Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.35 HasLCMS2Plugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the LCMS2 plugin is installed.
Example:

```#
if MBS.HasLCMS2Plugin then
MsgBox "LCMS2 Plugin is installed."
# endif```
Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.36 HasLCMSPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the LCMS plugin is installed.
Example:

```plaintext
# if MBS.HasLCMSPlugin then
MsgBox "LCMS Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.37 HasLeopardPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the Leopard plugin is installed.
Example:

```plaintext
# if MBS.HasLeopardPlugin then
MsgBox "Leopard Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.38 HasLinuxPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the Linux plugin is installed.
Example:

```plaintext
# if MBS.HasLinuxPlugin then
MsgBox "Linux Plugin is installed."
# endif
```
Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.39 HasLionPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the Lion plugin is installed.
Example:

``````
# if MBS.HasLionPlugin then
MsgBox "Lion Plugin is installed."
# endif
```
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.40 HasMac64bitPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the Mac64bit plugin is installed.
Example:

``````
# if MBS.HasMac64bitPlugin then
MsgBox "Mac64bit Plugin is installed."
# endif
```
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.41 HasMacOSXCFPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the MacOSXCF plugin is installed.
Example:

``````
# if MBS.HasMacOSXCFPlugin then
MsgBox "MacOSXCF Plugin is installed."
# endif
```
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.
Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.42 HasMacOSXCGPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the MacOSXCG plugin is installed.
Example:

```plaintext
# if MBS.HasMacOSXCGPlugin then
MsgBox "MacOSXCG Plugin is installed."

# endif
```
Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.48 HasMountainLionPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the MountainLion plugin is installed.
Example:

# if MBS.HasMountainLionPlugin then
MsgBox "MountainLion Plugin is installed."
# endif

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.49 HasNetworkPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the Network plugin is installed.
Example:

# if MBS.HasNetworkPlugin then
MsgBox "Network Plugin is installed."
# endif

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.50 HasNikonCameraPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the NikonCamera plugin is installed.
Example:

# if MBS.HasNikonCameraPlugin then
MsgBox "NikonCamera Plugin is installed."
# endif
**Notes:** The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 138.1.51 HasOCRPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the OCR plugin is installed.  
**Example:**

```plaintext
# if MBS.HasOCRPlugin then
MsgBox "OCR Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 138.1.52 HasOverlayPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Overlay plugin is installed.  
**Example:**

```plaintext
# if MBS.HasOverlayPlugin then
MsgBox "Overlay Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 138.1.53 HasPHPPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the PHP plugin is installed.  
**Example:**

```plaintext
# if MBS.HasPHPPlugin then
MsgBox "PHP Plugin is installed."
# endif
```
Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.54 HasPicturePlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the Picture plugin is installed.
Example:

```plaintext
# if MBS.HasPicturePlugin then
MsgBox "Picture Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.55 HasPNGPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the PNG plugin is installed.
Example:

```plaintext
# if MBS.HasPNGPlugin then
MsgBox "PNG Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.56 HasQTKitPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the QTKit plugin is installed.
Example:

```plaintext
# if MBS.HasQTKitPlugin then
MsgBox "QTKit Plugin is installed."
# endif
```
Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.57 HasQuickTimePlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the QuickTime plugin is installed.
Example:

```lua
# if MBS.HasQuickTimePlugin then
MsgBox "QuickTime Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.58 HasRegExPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the RegEx plugin is installed.
Example:

```lua
# if MBS.HasRegExPlugin then
MsgBox "RegEx Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.59 HasSmartCardPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the SmartCard plugin is installed.
Example:

```lua
# if MBS.HasSmartCardPlugin then
MsgBox "SmartCard Plugin is installed."
# endif
```
Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.60 HasSnowLeopardPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the SnowLeopard plugin is installed.
Example:

```#
if MBS.HasSnowLeopardPlugin then
MsgBox "SnowLeopard Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.61 HasSQLPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the SQL plugin is installed.
Example:

```#
if MBS.HasSQLPlugin then
MsgBox "SQL Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.62 HasTAPIPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the TAPI plugin is installed.
Example:

```#
if MBS.HasTAPIPlugin then
MsgBox "TAPI Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.
138.1. **MODULE MBS**

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 138.1.63 HasTidyPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Tidy plugin is installed.  
**Example:**

```plaintext
# if MBS.HasTidyPlugin then
MsgBox "Tidy Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 138.1.64 HasTiffPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Tiff plugin is installed.  
**Example:**

```plaintext
# if MBS.HasTiffPlugin then
MsgBox "Tiff Plugin is installed."
# endif
```

**Notes:** The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

### 138.1.65 HasTwainPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Twain plugin is installed.  
**Example:**

```plaintext
# if MBS.HasTwainPlugin then
MsgBox "Twain Plugin is installed."
# endif
```
Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.66 HasUSBPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the USB plugin is installed.

**Example:**

```plaintext
# if MBS.HasUSBPlugin then
MsgBox "USB Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.67 HasUtilPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Util plugin is installed.

**Example:**

```plaintext
# if MBS.HasUtilPlugin then
MsgBox "Util Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.68 HasVLCPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the VLC plugin is installed.

**Example:**

```plaintext
# if MBS.HasVLCPlugin then
MsgBox "VLC Plugin is installed."
# endif
```
Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.69 HasWIAPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the WIA plugin is installed.
Example:

```pascal
# if MBS.HasWIAPlugin then
MsgBox "WIA Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.70 HasWinDragDropPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the WinDragDrop plugin is installed.
Example:

```pascal
# if MBS.HasWinDragDropPlugin then
MsgBox "WinDragDrop Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.71 HasWinICMPlugin = true

MBS Main Plugin, Plugin Version: 16.4. Function: Whether the WinICM plugin is installed.
Example:

```pascal
# if MBS.HasWinICMPlugin then
MsgBox "WinICM Plugin is installed."
# endif
```
Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.72  HasWinPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Win plugin is installed.  
**Example:**

```
# if MBS.HasWinPlugin then
MsgBox "Win Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.73  HasXLPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the XL plugin is installed.  
**Example:**

```
# if MBS.HasXLPlugin then
MsgBox "XL Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.74  HasXMPPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the XMP plugin is installed.  
**Example:**

```
# if MBS.HasXMPPlugin then
MsgBox "XMP Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.
Notes: The MBS Main Plugin will check on startup of the Xojo or Real Studio IDE what plugins are installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

138.1.75 HostName = ”MyMac”

MBS Main Plugin, Plugin Version: 14.0. **Function:** The host the IDE was launched on for building an app.

Example:

MsgBox mbs.HostName

Notes:
Using this constant allows you to include details on who build the app in the application itself, e.g. for documentation.
The constant value is not in this documentation as it changes too often.

138.1.76 UserName = ”Christian Schmitz”

MBS Main Plugin, Plugin Version: 14.0. **Function:** The user name of the user who launched the IDE.

Example:

MsgBox mbs.UserName

Notes:
Using this constant allows you to include details on who build the app in the application itself, e.g. for documentation.
The constant value is not in this documentation as it changes too often.

138.1.77 Version = ”MBS Xojo Plugin 18.2 (build 19645) Sun May 20 14:02:01 2018 (GMT)”

MBS Main Plugin, Plugin Version: 9.5. **Function:** The plugin version string.

Example:

MsgBox mbs.Version
138.1.78  VersionString = ”18.2”

MBS Main Plugin, Plugin Version: 11.1. **Function:** The plugin version string (only, the number part).
**Example:**
MsgBox mbs.VersionString

**Notes:** e.g. ”11.1”

138.1.79  Website = ”http://www.monkeybreadsoftware.de”

MBS Main Plugin, Plugin Version: 9.5. **Function:** The URL for the Monkeybread Software website.
**Notes:** ShowURL mbs.Website

138.1.80  Year = 2018

MBS Main Plugin, Plugin Version: 9.5. **Function:** The year of the plugin.
**Example:**
MsgBox str(mbs.Year)
138.2  Globals

138.2.1  LogoMBS(size as Integer = 0, WithAlphaChannel as boolean = false) as Picture

MBS Main Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the MBS logo picture. **Example:**

window1Backdrop = LogoMBS(500)

**Notes:**
Best size is 500 pixel.
This function exists to provide a sample picture for examples.
If WithAlphaChannel is true and alpha channel pictures are supported, the plugin returns a picture with alpha channel. (Cocoa, Windows or Linux target on Real Studio 2011r4).

Due to a bug in console runtime from Real Software this function can only produce useful pictures with 500 pixel size in console or web applications.

138.2.2  MBSPluginCompileDate as string

MBS Main Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compilation date of the plugins. **Example:**

MsgBox MBSPluginCompileDate

**Notes:**
E.g. "Aug 27 2006"
Actually the compilation date of the Version Plugin part which defines this function.

138.2.3  MBSPluginCompileTime as string

MBS Main Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compilation Time of the plugins. **Example:**
CHAPTER 138. REGISTRATION

MsgBox MBSPluginCompileTime

Notes:
e.g. "19:40:16"
Actually the compilation date of the Version Plugin part which defines this function.

138.2.4 MBSPluginVersion as string

MBS Main Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns a version string from the plugin.
Example:
MsgBox "Build with Real Studio " + RBVersionString + " and " + MBSPluginVersion

Notes: You can show that in your about box so your users can tell you which plugin they use.

138.2.5 RegisterMBSPlugin(name as string, product as string, enddate as Integer, serial as Integer) as boolean

Example:
const name = "Joe Smith"
const serialnumber = 123456789
const enddate = 200710
if not RegisterMBSPlugin(name,"MBS2007", enddate, serialnumber) then
    MsgBox "something wrong with the serial number of the plugins!"
end if

Notes:
Returns true if name and serial number is accepted.

While you are running your project in Xojo (or Real Studio) you don’t need to register, but if you compile for any target, you should or nice popup windows will show that the app is not registered.
Register in an application subclass to make registering as early as possible.

In case you get this message: "RegisterMBSPlugin()", giving the message "This item conflicts with another item of the same name" you have something else in your plugins folder, e.g. a html file.

Possible reasons for this failing:
- The calculations you make on the strings or serial number do not create the same value on every machine (Intel vs. PPC, e.g. endian problems)
- You use MBS functions before calling registration function (e.g. you register in window.open event and use the plugin for a control.)
- You mix different plugin versions in your Realbasic folder.

This function works only for 2007 and newer serial numbers.

See also:

- 138.2.6 RegisterMBSPlugin(name as string, product as string, enddate as Integer, serial as string) as boolean

138.2.6 RegisterMBSPlugin(name as string, product as string, enddate as Integer, serial as string) as boolean

MBS Main Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The function to register the plugins.

**Example:**

```
const name = "Joe Smith"
const serialnumber = "123456"
const enddate = 200710

if not RegisterMBSPlugin(name, "MBS Complete", enddate, serialnumber) then
    msgBox "something wrong with the serial number of the plugins!"
end if
```

**Notes:**

Returns true if name and serial number is accepted.

While you are running your project in Xojo (or Real Studio) you don’t need to register, but if you compile for any target, you should or nice popup windows will show that the app is not registered.

Register in an application subclass to make registering as early as possible.
In case you get this message: "RegisterMBSPlugin()", giving the message "This item conflicts with another item of the same name" you have something else in your plugins folder, e.g. a html file.

Possible reasons for this failing:
- The calculations you make on the strings or serial number do not create the same value on every machine (Intel vs. PPC, e.g. endian problems)
- You use MBS functions before calling registration function (e.g. you register in window.open event and use the plugin for a control.)
- You mix different plugin versions in your Realbasic folder.

This function works only for 2015 and newer serial numbers.

See also:

- 138.2.5 RegisterMBSPlugin(name as string, product as string, enddate as Integer, serial as Integer) as boolean

138.2.7 SetRegistrationMessageMBS(ID as Integer, message as string)

MBS Main Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Defines what messages to show.

**Example:**

SetRegistrationMessageMBS(0, "This application is broken. Please reinstall!")

**Notes:**

ID currently can only be 0 and is reserved for future flags.

Currently this changes the message which is shown if plugins of different versions are found. This typically happens if installers mix old and new libraries in an app and the user should be asked to reinstall the application.

138.3 class RegistrationEngineMBS

138.3.1 class RegistrationEngineMBS

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
An engine to add serial number generation to your application.

**Example:**
138.3. CLASS REGISTRATIONENGINE MBS

```vbnet
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"

MsgBox r.Calc  // shows: ICYR-RES4-UXQ1
```

**Notes:**

If you want to add serial numbers to your application, you can use this class to write yourself a serial number generator application. You can later in your application use this class to verify the serial number.

You may want to design your application so that the serial number is written to your preferences file so you can verify it every time your application is launched. But if you do this, also save some computer-related value there so you can avoid people cloning the system. For example the MAC ID, the user name, the system folder creation date. This way you detect whenever a preferences file is copied to another machine.

For generate and later verify serial numbers the setup of the class must match. So carefully check how your serial number should look like. A format like "MA-1234-5678-9012-V1" can be good. Use a prefix and suffix so make serial numbers from different products and different major versions look different. 12 letters are normally enough for a serial number. Especially if you use alphanumeric characters. You can of course change the alphabet string and use lower case letters.

### 138.3.2 Methods

#### 138.3.3 Calc as string

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calculates the serial number.

#### 138.3.4 Verify(s as string) as boolean

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Verifies the serial number.

**Notes:**

If you only use upper case letter for your serial numbers, use a function like `uppercase` before calling `verify`. This way you avoid that a serial number "abc" is invalid because it is not "ABC". Returns true on success and false on failure.
138.3.5 Properties

138.3.6 Alphabet as String

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The characters to use for serial numbers.

**Example:**
```vba
dim r as new RegistrationEngineMBS
r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"
r.Alphabet="ABC123"
MsgBox r.Calc // shows: A1AC-2312-12CC
```
```
r.Alphabet="0123456789"
MsgBox r.Calc // shows: 4308-2905-4013
```

**Notes:**
Must have at least two characters.
Characters must be unique.
Default is "0123456789ABCDEFGHIJKLMNOPQRSTUVWXYZ".
(Read and Write property)

138.3.7 BlockLength as Integer

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Length of the blocks in the serial number.

**Example:**
```vba
dim r as new RegistrationEngineMBS
r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"
r.NumberLength=10
r.BlockLength=5
MsgBox r.Calc // shows: ICYRR-ES4UX
```
```
r.NumberLength=16
r.BlockLength=4
MsgBox r.Calc // shows: ICYR-RES4-UXQ1
```
Notes:
If this value is 0, no delimiters are used.
(Read and Write property)

138.3.8  Delimiter as String

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The delimiter string to use for separating blocks in the serial number.
Notes:
Default is ".".
(Read and Write property)

138.3.9  Mode as Integer

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The mode of operation.
Notes:
Currently always 0.
Set to 1 to use 128bit instead of 64bit number.
(Read and Write property)

138.3.10 NumberLength as Integer

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The maximum length of the number.
Example:

dim r as new RegistrationEngineMBS
r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"
r.NumberLength=10
r.BlockLength=5
MsgBox r.Calc // shows: ICYRR-ES4UX
r.NumberLength=16
r.BlockLength=4
MsgBox r.Calc // shows: ICYR-RES4-UXQ1
138.3.11 Platform as Integer

MBS Util Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Which platform to use for platform specific keys.

**Notes:**
Value is set in the constructor to current platform, but you can change it if you want to run the key generator on a different platform.

Values are:

1  Mac
2  Windows
3  Linux

All other values behave like PlatformSpecificKeys is false.
This value is only used if PlatformSpecificKeys is true.
(Read and Write property)

138.3.12 PlatformSpecificKeys as Boolean

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether you want platform specific keys.

**Notes:**
Set to false if you want to have Windows, Mac OS X and Linux all use the same serial numbers.
Set to true if you want to different serial numbers depending on the platform.

Default is false.
(Read and Write property)
138.3.13 Prefix as String

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The prefix for the serial number string.
**Notes:** (Read and Write property)

138.3.14 Seed as Integer

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A seed value you can set to get your serial number more unique.
**Notes:** (Read and Write property)

138.3.15 Suffix as String

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The suffix for the serial number string.
**Example:**
```vba
dim r as new RegistrationEngineMBS
r.Field(0)="Hello World"
r.Field(1)="REALbasic"
r.suffix="-RB600CPFUSA-MAC"
r.BlockLength=8
r.NumberLength=32
MsgBox r.Calc
// shows: EV6GG9P2-DI533EV6-GG9P2DI5-33EV6GG9-RB600CPFUSA-MAC
// looks like a REALbasic serial number ;-)```
**Notes:** (Read and Write property)

138.3.16 Field(index as Integer) as string

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The data fields you can use for personalized serial numbers.
**Notes:**
Fill this fields with all the values you want to use for personalized serial numbers. You should use the name of the user, maybe the postal address. You can use hardware values like the MAC address or software values
Like the system folder creation date. Also you may have serial numbers different between version 1.x and 2.x of your application. So you pass version information like "1" or "2". Do not pass values like "1.2.3" as this serial number won’t work on "1.2.4".

Index is from 0 to 7.
(Read and Write computed property)
Chapter 139

Regular Expressions

139.1 class RegExMBS

139.1.1 class RegExMBS

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A class for fast Regular Expression Search in a perl compatible way.

**Example:**

```vbscript
dim r as new RegExMBS
dim searchString as string = ".o"

if r.Compile(searchString) then

dim s as string="Hello World"

dim start as Integer = 0
while r.Execute(s,start)>0

    dim p as Integer = r.OffsetCharacters(0)
dim l as Integer = r.OffsetCharacters(1)-r.OffsetCharacters(0)

    MsgBox ",Found "+searchString+" on position ",str(p)," with length ",str(l)," in "",s,""

    start = r.Offset(1)
wend
else
    MsgBox "failed to compile"
end if
```

18227
Notes:

uses the PCRE library. You may check the PCRE documentation.

The RegExMBS class has different defaults as the built in RegEx class in Real Studio.

You may want to set options like this:

RB: CaseSensitive = false
MBS: CompileOptionCaseLess = true

RB: DotMatchAll = false
MBS: CompileOptionDotAll = false

RB: Greedy = true
MBS: CompileOptionUngreedy = false

RB: LineEndType = 0
MBS: CompileOptionNewLineAnyCRLF = true and ExecuteOptionNewLineAnyCRLF = true

RB: MatchEmpty = true
MBS: ExecuteOptionNotEmpty = false

and you want to set CompileOptionMultiline to true for multi line match.

139.1.2 Methods

139.1.3 Compile(pattern as string) as boolean

**Example:**

```vbnet
dim r as new RegExMBS
dim searchString as string = ".o"

if r.Compile(searchString) then
    msgbox "OK"
else
    MsgBox "failed to compile"
end if
```
Notes:
Some predefined patterns like \b do not support Unicode well, so you may work around that by using your own pattern.

Returns true on success and false on failure.
ErrorMessage, Lasterror, ErrorOffset and Handle are set.

The following table lists the error codes than may be returned by Compile(), along with the error messages that may be returned by both compiling functions.

139.1.4 CompileMemory(pattern as memoryblock, ByteOffset as Integer) as boolean

**Notes:**
Same as Compile, but the text is stored in a memoryblock and must be a 0 terminated C string.
Be careful to use valid UTF8 input and provide offset in byte units and not in characters.

139.1.5 ConfigBSR as boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns an integer whose value indicates what character sequences the \R escape sequence matches by default.
**Notes:** A value of 0 means that \R matches any Unicode line ending sequence; a value of 1 means that \R matches only CR, LF, or CRLF. The default can be overridden when a pattern is compiled or matched.

139.1.6 ConfigLinkSize as Integer

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns an integer that contains the number of bytes used for internal linkage in compiled regular expressions.
**Notes:** The value is 2, 3, or 4. Larger values allow larger regular expressions to be compiled, at the expense of slower matching. The default value of 2 is sufficient for all but the most massive patterns, since it allows the compiled pattern to be up to 64K in size.
139.1.7 ConfigMallocThreshold as Integer

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The output is an integer that contains the threshold above which the POSIX interface uses malloc() for output vectors.

139.1.8 ConfigMatchLimit as Integer

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns an integer that gives the default limit for the number of internal matching function calls in a Execute execution.

139.1.9 ConfigMatchLimitRecursion as Integer

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns an integer that gives the default limit for the depth of recursion when calling the internal matching function in a Execute() execution.

139.1.10 ConfigNewLine as Integer

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
What newline character is used as default.
**Notes:** The output is an integer whose value specifies the default character sequence that is recognized as meaning "newline". The four values that are supported are: 10 for LF, 13 for CR, 3338 for CRLF, -2 for ANYCRLF, and -1 for ANY. Though they are derived from ASCII, the same values are returned in EBCDIC environments. The default should normally correspond to the standard sequence for your operating system.

139.1.11 ConfigStackRecurse as boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns an integer that is set to one if internal recursion when running Execute() is implemented by recursive function calls that use the stack to remember their state.
**Notes:** This is the usual way that PCRE is compiled. The output is zero if PCRE was compiled to use blocks of data on the heap instead of recursive function calls. In this case, malloc and free are called to manage memory blocks on the heap, thus avoiding the use of the stack.
139.1.12 ConfigUnicodeProperties as boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if unicode properties are available. **Notes:** Should be true for the plugin.

139.1.13 ConfigUTF8 as boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether UTF8 is supported. **Notes:** If this ever is false, please complain. This plugin is designed to work only on UTF8 strings for best performance.

139.1.14 Constructor(VecSize as Integer = 0)

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor. **Notes:** You pass here the internal vector size which limits how many substrings you can find. For 20 substrings, you need to pass (20+1)*3 for vector size.

139.1.15 Escape(text as string) as string

MBS Tools Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Escapes the string. **Example:**

```vbnet
dim r as new RegExMBS

dim s as string = "Hello [ ] "
dim e as string = r.Escape(s)
MsgBox e // shows Hello \[ \]

dim d as string = r.Unescape(e)
MsgBox d // shows original string
```

**Notes:** The string is converted to UTF8 and all the RegEx special characters are escaped. Returns "" on low memory.
### 139.1.16 Execute(start as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a search with the compiled pattern again. **Notes:** You can use this variant of execute to continue a search in the same string/memoryblock at a new starting offset. See also:

- 139.1.17 Execute(text as string, start as Integer = 0) as Integer

### 139.1.17 Execute(text as string, start as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a search with the compiled pattern. **Example:**

```vba
dim r as RegExMbs
dim s as string
dim c as Integer

s="123 ABC 456"

r=new RegExMBS
if r.Compile(" \D+ ") then
c=r.Execute(s,0)
MsgBox str(c)+" "+str(r.Offset(0))+" "+str(r.Offset(1))
// shows: 1 3 8
// 1 for number of results
// 3 for 3 bytes before the matched pattern
// 8 for the 8 bytes before the end of the matched pattern
end if
```

**Notes:**

Returns the number of found offsets. 
text must be in UTF-8 text encoding. 
Start must be 0 for the first character and the byte offset for other characters. Do not pass values from OffsetCharacters here!

Return values from Execute:
If Execute() fails, it returns a negative number. The following are defined in the header file:
139.1.18 ExecuteMemory(text as memoryblock, ByteOffset as Integer = 0, ByteLength as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a search with the compiled pattern.

**Notes:**
Same as Execute, but the text is stored in a memoryblock.
Be careful to use valid UTF8 input and provide offset and length in byte units and not in characters.
If ByteLength is zero, we take the length of the memoryblock.

139.1.19 ExecuteMemoryMT(text as memoryblock, ByteOffset as Integer = 0, ByteLength as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a search with the compiled pattern.

**Notes:**
Same as ExecuteMemory, but more thread friendly.
The work is performed on an extra thread, so this function can yield time to other Xojo (Real Studio) threads. For best user experience run this command on a Xojo (Real Studio) thread, so your GUI stays responsive. But all the thread overhead is only useful if the execution takes long.

139.1.20 ExecuteMT(start as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a search with the compiled pattern.

**Notes:**
Same as Execute, but more thread friendly.
The work is performed on an extra thread, so this function can yield time to other Xojo (Real Studio) threads. For best user experience run this command on a Xojo (Real Studio) thread, so your GUI stays responsive. But all the thread overhead is only useful if the execution takes long.

See also:

- 139.1.21 ExecuteMT(text as string, start as Integer = 0) as Integer
139.1.21 **ExecuteMT(text as string, start as Integer = 0) as Integer**

MBS Tools Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a search with the compiled pattern.

**Notes:**
Same as Execute, but more thread friendly. 
The work is performed on an extra thread, so this function can yield time to other Xojo (Real Studio) threads. 
For best user experience run this command on a Xojo (Real Studio) thread, so your GUI stays responsive. 
But all the thread overhead is only useful if the execution takes long.

See also:
- 139.1.20 ExecuteMT(start as Integer = 0) as Integer

139.1.22 **InfoNameEntry(Index as Integer) as string**

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries a name entry in the list of captures.

**Notes:** Only valid after pattern was compiled.

139.1.23 **Match(text as string) as boolean**

MBS Tools Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if current search pattern matches against given text.

**Example:**
```
    dim r as new RegExMBS
    if r.Compile("e.l") then
        if r.Match("Hello") then
            MsgBox "match"
        end if
        if r.Match("Heiro") then
            MsgBox "wrong match"
        end if
    end if
```

See also:
- 139.1.24 Match(text() as string, inverse as boolean = false) as string()
- 139.1.25 Match(text() as Variant, inverse as boolean = false) as string()
139.1. CLASS REGEXMBS

139.1.24 Match(text() as string, inverse as boolean = false) as string()

MBS Tools Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if current search pattern matches against given text array.

**Example:**

