTransactionBoolean(type as Integer, topic as DDEStringMBS, data as DDEBinaryDataMBS) as Boolean
- 61.3.8 clientTransactionBoolean(type as Integer, topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as Boolean

61.3.7 clientTransactionBoolean(type as Integer, topic as DDEStringMBS, data as DDEBinaryDataMBS) as Boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Runs a Transaction with the server.
**Notes:** Short version of ClientTransactionBoolean with Datatype=CF_TEXT.
See also:

- 61.3.6 clientTransactionBoolean(type as Integer, topic as DDEStringMBS) as Boolean
- 61.3.8 clientTransactionBoolean(type as Integer, topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as Boolean

61.3.8 clientTransactionBoolean(type as Integer, topic as DDEStringMBS, data as DDEBinaryDataMBS, datatype as Integer) as Boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Runs a Transaction with the server.
**Notes:**
Use this ClientTransaction if the application returns a value or ClientTransactionBoolean if it returns a boolean.
Data and Datatype are optional. If no datatype is set, the datatype is set to the value of CF\_TEXT.

See also:

- 61.3.6 clientTransactionBoolean(type as Integer, topic as DDEStringMBS) as Boolean
- 61.3.7 clientTransactionBoolean(type as Integer, topic as DDEStringMBS, data as DDEBinaryDataMBS) as Boolean

### 61.3.9 close

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Closes the running connection.

**Example:**

```vbs
dim d as DDEMSB
// work with dde object

if d<>nil then
  d.close
  d=nil
end if
```

**Notes:** RB seems to crash, if the object is not destroyed before application is quit.

### 61.3.10 ConnectToServer(appname as DDEStringMBS, topic as DDEStringMBS) as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Connects to the application for the given topic.

**Example:**

```vbs
dim a,b as DDEStringMBS
dim d as DDEMSB

d=new DDEMSB
if d.InitClient then
  a=d.newDDEString(“servicename”)  
  b=d.newDDEString(“topicname”)  
  if a<>nil and b<>nil then
    if d.ConnectToServer(a,b) then
      msgBox “Connected.”
      return // ok, so leave before closing.
    else
      msgBox “Failed to connect.”
    end if
  end if
end if
```
end if
else
msgBox "Unable to make DDE Strings."
end if
d.close // failed
else
msgBox "Failed to initClient."
end if

Notes:
Using nil for appname or topic you can try to connect to anyone who accepts.
Renamed in v4.3 to ConnectToServer from Connect for better RB 6 compatibility.

61.3.11 InitClient as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Starts DDE, but only for Client stuff.
**Notes:**
With plugin version 6.1pr4 and newer you can have eight DDE objects in your application.
With older plugin versions you can only have one instance of the DDEMBS class at all!

61.3.12 InitServer as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Starts DDE for client and server stuff.
**Notes:**
With plugin version 6.1pr4 and newer you can have eight DDE objects in your application.
With older plugin versions you can only have one instance of the DDEMBS class at all!

61.3.13 NewDDEBinaryData(name as DDEStringMBS,data as memoryblock,offset as Integer,length as Integer,dataformat as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new binary data object.
See also:
61.3.14 NewDDEBinaryData(name as DDEStringMBS, data as string) as DDEBinaryDataMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new binary data object.

**Notes:** A short version of NewDDEBinaryData which takes the whole string.

See also:

- 61.3.13 NewDDEBinaryData(name as DDEStringMBS, data as memoryblock, offset as Integer, length as Integer, dataformat as Integer) as DDEBinaryDataMBS
- 61.3.15 NewDDEBinaryData(name as DDEStringMBS, data as string, offset as Integer, length as Integer) as DDEBinaryDataMBS

61.3.15 NewDDEBinaryData(name as DDEStringMBS, data as string, offset as Integer, length as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new binary data object.

**Notes:** The offset and length is optional.

See also:

- 61.3.13 NewDDEBinaryData(name as DDEStringMBS, data as memoryblock, offset as Integer, length as Integer, dataformat as Integer) as DDEBinaryDataMBS
- 61.3.14 NewDDEBinaryData(name as DDEStringMBS, data as string) as DDEBinaryDataMBS

61.3.16 NewDDEString(ansistring as string) as DDEStringMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new ANSI DDE string.

**Example:**

```vbnet
dim d as DDEMBS // your DDE object
dim a as DDEStringMBS
a=d.newDDEString("servicename")
```

**Notes:** ANSI is the normal string encoding on Windows.
61.3. CLASS DDEMBS

61.3.17 NewDDEStringUnicode(unicodestring as string) as DDEStringMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new Unicode DDE string.

**Example:**

```vbnet
dim d as DDEMBS // your DDE object
dim a as DDEStringMBS
a=d.NewDDEStringUnicode("servicename")
```

**Notes:** Currently this DDE Classes are only tested for ANSI Systems. And I'm not sure if REALbasic itself does handle Unicode correctly on Windows.

61.3.18 RegisterService(name as DDEStringMBS) as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Registers a service name.

**Example:**

```vbnet
dim d as DDEMBS // your dde object
dim s as DDEStringMBS
if d<>nil then
s=d.newDDEString(editfield1.text)
if s<>nil then
if d.registerService(s) then
msgBox "Registered."
else
msgBox "Register fails."
end if
else
msgBox "Failed on NewDDEString"
end if
else
msgBox "No DDE object?!"
end if
```

61.3.19 UnRegisterService(name as DDEStringMBS) as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Unregisters a service name.
61.3.20  Properties

61.3.21  LastError as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code. **Notes:** (Read only property)

61.3.22  Timeout as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Timeout in milliseconds. **Example:**

```
dim d as DDEMBS  // your DDE object
dim s as DDEStringMBS

if d<>nil then
    s=d.newDDEString(editfield1.text)

if s<>nil then
    if d.UnRegisterService(s) then
        msgBox "Unregistered."
    else
        msgBox "Unregister fails."
    end if
else
    msgBox "Failed on NewDDEString"
end if
else
    msgBox "No DDE object!?"
end if
```

**Notes:**
Default is 1000.  
(Read and Write property)
61.3. CLASS DDEMBS

61.3.23 Events

61.3.24 AdviceData(topic as DDEStringMBS, item as DDEStringMBS, dataformat as Integer, data as DDEBinaryDataMBS) as Integer

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. Function: One of the DDE events. Notes: A dynamic data exchange (DDE) client receives the AdviceData event after establishing an advise loop with a server. This transaction informs the client that the value of the data item has changed.

Return Values: A DDE callback function should return DDE_FACK if it processes this transaction, DDE_FBUSY if it is too busy to process this transaction, or DDE_FNOTPROCESSED if it rejects this transaction.

Remarks: An application must copy the data associated with the DDEBinaryDataMBS object if the application must process the data after the callback function returns.

61.3.25 AdviceRequest(topic as DDEStringMBS, item as DDEStringMBS, dataformat as Integer, remaincount as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. Function: One of the DDE events. Notes: The system sends the AdviceRequest event to a server after the server calls the DdePostAdvise function. This transaction informs the server that an advise transaction is outstanding on the specified topic name and item name pair and that data corresponding to the topic name and item name pair has changed.

Return Values: The server should first call the NewDDEBinaryData function to create a data object that identifies the changed data and then return this object. The server should return nil if it is unable to complete the transaction.

Remarks: A client uses this event to establish an advise loop with a server.
61.3.27  AdviceStop(topic as DDEStringMBS, item as DDEStringMBS, dataformat as Integer)

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** One of the DDE events. **Notes:** A client uses this event to end an advise loop with a server.

61.3.28  ConfirmConnect(topic as DDEStringMBS, service as DDEStringMBS, myself as Boolean)

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** One of the DDE events. **Notes:** Your connection was accepted.

61.3.29  Connect(topic as DDEStringMBS, service as DDEStringMBS, myself as Boolean, info as DDEContextInfoMBS) as Boolean

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** One of the DDE events. **Notes:** Return true if you accept this connection.

61.3.30  Disconnect(myself as Boolean)

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** One of the DDE events. **Notes:** The connection was closed.

61.3.31  Error(errorcode as Integer)

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** One of the DDE events. **Notes:**

A dynamic data exchange (DDE) object receives the Error event when a critical error occurs.

Possible errors:

61.3.32  Execute(topic as DDEStringMBS, data as DDEBinaryDataMBS) as Integer

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** One of the DDE events. **Notes:**
A dynamic data exchange (DDE) server object receives the Execute event when a client specifies XTYP_EXECUTE in the ClientTransaction function. A client uses this transaction to send a command string to the server.

Return Values:
A server should return DDE_FACK if it processes this transaction, DDE_FBUSY if it is too busy to process this transaction, or DDE_FNOTPROCESSED if it rejects this transaction.

The data property is only valid while inside the event.

61.3.33 Poke(topic as DDEStringMBS,item as DDEStringMBS,data as DDE-BinaryDataMBS) as Integer

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. Function: One of the DDE events.
Notes:
Return Values:
A server should return DDE_FACK if it processes this transaction, DDE_FBUSY if it is too busy to process this transaction, or DDE_FNOTPROCESSED if it rejects this transaction.

61.3.34 Register(application as DDEStringMBS,service as DDEStringMBS)

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. Function: One of the DDE events.
Notes: A service is registered. You may add it to your own list.
61.3.35 Request(topic as DDEStringMBS,item as DDEStringMBS,dataformat as Integer) as DDEBinaryDataMBS

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** One of the DDE events. **Notes:** The server should create a DDEBinaryDataMBS object that identifies the data and then return this object. The server should return nil if it is unable to complete the transaction. If the server returns nil, the client will receive a DDE_FNOTPROCESSED flag.

61.3.36 UnRegister(application as DDEStringMBS,service as DDEStringMBS)

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** One of the DDE events. **Notes:** A service was unregistered.

61.3.37 WildConnect(topic as DDEStringMBS,service as DDEStringMBS, myself as boolean,info as DDEContextInfoMBS) as DDEStringPairListMBS

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** One of the DDE events. **Notes:** A connection is tried to all available servers. Return true if you accept.

61.3.38 Constants

61.3.39 CF_BITMAP = 2

MBS Win Plugin. **Function:** A constant for the format parameter. **Notes:** Specifies a Windows bitmap format.

61.3.40 CF_DIB = 8

MBS Win Plugin. **Function:** A constant for the format parameter. **Notes:** Specifies the Windows Device Independent Bitmap (DIB) format.

61.3.41 CF_DIBV5 = 17

MBS Win Plugin. **Function:** A constant for the format parameter. **Notes:** Specifies the Windows Device Independent Bitmap (DIB) format of Windows 2000 and newer.
61.3. CLASS DDEMB5

61.3.42 CF_DIF = 5

MBS Win Plugin. **Function:** A constant for the format parameter. **Notes:** Specifies the Windows data interchange format.

61.3.43 CF_ENHMETAFILE = 14

MBS Win Plugin. **Function:** A constant for the format parameter. **Notes:** Specifies the Windows enhanced metafile format.

61.3.44 CF_HDROP = 15

MBS Win Plugin. **Function:** A constant for the format parameter. **Notes:** Specifies the Windows file drop format.

61.3.45 CF_LOCALE = 16

MBS Win Plugin. **Function:** A constant for the format parameter. **Notes:** Specifies the Windows locale format.

61.3.46 CF_METAFILEPICT = 3

MBS Win Plugin. **Function:** A constant for the format parameter. **Notes:** Specifies the Windows metafile format.

61.3.47 CF_OEMTEXT = 7

MBS Win Plugin. **Function:** A constant for the format parameter. **Notes:** Specifies the standard Windows original equipment manufacturer (OEM) text format.

61.3.48 CF_PALETTE = 9

MBS Win Plugin. **Function:** A constant for the format parameter. **Notes:** Specifies the Windows Palette format.
61.3.49  CF_PENDATA = 10

MBS Win Plugin. **Function:** A constant for the format parameter.
**Notes:** Specifies the Windows pen data format.

61.3.50  CF_RIFF = 11

MBS Win Plugin. **Function:** A constant for the format parameter.
**Notes:** Specifies the Resource Interchange File Format (RIFF) audio format.

61.3.51  CF_SYLK = 4

MBS Win Plugin. **Function:** A constant for the format parameter.
**Notes:** Specifies the Windows symbolic link format.

61.3.52  CF_TEXT = 1

MBS Win Plugin. **Function:** A constant for the format parameter.
**Notes:** Specifies the standard American National Standards Institute (ANSI) text format.

61.3.53  CF_TIFF = 6

MBS Win Plugin. **Function:** A constant for the format parameter.
**Notes:** Specifies the Tagged Image File Format (TIFF).

61.3.54  CF_UNICODETEXT = 13

MBS Win Plugin. **Function:** A constant for the format parameter.
**Notes:** Specifies the standard Windows Unicode text format.

61.3.55  CF_WAVE = 12

MBS Win Plugin. **Function:** A constant for the format parameter.
**Notes:** Specifies the wave audio format.
61.3. CLASS DDEMBS

61.3.56  DDE_FACK = & h8000

MBS Win Plugin. **Function:** A constant for the return parameter of some events.
**Notes:** Return DDE_FACK if everything was handled well.

61.3.57  DDE_FBUSY = & h4000

MBS Win Plugin. **Function:** A constant for the return parameter of some events.
**Notes:** Return DDE_FBUSY if your application is busy and can’t currently handle the request.

61.3.58  DDE_FNOTPROCESSED = 0

MBS Win Plugin. **Function:** A constant for the return parameter of some events.
**Notes:** Return DDE_FNOTPROCESSED if something went wrong will processing this event.

61.3.59  XTYP_EXECUTE = & h4050

MBS Win Plugin. **Function:** A constant for the type parameter of ClientTransaction and ClientTransactionBoolean.

61.3.60  XTYP_POKE = & h4090

MBS Win Plugin. **Function:** A constant for the type parameter of ClientTransaction and ClientTransactionBoolean.

61.3.61  XTYP_REQUEST = & h20B0

MBS Win Plugin. **Function:** A constant for the type parameter of ClientTransaction and ClientTransactionBoolean.
61.4 class DDEStringMBS

61.4.1 class DDEStringMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string for DDEMBS conversation. **Notes:** Be carefully: This objects for data received inside a DDEMBS Event are read only. Passing an object to a function normally destroys it.

61.4.2 Methods

61.4.3 Len as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the length of this string.

61.4.4 Mem as memoryblock

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the content of this DDEMBS String as Realbasic Memoryblock.

61.4.5 Str as string

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the content of this DDEMBS String as Realbasic String.

61.4.6 Properties

61.4.7 Handle as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The handle for this data. **Notes:** (Read and Write property)
61.4.8 Release as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** whether the destructor will release the data handle or not.
**Notes:** (Read and Write property)
61.5 class DDEStringPairListMBS

61.5.1 class DDEStringPairListMBS

MBS Win Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A list of DDE string pairs.
**Notes:** Used for the wild connect event.

61.5.2 Methods

61.5.3 Append (item as DDEStringPairMBS)

MBS Win Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Adds another item to the list.

61.5.4 Count as Integer

MBS Win Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Counts the number of items in the list.

61.5.5 Item (index as Integer) as DDEStringPairMBS

MBS Win Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns an item from this list.
**Notes:**
Returns nil on any error.
Index is from 0 to count-1.
61.6. **CLASS DDESTRINGPAIRMBS**

### 61.6 class DDEStringPairMBS

MBS Win Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A pair of topic and service DDEString objects. **Notes:** Used for the wild connect event.

### 61.6.2 Properties

### 61.6.3 Service as DDEStringMBS

MBS Win Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The service of this pair. **Notes:** (Read and Write property)

### 61.6.4 Topic as DDEStringMBS

MBS Win Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The topic of this pair. **Notes:** (Read and Write property)
Chapter 62

Declare

62.1 class BlockMBS

Function: A class to use blocks on Mac OS X with declares.

62.1.2 Methods

62.1.3 Close

Function: Releases all blocks.

62.1.4 GetBlockB(tag as Variant = nil) as Integer

Function: Returns the address of a block to pass to a declare.
Notes:
Tag is passed to the event.
Later when the block is invoked, the BlockB event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With running the event later, we can of course not return the event result to the block caller, but only the value in the AsyncResult property.
62.1.5  GetBlockBI(tag as Variant = nil) as Integer

Function: Returns the address of a block to pass to a declare.
Notes:
Tag is passed to the event.
Later when the block is invoked, the BlockBI event is called. If the block is invoked on the main thread,
we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With
running the event later, we can of course not return the event result to the block caller, but only the value
in the AsyncBoolResult property.

62.1.6  GetBlockBII(tag as Variant = nil) as Integer

Function: Returns the address of a block to pass to a declare.
Notes:
Tag is passed to the event.
Later when the block is invoked, the BlockBII event is called. If the block is invoked on the main thread,
we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With
running the event later, we can of course not return the event result to the block caller, but only the value
in the AsyncBoolResult property.

62.1.7  GetBlockBIII(tag as Variant = nil) as Integer

Function: Returns the address of a block to pass to a declare.
Notes:
Tag is passed to the event.
Later when the block is invoked, the BlockBIII event is called. If the block is invoked on the main thread,
we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With
running the event later, we can of course not return the event result to the block caller, but only the value
in the AsyncBoolResult property.

62.1.8  GetBlockBIIII(tag as Variant = nil) as Integer

Function: Returns the address of a block to pass to a declare.
Notes:
Tag is passed to the event.
Later when the block is invoked, the BlockBIII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread. With running the event later, we can of course not return the event result to the block caller, but only the value in the AsyncBoolResult property.

### 62.1.9 GetBlockV(tag as Variant = nil) as Integer

**Function:** Returns the address of a block to pass to a declare.
**Notes:**
Tag is passed to the event.
Later when the block is invoked, the BlockV event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

### 62.1.10 GetBlockVI(tag as Variant = nil) as Integer

**Function:** Returns the address of a block to pass to a declare.
**Notes:**
Tag is passed to the event.
Later when the block is invoked, the BlockVI event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

### 62.1.11 GetBlockVII(tag as Variant = nil) as Integer

**Function:** Returns the address of a block to pass to a declare.
**Notes:**
Tag is passed to the event.
Later when the block is invoked, the BlockVII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

### 62.1.12 GetBlockVIII(tag as Variant = nil) as Integer

**Function:** Returns the address of a block to pass to a declare.
**Notes:**
Tag is passed to the event.
Later when the block is invoked, the BlockVIII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

62.1.13  GetBlockVIII(tag as Variant = nil) as Integer

Function: Returns the address of a block to pass to a declare.
Notes:
Tag is passed to the event.
Later when the block is invoked, the BlockVIII event is called. If the block is invoked on the main thread, we call the event directly. Else we schedule to call the event as soon as possible on the main thread.

62.1.14  Properties

62.1.15  AsyncBoolResult as Boolean

Function: The result for a boolean block called on a non main thread.
Notes:
If you use one of the BlockB methods to get a block and it’s called on another thread but the main thread, we return the value of this property instead of the actual event result.
(Read only property)

62.1.16  Synchronous as Boolean

Function: Whether to call events synchronously.
Notes:
If the block is called on another thread, the plugin calls the event on the main thread.
If Synchronous is true, we call the main thread synchronously, else asynchronously.
Default is asynchronously to avoid dead locks.
(Read and Write property)
62.1. Events

62.1.18 BlockB(Async_ as boolean, tag as Variant) as boolean

Function: Called when block is invoked.
Notes:
Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed
back AsyncBoolResult for you before this event is called.

62.1.19 BlockBI(Async_ as boolean, tag as Variant, value as Integer) as boolean

Function: Called when block is invoked.
Notes:
Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you
expect.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed
back AsyncBoolResult for you before this event is called.

62.1.20 BlockBII(Async_ as boolean, tag as Variant, value1 as Integer, value2 as Integer) as boolean

Function: Called when block is invoked.
Notes:
Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you
expect.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed
back AsyncBoolResult for you before this event is called.
62.1.21  BlockBIII(Async as boolean, tag as Variant, value1 as Integer, value2 as Integer, value3 as Integer) as boolean

Function: Called when block is invoked.
Notes:
Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed back AsyncBoolResult for you before this event is called.

62.1.22  BlockBIIII(Async as boolean, tag as Variant, value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer) as boolean

Function: Called when block is invoked.
Notes:
Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.
If you return a boolean, we pass it to the caller if async=false. For Async = true, the plugin already passed back AsyncBoolResult for you before this event is called.

62.1.23  BlockV(Async as boolean, tag as Variant)

Function: Called when block is invoked.
Notes:
Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.

62.1.24  BlockVI(Async as boolean, tag as Variant, value as Integer)

Function: Called when block is invoked.
Notes:
Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.

62.1.25 BlockVII(Async as boolean, tag as Variant, value1 as Integer, value2 as Integer)

Function: Called when block is invoked.
Notes:
Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.

62.1.26 BlockVIII(Async as boolean, tag as Variant, value1 as Integer, value2 as Integer, value3 as Integer)

Function: Called when block is invoked.
Notes:
Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.

62.1.27 BlockVIII(Async as boolean, tag as Variant, value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer)

Function: Called when block is invoked.
Notes:
Async: False if block is invoked directly on main thread. Else true so invoked later on main thread.
Tag: The tag value passed on block creation.
Value properties give the actual values. You may need to cast to Ptr, Boolean or whatever data type you expect.
62.2 class SoftDeclareMBS

62.2.1 class SoftDeclareMBS

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A way to do soft linking to libraries.

**Example:**

// Load the Stuffit Bundle on Mac OS X:

dim f as FolderItem

dim s as SoftDeclareMBS

f=FrameworksFolderMBS(-32765).Child("StuffIt.framework")

s=new SoftDeclareMBS

if s.LoadFrameworkFile(f) then
    MsgBox "ok"
end if

**Notes:**

You can make a declare like this:

Declare Function SpeakString lib "SpeechLib" (SpeakString as pstring) as Integer

But what if the SpeechLib is not installed?
Simple, but your application won’t even launch on this machine.
Now you can of course use this MBS Plugin using the SpeechMBS functions, which are all week linked.
But you can also use this class to weak link to the SpeechMBS library like this:

dim b as boolean, m,p as memoryblock, c as SoftDeclareMBS

c=new SoftDeclareMBS

p=newmemoryBlock(256) // make the string for the first parameter
p.pstring(0)="Hello World!"

m=newmemoryBlock(4) // make the memoryblock for the parameters
m.long(0)=p.Address(0) // set the first parameter to the address of the string buffer

if c.loadlibrary("SpeechLib") then // Load libraries
    if c.loadfunction("SpeakString") then // Load function
        b=c.Call(1,m)
    end if
end if
end if
This way your application will be loaded, you can call the function, but people who don’t have the SpeechLib will also hear it.

### 62.2.2 Methods

#### 62.2.3 CallFunction(param as string, data as memoryblock) as boolean

**Example:**

```basic
Dim c As SoftDeclareMBS
Dim m, p, b As memoryBlock
Dim f As folderItem
Dim path As string

f = ApplicationsFolderMBS(-32766) // get a folder...
path = f.absolutePath

MsgBox path

b = NewMemoryBlock(1024)
b.long(0) = 0 // make empty C string

p = NewMemoryBlock(lenb(path) + 3)
p.cstring(0) = path

m = NewMemoryBlock(12 + 10)
m.long(0) = p.AddressMBS(0)
m.long(4) = b.AddressMBS(0)
m.long(8) = 1023

c = New SoftDeclareMBS
If c.LoadDLL("KERNEL32") Then
    If c.loadfunction("GetShortPathNameA") Then
        c.CallingMode = 0
        MsgBox "found function"
        If c.CallFunction("iii", m) Then
            MsgBox "Short path is: " + b.cstring(0)
        Else
            MsgBox "Failed to call function."
        End If
    Else
        MsgBox "Loading of function "+c.FunctionName+" failed."
    End If
End If
```
else
msgbox "Loading of Kernel32 failed."
end if

Notes:
The param string is a combination of the characters ”i” for integer, ”l” for 64bit integer, ”f” for single (float) and ”d” for double.
Use ”i” for booleans, shorts and pointers.

the memoryblock must match exactly the parameters you specified.
Returns true on success.
See also:

- 62.2.4 CallFunction(paramcount as Integer, data as memoryblock) as boolean

62.2.4 CallFunction(paramcount as Integer, data as memoryblock) as boolean

Example:

dim c as SoftDeclareMBS
dim m,p,b as memoryBlock
dim f as folderItem
dim path as string

f=ApplicationsFolderMBS(-32766) // get a folder...
path=f.absolutePath

MsgBox path

b=newmemoryBlock(1024)
b.long(0)=0 // make empty C string

p=newmemoryBlock(lenb(path)+3)
p.cstring(0)=path

m=newmemoryBlock(12+10)
m.long(0)=p.AddressMBS(0)
m.long(4)=b.AddressMBS(0)
m.long(8)=1023

c=new SoftDeclareMBS
if c.LoadDLL("KERNEL32") then
if c.loadfunction("GetShortPathNameA") then
c.CallingMode=0
MsgBox "found function"
if c.CallFunction(3,m) then
    messagebox "Short path is: " + b.cstring(0)
else
    messagebox "Failed to call function."
end if
else
    messagebox "Loading of function " + c.FunctionName+" failed."
end if
else
    messagebox "Loading of Kernel32 failed."
end if

Notes:
If parametercount is 0, the memoryblock is ignored.
The size of the memoryblock must be minimum 4*paramcount.
Each parameter is set using m.long(n*4) where n=0 is the first parameter.
A parameter may be any integer value or an address of a memoryblock. The address can be read using
memoryblock.addressMBS which is part of the plugin. You can even use only one memoryblock for all 3
parameters in the example like this:

m=newmemoryBlock(2100)
m.cstring(1024)=path
m.long(0)=m.address(20)
m.long(4)=m.address(1024)
m.long(8)=1024

First 12 bytes for the parameter table, the next 1000 bytes for the result buffer and finally a thousand
bytes for the input string.

Before RB 3.1 this function was named "Call", but RB5 requires that the word "Call" is no longer valid for
a function name.

Softdeclare is limited to only 6 parameters for plugin version 3.2. Plugin version 3.3 extends this to 8
parameters.
See also:

- 62.2.3 CallFunction(param as string,data as memoryblock) as boolean
62.2.5 CallFunctionDouble(param as string, data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a function which returns a double value.
**Notes:**
The param string is a combination of the characters "i" for integer, "l" for 64bit integer, "f" for single (float) and "d" for double.
Use "i" for booleans, shorts and pointers.

the memoryblock must match exactly the parameters you specified.
Returns true on success.
See also:
- 62.2.6 CallFunctionDouble(paramcount as Integer, data as memoryblock) as boolean

62.2.6 CallFunctionDouble(paramcount as Integer, data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a function which returns a double value.
**Notes:**
Fills the ResultDouble property.

If paramtercount is 0, the memoryblock is ignored.
The size of the memoryblock must be minimum 4*paramcount.
Each parameter is set using m.long(n*4) where n=0 is the first parameter.
A parameter may be any integer value or an address of a memoryblock. The address can be read using memoryblock.addressMBS which is part of the plugin.
Only 10 parameters can currently be used.
See also:
- 62.2.5 CallFunctionDouble(param as string, data as memoryblock) as boolean

62.2.7 CallFunctionInteger64(param as string, data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a function which returns an integer value.
**Notes:**
The param string is a combination of the characters "i" for integer, "l" for 64bit integer, "f" for single (float) and "d" for double.
Use "i" for booleans, shorts and pointers.

the memoryblock must match exactly the parameters you specified.
Returns true on success.

See also:

- **62.2.8 CallFunctionInteger64(paramcount as Integer, data as memoryblock) as boolean**

### 62.2.8 CallFunctionInteger64(paramcount as Integer, data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a function which returns an integer value.

**Notes:**

Fills the ResultInt64 property.

If paramtercount is 0, the memoryblock is ignored.
The size of the memoryblock must be minimum 4*paramcount.
Each parameter is set using m.long(n*4) where n=0 is the first parameter.
A parameter may be any integer value or an address of a memoryblock. The address can be read using
memoryblock.addressMBS which is part of the plugin.
Only 10 parameters can currently be used.

See also:

- **62.2.7 CallFunctionInteger64(param as string, data as memoryblock) as boolean**

### 62.2.9 CallMethod(param as string, data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a function which returns no value.

**Notes:**

The param string is a combination of the characters ”i” for integer, ”l” for 64bit integer, ”f” for single (float) and ”d” for double.
Use ”i” for booleans, shorts and pointers.

the memoryblock must match exactly the parameters you specified.
Returns true on success.

See also:

- **62.2.10 CallMethod(paramcount as Integer, data as memoryblock) as boolean**

### 62.2.10 CallMethod(paramcount as Integer, data as memoryblock) as boolean

MBS Util Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a function which returns no value.
CHAPTER 62. DECLARE

Notes:

If paramtercount is 0, the memoryblock is ignored.
The size of the memoryblock must be minimum 4*paramcount.
Each parameter is set using $m.long(n*4)$ where n=0 is the first parameter.
A parameter may be any integer value or an address of a memoryblock. The address can be read using
memoryblock.addressMBS which is part of the plugin.
Only 10 parameters can currently be used.
Returns true on success.
See also:

- 62.2.9 CallMethod(param as string, data as memoryblock) as boolean

62.2.11 CopyLibrary(byref target as SoftDeclareMBS)

MBS Util Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Copies the library handle to another softdeclare object.
Notes:
if target is nil, a new object is created.
The library handle in the target object is set to point to the same library as the original object.

62.2.12 FreeLibrary as boolean

MBS Util Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function:
Releases the library.
Notes:
Only for Windows currently this function releases the handles and unloads the library. Windows internally
has a reference counter for the library so memory is only released when the last reference is freed.
LastError is set.

62.2.13 LoadConstant(constname as string) as boolean

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Loads a constant from
inside the library.
Example:

dim c as SoftDeclareMBS
dim s as CFStringMBS
dim m as MemoryBlock
dim handle as Integer

// Test Mac OS X
62.2. CLASS SOFTDECLAREMBS

// Load the constant kABFirstNameProperty from the Addressbook framework

c=new SoftDeclareMBS

if c.LoadFramework("Addressbook.framework") then
    msgbox "Loaded "+c.libname+" to "+format(c.libhandle,"-0")+"." 
if c.LoadConstant("kABFirstNameProperty") then
    msgbox "Loaded constant "+c.ConstantName+" to "+format(c.ConstantPointer,"-0")+"." 

m=NewMemoryBlockFromPtrMBS(c.ConstantPointer) // I hope it’s not nil!

handle=m.Long(0)
if handle<>0 then
    s=new CFStringMBS
    s.Handle=handle
    msgbox "Got value: "+s.str
else
    msgbox "Loading of constant "+c.ConstantName+" failed." 
else
    msgbox "Loading of Addressbook.framework failed." 
end if

Notes: Lasterror is set.

62.2.14 LoadDLL(libname as string) as boolean

MBS Util Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: Loads a Windows DLL.
Notes:
Lasterror is set.
libname can be name (e.g. "KERNEL32"), filename (e.g. "KERNEL32.DLL") or path (e.g. "C:\WIN-DOWS\KERNEL32.DLL").

62.2.15 LoadDLLfromMemory(data as string) as boolean

Notes:
Some libraries don’t like to be loaded from a string.  
But else you can pass any DLL file content to this function.

The string is locked so it stays in memory.  
On success the handle property is not zero and the function returns true.

62.2.16 LoadDylib(path as string) as boolean

MBS Util Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  
Function: Loads a library in Mac OS X dylib format.  
Notes: Lasterror and Liberror are set.

62.2.17 LoadFramework(frameworkfilename as string) as boolean

MBS Util Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  
Function: Loads a framework in Mac OS X.  
Example:

// A user’s question:  
// I am trying to call this to Carbon.framework using the softdeclare function:

// UInt32 SwapQDTextFlags(UInt32 newFlags);

// flags are OR’d

// kQDUseDefaultTextRendering = 0  
// kQDUseTrueTypeScalerGlyphs = (1 <<0)  
// kQDUseCGTextRendering = (1 <<1)  
// kQDUseCGTextMetrics = (1 <<2)  
// kQDDonChangTextFlags = 0xFFFFFFFF

// The call is to make the system use Quartz rendering for QuickDraw text (like the text in my WASTE-Field).  
// How should I call this?

// The solution code:

dim s as SoftDeclareMBS
dim m as MemoryBlock

const flags=-1  // = 0xFFFFFFFF

s=new SoftDeclareMBS
m=NewMemoryBlock(10)
m.Long(0)=flags
if s.LoadFramework("Carbon.Framework") then
if s.LoadFunction("SwapQDTextFlags") then
if s.CallFunction(1,m) then
MsgBox str(s.Result) // returns 7 for me (using Silk)
end if
end if
end if

// Without any error checking!

Notes:
frameworkfilename is e.g. "Carbon.framework"
Lasterror is set.

62.2.18 LoadFrameworkFile(frameworkpath as folderitem) as boolean

MBS Util Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Loads on Mac OS X a framework from the given file specification.
Example:

`dim f as FolderItem
dim s as SoftDeclareMBS
f=SpecialFolder.Desktop.Child("spellcheck.bundle")
s=new SoftDeclareMBS
if s.LoadFrameworkFile(f) then
MsgBox "OK"
end if`

Notes:
Returns true if successfull.
Lasterror is set.

62.2.19 LoadFunction(funcname as string) as boolean

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Loads a function from
inside the library.
Example:
dim s as SoftDeclareMBS
dim m as MemoryBlock

cnst flags=-1 // = 0xFFFFFFFF

s=new SoftDeclareMBS
m=NewMemoryBlock(10)
m.Long(0)=flags

if s.LoadLibrary("Carbon.Framework") then
if s.LoadFunction("SwapQDTextFlags") then
if s.CallFunction(1,m) then
MsgBox str(s.Result) // returns 7 for me (using Silk)
end if
end if
end if

Notes:

A user’s question:
I am trying to call this to Carbon.framework using the softdeclare function:

 UInt32 SwapQDTextFlags(UInt32 newFlags);

flags are OR’d

kQDUseDefaultTextRendering = 0
kQDUseTrueTypeScalerGlyphs = (1 << 0)
kQDUseCGTextRendering = (1 << 1)
kQDUseCGTextMetrics = (1 << 2)
kQDDontChangeFlags = 0xFFFFFFFF

The call is to make the system use Quartz rendering for QuickDraw text (like the text in my WASTEField). How should I call this?

The solution code is above without any error checking!

Lasterror is set.
62.2. CLASS SOFTDECLAREMBS

62.2.20 LoadLibrary(libname as string) as boolean

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads a library.
**Notes:**
On Mac OS X e.g. "Carbon.framework" or "System.framework".
On Mac OS Carbon inside Classic e.g. "CarbonLib".
On Windows e.g. "KERNEL32" or "USER32".

Lasterror is set.

62.2.21 ParametersSupported(param as string) as boolean

MBS Util Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Tests whether plugin supports the given parameter string.
**Notes:**
The param string is a combination of the characters "i" for integer, "l" for 64bit integer, "f" for single (float) and "d" for double.
Use "i" for booleans, shorts and pointers.

Any new parameter string can be added. Please send an email to support to get a new combination added.

62.2.22 Properties

62.2.23 CallingMode as Integer

MBS Util Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** What calling mode to use.
**Notes:**
0 = Pascal (default)
1 = C

The Windows API works with Pascal, but calls to QuickTime DLL use C.
(Read and Write property)

62.2.24 ConstantFound as boolean

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Was the constant loaded?
62.2.25  ConstantName as string

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of the constant to load.
**Notes:**
Set by the LoadConstant function.
(Read and Write property)

62.2.26  ConstantPointer as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The pointer of the constant loaded.
**Notes:**
Set by the LoadConstant function.
(Read and Write property)

62.2.27  FunctionFound as boolean

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Was the function loaded?
**Notes:**
Set by the LoadFunction function.
(Read only property)

62.2.28  FunctionName as string

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of the function to load.
**Notes:**
Set by the LoadFunction function.
(Read and Write property)
62.2. CLASS SOFTDECLAREMBS

62.2.29 FunctionPointer as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The pointer of the function loaded.

**Notes:**
Set by the LoadFunction function.
(Read and Write property)

62.2.30 Lasterror as Integer

MBS Util Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code.

**Notes:**
LoadLibraryFile, LoadLibrary, LoadFunction, LoadConstant and FreeLibrary set this property.
(Read and Write property)

62.2.31 Liberror as string

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An error message from loadlibrary.

**Notes:**
Set by the LoadLibrary function.
(Read and Write property)

62.2.32 Libfound as boolean

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Was the library loaded?

**Notes:**
Set by the LoadLibrary function.
(Read only property)

62.2.33 Libhandle as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The handle of the library loaded.

**Notes:**
CHAPTER 62. DECLARE

Set by the LoadLibrary function.
On Mac OS Classic a CFragConnectionID.
On Mac OS X a CFBundleRef.
On Windows a HINSTANCE.
(Read and Write property)

62.2.34 Libname as string

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of the library to load.
**Notes:**
Set by the LoadLibrary function.
(Read and Write property)

62.2.35 Result as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The result of the call function.
**Notes:**
Set by the Call function.
(Read and Write property)

62.2.36 ResultDouble as Double

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The result of the call function CallFunctionDouble.
**Notes:** (Read and Write property)

62.2.37 ResultInt64 as MemoryBlock

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The result of the call function CallFunctionInteger64.
**Example:**
```dim s as SoftDeclareMBS
dim m as MemoryBlock
s=new SoftDeclareMBS
if s.LoadDLL("test64bit.dll") then```
if s.LoadFunction("Get64bitNumber") then
  if s.CallFunctionInteger64(0,nil) then
    MsgBox hex(s.ResultInt64.long(4))+hex(s.ResultInt64.long(0))
  end if
end if

' DLL was created with a function like this:
' IMPEXP long long Get64bitNumber()
' {
'    return 0x1122334455667788;
' }
Chapter 63

DirectShow

63.1  class DirectShowAMCameraControlMBS

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** This interface provides local or remote control over a camera.

**Notes:**
Applications can use this interface to control camera settings such as zoom, pan, aperture adjustment, or shutter speed. To obtain this interface, query the filter that controls the camera.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

63.1.2 Methods

63.1.3 Constructor

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The private constructor.

63.1.4 Get(PropertySelector as Integer, byref Value as Integer, byref Flags as Integer)

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** This method retrieves the current setting of a camera property.

**Notes:**
CHAPTER 63. DIRECTSHOW

PropertySelector: A long value that specifies the property to retrieve, see kProperty* constants.
Value: receives the value of the property.
Flags: Receives a member of the CameraControlFlags enumeration. The returned value indicates whether
the setting is controlled manually or automatically.

LastError is set.

63.1.5 GetRange(PropertySelector as Integer, byref MinValue as Integer, byref MaxValue as Integer, byref SteppingDelta as Integer, byref DefaultValue as Integer, byref CapsFlags as Integer)

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
This method retrieves the range and default value of a specified camera property.
**Notes:**
PropertySelector: A long value that specifies the property to query, see kProperty* constants.
MinValue: Receives the minimum value of the property.
MaxValue: Receives the maximum value of the property.
SteppingDelta: Receives the step size for the property. The step size is the smallest increment by which the
property can change.
DefaultValue: Receives the default value of the property.
CapsFlags: Receives an element of the CameraControlFlags enumeration, indicating whether the property
is controlled automatically or manually.

LastError is set.

63.1.6 Set(PropertySelector as Integer, Value as Integer, Flags as Integer = 0)

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
This method sets a specified property on the camera.
**Notes:**
PropertySelector: A long value that specifies the property to set, see kProperty* constants.
Value: A long value that specifies the new value of the property.
Flags: A long value that specifies the desired control setting. See kFlags* constants.

LastError is set.
63.1.7 Properties

63.1.8 Handle as Integer

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal object reference. **Notes:** Points to an IAMCameraControl interface. (Read and Write property)

63.1.9 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code. **Notes:** Please check function documentation and also LastErrorMessage property for a human readable error message. (Read and Write property)

63.1.10 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The formatted error message for the last error. **Notes:** (Read and Write property)

63.1.11 Constants

63.1.12 kFlagsAuto = 1

MBS Win Plugin, Plugin Version: 12.4. **Function:** One of the flags for Get/Set. **Notes:** The setting is controlled automatically.

63.1.13 kFlagsManual = 2

MBS Win Plugin, Plugin Version: 12.4. **Function:** One of the flags for Get/Set. **Notes:** The setting is controlled manually.
63.1.14 \( \text{kPropertyExposure} = 4 \)

MBS Win Plugin, Plugin Version: 12.4. **Function:** One of the property selectors.
**Notes:**
Identifies the exposure setting, in log base 2 seconds. In other words, for values less than zero, the exposure time is \(1/2^n\) seconds, and for values zero or above, the exposure time is \(2^n\) seconds. For example:

<table>
<thead>
<tr>
<th>Value</th>
<th>Seconds</th>
</tr>
</thead>
<tbody>
<tr>
<td>-3</td>
<td>1/8</td>
</tr>
<tr>
<td>-2</td>
<td>1/4</td>
</tr>
<tr>
<td>-1</td>
<td>1/2</td>
</tr>
<tr>
<td>0</td>
<td>1</td>
</tr>
<tr>
<td>1</td>
<td>2</td>
</tr>
<tr>
<td>2</td>
<td>4</td>
</tr>
</tbody>
</table>

63.1.15 \( \text{kPropertyFocus} = 6 \)

MBS Win Plugin, Plugin Version: 12.4. **Function:** One of the property selectors.
**Notes:** Specifies the camera’s focus setting, as the distance to the optimally focused target, in millimeters. The range and default value are specific to the device.

63.1.16 \( \text{kPropertyIris} = 5 \)

MBS Win Plugin, Plugin Version: 12.4. **Function:** One of the property selectors.
**Notes:** Specifies the camera’s iris setting, in units of fstop * 10.

63.1.17 \( \text{kPropertyPan} = 0 \)

MBS Win Plugin, Plugin Version: 12.4. **Function:** One of the property selectors.
**Notes:** Identifies the camera’s pan setting, in degrees. Values range from 180 to +180, with the default set to zero. Positive values are clockwise from the origin (the camera rotates clockwise when viewed from above), and negative values are counterclockwise from the origin.
63.1.18  **kPropertyRoll = 2**

MBS Win Plugin, Plugin Version: 12.4. **Function:** One of the property selectors.  
**Notes:** Identifies the camera’s roll setting, in degrees. Values range from 180 to +180, with the default set to zero. Positive values cause a clockwise rotation of the camera along the image-viewing axis, and negative values cause a counterclockwise rotation of the camera.

63.1.19  **kPropertyTilt = 1**

MBS Win Plugin, Plugin Version: 12.4. **Function:** One of the property selectors.  
**Notes:** Identifies the camera’s tilt setting, in degrees. Values range from 180 to +180, with the default set to zero. Positive values point the imaging plane up, and negative values point the imaging plane down.

63.1.20  **kPropertyZoom = 3**

MBS Win Plugin, Plugin Version: 12.4. **Function:** One of the property selectors.  
**Notes:** Identifies the camera’s zoom setting, in millimeters. Values range from 10 to 600, and the default is specific to the device.
63.2  class DirectShowAMCrossbarMBS

63.2.1  class DirectShowAMCrossbarMBS

MBS Win Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The IAMCrossbar interface routes signals from an analog or digital source to a video capture filter.
**Notes:**
This interface is implemented by the Analog Video Crossbar Filter. The Analog Video Crossbar filter is
modeled after a general switching matrix, with n inputs and m outputs. For example, a video card might
have two external connectors: a coaxial connector for TV, and an S-video input. These would be represented
as input pins on the filter. To select one of the inputs, an application would use the IAMCrossbar interface
to "route" an input pin to the filter's output pin, by calling the Route method.

see also
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

63.2.2  Methods

63.2.3  BaseFilter as DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Queries the base filter for the crossbar.
**Notes:**
See also:

63.2.4  CanRoute(OutputPinIndex as Integer, InputPinIndex as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The CanRoute method queries whether a specified input pin can be routed to a specified output pin.
**Notes:**
OutputPinIndex: Specifies the index of the output pin.
InputPinIndex: Specifies the index of input pin.
Lasterror is set.
Returns true if two pins can be routed.

To route the pins, call the Route method. Output pins and input pins are both indexed from zero. To
determine the number of output and input pins, call the getPinCounts method.
63.2.5 Constructor

MBS Win Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The private constructor.

63.2.6 GetCrossbarPinInfo(IsInputPin as boolean, PinIndex as Integer, byref PinIndexRelated as Integer, byref PhysicalType as Integer)

MBS Win Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The getCrossbarPinInfo method retrieves information about a specified pin. **Notes:**

IsInputPin: Specifies the direction of the pin. Use one of the following values.

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>True</td>
<td>Input pin</td>
</tr>
<tr>
<td>False</td>
<td>Output pin</td>
</tr>
</tbody>
</table>

PinIndex: Specifies the index of the pin.
PinIndexRelated: Variable that receives the index of the related pin, or 1 if no pin is related to this pin. The related pin is a pin on the same filter, with the same direction; it typically represents the same physical jack or connector. For example, a video tuner and an audio tuner might be related pins. Typically, if two pins are related, you should route them together.
PhysicalType: Variable that receives a member of the PhysicalConnectorType enumeration, indicating the pin’s physical type.

Lasterror is set.
Output pins and input pins are both indexed from zero. To determine the number of output and input pins, call the getPinCounts method.

63.2.7 GetPinCounts(byref OutputPinCount as Integer, byref InputPinCount as Integer)

MBS Win Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The getPinCounts method retrieves the number of input and output pins on the crossbar filter. **Notes:**

OutputPinCount: Variable that receives the number of output pins.
InputPinCount: Variable that receives the number of input pins.
The other IAMCrossbar methods take parameters that specify pins by index number. For these methods, output pins and input pins are both indexed from zero. Use the getPinCounts method to determine the upper bounds for each.

### 63.2.8 IsRoutedTo(InputPinIndex as Integer) as Integer

MBS Win Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The IsRoutedTo method retrieves the input pin that is currently routed to the specified output pin.  
**Notes:**  
OutputPinIndex: Specifies the index of the output pin.  
InputPinIndex: Variable that receives the index of the input pin, or -1 if no input pin is routed to this output pin.  

Output pins and input pins are both indexed from zero. To determine the number of output and input pins, call the getPinCounts method.  
LastError is set.

### 63.2.9 PhysicalPinName(type as Integer) as string

MBS Win Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the name for a given type.  
**Notes:** Just a convenience method to return english names for types.

### 63.2.10 Route(OutputPinIndex as Integer, InputPinIndex as Integer)

MBS Win Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Route method routes an input pin to an output pin.  
**Notes:**  
OutputPinIndex: Specifies the index of the output pin.  
InputPinIndex: Specifies the index of the input pin.  

LastError is set.

Routing two pins causes the output pin to deliver data from that input pin. Only one input pin at a time can be routed to a given output pin.  
Output pins and input pins are both indexed from zero. To determine the number of output and input pins,
call the getPinCounts method.

63.2.11 Properties

63.2.12 Handle as Integer

MBS Win Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal object reference.  
**Notes:**  
Points to an IAMCrossbar interface.  
(Read and Write property)

63.2.13 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.  
**Notes:**  
Please check function documentation and also LastErrorMessage property for a human readable error mes- 
sage.  
(Read and Write property)

63.2.14 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The formatted error message for the last error.  
**Notes:** (Read and Write property)

63.2.15 Constants

63.2.16 PhysConn_Audio_1394 = 4103

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin  
(audio or video).  
**Notes:** Specifies an IEEE 1394 pin for audio.
63.2.17 PhysConn_Audio_AESDigital = 4099

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies an AES/EBU (Audio Engineering Society/European Broadcast Union) digital pin for audio.

63.2.18 PhysConn_Audio_AudioDecoder = 4105

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies an audio decoder pin.

63.2.19 PhysConn_Audio_AUX = 4102

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies an AUX pin for audio.

63.2.20 PhysConn_Audio_Line = 4097

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies a line pin for audio.

63.2.21 PhysConn_Audio_Mic = 4098

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies a microphone pin.

63.2.22 PhysConn_Audio_SCSI = 4101

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies a SCSI pin for audio.
63.2.23  PhysConn_Audio_SPDIFDigital = 4100

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies an S/PDIF (Sony/Philips Digital Interface Format) digital pin for audio.

63.2.24  PhysConn_Audio_Tuner = 4096

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies a tuner pin for audio.

63.2.25  PhysConn_Audio_USB = 4104

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies a USB pin for audio.

63.2.26  PhysConn_Video_1394 = 10

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies an IEEE 1394 pin for video.

63.2.27  PhysConn_Video_AUX = 9

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies an AUX (auxiliary) pin for video.

63.2.28  PhysConn_Video_Black = 15

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Not used.
63.2.29  PhysConn_Video_Composite = 2

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies a composite pin for video.

63.2.30  PhysConn_Video_ParallelDigital = 7

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies a parallel digital pin for video.

63.2.31  PhysConn_Video_RGB = 4

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies an RGB pin for video.

63.2.32  PhysConn_Video_SCART = 14

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies a SCART (Peritel) pin for video.

63.2.33  PhysConn_Video_SCSI = 8

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies a SCSI (Small Computer System Interface) pin for video.

63.2.34  PhysConn_Video_SerialDigital = 6

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies a serial digital pin for video.
63.2.35  **PhysConn_Video_SVideo = 3**

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies an S-Video (Y/C video) pin.

63.2.36  **PhysConn_Video_Tuner = 1**

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies a tuner pin for video.

63.2.37  **PhysConn_Video_USB = 11**

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies a USB (Universal Serial Bus) pin for video.

63.2.38  **PhysConn_Video_VideoDecoder = 12**

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies a video decoder pin.

63.2.39  **PhysConn_Video_VideoEncoder = 13**

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies a video encoder pin.

63.2.40  **PhysConn_Video_YRYBY = 5**

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the constants to specify the physical type of pin (audio or video).
**Notes:** Specifies a YRYBY (Y, RY, BY) pin for video.
63.3 class DirectShowAMStreamConfigMBS

63.3.1 class DirectShowAMStreamConfigMBS

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: The IAMStreamConfig interface sets the output format on certain capture and compression filters, for both audio and video.

Notes:
Applications can use this interface to set format properties, such as the output dimensions and frame rate (for video) or the sample rate and number of channels (for audio).
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

63.3.2 Methods

63.3.3 AudioCaps as DirectShowAudioStreamConfigCapsMBS()

Notes:
Lasterror is set.
Returns empty array for video streams.

63.3.4 Constructor

63.3.5 MediaTypes as DirectShowMediaTypeMBS()

Notes:
Lasterror is set.
see also
63.3. **CLASS DIRECTSHOWAMSTREAMCONFIGMBS**

### 63.3.6 NumberOfCapabilities as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the number of format capabilities that this pin supports. **Notes:** Lasterror is set.

### 63.3.7 VideoCaps as DirectShowVideoStreamConfigCapsMBS()

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the video capabilities. **Notes:** Lasterror is set. Returns empty array for audio streams.

### 63.3.8 Properties

#### 63.3.9 Handle as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal object reference. **Notes:** (Read and Write property)

#### 63.3.10 Lasterror as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code. **Notes:** Please check function documentation and also LastErrorMessage property for a human readable error message. (Read and Write property)

#### 63.3.11 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The formatted error message for the last error. **Notes:** (Read and Write property)
63.3.12 Format as DirectShowMediaTypeMBS

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Get or set the preferred output format.

**Notes:**
Lasterror is set.

see also
(Read and Write computed property)
63.4 class DirectShowAMVideoProcAmpMBS

63.4.1 class DirectShowAMVideoProcAmpMBS

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The AMVideoProcAmp interface adjusts the qualities of an incoming video signal, such as brightness, contrast, hue, saturation, gamma, and sharpness.

**Notes:**

The WDM Video Capture filter exposes this interface if the hardware supports image adjustment.

This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

63.4.2 Methods

63.4.3 Constructor

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The private constructor.

63.4.4 Get(PropertySelector as Integer, byref Value as Integer, byref Flags as Integer)

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets video quality for a specified property.

**Notes:**

PropertySelector: Specifies the property to retrieve, as a value from the kProperty* constants.

Value: Receives the value of the property.

Flags: Receives the flags. The returned value indicates whether the setting is controlled manually or automatically.

Lasterror is set.

63.4.5 GetRange(PropertySelector as Integer, byref MinValue as Integer, byref MaxValue as Integer, byref SteppingDelta as Integer, byref DefaultValue as Integer, byref CapsFlags as Integer)

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets the minimum, maximum, and default values for setting properties.

**Notes:**

PropertySelector: Specifies the property to retrieve, as a value from the kProperty* constants.
MinValue: Receives the minimum value of the property.
MaxValue: Receives the maximum value of the property.
SteppingDelta: Receives the step size for the property. The step size is the smallest increment by which the
property can change.
DefaultValue: Receives the default value of the property.
CapsFlags: Receives a member of the VideoProcAmpFlags enumeration, indicating whether the property is
controlled automatically or manually.
LastError is set.

63.4.6 Set(PropertySelector as Integer, Value as Integer, Flags as Integer = 0)

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Sets video quality for a specified property.
**Notes:**
PropertySelector: Specifies the property to retrieve, as a value from the kProperty* constants.
Value: The new value of the property.
Flags: The desired control setting. See kFlags* constants.

LastError is set.

63.4.7 Properties

63.4.8 Handle as Integer

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The internal object reference.
**Notes:**
Points to an IAMVideoProcAmp interface.
(Read and Write property)

63.4.9 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The last error code.
**Notes:**
Please check function documentation and also LastError_Message property for a human readable error mes-
sage.
(Read and Write property)
63.4.10 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The formatted error message for the last error. **Notes:** (Read and Write property)

63.4.11 Constants

63.4.12 kFlagsAuto = 1

MBS Win Plugin, Plugin Version: 12.4. **Function:** One of the flags for Get/Set. **Notes:** The setting is controlled automatically.

63.4.13 kFlagsManual = 2

MBS Win Plugin, Plugin Version: 12.4. **Function:** One of the flags for Get/Set. **Notes:** The setting is controlled manually.

63.4.14 kPropertyBacklightCompensation = 8

MBS Win Plugin, Plugin Version: 12.4. **Function:** One of the property selectors. **Notes:** Specifies the backlight compensation setting. Possible values are 0 (off) and 1 (on).

63.4.15 kPropertyBrightness = 0

MBS Win Plugin, Plugin Version: 12.4. **Function:** One of the property selectors. **Notes:** Specifies the brightness, also called the black level. For NTSC, the value is expressed in IRE units * 100. For non-NTSC sources, the units are arbitrary, with zero representing blanking and 10,000 representing pure white. Values range from 10,000 to 10,000.

63.4.16 kPropertyColorEnable = 6

MBS Win Plugin, Plugin Version: 12.4. **Function:** One of the property selectors. **Notes:** Specifies the color enable setting. The possible values are 0 (off) and 1 (on).
63.4.17  \textbf{kPropertyContrast} = 1

MBS Win Plugin, Plugin Version: 12.4. \textbf{Function}: One of the property selectors. 
\textbf{Notes}: Specifies the contrast, expressed as gain factor $\times 100$. Values range from zero to 10,000.

63.4.18  \textbf{kPropertyGain} = 9

MBS Win Plugin, Plugin Version: 12.4. \textbf{Function}: One of the property selectors. 
\textbf{Notes}: Specifies the gain adjustment. Zero is normal. Positive values are brighter and negative values are darker. The range of values depends on the device.

63.4.19  \textbf{kPropertyGamma} = 5

MBS Win Plugin, Plugin Version: 12.4. \textbf{Function}: One of the property selectors. 
\textbf{Notes}: Specifies the gamma, as gamma $\times 100$. Values range from 1 to 500.

63.4.20  \textbf{kPropertyHue} = 2

MBS Win Plugin, Plugin Version: 12.4. \textbf{Function}: One of the property selectors. 
\textbf{Notes}: Specifies the hue, in degrees $\times 100$. Values range from -180,000 to 180,000 (-180 to +180 degrees).

63.4.21  \textbf{kPropertySaturation} = 3

MBS Win Plugin, Plugin Version: 12.4. \textbf{Function}: One of the property selectors. 
\textbf{Notes}: Specifies the saturation. Values range from 0 to 10,000.

63.4.22  \textbf{kPropertySharpness} = 4

MBS Win Plugin, Plugin Version: 12.4. \textbf{Function}: One of the property selectors. 
\textbf{Notes}: Specifies the sharpness. Values range from 0 to 100.

63.4.23  \textbf{kPropertyWhiteBalance} = 7

MBS Win Plugin, Plugin Version: 12.4. \textbf{Function}: One of the property selectors. 
\textbf{Notes}: Specifies the white balance, as a color temperature in degrees Kelvin. The range of values depends
63.4. CLASS DIRECTSHOWAMVIDEOPROCAMPMB5

on the device.
63.5 class DirectShowAudioStreamConfigCapsMBS

63.5.1 class DirectShowAudioStreamConfigCapsMBS

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Describes a range of audio formats.

**Notes:**
Audio compression and capture filters use this structure to describe the formats they can produce.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

63.5.2 Methods

63.5.3 Constructor

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The private constructor.

63.5.4 Properties

63.5.5 BitsPerSampleGranularity as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Granularity of the bits per sample.

**Notes:**
For example, the filter might specify 8 bits per sample through 32 bits per sample, in steps of 8.
(Read only property)

63.5.6 ChannelsGranularity as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Granularity of the channels.

**Notes:**
For example, the filter might specify channels 2 through 4, in steps of 2.
(Read only property)
63.5.7 MaximumBitsPerSample as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Maximum sample frequency. **Notes:** (Read only property)

63.5.8 MaximumChannels as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Maximum number of channels. **Notes:** (Read only property)

63.5.9 MaximumSampleFrequency as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Maximum sample frequency. **Notes:** (Read only property)

63.5.10 MinimumBitsPerSample as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Minimum bits per sample. **Notes:** (Read only property)

63.5.11 MinimumChannels as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Minimum number of channels. **Notes:** (Read only property)

63.5.12 MinimumSampleFrequency as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Minimum sample frequency. **Notes:** (Read only property)
63.5.13 SampleFrequencyGranularity as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Granularity of the frequency. **Notes:** For example, the filter might specify 11025 Hz to 44100 Hz, in steps of 11025 Hz. (Read only property)
63.6. **CLASS DIRECTSHOWBASEFILTERMBS**

63.6. class DirectShowBaseFilterMBS

63.6.1 class DirectShowBaseFilterMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The BaseFilter interface is the primary interface for DirectShow filters.

**Notes:**

All DirectShow filters must expose this interface. The Filter Graph Manager uses this interface to control filters. Applications can use this interface to enumerate pins and query for filter information, but should not use it to change the state of a filter. Instead, use the MediaControl interface on the Filter Graph Manager. Subclass of the DirectShowMediaFilterMBS class.

This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

63.6.2 Methods

63.6.3 AMCameraControl as DirectShowAMCameraControlMBS

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries camera control object.

**Example:**

```vbnet
dim srcfilter as DirectShowBaseFilterMBS // your basefilter
dim value, flags as Integer
dim c as DirectShowAMCameraControlMBS = srcfilter.AMCameraControl
if c <> nil then
    c.Get(c.kPropertyZoom, value, flags)
    if c.Lasterror = 0 then
        MsgBox "Zoom: " + str(value)
    else
        MsgBox "Zoom: " + c.LasterrorMessage
    end if

    c.Get(c.kPropertyFocus, value, flags)
    if c.Lasterror = 0 then
        MsgBox "Focus: " + str(value)
    else
        MsgBox "Focus: " + c.LasterrorMessage
    end if

    c.Get(c.kPropertyExposure, value, flags)
    if c.Lasterror = 0 then
        MsgBox "Exposure: " + str(value)
    else
        MsgBox "Exposure: " + c.LasterrorMessage
    end if
```

Notes:
Returns object when this filter represents a device supporting this interface.
Else returns nil on any error.
Also sets lasterror property.

63.6.4 AMCrossbar as DirectShowAMCrossbarMBS

MBS Win Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the IAMCrossbar interface for this filter.
**Notes:** Returns nil if no such interface exists.

63.6.5 AMVideoProcAmp as DirectShowAMVideoProcAmpMBS

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries video properties object.
**Example:**

```vbscript
dim srcfilter as DirectShowBaseFilterMBS // your basefilter
dim value, flags as Integer
dim v as DirectShowAMVideoProcAmpMBS = srcfilter.AMVideoProcAmp
if v<>nil then
  v.Get(v.kPropertyHue, value, flags)
  if v.Lasterror = 0 then
    MsgBox "Hue: " +str(value)
  else
    MsgBox "Hue: " +v.LasterrorMessage
  end if

  v.Get(v.kPropertyBrightness, value, flags)
  if v.Lasterror = 0 then
    MsgBox "Brightness: " +str(value)
  else
    MsgBox "Brightness: " +v.LasterrorMessage
  end if
end if
```

end if
63.6. **CLASS DIRECTSHOWBASEFILTERMBS**

**Notes:**

Returns object when this filter represents a device supporting this interface.
Else returns nil on any error.
Also sets lasterror property.

### 63.6.6 **ConfigAviMux as DirectShowConfigAviMuxMBS**

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Queries the config avimux object.

**Notes:**

Lasterorr is set.
Works only with filters which support this interface.

### 63.6.7 **ConfigInterleaving as DirectShowConfigInterleavingMBS**

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Queries the config interleaving object.

**Notes:**

Lasterorr is set.
Works only with filters which support this interface.

### 63.6.8 **Constructor**

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The private constructor.

### 63.6.9 **EnumPins as DirectShowEnumPinsMBS**

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The EnumPins method enumerates the pins on this filter.

**Notes:** Lasterror is set.

### 63.6.10 **FindPin(name as string) as DirectShowPinMBS**

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The FindPin method retrieves the pin with the specified identifier.
name: string that identifies the pin.

Returns the pin object.
Lasterror is set.

This method supports graph persistence. Use the DirectShowPinMBS.QueryId method to save a pin’s state, and use this method to restore the state. The pin’s identifier string is defined by the filter implementation. The identifier must be unique within the filter.

63.6.11  Info as DirectShowFilterInfoMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves information about the filter.

**Notes:**
Lasterror is set.
Returns nil on error.

63.6.12  VendorInfo as string

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves a string containing vendor information.

**Notes:**
Lasterror is set.
This method is optional; filters are not required to support it.
63.7. **CLASS DIRECTSHOWBINDCONTEXTMBS**

63.7  **class DirectShowBindContextMBS**

63.7.1  **class DirectShowBindContextMBS**

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Provides access to a bind context, which is an object that stores information about a particular moniker binding operation.

63.7.2  **Methods**

63.7.3  **Constructor**

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor to create a new bind context.

63.7.4  **Properties**

63.7.5  **Handle as Integer**

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.

**Notes:**
Points to an IConfigAviMux interface.
(Read and Write property)

63.7.6  **Lasterror as Integer**

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code.

**Notes:**
Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)
63.7.7 LastErrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The formatted error message for the last error.
**Notes:** (Read and Write property)
63.8. class DirectShowCaptureGraphBuilderMBS

63.8.1 class DirectShowCaptureGraphBuilderMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Builds capture graphs and other custom filter graphs.

**Notes:**
see also

63.8.2 Methods

63.8.3 AllocCapFile(filePath as string, size as UInt64)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The AllocCapFile method preallocates a capture file to a specified size. For best results, always capture to a defragmented, preallocated capture file that is larger than the size of the capture data.

**Notes:**
FilePath: a string that contains the name of the file to create or resize.
Size: Size of the file to allocate, in bytes.

LastError is set.

This method fails if the file is read-only.
It is best to allocate as much space as possible, ideally, more than needed. However, this can result in a very large file that contains relatively little data. For example, a 1-gigabyte (GB) capture file might contain a few megabytes of captured video. Use the CopyCaptureFile method to copy the data into a new file. That method copies only the data and ignores the empty portion of the original file.
If you use this method to preallocate the file, call SetMode on the file-writer filter with the value zero. If the filter is set to AM.FILE.OVERWRITE, it will delete the preallocated file. Note that some file-writer filters do not support mode 0.

63.8.4 Constructor

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The constructor.
63.8.5 Crossbar(filter as DirectShowBaseFilterMBS) as DirectShowAMCrossbarMBS

MBS Win Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Finds a crossbar in the graph.
**Notes:**
See also:

This function implements the FindInterface call with LOOK_UPSTREAM_ONLY and the filter you provide.

63.8.6 GetFiltergraph as DirectShowGraphBuilderMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Retrieves the filter graph that the builder is using.
**Notes:** Sets lasterror.

63.8.7 GetStreamConfig(preview as boolean, filter as DirectShowBaseFilterMBS) as DirectShowAMStreamConfigMBS

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Queries the stream config object for this graph.
**Notes:** Lasterror is set.

63.8.8 MEDIATYPE_Audio as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
One of the media type GUIDs.
**Notes:** Audio.

63.8.9 MEDIATYPE_AUXLine21Data as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
One of the media type GUIDs.
**Notes:** Line 21 data. Used by closed captions.
63.8. **CLASS DIRECTSHOWCAPTUREGRAPHBUILDERMBS**

### 63.8.10 MEDIATYPE_Interleaved as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the media type GUIDs.
**Notes:** Interleaved audio and video. Used for Digital Video (DV).

### 63.8.11 MEDIATYPE_Midi as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the media type GUIDs.
**Notes:** MIDI format.

### 63.8.12 MEDIATYPE_ScriptCommand as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the media type GUIDs.
**Notes:** Data is a script command, used by closed captions.

### 63.8.13 MEDIATYPE_Stream as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the media type GUIDs.
**Notes:** Byte stream with no time stamps.

### 63.8.14 MEDIATYPE_Text as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the media type GUIDs.
**Notes:** Text.

### 63.8.15 MEDIATYPE_Timecode as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the media type GUIDs.
**Notes:** Timecode data. Note: DirectShow does not provide any filters that support this media type.
63.8.16 MEDIATYPE_Video as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
One of the media type GUIDs.
**Notes:** Video.

63.8.17 RenderStream(category as DirectShowGUIDMBS, Type as DirectShowGUIDMBS, Source as DirectShowBaseFilterMBS, Intermediate as DirectShowBaseFilterMBS = nil, Sink as DirectShowBaseFilterMBS = nil)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The RenderStream method connects an output pin on a source filter to a sink filter, optionally through an intermediate filter.
**Notes:**
Lasterror is set:
Category: A GUID that specifies one of the pin categories listed in Pin Property Set. To match any pin, regardless of category, set this parameter to nil. Typical values include the following. PIN_CATEGORY_CAPTURE, PIN_CATEGORY_PREVIEW, PIN_CATEGORY_CC.
Type: A major-type GUID that specifies the media type of the output pin; or nil to use any pin, regardless of media type.
Source: Specifies a pointer to the starting filter for the connection, or to an output pin.
Intermediate: BaseFilter interface of an intermediate filter, such as a compression filter. Can be nil.
Sink: BaseFilter interface of a sink filter, such as a renderer or mux filter. If the value is nil, the method uses a default renderer (see Remarks).

see also:
See also:

- 63.8.18 RenderStream(category as DirectShowGUIDMBS, Type as DirectShowGUIDMBS, Source as DirectShowPinMBS, Intermediate as DirectShowBaseFilterMBS = nil, Sink as DirectShowBaseFilterMBS = nil)

63.8.18 RenderStream(category as DirectShowGUIDMBS, Type as DirectShowGUIDMBS, Source as DirectShowPinMBS, Intermediate as DirectShowBaseFilterMBS = nil, Sink as DirectShowBaseFilterMBS = nil)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The RenderStream method connects an output pin on a source filter to a sink filter, optionally through an intermediate filter.
**Notes:**
Lasterror is set:

Category: A GUID that specifies one of the pin categories listed in Pin Property Set. To match any pin, regardless of category, set this parameter to nil. Typical values include the following. PIN_CATEGORY_CAPTURE, PIN_CATEGORY_PREVIEW, PIN_CATEGORY_CC.
Type: A major-type GUID that specifies the media type of the output pin; or nil to use any pin, regardless of media type.
Source: Specifies a pointer to the starting filter for the connection, or to an output pin.
Intermediate: BaseFilter interface of an intermediate filter, such as a compression filter. Can be nil.
Sink: BaseFilter interface of a sink filter, such as a renderer or mux filter. If the value is nil, the method uses a default renderer (see Remarks).

see also:
See also:

- 63.8.17 RenderStream(category as DirectShowGUIDMBS, Type as DirectShowGUIDMBS, Source as DirectShowBaseFilterMBS, Intermediate as DirectShowBaseFilterMBS = nil, Sink as DirectShowBaseFilterMBS = nil)

63.8.19 SetFiltergraph(graph as DirectShowGraphBuilderMBS)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: Tells the graph builder object which filter graph to use.
Notes:
Lasterror is set.

graph: specifies the filter graph to use for subsequent calls to the AddFilter method.

The graph builder will automatically create a filter graph if you don’t call this method. If you call this method after the graph builder has created its own filter graph, the call will fail.

63.8.20 SetOutputFileName(Type as DirectShowGUIDMBS, FilePath as string)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: Creates the rendering section of the filter graph, which will save bits to disk with the specified file name.
Notes:
Lasterror is set.

Type: GUID representing the media subtype. Must be MEDIASUBTYPE_Avi.
FilePath: string containing the output file name.
CHAPTER 63. DIRECTSHOW

filter: Optional, a filter representing the multiplexer filter.
Sink: Optional, a FileSinkFilter object representing the file writer.

This method inserts the multiplexer and the file writer into the filter graph and calls SetFileName to set the output file name.
See also:

- 63.8.21 SetOutputFileName(Type as DirectShowGUIDMBS, FilePath as string, byref filter as DirectShowBaseFilterMBS, byref sink as DirectShowFileSinkFilterMBS)

63.8.21 SetOutputFileName

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Creates the rendering section of the filter graph, which will save bits to disk with the specified file name.
**Notes:**
Lasterror is set.

Type: GUID representing the media subtype. Must be MEDIASUBTYPE_Avi.
FilePath: string containing the output file name.
filter: Optional, a filter representing the multiplexer filter.
Sink: Optional, a FileSinkFilter object representing the file writer.

This method inserts the multiplexer and the file writer into the filter graph and calls SetFileName to set the output file name.
See also:

- 63.8.20 SetOutputFileName(Type as DirectShowGUIDMBS, FilePath as string)

63.8.22 Properties

63.8.23 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The internal object reference.
**Notes:**
Points to an ICaptureGraphBuilder interface.
(Read and Write property)
63.8.24 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The last error code.
**Notes:**
Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

63.8.25 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The formatted error message for the last error.
**Notes:** (Read and Write property)
63.9 class DirectShowConfigAviMuxMBS

63.9.1 class DirectShowConfigAviMuxMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
This class configures the AVI Mux filter.
**Notes:**
Applications can use this class to set the master stream and to create an AVI 1.0 index.

DirectShowConfigAviMuxMBS provides backward compatibility with older Video for Windows (VFW) Audio-Video Interleaved (AVI) index formats (idx1) as well as extended AVI 2.0 index formats (indx) to allow for file sizes greater than 1 gigabyte (GB). Set and retrieve the compatibility indexes by using the OutputCompatibilityIndex property.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

63.9.2 Methods

63.9.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The private constructor.

63.9.4 Properties

63.9.5 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The internal object reference.
**Notes:**
Points to an IConfigAviMux interface.
(Read and Write property)

63.9.6 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The last error code.
**Notes:**
Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

### 63.9.7 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The formatted error message for the last error.
**Notes:** (Read and Write property)

### 63.9.8 MasterStream as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Specifies the master stream that will be used to synchronize the other streams in the file.
**Notes:**
Specifies the index of the stream, or 1 to indicate no master stream. The AVI Mux writes one stream for each connected input pin. Stream numbers are indexed from zero. Lasterror is set.

If you are capturing audio and video from two different sources, use this method to synchronize the streams. Streams coming from separate capture sources may be captured at slightly different rates. If you specify a master stream, the AVI Mux adjusts the playback rates for the other streams, to compensate for any drift that might occur.

It is recommended to use the audio stream as the master stream, because minor adjustments to the video playback rate are less noticeable than changes to the audio playback rate. Also, modifying the audio playback rate will cause the audio to be resampled by the audio driver.

This method works by adjusting the dwScale and dwRate values in the AVISTREAMHEADER structure.
(Read and Write computed property)

### 63.9.9 OutputCompatibilityIndex as Boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Get or set the AVI index format.
**Notes:**
Lasterror is set.
True: Create an AVI 1.0 index, as well as an AVI 2.0 index.
False: Create an AVI 2.0 index, but not an AVI 1.0 index.

The AVI Mux filter always creates an AVI 2.0 index (‘indx’ format). If the value given in fOldIndex is
TRUE, the AVI Mux also creates an AVI 1.0 index (’idx1’ format), for backward compatibility with Video for Windows.
The AVI 2.0 index format allows for larger files, incremental growth of files, and minimized disk seeks.
(Read and Write computed property)
63.10 class DirectShowConfigInterleavingMBS

63.10.1 class DirectShowConfigInterleavingMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The ConfigInterleaving interface controls how the AVI Mux filter interleaves audio and video samples.
**Notes:**
Video-authoring applications that handle capturing should use this interface when they need to control how audio samples and video frames will be saved on a disk.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

63.10.2 Methods

63.10.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The private constructor.

63.10.4 Properties

63.10.5 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The internal object reference.
**Notes:**
Points to an IConfigInterleaving interface.
(Read and Write property)

63.10.6 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The last error code.
**Notes:**
Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)
63.10.7 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The formatted error message for the last error.
**Notes:** (Read and Write property)

63.10.8 Mode as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The interleaving quality setting.
**Notes:**
Lasterror is set.
See kInterleaving* constants.
(Read and Write computed property)

63.10.9 Constants

63.10.10 kInterleaveBuffered = 3

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the interleaving mode constants.
**Notes:**
Noninterleaved.
This mode is equivalent to kInterleaveNone but uses less file space and system overhead.

63.10.11 kInterleaveCapture = 1

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the interleaving mode constants.
**Notes:**
Approximate interleaving with less overhead than kInterleaveFull.
This mode is suitable for video capture. The AVI Mux attempts to use unbuffered, overlapped write operations. Unless the interleaving parameters are configured properly, however, frames may be dropped if one stream blocks while it waits for data from another stream. In particular, audio buffers should be less than .5 second, or else the video stream will block for excessive periods of time.

63.10.12 kInterleaveFull = 2

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the interleaving mode constants.
**Notes:**
Full, precise interleaving of audio samples and video frames. Streams will block indefinitely, waiting for equal amounts of data before interleaving. This mode is suitable for authoring and playback.

63.10.13 kInterleaveNone = 0

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the interleaving mode constants. **Notes:**

Noninterleaved. Frames are written in the order they arrive. Files must be interleaved for playback at a later time. In this mode, the AVI Mux filter attempts to use unbuffered, overlapped write operations, to increase throughput.
CHAPTER 63. DIRECTSHOW

63.11 class DirectShowDVInfoMBS

63.11.1 class DirectShowDVInfoMBS

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Describes the format of a digital video (DV) stream. **Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

63.11.2 Methods

63.11.3 Constructor

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The private constructor.

63.11.4 Properties

63.11.5 DVAAuxCtl as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the AAUX source control Pack for the first audio block. **Notes:** (Read and Write property)

63.11.6 DVAAuxCtl1 as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the AAUX source control pack for the second audio block. **Notes:** (Read and Write property)

63.11.7 DVAAuxSrc as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the audio auxiliary (AAUX) source pack for the first audio block. **Notes:** (Read and Write property)
63.11.8  DVAAuxSrc1 as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the AAUX source pack for the second audio block. **Notes:** (Read and Write property)

63.11.9  DVVAuxCtl as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the VAUX source control pack. **Notes:** (Read and Write property)

63.11.10  DVVAuxSrc as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the video auxiliary (VAUX) source pack. **Notes:** (Read and Write property)
63.12 class DirectShowEnumMonikerMBS

63.12.1 class DirectShowEnumMonikerMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Enumerates the monikers in a table of monikers.

63.12.2 Methods

63.12.3 Clone as DirectShowEnumMonikerMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new enumerator that contains the same enumeration state as the current one.  
**Notes:** This method makes it possible to record a particular point in the enumeration sequence and then return to that point at a later time. The caller must release this new enumerator separately from the first enumerator. 

Returns nil on any error.  
Lasterror is set.

63.12.4 CLSID_AudioCompressorCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the DirectShow filter categories.  
**Notes:** Audio Compressors

63.12.5 CLSID_AudioInputDeviceCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the DirectShow filter categories.  
**Notes:** Audio Capture Sources

63.12.6 CLSID_AudioRendererCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the DirectShow filter categories.  
**Notes:** Audio Renderers
63.12.7  CLSID_DeviceControlCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the DirectShow filter categories.  
**Notes:** Device Control Filters

63.12.8  CLSID_DVDHWDecodersCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the DirectShow filter categories.  
**Notes:**  
WDM Stream Decompression Devices  
This category contains hardware DVD decoders.

63.12.9  CLSID_LegacyAmFilterCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the DirectShow filter categories.  
**Notes:** DirectShow Filters

63.12.10  CLSID_MidiRendererCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the DirectShow filter categories.  
**Notes:** Midi Renderers

63.12.11  CLSID_TransmitCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the DirectShow filter categories.  
**Notes:** External Renderers

63.12.12  CLSID_VideoCompressorCategory as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the DirectShow filter categories.
Notes: Video Compressors

63.12.13 CLSID_VideoInputDeviceCategory as DirectShowGUIDMBS

63.12.14 Constructor(clsidDeviceClass as DirectShowGUIDMBS)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: Creates an enumerator for a specified device category. Notes: This method makes it possible to record a particular point in the enumeration sequence and then return to that point at a later time. The caller must release this new enumerator separately from the first enumerator. Lasterror is set.

63.12.15 NextObject as DirectShowMonikerMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: Retrieves the next item in the enumeration sequence. Notes: Returns nil on any error. Lasterror is set.

63.12.16 Reset

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: Resets the enumeration sequence to the beginning. Notes: Lasterror is set. There is no guarantee that the same set of objects will be enumerated after the reset operation has completed. A static collection is reset to the beginning, but it can be too expensive for some collections, such as files in a directory, to guarantee this condition.
63.12.17  Skip(n as Integer)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Skips over the specified number of items in the enumeration sequence. **Notes:** Lasterror is set.

63.12.18  Properties

63.12.19  Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal object reference. **Notes:** Points to an IEnumMoniker interface. (Read and Write property)

63.12.20  Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code. **Notes:** Please check function documentation and also LastErrorMessage property for a human readable error message. (Read and Write property)

63.12.21  LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The formatted error message for the last error. **Notes:** (Read and Write property)
63.13 class DirectShowEnumPinsMBS

63.13.1 class DirectShowEnumPinsMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Enumerates pins on a filter.
**Notes:**
The BaseFilterMBS.EnumPins method returns this interface. It is based on the standard Component Object Model (COM) enumerators.
The filter graph manager uses this interface when it connects filters. Applications can use it to retrieve pins on a filter. For more information, see Enumerating Objects in a Filter Graph.
If the number of pins on the filter changes, some methods on this interface return VFW_E_ENUM_OUT_OF_SYNC. Call the Reset method to resynchronize the enumerator.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

63.13.2 Methods

63.13.3 Clone as DirectShowEnumPinsMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The Clone method makes a copy of the enumerator with the same enumeration state.
**Notes:**
Lasterror is set. Returns nil on any error.
If the number of pins changes, the enumerator is no longer consistent with the filter, and the method returns VFW_E_ENUM_OUT_OF_SYNC. Discard any data obtained from previous calls to the enumerator, because it might be invalid. Update the enumerator by calling the IEnumPins::Reset method. You can then call the Clone method safely.

63.13.4 Constructor

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The private constructor.

63.13.5 NextObject as DirectShowPinMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The Next method retrieves the next pin in the enumeration sequence.
**Notes:**
63.13. **CLASS DIRECTSHOWENUMPINS**

Lasterror is set. Returns nil on any error.

If the number of pins changes, the enumerator is no longer consistent with the filter, and the method returns VFW_E_ENUM_OUT_OF_SYNC. Discard any data obtained from previous calls to the enumerator, because it might be invalid. Update the enumerator by calling the IEnumPins::Reset method. You can then call the Next method safely.

### 63.13.6 Reset

**MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.** **Function:**
The Reset method resets the enumeration sequence to the beginning.  
**Notes:** Lasterror is set.

### 63.13.7 Skip(n as Integer)

**MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.** **Function:**
The Skip method skips over a specified number of pins.  
**Notes:**

n: Number of pins to skip.

Lasterror is set.

If the number of pins changes, the enumerator is no longer consistent with the filter, and the method returns VFW_E_ENUM_OUT_OF_SYNC. Discard any data obtained from previous calls to the enumerator, because it might be invalid. Update the enumerator by calling the IEnumPins::Reset method. You can then call the Skip method safely.

### 63.13.8 Properties

### 63.13.9 Handle as Integer

**MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.** **Function:**
The internal object reference.  
**Notes:**
Points to an IEnumPins interface.  
(Read and Write property)
63.13.10 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.

**Notes:**
Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

63.13.11 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The formatted error message for the last error.

**Notes:** (Read and Write property)
63.14. class DirectShowFileSinkFilterMBS

63.14.1. class DirectShowFileSinkFilterMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The FileSinkFilter interface is implemented on filters that write media streams to a file.
**Notes:**
A file sink filter in a video capture filter graph, for instance, writes the output of the video compression filter
to a file. Typically, the application running this filter graph should enable the user to enter the name of the
file to be written to. This interface enables the communication of this information.
If a filter needs the name of an output file, it should expose this interface to allow an application to set the
file name. Note that there is currently no base class implementation of this interface.
Any application that must set the name of the file into which the file sink filter will write should use this
interface to get and set the file name.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

63.14.2. Methods

63.14.3. Constructor

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The private constructor.

63.14.4. MEDIASUBTYPE_Asf as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The media sub type for ASF video files.

63.14.5. MEDIASUBTYPE_Avi as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The media sub type for AVI video files.

63.14.6 Properties

63.14.7 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal object reference.  
**Notes:**  
Points to an IFileSinkFilter interface.  
(Read and Write property)

63.14.8 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.  
**Notes:**  
Please check function documentation and also LastErrorMessage property for a human readable error message.  
(Read and Write property)

63.14.9 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The formatted error message for the last error.  
**Notes:** (Read and Write property)
63.15  CLASS DIRECTSHOWFILTERGRAPHMBS

63.15  class DirectShowFilterGraphMBS

63.15.1  class DirectShowFilterGraphMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.  **Function:** This class provides methods for building a filter graph.

**Notes:**
An application can use it to add filters to the graph, connect or disconnect filters, remove filters, and perform other basic operations. However, the DirectShowGraphBuilderMBS interface inherits from this interface and provides additional methods that are more sophisticated. Therefore, applications should use DirectShowGraphBuilderMBS rather than using DirectShowFilterGraphMBS directly.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

63.15.2  Methods

63.15.3  AddFilter(SourceFilter as DirectShowBaseFilterMBS, Name as string = "")

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.  **Function:** Adds a filter to the graph.

**Notes:**
Filter: The filter to add.
Name: name for filter.

Lasterror is set.

The name of the filter can be ",", in which case the Filter Graph Manager generates a name. If the name is not "," and is not unique, this method will modify the name in an attempt to generate a new unique name. If this is successful, this method sets lasterror to VFW_S_DUPLICATE_NAME. If it cannot generate a unique name, it sets lasterror to VFW_E_DUPLICATE_NAME.

AddFilter calls the filter’s JoinFilterGraph method to inform the filter that it has been added. AddFilter must be called before attempting to use the Connect, ConnectDirect, or Render method to connect or render pins belonging to the added filter.
The Filter Graph Manager holds a reference count on the filter until the filter is removed from the graph or the Filter Graph Manager is released.

63.15.4  Constructor

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.  **Function:** The private constructor.
63.15.5 SetDefaultSyncSource

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets the reference clock to the default clock.  
**Notes:**  
LastError is set.  

This method instructs the Filter Graph Manager to choose a reference clock using its default algorithm. For more information about the algorithm that it uses, see Reference Clocks. Usually you do not need to call this method, because the Filter Graph Manager automatically selects a clock. However, if you call SetSyncSource to override the clock, you can use SetDefaultSyncSource to restore the default clock. This method fails if the filter graph is running or paused.

63.15.6 Properties

63.15.7 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal object reference.  
**Notes:**  
Points to an IFilterGraph interface.  
(Read and Write property)

63.15.8 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.  
**Notes:**  
Please check function documentation and also LastErrorMessage property for a human readable error message.  
(Read and Write property)
63.15.9 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The formatted error message for the last error.
**Notes:** (Read and Write property)
63.16 class DirectShowFilterInfoMBS

63.16.1 class DirectShowFilterInfoMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: The class for information about a filter. Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

63.16.2 Methods

63.16.3 Constructor

63.16.4 Properties

63.16.5 Graph as DirectShowFilterGraphMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: Returns filter graph. Notes: If the filter is member of a filter graph, this is a reference to the filter graph’s FilterGraph interface. If the filter is not a member of a filter graph, this value of this member is nil. (Read and Write property)

63.16.6 Name as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: The name of the filter. Notes: (Read and Write property)
63.17 class DirectShowGraphBuilderMBS

63.17.1 class DirectShowGraphBuilderMBS

This class provides methods that enable an application to build a filter graph.

Notes:

The GraphBuilder interface inherits from the FilterGraph interface. FilterGraph provides basic operations, such as adding a filter to the graph or connecting two pins. GraphBuilder adds further methods that construct graphs from partial information. For example, the RenderFile method builds a graph for file playback, given the name of the file. The Render method renders data from an output pin by connecting new filters to the pin.

Using these methods, an application does not need to specify every filter and pin connection in the graph. Instead, the Filter Graph Manager selects filters that are registered on the user’s system, adds them to the graph, and connects them.

see also

Subclass of the DirectShowFilterGraphMBS class.

63.17.2 Methods

63.17.3 Abort

Function:
The Abort method requests the Filter Graph Manager to halt its current task as quickly as possible.

Notes:
The current task may or may not fail to complete. Possibly the fastest option for the Filter Graph Manager is to complete the task.

Lasterror is set.

63.17.4 AddSourceFilter(FileName as string, FilterName as string) as DirectShowBaseFilterMBS

Function:
Add a source filter for a specified file to the filter graph.

Notes:
FileName: the name of the file to load.
FilterName: name for the source filter.

Lasterror is set.

This method searches for an installed filter that can read the specified file. If it finds one, the method adds it to the filter graph and returns a pointer to the filter’s IBaseFilter interface. To determine the media type and compression scheme of the file, the Filter Graph Manager reads the first few bytes of the file, looking for specific patterns of bytes, as documented in the article Registering a Custom File Type.

The application is responsible for building the rest of the filter graph. To do so, call EnumPins to enumerate the output pins on the source filter. Then use either the Connect method or the Render method.

If the method succeeds, the BaseFilter interface has an outstanding reference count. The caller must release the interface.

To render a file for default playback, use the RenderFile method.

The Filter Graph Manager holds a reference count on the filter until the filter is removed from the graph or the Filter Graph Manager is released.

63.17.5  Connect(pinOut as DirectShowPinMBS, pinIn as DirectShowPinMBS)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.  Function: Connects the two pins, using intermediates if necessary.
Notes:
pinOut: the output pin.
pinIn: the input pin.

Lasterror is set.

This method connects two pins directly or indirectly, adding intermediate filters if necessary. The method starts by attempting a direct connection. If that fails, it tries to use any filters that are already in the filter graph and have unconnected input pins. (It enumerates these in an arbitrary order.) If that fails, it searches for filters in the registry, and tries them in order of merit.

During the connection process, the Filter Graph Manager ignores pins on intermediate filters if the pin name begins with a tilde (\textasciitilde).
63.17. **CLASS DIRECTSHOWGRAPHBUILDERMBS**

see also

63.17.6 **ConnectFilters**(pinOut as DirectShowPinMBS, dest as DirectShowBaseFilterMBS)

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Convenience function to connect an output pin to a filter.
**Notes:** Lasterror is set.
See also:
- 63.17.7 ConnectFilters(source as DirectShowBaseFilterMBS, dest as DirectShowBaseFilterMBS) 11039
- 63.17.8 ConnectFilters(source as DirectShowBaseFilterMBS, pinIn as DirectShowPinMBS) 11039

63.17.7 **ConnectFilters**(source as DirectShowBaseFilterMBS, dest as DirectShowBaseFilterMBS)

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Convenience function to connect two filters.
**Notes:** Lasterror is set.
See also:
- 63.17.6 ConnectFilters(pinOut as DirectShowPinMBS, dest as DirectShowBaseFilterMBS) 11039
- 63.17.8 ConnectFilters(source as DirectShowBaseFilterMBS, pinIn as DirectShowPinMBS) 11039

63.17.8 **ConnectFilters**(source as DirectShowBaseFilterMBS, pinIn as DirectShowPinMBS)

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Convenience function to connect a filter to an input pin.
**Notes:** Lasterror is set.
See also:
- 63.17.6 ConnectFilters(pinOut as DirectShowPinMBS, dest as DirectShowBaseFilterMBS) 11039
- 63.17.7 ConnectFilters(source as DirectShowBaseFilterMBS, dest as DirectShowBaseFilterMBS) 11039

63.17.9 **Constructor**

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The constructor.
63.17.10 MediaControl as DirectShowMediaControlMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries related media control object. **Notes:** Lasterror is set.

63.17.11 MediaEventEx as DirectShowMediaEventExMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries related media event object. **Notes:** Lasterror is set.

63.17.12 Render(pinOut as DirectShowPinMBS)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Render method builds a filter graph that renders the data from a specified output pin. **Notes:**

- pinOut: an output pin.
- Lasterror is set.

This method renders the data from a specified output pin, adding new filters to the graph as needed. Filters are tried in the same order as for the Connect method. For more information, see Intelligent Connect.

During the connection process, the Filter Graph Manager ignores pins on intermediate filters if the pin name begins with a tilde (textasciitilde).

63.17.13 RenderFile(filePath as string)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Builds a filter graph that renders the specified file. **Notes:**

- filePath: string that contains the name of a media file.
- Lasterror is set.

If the filePath parameter specifies a media file, the method builds a filter graph for default playback. First it adds a source filter that can read the file, using the same process as the AddSourceFilter method. Then it renders the output pins on the source filter, adding intermediate filters if necessary. It tries filters in the same order as the Connect method.

During the connection process, the Filter Graph Manager ignores pins on intermediate filters if the pin name
begins with a tilde (`textasciitilde`).

Note that the RenderFile method does not remove any filters from the graph. If you call RenderFile twice, the second call simply adds more filters to the graph. When you run the graph, both sources will play at the same time.

### 63.17.14 SetLogFile(FilePath as string)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The SetLogFile method sets the file for logging actions taken when attempting to perform an operation.

**Notes:**
This method is for use in debugging; it is intended to help you determine the cause of any failure to automatically build a filter graph. Lasterror is set.

### 63.17.15 VideoWindow as DirectShowVideoWindowMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Queries the video window related to this graph builder.

**Notes:** Lasterror is set.
63.18 class DirectShowGUIDMBS

63.18.1 class DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for a Windows unique ID. **Notes:** If you need to validate a GUID or UUID, please check the IsGUID function in our FAQ.

63.18.2 Methods

63.18.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a GUID with only zeros. 
**Example:**
```vba
dim g as new DirectShowGUIDMBS
MsgBox g.DisplayString
```

See also:

- 63.18.4 Constructor(value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer, value5 as Integer, value6 as Integer, value7 as Integer, value8 as Integer, value9 as Integer, value10 as Integer, value11 as Integer, value12 as Integer, value13 as Integer, value14 as Integer, value15 as Integer, value16 as Integer)

63.18.4 Constructor(value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer, value5 as Integer, value6 as Integer, value7 as Integer, value8 as Integer, value9 as Integer, value10 as Integer, value11 as Integer, value12 as Integer, value13 as Integer, value14 as Integer, value15 as Integer, value16 as Integer)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new GUID with the given byte values. 
**Example:**
```vba
dim g as new DirectShowGUIDMBS(&h14, &h3e, &h4e, &h83, &h64, &h97, &h11, &hd2, &ha2, &h31, &h00, &h0, &h4f, &ha3, &h18, &h09)
MsgBox g.DisplayString
```
63.18. CLASS DIRECTSHOWGUIDMBS

See also:

- 63.18.3 Constructor

63.18.5 DisplayString as string

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The ID well formatted.

63.18.6 Equal(other as DirectShowGUIDMBS) as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Checks whether two GUIDs are equal.
**Notes:** Returns true if both items are equals.

63.18.7 Parse(GUID as String) as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Parses GUID string into a GUID object.

63.18.8 Properties

63.18.9 Byte(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Read or write the byte value.
**Example:**
```vba
dim g as new DirectShowGUIDMBS

g.Byte(1) = 65

MsgBox str(g.Byte(1)) // shows 65
```

**Notes:** (Read and Write computed property)
63.18.10 Data as string

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The UID as binary string.
**Notes:** (Read and Write computed property)
class DirectShowMediaControlMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Provides methods for controlling the flow of data through the filter graph.

**Notes:**

It includes methods for running, pausing, and stopping the graph. The Filter Graph Manager implements this interface.

This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

**Methods**

**Constructor**

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The private constructor.

**GetState(msTimeout as Integer = -1) as Integer**

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the state of the filter graph: paused, running, or stopped.

**Notes:**

*msTimeout*: Duration of the time-out, in milliseconds, or INFINITE (-1) to specify an infinite time-out.

State transitions are not necessarily synchronous. Therefore, when you call this method, the filter graph might be in transition to a new state. In that case, the method blocks until the transition completes or until the specified time-out elapses.

Lasterror is set.

Applications can use this method to determine whether playback has started after a call to Run. Generally, applications should have their own mechanism for tracking which state they have put the filter graph into. Applications typically use the current state to determine which user interface controls are enabled or disabled. For example, once the graph goes into the running state, the application might disable a ”Play” button and enable ”Stop” and ”Pause” buttons.

If the filter graph is in a transition to a new state, the returned state is the new state, not the previous state. This method returns an error if there is a call on another thread to change the state while this method is blocked.

Avoid specifying a time-out of INFINITE, because threads cannot process messages while waiting in Get-
State. If you call GetState from the thread that processes Windows messages, specify small wait times on the call in order to remain responsive to user input. This is especially important when the source is streaming over a network or from the Internet because state transitions in these environments can take significantly more time to complete.

63.19.5 Pause

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Pauses all the filters in the filter graph.

**Notes:**

LastError is set.

Pausing the filter graph cues the graph for immediate rendering when the graph is next run. While the graph is paused, filters process data but do not render it. Data is pushed through the graph and processed by transform filters as far as buffering permits, but renderer filters do not render the data. However, video renderers display a static poster frame of the first sample.

If the method returns S_FALSE, call the GetState method to wait for the state transition to complete, or to check if the transition has completed. When you call Pause to display the first frame of a video file, always follow it immediately with a call to GetState to ensure that the state transition has completed. Failure to do this can result in the video rectangle being painted black. If the method fails, it stops the graph before returning.

63.19.6 RenderFile(FilePath as string)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Builds a filter graph that renders the specified file.

**Notes:**

LastError is set.

FilePath: Specifies the name of the file to load.

63.19.7 Run

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Runs all the filters in the filter graph.

**Notes:**

While the graph is running, data moves through the graph and is rendered.
Lasterror is set.

If the filter graph is stopped, this method pauses the graph before running. If the graph is already running, the method returns S_OK but has no effect.

The graph runs until the application calls the Pause or Stop method. When playback reaches the end of the stream, the graph continues to run, but the filters do not stream any more data. At that point, the application can pause or stop the graph. For information about the end-of-stream event, see Pause and EC_COMPLETE.

This method does not seek to the beginning of the stream. Therefore, if you run the graph, pause it, and then run it again, playback resumes from the paused position. If you run the graph after it has reached the end of the stream, nothing is rendered. To seek the graph, use the MediaSeeking interface.

If method returns S_FALSE, it means that the method returned before all of the filters switched to a running state. The filters will complete the transition after the method returns. Optionally, you can wait for the transition to complete by calling the GetState method with a timeout value. However, this is not required.

If the Run method returns an error code, it means that one or more filters failed to run. However, some filters might be in a running state. In a multistream graph, entire streams might be playing successfully. Typically the application would tear down the graph and report an error in this case.

63.19.8 Stop

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Stops all the filters in the graph.

**Notes:**

Lasterror is set.

If the graph is running, this method pauses the graph before stopping it. While paused, video renderers can copy the current frame to display as a poster frame.

This method does not seek to the beginning of the stream. If you call this method and then call the Run method, playback resumes from the stopped position. To seek, use the IMediaSeeking interface.

The Filter Graph Manager pauses all the filters in the graph, and then calls the Stop method on all filters, without waiting for the pause operations to complete. Therefore, some filters might have their Stop method called before they complete their pause operation. If you develop a custom rendering filter, you might need to handle this case by pausing the filter if it receives a stop command while in a running state. However, most filters do not need to take any special action in this regard.

63.19.9 StopWhenReady

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Pauses the filter graph, allowing filters to queue data, and then stops the filter graph.
Notes:

Lasterror is set.

This method is useful if you want to seek the filter graph while the graph is stopped. As long as the filter graph is stopped, changes in the current position do not repaint the video window with a new frame. Therefore, calling SetPositions does not update the video window. To update the window after the seek operation, call StopWhenReady. This method transitions the graph to a paused state, waits for the pause operation to complete, and then transitions the graph back to stopped. The pause operation queues data in the graph, so that the video renderer receives and displays the new frame.

This method is asynchronous. It waits on a separate thread for the pause to complete. The calling thread does not block, which enables the application to respond to user input. When the method returns, the logical state of the graph is stopped, even before the pause operation completes. If you call the GetState method at this point, it returns StateStopped.

If the application issues another state-change command (such as pause, run, or seek) before the pause operation completes, the new command cancels the pending stop command. The pause operation completes, but the graph does not stop.

63.19.10 Properties

63.19.11 Handle as Integer

Notes:

Points to an IMediaControl interface.

(Read and Write property)

63.19.12 Lasterror as Integer

Notes:

Please check function documentation and also LastErrorMessage property for a human readable error message.

(Read and Write property)
63.19.13 LastErrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The formatted error message for the last error. **Notes:** (Read and Write property)

63.19.14 Constants

63.19.15 kStatePaused = 1

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the state constants. **Notes:** Paused

63.19.16 kStateRunning = 2

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the state constants. **Notes:** Running

63.19.17 kStateStopped = 0

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the state constants. **Notes:** Stopped.
63.20 class DirectShowMediaEventExMBS

63.20.1 class DirectShowMediaEventExMBS

The class for extended options for media event handling.

Notes:

The DirectShowMediaEventExMBS interface inherits the DirectShowMediaEventMBS interface, which contains methods for retrieving event notifications and for overriding the filter graph’s default handling of events. MediaEventEx adds methods that enable an application window to receive messages when events occur. Subclass of the DirectShowMediaEventMBS class. This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

63.20.2 Methods

63.20.3 Constructor

The private constructor.

63.20.4 Properties

63.20.5 NotifyFlags as Integer

Enables or disables event notifications. Must be one of the following values: 0 = Enable event notifications or AM_MEDIAEVENT_NONOTIFY = Disable event notifications.

Notes:

By default, the Filter Graph Manager posts event notifications for the application. If the NotifyFlags parameter is AM_MEDIAEVENT_NONOTIFY, the Filter Graph Manager clears any pending event notifications from the queue, and does not post any new ones. If event notifications are disabled, the handle returned by the GetEventHandle method is signaled at the end of each stream that is, whenever the Filter Graph Manager receives an EC_COMPLETE event.

(Read and Write computed property)
63.20.6 Constants

63.20.7 AM_MEDIAEVENT_NONOTIFY = 1

MBS Win Plugin, Plugin Version: 12.1. Function: One of the notify flags constant. Notes: Pass this value to NotifyFlags to disable event notification.
63.21 class DirectShowMediaEventMBS

63.21.1 class DirectShowMediaEventMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for media event handling.

**Notes:**

The MediaEvent interface contains methods for retrieving event notifications and for overriding the Filter Graph Manager’s default handling of events. The MediaEventEx interface inherits this interface and extends it.

The Filter Graph Manager implements this interface. Applications can use it to respond to events that occur in the filter graph, such as the end of a stream or a rendering error. Filters post events to the filter graph using the IMediaEventSink interface.

This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

63.21.2 Methods

63.21.3 CancelDefaultHandling(eventCode as Integer)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Cancels the Filter Graph Manager’s default handling for a specified event.

**Notes:**

The event notification is passed to the application.

Lasterror is set.

To restore the default handling for an event, call the RestoreDefaultHandling method with the event code.

63.21.4 Constructor

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The private constructor.

63.21.5 FreeEventParams(eventCode as Integer, Param1 as Integer, Param2 as Integer)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Frees resources associated with the parameters of an event.
Notes:
EventCode: Event code.
Param1: First event parameter.
Param2: Second event parameter.

Lasterorr is set.
After you call the GetEvent method to retrieve an event notification, you must call FreeEventParams. This method frees any resources that were allocated for the event parameters. Pass in the same variables used for the GetEvent call.

63.21.6 RestoreDefaultHandling(eventCode as Integer)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Restores the Filter Graph Manager's default handling for a specified event.

Notes:
Lasterror is set.
By default, the Filter Graph Manager handles some events (such as EC_REPAINT) without passing them to the application. If you call the CancelDefaultHandling method to override the default handling for an event, you can restore the default behavior by calling RestoreDefaultHandling with the same event code.

63.21.7 Properties

63.21.8 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The internal object reference.

Notes:
Points to an IMediaEvent interface.
(Read and Write property)

63.21.9 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The last error code.

Notes:
Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)
63.21.10 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The formatted error message for the last error. **Notes:** (Read and Write property)

63.21.11 Constants

63.21.12 AM_MEDIAEVENT_NONOTIFY = 1

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the notify flags constant. **Notes:** Pass this value to NotifyFlags to disable event notification.
63.22 class DirectShowMediaFilterMBS

63.22.1 class DirectShowMediaFilterMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The MediaFilter interface controls the streaming state of a filter.

**Notes:**
All DirectShow filters implement this interface. It provides methods for switching the filter between states (stopped, paused, and running); for retrieving the filter's current state; and for setting a reference clock. Applications should not call MediaFilter methods on filters.

The Filter Graph Manager also exposes this interface. Applications can use the SetSyncSource method to set the graph reference clock, and GetSyncSource to retrieve the clock. Applications should not call the other methods on this interface. Instead, use the corresponding methods on the MediaControl interface. The BaseFilter interface inherits from MediaFilter.

This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

63.22.2 Methods

63.22.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The private constructor.

63.22.4 Pause

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The Pause method pauses the filter.

**Notes:**
Lasterror is set.

When a filter is paused, it can receive, process, and deliver samples. However, a renderer filter will only accept one sample while paused. Therefore, when the filter graph is paused, samples move through the graph until the first sample reaches the renderer. At that point, streaming is paused until the Run method is called. Video renderers display the first sample as a still frame.

Live capture filters do not deliver any samples while paused, only while running.

The state transition might be asynchronous. If the method returns before the transition completes, the
lasterror value is 1. A renderer filter does not complete the transition to paused until either (1) it receives one sample, or (2) it receives an end-of-stream notification. While the state transition is pending, State gives lasterror VFW_S_STATE_INTERMEDIATE.

### 63.22.5 Run(StartTime as Int64)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The Run method runs the filter.

**Notes:**

StartTime: Reference time corresponding to stream time 0.
Lasterror is set.

When a filter is running, it can receive, process, and deliver samples. Source filters generate new samples, and renderer filters render them.
The state transition might be asynchronous. If the method returns before the transition completes, the lasterror value is 1.
Stream time is calculated as the current reference time minus StartTime. To calculate when a media sample should be rendered, the renderer compares the time stamp with the current stream time. Thus, a media sample with a time stamp of zero should be rendered at time StartTime. For more information, see Time and Clocks in DirectShow.
When an application calls the Run method, the Filter Graph Manager calls Run on each filter. It sets the value of StartTime slightly in the future, to account for graph latency.

### 63.22.6 Stop

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The Stop method stops the filter.

**Notes:**

Lasterror is set.
When a filter is stopped, it does not process or deliver any samples, and it rejects samples from upstream filters.
The state transition might be asynchronous. If the method returns before the transition completes, the lasterror value is 1.
This method always sets the filter’s state to kStateStopped, even if the method returns an error code.
63.22. CLASS DIRECTSHOWMEDIAFILTERMBS

63.22.7 Properties

63.22.8 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The internal object reference.
**Notes:** Points to an IMediaFilter interface.
(Read and Write property)

63.22.9 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The last error code.
**Notes:** Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

63.22.10 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The formatted error message for the last error.
**Notes:** (Read and Write property)

63.22.11 Constants

63.22.12 kStatePaused = 1

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the filter state constants.
**Notes:** Paused. The filter is processing data, but not rendering it.

63.22.13 kStateRunning = 2

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the filter state constants.
**Notes:** Running. The filter is processing and rendering data.
63.22.14  kStateStopped = 0

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the filter state constants.  
**Notes:** Stopped. The filter is not processing data.
63.23. **CLASS DIRECTSHOWMEDIATYPEMBS**

### 63.23 class DirectShowMediaTypeMBS

#### 63.23.1 class DirectShowMediaTypeMBS

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**

Describes the format of a media sample.

**Notes:**

see also

This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

---

### 63.23.2 Methods

#### 63.23.3 Constructor

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**

The private constructor.

---

### 63.23.4 Properties

#### 63.23.5 DVINFO as DirectShowDVInfoMBS

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**

Queries format data as DVInfo.

**Notes:**

Returns nil if format is not a DVInfo.

(Read only property)

---

#### 63.23.6 FixedSizeSamples as Boolean

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**

If true, samples are of a fixed size.

**Notes:**

This field is informational only. For audio, it is generally set to true. For video, it is usually true for uncompressed video and false for compressed video.

(Read and Write property)
63.23.7 FormatType as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** GUID that specifies the structure used for the format block. **Notes:** (Read and Write property)

63.23.8 Handle as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Internal object reference. **Notes:** (Read and Write property)

63.23.9 MajorType as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Globally unique identifier (GUID) that specifies the major type of the media sample. **Notes:** For a list of possible major types, see Media Types. http://msdn.microsoft.com/en-us/library/windows/desktop/dd390670(v=vs.85).aspx (Read and Write property)

63.23.10 SampleSize as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Size of the sample in bytes. For compressed data, the value can be zero. **Notes:** (Read and Write property)

63.23.11 SubType as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** GUID that specifies the subtype of the media sample. **Notes:** For a list of possible subtypes, see Media Types. For some formats, the value might be MEDIASUB-TYPE_None, which means the format does not require a subtype. http://msdn.microsoft.com/en-us/library/windows/desktop/dd390670(v=vs.85).aspx (Read and Write property)
63.23.12 TemporalCompression as Boolean

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
If true, samples are compressed using temporal (interframe) compression.

**Notes:**
A value of true indicates that not all frames are key frames. This field is informational only.
(Read and Write property)

63.23.13 VideoInfoHeader as DirectShowVideoInfoHeaderMBS

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Queries format data as VideoInfoHeader.

**Notes:**
Returns nil if format is not a VideoInfoHeader.
(Read only property)

63.23.14 VideoInfoHeader2 as DirectShowVideoInfoHeader2MBS

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Queries format data as VideoInfoHeader2.

**Notes:**
Returns nil if format is not a VideoInfoHeader2.
(Read only property)

63.23.15 WaveFormat as DirectShowWaveFormatMBS

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Queries format data as WaveFormat.

**Notes:**
Returns nil if format is not a WaveFormat.
(Read only property)
class DirectShowMonikerMBS

Notes:
In this plugin we use monikers to enumerate filters and devices in order to connect with BindBaseFilter method.

Enables you to use a moniker object, which contains information that uniquely identifies a COM object. An object that has a pointer to the moniker object’s IMoniker interface can locate, activate, and get access to the identified object without having any other specific information on where the object is actually located in a distributed system.
Monikers are used as the basis for linking in COM. A linked object contains a moniker that identifies its source. When the user activates the linked object to edit it, the moniker is bound; this loads the link source into memory.

see also
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

Methods

BindBaseFilter as DirectShowBaseFilterMBS

Notes:
Lasterror is set.

This implements the primary function of a moniker, which is to locate the object identified by the moniker and return a pointer to one of its interfaces.

see also
63.24. CLASS DIRECTSHOWMONIKERMBS

63.24.4 Constructor

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The private constructor.

63.24.5 DisplayName(BindContext as DirectShowBindContextMBS = nil) as string

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the display name for the moniker.
**Notes:**
BindContext: The DirectShowBindContextMBS interface on the bind context to be used in this operation. The bind context caches objects bound during the binding process, contains parameters that apply to all operations using the bind context, and provides the means by which the moniker implementation should retrieve information about its environment. If you provide nil, the plugin creates a temporary context.

GetDisplayName provides a string that is a displayable representation of the moniker. A display name is not a complete representation of a moniker’s internal state; it is simply a form that can be read by users. As a result, it is possible (though rare) for two different monikers to have the same display name.

This is not a text to show to user.

63.24.6 EnumMonikers(forward as boolean) as DirectShowEnumMonikerMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves enumerator for the components of a composite moniker.
**Notes:** Lasterror is set.

63.24.7 Hash as UInt32

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a hash value using the internal state of the moniker.
**Notes:** Lasterror is set.

63.24.8 IsEqual(other as DirectShowMonikerMBS) as Boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Determines whether this moniker is identical to the specified moniker.
CHAPTER 63. DIRECTSHOW

Notes:
Returns true if both are identical.
LastError is set.

63.24.9 Properties(BindContext as DirectShowBindContextMBS = nil) as DirectShowPropertyBagMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates property bag with properties of the moniker.
**Notes:** Lasterror is set.

63.24.10 Properties

63.24.11 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The internal object reference.
**Notes:**
Points to an IMoniker interface.
(Read and Write property)

63.24.12 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The last error code.
**Notes:**
Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

63.24.13 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The formatted error message for the last error.
**Notes:** (Read and Write property)
63.25 class DirectShowNullRendererMBS

63.25.1 class DirectShowNullRendererMBS

**Notes:**

The Null Renderer filter is a renderer that discards every sample it receives, without displaying or rendering the sample data.

Use this filter when an output pin in the graph requires a downstream connection, but you do not wish to render the data from that pin. By connecting the output pin to the Null Renderer, you complete the connection without rendering the data.

Subclass of the DirectShowBaseFilterMBS class.

63.25.2 Methods

63.25.3 Constructor

**Notes:** On success the handle property is not zero.
63.26 class DirectShowPinMBS

63.26.1 class DirectShowPinMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
This interface is exposed by all input and output pins.
**Notes:**
The filter graph manager uses this interface to connect pins and perform flushing operations. Applications can use this interface to query the pin for information.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

63.26.2 Methods

63.26.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The private constructor.

63.26.4 Disconnect

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The Disconnect method breaks the current pin connection.
**Notes:**
The Filter Graph Manager calls this method when it disconnects two filters. Applications and filters should not call this method. Instead, call the DirectShowFilterGraphMBS.Disconnect method on the Filter Graph Manager.
Sets lasterror.

This method fails if the filter is paused or running. If the pin supports the PinConnection interface, call PinConnection DynamicDisconnect to disconnect the pin when the filter is paused or running.
This method does not disconnect the other pin in the pin connection.

63.26.5 PIN_CATEGORY_ANALOGVIDEOIN as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
One of the DirectShow pin categories.
**Notes:** Input pin of the capture filter that takes analog and digitizes it.
63.26.6 PIN_CATEGORY_CAPTURE as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the DirectShow pin categories. **Notes:** Capture pin.

63.26.7 PIN_CATEGORY_CC as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the DirectShow pin categories. **Notes:** Pin providing closed captioning data from Line 21.

63.26.8 PIN_CATEGORY_EDS as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the DirectShow pin categories. **Notes:** Pin providing Extended Data Services (Line 21, even fields).

63.26.9 PIN_CATEGORY_NABTS as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the DirectShow pin categories. **Notes:** Pin providing North American Videotext Standard data.

63.26.10 PIN_CATEGORY_PREVIEW as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the DirectShow pin categories. **Notes:** Preview pin.

63.26.11 PIN_CATEGORY_STILL as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the DirectShow pin categories. **Notes:** Pin that provides a still image. The filter’s capture pin must be connected before the still-image pin is connected.
63.26.12 PINCATEGORY_TELETEXT as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
One of the DirectShow pin categories.  
**Notes:** Pin providing teletext (a closed captioning variant).

63.26.13 PINCATEGORY_TIMECODE as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
One of the DirectShow pin categories.  
**Notes:** Pin providing timecode data.

63.26.14 PINCATEGORY_VBI as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
One of the DirectShow pin categories.  
**Notes:** Pin to be connected to the VBI Surface Allocator, the VBI surface allocator filter that is needed to allocate the correct video memory for things like closed captioning overlays in scenarios where a video port is being used. PCI, IEEE 1394, and USB scenarios do not use this filter.

63.26.15 PINCATEGORY_VIDEOPORT as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
One of the DirectShow pin categories.  
**Notes:** Video output pin to be connected to input pin zero on the Overlay Mixer.

63.26.16 PINCATEGORY_VIDEOPORT_VBI as DirectShowGUIDMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
One of the DirectShow pin categories.  
**Notes:** Pin providing vertical blanking interval data.
63.26.17 Properties

63.26.18 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The internal object reference.
**Notes:**
Points to an IPin interface.
(Read and Write property)

63.26.19 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The last error code.
**Notes:**
Please check function documentation and also LastErrorMessage property for a human readable error mes-
sage.
(Read and Write property)

63.26.20 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The formatted error message for the last error.
**Notes:** (Read and Write property)
63.27 class DirectShowPropertyBagMBS

63.27.1 class DirectShowPropertyBagMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Provides an object with a property bag in which the object can save its properties persistently.
**Notes:**
used for Monikers to store properties like description and user friendly name.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

63.27.2 Methods

63.27.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

63.27.4 Description as string

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Convenience method to read description.
**Notes:** Lasterror is set.

63.27.5 DevicePath as string

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Convenience method to read device path.
**Notes:** Lasterror is set.

63.27.6 FriendlyName as string

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Convenience method to read friendly name.
**Notes:** Lasterror is set.
63.27.7 Read(name as string) as Variant

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads one of the properties into a variant.

**Notes:**
As we only need 3 properties for DirectShowMonikerMBS.Properties, we have direct accessors. Lasterror is set.

63.27.8 Properties

63.27.9 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.

**Notes:**
Points to an IPropertyBag interface.
(Read and Write property)

63.27.10 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code.

**Notes:**
Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

63.27.11 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The formatted error message for the last error.

**Notes:** (Read and Write property)
63.28 class DirectShowSampleGrabberMBS

63.28.1 class DirectShowSampleGrabberMBS

Notes:
The Sample Grabber filter provides a way to retrieve samples as they pass through the filter graph. It is a transform filter with one input pin and one output pin. It passes all samples downstream unchanged, so you can insert it into a filter graph without altering the data stream. Your application can then retrieve individual samples from the filter by calling methods on the ISampleGrabber interface. If you want to retrieve samples without rendering the data, connect the Sample Grabber filter to the Null Renderer filter.

63.28.2 Methods

63.28.3 BaseFilter as DirectShowBaseFilterMBS

Notes: So you can add it to a graph builder.

63.28.4 Constructor

63.28.5 Current as Picture

Notes:
This actually makes a copy of the internal buffer into a new picture object.
Lasterror is set.
63.28. Destructor

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The destructor.

63.28.7 SetOneShot(OneShot as boolean)

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The SetOneShot method specifies whether the Sample Grabber filter halts after the filter receives a sample.

63.28.8 Properties

63.28.9 Handle as Integer

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The internal object reference.
**Notes:**
Points to an ISampleGrabber interface.
(Read and Write property)

63.28.10 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The last error code.
**Notes:**
Please check function documentation and also LastErrorMessage property for a human readable error message.
(Read and Write property)

63.28.11 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The formatted error message for the last error.
**Notes:** (Read and Write property)
63.28.12 Events

63.28.13 NewFrame(Time as Double)

MBS Win Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**

The event for a new video frame.

**Notes:**

time is the starting time of the sample, in seconds.

Use the Current method to get the picture.
63.29. **CLASS DIRECTSHOWVIDEOINFOHEADER2MBS**

**63.29 class DirectShowVideoInfoHeader2MBS**

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**

Describes the bitmap and color information for a video image, including interlace, copy protection, and pixel aspect ratio information.

**Notes:**

see also

This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

**63.29.2 Methods**

**63.29.3 Constructor**

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**

The private constructor.

**63.29.4 Properties**

**63.29.5 AvgTimePerFrame as Int64**

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**

The desired average display time of the video frames, in 100-nanosecond units.

**Notes:**

The actual time per frame may be longer.

see also

(Read and Write property)

**63.29.6 BitErrorRate as Integer**

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**

Data error rate, in bit errors per second.

**Notes:** (Read and Write property)
63.29.7  BitRate as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Approximate data rate of the video stream, in bits per second.
**Notes:** (Read and Write property)

63.29.8  ControlFlags as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Control flags.
**Notes:**
see also
(Read and Write property)

63.29.9  CopyProtectFlags as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Flag set with the AMCOPYPROTECT.RestrictDuplication value (0x00000001) to indicate that the duplication of the stream should be restricted.
**Notes:**
If undefined, specify zero or else the connection will be rejected.
(Read and Write property)

63.29.10 Height as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The bitmap height.
**Notes:** (Read and Write property)

63.29.11 InterlaceFlags as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Flags that specify how the video is interlaced.
**Notes:**
see also
63.29. **CLASS DIRECTSHOWVIDEOINFOHEADER2MBS**

(Read and Write property)

63.29.12 **PictAspectRatioX** as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The X dimension of picture aspect ratio. For example, 16 for a 16-inch x 9-inch display.
**Notes:** (Read and Write property)

63.29.13 **PictAspectRatioY** as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Y dimension of picture aspect ratio. For example, 9 for a 16-inch x 9-inch display.
**Notes:** (Read and Write property)

63.29.14 **SourceBottom** as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Part of the rectangle defining the source video window.
**Notes:** This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

63.29.15 **SourceLeft** as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Part of the rectangle defining the source video window.
**Notes:** This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

63.29.16 **SourceRight** as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Part of the rectangle defining the source video window.
**Notes:**
This rectangle can be a clipping rectangle, to select a portion of the source video stream.  
(Read and Write property)

63.29.17  SourceTop as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.  Function:  
Part of the rectangle defining the source video window.  
Notes:  
This rectangle can be a clipping rectangle, to select a portion of the source video stream.  
(Read and Write property)

63.29.18  TargetBottom as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.  Function:  
Part of the target rectangle for the destination video window.  
Notes:  
(Read and Write property)

63.29.19  TargetLeft as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.  Function:  
Part of the target rectangle for the destination video window.  
Notes:  
(Read and Write property)

63.29.20  TargetRight as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.  Function:  
Part of the target rectangle for the destination video window.  
Notes:  
(Read and Write property)

63.29.21  TargetTop as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.  Function:  
Part of the target rectangle for the destination video window.  
Notes:  
(Read and Write property)
63.29.22 Width as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The bitmap width. **Notes:** (Read and Write property)
63.30  class DirectShowVideoInfoHeaderMBS

63.30.1  class DirectShowVideoInfoHeaderMBS

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Describes the bitmap and color information for a video image.

**Notes:**

see also http://msdn.microsoft.com/en-us/library/windows/desktop/dd407325(v=vs.85).aspx

This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

63.30.2  Methods

63.30.3  Constructor

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The private constructor.

63.30.4  Properties

63.30.5  AvgTimePerFrame as Int64

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The desired average display time of the video frames, in 100-nanosecond units.

**Notes:**

The actual time per frame may be longer.

see also http://msdn.microsoft.com/en-us/library/windows/desktop/dd407325(v=vs.85).aspx

(Read and Write property)

63.30.6  BitCount as Integer

**Notes:**

The number of bits-per-pixel. Determines the number of bits that define each pixel and the maximum number of colors in the bitmap. This member must be one of the following values.

Can be 0 for PNG/JPEG images, 1 for B/W, 4 for 16 colors, 8 for 256 colors, 16 for thousands of colors, 24 for millions of colors or 32 for millions of colors with alpha.
63.30. CLASS DIRECTSHOWVIDEOINFOHEADERMBS

(Read and Write property)

63.30.7 BitErrorRate as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Data error rate, in bit errors per second.
**Notes:** (Read and Write property)

63.30.8 BitRate as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Approximate data rate of the video stream, in bits per second.
**Notes:** (Read and Write property)

63.30.9 BMIHeaderPtr as Ptr

MBS Win Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Returns pointer to BITMAPINFOHEADER structure.
**Notes:**
You can use this to modify any field directly.
You need to know what you do and know the exact offset. (which can be different in 32-bit vs. 64-bit)
(Read only property)

63.30.10 Height as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The bitmap height.
**Notes:** (Read and Write property)

63.30.11 SourceBottom as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Part of the rectangle defining the source video window.
**Notes:**
This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)
63.30.12 SourceLeft as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Part of the rectangle defining the source video window.
**Notes:**
This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

63.30.13 SourceRight as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Part of the rectangle defining the source video window.
**Notes:**
This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

63.30.14 SourceTop as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Part of the rectangle defining the source video window.
**Notes:**
This rectangle can be a clipping rectangle, to select a portion of the source video stream.
(Read and Write property)

63.30.15 TargetBottom as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Part of the target rectangle for the destination video window.
**Notes:** (Read and Write property)

63.30.16 TargetLeft as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Part of the target rectangle for the destination video window.
**Notes:** (Read and Write property)
63.30. **CLASS DIRECTSHOWVIDEOINFOHEADERMBS**

63.30.17 **TargetRight as Integer**

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Part of the target rectangle for the destination video window.
**Notes:** (Read and Write property)

63.30.18 **TargetTop as Integer**

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Part of the target rectangle for the destination video window.
**Notes:** (Read and Write property)

63.30.19 **VideoInfoHeaderPtr as Ptr**

MBS Win Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Returns pointer to VIDEOINFOHEADER structure.
**Notes:**
You can use this to modify any field directly.
You need to know what you do and know the exact offset. (which can be different in 32-bit vs. 64-bit)
(Read only property)

63.30.20 **Width as Integer**

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The bitmap width.
**Notes:** (Read and Write property)
class DirectShowVideoStreamConfigCapsMBS

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Describes a range of video formats.  
**Notes:**  
Video compression and video capture filters use this structure to describe what formats they can produce. Microsoft deprecated this structure some time ago in favor of DirectShowMediaTypeMBS class.  

see also  
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.  

### 63.31.2 Methods

### 63.31.3 Constructor

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The private constructor.

### 63.31.4 Properties

#### 63.31.5 CropAlignX as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Required horizontal alignment of the source rectangle.  
**Notes:**  
 Deprecated.  
(Read only property)

#### 63.31.6 CropAlignY as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Required vertical alignment of the source rectangle.  
**Notes:**  
 Deprecated.  
(Read only property)
63.31.7 CropGranularityX as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Horizontal granularity of the source rectangle.

**Notes:**
This value specifies the increments that are valid between MinCroppingSize and MaxCroppingSize. Deprecated.
(Read only property)

63.31.8 CropGranularityY as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Vertical granularity of the source rectangle.

**Notes:**
This value specifies the increments that are valid between MinCroppingSize and MaxCroppingSize. Note Deprecated.
(Read only property)

63.31.9 InputSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Native size of the incoming video signal.

**Notes:**
For a compressor, the size is taken from the input pin. For a capture filter, the size is the largest signal the filter can digitize with every pixel remaining unique. Deprecated.
(Read only property)

63.31.10 InputSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Native size of the incoming video signal.

**Notes:**
For a compressor, the size is taken from the input pin. For a capture filter, the size is the largest signal the filter can digitize with every pixel remaining unique. Deprecated.
63.31.11 MaxBitsPerSecond as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Maximum data rate this pin can produce.

**Notes:**
Deprecated
(Read only property)

63.31.12 MaxCroppingSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Largest source rectangle allowed.

**Notes:**
Deprecated.
(Read only property)

63.31.13 MaxCroppingSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Largest source rectangle allowed.

**Notes:**
Deprecated.
(Read only property)

63.31.14 MaxFrameInterval as Int64

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The maximum frame duration, in 100-nanosecond units.

**Notes:**
This value applies only to capture filters.
(Read and Write property)
63.31.15 MaxOutputSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Maximum output size.
**Notes:**
Deprecated.
(Read only property)

63.31.16 MaxOutputSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Maximum output size.
**Notes:**
Deprecated.
(Read only property)

63.31.17 MinBitsPerSecond as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Minimum data rate this pin can produce.
**Notes:**
Deprecated.
(Read only property)

63.31.18 MinCroppingSizeHeight as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Smallest source rectangle allowed.
**Notes:**
The source rectangle is defined in the Source rectangle of the DirectShowVideoInfoHeader2MBS or Direct-
ShowVideoInfoHeaderMBS classes.
Note Deprecated.
(Read only property)
63.31.19  MinCroppingSizeWidth as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.  **Function:** Smallest source rectangle allowed.  
**Notes:**  
The source rectangle is defined in the Source rectangle of the DirectShowVideoInfoHeader2MBS or DirectShowVideoInfoHeaderMBS classes.  
Note Deprecated.  
(Read only property)

63.31.20  MinFrameInterval as Int64

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.  **Function:** The minimum frame duration, in 100-nanosecond units. This value applies only to capture filters.  
**Notes:** (Read and Write property)

63.31.21  MinOutputSizeHeight as Integer

**Notes:**  
Deprecated.  
(Read only property)

63.31.22  MinOutputSizeWidth as Integer

**Notes:**  
Deprecated.  
(Read only property)

63.31.23  OutputGranularityX as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.  **Function:** Granularity of the output width.  
**Notes:**
This value specifies the increments that are valid between MinOutputSize and MaxOutputSize. Deprecated. (Read only property)

### 63.31.24 OutputGranularityY as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Granularity of output height. **Notes:** This value specifies the increments that are valid between MinOutputSize and MaxOutputSize. Deprecated. (Read only property)

### 63.31.25 ShrinkTapsX as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates how well the filter can shrink the image horizontally. **Notes:** Deprecated.

<table>
<thead>
<tr>
<th>Value</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Does not support stretching/shrinking.</td>
</tr>
<tr>
<td>1</td>
<td>Uses pixel doubling (stretching) or eliminates pixels (shrinking)</td>
</tr>
<tr>
<td>2</td>
<td>Uses interpolation (2 taps)</td>
</tr>
<tr>
<td>3 and higher</td>
<td>Uses interpolation (&gt;2 taps)</td>
</tr>

(Read only property)

### 63.31.26 ShrinkTapsY as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates how well the filter can shrink the image vertically. **Notes:** Deprecated.

(Read only property)
63.31.27 StretchTapsX as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates how well the filter can stretch the image horizontally.

**Notes:**
Deprecated.

<table>

(Read only property)
63.31. **CLASS DIRECTSHOWVIDEOSTREAMCONFIGCAPSMBS**

### 63.31.29 VideoStandard as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The analog video standard supported.
**Notes:**
The value is a bitwise combination of flags from the AnalogVideoStandard enumeration type, or zero.
(Read only property)
63.32 class DirectShowVideoWindowMBS

63.32.1 class DirectShowVideoWindowMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The direct show class for a video window.

**Notes:**
The DirectShowVideoWindowMBS interface sets properties on the video window. Applications can use it to set the window owner, the position and dimensions of the window, and other properties.

The Video Renderer filter and the Filter Graph Manager both expose this interface. The Filter Graph Manager forwards all method calls to the Video Renderer. It also forwards certain window messages that the Video Renderer needs to receive, such as WM_DISPLAYCHANGE. Because the video window is usually a child of an application window, the filter would not otherwise receive these messages. Therefore it relies on the Filter Graph Manager to forward them.

In most cases, an application should query the Filter Graph Manager for this interface, and not call the filter directly, because of the messaging issue just described. However, if the filter graph has more than one Video Renderer, the Filter Graph Manager only communicates with one of them, selected arbitrarily. Therefore, if your application uses multiple video windows, use the DirectShowVideoWindowMBS interface directly on the filters. In that case, you must forward window messages to each Video Renderer instance, using the NotifyOwnerMessage method.

Properties set on a video renderer persist between successive connections and disconnections.

**Error codes:** If the video renderer filter is not connected to another filter, all methods return the error code VFW_E_NOT_CONNECTED. For the Filter Graph Manager’s implementation, if the graph does not contain a video renderer filter, all methods return E_NOINTERFACE. Note that the Filter Graph Manager exposes the interface even when the graph does not contain a video renderer, so an application can query for the interface before it builds the graph.

This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

63.32.2 Methods

63.32.3 Constructor

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The private constructor to create a new video window.
63.32.4 GetMaxIdealImageSize(byref width as Integer, byref height as Integer)

Notes:
Width: Receives the maximum ideal width, in pixels.
Height: Receives the maximum ideal height, in pixels.
Lasterror is set.

The maximum ideal size may differ from the native video size, because the video hardware might have specific stretching requirements.

63.32.5 GetMinIdealImageSize(byref width as Integer, byref height as Integer)

Notes:
Width: Receives the minimum ideal width, in pixels.
Height: Receives the minimum ideal height, in pixels.
Lasterror is set.

The maximum ideal size may differ from the native video size, because the video hardware might have specific stretching requirements.

63.32.6 GetRestorePosition(byref left as Integer, byref top as Integer, byref width as Integer, byref height as Integer)

Notes:
Left: Receives the x-coordinate, in pixels.
Top: Receives the y-coordinate, in pixels.
Width: Receives the width of the window, in pixels.
Height: Receives the height of the window, in pixels.
Lasterror is set.

If the video window is minimized or maximized, you can use this method to get the window’s restored position.
63.32.7 GetWindowPosition(byref left as Integer, byref top as Integer, byref width as Integer, byref height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The GetWindowPosition method retrieves the position of the video window.

**Notes:**
- Left: Receives the x-coordinate, in pixels.
- Top: Receives the y-coordinate, in pixels.
- Width: Receives the width of the window, in pixels.
- Height: Receives the height of the window, in pixels.

LastError is set.
This method has the same effect as querying left, top, width and height methods.

63.32.8 HideCursor(hide as boolean)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The HideCursor method shows or hides the cursor when the mouse is positioned over the video window.

**Notes:**
- Hide: Whether to hide or show the cursor.
- Lasterror is set.

63.32.9 IsCursorHidden as Boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The IsCursorHidden method queries whether the cursor is hidden.

**Notes:** Lasterror is set.

63.32.10 SetWindowForeground(Focus as Boolean)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The SetWindowForeground method places the video window at the top of the Z order.

**Notes:**
- Focus: whether to give the window focus.
- Lasterror is set.
63.32.11 SetWindowPosition(left as Integer, top as Integer, width as Integer, height as Integer)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The SetWindowPosition method sets the position of the video window.  
**Notes:**  
- Left: The x-coordinate, in pixels.  
- Top: The y-coordinate, in pixels.  
- Width: The width, in pixels.  
- Height: The height, in pixels.  
- Lasterror is set.  

This method has the same effect as setting the Left, Top, Width, and Height methods. If resizing the window to the specified dimensions is impossible, this method modifies the window’s size and location to make the window fit. Call the GetWindowPosition method to determine the result.

63.32.12 Properties

63.32.13 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal object reference.  
**Notes:**  
- Points to an IVideoWindow interface.  
- (Read and Write property)

63.32.14 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.  
**Notes:**  
- Please check function documentation and also LastErrorMessage property for a human readable error message.  
- (Read and Write property)

63.32.15 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The formatted error message for the last error.
63.32.16 AutoShow as Boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Whether the video renderer automatically shows the video window when it receives video data. 
**Notes:**
Lasterror is set.
By default, when the filter graph changes state to paused or running, the video renderer shows the video window and moves it to the foreground. If the user closes the window, it will not automatically reappear. (Read and Write computed property)

63.32.17 BackgroundPalette as Boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Whether the video window realizes its palette in the background. 
**Notes:**
Lasterror is set.
If BackgroundPalette is true and the video image requires a palette, the video renderer will realize that palette in the background. Any colors that the palette uses will change to their closest match in the display palette prior to drawing. This ensures that an application will not have its palette disturbed. However, it imposes severe performance penalties on the video. (Read and Write computed property)

63.32.18 BorderColor as color

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The color that appears around the edges of the destination rectangle. 
**Notes:**
Lasterror is set.
If the destination rectangle is smaller than the client area of the video window, a border is exposed around the edges of the video. The default color is black. Use this method to override the default color. If a palette is in use, a nonsystem color is converted to its closest match. (Read and Write computed property)
63.32. **CLASS DIRECTSHOWVIDEOWINDOWMBS**

63.32.19 **Caption as string**

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The video window caption.
**Notes:**
Lasterror is set.
(Read and Write computed property)

63.32.20 **FullScreenMode as Boolean**

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Enables or disables full-screen video rendering.
**Notes:**
Set to true to switch to full-screen mode. Set to false to disable full-screen mode. (Default.)
Lasterror is set.

Depending on the video renderer, the switch to full-screen mode may not be visible until the application
runs or pauses the graph. In full-screen mode, if the user switches away from the application (for example,
using ALT + TAB), the Filter Graph Manager sends an EC_FULLSCREEN_LOST event.
The following remarks describe how the Filter Graph Manager implements full-screen mode. Application
developers can probably ignore this information, but it may be useful if you are writing a custom video
renderer.
When an application switches to full-screen mode, the Filter Graph Manager searches for a video renderer
that will function most efficiently. In order of preference, these are:

- Any video renderer in the filter graph that natively supports full-screen mode.
- Any video renderer in the filter graph that can stretch the video to full-screen without a significant
  performance cost.
- The Full Screen Renderer filter.
- Any video renderer in the filter graph that supports DirectShowVideoWindowMBS.

For the first option, the Filter Graph Manager sets FullScreenMode on every video renderer in the graph. Most renderers return E_NOTIMPL, indicating the filter does not natively support full-screen mode. If any renderer returns a value not equal to E_NOTIMPL, the Filter Graph Manager uses that one.
For the second option, the Filter Graph Manager calls GetMaxIdealImageSize and GetMinIdealImageSize
on every video renderer in the graph. If the size of the display falls within the filter’s reported range, it
indicates that the filter can stretch the video without a significant performance cost.
Note If the graph is stopped, the Filter Graph Manager pauses each renderer before calling these methods. This gives the renderer an opportunity to initialize any resources it needs, because many renderers cannot determine these values while they are stopped.
Except on older hardware, the second option will generally succeed. The third option is to use the Full Screen Renderer filter, adding it to the graph if necessary. The fourth option is simply to find the first renderer in the graph that supports DirectShowVideoWindowMBS, and stretch the video regardless of performance. (Read and Write computed property)

63.32.21 Height as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: The height of the video window. Notes: Lasterror is set. (Read and Write computed property)

63.32.22 Left as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: The x-coordinate of the video window. Notes: Lasterror is set. (Read and Write computed property)

63.32.23 MessageDrain as Window

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. Function: The window to receive mouse and keyboard messages from the video window. Notes: Lasterror is set. This method enables an application to respond to mouse and keyboard events generated within the video window. If Drain is non-nil, the video renderer forwards certain messages to the specified window, using the PostMessage function. Which messages are forwarded might depend on the video renderer in use. (Read and Write computed property)

63.32.24 Owner as Window

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. Function: The parent window for the video window. Notes:
Lasterror is set.
Use this method to display videos in a compound document. This method changes the parent of the video
window and sets the WS_CHILD style for the video window.
Reset the owner to nil before releasing the Filter Graph Manager. Otherwise, messages will continue to be
sent to this window and errors will likely occur when the application is terminated.
(Read and Write computed property)

63.32.25  Top as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The y-coordinate of the video window.
**Notes:**
Lasterror is set.
(Read and Write computed property)

63.32.26  Visible as Boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Shows or hides the video window.
**Notes:**
Set to true to show the window or set to false to hide the window.
Lasterror is set.
(Read and Write computed property)

63.32.27  Width as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The width of the video window.
**Notes:** (Read and Write computed property)

63.32.28  WindowState as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Shows, hides, minimizes, or maximizes the video window.
**Notes:**
Lasterror is set.
CHAPTER 63. DIRECTSHOW

See MSDN page for ShowWindow for SW_* constants:
(Read and Write computed property)

63.32.29 WindowStyle as Integer

Notes:
Lasterror is set.
See MSDN for SetWindowLong for details on the WS_* constants.
(Read and Write computed property)

63.32.30 WindowStyleEx as Integer

Notes:
Lasterror is set.
See MSDN for SetWindowLong for details on the WS_EX_* constants.
(Read and Write computed property)

63.32.31 Constants

63.32.32 SW_FORCEMINIMIZEx = 11

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flags for WindowsStyle property.

63.32.86 **WS_OVERLAPPED = & h00000000**

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flags for WindowsStyle property.

63.32.87 **WS_OVERLAPPEDWINDOW = & h00CF0000**

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flags for WindowsStyle property.

63.32.88 **WS_POPUP = & h80000000**

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flags for WindowsStyle property.

63.32.89 **WS_POPUPWINDOW = & h80880000**

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flags for WindowsStyle property.

63.32.90 **WS_SIZEBOX = & h00040000**

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flags for WindowsStyle property.
63.32.91  **WS_SYSMENU = & h00080000**

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flags for WindowsStyle property.

63.32.92  **WS_TABSTOP = & h00010000**

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flags for WindowsStyle property.

63.32.93  **WS_THICKFRAME = & h00040000**

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flags for WindowsStyle property.

63.32.94  **WS_TILED = & h00000000**

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flags for WindowsStyle property.

63.32.95  **WS_TILEDWINDOW = & h00CF0000**

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flags for WindowsStyle property.

63.32.96  **WS_VISIBLE = & h10000000**

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flags for WindowsStyle property.

63.32.97  **WS_VSCROLL = & h00200000**

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flags for WindowsStyle property.
63.33. **CLASS DIRECTSHOWWAVEFORMATMBS**

63.33  class DirectShowWaveFormatMBS

63.33.1  class DirectShowWaveFormatMBS

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Defines the format of waveform-audio data.

**Notes:**
Only format information common to all waveform-audio data formats is included in this structure. For formats that require additional information, this structure is included as the first member in another structure, along with the additional information.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

63.33.2  Methods

63.33.3  Constructor

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The private constructor.

63.33.4  Properties

63.33.5  AvgBytesPerSec as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Required average data-transfer rate, in bytes per second, for the format tag.

**Notes:**
If wFormatTag is WAVE_FORMAT_PCM, nAvgBytesPerSec must equal nSamplesPerSec x nBlockAlign.
For non-PCM formats, this member must be computed according to the manufacturer’s specification of the format tag.
(Read and Write property)

63.33.6  BitsPerSample as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Bits per sample for the FormatTag format type.

**Notes:**
If wFormatTag is WAVE_FORMAT_PCM, then BitsPerSample should be equal to 8 or 16. For non-PCM formats, this member must be set according to the manufacturer’s specification of the format tag. If FormatTag is WAVE_FORMAT_EXTENSIBLE, this value can be any integer multiple of 8.
Some compression schemes do not define a value for BitsPerSample, so this member can be zero.

(Read and Write property)

### 63.33.7 BlockAlign as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Block alignment, in bytes.

**Notes:**

The block alignment is the minimum atomic unit of data for the wFormatTag format type. If wFormatTag is WAVE_FORMAT_PCM, nBlockAlign must equal (nChannels * wBitsPerSample) / 8. For non-PCM formats, this member must be computed according to the manufacturer’s specification of the format tag. Software must process a multiple of nBlockAlign bytes of data at a time. Data written to and read from a device must always start at the beginning of a block. For example, it is illegal to start playback of PCM data in the middle of a sample (that is, on a non-block-aligned boundary).

(Read and Write property)

### 63.33.8 Channels as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Number of channels in the waveform-audio data.

**Notes:**

Monaural data uses one channel and stereo data uses two channels.

(Read and Write property)

### 63.33.9 Data as Ptr

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Pointer to raw data of WAVEFORMATEX structure.

**Notes:** (Read only property)

### 63.33.10 FormatTag as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Waveform-audio format type.

**Notes:**

Format tags are registered with Microsoft Corporation for many compression algorithms. A complete list of format tags can be found in the Mmreg.h header file. For one- or two-channel Pulse Code Modulation
(PCM) data, this value should be WAVE_FORMAT_PCM.

- If FormatTag equals WAVE_FORMAT_EXTENSIBLE, the structure is interpreted as a WAVEFORMATEXTENSIBLE structure.
- If FormatTag equals WAVE_FORMAT_MPEG, the structure is interpreted as an MPEG1WAVEFORMAT structure.
- If FormatTag equals WAVE_FORMAT_MPEGLAYER3, the structure is interpreted as an MPEGLAYER3WAVEFORMAT structure.

Before reinterpreting a WAVEFORMATEX structure as one of these extended structures, verify that the actual structure size is sufficiently large and that the cbSize member indicates a valid size.

Please contact MBS if you need the above structures as classes in Xojo.

(Read and Write property)

### 63.33.11 SamplesPerSec as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sample rate, in samples per second (hertz).

**Notes:**

If FormatTag is WAVE_FORMAT_PCM, then common values for SamplesPerSec are 8.0 kHz, 11.025 kHz, 22.05 kHz, and 44.1 kHz. For non-PCM formats, this member must be computed according to the manufacturer's specification of the format tag.

(Read and Write property)

### 63.33.12 Size as Integer

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Size, in bytes, of extra format information appended to the end of the WAVEFORMATEX structure.

**Notes:**

This information can be used by non-PCM formats to store extra attributes for the wFormatTag. If no extra information is required by the wFormatTag, this member must be set to zero. For WAVE_FORMAT_PCM formats (and only WAVE_FORMAT_PCM formats), this member is ignored. However it is still recommended to set the value.

(Read and Write property)
Chapter 64

Disassembler

64.1 Globals

64.1.1 DisAssembleMBS

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Disassembles all further instructions from the current method following this command. **Notes:** The result is stored inside the plugin memory and you can get a copy using the GetDisAssembleMBS function.

64.1.2 DisAssembleObjectMethodMBS(target as object, Declaration as string)

MBS Util Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Disassembles all instructions from the given method inside the given object. **Notes:** The result is stored inside the plugin memory and you can get a copy using the GetDisAssembleMBS function. Requires Realbasic 5.5 or newer.

64.1.3 GetDisAssembleMBS as string

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a string with the disassembled text.
Chapter 65

DiscRecording

65.1 class DRBurnMBS

65.1.1 class DRBurnMBS

Function: A class to perform and monitor the burning of a CD or DVD disc.

Notes:

Each time you want to burn to a disc, an instance of DRBurnMBS needs to be created.

When an instance is created, you pass in an instance of DRDevice to let the DRBurn object know what device to use. This object is retained for the life of the DRBurn instance. Before burning, you can set several options that control the behavior of the burn and the handling of the disc once the burn completes.

A DRBurn object will send out notifications through the DRNotificationCenter mechanism to broadcast the burn state to any interested observers. However, if for some reason you don’t want to use notifications, you can poll the burn object at any time for the current status using the status properties. This is not recommended in any application using a run loop, because it involves polling.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
65.1.2 Methods

65.1.3 abort

Function: Stops the burn.
Notes: When this method returns the burn might not actually be fully stopped but it has been cancelled and only cleanup is going on. If a burn has not completed writing data to disc, you just made a coaster.

Typically this method is only used as a result of the user hitting a cancel/stop button somewhere in the user interface.

65.1.4 burnForDevice(device as DRDeviceMBS) as DRBurnMBS

Function: Creates an autoreleased burn object.
Notes: Once a burn is created with this method, the object is ready to write data to the disc.

65.1.5 Constructor(device as DRDeviceMBS)

Function: Creates a burn object.
Notes: Once a burn is created with this method, the object is ready to write data to the disc.

65.1.6 device as DRDeviceMBS

Function: Returns the device being used for the burn.
Notes: Returns nil on any error.

65.1.7 DRBurnAppendableKey as string

Function: One of the property key constants.
Notes: The burn property whose value is a boolean indicating if the disc will still be appendable after the burn. If this key is not present, the burn will default to a value of false and the disc will be marked as not
65.1.8 **DRBurnCompletionActionEject as string**

**Function:** An string value for the CompletionAction indicating that the burn object should eject the disc from the drive when the burn completes.

65.1.9 **DRBurnCompletionActionKey as string**

**Function:** One of the property key constants.

**Notes:** The burn property whose value is a String containing one of the completion actions possible for the disc handling. If this key is not present, the burn will default to a value of DRBurnCompletionActionEject and the disc will be ejected.

65.1.10 **DRBurnCompletionActionMount as string**

**Function:** An string value for the CompletionAction property indicating that the burn object should mount the disc on the desktop when the burn completes.

65.1.11 **DRBurnDoubleLayerL0DataZoneBlocksKey as string**

**Function:** One of the property key constants.

**Notes:**

The burn property key whose value is an double containing the number of blocks desired for the layer 0 data zone on a double layer writable disc.

The size of the layer 0 data zone dictates where the transition point is from layer 0 to layer 1. If this key is present, the data zone size will be set prior to the start of the burn using the value for this key. If it is not present, the default layer 0 data zone will be used (half the available blocks on an empty disc).

The transition point can be specified two ways. If the value specified in this key is greater than 1.0, then it will designate an absolute block number for the transition point. In this case, the block number should be a multiple of 16 and at least 40000h per specification. If the value is less than 1.0, it will specify the percentage of the burn that should reside on layer 0. A typical value is 0.5, designating half the burn for
each layer. A value of 0.0 or 1.0 will not change the layer 0 transition point.

### 65.1.12 DRBurnFailureActionEject as string

**Function:** An string constant for FailureAction indicating that the burn object should eject the disc from the drive if the burn fails.

### 65.1.13 DRBurnFailureActionKey as string

**Function:** One of the property key constants.  
**Notes:**  
The burn property whose value is a string containing a one of the failure actions possible for the disc handling.  
If this key is not present, the burn will default to a value of DRBurnFailureActionEject and the disc will be ejected.

### 65.1.14 DRBurnFailureActionNone as string

**Function:** An string constant for FailureAction indicating that the burn object should do nothing with the disc if the burn fails.

### 65.1.15 DRBurnOverwriteDiscKey as string

**Function:** One of the property key constants.  
**Notes:** The burn property whose value is a boolean indicating if the disc will be overwritten from block zero for the burn. If this key is not present, the burn will default to a value of false and the disc will be appended.

### 65.1.16 DRBurnRequestedSpeedKey as string

**Function:** One of the property key constants.
Notes: The burn property whose value is a number containing the speed at which the burn should run, expressed as a float value of kilobytes per second. If this key is not present, the speed will default to DRDeviceBurnSpeedMax.

65.1.17 DRBurnStatusChangedNotification as string

Function: The notification name for a status update on a burn operation.
Notes: See the "DataBurn with Events and Notification" example project.

65.1.18 DRBurnStrategyBDDAO as string

Function: One of the string constants for the burn strategy.
Notes: An string value for DRBurnStrategyKey representing the DAO (disc-at-once) burn strategy for BD (Blu-ray). This strategy applies only to BDs.

65.1.19 DRBurnStrategyCDSAO as string

Function: One of the string constants for the burn strategy.
Notes: An String value for DRBurnStrategyKey representing the SAO (session-at-once) burn strategy for CD.

65.1.20 DRBurnStrategyCDTAO as string

Function: One of the string constants for the burn strategy.
Notes: An String value for DRBurnStrategyKey representing the TAO (track-at-once) burn strategy for CD.

65.1.21 DRBurnStrategyDVDDDAO as string

Function: One of the string constants for the burn strategy.
Notes: An String value for DRBurnStrategyKey representing the DAO (disc-at-once) burn strategy for DVD. This strategy applies only to DVDs; it is invalid when burning to CD media.
65.1.22 DRBurnStrategyIsRequiredKey as string

Function: One of the property key constants.
Notes:
The burn property whose value is a BOOL indicating whether the burn strategy/strategies listed for DRBurnStrategyKey are the only strategies allowed. If this key is not present, the burn will default to a value of false.

If this value is set to true, and the device does not support the type(s) of burn requested, the burn will fail with kDRDeviceBurnStrategyNotAvailableErr.

If this value is set to false, and the device does not support the type(s) of burn requested, the engine will choose an alternate burn strategy automatically - one that will provide an equivalent disc.

65.1.23 DRBurnStrategyKey as string

Function: One of the property key constants.
Notes:
The burn property whose value is a string, or array of strings, indicating the burn strategy or strategies that are suggested. If this key is not present, the burn engine picks an appropriate burn strategy automatically. Most clients will not need to specify a specific burn strategy.

When more than one strategy is suggested, the burn engine will attempt to use the first strategy in the list which is available. A burn strategy will never be used if it cannot write the required data: for example, TAO cannot be used to write CD-Text.

The presence of this key by itself is just a suggestion, and if the burn engine cannot fulfill the request it will burn using whatever strategy is available. To make the suggestion into a requirement, add DRBurnStrategyIsRequiredKey with a value of true.

65.1.24 DRBurnTestingKey as string

Function: One of the property key constants.
Notes:
The burn property whose value is a boolean indicating if the burn will run as a test burn.

When this is set and the burn object is sent writeLayout, the entire burn process proceeds as if data would
be written to the disc, but the laser is not turned on to full power, so the physical disc is not modified.

If this key is not present or the selected burning device does not support test burning, the burn will default to a value of false and a normal burn will occur.

### 65.1.25 DRBurnUnderrunProtectionKey as string

**Function:** One of the property key constants.

**Notes:**
The burn property whose value is a boolean indicating if burn underrun protection will be on or off for devices which support it.

For those devices which support it, burn underrun protection is enabled by default.

If the device supports burn underrun protection and this key is not present, the burn will default to a value of true and burn underrun protection will be enabled.

### 65.1.26 DRBurnVerifyDiscKey as string

**Function:** One of the property key constants.

**Notes:** The burn property whose value is a boolean indicating if the disc will be verified after being burned. If this key is not present, the burn will default to a value of true and the disc will be verified.

### 65.1.27 DRCDTextKey as string

**Function:** One of the property key constants.

**Notes:**
This key points to a DRCDTextBlockMBS, or array of DRCDTextBlockMBS objects containing the CD-Text information for the disc. If this key is not present, the burn will not write CD-Text.

Before using this key, you should to make sure that the device supports CD-Text by checking the value of DRDeviceCanWriteCDTextKey in the device’s write capabilities dictionary.

If this value is set to true, and the device does not support writing CD-Text, the burn will fail with kDRDeviceCantWriteCDTextErr.
65.1.28  DRErrorStatusAdditionalSenseStringKey as string

**Function:** One of the dictionary keys for the burn status dictionary.
**Notes:** String describing the RBC additional sense code and additional sense code qualifier pair returned by the device. If no sense is reported, this key will not be present.

65.1.29  DRErrorStatusErrorInfoStringKey as string

**Function:** One of the dictionary keys for the burn status dictionary.
**Notes:** String describing extended error information in a user appropriate manner.

65.1.30  DRErrorStatusErrorKey as string

**Function:** One of the dictionary keys for the burn status dictionary.
**Notes:** Number containing the OS error code for the error.

65.1.31  DRErrorStatusErrorStringKey as string

**Function:** One of the dictionary keys for the burn status dictionary.
**Notes:** String describing the error in a user appropriate manner.

65.1.32  DRErrorStatusKey as string

**Function:** One of the dictionary keys for the burn status dictionary.
**Notes:** The key in the status dictionary for the error dictionary.

65.1.33  DRErrorStatusSenseCodeStringKey as string

**Function:** One of the dictionary keys for the burn status dictionary.
65.1. CLASS DRBURNMBS

Notes: String describing the RBC sense code returned by the device. If no sense is reported, this key will not be present.

65.1.34 DRErrorStatusSenseKey as string

Function: One of the dictionary keys for the burn status dictionary.
Notes: String containing the raw RBC sense information structure reported by the device. If no sense is reported, this key will not be present.

65.1.35 DRMediaCatalogNumberKey as string

Function: One of the property key constants.
Notes: The burn property whose value is a memoryblock containing exactly 13 bytes of data, which will be written to the disc as the Media Catalog Number. If this key is not present, it will default to all zeroes, indicating that a MCN is not supplied.

This value is the UPC/EAN product number, and should conform to the specifications of the UCC and EAN. See ean-int.org and uc-council.org for more details on the UPC/EAN standard.

http://www.ean-int.org/
http://www.uc-council.org/

65.1.36 DRStatusCurrentSessionKey as string

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the current session being burned.

65.1.37 DRStatusCurrentSpeedKey as string

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the current burn speed.
65.1.38 **DRStatusCurrentTrackKey as string**

Function: One of the dictionary keys for the burn status dictionary.
Notes: Number indicating the current track being burned.

65.1.39 **DRStatusEraseTypeKey as string**

Function: One of the dictionary keys for the burn status dictionary.
Notes: String indicating the type of erase operation.

65.1.40 **DRStatusPercentCompleteKey as string**

Function: One of the dictionary keys for the burn status dictionary.
Notes: A key for the status dictionaries.
Number containing the percent complete of the operation expressed as a floating point number from 0 to 1.

65.1.41 **DRStatusProgressCurrentKPS as string**

Function: The current burn speed in kilobytes per second.
Notes: This is an optional key within the DRStatusProgressInfoKey dictionary. The value of this key, if present, is a Number containing the write speed of the burn.

65.1.42 **DRStatusProgressCurrentXFactor as string**

Function: The current burn speed in a media appropriate x-factor
Notes: This is an optional key within the DRStatusProgressInfoKey dictionary. The value of this key, if present, is a number containing the appropriate x-factor for the media.
65.1.43 DRStatusProgressInfoKey as string

Function: One of the dictionary keys for the burn status dictionary.
Notes: A dictionary of extended progress information.
A key for the status dictionary. The value of this key is a reference to a Dictionary object containing extended progress information.

65.1.44 DRStatusStateDone as string

Function: One possible value for DRStatusStateKey. Indicates the operation is finished and it succeeded.

65.1.45 DRStatusStateErasing as string

Function: One possible value for DRStatusStateKey in the erase status dictionary.
Notes: Indicates the erase is currently in progress.

65.1.46 DRStatusStateFailed as string

Function: One possible value for DRStatusStateKey. Indicates the operation is finished and it failed.

65.1.47 DRStatusStateFinishing as string

Function: One possible value for DRStatusStateKey in the burn status dictionary.
Notes: Indicates the burn is finishing up (closing the last session, writing the TOC, etc).

65.1.48 DRStatusStateKey as string

Function: One of the dictionary keys for the burn status dictionary.
Notes:
A key for the status dictionaries.
String indicating the current state of the operation.

### 65.1.49 DRStatusStateNone as string

**Function:** One possible value for DRStatusStateKey. Indicates the operation has not yet begun.

### 65.1.50 DRStatusStatePreparing as string

**Function:** One possible value for DRStatusStateKey. Indicates the operation is preparing to begin.

### 65.1.51 DRStatusStateSessionClose as string

**Function:** One possible value for DRStatusStateKey in the burn status dictionary.
**Notes:** Indicates the burn is closing a session on disc. The exact session being closing is contained in DRStatusCurrentSessionKey.

### 65.1.52 DRStatusStateSessionOpen as string

**Function:** One possible value for DRStatusStateKey in the burn status dictionary.
**Notes:** Indicates the burn is opening a session on disc. The exact session being opened is contained in DRStatusCurrentSessionKey.

### 65.1.53 DRStatusStateTrackClose as string

**Function:** One possible value for DRStatusStateKey in the burn status dictionary.
**Notes:** Indicates the burn is closing a track on disc. The exact track being closed is contained in DRStatusCurrentTrackKey.
65.1.54  **DRStatusStateTrackOpen as string**

**Function:** One possible value for DRStatusStateKey in the burn status dictionary.
**Notes:** Indicates the burn is opening a track on disc. The exact track being opened is contained in DRStatusCurrentTrackKey.

65.1.55  **DRStatusStateTrackWrite as string**

**Function:** One possible value for DRStatusStateKey in the burn status dictionary.
**Notes:** Indicates the burn is writing a track on disc. The exact track being written is contained in DRStatusCurrentTrackKey.

65.1.56  **DRStatusStateVerifying as string**

**Function:** One possible value for DRStatusStateKey. Indicates the operation is verifying what it did.

65.1.57  **DRStatusTotalSessionsKey as string**

**Function:** One of the dictionary keys for the burn status dictionary.
**Notes:** Number indicating the total number of sessions being burned.

65.1.58  **DRStatusTotalTracksKey as string**

**Function:** One of the dictionary keys for the burn status dictionary.
**Notes:** Number indicating the total number of tracks in the current session being burned.

65.1.59  **DRSynchronousBehaviorKey as string**

**Function:** One of the property key constants.
**Notes:**
The burn property whose value is a BOOL indicating if burn operations will behave synchronously. If this key is not present, it will default to a value of false and burn operations will behave asynchronously.

Synchronous operations do not post status notifications, and will not return until they are completed. Status can still be queried at any time, and will remain valid even after the burn operation has finished.

65.1.60  status as dictionary

Function: Returns a dictionary describing the status of the burn.
Notes: The same dictionary is returned through the DRBurnStatusChangedNotification notification.

65.1.61  writeImageFile(ImageFile as FolderItem) as boolean

Function: Writes the image tracks to the disc.
Notes: Requires Mac OS X 10.4.

ImageFile: The path to the image file. This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.

Returns true on success and false on failure.
See also:
• 65.1.62 writeImageFile(ImagePath as String) as boolean

65.1.62  writeImageFile(ImagePath as String) as boolean

Function: Writes the image tracks to the disc.
Notes: Requires Mac OS X 10.4.

ImageFile: The path to the image file. This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.
65.1. CLASS DRBURNMBS

Returns true on success and false on failure.
See also:

- 65.1.61 writeImageFile(ImageFile as FolderItem) as boolean

65.1.63 writeLayout(track as DRTrackMBS)

Function: Writes the track to the disc.
Notes: A single session disc will be created with the given track.
See also:

- 65.1.64 writeLayout(tracks() as DRTrackMBS)

65.1.64 writeLayout(tracks() as DRTrackMBS)

Function: Writes the tracks to the disc.
Notes: A multi session disc will be created with the given tracks.
See also:

- 65.1.63 writeLayout(track as DRTrackMBS)

65.1.65 Properties

65.1.66 appendable as boolean

Function: Indicates whether the burn is appendable.
Example:

dim b as DRBurnMBS // get a burn object
b.appendable=true

Notes:

When a burn completes, it can mark the disc so that no more data can be written to it. This creates a closed or non-appendable disc (which is the most compatible with audio CD players). If this method returns false, then the disc will be marked as closed and no data can be appended to it. A return value of true indicates further burns can be appended to the disc.
(Read and Write computed property)
65.1.67  **BurnFailureAction as string**

**Function:** What to do on a failure.
**Notes:**
The burn property whose value is a string containing a one of the failure actions possible for the disc handling.

If this key is not present, the burn will default to a value of DRBurnFailureActionEject and the disc will be ejected.
(Read and Write computed property)

65.1.68  **completionAction as string**

**Function:** The action to be performed at the end of the burn.
**Notes:**
Value must be DRBurnCompletionActionEject, DRBurnCompletionActionMount or empty for default.
(Read and Write computed property)

65.1.69  **DoubleLayerL0DataZoneBlocks as Double**

**Function:** A double containing the number of blocks desired for the layer 0 data zone on a double layer writable disc.
**Notes:**
The size of the layer 0 data zone dictates where the transition point is from layer 0 to layer 1. If this key is present, the data zone size will be set prior to the start of the burn using the value for this key. If it is not present, the default layer 0 data zone will be used (half the available blocks on an empty disc). The transition point can be specified two ways. If the value specified in this key is greater than 1.0, then it will designate an absolute block number for the transition point. In this case, the block number should be a multiple of 16 and at least & h40000 per specification. If the value is less than 1.0, it will specify the percentage of the burn that should reside on layer 0. A typical value is 0.5, designating half the burn for each layer. A value of 0.0 or 1.0 will not change the layer 0 transition point.
(Read and Write computed property)

65.1.70  **MediaCatalogNumber as memoryblock**

**Function:** The media catalog number as a binary data string.
65.1. CLASS DRBURNMBS

Notes:

The burn property whose value is a memoryblock containing exactly 13 bytes of data, which will be written to the disc as the Media Catalog Number. If this key is not present, it will default to all zeroes, indicating that a MCN is not supplied.

This value is the UPC/EAN product number, and should conform to the specifications of the UCC and EAN. See http://www.ean-int.org/ and http://www.uc-council.org/ for more details on the UPC/EAN standard. (Read and Write computed property)

65.1.71 Overwrite as boolean

Function: The burn property whose value is a boolean indicating if the disc will be overwritten from block zero for the burn.
Notes:
If this key is not present, the burn will default to a value of false and the disc will be appended. (Read and Write computed property)

65.1.72 properties as dictionary

Function: The properties dictionary of the burn.
Notes: (Read and Write computed property)

65.1.73 requestedBurnSpeed as single

Function: The speed at which this burn will attempt to write data.
Notes:
The actual speed also depends on the capabilities of the bus the device is on, the maximum speed of the device itself, and the media used.

Value is a float indicating the speed the burn should run at in kilobytes per second. (Read and Write computed property)
### 65.1.74 Testing as boolean

**Function:** Whether the burn will run as a test burn.  
**Notes:**  
When this is set and the burn starts, the entire burn process proceeds as if data would be written to the disc, but the laser is not turned on to full power, so the physical disc is not modified.  
If this key is not present or the selected burning device does not support test burning, the burn will default to a value of false and a normal burn will occur.  
(Read and Write computed property)

### 65.1.75 UnderrunProtection as boolean

**Function:** A boolean indicating if burn underrun protection will be on or off for devices which support it.  
**Notes:**  
For those devices which support it, burn underrun protection is enabled by default.  
If the device supports burn underrun protection and this key is not present, the burn will default to a value of `<i>true</i>` and burn underrun protection will be enabled.  
(Read and Write computed property)

### 65.1.76 verifyDisc as boolean

**Function:** Indicates whether the resulting disc will be verified.  
**Example:**
```
dim b as DRBurnMBS // get a burn object  
b.verifyDisc=true
```

**Notes:**  
After data is written to disc, the data can be verified. The verification process will read the data on the disc back into memory and compare it to the data originally used to write to disc. The type of verification is determined by a track property on a track-by-track basis. See the DRTrackMBS documentation for more information on verification types.  
(Read and Write computed property)
65.2.1 class DRBurnProgressPanelMBS

Function: Run and display progress while burning data to media.

Example:

```dim track as DRTrackMBS
dim bsp as DRBurnSetupPanelMBS
dim bpp as DRBurnProgressPanelMBS

// we need a track
track=CreateTrack
if track<>nil then
    bsp=new DRBurnSetupPanelMBS
    // set a few options
    bsp.setCanSelectAppendableMedia true
    bsp.setCanSelectTestBurn true
    if bsp.runSetupPanel=bsp.NSOKButton then
        bpp=new DRBurnProgressPanelMBS
        // And start off the burn itself. This will put up the progress dialog
        // and do all the nice pretty things that a happy app does.
        bpp.beginProgressPanelForBurn bsp.burnObject, track
    else
        MsgBox "You pressed cancel."
    end if
end if```

Notes:

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

Subclass of the NSPanelMBS class.
65.2.2 Methods

65.2.3 beginProgressPanelForBurn(burn as DRBurnMBS, track as DRTrackMBS)

Function: Presents the progress panel on screen and begins the burn process.
Notes:
This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once
the method has returned the caller can perform other operations while the burn continues.