```vba
dim r as new RegExMBS
r.CompileOptionCaseLess = true
if r.Compile("e.l") then
    dim t() as string = array("Hello", "World", "Xojo", "REALbasic")
    dim match1() as string = r.Match(t)
    dim match2() as string = r.Match(t, true)
    MsgBox "Matching: " + Join(match1, " ") + EndOfLine + "Other: " + Join(match2, " ")
end if
```

**Notes:**

Returns the list of matching values.
If inverse is set to true, it returns the list of non matching values.

See also:
- 139.1.23 Match(text as string) as boolean
- 139.1.25 Match(text() as Variant, inverse as boolean = false) as string()

139.1.25 Match(text() as Variant, inverse as boolean = false) as string()

MBS Tools Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if current search pattern matches against given variant array.

**Example:**

```vba
dim r as new RegExMBS
r.CompileOptionCaseLess = true
if r.Compile("e.l") then
    dim dic as new Dictionary
dic.Value("Hello") = 1
dic.Value("World") = 2
dic.Value("Xojo") = 3
dic.Value("REALbasic") = 4
```

dim match1() as string = r.Match(dic.keys)
dim match2() as string = r.Match(dic.keys, true)

MsgBox ”Matching: ”+Join(match1, ”, ”)+EndOfLine+”Other: ”+Join(match2, ”, ”)
end if

Notes:
The variant array should have entries which convert well to string.
Returns the list of matching values.
If inverse is set to true, it returns the list of non matching values.
See also:

• 139.1.23 Match(text as string) as boolean 18234
• 139.1.24 Match(text() as string, inverse as boolean = false) as string() 18235

139.1.26 Offset(index as Integer) as Integer

Example:

dim r as RegExMbs
dim s as string
dim c as Integer

s=”123 ABC 456”

r=new RegExMBS
if r.Compile(“..”) then

c=r.Execute(s,0)
MsgBox str(c)+” ”+str(r.Offset(0))+” ”+str(r.Offset(1))
// shows: 1 4 10
// 1 for ubound of the offset array
// 4 for 4 bytes before the matched pattern
// 10 for the 10 bytes before the end of the matched pattern
end if

r=new RegExMBS
if r.Compile(“\xF6.”) then // finds using Unicode codepoint

c=r.Execute(s,0)
MsgBox str(c)+” ”+str(r.Offset(0))+” ”+str(r.Offset(1))
// shows: 1 4 10
// 1 for ubound of the offset array
// 4 for 4 bytes before the matched pattern
// 10 for the 10 bytes before the end of the matched pattern
end if

Notes:
If you found a pattern in a string you get here:

Invalid indexes return 0.
Count is the number of entries here.

139.1.27 OffsetCharacters(index as Integer) as Integer

Get the offset in the offset list with given index in characters.

Example:

```
dim r as new RegExMBS
dim searchString as string = ".o"
if r.Compile(searchString) then

dim s as string=" Hello World"
if r.Execute(s,0)>0 then

dim lines(-1) as string
lines.Append str(R.Count)+" offset found."
lines.Append "In Bytes:"
lines.Append " Start of matched patern: "+str(R.Offset(0))
lines.Append " End of matched patern: "+str(R.Offset(1))
lines.Append " Length of matched patern: "+str(R.Offset(1)-r.Offset(0))

lines.Append "In Characters:"
lines.Append " Start of matched patern: "+str(R.OffsetCharacters(0))
lines.Append " End of matched patern: "+str(R.OffsetCharacters(1))
lines.Append " Length of matched patern: "+str(R.OffsetCharacters(1)-r.OffsetCharacters(0))

MsgBox Join(lines,EndOfLine)
end if
else
MsgBox "failed to compile"
end if
```
Notes:
This function is identical to Offset(), but returns characters instead of bytes.
Works only with valid UTF-8 strings as input.
Value is calculated on each function call based on Offset(index) and current text.

If you found a pattern in a string you get here:

Invalid indexes return 0.
Count is the number of entries here.

Please note that if you just need offsets for calling Mid() function, you can get better performance by using just Offset and MidB function. Than neither Mid and OffsetCharacters need to calculate the character offset.

139.1.28 Replace(NewText as string) as string

Replaces the text on the current found position and returns the complete new text.
Notes:
You need to call Execute before.
Lasterror is set.
NewText must have UTF-8 text encoding.

\0 references the whole found pattern, \1 to \15 the subexpressions.
\t is replaced with chr(9), \r and \n with chr(13) and \\\ with \\.

139.1.29 ReplaceAll(Target as string, NewText as string = ””) as string

Searches the target string for current pattern and replaces all occurrences with the new text.
Notes:
You need to call Compile before to initialize the pattern and you should call Study before to optimize the pattern.
Lasterror is set.
Target and NewText must have UTF-8 text encoding.

\0 references the whole found pattern, \1 to \15 the subexpressions.
\t is replaced with chr(9), \r and \n with chr(13) and \\ with \.

### 139.1.30 ReplaceSelection(NewText as string) as string

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Replaces the text on the current found position and returns new text for that selection. **Notes:**

This method is for text editors where you will store result in editfield.seltext to replace the current selection. Lasterror is set.
You need to call Execute before.
NewText must have UTF-8 text encoding.

\0 references the whole found pattern, \1 to \15 the subexpressions.
\t is replaced with chr(9), \r and \n with chr(13) and \\ with \\.

### 139.1.31 StringNumber(name as string) as Integer

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This convenience function finds the number of a named substring capturing parenthesis in a compiled pattern. **Notes:**

name: Name whose number is required
The yield of the function is the number of the parenthesis if the name is found, or PCRE_ERROR_NOSUBSTRING otherwise.

### 139.1.32 Study as boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** After you compiled a pattern study can optimize it. **Notes:**

Only useful if you use Execute several times.
In that case you call one time Compile, one time Study and several times Execute.
Errormessage is set.

### 139.1.33 Substring(index as Integer) as string

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the subexpression found with the given index.
CHAPTER 139. REGULAR EXPRESSIONS

Notes:

Returns "" on any error.
Lasterror is set.
See also:

- 139.1.34 Substring(name as string) as string

139.1.34 Substring(name as string) as string

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the subexpression found with the given name.

Notes:

Returns "" on any error.
Lasterror is set.
See also:

- 139.1.33 Substring(index as Integer) as string

139.1.35 Unescape(text as string) as string

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unescapes the string.

**Example:**

```vba
dim r as new RegExMBS

dim s as string = "Hello \[ \] 

dim e as string = r.Escape(s)
MsgBox e // shows Hello \[ \]

dim d as string = r.Unescape(e)
MsgBox d // shows original string
```

Notes:

The string is converted to UTF8 and all the RegEx special characters are escaped.
Returns "" on low memory.

139.1.36 Version as string

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The version of the PCRE library as an ASCII string.
139.1.37 Properties

139.1.38 CompileOptionAnchored as Boolean

**Notes:** (Read and Write property)

139.1.39 CompileOptionAutoCallOut as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Compile automatic callouts  
**Notes:** (Read and Write property)

139.1.40 CompileOptionBSRAnyCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option and CompileOptionBSRUnicode (which are mutually exclusive) control what the \R escape sequence matches.  
**Notes:** The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.  
(Read and Write property)

139.1.41 CompileOptionBSRUnicode as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option and CompileOptionBSRAnyCRLF (which are mutually exclusive) control what the \R escape sequence matches.  
**Example:**
```plaintext
dim rg As new RegExMBS  
rg.CompileOptionUngreedy = false  
rg.CompileOptionBSRUnicode = true

dim ts as string = ”one” + EndOfLine.UNIX + ”test” + chr(& h2028) + ”more”
```
// replace all end lines with #
if rg.Compile(”\R+”) then
    ts = rg.ReplaceAll(ts,” # ”)
end if

MsgBox ts

Notes:
The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.
(Read and Write property)

139.1.42 CompileOptionCaseLess as Boolean

Example:

dim r as new RegExMBS
dim searchString as string = ”hello”
	r.CompileOptionCaseLess=True

if r.Compile(searchString) then
    dim s as string= ”Hello World”

    if r.Execute(s,0) >0 then
        MsgBox ”Found: ”+mid(s, r.OffsetCharacters(0)+1, r.OffsetCharacters(1)-r.OffsetCharacters(0))
    else
        MsgBox ”nothing found”
    end if
else
    MsgBox ”failed to compile”
end if

Notes: (Read and Write property)
139.1.43 CompileOptionDollarEndOnly as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Option for Compile: $ not to match newline at end  
**Notes:** (Read and Write property)

139.1.44 CompileOptionDotAll as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Option for Compile: . matches anything including endofline  
**Example:**
```vbs
dim r as new RegExMBS
dim searchString as string = "<.+

r.CompileOptionDotAll = false // finds only if true

if r.Compile(searchString) then
    dim s as string="\<Step enable=""True""+EndOfLine.unix+"id=""93"" name=""Beep""/>"
    if r.Execute(s,0) >0 then
        MsgBox "Found: "+mid(s, r.OffsetCharacters(0)+1, r.OffsetCharacters(1)-r.OffsetCharacters(0))
    else
        MsgBox "nothing found"
    end if
else
    MsgBox "failed to compile"
end if
```

**Notes:** (Read and Write property)

139.1.45 CompileOptionDuplicateNames as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
If this bit is set, names used to identify capturing subpatterns need not be unique.  
**Notes:**
This can be helpful for certain types of pattern when it is known that only one instance of the named sub-
pattern can ever be matched. There are more details of named subpatterns below; see also the pcrepattern
documentation.  
(Read and Write property)
139.1.46 CompileOptionExtended as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Ignore whitespace and # comments
**Notes:** (Read and Write property)

139.1.47 CompileOptionFirstLine as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Force matching to be before newline
**Notes:** (Read and Write property)

139.1.48 CompileOptionJavaScriptCompat as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If this option is set, PCRE’s behaviour is changed in some ways so that it is compatible with JavaScript rather than Perl.
**Notes:**
The changes are as follows:

1. A lone closing square bracket in a pattern causes a compile-time error, because this is illegal in JavaScript (by default it is treated as a data character). Thus, the pattern AB ] CD becomes illegal when this option is set.

2. At run time, a back reference to an unset subpattern group matches an empty string (by default this causes the current matching alternative to fail). A pattern such as \((1)(a) succeeds when this option is set (assuming it can find an ”a” in the subject), whereas it fails by default, for Perl compatibility.
**Notes:** (Read and Write property)

139.1.49 CompileOptionMultiline as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: ˆ and $ match newlines within data

**Example:**
```plaintext
dim r as RegExMBS
dim n,i,c as Integer
```
dim s as string

s=ReplaceLineEndings(EditField1.text,EndOfLine.UNIX)

r=new RegExMBS

' r.CompileOptionFirstLine=True
r.CompileOptionMultiline=True

if r.Compile("ˆ....$ ") then
 n=0
 do
  c=r.Execute(s,n)
 if c>0 then
  MsgBox r.Substring(0)
  n=r.Offset(1)
 end if
 loop until c=0
 end if

**Notes:** (Read and Write property)

### 139.1.50 CompileOptionNewLineAny as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This option override the default newline definition that was chosen when PCRE was built.

**Notes:**

Setting CompileOptionNewLineCR or CompileOptionNewLineLF specifies that a newline is indicated by a single character (CR or LF, respectively). Setting CompileOptionNewLineCRLF specifies that a newline is indicated by the two-character CRLF sequence. Setting CompileOptionNewLineAnyCRLF specifies that any of the three preceding sequences should be recognized. Setting CompileOptionNewLineAny specifies that any Unicode newline sequence should be recognized. The Unicode newline sequences are the three just mentioned, plus the single characters VT (vertical tab, U+000B), FF (formfeed, U+000C), NEL (next line, U+0085), LS (line separator, U+2028), and PS (paragraph separator, U+2029). The last two are recognized only in UTF-8 mode.

The newline setting in the options word uses three bits that are treated as a number, giving eight possibilities. Currently only six are used (default plus the five values above). This means that if you set more than one newline option, the combination may or may not be sensible. For example, CompileOptionNewLineCR with CompileOptionNewLineLF is equivalent to CompileOptionNewLineCRLF, but other combinations may yield unused numbers and cause an error.
CHAPTER 139. REGULAR EXPRESSIONS

The only time that a line break in a pattern is specially recognized when compiling is when PCRE_EXTENDED is set. CR and LF are whitespace characters, and so are ignored in this mode. Also, an unescaped # outside a character class indicates a comment that lasts until after the next line break sequence. In other circumstances, line break sequences in patterns are treated as literal data.

139.1.51 CompileOptionNewLineAnyCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This option override the default newline definition that was chosen when PCRE was built.
**Notes:**
See CompileOptionNewLineAny for more details.
(Read and Write property)

139.1.52 CompileOptionNewLineCR as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This option override the default newline definition that was chosen when PCRE was built.
**Notes:**
See CompileOptionNewLineAny for more details.
(Read and Write property)

139.1.53 CompileOptionNewLineCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This option override the default newline definition that was chosen when PCRE was built.
**Notes:**
See CompileOptionNewLineAny for more details.
(Read and Write property)

139.1.54 CompileOptionNewLineLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This option override the default newline definition that was chosen when PCRE was built.
**Notes:**
See CompileOptionNewLineAny for more details.
(Read and Write property)
139.1.55  CompileOptionNoAutoCapture as Boolean

**Notes:** (Read and Write property)

139.1.56  CompileOptionNoStartOptimize as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This is an option that acts at matching time; that is, it is really an option for Execute.
**Notes:**
If it is set at compile time, it is remembered with the compiled pattern and assumed at matching time. (Read and Write property)

139.1.57  CompileOptionNoUTF8Check as Boolean

**Notes:** (Read and Write property)

139.1.58  CompileOptions as Integer

MBS Tools Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal value of all the compile options.
**Notes:**
You can get and set the bits using the CompileOption* Boolean properties. (Read and Write property)

139.1.59  CompileOptionUngreedy as Boolean

**Notes:**
Basically this is about whether to find the next matching item or the last matching item in the whole string. Matching the next item is always much faster.
139.1.60  CompileOptionUnicodeCodePoints as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to support unicode code points for character classes.

**Notes:**
This option changes the way PCRE processes `\B`, `\b`, `\D`, `\d`, `\S`, `\s`, `\W`, `\w`, and some of the POSIX character classes. By default, only ASCII characters are recognized, but if PCRE_UCP is set, Unicode properties are used instead to classify characters. More details are given in the section on generic character types in the pcrepattern page. If you set PCRE_UCP, matching one of the items it affects takes much longer. The option is available only if PCRE has been compiled with Unicode property support.

(Read and Write property)

139.1.61  CompileOptionUTF8 as Boolean

**Notes:** (Read and Write property)

139.1.62  Count as Integer

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of offsets found.

**Example:**

```vbscript
dim r as new RegExMBS
dim searchString as string = ".o"
if r.Compile(searchString) then
dim s as string=" Hello World"
if r.Execute(s,0) > 0 then
dim lines(-1) as string
lines.Append str(R.Count)+" offset found."
lines.Append "In Bytes:"
lines.Append " Start of matched patern: "+str(R.Offset(0))
lines.Append " End of matched patern: "+str(R.Offset(1))
lines.Append " Length of matched patern: "+str(R.Offset(1)-r.Offset(0))
```

lines.Append "In Characters:"
lines.Append " Start of matched pattern: " + str(R.OffsetCharacters(0))
lines.Append " End of matched pattern: " + str(R.OffsetCharacters(1))
lines.Append " Length of matched pattern: " + str(R.OffsetCharacters(1)-R.OffsetCharacters(0))

MsgBox Join(lines, EndOfLine)
end if

else
MsgBox "failed to compile"
end if

Notes: (Read only property)

139.1.63  ErrorMessage as String

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last message reported.
**Notes:**
Set by Study and Compile.
(Read only property)

139.1.64  ErrorOffset as Integer

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error offset from the compile function.
**Notes:** (Read only property)

139.1.65  ExecuteOptionAnchored as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Execute: Match only at the first position
**Notes:** (Read and Write property)

139.1.66  ExecuteOptionBSRAnyCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option and ExecuteOptionBSRUnicode (which are mutually exclusive) control what the \R escape
sequence matches.

Notes:
The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.

(Read and Write property)

139.1.67 ExecuteOptionBSRUnicode as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option and ExecuteOptionBSRAnyCRLF (which are mutually exclusive) control what the \R escape sequence matches.

**Example:**

```vbnet
dim rg As new RegExMBS
rg.CompileOptionUngreedy = false
rg.ExecuteOptionBSRUnicode = true

dim ts as string = ”one” + EndOfLine.UNIX + ”test” + chr(& h2028) + ”more”