Burns a single session disc with one track.
See also:

• 65.2.4 beginProgressPanelForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS)

65.2.4 beginProgressPanelForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS)

Function: Presents the progress panel on screen and begins the burn process.
Notes:
This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once
the method has returned the caller can perform other operations while the burn continues.

Burns a multi session disc with several tracks.
See also:

• 65.2.3 beginProgressPanelForBurn(burn as DRBurnMBS, track as DRTrackMBS)

65.2.5 beginProgressPanelForImageFile(burn as DRBurnMBS, file as folderitem) as boolean

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Presents the progress panel on screen and begins the burn process.
Notes:
This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once
the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso,
.cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and
65.2. CLASS DRBURNPROGRESSPANELMBS

correctly referenced in the .cue/.toc file.
See also:

- 65.2.6 beginProgressPanelForImageFile(burn as DRBurnMBS, file as string) as boolean

65.2.6 beginProgressPanelForImageFile(burn as DRBurnMBS, file as string) as boolean

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Presents the progress panel on screen and begins the burn process.
Notes:
This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once
the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso,
.cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and
correctly referenced in the .cue/.toc file.
See also:

- 65.2.5 beginProgressPanelForImageFile(burn as DRBurnMBS, file as folderitem) as boolean

65.2.7 beginProgressSheetForBurn(burn as DRBurnMBS, track as DRTrackMBS,
docWindow as NSWindowMBS)

Function: Presents the progress panel as a sheet and begins the burn process.
Notes:
docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a
sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once
the method has returned the caller can perform other operations while the burn continues.

Burns a single session disc with one track.
See also:

- 65.2.8 beginProgressSheetForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS, docWindow as
  NSWindowMBS)
65.2.8 beginProgressSheetForBurn(burn as DRBurnMBS, tracks() as DRTrackMBS, docWindow as NSWindowMBS)

Function: Presents the progress panel as a sheet and begins the burn process.
Notes:
docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns a multi session disc with several tracks.
See also:
- 65.2.7 beginProgressSheetForBurn(burn as DRBurnMBS, track as DRTrackMBS, docWindow as NSWindowMBS)

65.2.9 beginProgressSheetForImageFile(burn as DRBurnMBS, file as folderitem, docWindow as NSWindowMBS) as boolean

Function: Presents the progress panel as a sheet and begins the burn process.
Notes:
docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.
See also:
- 65.2.10 beginProgressSheetForImageFile(burn as DRBurnMBS, file as string, docWindow as NSWindowMBS) as boolean
65.2. CLASS DRBURNPROGRESSPANELMBS

65.2.10 beginProgressSheetForImageFile(burn as DRBurnMBS, file as string, docWindow as NSWindowMBS) as boolean

Function: Presents the progress panel as a sheet and begins the burn process.

Notes:

docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the burn. Once the method has returned the caller can perform other operations while the burn continues.

Burns the image file located on the given position.

This file must be one that can be read by DiscRecording. The supported image types include: .dmg, .iso, .cue, and .toc. For .cue and .toc files the corresponding data files (.bin, .img, etc) must also be present and correctly referenced in the .cue/.toc file.

See also:
- 65.2.9 beginProgressSheetForImageFile(burn as DRBurnMBS, file as folderitem, docWindow as NSWindowMBS) as boolean

65.2.11 Constructor

Function: The constructor to create a new burn progress panel.

65.2.12 DRBurnProgressPanelDidFinishNotification as string

Function: One of the notification names for use with a burn progress panel.

Notes:

Posted when the DRBurnProgressPanel has finished and is about to go away.
This notification contains a notification object but no userInfo dictionary. The notification object is the DRBurnProgressPanel that will be closed.

65.2.13 DRBurnProgressPanelWillBeginNotification as string

Function: One of the notification names for use with a burn progress panel.
CHAPTER 65. DISCRECORDING

Notes:
Posted when the DRBurnProgressPanel is about to begin displaying progress. This notification contains a notification object but no userInfo dictionary. The notification object is the DRBurnProgressPanel that will be displayed.

65.2.14 stopBurn

Function: Invoked when the user clicks the panel’s stop button.
Notes: If you overwrite this method in Real Studio, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

65.2.15 Properties

65.2.16 Description as string

Function: The description string displayed in the panel.
Notes: If no description is explicitly set, this method will return the standard text string.

The panel’s description is typically a short text string that gives an indication to the user what operation is being performed. If no description is explicitly set, the progress panel uses a standard text string suitable to the burn.
(Read and Write computed property)

65.2.17 VerboseProgressStatus as boolean

Function: The verbosity of the progress feedback.
Notes: If verbose is true, the panel will update status for every change. If verbose is false, the panel will filter some status messages and only update for major changes. The default for the panel is filter the status messages.
(Read and Write computed property)
65.2.19 burnProgressPanelBurnDidFinish(burn as DRBurnMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Allows the delegate to handle the end-of-burn feedback. **Notes:** This method allows the delegate to handle or modify the end-of-burn feedback performed by the progress panel. Return true to indicate the delegate handled the burn completion and the standard feedback should be suppressed. If this method returns false, the normal end-of-burn handling is performed (displaying an error if appropriate, playing an "I'm done" sound, etc). The delegate is messaged before the progress panel is ordered out so a sheet may be displayed on a progress panel displayed as a window.

65.2.20 burnProgressPanelDidFinish

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Notification sent by the panel after ordering out. **Notes:** If the delegate implements this method it will receive the message after the panel is removed from display.

65.2.21 burnProgressPanelWillBegin

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Notification sent by the panel before display. **Notes:** If the delegate implements this method it will receive the message immediately before the panel is displayed.
**Function:** The burn progress panel running.
65.3. **CLASS DRBURNSETUP PANELMBS**

65.3 **class DRBurnSetupPanelMBS**

65.3.1 **class DRBurnSetupPanelMBS**

**Function:** Manages a panel that allows users to specify the parameters of an burn.

**Example:**

```vbnet
dim track as DRTrackMBS
dim bsp as DRBurnSetupPanelMBS
dim bpp as DRBurnProgressPanelMBS

// we need a track
track=CreateTrack

if track<>nil then
bsp=new DRBurnSetupPanelMBS

    // set a few options
    bsp.setCanSelectAppendableMedia true
    bsp.setCanSelectTestBurn true

    if bsp.runSetupPanel=bsp.NSOKButton then
    bpp=new DRBurnProgressPanelMBS

        // And start off the burn itself. This will put up the progress dialog
        // and do all the nice pretty things that a happy app does.
        bpp.beginProgressPanelForBurn bsp.burnObject, track

    else
    MsgBox "You pressed cancel."
    end if
end if
```

**Notes:**

This class supports choosing the the device to use, whether or not to verify the burned data and how to handle the burned disc when it completes.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

Subclass of the DRSetupPanelMBS class.
65.3.2 Methods

65.3.3 appendable

Function: Invoked when the user clicks the panel’s appendable checkbox.
Notes: If you overwrite this method in Real Studio, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

65.3.4 burnObject as DRBurnMBS

Function: Creates and returns a new DRBurn object that’s configured to write data to the currently selected device.
Notes: The new DRBurn object is configured based on the settings in the setup panel when the user clicks the OK button.

Do not invoke this method within a modal session because the burn object information is only updated just before the modal session ends.

Returns nil on any error.

65.3.5 burnSpeed

Function: Invoked when the user clicks the panel’s burn speed popup button.
Notes: If you overwrite this method in Real Studio, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

65.3.6 completionAction

Function: Invoked when the user clicks one of the panel’s completion action radio buttons.
Notes: If you overwrite this method in Real Studio, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.
65.3. CLASS DRBURNSETUPPANELMBS

65.3.7 Constructor

Function: The constructor to create a new burn setup panel.

65.3.8 DRBurnSetupPanelCancelButtonDefaultTitle as string

Function: The constant to use for the build title so it is replaced by the real default title string.

65.3.9 expand

Function: Invoked when the user clicks the panel’s expand button.
Notes: If you overwrite this method in Real Studio, your method will not be called. You can only call this
method to trigger the same behavior as if the user clicked the control.

65.3.10 setCanSelectAppendableMedia(flag as boolean)

Function: Specifies whether the user can choose to leave the disc appendable.
Notes:
This method controls whether the appendable checkbox is enabled.

If the data being written to disc does not lend itself to having more data appended on to it, you can disable
the ability of the user to leave the disc open.

This method must be called before the panel is displayed.

Set to yes to enable the appendable checkbox, false to disable.

65.3.11 setCanSelectTestBurn(flag as boolean)

Function: Specifies whether the user can choose to make a test burn.
Notes:
This method controls whether a checkbox should be added to the receiver that allows the user to set the
burn to be a test burn. By default, the test burn button is not displayed.

This method must be called before the panel is displayed.

Set to yes to show the test burn checkbox, false to hide it.

### 65.3.12 setDefaultButtonTitle(title as string)

**Function:** Sets the title for the receiver’s default button to title.
**Example:**
```dim panel as new DRBurnSetupPanelMBS
panel.setDefaultButtonTitle "Do Burn"
```

**Notes:** Normally, the default button is "Burn".

### 65.3.13 testBurn

**Function:** Invoked when the user clicks the panel’s test burn checkbox.
**Notes:** If you overwrite this method in Real Studio, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

### 65.3.14 verifyBurn

**Function:** Invoked when the user clicks the panel’s verify burn checkbox.
**Notes:** If you overwrite this method in Real Studio, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.
Function: The burn setup panel running.
65.4 class DRCDTextBlockMBS

65.4.1 class DRCDTextBlockMBS

Function: A class for a Text block.
Notes:
All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

65.4.2 Methods

65.4.3 Constructor

Function: The private constructor.

65.4.4 encoding as Integer

Function: The text encoding to use.

65.4.5 language as string

Function: The language of this text block.
65.5. CLASS DRDEVICEMBS

65.5 class DRDeviceMBS

65.5.1 class DRDeviceMBS

Function: Represents a physical CD/DVD drive connected to the computer.
Notes:
All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

65.5.2 Methods

65.5.3 acquireExclusiveAccess as boolean

Function: Attempts to acquire an exclusive access session with the device.
Notes:
Acquiring exclusive access to the device prevents any process other than the one acquiring access from communicating with the device. So once exclusive access is granted, the device is unusable by any other process. Because of this all volumes mounted from media in the drive must be unmounted before exclusive access can be granted.

Exclusive access can be acquired multiple times. Each time this method is called, a call to releaseExclusiveAccess must be made at a later time, otherwise the process will never release its exclusive access.

Returns true if the exclusive access is acquired and false if not.

65.5.4 acquireMediaReservation

Function: Indicate an interest in the blank media reservation.
Example:

```plaintext
dim d as DRDeviceMBS // get a device
d.AcquireMediaReservation
```

Notes: Blank media participates in a reservation system that allows applications to express their claim on
blank media to other applications. Indicating an interest in the reservation isn’t enough to assume its been acquired, as there are likely to be other applications in the system whom have also indicated an interest in the blank media reservation.

65.5.5 bsdName as string

Function: Returns the bsd /dev node name.

65.5.6 closeTray as boolean

Function: Commands the device to close its tray.
Notes: Does nothing if the device does not have a tray (slotload).
Returns true if the tray could be closed and false if not.

65.5.7 Constructor

Function: The private constructor.

65.5.8 device(index as UInt32) as DRDeviceMBS

Function: Queries the device with the given index.
Notes: Index from 0 to deviceCount-1.
Same as devices(), but if you only need one, this method is more efficient.

65.5.9 deviceCount as UInt32

Function: Queries the number of devices on this computer.
65.5.10  deviceForBSDName(bsdName as string) as DRDeviceMBS

Function: Obtains a DRDevice for the device corresponding to the bsd /dev node.
Notes: If the device is not an authoring device (i.e., CDR, CDRW, DVR-R, etc), returns nil.

65.5.11  deviceForIORegistryEntryPath(path as string) as DRDeviceMBS

Function: Obtains a DRDevice for the device at the path.
Notes: If the device is not an authoring device (i.e., CDR, CDRW, DVR-R, etc), returns nil.

65.5.12  devices as DRDeviceMBS()

Function: Obtains a static list of devices connected to the computer.
Example:

// shows all devices with their product names:
dim devices() as DRDeviceMBS = DRDeviceMBS.devices

for each dd as DRDeviceMBS in devices
    MsgBox dd.info.lookup(DRDeviceMBS.DRDeviceProductNameKey, "?")
next

Notes: Returns all CD/DVD devices connected to the computer at the time this method is called. Since devices can come and go at any time, the output of this method is simply a snapshot of the set of devices connected.

65.5.13  displayName as string

Function: Returns a string suitable for display in the user interface.

65.5.14  DRDeviceAppearedNotification as string

Function: One of the notification names used with a DRBurn object.
Notes:

Posted by a DRNotificationCenter when a device is added to the system.

This notification is registered for only by name.

The object associated with this notification is the the device that has appeared. The userInfo is the same dictionary returned by info for that device.

65.5.15  DRDeviceBurnSpeedBD1x as single

Function: One of the possible burn speed values.
Notes: 4496.0 KB/sec.

65.5.16  DRDeviceBurnSpeedCD1x as single

Function: One of the possible burn speed values.
Notes: 176.4 KB/sec.

65.5.17  DRDeviceBurnSpeedDVD1x as single

Function: One of the possible burn speed values.
Notes: 1385.0 KB/sec.

65.5.18  DRDeviceBurnSpeedHDDVD1x as single

Function: One of the possible burn speed values.
Notes: 4568.0 KB/sec.

65.5.19  DRDeviceBurnSpeedMax as single

Function: One of the possible burn speed values.
Notes: A value representing the maximum speed at which a device can burn. The actual speed will vary from device to device.

65.5.20 DRDeviceBurnSpeedsKey as string

Function: One of the keys in the dictionary returned by the status method.
Notes: An array containing the possible burn speeds available to use. This key may not be present if no media is inserted.

65.5.21 DRDeviceCanTestWriteCDKey as string

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Value for this key is a boolean value indicating whether the device can perform a test burn to CD media.

65.5.22 DRDeviceCanTestWriteDVDKey as string

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: A boolean value indicating whether the device can perform a test burn to DVD media.

65.5.23 DRDeviceCanUnderrunProtectCDKey as string

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports burn underrun protection when writing to CD media.

65.5.24 DRDeviceCanUnderrunProtectDVDKey as string

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports burn underrun protection when writing to DVD media.
65.5.25 **DRDeviceCanWriteBDKey as string**

**Function:** One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
**Notes:** Boolean value indicating whether the device can write to some type of BD (Blu-ray) based media.

65.5.26 **DRDeviceCanWriteBDREKey as string**

**Function:** One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
**Notes:** Boolean value indicating whether the device can write to BD-RE media.

65.5.27 **DRDeviceCanWriteBDRKey as string**

**Function:** One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
**Notes:** Boolean value indicating whether the device can write to BD-R media.

65.5.28 **DRDeviceCanWriteCDKey as string**

**Function:** One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
**Notes:** Boolean value indicating whether the device can write to some type of CD based media.

65.5.29 **DRDeviceCanWriteCDRawKey as string**

**Function:** One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
**Notes:** Boolean value indicating whether the device supports a raw mode burn strategy for CD. Raw mode is sometimes incorrectly referred to as DAO (disc-at-once).

65.5.30 **DRDeviceCanWriteCDRKey as string**

**Function:** One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
**Notes:** Boolean value indicating whether the device can write to CD-R media.
65.5. CLASS DRDEVICEMBS

65.5.31 DRDeviceCanWriteCDRWKey as string

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to CD-RW media.

65.5.32 DRDeviceCanWriteCDSAOKey as string

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports a SAO (session-at-once) burn strategy for CD.

65.5.33 DRDeviceCanWriteCDTAOKey as string

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports a TAO (track-at-once) burn strategy for CD.

65.5.34 DRDeviceCanWriteCDTextKey as string

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write CD-Text information to media.

65.5.35 DRDeviceCanWriteDVDDDAOKey as string

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device supports a DAO (disc-at-once) burn strategy on DVD media.

65.5.36 DRDeviceCanWriteDVDKey as string

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to some type of DVD based media.
CHAPTER 65. DISCRECORDING

65.5.37 DRDeviceCanWriteDVDPlusRDoubleLayerKey as string

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+R DL media.

65.5.38 DRDeviceCanWriteDVDPlusRKey as string

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+R media.

65.5.39 DRDeviceCanWriteDVDPlusRWDoubleLayerKey as string

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+RW DL media.

65.5.40 DRDeviceCanWriteDVDPlusRWKey as string

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD+RW media.

65.5.41 DRDeviceCanWriteDVDRAMKey as string

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-RAM media.

65.5.42 DRDeviceCanWriteDVDRDualLayerKey as string

Function: One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
Notes: Boolean value indicating whether the device can write to DVD-R DL media.
65.5.43  **DRDeviceCanWriteDVDRKey as string**

**Function:** One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
**Notes:** Boolean value indicating whether the device can write to DVD-R media.

65.5.44  **DRDeviceCanWriteDVDRWDualLayerKey as string**

**Function:** One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
**Notes:** Boolean value indicating whether the device can write to DVD-RW DL media.

65.5.45  **DRDeviceCanWriteDVDRWKey as string**

**Function:** One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
**Notes:** Boolean value indicating whether the device can write to DVD-RW media.

65.5.46  **DRDeviceCanWriteHDDVDKey as string**

**Function:** One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
**Notes:** Boolean value indicating whether the device can write to some type of HDDVD based media.

65.5.47  **DRDeviceCanWriteHDDVDRAKem as string**

**Function:** One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
**Notes:** Boolean value indicating whether the device can write to HD DVD-RAM media.

65.5.48  **DRDeviceCanWriteHDDVDRDualLayerKey as string**

**Function:** One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.
**Notes:** Boolean value indicating whether the device can write to HD DVD-R DL media.
65.5.49  **DRDeviceCanWriteHDDVDRKey** as string

**Function:** One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.  
**Notes:** Boolean value indicating whether the device can write to HD DVD-R media.

65.5.50  **DRDeviceCanWriteHDDVDRWDDualLayerKey** as string

**Function:** One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.  
**Notes:** Boolean value indicating whether the device can write to HD DVD-RW DL media.

65.5.51  **DRDeviceCanWriteHDDVDRWKey** as string

**Function:** One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.  
**Notes:** Boolean value indicating whether the device can write to HD DVD-RW media.

65.5.52  **DRDeviceCanWriteIndexPointsKey** as string

**Function:** One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.  
**Notes:** Boolean value indicating whether the device can write index points to CD media.

65.5.53  **DRDeviceCanWriteISRCKey** as string

**Function:** One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.  
**Notes:** Boolean value indicating whether the device can write ISRC to CD media.

65.5.54  **DRDeviceCanWriteKey** as string

**Function:** One of the keys in the DRDeviceWriteCapabilitiesKey dictionary.  
**Notes:** Boolean value indicating whether the device can write to some type of media.
65.5.55  **DRDeviceCurrentWriteSpeedKey as string**

**Function:** One of the keys in the dictionary returned by the status method.
**Notes:** Number containing the current burning speed of this device.

65.5.56  **DRDeviceDisappearedNotification as string**

**Function:** One of the notification names used with a DRBurn object.
**Notes:**
Posted by a DRNotificationCenter when a device is removed from the system.

The object associated with this notification is the device that has disappeared. The userInfo is the same dictionary returned by info for that device.

65.5.57  **DRDeviceFirmwareRevisionKey as string**

**Function:** One of the keys in the dictionary returned by the info method.
**Notes:** String containing the firmware revision extracted from the device.

65.5.58  **DRDeviceIORegistryEntryPathKey as string**

**Function:** String containing the path of the device in the IO Registry.
**Notes:** One of the keys in the dictionary returned by the info method.

65.5.59  **DRDeviceIsBusyKey as string**

**Function:** One of the keys in the dictionary returned by the status method.
**Notes:** Number containing a boolean value indicating whether the device is busy or not.
65.5.60  **DRDeviceIsTrayOpenKey as string**

**Function:** One of the keys in the dictionary returned by the status method.  
**Notes:** Number containing a boolean value indicating whether the device’s tray is open or not.

65.5.61  **DRDeviceLoadingMechanismCanEjectKey as string**

**Function:** One of the keys in the dictionary returned by the info method.  
**Notes:** Number describing if the loading mechanism of the drive can eject.

65.5.62  **DRDeviceLoadingMechanismCanInjectKey as string**

**Function:** One of the keys in the dictionary returned by the info method.  
**Notes:** Number describing if the loading mechanism of the drive can inject.

65.5.63  **DRDeviceLoadingMechanismCanOpenKey as string**

**Function:** One of the keys in the dictionary returned by the info method.  
**Notes:** Number describing if the loading mechanism of the drive can open.

65.5.64  **DRDeviceMaximumWriteSpeedKey as string**

**Function:** One of the keys in the dictionary returned by the status method.  
**Notes:** Number containing the maximum burning speed of this device.

65.5.65  **DRDeviceMediaBlocksFreeKey as string**

**Function:** One of the keys in the DRDeviceMediaInfoKey dictionary.  
**Notes:** Number containing the amount of space available (in blocks) on the media to be written to. If the media already contains data and this value will be less than the normal maximum size of the disc. This value will normally only be used if the intent is to append data onto an open disc.
65.5.66 DRDeviceMediaBlocksOverwritableKey as string

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the total amount of writable space available (in blocks) on the media to be written to - if that media can be overwritten. Media that can be overwritten is designated through the DRDeviceMediaIsOverwritableKey.

The overwritable space is the amount of space on the disc that would be available if any data currently on the disc is first erased.

65.5.67 DRDeviceMediaBlocksUsedKey as string

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the amount of space currently used (in blocks) for existing data.

65.5.68 DRDeviceMediaBSDNameKey as string

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: String containing the BSD /dev node name assigned to the media in the device.

65.5.69 DRDeviceMediaClassBD as string

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of BD (Blu-ray) based media.

65.5.70 DRDeviceMediaClassCD as string

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of CD based media.
65.5.71  DRDeviceMediaClassDVD as string

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of DVD based media.

65.5.72  DRDeviceMediaClassHDDVD as string

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media is some type of HD DVD based media.

65.5.73  DRDeviceMediaClassKey as string

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: String containing the class of media present in the drive.

65.5.74  DRDeviceMediaClassUnknown as string

Function: One possible value of the DRDeviceMediaClassKey.
Notes: Indicates the media class is unknown.

65.5.75  DRDeviceMediaDoubleLayerL0DataZoneBlocksKey as string

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing the amount of space available (in blocks) on layer 0 of a double layer piece of media.

65.5.76  DRDeviceMediaFreeSpaceKey as string

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: MSF value of the amount of space available on the media to be written to. If the media already contains data and this value will be less than the normal maximum size of the disc. This value will normally
only be used if the intent is to append data onto an open disc.

65.5.77  DRDeviceMediaInfoKey as string

Function: One of the keys in the dictionary returned by the status method.
Notes: Dictionary of information describing the media currently in the device. This key may not be present if no media is inserted.

65.5.78  DRDeviceMediaIsAppendableKey as string

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating that data can be appended to the existing data (if any).

65.5.79  DRDeviceMediaIsBlankKey as string

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating whether data has previously been written to the media.

65.5.80  DRDeviceMediaIsErasableKey as string

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating whether this media can be erased.

65.5.81  DRDeviceMediaIsOverwritableKey as string

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: Number containing a boolean value indicating that the data on the disc (if any) can be overwritten. Rewritable media can always be erased, and then rewritten in its entirety, so it is always considered over-

writable.

Write-once media, if its blank, can also be written in its entirety and is also considered overwriteable.

Write-once media, that has been partially written, can never again enter a state where it is entirely writable and will have lost its overwriteable designation.

**65.5.82 DRDeviceMediaIsReservedKey as string**

**Function:** One of the keys in the DRDeviceMediaInfoKey dictionary.  
**Notes:** Number containing a boolean value indicating whether the media is reserved for exclusive use by the current process.

**65.5.83 DRDeviceMediaOverwritableSpaceKey as string**

**Function:** One of the keys in the DRDeviceMediaInfoKey dictionary.  
**Notes:** MSF value of the amount of writable space available on the media to be written to - if that media can be overwritten. Media that can be overwritten is designated through the DRDeviceMediaIsOverwritableKey.  

The overwritable space is the amount of space on the disc that would be available if any data currently on the disc is first erased.

**65.5.84 DRDeviceMediaSessionCountKey as string**

**Function:** One of the keys in the DRDeviceMediaInfoKey dictionary.  
**Notes:** Number containing the current number of sessions present on the media.

**65.5.85 DRDeviceMediaStateInTransition as string**

**Function:** One of the possible values for the DRDeviceMediaStateKey.  
**Notes:** The media is transitioning from one state to another (i.e., being spun up/down).
65.5. **CLASS DRDEVICEMBS**

65.5.86 **DRDeviceMediaStateKey** as string

**Function:** One of the keys in the dictionary returned by the status method.
**Notes:** String describing the state of the media.

65.5.87 **DRDeviceMediaStateMediaPresent** as string

**Function:** One of the possible values for the DRDeviceMediaStateKey.
**Notes:** Device contains media of some type.

65.5.88 **DRDeviceMediaStateNone** as string

**Function:** One of the possible values for the DRDeviceMediaStateKey.
**Notes:** No media is present in the device.

65.5.89 **DRDeviceMediaTrackCountKey** as string

**Function:** One of the keys in the DRDeviceMediaInfoKey dictionary.
**Notes:** Number containing the number of tracks present on the media.

65.5.90 **DRDeviceMediaTypeBDR** as string

**Function:** One of the possible values of the DRDeviceMediaTypeKey.
**Notes:** Media is a BD-R.

65.5.91 **DRDeviceMediaTypeBDRE** as string

**Function:** One of the possible values of the DRDeviceMediaTypeKey.
**Notes:** Media is a BD-RE.
65.5.92  **DRDeviceMediaTypeBDROM as string**

**Function:** One of the possible values of the DRDeviceMediaTypeKey.

**Notes:** Media is a BD-ROM.

65.5.93  **DRDeviceMediaTypeCDR as string**

**Function:** One of the possible values of the DRDeviceMediaTypeKey.

**Notes:** Media is a CD-R.

65.5.94  **DRDeviceMediaTypeCDROM as string**

**Function:** One of the possible values of the DRDeviceMediaTypeKey.

**Notes:** Media is a CD-ROM.

65.5.95  **DRDeviceMediaTypeCDRW as string**

**Function:** One of the possible values of the DRDeviceMediaTypeKey.

**Notes:** Media is a CD-RW.

65.5.96  **DRDeviceMediaTypeDVDPlusR as string**

**Function:** One of the possible values of the DRDeviceMediaTypeKey.

**Notes:** Media is a DVD+R.

65.5.97  **DRDeviceMediaTypeDVDPlusRDoubleLayer as string**

**Function:** One of the possible values of the DRDeviceMediaTypeKey.

**Notes:** Media is a DVD+R Double Layer.
65.5.98  **DRDeviceMediaTypeDVDPlusRW as string**

**Function:** One of the possible values of the DRDeviceMediaTypeKey.
**Notes:** Media is a DVD+RW.

65.5.99  **DRDeviceMediaTypeDVDPlusRWDoubleLayer as string**

**Function:** One of the possible values of the DRDeviceMediaTypeKey.
**Notes:** Media is a DVD+RW Double Layer.

65.5.100  **DRDeviceMediaTypeDVDR as string**

**Function:** One of the possible values of the DRDeviceMediaTypeKey.
**Notes:** Media is a DVD+RW.

65.5.101  **DRDeviceMediaTypeDVDRAM as string**

**Function:** One of the possible values of the DRDeviceMediaTypeKey.
**Notes:** Media is a DVD-RAM.

65.5.102  **DRDeviceMediaTypeDVDRDualLayer as string**

**Function:** One of the possible values of the DRDeviceMediaTypeKey.
**Notes:** Media is a DVD-R DL.
65.5.103 **DRDeviceMediaTypeDVDROM as string**

**Function:** One of the possible values of the DRDeviceMediaTypeKey.  
**Notes:** Media is a DVD-ROM.

65.5.104 **DRDeviceMediaTypeDVDRW as string**

**Function:** One of the possible values of the DRDeviceMediaTypeKey.  
**Notes:** Media is a DVD-RW.

65.5.105 **DRDeviceMediaTypeDVDRWDualLayer as string**

**Function:** One of the possible values of the DRDeviceMediaTypeKey.  
**Notes:** Media is a DVD-R DL.

65.5.106 **DRDeviceMediaTypeHDDVDR as string**

**Function:** One of the possible values of the DRDeviceMediaTypeKey.  
**Notes:** Media is a HD DVD-R.

65.5.107 **DRDeviceMediaTypeHDDVDRAM as string**

**Function:** One of the possible values of the DRDeviceMediaTypeKey.  
**Notes:** Media is a HD DVD-RAM.

65.5.108 **DRDeviceMediaTypeHDDVDRDualLayer as string**

**Function:** One of the possible values of the DRDeviceMediaTypeKey.  
**Notes:** Media is a HD DVD-R DL.
65.5. CLASS DRDEVICEMBS

65.5.109 DRDeviceMediaTypeHDDVDROM as string

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-ROM.

65.5.110 DRDeviceMediaTypeHDDVDRW as string

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-RW.

65.5.111 DRDeviceMediaTypeHDDVDRWDualLayer as string

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: Media is a HD DVD-RW DL.

65.5.112 DRDeviceMediaTypeKey as string

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: String containing the type of media inserted in the device.

65.5.113 DRDeviceMediaTypeUnknown as string

Function: One of the possible values of the DRDeviceMediaTypeKey.
Notes: The type of the media cannot be determined.

65.5.114 DRDeviceMediaUsedSpaceKey as string

Function: One of the keys in the DRDeviceMediaInfoKey dictionary.
Notes: MSF value of the amount of space currently used for existing data.
65.5.115  DRDevicePhysicalInterconnectATAPI as string

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected on an ATAPI interface.

65.5.116  DRDevicePhysicalInterconnectFibreChannel as string

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected through a Fibre Channel interface.

65.5.117  DRDevicePhysicalInterconnectFireWire as string

Function: One of the possible values of the DRDevicePhysicalInterconnectKey.
Notes: Device is connected through a Firewire interface.

65.5.118  DRDevicePhysicalInterconnectKey as string

Function: One of the keys in the dictionary returned by the info method.
Notes: String describing the connection of the device to the computer.

65.5.119  DRDevicePhysicalInterconnectLocationExternal as string

Function: One of the possible values of the DRDevicePhysicalInterconnectLocationKey.
Notes: Device is connected to the machine externally.

65.5.120  DRDevicePhysicalInterconnectLocationInternal as string

Function: One of the possible values of the DRDevicePhysicalInterconnectLocationKey.
Notes: Device is connected to the machine internally.
65.5.121 DRDevicePhysicalInterconnectLocationKey as string

**Function:** One of the keys in the dictionary returned by the info method.
**Notes:** String describing the location of the device (e.g. internal/external).

65.5.122 DRDevicePhysicalInterconnectLocationUnknown as string

**Function:** One of the possible values of the DRDevicePhysicalInterconnectLocationKey.
**Notes:** It’s not known how the device is connected.

65.5.123 DRDevicePhysicalInterconnectSCSI as string

**Function:** One of the possible values of the DRDevicePhysicalInterconnectKey.
**Notes:** Device is connected on a SCSI interface.

65.5.124 DRDevicePhysicalInterconnectUSB as string

**Function:** One of the possible values of the DRDevicePhysicalInterconnectKey.
**Notes:** Device is connected through a USB interface.

65.5.125 DRDeviceProductNameKey as string

**Function:** One of the keys in the dictionary returned by the info method.
**Example:**

```vbs
// shows all devices with their product names:
Dim devices() As DRDeviceMBS = DRDeviceMBS.devices

For Each dd As DRDeviceMBS In devices
    MsgBox dd.info.lookup(DRDeviceMBS.DRDeviceProductNameKey, "")
Next
```
Notes: String containing the product name extracted from the device.

65.5.126 DRDeviceStatusChangedNotification as string

Function: One of the notification names used with a DRBurn object.
Notes: Posted by a DRNotificationCenter when the media in a device changes state. This can include being ejected, inserted, becoming busy, etc.

The object for this notification is the device who's media is changing state. The userInfo for this notification is the same dictionary returned by status for that device.

65.5.127 DRDeviceSupportLevelAppleShipping as string

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device is shipping in some Apple machine.

65.5.128 DRDeviceSupportLevelAppleSupported as string

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device has been tested by Apple for support.

65.5.129 DRDeviceSupportLevelKey as string

Function: One of the keys in the dictionary returned by the info method.
Notes: String describing the support level the device enjoys from the engine.

65.5.130 DRDeviceSupportLevelNone as string

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device is not supported.
65.5. CLASS DRDEVICEMBS

65.5.131 DRDeviceSupportLevelUnsupported as string

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates the device is unsupported, but the engine will try to use it anyway.

65.5.132 DRDeviceSupportLevelVendorSupported as string

Function: One of the values for DRDeviceSupportLevelKey.
Notes: This value indicates this device has been tested by a third party for support.

65.5.133 DRDeviceTrackInfoKey as string

Function: One of the keys in the dictionary returned by the status method.
Notes: Dictionary containing dictionaries describing the tracks. DRTracks from the DRDeviceTrackRefsKey are used as keys into this dictionary.

65.5.134 DRDeviceTrackRefsKey as string

Function: One of the keys in the dictionary returned by the status method.
Notes: An array containing a list of DRTrack objects describing any tracks that are already on the disc.

65.5.135 DRDeviceVendorNameKey as string

Function: One of the keys in the dictionary returned by the info method.
Notes: String containing the vendor name extracted from the device.

65.5.136 DRDeviceWriteBufferSizeKey as string

Function: One of the keys in the dictionary returned by the info method.
Notes: Number containing the size of the write buffer of the device.
65.5.137  **DRDeviceWriteCapabilitiesKey as string**

**Function:** One of the keys in the dictionary returned by the info method.
**Notes:** Dictionary containing the capabilities of the device for writing different kinds of media.

65.5.138  **ejectMedia as boolean**

**Function:** Commands the device to eject the media.
**Notes:**
This command first unmounts any volumes associated with the media and then eject the media from the drive. If the media could not be ejected, most likely this is because a volume associated with the media could not be unmounted.

Returns true if the media could be ejected and false if not.

65.5.139  **info as dictionary**

**Function:** Returns a dictionary of information describing the device.
**Notes:** The information returned include the types of media the device can write to, how it’s connected and its identifying information such as the vendor and product name.

65.5.140  **ioRegistryEntryPath as string**

**Function:** Returns the path to the device in the IO Registry.

65.5.141  **isEqualToDevice(value as DRDeviceMBS) as boolean**

**Function:** Compares the receiver to another device.
**Notes:** Returns true if the receiver is equal to otherDevice.
65.5. **CLASS DRDEVICEMBS**

65.5.142 **isValid as boolean**

**Function:** Returns whether or not the device represented by the receiver is still attached to the computer.

**Notes:**

Because of the way some physical interconnects work, a device which is unplugged and replugged in does not necessarily look like the same device to the computer and would be invalid in that instance.

Returns true if the device is valid and false if not.

65.5.143 **mediaIsAppendable as boolean**

**Function:** Returns true if the media in the device can have more data appended to any existing data.

65.5.144 **mediaIsBlank as boolean**

**Function:** Returns true the media in the device is blank.

65.5.145 **mediaIsBusy as boolean**

**Function:** Returns true if the media is in use by some process - even the one making this call.

65.5.146 **mediaIsErasable as boolean**

**Function:** Returns true if the media can be erased (i.e., CD-RW, DVD-RW, etc).

65.5.147 **mediaIsOverwritable as boolean**

**Function:** Returns true if the media in the device can be fully (re)written.
65.5.148 mediaIsPresent as boolean

Function: Reports the presence of the media.

65.5.149 mediaIsReserved as boolean

Function: Returns true if the application calling this method currently holds the reservation on the media.

65.5.150 mediaIsTransitioning as boolean

Function: Returns true if the media is in transition (spinning up or down for example).

65.5.151 mediaSpaceFree as DRMSFMBS

Function: Returns the amount of free space on the media.

65.5.152 mediaSpaceOverwritable as DRMSFMBS

Function: Returns the amount of writable space on the media.

65.5.153 mediaSpaceUsed as DRMSFMBS

Function: Returns the amount of used space on the media.

65.5.154 mediaType as string

Function: Returns the type of media currently inserted into the device.
65.5. **CLASS DRDEVICEMBS**

### 65.5.155 openTray as boolean

**Function:** Commands the device to open it’s tray.
**Notes:**

Does nothing if the device does not have a tray (slotload). If there is media in the drive this method will do nothing and return false. In this case use ejectMedia to eject the media and open the tray.

Returns true if the tray could be opened and false if not.

### 65.5.156 PhysicalInterconnect as string

**Function:** The connection of the device to the computer.

### 65.5.157 PhysicalInterconnectLocation as string

**Function:** The location of the device (internal/external/unknown).
**Notes:** Use the DRDevicePhysicalInterconnectLocation* constants.

### 65.5.158 releaseExclusiveAccess

**Function:** Releases the latest exclusive access request for the device.
**Notes:** A call to this method must be made for every call to acquireExclusiveAccess, otherwise the process will never release its exclusive access.

### 65.5.159 releaseMediaReservation

**Function:** Releases any media reservation that might be in place for the device.
**Notes:** If media is inserted and reserved, then the reservation will be passed on to the next process with a reservation request.
65.5.160 status as dictionary

Function: Returns a dictionary of information describing the media in the device.
Notes: In addition to information about the media (type, space available/used, etc), the dictionary returned includes those pieces of information about the device itself which are in part determined by the media (i.e., maximum burn speed).

65.5.161 trayIsOpen as boolean

Function: Reports the tray state of the device.
Notes: Returns true if the device has a tray and it is open.

65.5.162 writesCD as boolean

Function: Reports the device’s ability to burn to CD-type media.
Notes: Returns true if the device has the ability to write to CD-R media.

65.5.163 writesDVD as boolean

Function: Reports the device’s ability to burn to DVD-type media.
Notes: Returns true if the device has the ability to write to DVD-R media.
65.6   class DREraseMBS

65.6.1   class DREraseMBS

**Function:** Perform and monitor the erasing a rewritable CD or DVD disc.
**Notes:** All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead.
Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

65.6.2   Methods

65.6.3   Constructor(device as DREraseMBS)

**Function:** Initializes an erase object.

65.6.4   device as DRDeviceMBS

**Function:** Returns the device being used for the erase.

65.6.5   DREraseStatusChangedNotification as string

**Function:** One of the notification names you can use to register notifications on the erase status.

65.6.6   DREraseTypeComplete as string

**Function:** A constant to be used for the eraseType property.
**Notes:** Configures the erase object to perform a complete erase, erasing every byte on the disk. This operation is slow (on the order of 30 minutes) to complete.
**65.6.7  DREraseTypeKey as string**

Function: One of the property names in the properties dictionary of the erase object.

**65.6.8  DREraseTypeQuick as string**

Function: A constant to be used for the eraseType property.
Notes: Configures the erase object to perform a quick erase, doing the minimal amount of work to make the disc appear blank. This operation typically takes only a minute or two.

**65.6.9  eraseForDevice(device as DRDeviceMBS) as DREraseMBS**

Function: Creates and returns an erase object.
Notes: Returns nil on any error.

**65.6.10  start**

Function: Begin the process of erasing media.
Notes: This method only kicks off the erase. Once the erasure starts, control returns to the caller.

**65.6.11  status as dictionary**

Function: Returns a dictionary containing the status of the erase.
Notes: The same dictionary is returned through the DREraseStatusChangedNotification notification.

**65.6.12  Properties**

**65.6.13  eraseType as string**

Function: The type of erase to be performed.
65.6. **CLASS DRERASEMBS**

**Notes:** (Read and Write computed property)

---

### 65.6.14 properties as dictionary

**Function:** The properties dictionary of the erase.

**Notes:** (Read and Write computed property)
65.7 class DRoseProgressPanelMBS

65.7.1 class DRoseProgressPanelMBS

**Function:** Panel to display progress while erasing media.  
**Notes:** All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct. Subclass of the NSPanelMBS class.

65.7.2 Methods

65.7.3 beginProgressPanelForErase(erase as DRoseMBS)

**Function:** Presents the progress panel on screen and begins the erase process.  
**Notes:** This method returns control to the caller after it has displayed the progress sheet and begun the erase. Once the method has returned the caller can perform other operations while the erase continues.

65.7.4 beginProgressSheetForErase(erase as DRoseMBS, docWindow as NSWindowMBS)

**Function:** Presents the progress panel as a sheet and begins the erase process.  
**Notes:** erase: The object performing the erase.  
docWindow: The window the sheet will be attached to. If docWindow is not nil, the panel slides down as a sheet running as a document modal window. If owner is nil, this is an error.

This method returns control to the caller after it has displayed the progress sheet and begun the erase. Once the method has returned the caller can perform other operations while the erase continues.

65.7.5 Constructor

**Function:** The constructor which creates the erase progress panel.
65.7. **DREraseProgressPanelDidFinishNotification as string**

**Function:** One of the notification names for use with an erase progress panel.  
**Notes:**  
Posted when the DREraseProgressPanel has finished and is about to go away.  

This notification contains a notification object but no userInfo dictionary. The notification object is the DREraseProgressPanel that will be closed.

65.7.7 **DREraseProgressPanelWillBeginNotification as string**

**Function:** One of the notification names for use with an erase progress panel.  
**Notes:**  
Posted when the DREraseProgressPanel is about to begin displaying progress.  

This notification contains a notification object but no userInfo dictionary. The notification object is the DREraseProgressPanel that will be displayed.

65.7.8 **Properties**

65.7.9 **Description as string**

**Function:** The description string displayed in the panel.  
**Notes:**  
If no description is explicitly set, this method will return the standard text string.

The panel’s description is typically a short text string that gives an indication to the user what operation is being performed. If no description is explicitly set, the progress panel uses a standard text string suitable to the erase.  
(Read and Write computed property)
65.7.10 Events

65.7.11 eraseProgressPanelDidFinish

65.7.12 eraseProgressPanelEraseDidFinish(erase as DREraseMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: Allows the delegate to handle the end-of-erase feedback. Notes: This method allows the delegate to handle or modify the end-of-erase feedback performed by the progress panel. Return true to indicate the delegate handled the erase completion and the standard feedback should be suppressed. If this method returns false, the normal end-of-erase handling is performed (displaying an error if appropriate, playing an "I’m done" sound, etc). The delegate is messaged before the progress panel is ordered out so a sheet may be displayed on a progress panel displayed as a window.

65.7.13 eraseProgressPanelWillBegin

65.8. **class DREraseSetupPanelMBS**

65.8.1 **class DREraseSetupPanelMBS**

**Function:** Manages a panel that allows users to specify the parameters of an erase.

**Notes:**

This class supports choosing the device to use and what sort of erase to perform. When the panel is closed by the user choosing to erase the media in the device, the device is exclusively held by the application for its own use to prevent possible bad or corrupt media from causing problem for the rest of the system. This means that if the erase object obtained from the panel is not used to do an erase, the device will remain unavailable to other applications until the exclusive access is released.

Subclass of the DRSetupPanelMBS class.

65.8.2 **Methods**

65.8.3 **Constructor**

**Function:** The constructor to create the erase setup panel.

**Example:**

```dim d as DREraseSetupPanelMBS
d=new DREraseSetupPanelMBS
call d.runSetupPanel```

65.8.4 **eraseObject as DREraseMBS**

**Function:** Creates and returns a new DRErase object that’s configured to erase the disc in the currently selected device.

**Notes:**

The new DRErase object is configured based on the settings in the setup panel when the user clicks the OK button.

Do not invoke this method within a modal session runSetupPanel because the erase object information is only updated just before the modal session ends.

Returns a new DRErase object.
65.9. **CLASS DRFILEMBS**

65.9 **class DRFileMBS**

65.9.1 **class DRFileMBS**

**Function:** Represents a file to be created on the disc.

**Notes:**

A file can be either a pointer to an exiting file (residing on a hard drive for example) or can be created at burn time from data passed into the file object as requested. DRFiles can only exist inside of DRFolder objects.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

Subclass of the DRFSObjectMBS class.

65.9.2 **Methods**

65.9.3 **Constructor**

**Function:** Dummy constructor.

**Notes:**

See also:

- 65.9.4 Constructor(name as string) 11185
- 65.9.5 Constructor(name as string, data as memoryblock) 11186
- 65.9.6 Constructor(path as folderitem) 11186

65.9.4 **Constructor(name as string)**

**Function:** Creates a "virtual" file object.

**Notes:**

This type of DRFile burns the data produced to the output disc, creating a file with the passed in name.

You need to subclass the DRFileMBS class and handle the events.

See also:

- 65.9.3 Constructor 11185
65.9.5 Constructor(name as string, data as memoryblock)

**Function:** Creates a "virtual" file object.  
**Notes:** This type of DRFile burns the data passed in to disc, creating a file with the passed in name.  
See also:

- 65.9.3 Constructor
- 65.9.4 Constructor(name as string)
- 65.9.6 Constructor(path as folderitem)

65.9.6 Constructor(path as folderitem)

**Function:** Initializes a "real" file object  
**Notes:** This type of DRFile reads in data from an existing file located at path and burns that data to disc.  
See also:

- 65.9.3 Constructor
- 65.9.4 Constructor(name as string)
- 65.9.5 Constructor(name as string, data as memoryblock)

65.9.7 DRLinkTypeFinderAlias as string

**Function:** The constant used with linkWithLinkType to create a Finder alias.

65.9.8 DRLinkTypeHardLink as string

**Function:** The constant used with linkWithLinkType to create a hard link.
65.9.9  DRLinkTypeSymbolicLink as string

Function: The constant used with linkWithLinkType to create a symbolic link.

65.9.10  fileWithPath(path as folderitem) as DRFileMBS

Function: Creates a "real" file object.
Example:

```
dim file as FolderItem = GetFolderItem("/System/Library/Fonts/Helvetica.dfont", FolderItem.PathType-Shell)
dim f as DRFileMBS = DRFileMBS.fileWithPath(file)
MsgBox f.baseName
```

Notes: This type of DRFile reads in data from an existing file located at path and burns that data to disc.
See also:

- 65.9.11 fileWithPath(path as string) as DRFileMBS

65.9.11  fileWithPath(path as string) as DRFileMBS

Function: Creates a "real" file object.
Example:

```
dim f as DRFileMBS = DRFileMBS.fileWithPath(”/System/Library/Fonts/Helvetica.dfont”)```

MsgBox f.baseName

Notes: This type of DRFile reads in data from an existing file located at path and burns that data to disc.
See also:

- 65.9.10 fileWithPath(path as folderitem) as DRFileMBS
65.9.12 finderAliasPointingTo(original as DRFSObjectMBS, filesystem as string) as DRFileMBS

**Function:** Creates a Finder alias to another file on the output disc.
**Notes:**
original: The file to point the hard link to
filesystem: The filesystem this link will exist on.

As with Mac OS X 10.6.4 this method seems to create an empty file only (no alias).

65.9.13 hardLinkPointingTo(original as DRFileMBS, filesystem as string) as DRFileMBS

**Function:** Creates a hard link to another file on the output disc.
**Notes:**
original: The file to point the hard link to
filesystem: The filesystem this link will exist on.

As with Mac OS X 10.6.4 this method seems to crash always.

65.9.14 linkWithLinkType(linkType as string, original as DRFSObjectMBS, filesystem as string) as DRFileMBS

**Function:** Initializes a file object to point to another file on the output disc.
**Example:**

```plaintext
dim SomeFolder as new DRFolderMBS("Some new folder")

// Let's have a file to test

dim data as string = "Hello World" // file content
dim name as string = "test.txt" // file name
dim testfile as DRFileMBS = DRFileMBS.virtualFileWithName(name, data)

// and create a sym link for it

dim SymLink as DRFileMBS = DRFileMBS.linkWithLinkType(DRFileMBS.DRLinkTypeSymbolicLink, testfile, DRFileMBS.DRHFSPlus)
if SymLink = nil then
```

MsgBox "SymLink is nil!?"
else
SomeFolder.addChild SymLink
end if

Notes:

linkType: The type of link that will be created.
original: The file to point the hard link to
filesystem: The filesystem this link will exist on.

65.9.15  symLinkPointingTo(original as DRFSObjectMBS, filesystem as string) as DRFileMBS

Function: Creates a symbolic link to another file on the output disc.
Example:

dim SomeFolder as new DRFolderMBS("Some new folder")

// Let’s have a file to test

dim data as string = "Hello World" // file content
dim name as string = "test.txt" // file name
dim testfile as DRFileMBS = DRFileMBS.virtualFileWithName(name, data)

// and create a sym link for it
dim SymLink as DRFileMBS = DRFileMBS.symLinkPointingTo(testfile, DRFileMBS.DRHFSPlus)
if SymLink = nil then
MsgBox "SymLink is nil!?"
else
SomeFolder.addChild SymLink
end if

Notes:

original: The file to point the hard link to
filesystem: The filesystem this link will exist on.

As with Mac OS X 10.6.4 this method seems to work just fine.
65.9.16 `virtualFileWithName(name as string, data as memoryblock) as DRFileMBS`

**Function:** Creates a ”virtual” file object.

**Example:**

```vba
dim data as string = "Hello World" ' file content
dim name as string = "test.txt" ' file name

dim f as DRFileMBS = DRFileMBS.virtualFileWithName(name, data)

MsgBox f.baseName
```

**Notes:** This type of DRFile burns the data passed in to disc, creating a file with the passed in name.

65.9.17 Events

65.9.18 `calculateSizeOfFile(fork as Integer, estimating as boolean) as uint64`

**Function:** Calculates the size of a file’s fork.

**Notes:**
This method may be sent at any time after the file object has been instantiated. Requests that the receiver calculate the file size of file fork (for instance data or resource).

If estimate is true, you are being asked for an estimate of the final fork size, perhaps to provide an estimate of the track size, and do not have to be exact. Estimates should err on the high side; it’s better to overestimate than underestimate.

An estimate call may be made at any time.

If estimate is false, you are being asked for the actual fork size, to be used in the burn. This call is only made in the burn phase.

**fork:** The fork of the file whose size is to be calculated.
**estimate:** If the file size should be estimated or exact.

Return the length of the file’s fork.
65.9. **CLASS DRFILEMBS**

65.9.19 cleanupFileAfterBurn

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Cleanup the file once the burn is complete. **Notes:** Sent to the receiver after the burn completes. This would be an appropriate place to close files, or do any other teardown work needed. This message will always be sent regardless of whether the burn succeeded or failed.

65.9.20 prepareFileForBurn as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Prepare the file object for burning. **Notes:**

Sent to the receiver before the burn begins. This would be an appropriate method to open files, or do any other prep work needed. The disc’s entire hierarchy is completely in place and can be queried if needed.

After this call, the burn’s content is locked down, and you should be able to respond to the calculateSizeOfFile messages with exact values.

65.9.21 prepareFileForVerification as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Prepare the file object for verification. **Notes:** Called during the burn (after production, before the cleanupFileAfterBurn event is called) to indicate that verification is about to begin. Now would be a good time to rewind to the start of the file, reset state machines, or do whatever else is needed to prepare to produce again.

65.9.22 produceFile(fork as Integer, buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32) as uint32

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Calculates the size of a file’s fork. **Notes:**

Sent during the burn (after the prepareFileForBurn message) requesting that the receiver produce the data fork contents.

The receiver should fill up the buffer passed in as full as possible and then return control to the caller. Since while burning, keeping the drive’s buffer full is of utmost importance, you should not perform lengthy
operations or block for data in this method. This method should return the number of bytes actually in the buffer or 0 to indicate that there was an error producing the data.

You may be asked to produce twice, once during the actual burn and once during verification.

fork: The fork of the file to produce.
buffer: The buffer to produce data into.
bufferLength: The length of the buffer to produce data into
blockSize: The size of the track blocks

Return the number of bytes produced.

65.9.23 Constants

65.9.24 DRFileForkData = 0

MBS MacControls Plugin, Plugin Version: 7.4. Function: The constant which specifies which fork is currently needed.
Notes:
The data fork contains the primary information for the file and is the fork used for files such as JPEGs, text files, etc.

The resource fork contains secondary meta-data, which is not important to the primary content of the file and may safely be ignored when the file is sent to a filesystem or OS which does not support multiple forks.

65.9.25 DRFileForkResource = 1

MBS MacControls Plugin, Plugin Version: 7.4. Function: The constant which specifies which fork is currently needed.
Notes:
The data fork contains the primary information for the file and is the fork used for files such as JPEGs, text files, etc.

The resource fork contains secondary meta-data, which is not important to the primary content of the file and may safely be ignored when the file is sent to a filesystem or OS which does not support multiple forks.
65.10 class DRFolderMBS

**Function:** A class for folder objects used in filesystem creation.

**Notes:**

A DRFile object is a subclass of DRFSObject and represents a folder on the finished disc. DRFolders can be either a pointer to an existing folder (residing on a hard drive for example) or can be a "virtual" folder which exists only on the resulting burned disc. A DRFolder pointing to an existing folder ("real" folder) cannot have its contents changed - only those files/folders which are children of the actual folder on disk will be included on the resulting disc. "Virtual" folders are entirely created programatically and any virtual folder structure can exist and be burned to disc. It is possible to convert a "real" folder to a "virtual" folder using the makeVirtual method.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

Subclass of the DRFSObjectMBS class.

65.10.2 Methods

65.10.3 addChild(child as DRFSObjectMBS)

**Function:** Adds an object reference (either a file or folder) as a child of a virtual folder object.

**Notes:** This method only applies to virtual folders. Real folders are considered "leaf nodes" and cannot have children.

65.10.4 children as DRFSObjectMBS()

**Function:** Returns an array containing the children of a virtual folder.

**Notes:** The order of children in the array is arbitrary – since the various filesystems being generated may have different sorting requirements, there is no one true way to sort the children. The ordering will change only when children are added or removed. You should sort the children according to the needs of your display, and in a consistent manner. This function only applies to virtual folders. Real folders are considered "leaf nodes" and should not be passed into this call.
65.10.5 Constructor

Function: The dummy constructor.

See also:
- 65.10.6 Constructor(name as string)
- 65.10.7 Constructor(path as folderitem)

65.10.6 Constructor(name as string)

Function: Creates a "virtual" folder object with a name.

See also:
- 65.10.5 Constructor
- 65.10.7 Constructor(path as folderitem)

65.10.7 Constructor(path as folderitem)

Function: Initializes a DRFolder object that will use the folder contents of the folder located at path as a source.

See also:
- 65.10.5 Constructor
- 65.10.6 Constructor(name as string)

65.10.8 count as Integer

Function: Returns the number of children of a virtual folder.

Notes: This method returns a "shallow" count of only those children that are immediately contained within the virtual folder. This method only applies to virtual folders. Real folders are considered "leaf nodes" and should not be passed into this call.

65.10.9 folderWithPath(path as folderitem) as DRFolderMBS

Function: Initializes a DRFolder object that will use the folder contents of the folder located at path as a
65.10. **CLASS DRFOLDERMBS**

source.

See also:

- 65.10.10 folderWithPath(path as string) as DRFolderMBS

### 65.10.10 folderWithPath(path as string) as DRFolderMBS

**Function:** Initializes a DRFolder object that will use the folder contents of the folder located at path as a source.  
See also:

- 65.10.9 folderWithPath(path as folderitem) as DRFolderMBS

### 65.10.11 makeVirtual

**Function:** Changes the real DRFolder object into a "virtual" DRFolder object.  
**Notes:** The virtual folder created in this way is a snapshot of the on-disk folder at the moment of the call. The newly created virtual folder will contain real folder and file objects corresponding to the on-disk children of the original on-disk folder. If the on-disk folder is modified (eg, if the folder attributes change, or if children are added to or removed from the on-disk tree): during this call, the virtual folder may or may not reflect the changes. If modified after this call, the virtual folder will not reflect the changes.

### 65.10.12 removeChild(child as DRFSObjectMBS)

**Function:** Removes an object reference (either a file or folder) as a child of a virtual folder object.  
**Notes:** This method only applies to virtual folders. Real folders are considered "leaf nodes" and cannot have children.

### 65.10.13 virtualFolderWithName(name as string) as DRFolderMBS

**Function:** Creates a "virtual" folder object with a name.
65.11 class DRFSObjectMBS

65.11.1 class DRFSObjectMBS

Function: A class which defines common features of all filesystem content objects.
Notes: Please read Apples documentation for more details.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

65.11.2 Methods

65.11.3 Constructor

Function: The private constructor.

65.11.4 DRAccessDate as string

Function: One of the property keys.
Notes: Date containing the item’s last-accessed date.

65.11.5 DRAllFilesystems as string

Function: The key for accessing the name or properties for the file in all filesystems together.
Notes: When this key is used to refer to a name, it refers to the base name (which has no naming restrictions).

65.11.6 DRAtributeModificationDate as string

Function: One of the property keys.
65.11. CLASS DRFSOBJECTMBS

Notes: Date containing the item’s attribute modification date.

65.11.7 DRBackupDate as string

Function: One of the property keys.
Notes: Date containing the item’s backup date.

65.11.8 DRContentModificationDate as string

Function: One of the property keys.
Notes: Date containing the item’s content modification date.

65.11.9 DRCreationDate as string

Function: One of the property keys.
Notes: Date containing the item’s creation date.

65.11.10 DREffectiveDate as string

Function: One of the property keys.
Notes: Date containing the item’s effective date.

65.11.11 DRExpirationDate as string

Function: One of the property keys.
Notes: Date containing the item’s expiration date.

65.11.12 DRHFSPlus as string

Function: The key for accessing the HFS+ name/properties for the file.
Notes: HFS+ names can be up to 255 decomposed unicode characters long.

65.11.13 DRHFSPlusCatalogNodeID as string

Function: One of the property keys.
Notes: Number containing item's catalog node ID (HFS+ only). Currently, this value if set is only a suggestion. The burn engine will attempt to use this node ID, but may use another value if it needs to resolve conflicts. Default behavior is to allocate node IDs incrementally from kHFSFirstUserCatalogNodeID.

65.11.14 DRHFSPlusTextEncodingHint as string

Function: One of the property keys.
Notes: Number containing the item's text encoding hint (HFS+ only).

This value is used by the MacOS to help when converting the natively UTF-16 filename into an 8-bit-per-character representation (such as MacRoman, Shift-JIS, or UTF8). If not set, default behavior is to call CFStringGetMostCompatibleMacStringEncoding (CFStringGetSmallestEncoding()).

65.11.15 DRInvisible as string

Function: One of the property keys.
Notes: Boolean indicating whether the item is invisible or not.

65.11.16 DRISO9660 as string

Function: The key for accessing the ISO-9660 properties for the file.
Notes: This key cannot be used to refer to the name of the file; it is ambiguous, since the name may be in either level 1 or level 2 format.
65.11. CLASS DRFSOBJECTMBS

65.11.17 DRISO9660LevelOne as string

Function: The key for accessing the ISO-9660 level 1 name for the file.
Notes: This key is used to refer specifically to the name generated for ISO-9660 if the ISO level is set to 1. When used for a property, it is equivalent in use to the DRISO9660 key and acts as a synonym for that key.
ISO9660 level 1 names are in the form typically known as 8.3 - eight characters of name and three characters of extension (if it’s a file; directories can’t have extensions). Character set is limited to A-Z, 0-9, and .

65.11.18 DRISO9660LevelTwo as string

Function: The key for accessing the ISO-9660 level 2 name for the file.
Notes: This key is used to refer specifically to the name generated for ISO-9660 if the ISO level is set to 2. When used for a property, it is equivalent in use to the DRISO9660 key and acts as a synonym for that key.
ISO9660 level 2 names can be 32 chars long, are limited to a subset of the 7-bit ASCII chars (capital letters, numbers, space, punctuation), and are only allowed one "." character.

65.11.19 DRISO9660VersionNumber as string

Function: One of the property keys.
Notes: Number containing the ISO9660 version number for the object. Default value is 1.

65.11.20 DRJoliet as string

Function: The key for accessing the Joliet name/properties for the file.
Notes: Joliet names can be 64 precomposed unicode characters long, but are only allowed one "." character and many punctuation characters are illegal.
65.11.21 DRMacExtendedFinderFlags as string

Function: One of the property keys.
Notes: Number containing the item’s extended Finder flags (MacOS only).

65.11.22 DRMacFileCreator as string

Function: One of the property keys.
Notes: A binary string containing the OSType for the file creator (MacOS only).

65.11.23 DRMacFileType as string

Function: One of the property keys.
Notes: A binary string containing the OSType for the file type (MacOS only).

65.11.24 DRMacFinderFlags as string

Function: One of the property keys.
Notes: Number containing the item’s Finder flags (MacOS only). The invisible bit is ignored - use DRInvisible instead.

65.11.25 DRMacFinderHideExtension as string

Function: One of the property keys.
Notes: A boolean indicating whether the extension should be hidden in the Finder or not. The default is false and only applies to files.

65.11.26 DRMacIconLocation as string

Function: One of the property keys.
Notes: A binary string containing a Point (not NSPoint) for the item’s icon location in its parent folder
65.11.27 DRMacScrollPosition as string

Function: One of the property keys.
Notes: Binary string containing a Point (not NSPoint) for the folder’s scroll position (MacOS only).

65.11.28 DRMacWindowBounds as string

Function: One of the property keys.
Notes: Binary string containing a Rect (not NSRect) for the window bounds for a folder (MacOS only).

65.11.29 DRMacWindowView as string

Function: One of the property keys.
Notes: Number containing the folder’s window view type (MacOS only).

65.11.30 DRPosixFileMode as string

Function: One of the property keys.
Notes: Number containing the item’s POSIX file mode.

65.11.31 DRPosixGID as string

Function: One of the property keys.
Notes: Number containing the item’s POSIX GID.

65.11.32 DRPosixUID as string

Function: One of the property keys.
Notes: Number containing the item’s POSIX UID.

65.11.33  DRRecordingDate as string

**Function:** One of the property keys.
**Notes:** Date containing the item’s recording date.

65.11.34  DRUDF as string

**Function:** The key for accessing the UDF name/properties for the file.

65.11.35  DRUDFApplicationIdentifierSuffix as string

**Function:** One of the property keys.
**Notes:** Optional key. Binary string of up to 8 bytes in length, for application use. The presence of this key requires the DRApplicationIdentifier key.

65.11.36  DRUDFExtendedFilePermissions as string

**Function:** One of the property keys.
**Notes:**
Number indicating the extended UDF file permissions of this file.

Bit 0: Change attributes for others (low order bit) Bit 1: Delete permissions for others Bit 2: Change attributes for group Bit 3: Delete permissions for group Bit 4: Change attributes for owner Bit 5: Delete permissions for owner Bit 6 & 7: Reserved If this key is not present, DRPosixFileMode will be used with the above bits being set to the corresponding write bit for owner, group, and others. If DRPosixFileMode is not present, the file mode from the file on disc will be used, again using the write bit for these permissions.

65.11.37  DRUDFInterchangeLevel as string

**Function:** One of the property keys.
65.11. **CLASS DRFSOBJECTMBS**

**Notes:** Optional key. Number containing the volume interchange level. See the UDF specs for details.

---

**65.11.38 DRUDFMaxInterchangeLevel as string**

**Function:** One of the property keys.

**Notes:** Optional key. Number containing the maximum volume interchange level number. See the UDF specs for details.

---

**65.11.39 DRUDFMaxVolumeSequenceNumber as string**

**Function:** One of the property keys.

**Notes:** Optional key. Number containing the maximum volume sequence number. See the UDF specs for details.

---

**65.11.40 DRUDFPrimaryVolumeDescriptorNumber as string**

**Function:** One of the property keys.

**Notes:** Optional key. Number containing the primary volume sequence number. See the UDF specs for details.

---

**65.11.41 DRUDFRealTimeFile as string**

**Function:** One of the property keys.

**Notes:** Number indicating whether the file is a UDF Real-Time file.

---

**65.11.42 DRUDFVersion102 as string**

**Function:** This value is used in DRUDFWriteVersion.
65.11.43 **DRUDFVersion** as string

**Function:** This value is used in DRUDFWriteVersion.

65.11.44 **DRUDFVolumeSequenceNumber** as string

**Function:** One of the property keys.
**Notes:** Optional key. Number containing the volume sequence number. See the UDF specs for details.

65.11.45 **DRUDFVolumeSetIdentifier** as string

**Function:** One of the property keys.
**Notes:** Optional key. The Volume Set Identifier for the UDF volume set. If this key is not present, DRVolumeSet will be used if present. The Volume Set Identifier is composed of the Volume Set Timestamp, the Implementation Use, and a the string contained in this property.

65.11.46 **DRUDFVolumeSetImplementationUse** as string

**Function:** One of the property keys.
**Notes:** Optional key. A binary string (8 bytes in length) for implementation use data. See the UDF specs for details.

65.11.47 **DRUDFVolumeSetTimestamp** as string

**Function:** One of the property keys.
**Notes:** Optional key. A date object for the volume set timestamp. See the UDF specs for details.

65.11.48 **DRUDFWriteVersion** as string

**Function:** One of the property keys.
**Notes:** Optional key. This property key defines the version for the UDF structures written to disk. Values
CLASS DRFSOBJECTMBS

are defined in UDF Version types.

65.11.49 **effectiveFilesystemMask as Integer**

**Function:** The effective filesystem mask set for the receiver.

65.11.50 **isVirtual as boolean**

**Function:** Indicates whether the receiver is real or virtual. 
**Notes:** 
True if the receiver is virtual and false if real.

65.11.51 **mangledNameForFilesystem(filesystem as string) as string**

**Function:** A single mangled filesystem-specific name for this fsobject. 
**Notes:** Use DRISO9660LevelOne, DRISO9660, DRHFSPlus, DRUDF, DRJoliet, DRISO9660LevelTwo or DRAIIFilesystems for the filesystem parameter.

65.11.52 **mangledNames as dictionary**

**Function:** Returns a dictionary containing all of the filesystem-specific names for the receiver, each one mangled for uniqueness.  
**Notes:** The dictionary will return only the names which are indicated by the receiver’s effective mask. If the receiver’s effective mask is zero, an empty dictionary is returned.

65.11.53 **parent as DRFolderMBS**

**Function:** The parent object.
65.11.54 propertiesForFileSystem(filesystem as string, mergeWithOtherFilesystems as boolean) as dictionary

Function: Returns all the filesystem properties set for the specified filesystem.
Notes:
filesystem: The filesystem to look in.
merge: If true, also look for properties in the umbrella DRAllFilesystems.

Normally you would call this method with merge set to true since you are interested in the set of properties that will be used when writing the object to disc. But if you have a need to determine what properties are set just for a specific filesystem, then pass in false for merge. In this case only the specific filesystem is checked. So if filesystem is set to DRHFSPlus and merge is false then the properties dictionary contains the values set for the HFS+ filesystem only. If no properties have been directly set for HFS+ yet, then this properties dictionary will be empty.

65.11.55 propertyForKey(key as string, filesystem as string, mergeWithOtherFilesystems as boolean) as Variant

Function: Returns a file/folder property specified by key for the specified filesystem.
Notes:
key: The property to return.
filesystem: The filesystem to look in.
merge: If true, also look for the property in the umbrella DRAllFilesystems.

Returns the value associated with the property.

Normally you would call this method with merge set to true since you are interested in the property that will be used when writing the object to disc. But if you have a need to determine what property is set just for a specific filesystem, then pass in false for merge. In this case only the specific filesystem is checked. So if DRHFSPlus is passed in for filesystem and merge is false then the property returned is the value set for the HFS+ filesystem only. If that property has not been directly set for HFS+ yet, then the returned value will be nil.

65.11.56 setProperties(Value as dictionary, filesystem as string)

Function: Sets the value of all the receiver’s properties specified by the keys in properties for the specific filesystem.
Notes:

properties: The value of the property.
filesystem: The filesystem to set the property in.

The properties are set only in the filesystem dictionary specified by filesystem. DRAAllFilesystems may be specified as the filesystem in which case the umbrella property affecting all filesystems at once will be set. Setting properties for DRAAllFilesystems does not preclude setting a filesystem specific property.

65.11.57 setProperty(Value as Variant, key as string, filesystem as string)

Function: Sets the value of the receiver’s property specified by key for the specific filesystem.

Notes:

property: The value of the property.
key: The property key.
filesystem: The filesystem to set the property in.

The property is set only in the filesystem dictionary specified by filesystem. DRAAllFilesystems may be specified as the filesystem in which case the umbrella property affecting all filesystems at once will be set. Setting a property for DRAAllFilesystems does not preclude setting a filesystem specific property.

65.11.58 sourcePath as string

Function: The source path.

65.11.59 Properties

65.11.60 baseName as string

Function: Returns the base name for the receiver.

Notes:

The base name is the name from which any necessary filesystem-specific names are automatically generated.

Because the content creation API is able to generate multiple filesystems which require multiple varied naming conventions, a sensible system for naming is required. Thus each file has a "base name" which
corresponds to its default name in any filesystem.

Whenever possible, the "base name" will be used in the generated filesystem without modification. If the name cannot be used as-is (if, for example, it contains illegal characters, exceeds the length requirements, doesn’t meet the required format, or a name collision is detected) then an acceptable name that meets the filesystem’s criteria will be generated automatically from the base name.

The default base name for a real file or folder is the actual on-disk name of the item.

(Read and Write computed property)

65.11.61 explicitFilesystemMask as Integer

Function: The explicit filesystem mask set for the receiver.
Notes: (Read and Write computed property)

65.11.62 specificNameForFilesystem(filesystem as string) as string

Function: A single filesystem-specific name for this fsobject.
Notes:
Use DRISO9660LevelOne, DRISO9660, DRHFSPlus, DRUDF, DRJoliet, DRISO9660LevelTwo or DRAll-Filesystems for the filesystem parameter.
(Read and Write computed property)

65.11.63 specificNames as dictionary

Function: The names used for the receiver in the different filesystems all at once.
Notes:
An Dictionary of filesystem keys with corresponding name strings as their values for each specific filesystem name that should be set.

Every effort will be made to use the names passed in. However, if a name is illegal, it will be modified to fit the rules for that filesystem’s names. Because of this, you should always call specificNames after setSpecificNames: to ensure that you are always displaying the most current names to the user.
(Read and Write computed property)
65.11. Constants

65.11.65 DRFilesystemInclusionMaskHFSPlus $= 8$
MBS MacControls Plugin, Plugin Version: 7.4. **Function:** The value which indicates the object should be included in the HFS+ filesystem.

65.11.66 DRFilesystemInclusionMaskISO9660 $= 1$
MBS MacControls Plugin, Plugin Version: 7.4. **Function:** The value which indicates the object should be included in the ISO9660 filesystem.

65.11.67 DRFilesystemInclusionMaskJoliet $= 2$
MBS MacControls Plugin, Plugin Version: 7.4. **Function:** The value which indicates the object should be included in the Joliet filesystem.

65.11.68 DRFilesystemInclusionMaskUDF $= 4$
MBS MacControls Plugin, Plugin Version: 7.4. **Function:** The value which indicates the object should be included in the UDF filesystem.
65.12 class DRMSFMBS

65.12.1 class DRMSFMBS

Function: Minutes/Seconds/Frames handling.
Notes:
On CDs, minutes/seconds/frames are used to identify positioning on a disc (which is most useful on an audio disc), but applies to any position on a disc no matter what type of data is present.

A frame is equivalent to a sector or block in normal disk parlance. 75 frames make up one second, so a 2 second pause (typical pregap size) is 150 frames.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

65.12.2 Methods

65.12.3 Constructor

Function: The dummy constructor.
See also:

- 65.12.4 Constructor(frames as Integer)
- 65.12.5 Constructor(s as string)

65.12.4 Constructor(frames as Integer)

Function: Creates an msf object whose length is frames.
See also:

- 65.12.3 Constructor
- 65.12.5 Constructor(s as string)
65.12. CLASS DRMSFMBS

65.12.5 Constructor(s as string)

**Function:** Creates an msf object initialized to the value represented by string
See also:

- 65.12.3 Constructor
- 65.12.4 Constructor(frames as Integer)

65.12.6 description as string

**Function:** Returns a textual representation.

65.12.7 descriptionWithFormat(format as string) as string

**Function:** Returns a textual representation of the receiver.

**Notes:**
The format string is very similar to
A printf-style format string with % -escaped formatting characters.

```plaintext
% % A ”% ” character
% m Minutes as a decimal number
% s Seconds as a decimal number
% f Frames as a decimal number
```

In addition to these formatting characters an optional length specifier can come between then % and the
formatting character. This length specifier will force the field in question to be at least that wide. For
example a format specifier of ”% 02m:% 02s” will cause a DRMSF object representing 3 minutes 9 seconds
to be formatted as ”03:09”.

A formatter is aware of and respects rounding. If a bit of the msf is no zero, but the format does not display
that value, the next higher value will be increased by one to reflect that. Extending our example above, an
DRMSF with a value of 3 minutes, 9 seconds, 15 frames using a format specifier of ”% 02m:% 02s”, will be
formatted as ”03:10” since the 15 frames rounds up the seconds to the next value.

Returns a string containing a textual representation of the object utilizing the specified format.
65.12.8 frames as Integer

Function: Returns the number of frames represented by the receiver.
Notes: This method differs from sectors in that it returns to the caller the number of frames remaining in the current second. For example an DRMSF value of 5:30:72 will return 72 from frames.

65.12.9 isEqualToMSF(value as DRMSFMBS) as boolean

Function: Compares one msf to another.
Notes: True if the two objects are equal, false otherwise.

65.12.10 minutes as Integer

Function: Returns the number of minutes represented by the receiver.
Notes: If the receiver represents a non-integral number of minutes, only the whole minute value is returned. For example an DRMSF value of 5:30:72 will return 5 from a minutes.

65.12.11 msf as DRMSFMBS

Function: Creates an msf object with no length/time.
Notes: Returns nil on any error.

65.12.12 msfByAdding(value as DRMSFMBS) as DRMSFMBS

Function: Adds an msf to the receiver.
Notes: Returns nil on any error.

65.12.13 msfBySubtracting(value as DRMSFMBS) as DRMSFMBS

Function: Subtracts an msf to the receiver.
Notes: Returns nil on any error.
**65.12.14 msfWithFrames(frames as Integer) as DRMSFMBS**

**Function:** Creates an msf object whose length is frames.
**Notes:** Returns nil on any error.

**65.12.15 msfWithString(s as string) as DRMSFMBS**

**Function:** Creates an msf object initialized to the value represented by string.
**Notes:** Returns nil on any error.

**65.12.16 seconds as Integer**

**Function:** Returns the number of seconds represented by the receiver.
**Notes:** If the receiver represents a non integral number of seconds, only the whole second value is returned. For example an DRMSF value of 5:30:72 will return 30 from seconds.

**65.12.17 sectors as Integer**

**Function:** Returns the total number of frames/sectors represented by the receiver.
**Notes:**
This method differs from frames in that it returns to the caller the total number of frames/sectors represented by the object. For example an DRMSF value of 5:30:72 will return 24822 from sectors.
65.13 class DRNotificationCenterMBS

65.13.1 class DRNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for notifications.

**Notes:** All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

65.13.2 Methods

65.13.3 addObserver(observer as NSNotificationObserverMBS, name as string="", theObject as Variant=nil)

MBS MacBase Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Adds an entry to the receiver’s dispatch table with an observer and optional criteria: notification name and sender.

**Notes:**
- observer: Object registering as an observer. This value must not be nil.
- name: The name of the notification for which to register the observer; that is, only notifications with this name are delivered to the observer. If you pass nil, the notification center doesn’t use a notification’s name to decide whether to deliver it to the observer.
- theObject: The object whose notifications the observer wants to receive; that is, only notifications sent by this sender are delivered to the observer. If you pass nil, the notification center doesn’t use a notification’s sender to decide whether to deliver it to the observer.

65.13.4 Constructor

MBS MacBase Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor to create a new instance of notification center pointing to the default notification center.

**Notes:**

A DRNotificationCenter object (or simply, notification center) is essentially a notification dispatch table. It notifies all observers of notifications meeting specific criteria. This information is encapsulated in NSNotification objects, also known as notifications. Client objects register themselves with the notification center as observers of specific notifications posted by DiscRecording. When an event occurs, DiscRecording posts an appropriate notification to the notification center. The notification center dispatches a message to each registered observer, passing the notification as the sole argument.

There are two main differences between a DRNotificationCenter and the NSNotificationCenter from Founda-
65.13. CLASS DRNOTIFICATIONCENTERMBS

First is that only Disc Recording posts notifications received through this mechanism. You use this to obtain device plug/unplug events, burn status, etc. Second, there can be multiple notification centers active at once. Each run loop of your application will have its own notification center and notifications from that notification center will be posted to the runloop it was created on.

65.13.5 removeObserver(observer as NSNotificationObserverMBS, name as string, theObject as Variant=nil)

Notes:

notificationObserver: Observer to remove from the dispatch table. Specify an observer to remove only entries for this observer. Must not be nil, or message will have no effect.
notificationName: Name of the notification to remove from dispatch table. Specify a notification name to remove only entries that specify this notification name. When nil, the receiver does not use notification names as criteria for removal.
notificationSender: Sender to remove from the dispatch table. Specify a notification sender to remove only entries that specify this sender. When nil, the receiver does not use notification senders as criteria for removal.

Be sure to invoke this method before the observer object or any object specified in addObserver is deallocated.
65.14 class DRSetupPanelMBS

65.14.1 class DRSetupPanelMBS

Function: Base class for the DiscRecordingUI setup panels.
Notes: Provides a base framework for handling device selection, media ejection and confirming or cancelling the panel.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the NSPanelMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

65.14.2 Methods

65.14.3 cancel

Function: Invoked when the user clicks the panel's cancel button.
Notes: If you overwrite this method in Real Studio, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

65.14.4 close

Function: Invoked when the user clicks the panel's close button.
Notes: If you overwrite this method in Real Studio, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

65.14.5 Constructor

Function: The private constructor.
65.14. CLASS DRSETUPPANELMBS

65.14.6  eject

**Function:** Invoked when the user clicks the panel’s eject button.
**Notes:** If you overwrite this method in Real Studio, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

65.14.7  ok

**Function:** Invoked when the user clicks the panel’s default button.
**Notes:** If you overwrite this method in Real Studio, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

65.14.8  open

**Function:** Invoked when the user clicks the panel’s open button.
**Notes:** If you overwrite this method in Real Studio, your method will not be called. You can only call this method to trigger the same behavior as if the user clicked the control.

65.14.9  runSetupPanel as Integer

**Function:** Displays the panel and begins its event loop.
**Notes:** Returns NSOKButton (if the user clicks the default button) or NSCancelButton (if the user clicks the Cancel button).

65.14.10  Events

65.14.11  determineBestDevice(deviceA as DRDeviceMBS, deviceB as DRDeviceMBS) as DRDeviceMBS

**Function:** Called to let you decide which device is better to use.
**Notes:** Default returns device A.
65.14.12 DeviceContainsSuitableMedia(device as DRDeviceMBS, byref prompt as string) as boolean

**Function:** This delegate method allows the delegate to determine if the media inserted in the device is suitable for whatever operation is to be performed.
**Notes:**

- **device:** The device that contains the media being asked about.
- **prompt:** Pass back a string object describing the media state.

Return false to disable the default button.

65.14.13 DeviceCouldBeTarget(device as DRDeviceMBS) as boolean

**Function:** Allows the delegate to determine if device can be used as a target.
**Notes:**

This method is used to limit the menu to only those devices that you want to appear. For example, a DVD burning application might use this to limit the menu to only devices that are capable of writing DVD-Rs.

- **device:** The candidate device.
- Returns true if the device is acceptable, false if not.

65.14.14 DeviceSelectionChanged(device as DRDeviceMBS)

**Function:** Sent by the default notification center when the device selection in the panel has changed.

65.14.15 SetupPanelShouldHandleMediaReservations as boolean

**Function:** This event allows the delegate to control how media reservations are handled.
**Notes:** Return false to indicate the delegate will handle media reservations. Return true to indicate the setupPanel should handle media reservations itself.
65.14.16 Constants

65.14.17 NSCancelButton = 0

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** The value runSetupPanel returns if the Cancel button is clicked.

65.14.18 NSOKButton = 1

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** The value runSetupPanel returns if the OK button is clicked.
65.15 class DRTrackMBS

65.15.1 class DRTrackMBS

**Function:** The DRTrack class represents a track on the burned disc.

**Example:**

```dim track as DRTrackMBS
dim bsp as DRBurnSetupPanelMBS
dim bpp as DRBurnProgressPanelMBS

// we need a track
track=CreateTrack

if track<>nil then
    bsp=new DRBurnSetupPanelMBS

    // set a few options
    bsp.setCanSelectAppendableMedia true
    bsp.setCanSelectTestBurn true

    if bsp.runSetupPanel=bsp.NSOKButton then
        bpp=new DRBurnProgressPanelMBS

        // And start off the burn itself. This will put up the progress dialog
        // and do all the nice pretty things that a happy app does.
        bpp.beginProgressPanelForBurn bsp.burnObject, track

    else
        MsgBox "You pressed cancel."
    end if
end if
```

**Notes:**

A DRTrack provides data to the for the burn and contains a description of the track on disc (length, block type, data format, etc). Data is provided for the burn in a real-time thread. It is up to the track to provide this data in a timely manner, otherwise a burn underrun can occur and ruin a disc.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
65.15.2 Methods

65.15.3 Constructor

Function: Dummy constructor.

65.15.4 DRAbstractFile as string

Function: One of the key constants for the properties dictionary.
Notes: DRFileMBS object pointing to the abstract file for ISO and Joliet volumes. The file must be in the root directory.

65.15.5 DRApplicationIdentifier as string

Function: One of the key constants for the properties dictionary.
Notes: String indicating the application identifier for ISO, Joliet and UDF volumes.

65.15.6 DRAudioFourChannelKey as string

Function: One of the key constants for the properties dictionary.
Notes:
For CD-DA audio tracks only. This key points to a boolean value indicating whether the track data has four channels, as opposed to the two channels of normal stereo. If this key is not present, the engine will use a default value of false and standard two-channel stereo is assumed.

Note that while four-channel is technically allowed in the Red Book, it never caught on and is probably being replaced by SACD, so you probably shouldn’t attempt to use it.

On the media, this key corresponds to bit 3 of the control field in sub-channel Q.

65.15.7 DRAudioPreEmphasisKey as string

Function: One of the key constants for the properties dictionary.
Notes: For CD-DA audio tracks only. This key points to a boolean value indicating whether the track includes pre-emphasis of 50/15us. If this key is not present, the engine will use a default value of false. On the media, this key corresponds to bit 0 of the control field in sub-channel Q.

65.15.8 DRBibliographicFile as string

Function: One of the key constants for the properties dictionary.
Notes: DRFile pointing to the bibliographic file for ISO and Joliet volumes. The file must be in the root directory.

65.15.9 DRBlockSize as string

Function: One of the key constants for the properties dictionary.
Notes: Number indicating the block size of the track. Currently always 2048. Do not change.

65.15.10 DRBlockSizeKey as string

Function: One of the key constants for the properties dictionary.
Notes: Number containing the size in bytes of each track block. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

65.15.11 DRBlockTypeKey as string

Function: One of the key constants for the properties dictionary.
Notes: Number containing the type of each track block. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

65.15.12 DRCopyrightFile as string

Function: One of the key constants for the properties dictionary.
Notes: DRFileMBS pointing to the copyright file for ISO and Joliet volumes. The file must be in the root directory.
65.15.13  DRDataFormKey as string

Function: One of the key constants for the properties dictionary.
Notes: Number containing the data form of each block in the track. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

65.15.14  DRDataPreparer as string

Function: One of the key constants for the properties dictionary.
Notes: String indicating the data preparer for ISO and Joliet volumes.

65.15.15  DRDefaultDate as string

Function: One of the key constants for the properties dictionary.
Notes: Date containing the default date to use for any unspecified dates in the filesystem. The current date and time is used if unspecified.

65.15.16  DRDVDCopyrightInfoKey as string

Function: One of the key constants for the properties dictionary.
Notes: For DVD tracks only. A binary string containing the DVD copyright info structure sent through the SEND DVD STRUCTURE command. The contents of this will be sent directly to the drive.

65.15.17  DRDVDTimestampKey as string

Function: One of the key constants for the properties dictionary.
Notes: For DVD tracks only. Binary string containing the DVD timestamp structure sent through the SEND DVD STRUCTURE command. The contents of this will be sent directly to the drive.

65.15.18  DRFreeBlocksKey as string

Function: One of the key constants for the properties dictionary.
Notes: Number containing the length, in blocks, which is still available in a writable track.

65.15.19  DRIndexPointsKey as string

Function: One of the key constants for the properties dictionary.
Notes:
For CD tracks only. This key points to an NSArray of NSNumbers, indicating the index points inside the track. Each index point is specified as a number of blocks (frames) relative to the start of the track. There are 75 blocks in one second of CD audio. No more than 98 index points may be specified for a track.

Not all drives are capable of writing index points, and not all consumer CD players report or use them. If this key is present in any track and the drive cannot write index points, the burn will fail with kDRDevice-CantWriteIndexPointsErr.

65.15.20  DRISOLevel as string

Function: One of the key constants for the properties dictionary.
Notes: Number containing the ISO level of the ISO-9660 filesystem on the track. Currently should be 1 or 2.

65.15.21  DRISOMacExtensions as string

Function: One of the key constants for the properties dictionary.
Notes: Boolean indicating whether the track should have Mac extensions.

65.15.22  DRISORockRidgeExtensions as string

Function: One of the key constants for the properties dictionary.
Notes: Boolean indicating whether the track should have RockRidge (POSIX) extensions.

65.15.23  DRMaxBurnSpeedKey as string

Function: One of the key constants for the properties dictionary.
65.15. **CLASS DRTRACKMBS**

**Notes:** Number containing the maximum burn speed at which data can be produced. The speed is represented in KB/s (1 KB = 1000 bytes). This key can only be used to limit the speed at which the burn runs.

### 65.15.24 DRNextWritableAddressKey as string

**Function:** One of the key constants for the properties dictionary.

**Notes:** Number containing the LBA of the next writable address in the track. This key is not present in closed tracks.

### 65.15.25 DRPreGapIsRequiredKey as string

**Function:** One of the key constants for the properties dictionary.

**Notes:**

For CD tracks only. Number indicating whether the pregap listed for the track is required. If this key is not present, the track will behave as though the key were false.

If this key’s value is set to true and the device does not support the exact pregap length, the burn will fail with a return value of kDRDevicePregapLengthNotAvailableErr.

If this key’s value is set to true and the device does not support any of the suggested pregap length, the engine will choose an alternate pregap length.

### 65.15.26 DRPreGapLengthKey as string

**Function:** One of the key constants for the properties dictionary.

**Notes:** For CD tracks only. Number containing the length of silence or data at the beginning of the track. This defaults to 2 seconds of silence. If this key is present, the track producer will be asked for the pregap data first. If the producer implements the proper selector, then it’s the responsibility of the producer to provide data for the pregap, otherwise that length of silence will be produced by Disc Recording.

### 65.15.27 DRPublisher as string

**Function:** One of the key constants for the properties dictionary.
Notes: String indicating the publisher for ISO and Joliet volumes.

65.15.28 DRSCMSCopyrightFree as string

Function: One of the key constants for the properties dictionary.
Notes: One possible value for the DRSerialCopyManagementStateKey. Indicates that the track has no copying restrictions. Copies of this track should also be copyright free.

65.15.29 DRSCMSCopyrightProtectedCopy as string

Function: One of the key constants for the properties dictionary.
Notes: One possible value for the DRSerialCopyManagementStateKey. Indicates that the track is a first-generation copy of an original that was subject to copy protection. No further digital copying should be allowed.

65.15.30 DRSCMSCopyrightProtectedOriginal as string

Function: One of the key constants for the properties dictionary.
Notes: One possible value for the DRSerialCopyManagementStateKey. Indicates that the track is an original subject to copyright protection. Digital copying of this track should be allowed, but copies should be marked with SCMS.

65.15.31 DRSerialCopyManagementStateKey as string

Function: One of the key constants for the properties dictionary.
Notes: For CD tracks only. This key points to a string value indicating the SCMS state of the track. If this key is not present, no SCMS data is written.

Not all drives are capable of writing SCMS. If this key is present in any track and the drive cannot write SCMS, the burn will fail with kDRDeviceCantWriteSCMSErr.
65.15.32 **DRSessionFormatKey** as string

**Function:** One of the key constants for the properties dictionary.
**Notes:** Number containing the session format of the track. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

65.15.33 **DRSessionNumberKey** as string

**Function:** One of the key constants for the properties dictionary.
**Notes:** Number containing the physical session number of a track.

65.15.34 **DRSubchannelDataFormKey** as string

**Function:** One of the key constants for the properties dictionary.
**Notes:**

The property whose value is the data mode of the subchannel data sent to the drive. If this key is not present, the track will default to a value of DRSubchannelDataFormNone and no subchannel information will be requested from the producer.

Subchannel data is returned from the producer in the same production method that produces normal user data. Normally a producer returns user data in chunks of DRBlockSizeKey size. When subchannel data is also produced, the producer is expected to return user data of DRBlockSizeKey in length with an additional 96 bytes of subchannel data. Depending on the data form specified in this key, the format of this 96 bytes is either in raw or pack format. When subchannel data is requested from the producer, the DRFlagSubchannelDataRequested flag is set in the flags parameter of producePreGapForTrack or produceDataForTrack and blockSize is increased by 96 bytes.

65.15.35 **DRSubchannelDataFormNone** as string

**Function:** A value for DRSubchannelDataFormKey indicating that the subchannel data will not be provided by the producer.
65.15.36 DrSubchannelDataFormPack as string

Function: One of the key constants for the properties dictionary.
Notes: A value for DrSubchannelDataFormKey indicating that the producer will be asked to provide pack format subchannel data for the track. If this form is selected, the drive will perform P and Q parity calculations on each pack and interleave the packs before writing them to disc. This corresponds to a subchannel data form of 0xC0.

65.15.37 DrSubchannelDataFormRaw as string

Function: One of the key constants for the properties dictionary.
Notes: A value for DrSubchannelDataFormKey indicating that the producer will be asked to provide raw format subchannel data for the track. If this form is selected, the producer must have performed P and Q parity calculations for each pack and done proper interleaving of the subchannel data. The drive will fill in the P-Q subchannel information and write the R-W subchannel data as is to the disc. This corresponds to a subchannel data form of & h40.

65.15.38 DrSuppressMacSpecificFiles as string

Function: One of the key constants for the properties dictionary.
Notes: Boolean indicating whether the track should suppress Mac-specific files from non-HFS filesystems.

65.15.39 DrSystemIdentifier as string

Function: One of the key constants for the properties dictionary.
Notes: String indicating the system identifier for ISO and Joliet volumes.

65.15.40 DrTrackIsEmptyKey as string

Function: One of the key constants for the properties dictionary.
Notes: Number containing a boolean value and indicates whether the track is empty.
65.15. **CLASS DRTRACKMBS**

65.15.41 **DRTrackISRCKey as string**

**Function:** One of the key constants for the properties dictionary.

**Notes:**

For CD-DA audio tracks only. This key points to an memoryblock containing exactly 12 bytes, which will be written to the disc as the International Standard Recording Code (ISRC). If this key is not present, no ISRC is written.

The use of this value should conform to the specifications of the IFPI. More details: http://www.ifpi.org/isrc/

Not all drives are capable of the write modes necessary to write the ISRC. If this key is present in any track and the drive cannot write the ISRC, the burn will fail with kDRDeviceCantWriteISRCErr.

65.15.42 **DRTrackLengthKey as string**

**Function:** One of the key constants for the properties dictionary.

**Notes:** Number representing the length of the track.

65.15.43 **DRTrackModeKey as string**

**Function:** One of the key constants for the properties dictionary.

**Notes:** Number containing the track mode of the track. See the Mt. Fuji (INF-8090i) specification for CD/DVD devices for possible values for this property.

65.15.44 **DRTrackNumberKey as string**

**Function:** One of the key constants for the properties dictionary.

**Notes:** Number containing the physical track number of a track.

65.15.45 **DRTrackPacketSizeKey as string**

**Function:** One of the key constants for the properties dictionary.
Notes: Number containing the number of blocks per packet for the disc. It will only be present if the disc contains fixed packets. This key will contain 16 for DVD media, and typically contains either 16 or 32 for CD media.

65.15.46  DRTrackPacketTypeFixed as string

Function: If this is the value of the DRTrackPacketTypeKey then the disc is written with fixed sized packets. When this value is present the DRPacketSizeKey will also be present.

65.15.47  DRTrackPacketTypeKey as string

Function: One of the key constants for the properties dictionary.
Notes: String indicating the kind of packets being written.

65.15.48  DRTrackPacketTypeVariable as string

Function: If this is the value of the DRTrackPacketTypeKey then the disc is written with sequential variable sized packets. The presence of this value indicates the lack of the DRPacketSizeKey.

65.15.49  DRTrackStartAddressKey as string

Function: One of the key constants for the properties dictionary.
Notes: Number containing the LBA of the start address for the track.

65.15.50  DRTrackTypeClosed as string

Function: If this is the value of the DRTrackTypeKey then the track has been written and is closed.
65.15. **CLASS DRTRACKMBS**

65.15.51 **DRTrackTypeIncomplete as string**

**Function:** If this is the value of the DRTrackTypeKey then the track is not invisible or reserved and is available for writing.

65.15.52 **DRTrackTypeInvisible as string**

**Function:** One of the key constants for the properties dictionary.  
**Notes:** If this is the value of the DRTrackTypeKey then the track is invisible and available to writing. If it is packet written and not closed, DRPacketTypeKey will be present, along with DRTrackPacketType and DRTrackPacketSize keys.

65.15.53 **DRTrackTypeKey as string**

**Function:** One of the key constants for the properties dictionary.  
**Notes:** String indicating the type of track. Possible values are: DRTrackTypeIncomplete, DRTrackTypeReserved or DRTrackTypeClosed.

65.15.54 **DRTrackTypeReserved as string**

**Function:** One of the key constants for the properties dictionary.  
**Notes:** If this is the value of the DRTrackTypeKey then the track is reserved for writing.

65.15.55 **DRVerificationTypeChecksum as string**

**Function:** One of the possible values of the VerificationType.  
**Notes:** The engine will verify the track data with an internally calculated checksum.

65.15.56 **DRVerificationTypeKey as string**

**Function:** One of the key constants for the properties dictionary.
Notes: String indicating the type of verification to be performed. If this is not present, the track will not be verified.

65.15.57 DRVerificationTypeNone as string

Function: One of the possible values of the VerificationType property.
Notes: No verification is desired, so verification will be skipped.

65.15.58 DRVerificationTypeProduceAgain as string

Function: One of the possible values of the VerificationType property.
Notes: The engine will simply begin another production cycle and start calling produceDataForTrack again.

65.15.59 DRVerificationTypeReceiveData as string

Function: One of the possible values of the VerificationType property.
Notes: The engine will begin reading data from the disc and calling verifyDataForTrack.

65.15.60 DRVolumeCheckedDate as string

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume-checked date for HFS+ volumes. DRDefaultDate is used if unspecified.

65.15.61 DRVolumeCreationDate as string

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume creation date. DRDefaultDate is used if unspecified.
65.15.62 DRVolumeEffectiveDate as string

Function: One of the key constants for the properties dictionary.
Notes: Date containing the date and time at which the volume is effective for ISO and Joliet volumes.

65.15.63 DRVolumeExpirationDate as string

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume expiration date for ISO and Joliet volumes.

65.15.64 DRVolumeModificationDate as string

Function: One of the key constants for the properties dictionary.
Notes: Date containing the volume modification date. DRDefaultDate is used if unspecified.

65.15.65 DRVolumeSet as string

Function: One of the key constants for the properties dictionary.
Notes: String indicating the volume set name for ISO and Joliet volumes.

65.15.66 estimateLength as UInt64

Function: Asks the track producer for a size estimate.
Notes:
This method calls the track producer to ask it to estimate the size needed for its data.

For some types of track, this call may be very expensive. For example, a DRFilesystemTrack may need to iterate folders on disk to provide an accurate estimate, which (if a large number of files and folders are involved) can cause this call to take 30 seconds or more. Since your main thread should not be allowed to block for this long, you may wish to call this function on a separate thread.

Requires Mac OS X 10.3.
65.15.67 testProductionSpeedForInterval(seconds as Double) as Double

Function: Tests the production speed for a specified interval.

Notes:
Runs a fake "production" cycle, repeatedly asking the receiver for data by calling it’s producer’s produceDataIntoBuffer for the specified time interval.

Use this function to verify that the the production code can produce data fast enough to satisfy the data throughput requirements of the burn.

Returns the calculated maximum speed the at which the receiver can produce data. This value should be used when setting up a burn to limit the burn speed.

65.15.68 testProductionSpeedForLength(length as Integer) as Double

Function: Tests the production speed for a specified byte count.

Notes:
Runs a fake "production" cycle, repeatedly asking the receiver for data by calling it’s producer’s produceDataIntoBuffer:length:atAddress:blockSize:ioFlags: until the specified length number of bytes have been produced.

Use this function to verify that the the production code can produce data fast enough to satisfy the data throughput requirements of the burn.

Returns the calculated maximum speed the at which the receiver can produce data. This value should be used when setting up a burn to limit the burn speed.

Length: length of test in seconds.

65.15.69 trackForAudioFile(path as folderitem) as DRTrackMBS

Function: Creates an audio track capable of burning RedBook CD audio from a file.

Example:

dim f as FolderItem
f=SelectFolder
if f<>nil then
    // Create tracks for the audio files
65.15. CLASS DRTRACKMBS

```vba
dim tracks(-1) as DRTrackMBS
    dim c as Integer=f.Count
    for i as Integer=1 to c
        dim g as FolderItem=f.Item(i)
        if g<>nil and g.visible then
            dim track as DRTrackMBS=DRTrackMBS.trackForAudioFile(g)
            if track<>nil then
                tracks.Append track
            end if
        end if
    next

    // display gui
    if UBound(tracks)>=0 then
        dim bsp as DRBurnSetupPanelMBS=new DRBurnSetupPanelMBS // you may want to use your own subclass to catch events
        if bsp.runSetupPanel=bsp.NSOKButton then
            dim bpp as new DRBurnProgressPanelMBS // you may want to use your own subclass to catch events
            bpp.beginProgressPanelForBurn(bsp.burnObject, tracks)
        end if
    end if
```

**Notes:**

This function creates a track object configured and primed to output RedBook audio CD data. It accepts any file readable by QuickTime and extracts the audio data (if any) from the file, translating that into the correct format for output to the disc.

Returns nil on any error. Requires Mac OS X 10.3.

See also:

- 65.15.70 trackForAudioFile(path as string) as DRTrackMBS

65.15.70 trackForAudioFile(path as string) as DRTrackMBS

**MBS MacControls Plugin, Plugin Version:** 7.4, **Console & Web:** Yes, **Mac:** Yes, **Win:** No, **Linux:** No.

**Function:** Creates an audio track capable of burning RedBook CD audio from a file.

**Notes:**

This function creates a track object configured and primed to output RedBook audio CD data. It accepts any file readable by QuickTime and extracts the audio data (if any) from the file, translating that into the correct format for output to the disc.

Returns nil on any error. Requires Mac OS X 10.3.

CHAPTER 65. DISCRECORDING

See also:

- 65.15.69 trackForAudioFile(path as folderitem) as DRTrackMBS

65.15.71 trackForRootFolder(folder as DRFolderMBS) as DRTrackMBS

Function: Creates a filesystem track capable of burning a folder.
Notes: Returns a track which contains the given folder as root.
See also:

- 65.15.72 trackForRootFolder(folder as folderitem) as DRTrackMBS

65.15.72 trackForRootFolder(folder as folderitem) as DRTrackMBS

Function: Creates a filesystem track capable of burning a folder.
Notes: Returns a track which contains the given folder as root.
See also:

- 65.15.71 trackForRootFolder(folder as DRFolderMBS) as DRTrackMBS

65.15.73 Properties

65.15.74 BlockSize as Integer

Function: The size in bytes of each track block.
Notes: (Read and Write computed property)

65.15.75 BlockType as Integer

Function: The type of each track block.
Notes: (Read and Write computed property)

65.15.76 DataForm as Integer

Function: The data form of each block in the track.
65.15. **CLASS DRTRACKMBS**

**Notes:** (Read and Write computed property)

### 65.15.77 length as DRMSFMBS

**Function:** Returns the length of the track data.

**Notes:**

The length returned does not include the length of the pregap. Only the length of the track data itself is returned.

(Read and Write computed property)

### 65.15.78 MaxBurnSpeed as Double

**Function:** A number containing the maximum burn speed at which data can be produced.

**Notes:**

The speed is represented in KB/s (1 KB = 1000 bytes). This value can only be used to limit the speed at which the burn runs.

(Read and Write computed property)

### 65.15.79 preGap as DRMSFMBS

**Function:** The length of the pre gap.

**Notes:** (Read and Write computed property)

### 65.15.80 PreGapIsRequired as boolean

**Function:** A boolean indicating whether the pregap listed for the track is required.

**Notes:**

For CD tracks only.
If this value is not set, the track will behave as though the value were false.

If this value is set to true and the device does not support the exact pregap length, the burn will fail with a return value of kDRDevicePregapLengthNotAvailableErr.
If this value is set to true and the device does not support any of the suggested pregap length, the engine will choose an alternate pregap length.

(Read and Write computed property)

### 65.15.81 PreGapLength as Double

**Function:** A number containing the length of silence or data at the beginning of the track.
**Notes:**
For CD tracks only.
This defaults to 2 seconds of silence. If this value is set, the track producer will be asked for the pregap data first.
If the producer implements the proper event, then it’s the responsibility of the producer to provide data for the pregap, otherwise that length of silence will be produced by Disc Recording.
(Read and Write computed property)

### 65.15.82 properties as dictionary

**Function:** The properties dictionary of the track
**Notes:** (Read and Write computed property)

### 65.15.83 SessionFormat as Integer

**Function:** The session format of the track.
**Notes:** (Read and Write computed property)

### 65.15.84 TrackISRC as memoryblock

**Function:** The property for the tracks ISRC data.
**Notes:**
For CD-DA audio tracks only. This key points to a memoryblock containing exactly 12 bytes, which will be written to the disc as the International Standard Recording Code (ISRC). If this key is not present, no ISRC is written.
The use of this value should conform to the specifications of the IFPI. See http://www.ifpi.org/isrc/ for more details on the ISRC standard.

Not all drives are capable of the write modes necessary to write the ISRC. If this key is present in any track and the drive cannot write the ISRC, the burn will fail with kDRDeviceCantWriteISRCErr.

(Read and Write computed property)

**65.15.85 TrackMode as Integer**

**Function:** The track mode of the track.

**Notes:** (Read and Write computed property)

**65.15.86 VerificationType as string**

**Function:** The type of verification requested.

**Notes:**

Value should be DRVerificationTypeReceiveData, DRVerificationTypeProduceAgain, DRVerificationTypeNone or DRVerificationTypeChecksum.

(Read and Write computed property)

**65.15.87 Events**

**65.15.88 cleanupTrackAfterBurn**

**Function:** Cleans up the track after the burn completes.

**Notes:**

Called after burning is complete. Typically you’ll clean up what was setup is prepareTrackForBurn. Since this method is called after the laser is turned off and the burn is finished, this method can perform time consuming tasks.

True to indicate that the burn should proceed and false to indicate a failure occurred.
65.15.89 cleanupTrackAfterVerification as boolean

**Function:** Cleans up the track after the verification completes.

**Notes:**
Once the verification phase is complete, this method is called. The class implementing the method has a chance to do anything up to and including failing the verification.

Return true to indicate success, false to indicate failure.

65.15.90 estimateLengthOfTrack as uint64

**Function:** Estimates the size of the track to be burned.

**Notes:**
This message is sent outside of a burn cycle in response to a -estimateLength message sent to the track.

Returns the number of blocks of data that the track will occupy. The estimate should be reasonably accurate, and no smaller than the actual size that will be needed.

Only on Mac OS X 10.3 and newer.

65.15.91 prepareTrack(burn as DRBurnMBS) as boolean

**Function:** Prepares the track for burning.

**Notes:**
Called before any burning starts. Do any sort of setup that needs to be performed (such as opening files). This method can calculate and update the exact track length that will be burned.

Since this method is called before the laser is turned on, this method can perform time consuming tasks.

burn: The burn object controlling the burn

Return true to indicate that the burn should proceed and false to indicate a failure occurred.
**65.15.92** prepareTrackForVerification as boolean

**Function:** Prepare the track to be verified.

**Notes:**

This method is called after the burn completes writing data to disc and before verification phase starts. Now would be a good time to prepare to produce data again by rewinding to the start of files, etc.

Return true to indicate that the verification should proceed and false to indicate a failure occurred.

---

**65.15.93** produceDataForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as uint32

**Function:** Produces the track data.

**Notes:**

This method is called many times over the course of a burn to obtain data for the track. The buffer passed in will be a multiple of blockSize (bufferLength == blockSize * N, where N >1) and should be filled as full as possible with data. address is the sector address on the disc from the start of the track that is the buffer will be written to.

Since while burning, keeping the drive’s buffer full is of utmost importance, you should not perform lengthy operations or block for data in this method. This method should return the number of bytes actually in the buffer or 0 to indicate that there was an error producing the data.

- buffer: The buffer to place data into
- bufferLength: The length of buffer
- address: The on-disc address of where data will be written
- blockSize: the size of each block on the disc. It’s best to return a multiple of this size.
- flags: Some flags. Not yet used.

Return the number of bytes produced.

---

**65.15.94** producePreGapForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as uint32

**Function:** Produces the pregap data.

**Notes:**

---
CHAPTER 65. DISCRECORDING

This method is called to obtain data for the track’s pregap. If the DRPreGapLengthKey key is present in the track properties, the track producer will be asked for the pregap data first. If the producer implements this selector, then it’s the responsibility of the producer to provide data for the pregap, otherwise that length of silence will be produced by DiscRecording.

The buffer passed in will be a multiple of blockSize (bufferLength = blockSize * N, where N > 1) and should be filled as full as possible with data. address is the sector address on the disc from the start of the track that is the buffer will be written to.

Since while burning, keeping the drive’s buffer full is of utmost importance, you should not perform lengthy operations or block for data in this method. This method should return the number of bytes actually in the buffer or 0 to indicate that there was an error producing the data.

buffer: The buffer to place data into
bufferLength: The length of buffer
address: The on-disc address of where data will be written
blockSize: the size of each block on the disc. It’s best to return a multiple of this size.
flags: Some flags (not used).

Return the number of bytes produced.

65.15.95 verifyDataForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as boolean

Function: Cleans up the track after the burn completes.
Notes:
If the class implementing this method asks for a verification type of DRVerificationTypeReceiveData, then a series of calls to this method will start. It’s up to the class to reproduce the data again and compare it to the data passed in buffer. The buffer passed in will be a multiple of blockSize (bufferLength == blockSize * N, where N > 1). address is the sector address on the disc from the start of the track that is the buffer was written to.

buffer: The data read in from the track to compare with
bufferLength: The length of buffer
address: The on-disc address of where data will was read from.
blockSize: the size of each block on the disc. It’s best to return a multiple of this size.
flags: Some flags. Not used.

Return true to indicate that the data compared successfully and false to indicate a failure occurred.
65.15.96  verifyPreGapForTrack(buffer as memoryblock, Bufferlen as uint32, address as uint64, blocksize as uint32, byref flags as uint32) as boolean

Function: Checks the integrity track pregap after a burn.
Notes:
If the class implementing this method asks for a verification type of DRVerificationTypeReceiveData, then a series of calls to this method will start. It’s up to the class to reproduce the pregap again and compare it to the data passed in buffer. The buffer passed in will be a multiple of blockSize (bufferLength == blockSize * N, where N > 1). address is the sector address on the disc from the start of the track that is the buffer was written to.

buffer: The data read in from the track to compare with
bufferLength: The length of buffer
address: The on-disc address of where data will was read from.
blockSize: the size of each block on the disc. It’s best to return a multiple of this size.
flags: Some flags. (not used)

Return true to indicate that the data compared successfully and false to indicate a failure occurred.

65.15.97  Constants

65.15.98  DRFlagSubchannelDataRequested = 2

MBS MacControls Plugin, Plugin Version: 10.4. Function: A flag passed to producePreGapForTrack or produceDataForTrack.
Notes:
Indicates that the blockSize passed in includes room for subchannel data.
Data producers should check this flag and perform subchannel data production in addition to user data production. Each block requested from the producer in this case will be formatted as [ user data (as specified in track properties) ] [ subchannel data(96 bytes) ] .

For example an audio producer callback should repeatedly produce 2352 bytes of audio data into bytes 0-2351 of the block and an additional 96 bytes of subchannel data into bytes 2352-2447.

65.15.99  kDRBlockSizeAudio = 2352

MBS MacControls Plugin, Plugin Version: 10.3. Function: One of the block size constants.
Notes: Audio data.
65.15.100  kDRBlockSizeDVDData = 2048

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the block size constants. **Notes:** DVD data.

65.15.101  kDRBlockSizeMode1Data = 2048

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the block size constants. **Notes:** Mode 1 data.

65.15.102  kDRBlockSizeMode2Data = 2332

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the block size constants. **Notes:** Mode 2 data. Photo CD and CD-i use this.

65.15.103  kDRBlockSizeMode2Form1Data = 2048

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the block size constants. **Notes:** Mode 2 Form 1 data.

65.15.104  kDRBlockSizeMode2Form2Data = 2324

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the block size constants. **Notes:** Mode 2 Form 2 data.

65.15.105  kDRBlockTypeAudio = 0

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the block type constants. **Notes:** Audio data.
65.15.106  kDRBlockTypeDVDData = 8

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the block type constants.  
**Notes:** DVD data.

---

65.15.107  kDRBlockTypeMode1Data = 8

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the block type constants.  
**Notes:** Mode 1 data.

---

65.15.108  kDRBlockTypeMode2Data = 13

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the block type constants.  
**Notes:** Mode 2 data. Photo CD and CD-i use this.

---

65.15.109  kDRBlockTypeMode2Form1Data = 10

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the block type constants.  
**Notes:** Mode 2 Form 1 data.

---

65.15.110  kDRBlockTypeMode2Form2Data = 12

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the block type constants.  
**Notes:** Mode 2 Form 2 data.

---

65.15.111  kDRDataFormAudio = 0

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the data form constants.  
**Notes:** Audio data.

---

65.15.112  kDRDataFormDVDData = 16

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the data form constants.  
**Notes:** DVD data.
65.15.113 kDRDataFormMode1Data = 16

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the data form constants. **Notes:** Mode 1 data.

65.15.114 kDRDataFormMode2Data = 32

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the data form constants. **Notes:** Mode 2 data. Photo CD and CD-i use this.

65.15.115 kDRDataFormMode2Form1Data = 32

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the data form constants. **Notes:** Mode 2 Form 1 data.

65.15.116 kDRDataFormMode2Form2Data = 32

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the data form constants. **Notes:** Mode 2 Form 2 data.

65.15.117 kDRSessionFormatAudio = 0

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the constants for the session format. **Notes:** Audio data.

65.15.118 kDRSessionFormatCDI = 16

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the constants for the session format. **Notes:** CD-I disc.

65.15.119 kDRSessionFormatCDXA = 32

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the constants for the session format. **Notes:** CD-ROM XA disc.
65.15. **CLASS DRTRACKMBS**

### 65.15.120 kDRSessionFormatDVDData = 0

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the constants for the session format. **Notes:** DVD data.

### 65.15.121 kDRSessionFormatMode1Data = 0

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the constants for the session format. **Notes:** Mode 1 data.

### 65.15.122 kDRTrackMode1Data = 4

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the track mode constants. **Notes:** Mode 1 data.

### 65.15.123 kDRTrackMode2Data = 4

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the track mode constants. **Notes:** Mode 2 data. Photo CD and CD-i use this.

### 65.15.124 kDRTrackMode2Form1Data = 4

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the track mode constants. **Notes:** Mode 2 Form 1 data.

### 65.15.125 kDRTrackMode2Form2Data = 4

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the track mode constants. **Notes:** Mode 2 Form 2 data.

### 65.15.126 kDRTrackModeAudio = 0

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the track mode constants. **Notes:** Audio data.
65.15.127  kDRTrackModeDVDData = 5

MBS MacControls Plugin, Plugin Version: 10.3. **Function:** One of the track mode constants. **Notes:** DVD data.
65.16. CLASS WINDOWSBURNMBS

65.16  class WindowsBurnMBS

65.16.1  class WindowsBurnMBS

MBS Win Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Exposes methods that determine whether a system has hardware for writing to CD, the drive letter of a CD writer device, and programmatically initiate a CD writing session.

65.16.2  Methods

65.16.3  CDBurn

MBS Win Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Instructs data to be copied from the staging area to a writable CD.

**Notes:**
The staging area has a default location of `%userprofile%\Local Settings\Application Data\Microsoft\CD Burning`. Its actual path can be retrieved through `WindowsBurnAreaFolderMBS`.

This method returns when the CD is done or the user cancelled.

See also:

- 65.16.4 CDBurn(hostwindow as window)

65.16.4  CDBurn(hostwindow as window)

MBS Win Plugin, Plugin Version: 8.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Instructs data to be copied from the staging area to a writable CD.

**Notes:**
Hostwindow: parent window of the user interface (UI)

The staging area has a default location of `%userprofile%\Local Settings\Application Data\Microsoft\CD Burning`. Its actual path can be retrieved through `WindowsBurnAreaFolderMBS`.

This method returns when the CD is done or the user cancelled.

See also:

- 65.16.3 CDBurn
CHAPTER 65. DISCRECORDING

65.16.5 HasRecordableDrive as boolean

MBS Win Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Scans the system for a CD drive with write-capability, returning true if one is found.
**Notes:** This search does not rely on the state of the Enable cd writing on this drive option found on the drive’s property sheet. Instead, the determination is based on IMAPI.

65.16.6 RecorderDriveLetter as string

MBS Win Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Gets the drive letter of a CD drive that has been marked as write-enabled.
**Notes:**
The drive whose letter designation is returned by this method is the drive that has the Enable cd writing on this drive option selected. This option is found on the drive’s property sheet. Only one drive on a system can have this option selected.

If a recordable CD drive is present but that option has been deselected, the method will return an empty string.

65.16.7 Properties

65.16.8 Available as boolean

MBS Win Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Whether the Shell extension on Windows for CD Burning is available.
**Notes:**
Available should be true on Windows XP and newer.
(Read only property)

65.16.9 Lasterror as Integer

MBS Win Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The last error code reported by one of the methods.
**Notes:** (Read and Write property)
Chapter 66

DNS

66.1 class DNSAddressRecordMBS

66.1.1 class DNSAddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The class for an address record.
**Example:**
```vba
dim r as DNSReplyMBS = DNSUtilMBS.Lookup(”www.six.heise.de”, DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)
if r<>Nil then
  for each d as DNSResourceRecordMBS in r.Answers
    if d.A<>Nil then
      MsgBox d.A.address
    end if
  next
end if
```

66.1.2 Properties

66.1.3 address as String

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The IPv4 address.
**Example:**
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.six.heise.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)
if r<>Nil then
for each d as DNSResourceRecordMBS in r.Answers
if d.A<>Nil then
    MsgBox d.A.address
end if
next
end if

Notes: (Read and Write property)
66.2. class DNSAFSDBRecordMBS

66.2.1 class DNSAFSDBRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for an AFSDB record.

66.2.2 Properties

66.2.3 hostname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The hostname. **Notes:** (Read and Write property)

66.2.4 subtype as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The sub type. **Notes:** (Read and Write property)
66.3 class DNSDomainNameRecordMBS

66.3.1 class DNSDomainNameRecordMBS

66.3.2 Properties

66.3.3 name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The queried name. Notes: (Read and Write property)
66.4. CLASS DNSHEADERMBS

66.4  class DNSHeaderMBS

66.4.1  class DNSHeaderMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a header of a DNS query.

66.4.2  Properties

66.4.3  AdditionalCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of additional items.

**Example:**

```vbs
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)
if r<>Nil then
    MsgBox "AdditionalCount: "+str(r.Header.AdditionalCount)
end if
```

**Notes:** (Read and Write property)

66.4.4  AnswerCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of answers in this query.

**Example:**

```vbs
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)
if r<>Nil then
    MsgBox "AnswerCount: "+str(r.Header.AnswerCount)
end if
```

**Notes:** (Read and Write property)
66.4.5 AuthorityCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The number of authority records.
**Example:**
```vba
dim r as DNSReplyMBS = DNSUtilMBS.Lookup(”www.apple.com”, DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)
if r<>Nil then
    MsgBox ”AuthorityCount: ”+str(r.Header.AuthorityCount)
end if
```

**Notes:** (Read and Write property)

66.4.6 Flags as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The flags.
**Example:**
```vba
dim r as DNSReplyMBS = DNSUtilMBS.Lookup(”www.apple.com”, DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)
if r<>Nil then
    MsgBox ”Flags: ”+str(r.Header.Flags)
end if
```

**Notes:** (Read and Write property)

66.4.7 QuestionCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The number of questions in this query.
**Example:**
```vba
dim r as DNSReplyMBS = DNSUtilMBS.Lookup(”www.apple.com”, DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)
if r<>Nil then
    MsgBox ”QuestionCount: ”+str(r.Header.QuestionCount)
end if
```
Notes: (Read and Write property)

66.4.8 xid as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The xid value.

**Example:**

```vba
    dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)
    if r<>Nil then
        MsgBox "xid: "+str(r.Header.xid)
    end if
```

Notes: (Read and Write property)
66.5 class DNSHINFORecordMBS

66.5.1 class DNSHINFORecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for the host information record.

66.5.2 Properties

66.5.3 CPU as String

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The CPU information string.
**Notes:** (Read and Write property)

66.5.4 OS as String

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The operation system name.
**Notes:** (Read and Write property)
66.6. **CLASS DNSIN6ADDRESSRECORDMBS**

### 66.6 class DNSIN6AddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for an IPv6 address record.

**Example:**

```vba
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.six.heise.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeAAAA)
if r<>Nil then
for each d as DNSResourceRecordMBS in r.Answers
if d.AAAA<>Nil then
    MsgBox d.AAAA.address
end if
next
end if
```

### 66.6.2 Properties

#### 66.6.3 address as String

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The IPv6 address.

**Example:**

```vba
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.six.heise.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeAAAA)
if r<>Nil then
for each d as DNSResourceRecordMBS in r.Answers
if d.AAAA<>Nil then
    MsgBox d.AAAA.address
end if
next
end if
```

**Notes:** (Read and Write property)
66.6.4 rawaddress as Memoryblock

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The raw address as a memoryblock. **Notes:** (Read and Write property)
66.7.  CLASS DNSISDNRECORDMBS

66.7  class DNSISDNRecordMBS

66.7.1  class DNSISDNRecordMBS

66.7.2  Properties

66.7.3  isdnAddress as String

Notes: (Read and Write property)

66.7.4  subAddress as String

Notes: (Read and Write property)
class DNSLocRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The location record class.

### 66.8.2 Properties

#### 66.8.3 altitude as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The altitude value. **Notes:** (Read and Write property)

#### 66.8.4 horizontalPrecision as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The horizontal precision value. **Notes:** (Read and Write property)

#### 66.8.5 latitude as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The latitude value. **Notes:** (Read and Write property)

#### 66.8.6 longitude as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The longitude value. **Notes:** (Read and Write property)

#### 66.8.7 size as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The size value.
66.8.8 version as Integer

Notes: (Read and Write property)

66.8.9 verticalPrecision as Integer

Notes: (Read and Write property)
66.9 class DNSMINFORecordMBS

66.9.1 class DNSMINFORecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The MINFO record class.

66.9.2 Properties

66.9.3 emailbx as String

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The emailbx value. **Notes:** (Read and Write property)

66.9.4 rmailbx as String

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The rmailbx value. **Notes:** (Read and Write property)
66.10. CLASS DNSSMRECORDMBS

66.10 class DNSSMRecordMBS

66.10.1 class DNSSMRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a mx (mailbox) record.

66.10.2 Properties

66.10.3 name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of this email server. **Notes:** (Read and Write property)

66.10.4 preference as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The preference value for this email server. **Notes:** (Read and Write property)
66.11 class DNSQuestionMBS

66.11.1 class DNSQuestionMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a DNS query question.

66.11.2 Properties

66.11.3 dnsclass as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The DNS class value. **Notes:** See the Class* constants in DNSUtilMBS module. (Read and Write property)

66.11.4 dnstype as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The DNS type value. **Notes:** See the Type* constants in DNSUtilMBS module. (Read and Write property)

66.11.5 name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The query in the question. **Notes:** (Read and Write property)
66.12 class DNSRawResourceRecordMBS

66.12.1 class DNSRawResourceRecordMBS

66.12.2 Properties

66.12.3 data as String

Notes:

Just the raw bytes as string.
(Read and Write property)

66.12.4 length as Integer

Notes: (Read and Write property)
66.13 class DNSReplyMBS

66.13.1 class DNSReplyMBS

66.13.2 Methods

66.13.3 Additional(index as Integer) as DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the additional record with the given index. Notes: index is zero based.

66.13.4 Additionals as DNSResourceRecordMBS()

66.13.5 Answer(index as Integer) as DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the answer with the given index. Notes: index is zero based.

66.13.6 Answers as DNSResourceRecordMBS()

66.13.7 Authority(index as Integer) as DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the authority with the given index. Notes: index is zero based.
66.13.8 Authoritys as DNSResourceRecordMBS()

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array with the authority records.

66.13.9 Question(index as Integer) as DNSQuestionMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The question with the given index. 
**Notes:** index is zero based.

66.13.10 Questions as DNSQuestionMBS()

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array with the question records.

66.13.11 Properties

66.13.12 additionalCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of additional records. 
**Example:**

```pascal
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)
if r<>Nil then
    MsgBox "additionalCount: "+str(r.additionalCount)
end if
```

**Notes:** (Read and Write property)

66.13.13 answerCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of answer records. 
**Example:**
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
    MsgBox "answerCount: "+str(r.answerCount)
end if

Notes: (Read and Write property)

66.13.14 authorityCount as Integer

Example:

dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
    MsgBox "authorityCount: "+str(r.authorityCount)
end if

Notes: (Read and Write property)

66.13.15 Header as DNSHeaderMBS

Notes: (Read and Write property)

66.13.16 questionCount as Integer

Example:

dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)
if r<>Nil then
MsgBox "questionCount: "+str(r.questionCount)
end if

Notes: (Read and Write property)

66.13.17 Server as DNSSocketAddressMBS

Notes: (Read and Write property)

66.13.18 Status as Integer

Example:
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)
if r<>Nil then
MsgBox "Status: "+str(r.Status)
end if

Notes:
See the Status* constants.
(Read and Write property)

66.13.19 Constants

66.13.20 StatusBadHandle = 1

MBS MacOSX Plugin, Plugin Version: 9.7. Function: One of the status constants for the status property.
66.13.21 StatusConnectionFailed = 6
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the status constants for the status property.

66.13.22 StatusMalformedQuery = 2
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the status constants for the status property.

66.13.23 StatusOK = 0
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the status constants for the status property.

66.13.24 StatusReceiveFailed = 5
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the status constants for the status property.

66.13.25 StatusSendFailed = 4
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the status constants for the status property.

66.13.26 StatusTimeout = 3
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the status constants for the status property.

66.13.27 StatusWrongQuestion = 9
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the status constants for the status property.

66.13.28 StatusWrongServer = 7
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the status constants for the status property.
66.13. CLASS DNSREPLYMBS

66.13.29 StatusWrongXID = 8

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the status constants for the status property.
66.14 class DNSResourceRecordMBS

66.14.1 class DNSResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a resource record. **Notes:** Data contained in unsupported or obsolete Resource Record types may be accessed via RAW as a DNSRawResourceRecordMBS.

66.14.2 Properties

66.14.3 A as DNSAddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content. **Notes:** (Read and Write property)

66.14.4 AAAA as DNSIN6AddressRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content. **Notes:** (Read and Write property)

66.14.5 AFSDB as DNSAFSDBRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content. **Notes:** (Read and Write property)

66.14.6 CNAME as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content. **Notes:** (Read and Write property)
66.14. **CLASS DNSRESOURCERECORDMBS**

66.14.7 **dnsclass as Integer**

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The DNS class value. 
**Notes:**
See the Class* constants in DNSUtilMBS module. 
(Read and Write property)

66.14.8 **dnstype as Integer**

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The DNS type value. 
**Notes:**
See the Type* constants in DNSUtilMBS module. 
(Read and Write property)

66.14.9 **HINFO as DNSHINFORecordMBS**

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content. 
**Notes:** (Read and Write property)

66.14.10 **ISDN as DNSISDNRecordMBS**

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content. 
**Notes:** (Read and Write property)

66.14.11 **LOC as DNSLocRecordMBS**

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content. 
**Notes:** (Read and Write property)
CHAPTER 66. DNS

66.14.12 MB as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content. **Notes:** (Read and Write property)

66.14.13 MD as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content. **Notes:** (Read and Write property)

66.14.14 MF as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content. **Notes:** (Read and Write property)

66.14.15 MG as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content. **Notes:** (Read and Write property)

66.14.16 MINFO as DNSMINFORecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content. **Notes:** (Read and Write property)

66.14.17 MR as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content. **Notes:** (Read and Write property)
66.14. CLASS DNSRESOURCERECORDMBS

66.14.18  MX as DNSMXRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content.  
**Notes:** (Read and Write property)

66.14.19  name as String

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name.  
**Notes:** (Read and Write property)

66.14.20  NS as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content.  
**Notes:** (Read and Write property)

66.14.21  PTR as DNSDomainNameRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content.  
**Notes:** (Read and Write property)

66.14.22  RAW as DNSRawResourceRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content.  
**Notes:**  
Data contained in unsupported or obsolete Resource Record types may be accessed via RAW as a DNSRawResourcerecordMBS.  
(Read and Write property)

66.14.23  Record as Variant

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**  
The record content as a variant.
Notes:
Each resource record contains only one subrecord. So this record property has a reference to it and the corresponding property.
(Read and Write property)

66.14.24 RP as DNSRPRecordMBS

Notes: (Read and Write property)

66.14.25 RT as DNSRTRecordMBS

Notes: (Read and Write property)

66.14.26 SOA as DNSSOARecordMBS

Notes: (Read and Write property)

66.14.27 SRV as DNSSRVRecordMBS

Notes: (Read and Write property)

66.14.28 ttl as Integer

Notes: (Read and Write property)
66.14. CLASS DNSRESOURCEREORDMBS

66.14.29 TXT as DNSTXTRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content.
**Notes:** (Read and Write property)

66.14.30 WKS as DNSWKSEcordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content.
**Notes:** (Read and Write property)

66.14.31 X25 as DNSX25RecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record content.
**Notes:** (Read and Write property)
66.15 class DNSRPRecordMBS

66.15.1 class DNSRPRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a RP record.

66.15.2 Properties

66.15.3 mailbox as String

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The mailbox value.  
**Notes:** (Read and Write property)

66.15.4 txtdname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The txtdname value.  
**Notes:** (Read and Write property)
66.16. CLASS DNSRTRECORDMBS

66.16. class DNSRTRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a RT record.

### 66.16.2 Properties

#### 66.16.3 intermediate as String

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The intermediate value.  
**Notes:** (Read and Write property)

#### 66.16.4 preference as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The preference value.  
**Notes:** (Read and Write property)
66.17 class DNSServiceQueryRecordMBS

66.17.1 class DNSServiceQueryRecordMBS

MBS Network Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The class to query for an arbitrary DNS record. **Notes:** Subclass of the DNSServiceBaseMBS class.

66.17.2 Methods

66.17.3 QueryRecord(InterfaceIndex as Integer, FullName as string, rrType as Integer, rrClass as Integer, Flags as Integer = 0) as boolean

MBS Network Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Query for an arbitrary DNS record. **Notes:**

- Flags: kFlagsForceMulticast or kFlagsLongLivedQuery. Pass kFlagsLongLivedQuery to create a "long-lived" unicast query to a unicast DNS server that implements the protocol. This flag has no effect on link-local multicast queries.
- interfaceIndex: If non-zero, specifies the interface on which to issue the query (the index for a given interface is determined via the if_nametoindex() family of calls.) Passing 0 causes the name to be queried for on all interfaces. See "Constants for specifying an interface index" for more details.
- fullname: The full domain name of the resource record to be queried for.
- rrtype: The numerical type of the resource record to be queried for (e.g. kType_PTR, kType_SRV, etc)
- rrclass: The class of the resource record (usually kClass_IN).

Lastly, Lasterror is set: Returns kErr_NoError on success (any subsequent, asynchronous errors are delivered to the event), otherwise returns an error code indicating the error that occurred. Returns false in case of error or true in case of success.

You can use DNSServiceBaseMBS.ConstructFullName to build the full name.

66.17.4 Events

66.17.5 ServiceQueryRecord(flags as Integer, InterfaceIndex as Integer, ErrorCode as Integer, Fullname as string, rrType as Integer, rrClass as Integer, Length as Integer, Data as string, ttl as Integer)

MBS Network Plugin, Plugin Version: 16.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The event called when data is received for DNS query.
Notes:

flags: Possible values are kFlagsMoreComing and kFlagsAdd. The Add flag is NOT set for PTR records with a ttl of 0, i.e. "Remove" events.

InterfaceIndex: The interface on which the query was resolved.

errorCode: Will be kErr_NoError on success, otherwise will indicate the failure that occurred. Other parameters are undefined if errorCode is nonzero.

fullname: The resource record’s full domain name.

rrtype: The resource record’s type (e.g. kType_PTR, kType_SRV, etc)

rrclass: The class of the resource record (usually kClass_IN).

Length: The length, in bytes, of the resource record rdata.

Data: The raw record data of the resource record.

ttl: If the client wishes to cache the result for performance reasons, the TTL indicates how long the client may legitimately hold onto this result, in seconds. After the TTL expires, the client should consider the result no longer valid, and if it requires this data again, it should be re-fetched with a new query. Of course, this only applies to clients that cancel the asynchronous operation when they get a result. Clients that leave the asynchronous operation running can safely assume that the data remains valid until they get another callback telling them otherwise.
66.18 class DNSSOARecordMBS

66.18.1 class DNSSOARecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The SOA record class.  
**Notes:** The Start of Authority (SOA) record contains information about the zone.

66.18.2 Properties

66.18.3 expire as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The expire value.  
**Notes:** (Read and Write property)

66.18.4 minimum as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minimum value.  
**Notes:** (Read and Write property)

66.18.5 mname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The mname value.  
**Notes:** (Read and Write property)

66.18.6 refresh as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The refresh delay in seconds before the slave contacts the master.  
**Notes:** (Read and Write property)
66.18.7  retry as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  Function: The retry delay in seconds before the slave contacts the master again.  Notes: (Read and Write property)

66.18.8  rname as String

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  Function: The name value.  Notes: (Read and Write property)

66.18.9  serial as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  Function: The serial value.  Notes: (Read and Write property)
66.19   class DNSSocketAddressMBS

66.19.1   class DNSSocketAddressMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The DNS socket address class.

66.19.2   Properties

66.19.3   address as String

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The address value.
**Example:**
```
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)
if r<>Nil then
    MsgBox "Server.address: " + r.Server.address
end if
```

**Notes:**
This is IPv4 or IPv6.
(Read and Write property)

66.19.4   data as Memoryblock

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The raw data of this socket address.
**Notes:** (Read and Write property)

66.19.5   Family as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The family value.
**Example:**
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
    MsgBox "Server.Family: " + str(r.Server.Family)
end if

Notes: (Read and Write property)

66.19.6 Port as Integer

Example:

dim r as DNSReplyMBS = DNSUtilMBS.Lookup("www.apple.com", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeA)

if r<>Nil then
    MsgBox "Server.Port: " + str(r.Server.Port)
end if

Notes: (Read and Write property)
66.20 class DNSSRVRecordMBS

66.20.1 class DNSSRVRecordMBS

66.20.2 Properties

66.20.3 port as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The port value. Notes: (Read and Write property)

66.20.4 priority as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The priority value. Notes: (Read and Write property)

66.20.5 target as String

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The target value. Notes: (Read and Write property)

66.20.6 weight as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The weight value. Notes: (Read and Write property)
66.21 class DNSTXTRecordMBS

66.21.1 class DNSTXTRecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a text record.

66.21.2 Methods

66.21.3 Strings(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The strings by index.  
**Notes:** Index is zero based.

66.21.4 Properties

66.21.5 Count as Integer

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of strings in this text record. 
**Notes:** (Read only property)
66.22 module DNSUtilMBS

66.22.1 module DNSUtilMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The module for DNS queries.

66.22.2 Methods

66.22.3 ClassNumber(dnsClass as string, byref n as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the DNS class constants. **Example:**

```vbscript
dim n as Integer
if DNSUtilMBS.ClassNumber("CH", n) then
    MsgBox str(n) // shows 3
end if
```

**Notes:** Returns true on success.

66.22.4 ClassString(dnsclass as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the string name of this class value. **Example:**

```vbscript
MsgBox DNSUtilMBS.ClassString(DNSUtilMBS.ClassCHAOS) // shows "CH"
```

66.22.5 Lookup(name as string, dnsclass as Integer, dnsType as Integer) as DNSReplyMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Performs a DNS query. **Example:**

```vbscript
```
66.22. MODULE DNSUTILMBS

// lookup MX record for email sending
dim r as DNSReplyMBS = DNSUtilMBS.Lookup("macsw.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeMX)
if r <> nil then
    MsgBox "macsw.de -" + r.Answer(0).MX.name
end if

Notes: Use the Class* constants for the dnsclass parameter. And use the Type* constants for the dnsType parameter.

66.22.6 LookupMT(name as string, dnsclass as Integer, dnsType as Integer) as DNSReplyMBS

Notes:
Use the Class* constants for the dnsclass parameter. And use the Type* constants for the dnsType parameter.

The work is performed on an extra thread, so this function can yield time to other Xojo (Real Studio) threads. And it calles the Working event regularly. For best user experience run this command on a Xojo (Real Studio) thread, so your GUI stays responsive.

66.22.7 TypeNumber(dnsType as string, byref n as Integer) as boolean

Example:

dim n as Integer

if DNSUtilMBS.TypeNumber("AAAA", n) then
    MsgBox str(n) // shows 28
end if

Notes: Returns true on success.
66.22.8 TypeString(dnstype as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the string name of this type value.
**Example:**
MsgBox DNSUtilMBS.TypeString(DNSUtilMBS.TypeMD) // shows "MD"

66.22.9 Constants

66.22.10 ClassALL = & hff

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS class constants.

66.22.11 ClassANY = & hff

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS class constants.

66.22.12 ClassCHAOS = 3

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS class constants.

66.22.13 ClassCSNET = 2

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS class constants.

66.22.14 ClassHESIOD = 4

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS class constants.

66.22.15 ClassINTERNET = 1

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS class constants.
66.22. MODULE DNSUTILMBS

66.22.16 ClassNONE = & hfe

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS class constants.

66.22.17 TypeA = 1

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.18 TypeAAAA = & h1c

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.19 TypeAFSDB = & h12

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.20 TypeALL = & hff

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.21 TypeANY = & hff

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.22 TypeATMA = & h22

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.23 TypeAXFR = & hfc

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.
66.22.24 TypeCNAME = 5

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.25 TypeGPOS = & h1b

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.26 TypeHINFO = & h0d

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.27 TypeISDN = & h14

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.28 TypeIXFR = & hfb

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.29 TypeKEY = & h19

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.30 TypeLOC = & h1d

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.31 TypeMAILA = & hfe

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.
66.22.32 TypeMAILB = & hfd
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.33 TypeMB = 7
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.34 TypeMD = 3
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.35 TypeMF = 4
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.36 TypeMG = 8
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.37 TypeMINFO = & h0e
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.38 TypeMR = 9
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.39 TypeMX = & h0f
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

**Example:**
// lookup MX record for email sending
Dim r As DNSReplyMBS = DNSUtilMBS.Lookup("macsw.de", DNSUtilMBS.ClassINTERNET, DNSUtilMBS.TypeMX)
If r <> Nothing Then
 MsgBox "macsw.de ->" + r.Answer(0).MX.name
End If

66.22.40 TypeNS = 2
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.41 TypeNSAP = & h16
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.42 TypeNSAPPTR = & h17
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.43 TypeNULL = & h0a
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.44 TypeNXT = & h1e
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.45 TypePTR = & h0c
MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.
66.22.46  TypePX = \& h1a

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.47  TypeRP = \& h11

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.48  TypeRT = \& h15

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.49  TypeSIG = \& h18

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.50  TypeSOA = 6

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.51  TypeSRV = \& h21

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.52  TypeTEXT = \& h10

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.

66.22.53  TypeTKEY = \& hf9

MBS MacOSX Plugin, Plugin Version: 9.7. **Function:** One of the DNS type constants.
66.22.54 TypeTSIG = & hfa

MBS MacOSX Plugin, Plugin Version: 9.7. Function: One of the DNS type constants.

66.22.55 TypeWKS = & h0b

MBS MacOSX Plugin, Plugin Version: 9.7. Function: One of the DNS type constants.

66.22.56 TypeX25 = & h13

MBS MacOSX Plugin, Plugin Version: 9.7. Function: One of the DNS type constants.
66.23. CLASS DNSWKSRECORDMBS

66.23 class DNSWKSRecordMBS

66.23.1 class DNSWKSRecordMBS

66.23.2 Methods

66.23.3 Map(index as Integer) as Integer

Notes: Index is zero based.

66.23.4 Properties

66.23.5 address as String

Notes: (Read and Write property)

66.23.6 maplength as Integer

Notes: (Read and Write property)

66.23.7 protocol as Integer

Notes: (Read and Write property)
66.24 class DNSX25RecordMBS

66.24.1 class DNSX25RecordMBS

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a X25 record.

66.24.2 Properties

66.24.3 psdnAddress as String

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The psdn address. **Notes:** (Read and Write property)
Chapter 67

Dongle

67.1  Globals

67.1.1  CallHASPMBS(service as Integer, seed as Integer, lptnum as Integer, pass1 as Integer, pass2 as Integer, byref p1 as Integer, byref p2 as Integer, byref p3 as Integer, byref p4 as Integer)

MBS Dongle Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls the HASP API.
**Notes:**
You may need drivers from Aladdin Knowledge Systems for your HASP keys, but the plugin should run and compile even without.

Linux added for plugin v7.0
Please check the HASP documentation from Aladdin for the list of error codes.
If you need a plugin for HASP SRM, please contact us.

With plugin version 14.2 we see problems on Windows with Xojo, but works with Real Studio.

Please use HASPHLDMBS for newer projects.

11301
67.1.2 CallHASPMemMBS(service as Integer, seed as Integer, lptnum as Integer, pass1 as Integer, pass2 as Integer, byref p1 as Integer, byref p2 as Integer, byref p3 as Integer, byref p4 as Integer, mem as memoryblock)

MBS Dongle Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls the HASP API.

**Notes:**
This version of the Call will pass in the p3 and p4 parameters the address of the memoryblock to the function.

Linux added for plugin v7.0

Please check the HASP documentation from Aladdin for the list of error codes.

67.1.3 GetHASPErrorStrMBS(error as Integer) as string

MBS Dongle Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a human readable error string for the given error code.

**Notes:**
May return "" on low memory.

Please check the HASP documentation from Aladdin for the list of error codes.

67.1.4 GetNetHaspWarningStrMBS(error as Integer) as string

MBS Dongle Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a human readable string for the given error code.

**Notes:**
May return nil on low memory.

Please check the HASP documentation from Aladdin for the list of error codes.
67.2. CLASS HASPHLDMBS

67.2.1 class HASPHLDMBS

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for accessing HASP HL or Sentinel dongles.

**Example:**

// Load your vendor library or the demo one
dim LibFile as FolderItem = GetFolderItem("hasp_darwin_12345.dylib")

if HASPHLDMBS.LoadLibrary(LibFile) then
    'MsgBox "OK"
else
    MsgBox "Failed to load library."
    Return
end if

// init dongle
' This method runs the actual tests on the given program number
dim blob as MemoryBlock // container for data for en-/decryption

dim FeatureID = HASPHLDMBS.HASP_DEFAULT_FID
dim VendorCode = "123456" // your vendor code here, some big Base64 encoded block

dim hasp as new HASPHLDMBS(FeatureID, VendorCode)
Select case hasp.Lasterror
    case HASPHLDMBS.HASP_STATUS_OK
        // ok
    case HASPHLDMBS.HASP_HASP_NOT_FOUND
        MsgBox "Dongle not found."
        return
    case HASPHLDMBS.HASP_INV_VCODE
        MsgBox "Invalid vendor code"
        Return
    else
        MsgBox "Error: " + str(hasp.Lasterror)
        return
end Select

// read a file ID
dim fileid as Integer = 65524
dim size as Integer = hasp.GetSize( fileid )

if hasp.Lasterror = HASPHLDMBS.HASP_STATUS_OK then // ONLY IF FILE IS SUPPORTED

// read to memoryblock
blob = hasp.ReadMemory( fileid, 0, size )
if hasp.Lasterror = HASPHLMBS.HASP_STATUS_OK then
    // show in MsgBox
    s = Blob.stringvalue(0,blob.size)
    MsgBox DefineEncoding(s,Encodings.UTF8)
end if
end if

Notes:

Please use HASP Master Wizard Suite to generate your own runtime libraries. Than you get a couple of DLLs which you can load with this class. For the demo keys, you can use the demo DLLs.
The demo DLL for example is named "hasp_windows_x64_demo.dll" or including your vendor code "hasp_windows_x64_12345.dll" (64bit). 32bit Windows DLL is named hasp_windows_12345.dll, hasp_windows_demo.dll or haspvlib_12345.dll.

Now when you have the platform dependent libraries, you can use LoadLibrary() function in this class to load the right one.

HASPHLMBS uses a linked in library. This is okay for older HASP HL versions. But newer versions require you to create your own signed libraries. For them use the HASPHLDMBS class.

67.2.2 Methods

67.2.3 Available as boolean

Notes: Returns true if library was loaded successfully or we use internal library.

67.2.4 Close

Notes:
Called automatically for you by the destructor.

Use this function to end a connection to an API session object. Once logged out from a session, all memory allocated for the session is released.

Lasterror is set.
67.2.5 Constructor(FeatureID as Integer, scope as string, VendorCode as string)

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Logs into a Feature to establish a session, according to predefined search parameters. **Notes:**

This function is used to specify conditions that describe where login information is to searched for.

The requisite Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

You can open up to 512 simultaneous login sessions.

This function does not work with legacy HASP Features.

FeatureID: Unique identifier for a specific Feature stored in a Sentinel HASP protection key
Scope: Definition of the search parameters for this Feature ID. See the additional HASP API Reference documentation for more information about Scope XML Tags.
VendorCode: the vendor code

Lasterror is set. This calls SDK function hasp_login_scope.
See also:

- 67.2.6 Constructor(FeatureID as Integer, VendorCode as string)

67.2.6 Constructor(FeatureID as Integer, VendorCode as string)

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Logs into a Feature and thereby establishes a session context.

**Notes:**

This function establishes a context to a Sentinel HASP protection key containing a license for the requested Feature ID.

The requisite Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

You can open up to 512 simultaneous login sessions.

Legacy HASP Remarks
For local prognum Features, concurrency is not handled and each login performs a decrement if it is a count-
CHAPTER 67. DONGLE

ing license.

Network "prognum" features continue to use the old HASP LM login logic, with its inherent limitations.

There is only support for concurrent usage of one server (global server address).

With "Program Number" features (see HASP_FEATURETYPE_MASK), 8 bits are reserved for legacy options (see HASP_PROGNUM_OPT_MASK, currently 5 bits are used):

- only local
- only remote
- login is counted per process ID
- disable terminal server check
- enable access to old (HASP3/HASP4) keys

FeatureID: Unique identifier for a specific Feature stored in a Sentinel HASP protection key
VendorCode: the Vendor Code

Lasterror is set. This calls SDK function hasp_login.

See also:

- 67.2.5 Constructor(FeatureID as Integer, scope as string, VendorCode as string)

67.2.7 DateTimeToHaspTime(day as Integer, month as Integer, year as Integer, hour as Integer, minute as Integer, second as Integer) as memoryblock

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts a date and time value to hasptime (the number of elapsed seconds since January 1 1970).

**Notes:**
Time values are in UTC.
Memoryblock has 8 bytes.

67.2.8 DecryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Decrypts a buffer.

**Notes:**
67.2. CLASS HASPHLDMBS

Decrypts data using the decryption engine in the Sentinel HASP protection key. The specific session handle determines which Sentinel HASP protection key and which Feature ID decrypts the data buffer. The decryption key remains in the Sentinel HASP protection key. If the decryption fails, the buffer is not modified. To encrypt the data buffer, use the Encrypt function.

Data: The data to decrypt.
DataOffset: Start address in Bytes in the memoryblock.
Size: Data size in Bytes in memoryblock. (16 bytes minimum)

Lasterror is set. This calls SDK function hasp_decrypt.

67.2.9 DecryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Decrypts a buffer.
**Notes:**
Decrypts data using the decryption engine in the Sentinel HASP protection key. The specific session handle determines which Sentinel HASP protection key and which Feature ID decrypts the data buffer. The decryption key remains in the Sentinel HASP protection key. If the decryption fails, the buffer is not modified. To encrypt the data buffer, use the Encrypt function.

Data: The data to decrypt.
Returns the decrypted data.
Lasterror is set. This calls SDK function hasp_decrypt.

67.2.10 Detach(detachAction as string, scope as string, VendorCode as string, recipient as string, byref info as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Detaches or cancels an attached license, according to customizable parameters
**Notes:**
You do not need to be logged in to a Sentinel HASP Feature in order to use this function.
This function is used to detach a license for a Product (i.e. all Sentinel HASP Features and Memory files which belong to this Product) from a HASP SL Protection key. The function returns a H2R file which must then be applied on the recipient machine using hasp_update() or the ACC.
This function only works with HASP SL Protection Keys; HASP HL Protection Keys are ignored.
This function can also be used on the recipient machine to cancel an attached license. In this case, the recipient parameter is ignored and should be set to NULL. For cancelling, the function returns a R2H file which must be applied on the host machine using hasp_update() or the ACC. If the detached Product is already expired, no R2H file will be returned.
The required Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor
CHAPTER 67. DONGLE

Code, the function call cannot succeed.

67.2.11 EncryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Encrypts a buffer.

**Notes:**

Encrypts data using the encryption engine in the Sentinel HASP protection key.
The specific session handle determines which Sentinel HASP protection key and which Feature ID encrypts the data buffer. The encryption key remains in the Sentinel HASP protection key. If the encryption fails,
the buffer is not modified. To decrypt the data buffer, use the Decrypt function.

Data: The data to encrypt.
DataOffset: Start address in Bytes in the memoryblock.
Size: Data size in Bytes in memoryblock. (16 bytes minimum)

Lasterror is set. This calls SDK function hasp_encrypt.

67.2.12 EncryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Encrypts a buffer.

**Notes:**
Encrypted data using the encryption engine in the Sentinel HASP protection key. The specific session handle determines which Sentinel HASP protection key and which Feature ID encrypts the data buffer. The encryption key remains in the Sentinel HASP protection key. If the encryption fails, the buffer is not modified. To decrypt the data buffer, use the Decrypt function.

Data: The data to encrypt. (16 bytes minimum)

Returns encrypted string.

Lasterror is set. This calls SDK function hasp_encrypt.

67.2.13 GetInfo(scope as string, format as string, VendorCode as string, byref info as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves information about system components, according to customizable search parameters, and presents it according to customizable formats.

**Notes:**
You do not need to be logged in to a Sentinel HASP Feature in order to use this function.

This function is used to specify conditions about where to search for information. In addition, it enables you to specify conditions about the format in which the retrieved information is presented. If retrieved information is appropriately formatted, it can be used as a template in the Constructor.

The requisite Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor
Code, the function call cannot succeed.

This function cannot be used to retrieve legacy HASP Features.

scope: Definition of the data that is to be searched, in XML format. For more information, see the accompanying Sentinel HASP Run-time API help documentation.

format: Definition of the format in which the data is to be displayed, in XML format. For more information, see the accompanying Sentinel HASP Run-time API help documentation.

VendorCode: the Vendor Code

info: The information that is retrieved, in XML format

### 67.2.14 GetRTC as memoryblock

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the current time.

**Notes:**

Only HASP HL keys with a Real-time clock (rtc) and HASP SL keys can provide the current time. Primarily used to obtain reliable timestamps that are independent from the system clock. Time values are returned as the number of seconds that have elapsed since Jan-01-1970 0:00:00 UTC. This request is only supported on locally accessed keys. Trying to get the time from a remotely accessed key will return HASP_NO_TIME. Returns time as a 8 byte memoryblock. Lasterror is set.

### 67.2.15 GetSessionInfo(format as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves information regarding a session context.
Notes:

format: Definition for the type of output data structure, in XML format.
There are three format options:

- **HASP_KEYINFO** For retrieving information on the Sentinel HASP protection key
- **HASP_SESSIONINFO** For retrieving information on the login session
- **HASP_UPDATEINFO** For retrieving information on a license update usually contained in a C2V file.
  The retrieved information includes the current state of the key, including update counters, license availability and memory images

Returns answer. Lasterror is set.

HASP_KEYINFO is "<haspformat format=""keyinfo""/>
HASP_SESSIONINFO is "<haspformat format=""sessioninfo""/>
HASP_UPDATEINFO is "<haspformat format=""updateinfo""/>

67.2.16 GetSize(FileID as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the byte size of a memory file from a HASP protection key.

**Notes:**

This function is used to determine the file size of a HASP memory file.
FileID: Identifier for the file that is to be queried.
Returns file size. Lasterror is set.

Possible File ID constants: HASP_FILEID_LICENSE, HASP_FILEID_MAIN, HASP_FILEID_RO or HASP_FILEID_RW.

67.2.17 GetVersion(byref MajorVersion as Integer, byref MinorVersion as Integer, byref BuildServer as Integer, byref BuildNumber as Integer, VendorCode as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves version and build number of the HASP library.

**Notes:** Returns error code.
67.2.18  **HaspTimeToDateTime(time as memoryblock, byref day as Integer, byref month as Integer, byref year as Integer, byref hour as Integer, byref minute as Integer, byref second as Integer)**

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts a time value (elapsed seconds since January 1 1970) into a date and time

**Notes:**
- Memoryblock has 8 bytes.
- Time values are in UTC.

67.2.19  **LegacyDecryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)**

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Legacy HASP4 compatible decryption function.

**Notes:**
- This object must have been created by calling Constructor() with a "prognum" Feature ID.
- Data: The memoryblock where bytes are decrypted.
- DataOffset is the start position in Bytes in the memoryblock and size the length of the data block to decrypt.
- Size: Size of the data in the memoryblock to decrypt.
- Lasterror is set.