// replace all end lines with #
if rg.Compile(”\\R+”) then

ts = rg.ReplaceAll(ts,” # ”)
end if

MsgBox ts
```

Notes:
The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.

(Read and Write property)

139.1.68 ExecuteOptionNewLineAny as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.

Notes:
Setting ExecuteOptionNewLineCR or ExecuteOptionNewLineLF specifies that a newline is indicated by a
single character (CR or LF, respectively). Setting `ExecuteOptionNewLineCRLF` specifies that a newline is indicated by the two-character CRLF sequence. Setting `ExecuteOptionNewLineAnyCRLF` specifies that any of the three preceding sequences should be recognized. Setting `ExecuteOptionNewLineAny` specifies that any Unicode newline sequence should be recognized. The Unicode newline sequences are the three just mentioned, plus the single characters VT (vertical tab, U+000B), FF (formfeed, U+000C), NEL (next line, U+0085), LS (line separator, U+2028), and PS (paragraph separator, U+2029). The last two are recognized only in UTF-8 mode. The newline setting in the options word uses three bits that are treated as a number, giving eight possibilities. Currently only six are used (default plus the five values above). This means that if you set more than one newline option, the combination may or may not be sensible. For example, `ExecuteOptionNewLineCR` with `ExecuteOptionNewLineLF` is equivalent to `ExecuteOptionNewLineCRLF`, but other combinations may yield unused numbers and cause an error.

The only time that a line break in a pattern is specially recognized when compiling is when `PCRE_EXTENDED` is set. CR and LF are whitespace characters, and so are ignored in this mode. Also, an unescaped # outside a character class indicates a comment that lasts until after the next line break sequence. In other circumstances, line break sequences in patterns are treated as literal data.

(Read and Write property)

### 139.1.69 ExecuteOptionNewLineAnyCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built. **Notes:** See `ExecuteOptionNewLineAny` for more details. (Read and Write property)

### 139.1.70 ExecuteOptionNewLineCR as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built. **Notes:** See `ExecuteOptionNewLineAny` for more details. (Read and Write property)

### 139.1.71 ExecuteOptionNewLineCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built. **Notes:**
139.1.72 **ExecuteOptionNewLineLF as Boolean**

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This option override the default newline definition that was chosen when PCRE was built.

**Notes:**
See ExecuteOptionNewLineAny for more details.
(Read and Write property)

139.1.73 **ExecuteOptionNoStartOptimize as Boolean**

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
There are a number of optimizations that Execute uses at the start of a match, in order to speed up the process.

**Notes:**
For example, if it is known that an unanchored match must start with a specific character, it searches the subject for that character, and fails immediately if it cannot find it, without actually running the main matching function. This means that a special item such as (*COMMIT) at the start of a pattern is not considered until after a suitable starting point for the match has been found. When callouts or (*MARK) items are in use, these "start-up" optimizations can cause them to be skipped if the pattern is never actually used. The start-up optimizations are in effect a pre-scan of the subject that takes place before the pattern is run.

The ExecuteOptionNoStartOptimize option disables the start-up optimizations, possibly causing performance to suffer, but ensuring that in cases where the result is "no match", the callouts do occur, and that items such as (*COMMIT) and (*MARK) are considered at every possible starting position in the subject string. If ExecuteOptionNoStartOptimize is set at compile time, it cannot be unset at matching time.

Setting ExecuteOptionNoStartOptimize can change the outcome of a matching operation. Consider the pattern

(*COMMIT)ABC
When this is compiled, PCRE records the fact that a match must start with the character "A". Suppose the subject string is "DEFABC". The start-up optimization scans along the subject, finds "A" and runs the first match attempt from there. The (*COMMIT) item means that the pattern must match the current starting position, which in this case, it does. However, if the same match is run with ExecuteOptionNoStartOptimize set, the initial scan along the subject string does not happen. The first match attempt is run starting from "D" and when this fails, (*COMMIT) prevents any further matches being tried, so the overall result is "no match". If the pattern is studied, more start-up optimizations may be used. For example, a minimum length for the subject may be recorded. Consider the pattern.

(*COMMIT)ABC
139.1. CLASS REGEXMBS

(*MARK:A)(X | Y)
The minimum length for a match is one character. If the subject is "ABC", there will be attempts to match "ABC", "BC", "C", and then finally an empty string. If the pattern is studied, the final attempt does not take place, because PCRE knows that the subject is too short, and so the (*MARK) is never encountered. In this case, studying the pattern does not affect the overall match result, which is still "no match", but it does affect the auxiliary information that is returned.

(Read and Write property)

139.1.74 ExecuteOptionNotBOL as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Execute: Subject is not the beginning of a line

**Notes:** (Read and Write property)

139.1.75 ExecuteOptionNotEmpty as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Execute: An empty string is not a valid match

**Notes:** (Read and Write property)

139.1.76 ExecuteOptionNotEmptyAtStart as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the options.

**Notes:**

This is like ExecuteOptionNotEmpty, except that an empty string match that is not at the start of the subject is permitted. If the pattern is anchored, such a match can occur only if the pattern contains \K. Perl has no direct equivalent of ExecuteOptionNotEmpty or ExecuteOptionNotEmptyAtStart, but it does make a special case of a pattern match of the empty string within its split() function, and when using the /g modifier. It is possible to emulate Perl's behaviour after matching a null string by first trying the match again at the same offset with ExecuteOptionNotEmptyAtStart and ExecuteOptionAnchored, and then if that fails, by advancing the starting offset (see below) and trying an ordinary match again. There is some code that demonstrates how to do this in the peredemo sample program. In the most general case, you have to check to see if the newline convention recognizes CRLF as a newline, and if so, and the current character is CR followed by LF, advance the starting offset by two characters instead of one.

(Read and Write property)
139.1.77  **ExecuteOptionNotEOL as Boolean**

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Execute: Subject is not the end of a line  
**Notes:** (Read and Write property)

139.1.78  **ExecuteOptionNoUTF8Check as Boolean**

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Execute: Do not check the subject for UTF-8 validity  
**Notes:** (Read and Write property)

139.1.79  **ExecuteOptionPartial as Boolean**

**Notes:** (Read and Write property)

139.1.80  **ExecuteOptionPartialHard as Boolean**

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**  
This option (and ExecuteOptionPartial) turn on the partial matching feature.  
**Notes:**

A partial match occurs if the end of the subject string is reached successfully, but there are not enough subject characters to complete the match. If this happens when ExecuteOptionPartial (but not ExecuteOptionPartialHard) is set, matching continues by testing any remaining alternatives. Only if no complete match can be found is ErrorPartial returned instead of PCRE_ERROR_NOMATCH. In other words, ExecuteOptionPartial says that the caller is prepared to handle a partial match, but only if no complete match can be found.
If ExecuteOptionPartialHard is set, it overrides ExecuteOptionPartial. In this case, if a partial match is found, Execute() immediately returns ErrorPartial, without considering any other alternatives. In other words, when ExecuteOptionPartialHard is set, a partial match is considered to be more important that an alternative complete match.

In both cases, the portion of the string that was inspected when the partial match was found is set as the first matching string. There is a more detailed discussion of partial and multi-segment matching, with examples, in the pcrepartial documentation.  
(Read and Write property)
139.1. **ExecuteOptions as Integer**

MBS Tools Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal value of all the execute options.

**Notes:**
You can get and set the bits using the CompileOption* Boolean properties.
(Read and Write property)

139.1.82 **Handle as Integer**

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The handle to the pattern data structure.

**Notes:** (Read only property)

139.1.83 **InfoCaptureCount as Integer**

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of captures defined in the pattern.

**Notes:**
Only valid after pattern was compiled.
(Read only property)

139.1.84 **InfoNameCount as Integer**

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of names defined in the pattern.

**Notes:**
Only valid after pattern was compiled.
(Read only property)

139.1.85 **InfoSize as Integer**

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the size of the compiled pattern.

**Notes:**
Only valid after pattern was compiled.
(Read only property)
139.1.86  InfoStudySize as Integer

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the study details size.  
**Notes:** Only valid after calling Study.  
(Read only property)

139.1.87  Lasterror as Integer

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code reported.  
**Notes:** 0 is no error and -1 is some parameter error. See Error* constants for other values.  
(Read only property)

139.1.88  MatchLimit as Integer

**Notes:** You can set it to a limit value. If set to zero, the plugin will use the default.  
The default value for the limit can be set when PCRE is built; the default default is 10 million, which handles all but the most extreme cases. You can override the default by setting this property.  
(Read and Write property)

139.1.89  MatchLimitRecursion as Integer

**Notes:** The MatchLimitRecursion field is similar to MatchLimit, but instead of limiting the total number of times that match() is called, it limits the depth of recursion. The recursion depth is a smaller number than the total number of calls, because not all calls to match() are recursive. This limit is of use only if it is set.
139.1. CLASS REGEXMBS

smaller than MatchLimit.

Limiting the recursion depth limits the amount of stack that can be used.

The default value for MatchLimitRecursion can be set when PCRE is built; the default default is the same value as the default for MatchLimit. You can override the default by setting this property. If value is zero, the plugin uses the default.

(Read and Write property)

139.1.90 Text as String

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The text used for the last successfull compile call.
**Notes:** (Read only property)

139.1.91 TextMemory as Memoryblock

MBS Tools Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The text used for the last successfull compiletext call.
**Notes:** (Read only property)

139.1.92 VectorSize as Integer

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal vector size.
**Notes:** (Read only property)

139.1.93 Constants

139.1.94 ErrorBadCount = -15

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
**Notes:** This error is given if the value of the ovecsize argument is negative.
139.1.95  ErrorBadMagic = -4

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.  
**Notes:** PCRE stores a 4-byte "magic number" at the start of the compiled code, to catch the case when it is passed a junk pointer and to detect when a pattern that was compiled in an environment of one endianness is run in an environment with the other endianness. This is the error that PCRE gives when the magic number is not present.

139.1.96  ErrorBadNewLine = -23

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.  
**Notes:** An invalid combination of Newline options was given.

139.1.97  ErrorBadOffset = -24

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.  
**Notes:** The value of startoffset was negative or greater than the length of the subject, that is, the value in length.

139.1.98  ErrorBadOption = -3

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.  
**Notes:** An unrecognized bit was set in the options argument.

139.1.99  ErrorBadPartial = -13

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.  
**Notes:** This code is no longer in use. It was formerly returned when the PCRE_PARTIAL option was used with a compiled pattern containing items that were not supported for partial matching. From release 8.00 onwards, there are no restrictions on partial matching.

139.1.100  ErrorBadUTF8 = -10

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.  
**Notes:** A string that contains an invalid UTF-8 byte sequence was passed as a subject. However, if PCRE_PARTIAL_HARD is set and the problem is a truncated UTF-8 character at the end of the subject, ErrorShortUTF8 is used instead.
139.1. **CLASS REGEXMBS**

139.1.101 **ErrorBadUTF8Offset** = -11

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants. **Notes:** The UTF-8 byte sequence that was passed as a subject was valid, but the value of startoffset did not point to the beginning of a UTF-8 character or the end of the subject.

139.1.102 **ErrorCallOut** = -9

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

139.1.103 **ErrorDFARecurse** = -20

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

139.1.104 **ErrorDFAUCond** = -17

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
0 no error
1 \ at end of pattern
2 \c at end of pattern
3 unrecognized character follows \n
4 numbers out of order in \{ \} quantifier
5 number too big in \{ \} quantifier
6 missing terminating ] for character class
7 invalid escape sequence in character class
8 range out of order in character class
9 nothing to repeat
10 operand of unlimited repeat could match the empty string
11 internal error: unexpected repeat
12 unrecognized character after (?)
13 POSIX named classes are supported only within a class
14 missing )
15 reference to non-existent subpattern
16 erroffset passed as NULL
17 unknown option bit(s) set
18 missing ) after comment
19 parentheses nested too deeply
20 regular expression too large
21 failed to get memory
22 unmatched parentheses
23 internal error: code overflow
24 unrecognized character after (?<
25 lookbehind assertion is not fixed length
26 malformed number after (?(
27 conditional group contains more than two branches
28 assertion expected after (?(
29 (?R or (?digits must be followed by )
30 unknown POSIX class name
31 POSIX collating elements are not supported
32 this version of PCRE is not compiled with PCRE_UTF8 support
33 spare error
34 character value in \x \{ ... \} sequence is too large
35 invalid condition (?(0)
36 \C not allowed in lookbehind assertion
37 PCRE does not support \L, \l, \N, \U, or \u
38 number after (?C is >255
39 closing ) for (?C expected
40 recursive call could loop indefinitely
41 unrecognized character after (?P
42 syntax error after (?P
43 two named groups have the same name
44 invalid UTF-8 string
45 support for \P, \p, and \X has not been compiled
46 malformed \P or \p sequence
47 unknown property name after \P or \p

139.1.105  ErrorDFAUItem = -16

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

139.1.106  ErrorDFAUMLimit = -18

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

139.1.107  ErrorDFAWSSize = -19

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

139.1.108  ErrorInternal = -14

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants. **Notes:** An unexpected internal error has occurred. This error could be caused by a bug in PCRE or by overwriting of the compiled pattern.

139.1.109  ErrorMatchLimit = -8

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants. **Notes:** The backtracking limit, as specified by the match_limit field in a pcre_extra structure (or defaulted) was reached.

139.1.110  ErrorNoMatch = -1

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants. **Notes:** The subject string did not match the pattern.

139.1.111  ErrorNoSubstring = -7

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants. **Notes:** This error is used by the substring functions.
139.1.112  ErrorNull = -2

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.  
**Notes:** Either code or subject was passed as """, or ovector was """" and ovecsize was not zero.

139.1.113  ErrorNullWSLimit = -22

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

139.1.114  ErrorPartial = -12

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.  
**Notes:** The subject string did not match, but it did match partially.

139.1.115  ErrorPlugin = -99

MBS Tools Plugin, Plugin Version: 13.1. **Function:** One of the RegEx error constants.  
**Notes:** Generic error for something wrong with the plugin state.  
Like no current regex object internally or wrong function parameters.

139.1.116  ErrorRecursionLimit = -21

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.  
**Notes:** The internal recursion limit, as specified by the match_limit_recursion field in a pcre_extra structure (or defaulted) was reached. See the description above.

139.1.117  ErrorShortUTF8 = -25

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.  
**Notes:** The subject string ended with an incomplete (truncated) UTF-8 character, and the PCRE_PARTIAL_HARD option was set. Without this option, ErrorBadUTF8 is returned in this situation.
139.1.118  **ErrorUnknownNode = -6**

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

139.1.119  **ErrorUnknownOpcode = -5**

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.  
**Notes:** While running the pattern match, an unknown item was encountered in the compiled pattern. This error could be caused by a bug in PCRE or by overwriting of the compiled pattern.
Chapter 140

Remote Control

140.1 class GammaFadeMBS

140.1.1 class GammaFadeMBS

Function: A class to perform gamma fades on Mac OS X and Windows.
Notes: On Mac OS X a system API is used. On Windows the GammaMBS class is used internally.

140.1.2 Methods

140.1.3 Constructor

Function: Initializes the gamma fade class and queries the current gamma values.
Notes:
On Windows a window is needed to get the exclusive access to the gamma controls.

The Available property is set to true if the constructor was successful.
See also:

- 140.1.4 Constructor(mainwindow as window) 18267

140.1.4 Constructor(mainwindow as window)

Function: Initializes the gamma fade class and queries the current gamma values.
Notes:

On Windows a window is needed to get the exclusive access to the gamma controls.

The Available property is set to true if the constructor was successful.

See also:

- 140.1.3 Constructor

140.1.5 GammaFadeIn(seconds as Double) as boolean

**Function:** Fades back to the normal screen.

**Notes:**

Seconds is the duration of the fade in seconds. Typical 0.3 seconds.

Returns true on success and false on failure.

140.1.6 GammaFadeOut(seconds as Double) as boolean

**Function:** Fades to a solid color.

**Notes:**

Seconds is the duration of the fade in seconds. Typical 0.5 seconds.

Returns true on success and false on failure.

140.1.7 Properties

140.1.8 Available as Boolean

**Function:** Whether the constructor was successful.

**Notes:**

True if the initialization code worked.

On Mac OS X the constructor fails to get access if there is another gamma fade running.
On Windows the access to the gamma controls can fail if you don’t provide a window, the hardware can't do gamma fades (e.g. running in VMWare) or DirectX is not available.

(Read and Write property)
140.1.9  FadeColor as Color

Function: The color to use for the fade.
Example:

```vbs
dim g as new GammaFadeMBS
g.FadeColor=& c0000FF // blue
```

Notes:

Default is black.
(Read and Write property)
140.2 class GammaMBS

140.2.1 class GammaMBS

Function: A class to change the gamma settings of the display.
Notes:
You can use that class to change the gamma table. For example to invert the screen or increase/decrease one of the colors.

Works on Mac OS X and Windows.

140.2.2 Methods

140.2.3 Constructor(mainWindow as window = nil, displayIndex as Integer = 0)

Function: Initializes the gamma class and queries the current gamma values.
Notes:
On Windows a window is needed to get the exclusive access to the gamma controls.

The Available property is set to true if the constructor was successful.
Added displayIndex parameter in plugin version 14.1 to specify on Mac which display to handle.

140.2.4 SetGamma(gammaScale as Double = 1.0) as boolean

Function: Sets the gamma values.
Notes:
The current table assigned to the main screen.
All values are multiplied with gammaScale
140.2. CLASS GAMMAMBS

140.2.5 Properties

140.2.6 Available as Boolean

Function: Whether the constructor was successful.
Notes: True if the initialization code worked.

On Mac OS X the constructor fails to get access if it does not find a display with gamma controls.

On Windows the access to the gamma controls can fail if you don’t provide a window, the hardware can’t do gamma fades (e.g. running in VMWare) or DirectX is not available.
(Read and Write property)

140.2.7 Lasterror as Integer

Function: The last error code.
Notes: (Read and Write property)

140.2.8 Size as Integer

Function: The number of entries in the gamma table.
Notes: Should be 256 for Windows.
And 256 or 1024 for Mac.
(Read only property)

140.2.9 Blue(Index as Integer) as Double

Function: The blue value with the given index.
Notes: Index is from 0 to 255 and value from 0.0 to 1.0.
(Read and Write computed property)
140.2.10  **Green(Index as Integer) as Double**

**Function:** The green value with the given index.
**Notes:**
Index is from 0 to 255 and value from 0.0 to 1.0.
(Read and Write computed property)

140.2.11  **Red(Index as Integer) as Double**

**Function:** The red value with the given index.
**Notes:**
Index is from 0 to 255 and value from 0.0 to 1.0.
(Read and Write computed property)
140.3  CLASS KEYCODESMBS

140.3  class KeyCodesMBS

140.3.1  class KeyCodesMBS

Function: A class for translating between key codes and ASCII characters.

Notes:

This class is outdated, please use RemoteControlMBS module.

The list of key codes on a Mac is the same as the one used in the RB documentation for the sprite surface.

Some special keys:

Modifier keys
- kVirtualCapsLockKey & h039
- kVirtualShiftKey & h038
- kVirtualControlKey & h03B
- kVirtualOptionKey & h03A
- kVirtualCommandKey & h037

Editing/utility keys
- kVirtualHelpKey & h072
- kVirtualDeleteKey & h033
- kVirtualTabKey & h030
- kVirtualEnterKey & h04C
- kVirtualReturnKey & h024
- kVirtualEscapeKey & h035
- kVirtualForwardDeleteKey & h075

Navigation keys
- kVirtualHomeKey & h073
- kVirtualEndKey & h002
- kVirtualPageUpKey & h074
- kVirtualPageDownKey & h079
- kVirtualLeftArrowKey & h07B
- kVirtualRightArrowKey & h07C
- kVirtualUpArrowKey & h07E
- kVirtualDownArrowKey & h07D

Key codes for Windows:
140.3.2 Methods

140.3.3 AsciiToKeyCode(ascii as Integer) as Integer

Function: Returns the keycode which is needed to be pressed to create this ASCII character.
Notes: You get the main key, not any modifier which may also be pressed.

140.3.4 KeyCodeToAscii(keycode as Integer) as Integer

Function: Returns the ASCII code which matches the key code.
Example:

```vbs
dim k as KeyCodesMBS
k=new KeyCodesMBS

// makes a big A on a german keyboard:
MsgBox chr(k.KeyCodeToAsciiWithSecondKeyCode(0+512))
```

Notes:
Note on a Mac:
Bit 0 to 6 are the keycode, bit 7 is 1 if key goes up and 0 if key goes down.
Bit 8 to 15 are modifier keys:

Constants for the modifier keys:

Not available in 64-bit.
See MacTextForKeyCode method in RemoteControlMBS module.

140.3.5 KeyCodeToAsciiWithSecondKeyCode(keycode as Integer) as Integer

Function: Returns the ASCII code which matches the key code with the current state.
Example:

```vbs
dim k as KeyCodesMBS
k=new KeyCodesMBS
```
 MsgBox str(k.KeyCodeToAscii(& h0A))
 MsgBox chr(k.KeyCodeToAsciiWithSecondKeyCode(0))

// gives on a German Keyboard

Notes:

On the first call of KeyCodeToAscii you get the ASCII char, but if you call KeyCodeToAsciiWithSecondKeyCode and the state property is not changed, you can get what the user gets if he presses several keys. KeyCodeToAscii resets state to 0 before calling.

On Windows, KeyCodeToAscii and KeyCodeToAsciiWithSecondKeyCode are equal.

Note on a Mac:
Bit 0 to 6 are the keycode, bit 7 is 1 if key goes up and 0 if key goes down.
Bit 8 to 15 are modifier keys:

Constants for the modifier keys:

Not available in 64-bit.

140.3.6 TestForAsciiKeyDown(ascii as Integer) as boolean

Function: Returns true if the key with the given ascii code is pressed.

140.3.7 TestForKeyDown(keycode as Integer) as boolean

Function: Returns true if the key with the given key code is pressed.

140.3.8 Update

Function: Updates the layout so it is the current one.
140.3.9 Properties

140.3.10 LastError as Integer

Function: The last error code.
Notes:
The last function was successful if lasterror is 0.
If the last function was not available on this machine, the value is set to -1.
Other values are Mac OS error codes.
(Read and Write property)

140.3.11 Name as String

Function: The name for the current keyboard layout.
Notes:
On Mac OS 9 e.g. ”Deutsch”.
On Mac OS X e.g. ”German”.
On Windows 98 e.g. ”00020407”.
(Read only property)

140.3.12 State as Integer

Function: The last state.
Notes:
The function KeyCodeToAscii stores a code here which the function KeyCodeToAsciiWithSecondKeyCode
will use on further calls.
(Read and Write property)
140.3. CLASS KEYCODES

<table>
<thead>

## 140.4 class PresskeyMBS

### 140.4.1 class PresskeyMBS

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** This class allows you to simulate keyboard activity.

**Deprecated:** This item is deprecated and should no longer be used. You can use RemoteControlMBS instead. **Notes:** This class is deprecated, please use RemoteControlMBS module.

### 140.4.2 Methods

#### 140.4.3 clear

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Resets this object.

#### 140.4.4 mouseclick(down as boolean)

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Clicks the mouse button.

**Notes:**
Clicks the mouse at current position.
Left button is used.
If you forget the mouseup you may lose control about a Mac with Mac OS X, but if you have enabled external terminal login you can login via SSH and quit Realbasic from outside.

The Mac version sets the lasterror property.

See also:
- 140.4.5 MouseClick(down as boolean, rightdown as boolean)

#### 140.4.5 MouseClick(down as boolean, rightdown as boolean)

MBS ComputerControl Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Clicks the mouse with the given buttons.

**Notes:** Same as MouseClick, but with an additional rightdown parameter.
See also:
- 140.4.4 mouseclick(down as boolean)
140.4.6  **MouseMove**(globalx as Integer, globaly as Integer)

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Moves the mouse.

**Example:**

```vbs
Dim x, y As Integer
Dim p As PresskeyMBS
p = New PresskeyMBS
x = System.MouseX
y = System.MouseY + 10 ' move ten pixels down
p.MouseMove x, y
```

**Notes:**

Moves the mouse on screen.
The destination must be specified in global screen coordinates.
Requires Mac OS 8.5 or newer for Mac OS Classic.

140.4.7  **MouseMoveClick**(globalx as Integer, globaly as Integer, down as boolean)

MBS ComputerControl Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Moves the mouse.

**Notes:**

Moves the mouse on screen and clicks.
The destination must be specified in global screen coordinates.
Requires Mac OS 8.5 or newer for Mac OS Classic.

The Mac version sets the lasterror property.

Mac OS X only:
Based on the values entered, the appropriate mouse-down, mouse-up, mouse-move, or mouse-drag events are generated, by comparing the new state with the current state.

See also:

- 140.4.8 **MouseMoveClick**(globalx as Integer, globaly as Integer, down as boolean, rightdown as boolean)
140.4. **CLASS PRESSKEYMBS**

### 140.4.8 MouseMoveClick(globalx as Integer, globaly as Integer, down as boolean, rightdown as boolean)

**Function:** Moves the mouse cursor and clicks the mouse with the given buttons.  
**Notes:** Same as MouseMoveClick, but with an additional rightdown parameter.  
See also:

- 140.4.7 MouseMoveClick(globalx as Integer, globaly as Integer, down as boolean)

### 140.4.9 press

**Function:** Presses a key.  
**Example:**

```vbnet
' example for Mac OS X:
dim p as PresskeyMBS

p=new PresskeyMBS
p.shift=true
p.charcode=asc("H")
p.keycode=4
p.press 'press H
p.shift=false
p.charcode=asc("e")
p.keycode=14
p.press 'press e
p.charcode=asc("l")
p.keycode=37
p.press 'press l
p.press 'press l
p.charcode=asc("o")
p.keycode=31
p.press 'press o

' example for Windows:

editfield1.setfocus 'so we get something in it!

p=new PresskeyMBS
p.shift=true
p.charcode=asc("H")
p.virtualCode=-1 'automatically try to get this code
p.press 'press H
p.shift=false
p.virtualCode=-1 'after a call you find the virtualCode there
```
p.charcode=asc("e")
p.press 'press e
p.virtualCode=-1
p.charcode=asc("l")
p.press 'press 1
p.press 'press 1
p.virtualCode=-1
p.charcode=asc("o")
p.press 'press o

Notes:
Simulates a keypress and handles the Settings for Shift, Control, Command and Option key.
Command shows no reaction in my tests for Mac OS Classic
On Windows, if you set virtualcode=-1 this method will set it to the code matching the charcode property.

The Mac version sets the lasterror property.

140.4.10   pressraw(down as boolean)

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Presses a key.
**Example:**
' Works perfectly on Mac OS X but Shift can’t be done Raw on Mac OS 9:
dim p as PresskeyMBS

p=new PresskeyMBS

p.charcode=0
p.keycode=&h38
p.pressraw true 'shift down

p.charcode=asc("H")
p.keycode=4
p.pressraw true 'press H
p.pressraw false

p.charcode=0
p.keycode=&h38
p.pressraw false 'shift up

p.charcode=asc("e")
p.keycode=14
140.4. CLASS PRESSKEYMBS

p.pressraw true 'press e
p.pressraw false
p.charcode=asc("l")
p.keycode=37
p.pressraw true 'press l
p.pressraw false
p.pressraw true 'press l
p.pressraw false
p.charcode=asc("o")
p.keycode=31
p.pressraw true 'press o
p.pressraw false

Notes:
Simulates a keypress and doesn’t handle the Settings for Shift, Control, Command and Option key. On Windows, if you set virtualcode=-1 this method will set it to the code matching the charcode property.

The Mac version sets the lasterror property.

140.4.11 Properties

140.4.12 Charcode as Integer

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The character you want to press.  
**Example:**

dim p as PresskeyMBS

p=new PresskeyMBS
p.charcode=8
p.keycode=& h33
p.press  // press backspace on Mac OS

Notes:
On Mac OS Classic the final printed charcode inside an editfield is the one you pass.  
(Read and Write property)
140.4.13 Command as boolean

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Tells the Press method to press down command key before and release it after it simulates the key press.

**Example:**

```vba
dim p as new PresskeyMBS
p.command=True
```

**Notes:**

It looks like the command key is not working for Mac OS Classic.
On Windows the control key is pressed if control or command properties are true.
(Read and Write property)

140.4.14 Control as boolean

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Tells the Press method to press down control key before and release it after it simulates the key press.

**Example:**

```vba
dim p as new PresskeyMBS
p.Control=True
```

**Notes:**

On Windows the control key is pressed if control or command properties are true.
(Read and Write property)

140.4.15 Keycode as Integer

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** For Mac OS the number of the key on the keyboard which is pressed.

**Example:**

```vba
dim p as PresskeyMBS
p=new PresskeyMBS
p.keycode=2
p.charcode=asc("d")
p.press 'shows a "d" on Mac OS
```
Notes:
You find this codes in that nice tables for the codes of the Spritesurface in the Realbasic books.
(Read and Write property)

140.4.16  Lasterror as Integer

Function: The last error code.
Notes:
Not all functions of this class fill this property!
(Read and Write property)

140.4.17  Option as boolean

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. Function: Tells the
Press method to press down option key before and release it after it simulates the key press.
Example:
    dim p as PresskeyMBS
    p.option=True

Notes: (Read and Write property)

140.4.18  Shift as boolean

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. Function: Tells the
Press method to press down shift before and release it after it simulates the key press.
Example:
    dim p as PresskeyMBS

    p=new PresskeyMBS
    p.shift=true
    p.charcode=asc("1")
    p.keycode=18
    p.press 'press !
CHAPTER 140. REMOTE CONTROL

Notes: (Read and Write property)

140.4.19 VirtualCode as Integer

Example:

```
dim p as PresskeyMBS
p=new PresskeyMBS
p.charcode=asc(“m”)  
p.virtualcode=-1
p.press ' makes a ”m” on Windows.
```

Notes:

If you don’t know this code, just pass -1 and this value will be filled automatically using the charcode property.
After you call press or pressraw you’ll find the matching virtualcode in this property.
(Read and Write property)
140.5  **module RemoteControlMBS**

140.5.1  **module RemoteControlMBS**

**Function:** This module collects methods for simulating user input with mouse and keyboard.

**Notes:**
You can use this class for GUI scripting.
Requires libXtst.so.6 on Linux to be installed.

140.5.2  **Methods**

140.5.3  **LinuxConvertCase(keysymbol as Integer, byref lowerSymbol as Integer, byref upperSymbol as Integer) as boolean**

**Function:** Converts the case of the given keysymbol.

**Notes:**
In lowerSymbol you will receive the key symbol for a lower case key and in upperSymbol the uppercase keys.

So passing in the key symbol of "a" or "A" will both return "a" and "A".

140.5.4  **LinuxKeyCodeToKeySymbol(keycode as Integer, index as Integer) as Integer**

**Function:** Returns from the keyboard mapping tables the key symbol for the given key code.

**Notes:** Index is the offset in the tables. 0 for the first key symbol and 1 for the second. If the user presses
shift the keyboard driver uses index=1 to access the capital letters.

140.5.5  **LinuxKeyNameToKeySymbol(keyname as string) as Integer**

**Function:** Searches the key mapping list for the key symbol for a given name.

**Notes:** Returns 0 on failure.
140.5.6  LinuxKeySymbolToKeyCode(keysymbol as Integer) as Integer

Function: Searches the hardware dependend key code for the given key symbol.
Notes: Returns 0 on any error.

140.5.7  LinuxKeySymbolToKeyName(keysymbol as Integer) as string

Function: Returns the name of the key symbol.
Notes: Can return "" on an invalide keysymbol value.

140.5.8  LinuxMouseClick(ButtonID as Integer, ButtonDown as boolean) as boolean

Function: Simulates a mouse click with the given button.
Notes:
ButtonID=1 is the left mouse button.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.

140.5.9  LinuxMousePositionX as Integer

Function: Queries the current mouse position.

140.5.10  LinuxMousePositionY as Integer

Function: Queries the current mouse position.
140.5.11 LinuxMoveMouse(x as Integer, y as Integer) as boolean

**Function:** Moves the mouse to the given position.
**Notes:** Returns true on success.

140.5.12 LinuxPressControlKey(keydown as boolean) as boolean

**Function:** Presses the ctrl key.
**Notes:**
Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

140.5.13 LinuxPressKey(Keycode as Integer) as boolean

**Function:** Presses the key with the given keycode.
**Notes:**
Performs a key down and a key up event.
Returns true on success.
See also:

• 140.5.14 LinuxPressKey(Keycode as Integer, ButtonDown as boolean) as boolean

140.5.14 LinuxPressKey(Keycode as Integer, ButtonDown as boolean) as boolean

**Function:** Performs a key event.
**Notes:**
Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:

• 140.5.13 LinuxPressKey(Keycode as Integer) as boolean
140.5.15 LinuxPressOptionKey(keydown as boolean) as boolean

**Function:** Presses the alt key.
**Notes:**
Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

140.5.16 LinuxPressShiftKey(keydown as boolean) as boolean

**Function:** Presses the shift key.
**Notes:**
Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

140.5.17 LinuxSupported as boolean

**Function:** Whether the functions are available for simulation of keyboard and mouse events.
**Notes:** Returns true if the Xtest extension is installed.

140.5.18 MacCurrentProcessID as Integer

**Function:** Returns the process ID of your application.
**Notes:** Returns 0 on any error.

140.5.19 MacCurrentProcessName as string

**Function:** Returns the name of the current process.
**Example:**
Notes: This is the name of your application.

140.5.20  MacDescriptionForKeyCode(keycode as Integer) as string

Function: Translates a keycode to a string for displaying.
Notes: Keycodes which match a special key like "Return", "F1" or "Backspace" are returned as descriptive strings.

140.5.21  MacDisplayNameForKeyCode(keycode as Integer) as string

Function: Translates a keycode to a string for displaying.
Notes: Same as MacTextForKeyCode(keycode, 4)

140.5.22  MacForegroundProcessID as Integer

Function: Returns the process ID of the application in the foreground.
Notes: Returns 0 on any error.

140.5.23  MacFrontProcessName as string

Function: The name of the front process.
Example:
RemoteControlMBS.MacFrontProcessName="iChat"  // move iChat to front

Notes: (Read and Write computed property)
140.5.24 MacKeyboardLocalizedName as string

Function: The localized name of the current keyboard layout.
Notes: Returns "" on any error.

140.5.25 MacKeyboardName as string

Function: The name of the current keyboard layout.
Notes:
Returns "" on any error.

Added 64-bit support for version 17.0.

140.5.26 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean) as boolean

Function: Clicks the mouse buttons on the given position.
Example:

// doing a context menu click with control key:

dim x,y as Integer
x=System.MouseX
y=System.MouseY

call RemoteControlMBS.PressControlKey true
call RemoteControlMBS.MacMouseClick x, y, true, true
call RemoteControlMBS.MacMouseClick x, y, true, false
call RemoteControlMBS.PressControlKey false

Notes:
Returns true on success.
If updateMouseCursorPosition is true the mouse position is updated on screen.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:
140.5. MODULE REMOTECONTROLMBS

- 140.5.27 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean
- 140.5.28 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean

140.5.27 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean

Function: Clicks the mouse buttons on the given position.

Example:

```vbnet
// do a right click:

dim x,y as Integer
x=System.MouseX
y=System.MouseY

call RemoteControlMBS.MacMouseClick x, y, true, false, true
call RemoteControlMBS.MacMouseClick x, y, true, false, false
```

Notes:

Returns true on success.
If updateMouseCursorPosition is true the mouse position is updated on screen.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.

See also:

- 140.5.26 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean) as boolean
- 140.5.28 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean

140.5.28 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean

Function: Clicks the mouse buttons on the given position.

Notes:
Returns true on success. If updateMouseCursorPosition is true the mouse position is updated on screen.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.

See also:

- 140.5.26 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean) as boolean

- 140.5.27 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean

140.5.29 MacMousePositionX as Integer

Function: Queries the current mouse position.

140.5.30 MacMousePositionY as Integer

Function: Queries the current mouse position.

140.5.31 MacMouseWheel(wheel1 as Integer) as boolean

Function: Performs a wheel event.
Example:

```
call RemoteControlMBS.MacMouseWheel 1
```

Notes:

Returns true on success.
A typical value for the wheel changes are in range from -10 to 10.
See also:

- 140.5.32 MacMouseWheel(wheel1 as Integer, wheel2 as Integer) as boolean
140.5.32  MacMouseWheel(wheel1 as Integer, wheel2 as Integer) as boolean

Function: Performs a wheel event.
Example:
call RemoteControlMBS.MacMouseWheel 10,5

Notes:
Returns true on success.
A typical value for the wheel changes are in range from -10 to 10.
See also:
• 140.5.31 MacMouseWheel(wheel1 as Integer) as boolean

140.5.33  MacMoveMouse(x as Double, y as Double) as boolean

Function: Moves the mouse to the given position.
Example:
call RemoteControlMBS.MacMoveMouse(100,100)

Notes:
Returns true on success.
On Mac does not generate mouse events.

140.5.34  MacPressCommandKey(keydown as boolean) as boolean

Function: Presses the command key.
Notes:
Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
140.5.35  MacPressControlKey(keydown as boolean) as boolean

Function: Presses the ctrl key.
Notes:
Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

140.5.36  MacPressKey(keychar as Integer, virtualkey as Integer) as boolean

Function: Presses the given key.
Notes:
keychar is the ASCII code of the key you press and virtualkey is the key code.
Returns true on success.
Perform a key down and a key up event.
See also:
  • 140.5.37 MacPressKey(keychar as Integer, virtualkey as Integer, keydown as boolean) as boolean

140.5.37  MacPressKey(keychar as Integer, virtualkey as Integer, keydown as boolean) as boolean

Function: Presses the given key.
Notes:
keychar is the ASCII code of the key you press and virtualkey is the key code.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:
  • 140.5.36 MacPressKey(keychar as Integer, virtualkey as Integer) as boolean

140.5.38  MacPressOptionKey(keydown as boolean) as boolean

Function: Presses the option key. (labeled with alt)
Notes:
Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

140.5.39  MacPressShiftKey(keydown as boolean) as boolean

Function: Presses the shift key.
Notes:
Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

140.5.40  MacProcessCount as Integer

Function: Counts the high level processes.
Example:
msgBox str(remoteControlMBS.macprocessCount)

140.5.41  MacProcessName(index as Integer) as string

Function: The name of the process with the given index.
Example:

dim i,c as Integer

// search iChat and make it visible
c=remoteControlMBS.macprocesscount
for i=0 to c-1
if remoteControlMBS.macprocessname(i)="iChat" then
remoteControlMBS.macprocessVisible(i)=true
end if
next
140.5.42 MacProcessVisible(index as Integer) as boolean

Function: Whether a process is visible or not.

Example:

```vbs
Dim i, c as Integer

// search Safari and make it invisible
C = remoteControlMBS.macProcessCount
For i = 0 To c - 1
    If remoteControlMBS.macProcessName(i) = "Safari" Then
        remoteControlMBS.macProcessVisible(i) = False
    End If
Next
```

Notes:
Index is from 0 to MacProcessCount-1.
(Read and Write computed property)

140.5.43 MacTextForKeyCode(keycode as Integer, KeyAction as Integer, ModifierState as Integer) as string

Function: Translates a keycode to a string.

Example:

```vbs
// try some keycodes like e, E, or
Dim key as string = "@"

Const kCommandKey = 1
Const kShift = 2
Const kCapsLock = 4
Const kOption = 8
Const kControl = 16

// with no modifiers
For i As Integer = 0 To 127
```

Notes:
Index is from 0 to MacProcessCount-1.
dim s as string = RemoteControlMBS.MacTextForKeyCode(i, 3, 0)

if StrComp(key, s, 0) = 0 then
  MsgBox "Found with keycode " + str(i)
  Return
end if

next

// with shift
for i as Integer = 0 to 127

  dim s as string = RemoteControlMBS.MacTextForKeyCode(i, 3, kShift)

  if StrComp(key, s, 0) = 0 then
    MsgBox "Found with keycode " + str(i) + " with Shift"
    Return
  end if

next

// with option
for i as Integer = 0 to 127

  dim s as string = RemoteControlMBS.MacTextForKeyCode(i, 3, kOption)

  if StrComp(key, s, 0) = 0 then
    MsgBox "Found with keycode " + str(i) + " with Option"
    Return
  end if

next

Notes:
Works only with Unicode keyboard layouts which need Mac OS X 10.5.

Modifier values:

Possible constants for the Key Action:
CHAPTER 140. REMOTE CONTROL

Command Key  1
Shift  2
CapsLock  4
Option  8
Control  16

kUCKeyActionDown  0  The user is pressing the key.
kUCKeyActionUp  1  The user is releasing the key.
kUCKeyActionAutoKey  2  The user has the key in an “auto-key” pressed state that is, the user is holding down the key for an extended period of time and is thereby generating multiple key strokes from the single key.
kUCKeyActionDisplay  3  The user is requesting information for key display, as in the Key Caps application.

140.5.44 MouseClick(x as Integer, y as Integer, down as boolean) as boolean

Function: Performs a mouse click.
Notes:
The mouse cursor is moved to the given position and the first mouse button is pressed.
Returns true on success.

140.5.45 MousePositionX as Integer

Function: Queries the current mouse position.

140.5.46 MousePositionY as Integer

Function: Queries the current mouse position.

140.5.47 MoveMouse(x as Integer, y as Integer) as boolean

Function: Moves the mouse to the given location.
Notes:
Returns true on success.
On Mac does not generate mouse events.

**140.5.48 PressControlKey(keydown as boolean) as boolean**

**Function:** Presses the ctrl key.
**Notes:** Returns true on success.

**140.5.49 PressOptionKey(keydown as boolean) as boolean**

**Function:** Presses the option key.
**Notes:** Returns true on success.

**140.5.50 PressShiftKey(keydown as boolean) as boolean**

**Function:** Presses the shift key.
**Notes:** Returns true on success.

**140.5.51 WinBringProcessToTop(ProcessID as Integer) as boolean**

**Function:** Brings all windows of process to the front.
**Notes:** Returns true if function found at least one window.

**140.5.52 WinBringWindowToTop(WindowHandle as Integer, SetFocus as boolean = true) as boolean**

**Function:** Brings a given window to front.
**Example:**

```vba
dim h as Integer = RemoteControlMBS.WinFindWindow("", "Calculator")
call RemoteControlMBS.WinBringWindowToTop h
```
Notes:
Pass any window handle, including windows from other applications.
If SetFocus is true, we also set the focus.
Returns true on success.

140.5.53 WinCurrentProcessID as Integer

Function: Returns the process ID of your application.
Notes: Returns 0 on any error.

140.5.54 WinFindWindow(ClassName as string, WindowName as string) as Integer

Function: Finds a window based on the classname and/or the window name.
Example:
```vbnet
dim h as Integer = RemoteControlMBS.WinFindWindow("SciCalc","")
msgbox hex(h)
```

Notes:
One of the names can be an empty string so only the other name is used. Normally you should prefer
the class name as it is not localized. The WindowsListMBS class can help you finding the class name of a
window.
Returns 0 on any error.

140.5.55 WinForegroundProcessID as Integer

Function: Returns the process ID of the application which owns the foreground window.
Notes: Returns 0 on any error.

140.5.56 WinFrontWindowTitle as string

Function: The title of the window which has the focus.
Example:

```
title=remoteControlMBS.winfrontWindowTitle
```

Notes: May return "" on any error.

### 140.5.57 WinIsWindowMinimized(WindowHandle as Integer) as Boolean

**Function:** Checks whether the specified window is minimized.

**Notes:**
- Returns true if minimized.
- Use RemoteControlMBS.WinFindWindow if you need to find a window handle.

### 140.5.58 WinIsWindowVisible(WindowHandle as Integer) as Boolean

**Function:** Checks the visibility state of the specified window.

**Notes:**
- Returns true if visible or false if not.
- Use RemoteControlMBS.WinFindWindow if you need to find a window handle.

### 140.5.59 WinKeyboardName as string

**Function:** Returns the name of the current Windows keyboard layout.

### 140.5.60 WinKeyIsDown(virtualkey as Integer) as boolean

**Function:** Tests whether a given key is currently pressed.
140.5.61  **WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean) as boolean**

**Function:** Performs a mouse click on the given position.
**Notes:**
If AbsolutePosition is false the given coordinates are relative to the current position.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 140.5.62  **WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean**  

- 140.5.63  **WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean**

140.5.62  **WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean**

**Function:** Performs a mouse click on the given position.
**Notes:**
If AbsolutePosition is false the given coordinates are relative to the current position.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 140.5.61  **WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean) as boolean**  

- 140.5.63  **WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean**

140.5.63  **WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean**

**Function:** Performs a mouse click on the given position.
140.5. MODULE REMOTECONTROLMBS

**Notes:**

If AbsolutePosition is false the given coordinates are relative to the current position.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.

See also:

- 140.5.61 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean) as boolean
- 140.5.62 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean

### 140.5.64 WinMousePositionX as Integer

**Function:** Queries the current mouse position.

### 140.5.65 WinMousePositionY as Integer

**Function:** Queries the current mouse position.

### 140.5.66 WinMoveMouse(x as Integer, y as Integer) as boolean

**Function:** Moves the mouse cursor to the given position.

**Notes:**

Returns true on success.
Internally the coordinates are converted to normalized absolute coordinates which can lead to have the mouse one pixel off the requested position due to rounding.

### 140.5.67 WinPressControlKey(keydown as boolean) as boolean

**Function:** Presses the ctrl key.

**Notes:**
Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

140.5.68 WinPressKey(ScanCode as Integer) as boolean

Function: Performs a key event with the given data. 
Notes: 
This method creates a keydown and a keyup event.
Returns true on success.
See also:

- 140.5.69 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean
- 140.5.70 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean
- 140.5.71 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean

140.5.69 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean

Function: Performs a key event with the given data. 
Notes: 
Returns true on success.
Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:

- 140.5.68 WinPressKey(ScanCode as Integer) as boolean
- 140.5.70 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean
- 140.5.71 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean

140.5.70 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean

Function: Performs a key event with the given data. 
Notes: 
This method creates a keydown and a keyup event.
Returns true on success.
See also:

- 140.5.68 WinPressKey(ScanCode as Integer) as boolean
- 140.5.69 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean
- 140.5.71 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean

140.5.71 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean

Function: Performs a key event with the given data.
Notes:
Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:

- 140.5.68 WinPressKey(ScanCode as Integer) as boolean
- 140.5.69 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean
- 140.5.70 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean

140.5.72 WinPressOptionKey(keydown as boolean) as boolean

Function: Presses the alt key.
Notes:
Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

140.5.73 WinPressShiftKey(keydown as boolean) as boolean

Function: Presses the shift key.
Notes:
Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

140.5.74 WinScanCodeToVirtualKeyCode(ScanCode as Integer) as Integer

Function: Searches the virtual key code for the given scancode.
Notes:
Each key has a hardware dependend scan code. For each scancode you can get the virtual key code which is hardware independend.

Returns 0 on failure.

140.5.75 WinSendMessage(Win as window, Msg as Integer, lParam as Integer, WParam as Integer) as Integer

Function: Sends a Windows message to a given window.
Example:
const WM_CLOSE = & h0010
call RemoteControlMBS.WinSendMessage(window1, WM_CLOSE, 0, 0)

Notes: The result depends on the message command.
See also:
• 140.5.76 WinSendMessage(WindowHandle as Integer, Msg as Integer, lParam as Integer, WParam as Integer) as Integer

140.5.76 WinSendMessage(WindowHandle as Integer, Msg as Integer, lParam as Integer, WParam as Integer) as Integer

Function: Sends a Windows message to a given window.
Example:
const WM_CLOSE = & h0010

dim h as Integer = RemoteControlMBS.WinFindWindow("SciCalc","")

call RemoteControlMBS.WinSendMessage(h, WM_CLOSE, 0, 0) // Closes Calc

Notes: The result depends on the message command.
See also:

• 140.5.75 WinSendMessage(Win as window, Msg as Integer, lParam as Integer, WParam as Integer) as Integer

140.5.77 WinShowWindow(WindowHandle as Integer, CmdShow as Integer) as Boolean

Function: Shows or hides a window.
Notes:
CmdShow can be:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Hide</td>
</tr>
<tr>
<td>1</td>
<td>Show normal</td>
</tr>
<tr>
<td>2</td>
<td>Show minimized</td>
</tr>
<tr>
<td>3</td>
<td>Maximize</td>
</tr>
<tr>
<td>4</td>
<td>Show without activating</td>
</tr>
<tr>
<td>5</td>
<td>Show</td>
</tr>
<tr>
<td>6</td>
<td>Minimize</td>
</tr>
<tr>
<td>7</td>
<td>Show minimized without activating</td>
</tr>
<tr>
<td>8</td>
<td>Show normal without activating</td>
</tr>
<tr>
<td>9</td>
<td>Restore</td>
</tr>
<tr>
<td>10</td>
<td>Show default</td>
</tr>
<tr>
<td>11</td>
<td>Force minimized</td>
</tr>
</tbody>
</table>

Use RemoteControlMBS.WinFindWindow if you need to find a window handle.
140.5.78  WinVirtualKeyCodeToCharCode(VirtualKeyCode as Integer) as Integer

Function: Queries the char code for a virtual key code.
Notes: Returns 0 on failure.

140.5.79  WinVirtualKeyCodeToScanCode(VirtualKeyCode as Integer) as Integer

Function: Finds the scan code to match the given virtual key code.
Notes: Returns 0 on failure.

140.5.80  WinVirtualKeyForASCII(Character as Integer, byref VirtualKeyCode as Integer, byref ShiftKey as boolean, byref ControlKey as Boolean, byref AltKey as boolean) as boolean

Function: Returns for a given character which combination of key code and modifiers created the character.
Notes:
For Character, you should use asc(string), but you may need to convert the string to Windows ANSI text encoding.

Returns 0 on failure.
Chapter 141

Resolution

141.1 class DisplayMBS

141.1.1 class DisplayMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Defines a class for accessing the displays of the screen.

141.1.2 Methods

141.1.3 CanDepth(depth as Integer) As Boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns true if the monitor supports the given color depth at the current ResolutionMBS. **Notes:** none.

141.1.4 FadeGamma(intensity as Integer, col As Color)

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Sets the gamma of the DisplayMBS. **Notes:**

Intensity has to be between 0 and 1000. 1000 is normal, when it is 0, the whole DisplayMBS is in the color GammaColor. Direct color display modes do not use color lookup tables and are usually 16, 24, or 32 bit. Not all direct color video boards support loadable gamma ramps.
See the NativeGamma documentation for more details on Windows Gamma details.

141.1.5  **FadeGammaTo(intensity as Integer, col As Color, ticks as Integer)**

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Fades the intensity and color of the gamma slowly in the given number of milliseconds.

**Notes:**
Intensity has to be between 0 and 1000. 1000 is normal, when it is 0, the whole display is in the color GammaColor.
Direct color display modes do not use color lookup tables and are usually 16, 24, or 32 bit. Not all direct color video boards support loadable gamma ramps.
See the NativeGamma documentation for more details on Windows Gamma details.

141.1.6  **GetBestResolution(width as Integer, height as Integer, depth as Integer, safe As Boolean) As ResolutionMBS**

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Searches for the best matching resolution.

**Notes:**
Returns the best resolution which size is not smaller that the dimensions given, which has the given depth and, if safe is true, which is safe. If safe is not true, be sure that the frequency works, if you want to switch to it (for example by asking the user).
On Mac OS X till now no resolution can be called safe.
See also:

- 141.1.7 GetBestResolution(width as Integer, height as Integer, safe As Boolean) As ResolutionMBS

18312

141.1.7  **GetBestResolution(width as Integer, height as Integer, safe As Boolean) As ResolutionMBS**

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Searches for the best matching resolution.

**Notes:**
Returns the best resolution which size is not smaller that the dimensions given, which has the highest depth and, if safe is true, which is safe. If safe is not true, be sure that the frequency works, if you want to switch to it (for example by asking the user).
On Mac OS X till now no resolution can be called safe.
See also:
141.1. CLASS DISPLAYMBS

- **141.1.6 GetBestResolution(width as Integer, height as Integer, depth as Integer, safe As Boolean) As ResolutionMBS**

141.1.8 GetCurrentResolution As ResolutionMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the current resolution.
**Notes:** Returns the resolution the display is currently set to. This is useful if you want to switch back to the old resolution after you switched to another resolution.

141.1.9 GetLargestResolution(depth as Integer, safe As Boolean) As ResolutionMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Searches for the largest resolution with the given depth.
**Notes:**
The same as GetBestResolution(width, height, depth, safe), the only difference is that it does not search for the smallest resolution but for the biggest one.
On Mac OS X till now no resolution can be called safe.
See also:

- **141.1.10 GetLargestResolution(safe As Boolean) As ResolutionMBS**

141.1.10 GetLargestResolution(safe As Boolean) As ResolutionMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Searches for the largest resolution.
**Notes:**
If safe is true, this method returns only safe resolutions.
On Mac OS X till now no resolution can be called safe.
See also:

- **141.1.9 GetLargestResolution(depth as Integer, safe As Boolean) As ResolutionMBS**

141.1.11 GetResolution(num as Integer) As ResolutionMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a resolution.
**Notes:** Num has to be between 0 and ResolutionCount(safe)-1.
141.1.12 ResolutionCount(depth as Integer, safe As Boolean) as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the number of resolutions for a given depth.

**Notes:**
This method returns the number of resolutions that have the given depth and, if safe is true, which are safe. On Mac OS X till now no ResolutionMBS can be called safe.

See also:
- 141.1.13 ResolutionCount(safe As Boolean) as Integer

141.1.13 ResolutionCount(safe As Boolean) as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the number of resolutions.

**Notes:**
This method returns the total number of resolutions this monitor supports and, if safe is true, which are safe. Safe resolutions are resolutions which will always work. On Mac OS X till now no ResolutionMBS can be called safe.

See also:
- 141.1.12 ResolutionCount(depth as Integer, safe As Boolean) as Integer

141.1.14 SetDepth(depth as Integer) As Boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Switches the color depth to the depth given. Returns true if attempt was successful.

**Notes:** none.

141.1.15 SwitchTo(width as Integer, height as Integer, depth as Integer, safe As Boolean) As Boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Switches to the given ResolutionMBS if possible.

**Notes:**
This method tries to switch directly to the best ResolutionMBS which size is bigger or the same as the given dimensions and which depth is the same as the given parameter. It returns true if it was successful. Try this function first with safe set to true. If that fails, try again with false, but after that show a dialog asking the user if that ResolutionMBS is okay. If the user presses escape or clicks cancel, you should immediately switch back to the old ResolutionMBS. On Mac OS X till now no ResolutionMBS can be called safe.
141.1. CLASS DISPLAYMBS

141.1.16 Update

MBS Util Plugin, Plugin Version: 3.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Updates the properties in this class.

**Notes:**
Call it whenever you detect a screen resolution change to update the content of this class. In general you should not keep DisplayMBS classes around too long because the display described may go away (one a Powerbook the external display).

141.1.17 Properties

141.1.18 Depth as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Depth of the DisplayMBS.

**Notes:**
Can be 8, 16 or 32. Other screen depths are not well supported.
(Read only property)

141.1.19 displaynum as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** DisplayNum is the number of the DisplayMBS.

**Notes:**
The number is always between 0 and DisplayCount-1, where 0 is the main monitor.
(Read only property)

141.1.20 GammaColor as color

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The color for fading the DisplayMBS.

**Notes:**
This property is read-only. To change it, use the methods of the DisplayMBS class and the Switch method of the ResolutionMBS class.
There is no fading for Windows.
(Read only property)
141.1.21 GammaIntensity as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** GammaIntensity is the intensity of the monitor.

**Notes:**
1000 is normal, if it is 0, the whole DisplayMBS is in the color GammaColor. This property is read-only. To change it, use the methods of the DisplayMBS class and the Switch method of the ResolutionMBS class.
There is no fading for Windows.
(Read only property)

141.1.22 Height as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Height of the monitor. **Notes:** (Read only property)

141.1.23 hz as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** frequency in Hz of that DisplayMBS

**Example:**