67.2.20  **LegacyDecryptString(Data as string) as string**

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Legacy HASP4 compatible decryption function.

**Notes:**
- This object must have been created by calling Constructor() with a "prognum" Feature ID.
- Lasterror is set.
67.2.21 LegacyEncryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Legacy HASP4 compatible encryption function.

**Notes:**
This object must have been created by calling Constructor() with a "prognum" Feature ID.

Data: The memoryblock where bytes are encrypted.
DataOffset is the start position in Bytes in the memoryblock and size the length of the data block to encrypt.
Size: Size of the data in the memoryblock to encrypt.

LastError is set.

67.2.22 LegacyEncryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Legacy HASP4 compatible encryption function.

**Notes:**
This object must have been created by calling Constructor() with a "prognum" Feature ID.

LastError is set.

67.2.23 LegacySetIdleTime(idletime as Integer)

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set the LM idle time.

**Notes:**
This object must have been created by calling Constructor() with a "prognum" Feature ID.

time: The idle time in minutes.

LastError is set.
67.2.24 LegacySetRTC(time as memoryblock)

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes to HASP4-compatible real-time clock.

**Notes:**
This object must have been created by calling Constructor() with a "prognum" Feature ID.

This request is only supported on locally accessed keys. Attempting to set the time on a remotely accessed key will return HASP_NO_TIME.

time: The new time value (8 byte Memoryblock)

LastError is set.

67.2.25 LoadLibrary(file as folderitem) as boolean

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the HASPHL shared library.

**Notes:**
Returns true on success and false on failure.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library or a Mac OS X framework from the given path.

See also:
- 67.2.26 LoadLibrary(path as string) as boolean

67.2.26 LoadLibrary(path as string) as boolean

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the HASPHL shared library.

**Notes:**
Returns true on success and false on failure.

Path can be an absolute, a relative or just a file name.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library or a Mac OS X framework from the given path.

See also:
- 67.2.25 LoadLibrary(file as folderitem) as boolean
67.2.27 ReadMemory(FileID as Integer, Offset as Integer, Size as Integer) as Memoryblock

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the memory of a Sentinel HASP protection key.  
**Notes:**  
Valid File IDs are HASP\_FILEID\_RW and HASP\_FILEID\_RO.

Legacy HASP Remarks  
Valid File IDs are HASP\_FILEID\_LICENSE and HASP\_FILEID\_MAIN.

FileID: Identifier for the file that is to be read  
Offset: Byte offset in the file  
Size: Number of bytes to read.

LastError is set.

67.2.28 ReadString(FileID as Integer, Offset as Integer, Size as Integer) as string

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the memory of a Sentinel HASP protection key.  
**Notes:**  
Valid File IDs are HASP\_FILEID\_RW and HASP\_FILEID\_RO.

Legacy HASP Remarks  
Valid File IDs are HASP\_FILEID\_LICENSE and HASP\_FILEID\_MAIN.

FileID: Identifier for the file that is to be read  
Offset: Byte offset in the file  
Size: Number of bytes to read.

LastError is set.
67.2.29 Transfer(action as string, scope as string, VendorCode as string, recipient as string, byref info as string) as Integer

MBS Dongle Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a transfer operation.

**Notes:**

Sentinel Licensing API Usage Notes
You do not need to be logged in to a Sentinel Feature in order to use this function.

This function is used to perform the following task as per its "action" parameter.

for "detach" action: detach a license for a Product (i.e. all Sentinel Features and Memory files which belong to this Product) from a Sentinel SL/SL-AdminMode/SL-UserMode key. The function returns a buffer which should be saved as H2R file.

for "cancel" action: This action runs on the recipient machine to cancel an attached license. In this case, the recipient parameter is ignored and should be set to "". For cancelling, the function returns a buffer which must be applied on the host machine using Update() or ACC If the detached Product is already expired, no buffer will be returned.

for "rehost" action: create a transferable license for given container (i.e. all Sentinel Features and Memory files which belong to this container) from SL-AdminMode/SL-UserMode Protection key. The function returns buffer on success which must be saved as V2C file. Update() or ACC is used to apply this on destination machine.

This function only works with Sentinel SL/SL-AdminMode/SL-UserMode Protection Keys; Sentinel HL Protection Keys are ignored.

The required Vendor Codes are stored in a VendorCodes folder in your system. Without the correct Vendor Code, the function call cannot succeed.

**action:** Parameters for the operation, in XML format. For more information, see the accompanying Sentinel Licensing API help documentation.
**scope:** Search parameters for the container-id that is to be re-hosted. For more information, see the accompanying Sentinel Licensing API help documentation.
**VendorCode:** The Vendor Code
**recipient:** Definition in XML format of the recipient computer, on which the detached Product will be installed.

This information can be retrieved using either GetInfo or GetSessionInfo together with the format specifier...
info: String for the information that is retrieved, in XML format. This information is a V2C, which can then be installed on the destination computer via Update.

67.2.30 Update(data as string) as string

Notes:
This function writes update information. Note that the Sentinel HASP protection key must be locally connected.

The update code contains all necessary data to perform the update on a deployed Sentinel HASP protection key including:

- The Sentinel HASP protection key on which the updated information is to be written
- The necessary Vendor Code that is required to access the Sentinel HASP key
- The actual update information

Depending on the update data, the function returns an acknowledgement code that is signed/encrypted by the key. The code is evidence that an update has been applied to a license.

data: The update data.
Returns the acknowledge data.

Lasterror is set.

67.2.31 WriteMemory(FileID as Integer, FileOffset as Integer, Data as Memo-ryblock, DataOffset as Integer, Size as Integer)

Notes:
Valid File ID is HASP_FILEID_RW.
Depending on the provided session handle (either logged into the default Feature or any other Feature), write access to the FAS memory (HASP_FILEID_LICENSE) is not permitted.

FileID: Identifier for the file that is to be written
FileOffset: Byte offset in the file
Data: the data
DataOffset: Start address in Bytes in the memoryblock.
Size: Data size in Bytes in memoryblock.

LastError is set.

### 67.2.32 WriteString(FileID as Integer, FileOffset as Integer, Data as String)

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes to the memory of a Sentinel HASP protection key.

**Notes:**
- Valid File ID is HASP_FILEID_RW.

Depending on the provided session handle (either logged into the default Feature or any other Feature), write access to the FAS memory (HASP_FILEID_LICENSE) is not permitted.

FileID: Identifier for the file that is to be written
FileOffset: Byte offset in the file
Data: the data

LastError is set.

### 67.2.33 Properties

### 67.2.34 Handle as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Internal handle for the session.

**Notes:** (Read and Write property)
67.2.  CLASS HASPHLDMBS

67.2.35  Lasterror as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error value. **Notes:** (Read and Write property)

67.2.36  Constants

67.2.37  HASP_ACCESS_DENIED = 5

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes. **Notes:** Access to Feature, HASP protection key or functionality denied.

67.2.38  HASP_ALREADY_LOGGED_IN = 502

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes. **Notes:** C++ API: Logging in twice to the same object.

67.2.39  HASP_ALREADY_LOGGED_OUT = 503

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes. **Notes:** C++ API: Logging out twice of the same object

67.2.40  HASP_BROKEN_SESSION = 39

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes. **Notes:** Session been interrupted.

67.2.41  HASP_CANNOT_READ_FILE = 72

MBS Dongle Plugin, Plugin Version: 15.4. **Function:** One of the HASP error codes. **Notes:** File not found or access denied.
67.2.42  **HASP_CLONE_DETECTED = 64**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  **Notes:** Cloned HASP SL secure storage detected.

67.2.43  **HASP_CONTAINER_NOT_FOUND = 7**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  **Notes:** Deprecated - use HASP_HASP_NOT_FOUND.

67.2.44  **HASP_DEFAULT_FID = 0**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** The HASP default Feature ID.  **Notes:** Available in every HASP key.

67.2.45  **HASP_DETACHED_LICENSE_FOUND = 76**

MBS Dongle Plugin, Plugin Version: 15.4. **Function:** One of the HASP error codes.  **Notes:**
Format SL-AdminMode or migrate SL-Legacy to SL-AdminMode not allowed as container has detached license.

67.2.46  **HASP_DETACH_DISABLE = 74**

MBS Dongle Plugin, Plugin Version: 15.4. **Function:** One of the HASP error codes.  **Notes:**
Detach of license not allowed as product.
contains VM disabled feature and host machine is a virtual machine.

67.2.47  **HASP_DEVICE_ERR = 43**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  **Notes:** Input/Output error occurred in secure storage area of HASP SL key OR a USB error occurred when communicating with a HASP HL key.
67.2. CLASS HASPHLDMBS

67.2.48  HASP_DUPLICATE_HOSTNAME = 79

MBS Dongle Plugin, Plugin Version: 15.4. **Function:** One of the HASP error codes.  
**Notes:** Duplicate Hostname found while key contains Hostname Fingerprinting.

67.2.49  HASP_ENC_NOT_SUPP = 23

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Sentinel HASP protection key does not support encryption type.

67.2.50  HASP_EXTENSION_NOT_ALLOWED = 73

MBS Dongle Plugin, Plugin Version: 15.4. **Function:** One of the HASP error codes.  
**Notes:**  
Extension of license not allowed as number of detached licenses is greater than current concurrency count.

67.2.51  HASP_FEATURETYPE_MASK = & hffff0000

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** Legacy HASP HL Run-time API: "Feature Type" mask.  
**Notes:** AND-mask used to identify Feature type.

67.2.52  HASP_FEATURE_EXPIRED = 41

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Feature expired.

67.2.53  HASP_FEATURE_NOT_FOUND = 31

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Requested Feature not available.
67.2.54  **HASP_FEATURE_TYPE_NOT_IMPL = 28**

MBS Dongle Plugin, Plugin Version: 11.1. **Function**: One of the HASP error codes.  
**Notes**: Requested Feature type not implemented.

67.2.55  **HASP_FILEID_DYNAMIC_FIRST = 1**

MBS Dongle Plugin, Plugin Version: 15.4. **Function**: One of the HASP error codes.  
**Notes**:  
Sentinel dynamic memory file ID available range  
File ID lower limit for Sentinel dynamic memory file.

67.2.56  **HASP_FILEID_DYNAMIC_LAST = & hffbf**

MBS Dongle Plugin, Plugin Version: 15.4. **Function**: One of the HASP error codes.  
**Notes**:  
Sentinel dynamic memory file ID available range  
File ID upper limit for Sentinel dynamic memory file.

67.2.57  **HASP_FILEID_LICENSE = & hff2**

MBS Dongle Plugin, Plugin Version: 11.1. **Function**: One of the Memory File ID constants  
**Notes**:  
Legacy HASP HL Run-time API: HASP4 FAS memory file  
(Dummy) File ID for the license data area of memory contents.

67.2.58  **HASP_FILEID_MAIN = & hff0**

MBS Dongle Plugin, Plugin Version: 11.1. **Function**: One of the Memory File ID constants  
**Notes**:  
Legacy HASP HL Run-time API: HASP4 memory file  
File ID for HASP4-compatible memory contents w/o FAS.
67.2. CLASS HASP_HLDMBS

67.2.59 HASP_FILEID_RO = & hfff5

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the Memory File ID constants
**Notes:**
Sentinel HASP secure read only memory file.
File ID for HASP Sentinel HASP read only memory.

67.2.60 HASP_FILEID_RW = & hfff4

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the Memory File ID constants
**Notes:**
Sentinel HASP secure writable memory file
File ID for Sentinel HASP secure writable memory.

67.2.61 HASP_FIRST_HASP_ACT = 3001

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.
**Notes:** Reserved for HASP Activation API

67.2.62 HASP_FIRST_HELPER = 2001

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.
**Notes:** Reserved for HASP helper libraries.

67.2.63 HASP_HARDWARE_MODIFIED = 52

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.
**Notes:** HASP SL key incompatible with machine hardware; HASP SL key is locked to different hardware.
OR: In the case of a V2C file, conflict between HASP SL key data and machine hardware data; HASP SL key locked to different hardware

67.2.64 HASP_HASP_INACTIVE = 66

MBS Dongle Plugin, Plugin Version: 15.4. **Function:** One of the HASP error codes.
**Notes:** Specified Hasp Id is in Inactive state
67.2.65  HASP_HASP_NOT_FOUND = 7

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Sentinel HASP protection key not available.

67.2.66  HASP_INCOMPAT_FEATURE = 6

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Legacy decryption function cannot work on Feature.

67.2.67  HASP_INSUF_MEM = 3

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** System is out of memory.

67.2.68  HASP_INT_ERR = 699

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Internal error occurred in API.

67.2.69  HASP_INVALID_HANDLE_VALUE = 0

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** Invalid handle value for Handle property.

67.2.70  HASP_INVALID_OBJECT = 500

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** C++ API: Object incorrectly initialized.

67.2.71  HASP_INVALID_PARAMETER = 501

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Invalid function parameter.
67.2.72  HASP_INV_ACTION = 59

MBS Dongle Plugin, Plugin Version: 15.4. **Function:** One of the HASP error codes.  
**Notes:** Invalid XML "action" parameter

67.2.73  HASP_INV_API_DYLIB = 401

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** API dispatcher: Unable to load API; DLL possibly corrupt?

67.2.74  HASP_INV_DETACH_ACTION = 59

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Invalid XML "action" parameter.

67.2.75  HASP_INV_DURATION = 63

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Invalid duration.

67.2.76  HASP_INV_FILEID = 10

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Specified File ID not recognized by API.

67.2.77  HASP_INV_FORMAT = 15

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Invalid XML format.

67.2.78  HASP_INV_HND = 9

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Invalid login handle passed to function.
**67.2.79**  \texttt{HASP\_INV\_PORT = 651} \\
MBS Dongle Plugin, Plugin Version: 11.1. \textbf{Function}: One of the HASP error codes. 
\textbf{Notes}: Internal use: invalid port value.

**67.2.80**  \texttt{HASP\_INV\_PORT\_TYPE = 650} \\
MBS Dongle Plugin, Plugin Version: 11.1. \textbf{Function}: One of the HASP error codes. 
\textbf{Notes}: Internal use: invalid port type.

**67.2.81**  \texttt{HASP\_INV\_PRODUCT = 61} \\
MBS Dongle Plugin, Plugin Version: 11.1. \textbf{Function}: One of the HASP error codes. 
\textbf{Notes}: Invalid Product information.

**67.2.82**  \texttt{HASP\_INV\_PROGNUM\_OPT = 2} \\
MBS Dongle Plugin, Plugin Version: 11.1. \textbf{Function}: One of the HASP error codes.

67.2.110 HASP_NO_LOG = 32

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Access log not enabled.

67.2.111 HASP_NO_TIME = 12

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Real-time clock (rtc) not available.
### Class HASP_HLDMBS

#### 67.2.112 HASP_NO_VLIB = 48

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Unable to find Vendor library.

#### 67.2.113 HASP_OLD_DRIVER = 11

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Installed driver or daemon too old to execute function.

#### 67.2.114 HASP_OLD_LM = 42

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Sentinel HASP License Manager version too old.

#### 67.2.115 HASP_OLD_VLIB = 56

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Vendor library version too old.

#### 67.2.116 HASP_OPERATION_FAILED = 525

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** .NET API: Incorrect use of system or platform

#### 67.2.117 HASP_PROGNUM_DEFAULT_FID = & hfff0000

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** Legacy HASP HL Run-time API: The HASP default Feature ID  
**Notes:** Available in every legacy HASP hardware key.

#### 67.2.118 HASP_PROGNUM_FEATURETYPE = & hfff0000

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** Legacy HASP HL Run-time API: "Program Number Feature" type
CHAPTER 67. DONGLE

Notes: After AND-ing with HASP_FEATURETYPE_MASK the Feature type contain this value.

67.2.119  HASP_PROGNUM_MASK = & h000000ff

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** Legacy HASP HL Run-time API: "Program Number Mask"
**Notes:** AND-mask used to extract the Program Number from a "prognum" Feature ID.

67.2.120  HASP_PROGNUM_OPT_CLASSIC = & h00001000

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** Legacy HASP HL Run-time API: "Program Number" option
**Notes:** Enables the API to access "classic" (HASP4 or earlier) keys.

67.2.121  HASP_PROGNUM_OPT_MASK = & h0000ff00

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** Legacy HASP HL Run-time API: "Program Number Options" mask.
**Notes:**
AND-mask used to identify Program Number options:

- HASP_PROGNUM_OPT_NO_LOCAL
- HASP_PROGNUM_OPT_NO_REMOTE
- HASP_PROGNUM_OPT_PROCESS
- HASP_PROGNUM_OPT_CLASSIC
- HASP_PROGNUM_OPT_TS

3 bits of the mask are reserved for future extensions and currently unused. Initialize them with zero.

67.2.122  HASP_PROGNUM_OPT_NO_LOCAL = & h00008000

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** Legacy HASP HL Run-time API: "Program Number" option
**Notes:** Disables the search for local licenses.
67.2.123  HASP_PROGNUM_OPT_NO_REMOTE = & h00004000

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** Legacy HASP HL Run-time API: "Program Number" option
**Notes:** Disables the search for network licenses.

67.2.124  HASP_PROGNUM_OPT_PROCESS = & h00002000

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** Legacy HASP HL Run-time API: "Program Number" option
**Notes:** Sets session count of network licenses to "per-process".

67.2.125  HASP_PROGNUM_OPT_TS = & h00000800

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** Legacy HASP HL Run-time API: "Program Number" option
**Notes:** Ignores the presence of terminal servers.

67.2.126  HASP_RDP_DETECTED = 27

MBS Dongle Plugin, Plugin Version: 15.4. **Function:** One of the HASP error codes.
**Notes:** Program running on a Remote Desktop

67.2.127  HASP_RECIPIENT_OLD_LM = 77

MBS Dongle Plugin, Plugin Version: 15.4. **Function:** One of the HASP error codes.
**Notes:** Recipient of the requested operation is older than expected.

67.2.128  HASP_REHOST_ALREADY_APPLIED = 71

MBS Dongle Plugin, Plugin Version: 15.4. **Function:** One of the HASP error codes.
**Notes:** Old rehost license try to apply
67.2.129  **HASP_REHOST_DISABLED = 75**

MBS Dongle Plugin, Plugin Version: 15.4. **Function:** One of the HASP error codes.  
**Notes:**  
Rehost of license not allowed as container  
contains VM disabled feature and host machine is a virtual machine

67.2.130  **HASP_REHOST_NOT_ALLOWED = 69**

MBS Dongle Plugin, Plugin Version: 15.4. **Function:** One of the HASP error codes.  
**Notes:** Rehost is not allowed for any license

67.2.131  **HASP_REMOTE_COMM_ERR = 40**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Communication error between local and remote Sentinel HASP License Managers.

67.2.132  **HASP_REQ_NOT_SUPP = 16**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Unable to execute function in this context; the requested functionality is not implemented.

67.2.133  **HASP_SCHAN_ERR = 46**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Communication error occurred in secure channel.

67.2.134  **HASP_SCOPE_RESULTS_EMPTY = 50**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Unable to locate any Feature matching scope.
67.2. CLASS HASPHLD MBS

67.2.135 HASP_SECURE_STORE_ID_MISMATCH = 78

MBS Dongle Plugin, Plugin Version: 15.4. **Function:** One of the HASP error codes.  
**Notes:** Secure storage ID mismatch

67.2.136 HASP_STATUS_OK = 0

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Request successfully completed

67.2.137 HASP_STORAGE_CORRUPT = 47

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Corrupt data exists in secure storage area of HASP SL protection key.

67.2.138 HASP_SYS_ERR = 13

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Generic error from host system call.

67.2.139 HASP_TIME_ERR = 45

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** System time has been tampered with.

67.2.140 HASP_TMOF = 4

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Too many open Features/login sessions.

67.2.141 HASP_TOO_MANY_HOSTS = 68

MBS Dongle Plugin, Plugin Version: 15.4. **Function:** One of the HASP error codes.  
**Notes:** Scope does not specify a unique host
67.2.142 **HASP_TOO_MANY_KEYS = 37**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes. 
**Notes:** Too many Sentinel HASP protection keys currently connected.

67.2.143 **HASP_TOO_MANY_PRODUCTS = 60**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes. 
**Notes:** Scope does not specify a unique Product.

67.2.144 **HASP_TOO_MANY_USERS = 38**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes. 
**Notes:** Too many concurrent user sessions currently connected.

67.2.145 **HASP_TOO_SHORT = 8**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes. 
**Notes:** Encrypted/decrypted data length too short to execute function call.

67.2.146 **HASP_TS_DETECTED = 27**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes. 
**Notes:** Program running on a terminal server.

67.2.147 **HASP_UNKNOWN_ALG = 29**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes. 
**Notes:** Unknown algorithm used in H2R/V2C file.

67.2.148 **HASP_UNKNOWN_RECIPIENT = 62**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes. 
**Notes:** Unknown Recipient; update can only be applied to the Recipient specified in hasp_detach(), and not to this computer.
67.2. CLASS HASPHLDMS

67.2.149 HASP_UNKNOWN_VCODE = 34

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes. **Notes:** Vendor Code not recognized by API.

67.2.150 HASP_UPDATE_ALREADY_ADDED = 65

MBS Dongle Plugin, Plugin Version: 15.4. **Function:** One of the HASP error codes. **Notes:** Specified V2C update already installed in the LLM

67.2.151 HASP_UPDATE_BLOCKED = 44

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes. **Notes:** Update installation not permitted; This update was already applied.

67.2.152 HASP_UPDATE_TOO_NEW = 55

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes. **Notes:** Trying to install a V2C file with an update counter that is out of sequence with update counter in the Sentinel HASP protection key. The first value in the V2C file is greater than the value in the Sentinel HASP protection key.

67.2.153 HASP_UPDATE_TOO_OLD = 54

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes. **Notes:** Trying to install a V2C file with an update counter that is out of sequence with the update counter on the Sentinel HASP protection key. The update counter value in the V2C file is lower than the value in sentinel HASP protection key.

67.2.154 HASP_UPLOAD_ERROR = 57

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes. **Notes:** Upload via ACC failed, e.g. because of illegal format.
67.2.155  **HASP_USER_DENIED = 53**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Login denied because of user restrictions.

---

67.2.156  **HASP_VM_DETECTED = 51**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the HASP error codes.  
**Notes:** Program running on a virtual machine.
67.3. **CLASS HASPHLMBS**

67.3 **class HASPHLMBS**

67.3.1 **class HASPHLMBS**

MBS Dongle Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** A class for accessing HASP HL dongles. **Deprecated:** This item is deprecated and should no longer be used. You can use HASPHLDMBS instead. **Notes:**

HASPHLMBS uses a linked in library. This is okay for older HASP HL versions. But newer versions require you to create your own signed libraries. For them use the HASPHLDMBS class.

Please use HASPHLDMBS for newer projects.

67.3.2 **Methods**

67.3.3 **Close**

MBS Dongle Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The destructor. **Notes:**

If you logged in successful before, it logs out from a session and frees all allocated resources for the session. Lasterror is set.

67.3.4 **Constructor(FeatureID as Integer, VendorCode as string)**

MBS Dongle Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Login into a feature. **Notes:**

This function establishes a context (logs into a feature).

feature_id: Unique identifier of the feature. Combinations of constants below.

vendor_code: string with the vendor code

For local prognum features, concurrency is not handled and each login performs a decrement if it is a counting license.

Network prognum features just use the old HASPLM login logic with all drawbacks. There is only support for concurrent usage of \( b \) one server (global server address).
Lasterror is set.

const HASP_PROGNUM_OPT_NO_LOCAL = &h00008000 Disable local license search
const HASP_PROGNUM_OPT_NO_REMOTE = &h00004000 Disable network license search
const HASP_PROGNUM_OPT_PROCESS = &h00002000 Sets session count of network licenses to per-process
const HASP_PROGNUM_OPT_CLASSIC = &h00001000 Enables the API to access "classic" (HASP4 or earlier) keys
const HASP_PROGNUM_OPT_TS = &h00000800 Presence of Terminal Services gets ignored

67.3.5 DateTimeToHaspTime(day as Integer, month as Integer, year as Integer, hour as Integer, minute as Integer, second as Integer) as memoryblock

Notes:
Lasterror is set.
Times are in UTC.

67.3.6 DecryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

Notes:
This is the reverse operation of the hasp_encrypt() function.
Lasterror is set.

Data: Buffer
DataOffset: Start offset in the buffer.
Size: size in bytes of the buffer to be decrypted (16 bytes minimum)

If the decryption fails (e.g. key removed in-between) the data pointed to by buffer is unmodified.

67.3.7 DecryptString(Data as string) as string

Notes:
This is the reverse operation of the hasp_encrypt() function.
This function encrypts a buffer.
If the decryption fails (e.g. key removed in-between) an empty string is returned.

### 67.3.8 EncryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:**
Encrypt a buffer.

**Example:**

```vba
dim h as HASPHLMBS // your hasp object
dim mem as MemoryBlock // your data

h.EncryptMemory(mem,0,mem.size) // Whole block
```

**Notes:**

This function encrypts a buffer.
Lasterror is set.

Data: Buffer
DataOffset: Start offset in the buffer.
Size: size in bytes of the buffer to be encrypted (16 bytes minimum)

If the encryption fails (e.g. key removed in-between) the data pointed to by buffer is unmodified.

### 67.3.9 EncryptString(Data as string) as string

MBS Dongle Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:**
Encrypt a buffer.

**Notes:**

This function encrypts a buffer.
Lasterror is set.

If the encryption fails (e.g. key removed in-between) an empty string is returned.
### 67.3.10 GetRTC as memoryblock

MBS Dongle Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Read current time from a time key.  
**Notes:**  
This function reads the current time from a time key.  
The time will be returned in seconds since Jan-01-1970 0:00:00 GMT.  

The general purpose of this function is not related to licensing, but to get reliable timestamps which are  
independent from the system clock.  
This request is only supported on locally accessed keys. Trying to get the time from a remotely accessed key  
will return HASP.NO.TIME.  

Returns a 64bit integer inside an eight byte memoryblock.

### 67.3.11 GetSessionInfo(format as string) as string

MBS Dongle Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Get information in a session context.  
**Notes:**  
format: XML definition of the output data structure

```
const HASP_UPDATEINFO = <haspformat format="updateinfo"/>  
const HASP_SESSIONINFO = <haspformat format="sessioninfo"/>  
const HASP_KEYINFO = <haspformat format="keyinfo"/>  
```

Returns XML data with the requested information.  

Calling GetSessionInfo with HASP_UPDATEINFO format will return something like this:

```
<?xml version="1.0" encoding="UTF-8"?>  
<hasp_info>  
<c2v>  
```

YYIbIADY3R2oQAfAEAuwulCiCYABaoEBhIABOBxoaABAIGBwD2sfFiy8UKuDvNWH9

rONYKSogA/q1tuLLR70kdag  
```
67.3. CLASS HASPHLMBS

Calling GetSessionInfo with HASP_SESSIONINFO format will return something like this:

```xml
<hasp_info>
<feature>
<featureid>4294905856</featureid>
<maxlogins>5</maxlogins>
<currentlogins>1</currentlogins>
<activations>unlimited</activations>
</feature>
</hasp_info>
```

In case of an expiring license on a time enabled key (prognum \(\leq 8\)), instead of the remaining activations the expiration date will be returned:

```xml
<hasp_info>
<feature>
<featureid>4294905857</featureid>
<expirationdate>1052919239</expirationdate>
</feature>
</hasp_info>
```

For locally accessed keys there is no maxlogins and currentlogins field.

Calling GetSessionInfo with HASP_KEYINFO format will return something like this for a locally accessed key:

```xml
<?xml version="1.0" encoding="UTF-8"?>
<hasp_info>
<keyspec>
<keycaps>
<hasp4/>
<aes/>
<newintf/>
</keycaps>
<hasp>
<haspid>12345</haspid>
<nethasptype>0</nethasptype>
<memoryinfo>
<name>"Main"</name>
<fileid>65520</fileid>
<size>48</size>
```
Calling GetSessionInfo with HASP_KEYINFO format will return something like this for a remotely accessed key:

```xml
<?xml version="1.0" encoding="UTF-8"?>
<hasp_info>
  <keycaps>
    <hasp4/>
  </keycaps>
  <hasp>
    <haspid>782062012</haspid>
    <nethasptype>5</nethasptype>
  </hasp>
  <memoryinfo>
    <name>"Main"</name>
    <fileid>65520</fileid>
    <size>432</size>
  </memoryinfo>
  <memoryinfo>
    <name>"FAS"</name>
    <fileid>65522</fileid>
    <size>448</size>
  </memoryinfo>
  <serveraddress>
    <protocol>"IP"</protocol>
    <address>"10.20.3.10"</address>
  </serveraddress>
</hasp_info>
```

decrypt this hasp info and keycaps flags:
67.3. CLASS HASPHLMBS

hasp4 support HASP4 compatible encryption
aes support AES encryption
rtc key has real time clock chip
newintf supports new access interface

67.3.12 GetSize(FileID as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:**
Get memory size.

**Notes:**
This function is used to determine the memory size.
Returns the number of bytes inside the file.
Lasterror is set.

```cpp
class const HASP_FILEID_MAIN = & hfff0 File id for HASP4 compatible memory contents w/o FAS
class const HASP_FILEID_LICENSE = & hfff2 (Dummy) file id for license data area of memory contents
```

67.3.13 HaspTimeToDateTime(time as memoryblock, byref day as Integer, byref month as Integer, byref year as Integer, byref hour as Integer, byref minute as Integer, byref second as Integer)

MBS Dongle Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:**
Convert time type into broken up time

**Notes:**
Lasterror is set.
Times are in UTC.

67.3.14 LegacyDecryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)

MBS Dongle Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:**
This function decrypts a buffer.

**Notes:**
This is the reverse operation of the hasp_encrypt() function.
Lasterror is set.

**Data:** Buffer

**DataOffset:** Start offset in the buffer.
Size: size in bytes of the buffer to be decrypted (16 bytes minimum)

If the decryption fails (e.g. key removed in-between) the data pointed to by buffer is unmodified.

Legacy HASP functionality for backward compatibility.

**67.3.15 LegacyDecryptString(Data as string) as string**

MBS Dongle Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** This function decrypts a buffer.  
**Notes:**  
This is the reverse operation of the hasp_encrypt() function.  
This function encrypts a buffer.  
Lasterror is set.

If the decryption fails (e.g. key removed in-between) an empty string is returned.

Legacy HASP functionality for backward compatibility.

**67.3.16 LegacyEncryptMemory(Data as Memoryblock, DataOffset as Integer, Size as Integer)**

**Example:**
```vba
dim h as HASPHLMBS // your hasp object
dim mem as MemoryBlock // your data

h.LegacyEncryptMemory(mem, 0, mem.size) // Whole block
```

**Notes:**  
This function encrypts a buffer.  
Lasterror is set.

Data: Buffer  
DataOffset: Start offset in the buffer.  
Size: size in bytes of the buffer to be encrypted (16 bytes minimum)
If the encryption fails (e.g. key removed in-between) the data pointed to by buffer is unmodified.

Legacy HASP functionality for backward compatibility.

67.3.17 LegacyEncryptString(Data as string) as string

Notes: This function encrypts a buffer.
Lasterror is set.

If the encryption fails (e.g. key removed in-between) an empty string is returned.

Legacy HASP functionality for backward compatibility.

67.3.18 LegacySetIdleTime(idletime as Integer)

Notes: idletime: the idle time in minutes

Legacy HASP functionality for backward compatibility.

67.3.19 LegacySetRTC(time as memoryblock)

MBS Dongle Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. Function: Write to HASP4 compatible real time clock
Notes: This request is only supported on locally accessed keys. Trying to set the time on a remotely accessed key will return HASP.NO_TIME.

Legacy HASP functionality for backward compatibility.
67.3.20  **ReadMemory(FileID as Integer, Offset as Integer, Size as Integer) as Memoryblock**

MBS Dongle Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** This function is used to read from the key memory.

**Notes:**
- Lasterror is set.
- Offset: Byte start in the file.
- Size: Number of bytes in the file.
- Result: The data read from the file.

```plaintext
const HASP_FILEID_MAIN = & hfff0 File id for HASP4 compatible memory contents w/o FAS
const HASP_FILEID_LICENSE = & hfff2 (Dummy) file id for license data area of memory contents
```

67.3.21  **ReadString(FileID as Integer, Offset as Integer, Size as Integer) as string**

MBS Dongle Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** This function is used to read from the key memory.

**Notes:**
- Lasterror is set.
- Offset: Byte start in the file.
- Size: Number of bytes in the file.
- Result: The data read from the file.

```plaintext
const HASP_FILEID_MAIN = & hfff0 File id for HASP4 compatible memory contents w/o FAS
const HASP_FILEID_LICENSE = & hfff2 (Dummy) file id for license data area of memory contents
```

67.3.22  **Update(data as string) as string**

**Notes:**
- This function writes update information. The update blob contains all necessary data to perform the update:
  - Where to write (in which “container”, e.g. dongle), the necessary access data (vendor code) and of course the update itself.
  - If the update blob requested it, the function returns in an acknowledge blob, which is signed/encrypted by the updated instance and contains a proof that this update was successfully installed.
67.3.  **CLASS HASPHLMBS**

data: string with the complete update data.

Update via LM is not supported.

Lasterror is set.

### 67.3.23  **WriteMemory(FileID as Integer, FileOffset as Integer, Data as Memoryblock, DataOffset as Integer, Size as Integer)**

MBS Dongle Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Write to key memory.  
**Notes:**

Lasterror is set.  
FileOffset: Byte start in the file.  
Data: The data to be written to the file.  
DataOffset: The byte offset inside the memoryblock.  
Size: The number of bytes to be written.

```plaintext
const HASP_FILEID_MAIN = & hfff0  File id for HASP4 compatible memory contents w/o FAS
const HASP_FILEID_LICENSE = & hfff2  (Dummy) file id for license data area of memory contents
```

### 67.3.24  **WriteString(FileID as Integer, FileOffset as Integer, Data as String)**

MBS Dongle Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Write to key memory.  
**Notes:**

Lasterror is set.  
FileOffset: Byte start in the file.  
Data: The data to be written to the file.

```plaintext
const HASP_FILEID_MAIN = & hfff0  File id for HASP4 compatible memory contents w/o FAS
const HASP_FILEID_LICENSE = & hfff2  (Dummy) file id for license data area of memory contents
```
67.3.25 Properties

67.3.26 Handle as Integer

MBS Dongle Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The handle of the current session.
**Notes:** (Read and Write property)

67.3.27 Lasterror as Integer

MBS Dongle Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Last error code reported from one of the functions.
**Notes:**

```
<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>HASP_STATUS_OK</td>
<td>no error occurred</td>

(Read and Write property)
67.4. module MatrixDongleMBS

67.4.1 module MatrixDongleMBS

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This module implements methods to access the matrix lock dongles from Technodata Interware.

**Notes:**
Note: You will find the newest versions of the API and tools available for download at www.tdi-matrix.com

The plugin is from MBS. The library code it is using is based on work from tdi, so if you have trouble, ask both of us.

67.4.2 Methods

67.4.3 DongleCount(PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of dongles available at the specified LPT or USB interface.

**Notes:** Please check the documentation of the dongle API for more details.

67.4.4 DongleDecryptData(UserCode as Integer, Data as memoryblock, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Transmit a 8 bytes encrypted data block to the dongle. This is returned decrypted as clear data.

**Notes:** Please check the documentation of the dongle API for more details.

67.4.5 DongleEncryptData(UserCode as Integer, Data as memoryblock, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Transmit a 8 bytes clear data block to the dongle. This is returned in XTEA-encrypted form.

**Notes:** Please check the documentation of the dongle API for more details.
67.4.6 DongleExit as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Exits the dongle.
**Notes:** Please check the documentation of the dongle API for more details.

67.4.7 DongleFind as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the dongle and returns the LPT/USB interface at which it was found.
**Notes:** Please check the documentation of the dongle API for more details.

67.4.8 DongleFindEx(byref LPTNr1 as Integer, byref LPTAdr1 as Integer, byref DNGCnt1 as Integer, byref LPTNr2 as Integer, byref LPTAdr2 as Integer, byref DNGCnt2 as Integer, byref LPTNr3 as Integer, byref LPTAdr3 as Integer, byref DNGCnt3 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for all LPT ports and dongles and stores this information in a data buffer.
**Notes:** Please check the documentation of the dongle API for more details.

67.4.9 DongleGetKeyFlag(UserCode as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks whether a 128-bit XTEA key different to zero is available in the dongle.
**Notes:** Please check the documentation of the dongle API for more details.

67.4.10 DongleMemSize(DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the memory size of the dongle in Bytes.
**Notes:** Please check the documentation of the dongle API for more details.
67.4.11 DongleModel(DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the model number of the hardware from the dongle. **Notes:** Please check the documentation of the dongle API for more details.

67.4.12 DongleReadData(UserCode as Integer, Data as memoryblock, count as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the data from the Matrix-dongle beginning from the first memory field. **Notes:** Please check the documentation of the dongle API for more details.

67.4.13 DongleReadDataEx(UserCode as Integer, Data as memoryblock, FPos as Integer, count as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the data from the Matrix-dongle beginning from the specified memory field. **Notes:** Please check the documentation of the dongle API for more details.

67.4.14 DongleReadSerNr(UserCode as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the unique serial number which is assigned to each Matrix-dongle. **Notes:** Please check the documentation of the dongle API for more details.

67.4.15 DongleSetLedFlag(a as Integer, b as Integer, c as Integer, d as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Sets the LED flag. **Notes:** Please check the documentation of the dongle API for more details.
67.4.16 DongleVersion(DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the version number of the dongle. **Notes:** Please check the documentation of the dongle API for more details.

67.4.17 DongleWriteData(UserCode as Integer, Data as memoryblock, count as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes data into the Matrix-dongle beginning from the first memory field. **Notes:** Please check the documentation of the dongle API for more details.

67.4.18 DongleWriteDataEx(UserCode as Integer, Data as memoryblock, FPos as Integer, count as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes data into the Matrix-dongle beginning from the specified memory field. **Notes:** Please check the documentation of the dongle API for more details.

67.4.19 DongleWriteKey(UserCode as Integer, KeyData as memoryblock, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves the 128-bit XTEA key in the dongle. **Notes:** Please check the documentation of the dongle API for more details.

67.4.20 GetConfigMatrixNet(Category as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns from Server-File parameters configured with the MxNet server program. **Notes:** Please check the documentation of the dongle API for more details.
67.4.21 GetDriverFlag(UserCode as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the current USB operating mode of the dongle "HID-Mode" or "Driver-Mode". **Notes:** Please check the documentation of the dongle API for more details.

67.4.22 GetPortAdr(LptNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the address of the LPT port. **Notes:** Please check the documentation of the dongle API for more details.

67.4.23 GetVersionAPI as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the version number of the Matrix-API. **Notes:** Please check the documentation of the dongle API for more details.

67.4.24 GetVersionDRV as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the version number of the LPT driver. **Notes:** Please check the documentation of the dongle API for more details.

67.4.25 GetVersionDRV_USB as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the version number of the USB driver. **Notes:** Please check the documentation of the dongle API for more details.

67.4.26 InitMatrixAPI as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Starts the Matrix API. **Notes:** Please check the documentation of the dongle API for more details.
67.4.27 LogInMatrixNet(UserCode as Integer, AppSlot as Integer, DongleNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Logs on the network client and acquires/refreshes the user slot in the server file. **Notes:** Please check the documentation of the dongle API for more details.

67.4.28 LogOutMatrixNet(UserCode as Integer, AppSlot as Integer, DongleNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Logs off the network client and releases the UserSlot in the server file again. **Notes:** Please check the documentation of the dongle API for more details.

67.4.29 PausePrinterActivity as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Stops the Windows print-spooler. (under Win9.x / Win-NT / 2000 only) **Notes:** Please check the documentation of the dongle API for more details.

67.4.30 ReleaseMatrixAPI as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Close the Matrix API. **Notes:** Please check the documentation of the dongle API for more details.

67.4.31 ResumePrinterActivity as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Releases the Windows print-spooler again. (under Win9.x / Win-NT / 2000 only) **Notes:** Please check the documentation of the dongle API for more details.

67.4.32 SetConfigMatrixNet(Access as Integer, File as string) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Activates or deactivates network access.
Notes: Please check the documentation of the dongle API for more details.

67.4.33 SetDriverFlag(UserCode as Integer, DriverFlag as Integer, DongleNr as Integer, PortNr as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the dongle to the desired USB operating mode "HID-Mode" or "Driver-Mode". **Notes:** Please check the documentation of the dongle API for more details.

67.4.34 SetW95Access(mode as Integer)

MBS Dongle Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Win95/98 with or without VXD driver. **Notes:** Can have the value 1 or 2 or the predefined values: IW_DRIVER / IW_NODRIVER

1. Communication takes place via the VXD driver.
2. Communication takes place without the VXD driver.

Please check the documentation of the dongle API for more details.
67.5 class Rockey2MBS

67.5.1 class Rockey2MBS

MBS Dongle Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class to use Rockey 2 dongles in REALbasic.

67.5.2 Methods

67.5.3 Available as boolean

MBS Dongle Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether library was loaded. **Notes:** Returns true if library was loaded successfully or we use internal library.

67.5.4 Close

MBS Dongle Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes the dongle. **Notes:**

Lasterror is set.
This is called automatically by the destructor.

67.5.5 Find as Int32

MBS Dongle Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for Rockey 2 dongles on the computer. **Notes:**

Lasterror is set.
Returns the number of attached Rockey 2 dongles.

67.5.6 GenUID(byref uid as UInt32, seed as string, isProtect as boolean) as Int32

MBS Dongle Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Generates an user ID. **Notes:**
67.5. CLASS ROCKEY2MBS

UID: the generated user id.
seed: Seed to generate UID. It is a character string with the maximum length of 64 bytes.
isProtect: Sets write protection. 0=dongle not write protected, 1=dongle write protected.

LastError is set.

67.5.7 LoadLibrary(file as folderitem) as boolean

MBS Dongle Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the Rockey2 shared library. **Notes:** Returns true on success and false on failure.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library from the given path. See also:

- 67.5.8 LoadLibrary(path as string) as boolean

67.5.8 LoadLibrary(path as string) as boolean

MBS Dongle Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the Rockey2 shared library. **Notes:** Returns true on success and false on failure.

Path can be an absolute, a relative or just a file name.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library from the given path. See also:

- 67.5.7 LoadLibrary(file as folderitem) as boolean

67.5.9 Open(mode as Int32, uid as UInt32, byref hid as UInt32)

MBS Dongle Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a specific rockey 2 dongle. **Notes:**

mode:
This parameter indicates the way to open the dongle
mode = 0, open the first found ROCKEY2 dongle
mode >0, open the dongle according to the UID. The mode value is the dongle number, for example:
uid=12345678, mode=2, this means it will open the second dongle with UID 12345678
mode = -1, open the dongle according to the HID, and *hid can not be 0We defined two constants:
AUTO_MODE=0 and HID_MODE=-1

uid(UserID): You need to specify the dongle UID and this UID is generated withRY2_GenUID
hid(HardwareID): Open dongle with HID of hid. The dongle HID will be returned to hid regardless of how
the dongle was opened.

Sets the handle and lasterror properties.

67.5.10  Read(BlockIndex as Int32) as string

MBS Dongle Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: 
Read dongle content.
Notes:
BlockIndex: Block index. Specify the block to write. The value range is 0-4
Returns 512 bytes on success.
Lasterror is set.

67.5.11  Transform(data as string) as string

MBS Dongle Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. Function: 
Transforms data.

67.5.12  Write(BlockIndex as Int32, data as string)

MBS Dongle Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: 
Writes data to the dongle.
Notes:
Blockindex: Specify the block to write. The value range is 0-4.
Lasterror is set.
If you pass less than 512 bytes, the remaining space is filled with zeros.
67.5. **CLASS ROKEY2MBS**

### 67.5.13 Properties

#### 67.5.14 Handle as Integer

MBS Dongle Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal handle for dongle communication. **Notes:** (Read and Write property)

#### 67.5.15 Lasterror as Integer

MBS Dongle Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code. **Notes:** (Read and Write property)

### 67.5.16 Constants

#### 67.5.17 AUTO_MODE = 0

MBS Dongle Plugin, Plugin Version: 9.6. **Function:** A constant for use in the Open method.

#### 67.5.18 HID_MODE = -1

MBS Dongle Plugin, Plugin Version: 9.6. **Function:** A constant for use in the Open method.

#### 67.5.19 R2_MINOR = 16

MBS Dongle Plugin, Plugin Version: 9.6. **Function:** The maximum number of dongles the plugin can handle.

#### 67.5.20 ROCKEY2_DISABLE_WRITE_PROTECT = false

MBS Dongle Plugin, Plugin Version: 9.6. **Function:** One of the constants for the GenUID function.
67.5.21 ROCKEY2_ENABLE_WRITE_PROTECT = true

MBS Dongle Plugin, Plugin Version: 9.6. **Function**: One of the constants for the GenUID function.

67.5.22 RY2ERR_FLUSH_QUEUE = & hA010000F

MBS Dongle Plugin, Plugin Version: 9.6. **Function**: One of the error constants. **Notes**: Internal error (Windows error)

67.5.23 RY2ERR_FREE_PREPARSED_DATA = & hA010000E

MBS Dongle Plugin, Plugin Version: 9.6. **Function**: One of the error constants. **Notes**: Internal error (Windows error)

67.5.24 RY2ERR_GETCAPS = & hA010000D

MBS Dongle Plugin, Plugin Version: 9.6. **Function**: One of the error constants. **Notes**: Internal error (Windows error)

67.5.25 RY2ERR_GET_ATTRIBUTES = & hA010000B

MBS Dongle Plugin, Plugin Version: 9.6. **Function**: One of the error constants. **Notes**: Internal error (Windows error)

67.5.26 RY2ERR_GET_PREPARSED_DATA = & hA010000C

MBS Dongle Plugin, Plugin Version: 9.6. **Function**: One of the error constants. **Notes**: Internal error (Windows error)

67.5.27 RY2ERR_GET_SERIAL = & hA0100011

MBS Dongle Plugin, Plugin Version: 9.6. **Function**: One of the error constants. **Notes**: Internal error (Windows error)
67.5. CLASS ROCKEY2MBS

67.5.28  **RY2ERR_NOT_OPENED_DEVICE = & hA0100002**

MBS Dongle Plugin, Plugin Version: 9.6. **Function:** One of the error constants. **Notes:** Need to call RY2_Open first to open the dongle, then call this function (operation error)

67.5.29  **RY2ERR_NO_SUCH_DEVICE = & hA0100001**

MBS Dongle Plugin, Plugin Version: 9.6. **Function:** One of the error constants. **Notes:** Specified dongle is not found (parameter error)

67.5.30  **RY2ERR_OPEN_DEVICE = & hA0100007**

MBS Dongle Plugin, Plugin Version: 9.6. **Function:** One of the error constants. **Notes:** Open device error (Windows error)

67.5.31  **RY2ERR_READ_REPORT = & hA0100008**

MBS Dongle Plugin, Plugin Version: 9.6. **Function:** One of the error constants. **Notes:** Read record error (Windows error)

67.5.32  **RY2ERR_SETUP_DI_CLASS_DEVS = & hA0100010**

MBS Dongle Plugin, Plugin Version: 9.6. **Function:** One of the error constants. **Notes:** Internal error (Windows error)

67.5.33  **RY2ERR_SETUP_DI_GET_DEVICE_INTERFACE_DETAIL = & hA010000A**

MBS Dongle Plugin, Plugin Version: 9.6. **Function:** One of the error constants. **Notes:** Internal error (Windows error)

67.5.34  **RY2ERR_SUCCESS = 0**

MBS Dongle Plugin, Plugin Version: 9.6. **Function:** One of the error constants. **Notes:** Success
67.5.35 **RY2ERR_TOO_LONG_DEVICE_DETAIL = & hA0100012**

MBS Dongle Plugin, Plugin Version: 9.6. **Function:** One of the error constants.  
**Notes:** Internal error

67.5.36 **RY2ERR_TOO_LONG_SEED = & hA0100005**

MBS Dongle Plugin, Plugin Version: 9.6. **Function:** One of the error constants.  
**Notes:** Seed character string is longer than 64 bytes when calling GenUID (parameter error)

67.5.37 **RY2ERR_UNKNOWNDEVICE = & hA0100020**

MBS Dongle Plugin, Plugin Version: 9.6. **Function:** One of the error constants.  
**Notes:** Unknown device.

67.5.38 **RY2ERR_UNKNOWNERROR = & hA010FFFF**

MBS Dongle Plugin, Plugin Version: 9.6. **Function:** One of the error constants.  
**Notes:** Unknown error (hardware error)

67.5.39 **RY2ERR_VERIFY = & hA0100014**

MBS Dongle Plugin, Plugin Version: 9.6. **Function:** One of the error constants.  
**Notes:** Verification error (hardware error)

67.5.40 **RY2ERR_WRITE_PROTECT = & hA0100006**

MBS Dongle Plugin, Plugin Version: 9.6. **Function:** One of the error constants.  
**Notes:** Tried to write to write-protected dongle (operation error)

67.5.41 **RY2ERR_WRITEREPORT = & hA0100009**

MBS Dongle Plugin, Plugin Version: 9.6. **Function:** One of the error constants.  
**Notes:** Write record error (Windows error)
67.5.42  **RY2ERR_WRONG_INDEX = & hA0100004**

MBS Dongle Plugin, Plugin Version: 9.6. **Function**: One of the error constants.  
**Notes**: Block index error (parameter error)

67.5.43  **RY2ERR_WRONG_REPORT_LENGTH = & hA0100013**

MBS Dongle Plugin, Plugin Version: 9.6. **Function**: One of the error constants.  
**Notes**: Wrong report length.

67.5.44  **RY2ERR_WRONG_UID = & hA0100003**

MBS Dongle Plugin, Plugin Version: 9.6. **Function**: One of the error constants.  
**Notes**: Wrong UID (parameter error)
67.6 class Rockey4NDMBS

67.6.1 class Rockey4NDMBS

MBS Dongle Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A class to handle calls to the Rockey4ND Dongle API.

67.6.2 Methods

67.6.3 Rockey(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
calls the Rockey Dongle API.
**Example:**

```vba
dim r as RockeyMBS
dim e as Integer

r=new RockeyMBS
r.p1=&HC44C
r.p2=&HC8F8
r.p3=0
r.p4=0

e=r.Rockey(1)

if e=0 then
    MsgBox "Found dongle: " + hex(r.lp1)
else
    MsgBox "Error: " + str(e)
end if
```

**Notes:**
See the Rockey dongle documentation for more details.

Be aware that no endian correction is done!

Error codes from the plugin:
-1 = memoryblock is nil
-2 = library not present
67.6. **CLASS ROCKEY4NDMBS**

### 67.6.4 RockeyCall(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Same as Rockey but a different name for compatibility.  
**Notes:** The original Rockey dongle calls the function RockeyCall.

### 67.6.5 Properties

#### 67.6.6 Buffer as MemoryBlock

MBS Dongle Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A one KB big buffer.  
**Notes:** (Read and Write property)

#### 67.6.7 Handle as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The 16bit handle value.  
**Notes:** (Read and Write property)

#### 67.6.8 LP1 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first 32bit parameter for the rockey function.  
**Notes:** (Read and Write property)

#### 67.6.9 LP2 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The second 32bit parameter for the rockey function.  
**Notes:** (Read and Write property)

#### 67.6.10 P1 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first 16bit parameter for the rockey function.
67.6.11 P2 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The second 16bit parameter for the rockey function.
**Notes:** (Read and Write property)

67.6.12 P3 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The third 16bit parameter for the rockey function.
**Notes:** (Read and Write property)

67.6.13 P4 as Integer

MBS Dongle Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The forth 16bit parameter for the rockey function.
**Notes:** (Read and Write property)
67.7. **CLASS ROCKEYMBS**

67.7  **class RockeyMBS**

67.7.1  **class RockeyMBS**

MBS Dongle Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class to handle calls to the Rockey Dongle API.

67.7.2  **Methods**

67.7.3  **Rockey(FunctionCode as Integer) as Integer**

MBS Dongle Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls the Rockey Dongle API.

**Example:**

```vba
dim r as RockeyMBS
dim e as Integer

r=new RockeyMBS
r.p1=& HC44C
r.p2=& HC8F8
r.p3=0
r.p4=0

e=r.Rockey(1)

if e=0 then
    MsgBox "Found dongle: " +hex(r.lp1)
else
    MsgBox "Error: " +str(e)
end if
```

**Notes:**

See the Rockey dongle documentation for more details.

Be aware that no endian correction is done!

Error codes from the plugin:
-1 = memoryblock is nil
-2 = library not present (always on Linux)
67.7.4 RockeyCall(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Same as Rockey but a different name for compatibility.
**Notes:** The original Rockey dongle calls the function RockeyCall.

67.7.5 Properties

67.7.6 Buffer as memoryblock

MBS Dongle Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A one KB big buffer.
**Notes:** (Read and Write property)

67.7.7 Handle as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The 16bit handle value.
**Notes:** (Read and Write property)

67.7.8 LP1 as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first 32bit parameter for the rockey function.
**Notes:** (Read and Write property)

67.7.9 LP2 as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The second 32bit parameter for the rockey function.
**Notes:** (Read and Write property)

67.7.10 P1 as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first 16bit parameter for the rockey function.
67.7. CLASS ROCKYMBS

Notes: (Read and Write property)

67.7.11  P2 as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The second 16bit parameter for the rockey function.
Notes: (Read and Write property)

67.7.12  P3 as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The third 16bit parameter for the rockey function.
Notes: (Read and Write property)

67.7.13  P4 as Integer

MBS Dongle Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The forth 16bit parameter for the rockey function.
Notes: (Read and Write property)
67.8 module SecureDongleXMBS

67.8.1 module SecureDongleXMBS

**Function:**
This module implements an interface to the SecureDongleX products from SecureMetric Technology Sdn. Bhd.

**Notes:**
For more details see the website:
http://www.securemetric.com/

Please order there your evaluation SDK as well as further dongles.

67.8.2 Methods

67.8.3 Close(handle as Integer)

**Function:** Close specified SecureDongle X

**Notes:** Pass the handle you got returned from Open method.

67.8.4 Find as Integer

**Function:** Find dongles attached to the computer

**Notes:**
See SDK Developer Guide for details.
Returns number of dongles or negative error code.

67.8.5 GetVersion(handle as Integer) as Integer

**Function:** Get SecureDongle X hardware version

**Notes:**
See SDK Developer Guide for details.
Returns positive version number or nega...
67.8. **MODULE SECUREDONGLEXMBS**

### 67.8.6 Open(mode as Integer, uid as UInt32) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Open specified SecureDongle X

**Notes:**
Convenience method where hid parameter is left away.
The default UID is 715400947 for demo dongles.
See SDK Developer Guide for details.
See also:

- 67.8.7 Open(mode as Integer, uid as UInt32, byref hid as UInt32) as Integer

### 67.8.7 Open(mode as Integer, uid as UInt32, byref hid as UInt32) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Open specified SecureDongle X

**Notes:**
The default UID is 715400947 for demo dongles.
See SDK Developer Guide for details.
See also:

- 67.8.6 Open(mode as Integer, uid as UInt32) as Integer

### 67.8.8 Read(handle as Integer, BlockIndex as Integer, byref data as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Read SecureDongle X content

**Notes:**
handle: SDX handle. It is the handle returned from Open
block_index: The block index. Specify the block to read. The value range is 0-4
data: Read buffer. Here you receive a string with 512 bytes.

Returns an error code.

See SDK Developer Guide for details.
67.8.9  RSADecrypt(handle as Integer, startIndex as Integer, byref buf as string, byref key as string) as Integer

67.8.10 RSAEncrypt(handle as Integer, startIndex as Integer, byref buf as string, byref key as string) as Integer

67.8.11 Transform(handle as Integer, byref data as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Data hashing function. Notes: On input data contains a string to transform (maximum 32 bytes) and on return the hash value. See SDK Developer Guide for details.

67.8.12 Write(handle as Integer, BlockIndex as Integer, data as string) as Integer

MBS Dongle Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Write to SecureDongle X Notes: handle: SDX handle. It is the handle returned from Open block_index: The Block index. Specify the block to write. The value range is 0-4 data: Write buffer. The buffer can be at maximum 512 bytes to accommodate the 512-byte block size. The plugin will fill the rest with zeros. Returns error code. See SDK Developer Guide for details.
67.8.13 Constants

67.8.14 HID_MODE = -1

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** The constant for default HID mode.

67.8.15 SDXERR_FAILED_DECRYPTION = & hA010000E

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Failed Decrypt string (Cryptography error)

67.8.16 SDXERR_FAILED_ENCRYPTION = & hA010000C

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Failed encrypt string (cryptography error)

67.8.17 SDXERR_FAILED_WRITE_KEY = & hA010000D

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Failed write key (cryptography error)

67.8.18 SDXERR_FLUSH_QUEUE = & hA0100017

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Internal error (Windows error)

67.8.19 SDXERR_FREE_PREPARSED_DATA = & hA0100016

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Internal error (Windows error)
67.8.20  **SDXERR_GENERATE_KEY = & hA010000A**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.  
**Notes:** Generate key error (cryptography error)

67.8.21  **SDXERR_GETCAPS = & hA0100015**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.  
**Notes:** Internal error (Windows error)

67.8.22  **SDXERR_GET_ATTRIBUTES = & hA0100013**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.  
**Notes:** Internal error (Windows error)

67.8.23  **SDXERR_GET_PREPARSED_DATA = & hA0100014**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.  
**Notes:** Internal error (Windows error)

67.8.24  **SDXERR_GET_SERIAL = & hA0100019**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.  
**Notes:** Internal error (Windows error)

67.8.25  **SDXERR_INVALID_KEY = & hA010000B**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.  
**Notes:** Invalid key (cryptography error)
67.8.26 SDXERR_INVALID_LEN = & hA0100008

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Invalid length (parameter error)

67.8.27 SDXERR_NOT_OPENEDDEVICE = & hA0100002

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Need to call SDX_Open first to open the SDX, then call this function (operation error)

67.8.28 SDXERR_NO_SUCH_DEVICE = & hA0100001

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Specified SDX is not found (parameter error)

67.8.29 SDXERR_OPEN_DEVICE = & hA010000F

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Open device error (Windows error)

67.8.30 SDXERR_READ_REPORT = & hA0100010

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Read record error (Windows error)

67.8.31 SDXERR_SETUP_DI_CLASS_DEVS = & hA0100018

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Internal error (Windows error)
67.8.32  SDXERR_SETUP_DI_GET_DEVICE_INTERFACE_DETAIL = & hA0100012

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Internal error (Windows error)

67.8.33  SDXERR_SUCCESS = 0

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Success

67.8.34  SDXERR_TOO_LONG_DEVICE_DETAIL = & hA010001B

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Internal error

67.8.35  SDXERR_TOO_LONG_ENCRYPTION_DATA = & hA0100009

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Cipher text length is too long (cryptography error)

67.8.36  SDXERR_TOO_LONG_SEED = & hA0100005

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Seed character string is longer than 64 bytes when calling GenUID (parameter error)

67.8.37  SDXERR_UNKNOWN_DEVICE = & hA0100020

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Unknown device.
67.8.38  **SDXERR_UNKNOWN_ERROR = & hA010FFFF**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Unknown error (hardware error)

67.8.39  **SDXERR_VERIFY = & hA0100021**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Verification error (hardware error)

67.8.40  **SDXERR_WRITE_PROTECT = & hA0100006**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Tried to write to write-protected SDX (operation error)

67.8.41  **SDXERR_WRITE_REPORT = & hA0100011**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Write record error (Windows error)

67.8.42  **SDXERR_WRONG_INDEX = & hA0100004**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Block index error (parameter error)

67.8.43  **SDXERR_WRONG_REPORT_LENGTH = & hA010001A**

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.
**Notes:** Unknown device (hardware error)
67.8.44 SDXERR_WRONG_START_INDEX = & hA0100007

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.  
**Notes:** Start index error (parameter error)

67.8.45 SDXERR_WRONG_UID = & hA0100003

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** One of the possible error codes for functions in this module.  
**Notes:** Wrong UID (parameter error)

67.8.46 SDX_MINOR = 16

MBS Dongle Plugin, Plugin Version: 11.1. **Function:** The maximum number of sdx devices.
67.9. **CLASS UNIKEYMBS**

### 67.9. class UnikeyMBS

#### 67.9.1 class UnikeyMBS

MBS Dongle Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class to enable REALbasic to use Unikey dongles.  
**Notes:**

Website:  
http://www.esecutech.com

#### 67.9.2 Methods

##### 67.9.3 Calculate1(StartAddress as Integer, Module as Integer, byref RegA as Integer, byref RegB as Integer, byref RegC as Integer, byref RegD as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Return the results of a calculation performed in UniKey, using input provided by the developer and the CALCULATE1 function.  
**Notes:**

See Unikey API Reference for details on UniKey_Calculate1 function.  
Returns error code.

##### 67.9.4 Calculate2(StartAddress as Integer, Seed as Integer, byref RegA as Integer, byref RegB as Integer, byref RegC as Integer, byref RegD as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Return the results of a calculation performed in UniKey, using input provided by the developer and the CALCULATE2 function.  
**Notes:**

See Unikey API Reference for details on UniKey_Calculate2 function.  
Returns error code.
67.9.5 Calculate3(StartAddress as Integer, Module as Integer, byref RegA as Integer, byref RegB as Integer, byref RegC as Integer, byref RegD as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Return results of a calculation performed in UniKey, using input provided by the developer and the CALCULATE3 function.
Notes:
See Unikey API Reference for details on UniKey_Calculate3 function.
Returns error code.

67.9.6 CheckModule(Module as Integer, byref Value as Integer, byref Decrease as Integer) as Integer

Notes:
See Unikey API Reference for details on UniKey_Check_Module function.
Returns error code.

67.9.7 CheckTimeModule(Module as Integer, byref RemainDays as Integer, Year as Integer, Month as Integer, Day as Integer, Hour as Integer) as Integer

Notes:
See Unikey API Reference for details on UniKey_Check_Time_Module function.
Returns error code.

67.9.8 CheckTimeModuleNow(Module as Integer, byref RemainDays as Integer, byref RemainHours as Integer) as Integer

Notes:
See Unikey API Reference for details on UniKey_Check_Time_Module_Now function.
Returns error code.
67.9.9  **CheckTimeModuleNowPC(Module as Integer, byref RemainDays as Integer, byref RemainHours as Integer) as Integer**

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Read the attributes of a specific UniKey Time license module Now PC.
**Notes:**
See Unikey API Reference for details on UniKey_Check_Time_Module_Now_PC function.
Returns error code.

67.9.10 **Decrypt(BufferLength as Integer, KeyNumber as Integer, Buffer as Ptr) as Integer**

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Decrypt an amount of memory with a key.
**Notes:**
The length of data must be a multiple of 8.
See Unikey API Reference for details on UniKey_Decrypt function.
Returns error code.

67.9.11 **Encrypt(BufferLength as Integer, KeyNumber as Integer, Buffer as Ptr) as Integer**

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Encrypt an amount of memory with a key.
**Notes:**
The length of data must be a multiple of 8.
See Unikey API Reference for details on UniKey_Encrypt function.
Returns error code.

67.9.12 **EraseTimeModule(Module as Integer) as Integer**

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Erase/Reset a real time module, and all the info in the module will be erased including start, end or duration.
**Notes:**
See Unikey API Reference for details on UniKey_Erase_Time_Module function.
Returns error code.
67.9.13  **Find(byref Setting1 as Integer, byref Setting2 as Integer) as Integer**

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Check if a specific UniKey is attached to the USB port.
**Notes:**
This is the first API to start a UniKey session.
Sets handle property.
See Unikey API Reference for details on UniKey_Find function.

67.9.14  **FindNext(byref Setting1 as Integer, byref Setting2 as Integer) as Integer**

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Check if another UniKey is attached to the USB port.
**Notes:**
Sets the handle property.
Returns error code.
See Unikey API Reference for details on UniKey_Find_Next function.

67.9.15  **GenerateKey(KeyNumber as Integer) as Integer**

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Generate a new key in the specific key storage.
**Notes:**
See Unikey API Reference for details on UniKey_Generate_Key function.
Returns error code.

67.9.16  **GenerateKeyViaSeed(KeyNumber as Integer, byref Seed1 as Integer, byref Seed2 as Integer, byref Seed3 as Integer, byref Seed4 as Integer) as Integer**

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Generate a new key in the specific key storage via seed.
**Notes:**
See Unikey API Reference for details on UniKey_Generate_Key_Via_Seed function. Returns error code.

67.9.17 GenerateNewPassword(Seed as Integer, byref Password1 as Integer, byref Password2 as Integer, byref Password3 as Integer, byref Password4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Generate a new password via a seed code; the mapping from the seed code to the password is only one way. Without the seed, you cannot generate the same password. **Notes:** See Unikey API Reference for details on UniKey_Generate_New_Password function. Returns error code.

67.9.18 GetCliNum(byref Count as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get the UniKey client number. **Notes:** See Unikey API Reference for details on UniKey_Get_Cli_Num function. Returns error code.

67.9.19 GetDongleLocation(byref IP as String) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get the Server IP, if it is local, return 127.0.0.1. **Notes:** See Unikey API Reference for details on UniKey_Get_Dongle_Location function. Returns error code.

67.9.20 GetMaxNum(byref Count as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get the maximum client number. **Notes:** See Unikey API Reference for details on UniKey_Get_Max_Num function. Returns error code.
67.9.21 GetModule(Module as Integer, byref Value as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get a value from a specific UniKey license module. **Notes:** See Unikey API Reference for details on UniKey_Get_Module function. Returns error code.

67.9.22 GetModuleEndTime(Module as Integer, byref Year as Integer, byref Month as Integer, byref Day as Integer, byref Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the end time of a specific UniKey Time license module. **Notes:** See Unikey API Reference for details on UniKey_Get_Module_End_Time function. Returns error code.

Not supported for 64-bit Linux and Mac PPC.

67.9.23 GetModuleStartTime(Module as Integer, byref Year as Integer, byref Month as Integer, byref Day as Integer, byref Hour as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the start time of a specific UniKey Time license module. **Notes:** See Unikey API Reference for details on UniKey_Get_Module_Start_Time function. Returns error code.

Not supported for 64-bit Linux and Mac PPC.
67.9.24 GetTime(byref Year as Integer, byref Month as Integer, byref Day as Integer, byref Hour as Integer, byref Minute as Integer, byref Second as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get UniKey Times real time clocks time.

**Notes:**
See Unikey API Reference for details on UniKey_Get_Time function.
Returns error code.
Year is 10 for 2010.

67.9.25 GetType(byref type as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GetType can help you get the type of the UniKey dongle.

**Notes:**
The return value of type will indicate the type of the UniKey dongle.
UNIKEY_TYPE_TIME 101
UNIKEY_TYPE_PRO 102
UNIKEY_TYPE_STD 103

See Unikey API Reference for details on UniKey_Get_Type function.

67.9.26 GetVersion(byref Version as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get the current UniKey library version.

**Notes:**
See Unikey API Reference for details on UniKey_Get_Version function.
Returns error code.

67.9.27 Logoff as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Logoff a UniKey dongle with a specific handle.

**Notes:**
This API should be called at the end of UniKey session.
See Unikey API Reference for details on UniKey_Logoff function.
Returns error code.

**67.9.28 MD5(BufferLength as Integer, Buffer as Ptr) as Integer**

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Make an MD5 digest for a mount of content or data.
**Notes:**
See Unikey API Reference for details on UniKey_MD5 function.
Returns error code.

**67.9.29 ModuleDecrease(Module as Integer) as Integer**

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Decrease the value in a specified UniKey license module by 1.
**Notes:**
See Unikey API Reference for details on UniKey_Module_Decrease function.
Returns error code.

For Linux, does not work on Linux ARM or 32-bit Linux. Works on 64-bit Linux.

**67.9.30 Random(byref Return1 as Integer, byref Return2 as Integer, byref Return3 as Integer, byref Return4 as Integer) as Integer**

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Generate a random number from the dongle.
**Notes:**
See Unikey API Reference for details on UniKey_Random function.
Returns error code.

**67.9.31 ReadMemory(StartAddress as Integer, BufferLength as Integer, Buffer as Ptr) as Integer**

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Read the contents of the Memory.
**Notes:**
This API needs to be called after logon of a UniKey dongle.
67.9. **CLASS UNIKEYMBS**

See Unikey API Reference for details on UniKey_Read_Memory function.
Returns error code.

### 67.9.32 ReadSoftID(byref SoftID as Integer) as Integer

**MBS Dongle Plugin, Plugin Version:** 16.4, **Console & Web:** Yes, **Mac:** Yes, **Win:** Yes, **Linux:** Yes. **Function:**
Read the user defined SoftID.

**Notes:**
See Unikey API Reference for details on UniKey_Read_SoftID function.
Returns error code.

### 67.9.33 ReadUpdateTag(byref UpdateTag as Integer) as Integer

**MBS Dongle Plugin, Plugin Version:** 16.4, **Console & Web:** Yes, **Mac:** Yes, **Win:** Yes, **Linux:** Yes. **Function:**
Read UpdateTag from a specific dongle.

**Notes:**
See Unikey API Reference for details on UniKey_Read_UpdateTag function.
Returns error code.

### 67.9.34 Seed(Seed as Integer, byref Return1 as Integer, byref Return2 as Integer, byref Return3 as Integer, byref Return4 as Integer) as Integer

**MBS Dongle Plugin, Plugin Version:** 16.4, **Console & Web:** Yes, **Mac:** Yes, **Win:** Yes, **Linux:** Yes. **Function:**
Get return codes from the input of a seed code.

**Notes:**
This API return for values which are related to Seed and UniKey dongles password.
See Unikey API Reference for details on UniKey_Seed function.
Returns error code.

### 67.9.35 SetMaxNum(byref Count as Integer) as Integer

**MBS Dongle Plugin, Plugin Version:** 16.4, **Console & Web:** Yes, **Mac:** Yes, **Win:** Yes, **Linux:** Yes. **Function:**
Set the maximum client number.

**Notes:**
See Unikey API Reference for details on UniKey_Set_Max_Num function.
Returns error code.
Not supported for Mac PPC.

67.9.36  SetModule(Module as Integer, Value as Integer, Decrease as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** To write a value to a specific UniKey license module and set the Decrement attribute. **Notes:** See Unikey API Reference for details on UniKey_Set_Module function. Returns error code.

67.9.37  SetNETINILocation(byref Setting1 as Integer, byref Setting2 as Integer, IniFile as String) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets ini location. **Notes:** See Unikey API Reference for details on UniKey_SetNETINILocation function. Returns error code.

67.9.38  SetTime(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set UniKey Times real time clocks time. **Notes:** See Unikey API Reference for details on UniKey_Set_Time function. Returns error code. Year is 10 for 2010.

67.9.39  SetTimeModuleDuration(Module as Integer, Year as Integer, Day as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set the duration time for a specific real time module. The total duration is (Day)*24 + (Hour) in hours. **Notes:**
See Unikey API Reference for details on UniKey_Set_Time_Module_Duration function.
Returns error code.

67.9.40 SetTimeModuleEndTime(Module as Integer, Year as Integer, Month as Integer, Day as Integer, Hour as Integer) as Integer

Notes: See Unikey API Reference for details on UniKey_Set_Time_Module_End_Time function.
Returns error code.

67.9.41 SetTimeModuleStartTime(Module as Integer, Year as Integer, Month as Integer, Day as Integer, Hour as Integer) as Integer

Notes: See Unikey API Reference for details on UniKey_Set_Time_Module_Start_Time function.
Returns error code.

67.9.42 SetTimeModuleStartTimeNow(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Set a real time modules start time as the now time in UniKey dongles clock.
Notes: See Unikey API Reference for details on UniKey_Set_Time_Module_Start_Time_Now function.
Returns error code.

67.9.43 SetTimeModuleStartTimeNowPC(Module as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Set a real time modules start time as the now time in host computer.
Notes: See Unikey API Reference for details on UniKey_Set_Time_Module_Start_Time_Now_PC function.
Returns error code.
67.9.44 SetTimeNow as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set UniKey Times real time clocks time by the host computers clock.

**Notes:**
See Unikey API Reference for details on UniKey_Set_Time_Now function.
Returns error code.

67.9.45 Unikey(FunctionCode as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
calls the unikey function with the values from this object.

**Notes:** See the unikey documentation for what values to use.

67.9.46 UserLogon(Password1 as Integer, Password2 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Logon a UniKey dongle with specified passwords.

**Notes:**
This API should be called in the released software in order to improve security.
See Unikey API Reference for details on UniKey_User_Logon function.
Returns error code.
Sets handle property.

67.9.47 VendorLogon(Password1 as Integer, Password2 as Integer, Password3 as Integer, Password4 as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:**
Logon a UniKey dongle in vendor mode with specified passwords.

**Notes:**
This API helps software vendors to logon the UniKey dongle in vendor mode, and get the full permission to UniKey dongle.
We do NOT advise you to enclose this API in the final released software. This API is only for software vendors usage.
If password3 or password4 is wrong while password1 and password2 is correct, the dongle is also logged on in user mode automatically.

Sets handle property.
See Unikey API Reference for details on UniKey_Vender_Logon function.
67.9. **CLASS UNIKEYMBS**

Returns error code.

Not supported on Linux.

### 67.9.48 WriteArithmetic(StartAddress as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Write user-defined mathematical algorithms.

**Notes:**
See Unikey API Reference for details on UniKey_Write_Arithmetic function. Returns error code.

### 67.9.49 WriteMemory(StartAddress as Integer, BufferLength as Integer, Buffer as Ptr) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Write data into the memory.

**Notes:**
This API needs to be called after logging on to a UniKey dongle.
See Unikey API Reference for details on UniKey_Write_Memory function. Returns error code.

### 67.9.50 WriteSoftID(SoftID as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Write the vendor defined SoftID.

**Notes:**
See Unikey API Reference for details on UniKey_Write_SoftID function. Returns error code.

### 67.9.51 WriteUpdateTag(UpdateTag as Integer) as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Write UpdateTag into a specific dongle.

**Notes:**
See Unikey API Reference for details on UniKey_Write_UpdateTag function. Returns error code.
67.9.52  Properties

67.9.53  Buffer as MemoryBlock

MBS Dongle Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The memoryblock to use when calling the unikey function.  
**Notes:** (Read and Write property)

67.9.54  Handle as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The handle to the dongle.  
**Notes:** (Read and Write property)

67.9.55  LP1 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parameter LP1.  
**Notes:** (Read and Write property)

67.9.56  LP2 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parameter LP2.  
**Notes:** (Read and Write property)

67.9.57  P1 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value for the parameter p1.  
**Notes:** (Read and Write property)
67.9.58 P2 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value for the parameter p2.
**Notes:** (Read and Write property)

67.9.59 P3 as Integer

MBS Dongle Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value for the parameter p3.
**Notes:** (Read and Write property)

67.9.60 P4 as Integer

**Notes:** (Read and Write property)

67.9.61 Result as Integer

MBS Dongle Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The result of the last function call.
**Notes:** (Read and Write property)

67.9.62 Constants

67.9.63 CBC_MODE = 2

MBS Dongle Plugin, Plugin Version: 16.4. **Function:** One of the encryption modes.
**Notes:** CBC Mode

67.9.64 DES1 1

MBS Dongle Plugin, Plugin Version: 16.4. **Function:** One of the encryption modes.
**Notes:** DES1
67.9.65  DES2 2

MBS Dongle Plugin, Plugin Version: 16.4. **Function:** One of the encryption modes.  
**Notes:** DES2

67.9.66  DES3 3

MBS Dongle Plugin, Plugin Version: 16.4. **Function:** One of the encryption modes.  
**Notes:** DES3

67.9.67  DES_KEY = 2

MBS Dongle Plugin, Plugin Version: 16.4. **Function:** One of the encryption modes.  
**Notes:** DES Key

67.9.68  DES_KEY_LEN = 24

MBS Dongle Plugin, Plugin Version: 16.4. **Function:** One of the encryption modes.  
**Notes:** DES Key Len

67.9.69  ECB_MODE = 1

MBS Dongle Plugin, Plugin Version: 16.4. **Function:** One of the encryption modes.  
**Notes:** ECB Mode

67.9.70  ERROR_KEY_INDEX = 259

MBS Dongle Plugin, Plugin Version: 16.4. **Function:** One of the error codes.  
**Notes:** Error with key index.

67.9.71  ERROR_MAX_KEYS = 258

MBS Dongle Plugin, Plugin Version: 16.4. **Function:** One of the error codes.  
**Notes:** Error with max keys.
67.9. CLASS UNIKEYMBS

67.9.72 ERROR_MAX_USERS = 257

67.9.73 ERROR_UNIKEY_ALREADY_LOCKED = 236
MBS Dongle Plugin, Plugin Version: 16.4. Function: One of the error codes. Notes: Dongle Already Locked (When Lock Twice Or Open After Lock)

67.9.74 ERROR_UNIKEY_AR_BAD_COMMAND = 217
MBS Dongle Plugin, Plugin Version: 16.4. Function: One of the error codes. Notes: Arithmetic Instruction Error

Chapter 68

Drag & Drop

68.1 class DragFolderItemMBS

68.1.1 class DragFolderItemMBS

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: A class for a Drag folderitem.
Notes:
This class is only for Carbon applications, not Cocoa!
While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!

68.1.2 Methods

68.1.3 close

Function: The destructor.
Notes:
There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)
68.1.4 Properties

68.1.5 File as FolderItem

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Creates a folderitem for this file reference.
Notes:
As RB does some caching for folderitems you may get better performance if you check the file reference by type & creator before you ask for this folderitem.
(Read and Write property)

68.1.6 Finderflags as Integer

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The finder flags for this file.
Notes:
Finder flags:
Any flag reserved or not specified should be set to 0.

Useful constants:

- kIsOnDesk & h0001 Files and folders (System 6)
- kColor & h000E Files and folders, 3 bits for colors.
- kReserved1 & h0020 Reserved for future use
- kIsShared & h0040 Files only (Applications only). If clear, the application needs to write to its resource fork, and therefore cannot be shared on a server.
- kHasNoINITs & h0080 Files only (Extensions/Control Panels only). This file contains no INIT resource
- kHasBeenInited & h0100 Files only, Clear if the file contains desktop database, resources (‘BNDL’, ‘FREF’, ‘open’, ‘kind’...) that have not been added yet. Set only by the Finder, Reserved for folders - make sure this bit is cleared for folders.
- kReserved2 & h0200 Reserved for future use
- kHasCustomIcon & h0400 Files and folders
- kIsStationery & h0800 Files only
- kNameLocked & h1000 Files and folders
- kHasBundle & h2000 Files only
- klsInvisible & h4000 Files and folders
- klsAlias & h8000 Files only

(Read and Write property)
68.1.7 MacCreator as String

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The Mac creator code for this file.  
**Notes:** (Read and Write property)

68.1.8 MacType as String

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The Mac type code for this file.  
**Notes:** (Read and Write property)
68.2 class DragItem

68.2.1 class DragItem

Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The dragitem class from Xojo framework.

68.2.2 Methods

68.2.3 NSDraggingInfoMBS as NSDraggingInfoMBS

68.3. CLASS DRAGITEMMBS

68.3 class DragItemMBS

68.3.1 class DragItemMBS

**Function:** A class for a DragItem.
**Notes:**
This class is only for Carbon applications, not Cocoa!
A dragitem is built using several items. Each item has it’s ID and may contain several data types.

While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!

68.3.2 Methods

68.3.3 AddFlavorDataAsMemory(ID as Integer, type as Integer, data as memoryblock)

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
**Function:** Adds data to the drag item.
**Notes:**
Type is a normal flavortype like e.g. "TEXT" (use StringToOSTypeMBS).
ID is an user choosen ID and data the data you want to add.
Lasterror is set.
Done use ID=0 because some applications like the Finder will ignore this ID.
See also:
- 68.3.4 AddFlavorDataAsMemory(ID as Integer, type as Integer, data as memoryblock, OnlyPrivate as boolean)

68.3.4 AddFlavorDataAsMemory(ID as Integer, type as Integer, data as memoryblock, OnlyPrivate as boolean)

**Function:** Adds (public or private) data to the drag item.
**Notes:**
Type is a normal flavortype like e.g. "TEXT" (use StringToOSTypeMBS).
ID is an user choosen ID and data the data you want to add.
Lasterror is set.
Done use ID=0 because some applications like the Finder will ignore this ID.
See also:
68.3.5 AddFlavorDataAsString(ID as Integer, type as Integer, data as string)

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Adds data to the drag item.
Example:

dim d as new DragItemMBS
if d.Create then
    dim t as Integer = OSTypeFromStringMBS("TEXT")
    d.AddFlavorDataAsString 1, t, "Hello World"
    MsgBox str(D.ItemCount)+' item"
end if

Notes:
Type is a normal flavortype like e.g. "TEXT" (use OSTypeFromStringMBS).
ID is an user choosen ID and data the data you want to add.
Lastererror is set.
Done use ID=0 because some applications like the Finder will ignore this ID.
See also:

• 68.3.6 AddFlavorDataAsString(ID as Integer, type as Integer, data as string, OnlyPrivate as boolean)

68.3.6 AddFlavorDataAsString(ID as Integer, type as Integer, data as string, OnlyPrivate as boolean)

Function: Adds (public or private) data to the drag item.
Notes:
Type is a normal flavortype like e.g. "TEXT" (use StringToOSTypeMBS).
ID is an user choosen ID and data the data you want to add.
Lastererror is set.
Done use ID=0 because some applications like the Finder will ignore this ID.
See also:

• 68.3.5 AddFlavorDataAsString(ID as Integer, type as Integer, data as string)
68.3. CLASS DRAGITEMMBS

68.3.7 AddFlavorFileReference(ID as Integer, file as DragFolderItemMBS)

Function: Adds a folderitem to the drag item.
Notes:
Lasterror is set.
ID is an user choosen ID.
Done use ID=0 because some applications like the Finder will ignore this ID.
See also:

- 68.3.8 AddFlavorFileReference(ID as Integer, file as DragFolderItemMBS, OnlyPrivate as boolean)

68.3.8 AddFlavorFileReference(ID as Integer, file as DragFolderItemMBS, OnlyPrivate as boolean)

Function: Adds a folderitem to the drag item.
Example:

```vba
dim d as DragItemMBS
dim f as DragFolderItemMBS

f=new DragFolderItemMBS
f.File=SpecialFolder.Desktop
f.MacCreator=SpecialFolder.Desktop.MacCreator
f.MacType=SpecialFolder.Desktop.MacType

d=new DragItemMBS
if d.create then
d.AddFlavorFileReference(1,f)

d.FlavorFileReference(1)=f
if d.Lasterror<>0 then
    MsgBox str(d.Lasterror)
else
    MsgBox d.FlavorFileReference(1).MacCreator
end if
end if
```

Notes:
Lasterror is set.
ID is an user choosen ID.
If OnlyPrivate is true, the folderitem is only visible to your own application.
Done use ID=0 because some applications like the Finder will ignore this ID.

See also:

- 68.3.7 AddFlavorFileReference(ID as Integer, file as DragFolderItemMBS)

### 68.3.9 close

**Function:** The destructor.

**Notes:**

There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.

(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

### 68.3.10 Create as boolean

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.

**Function:** Creates a new drag object handle.

**Notes:** On success, lasterror is 0 and handle not 0.

See also:

- 68.3.11 Create(PasteboardRef as Integer) as boolean

### 68.3.11 Create(PasteboardRef as Integer) as boolean

**Function:** Creates a new drag object handle.

**Notes:**

PasteboardRef is a PasteboardRef, e.g. created with PasteboardCreate function.

On success, lasterror is 0 and handle not 0.

See also:

- 68.3.10 Create as boolean

### 68.3.12 DragAllowableActions as Integer

**Function:** Gets the actions the drag sender has allowed the receiver to perform.

**Notes:**

These are not requirements, but they highly suggested actions which allows the drag receiver to improve harmony across the system. The allowable actions received are always those local to the caller’s process.

Lasterror is set.

### 68.3.13 FlavorCount(ID as Integer) as Integer

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.

**Function:** Counts the different flavors in one item.

**Example:**

```vbs
dim d as new DragItemMBS
if d.Create then
    dim t as Integer = OSTypeFromStringMBS("TEXT")
    d.AddFlavorDataAsString 1, t, "Hello World"
    MsgBox str(D.FlavorCount(1)) + " flavor"
end if
```

**Notes:**

Returns 0 on any error.
Lasterror is set.

### 68.3.14 FlavorDataFlags(ID as Integer, type as Integer) as Integer

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.

**Function:** Returns the flags for a specified flavor.

**Notes:**

You can check lasterror after calling this to see whether the flavor is available.
ID must be a valid item ID.
Lasterror is set.

Possible values:
68.3.15 **FlavorFileReferenceAvailable**(ID as Integer) as boolean

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function**: Returns true if given drag item contains a file reference.

68.3.16 **FlavorMovieAvailable**(ID as Integer) as boolean

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function**: Returns true if given drag item contains a movie handle.

68.3.17 **FlavorPicture**(ID as Integer) as Picture

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function**: Returns a picture if one is found. **Notes**: Returns nil on any error.

68.3.18 **FlavorPictureAvailable**(ID as Integer) as boolean

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function**: Returns true if given drag item contains a picture handle.

68.3.19 **FlavorSoundAvailable**(ID as Integer) as boolean

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function**: Returns true if given drag item contains a sound handle.

68.3.20 **FlavorTextAvailable**(ID as Integer) as boolean

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function**: Returns true if given drag item contains text.
68.3.21  **FlavorTextStyle(ID as Integer) as string**

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns text style data if present in this drag item.

68.3.22  **FlavorTextStyleAvailable(ID as Integer) as boolean**

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if given drag item contains text styles.

68.3.23  **FlavorType(ID as Integer, index as Integer) as Integer**

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the flavor type of the specified flavor. **Notes:** Value may be the number of e.g. StringToOSTypeMBS("TEXT")

68.3.24  **FlavorUnicodeTextAvailable(ID as Integer) as boolean**

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if given drag item contains an unicode text.

68.3.25  **HasLeftSenderWindow as boolean**

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Drag has left the source window since Drag has started.

68.3.26  **InsideSenderApplication as boolean**

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Drag is occurring within the sender application.
### 68.3.27 InsideSenderWindow as boolean

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Drag is occurring within the sender window.

### 68.3.28 IsDroppedToTrash as boolean

MBS MacClassic Plugin, Plugin Version: 8.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** True if the item has been dropped on the trash. **Notes:** Only valid after the dragging has finished. Requires Mac OS X 10.2.

### 68.3.29 ItemCount as Integer

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The number of items in the dragitem. **Notes:** Lasterror is set. Returns 0 on any error.

### 68.3.30 ItemGetRect(ID as Integer, byref left as Integer, byref top as Integer, byref width as Integer, byref height as Integer)

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Gets the rectangle for a given item. **Notes:** Lasterror is set.

### 68.3.31 ItemID(index as Integer) as Integer

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The ID of the item with the given index. **Notes:** Lasterror is set. Returns 0 on any error.
68.3.32 **ItemSetRect** (ID as Integer, left as Integer, top as Integer, width as Integer, height as Integer)

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sets the rectangle for a given item.  
**Notes:** Lasterror is set.

68.3.33 **ModifiersCurrent** as Integer

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The modifiers from the keyboard at the current time.  
**Notes:**

Values:

<table>
<thead>
<tr>
<th>Modifier</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>cmdKey</td>
<td>256</td>
<td>set if Command key down</td>
</tr>
<tr>
<td>shiftKey</td>
<td>512</td>
<td>set if Shift key down</td>
</tr>
<tr>
<td>alphaLock</td>
<td>1024</td>
<td>set if Caps Lock key down</td>
</tr>
<tr>
<td>optionKey</td>
<td>2048</td>
<td>set if Option key down</td>
</tr>
<tr>
<td>controlKey</td>
<td>4096</td>
<td>set if Control key down</td>
</tr>
<tr>
<td>rightshiftKey</td>
<td>8192</td>
<td>set if right Shift key down</td>
</tr>
<tr>
<td>rightoptionKey</td>
<td>16384</td>
<td>set if right Option key down</td>
</tr>
<tr>
<td>rightcontrolKey</td>
<td>32768</td>
<td>set if right Control key down</td>
</tr>
</tbody>
</table>

Lasterror is set.

68.3.34 **ModifiersMouseDown** as Integer

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The modifiers from the keyboard at the time the mouse was going down.  
**Notes:**

Values:

Lasterror is set.

68.3.35 **ModifiersMouseUp** as Integer

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The modifiers from the keyboard at the time the mouse was going up.
CHAPTER 68. DRAG & DROP

cmdKey 256 set if Command key down
shiftKey 512 set if Shift key down
alphaLock 1024 set if Caps Lock key down
optionKey 2048 set if Option key down
controlKey 4096 set if Control key down
rightshiftKey 8192 set if right Shift key down
rightoptionKey 16384 set if right Option key down
rightcontrolKey 32768 set if right Control key down

Notes:
Values:

cmdKey 256 set if Command key down
shiftKey 512 set if Shift key down
alphaLock 1024 set if Caps Lock key down
optionKey 2048 set if Option key down
controlKey 4096 set if Control key down
rightshiftKey 8192 set if right Shift key down
rightoptionKey 16384 set if right Option key down
rightcontrolKey 32768 set if right Control key down

Lasterror is set.

68.3.36 MouseGlobalPinnedX as Integer

MBS MacClassic Plugin, Plugin Version: 4.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: The current pinned mouse location in global screen coordinates. Notes: The value will be (0, 0) if the drag is not yet used. After a drag completes, the drop location is returned. The pinned mouse location is the mouse location that is used to draw the drag region on the screen. The pinned mouse location is different from the mouse location when the cursor is being constrained in either dimension by a tracking handler.

68.3.37 MouseGlobalPinnedY as Integer

MBS MacClassic Plugin, Plugin Version: 4.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: The current pinned mouse location in global screen coordinates. Notes: The value will be (0, 0) if the drag is not yet used. After a drag completes, the drop location is returned. The pinned mouse location is the mouse location that is used to draw the drag region on the screen. The pinned mouse location is different from the mouse location when the cursor is being constrained
68.3. **CLASS DRAGITEMMBS**

in either dimension by a tracking handler.

---

**68.3.38 **MouseOriginX as Integer

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The initial mouse position.  
**Notes:** Lasterror is set.

---

**68.3.39 **MouseOriginY as Integer

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The initial mouse position.  
**Notes:** Lasterror is set.

---

**68.3.40 **MouseX as Integer

MBS MacClassic Plugin, Plugin Version: 4.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The current mouse location in global screen coordinates.  
**Notes:** The value will be (0, 0) if the drag is not yet used. After a drag completes, the drop location is returned.

---

**68.3.41 **MouseY as Integer

MBS MacClassic Plugin, Plugin Version: 4.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The current mouse location in global screen coordinates.  
**Notes:** The value will be (0, 0) if the drag is not yet used. After a drag completes, the drop location is returned.

---

**68.3.42 **SetDragAllowableActions(actions as Integer, Local as boolean)

MBS MacClassic Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sets the actions the receiver of the drag is allowed to perform. 
**Notes:**  
These are not requirements, but they highly suggested actions which allows the drag receiver to improve harmony across the system. The caller may select whether these drag actions apply to a local or remote process.
Local: A boolean value allowing the drag sender to distinguish between those drag actions allowable by the local receiver versus a remote one.

LastError is set.

**68.3.43 SetDragCGImage(CGImageHandle as Integer, ImageOffsetX as single, ImageOffsetY as single, flags as Integer)**

**Function:** Sets the drag image.  
**Notes:**  
ImageOffsetX and ImageOffsetY is the place inside the image where the mouse cursor is (negative value).  
Values for flags:

- `kDragStandardTranslucency` 0 65% image translucency (standard)  
- `kDragDarkTranslucency` 1 50% image translucency  
- `kDragDarkerTranslucency` 2 25% image translucency  
- `kDragOpaqueTranslucency` 3 0% image translucency (opaque)

LastError is set.  
The cgimage is retained, so you don’t need to keep a reference around.

**68.3.44 SetDragImage(pic as picture, OffsetX as Integer, OffsetY as Integer, flags as Integer)**

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.  
**Function:** Sets the drag image.  
**Notes:**  
Values for flags:

- `kDragStandardTranslucency` 0 65% image translucency (standard)  
- `kDragDarkTranslucency` 1 50% image translucency  
- `kDragDarkerTranslucency` 2 25% image translucency  
- `kDragOpaqueTranslucency` 3 0% image translucency (opaque)

LastError is set.  
The image must be one made using NewPicture (a bitmap image) and it must be kept until the drag is
finished. (Don’t loose it!)

68.3.45 SetDragImageWithRegion(pic as picture, OffsetX as Integer, OffsetY as Integer, flags as Integer, regionhandle as Integer)

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Same as SetDragImage, but with an additional region handle.

68.3.46 SetDragPicture(pic as picture, ImageOffsetX as single, ImageOffsetY as single, flags as Integer)

MBS MacClassic Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sets the drag image.

**Notes:**
This is the same method as SetDragCGImage, but it takes REALbasic picture.
Supports transparency.

ImageOffsetX and ImageOffsetY is the place inside the image where the mouse cursor is (negative value).

Values for flags:

- kDragStandardTranslucency 0 65% image translucency (standard)
- kDragDarkTranslucency 1 50% image translucency
- kDragDarkerTranslucency 2 25% image translucency
- kDragOpaqueTranslucency 3 0% image translucency (opaque)

Lasterror is set.

68.3.47 StartDrag(MouseX as Integer, MouseY as Integer, MouseModifiers as Integer, Left as Integer, Top as Integer, Width as Integer, Height as Integer)

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Starts dragging.

**Notes:**
The plugin is not perfect with dragging as it does not have as much control as RB itself has over events.
Values:

- **cmdKey** 256 set if Command key down
- **shiftKey** 512 set if Shift key down
- **alphaLock** 1024 set if Caps Lock key down
- **optionKey** 2048 set if Option key down
- **controlKey** 4096 set if Control key down
- **rightshiftKey** 8192 set if right Shift key down
- **rightoptionKey** 16384 set if right Option key down
- **rightcontrolKey** 32768 set if right Control key down

### 68.3.48 Properties

#### 68.3.49 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.

Function: The handle of the DragRef.

Notes:

Maybe useful for toolbox calls.

(Read and Write property)

#### 68.3.50 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.

Function: The last error code reported.

Notes: (Read and Write property)

#### 68.3.51 Release as Boolean

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.

Function: Whether the destructor will release the handle.

Notes: (Read and Write property)

#### 68.3.52 DragDropAction as Integer

Function: The action performed by the receiver of the drag.

Notes:
More than one action may have been performed.

LastError is set.
(Read and Write computed property)

68.3.53  **FlavorDataAsMemory** (ID as Integer, type as Integer) as memoryblock

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Get and set flavor data.
**Notes:** (Read and Write computed property)

68.3.54  **FlavorDataAsString** (ID as Integer, type as Integer) as string

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Get and set flavor data.
**Notes:** (Read and Write computed property)

68.3.55  **FlavorFileReference** (ID as Integer) as DragFolderItemMBS

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns a file reference if one is inside the drag item.
**Notes:**
Returns nil on any error.
Value is setable in plugin version 4.2.
(Read and Write computed property)

68.3.56  **FlavorText** (ID as Integer) as string

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns text data if present in this drag item.
**Notes:** (Read and Write computed property)
68.3.57 Constants

68.3.58 kDragActionAlias=2

Notes:
The drag action constants define, in a general way, what actions a drag should or has performed. Some drag actions enforce a mode of operation while others are flexible suggestions.

Suggests the data contained within the drag can be/is shared.

68.3.59 kDragActionAll=& hFFFFFFFF

Notes:
The drag action constants define, in a general way, what actions a drag should or has performed. Some drag actions enforce a mode of operation while others are flexible suggestions.

All of the above drag actions are allowed.

68.3.60 kDragActionCopy=1

Notes:
The drag action constants define, in a general way, what actions a drag should or has performed. Some drag actions enforce a mode of operation while others are flexible suggestions.

Suggests the data contained within the drag can be/was copied.

68.3.61 kDragActionDelete=32

Notes: The drag action constants define, in a general way, what actions a drag should or has performed. Some drag actions enforce a mode of operation while others are flexible suggestions.
68.3.62  \texttt{kDragActionGeneric=4}

MBS MacClassic Plugin, Plugin Version: 9.2. **Function:** One of the drag action constants.  
**Notes:**  
The drag action constants define, in a general way, what actions a drag should or has performed. Some drag actions enforce a mode of operation while others are flexible suggestions.

Suggests the drag action is can be defined by the drag destination or was not defined by the drag destination.

68.3.63  \texttt{kDragActionMove=16}

MBS MacClassic Plugin, Plugin Version: 9.2. **Function:** One of the drag action constants.  
**Notes:**  
The drag action constants define, in a general way, what actions a drag should or has performed. Some drag actions enforce a mode of operation while others are flexible suggestions.

68.3.64  \texttt{kDragActionNothing=0}

MBS MacClassic Plugin, Plugin Version: 9.2. **Function:** One of the drag action constants.  
**Notes:**  
The drag action constants define, in a general way, what actions a drag should or has performed. Some drag actions enforce a mode of operation while others are flexible suggestions.

Suggests nothing should be/was done with the data in a drag. When set as an allowable action for remote drags, the drag will not be sent to apps other than the sender.

68.3.65  \texttt{kDragActionPrivate=8}

MBS MacClassic Plugin, Plugin Version: 9.2. **Function:** One of the drag action constants.  
**Notes:**  
The drag action constants define, in a general way, what actions a drag should or has performed. Some drag actions enforce a mode of operation while others are flexible suggestions.

Suggests the drag action should be negotiated privately between the drag source and destination.
68.4  class DragReceiverMBS

68.4.1  class DragReceiverMBS

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: A class for a drag receiver.
Notes:
This class is only for Carbon applications, not Cocoa!
Whenever you drop something on a window and the Drag Tracker accepted the DragItem, your DragReceiver will get it finally.
While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!

68.4.2  Methods

68.4.3  AttachWindow(win as window) as boolean

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Attaches this object to the given window.
Notes:
Returns true on success.
You can only attach to one object to one window at once.
You can pass nil to attach to all of your windows.

68.4.4  AttachWindowHandle(win as Integer) as boolean

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Attaches this object to the window given using the window handle.
Example:

    dim d as DragReceiverMBS  // your receiver
    dim b as boolean
    b=d.AttachWindowHandle(MyOverlayWindow.handle)

Notes:
Returns true on success.
You can only attach to one object to one window at once.
You can pass 0 to attach to all of your windows.
68.4.5 close

Function: The destructor.
Notes:
There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

68.4.6 Properties

68.4.7 WindowHandle as Integer

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The handle of the used window.
Notes:
0 if not attached to a window.
(Read only property)

68.4.8 Events

68.4.9 Received(drag as DragItemMBS) as boolean

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Called whenever someone dropped something on your window and the DragTracker accepted it.
Notes: Return true if you accept the given drag item.
68.5 class DragTrackerMBS

68.5.1 class DragTrackerMBS

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: A class for a drag tracker.
Notes:
This class is only for Carbon applications, not Cocoa!
Whenever something is dragged over a window, the Drag Manager calls all registered Drag Tracker to ask them whether the window can accept the given DragItem.

While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!

68.5.2 Methods

68.5.3 AttachWindow(win as window) as boolean

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Attaches this object to the given window.
Notes:
Returns true on success.
You can only attach to one object to one window at once.
You can pass nil to attach to all of your windows.

68.5.4 AttachWindowHandle(win as Integer) as boolean

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Attaches this object to the window given using the window handle.
Example:

dim d as DragTrackerMBS // your tracker
dim b as boolean
b=d.AttachWindowHandle(MyOverlayWindow.handle)

Notes:
Returns true on success.
You can only attach to one object to one window at once.
You can pass 0 to attach to all of your windows.
68.5.5 close

Function: The destructor.
Notes:
There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

68.5.6 Properties

68.5.7 WindowHandle as Integer

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The handle of the used window.
Notes:
0 if not attached to a window.
(Read only property)

68.5.8 Events

68.5.9 Dragging(message as Integer, drag as DragItemMBS) as boolean

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The user is dragging over the window.
Notes:
Values for message:

1 Enter Handler
2 Enter Window
3 Inside Window
4 Leave Window
5 Leave Handler

While running inside the RB IDE your application may not receive all events.
Return true if you accept the given drag item.
68.6. class NSDraggingImageComponentMBS

68.6.1 class NSDraggingImageComponentMBS

Notes: An array of NSDraggingImageComponent instances are composited together to create the dragging image for an NSDraggingItem. NSDraggingImageComponent instances can simply be considered as named images with a location used by an NSDraggingItem instance.

68.6.2 Methods

68.6.3 Constructor(key as string)

Notes:

key: The key.
Available in OS X v10.7 and later.

68.6.4 draggingImageComponentWithKey(key as string) as NSDraggingImageComponentMBS

Notes: Available in OS X v10.7 and later.

68.6.5 NSDraggingImageComponentIconKey as string

Notes:

Key with a corresponding value that is an image of the item being dragged.
Available in OS X v10.7 and later.
68.6.6 NSDraggingImageComponentLabelKey as string

**Function:** One of the keys for Constructor.  
**Notes:**  
Key with a corresponding value that represents a textual label associate with the item, for example, a file name.  
Available in OS X v10.7 and later.

68.6.7 Properties

68.6.8 Handle as Integer

**Function:** The internal object handle.  
**Notes:** (Read and Write property)

68.6.9 contents as Variant

**Function:** An object providing the image contents of the component.  
**Notes:**  
Typically you set an NSImage instance as content.  
Available in OS X v10.7 and later.  
(Read and Write computed property)

68.6.10 frame as NSRectMBS

**Function:** The coordinate space is the bounds of the parent dragging item.  
**Notes:**  
The frame is `{ { 0,0 }, { draggingFrame.size.width, draggingFrame.size.height } } .  

The coordinate space is the bounds of the parent NSDraggingItem instance’s draggingFrame.  
Available in OS X v10.7 and later.  
(Read and Write computed property)
68.6.11  key as string

Function: The unique name of this image component instance.

Notes:

The key must be unique for each component in an NSDraggingItem instance. You can create your own named components, however the keys described in NSDragImage Component Keys have special meanings.

When an NSDraggingItem instances imageComponents are changed by one of the enumerateDraggingItemsWithOptions methods the image associated with this key is morphed into the new image component’s image associated with the same key.

Available in OS X v10.7 and later.
(Read and Write computed property)
CHAPTER 68. DRAG & DROP

68.7 class NSDraggingInfoMBS

68.7.1 class NSDraggingInfoMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The NSDraggingInfo protocol declares methods that supply information about a dragging session. Notes: NSDraggingInfo protocol methods are designed to be invoked from within a class’s implementation of NSDraggingDestination protocol methods. The Application Kit automatically passes an object that conforms to the NSDraggingInfo protocol as the argument to each of the methods defined by NSDraggingDestination. NSDraggingInfo messages should be sent to this object; you never need to create a class that implements the NSDraggingInfo protocol.

68.7.2 Methods

68.7.3 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The private constructor. See also:

• 68.7.4 Constructor(Handle as Integer)

68.7.4 Constructor(Handle as Integer)

MBS MacCocoa Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The constructor to build an NSDraggingInfo object with a handle. Notes: Handle should be a Cocoa object reference implementing the NSDraggingInfo protocol. See also:

• 68.7.3 Constructor

68.7.5 namesOfPromisedFilesDroppedAtDestination(dropDestination as FolderItem) as string()

MBS MacCocoa Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Sets the drop location for promised files and returns the names of the files that the receiver promises to create there. Notes:

dropDestination: A folderitem specifying the drop location for promised files.

Return an array of file names, which are not full paths.
Drag destinations should invoke this method within their `performDragOperation` method. The source may or may not have created the files by the time this method returns.

### 68.7.6 promisedFilesDroppedAtDestination

**Function:** Sets the drop location for promised files and returns the files that the receiver promises to create there.

**Notes:**
- `dropDestination`: A `FolderItem` specifying the drop location for promised files.

Return an array of `FolderItem` for the files.
The files may not yet exist.

Drag destinations should invoke this method within their `performDragOperation` method. The source may or may not have created the files by the time this method returns.

### 68.7.7 slideDraggedImageTo

**Function:** Slides the image to a specified location.

**Notes:**
- `screenPoint`: A point that specifies a location in the screen coordinate system.

This method can be used to adjust the location to which the dragged image will slide back if the drag is rejected.
It should only be invoked from within the destination’s implementation of `prepareForDragOperation`, and will only have effect if the destination rejects the drag.
This method is invoked after the user has released the image but before it is removed from the screen.

### 68.7.8 Properties

#### 68.7.9 animatesToDestination as boolean

**Function:** Whether the dragging formation animates while the drag is over this destination.

**Notes:**
During the conclusion of an accepted drag, if this property is set to true, the drag manager will animate each dragging image to their NSDraggingFormationNone locations. Otherwise, the drag images are removed without any animation.

This property is inspected between prepareForDragOperation and performDragOperation. You should enumerate through the dragging items during performDragOperation to set the item’s draggingFrame to the correct destinations.

Available in OS X v10.7 and later.

(Read and Write property)

### 68.7.10 draggedImage as Variant

**Function:** Returns the image being dragged.

**Notes:**

Value is a NSImageMBS object. Returned as Variant to reduce plugin dependencies.

This image object visually represents the data put on the pasteboard during the drag operation; however, it is the pasteboard data and not this image that is ultimately utilized in the dragging operation.

This method returns non-nil for a local drag, but nil for a cross-process drag. With the new multi-image dragging capabilities, a cross-process destination may participate and change the drag image. But it still cannot get the current drag image.

(Read only property)

### 68.7.11 draggedImageLocation as NSPointMBS

**Function:** Returns the current location of the dragged image’s origin.

**Notes:**

Returns the dragged image’s origin, in the base coordinate system of the destination object’s window. The image moves along with the mouse pointer (the position of which is given by draggingLocation) but may be positioned at some offset.

(Read only property)
68.7. CLASS NSDRAGGINGINFOMBS

68.7.12 draggingDestinationWindow as Variant

**Function:** Returns the destination window for the dragging operation.
**Notes:**
Value is a NSWindowMBS object. Returned as Variant to reduce plugin dependencies.
Either this window is the destination itself, or it contains the view object that is the destination.
(Read only property)

68.7.13 draggingFormation as Integer

**Function:** Returns the dragging formation while the drag is over this destination.
**Notes:**
Set this property to change the formation of the drag items. This is generally done during the updateDraggingItemsForDrag method or whenever you enumerate the dragging items.
The default value is the current drag formation.
Note: Set this property before or after the NSDraggingInfo or NSDraggingSession class’s method enumerateDraggingItemsWithOptions not inside the enumeration Block.
Available in OS X v10.7 and later.
(Read and Write property)

68.7.14 draggingLocation as NSPointMBS

**Function:** Returns the current location of the mouse pointer in the base coordinate system of the destination object’s window.
**Notes:** (Read only property)

68.7.15 draggingPasteboard as Variant

**Function:** Returns the pasteboard object that holds the data being dragged.
**Notes:**
Value is a NSPasteboardMBS object. Returned as Variant to reduce plugin dependencies.

The dragging operation that is ultimately performed utilizes this pasteboard data and not the image returned by the draggedImage method.
(Read only property)

68.7.16 draggingSequenceNumber as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a number that uniquely identifies the dragging session.
**Notes:** (Read only property)

68.7.17 draggingSource as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the source, or owner, of the dragged data.
**Notes:**
This method returns nil if the source is not in the same application as the destination. The dragging source implements methods from the NSDraggingSource protocol.
(Read only property)

68.7.18 draggingSourceOperationMask as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the dragging operation mask of the dragging source.
**Notes:**
The dragging operation mask, which is declared by the dragging source through the NSDraggingSource sourceOperationMaskForDraggingContext method (preferred) or the NSDraggingSource draggingSourceOperationMaskForLocal method. If the source does not permit any dragging operations, this method should return NSDragOperationNone.

If the source permits dragging operations, the elements in the mask are one or more of the constants described in "Obtaining Information About the Dragging Session", combined using the C bitwise OR operator.

If the user is holding down a modifier key during the dragging session and the source does not prohibit modifier keys from affecting the drag operation (through its ignoreModifierKeysWhileDragging method), then the operating system combines the dragging operation value that corresponds to the modifier key (see the descriptions below) with the source's mask using the C bitwise AND operator.
The modifier keys are associated with the dragging operation options shown below:

<table>
<thead>
<tr>
<th>Modifier Key</th>
<th>Dragging Operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Control</td>
<td>NSDragOperationLink</td>
</tr>
<tr>
<td>Option</td>
<td>NSDragOperationCopy</td>
</tr>
<tr>
<td>Command</td>
<td>NSDragOperationGeneric</td>
</tr>
</tbody>
</table>

(Modifier Key Dragging Operation)

**68.7.19 Handle as Integer**

MBS MacCocoa Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference. **Notes:** (Read and Write property)

**68.7.20 numberOfValidItemsForDrop as Integer**

MBS MacCocoa Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the number of valid items for a drop operation. **Notes:** During draggingEntered or draggingUpdated, you are responsible for returning the drag operation. In some cases, you may accept some, but not all items on the dragging pasteboard. (For example, your application may only accept image files.)

If you only accept some of the items, set this property to the number of items accepted so the drag manager can update the drag count badge.

When updateDraggingItemsForDrag is called, you should set the image of non-valid dragging items to nil. If none of the drag items are valid then you should not updateItems, simply return NSDragOperationNone from your implementation of draggingEntered and, or draggingUpdated and do not modify any drag item properties.

Available in OS X v10.7 and later. **(Read and Write property)**
CHAPTER 68. DRAG & DROP

68.7.21 Constants

68.7.22 NSDraggingFormationDefault = 0

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** One of the constants to control the visual format of multiple items being dragged.

**Notes:**
The system determined formation.
Available in OS X v10.7 and later.

68.7.23 NSDraggingFormationList = 3

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** One of the constants to control the visual format of multiple items being dragged.

**Notes:**
Drag images are laid out vertically, non-overlapping with the left edges aligned.
Available in OS X v10.7 and later.

68.7.24 NSDraggingFormationNone = 1

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** One of the constants to control the visual format of multiple items being dragged.

**Notes:**
Drag images maintain their set positions relative to each other.
Available in OS X v10.7 and later.

68.7.25 NSDraggingFormationPile = 2

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** One of the constants to control the visual format of multiple items being dragged.

**Notes:**
Drag images are placed on top of each other with random rotations.
Available in OS X v10.7 and later.
68.7. **CLASS NSDRAGGINGINFOMBS**

68.7.26  **NSDraggingFormationStack = 4**

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** One of the constants to control the visual format of multiple items being dragged.  
**Notes:**

Drag images are laid out overlapping diagonally.  
Available in OS X v10.7 and later.

68.7.27  **NSDragOperationAll_Obsolete = 15**

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** One of the drag operation constants.  
**Notes:** The NSDragOperationAll constant is deprecated. Use NSDragOperationEvery instead.

68.7.28  **NSDragOperationCopy = 1**

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** One of the drag operation constants.  
**Notes:** The data represented by the image can be copied.

68.7.29  **NSDragOperationDelete = 32**

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** One of the drag operation constants.  
**Notes:** The data can be deleted.

68.7.30  **NSDragOperationEvery = -1**

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** One of the drag operation constants.  
**Notes:** All of the above.

68.7.31  **NSDragOperationGeneric = 4**

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** One of the drag operation constants.  
**Notes:** The operation can be defined by the destination.
68.7.32 **NSDragOperationLink = 2**

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** One of the drag operation constants.

68.7.33 **NSDragOperationMove = 16**

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** One of the drag operation constants. **Notes:** The data can be moved.

68.7.34 **NSDragOperationNone = 0**

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** One of the drag operation constants. **Notes:** No drag operations are allowed.

68.7.35 **NSDragOperationPrivate = 8**

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** One of the drag operation constants. **Notes:** The operation is negotiated privately between the source and the destination.
68.8 class NSDraggingItemMBS

68.8.1 class NSDraggingItemMBS

**Function:** The NSDraggingItem class encompasses a single dragged item within an NSDraggingSession instance.

**Notes:**

See NSDraggingSessionMBS Class Reference for more information.

When the NSDraggingSession method beginDraggingSessionWithItems is called, the dragging items passed to the method are consumed immediately and are not retained.

68.8.2 Methods

68.8.3 Constructor(item as NSPasteboardItemMBS)

**Function:** Initializes a dragging item using the specified content.

**Notes:**

item: The object that provides the dragging content.

When the developer creates an NSDraggingItem instance, it is for use with the view method beginDraggingSessionWithItems. During the invocation of that method, the item is placed onto the dragging pasteboard for the NSDraggingSession that contains the dragging item instance.

Available in OS X v10.7 and later.

68.8.4 item as Variant

MBS MacCocoa Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the pasteboard reader or writer object dependent on the context of where this dragging item is used. (read-only)

**Notes:** When you create an NSDraggingItem instance, item is the pasteboardWriter passed to Constructor.
68.8.5 *setDraggingFrame*(frame as NSRectMBS, contents as Variant)

**Function:** Sets the item’s dragging frame and contents.

**Notes:**

frame: The item content frame in the same coordinate space that the draggingFrame.
contents: The item contents to display when dragging. Typically this is an NSImage, but a CGImageRef will also work.

Alternate single image component setter.

This method simplifies modifying the components of an NSDraggingItem when there is only one component.

This is a convenience method. This method sets the draggingFrame and creates a single NSDraggingImage-Component instance with one image corresponding to the NSDraggingImageComponentIconKey key. You should only use this method under the following conditions: the drag image for this item is composed of a single image., or there are a reasonable number of dragging item instances being created or enumerated.

This method will set the draggingFrame and imageComponents properties. Available in OS X v10.7 and later.

68.8.6 Properties

68.8.7 *Handle as Integer*

**Notes:** (Read and Write property)

68.8.8 *draggingFrame as NSRectMBS*

MBS MacCocoa Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The frame of the dragging item.

**Notes:**

The dragging frame provides the spatial relationship between NSDraggingItem instances when the dragging formation is set to NSDraggingFormationNone.

The exact coordinate space of this rectangle is dependent on where it is used. The view that initiated the drag using beginDraggingSessionWithItems or the view your pass to the NSDraggingSession instance
implantation of enumerateDragggingItemsWithOptions.

Available in OS X v10.7 and later.
(Read and Write computed property)
68.9 class NSDraggingSessionMBS

68.9.1 class NSDraggingSessionMBS

**Function:** The NSDraggingSession class encompasses a drag and drop action and allows modification of the drag while in progress.

**Notes:**

You start a new dragging session by calling the NSView method beginDraggingSessionWithItems method. This method immediately returns and you can further modify the properties of the dragging session. The actual drag begins at the next turn of the run loop.

This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

68.9.2 Methods

68.9.3 Constructor

**Function:** The private constructor.

68.9.4 draggingLeaderIndex as Integer

**Function:** The index of the dragging item under the cursor.

**Notes:**

The index is to an element in the array passed as the first parameter to the NSView method beginDraggingSessionWithItem.

The default is the NSDraggingItem closest to the location field in the event parameter that was passed to the beginDraggingSessionWithItems method.

Available in OS X v10.7 and later.

68.9.5 draggingLocation as NSPointMBS

**Function:** The current cursor location of the drag in screen coordinates. (read-only)
**68.9. CLASS NSDRAGGINGSESSIONMBS**

Notes: Available in OS X v10.7 and later.

### 68.9.6 draggingPasteboard as NSPasteboardMBS

MBS MacCocoa Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the pasteboard object that contains the data being dragged. (read-only)  
**Notes:** Available in OS X v10.7 and later.

### 68.9.7 draggingSequenceNumber as Integer

MBS MacCocoa Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a number that uniquely identifies the dragging session. (read-only)  
**Notes:** Available in OS X v10.7 and later.

### 68.9.8 Properties

### 68.9.9 Handle as Integer

**Notes:** (Read and Write property)

### 68.9.10 animatesToStartingPositionsOnCancelOrFail as boolean

MBS MacCocoa Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Controls whether the dragging image animates back to its starting point on a cancelled or failed drag.  
**Notes:**  
This property should be set immediately after creating the dragging session.

The default value is true.  
Available in OS X v10.7 and later.  
(Read and Write computed property)
68.9.11 draggingFormation as Integer

**Function:** Controls the dragging formation when the drag is not over the source or a valid destination. 
**Notes:**
Setting this value causes the dragging formation to change immediately, provided a valid destination has not overridden the behavior. If the dragging session hasn’t started yet, the dragging items will animate into formation immediately upon start. It is highly recommended to never change the formation when starting a drag.

The default value is NSDraggingFormationNone.  
Available in OS X v10.7 and later.  
(Read and Write computed property)

68.9.12 Constants

68.9.13 NSDraggingContextOutsideApplication = 0

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** Whether a drag terminates within or outside the application. 
**Notes:**
The dragging terminates outside the application.  
Available in OS X v10.7 and later.

68.9.14 NSDraggingContextWithinApplication = 1

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** Whether a drag terminates within or outside the application. 
**Notes:**
The dragging terminates within the application. 
Available in OS X v10.7 and later.

68.9.15 NSDraggingFormationDefault = 0

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** One of the constants to control the visual format of multiple items being dragged. 
**Notes:**
The system determined formation.
68.9.16  **NSDraggingFormationList = 3**

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** One of the constants to control the visual format of multiple items being dragged.

**Notes:**
Drag images are laid out vertically, non-overlapping with the left edges aligned.
Available in OS X v10.7 and later.

68.9.17  **NSDraggingFormationNone = 1**

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** One of the constants to control the visual format of multiple items being dragged.

**Notes:**
Drag images maintain their set positions relative to each other/
Available in OS X v10.7 and later.

68.9.18  **NSDraggingFormationPile = 2**

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** One of the constants to control the visual format of multiple items being dragged.

**Notes:**
Drag images are placed on top of each other with random rotations.
Available in OS X v10.7 and later.

68.9.19  **NSDraggingFormationStack = 4**

MBS MacCocoa Plugin, Plugin Version: 13.1. **Function:** One of the constants to control the visual format of multiple items being dragged.

**Notes:**
Drag images are laid out overlapping diagonally.
Available in OS X v10.7 and later.
CHAPTER 68. DRAG & DROP

68.10  Globals

68.10.1  InstallDragImageMBS

MBS MacExtrax Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Install drag image patch.
Notes: This allows you to use retina NSImage for drag image with using Xojo’s built in drag and drop classes.
So call InstallDragImageMBS once in app.open to initialize.

Than before call DragItem.Drag, call SetNextDragImageMBS and provide a 2x image as NSImageMBS object.
See example project for details.

68.10.2  SetNextDragImageMBS(Img as NSImageMBS)

MBS MacExtrax Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Sets which image to use for next drag.
Notes: Once image has been replaced for Xojo’s drag, the image reference is freed by plugin.

68.11  class WinDataObjectMBS

68.11.1  class WinDataObjectMBS

Function: The class for a data object for Drag and Drop.
Example:

// take some picture
dim p as Picture = LogoMBS(500)

// create data object
dim w as new WinDataObjectMBS(p)

Notes: While the drag classes compile for Web Edition, they run on the server, so they have no effect on
the client browser!
68.11. Methods

68.11.3 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer)

MBS Win Plugin, Plugin Version: 11.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Adds a drag image to the data object.

**Notes:**
- pic: the picture to use.
- width and height: The size of the picture.
- x and y: The location of the cursor within the drag image. The point should contain the offset from the upper-left corner of the drag image to the location of the cursor.

Requires Windows 2000 Professional with SP3, Windows XP.
On success the HelperHandle property is not zero.

Turn off antialiasing when drawing text. Otherwise, artifacts could occur at the edges, between the text color and the color key.

This function takes the picture (and it’s mask) and turns it in a nice drag picture. This includes applying the mask and passing black for the background color. Dark colors which should be transparent will be made lighter.

See also:

- 68.11.4 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer, ImageBackgroundColor as color)

68.11.4 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer, ImageBackgroundColor as color)

MBS Win Plugin, Plugin Version: 10.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Adds a drag image to the data object.

**Notes:**
- pic: the picture to use.
- width and height: The size of the picture.
- x and y: The location of the cursor within the drag image. The point should contain the offset from the upper-left corner of the drag image to the location of the cursor.
- ImageBackgroundColor: The color used by the control to fill the background of the drag image.

Requires Windows 2000 Professional with SP3, Windows XP.
On success the HelperHandle property is not zero.
Turn off antialiasing when drawing text. Otherwise, artifacts could occur at the edges, between the text color and the color key.

See also:

- 68.11.3 AddDragImage(pic as picture, width as Integer, height as Integer, x as Integer, y as Integer)

### 68.11.5 AddFiles(files() as folderitem)

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Adds file references in the format the explorer can understand them.

See also:

- 68.11.6 AddFiles(pathes() as string)

### 68.11.6 AddFiles(pathes() as string)

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Adds file paths in the format the explorer can understand them.

**Notes:** Folder paths should have no backslash on the end.

See also:

- 68.11.5 AddFiles(files() as folderitem)

### 68.11.7 AddPicture(pic as picture)

MBS Win Plugin, Plugin Version: 10.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Adds a picture to the data object.

### 68.11.8 AddRaw(format as Integer, data as string)

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Adds raw data to the data object.

**Notes:** Depending of the format you may need to add chr(0) on the end.

### 68.11.9 AddText(text as string)

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Adds the text to the data object.
68.11. CLASS WINDATAOBJECTMBS

68.11.10 Constructor

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates an empty data object.
See also:

- 68.11.11 Constructor(files() as folderitem)
- 68.11.12 Constructor(pic as picture)
- 68.11.13 Constructor(text as string)

68.11.11 Constructor(files() as folderitem)

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a data object and adds the files.
See also:

- 68.11.10 Constructor
- 68.11.12 Constructor(pic as picture)
- 68.11.13 Constructor(text as string)

68.11.12 Constructor(pic as picture)

MBS Win Plugin, Plugin Version: 10.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new data object and adds the given picture.

**Example:**
```javascript
// take some picture
dim p as Picture = LogoMBS(500)

// create data object
dim w as new WinDataObjectMBS(p)
```

See also:

- 68.11.10 Constructor
- 68.11.11 Constructor(files() as folderitem)
- 68.11.13 Constructor(text as string)
68.11.13 Constructor(text as string)

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new data object and adds the given text.

**Example:**

```vbnet
// create data object with text
dim w as new WinDataObjectMBS("Hello World")
```

See also:

- 68.11.10 Constructor
- 68.11.11 Constructor(files() as folderitem)
- 68.11.12 Constructor(pic as picture)

68.11.14 Formats as String()

MBS Win Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries list of formats in the data object.

**Notes:** Helps for debugging to see what is inside.

68.11.15 GetFileContents(index as Integer) as string

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries file content for the file with the given index.

**Notes:**

Use index from WindowsFileDescriptorMBS.index property.

This works for files up to a few hundred megabytes in size. For larger files we will have to change plugin if you want to receive those.

68.11.16 GetFileDescriptors as WindowsFileDescriptorMBS()

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries file descriptors.

**Example:**

```vbnet
dim dataObject as WinDataObjectMBS // your data object
```
68.11. **CLASS WINDATAOBJECTMBS**

```vba
dim des(-1) as WindowsFileDescriptorMBS = dataObject.GetFileDescriptors

for each d as WindowsFileDescriptorMBS in des
    // we got file descriptions. Some metadata and the data. No path.
    dim data as string = dataObject.GetFileContents(0)
    msgbox "File """" + d.FileName + """" with """" + str(lenb(data)) + """" bytes data."
next
```

**Notes:** Result array is empty on any error.

---

### 68.11.17 GetFileName as string

MBS Win Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries filename from data object.  

**Notes:** Depending on how the other application works, the drag data object may have either file descriptors, a file path or path strings.

The file name is valid at least as long as this object is alive.

---

### 68.11.18 GetPaths as folderitem()

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the paths in the data object.  

**Example:**

```vba
dim dataObject as WinDataObjectMBS // your data object

dim files(-1) as FolderItem = dataObject.GetPaths

for each f as FolderItem in files
    // we got a file you can use like any other file (e.g. copy)
    listbox1.AddRow "Path """" + f.AbsolutePath + """"
next
```

**Notes:** Checks for a CF_HDROP type. May return one or more folderitems.
68.11.19  GetPathStrings as string()

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the paths in the data object. **Notes:** Checks for a CF_HDROP type. May return one or more folderitems.

68.11.20  GetPicture as picture

MBS Win Plugin, Plugin Version: 10.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries the picture from the data object. **Notes:** Supports CF_BITMAP/TYMED_GDI.

68.11.21  GetRaw(format as Integer) as string

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the raw data for the given type.

68.11.22  GetText as string

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the text from the data object. **Notes:** Returns unicode or ANSI text depending on what is available. Unicode is preferred.

68.11.23  HasFileDescriptors as boolean

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Checks whether this data object contains file descriptors. **Notes:** Returns true if a path is found. Checks for CF_FILEGROUPDESCRIPTOR.

Windows uses File Descriptors and FileContents for drag and drop operations where the data is not stored in a file. You get the descriptors and if you need you can get the data which is delivered just in time.
68.11. **CLASS WINDATAOBJECTMBS**

68.11.24 **HasFileName as boolean**

MBS Win Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Checks to see if a filename entry is in the data object.

68.11.25 **HasPaths as boolean**

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Checks whether this data object contains file paths.

Notes:
Returns true if a path is found.
Checks for CF_HDROP.

68.11.26 **HasPicture as boolean**

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Checks if a picture is part of this data object.

Notes:
Returns true if a picture is found.
Checks for CF_BITMAP.

68.11.27 **HasRaw(format as Integer) as boolean**

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Checks whether this data object contains data in the given format.

68.11.28 **HasText as boolean**

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Checks whether this data object contains Text or UnicodeText.

Notes:
Returns true if text is found.
Checks for CF_UNICODETEXT and CF_TEXT.
68.11.29 Properties

68.11.30 DragImage as Picture

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The drag image.
**Notes:**
Used to show user what he is dragging.
(Read only property)

68.11.31 Handle as Integer

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal handle.
**Notes:** (Read and Write property)

68.11.32 HelperHandle as Integer

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The internal helper object to handle the drag image.
**Notes:**
This value is not zero if the AddDragImage call was successful.
(Read and Write property)

68.11.33 Lasterror as Integer

MBS Win Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
**Notes:** (Read and Write property)

68.11.34 Constants

68.11.35 CF_BITMAP = 2

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the constants for the data types.
68.11. **CLASS WINDATAOBJECTMBS**

68.11.36 **CF\_DIB = 8**

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the constants for the data types.

68.11.37 **CF\_DIBV5 = 17**

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the constants for the data types.

68.11.38 **CF\_DIF = 5**

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the constants for the data types.

68.11.39 **CF\_ENHMETAFILE = 14**

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the constants for the data types.

68.11.40 **CF\_HDROP = 15**

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the constants for the data types.

68.11.41 **CF\_LOCALE = 16**

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the constants for the data types.

68.11.42 **CF\_METAFILEPICT = 3**

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the constants for the data types.

68.11.43 **CF\_OEMTEXT = 7**

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the constants for the data types.
68.11.44 CF_PALETTE = 9

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the constants for the data types.

68.11.45 CF_PENDATA = 10

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the constants for the data types.

68.11.46 CF_RIFF = 11

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the constants for the data types.

68.11.47 CF_SYLK = 4

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the constants for the data types.

68.11.48 CF_TEXT = 1

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the constants for the data types.

68.11.49 CF_TIFF = 6

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the constants for the data types.

68.11.50 CF_UNICODETEXT = 13

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the constants for the data types.

68.11.51 CF_WAVE = 12

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the constants for the data types.
68.12  class WindowsDragSourceMBS

**Function:**
The class for Drag and Drop on Windows to create a drag source.

**Notes:**
The WindowsDragSourceMBS class is one of the class you implement to provide drag-and-drop operations in your application. It contains methods used in any application used as a data source in a drag-and-drop operation. The data source application in a drag-and-drop operation is responsible for:

- Determining the data being dragged based on the user’s selection.
- Initiating the drag-and-drop operation based on the user’s mouse actions.
- Generating some of the visual feedback during the drag-and-drop operation, such as setting the cursor and highlighting the data selected for the drag-and-drop operation.
- Canceling or completing the drag-and-drop operation based on the user’s mouse actions.
- Performing any action on the original data caused by the drop operation, such as deleting the data on a drag move.

WindowsDragSourceMBS contains the events for generating visual feedback to the end user and for canceling or completing the drag-and-drop operation.

**When To Implement**
Implement WindowsDragSourceMBS if you are developing a container or server application that can act as a data source for a drag-and-drop operation. The WindowsDragSourceMBS interface is only required during the drag-and-drop operation.

If you implement the WindowsDragSourceMBS class, you must also implement the DataObjectMBS class on the same object to represent the data being transferred.

You can use the same implementation of DataObjectMBS for drag-and-drop data as for the data object offered to the clipboard. After you have implemented clipboard operations in your application, you can add drag-and-drop operations with only a little extra work.

**When To Use**
You do not usually call the WindowsDragSourceMBS methods directly. Instead, your data source calls the DoDragDrop function when it detects that the user has initiated a drag-and-drop operation. Then, DoDrag-
Drop calls the WindowsDragSourceMBS methods during the drag-and-drop operation.

For example, DoDragDrop calls WindowsDragSourceMBS.GiveFeedback when you need to change the cursor shape or when you need to provide some other visual feedback. DoDragDrop calls WindowsDragSourceMBS.QueryContinueDrag when there is a change in the mouse button state to determine if the drag-and-drop operation was canceled or completed.

While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!

**68.12.2 Methods**

**68.12.3 DoDragDrop(dataObject as WinDataObjectMBS, OKEffect as Integer, byref Effect as Integer) as Integer**

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Carries out an OLE drag and drop operation. **Notes:**

Parameters:

- **dataObject:** The WinDataObjectMBS data object that contains the data being dragged.
- **OKEffects:** Effects the source allows in the OLE drag-and-drop operation. Most significant is whether it permits a move. The OKEffect and Effect parameters obtain values from the DROPEFFECT* constants.
- **Effect:** Pointer to a value that indicates how the OLE drag-and-drop operation affected the source data. The pdwEffect parameter is set only if the operation is not canceled.

This function returns S_OK on success. Other possible values include the following.

<table>
<thead>
<tr>
<th>Return code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DRAGDROP_S_DROP</td>
<td>The OLE drag-and-drop operation was successful.</td>
</tr>
<tr>
<td>DRAGDROP_S_CANCEL</td>
<td>The OLE drag-and-drop operation was canceled.</td>
</tr>
<tr>
<td>E_UNSPEC</td>
<td>Unexpected error occurred.</td>
</tr>
</tbody>
</table>

Remarks

If you are developing an application that can act as a data source for an OLE drag-and-drop operation, you must call DoDragDrop when you detect that the user has started an OLE drag-and-drop operation.

The DoDragDrop function enters a loop in which it calls various methods in the WindowsDragSourceMBS and WindowsDropTargetMBS interfaces. (For a successful drag-and-drop operation, the application acting
as the data source must also implement WindowsDragSourceMBS, while the target application must implement WindowsDropTargetMBS.)

The DoDragDrop function determines the window under the current cursor location. It then checks to see if this window is a valid drop target.

If the window is a valid drop target, DoDragDrop calls WindowsDropTargetMBS.DragEnter. This method supplies an effect code indicating what would happen if the drop actually occurred. For a list of valid drop effects, see the DROPEFFECT* constants.

DoDragDrop calls WindowsDragSourceMBS.GiveFeedback with the effect code so that the drop source interface can provide appropriate visual feedback to the user.

DoDragDrop tracks mouse cursor movements and changes in the keyboard or mouse button state.

If the user moves out of a window, DoDragDrop calls WindowsDropTargetMBS.DragLeave.

If the mouse enters another window, DoDragDrop determines if that window is a valid drop target and then calls WindowsDropTargetMBS.DragEnter for that window.

If the mouse moves but stays within the same window, DoDragDrop calls WindowsDropTargetMBS.DragOver.

If there is a change in the keyboard or mouse button state, DoDragDrop calls WindowsDragSourceMBS.QueryContinueDrag and determines whether to continue the drag, to drop the data, or to cancel the operation based on the return value.

If the return value is S_OK, DoDragDrop first calls WindowsDropTargetMBS.DragOver to continue the operation. This method returns a new effect value and DoDragDrop then calls WindowsDragSourceMBS.GiveFeedback with the new effect so appropriate visual feedback can be set. For a list of valid drop effects, see the DROPEFFECT constants. WindowsDropTargetMBS.DragOver and WindowsDragSourceMBS.GiveFeedback are paired so that as the mouse moves across the drop target, the user is given the most up-to-date feedback on the mouse’s position.

If the return value is DRAGDROP_S_DROP, DoDragDrop calls WindowsDropTargetMBS.Drop. The DoDragDrop function returns the last effect code to the source, so the source application can perform the appropriate operation on the source data, for example, cut the data if the operation was a move.

If the return value is DRAGDROP_S_CANCEL, the DoDragDrop function calls WindowsDropTargetMBS.DragLeave.
68.12.4 Properties

68.12.5 Handle as Integer

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The internal handle.
**Notes:** (Read and Write property)

68.12.6 Events

68.12.7 GiveFeedback(Effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
Enables a source application to give visual feedback to the end user during a drag-and-drop operation by
providing the DoDragDrop function with an enumeration value specifying the visual effect.
**Notes:**
Effect: The drop effect value returned by the most recent call to WindowsDropTargetMBS.DragEnter, Win-
dowsDropTargetMBS.DragOver, or WindowsDropTargetMBS.DragLeave.

Return S_OK on success. Return DRAGDROP_S_USEDEFAULTCURSORS to indicate successful comple-
tion of the method, and requests OLE to update the cursor using the OLE-provided default cursors.

When your application detects that the user has started a drag-and-drop operation, it should call the Do-
DragDrop function. DoDragDrop enters a loop, calling WindowsDropTargetMBS.DragEnter when the mouse
first enters a drop target window, WindowsDropTargetMBS.DragOver when the mouse changes its position
within the target window, and WindowsDropTargetMBS.DragLeave when the mouse leaves the target win-
dow.

For every call to either WindowsDropTargetMBS.DragEnter or WindowsDropTargetMBS.DragOver, Do-
DragDrop calls WindowsDropTargetMBS.GiveFeedback, passing it the drop effect value returned from the
drop target call.

DoDragDrop calls WindowsDropTargetMBS.DragLeave when the mouse has left the target window. Then,
DoDragDrop calls WindowsDropTargetMBS.GiveFeedback and passes the DROPEFFECT_NONE value in
the dwEffect parameter.

The Effect parameter can include DROPEFFECT_SCROLL, indicating that the source should put up the
drag-scrolling variation of the appropriate pointer.

Notes to Implementers
This function is called frequently during the DoDragDrop loop, so you can gain performance advantages if you optimize your implementation as much as possible.

GiveFeedback is responsible for changing the cursor shape or for changing the highlighted source based on the value of the dwEffect parameter. If you are using default cursors, you can return DRAGDROP_S_USEDEFAULTCURSORS, which causes OLE to update the cursor for you, using its defaults.

### 68.12.8 QueryContinueDrag(EscapePressed as boolean, KeyState as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
Determines whether a drag-and-drop operation should be continued, canceled, or completed. You do not call this method directly.

**Notes:**
The OLE DoDragDrop function calls this method during a drag-and-drop operation.

**EscapePressed:** Indicates whether the Esc key has been pressed since the previous call to QueryContinueDrag or to DoDragDrop if this is the first call to QueryContinueDrag. A true value indicates the end user has pressed the escape key; a false value indicates it has not been pressed.

**KeyState:** The current state of the keyboard modifier keys on the keyboard. Possible values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.

This event can return the following values.

<table>
<thead>
<tr>
<th>Return code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>S_OK</td>
<td>The drag operation should continue. This result occurs if no errors are detected, the mouse button starting the drag-and-drop operation has not been released, and the Esc key has not been detected.</td>
</tr>
<tr>
<td>DRAGDROP_S_DROP</td>
<td>The drop operation should occur completing the drag operation. This result occurs if KeyState indicates that the key that started the drag-and-drop operation has been released.</td>
</tr>
<tr>
<td>DRAGDROP_S_CANCEL</td>
<td>The drag operation should be canceled with no drop operation occurring. This result occurs if EscapePressed is true, indicating the Esc key has been pressed.</td>
</tr>
</tbody>
</table>

The DoDragDrop function calls QueryContinueDrag whenever it detects a change in the keyboard or mouse button state during a drag-and-drop operation. QueryContinueDrag must determine whether the drag-and-drop operation should be continued, canceled, or completed based on the contents of the parameters KeyState and EscapePressed.
68.12.9 Constants

68.12.10 DRAGDROP_S_CANCEL = & H00040101

MBS Win Plugin, Plugin Version: 10.5. Function: One of the OLE error codes. Notes: Drag and Drop was cancelled.

68.12.11 DRAGDROP_S_DROP = & h00040100

MBS Win Plugin, Plugin Version: 10.5. Function: One of the OLE error codes. Notes: Do the drop operation.

68.12.12 DRAGDROP_S_USEDEFAULTCURSORS = & h00040102

MBS Win Plugin, Plugin Version: 10.5. Function: One of the OLE error codes.

68.12.13 DROPEFFECT_COPY = 1

MBS Win Plugin, Plugin Version: 10.5. Function: One of the drop effect constants. Notes: Drop results in a copy. The original data is untouched by the drag source.

Your application should always mask drop effect constants to ensure compatibility with future implementations. Presently, only some of the bit positions in a drop effect value have meaning. In the future, more interpretations for the bits will be added. Drag sources and drop targets should carefully mask these values appropriately before comparing. They should never compare a drop effect value against, say, DROPEFFECT_COPY by doing the following:

if DropEffect = DROPEFFECT_COPY then

Instead, the application should always mask for the value or values being sought as using one of the following techniques:

if bitwiseAnd(DropEffect, DROPEFFECT_COPY) = DROPEFFECT_COPY then

This allows for the definition of new drop effects, while preserving backwards compatibility with existing code.
68.12.14 DROPEFFECT_LINK = 4

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the drop effect constants.  
**Notes:** Drag source should create a link to the original data.

68.12.15 DROPEFFECT_MOVE = 2

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the drop effect constants.  
**Notes:** Drag source should remove the data.

68.12.16 DROPEFFECT_NONE = 0

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the drop effect constants.  
**Notes:** Drop target cannot accept the data.

68.12.17 DROPEFFECT_SCROLL = & h80000000

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the drop effect constants.  
**Notes:** Scrolling is about to start or is currently occurring in the target. This value is used in addition to the other values.

68.12.18 MK_CONTROL = 8

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the key state constants.  
**Notes:** The CTRL key is down.

68.12.19 MK_LBUTTON = 1

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the key state constants.  
**Notes:** The left mouse button is down.

68.12.20 MK_MBUTTON = & h10

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the key state constants.  
**Notes:** The middle mouse button is down.
68.12.21 MK_RBUTTON = 2

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the key state constants. **Notes:** The right mouse button is down.

68.12.22 MK_SHIFT = 4

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the key state constants. **Notes:** The SHIFT key is down.

68.12.23 MK_XBUTTON1 = & h20

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the key state constants. **Notes:** The first X button is down.

68.12.24 MK_XBUTTON2 = & h40

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the key state constants. **Notes:** The second X button is down.

68.12.25 S_FALSE = 1

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the OLE error codes.

68.12.26 S_OK = 0

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the OLE error codes.
68.13. class WindowsDropTargetMBS

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The WindowsDropTargetMBS interface is one of the interfaces you implement to provide drag-and-drop operations in your application. **Notes:** It contains methods used in any application that can be a target for data during a drag-and-drop operation. A drop-target application is responsible for:

- Determining the effect of the drop on the target application.
- Incorporating any valid dropped data when the drop occurs.
- Communicating target feedback to the source so the source application can provide appropriate visual feedback such as setting the cursor.
- Implementing drag scrolling.
- Registering and revoking its application windows as drop targets.

The WindowsDropTargetMBS class contains methods that handle all these responsibilities except registering and revoking the application window as a drop target, for which you must call the AttachToWindow functions.

**When To Implement**

Implement the WindowsDropTargetMBS interface if you are developing an application that can act as a target for a drag-and-drop operation. The WindowsDropTargetMBS interface is associated with your application windows and is implemented on your window objects. Call the AttachToWindow function to register your window objects as drop targets.

**When To Use**

You do not call the methods of WindowsDropTargetMBS directly. The DoDragDrop function calls the WindowsDropTargetMBS methods during the drag-and-drop operation.

For example, DoDragDrop calls WindowsDropTargetMBS.DragEnter when it detects the mouse has moved over a window that is registered as a drag target. After the mouse has entered a drag-target window, DoDragDrop calls WindowsDropTargetMBS.DragOver as the mouse moves through the window and calls WindowsDropTargetMBS.DragLeave if the mouse leaves the target window or if the user cancels or completes the drag-and-drop operation. DoDragDrop calls WindowsDropTargetMBS.Drop if the drop finally
CHAPTER 68. DRAG & DROP

occurs.

To see the ghost picture of the drag, please register a WindowsDragSourceMBS for the same window.

While the drag classes compile for Web Edition, they run on the server, so they have no effect on the client browser!

68.13.2 Methods

68.13.3 AttachToControl(ctl as control, showDragImage as boolean = true) as Integer

Notes:

This method unregistered any existing drop target on the control (including the one from Real Studio).

Registers the specified control as one that can be the target of an OLE drag-and-drop operation and specifies the WindowsDropTargetMBS instance to use for drop operations.

c: The control that can be a target for an OLE drag-and-drop operation.
showDragImage: Whether we should support the drag image methods in the newer Windows versions.

This function returns S_OK on success. Other possible values include the following.

<table>
<thead>
<tr>
<th>Return code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DRAGDROP_E_INVALIDHWND</td>
<td>Invalid handle returned in the hwnd parameter.</td>
</tr>
<tr>
<td>DRAGDROP_E_ALREADYREGISTERED</td>
<td>The specified window has already been registered as a drop target.</td>
</tr>
<tr>
<td>E_OUTOFMEMORY</td>
<td>Insufficient memory for the operation.</td>
</tr>
</tbody>
</table>

If your application can accept dropped objects during OLE drag-and-drop operations, you must call the AttachToControl function. Do this whenever one of your application windows is available as a potential drop target, i.e., when the window appears unobscured on the screen.

AttachToControl must be called on the main thread of your application.

The AttachToControl function only registers one control at a time, so you must call it for each application control capable of accepting dropped objects. For each control, you need your own instance of the WindowsDropTargetMBS class.
As the mouse passes over unobscured portions of the target control during an OLE drag-and-drop operation, the DoDragDrop function calls the specified WindowsDropTargetMBS.DragOver method for the current control. When a drop operation actually occurs in a given control, the DoDragDrop function calls WindowsDropTargetMBS.Drop.

### 68.13.4 AttachToWindow(win as window, showDragImage as boolean = true) as Integer

MBS Win Plugin, Plugin Version: 10.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Attached the drop target to the window.

**Notes:**
This method unregistered any existing drop target on the window (including the one from Real Studio).

Registers the specified window as one that can be the target of an OLE drag-and-drop operation and specifies the WindowsDropTargetMBS instance to use for drop operations.

**Win:** The window that can be a target for an OLE drag-and-drop operation.
**showDragImage:** Whether we should support the drag image methods in the newer Windows versions.

This function returns S_OK on success. Other possible values include the following.

<table>
<thead>
<tr>
<th>Return code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DRAGDROP_E_INVALIDHWND</td>
<td>Invalid handle returned in the hwnd parameter.</td>
</tr>
<tr>
<td>DRAGDROP_E_ALREADYREGISTERED</td>
<td>The specified window has already been registered as a drop target.</td>
</tr>
<tr>
<td>E_OUTOFMEMORY</td>
<td>Insufficient memory for the operation.</td>
</tr>
</tbody>
</table>

If your application can accept dropped objects during OLE drag-and-drop operations, you must call the AttachToWindow function. Do this whenever one of your application windows is available as a potential drop target, i.e., when the window appears unobscured on the screen.

AttachToWindow must be called on the main thread of your application.

The AttachToWindow function only registers one window at a time, so you must call it for each application window capable of accepting dropped objects. For each window, you need your own instance of the WindowsDropTargetMBS class.

As the mouse passes over unobscured portions of the target window during an OLE drag-and-drop operation, the DoDragDrop function calls the specified WindowsDropTargetMBS.DragOver method for the current window. When a drop operation actually occurs in a given window, the DoDragDrop function calls WindowsDropTargetMBS.Drop.
### 68.13.5 Properties

**68.13.6 Handle as Integer**

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The internal handle.
**Notes:** (Read and Write property)

**68.13.7 Helper as Integer**

MBS Win Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The internal reference to the helper object.
**Notes:** (Read and Write property)

### 68.13.8 Events

**68.13.9 DragEnter(dataObject as WinDataObjectMBS, keystate as Integer, x as Integer, y as Integer, byref effect as Integer) as Integer**

MBS Win Plugin, Plugin Version: 10.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
Indicates whether a drop can be accepted, and, if so, the effect of the drop.
**Notes:**

**dataObject:** This data object contains the data being transferred in the drag-and-drop operation. If the drop occurs, this data object will be incorporated into the target.

**KeyState:** The current state of the keyboard modifier keys on the keyboard. Possible values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.

**x and y:** A point containing the current cursor coordinates in screen coordinates.

**effect:** The value of the Effect parameter of the DoDragDrop function. On return, must contain one of the DROPEFFECT flags, which indicates what the result of the drop operation would be.

Return S_OK on success. Other possible values include the following.

You do not call DragEnter directly; instead the DoDragDrop function calls it to determine the effect of a drop the first time the user drags the mouse into the registered window of a drop target.
To implement DragEnter, you must determine whether the target can use the data in the source data object by checking three things:

- The format and medium specified by the data object
- The input value of Effect
- The state of the modifier keys

To check the format and medium, use the WinDataObjectMBS object.

On entry to WindowsDropTargetMBS.DragEnter, the Effect parameter is set to the effects given to the OkEffect parameter of the DoDragDrop function. The WindowsDropTargetMBS.DragEnter method must choose one of these effects or disable the drop.

The following modifier keys affect the result of the drop.

<table>
<thead>
<tr>
<th>Key Combination</th>
<th>User-Visible Feedback</th>
<th>Drop Effect</th>
</tr>
</thead>
<tbody>
<tr>
<td>CTRL + SHIFT</td>
<td>DROPEFFECT_LINK</td>
<td></td>
</tr>
<tr>
<td>CTRL +</td>
<td>DROPEFFECT_COPY</td>
<td></td>
</tr>
<tr>
<td>No keys or SHIFT</td>
<td>None</td>
<td></td>
</tr>
</tbody>
</table>

On return, the method must write the effect, one of the DROPEFFECT flags, to the Effect parameter. DoDragDrop then takes this parameter and writes it to its Effect parameter. You communicate the effect of the drop back to the source through DoDragDrop in the Effect parameter. The DoDragDrop function then calls WindowsDragSourceMBS.GiveFeedback so that the source application can display the appropriate visual feedback to the user through the target window.

### 68.13.10 DragLeave as Integer

MBS Win Plugin, Plugin Version: 10.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Removes target feedback and releases the data object. **Notes:** Return S_OK on success. Other possible values include the following.
Return code   Description
E_OUTOFMEMORY There is insufficient memory available for this operation.

You do not call this method directly. The DoDragDrop function calls this method in either of the following cases:

- When the user drags the cursor out of a given target window.
- When the user cancels the current drag-and-drop operation.

To implement WindowsDropTargetMBS.DragLeave, you must remove any target feedback that is currently displayed. You must also release any references you hold to the data transfer object.

### 68.13.11 DragOver(keystate as Integer, x as Integer, y as Integer, byref effect as Integer) as Integer

**MBS Win Plugin, Plugin Version: 10.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. Function:** Provides target feedback to the user and communicates the drop’s effect to the DoDragDrop function so it can communicate the effect of the drop back to the source.

**Notes:**

- **KeyState:** The current state of the keyboard modifier keys on the keyboard. Valid values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK_MBUTTON, and MK_RBUTTON.
- **x and y:** The point containing the current cursor coordinates in screen coordinates.
- **Effect:** On input, pointer to the value of the Effect parameter of the DoDragDrop function. On return, must contain one of the DROPEFFECT flags, which indicates what the result of the drop operation would be.

Return S_OK on success. Other possible values include the following.

<table>
<thead>
<tr>
<th>Return code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>E_UNEXPECTED</td>
<td>An unexpected error has occurred.</td>
</tr>
<tr>
<td>E_INVALIDARG</td>
<td>The Effect value is not valid.</td>
</tr>
<tr>
<td>E_OUTOFMEMORY</td>
<td>There was insufficient memory available for this operation.</td>
</tr>
</tbody>
</table>

You do not call DragOver directly. The DoDragDrop function calls this method each time the user moves the mouse across a given target window. DoDragDrop exits the loop if the drag-and-drop operation is canceled, if the user drags the mouse out of the target window, or if the drop is completed.

In implementing WindowsDropTargetMBS.DragOver, you must provide features similar to those in WindowsDropTargetMBS.DragEnter. You must determine the effect of dropping the data on the target by
examine the FORMATETC defining the data object’s formats and medium, along with the state of the modifier keys. The mouse position may also play a role in determining the effect of a drop. The following modifier keys affect the result of the drop.

<table>
<thead>
<tr>
<th>Key Combination</th>
<th>User-Visible Feedback</th>
<th>Drop Effect</th>
</tr>
</thead>
<tbody>
<tr>
<td>CTRL + SHIFT</td>
<td>=</td>
<td>DROPEFFECT_LINK</td>
</tr>
<tr>
<td>CTRL</td>
<td>+</td>
<td>DROPEFFECT_COPY</td>
</tr>
<tr>
<td>No keys or SHIFT</td>
<td>None</td>
<td>DROPEFFECT_MOVE</td>
</tr>
</tbody>
</table>

You communicate the effect of the drop back to the source through DoDragDrop in Effect. The DoDragDrop function then calls WindowsDragSourceMBS.GiveFeedback so the source application can display the appropriate visual feedback to the user.

On entry to WindowsDropTargetMBS.DragOver, the Effect parameter must be set to the allowed effects passed to the OkEffect parameter of the DoDragDrop function. The WindowsDropTargetMBS.DragOver method must be able to choose one of these effects or disable the drop.

Upon return, Effect is set to one of the DROPEFFECT flags. This value is then passed to the Effect parameter of DoDragDrop. Reasonable values are DROPEFFECT_COPY to copy the dragged data to the target, DROPEFFECT_LINK to create a link to the source data, or DROPEFFECT_MOVE to allow the dragged data to be permanently moved from the source application to the target.

You may also wish to provide appropriate visual feedback in the target window. There may be some target feedback already displayed from a previous call to WindowsDropTargetMBS.DragOver or from the initial WindowsDropTargetMBS.DragEnter. If this feedback is no longer appropriate, you should remove it.

For efficiency reasons, a data object is not passed in WindowsDropTargetMBS.DragOver. The data object passed in the most recent call to WindowsDropTargetMBS.DragEnter is available and can be used.

When WindowsDropTargetMBS.DragOver has completed its operation, the DoDragDrop function calls WindowsDragSourceMBS.GiveFeedback so the source application can display the appropriate visual feedback to the user.

Notes to Implementers

This function is called frequently during the DoDragDrop loop so it makes sense to optimize your implementation of the DragOver method as much as possible.
68.13.12 Drop(dataObject as WinDataObjectMBS, keystate as Integer, x as Integer, y as Integer, byref effect as Integer) as Integer

MBS Win Plugin, Plugin Version: 10.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Incorporates the source data into the target window, removes target feedback, and releases the data object. **Notes:**

dataObject: The data object being transferred in the drag-and-drop operation.
KeyState: The current state of the keyboard modifier keys on the keyboard. Possible values can be a combination of any of the flags MK_CONTROL, MK_SHIFT, MK_ALT, MK_BUTTON, MK_LBUTTON, MK MBUTTON, and MK RBUTTON.
x and y: The point containing the current cursor coordinates in screen coordinates.
Effect: On input, the value of the Effect parameter of the DoDragDrop function. On return, must contain one of the DROPEFFECT flags, which indicates what the result of the drop operation would be.

Return \texttt{S_OK} on success. Other possible values include the following.

<table>
<thead>
<tr>
<th>Return code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>E_UNEXPECTED</td>
<td>An unexpected error has occurred.</td>
</tr>
<tr>
<td>E_INVALIDARG</td>
<td>The pdwEffect parameter is not valid.</td>
</tr>
<tr>
<td>E_OUTOFMEMORY</td>
<td>There is insufficient memory available for this operation.</td>
</tr>
</tbody>
</table>

You do not call this method directly. The DoDragDrop function calls this method when the user completes the drag-and-drop operation.

In implementing Drop, you must incorporate the data object into the target. Use the formats available in WinDataObjectMBS, available through dataObject, along with the current state of the modifier keys to determine how the data is to be incorporated, such as linking or embedding.

In addition to incorporating the data, you must also clean up as you do in the WindowsDropTargetMBS.DragLeave method:

Remove any target feedback that is currently displayed.
Release any references to the data object.
You also pass the effect of this operation back to the source application through DoDragDrop, so the source application can clean up after the drag-and-drop operation is complete:

Remove any source feedback that is being displayed.
Make any necessary changes to the data, such as removing the data if the operation was a move.
68.13.14 DROPEFFECT_COPY = 1

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the drop effect constants.

**Notes:**
Drop results in a copy. The original data is untouched by the drag source.

Your application should always mask drop effect constants to ensure compatibility with future implementations. Presently, only some of the bit positions in a drop effect value have meaning. In the future, more interpretations for the bits will be added. Drag sources and drop targets should carefully mask these values appropriately before comparing. They should never compare a drop effect value against, say, DROPEFFECT_COPY by doing the following:

```python
if DropEffect = DROPEFFECT_COPY then
```

Instead, the application should always mask for the value or values being sought as using one of the following techniques:

```python
if bitwiseAnd(DropEffect, DROPEFFECT_COPY) = DROPEFFECT_COPY then
```

This allows for the definition of new drop effects, while preserving backwards compatibility with existing code.

68.13.15 DROPEFFECT_LINK = 4

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the drop effect constants.

**Notes:** Drag source should create a link to the original data.

68.13.16 DROPEFFECT_MOVE = 2

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the drop effect constants.

**Notes:** Drag source should remove the data.

68.13.17 DROPEFFECT_NONE = 0

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the drop effect constants.

**Notes:** Drop target cannot accept the data.
68.13.18  **DROPEFFECT_SCROLL = & h80000000**

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the drop effect constants. **Notes:** Scrolling is about to start or is currently occurring in the target. This value is used in addition to the other values.

68.13.19  **E_INVALIDARG = & h80070057**

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the OLE error codes. **Notes:** An invalid argument was passed.

68.13.20  **E_OUTOFMEMORY = & h80000002**

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the OLE error codes. **Notes:** There was insufficient memory available for this operation.

68.13.21  **E_UNEXPECTED = & h8000FFFF**

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the OLE error codes. **Notes:** An unexpected error has occurred.

68.13.22  **MK_CONTROL = 8**

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the key state constants. **Notes:** The CTRL key is down.

68.13.23  **MK_LBUTTON = 1**

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the key state constants. **Notes:** The left mouse button is down.

68.13.24  **MK_MBUTTON = & h10**

MBS Win Plugin, Plugin Version: 10.5. **Function:** One of the key state constants. **Notes:** The middle mouse button is down.
68.13.25  MK_RBUTTON = 2

MBS Win Plugin, Plugin Version: 10.5. Function: One of the key state constants.
Notes: The right mouse button is down.

68.13.26  MK_SHIFT = 4

MBS Win Plugin, Plugin Version: 10.5. Function: One of the key state constants.
Notes: The SHIFT key is down.

68.13.27  MK_XBUTTON1 = & h20

MBS Win Plugin, Plugin Version: 10.5. Function: One of the key state constants.
Notes: The first X button is down.

68.13.28  MK_XBUTTON2 = & h40

MBS Win Plugin, Plugin Version: 10.5. Function: One of the key state constants.
Notes: The second X button is down.

68.13.29  S_FALSE = 1

MBS Win Plugin, Plugin Version: 10.5. Function: One of the OLE error codes.

68.13.30  S_OK = 0

MBS Win Plugin, Plugin Version: 10.5. Function: One of the OLE error codes.
68.14  class WindowsFileDescriptorMBS

68.14.1  class WindowsFileDescriptorMBS

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for a file description.

### 68.14.2 Properties

#### 68.14.3 ClassID as String

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The file type identifier.

**Example:**

```vba
    dim d as WindowsFileDescriptorMBS  // your file description
    if BitwiseAnd(d.Flags, d.FD_CLSID) <> 0 then
        MsgBox d.ClassID
    end if
```

**Notes:**

Only valid if FD_CLSID is set in the flags.
(Read and Write property)

#### 68.14.4 CreationTime as Double

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The time of file creation.