```vbscript
dim d as DisplayMBS

d=GetDisplayMBS(0)

msgBox str(d.Hz)
```

**Notes:**
On Windows:
Sometimes Hz is 0, this is when Windows itself does not know the frequency (at least it is so in my emulation, Virtual PC 3.0 with Win95).
The value should never be greater as the real frequency, so you can just ignore this.
(Read only property)

141.1.24 Left as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The relative left offset to the other monitors.
141.1. CLASS DISPLAYMBS

Notes:
Should be 0 for the main monitor.
(Read only property)

### 141.1.25 Top as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The relative top offset to the other monitors.

Notes:
Should be 0 for the main monitor.
(Read only property)

### 141.1.26 Width as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Width of this screen.

Notes: (Read only property)

### 141.1.27 NativeGamma as memoryblock

MBS Util Plugin, Plugin Version: 3.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The native gamma values.

**Example:**

```plaintext
dim d as DisplayMBS // your display
d.nativegamma=newmemoryblock(3072) // all black
```

Notes:
3072 bytes big is this array a 256 RGB values saved in 3 single properties.

Some notes for SetDeviceGammaRamp, which is the Windows function used by the plugin:

SetDeviceGammaRamp doesn’t allow all gamma ramps. It checks the gamma ramp; if it is too complex, such as the red flash when the player is shot in Quake, it rejects it.

SetDeviceGammaRamp will not currently make use of a gamma calibrator. This may change in future versions of Image Color Management (ICM), but for Windows 2000, only the DirectDraw API supports the gamma calibrators.

The existing gamma entry points is already used by GetDeviceGammaRamp and SetDeviceGammaRamp. Therefore, the display driver doesn’t need to do anything special to support this new interface, as long as it
already supports the Win32 Get/SetDeviceGammaRamp functions. In addition to getting and setting gamma ramps, the new DirectDraw interface allows the new gamma ramp to be calibrated if a gamma calibrator is installed. The mechanism that DirectDraw uses to register and communicate with the gamma calibrator is an interim mechanism that will be changed in future releases. DirectDraw looks for an installed software calibrator and passes the gamma value to the software calibrator; the software calibrator in turn adjusts the gamma ramp according to the measured response of the monitor. The calibrator passes the gamma ramp back to DirectDraw, which passes it to the SetDeviceGammaRamp device driver interface (DDI). The result is that the game looks as intended. For DirectDraw to use the gamma calibrator, the calibrator must register itself with DirectDraw using a registry key; DirectDraw will call it if the application wants the gamma ramp to be calibrated. In the future, both the method by which DirectDraw communicates with the gamma calibrator, through the DDI, and the method gamma calibrators use to register themselves in the registry will change. But every part of the DirectDraw API is permanent. ICM is the color management system in Windows; all system-level color management should be handled by ICM. For this reason, downloadable gamma ramp support will be rolled into ICM in the future, making current solutions for gamma calibrators obsolete. Until such time, we have provided a method by which applications can take advantage of the installed base of software calibrators and graphics adapters that support downloadable gamma ramps. (Read and Write computed property)
141.2  Globals

141.2.1  DisplayCountMBS as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** DisplayCount returns the number of displays connected.

**Example:**

```
msgbox "You have " +str(DisplayCountMBS)+" screens."
```

141.2.2  GetDisplayMBS(num as Integer) As DisplayMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns an object of class DisplayMBS for the given DisplayMBS.

**Example:**

```vbnet
dim d as DisplayMBS
d=GetDisplayMBS(0)
msgBox str(d.width)+" x " +str(d.height)+" @ " +str(pow(2,d.depth))+" colors"
```

**Notes:** num must be: 0 <= num <displaycount

141.2.3  ResolutionLibraryPresentMBS as boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if the DisplayManager library file was found.

**Example:**

```vbnet
if not ResolutionLibraryPresentMBS then
    msgbox "I'm missing the shared library 'DisplayManager'."
end if
```

**Notes:**

This library should be present on all Mac OS Classic versions. (It is in the system suitcase.)

Returns always true on Windows.
141.2.4 UpdateDisplayCountMBS

MBS Util Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Rebuilds the display list. **Notes:** If new displays are attached or removed, this method needs to be called.

141.3 class ResolutionMBS

141.3.1 class ResolutionMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Defines a class for accessing the resolutions a screen.

141.3.2 Methods

141.3.3 Switch As Boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** This function switches the DisplayMBS to the ResolutionMBS and returns true if the attempt was successful. **Notes:**

If IsSafe is false, show a dialog after the switch asking the user if that ResolutionMBS is okay. If the user presses escape or clicks cancel, you should immediately switch back to the old ResolutionMBS. Especially on VGA-Monitors not all listed frequencies work.
On Mac OS X till now no ResolutionMBS can be called safe.

141.3.4 Properties

141.3.5 Depth as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Depth of the ResolutionMBS. **Notes:**

Can be 8, 16 or 32. Other screen depths are not well supported.  
(Read only property)
141.3. **CLASS RESOLUTIONMBS**

### 141.3.6 displaynum as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** DisplayNum is the number of the DisplayMBS

**Notes:**
The number is always between 0 and DisplayCount-1, where 0 is the main monitor.
(Read only property)

### 141.3.7 Height as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Height of the ResolutionMBS.

**Notes:** (Read only property)

### 141.3.8 hz as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** frequency in Hz of that ResolutionMBS

**Notes:**
Sometimes Hz is 0, this is when Windows itself does not know the frequency (at least it is so in my emulation, Virtual PC 3.0 with Win95).
(Read only property)

### 141.3.9 issafe as boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Is it a safe ResolutionMBS?

**Notes:**
On Mac OS X till now no ResolutionMBS can be called safe.
(Read only property)

### 141.3.10 Left as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The relative left offset to that ResolutionMBS.

**Notes:**
Should be 0 for the main monitor.
141.3.11  ResolutionNum as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** DisplayNum is the number of the DisplayMBS.

**Notes:**
ResolutionNum is the number of the DisplayMBS which always is between 0 and GetDisplayMBS(DisplayNum).ResolutionCount(false)-1.

On Windows: dis.GetCurrentResolution.resolutionNum is sometimes also -1.

(Read only property)

141.3.12  Top as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The relative top offset to the other monitors.

**Notes:**
Should be 0 for the main monitor.

(Read only property)

141.3.13  Width as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Width of this ResolutionMBS.

**Notes:** (Read only property)
Chapter 142

Screenshot

142.1 Globals

142.1.1 ScreenshotDisplayMBS(index as Integer) as picture

MBS Picture Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the Screenshot from the display with the given index.  
**Example:**  
Backdrop = ScreenshotDisplayMBS(0)

**Notes:**
Index starts at 0 for the main display.  
Works on Linux only for first screen.

Plugin version 10.4 added support for multiple displays on Windows.

142.1.2 ScreenshotFromStringMBS(Width as Integer, Height as Integer, Row-Bytes as Integer, data as string) as picture

MBS Picture Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates the picture from a string returned by ScreenshotStringMBS.  
**Example:**  
```vbs
    dim p as Picture
    dim s as string
```
dim w,h,r as Integer

s=ScreenshotStringMBS(w,h,r)
p=ScreenshotFromStringMBS(w,h,r,s)
Backdrop=p

Notes:
Returns nil on any error.
(for example if width, height and rowwidth doesn’t fit together.)

142.1.3 ScreenshotMBS as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a picture of the screen content in screen resolution.

**Example:**

dim p as picture
p=screenshotMBS

Notes:
For a rectangle only you can use ScreenShotRectMBS.

Plugin Version 7.2 adds Windows Vista Support.

142.1.4 ScreenshotRectMBS(left as Integer, top as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a picture of the screen rectangle in screen resolution.

**Example:**

dim p as picture
p=ScreenshotRectMBS(100,100,200,200)

Notes:
Improved in Version 3.2 to support multiple displays on Mac OS.

Plugin Version 10.4 adds Windows support.
See also:

- 142.1.5 ScreenshotRectMBS(left as Integer, top as Integer, width as Integer, height as Integer, destwidth as Integer, destheight as Integer) as picture

142.1.5 ScreenshotRectMBS(left as Integer, top as Integer, width as Integer, height as Integer, destwidth as Integer, destheight as Integer) as picture

MBS Picture Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a picture of the screen rectangle in screen resolution and scales it down to the requested size.
**Example:**
```vbs
dim p as picture
p=ScreenshotRectMBS(100,100,200,200,50,50)
```

**Notes:**
Only for Mac OS.
On Windows or Linux, please use the other ScreenshotRectMBS without the extra parameters and scale the image yourself with the scale method needed.
This function is just to do the grab and scale in one rush to save CPU time.

Does not work on Mac OS X 10.7.
See also:

- 142.1.4 ScreenshotRectMBS(left as Integer, top as Integer, width as Integer, height as Integer) as picture

142.1.6 ScreenshotStringDisplayMBS(byref Width as Integer, byref Height as Integer, byref RowBytes as Integer, index as Integer) as string

MBS Picture Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a picture of the screen content in screen resolution.
**Example:**
```vbs
dim s as string
dim w,h,r as Integer
dim index as Integer=0
s=ScreenshotStringDisplayMBS(w,h,r, index)
```
Notes:
Returns nil on any error.
Use ScreenshotFromStringMBS to get the picture from the string.

142.1.7 ScreenshotStringMBS(byref Width as Integer, byref Height as Integer, byref RowBytes as Integer) as string

MBS Picture Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a picture of the screen content in screen resolution.
**Example:**
```vbnet
dim s as string
dim w,h,r as Integer
s=ScreenshotStringMBS(w,h,r)
```

Notes:
Returns nil on any error.
Use ScreenshotFromStringMBS to get the picture from the string.
Chapter 143

SFPassword

143.1 class SFPasswordAssistantMBS

143.1.1 class SFPasswordAssistantMBS

MBS MacExtras Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: The class to help the user to create a new password.

Notes:
This is an Apple internal class with no public interface. It works for Mac OS X 10.4 and should work on 10.3 and 10.5.

You need to keep the reference to the SFPasswordAssistantMBS object in a global property. If the object in Realbasic is destroyed while the panel is still visible, it will crash.

Do not call Close or PerformClose methods to close this window, use BaseWindowWillClose.
Not supported for 64 bit target.
Subclass of the NSPanelMBS class.

143.1.2 Methods

143.1.3 BaseWindowWillClose

MBS MacExtras Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: Tells the panel that the base window will close.

Notes: If your window which uses the panel will close, you should call that method from the CancelClose method of your window.
143.1.4 Constructor

MBS MacExtras Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The constructor to create a new password assistant panel.

143.1.5 ShowPanel

MBS MacExtras Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Shows the panel.
**Notes:**
This method does a bit more than just show. It will create the panel, create a new password and run the password quality check.

143.1.6 Properties

143.1.7 Password as string

MBS MacExtras Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The current password.
**Notes:**
If you set the value, the new password is checked for quality and the TextChanged event may be fired. (Read and Write computed property)

143.1.8 Events

143.1.9 TextChanged(text as string)

MBS MacExtras Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The text was changed.
**Notes:**
This event fires often. It fires if the text changed (e.g. a letter was added) or sometimes it fires if the text was not changed.

So best if you need to update GUI, to check the text parameter and use timer. Restart the timer every time you get an event with a period of maybe 500 ms. So in case you don’t get new events and the timer fires, you can update your GUI.
Chapter 144

SmartCard

144.1 class SmartCardContextMBS

144.1.1 class SmartCardContextMBS

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for a SmartCard context.

**Example:**
```
    dim c as new SmartCardContextMBS
    dim list() as string = c.Readers
    MsgBox Join(list, EndOfLine)
```

144.1.2 Methods

144.1.3 Cancel

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Terminates all outstanding actions within a specific resource manager context.

**Notes:**
The only requests that you can cancel are those that require waiting for external action by the smart card or user. Any such outstanding action requests will terminate with a status indication that the action was canceled. This is especially useful to force outstanding GetStatusChange calls to terminate.

Lasterror is set.
144.1.4 Connect(reader as string, ShareMode as UInt32, PreferredProtocols as UInt32) as SmartCardMBS

**Example:**

```vbnet
dim c as new SmartCardContextMBS

dim s as SmartCardMBS
s = c.Connect("MyReader", SmartCardMBS.kShareShared, SmartCardMBS.kProtocolAny)
if s <> nil then
    MsgBox "Connected"
else
    MsgBox "Error: " + str(c.Lasterror)
end if
```

**Notes:**

Establishes a connection (using a specific resource manager context) between the calling application and a smart card contained by a specific reader. If no card exists in the specified reader, an error is returned.

- **Reader:** The name of the reader that contains the target card.
- **ShareMode:** A flag that indicates whether other applications may form connections to the card. Use one of SmartCardMBS.kShare* constants. e.g. kShareExclusive
- **PreferredProtocols:** A bitmask of acceptable protocols for the connection. Possible values may be combined with the OR operation. Use SmartCardMBS.kProtocol* constants. e.g. kProtocolT1

Lasterror and ActiveProtocol are set.
Returns on success a smartcard object, else returns nil.

144.1.5 Constructor

144.1.6 IsValid as boolean

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Determines whether a smart card context handle is valid.

**Notes:** Returns true if valid or false if not valid.
144.1.7 ReaderGroups as string()

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Provides the list of reader groups that have previously been introduced to the system.
**Notes:**
The groups may be SCard$ AllReaders, SCard$ DefaultReaders, SCard$ LocalReaders and SCard$ SystemReaders.
Lasterror is set.

144.1.8 Readers as string()

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Provides the list of readers within a set of named reader groups, eliminating duplicates.
**Example:**
```vbnet
dim c as new SmartCardContextMBS
dim list() as string = c.Readers
MsgBox Join(list, EndOfLine)
```
**Notes:** Lasterror is set.
See also:
- 144.1.8 Readers as string()

144.1.9 Readers(ReaderGroups() as string) as string()

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Provides the list of readers within a set of named reader groups, eliminating duplicates.
**Notes:**
The caller supplies a list of reader groups, and receives the list of readers within the named groups. Unrecognized group names are ignored. This function only returns readers within the named groups that are currently attached to the system and available for use.
**ReaderGroups:** The reader groups you like to query.
Lasterror is set.
See also:
- 144.1.9 Readers(ReaderGroups() as string) as string()
144.1.10 Properties

144.1.11 Available as Boolean

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the smartcard API is available. 
**Notes:**
This should be available on Mac and Windows.

Loads on Mac the PCSC.framework. 
For Linux you need pcsclite library installed. We try to load libpcsclite.so or /usr/lib/libpcsclite.so. 
On Windows we use winscard.dll built into Windows. 
(Read only property)

144.1.12 Handle as Integer

**Notes:** (Read and Write property)

144.1.13 Lasterror as Integer

**Notes:** (Read and Write property)

144.1.14 Constants

144.1.15 kErrorBadSeek = & H80100029

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes. 
**Notes:** An error occurred in setting the smart card file object pointer.

144.1.16 kErrorCancelled = & H80100002

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes. 
**Notes:** The action was canceled by an Cancel request.
144.1. CLASS SMARTCARDCONTEXTMBS

144.1.17 kErrorCancelledByUser = & H8010006E

MBS Tools Plugin, Plugin Version: 16.3. Function: One of the error codes. Notes: The action was canceled by the user.

144.1.18 kErrorCantDispose = & H8010000E

MBS Tools Plugin, Plugin Version: 16.3. Function: One of the error codes. Notes: The system could not dispose of the media in the requested manner.

144.1.19 kErrorCardNotAuthenticated = & H8010006F

MBS Tools Plugin, Plugin Version: 16.3. Function: One of the error codes. Notes: No PIN was presented to the smart card.

144.1.20 kErrorCardUnsupported = & H8010001C

MBS Tools Plugin, Plugin Version: 16.3. Function: One of the error codes. Notes: The smart card does not meet minimal requirements for support.

144.1.21 kErrorCertificateUnavailable = & H8010002D

MBS Tools Plugin, Plugin Version: 16.3. Function: One of the error codes. Notes: The requested certificate could not be obtained.

144.1.22 kErrorChvBlocked = & H8010006C

MBS Tools Plugin, Plugin Version: 16.3. Function: One of the error codes. Notes: The card cannot be accessed because the maximum number of PIN entry attempts has been reached.

144.1.23 kErrorCommDataLost = & H8010002F

MBS Tools Plugin, Plugin Version: 16.3. Function: One of the error codes. Notes: A communications error with the smart card has been detected.
144.1.24  **kErrorCommError = & H80100013**

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** An internal communications error has been detected.

144.1.25  **kErrorDirNotFound = & H80100023**

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The specified directory does not exist in the smart card.

144.1.26  **kErrorDuplicateReader = & H8010001B**

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The reader driver did not produce a unique reader name.

144.1.27  **kErrorEof = & H8010006D**

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The end of the smart card file has been reached.

144.1.28  **kErrorFileNotFound = & H80100024**

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The specified file does not exist in the smart card.

144.1.29  **kErrorIccCreateorder = & H80100021**

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The requested order of object creation is not supported.

144.1.30  **kErrorIccInstallation = & H80100020**

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** No primary provider can be found for the smart card.
144.1.31 kErrorInsufficientBuffer = & H80100008

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes. **Notes:** The data buffer for returned data is too small for the returned data.

144.1.32 kErrorInternalError = & H80100001

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes. **Notes:** An internal consistency check failed.

144.1.33 kErrorInvalidAtr = & H80100005

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes. **Notes:** An ATR string obtained from the registry is not a valid ATR string.

144.1.34 kErrorInvalidChv = & H8010000A

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes. **Notes:** The supplied PIN is incorrect.

144.1.35 kErrorInvalidHandle = & H80100003

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes. **Notes:** The supplied handle was not valid.

144.1.36 kErrorInvalidParameter = & H80100004

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes. **Notes:** One or more of the supplied parameters could not be properly interpreted.

144.1.37 kErrorInvalidTarget = & H80100005

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes. **Notes:** Registry startup information is missing or not valid.
144.1.38  \texttt{kErrorInvalidValue} = \& H80100011

MBS Tools Plugin, Plugin Version: 16.3. \textbf{Function}: One of the error codes. \textbf{Notes}: One or more of the supplied parameter values could not be properly interpreted.

144.1.39  \texttt{kErrorNoAccess} = \& H80100027

144.1.40  \texttt{kErrorNoDir} = \& H80100025

MBS Tools Plugin, Plugin Version: 16.3. \textbf{Function}: One of the error codes. \textbf{Notes}: The supplied path does not represent a smart card directory.

144.1.41  \texttt{kErrorNoFile} = \& H80100026

MBS Tools Plugin, Plugin Version: 16.3. \textbf{Function}: One of the error codes. \textbf{Notes}: The supplied path does not represent a smart card file.

144.1.42  \texttt{kErrorNoKeyContainer} = \& H80100030

MBS Tools Plugin, Plugin Version: 16.3. \textbf{Function}: One of the error codes. \textbf{Notes}: The requested key container does not exist on the smart card.

144.1.43  \texttt{kErrorNoMemory} = \& H80100006

MBS Tools Plugin, Plugin Version: 16.3. \textbf{Function}: One of the error codes. \textbf{Notes}: Not enough memory available to complete this command.

144.1.44  \texttt{kErrorNoReadersAvailable} = \& H8010002E

MBS Tools Plugin, Plugin Version: 16.3. \textbf{Function}: One of the error codes. \textbf{Notes}: No smart card reader is available.
144.1.45  kErrorNoService = & H8010001D

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The smart card resource manager is not running.

144.1.46  kErrorNoSmartcard = & H8010000C

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The operation requires a smart card, but no smart card is currently in the device.

144.1.47  kErrorNoSuchCertificate = & H8010002C

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The requested certificate does not exist.

144.1.48  kErrorNotReady = & H80100010

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The reader or card is not ready to accept commands.

144.1.49  kErrorNotTransacted = & H80100016

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** An attempt was made to end a nonexistent transaction.

144.1.50  kErrorPciTooSmall = & H80100019

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The PCI receive buffer was too small.

144.1.51  kErrorProtoMismatch = & H8010000F

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The requested protocols are incompatible with the protocol currently in use with the card.
144.1.52 kErrorReaderUnavailable = & H80100017

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes. **Notes:** The specified reader is not currently available for use.

144.1.53 kErrorReaderUnsupported = & H8010001A

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes. **Notes:** The reader driver does not meet minimal requirements for support.

144.1.54 kErrorRemovedCard = & H80100069

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes. **Notes:** The smart card has been removed, so further communication is not possible.

144.1.55 kErrorResetCard = & H80100068

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes. **Notes:** The smart card was reset.

144.1.56 kErrorSecurityViolation = & H8010006A

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes. **Notes:** Access was denied because of a security violation.

144.1.57 kErrorServerTooBusy = & H80100031

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes. **Notes:** The smart card resource manager is too busy to complete this operation.

144.1.58 kErrorServiceStopped = & H8010001E

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes. **Notes:** The smart card resource manager has shut down.
144.1.59  kErrorSharingViolation = & H8010000B

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The smart card cannot be accessed because of other outstanding connections.

144.1.60  kErrorShutdown = & H80100018

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The operation has been aborted to allow the server application to exit.

144.1.61  kErrorSuccess = 0

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** No error.

144.1.62  kErrorSystemCancelled = & H80100012

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The action was canceled by the system, presumably to log off or shut down.

144.1.63  kErrorTimeout = & H8010000A

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The user-specified time-out value has expired.

144.1.64  kErrorUnexpected = & H8010001F

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** An unexpected card error has occurred.

144.1.65  kErrorUnknownCard = & H8010000D

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The specified smart card name is not recognized.
144.1.66  kErrorUnknownError = & H80100014

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** An internal error has been detected, but the source is unknown.

144.1.67  kErrorUnknownReader = & H80100009

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The specified reader name is not recognized.

144.1.68  kErrorUnknownResMng = & H8010002B

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** An unrecognized error code was returned.

144.1.69  kErrorUnpoweredCard = & H80100067

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** Power has been removed from the smart card, so that further communication is not possible.

144.1.70  kErrorUnresponsiveCard = & H80100066

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The smart card is not responding to a reset.

144.1.71  kErrorUnsupportedCard = & H80100065

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The reader cannot communicate with the card, due to ATR string configuration conflicts.

144.1.72  kErrorUnsupportedFeature = & H80100022

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** This smart card does not support the requested feature.
144.1. CLASS SMARTCARDCONTEXTMBS

144.1.73  kErrorWaitedTooLong = & H80100007

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** An internal consistency timer has expired.

144.1.74  kErrorWriteTooMany = & H80100028

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** An attempt was made to write more data than would fit in the target object.

144.1.75  kErrorWrongChv = & H8010006B

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.  
**Notes:** The card cannot be accessed because the wrong PIN was presented.
class SmartCardMBS

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for a smartcard.
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

### 144.2.2 Methods

#### 144.2.3 BeginTransaction

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Starts a transaction.
**Notes:**
The function waits for the completion of all other transactions before it begins. After the transaction starts, all other applications are blocked from accessing the smart card while the transaction is in progress.

If a transaction is held on the card for more than five seconds with no operations happening on that card, then the card is reset. Calling any of the Smart Card and Reader Access Functions or Direct Card Access Functions on the card that is transacted results in the timer being reset to continue allowing the transaction to be used.

The BeginTransaction function is a smart card and reader access function. For more information about other access functions, see Smart Card and Reader Access Functions.

Lasterror is set.

#### 144.2.4 CancelTransaction

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Cancels current transaction.
**Notes:** Lasterror is set.

#### 144.2.5 Constructor

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.
144.2. CLASS SMARTCARDMBS

144.2.6 Control(ControlCode as Integer, input as ptr, inputLength as UInt32, output as ptr, byref outputLength as UInt32)

**Notes:**
You can call it any time after a successful call to SmartCard.Connect and before a successful call to SmartCard.Disconnect. The effect on the state of the reader depends on the control code.

**ControlCode:** Control code for the operation. This value identifies the specific operation to be performed.

**Input:** Pointer to a buffer that contains the data required to perform the operation. This parameter can be nil if the ControlCode parameter specifies an operation that does not require input data.

**inputLength:** Size, in bytes, of the buffer pointed to by Input.

**Output:** Pointer to a buffer that receives the operation’s output data. This parameter can be nil if the ControlCode parameter specifies an operation that does not produce output data.

**outputLength:** On input the size, in bytes, of the buffer pointed to by output. On output the receives the size, in bytes, of the data stored into the buffer pointed to by output.

Lasterror is set.

144.2.7 Disconnect(Disposition as Integer = 0)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Terminates a connection previously opened between the calling application and a smart card in the target reader.

**Notes:**
Disposition: Action to take on the card in the connected reader on close.

can be:

- kUnpowerCard: Power down the card and reset it (Cold Reset).
- kResetCard: Reset the card (Warm Reset).
- kLeaveCard: Do not do anything special on reconnect.
- kEjectCard: Eject card.

Lasterror is set.
144.2.8 EndTransaction(Disposition as Integer = 0)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Ends transaction.

**Notes:**
Completes a previously declared transaction, allowing other applications to resume interactions with the card.

Disposition: Action to take on the card in the connected reader on close. Can be Eject, Leave, Reset or Unpower. See constants.

LastError is set.

144.2.9 GetAttrib(AttrId as UInt32) as Memoryblock

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the current reader attributes for the given handle.

**Notes:**
It does not affect the state of the reader, driver, or card.
The plugin first queries for size of attribute and on success queries again to get the data and return it as a memoryblock.

AttrId: The attribute ID. See kAttribute* constants.

LastError is set.

144.2.10 Reconnect(ShareMode as UInt32, PreferredProtocols as UInt32, Initialization as UInt32)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The Reconnect function reestablishes an existing connection between the calling application and a smart card.

**Notes:**
This function moves a card handle from direct access to general access, or acknowledges and clears an error condition that is preventing further access to the card.

Initialization can be one of the following:

ShareMode: A flag that indicates whether other applications may form connections to the card. Use one of
144.2.  CLASS SMARTCARDMBS

kUnpowerCard  Power down the card and reset it (Cold Reset).
kResetCard    Reset the card (Warm Reset).
kLeaveCard    Do not do anything special on reconnect.

SmartCardMBS.kShare* constants. e.g. kShareExclusive
PreferredProtocols: A bitmask of acceptable protocols for the connection. Possible values may be combined
with the OR operation. Use SmartCardMBS.kProtocol* constants. e.g. kProtocolT1

Lasterror and ActiveProtocol are set.

144.2.11  SetAttrib(AttrId as UInt32, mem as Memoryblock)

Sets the given reader attribute.
Notes:
It does not affect the state of the reader, reader driver, or smart card. Not all attributes are supported by all
readers (nor can they be set at all times) as many of the attributes are under direct control of the transport
protocol.

AttrId: The attribute ID. See kAttribute* constants.
Mem: The data to store.

Lasterror is set.

144.2.12  Status(byref Reader as string, byref State as Integer, byref Protocol
as Integer, byref CardID as string)

Provides the current status of a smart card in a reader.
Notes:
You can call it any time after a successful call to SCardConnect and before a successful call to SCardDis-
connect. It does not affect the state of the reader or reader driver.

Provides reader name, state of card (see kState constants), Protocol (see kProtocol constants) and CardID.

State: Current state of the smart card in the reader. Upon success, it receives one of the following state
indicators.
Protocol: Current protocol, if any. The returned value is meaningful only if the returned value of pdwState is kCardStateSpecific.
CardID: 32-byte buffer that receives the ATR string from the currently inserted card, if available.

LastError is set.
See also:

- 144.2.13 Status(byref State as Integer, byref Protocol as Integer, byref CardID as string)

### 144.2.13 Status(byref State as Integer, byref Protocol as Integer, byref CardID as string)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Provides the current status of a smart card in a reader.

**Notes:**
Same as other Status function, but without querying the name.
LastError is set.
See also:

- 144.2.12 Status(byref Reader as string, byref State as Integer, byref Protocol as Integer, byref CardID as string)

### 144.2.14 Transmit(ioSendPci as Ptr, SendBuffer as ptr, SendLength as UInt32, ioRecvPci as ptr, RecvBuffer as Ptr, byref RecvLength as UInt32)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sends a service request to the smart card and expects to receive data back from the card.

**Example:**
```vbnet
dim card as SmartCardMBS // your card