**Example:**

```vba
    dim d as WindowsFileDescriptorMBS  // your file description
    if BitwiseAnd(d.Flags, d.FD_CREATETIME) <> 0 then
        dim da as new date
        da.TotalSeconds = d.CreationTime
        MsgBox da.LongDate
    end if
```

**Notes:**

68.14. CLASS WINDOWSFILEDESCRIPTORMBS

Only valid if FD_CREATETIME is set in the flags.
(Read and Write property)

68.14.5 FileAttributes as Integer

**Example:**

```vbscript
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_ATTRIBUTES) <> 0 then
    if BitwiseAnd(d.FileAttributes, d.FILE_ATTRIBUTE_TEMPORARY) = d.FILE_ATTRIBUTE_TEMPORARY then
        MsgBox "temp file"
    else
        MsgBox "no temp file"
    end if
end if
```

**Notes:**

This will be a combination of the FILE_ATTRIBUTE_* constants.
Only valid if FD_ATTRIBUTES is set in the flags.
(Read and Write property)

68.14.6 FileName as String

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The string that contains the name of the file.

**Example:**

```vbscript
dim d as WindowsFileDescriptorMBS // your file description

MsgBox d.FileName
```

**Notes:** (Read and Write property)
### 68.14.7 FileSize as Int64

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The file size, in bytes.

**Example:**
```vbnet
dim d as WindowsFileDescriptorMBS // your file description
if BitwiseAnd(d.Flags, d.FDFILESIZE) <> 0 then
    MsgBox str(d.FileSize)
end if
```

**Notes:**
Only valid if FDFILESIZE is set in flags.
(Read and Write property)

### 68.14.8 Flags as Integer

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
An array of flags that indicate which of the other structure members contain valid data.

**Notes:**
A combination of the FD_* constants.
(Read and Write property)

### 68.14.9 IconHeight as Integer

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The height of the file icon.

**Example:**
```vbnet
dim d as WindowsFileDescriptorMBS // your file description
if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <> 0 then
    MsgBox "file object at " + str(d.Pointx) + "/" + str(d.Pointy) + " with size " + str(d.IconWidth) + "/" + str(d.IconHeight)
end if
```

**Notes:**
Only valid if FD_SIZEPOINT is set in the flags.
68.14. CLASS WINODWSFILEDESCRIPTORMBS

(Read and Write property)

68.14.10  IconWidth as Integer

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.  **Function:** The width of the file icon.

**Example:**

```vbnet
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <> 0 then
    MsgBox "file object at " + str(d.Pointx) + "/" + str(d.Pointy) + " with size " + str(d.IconWidth) + "/" + str(d.IconHeight)
end if
```

**Notes:**

Only valid if FD_SIZEPOINT is set in the flags.

(Read and Write property)

68.14.11  Index as Integer

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.  **Function:** The index of the file descriptor.

**Notes:**

Use this entry for GetFileContent call.

(Read and Write property)

68.14.12  LastAccessTime as Double

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.  **Function:** The time that the file was last accessed.

**Example:**

```vbnet
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_ACCESSSTIME) <> 0 then
    dim da as new date
    da.TotalSeconds = d.LastAccessTime
    MsgBox da.LongDate
end if
```
Notes:
Only valid if FD_ACCESSTIME is set in the flags.
(Read and Write property)

68.14.13 LastWriteTime as Double

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The time of the last write operation.
**Example:**

dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_WRITESTIME) <> 0 then
    dim da as new date
    da.TotalSeconds = d.LastWriteTime
    MsgBox da.LongDate
end if

Notes:
Only valid if FD_WRITESTIME is set in the flags.
(Read and Write property)

68.14.14 PointX as Integer

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The x screen coordinate of the file object.
**Example:**

dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <> 0 then
    MsgBox "file object at " + stR(d.Pointx) + " / " + stR(d.Pointy) + " with size " + stR(d.IconWidth) + " / " + stR(d.IconHeight)
end if

Notes:
Only valid if FD_SIZEPOINT is set in the flags.
68.14.15  **PointY as Integer**

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The y screen coordinate of the file object.

**Example:**

```vbs
dim d as WindowsFileDescriptorMBS  // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <> 0 then
    MsgBox "file object at " +str(d.Pointx) +"/" +str(d.Pointy) +" with size " +str(d.IconWidth) +"/" +str(d.IconHeight)
end if
```

**Notes:**

Only valid if FD_SIZEPOINT is set in the flags.

(Read and Write property)

---

68.14.16  **Constants**

68.14.17  **FD_ACCESSSTIME = & h0010**

MBS Win Plugin, Plugin Version: 11.2. **Function:** One of the flag constants.

**Example:**

```vbs
dim d as WindowsFileDescriptorMBS  // your file description

if BitwiseAnd(d.Flags, d.FD_ACCESSSTIME) <> 0 then
    dim da as new date
    da.TotalSeconds = d.LastAccessTime
    MsgBox da.LongDate
end if
```

**Notes:** The LastAccessTime member is valid.
68.14.18  **FD_ATTRIBUTES = 4**

MBS Win Plugin, Plugin Version: 11.2. **Function:** One of the flag constants.  
**Example:**

```vba
    dim d as WindowsFileDescriptorMBS // your file description

    if BitwiseAnd(d.Flags, d.FD_ATTRIBUTES) <> 0 then
        if BitwiseAnd(d.FileAttributes, d.FILE_ATTRIBUTE_TEMPORARY) <> 0 then
            MsgBox "temp file"
        else
            MsgBox "no temp file"
        end if
    end if
```

**Notes:** The FileAttributes member is valid.

---

68.14.19  **FD_CLSID = 1**

MBS Win Plugin, Plugin Version: 11.2. **Function:** One of the flag constants.  
**Example:**

```vba
    dim d as WindowsFileDescriptorMBS // your file description

    if BitwiseAnd(d.Flags, d.FD_CLSID) <> 0 then
        MsgBox d.ClassID
    end if
```

**Notes:** The ClassID member is valid.

---

68.14.20  **FD_CREATETIME = 8**

MBS Win Plugin, Plugin Version: 11.2. **Function:** One of the flag constants.  
**Example:**

```vba
    dim d as WindowsFileDescriptorMBS // your file description

    if BitwiseAnd(d.Flags, d.FD_CREATETIME) <> 0 then
        dim da as new date
        da.TotalSeconds = d.CreationTime
        MsgBox da.LongDate
    end if
```
68.14. CLASS WINDOWSFILEDESCRIPTORMBS

Notes: The CreationTime member is valid.

68.14.21  FD_FILESIZE = & h0040

MBS Win Plugin, Plugin Version: 11.2. Function: One of the flag constants.
Example:

dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_FILESIZE) <>0 then
  MsgBox str(d.FileSize)
end if

Notes: Whether the FileSize member is valid.

68.14.22  FD_LINKUI = & h8000

MBS Win Plugin, Plugin Version: 11.2. Function: One of the flag constants.
Notes: Treat the operation as a shortcut.

68.14.23  FD_PROGRESSUI = & h4000

MBS Win Plugin, Plugin Version: 11.2. Function: One of the flag constants.
Notes: A progress indicator is shown with drag-and-drop operations.

68.14.24  FD_SIZEPOINT = 2

MBS Win Plugin, Plugin Version: 11.2. Function: One of the flag constants.
Example:

dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_SIZEPOINT) <>0 then
  MsgBox "file object at \"+str(d.Pointx)+"/\"+str(d.Pointy)+" with size \"+str(d.IconWidth)+"/\"+str(d.IconHeight)
end if
Notes: The Icon* and point* members are valid.

68.14.25  FD_WRITE TIME = & h0020

MBS Win Plugin, Plugin Version: 11.2. Function: One of the flag constants.  
Example:

```vbnet
dim d as WindowsFileDescriptorMBS // your file description

if BitwiseAnd(d.Flags, d.FD_WRITE TIME) <>0 then
dim da as new date
   da.TotalSeconds = d.LastWriteTime
   MsgBox da.LongDate
end if
```

Notes: Whether the LastWriteTime property is valid.

68.14.26  FILE_ATTRIBUTE_ARCHIVE = & h00000020

MBS Win Plugin, Plugin Version: 11.2. Function: One of the file attribute constants.  
Notes: A file or directory that is an archive file or directory. Applications typically use this attribute to mark files for backup or removal .

68.14.27  FILE_ATTRIBUTE.Atomic_WRITE = & h00000200

MBS Win Plugin, Plugin Version: 11.2. Function: One of the file attribute constants.

68.14.28  FILE_ATTRIBUTE_COMPRESSED = & h00000800

MBS Win Plugin, Plugin Version: 11.2. Function: One of the file attribute constants.  
Notes: A file or directory that is compressed. For a file, all of the data in the file is compressed. For a directory, compression is the default for newly created files and subdirectories.
68.14.29  FILE_ATTRIBUTE_DIRECTORY = & h00000010

MBS Win Plugin, Plugin Version: 11.2. Function: One of the file attribute constants.  
Notes: The handle that identifies a directory.

68.14.30  FILE_ATTRIBUTE_HIDDEN = & h00000002

MBS Win Plugin, Plugin Version: 11.2. Function: One of the file attribute constants.  
Notes: The file or directory is hidden. It is not included in an ordinary directory listing.

68.14.31  FILE_ATTRIBUTE_NORMAL = & h00000080

MBS Win Plugin, Plugin Version: 11.2. Function: One of the file attribute constants.  
Notes: A file that does not have other attributes set. This attribute is valid only when used alone.

68.14.32  FILE_ATTRIBUTE_OFFLINE = & h00001000

MBS Win Plugin, Plugin Version: 11.2. Function: One of the file attribute constants.  
Notes: The data of a file is not available immediately. This attribute indicates that the file data is physically moved to offline storage. This attribute is used by Remote Storage, which is the hierarchical storage management software. Applications should not arbitrarily change this attribute.

68.14.33  FILE_ATTRIBUTE_READONLY = & h00000001

MBS Win Plugin, Plugin Version: 11.2. Function: One of the file attribute constants.  
Notes: A file that is read-only. Applications can read the file, but cannot write to it or delete it.

68.14.34  FILE_ATTRIBUTE_SYSTEM = & h00000004

MBS Win Plugin, Plugin Version: 11.2. Function: One of the file attribute constants.  
Notes: A file or directory that the operating system uses a part of, or uses exclusively.

68.14.35  FILE_ATTRIBUTE_TEMPORARY = & h00000100

MBS Win Plugin, Plugin Version: 11.2. Function: One of the file attribute constants.  
Notes: A file that is being used for temporary storage. File systems avoid writing data back to mass storage
if sufficient cache memory is available, because typically, an application deletes a temporary file after the handle is closed. In that scenario, the system can entirely avoid writing the data. Otherwise, the data is written after the handle is closed.

68.14.36  FILE_ATTRIBUTE_XACTION_WRITE = & h00000400

MBS Win Plugin, Plugin Version: 11.2. **Function:** One of the file attribute constants.
Chapter 69

DVD Playback

69.1 class DVDPlaybackMBS

69.1.1 class DVDPlaybackMBS

MBS MacOSX Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for DVD Playback on Mac OS X 10.3

**Notes:**

Requires Mac OS X 10.3 or newer.

The DVD Playback application programming interface (API) gives you access to the DVDPlayback framework, allowing you to offer DVD playback functionality from within your application.

During a playback "session," the application must perform specific minimum operations, as follows:

1. Initialize the playback framework with calling Open. The DVDPlayback framework can only be opened by one process at a time. If a second process attempts to initialize it, an error will be returned.
2. Set the playback window with SetPlayWindow.
4. Set the video bounds with SetVideoBounds. This is the bounds within the window and is in port coordinates.
5. Open the media with OpenMediaVolume (DVD disc) or OpenMediaFile (VIDEO_TS folder).
6. Play the media.
7. When finished or switching media, close with the appropriate call (CloseMediaVolume or CloseMediaFile)
8. When quitting or finishing session, tear down the DVDPlayback framework with calling close.
69.1.2 Methods

69.1.3 Available as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** True if the DVD playback is installed on this Mac.  **Notes:** Requires Mac OS X 10.3 or newer.

69.1.4 ClearLastPlayBookmark

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sets the video playback position to the beginning of the disc.  **Notes:** This function sets the video playback position to the beginning of the disc, but does not begin playing the media. Calling this function is equivalent to calling the function DVDStop twice in succession. Before calling this function, media needs to be open.  Available in Mac OS X v10.4 and later.  Lasterror is set.

69.1.5 close

MBS MacOSX Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Call when completely done with playback. Usually when the application is quitting.  **Notes:** Requires Mac OS X 10.3 or newer.  Lasterror is set.

69.1.6 CloseMediaFile

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Closes a previously opened VIDEO_TS folder.  **Notes:** Requires Mac OS X 10.3 or newer.  Lasterror is set.
69.1.7  CloseMediaVolume

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Closes a previously opened DVD disc.

**Notes:**
Requires Mac OS X 10.3 or newer.
Lasterror is set.

69.1.8  DisplaySubPicture(value as boolean)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Turns the display of subpictures on or off.

**Notes:**
value: A Boolean value that specifies whether to display subpictures in the current title. To display subpictures, specify TRUE. To hide subpictures, specify FALSE.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started. You can use this function to display or hide additional bitmap graphic elements such as subtitles.

Available in Mac OS X v10.3 and later.

69.1.9  DoButtonActivate(inIndex as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Selects and activates a menu button by index.

**Notes:**
InIndex: The 1-based index of the menu button the user has selected.

If the index coincides with an active button, this function executes the action corresponding to the button.

Available in Mac OS X v10.4 and later.
CHAPTER 69. DVD PLAYBACK

69.1.10 DoMenuCGClick(x as Double, y as Double) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
If the point (in window root view coordinates) coincides with a menu button, it will be selected.
**Notes:**
Requires Mac OS X 10.5.
Lasterror is set.

69.1.11 DoMenuCGMouseOver(x as Double, y as Double) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
If the point (in window root view coordinates) coincides with a menu button, it will be highlighted.
**Notes:**
Requires Mac OS X 10.5.
Lasterror is set.

69.1.12 DoMenuClick(x as Integer, y as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
If the point (in port coordinates) coincides with a menu button, it will be selected.
**Notes:**
Requires Mac OS X 10.3 or newer.
Lasterror is set.

69.1.13 DoMenuMouseOver(x as Integer, y as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
If the point (in port coordinates) coincides with a menu button, it will be highlighted and its index returned in outIndex.
**Notes:**
Requires Mac OS X 10.3 or newer.
Lasterror is set.

69.1.14 DoUserNavigation(navigation as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Allows the user to navigate between menu buttons.
69.1.  CLASS DVDPLAYBACKMBS

Notes:

This is usually done using keyboard keys (arrow keys to move and Enter key to choose a menu item).
Requires Mac OS X 10.3 or newer.
Lasterror is set.

Constants:

- kDVDUserNavigationMoveUp 1
- kDVDUserNavigationMoveDown 2
- kDVDUserNavigationMoveLeft 3
- kDVDUserNavigationMoveRight 4
- kDVDUserNavigationEnter 5

69.1.15 EnableWebAccess(enable as boolean)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function:
Turns DVD@ccess support on or off.
Notes:

Lasterror is set.
Requires Mac OS X 10.3 or newer.

69.1.16 GetAngle as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function:
Gets the camera angle displayed.
Notes:

Returns the integer contains the 1-based index of the current camera angle.

Lasterror is set.
Before calling this function, DVD-Video media needs to be open and video playback started.
Available in Mac OS X v10.3 and later.
69.1.17 GetAspectRatio as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the aspect ratio of the current title or menu.
**Notes:**
Returns the variable specifies the aspect ratio of the current title. For a list of possible aspect ratios see the aspect ration constants.

Lasterror is set.

The aspect ratio of the video can change whenever a different title or menu is displayed. You can use this function together with GetNativeVideoSize to calculate the bounds of the video area in a window.

Available in Mac OS X v10.3 and later.

69.1.18 GetAudioLanguageCode(byref DVDLanguageCode as string, byref DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the current audio language code and extension.
**Notes:**
DVDLanguageCode: On return, the variable contains the language code for the current audio stream. For a list of possible values, see the Language Codes constants.

DVDSubpictureExtensionCode: On return, the variable contains the audio extension code for the current audio stream. For a list of possible values, see Audio Extension Codes constants.

Lasterror is set.

Available in Mac OS X v10.3 and later.

69.1.19 GetAudioLanguageCodeByStream(StreamIndex as Integer, byref DVDLanguageCode as string, byref DVDSUBpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the audio language code and extension for a specified stream.
**Notes:**
69.1. CLASS DVDPLAYBACKMBS

StreamIndex: An integer in the range 1 to 8 that specifies an audio stream in the current title.

DVDLanguageCode: On return, the variable contains the language code for the specified audio stream. For a list of possible values, see Language Codes.

DVDSubpictureExtensionCode: On return, the variable contains the audio extension code for the specified audio stream. For a list of possible values, see Audio Extension Codes.

LastError is set.

Available in Mac OS X v10.3 and later.

69.1.20 GetAudioOutputMode as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Gets the current audio mode setting.

**Notes:** Lasterror is set.

69.1.21 GetAudioOutputModeCapabilities as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the current possible audio output mode possibilities.

**Notes:** Lasterror is set.

69.1.22 GetAudioStream as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Gets the audio stream currently being used.

**Notes:**

Returns the number of the current audio stream, or 0 if the current title has no audio streams.

LastError is set.

Before calling this function, DVD-Video media needs to be open and video playback started.
69.1.23 GetAudioStreamFormat(byref outFormat as Integer, byref outBitsPerSample as Integer, byref outSamplesPerSecond as Integer, byref outChannels as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the current audio format (AC3, for example).

**Notes:**
Lasterror is set.
Requires Mac OS X 10.3.

**DVDAudioStreamFormat constants** - The different possible audio stream formats:

- kDVDAudioUnknownFormat 0
- kDVDAudioAC3Format 1
- kDVDAudioMPEG1Format 2
- kDVDAudioMPEG2Format 3
- kDVDAudioPCMFormat 4
- kDVDAudioDTSFormat 5
- kDVDAudioSDDSFormat 6

69.1.24 GetAudioStreamFormatByStream(index as Integer, byref outFormat as Integer, byref outBitsPerSample as Integer, byref outSamplesPerSecond as Integer, byref outChannels as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the audio format for a specified stream.

**Notes:**
index: An integer that specifies an audio stream in the current title.

outFormat: On return, the variable contains the audio format of the audio stream for the current title. For a list of possible formats, see "Audio Stream Formats."

outBitsPerSample: On return, the integer contains the number of bits per sample in the current audio stream.

outSamplesPerSecond: On return, the integer contains the number of samples per second in the current audio stream.

outChannels: On return, the integer contains the number of audio channels in the current audio stream.
69.1. CLASS DVDPLAYBACKMBS

Lasterror is set.

Before calling this function, DVD-Video media needs to be open.

Available in Mac OS X v10.4 and later.

69.1.25 GetAudioVolume as Integer

Notes:

Returns the current playback volume in the range 0 to 255.

Lasterror is set.

This function passes back the current playback audio volume setting. For more information, see DVDSetAudioVolume.

Available in Mac OS X v10.3 and later.

69.1.26 GetBookmark as string

Notes:

This function is used when playing media on a DVD-Video disc. Before calling this function, the media needs to be open and playing. This function passes back a bookmark to the current play position in the current DVD-Video playback session.

For information about requesting a bookmark when the media is not playing, see GetLastPlayBookmark.

The result is a binary string!

Available in Mac OS X v10.4 and later.
69.1.27 GetButtoninfo(byref numberOfButtons as Integer, byref selectedButton as Integer, byref forcedActivateButton as Integer, byref userButtonOffset as Integer, byref numberOfUserButtons as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Gets information about all available menu buttons in the current title, domain, or content.

**Notes:**

numberOfButtons: On return, the integer contains the number of buttons in the current menu.

selectedButton: On return, the integer contains the 1-based index of the selected button.

forcedActivateButton: On return, the integer contains the index of the button whose action is performed when a specified period of time elapses after the menu is first displayed.

userButtonOffset: On return, the integer contains the index of the first user-selectable button. If the number of user-selectable buttons in a menu is smaller than the total number of buttons, this index may be greater than zero.

numberOfUserButtons: On return, the integer contains the number of user-selectable buttons in the current menu.

Lasterror is set.

Available in Mac OS X v10.4 and later.

69.1.28 GetButtonPosition(index as Integer, byref x as Double, byref y as Double, byref w as Double, byref h as Double, byref autoAction as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the position and default action of a menu button.

**Notes:**

index: The zero-based index of a menu button. If your button index is 1-based, you should decrement the index before you pass it to this function.

x,y,w,h: On return, the rectangle contains the position and dimensions of the specified button in window local coordinates.

autoAction: On return, a value of 1 indicates the button is a forced activate button—that is, the button’s action is executed immediately when the button is selected. A value of 0 indicates the button is not a forced
activate button.

Lasterror is set.

Available in Mac OS X v10.4 and later.

### 69.1.29 GetChapter as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Gets the current chapter.  
**Notes:** Lasterror is set.

### 69.1.30 GetCurrentAudioVolume as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the current video playback volume.  
**Notes:** Lasterror is set.

Currently the minimum and maximum volumes are always 0 and 255.

### 69.1.31 GetDiscRegionCode as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Gets the region codes available on a DVD-Video disc.  
**Notes:** Returns a bitfield that specifies one or more region codes. For more information about region codes, see Region Codes.  
Lasterror is set.

This function passes back the region codes assigned to the DVD-Video disc that’s currently in use. Before calling this function, you need to call the function DVDOpenMediaVolume to open the media folder on the disc.

To test whether a disc is authorized for playback in region n, you need to compute the bitwise AND of out-Code with region code n. If the result is equal to region code n, the disc is authorized for playback in region n.
Available in Mac OS X v10.3 and later.

69.1.32 GetDriveRegionCode(byref regioncode as Integer, byref NumberChangesLeft as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the region code the drive is set to and how many changes are left. **Notes:**

Lasterror is set.
Requires Mac OS X 10.3.

Region Codes:
The drive region code must match the DVD disc region code. These calls allow getting the disc region code and getting or setting the drive region code.

**NOTE:** The drive region code is stored in the drive and can only be set a total of 5 times.

On the last time, the drive will be permanently locked to that region code.

69.1.33 GetFormatStandard as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Gets the video broadcast format of current DVD-Video media. **Notes:**

Returns the video broadcast format of the current media. For a list of possible values, see Video Broadcast Formats.

Lasterror is set.

This function determines which video broadcast format (NTSC or PAL) is used in the current media. Before calling this function, DVD-Video media needs to be open.

Available in Mac OS X v10.3 and later.
69.1.34 GetGPRMValue(index as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the current value of a general parameter (GPRM) register. **Notes:**

index: An integer index that specifies the desired GPRM register. The valid range is 1 to 16.

Returns the current value of the specified GPRM register.

Lasterror is set.

Available in Mac OS X v10.4 and later.

69.1.35 GetLastPlayBookmark as string

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Requests a bookmark to the last play position. **Notes:**

Returns a binary string.

Lasterror is set.

Available in Mac OS X v10.4 and later.

69.1.36 GetMaxAudioVolume as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the maximum video playback volume. **Notes:**

Lasterror is set.

Currently the minimum and maximum volumes are always 0 and 255.

69.1.37 GetMediaUniqueID as memoryblock

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Gets a unique identifier for a media folder. **Notes:**
Returns the unique identifier of the current media.

This function passes back a 64-bit identifier that can help you distinguish between different media folders. While the identifiers generated by this function are not guaranteed to be unique (see below), duplicate identifiers are extremely rare.

There are two known limitations of this function:

Two copies of the same DVD that are produced at different times do not necessarily have the same identifier. This can happen when the two media folders have minor differences.

Two different DVDs with similar content—collections of episodes from a television series, for example—do not always have different identifiers. This can happen when the two media folders are identical.

Available in Mac OS X v10.4 and later.

69.1.38 GetMediaVolumeName as string

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Gets the volume name of the current media.

**Notes:**

This function passes back the media volume name as a string. This is the name seen on the desktop when Mac OS X mounts a DVD-Video disc.

Available in Mac OS X v10.4 and later.

69.1.39 GetMenuLanguageCode as string

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Gets the menu language code for the current title.

**Notes:**

Returns the menu language code for the current title. For a list of possible values, see Language Codes.

Lasterror is set.

Available in Mac OS X v10.3 and later.
69.1. **CLASS DVDPLAYBACKMBS**

**69.1.40  GetMinAudioVolume as Integer**

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the minimum video playback volume.

**Notes:**
LastError is set.

Currently the minimum and maximum volumes are always 0 and 255.

**69.1.41  GetNativeVideoHeight as Integer**

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the native height of the current title.

**Notes:**
Available in Mac OS X v10.3 and later.
LastError is set.

**69.1.42  GetNativeVideoSize(byref w as Integer, byref h as Integer)**

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
The native video size.

**Notes:**
Requires Mac OS X 10.3 or newer.
LastError is set.

**69.1.43  GetNativeVideoWidth as Integer**

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the native width of the current title.

**Notes:**
Available in Mac OS X v10.3 and later.
LastError is set.

**69.1.44  GetNumberOfAngles as Integer**

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the number of camera angles currently available.
Notes:
Returns the number of different camera angles in the current title. DVD-Video media supports up to 9 camera angles.

Lasterror is set.
Available in Mac OS X v10.3 and later.

69.1.45  GetNumberOfAudioStreams as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function:
Gets the number of audio streams currently available.
Notes:
Returns the number of audio streams available in the current title.
Lasterror is set.
Before calling this function, DVD-Video media needs to be open.
Available in Mac OS X v10.3 and later.

69.1.46  GetNumberOfChapters(title as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function:
Gets the number of chapters in the specified title.
Notes:
title: An integer in the range 1 to 99 that specifies a title on the current media.
Returns the number of chapters in the specified title.
Lasterror is set.
If the specified chapter does not exist, this function does nothing and returns an error.
Available in Mac OS X v10.3 and later.

69.1.47  GetNumberOfSubPictureStreams as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function:
Gets the number of subpicture streams currently available.
Notes:
Returns the number of subpicture streams available in the current title. DVD-Video media supports up to 32 subpicture streams per title.

Lasterror is set.
Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

### 69.1.48 GetNumberOfTitles as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**

Gets the number of titles available on the media.

**Notes:**

Returns the number of titles on the current media in the range 0 to 99.

Lasterror is set.

Available in Mac OS X v10.3 and later.

### 69.1.49 GetScanRate(byref scanrate as Integer, byref direction as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**

Returns the current scan direction and rate.

**Notes:**

Requires Mac OS X 10.3 or newer.

Lasterror is set.

### 69.1.50 GetSPDIFDataOutDevice as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**

Returns the selected SPDIF capable audio device.

**Notes:**

Lasterror is set.

### 69.1.51 GetSPDIFDataOutDeviceCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**

Gets the number of SPDIF capable audio devices.

**Notes:**

Lasterror is set.
CHAPTER 69. DVD PLAYBACK

69.1.52 GetSPDIFDataOutDeviceName(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the name of a SPDIF capable audio device
**Notes:** Lasterror is set.

69.1.53 GetState as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the current play state of the DVDPlayback framework.
**Notes:**
Requires Mac OS X 10.3 or newer.
Lasterror is set.

The current play state of the framework.

**Constants:**

- kDVDStateUnknown 0
- kDVDStatePlaying 1 playing 1x or less (slow mo)
- kDVDStatePlayingStill 2
- kDVDStatePaused 3 pause and step frame
- kDVDStateStopped 4
- kDVDStateScanning 5 playing greater than 1x
- kDVDStateIdle 6

69.1.54 GetSubPictureLanguageCode(byref DVDLanguageCode as string, byref DVDSUBpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the subpicture language code and extension for the current subpicture stream.
**Notes:**
DVDLanguageCode: On return, the variable contains the language code for the current subpicture. For a list of possible values, see Language Codes.
DVDSUBpictureExtensionCode: On return, the variable contains the extension code for the current subpicture. For a list of possible values, see Subpicture Extension Codes.

If subpictures are not available, this function does nothing and lasterror is set to 0.
Lasterror is set.
69.1.55  GetSubPictureLanguageCodeByStream(StreamIndex as Integer, byref DVDLanguageCode as string, byref DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the subpicture language code and extension for a specified subpicture stream.

**Notes:**
StreamIndex: A subpicture stream number in the current title. Subpicture stream numbers range from 1 to 32.

DVDLanguageCode: On return, the variable contains the language code for the subpicture stream. For a list of possible values, see Language Codes.

DVDSubpictureExtensionCode: On return, the variable contains the extension code for the subpicture stream. For a list of possible values, see Subpicture Extension Codes.

Lasterror is set.

If subpictures are not available, this function does nothing and lasterror is not 0.

Available in Mac OS X v10.3 and later.

69.1.56  GetSubPictureStream as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the current subpicture stream.

**Notes:**
Returns the identifier of the current subpicture stream, or 0 if the current title has no subpictures. DVD-Video media supports up to 32 subpicture streams per title.

Lasterror is set.

Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.
69.1.57  GetTime(timecode as Integer, byref time as Integer, byref frames as Integer)

Function: Gets the current playback position in the current title in seconds relative to the requested time code (elapsed, remaining).
Notes:
Requires Mac OS X 10.3 or newer.
Lasterror is set.

Constants:

<table>
<thead>
<tr>
<th>Constant</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>kDVDTimeCodeUninitialized</td>
<td>0</td>
</tr>
<tr>
<td>kDVDTimeCodeElapsedSeconds</td>
<td>1</td>
</tr>
<tr>
<td>kDVDTimeCodeRemainingSeconds</td>
<td>2</td>
</tr>
<tr>
<td>kDVDTimeCodeTitleDurationSeconds</td>
<td>3</td>
</tr>
<tr>
<td>kDVDTimeCodeChapterElapsedSeconds</td>
<td>4</td>
</tr>
<tr>
<td>kDVDTimeCodeChapterRemainingSeconds</td>
<td>5</td>
</tr>
<tr>
<td>kDVDTimeCodeChapterDurationSeconds</td>
<td>6</td>
</tr>
</tbody>
</table>

69.1.58  GetTimeEventRate as Integer

Function: Gets the rate of the time event.
Notes:
Returns the current interval between time events in milliseconds.

Lasterror is set.
Available in Mac OS X v10.3 and later.

69.1.59  GetTitle as Integer

Function: Gets the number of the current title.
Notes:
Returns the current title number, or 0 if a menu is active. DVD-Video media can contain up to 99 titles.
Lasterror is set.
Available in Mac OS X v10.3 and later.

69.1.60 GetVideoBounds(byref x as Integer, byref y as Integer, byref w as Integer, byref h as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Returns (in port coordinates) the rect used to play video.
**Notes:**
Lasterror is set.
Requires Mac OS X 10.3.

69.1.61 GetVideoDisplay as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the graphics display for the current DVD-Video playback session.
**Notes:**
Returns the display ID is set to the current video playback display.
Lasterror is set.
Before calling this function, you need to set the video playback display using SetVideoDisplay or SwitchToDisplay.

Available in Mac OS X v10.3 and later.

69.1.62 GetVideoKeyColor as color

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the key color used by the video driver.
**Notes:**
Available in Mac OS X v10.3 and later.
Deprecated in Mac OS X v10.5.
Not available to 64-bit applications.
This function does nothing and returns the color black.
69.1.63 GetVideoWindowID as Integer

**Function:** Gets the window ID of the Cocoa window in use for DVD-Video playback.  
**Notes:** Returns the window ID of the Cocoa window currently in use for DVD-Video playback, or zero if there is no Cocoa window.  

Lasterror is set.  
Available in Mac OS X v10.3 and later.

69.1.64 GoBackOneLevel

**Function:** If a submenu is active, moves up one level in the same domain.  
**Notes:** Lasterror is set.  

This function is used to navigate one level up in a hierarchical structure in the same domain, for example, from a scene selection menu back to the main menu. This action is comparable to navigating upwards in the directory or folder hierarchy of a file system.  

Available in Mac OS X v10.3 and later.

69.1.65 GotoBookmark(Bookmark as string)

**Function:** Sets the video playback position using a bookmark, and resumes play.  
**Notes:** This function is used when playing media on a DVD-Video disc. Before calling this function, the media needs to be open. This function uses the specified bookmark to set the video playback position, and begins playing the media.  

Bookmark ist a binary string. Make sure you did not destroy it by an encoding conversion!  

Requires Mac OS X 10.4 or newer.  
Lasterror is set.
69.1.66 GoToMenu(menu as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Jump to a particular menu (Root Menu, Sub Picture Menu, etc.).
**Notes:**
Requires Mac OS X 10.3 or newer.
LastError is set.

69.1.67 HasMedia as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Returns true if the playback framework has media to play and the framework had received an Open call on
the media.
**Notes:**
Requires Mac OS X 10.3 or newer.
LastError is set.

69.1.68 HasMenu(menu as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Returns if input menu type is available.
**Notes:**
Requires Mac OS X 10.3 or newer.
LastError is set.

69.1.69 HasNextChapter as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Returns true if there is a chapter after the current chapter.
**Notes:**
Requires Mac OS X 10.3 or newer.
LastError is set.

69.1.70 HasPreviousChapter as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Returns true if there is a chapter before the current chapter.
CHAPTER 69. DVD PLAYBACK

Notes:
Requires Mac OS X 10.3 or newer.
Lasterror is set.

69.1.71   Idle
MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Allows the framework to get a consistent time to process at. (Might be removed in the future).
Notes:
Requires Mac OS X 10.3 or newer.
Lasterror is set.

69.1.72   IsDisplayingSubPicture as boolean
MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if subpictures are currently being displayed.
Notes:
Requires Mac OS X 10.3 or newer.
Lasterror is set.

69.1.73   IsMuted as boolean
MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Toggles the mute setting on or off.
Notes:
Returns true if the playback volume is currently muted.
Requires Mac OS X 10.3 or newer.
Lasterror is set.

69.1.74   IsOnMenu(byref OnMenu as boolean, byref menu as Integer)
MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Are we currently on a menu, and if so, which one.
Notes:
Requires Mac OS X 10.3 or newer.
Lasterror is set.
69.1. **CLASS DVDPLAYBACKMBS**

### 69.1.75 IsPaused as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Returns true if the framework has media and is paused.
**Notes:**
Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 69.1.76 IsPlaying as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Returns true if the framework has media and is playing (even if paused).
**Notes:**
Requires Mac OS X 10.3 or newer.
Lasterror is set.

### 69.1.77 IsSupportedDisplay(CGVideoDisplayHandle as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
True if the display is supported.
**Notes:**
Lasterror is set.
Requires Mac OS X 10.3 or newer.
You can use the handle from a CGDisplayMBS object.

### 69.1.78 IsSupportedScreen(screenNumber as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Returns true if this display is known to support DVD playback.
**Notes:**
Lasterror is set.
Requires Mac OS X 10.3.

Could return false for a display capable DVD playback but using a different video driver than the one currently in use.
69.1.79  IsValidMedia(folder as folderitem) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if the folderitem points to a valid media layout.

**Notes:**
Requires Mac OS X 10.3 or newer. Lasterror is set.

69.1.80  Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The last error code reported.

**Notes:**
Requires Mac OS X 10.3 or newer.

```
kDVDErrorUnknown -70001 Catch all error
kDVDErrorInitializingLib -70002 There was an error initializing the playback framework
kDVDErrorUninitializedLib -70003 The playback framework has not been initialized.
kDVDErrorNotAllowedDuringPlayback -70004 action is not allowed during playback
kDVDErrorUnassignedGrafPort -70005 A grafport was not set.
kDVDErrorAlreadyPlaying -70006 Media is already being played.
kDVDErrorNoFatalErrCallBack -70007 The application did not install a callback routine for fatal errors returned by the framework.
kDVDErrorIsAlreadySleeping -70008 The framework has already been notified to sleep.
kDVDErrorDontNeedWakeup -70009 DVDWakeUp was called when the framework was not asleep.
kDVDErrorTimeOutOfRange -70010 Time code is outside the valid range for the current title.
kDVDErrorUserActionNoOp -70011 The operation was not allowed by the media at this time.
kDVDErrorMissingDrive -70012 The DVD drive is not available.
kDVDErrorNotSupportedConfiguration -70013 The current system configuration is not supported.
kDVDErrorNotSupportedFunction -70014 The operation is not supported. For example, trying to slow mo backwards.
kDVDErrorNoValidMedia -70015 The media was not valid for playback.
kDVDErrordWrongParam -70016 The invalid parameter was passed.
kDVDErrorMissingGraphicsDevice -70017 A valid graphics device is not available.
kDVDErrorGraphicsDevice -70018 A graphics device error was encountered.
kDVDErrorPlaybackOpen -70019 The framework is already open (probably by another process).
kDVDErrorInvalidRegionCode -70020 The region code was not valid.
kDVDErrorRgnMgrInstall -70021 The region manager was not properly installed or missing from the system.
kDVDErrorMismatchedRegionCode -70022 The disc region code and the drive region code do not match.
kDVDErrorNoMoreRegionSets -70023 The drive does not have any region changes left.
kDVDErrorRegionCodeUninitialized -70024 The drive region code was not initialized.
kDVDErrorAuthentification -70025 The user attempting to change the region code could not be authenticated.
kDVDErrorOutOfVideoMemory -70026 The video driver does not have enough video memory available to playback the media.
kDVDErrorNoAudioOutputDevice -70027 An appropriate audio output device could not be found.
kDVDErrorSystem -70028 A system error was encountered.
kDVDErrorNavigation -70029 The user has made a selection not supported in the current menu.
```
69.1. CLASS DVDPLAYBACKMBS

69.1.81 LastErrorString as string

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns an error message for the lasterror code.  
**Notes:** Requires Mac OS X 10.3 or newer.

69.1.82 Mute(mute as boolean)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Toggles the mute setting on or off.  
**Notes:** mute: a boolean value that specifies whether to turn the mute setting on or off. To mute the video playback volume, pass TRUE. To restore the previous volume setting, pass FALSE.

Lasterror is set.

Available in Mac OS X v10.3 and later.

69.1.83 NextChapter

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sets to the next chapter on the current title.  
**Notes:** Requires Mac OS X 10.3 or newer.  
Lasterror is set.

69.1.84 Open

MBS MacOSX Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Call when preparing for playback. Usually when the application is initializing.  
**Notes:** Requires Mac OS X 10.3 or newer.  
Lasterror is set.  
Returns an error of kDVDErrorPlaybackOpen if the playback framework is already being used.
CHAPTER 69. DVD PLAYBACK

69.1.85 OpenMediaFile(folder as folderitem)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Opens a VIDEO_TS folder (can be on a hard drive or a dvd disc).
**Notes:**
Requires Mac OS X 10.3 or newer.
Lasterror is set.

69.1.86 OpenMediaVolume(disc as folderitem)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Opens a DVD disc for playback.
**Notes:**
Requires Mac OS X 10.3 or newer.
Lasterror is set.

69.1.87 Pause

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Pauses the media if currently playing.
**Notes:**
Requires Mac OS X 10.3 or newer.
Lasterror is set.

69.1.88 Play

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Starts playing the media.
**Notes:**
Requires Mac OS X 10.3 or newer.
Lasterror is set.

69.1.89 PreviousChapter

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Sets to the previous chapter on the current title.
**Notes:**
69.1.90  Resume

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Starts playing if currently paused.

**Notes:**
Requires Mac OS X 10.3 or newer.
Lasterror is set.

69.1.91  ReturnToTitle

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns from the menu back to the current position within the title.

**Notes:**
Requires Mac OS X 10.3 or newer.
Lasterror is set.

69.1.92  SetAngle(angle as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sets the camera angle to display.

**Notes:**
angle: A 1-based index that specifies the camera angle to display. The angle number of the main angle is 1. DVD-Video media supports up to nine camera angles.

Lasterror is set.
Before calling this function, DVD-Video media needs to be open and video playback started. The DVD-Video author decides how many camera angles are used. If the specified angle does not exist, this function does nothing.

Available in Mac OS X v10.3 and later.
69.1.93 SetAspectRatio(AspectRatio as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Sets the aspect ratio for the current title.

**Notes:**
AspectRatio: A constant that specifies the desired aspect ratio for the current title. For a list of possible values, see Aspect Ratios.

Lasterror is set.
This function does nothing and returns noErr.

Available in Mac OS X v10.3 and later.

69.1.94 SetAudioOutputMode(Mode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Set the audio mode.

**Notes:** Lasterror is set.

69.1.95 SetAudioStream(index as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Sets the audio stream to use.

**Notes:**
index: An integer from 1 to 8 that specifies an audio stream in the current title. DVD-Video media supports up to 8 audio streams per title.

Lasterror is set.
Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

69.1.96 SetAudioVolume(Volume as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Sets the playback audio volume setting (0 - 255).

**Notes:**
Volume: An integer in the range 0 to 255 that specifies the new video playback volume setting. Larger values are clamped to 255.

LastError is set.

This function changes the current playback audio volume setting, not the system audio volume setting. The actual audio volume experienced by the user is a function of these two settings:

Actual audio volume = system volume * playback audio volume / 255

For example, if you set the playback volume to 127, the actual volume is approximately one-half the current system volume.

Available in Mac OS X v10.3 and later.

69.1.97 SetChapter(Chapter as Integer)

Notes:

Chapter: An integer that specifies the chapter to play.

LastError is set.

This function defines the specified chapter to be the current video playback chapter. If video playback is paused, this function starts playing the chapter immediately. Note that some discs do not allow jumping directly to a chapter.

Available in Mac OS X v10.3 and later.

69.1.98 SetDefaultAudioLanguageCode(DVDLanguageCode as string, DVDSubpictureExtensionCode as Integer)

Notes:

DVDLanguageCode: A constant that specifies the default audio language for the specified audio extension. For a list of possible values, see Language Codes. If no language is specified that is, if you pass in kDVDLanguageNoPreference or kDVDLanguageCodeNone the default audio language is matched to the language

DVDSubpictureExtensionCode: An integer that specifies the default subpicture language for the specified subpicture extension.
setting in the International Preferences Panel.

**DVDSubpictureExtensionCode:** A constant that specifies an audio extension. For a list of possible values, see Audio Extension Codes.

Lasterror is set.

This function selects an audio language other than the DVD’s default language for a specified audio extension. Before calling this function, DVD-Video media needs to be open.

Available in Mac OS X v10.3 and later.

### 69.1.99 SetDefaultMenuLanguageCode(Code as string)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sets the default menu language code.

**Notes:**

Code: An integer code that specifies the default menu language for the current title. For a list of possible values, see "Language Codes." If no language is specified—that is, if you pass in kDVDLanguageNoPreference or kDVDLanguageCodeNonethe default menu language is matched to the language setting in the International Preferences Panel.

Lasterror is set.

This function selects a language other than the DVD’s default language for menus in the current title. Before calling this function, DVD-Video media needs to be open and video playback stopped.

Available in Mac OS X v10.3 and later.

### 69.1.100 SetDefaultSubPictureLanguageCode(DVDLanguageCode as string, DVDSubpictureExtensionCode as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sets the default subpicture language and extension when subpictures are enabled.

**Notes:**

DVDLanguageCode: A constant that specifies the default language for the specified subpicture extension. For a list of possible values, see "Language Codes." If no language is specified—that is, if you pass in kDVDLanguageNoPreference or kDVDLanguageCodeNonethe default subpicture language code is matched to the
language setting in the International Preferences Panel.

**DVDSubpictureExtensionCode**

A constant that specifies a subpicture extension. For a list of possible values, see "Subpicture Extension Codes."

Lasterror is set.
If the current title is playing, this function does nothing and lasterror is set to kDVDErrorAlreadyPlaying.

This function is used to select a subpicture language other than the system default language. Before calling this function, DVD-Video media needs to be open and video playback stopped.

Available in Mac OS X v10.3 and later.

### 69.1.101 SetDriveRegionCode(regioncode as Integer, AuthorizationHandle as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Sets the drive region code (requires user authentication).

**Notes:**

Lasterror is set.
Requires Mac OS X 10.3.

**DVDRRegionCode constants** - The different possible region codes (used for both the disc and the drive):

- kDVDRRegionCodeUninitialized: & hff
- kDVDRRegionCode1: & hfe
- kDVDRRegionCode2: & hfd
- kDVDRRegionCode3: & hfb
- kDVDRRegionCode4: & hf7
- kDVDRRegionCode5: & hef
- kDVDRRegionCode6: & hdf
- kDVDRRegionCode7: & hbf
- kDVDRRegionCode8: & h7f

### 69.1.102 SetLastPlayBookmark(Bookmark as string)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Sets the video playback position using a bookmark.

**Notes:**
Lasterror is set.

This function is used when playing media on a DVD-Video disc. Before calling this function, the media needs to be open. This function uses the specified bookmark to set the video playback position, but does not begin playing the media. See also GotoBookmark.

Available in Mac OS X v10.4 and later.
69.1.103 SetPlayWindow(win as window, screennumber as Integer)

MBS MacOSX Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: Redirects the output to the given window on the given screen.

Notes:
Requires Mac OS X 10.3 or newer.
LastError is set.

69.1.104 SetScanRate(scanrate as Integer, direction as Integer)

Notes:
Requires Mac OS X 10.3 or newer.
LastError is set.

The rate at which to scan:

<table>
<thead>
<tr>
<th>Rate</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>kDVDScanRateOneEighth</td>
<td>-8</td>
</tr>
<tr>
<td>kDVDScanRateOneFourth</td>
<td>-4</td>
</tr>
<tr>
<td>kDVDScanRateOneHalf</td>
<td>-2</td>
</tr>
<tr>
<td>kDVDScanRate1x</td>
<td>1</td>
</tr>
<tr>
<td>kDVDScanRate2x</td>
<td>2</td>
</tr>
<tr>
<td>kDVDScanRate4x</td>
<td>4</td>
</tr>
<tr>
<td>kDVDScanRate8x</td>
<td>8</td>
</tr>
<tr>
<td>kDVDScanRate16x</td>
<td>16</td>
</tr>
<tr>
<td>kDVDScanRate32x</td>
<td>32</td>
</tr>
</tbody>
</table>

Direction constants:

<table>
<thead>
<tr>
<th>Direction</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>kDVDScanDirectionForward</td>
<td>0</td>
</tr>
<tr>
<td>kDVDScanDirectionBackward</td>
<td>1</td>
</tr>
</tbody>
</table>

69.1.105 SetSPDIFDataOutDevice(Device as Integer)

Notes: Lasterror is set.
69.1.106 SetSubPictureStream(index as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sets the current subpicture stream.

**Notes:**

index: A positive integer that specifies the subpicture stream to display. Subpicture stream numbers range from 1 to 32.

LastError is set.

Before calling this function, DVD-Video media needs to be open and video playback started.

Available in Mac OS X v10.3 and later.

69.1.107 SetTime(timecode as Integer, time as Integer, frames as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sets the current playback position in the current title based on a time position in seconds relative to the time code (elapsed, remaining).

**Notes:**

timecode: A time code constant. You must specify one of two values: kDVDTimeCodeElapsedSeconds or kDVDTimeCodeRemainingSeconds.

time: An integer that specifies the position in seconds.

frames: An integer that specifies the frame number. For the NTSC video format, the range of frame numbers is 0 to 29. For the PAL format, the range is 0 to 24.

This function sets the video playback position in the current title. Not all titles permit this operation, so it's important to check the result code returned by this function.

Before calling this function, DVD-Video media needs to be open and video playback started.

Requires Mac OS X 10.3 or newer.

LastError is set.
69.1. **CLASS DVDPLAYBACKMBS**

69.1.108 **SetTimeEventRate(rate as Integer)**

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Sets the rate of the DVD Playback time event.

**Notes:**
The new interval between time events, specified in milliseconds.

Lasterror is set.

The default interval between DVD Playback time events is 900 milliseconds. You can use this function to lengthen or shorten the interval between time events. This function is relevant when you have used the function DVDRegisterEventCallBack to register a callback for one or both of the time events: kDVDEventTitleTime and kDVDEventChapterTime. Time event callbacks are typically used for tasks such as updating the elapsed time or remaining time displayed in your user interface.

Available in Mac OS X v10.3 and later.

69.1.109 **SetTitle(Title as Integer)**

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Sets the title to play.

**Notes:**
Title: An integer in the range 1 to 99 that specifies the title to play.

Lasterror is set.

If the specified title exists on the current media and the media permits this operation, this function begins playing the title.

Available in Mac OS X v10.3 and later.

69.1.110 **SetVideoBounds(x as Integer, y as Integer, w as Integer, h as Integer)**

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Sets the bounds in which to display the video.

**Notes:**
x,y,w,h: A rectangle that contains the desired bounds in window local coordinates.

Lasterror is set.
This function is used to set the area inside the current window in which to display the video. The video area is not required to fill the entire window. Generally you should set the video area to be smaller than the window whenever the aspect ratio of the current title and window are different. To find the aspect ratio of the current title, use the function GetAspectRatio.

Because the aspect ratios of the titles in a DVD-Video media folder are not always the same, you may need to call this function repeatedly to reset the video area as the user makes different viewing choices.

Available in Mac OS X v10.3 and later.
Deprecated in Mac OS X v10.5.
Not available to 64-bit applications.

69.1.111 SetVideoDisplay(CGVideoDisplayHandle as Integer)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sets the graphics display for the current DVD-Video playback session.  
**Notes:**  
The Quartz display ID for the graphics display you want to use for video playback. For information about how to get a display ID, see Quartz Display Services Reference. (or CGDisplayMBS class)

Lasterror is set.

You need to call this function or DVDSetVideoDevice each time you move the video playback window to a new graphics display. To avoid degrading video performance, you should not attempt to draw a video playback window that spans two different displays.

Available in Mac OS X v10.3 and later.

69.1.112 SetVideoWindow(win as window)

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sets the video output to the given window.  
**Notes:**  
As QuickDraw Ports are deprecated, Apple introduced this new function to replace SetPlayWindow. Requires Mac OS X 10.5 or newer.
Lasterror is set.
### 69.1.113 SetVideoWindowID(WindowID as Integer)

**MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.**

**Function:** Enables or disables DVD-Video playback in a Cocoa window.

**Notes:**

WindowID: The window ID associated with a Cocoa window, or NULL. For information about when to pass 0, see the Discussion below.

Lasterror is set.

If you’re using a Cocoa window for DVD-Video playback, you need to use this function in two different situations:

Immediately after calling the constructor to start a new DVD-Video playback session, you should call this function and pass the window ID associated with the Cocoa window.

When video is not playing and you want to draw into the area of the window you set by calling the function SetVideoBounds, you should call this function and pass 0 in the inVidWindowID parameter.

To learn how to obtain the window number for a Cocoa window, see the description of the windowNumber method in the NSWindow class.

**Availability**

Available in Mac OS X v10.3 and later.

### 69.1.114 Sleep

**MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.**

**Function:** Call when system is putting machine to sleep so playback information can be saved.

**Notes:**

Requires Mac OS X 10.3 or newer.

Lasterror is set.

The client must register for sleep notifications with the system so that it can notify the framework of sleep and wake notifications.

### 69.1.115 StepFrame(direction as Integer)

**MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.**

**Function:** Steps one frame in the direction specified in DVDScanDirection.
CHAPTER 69. DVD PLAYBACK

Notes:
Requires Mac OS X 10.3 or newer.
Lasterror is set.
Currently only supports kDVDScanDirectionForward.

69.1.116 Stop

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Stops if playing.
**Notes:**
Requires Mac OS X 10.3 or newer.
Lasterror is set.

69.1.117 SwitchToDisplay(CGVideoDisplayHandle as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Switches the output to the given display.
**Notes:**
Requires Mac OS X 10.3 or newer.
Lasterror is set.
You can use the handle from a CGDisplayMBS object.

69.1.118 UpdateVideo

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Forces the video to be updated.
**Notes:**
Requires Mac OS X 10.3 or newer.
Lasterror is set.

69.1.119 WakeUp

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Call when system is waking up so playback information can be reset.
**Notes:**
Requires Mac OS X 10.3 or newer.
Lasterror is set.
69.1. CLASS DVDPLAYBACKMBS

The client must register for sleep notifications with the system so that it can notify the framework of sleep and wake notifications.

69.1.120 Events

69.1.121 DVDEvent(eventcode as Integer, value1 as Integer, value2 as Integer)

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
A DVD event.
**Notes:**
Lasterror is set.
Requires Mac OS X 10.3.

DVDEventCode constants - The different event a client can register for to get notified (return value: UInt32)

<table>

69.1.122 FatalError(errorcode as Integer)

MBS MacOSX Plugin, Plugin Version: 4.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
A fatal error. Quit the application as soon as possible.
CHAPTER 69. DVD PLAYBACK

Notes:
Lasterror is set.
Requires Mac OS X 10.3.

69.1.123 Constants

69.1.124 kDVDAMGMDomain = 5
MBS MacOSX Plugin, Plugin Version: 9.2. Function: A constant that specifies playback domains or modes that define a set of possible actions.
Notes: Audio Manager Menu domain (DVD-Audio only, not used).

69.1.125 kDVDAspectRatio16x9 = 3
MBS MacOSX Plugin, Plugin Version: 9.2. Function: A constant that specifies the current aspect ratio.
Notes: The process of displaying a 16:9 video frame on a screen with the same aspect ratio.

69.1.126 kDVDAspectRatio4x3 = 1
MBS MacOSX Plugin, Plugin Version: 9.2. Function: A constant that specifies the current aspect ratio.
Notes: The process of displaying a 4:3 video frame on a screen with the same aspect ratio.

69.1.127 kDVDAspectRatio4x3PanAndScan = 2
MBS MacOSX Plugin, Plugin Version: 9.2. Function: A constant that specifies the current aspect ratio.
Notes: The process of choosing a sample area of a 16:9 video frame for display on a 4:3 screen, using center-of-interest information stored on the DVD.

69.1.128 kDVDAspectRatioLetterBox = 4
MBS MacOSX Plugin, Plugin Version: 9.2. Function: A constant that specifies the current aspect ratio.
Notes: The process of displaying the entire 16:9 video frame on a 4:3 screen by shrinking the frame and adding mattes or black bars above and below the frame.
69.1.129 kDVDAspectRatioUninitialized = 0

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies the current aspect ratio.  
**Notes:** Available in Mac OS X v10.3 and later.

69.1.130 kDVDAudioAC3Format = 1

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies the audio stream format.  
**Notes:** The Dolby Digital AC-3 format.

69.1.131 kDVDAudioDDPlusFormat = 8

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies an audio mode.

69.1.132 kDVDAudioDTSFormat = 5

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies the audio stream format.  
**Notes:** The Digital Theater Systems (DTS) format. This format is not supported.

69.1.133 kDVDAudioDTSHDFormat = 9

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies an audio mode.

69.1.134 kDVDAudioExtensionCodeDirectorsComment1 = 3

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies the purpose of an audio channel.  
**Notes:** First audio channel for the artistic director’s comments.

69.1.135 kDVDAudioExtensionCodeDirectorsComment2 = 4

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies the purpose of an audio channel.  
**Notes:** Second audio channel for the artistic director’s comments.
69.1.136  kDVDAudioExtensionCodeNormalCaptions = 1

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies the purpose of an audio channel.
**Notes:** Audio channel for extended information about the title.

69.1.137  kDVDAudioExtensionCodeNotSpecified = 0

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies the purpose of an audio channel.
**Notes:** Audio extension not specified.

69.1.138  kDVDAudioExtensionCodeNVisualImpaired = 2

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies the purpose of an audio channel.
**Notes:** Audio channel for the visually impaired.

69.1.139  kDVDAudioMLPFormat = 7

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies an audio mode.

69.1.140  kDVDAudioModeProLogic = 1

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies an audio mode.

69.1.141  kDVDAudioModeSPDIF = 2

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies an audio mode.

69.1.142  kDVDAudioModeUninitialized = 0

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies an audio mode.
69.1.143  kDVDAudioMPEG1Format = 2

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies the audio stream format. **Notes:** The MPEG-1 Layer II digital format.

69.1.144  kDVDAudioMPEG2Format = 3

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies the audio stream format. **Notes:** The MPEG-2 digital format.

69.1.145  kDVDAudioPCMFormat = 4

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies the audio stream format. **Notes:** The linear pulse-code modulation (PCM) format used on CDs.

69.1.146  kDVDAudioSDDSFormat = 6

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies the audio stream format. **Notes:** The Sony Dynamic Digital Sound (SDDS) format. This format is not supported.

69.1.147  kDVDAudioUnknownFormat = 0

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies the audio stream format. **Notes:** An unspecified audio format.

69.1.148  kDVDButtonIndexNone = -1

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant for an index of the selected menu button.

69.1.149  kDVDErrorAlreadyPlaying = -70006

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specify the result codes defined for DVD Playback. **Notes:** See kDVDErrorNotAllowedDuringPlayback.

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies the rate at which to scan. 
**Notes:** These constants are used along with the scan direction to specify the speed and direction of play. The constant kDVDScanRate1x represents the normal playback speed; the slower and faster playback speeds are multiples of the normal speed.

69.1.380  kDVDStateIdle = 6

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constants that specify the current play state. 
**Notes:** Not used.

69.1.381  kDVDStatePaused = 3

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constants that specify the current play state. 
**Notes:** DVD-Video media is open and paused or frame-stepping.

69.1.382  kDVDStatePlaying = 1

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constants that specify the current play state. 
**Notes:** DVD-Video media is open and playing at normal rate (1x scan rate).

69.1.383  kDVDStatePlayingSlow = 7

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constants that specify the current play state. 
**Notes:** DVD-Video media is open and playing in slow motion (less than 1x scan rate). Available in Mac OS X v10.4 and later.

69.1.384  kDVDStatePlayingStill = 2

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constants that specify the current play state. 
**Notes:** DVD-Video media is open and playing a single frame.
69.1.385  kDVDStateScanning = 5

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constants that specify the current play state. **Notes:** DVD-Video media is open and playing in fast motion (greater than 1x scan rate).

69.1.386  kDVDStateStopped = 4

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constants that specify the current play state. **Notes:** DVD-Video media is open and stopped (not playing).

69.1.387  kDVDStateUnknown = 0

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constants that specify the current play state. **Notes:** The initial state of a new DVD-Video playback session.

69.1.388  kDVDSTOPDomain = 4

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies playback domains or modes that define a set of possible actions. **Notes:** Stop State domain.

69.1.389  kDVDSubpictureExtensionCodeCaption4Children = 3

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies the purpose of a subpicture stream. **Notes:** A language-caption subpicture for children.

69.1.390  kDVDSubpictureExtensionCodeCaptionBiggerSize = 2

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies the purpose of a subpicture stream. **Notes:** A large language-caption subpicture.
69.1.391  kDVDSubpictureExtensionCodeCaptionNormalSize = 1

MBS MacOSX Plugin, Plugin Version: 9.2. **Function**: A constant that specifies the purpose of a subpicture stream.
**Notes**: A language-caption subpicture.

69.1.392  kDVDSubpictureExtensionCodeClosedCaption4Children = 7

MBS MacOSX Plugin, Plugin Version: 9.2. **Function**: A constant that specifies the purpose of a subpicture stream.
**Notes**: A closed-caption subpicture for children.

69.1.393  kDVDSubpictureExtensionCodeClosedCaptionBiggerSize = 6

MBS MacOSX Plugin, Plugin Version: 9.2. **Function**: A constant that specifies the purpose of a subpicture stream.
**Notes**: A large closed-caption subpicture.

69.1.394  kDVDSubpictureExtensionCodeClosedCaptionNormalSize = 5

MBS MacOSX Plugin, Plugin Version: 9.2. **Function**: A constant that specifies the purpose of a subpicture stream.
**Notes**: A closed-caption subpicture.

69.1.395  kDVDSubpictureExtensionCodeForcedCaption = 9

MBS MacOSX Plugin, Plugin Version: 9.2. **Function**: A constant that specifies the purpose of a subpicture stream.
**Notes**: A subpicture which is always visible, regardless of the viewer’s preferences.

69.1.396  kDVDSubpictureExtensionCodeNotSpecified = 0

MBS MacOSX Plugin, Plugin Version: 9.2. **Function**: A constant that specifies the purpose of a subpicture stream.
**Notes**: Subpicture not specified.
69.1.397  kDVDSubpictureExtensionDirectorsComment4Children = 15

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies the purpose of a subpicture stream.
**Notes:** A subpicture for director’s comments for children.

69.1.398  kDVDSubpictureExtensionDirectorsCommentBiggerSize = 14

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies the purpose of a subpicture stream.
**Notes:** A large subpicture for director’s comments.

69.1.399  kDVDSubpictureExtensionDirectorsCommentNormalSize = 13

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies the purpose of a subpicture stream.
**Notes:** A normal subpicture for director’s comments.

69.1.400  kDVDT imeCodeChapterDurationSeconds = 6

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies a temporal location in the video stream of the current title or chapter.
**Notes:** Number of seconds in the current chapter.

69.1.401  kDVDT imeCodeChapterElapsedSeconds = 4

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies a temporal location in the video stream of the current title or chapter.
**Notes:** Number of seconds elapsed since the beginning of the current chapter.

69.1.402  kDVDT imeCodeChapterRemainingSeconds = 5

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies a temporal location in the video stream of the current title or chapter.
**Notes:** Number of seconds remaining before the end of the current chapter.
69.1. CLASS DVDPLAYBACKMBS

69.1.403 kDVDTimeCodeElapsedSeconds = 1

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies a temporal location in the video stream of the current title or chapter. 
**Notes:** Number of seconds after a specified position.

69.1.404 kDVDTimeCodeRemainingSeconds = 2

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies a temporal location in the video stream of the current title or chapter. 
**Notes:** Number of seconds before a specified position.

69.1.405 kDVDTimeCodeTitleDurationSeconds = 3

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies a temporal location in the video stream of the current title or chapter. 
**Notes:** Number of seconds in the current title.

69.1.406 kDVDTimeCodeUninitialized = 0

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies a temporal location in the video stream of the current title or chapter. 
**Notes:** Not used.

69.1.407 kDVDTTDomain = 3

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies playback domains or modes that define a set of possible actions. 
**Notes:** Title domain.

69.1.408 kDVDTTGRDomain = 6

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies playback domains or modes that define a set of possible actions. 
**Notes:** Title Group domain (DVD-Audio only, not used).
69.1.409  kDVDUOPAngleChange = 4194304

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function SetAngle is disabled.

69.1.410  kDVDUOPAudioStreamChange = 1048576

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function SetAudioStream is disabled.

69.1.411  kDVDUOPBackwardScan = 512

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function Scan in the backward direction is disabled.

69.1.412  kDVDUOPButton = 131072

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The functions DoMenuClick, DoMenuMouseOver, and DoUserNavigation are disabled.

69.1.413  kDVDUOPForwardScan = 256

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function Scan in the forward direction is disabled.

69.1.414  kDVDUOPGoUp = 16

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function GoBackOneLevel is disabled.
69.1.415  kDVDUOPKaraokeModeChange = 8388608

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** Not used.

69.1.416  kDVDUOPMenuCallAngle = 16384

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function GoToMenu for an angle menu is disabled.

69.1.417  kDVDUOPMenuCallAudio = 8192

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function GoToMenu for an audio menu is disabled.

69.1.418  kDVDUOPMenuCallPTT = 32768

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function GoToMenu for a chapter menu is disabled.

69.1.419  kDVDUOPMenuCallRoot = 2048

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function GoToMenu for a root menu is disabled.

69.1.420  kDVDUOPMenuCallSubPicture = 4096

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function GoToMenu for a subpicture menu is disabled.
69.1.421  kDVDUOPMenuCallTitle = 1024

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function GoToMenu for a title menu is disabled.

69.1.422  kDVDUOPNextPGSearch = 128

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function NextChapter is disabled.

69.1.423  kDVDUOPPauseOff = 67108864

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function Resume is disabled.

69.1.424  kDVDUOPPauseOn = 524288

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function Pause is disabled.

69.1.425  kDVDUOPPrevTopPGSearch = 64

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function PreviousChapter is disabled.

69.1.426  kDVDUOPPTTPlaySearch = 2

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function SetTime is disabled.
69.1. CLASS DVDPLAYBACKMBS

69.1.427 kDVDUOPResume = 65536

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function SetTime is disabled.

69.1.428 kDVDUOPScanOff = 33554432

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** Not used.

69.1.429 kDVDUOPStillOff = 262144

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** Not used.

69.1.430 kDVDUOPStop = 8

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function Stop is disabled.

69.1.431 kDVDUOPSubPictureStreamChange = 2097152

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function SetAudioStream is disabled.

69.1.432 kDVDUOPTimePlaySearch = 1

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.
**Notes:** The function SetTime is disabled.
69.1.433  kDVDUOPTimePTTSearch = 32

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.  
**Notes:** The function DVDSetChapter is disabled.

69.1.434  kDVDUOPTitlePlay = 4

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.  
**Notes:** The functions ReturnToTitle, SetTitle, and SetChapter are disabled.

69.1.435  kDVDUOPVideoModeChange = 16777216

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies user operations (UOP) which are currently disabled.  
**Notes:** Not used.

69.1.436  kDVDUserNavigationEnter = 5

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button.  
**Notes:** Execute the action of the selected button.

69.1.437  kDVDUserNavigationMoveDown = 2

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button.  
**Notes:** Move to and select the button above the current location.

69.1.438  kDVDUserNavigationMoveLeft = 3

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button.  
**Notes:** Move to and select the button to the left of the current location.
69.1.  CLASS DVDPLAYBACKMBS

69.1.439  kDVDUserNavigationMoveRight = 4

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button. **Notes:** Move to and select the button to the right of the current location.

69.1.440  kDVDUserNavigationMoveUp = 1

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A Constant that specifies keyboard operations used to select a menu button and execute the action or command associated with a button. **Notes:** Move to and select the button above the current location.

69.1.441  kDVDVMGMDomain = 1

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies playback domains or modes that define a set of possible actions. **Notes:** Video Manager Menu domain.

69.1.442  kDVDVTSMDomain = 2

MBS MacOSX Plugin, Plugin Version: 9.2. **Function:** A constant that specifies playback domains or modes that define a set of possible actions. **Notes:** Video Title Set Menu domain.
69.2 class DVDPlaybackMissingFunctionExceptionMBS

69.2.1 class DVDPlaybackMissingFunctionExceptionMBS

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The exception raised if a DVDPlayback function is not available on this Mac OS X version.

**Notes:**
Check the message property.
Subclass of the RuntimeException class.
69.3. class DVDPlaybackNotInitializedExceptionMBS

69.3.1 class DVDPlaybackNotInitializedExceptionMBS

MBS MacOSX Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The exception raised when you use a method on the DVDPlaybackMBS class without initializing it. **Notes:** Subclass of the RuntimeException class.
Chapter 70

DynaPDF

70.1 class DynaPDFAnnotationExMBS

70.1.1 class DynaPDFAnnotationExMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: The class for extended annotation information.

Example:

```vba
dim pdf as DynaPDFMBS // your instance

dim c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
    dim a as DynaPDFAnnotationExMBS = pdf.GetAnnotEx(i)
    MsgBox str(a.Type)
next
```

Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.1.2 Methods

70.1.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: The private constructor.
70.1.4  **DashPattern(index as UInt32) as single**

**Function:** The dash pattern.
**Notes:** If BorderStyle is kbsDashed.

70.1.5  **InkList(index as UInt32) as Single()**

**Function:** The ink list.
**Notes:**
Ink annotations only. Array of array.
Index is from 0 to InkListCount-1.

70.1.6  **QuadPoints(index as UInt32) as single**

**Function:** Gets a quad point value.
**Notes:**
Index from 0 to QuadPointsCount-1.
Highlight, Link, and Redact annotations only.

70.1.7  **Vertices(index as UInt32) as single**

**Function:** The vertices array.
**Notes:** Line, PolyLine, and Polygon annotations only.

70.1.8  **Properties**

70.1.9  **AnnotFlags as UInt32**

**Function:** The flags for this annotation.
**Notes:**
You can use this constants:

- `kafNone` = & h0000000
- `kafInvisible` = & h0000001
- `kafHidden` = & h0000002
- `kafPrint` = & h0000004
- `kafNoZoom` = & h0000008
- `kafNoRotate` = & h0000010
- `kafNoView` = & h0000020
- `kafReadOnly` = & h0000040

(Read only property)

### 70.1.10 Author as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Annotation's author.  
**Notes:** This string is either an unicode encoded string or an ASCII encoded string.  
(Read only property)

### 70.1.11 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Background color.  
**Notes:** (Read only property)

### 70.1.12 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Bounding box in bottom-up coordinates.  
**Notes:** (Read only property)

### 70.1.13 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Border color.
70.1.14  BorderEffect as Integer

**Function:** The border effect.  
**Notes:**  
Circle, Square, FreeText, and Polygon annotations.  
(Read only property)

70.1.15  BorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Border style.  
**Notes:** (Read only property)

70.1.16  BorderWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Border width.  
**Notes:** (Read only property)

70.1.17  Caption as Boolean

**Function:** If true, the annotation string Content is used as caption.  
**Notes:**  
The string is shown in a PopUp annotation otherwise.  
(Read only property)

70.1.18  CaptionOffsetX as Single

**Function:** Horizontal offset of the caption from its normal position.  
**Notes:** (Read only property)
70.1.19  CaptionOffsetY as Single

**Function:** Vertical offset of the caption from its normal position.  
**Notes:** (Read only property)

70.1.20  CaptionPos as Integer

**Function:** The position where the caption should be drawn if present.  
**Notes:** (Read only property)

70.1.21  Content as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Annotation’s contents.  
**Notes:**  
This string is either an unicode encoded string or an ASCII encoded string.  
(Read only property)

70.1.22 CreateDate as String

**Function:** Creation Date ->Optional  
**Notes:** (Read only property)

70.1.23  DashPatternCount as UInt32

**Function:** Number of values in the array.  
**Notes:** (Read only property)

70.1.24  Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Is this annotation marked as deleted?
70.1.25  **DestFile as String**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The destination file.
**Notes:**
For File link or web link annotations.

(Read only property)

70.1.26  **DestPage as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The destination page.
**Notes:**
For Page link annotations only.

(Read only property)

70.1.27  **DestPos as DynaPDFRectMBS**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The destination position.
**Notes:**
For Page link annotations only.

(Read only property)

70.1.28  **DestType as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The destination type.
**Notes:**
For Page link annotations only.
70.1. **CLASS DYNAPDFANNOTATIONEXMBS**

(Read only property)

70.1.29 **EmbeddedFileHandle as Integer**

**Function:** The handle for the embedded file.  
**Notes:**  
For FileAttach annotations only. Use the handle with the GetEmbeddedFile function.  
(Read only property)

70.1.30 **Grouped as Boolean**

**Function:** Meaningful only if Parent <>-1 and Type <>katPopUp.  
**Notes:**  
If true, the annotation is part of an annotation group. Properties like Content, CreateDate, ModDate, BackColor, Subject, and Open must be taken from the parent annotation.  
(Read only property)

70.1.31 **Handle as Integer**

**Function:** The internal object reference.  
**Notes:** (Read only property)

70.1.32 **HighlightMode as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Visual effect.  
**Notes:** (Read only property)

70.1.33 **Icon as Integer**

**Function:** The icon type for this annotation.  
**Notes:**
The Icon type depends on the annotation type. If the annotation type is atText then the Icon is of type TAnnotIcon. If the annotation type is atFileAttach then it is of type kTFileAttachIcon. If the annotation type is atStamp then the Icon is the stamp type (kTRubberStamp). For any other annotation type this value is not set (-1).

(Read only property)

**70.1.34 InkListCount as Integer**

**Function:** Number of ink arrays.

**Notes:** (Read only property)

**70.1.35 Intent as String**

**Function:** Markup annotations only.

**Notes:**

The intent allows to distinguish between different uses of an annotation. For example, line annotations have two intents: LineArrow and LineDimension.

(Read only property)

**70.1.36 LE1 as Integer**

**Function:** Style of the start point - Line and PolyLine annotations only.

**Notes:** (Read only property)

**70.1.37 LE2 as Integer**

**Function:** Style of the end point - Line and PolyLine annotations only.

**Notes:** (Read only property)

**70.1.38 LeaderLineExtend as Single**

**Function:** Optional leader line extend beyond the leader line.
70.1.39 LeaderLineLen as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Length of the leader lines (positive or negative)  
**Notes:** (Read only property)

70.1.40 LeaderLineOffset as Single

MBS DynaPDF Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Amount of space between the endpoints of the annotation and the leader lines.  
**Notes:** (Read only property)

70.1.41 MarkupAnnot as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If true, the annotation is a markup annotation.  
**Notes:**  
Markup annotations can be flattened separately, see FlattenAnnots function.  
(Read only property)

70.1.42 ModDate as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Modification Date ->Optional  
**Notes:** (Read only property)

70.1.43 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Annotation’s name.  
**Notes:**  
This string is either an unicode encoded string or an ASCII encoded string.  
(Read only property)
70.1.44 OC as Integer

MBS DynaPDF Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Handle of an OCG or OCMD or -1 if not set.
Notes:
Annotations can be part of an Optional Content Group (OCG) or Optional Content Membership Dictionary (OCMD). If OC is greater -1 an OCG or OCMD handle was set. To determine whether an OCG handle was set, check whether the value is smaller & h40000000.
(Read only property)

70.1.45 Opacity as Single

Function: The annotation’s opacity.
Notes:
Opacity = 1.0 = Opaque, Opacity <1.0 = Transparent, Markup annotations only
(Read only property)

70.1.46 Open as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Meaningful only for annotations which have a corresponding PopUp annotation.
Notes: (Read only property)

70.1.47 PageIndex as UInt32

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The page index is used to sort form fields.
Notes:
See SortFieldsByIndex().
(Read only property)

70.1.48 PageNum as UInt32

Notes: (Read only property)
70.1.49 Parent as Integer

**Function:** Parent annotation handle of a PopUp Annotation or the parent annotation if this annotation represents a state of a base annotation.

**Notes:**
In this case, the annotation type is always atText and only the following members should be considered:

- **State** - The current state
- **StateModel** - Marked, Review, and so on
- **CreateDate** - Creation Date
- **ModDate** - Modification Date
- **Author** - The user who has set the state
- **Content** - Not displayed in Adobe’s Acrobat...
- **Subject** - Not displayed in Adobe’s Acrobat...

The PopUp annotation of a text annotation which represent an Annotation State must be ignored.
(Read only property)

70.1.50 PopUp as Integer

**Function:** Handle of the corresponding PopUp annotation if any.

**Notes:** (Read only property)

70.1.51 QuadPointsCount as UInt32

**Function:** The number of quad points.

**Notes:**
Highlight, Link, and Redact annotations only.
(Read only property)

70.1.52 RD as DynaPDFRectMBS

**Function:** The rectangular difference between the annotations bounding box and the content area.

**Notes:**
Caret, Circle, Square, and FreeText annotations.
(Read only property)

### 70.1.53 RichStyle as String

**Function:** Optional default style string.
**Notes:**
For FreeText annotations.
(Read only property)

### 70.1.54 RichText as String

**Function:** Optional rich text string (RC key).
**Notes:**
For Markup annotations.
(Read only property)

### 70.1.55 Rotate as Integer

**Function:** The rotation for caret annotations.
**Notes:**
Caret annotations only. Must be zero or a multiple of 90. This key is not documented in the specs.
(Read only property)

### 70.1.56 StampName as String

**Function:** The stamp name.
**Notes:**
Set only, if Icon property is rsUserDefined.
(Read only property)
70.1.57  State as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The state of the annotation. **Notes:** (Read only property)

70.1.58  StateModel as String

MBS DynaPDF Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The state model (Marked, Review, and so on). **Notes:** (Read only property)

70.1.59  Subject as String

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Annotation’s subject. **Notes:**

This string is either an unicode encoded string or an ASCII encoded string. (Read only property)

70.1.60  Subtype as String

MBS DynaPDF Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The subtype. **Notes:**

Set only, if Type = katUnknownAnnot. (Read only property)

70.1.61  Type as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Annotation type. **Notes:**

See at* constants. (Read only property)
70.1.62 VerticesCount as UInt32

**Function:** Number of values in the vertices array.

**Notes:**
This is the raw number of floating point values. Since a vertice requires always two coordinate pairs, the number of vertices or points is VerticeCount divided by 2.
(Read only property)
70.2. class DynaPDFAnnotationMBS

70.2.1 class DynaPDFAnnotationMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for annotation information.
Example:

```vba
dim pdf as DynaPDFMBS // your instance

dim c as Integer = pdf.GetAnnotCount

for i as Integer = 0 to c-1
dim a as DynaPDFAnnotationMBS = pdf.GetAnnot(i)

MsgBox str(a.Type)
next
```

Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.2.2 Methods

70.2.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The private constructor.

70.2.4 Properties

70.2.5 Author as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Annotation’s author.
Notes:
This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)
70.2.6 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Background color.
**Notes:** (Read only property)

70.2.7 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Bounding box in bottom-up coordinates.
**Notes:** (Read only property)

70.2.8 BorderColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Border color.
**Notes:** (Read only property)

70.2.9 BorderStyle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Border style.
**Notes:** (Read only property)

70.2.10 BorderWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Border width.
**Notes:** (Read only property)

70.2.11 Content as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Annotation’s contents.
**Notes:**
This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)
70.2.12 Deleted as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Is this annotation marked as deleted? Notes: (Read only property)

70.2.13 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Annotation handle. Notes: (Read only property)

70.2.14 HighlightMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Visual effect. Notes: See hm* constants. (Read only property)

70.2.15 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Annotation’s name. Notes: This string is either an unicode encoded string or an ASCII encoded string. (Read only property)

70.2.16 PageNum as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Page on which the annotation appears. Notes: (Read only property)
70.2.17 Subject as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Annotation’s subject.
Notes:
This string is either an unicode encoded string or an ASCII encoded string.
(Read only property)

70.2.18 Type as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Annotation type.
Notes:
See at* constants.
(Read only property)
70.3. class DynaPDFBarcodeMBS

70.3.1 class DynaPDFBarcodeMBS

*Function:* The class for detail information on barcode fields.

70.3.2 Properties

70.3.3 Caption as String

*Function:* Optional, the caption.
*Notes:* (Read and Write property)

70.3.4 ECC as Single

*Function:* The error correction code.
*Notes:* 0..8 for PDF417, or 0..3 for QRCode
(Read and Write property)

70.3.5 Height as Single

*Function:* Height in inches.
*Notes:* (Read and Write property)

70.3.6 nCodeWordCol as Single

*Function:* The number of codewords per barcode columnn.
*Notes:* Required for PDF417.
(Read and Write property)
70.3.7  nCodeWordRow as Single

**Function:** The number of codewords per barcode row.
**Notes:**
Required for PDF417.
(Read and Write property)

70.3.8  Resolution as Integer

**Function:** The resolution.
**Notes:**
Required. Should be 300.
(Read and Write property)

70.3.9  Symbology as String

**Function:** The symbology.
**Notes:**
PDF417, QRCode, or DataMatrix.
(Read and Write property)

70.3.10  Version as Single

**Function:** The version of this object.
**Notes:**
Should be 1
(Read and Write property)

70.3.11  Width as Single

**Function:** Width in inches.
70.3. CLASS DYNAPDFBARCODEMBS

Notes: (Read and Write property)

70.3.12 XSymHeight as Single

Function: The vertical distance between two barcode modules, measured in pixels.