dim header as new memoryBlock(8)
header.Int32Value(0) = 2 // T1
header.Int32Value(4) = 8 // size of this block

dim command as new MemoryBlock(5)
command.Int8Value(0) = 0
command.Int8Value(1) = & hCA
command.Int8Value(2) = 1
command.Int8Value(3) = & h82
command.Int8Value(4) = 2

dim buffer as new MemoryBlock(512)
```
144.2. CLASS SMARTCARDMBS

`dim` ReceiveHeader as new MemoryBlock(8)

dim RecvLength as UInt32

card.Transmit(header, command, command.Size, ReceiveHeader, buffer, RecvLength)

MsgBox "Received "+str(RecvLength)+" bytes"

Notes:

ioSendPci:
A pointer to the protocol header structure for the instruction. This buffer is in the format of an SCARD_IO_REQUEST structure, followed by the specific protocol control information (PCI).
For the T=0, T=1, and Raw protocols, the PCI structure is constant. The smart card subsystem supplies a global T=0, T=1, or Raw PCI structure, which you can reference by using the symbols SCARD_PCI_T0, SCARD_PCI_T1, and SCARD_PCI_RAW respectively.

SendBuffer:
A pointer to the actual data to be written to the card. For T=0, the data parameters are placed into the address pointed to by pbSendBuffer according to the following structure:

<table>
<thead>
<tr>
<th>Type</th>
<th>name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Byte</td>
<td>Cla</td>
<td>The instruction class</td>
</tr>
<tr>
<td>Byte</td>
<td>Ins</td>
<td>The instruction code</td>
</tr>
<tr>
<td>Byte</td>
<td>P1</td>
<td>Parameter to the instruction</td>
</tr>
<tr>
<td>Byte</td>
<td>P2</td>
<td>Parameter to the instruction</td>
</tr>
<tr>
<td>Byte</td>
<td>P3</td>
<td>Size of I/O transfer</td>
</tr>
</tbody>
</table>

The data sent to the card should immediately follow the send buffer. In the special case where no data is sent to the card and no data is expected in return, P3 is not sent.

SendLength:
The length, in bytes, of the SendBuffer parameter. For T=0, in the special case where no data is sent to the card and no data expected in return, this length must reflect that the P3 member is not being sent; the length should be 4.

ioRecvPci:
Pointer to the protocol header structure for the instruction, followed by a buffer in which to receive any returned protocol control information (PCI) specific to the protocol in use. This parameter can be nil if no PCI is returned.

RecvBuffer:
Pointer to any data returned from the card.
For T=0, the data is immediately followed by the SW1 and SW2 status bytes. If no data is returned from
the card, then this buffer will only contain the SW1 and SW2 status bytes.

RecvLength:
Supplies the length, in bytes, of the RecvBuffer parameter and receives the actual number of bytes received
from the smart card. This value cannot be SCARD_AUTOALLOCATE because Transmit does not support
SCARD_AUTOALLOCATE.
For T=0, the receive buffer must be at least two bytes long to receive the SW1 and SW2 status bytes.

Lasterror is set.

144.2.15 Properties

144.2.16 ActiveProtocol as Integer

The active protocol.
Notes: (Read and Write property)

144.2.17 Handle as Integer

The internal object reference.
Notes: (Read and Write property)

144.2.18 Lasterror as Integer

The last error code.
Notes: (Read and Write property)
144.2. CLASS SMARTCARDMBS

144.2.19 Constants

144.2.20 kAttributeAtrString = 590595

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants. **Notes:** Answer to reset (ATR) string.

144.2.21 kAttributeChannelId = 131344

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants. **Notes:**

DWORD encoded as &hDDDDCCCC, where DDDD = data channel type and CCCC = channel number.

The following encodings are defined for DDDD:
&h01 serial I/O; CCCC is a port number.
&h02 parallel I/O; CCCC is a port number.
&h04 PS/2 keyboard port; CCCC is zero.
&h08 SCSI; CCCC is SCSI ID number.
&h10 IDE; CCCC is device number.
&h20 USB; CCCC is device number.
&hFy vendor-defined interface with y in the range zero through 15; CCCC is vendor defined.

144.2.22 kAttributeCharacteristics = 393552

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants. **Notes:**

Integer indicating which mechanical characteristics are supported. If zero, no special characteristics are supported. Note that multiple bits can be set:
&h00000001 Card swallowing mechanism
&h00000002 Card ejection mechanism
&h00000004 Card capture mechanism
All other values are reserved for future use (RFU).

144.2.23 kAttributeCurrentBwt = 524809

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants. **Notes:** Current block waiting time.
144.2.24  \textit{kAttributeCurrentClk} = 524802

144.2.25  \textit{kAttributeCurrentCwt} = 524810

144.2.26  \textit{kAttributeCurrentD} = 524804

144.2.27  \textit{kAttributeCurrentEbcEncoding} = 524811

MBS Tools Plugin, Plugin Version: 16.3. \textbf{Function:} One of the attribute ID constants. \textbf{Notes:}

Current error block control encoding. 
0 = longitudinal redundancy check (LRC) 
1 = cyclical redundancy check (CRC)

144.2.28  \textit{kAttributeCurrentF} = 524803

144.2.29  \textit{kAttributeCurrentIfsc} = 524807

144.2. CLASS SMARTCARDMBS

144.2.30  kAttributeCurrentIfsd = 524808

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.  
**Notes:** Current byte size for information field size device.

144.2.31  kAttributeCurrentIoState = 590594

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.  
**Notes:** Current IO state

144.2.32  kAttributeCurrentN = 524805

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.  
**Notes:** Current guard time.

144.2.33  kAttributeCurrentProtocolType = 524801

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.  
**Notes:** Integer encoded as 0x0rrrpppp where rrr is RFU and should be 0x000. pppp encodes the current protocol type. Whichever bit has been set indicates which ISO protocol is currently in use. (For example, if bit zero is set, T=0 protocol is in effect.)

144.2.34  kAttributeCurrentW = 524806

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.  
**Notes:** Current work waiting time.

144.2.35  kAttributeDefaultClk = 196897

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.  
**Notes:** Default clock rate, in kHz.

144.2.36  kAttributeDefaultDataRate = 196899

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.  
**Notes:** Default data rate, in bps.
144.2.37  **kAttributeDeviceFriendlyNameA = 2147418115**

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.  
**Notes:** Reader’s display name. Windows ANSI encoding.

144.2.38  **kAttributeDeviceFriendlyNameW = 2147418117**

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.  
**Notes:** Reader’s display name. Unicode encoding.

144.2.39  **kAttributeDeviceInUse = 2147418114**

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.  
**Notes:** Reserved for future use.

144.2.40  **kAttributeDeviceSystemNameA = 2147418116**

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.  
**Notes:** Reader’s system name. Windows ANSI encoding.

144.2.41  **kAttributeDeviceSystemNameW = 2147418118**

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.  
**Notes:** Reader’s system name. Unicode encoding.

144.2.42  **kAttributeDeviceUnit = 2147418113**

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.  
**Notes:** Instance of this vendor’s reader attached to the computer. The first instance will be device unit 0, the next will be unit 1 (if it is the same brand of reader) and so on. Two different brands of readers will both have zero for this value.
144.2. CLASS SMARTCARDMBS

144.2.43 \texttt{kAttributeEscAuthrequest} = 499717

MBS Tools Plugin, Plugin Version: 16.3. \textbf{Function}: One of the attribute ID constants. \textbf{Notes}: Esc authentication request

144.2.44 \texttt{kAttributeEscCancel} = 499715

MBS Tools Plugin, Plugin Version: 16.3. \textbf{Function}: One of the attribute ID constants. \textbf{Notes}: Esc cancel

144.2.45 \texttt{kAttributeEscReset} = 499712

MBS Tools Plugin, Plugin Version: 16.3. \textbf{Function}: One of the attribute ID constants. \textbf{Notes}: Esc reset

144.2.46 \texttt{kAttributeExtendedBwt} = 524812

144.2.47 \texttt{kAttributeIccInterfaceStatus} = 590593

MBS Tools Plugin, Plugin Version: 16.3. \textbf{Function}: One of the attribute ID constants. \textbf{Notes}: Single byte. Zero if smart card electrical contact is not active; nonzero if contact is active.

144.2.48 \texttt{kAttributeIccPresence} = 590592

MBS Tools Plugin, Plugin Version: 16.3. \textbf{Function}: One of the attribute ID constants. \textbf{Notes}:

Single byte indicating smart card presence:
0 = not present
1 = card present but not swallowed (applies only if reader supports smart card swallowing)
2 = card present (and swallowed if reader supports smart card swallowing)
4 = card confiscated.
144.2.49  kAttributeIccTypePerAtr = 590596

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.  
**Notes:**  
Single byte indicating smart card type.  
0 = unknown type  
1 = 7816 Asynchronous  
2 = 7816 Synchronous  
Other values RFU.

144.2.50  kAttributeMaxClk = 196898

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.  
**Notes:** Maximum clock rate, in kHz.

144.2.51  kAttributeMaxDataRate = 196900

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.  
**Notes:** Maximum data rate, in bps.

144.2.52  kAttributeMaxIfsd = 196901

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.  
**Notes:** Maximum bytes for information file size device.

144.2.53  kAttributeMaxInput = 499719

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.  
**Notes:** Maximum input

144.2.54  kAttributePowerMgmtSupport = 262449

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.  
**Notes:** Zero if device does not support power down while smart card is inserted. Nonzero otherwise.
144.2. CLASS SMARTCARDMBS

144.2.55  \texttt{kAttributeProtocolTypes} = 196896

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
**Notes:**
Integer encoded as 0x0rrrpppp where rrr is RFU and should be 0x000.
pppp encodes the supported protocol types. A '1' in a given bit position indicates support for the associated
ISO protocol, so if bits zero and one are set, both T=0 and T=1 protocols are supported.

144.2.56  \texttt{kAttributeSupressT1IfsRequest} = 2147418119

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
**Notes:** Supress T1 information file size request.

144.2.57  \texttt{kAttributeUserAuthInputDevice} = 328002

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
**Notes:** User authentication input device.

144.2.58  \texttt{kAttributeUserToCardAuthDevice} = 328000

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
**Notes:** User to card authentication device.

144.2.59  \texttt{kAttributeVendorIfdSerialNo} = 65795

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
**Notes:** Vendor-supplied interface device serial number.

144.2.60  \texttt{kAttributeVendorIfdType} = 65793

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
**Notes:** Vendor-supplied interface device type (model designation of reader).
**144.2.61**  \( \text{kAttributeVendorIfdVersion} = 65794 \)

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
**Notes:** Vendor-supplied interface device version (DWORD in the form 0xMMmmmbbbb where MM = major version, mm = minor version, and bbbb = build number).

**144.2.62**  \( \text{kAttributeVendorName} = 65792 \)

**Notes:** Vendor name.

**144.2.63**  \( \text{kCardStateAbsent} = 2 \)

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card state constants.
**Notes:** There is no card in the reader.

**144.2.64**  \( \text{kCardStateNegotiable} = 32 \)

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card state constants.
**Notes:** The card has been reset and is awaiting PTS negotiation.

**144.2.65**  \( \text{kCardStatePowered} = 16 \)

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card state constants.
**Notes:** Power is being provided to the card, but the reader driver is unaware of the mode of the card.

**144.2.66**  \( \text{kCardStatePresent} = 4 \)

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card state constants.
**Notes:** There is a card in the reader, but it has not been moved into position for use.

**144.2.67**  \( \text{kCardStateSpecific} = 64 \)

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card state constants.
**Notes:** The card has been reset and specific communication protocols have been established.
144.2. CLASS SMARTCARDMBS

144.2.68 kCardStateSwallowed = 8

MBS Tools Plugin, Plugin Version: 16.3. **Function**: One of the card state constants. **Notes**: There is a card in the reader in position for use. The card is not powered.

144.2.69 kCardStateUnknown = 1

MBS Tools Plugin, Plugin Version: 16.3. **Function**: One of the card state constants. **Notes**: Unknown state.

144.2.70 kEjectCard = 3

MBS Tools Plugin, Plugin Version: 16.3. **Function**: One of the card initialization modes. **Notes**: Eject card.

144.2.71 kLeaveCard = 0

MBS Tools Plugin, Plugin Version: 16.3. **Function**: One of the card initialization modes. **Notes**: Do not do anything special on reconnect.

144.2.72 kProtocolAny = 3

MBS Tools Plugin, Plugin Version: 16.3. **Function**: One of the protocol constants. **Notes**: Any protocol is welcome.

144.2.73 kProtocolRAW = 4

MBS Tools Plugin, Plugin Version: 16.3. **Function**: One of the protocol constants. **Notes**: Raw protocol.

144.2.74 kProtocolT0 = 1

MBS Tools Plugin, Plugin Version: 16.3. **Function**: One of the protocol constants. **Notes**: T=0 is the active protocol.
144.2.75  \( k_{ProtocolT1} = 2 \)

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the protocol constants.
**Notes:** \( T=1 \) is the active protocol.

144.2.76  \( k_{ProtocolT15} = 8 \)

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the protocol constants.
**Notes:** \( T=15 \) protocol (not on Windows)

144.2.77  \( k_{ProtocolUndefined} = 0 \)

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the protocol constants.
**Notes:** \( kShareDirect \) has been specified, so that no protocol negotiation has occurred. It is possible that there is no card in the reader.

144.2.78  \( k_{ProtocolUnset} = 0 \)

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the protocol constants.
**Notes:** Unset

144.2.79  \( k_{ResetCard} = 1 \)

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card initialization modes.
**Notes:** Reset the card (Warm Reset).

144.2.80  \( k_{ShareDirect} = 3 \)

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the flags that indicates whether other applications may form connections to the card.
**Notes:** This application is allocating the reader for its private use, and will be controlling it directly. No other applications are allowed access to it.
144.2. CLASS SMARTCARDMBS

144.2.81 kShareExclusive = 1

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the flags that indicates whether other applications may form connections to the card.
**Notes:** This application is not willing to share the card with other applications.

144.2.82 kShareShared = 2

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the flags that indicates whether other applications may form connections to the card.
**Notes:** This application is willing to share the card with other applications.

144.2.83 kUnpowerCard = 2

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card initialization modes.
**Notes:** Power down the card and reset it (Cold Reset).

Social

145.1 class ACAccountCredentialMBS

145.1.1 class ACAccountCredentialMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: An ACAccountCredential object encapsulates the information needed to authenticate a user. Notes: To create an account credential that uses the OAuth open authentication standard, use the Constructor.

145.1.2 Methods

145.1.3 Constructor(token as string, refreshToken as string, expiryDate as date)

Accounts can optionally use the OAuth open authentication standard to authenticate your client application. Instead of the user giving their username and password to log in, the server authenticates the user, and your client application receives a token that grants it access to specific resources for a defined duration. The authentication mechanism uses a key and secret scheme similar to the public and private keys used by ssh. A token is a unique, random string of letters and numbers that is paired with a secret to protect the token from being abused. You initialize account credentials using this token and secret token.
To learn more about OAuth, go to Hueniverse OAuth.
http://hueniverse.com/oauth/

145.2 class ACAccountMBS

145.2.1 class ACAccountMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The account class.
Notes:
An ACAccount object encapsulates information about a user account stored in the Accounts database. You can create and retrieve accounts using an ACAccountStore object. The ACAccountStore object provides an interface to the persistent Accounts database. For each user, all account objects belong to a single ACAccountStore object.

Available in OS X v10.8 and later in 64-bit applications.

145.2.2 Methods

145.2.3 Constructor(type as ACAccountTypeMBS)

Notes: Available in OS X v10.8 and later.

145.2.4 Destructor

145.2.5 Properties

145.2.6 accountDescription as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A human-readable description of the account.
Notes:
This property is available if the user grants the application access to this account; otherwise it is "". (Read and Write property)
145.2.7 accountType as ACAccountTypeMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 
**Function:** The type of service account. 
**Notes:** 
This property is required. You specify the account type using the Constructor. You can use the accountsWithAccountType method to retrieve all accounts of a particular type. 
(Read and Write property)

145.2.8 credential as ACAccountCredentialMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 
**Function:** The credential used to authenticate the user of this account. 
**Notes:** 
This property is required and must be set before the account is saved. For privacy reasons, this property is inaccessible after the account is saved. 
(Read and Write property)

145.2.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 
**Function:** Internal object reference. 
**Notes:** (Read and Write property)

145.2.10 identifier as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 
**Function:** A unique identifier for this account. 
**Notes:** 
Use the accountWithIdentifier method to get an account with the specified identifier. 
(Read only property)

145.2.11 Parent as ACAccountStoreMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 
**Function:** The account store for this account. 
**Notes:** (Read only property)
145.2. CLASS ACACCOUNTMBS

145.2.12 username as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The username for this account.
Notes:
This property must be set before the account is saved. After the account is saved, this property is available if the user grants the application access to this account; otherwise it is "".
(Read and Write property)
145.3  class ACAccountStoreMBS

145.3.1  class ACAccountStoreMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The ACAccountStore class provides an interface for accessing, manipulating, and storing accounts. **Notes:**

To create and retrieve accounts from the Accounts database, you must create an ACAccountStore object. Each ACAccount object belongs to a single ACAccountStore object.

Available on Mac OS X 10.8 and later in 64-bit applications.

145.3.2  Methods

145.3.3  ACAccountStoreDidChangeNotification as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification names. **Notes:**

Posted when the accounts managed by this account store changed in the database. There is no userInfo dictionary associated with this notification.

This notification is sent if an account is saved or removed locally or externally. If you receive this notification, you should refetch all account objects.

The plugin automatically registeres this for the Changed event.

145.3.4  accounts as ACAccountMBS()

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The accounts managed by this account store.

145.3.5  accountsWithAccountType(type as ACAccountTypeMBS) as ACAccountMBS()

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns all accounts of the specified type.
145.3.6 accountTypeWithAccountTypeIdentifier(identifier as string) as ACAccountTypeMBS

145.3.7 accountWithIdentifier(identifier as string) as ACAccountMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the account with the specified identifier.

145.3.8 ACErrorDomain as string

145.3.9 available as boolean

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Whether class is available. Notes: Returns true on Mac OS X 10.8 in a 64-bit application.

145.3.10 Constructor

145.3.11 Destructor

145.3.12 removeAccount(account as ACAccountMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Removes an account from the account store.
Notes:
account: The account to remove.

This call will fail if you don’t have sufficient rights to remove the account.

145.3.13 renewCredentialsForAccount(account as ACAccountMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Renews account credentials when the credentials are no longer valid.
Notes:
account: The account to renew credentials.

For Twitter and Sina Weibo accounts, this method will prompt the user to go to Settings to re-enter their password.
For Facebook accounts, if the access token has become invalid due to a regular expiration, this method will obtain a new one.
If the user has deauthorized your app, this renewal request will return ACAccountCredentialRenewResultRejected.

145.3.14 requestAccessToAccountsWithTypeInfo(accountType as ACAccountTypeMBS, dic as dictionary, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Obtains permission to access protected user properties.
Notes:
accountType: The account type.
options: The account options.

Certain account types (such as Facebook) require an options dictionary. This method will throw an NSInvalidArgumentException if the options dictionary is not provided for such account types. Conversely, if the account type does not require an options dictionary, the options parameter must be nil.
145.3. CLASS ACACCOUNTSTOREMBS

145.3.15 saveAccount(account as ACAccountMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Saves an account to the Accounts database.
Notes:
account: The account to save.

If the account type supports authentication and the account is not authenticated, the account server uses the
account’s credentials to authenticate it. If the authentication is successful, the account is saved; otherwise
it is not saved.

145.3.16 Properties

145.3.17 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

145.3.18 Events

145.3.19 Changed

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Event called when database changed.
Notes:
Posted when the accounts managed by this account store changed in the database. There is no userInfo
dictionary associated with this notification.

This notification is sent if an account is saved or removed locally or externally. If you receive this notification,
you should refetch all account objects.

145.3.20 removeAccountCompleted(account as ACAccountMBS, success as boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when account removing completed.
145.3.21 `renewCredentialsForAccountCompleted(account as ACAccountMBS, 
renewResult as Integer, error as NSErrorMBS, tag as Variant)`

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event called when renew credentials completed.

145.3.22 `requestAccessCompleted(granted as boolean, error as NSErrorMBS, 
accountType as ACAccountTypeMBS, tag as Variant)`

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called when requestAccessToAccountsWithtype completed.

145.3.23 `saveAccountCompleted(success as boolean, error as NSErrorMBS, 
account as ACAccountMBS, tag as Variant)`

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The account save completed.

145.3.24 **Constants**

145.3.25 `ACAccountCredentialRenewResultFailed = 2`

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the status codes of credential renewal requests.
**Notes:** A non-user-initiated cancel of the prompt. Try again.

145.3.26 `ACAccountCredentialRenewResultRejected = 1`

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the status codes of credential renewal requests.
**Notes:** Renewal failed because the user revoked your access to their account.

145.3.27 `ACAccountCredentialRenewResultRenewed = 0`

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the status codes of credential renewal requests.
145.3. CLASS ACACCOUNTSTOREMBS

Notes: The accounts credentials have been renewed and are now associated with the account.

145.3.28   ACErrorAccessDeniedByProtectionPolicy = 10

MBS Mac64bit Plugin, Plugin Version: 15.3. Function: One of the error constants. Notes: Due to the current protection policy in effect, we couldn’t fetch a credential

145.3.29   ACErrorAccessInfoInvalid = 8

MBS Mac64bit Plugin, Plugin Version: 15.3. Function: One of the error constants. Notes: The client’s access info dictionary has incorrect or missing values.

145.3.30   ACErrorAccountAlreadyExists = 5

MBS Mac64bit Plugin, Plugin Version: 15.3. Function: One of the error constants. Notes: Account wasn’t added because it already exists.

145.3.31   ACErrorAccountAuthenticationFailed = 3

MBS Mac64bit Plugin, Plugin Version: 15.3. Function: One of the error constants. Notes: Account wasn’t saved because authentication of the supplied credential failed.

145.3.32   ACErrorAccountMissingRequiredProperty = 2

MBS Mac64bit Plugin, Plugin Version: 15.3. Function: One of the error constants. Notes: Account wasn’t saved because it is missing a required property.

145.3.33   ACErrorAccountNotFound = 6

MBS Mac64bit Plugin, Plugin Version: 15.3. Function: One of the error constants. Notes: Account wasn’t deleted because it could not be found.
145.3.34  **ACErrorAccountTypeInvalid = 4**

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.  
**Notes:** Account wasn’t saved because the account type is invalid.

145.3.35  **ACErrorClientPermissionDenied = 9**

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.  
**Notes:** Your client does not have access to the requested data.

145.3.36  **ACErrorCredentialNotFound = 11**

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.  
**Notes:** Yo, I tried to find your credential, but it must have run off!

145.3.37  **ACErrorFetchCredentialFailed = 12**

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.  
**Notes:** Something bad happened on the way to the keychain.

145.3.38  **ACErrorInvalidClientBundleID = 16**

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.  
**Notes:** The client making the request does not have a valid bundle ID.

145.3.39  **ACErrorPermissionDenied = 7**

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.  
**Notes:** The operation didn’t complete because the user denied permission.

145.3.40  **ACErrorRemoveCredentialFailed = 14**

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.  
**Notes:** Unable to remove credential.
145.3. **CLASS ACACCOUNTSTOREMBS**

145.3.41 **ACErrorStoreCredentialFailed = 13**

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.  
**Notes:** Unable to store credential

145.3.42 **ACErrorUnknown = 1**

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.  
**Notes:** Unknown error

145.3.43 **ACErrorUpdatingNonexistentAccount = 15**

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.  
**Notes:** Account save failed because the account being updated has been removed.
145.4 class ACAccountTypeMBS

145.4.1 class ACAccountTypeMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 
**Function:** An ACAccountType object encapsulates information about all accounts of a particular type. 
**Notes:**
You do not create account type objects directly. To obtain an account type, use the Constructor or the accountType property of an account object. Account Type Identifiers describes the identifiers for currently supported account types. You can also use the accountsWithAccountType method to obtain all accounts of a particular type.

Available in OS X v10.8 and later in 64-bit applications.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

145.4.2 Methods

145.4.3 ACAccountTypeIdentifierFacebook as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 
**Function:** Identifier for the Facebook account type.

145.4.4 ACAccountTypeIdentifierLinkedIn as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 
**Function:** Identifier for the LinkedIn account type.
**Notes:** Available in OS X v10.9 and later.

145.4.5 ACAccountTypeIdentifierSinaWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 
**Function:** Identifier for the Sina Weibo account type.

145.4.6 ACAccountTypeIdentifierTencentWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 
**Function:** Identifier for the Tencent Weibo account type.
145.4. CLASS ACACCOUNTTYPEMBS

Notes: Available in OS X v10.9 and later.

145.4.7 ACAccountTypeIdentifierTwitter as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 

Function: Identifier for the Twitter account type.

145.4.8 accessGranted as boolean

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 

Function: A Boolean value indicating whether the user granted the application access to accounts of this type. 
Notes: True if the application has access to accounts of this type; otherwise false.

145.4.9 accountTypeDescription as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 

Function: A human-readable description of the account type.

145.4.10 ACFacebookAppIdKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 

Function: Your Facebook App ID, as it appears on the Facebook website.

145.4.11 ACFacebookAudienceEveryone as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 

Function: Posts from your app are visible to everyone.

145.4.12 ACFacebookAudienceFriends as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 

Function: Posts are visible only to friends.
145.4.13 **ACFacebookAudienceKey** as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Only required when posting permissions are requested.

145.4.14 **ACFacebookAudienceOnlyMe** as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Posts are visible to the user only.

145.4.15 **ACFacebookPermissionsKey** as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An array of of the permissions you’re requesting.

145.4.16 **ACLLinkedInAppIdKey** as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Your LinkedIn App ID (or API Key), as it appears on the LinkedIn website.

145.4.17 **ACLLinkedInPermissionsKey** as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An array of of the LinkedIn permissions you’re requesting.

145.4.18 **ACTencentWeiboAppIdKey** as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Tencent App ID

145.4.19 **Constructor**

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.
145.4.20 identifier as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The unique identifier for the account type.

145.4.21 Properties

145.4.22 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.  
**Notes:** (Read and Write property)
145.5  class CustomNSSharingServiceMBS

145.5.1  class CustomNSSharingServiceMBS

Function: The class for a custom sharing service.
Notes:
You only use it to get your own service inside your app into sharing picker.

Please call Close method when you want to stop the service.
Subclass of the NSSharingServiceMBS class.

145.5.2  Methods

145.5.3  Constructor(title as string, image as NSImageMBS, alternateImage as NSImageMBS = nil, delegate as NSSharingServiceDelegateMBS = nil, tag as Variant = nil)

Function: Creates a custom sharing service object.
Notes:
title: The custom sharing service name.
image: The image that represents the sharing service
alternateImage: The alternate image that represents the sharing service
Delegate: The delegate where events are called for this service.

Custom sharing services can be added to the NSSharingServicePicker with the sharingServicesForItems event.
Available in OS X v10.8 and later.

Please call Close method when you want to stop the service.

145.5.4  Events

145.5.5  performCustomService(tag as Variant)

Function: Called when user selected this service and you need to perform your work.
145.6. class NSSharingServiceDelegateMBS

145.6.1 class NSSharingServiceDelegateMBS

**Function:** The NSSharingServiceDelegate protocol allows customization of the position and animation of the share sheet as well as be notified of the success or failure of the item being shared.
**Notes:** Available in OS X v10.8 and later.

145.6.2 Methods

145.6.3 Constructor

**Function:** The constructor.

145.6.4 Destructor

**Function:** The destructor.

145.6.5 Properties

145.6.6 Handle as Integer

**Function:** The internal object reference.
**Notes:** (Read and Write property)

145.6.7 Events

145.6.8 didFailToShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS, error as NSErrorMBS)

**Function:** Invoked when the sharing service encountered an error when sharing items.
**Notes:**
CHAPTER 145. SOCIAL

sharingService: The sharing service.
items: The items being shared.
error: The error that was encountered when trying to share the item. If the error is NSUserCancelledError, the user simply cancelled the error.

Available in OS X v10.8 and later.

145.6.9 didShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS)

Function: Invoked when the sharing service has finished sharing the items.
Notes:
sharingService: The sharing service.
items: The items being shared.

Available in OS X v10.8 and later.

145.6.10 sourceFrameOnScreenForShareItem(service as NSSharingServiceMBS, item as Variant) as NSRectMBS

Function: Invoked when the sharing service is performed and the sharing window is displayed, to present a transition between the original items and the sharing window.
Notes:
sharingService: The sharing service.
item: The item being shared.

Return the rectangle, in screen coordinates, to display the transition.

145.6.11 sourceWindowForShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS, scope as Integer) as NSWindowMBS

Function: Returns the window that contained the share items.
Notes:
sharingService: The sharing service.
items: The items being shared.
sharingContentScope: The sharing content scope. The sharing scope can be modified from the default value of NSSharingContentScopeItem by setting a different value in the out parameter sharingContentScope.

Return the window of the shared items.

145.6.12 transitionImageForShareItem(service as NSSharingServiceMBS, item as Variant, contentRect as NSRectMBS) as NSImageMBS

**Function:** Invoked to allow returning a custom transition image when sharing an item.
**Notes:**
- sharingService: The sharing service.
- item: The shared item.
- contentRect: The content rectangle is the frame of the actual content inside the transition image, excluding all decorations. For example, if the transition image is a QuickLook thumbnail, the value would be QLThumbnailGetContentRect.

Return the image to display for the sharing transition. Its size should exactly match that of the original image.

145.6.13 willShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS)

**Function:** Invoked when the sharing service will share the specified items.
**Notes:**
- sharingService: The sharing service.
- items: The items being shared.
Available in OS X v10.8 and later.

145.6.14 Constants

145.6.15 NSSharingContentScopeFull = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the sharing scope constants to specify the nature of the things you are sharing.
**Notes:**
- Used when sharing the whole content of the current document, for example, the URL of the webpage.
Available in OS X v10.8 and later.
145.6.16 **NSSharingContentScopeItem = 0**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the sharing scope constants to specify the nature of the things you are sharing.

**Notes:**

Used when sharing a clearly identified item, for example, a file represented by its icon.
Available in OS X v10.8 and later.

145.6.17 **NSSharingContentScopePartial = 1**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the sharing scope constants to specify the nature of the things you are sharing.

**Notes:**

Used when sharing a portion of a more global content, for example, part of a webpage.
Available in OS X v10.8 and later.
class NSHaringServiceItemsMBS

Function: A collection class for files, images, texts and URLs.

Example:

```vbnet
dim p as Picture = LogoMBS(500)
dim t as new NSHaringServiceItemsMBS
dim image as new NSImageMBS(p)
t.AddImage image
t.AddText "Hello World. This is a great app!"
```

Notes: Create an object from this class, add some items and pass to the share methods.

### 145.7.2 Methods

#### 145.7.3 AddAttributedString(AttributedString as NSAttributedStringMBS)

Function: Adds one attributed string to the collection.

See also:

- 145.7.4 AddAttributedString(AttributedString as NSAttributedStringMBS)

#### 145.7.4 AddAttributedString(AttributedString() as NSAttributedStringMBS)

Function: Adds attributed strings to the collection.

See also:

- 145.7.3 AddAttributedString(AttributedString as NSAttributedStringMBS)

#### 145.7.5 AddFile(file as folderitem)

Function: Adds one file to the collection.
145.7.6 AddFiles(files() as folderitem)

**Function:** Adds an array of files to the collection.

145.7.7 AddImage(image as NSImageMBS)

**Function:** Adds one image to the collection.

145.7.8 AddImages(images() as NSImageMBS)

**Function:** Adds an array of images to the collection.

145.7.9 AddText(text as string)

**Function:** Adds one text to the collection.
See also:

- 145.7.10 AddText(texts() as string) 18384

145.7.10 AddText(texts() as string)

**Function:** Adds an array of texts to the collection.
See also:

- 145.7.9 AddText(text as string) 18384

145.7.11 AddURL(URL as string)

**Function:** Add one URL to the collection.
See also:

- 145.7.12 AddURL(URLs() as string) 18385
145.7. CLASS NSSHARINGSERVICEITEMSMBS

145.7.12 AddURL(Urls() as string)

Function: Adds an array of URLs to the collection.
See also:

- 145.7.11 AddURL(URL as string)

145.7.13 Constructor

Function: The constructor.

145.7.14 count as Integer

Function: Returns the number of items in this collection.

145.7.15 Images as NSImageMBS()

Function: Returns all images in the collection.

145.7.16 objectAtIndex(index as Integer) as Variant

Function: Returns object at the given index.
Notes:
Index is from 0 to count-1.
Returns URLs and files as string with URL.

145.7.17 Texts as string()

Function: Returns array with all texts in this collection.
145.7.18  URLs as string()

Function: Returns array with all URLs.
Notes: As files are also handled as URLs, the array contains also files in the collections as URLs.

145.7.19  Properties

145.7.20  Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)
145.8 class NSSharingServiceMBS

145.8.1 class NSSharingServiceMBS

Function: The NSSharingService class is used to provide a consistent user experience when sharing items on OS X.
Notes:
For example, items can be: NSURL objects, NSString objects, NSImage objects, video (through file URLs), or any object which implements the NSPasteboardWriting protocol.

For any item or group of items, the NSSharingServiceMBS will display a sharing sheet to allow the user to pre-visualize what will be shared to the service. A sharing service can: create a post on a social network like Twitter or Facebook, send a message by email or iMessage, upload videos to viewing services, or send a file by AirDrop.

145.8.2 Methods

145.8.3 alternateImage as NSImageMBS

Function: The alternate image representing the sharing service. (read-only)
Notes: Available in OS X v10.8 and later.

145.8.4 Available as boolean

Function: Whether sharing services are available.
Notes: Returns true on Mac OS X 10.8.

145.8.5 canPerformWithItems(items as NSSharingServiceItemsMBS) as Boolean

Function: Returns whether the service can share all the specified items.
Notes:
items: The items to share.

Return true if the service can share all the items; false otherwise. If items is nil, the method will return true.
when the service is configured.

This method can be used to validate a custom user interface such as a dedicated Twitter button. Therefore you could call it once at launch time with nil items to check whether to display the button or not, and then with real items to enable and disable the button depending on the context or selection.

Available in OS X v10.8 and later.

### 145.8.6 Close

**Function:** Closes the sharing services.
**Notes:** Same as destructor, but closes now, not later.

### 145.8.7 Constructor(name as string)

**Function:** Create a sharing service instance representing the specified service name.
**Notes:** name: The service name. See NSSharingServiceName* methods.

### 145.8.8 Destructor

**Function:** The destructor.

### 145.8.9 image as NSImageMBS

**Function:** The primary image representing the sharing service. (read-only)

### 145.8.10 NSSharingServiceNameAddToAperture as string

**Function:** One of the sharing service names.
**Notes:**
145.8. CLASS NSSHARINGSERVICEMBS

Adds the content to Aperture.
Available in OS X v10.8 and later.

145.8.11 NSSharingServiceNameAddToIPhoto as string

Function: One of the sharing service names. 
Notes: 
Adds the content to iPhoto. 
Available in OS X v10.8 and later.

145.8.12 NSSharingServiceNameAddToSafariReadingList as string

Function: One of the sharing service names. 
Notes: 
Add the content to the Safari Reading List. 
Available in OS X v10.8 and later.

145.8.13 NSSharingServiceNameComposeEmail as string

Function: One of the sharing service names. 
Notes: 
Creates an email messages with the content. 
Available in OS X v10.8 and later.

145.8.14 NSSharingServiceNameComposeMessage as string

Function: One of the sharing service names. 
Notes: 
Creates a Messages methods with the content. 
Available in OS X v10.8 and later.
145.8.15  NSSharingServiceNamePostImageOnFlickr as string

Function: One of the sharing service names.
Notes:
Posts the image on Flickr.
Available in OS X v10.8 and later.

145.8.16  NSSharingServiceNamePostOnFacebook as string

Function: One of the sharing service names.
Notes:
Posts the content to Facebook.
Available in OS X v10.8 and later.

145.8.17  NSSharingServiceNamePostOnSinaWeibo as string

Function: One of the sharing service names.
Notes:
Posts the content on a Sina Weibo, Chinese microblogging (weibo) website. Akin to a hybrid of Twitter and Facebook.
Available in OS X v10.8 and later.

145.8.18  NSSharingServiceNamePostOnTwitter as string

Function: One of the sharing service names.
Notes:
Posts the content on Twitter.
Available in OS X v10.8 and later.

145.8.19  NSSharingServiceNamePostVideoOnTudou as string

Function: One of the sharing service names.
Notes:
Posts the video on the video sharing service Tudou, based in the People's Republic of China.
Available in OS X v10.8 and later.

145.8.20  **NSSharingServiceNamePostVideoOnVimeo** as string

**Function:** One of the sharing service names.
**Notes:**
Posts the video on the video sharing service Vimeo.
Available in OS X v10.8 and later.

145.8.21  **NSSharingServiceNamePostVideoOnYouku** as string

**Function:** One of the sharing service names.
**Notes:**
Posts the video on the video sharing service Youku, based in the People's Republic of China.
Available in OS X v10.8 and later.

145.8.22  **NSSharingServiceNameSendViaAirDrop** as string

**Function:** One of the sharing service names.
**Notes:**
Sends the file via Air Drop.
Available in OS X v10.8 and later.

145.8.23  **NSSharingServiceNameUseAsDesktopPicture** as string

**Function:** One of the sharing service names.
**Notes:**
Replaces the user's desktop image with the content.
Available in OS X v10.8 and later.
145.8.24  NSSharingServiceNameUseAsTwitterProfileImage as string

**Function:** One of the sharing service names.
**Notes:**
Replaces the Twitter profile image with the content.
Available in OS X v10.8 and later.

145.8.25  performWithItems(items as NSSharingServiceItemsMBS)

**Function:** Manually performs the service on the provided items.
**Notes:**
items: The items to share.
In most cases this will display a sharing window.
Available in OS X v10.8 and later.

145.8.26  SetDelegate(delegate as NSSharingServiceDelegateMBS)

**Function:** Specifies the delegate of the sharing service.

145.8.27  sharingServiceNamed(name as string) as NSSharingServiceMBS

**Function:** Returns a sharing service instance representing the specified service name.
**Notes:**
serviceName: The service name. See NSSharingServiceName* methods.
Returns an instance of NSSharingService for the specified service name.
Available in OS X v10.8 and later.
145.8.28 sharingServicesForItems(items as NSSharingServiceItemsMBS) as NSSharingServiceMBS()

**Function:** Returns a list of sharing services which could share all the provided items together.

**Example:**

```vba
// get an image
dim logo as Picture = LogoMBS(500)
Dim nsi as new NSImageMBS( logo )

// make items object
Dim nshi as new NSSharingServiceItemsMBS
nshi.AddImage nsi

// query services which are supported
Dim ssl(-1) as NSSharingServiceMBS = NSSharingServiceMBS.sharingServicesForItems( nshi )

// show services
for each s as NSSharingServiceMBS in ssl
    msgBox s.title
next
```

**Notes:**

- items: The items to share.

Returns an array of sharing services to allow for items.
This method can be used to build a custom user interface or to populate a contextual menu.
Available in OS X v10.8 and later.

145.8.29 title as string

**Function:** The title of the sharing service. (read-only)

**Example:**

```vba
// get an image
dim logo as Picture = LogoMBS(500)
Dim nsi as new NSImageMBS( logo )