Notes:

Only needed for PDF417.
The ratio XSymHeight/XSymWidth shall be an integer value. For PDF417, the acceptable ratio range is from 1 to 4. For QRCode and DataMatrix, this ratio shall always be 1.
(Read and Write property)

70.3.13 XSymWidth as Single

Function: Required. The horizontal distance, in pixels, between two barcode modules.

Notes: (Read and Write property)
70.4 class DynaPDFBitmapMBS

70.4.1 class DynaPDFBitmapMBS

Function: The class for a bitmap in DynaPDF.
Notes:
Currently only used for RenderAnnotOrField function.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.4.2 Methods

70.4.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The private constructor.

70.4.4 Properties

70.4.5 Buffer as Memoryblock

Function: Raw image buffer.
Notes:
To avoid problems, this is a copy of the image data.
(Read and Write property)

70.4.6 BufSize as Integer

Function: Buffer size in bytes.
Notes: (Read and Write property)

70.4.7 DestX as Integer

Function: x-coordinate in the main image (the rendered page)
70.4. CLASS DYNAPDFBITMAPMBS

Notes: (Read and Write property)

70.4.8 DestY as Integer

Function: y-coordinate in the main image (the rendered page)
Notes: (Read and Write property)

70.4.9 Height as Integer

Function: Image height in pixels.
Notes: (Read and Write property)

70.4.10 Stride as Integer

Function: Scanline length in bytes.
Notes: (Read and Write property)

70.4.11 Width as Integer

Function: Image width.
Notes: (Read and Write property)
70.5  class DynaPDFBookmarkMBS

70.5.1  class DynaPDFBookmarkMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for bookmark information. **Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.5.2  Methods

70.5.3  Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

70.5.4  Properties

70.5.5  ColorValue as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Bookmark color (PDF 1.4). **Notes:** (Read and Write property)

70.5.6  DestPage as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Destination page. **Notes:** (Read and Write property)

70.5.7  DestPos as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Destination position. **Notes:** (Read and Write property)
70.5. **CLASS DYNAPDFBOOKMARKMBS**

### 70.5.8 DestType as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Destination type. **Notes:** (Read and Write property)

### 70.5.9 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The bookmark handle. **Notes:** Index from 0 to GetBookmarkCount-1. (Read and Write property)

### 70.5.10 Open as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if the bookmark appears open. **Notes:** (Read and Write property)

### 70.5.11 Parent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parent bookmark if any or -1. **Notes:** (Read and Write property)

### 70.5.12 Style as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Text style (PDF 1.4). **Notes:** (Read and Write property)

### 70.5.13 Title as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The title string. **Notes:**
This string is either an unicode encoded string or an ASCII encoded string.
(Read and Write property)

70.5.14 TitleLen as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The title length.
**Notes:** (Read and Write property)
70.6. class DynaPDFChoiceValueMBS

70.6.1 class DynaPDFChoiceValueMBS

Function: The class for choice values in a PDF.

Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.6.2 Methods

70.6.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: The private constructor.

70.6.4 Properties

70.6.5 ExpValue as String

Function: The ExpValue.

Notes: (Read and Write property)

70.6.6 Selected as Boolean

Function: Whether the choice value is selected.

Notes: (Read and Write property)

70.6.7 Value as String

Function: The value.

Notes: (Read and Write property)
70.7  class DynaPDFCIDMetricMBS

70.7.1  class DynaPDFCIDMetricMBS

Function: The class for a CID Metric.
Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.7.2  Methods

70.7.3  Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The private constructor.

70.7.4  Properties

70.7.5  Width as Double

Function: Width value.
Notes: (Read and Write property)

70.7.6  x as Double

Function: X value.
Notes: (Read and Write property)

70.7.7  y as Double

Function: Y value.
Notes: (Read and Write property)
70.8. CLASS DYNAPDFCMAPMBS

70.8  class DynapdfCMapMBS

70.8.1  class DynapdfCMapMBS

Function: The class for a character map in DynaPDF.  
Notes:  
This class contains several duplicate fields because CMap files contain usually a DSC comment section which provides Postscript specific initialization code. With exception of DSCRResName the strings in the DSC section should not differ from their CMap counterparts. The Identity mapping of a character collection should contain the DSC comment ”% % BeginResource: CMap (Identity)”. Otherwise the string should be set to the CMap name.  
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.8.2  Methods

70.8.3  Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
Function: The private constructor.  

70.8.4  Properties

70.8.5  BaseCMap as String

Function: If set, this base cmap is required when loading the cmap.  
Notes: (Read only property)

70.8.6  CIDCount as Integer

Function: The ID count.  
Notes:  
0 if not set.  
(Read only property)
70.8.7  CMapName as String

Function: The CMap name.
Notes: (Read only property)

70.8.8  CMapType as Integer

Function: The CMap type.
Notes:
Should be 1!
(Read only property)

70.8.9  CMapVersion as Double

Function: The CMap version.
Notes: (Read only property)

70.8.10  DSCBaseCMap as String

Function: DSC comment.
Notes: (Read only property)

70.8.11  DSCCMapVersion as Double

Function: The DSC CMap version.
Notes: (Read only property)

70.8.12  DSCResName as String

Function: DSC comment.
Notes:
If the CMap uses an Identity mapping this string should be set to Identity.
(Read only property)

70.8.13 DSCTitle as String

Function: The DSC title.
Notes:
DSC comment -> DSC CMap name + Registry + Ordering + Supplement, e.g. "GB-EUC-H Adobe GB1 0"
(Read only property)

70.8.14 FileName as String

Function: The file name.
Notes:
The file name and CMap name should be identical!
(Read only property)

70.8.15 FilePath as String

Function: The file path.
Notes: (Read only property)

70.8.16 Ordering as String

Function: The ordering.
Notes:
CIDSystemInfo -> The Character Collection, e.g. Japan1.
(Read only property)
70.8.17 Registry as String

Function: The registry string.
Notes:
CIDSystemInfo -> The registrant of the Character Collection is usually Adobe.
(Read only property)

70.8.18 Supplement as Integer

Function: The Supplement number.
Notes:
CIDSystemInfo -> The Supplement number should be supported in the used PDF Version.
(Read only property)

70.8.19 WritingMode as Integer

Function: The writing mode.
Notes:
0 == Horizontal, 1 == Vertical
(Read only property)
class DynaPDFColorProfilesExMBS

Function: A set of ICC profiles for color management.

Notes:
In general, the DefInXXX profiles are used if no other profile is available for the color space. Possible sources are DefaultGray, DefaultRGB, DefaultCMYK, and the Rendering Intents.
The SoftProof profile emulates the output device. This is typically a printer profile or a default CMYK profile. If no profile is set then no device will be emulated. What you see is maybe not what you get on a printer.
To disable color management set the parameter Profiles of InitColormanagement() to nil.

Please use DynaPDFColorProfilesExMBS when you have profiles in memory and DynaPDFColorProfilesMBS when you have them as files.

Properties

DefInCMYK as String

Function: The CMYK Profile.

Notes:
Optional, CMYK colors are the problematic ones.
The other profiles can be created on demand but this is not possible with a CMYK profile. So, this is the most important input profile.
(Read and Write property)

DefInGray as String

Function: The gray profile.

Notes:
Optional
(Read and Write property)
70.9.5 DefInRGB as String

Function: The RGB profile.
Notes:
Optional, sRGB is the default.
(Read and Write property)

70.9.6 DeviceProfile as String

Function: The output device profile.
Notes:
Optional, the output profile must be compatible with the output color space.
At this time only Gray or RGB profiles are supported. This is the monitor profile! Default is sRGB.
(Read and Write property)

70.9.7 SoftProof as String

Function: The proofing profile.
Notes:
Optional but very important. This profile emulates the output device.
(Read and Write property)
70.10. class DynaPDFColorProfilesMBS

70.10.1 class DynaPDFColorProfilesMBS

**Function:** A set of ICC profiles for color management.

**Notes:**
In general, the DefInXXX profiles are used if no other profile is available for the color space. Possible sources are DefaultGray, DefaultRGB, DefaultCMYK, and the Rendering Intents.

The SoftProof profile emulates the output device. This is typically a printer profile or a default CMYK profile. If no profile is set then no device will be emulated. What you see is maybe not what you get on a printer.

To disable color management set the parameter Profiles of InitColormanagement() to nil.

Please use DynaPDFColorProfilesExMBS when you have profiles in memory and DynaPDFColorProfilesMBS when you have them as files.

70.10.2 Properties

70.10.3 DefInCMYK as FolderItem

**Function:** The CMYK Profile.

**Notes:**
Optional, CMYK colors are the problematic ones.

The other profiles can be created on demand but this is not possible with a CMYK profile. So, this is the most important input profile.

(Read and Write property)

70.10.4 DefInGray as FolderItem

**Function:** The gray profile.

**Notes:**
Optional

(Read and Write property)
70.10.5 **DefInRGB as FolderItem**

**Function:** The RGB profile.  
**Notes:**  
Optional, sRGB is the default.  
(Read and Write property)

70.10.6 **DeviceProfile as FolderItem**

**Function:** The output device profile.  
**Notes:**  
Optional, the output profile must be compatible with the output color space.  
At this time only Gray or RGB profiles are supported. This is the monitor profile! Default is sRGB.  
(Read and Write property)

70.10.7 **SoftProof as FolderItem**

**Function:** The proofing profile.  
**Notes:**  
Optional but very important. This profile emulates the output device.  
(Read and Write property)
70.11 class DynapdfColorSpaceMBS

70.11.1 class DynapdfColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The color space class. **Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.11.2 Methods

70.11.3 BlackPoint(index as Integer) as Double

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** CIE blackpoint. **Notes:** If set, the array contains exactly 3 values. (index 0 to 2)

70.11.4 Colorants(index as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Colorant names (Separation, DeviceN, and NChannel only). **Example:**

```vbnet
Sub DrawSomething(pdf as DynaPDFMBS)
    // draw all colorants with their own color
    Dim MyX, MyY as Double
    MyX = 10
    MyY = 100

    // set a font
call pdf.SetFont "Times", pdf.kfsItalic, 10.0, true, pdf.kcp1252

    // loop over all color spaces
dim Colorcount as Integer = pdf.GetColorSpaceCount

    For j as Integer = 0 to Colorcount-1
        MyX = 10
        dim MyColourSpace as DynapdfColorSpaceMBS = PDF.GetColorSpaceObj(j)
        dim ColorantsCount as Integer = MyColourSpace.ColorantsCount
        dim c as Integer = MyColourSpace.NumInComponents
        Call pdf.SetExtColorSpace j
```
// draw name of each colorant
for i as Integer = 0 to c-1

// build array with colors and set 100% for the one color we need
dim values() as Double
redim values(c-1)
values(i) = 1.0

// get name
dim name as string = "# " + str(i)
if i <= ColorantsCount then
    name = MyColourSpace.Colorants(i)
end if

// seaw name
Call pdf.SetFillColor(values)
call pdf.WriteText(MyX,MyY, name)

// next
MyX = MyX + pdf.GetTextWidth(name) + 20
next

// next
MyY = MyY+20
Next
End Sub

Notes:
This array contains ColorantsCount strings.
The plugin marks the string as UTF-8 and it should contain UTF-8. Be we saw PDF files form other applications which put here WindowsANSI or MacRoman strings.

70.11.5 Constructor

70.11.6 Gamma(index as Integer) as Double

70.11.7  Matrix(index as Integer) as Double

Notes: If set, the array contains exactly 9 values.

70.11.8  Range(index as Integer) as Double

Notes: min/max for each component or for the .a and .b components of a Lab color space. Index is zero based.

70.11.9  WhitePoint(index as Integer) as Double

Notes: If set, the array contains exactly 3 values. (index 0 to 2)

70.11.10  Properties

70.11.11  Alternate as DynaPDFColorSpaceMBS

Notes: Only set if the color space contains an alternate or base color space.
(Read only property)

70.11.12  AlternateType as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Alternate color space or base space of an Indexed or Pattern color space.
Notes: (Read only property)
70.11.13 Buffer as string

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Contains either an ICC profile or the color table of an Indexed color space. **Notes:** (Read only property)

70.11.14 BufferSize as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The buffer length in bytes. **Notes:** (Read only property)

70.11.15 ColorantsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of colorants in the array. **Example:**

```vbs
Sub DrawSomething(pdf as DynaPDFMBS)
    // draw all colorants with their own color
    Dim MyX, MyY as Double
    MyX = 10
    MyY = 100
    // set a font
    Call pdf.SetFont "Times", pdf.kfsItalic, 10.0, true, pdf.kcp1252

    // loop over all color spaces
    Dim Colorcount as Integer = pdf.GetColorSpaceCount
    For j as Integer = 0 to Colorcount-1
        MyX = 10
        Dim MyColourSpace as DynapdfColorSpaceMBS = PDF.GetColorSpaceObj(j)
        Dim ColorantsCount as Integer = MyColourSpace.ColorantsCount
        Dim c as Integer = MyColourSpace.NumInComponents
        Call pdf.SetExtColorSpace j
        For i as Integer = 0 to c-1
            // build array with colors and set 100% for the one color we need
            Dim values() as Double
            ReDim values(c-1)
```
values(i) = 1.0

// get name
dim name as string = "# " + str(i)
if i <= ColorantsCount then
    name = MyColourSpace.Colorants(i)
end if

// seaw name
Call pdf.SetFillColor(values)
call pdf.WriteText(MyX, MyY, name)

// next
MyX = MyX + pdf.GetTextWidth(name) + 20
next

// next
MyY = MyY + 20
Next
End Sub

Notes: (Read only property)

70.11.16 Description as String

Function: The description text for color space.
Notes:
For color spaces with valid ICC profile only.
(Read only property)

70.11.17 DeviceNAttributes as DynaPDFDeviceNAttributesMBS

Function: Optional attributes of DeviceN or NChannel color spaces.
Notes: (Read only property)
70.11.18 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal handle for this color space object. **Notes:** (Read only property)

70.11.19 HasBlackPoint as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the black point array has values. **Notes:** (Read only property)

70.11.20 HasGamma as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the gamma array has values. **Notes:** (Read only property)

70.11.21 HasMatrix as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the matrix array has values. **Notes:** (Read only property)

70.11.22 HasRange as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the range array has values. **Notes:** (Read only property)

70.11.23 HasWhitePoint as Boolean

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the white point array has values. **Notes:** (Read only property)
70.11.24 **Index as Integer**

MBS DynaPDF Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The index in the color space list for current document. **Notes:**

Can be -1 if not known by plugin. In that case you would need to get list of all colorspaces and compare handle values to see which entry you got. (Read only property)

70.11.25 **Manufacturer as String**

MBS DynaPDF Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The manufacturer text for color space. **Notes:**

For color spaces with valid ICC profile only. (Read only property)

70.11.26 **MetaData as string**

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Optional XMP metadata stream -> ICCBased only. **Notes:** (Read only property)

70.11.27 **MetadataSize as Integer**

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Metadata length in bytes. **Notes:** (Read only property)

70.11.28 **Model as String**

MBS DynaPDF Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The model text for color space. **Notes:**

For color spaces with valid ICC profile only. (Read only property)
70.11.29 Name as String

**Function:** The name of the color space.  
**Notes:**  
For color spaces with valid ICC profile only.  
The plugin picks name from Model, Description and Manufacturer properties.  
(Read only property)

70.11.30 NumColors as Integer

**Function:** The number of colors in this color space.  
**Notes:**  
HiVal + 1 as specified in the color space. Indexed color space only.  
(Read only property)

70.11.31 NumInComponents as Integer

**Function:** Number of input components.  
**Notes:** (Read only property)

70.11.32 NumOutComponents as Integer

**Function:** Number of output components.  
**Notes:** (Read only property)

70.11.33 Type as Integer

**Function:** The type of this color space.  
**Notes:** (Read only property)
70.11. CLASS DYNAPDFCOLORSPACEMBS

70.11.34 TypeString as String

Function: The type as string for viewing in debugger.

Notes: (Read only property)
70.12 class DynaPDFDeviceNAttributesMBS

70.12.1 class DynaPDFDeviceNAttributesMBS

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for information about a Device N.  
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.12.2 Methods

70.12.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

70.12.4 ProcessColorants(index as Integer) as string

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns process colorants with the given index.  
**Notes:**  
Raises out of bounds exceptions on bad index or if object does not have such an array.  
Index is zero based.

70.12.5 Separations(index as Integer) as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Optional array of separation color spaces.  
**Notes:**  
Raises out of bounds exceptions if used with wrong index parameter.  
Index is zero based.
70.12.6  Properties

70.12.7  ProcessColorantsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of process colorants in the array or zero if not set. **Notes:** (Read and Write property)

70.12.8  ProcessColorSpace as DynaPDFColorSpaceMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The process color space. **Notes:** (Read and Write property)

70.12.9  SeparationsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of color spaces in the Separations array. **Notes:** (Read and Write property)
70.13 class DynaPDFEditTextMBS

70.13.1 class DynaPDFEditTextMBS

Function: The text editor.
Notes: If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.

70.13.2 Methods

70.13.3 Constructor(PDF as DynaPDFMBS)

Function: Initializes the edit text class with the given PDF instance.

70.13.4 Destructor

Function: The destructor.

70.13.5 FindPattern(text as string) as Integer

Function: Searches the text on the current PDF page for the given text.
Notes: Returns the number of occurrences.
If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.

70.13.6 ReplacePattern(NewText as string)

Function: Replaces the text with a new one or deletes it if the new string is an empty string.
Notes: Use the PrepareWrite event.
If you have problems with asian characters, please make sure you use SetCMapDir and load the CMAPs.

### 70.13.7 Properties

### 70.13.8 Parent as DynaPDFMBS

**Function:** The reference of the DynaPDFMBS object.

**Notes:** (Read only property)

### 70.13.9 Events

#### 70.13.10 PrepareWrite(M as DynapdfMatrixMBS, text as string, FillCS as Integer, FillColor as UInt32, StrokeCS as Integer, StrokeColor as UInt32, FontSize as Double, x as Double, y as Double, w as Double, h as Double, font as DynaPDFFontMBS) as boolean

**Function:** The event called before replace function writes.

**Notes:**

- Changed font, text size or color here.
- If you return true, the text is not written.
- Like if you draw it yourself or delete it.

Add new parameters for fill color, stroke color, font size, rectangle and font information in version 17.0.
70.14 class DynaPDFEmbFileNodeMBS

70.14.1 class DynaPDFEmbFileNodeMBS

Function: The class for an embedded file node.
Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.14.2 Methods

70.14.3 Constructor

Function: The private constructor.

70.14.4 Properties

70.14.5 EF as DynaPDFFileSpecMBS

Function: Embedded file.
Notes: (Read only property)

70.14.6 Name as String

Function: The name.
Notes:
UTF-8 encoded name. This key contains usually a 7 bit ASCII string.
(Read only property)

70.14.7 NextObject as DynaPDFEmbFileNodeMBS

Function: Next node if any.
Notes: (Read only property)
70.15 class DynaPDFErrorMBS

70.15.1 class DynaPDFErrorMBS

**Function:** The class for an entry in the error log.
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.15.2 Methods

70.15.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The private constructor.

70.15.4 Properties

70.15.5 Message as String

**Function:** The error message
**Notes:** (Read and Write property)

70.15.6 ObjNum as Integer

**Function:** Object Number.
**Notes:**
-1 if not available
(Read and Write property)

70.15.7 Offset as Integer

**Function:** The offset.
**Notes:**
-1 if not available
(Read and Write property)

### 70.15.8 SrcFile as String

**Function:** The source file.
**Notes:** (Read and Write property)

### 70.15.9 SrcLine as Integer

**Function:** The Source Line.
**Notes:** (Read and Write property)
70.16.  

**CLASS DYNAPDFEXTGSTATE2MBS**

70.16  

class DynapdfExtGState2MBS

70.16.1  

class DynapdfExtGState2MBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The extended graphics state class.

70.16.2  

**Methods**

70.16.3  

**BlendMode(index as Integer) as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The blend modes.

**Notes:** See bm* constants.

70.16.4  

**Properties**

70.16.5  

**AlphaIsShape as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The AlphaIsShape property.

**Notes:**

PDF_MAX_INT if not set.
(Read and Write property)

70.16.6  

**AutoStrokeAdjust as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The AutoStrokeAdjust property.

**Notes:**

PDF_MAX_INT if not set.
(Read and Write property)

70.16.7  

**BlackGen as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function handle or 0.
70.16.8  BlackGen2 as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function handle or 0.  
**Notes:** (Read and Write property)

70.16.9  BlendModeCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The blend mode count.  
**Notes:** (Read and Write property)

70.16.10  FillAlpha as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The fill alpha.  
**Notes:** 
-1.0 if not set.  
(Read and Write property)

70.16.11  FlatnessTol as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The FlatnessTol property.  
**Notes:** 
-1.0 if not set.  
(Read and Write property)

70.16.12  Halftone as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The halftone handle or 0.  
**Notes:** (Read and Write property)
70.16.13 OverPrintFill as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The OverPrintFill property.

**Notes:**
PDF_MAX_INT if not set.
(Read and Write property)

70.16.14 OverPrintMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The OverPrintMode property.

**Notes:**
PDF_MAX_INT if not set.
(Read and Write property)

70.16.15 OverPrintStroke as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The OverPrintStroke property.

**Notes:**
PDF_MAX_INT if not set.
(Read and Write property)

70.16.16 RenderingIntent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The rendering intent.

**Notes:**
riNone if not set
(Read and Write property)

70.16.17 SmoothnessTol as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The SmoothnessTol property.

**Notes:**

70.16.18 SoftMask as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The Soft mask handle. Notes: (Read and Write property)

70.16.19 SoftMaskNone as Boolean

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: If true, the softmask must be disabled. Notes: (Read and Write property)

70.16.20 StrokeAlpha as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The stoke alpha value. Notes: -1.0 if not set. (Read and Write property)

70.16.21 TextKnockout as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The TextKnockout property. Notes: PDF_MAX_INT if not set. (Read and Write property)
70.17. CLASS DYNAPDFEXTGSTATEMBS

70.17 class dynapdfExtGStateMBS

70.17.1 class dynapdfExtGStateMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The extended graphics state class.

70.17.2 Properties

70.17.3 AlphaIsShape as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The AlphaIsShape property.
**Notes:**
PDF_MAX_INT if not set.
(Read and Write property)

70.17.4 AutoStrokeAdjust as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The AutoStrokeAdjust property.
**Notes:**
PDF_MAX_INT if not set.
(Read and Write property)

70.17.5 BlendMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The blend mode.
**Notes:**
See bm* constants.
Default bmNotSet.
(Read and Write property)
70.17.6 FillAlpha as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The fill alpha.
Notes:
-1.0 if not set.
(Read and Write property)

70.17.7 FlatnessTol as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The FlatnessTol property.
Notes:
-1.0 if not set.
(Read and Write property)

70.17.8 OverPrintFill as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The OverPrintFill property.
Notes:
PDF_MAX_INT if not set.
(Read and Write property)

70.17.9 OverPrintMode as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The OverPrintMode property.
Notes:
PDF_MAX_INT if not set.
(Read and Write property)

70.17.10 OverPrintStroke as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The OverPrintStroke property.
Notes:
70.17. **CLASS DYNAPDFEXTGSTATEMBS**

PDF_MAX_INT if not set.
(Read and Write property)

### 70.17.11 RenderingIntent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The rendering intent.
**Notes:**
riNone if not set
(Read and Write property)

### 70.17.12 SmoothnessTol as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The SmoothnessTol property.
**Notes:**
-1.0 if not set.
(Read and Write property)

### 70.17.13 SoftMask as Integer

**Function:** Soft mask pointer or nil. See CreateSoftMask for further information.
**Notes:** (Read and Write property)

### 70.17.14 SoftMaskNone as Boolean

**Function:** Disables the active soft mask.
**Notes:** (Read and Write property)

### 70.17.15 StrokeAlpha as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The stoke alpha value.
**Notes:**
70.17.16 TextKnockout as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The TextKnockout property.  
**Notes:**  
PDF_MAX_INT if not set.  
(Read and Write property)
70.18. **CLASS DYNAPDFFIELDEXMBS**

70.18  **class DynaPDFFieldExMBS**

70.18.1  **class DynaPDFFieldExMBS**

**Function:** The class for extended field information.

**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.18.2  **Methods**

70.18.3  **Close**

**Function:** The destructor.

**Notes:** You can call close to release all values now or simply let it go automatically later.

70.18.4  **Constructor**

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The private constructor.

70.18.5  **Kids(index as Integer) as DynaPDFFieldExMBS**

**Function:** Array of child fields.

70.18.6  **Properties**

70.18.7  **Action as Integer**

**Function:** Action handle or -1 if not set.

**Notes:**

This action is executed when the field is activated.

(Read only property)
70.18.8  **ActionType as Integer**

**Function:** The type of action.
**Notes:**
See kat* constants.
Meaningful only, if Action >= 0.
(Read only property)

70.18.9  **BackColor as UInt32**

**Function:** Background color.
**Notes:** (Read only property)

70.18.10  **BackColorSP as Integer**

**Function:** Color space of the background color.
**Notes:** (Read only property)

70.18.11  **Barcode as DynaPDFBarcodeMBS**

**Function:** If present, this field is a barcode field.
**Notes:**
The field type is set to kftText since barcode fields are extended text fields.
(Read only property)

70.18.12  **BBox as DynaPDFRectMBS**

**Function:** Bounding box of the field in bottom-up coordinates.
**Notes:** (Read only property)
70.18. **CLASS DYNAPDFFIELDDEXMBS**

70.18.13 **BorderColor as UInt32**

Function: The Border color.
Notes: (Read only property)

70.18.14 **BorderColorSP as Integer**

Function: Color space of the border color.
Notes: (Read only property)

70.18.15 **BorderStyle as Integer**

Function: The Border style.
Notes: (Read only property)

70.18.16 **BorderWidth as Single**

Function: The Border width.
Notes: (Read only property)

70.18.17 **CaptionPos as Integer**

Function: Where to position the caption.
Notes:
Use constants kbcpCaptionAbove, kbcpCaptionBelow, kbcpCaptionLeft, kbcpCaptionOnly, kbcpCaptionOver, kbcpCaptionRight or kbcpImageOnly.
(Read only property)

70.18.18 **CharSpacing as Single**

Function: The char spacing.
Notes:
Text fields only.
(Read only property)

70.18.19 CheckBoxChar as Integer

Function: The ZapfDingbats character that is used to display the on state.
Notes: (Read only property)

70.18.20 Checked as Boolean

Function: The check value.
Notes: Check boxes only
(Read only property)

70.18.21 DefState as Integer

Function: The default state.
Notes: Check boxes only
(Read only property)

70.18.22 DefValue as String

Function: Optional default value.
Notes: (Read only property)

70.18.23 Deleted as Boolean

Function: If true, the field was marked as deleted by DeleteField().
70.18.24 DownCaption as String

Function: Caption of the down state.
Notes: (Read only property)

70.18.25 DownImage as Integer

Function: Image handle of the down state.
Notes: You can use this image handle with GetImageObj to get the image.
(Read only property)

70.18.26 EditFont as String

Function: Postscript name of the editing font.
Notes: (Read only property)

70.18.27 Events as DynaPDFObjEventMBS

Function: The events for this fields.
Notes: (Read only property)

70.18.28 ExpValCount as Integer

Function: Combo and list boxes only.
Notes: The values can be accessed with GetFieldExpValueEx().
(Read only property)
70.18.29 ExpValue as String

**Function:** The exp value.
**Notes:**
Check boxes only.
(Read only property)

70.18.30 FieldFlags as Integer

**Function:** Field flags.
**Notes:** (Read only property)

70.18.31 FieldFont as String

**Function:** Postscript name of the font.
**Notes:** (Read only property)

70.18.32 FieldName as String

**Function:** The field name.
**Notes:**
Note that children of a field group or radio button have no name.
(Read only property)

70.18.33 FieldType as Integer

**Function:** Field type.
**Notes:** (Read only property)
70.18.34 FontSize as Double

**Function:** Font size. 0.0 means auto font size.
**Notes:** (Read only property)

70.18.35 GroupType as Integer

**Function:** If GroupType <> FieldType the field is a terminal field of a field group.
**Notes:** (Read only property)

70.18.36 Handle as Integer

**Function:** Field handle.
**Notes:** (Read only property)

70.18.37 HighlightMode as Integer

**Function:** Highlight mode.
**Notes:** (Read only property)

70.18.38 IEditFont as DynaPDFFontMBS

**Function:** The edit font object.
**Notes:**
The object is created on demand the first time you access and cached.
(Read only property)

70.18.39 IEditFontInfo as DynaPDFFontInfoMBS

**Function:** The edit font info object.
**Notes:**
The object is created on demand the first time you access and cached. (Read only property)

70.18.40  **IFieldFont as DynaPDFFontMBS**

**Function**: The field font object.  
**Notes**:  
The object is created on demand the first time you access and cached. (Read only property)

70.18.41  **IFieldFontInfo as DynaPDFFontInfoMBS**

**Function**: The field font info object.  
**Notes**:  
The object is created on demand the first time you access and cached. (Read only property)

70.18.42  **IsCalcField as Boolean**

**Function**: If true, the OnCalc event of the field is connected with a JavaScript action.  
**Notes**: (Read only property)

70.18.43  **KidCount as Integer**

**Function**: Number of fields in the Kids array.  
**Notes**: (Read only property)

70.18.44  **MapName as String**

**Function**: Optional unique mapping name of the field.  
**Notes**: (Read only property)
**70.18.45 MaxLen as Integer**

*Function:* The maximum text length.  
*Notes:*  
Text fields only - zero means not restricted.  
(Read only property)

**70.18.46 ModDate as String**

*Function:* Modification date.  
*Notes:* (Read only property)

**70.18.47 OC as Integer**

MBS DynaPDF Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
*Function:* Handle of an OCG or OCMD or -1.  
*Notes:*  
Fields can be part of an Optional Content Group (OCG) or Optional Content Membership Dictionary (OCMD). If OC is greater -1 an OCG or OCMD handle was set. To determine whether an OCG handle was set, check whether the value is smaller & h40000000.  
(Read only property)

**70.18.48 PageIndex as Integer**

*Function:* Array index to change the tab order.  
*Notes:*  
see SortFieldsByIndex().  
(Read only property)

**70.18.49 PageNum as Integer**

*Function:* Page on which the field is used or -1.  
*Notes:* (Read only property)
70.18.50 RollCaption as String

Function: Caption of the roll over state.
Notes: (Read only property)

70.18.51 RollImage as Integer

Function: Image handle of the roll over state.
Notes:
You can use this image handle with GetImageObj to get the image.
(Read only property)

70.18.52 Rotate as Integer

Function: Rotation angle in degrees.
Notes: (Read only property)

70.18.53 Signature as DynaPDFSigDictMBS

Function: The signature details.
Notes:
Signature fields only. Present only for imported signature fields which which have a value. That means the file was digitally signed. -
Signed signature fields are always marked as deleted!
(Read only property)

70.18.54 TextAlign as Integer

Function: The text align.
Notes:
Text fields only.
(Read only property)
70.18.55 TextColor as UInt32

Function: Text color.
Notes: (Read only property)

70.18.56 TextColorSP as Integer

Function: Color space of the field’s text.
Notes: (Read only property)

70.18.57 TextScaling as Single

Function: The text scaling.
Notes:
Text fields only.
(Read only property)

70.18.58 ToolTip as String

Function: The tooltip text.
Notes:
Optional tool tip.
(Read only property)

70.18.59 UniqueName as String

Function: Optional unique name (NM key).
Notes: (Read only property)
70.18.60  UpCaption as String

**Function:** Caption of the up state.
**Notes:** (Read only property)

70.18.61  UpImage as Integer

**Function:** Image handle of the up state.
**Notes:**
You can use this image handle with GetImageObj to get the image.
(Read only property)

70.18.62  Value as String

**Function:** The value of the field.
**Notes:** (Read only property)

70.18.63  WordSpacing as Single

**Function:** The word spacing.
**Notes:**
Text fields only.
(Read only property)
70.19.1 class DynaPDFFieldMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for field information. **Deprecated:** This item is deprecated and should no longer be used. You can use DynaPDFFieldExMBS instead. **Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.19.2 Methods

70.19.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

70.19.4 Properties

70.19.5 BackColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Background color. **Notes:** (Read only property)

70.19.6 BackCS as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Color space of background / border color **Notes:** (Read only property)

70.19.7 BBox as DynaPDFRectMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Bounding box. **Notes:** (Read only property)
**70.19.8 BorderColor as UInt32**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Border color.  
**Notes:** (Read only property)

**70.19.9 Checked as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Only set if the field is a check box.  
**Notes:** (Read only property)

**70.19.10 Deleted as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If true, the field was deleted.  
**Notes:** (Read only property)

**70.19.11 FieldName as String**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Field name.  
**Notes:**  
May be unicode or ASCII encoded.  
(Read only property)

**70.19.12 FieldNameLen as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Field name length in characters.  
**Notes:** (Read only property)

**70.19.13 FieldType as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Field type (see ft* constants)
70.19. CLASS DYNAPDFIELDMBS

Notes: (Read only property)

70.19.14 Font as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Used font by the field (PostScript name).
Notes: (Read only property)

70.19.15 FontSize as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Font size.
Notes: (Read only property)

70.19.16 Handle as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Field handle.
Notes: (Read only property)

70.19.17 KidCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Greater zero if the field has childs.
Notes: (Read only property)

70.19.18 Parent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parent field handle if any.
Notes: (Read only property)

70.19.19 TextColor as UInt32

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Text color.
70.19.20 **TextCS as UInt32**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Color space of text color. **Notes:** (Read only property)

70.19.21 **ToolTip as String**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Tool tip if any. **Notes:**

Unicode or ASCII encoded. (Read only property)

70.19.22 **Value as String**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Field value. **Notes:**

Unicode or ASCII encoded. (Read only property)
70.20. class DynaPDFFileSpecExMBS

70.20.1 class DynaPDFFileSpecExMBS

Function: The class for an extended file specification.
Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.20.2 Methods

70.20.3 Constructor

Function: The private constructor.

70.20.4 Properties

70.20.5 AFRelationship as String

Function: The relationship.
Notes:
PDF 2.0
(Read and Write property)

70.20.6 ColItem as Ptr

Function: If <>nil the embedded file contains a collection item with user defined data.
Notes:
This entry can occur in PDF Collections only (PDF 1.7). See "PDF Collections" in the help file for further information.
(Read and Write property)
70.20.7 Description as String

Function: Optional description string.
Notes: (Read and Write property)

70.20.8 DOS as String

Function: Optional DOS file name.
Notes: (Read and Write property)

70.20.9 EmbFileNode as DynaPDFEmbFileNodeMBS

Function: The embedded file node for embedded file.
Notes: (Read and Write property)

70.20.10 FileName as String

Function: File name as 7 bit ASCII string.
Notes: (Read and Write property)

70.20.11 FileNameIsURL as Boolean

Function: If true, FileName contains a URL.
Notes: (Read and Write property)

70.20.12 ID1 as String

Function: Optional file ID.
Notes: Meaningful only if FileName points to a PDF file.
(Read and Write property)
70.20.13  **ID2 as String**

*Function:* Optional file ID.
*Notes:* Meaningful only if FileName points to a PDF file.
(Read and Write property)

70.20.14  **IsVolatile as Boolean**

*Function:* If true, the file changes frequently with time.
*Notes:* (Read and Write property)

70.20.15  **Mac as String**

*Function:* Optional Mac file name.
*Notes:* (Read and Write property)

70.20.16  **Thumb as DynaPDFImageMBS**

*Function:* Optional thumbnail image.
*Notes:* (Read and Write property)

70.20.17  **UFileName as String**

*Function:* The file name.
*Notes:* PDF 1.7. Same as FileName but Unicode is allowed.
(Read and Write property)
70.20.18  Unix as String

Function: Optional Unix file name.

Notes: (Read and Write property)
70.21. class dynapdfFileSpecMBS

70.21.1 class dynapdfFileSpecMBS

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for information about an embedded file. **Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.21.2 Methods

70.21.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

70.21.4 Properties

70.21.5 Buffer as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Buffer of an embedded file. **Notes:** (Read and Write property)

70.21.6 BufferSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Buffer size in bytes. **Notes:** (Read and Write property)

70.21.7 Checksum as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** 16 byte MD5 digest if set. **Notes:** (Read and Write property)
70.21.8 ColItem as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Pointer to user defined collection item. **Notes:** (Read and Write property)

70.21.9 Compressed as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Should be false if Decompress was true. **Notes:** (Read and Write property)

70.21.10 CreateDate as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creation date as string. **Notes:** (Read and Write property)

70.21.11 Description as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Description. **Notes:**

This string is either an unicode encoded string or an ASCII encoded string. (Read and Write property)

70.21.12 FileName as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** File name as 7 bit ASCII string. **Notes:** (Read and Write property)

70.21.13 FileSize as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Decompressed stream size or zero if not known.
70.21.14 IsURL as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If true, FileName contains a URL. **Notes:** (Read and Write property)

70.21.15 MIMEType as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** MIME media type name (RFC 2046). **Notes:**

See also MimeTypeToFileExtensionMBS function. (Read and Write property)

70.21.16 ModDate as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Modification date as string. **Notes:** (Read and Write property)

70.21.17 Name as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Name of the file specification in the name tree. **Notes:**

This string is either an unicode encoded string or an ASCII encoded string. This value is always present. (Read and Write property)

70.21.18 UnicodeFileName as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Same as FileName but Unicode is allowed. **Notes:**
PDF 1.7.
This string is either an unicode encoded string or an ASCII encoded string.
(Read and Write property)
70.22. **CLASS DYNAPDFFONTINFOMBS**

70.22 class DynaPDFFontInfoMBS

70.22.1 class DynaPDFFontInfoMBS

**Function:** The class for DynaPDF font info.
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.22.2 Methods

70.22.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The private constructor.

70.22.4 HorzWidths(index as UInt32) as Single

**Function:** Horizontal glyph widths.
**Notes:** Index from 0 to HorzWidthsCount -1.

70.22.5 VertWidths(index as UInt32) as DynaPDFCIDMetricMBS

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Vertical glyph widths array.

70.22.6 Properties

70.22.7 Ascent as Single

**Function:** Ascent (optional).
**Notes:** (Read only property)
70.22.8 AvgWidth as Single

Function: Average character width (optional).
Notes: (Read only property)

70.22.9 BaseEncoding as Integer

Function: The base encoding.
Notes: Valid only if HaveEncoding is true.
Can be kbeWinAnsi, kbeStandard, kbeMacRoman or kbeMacExpert.
(Read only property)

70.22.10 BaseFont as String

Function: PostScript Name or Family Name.
Notes: (Read only property)

70.22.11 CapHeight as Single

Function: Cap height (optional).
Notes: (Read only property)

70.22.12 CharSet as String

Function: The charset describes which glyphs are present in the font.
Notes: (Read only property)

70.22.13 CharSetSize as UInt32

Function: Length of the CharSet in bytes.
70.22.  CLASS DYNAPDFONTINFOMBS

Notes: (Read only property)

70.22.14  CIDOrdering as String

Function: SystemInfo -> Character collection.
Notes: (Read only property)

70.22.15  CIDRegistry as String

Function: SystemInfo -> Issuer of the character collection.
Notes: (Read only property)

70.22.16  CIDSet as MemoryBlock

Function: CID fonts only.
Notes: This is a table of bits indexed by CIDs.
(Read only property)

70.22.17  CIDSetSize as UInt32

Function: Length of the CIDSet in bytes.
Notes: (Read only property)

70.22.18  CIDSupplement as UInt32

Function: CIDSystemInfo -> Supplement number.
Notes: (Read only property)
70.22.19 CIDToGIDMap as MemoryBlock

**Function:** Allowed for embedded TrueType based CID fonts only.
**Notes:** (Read only property)

70.22.20 CIDToGIDMapSize as UInt32

**Function:** Length of the CIDToGIDMap in bytes.
**Notes:** (Read only property)

70.22.21 CMapBuf as MemoryBlock

**Function:** The CMap data.
**Notes:** Only available if the CMap was embedded.
(Read only property)

70.22.22 CMapBufSize as UInt32

**Function:** CMAP Buffer size in bytes.
**Notes:** (Read only property)

70.22.23 CMapName as String

**Function:** CID fonts only external CMap name or encoding.
**Notes:** (Read only property)

70.22.24 Descent as Single

**Function:** Descent (optional).
70.22.25  Encoding as MemoryBlock

Function: Unicode mapping 0..255.
Notes:
not available for CID fonts.
(Read only property)

70.22.26  FirstChar as UInt32

Function: First char (simple fonts only).
Notes: (Read only property)

70.22.27  Flags as UInt32

Function: Font flags.
Notes:
See DynaPDF manual.

The font flags describe certain properties of the font. The most important flags are the following:

* 1  Fixed pitch font
* 2  Serif style
* 4  Symbol font
* 8  Script style
* & h20  Non-symbolic font
* & h40  Italic style
* & h40000  Force Bold (Type1 fonts only)

The full set of available flags can be found in the PDF Reference.
(Read only property)
70.22.28 **FontBBox as DynaPDFRectMBS**

**Function:** This is the size of the largest glyph in this font.
**Notes:** (Read only property)

70.22.29 **FontBuffer as MemoryBlock**

**Function:** The font data.
**Notes:**
Available if the font was embedded or loaded from a buffer.
(Read only property)

70.22.30 **FontBufSize as UInt32**

**Function:** Font file size in bytes.
**Notes:** (Read only property)

70.22.31 **FontFamily as String**

**Function:** Optional Font Family (Family Name).
**Notes:** (Read only property)

70.22.32 **FontFilePath as String**

**Function:** The font file path.
**Notes:**
Only available for system fonts.
(Read only property)
70.22.33  **FontFile** as Integer

**Function:** The font file type.
**Notes:**
Can be: kffsType1C, kffsOpenTypeC, kffsOpenType, kffsNoSubtype, kffsCIDFontType2 or kffsCIDFontType0C.
(Read only property)

70.22.34  **FontName** as String

**Function:** Font name (should be the same as BaseFont).
**Notes:** (Read only property)

70.22.35  **FontStretch** as String

**Function:** The font stretch.
**Notes:**
Optional - >Condensed, and so on.
(Read only property)

70.22.36  **FontType** as Integer

**Function:** The font type.
**Notes:**
If ftType0 the font is a CID font.
(Read only property)

70.22.37  **FontWeight** as Single

**Function:** Font weight (optional).
**Notes:** (Read only property)
70.22.38 FullName as String

Function: The full name.
Notes:
System fonts only.
(Read only property)

70.22.39 HaveEncoding as Boolean

Function: Whether encoding is known.
Notes:
If true, BaseEncoding was set from the font’s encoding.
(Read only property)

70.22.40 HorzWidthsCount as UInt32

Function: Number of horizontal widths in the array.
Notes: (Read only property)

70.22.41 Imported as Boolean

Function: Whether font is imported.
Notes:
If true, the font was imported from an external PDF file.
(Read only property)

70.22.42 ItalicAngle as Single

Function: Italic angle.
Notes: (Read only property)
70.22. **CLASS DYNAPDFONTINFOMBS**

### 70.22.43 Lang as String

**Function:** Optional language code defined by BCP 47.
**Notes:** (Read only property)

### 70.22.44 LastChar as UInt32

**Function:** Last char (simple fonts only).
**Notes:** (Read only property)

### 70.22.45 Leading as Single

**Function:** Leading (optional).
**Notes:** (Read only property)

### 70.22.46 Length1 as UInt32

**Function:** Length of the clear text portion of a Type1 font.
**Notes:** (Read only property)

### 70.22.47 Length2 as UInt32

**Function:** Length of the encrypted portion of a Type1 font program.
**Notes:** (Read only property)

### 70.22.48 Length3 as UInt32

**Function:** Length of the fixed-content portion of a Type1 font program.
**Notes:** (Read only property)
70.22.49  MaxWidth as Single

**Function:** Maximum glyph width (optional).
**Notes:** (Read only property)

70.22.50  Metadata as MemoryBlock

**Function:** Optional XMP metadata stream about the font file.
**Notes:** (Read only property)

70.22.51  MetadataSize as UInt32

**Function:** MetaData size in bytes.
**Notes:** (Read only property)

70.22.52  MisWidth as Single

**Function:** Missing width (default = 0.0).
**Notes:** (Read only property)

70.22.53  Panose as MemoryBlock

**Function:** Optional 12 bytes long Panose string.
**Notes:**
CID fonts only.
(Read only property)

70.22.54  PostScriptName as String

**Function:** System fonts only.
70.22. CLASS DYNAPDFFONTINFOMBS

Notes: (Read only property)

70.22.55 SpaceWidth as Single

Function: Space width in font units.
Notes: A default value is set if the font contains no space character.
(Read only property)

70.22.56 StemH as Single

Function: The thickness of horizontal stems.
Notes: (Read only property)

70.22.57 StemV as Single

Function: The thickness of vertical stems.
Notes: (Read only property)

70.22.58 ToUnicode as MemoryBlock

Function: ToUnicode CMap.
Notes: Only available for imported fonts.
(Read only property)

70.22.59 ToUnicodeSize as UInt32

Function: ToUnicode CMap size in bytes.
Notes: (Read only property)
70.22.60 VertDefPos as DynapdfPointMBS

Function: Default vertical displacement vector.
Notes: (Read only property)

70.22.61 VertWidthsCount as UInt32

Function: Number of vertical widths in the array.
Notes: (Read only property)

70.22.62 WMode as UInt32

Function: Writing Mode.
Notes:
0: Horizontal
1: Vertical.
(Read only property)

70.22.63 XHeight as Single

Function: The height of lowercase letters measured from the baseline.
Notes: (Read only property)
70.23. **CLASS DYNAPDFONTMBS**

70.23  **class dynapdfFontMBS**

70.23.1  **class dynapdfFontMBS**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for pdf font information. **Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.23.2  **Methods**

70.23.3  **Constructor**

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

70.23.4  **Encoding(Index as Integer) as string**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unicode mapping 0..255 if set. **Notes:** Index from 0 to 255.

70.23.5  **Widths(Index as Integer) as single**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Glyph widths. **Notes:** Index from 0 to WidthsCount-1.

70.23.6  **Properties**

70.23.7  **Ascent as Single**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The ascent of this font. **Notes:** (Read and Write property)
70.23.8 BaseFont as String

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: PostScript Name or Family Name. Notes: (Read and Write property)

70.23.9 CapHeight as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The Cap height. Notes: (Read and Write property)

70.23.10 DefWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Default character widths ->CID fonts only. Notes: (Read and Write property)

70.23.11 Descent as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The Descent. Notes: (Read and Write property)

70.23.12 FirstChar as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The first character. Notes: (Read and Write property)

70.23.13 Flags as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Font flags. Notes: (Read and Write property)
70.23. **CLASS DYNAPDFONTMBS**

70.23.14 **FontFamily as String**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Optional Font Family (Family Name). **Notes:**

Unicode or ASCII encoded. **(Read and Write property)**

70.23.15 **FontFile as Memoryblock**

MBS DynaPDF Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Font file buffer. **Notes:**

Only imported fonts are returned. **(Read and Write property)**

70.23.16 **FontFileType as Integer**

MBS DynaPDF Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The font file subtype. **Notes:**

See kffs* constants like those:

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>kffsType1C</td>
<td>0</td>
<td>CFF based Type1 font</td>
</tr>
<tr>
<td>kffsCIDFontType0C</td>
<td>1</td>
<td>CFF based Type1 CID font</td>
</tr>
<tr>
<td>kffsOpenType</td>
<td>2</td>
<td>TrueType based OpenType font</td>
</tr>
<tr>
<td>kffsOpenTypeC</td>
<td>3</td>
<td>CFF based OpenType font</td>
</tr>
<tr>
<td>kffsCIDFontType2</td>
<td>4</td>
<td>TrueType based CID Font</td>
</tr>
<tr>
<td>kffsNoSubtype</td>
<td>9</td>
<td>The font file is in the format of FontType</td>
</tr>
</tbody>
</table>

**(Read and Write property)**

70.23.17 **FontName as String**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Font name. **Notes:** **(Read and Write property)**
70.23.18 **FontType as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The font type.  
**Notes:**  
If ftType0 the font is a CID font.  
(Read and Write property)

70.23.19 **ItalicAngle as Single**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Italic angle.  
**Notes:** (Read and Write property)

70.23.20 **LastChar as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Last char.  
**Notes:** (Read and Write property)

70.23.21 **Length1 as Integer**

MBS DynaPDF Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Length of the clear text portion of the Type1 font, or the length of the entire font program if FontType <> kffType1.  
**Notes:** (Read and Write property)

70.23.22 **Length2 as Integer**

MBS DynaPDF Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Length of the encrypted portion of the Type1 font program (Type1 fonts only).  
**Notes:** (Read and Write property)

70.23.23 **Length3 as Integer**

MBS DynaPDF Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Length of the fixed-content portion of the Type1 font program or zero if not present.
70.23.24 SpaceWidth as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Space width in font units or default value. Notes: (Read and Write property)

70.23.25 WidthsCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Number of widths in the array. Notes: (Read and Write property)

70.23.26 XHeight as Single

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The x-height. Notes: (Read and Write property)
70.24 class DynaPDFGlyphOutlineMBS

70.24.1 class DynaPDFGlyphOutlineMBS

Function: The class for glyph outline.
Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.24.2 Methods

70.24.3 Constructor

Function: The private constructor.

70.24.4 Outline(index as Integer) as DynapdfPointMBS

Function: Queries point with given index.
Notes: Index from 0 to OutlineCount-1.

70.24.5 Outlines as DynapdfPointMBS()

Function: Queries array with all points.

70.24.6 Properties

70.24.7 AdvanceX as Single

Function: Glyph width in horizontal writing mode.
Notes: (Read only property)
### 70.24.8 AdvanceY as Single

**Function:** Glyph height in vertical writing mode.
**Notes:** (Read only property)

### 70.24.9 BBox as DynaPDFRectMBS

**Function:** Bounding box of the glyph outline.
**Notes:** (Read and Write property)

### 70.24.10 HaveBBox as Boolean

**Function:** If true, BBox was computed.
**Notes:** (Read and Write property)

### 70.24.11 Lsb as Integer

**Function:** Left side bearing (already applied, info only).
**Notes:** (Read and Write property)

### 70.24.12 OriginX as Single

**Function:** Placement vector (vertical writing mode only).
**Notes:** (Read only property)

### 70.24.13 OriginY as Single

**Function:** Placement vector (vertical writing mode only).
**Notes:** (Read only property)
### 70.24.14 OutlineCount as Integer

**Function:** Number of points.
**Notes:** (Read and Write property)

### 70.24.15 Tsb as Integer

**Function:** Top side bearing (already applied, info only).
**Notes:** (Read and Write property)
70.25. CLASS DYNAPDFGOTOACTIONMBS

70.25  class DynaPDFGoToActionMBS

70.25.1  class DynaPDFGoToActionMBS

**Function:** The class for details on a GoTo action.  
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.25.2  Methods

70.25.3  Constructor

**Function:** The private constructor.

70.25.4  DestPos(index as Integer) as Single

**Function:** Destination position.  
**Notes:** Array of 4 floating point values if set. Index from 0 to 3.

70.25.5  Properties

70.25.6  DestFile as DynaPDFFileSpecExMBS

**Function:** The destination file.  
**Notes:** (Read only property)

70.25.7  DestName as String

**Function:** Optional named destination that shall be loaded when opening the file.  
**Notes:** (Read only property)
70.25.8 DestPage as Integer

Function: Destination page (the first page is denoted by 1).
Notes: (Read only property)

70.25.9 DestType as Integer

Function: Destination type.
Notes: (Read only property)

70.25.10 NewWindow as Integer

Function: Whether to open a new window.
Notes:
Meaningful only if the destination file points to a PDF file.
-1 = viewer default, 0 = false, 1 = true.
(Read only property)

70.25.11 NextAction as Integer

Function: The index of the action.
Notes:
-1 or next action handle to be executed if any.
(Read only property)

70.25.12 NextActionType as Integer

Function: The type of the action.
Notes:
Only set if NextAction is > 0.
(Read only property)
class DynaPDFHideActionMBS

**Function:** The class for a hide action.

**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

### Methods

#### Constructor

**Function:** The private constructor.

### Fields(index as Integer) as DynaPDFFieldExMBS

**Function:** Array of fields.

### Properties

#### FieldsCount as Integer

**Function:** Number of fields in the array.

**Notes:** (Read only property)

#### Hide as Boolean

**Function:** A flag indicating whether to hide or show the fields in the array.

**Notes:** (Read only property)
70.26.8 NextAction as Integer

Function: The handle of the next action to use.
Notes:
-1 or next action handle to be executed if any.
(Read only property)

70.26.9 NextActionType as Integer

Function: The type of the next action.
Notes:
Only set if NextAction is >= 0.
(Read only property)
70.27. CLASS DYNAPDFIMAGEMBS

70.27 class DynaPDFImageMBS

70.27.1 class DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for dynapdf for passing image data. **Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.27.2 Methods

70.27.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

70.27.4 Decode as Single()

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The decode array. **Notes:**

If set, samples must be decoded. The array contains 2 * NumComponents values.
The decode array is never set if the image is returned decompressed since it is already applied during de-compression.

70.27.5 MaskImage(Flags as UInt32 = 0) as DynaPDFImageMBS

MBS DynaPDF Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the image details on the soft mask for this image. **Notes:**

If set, a 1 bit image is used as a transparency mask.
Plugin calls GetImageObjEx with the given flags to decode the image.
CHAPTER 70. DYNAPDF

70.27.6  **PictureData(ImageFormat as Integer = 0, ImageFilter as Integer = 0) as String**

**Function:** Requests images in the given format.
**Notes:**
Default for ImageFormat is Tiff (kifmTIFF is zero) and default Image Filter is flate (kcfFlate is zero).
You can pass different constants.
If you request JPEG or JPEG 2000 and the image is already in that format, we pass through.
Else we recompress image.

70.27.7  **SoftMask(Flags as UInt32 = 0) as DynaPDFImageMBS**

**Function:** Queries the image details on the soft mask for this image.
**Notes:**
If set, a grayscale image is used as alpha channel.
Plugin calls GetImageObjEx with the given flags to decode the image.

70.27.8  **Properties**

70.27.9  **BitsPerPixel as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Bit depth of the image buffer.
**Notes:**
Possible values are 1, 2, 4, 8, 24, 32, and 64.

(Read only property)

70.27.10  **Buffer as String**

**Function:** The buffer for the image data as a string.
**Notes:**
Each scanline is aligned to a full byte.
(Read only property)
70.27. **CLASS DYNAPDFIMAGEMBS**

### 70.27.11 BufferPtr as Ptr

MBS DynaPDF Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The buffer for the image data.  
**Notes:**  
Each scanline is aligned to a full byte.  
(Read only property)

### 70.27.12 BufferSize as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The size of the image buffer in bytes.  
**Notes:** (Read only property)

### 70.27.13 ColorCount as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of colors in the color table.  
**Notes:** (Read only property)

### 70.27.14 ColorMask as Memoryblock

MBS DynaPDF Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Pointer to color mask.  
**Notes:**  
The array contains ranges in the form min/max (2 values per component) for each component before decoding.  
(Read only property)

### 70.27.15 ColorSpace as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The color space refers either to the image buffer or to the color table if set.  
**Notes:**  
Note that 1 bit images can occur with and without a color table.
70.27.16  ColorSpaceObject as DynaPDFColorSpaceMBS

**Function:** The original color space.
**Notes:** (Read only property)

70.27.17  ColorTable as Memoryblock

**Function:** The color table or nil.
**Notes:** (Read only property)

70.27.18  Filter as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Required decode filter if the image is compressed.
**Notes:**
- Required decode filter if the image is compressed.
- Possible values are dfDCTDecode (JPEG), dfJPXDecode (JPEG2000), and dfJBIG2Decode. Other filters are already removed by DynaPDF since a conversion to a native file format is then always required.

(Read only property)

70.27.19  Height as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Image height in pixel.
**Notes:** (Read only property)

70.27.20  IMaskImageHandle as Integer

**Function:** The index of the mask image.
**Notes:**
This is the index to use with DynaPDFMBS.GetImageObj function.
(Read only property)

### 70.27.21 InlineImage as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If true, the image is an inline image. **Notes:** (Read only property)

### 70.27.22 Intent as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The rendering intent. **Notes:** Default riNone. (Read only property)

### 70.27.23 Interpolate as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If true, image interpolation should be performed. **Notes:** (Read and Write property)

### 70.27.24 ISoftMaskHandle as Integer

MBS DynaPDF Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The index of the soft mask image. **Notes:** This is the index to use with DynaPDFMBS.GetImageObj function. (Read only property)

### 70.27.25 JBIG2Globals as String

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Optional global page 0 segment (kdfJBIG2Decode filter only). **Notes:** (Read only property)
70.27.26 **JBIG2GlobalsSize as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The size of the bit stream in bytes. **Notes:** (Read only property)

70.27.27 **Measure as DynaPDFMeasureMBS**

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Optional measure dictionary. **Notes:** (Read only property)

70.27.28 **Metadata as String**

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Optional XML Metadata stream. **Notes:** (Read only property)

70.27.29 **MetadataSize as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Length of Metadata in bytes. **Notes:** (Read only property)

70.27.30 **MinIsWhite as Boolean**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If true, the colors of 1 bit images are reversed. **Notes:** (Read only property)

70.27.31 **NumComponents as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of components stored in the image buffer. **Notes:** (Read only property)
**70.27.32 OCG as Integer**

MBS DynaPDF Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Handle of an OCG or OCMD or -1.
**Notes:**
Images can be part of an Optional Content Group (OCG) or Optional Content Membership Dictionary (OCMD). If OC is greater -1 an OCG or OCMD handle was set. To determine whether an OCG handle was set, check whether the value is smaller & h40000000.
(Read only property)

**70.27.33 OrgFilter as Integer**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The image was compressed with this filter in the PDF file.
**Notes:**
This info is useful to determine which compression filter should be used when creating a new image file from the image buffer.
(Read only property)

**70.27.34 PDF as DynaPDFMBS**

**Function:** The reference to the parent DynaPDF object.
**Notes:** (Read only property)

**70.27.35 PtData as DynaPDFPointDataDictionaryMBS**

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The Point Data dictionary.
**Notes:** (Read only property)

**70.27.36 ResolutionX as Single**

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Image resolution on the x-axis.
**Notes:** (Read only property)
70.27.37 ResolutionY as Single

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Image resolution on the y-axis.
**Notes:** (Read only property)

70.27.38 ScanLineLength as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The length of a scanline in bytes.
**Notes:** (Read only property)

70.27.39 SMaskInData as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The SMaskInData value.
**Notes:**
JPXDecode only, PDF_MAX_INT if not set. See PDF Reference for further information.

(Read only property)

70.27.40 Transparent as Boolean

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The transparent mode.
**Notes:**
The meaning is different depending on the bit depth and whether a color table is available. If the image is a 1 bit image and if no color table is available, black pixels must be drawn with the current fill color. If the image contains a color table ColorMask contains the range of indexes in the form min/max index which appears transparent. If no color table is present ColorMask contains the transparent ranges in the form min/max for each component.

(Read only property)

70.27.41 Width as Integer

MBS DynaPDF Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Image width in pixel.
70.27. CLASS DYNAPDFIMAGEMBS

Notes: (Read only property)
70.28 class DynaPDFImportDataActionMBS

70.28.1 class DynaPDFImportDataActionMBS

Function: The class for an import data action.
Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.28.2 Methods

70.28.3 Constructor

Function: The private constructor.

70.28.4 Properties

70.28.5 Data as DynaPDFFileSpecExMBS

Function: The data or file to be loaded.
Notes: (Read only property)

70.28.6 NextAction as Integer

Function: The handle to the next action.
Notes:
-1 or next action handle to be executed if any
(Read only property)

70.28.7 NextActionType as Integer

Function: The type of the next action.
Notes:
Only set if NextAction is $\geq 0$.
(Read only property)
70.29  class DynaPDFJavaScriptActionMBS

70.29.1  class DynaPDFJavaScriptActionMBS

Function: The class for a javascript action.
Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.29.2  Methods

70.29.3  Constructor

Function: The private constructor.

70.29.4  Properties

70.29.5  NextAction as Integer

Function: The handle to the next action.
Notes:
-1 or next action handle to be executed if any
(Read only property)

70.29.6  NextActionType as Integer

Function: The type of the next action.
Notes:
Only set if NextAction is >= 0.
(Read only property)
70.29.7 Script as String

**Function:** The script.

**Notes:** (Read only property)
70.30 class DynaPDFLaunchActionMBS

70.30.1 class DynaPDFLaunchActionMBS

**Function:** The class for details on a launch action.
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plug-in functions.

70.30.2 Methods

70.30.3 Constructor

**Function:** The private constructor.

70.30.4 Properties

70.30.5 AppName as String

**Function:** Optional. The name of the application that should be launched.
**Notes:** (Read only property)

70.30.6 DefDir as String

**Function:** Optional default directory.
**Notes:** (Read only property)

70.30.7 File as DynaPDFFileSpecExMBS

**Function:** The file specification for the launch.
**Notes:** (Read only property)
70.30.8 NewWindow as Integer

Function: Whether to launch in new window.
Notes:
-1 = viewer default, 0 = false, 1 = true.
(Read only property)

70.30.9 NextAction as Integer

Function: The handle to the next action.
Notes:
-1 or next action handle to be executed if any
(Read only property)

70.30.10 NextActionType as Integer

Function: The type of the next action.
Notes:
Only set if NextAction is >= 0.
(Read only property)

70.30.11 Operation as String

Function: Optional string specifying the operation to perform (open or print).
Notes: (Read only property)

70.30.12 Parameter as String

Function: Optional parameter string that shall be passed to the application (AppName).
Notes: (Read only property)
70.31 class DynaPDFLayerGroupMBS

70.31.1 class DynaPDFLayerGroupMBS

Function: The class for a DynaPDF Layer Group.
Notes:
Used to link layers in hierarchies.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

70.31.2 Methods

70.31.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The private constructor.

70.31.4 Properties

70.31.5 Handle as Integer

Function: The internal object reference.
Notes: (Read only property)

70.31.6 Owner as DynaPDFMBS

Function: The link to the parent DynaPDF object.
Notes: (Read only property)
70.32. class DynaPDFLineAnnotParameterMBS

70.32.1 class DynaPDFLineAnnotParameterMBS

Function: The class for line annotation parameters.

70.32.2 Properties

70.32.3 Caption as Boolean

Function: Specifies whether the parameter Content of the function LineAnnot should be used as caption of the measure line.

Notes: (Read and Write property)

70.32.4 CaptionOffsetX as Single

Function: Horizontal offset of the caption from its normal position.

Notes: (Read and Write property)

70.32.5 CaptionOffsetY as Single

Function: Vertical offset of the caption from its normal position.

Notes: (Read and Write property)

70.32.6 CaptionPos as Integer

Function: The position where the caption should be drawn if present.

Notes: (Read and Write property)
70.32.7 LeaderLineExtend as Single

**Function:** Optional leader line extend beyond the leader line (must be a positive value or zero). 
**Notes:** (Read and Write property)

70.32.8 LeaderLineLen as Single

**Function:** Length of the leader lines (positive or negative). 
**Notes:** (Read and Write property)

70.32.9 LeaderLineOffset as Single

**Function:** Amount of space between the endpoints of the annotation and the leader lines (must be a positive value or zero) 
**Notes:** (Read and Write property)
70.33. **CLASS DYNAPDFMATRIXMBS**

### 70.33 class DynapdfMatrixMBS

**70.33.1 class DynapdfMatrixMBS**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a DynaPDF matrix structure. **Notes:** in the documentation known as TCTM struct.

### 70.33.2 Methods

#### 70.33.3 Constructor

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new matrix and sets it to identity. **Example:**

```vbnet
dim m as new DynapdfMatrixMBS
MsgBox m
```

**See also:**

- 70.33.4 Constructor(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double) 11723
- 70.33.5 Constructor(other as DynapdfMatrixMBS) 11724

#### 70.33.4 Constructor(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double)

MBS DynaPDF Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new instance with setting values to the given parameters. **Example:**

```vbnet
dim m as new DynapdfMatrixMBS(1,2,3,4,5,6)
MsgBox m
```

**See also:**

- 70.33.3 Constructor 11723
- 70.33.5 Constructor(other as DynapdfMatrixMBS) 11724
70.33.5 Constructor(other as DynapdfMatrixMBS)

**Function:** Creates a matrix object with copying the values.
**Example:**
```vba
dim m as new DynapdfMatrixMBS(1,2,3,4,5,6)
dim n as new DynapdfMatrixMBS(m)
MsgBox n
```

See also:

- 70.33.3 Constructor
- 70.33.4 Constructor(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double)

70.33.6 GetRotationAngle as Double

**Function:** Calculates the rotate angle.
**Example:**
```vba
dim m as DynapdfMatrixMBS = DynapdfMatrixMBS.Identity
m.Rotate 0.1
MsgBox str(m.GetRotationAngle) // shows 0.1
```

**Notes:** In radians from -pi to pi.

70.33.7 GetScaleFactor as Double

**Function:** Calculates the scale factor.
**Example:**
```vba
dim m as DynapdfMatrixMBS = DynapdfMatrixMBS.Identity
m.Scale 3.0, 4.0
MsgBox str(m.GetScaleFactor) // shows 3.535534
```
70.33.8  Identity as DynapdfMatrixMBS

Function: Creates new object with identity matrix.
Example:
```vba
dim m as DynapdfMatrixMBS = DynapdfMatrixMBS.Identity
MsgBox m // shows [ 1.000000 0.000000 0.000000 1.000000 0.000000 0.000000 ]
```

70.33.9  Invert

Function: Inverts the matrix.
Example:
```vba
dim m as new DynapdfMatrixMBS
m.Invert
MsgBox m // shows [ 1.000000 -0.000000 -0.000000 1.000000 0.000000 0.000000 ]
```

70.33.10  IsIdentity as boolean

Function: Checks whether matrix is the identity matrix.
Example:
```vba
dim m as new DynapdfMatrixMBS
MsgBox str(m.IsIdentity)
m.a = 3.0
MsgBox str(m.IsIdentity)
```

Notes: Returns true if a = 1, b = 0, c = 0, d = 1, x = 0 and y = 0.
70.33.11  **LeftMultiply**(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Multiplies both matrix where self is on the left side. 
See also:

- 70.33.12 **LeftMultiply**(other as DynapdfMatrixMBS)

70.33.12  **LeftMultiply**(other as DynapdfMatrixMBS)

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Multiplies both matrix where self is on the left side. 
**Example:**

```vba
dim m1 as new DynapdfMatrixMBS
dim m2 as new DynapdfMatrixMBS

m1.Rotate 0.1
m2.Scale 2.0, 3.0

dim m3 as new DynapdfMatrixMBS(m1)
m3.LeftMultiply(m2)

MsgBox m1.Str+EndOfLine+m2.Str+EndOfLine+m3.Str
```

See also:

- 70.33.11 **LeftMultiply**(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double)

70.33.13  **Operator_Compare**(other as DynapdfMatrixMBS) as Integer

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compares two matrix objects whether they have same values. 
**Example:**

```vba
dim m1 as new DynapdfMatrixMBS
dim m2 as new DynapdfMatrixMBS

if m1 = m2 then
```
70.33. CLASS DYNAPDFMATRIXMBS

MsgBox "Equal, same values."
else
MsgBox "Not equal - Bug in Plugin."
end if

if m1 is m2 then
MsgBox "Equal - Bug in REAL Studio."
else
MsgBox "Not equal, different objects."
end if

70.33.14 Operator Convert as string

**Function:** Converts matrix into a string for displaying in log files.

**Example:**

dim m as new DynapdfMatrixMBS
MsgBox m // shows [ 1.000000 0.000000 0.000000 1.000000 0.000000 0.000000 ]

**Notes:** Added for debugging.

70.33.15 Operator Multiply(other as DynapdfMatrixMBS) as DynapdfMatrixMBS

**Function:** Multiplies both matrix where self is on the left side.

**Example:**

dim m1 as new DynapdfMatrixMBS
dim m2 as new DynapdfMatrixMBS

m1.Rotate 0.1
m2.Scale 2.0, 3.0

dim m3 as DynapdfMatrixMBS = m1*m2

MsgBox m1.Str+EndOfLine+m2.Str+EndOfLine+m3.Str
70.33.16 Operator_MultiplyRight(other as DynapdfMatrixMBS) as DynapdfMatrixMBS

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Multiplies both matrix where self is on the right side.

70.33.17 RightMultiply(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Multiplies both matrix where self is on the right side. **See also:**

- 70.33.18 RightMultiply(other as DynapdfMatrixMBS)

70.33.18 RightMultiply(other as DynapdfMatrixMBS)

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Multiplies both matrix where self is on the right side. **See also:**

- 70.33.17 RightMultiply(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double)

70.33.19 Rotate(angle as Double)

MBS DynaPDF Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Rotates matrix with the given angle. **Example:**

```vbnet
dim m as new DynapdfMatrixMBS

const pi = 3.14159265

dim angle as Double = 30.0/180.0*pi

m.Rotate(angle)

MsgBox m // shows [ 0.866025 0.500000 -0.500000 0.866025 0.000000 0.000000 ]
```

**Notes:** Angle in radians: 2*Pi = 360 degree
70.33. **CLASS DYNAPDFMATRIXMBS**

### 70.33.20 Scale(sx as Double, sy as Double)

**Function:** Scales the matrix.
**Example:**

```vbnet
dim m as new DynapdfMatrixMBS
m.Scale 2.0, 3.0
MsgBox m // [ 2.000000 0.000000 0.000000 3.000000 0.000000 0.000000 ]
```

### 70.33.21 SetIdentity

**Function:** Sets values back to the identity matrix.
**Example:**

```vbnet
dim m as new DynapdfMatrixMBS
m.Scale 2.0, 3.0 // modify values
m.SetIdentity // and reset
MsgBox m // [ 1.000000 0.000000 0.000000 1.000000 0.000000 0.000000 ]
```

### 70.33.22 SetValues(a as Double, b as Double, c as Double, d as Double, x as Double, y as Double)

**Function:** Sets all the values in one method
**Example:**

```vbnet
dim m as new DynapdfMatrixMBS
m.SetValues 1,2,3,4,5,6
MsgBox m
```
70.33.23  **Str as string**

**Function:** Converts matrix into a string for displaying in log files.  
**Example:**

```vbs
Dim m As New DynapdfMatrixMBS
MsgBox m.Str // shows [ 1.000000 0.000000 0.000000 1.000000 0.000000 0.000000]
```

**Notes:** Added for debugging.

70.33.24  **Transform(byref x as Double, byref y as Double)**

**Function:** Applies the matrix to the given point.  
**Example:**

```vbs
Const pi = 3.14159265
Dim angle As Double = 30.0 / 180.0 * pi
m.Rotate(angle)
m.Translate 2.0, 3.0
Dim x As Double = 100.0
Dim y As Double = 100.0
m.Transform x, y
MsgBox str(x) + " " + str(y) // 36.83459 140.2006
```

70.33.25  **TransformInv(byref x as Double, byref y as Double)**

**Function:** Applies the matrix to the given point in inverse mode.  
**Example:**

```vbs
Const pi = 3.14159265
Dim angle As Double = 30.0 / 180.0 * pi
m.Rotate(angle)
```
0.33. CLASS DYNAPDFMATRIXMBS

m.Translate 2.0, 3.0

dim x as Double = 100.0
dim y as Double = 100.0

// transform
m.Transform x, y

MsgBox str(x) + " " + str(y) // 36.83459 140.2006

// transform back
m.TransformInv x, y

MsgBox str(x) + " " + str(y) // 100 100#

Notes: Like you have a point and want to know whether it was before the matrix was applied.

0.33.26 Translate(x as Double, y as Double)

Function: Translates matrix by given values.
Example:

dim m as new DynapdfMatrixMBS

m.Translate 2, 3

MsgBox m // shows [ 1.000000 0.000000 0.000000 1.000000 2.000000 3.000000 ]

0.33.27 Properties

0.33.28 a as Double

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: One of the matrix properties.
Notes: (Read and Write property)
**70.33.29  b as Double**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the matrix properties.
**Notes:** (Read and Write property)

---

**70.33.30  c as Double**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the matrix properties.
**Notes:** (Read and Write property)

---

**70.33.31  d as Double**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the matrix properties.
**Notes:** (Read and Write property)

---

**70.33.32  x as Double**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the matrix properties.
**Notes:** (Read and Write property)

---

**70.33.33  y as Double**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the matrix properties.
**Notes:** (Read and Write property)

**70.34. class DynaPDFMBS**

**70.34.1 class DynaPDFMBS**

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The dynapdf class.

**Notes:**

A pdf library to create, modify, import pdf files.
You need a separate dynapdf license key for this class.

Please note that all constants have the prefix k. In the dynapdf_help.pdf file, the constants don’t have a k prefix. And the C functions there have IPDF parameters which the plugin automatically passes for you. So

```
SI32 pdfSetPageCoords(const void* IDPF, TPageCoord PageCoords)
```

translates in Real Studio to

```
function SetPageCoords(PageCoords as Integer) as Integer
```

and you call it like this:

```
call pdf.SetPageCoords pdf.kpcTopDown
```

where in this sample the DynaPDF object is named pdf.

Pro license is required for the following functions:

- BeginTransparencyGroup
- ConvertColors
- Create3DAnnot
- CreateSoftMask
- FlattenForm
- GetPageText
- ImportPage and ImportPageEx
- ParseContent
- RenderAnnotOrField
- RenderPage
- SetCMapDir
- SetExtColorSpace, SetExtFillColorSpace and SetExtStrokeColorSpace.
- SetUseGlobalImpFiles

Lite is required for:

- AddRenderingIntent and AddRenderingIntentEx
- CreateFormFields
- CloseFileEx
- ConvertEMFSpool
- CreateCollection
- CreateExtGState
- InsertMetafile and InsertMetafileEx
- OpenImportBuffer, OpenImportFile and OpenImportStream
- SetPDFVersion for PDF/A and PDF/X

And all functions relaying on those functions internally.

70.34.2 Methods

70.34.3 AddActionToObj(ObjType as Integer, theEvent as Integer, ActHandle as Integer, ObjHandle as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function adds an action to a PDF object. See also AddActionToObj function in DynaPDF manual.

70.34.4 AddAnnotToPage(PageNum as UInt32, Handle as UInt32) as boolean

MBS DynaPDF Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Adds an annotation to a page. Notes:
With exception of PopUp annotations all annotation types can be drawn on multiple pages. Watermark or Stamp annotations are typical annotations which can be placed on multiple pages.
Returns true on success.
See also AddAnnotToPage function in DynaPDF manual.

70.34.5 AddArticle(PosX as Double, PosY as Double, Width as Double, Height as Double) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function creates a new article and adds it to the currently open article thread that must be created with CreateArticleThread() beforehand.
See also AddArticle function in DynaPDF manual.

70.34.6 AddBookmark(title as String, parent as Integer, DestPage as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function adds a bookmark to the global outline tree of the document.
Notes: The title parameter is converted to unicode.
See also AddBookmark function in DynaPDF manual.

70.34.7 AddBookmarkAnsi(title as String, parent as Integer, DestPage as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function adds a bookmark to the global outline tree of the document.
Notes: The title parameter is converted to ANSI.

70.34.8 AddBookmarkEx(title as String, parent as Integer, NamedDest as Integer, Open as boolean) as Integer

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function adds a bookmark to the global outline tree of the document.
Notes: The title parameter is converted to unicode.
See also AddBookmarkEx function in DynaPDF manual.
70.34.9  AddBookmarkEx2(title as String, parent as Integer, NamedDest as String, unicode as boolean, Open as boolean) as Integer

Function: This function adds a bookmark to the global outline tree of the document.
Notes: If unicode is true, the plugin passes NamedDest as unicode, else as Windows ANSI text.
See also AddBookmarkEx2 function in DynaPDF manual.

70.34.10 AddBookmarkEx2Ansi(title as String, parent as Integer, NamedDest as String, unicode as boolean, Open as boolean) as Integer

Function: This function adds a bookmark to the global outline tree of the document.
Notes: If unicode is true, the plugin passes NamedDest as unicode, else as Windows ANSI text.

70.34.11 AddBookmarkExAnsi(title as String, parent as Integer, NamedDest as Integer, Open as boolean) as Integer

Function: This function adds a bookmark to the global outline tree of the document.
Notes: The title parameter is converted to ANSI.

70.34.12 AddButtonImage(BtnHandle as Integer, State as Integer, Caption as string, ImgFile as Folderitem) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The function adds an image to a push button to one or more of the three different states of a button.
See also AddButtonImage function in DynaPDF manual.

70.34.13 AddButtonImageEx(BtnHandle as Integer, State as Integer, Caption as string, hbitmap as Integer) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The function adds a memory bitmap to a push button in the same ways as AddButtonImage() but accepts a HBITMAP handle as input image.
See also AddButtonImageEx function in DynaPDF manual.
70.34. **AddContinueText**(text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function prints a single text line and adds a line feed.  
**Notes:** The text string is converted to Unicode.  
See also AddContinueText function in DynaPDF manual.

70.34.15 **AddContinueTextAnsi**(text as string) as boolean

MBS DynaPDF Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function prints a single text line and adds a line feed.  
**Notes:** The text string is converted to ANSI.

70.34.16 **AddDeviceNProcessColorants**(DeviceNCS as Integer, Colorants() as string, ProcessCS as Integer, Handle as Integer) as boolean

**Notes:** Returns true on success and false on failure.  
See also AddDeviceNProcessColorants function in DynaPDF manual.

70.34.17 **AddDeviceNSeparations**(DeviceNCS as Integer, Colorants() as string, SeparationCS() as Integer) as boolean

**Notes:**  
Same as AddDeviceNSeparationsAnsi, but here the ReALbasic colorant strings are converted to UTF-8 encoding before they are passed to the DynaPDF library.  

ubound(Colorants) must be ubound(SeparationCS).  
Returns true on success and false on failure.

Currently limited to 100 colorants on the plugin side.  
See also AddDeviceNSeparations function in DynaPDF manual.
70.34.18 **AddDeviceNSeparationsAnsi**(DeviceNCS as Integer, Colorants() as string, SeparationCS() as Integer) as boolean

**Function:** Adds device N separations.  
**Notes:**  
Same as AddDeviceNSeparations, but here the ReALbasic colorant strings are converted to ANSI encoding before they are passed to the DynaPDF library.  

```
ubound(Colorants) must be ubound(SeparationCS).
Returns true on success and false on failure.
```

Currently limited to 100 colorants on the plugin side.