// make items object
Dim nshi as new NSSharingServiceItemsMBS
nshi.AddImage nsi
```
// query services which are supported
Dim ssl(-1) as NSSharingServiceMBS = NSSharingServiceMBS.sharingServicesForItems(nshi)

// show services
for each s as NSSharingServiceMBS in ssl
    msgBox s.title
next

145.8.30 Properties

145.8.31 Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)
145.9. **CLASS NSSHARINGSERVICEPICKERMBS**

145.9  **class NSSharingServicePickerMBS**

145.9.1  **class NSSharingServicePickerMBS**

**Function:** The NSSharingServicePicker class presents a list of sharing services, so that the user can choose a service to share an item.

**Notes:**

When a service is chosen, the picker automatically executes it, which presents the sharing window.

The events in this class allows customizing the picker’s available services, where it appears, and allows assigning the delegate object for the NSSharingService delegate.

Available in OS X v10.8 and later.

145.9.2  **Methods**

145.9.3  **Available as boolean**

**Function:** Whether sharing services are available.

**Notes:** Returns true on Mac OS X 10.8.

145.9.4  **Constructor(items as NSSharingServiceItemsMBS)**

**Function:** Initializes a new sharing service picker for the selected items.

**Notes:** Available in OS X v10.8 and later.

145.9.5  **Destructor**

**Function:** The destructor.
145.9.6 showRelativeToRect(r as NSRectMBS, view as NSViewMBS, preferredEdge as Integer)

Function: Shows the picker, populated with sharing services related to the instance items.
Notes:
rect: The rectangle the picker should be shown relative to. The coordinates are in the view coordinate system. Passing NSRectMBS.Zero causes the view bounds to be used.
view: The view.
preferredEdge: The preferred edge of the view to display the picker. See edge constants for the possible values.

When the user selects one of the sharing services, the sharing service will be performed. This method must be called on mouseDown.

Available in OS X v10.8 and later.

145.9.7 Properties

145.9.8 Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)

145.9.9 Events

145.9.10 delegateForSharingService(service as NSSharingServiceMBS) as NSSharingServiceDelegateMBS

Function: Invoked to provide the delegate to the sharing service when the user has selected a service.
Notes:
sharingServicePicker: The sharing service picker.
sharingService: The selected sharing service.

Return a NSSharingServiceDelegateMBS object the sharing service should use for this item’s transfer.
Available in OS X v10.8 and later.
145.9. **CLASS NSSHARINGSERVICEPICKERMBS**

145.9.11 **didChooseSharingService(service as NSSharingServiceMBS)**

**Function:** Invoked when the user has selected a service and before it is executed.

**Notes:**

sharingServicePicker: The sharing service picker.

service: The sharing service the user selected. Invoked to give the delegate to the sharing service that is about to be executed.

Available in OS X v10.8 and later.

145.9.12 **sharingServicesForItems(items as NSSharingServiceItemsMBS, proposedServices() as NSSharingServiceMBS) as NSSharingServiceMBS()**

**Function:** Invoked to allow the delegate to customize exactly what appears in the sharing service picker before it is presented.

**Notes:**

sharingServicePicker: The sharing service picker.

items: The items to share.

proposedServices: The proposed services to share the content.

Return the sharing services to use.

If you have no code in the event, the proposedServices are returned automatically.

The delegate can reorder, remove default services or add custom services before the picker is presented. It’s possible to add custom services by mutating the proposedSharingServices array and adding new NSSharingService instances.

Available in OS X v10.8 and later.

145.9.13 **Constants**

145.9.14 **NSMaxXEdge = 2**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the Cocoa edge constants. **Notes:** the maximum X edge. Typically right side.
145.9.15  **NSMaxYEdge = 3**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the Cocoa edge constants.  
**Notes:** The maximum Y edge. Topically the top edge of a window.

145.9.16  **NSMinXEdge = 0**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the Cocoa edge constants.  
**Notes:** the minimum X edge. Typically left side.

145.9.17  **NSMinYEdge = 1**

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the Cocoa edge constants.  
**Notes:** Minimum Y. As coordinates are upside down in the Cocoa world, this is the bottom edge of a window.
145.10. class SLRequestMBS

145.10.1 class SLRequestMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.

**Function:** The SLRequest object encapsulates the properties of an HTTP request, providing a convenient template for you to make requests.

**Notes:**
You send a request to a social networking service to perform some operation on behalf of the user or to retrieve user information.

HTTP requests have these common components: an HTTP request method (GET, POST, PUT, or DELETE), a URL identifying the operation to perform, a set of query parameters, and an optional multipart POST body containing additional data. The values for these properties depend on the request you are sending and the target service provider. Refer to each supported social networking sites documentation for possible values. Links to documentation are provided in Table 1.

Use the requestForServiceType:requestMethod:URL:parameters: method to initialize a newly created SLRequest object passing the required property values. Use the addMultipartData:withName:type: to optionally specify a multipart POST body. After you create your request, use the performRequestWithHandler: method to send the request, specifying the handler to call when the request is done.

If you already have a sending mechanism, you can use the preparedURLRequest method to create the request that you send using an NSURLConnection object. If the request requires user authorization, set the account property to an ACAccount object.

Available in OS X v10.8 and later. 64bit only.

145.10.2 Methods

145.10.3 addMultipartData(data as memoryblock, name as string, type as string, filename as string)

**Function:** Specifies a named multipart POST body for this request.

**Notes:**
data: The data for the multipart POST body, such as an image or text.
name: The name of the multipart POST body. This is the name that a specific social service expects.
type: The type of the multipart POST body. This is the MIME content type of the multipart data.
filename: The filename of the attachment that you want to POST. Many social services require a filename in order to accept certain POST requests, such as uploading an image or video. If your multipart data does
not require a filename, pass in nil.

Possible parameter values are dependent on the target service. This information, as well as guidance on when to use a multipart POST body, is documented by the service provider.

### 145.10.4 Available as boolean

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this class is available. **Notes:** Returns true on OS X 10.8 and newer in a 64-bit app.

### 145.10.5 Constructor(serviceType as string, requestMethod as Integer, URL as string, parameters as dictionary)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a newly created request object with the specified properties. **Notes:**

- **serviceType:** The social networking service type. e.g. SLServiceTypeTwitter
- **requestMethod:** The method to use for this HTTP request. e.g. SLRequestMethodPOST
- **url:** The destination URL for this HTTP request. The values and formatting for the URL are dependent on the target service and are documented by the service provider.
- **parameters:** The parameters for this HTTP request. The values and formatting are dependent on the target service and are documented by the service provider.

The newly initialized request object.
Use this method to initialize an SLRequest. The value and formatting of each parameter is dependent on the target service.

### 145.10.6 performRequest(tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Performs an asynchronous request and calls the RequestHandler event when done.

### 145.10.7 preparedURLRequest as NSURLRequestMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an authorized URL request that can be sent using an NSURLConnectionMBS object. **Notes:**
An OAuth-compatible NSURLRequest object that allows an app to act on behalf of the user while keeping the
users password private. The NSURLRequest is signed as OAuth1 by default, or OAuth2 by adding the
appropriate token based on the users account.

Use this method to modify your request before sending. By setting the account correctly, this method will
automatically add any necessary tokens.

145.10.8 SLServiceTypeFacebook as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: A string constant that identifies the social networking site, Facebook.

145.10.9 SLServiceTypeLinkedIn as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: A string constant that identifies the social networking site, LinkedIn.

145.10.10 SLServiceTypeSinaWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: A string constant that identifies the social networking site, Sina Weibo.

145.10.11 SLServiceTypeTencentWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: A string constant that identifies the social networking site, Tencent Weibo.

145.10.12 SLServiceTypeTwitter as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: A string constant that identifies the social networking site, Twitter.
145.10.13 Properties

145.10.14 account as ACAccountMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Account information used to authenticate the request.
Notes:
The account is used to sign a request with OAuth1 services or to add an access token for OAuth2 services. By associating the account with the request, the necessary tokens are added automatically. The default value is nil.
(Read and Write property)

145.10.15 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

145.10.16 parameters as Dictionary

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The parameters for this request.
Notes:
Use this property to look up the query parameters of the HTTP request that was set in Constructor. Possible values are dependent on the target service and are documented by the service provider.
(Read only property)

145.10.17 requestMethod as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The method to use for this request.
Notes:
Use this property to look up the method of the HTTP request that was set in requestForServiceType.
(Read only property)
145.10. **CLASS SLREQUESTMBS**

145.10.18 **URL as String**

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: The destination URL for this request.

**Notes**: (Read only property)

145.10.19 **Events**

145.10.20 **performRequestCompleted**(responseData as memoryblock, urlResponse as NSURLResponseMBS, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function**: The callback handler for a request.

**Notes**:
- responseData: The data returned by the request. The format of this data is dependent on the target service.
- urlResponse: The URL response returned by the request that includes the HTTP response codes.
- error: An error identifier. Possible values are dependent on the target service and are documented by the service provider.

145.10.21 **Constants**

145.10.22 **SLRequestMethodDELETE** = 2

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function**: One of the request types.

**Notes**:
- Deletes the specified resource.

Available in OS X v10.8 and later.

145.10.23 **SLRequestMethodGET** = 0

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function**: One of the request types.

**Notes**:
- Requests information from the specified resource. Use a GET request to fetch information from the specified server such as character limits or a users timeline.

Available in OS X v10.8 and later.
145.10.24  SLRequestMethodPOST = 1

MBS Mac64bit Plugin, Plugin Version: 15.3. Function: One of the request types.
Notes:
Submits data to be processed. Use a POST request to submit information to the specified server such as a
status update or an image.

Available in OS X v10.8 and later.

145.10.25  SLRequestMethodPUT = 3

MBS Mac64bit Plugin, Plugin Version: 15.3. Function: One of the request types.
Notes:
Uses a PUT request to submit the data.

Available in OS X v10.9 and later.
Chapter 146

Spamsum

146.1 class SpamSumMBS

146.1.1 class SpamSumMBS

MBS Util Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for the spamsum tool.

**Notes:**

Overview

spamsum is a tool for generating and testing signatures on files. The signature is designed to be particularly suitable for producing a result that can be used to compare two emails and see if they are 'similar'. This can provide the core of a SPAM detection system.

The algorithms in spamsum are in two parts. The first part generates a signature which is encoded as a string of ascii characters less than 72 characters long. The second part takes a new signature and a database of existing signatures (actually just a text file with one signature per line) and finds the existing signature that best matches the new signature. A match result in the range of 0 to 100 is generated, where 100 is a perfect match and 0 is a complete mismatch.

**Signature Algorithm**

The signature algorithm in spamsum has a number of interesting properties that make is especially suitable for SPAM detection.
• non-propogation

In most hash algorithms a change in any part of a plaintext will either change the resulting hash completely or will change all parts of the hash after the part corresponding with the changed plaintext. In the spamsum algorithm only the part of the spamsum signature that corresponds linearly with the changed part of the plaintext will be changed. This means that small changes in any part of the plaintext will leave most of the signature the same. This is essential for SPAM detection as it is common for variants of the same SPAM to have small changes in their body and we need to ensure that the matching algorithm can cope with these changes.

• alignment robustness

Most hash algorithms are very alignment sensitive. If you shift the plaintext by a byte (say by inserting a character at the start) then a completely different hash is generated. The spamsum algorithm is robust to alignment changes, and will automatically re-align the resulting signature after insertions or deletions. This works in combination with the non-propogation property to make spamsum suitable for telling if two emails are 'similar'.

The core of the spamsum algorithm is a rolling hash similar to the rolling hash used in 'rsync'. The rolling hash is used to produce a series of 'reset points' in the plaintext that depend only on the immediate context (with a default context width of seven characters) and not on the earlier or later parts of the plaintext. A stronger hash based on the FNV algorithm is then used to produce hash values of the areas between two reset points. The resulting signature comes from the concatenation of a single character from the FNV hash per reset point.

The frequency of the reset points determines how many characters in the plaintext will be used for each character of output in the signature. At startup spamsum scans the plaintext to determine how many valid input characters are in the plaintext (whitespace is ignored). The algorithm then estimates the reset frequency needed to produce a signature of length 64 and starts producing the signature. If after the signature is produced the result is less than a third of the desired length then the reset frequency is adjusted and the signature re-generated.

Similarity Testing

Once a set of signatures has been generated you need to be able to take a new plaintext and see if it matches one of the signatures. The way this is done is to generate a spamsum signature of the new plaintext then compute a distance measure between each of the existing signatures and the new signature.

The distance measure that spamsum uses is based on the 'string edit distance'. The string edit distance is a measure of how many edit operations are required to take one of the signatures and turn it into the other. In spamsum the 'insert' and 'delete' edit operations are given a weight of 1 while substitution is given a weight of 3 and transposition is given a weight of 5.
The resulting string edit distance is then scaled to produce a 'score' in the range 0-100. A score of 100 indicates a perfect match and a score of 0 indicates a complete mismatch. If the two signatures used a different 'reset frequency' (also known as block_size) then the score is automatically set as 0.

The score is weighted so that a value of 50 is a reasonable threshold to use for a 'good match'.

Dual hashes

A significant problem with the above algorithm is the sensitivity to the chosen hash strength of the rolling hash. The initial implementation used a single hash strength chosen based on the file size and rounded to a power of 2. This works, but it means that if the two files being compared cross over a boundary then they will not be able to be compared. To reduce this problem the current implementation chooses two different hash strengths and generates two hashes for each file. This means that the two files will have to have very different lengths for their respected spamsum signatures not to share a common hash strength.

Infrastructure

spamsum is useless without a good quality database of signatures for known spam. I am hoping that the spamsum algorithm will be incorporated into an online system for capturing known SPAM (such as razor).

Author

spamsum was written by Andrew Tridgell tridge @ samba.org

146.1.2 Methods

146.1.3 Match(sum1 as string, sum2 as string) as Integer

MBS Util Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Calculates a percent value representing

Example:

```vbnet
dim s as SpamSumMBS
dim t1,t2 as string

s=new SpamSumMBS

t1=S.Spamsum("Hello Welt, wie geht es? Mir geht es manchmal gut.",0,0)
t2=S.Spamsum("Hallo Welt, wie geht es? Mir geht es manchmal gut.",0,0)
```
MsgBox t1+" "+t2+" "+str(s.Match(t1,t2))
// 17 percent here. This needs longer texts...

Notes: Returns a value from 0 (not equal) to 100 (equal).

146.1.4 Spamsum(text as string, flags as Integer, blocksize as Integer) as string

MBS Util Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Calculates a checksum for a given text.
Notes:
You can specify for flags a combination of FlagsIgnoreWhitespace=1 and FlagsIgnoreHeaders=2.
Blocksize is linked to the length of the checksum. You can try values like 0, 3 or 90 and check what is best for you.
The text strings must be longer than just a few words as they are designed to take whole emails.

146.1.5 Properties

146.1.6 FlagsIgnoreHeaders as Integer

MBS Util Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The value used for the Spamsum call as flags.
Notes:
Value is 2.
(Read only property)

146.1.7 FlagsIgnoreWhitespace as Integer

MBS Util Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The value used for the Spamsum call as flags.
Notes:
Value is 1.
(Read only property)
Chapter 147

Sparkle

147.1  class SUAppcastItemMBS

147.1.1  class SUAppcastItemMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for items in the appcast file.

147.1.2  Methods

147.1.3  Constructor

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor to create a new appcast item object.

See also:

- 147.1.4 Constructor(dict as dictionary) 18409
- 147.1.5 Constructor(dict as dictionary, byref error as string) 18410

147.1.4  Constructor(dict as dictionary)

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes with data from a dictionary provided by the RSS class.

See also:

- 147.1.3 Constructor 18409
- 147.1.5 Constructor(dict as dictionary, byref error as string) 18410
147.1.5 Constructor(dict as dictionary, byref error as string)

**Function:** Initializes with data from a dictionary provided by the RSS class. 
See also:

- 147.1.3 Constructor
- 147.1.4 Constructor(dict as dictionary)

147.1.6 Properties

147.1.7 CriticalUpdate as Boolean

**Function:** Whether this is a critical update. 
**Notes:** (Read only property)

147.1.8 date as date

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 
**Function:** The release date for this app cast item. 
**Notes:** (Read only property)

147.1.9 DeltaUpdate as Boolean

**Function:** Whether this is a delta update. 
**Notes:** (Read only property)

147.1.10 DeltaUpdates as Dictionary

**Function:** Dictionary with properties about delta updates. 
**Notes:** (Read only property)
147.1.11 displayVersionString as string

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The display version number for this app cast item. **Notes:**

Maybe "1.1de"
(Read only property)

147.1.12 DSASignature as string

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The file signature for this app cast item. **Notes:** (Read only property)

147.1.13 fileURL as string

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The file URL for this app cast item. **Notes:** (Read only property)

147.1.14 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal handle used for this object. **Notes:** (Read and Write property)

147.1.15 InformationOnlyUpdate as Boolean

MBS MacExtras Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this is only an information only update. **Notes:**

Only available in newer Sparkle in 64-bit.
For older version this is always false.
(Read only property)
147.1.16 InfoURL as String

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The info URL.  
**Notes:** (Read only property)

147.1.17 itemDescription as string

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The description for this app cast item.  
**Notes:** (Read only property)

147.1.18 MaximumSystemVersion as String

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum system version for this app cast item.  
**Notes:**
The update will not be offered to users with newer system versions.  
(Read only property)

147.1.19 minimumSystemVersion as string

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minimum system version for this app cast item.  
**Notes:**
The update will not be offered to users with older system versions.  
(Read only property)

147.1.20 propertiesDictionary as dictionary

MBS MacExtras Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A dictionary with all the properties for this item.  
**Notes:** (Read only property)
147.1.21 releaseNotesURL as string

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The release notes URL for this app cast item.  
**Notes:** (Read only property)

147.1.22 title as string

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  
**Function:** The title for this app cast item.  
**Example:**

dim a as SUAppcastItemMBS

// get item somehow
MsgBox a.title

**Notes:** (Read only property)

147.1.23 versionString as string

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  
**Function:** The version string for this app cast item.  
**Notes:** (Read only property)
147.2 class SUAppcastMBS

147.2.1 class SUAppcastMBS

147.2.2 Methods

147.2.3 Constructor

147.2.4 fetchAppcastFromURL(url as string)

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Fetches the appcast from the given URL.
Example:

dim a as SUAppcastMBS

a.fetchAppcastFromURL "http://www.monkeybreadsoftware.de/SparkleTest/appcast.xml"

147.2.5 incrementalData as Memoryblock

Notes:
This is the XML data with the appcast.xml file content.
Only available on 32 bit target.

147.2.6 items as SUAppcastItemMBS()

147.2.7 Properties

147.2.8 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: The internal handle for the appcast. **Notes**: (Read and Write property)

147.2.9 httpHeaders as Dictionary

MBS MacExtras Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: The HTTP headers. **Notes**: You can check this dictionary for HTTP headers. Or make a new dictionary and assign it to this property to set http headers to include in transfer. (Read and Write property)

147.2.10 UserAgentString as string

MBS MacExtras Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: Which user agent string to use for the http download. **Notes**: (Read and Write property)
147.3 class SUUpdaterMBS

147.3.1 class SUUpdaterMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for Sparkle.

**Notes:** This class is for use with the Sparkle 1.5b6 framework and implements the Cocoa classes inside this framework.

147.3.2 Methods

147.3.3 checkForUpdateInformation

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Checks for new update information.

**Notes:** This begins a “probing” check for updates which will not actually offer to update to that version. The events, though, (up to didFindValidUpdate and updaterDidNotFindUpdate), are called, so you can use that information in your UI.

147.3.4 checkForUpdates

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Performs a check for updates.

**Notes:** Call this method from a menu item where the user can check for updates manually. Sparkle will check for updates and report back its findings verbosely.

147.3.5 checkForUpdatesInBackground

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This kicks off an update meant to be programmatically initiated.

**Notes:** That is, it will display no UI unless it actually finds an update, in which case it proceeds as usual. If the fully automated updating is turned on, however, this will invoke that behavior, and if an update is found, it will be downloaded and prepped for installation.

147.3.6 Constructor

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor for the updater.
147.3. CLASS SUUPDATERMBS

Notes: Please create only one instance of the SUUpdaterMBS class in your application using this constructor.
See also:

- 147.3.7 Constructor(Bundle as folderitem)

147.3.7 Constructor(Bundle as folderitem)

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor for the updater.
Notes:
Targets for the update the bundle you specify. This can be used to update a preference panel for example.

Please create only one instance of the SUUpdaterMBS class in your application using this constructor.
See also:

- 147.3.6 Constructor

147.3.8 installUpdatesIfAvailable

Function: Checks for updates and, if available, immediately downloads and installs them.
Notes:
A progress dialog is shown but the user will never be prompted to read the release notes.

You may want to respond to the userDidCancelDownload event in case the user clicks the "Cancel" button while the update is downloading.

Only available in newer Sparkle version for 64-bit.

147.3.9 InvokeImmediateInstallation

Function: If installation was moved to quit of app, you can call this method to update now.
Notes: New in version 1.6 of Sparkle.

147.3.10 InvokeUpdate

Function: Invokes a postponed updated.
147.3.11 IsFrameworkLoaded as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the framework has been loaded.  
**Notes:** Returns true if the Sparkle framework has been loaded.

147.3.12 LoadFramework(path as folderitem) as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Loads the Sparkle framework from the given folderitem.  
**Notes:** Returns false on Windows and Linux or on Mac OS X if the framework failed to load.  
Return true if the framework was loaded already or was loaded successfully.

Be aware that the Sparkle Framework needs correct file permissions:

```
{$APPFILENAME}/Contents/Frameworks/Sparkle.framework/Versions/A/Sparkle"
{$APPFILENAME}/Contents/Frameworks/Sparkle.framework/Versions/A/Resources/relaunch"
```

If the permissions are set wrong the relaunch does not work.

147.3.13 resetUpdateCycle

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Resets the update cycle.  
**Notes:** Call this to appropriately schedule or cancel the update checking timer according to the preferences for time interval and automatic checks. This call does not change the date of the next check, but only the internal timer.
147.3.14 Properties

147.3.15 automaticallyChecksForUpdates as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Whether update checks are performed automatically. Notes: (Read and Write property)

147.3.16 automaticallyDownloadsUpdates as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Whether downloads should be downloaded automatically. Notes: (Read and Write property)

147.3.17 feedURL as string

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The URL of the appcast feed. Notes: (Read and Write property)

147.3.18 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The internal handle to the object used. Notes: (Read and Write property)

147.3.19 hostBundle as Variant

MBS MacExtras Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The target application to update. Notes: Value is a NSBundleMBS object. You can query BundleFolder on the NSBundle object to know where your app is. (Read only property)
147.3.20 httpHeaders as Dictionary

Function: The HTTP headers to include with fetchAppcastFromURL call.
Notes: You can check this dictionary for HTTP headers.
Or make a new dictionary and assign it to this property to set http headers to include in transfer.
(Read and Write property)

147.3.21 lastUpdateCheckDate as date

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The date of the last update check.
Notes: Returns nil if no check has been performed.
(Read only property)

147.3.22 sendsSystemProfile as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the system profile is sent to the server.
Notes: (Read and Write property)

147.3.23 sparkleBundle as Variant

Function: The sparkle bundle.
Notes: Value is a NSBundleMBS object.
You can query BundleFolder on the NSBundle object to know where your app is.
(Read only property)

147.3.24 updateCheckInterval as Double

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: After which time the next update check is performed.
Notes: (Read and Write property)
147.3. **CLASS SUUPDATERMBS**

### 147.3.25 updateInProgress as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether an update is in progress.  
**Notes:** (Read only property)

### 147.3.26 userAgentString as String

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Which user agent string to use for the http download.  
**Notes:** (Read and Write property)

### 147.3.27 Events

#### 147.3.28 bestValidUpdateInAppcast(appcast as SUAppcastMBS) as SUAppcastItemMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called to decide which appcast item is the best to use.  
**Notes:**  
If you’re using special logic or extensions in your appcast, implement this to use your own logic for finding a valid update, if any, in the given appcast.  
If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

#### 147.3.29 didAbortWithError(error as NSErrorMBS)

MBS MacExtras Plugin, Plugin Version: 16.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called after an update is aborted due to an error.  
**Notes:**  
error: The error that caused the abort  
This is a newer event which is only called in 64-bit version.
147.3.30 didCancelInstallUpdateOnQuit(update as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when an update is scheduled to be silently installed on quit and cancelled. **Notes:** New in version 1.6 of Sparkle.

147.3.31 didFindValidUpdate(update as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event is called when a valid update is found by the update driver. **Notes:** If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

Plugin version 8.7 makes sure this method is executed on the main thread.

147.3.32 didFinishLoadingAppcast(update as SUAppcastMBS)

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called when the appcast has been loaded. **Notes:** Implement this if you want to do some special handling with the appcast once it finishes loading.

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

Plugin version 8.7 makes sure this method is executed on the main thread.

147.3.33 failedToDownloadUpdate(item as SUAppcastItemMBS, error as NSErrorMBS)

MBS MacExtras Plugin, Plugin Version: 16.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called after the specified update failed to download. **Notes:**

item: The appcast item corresponding to the update that failed to download. error: The error generated by the failed download.
This is a newer event which is only called in 64-bit version.

147.3.34 **feedParametersForUpdater(sendingProfile as boolean) as dictionary()**

MBS MacExtras Plugin, Plugin Version: 14.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Provide additional parameters for updater. **Notes:** This method allows you to add extra parameters to the appcast URL, potentially based on whether or not Sparkle will also be sending along the system profile. This method should return an array of dictionaries with keys: "key", "value", "displayKey", "displayValue", the latter two being specifically for display to the user.

147.3.35 **feedURLStringForUpdater as String**

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Override this to dynamically specify the entire feed URL. **Notes:** New in version 1.6 of Sparkle.

147.3.36 **pathToRelaunchForUpdater as string**

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event is called so you can customize the installation destination of the update. **Notes:** This event returns the path which is used to relaunch the client after the update is installed. By default, the path of the host bundle. If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

147.3.37 **shouldPostponeRelaunchForUpdate(sendingProfile as SUAppcastItemMBS) as boolean**

MBS MacExtras Plugin, Plugin Version: 14.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Return true to delay the relaunch until you do some processing. **Notes:** Invoke the update later by calling InvokeUpdate method. This is not called if the user didn’t relaunch on the previous update, in that case it will immediately restart.
147.3.38  **updateDidNotFindUpdate**

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called when a valid update is not found.  **Notes:** Plugin version 8.7 makes sure this method is executed on the main thread.

147.3.39  **updateDidShowModalAlert**

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called after an updater shows a modal alert window, to give the host the opportunity to hide attached windows etc. that may get in the way.  **Notes:** New in version 1.6 of Sparkle.

147.3.40  **updateMayCheckForUpdates as boolean**

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Use this to keep Sparkle from popping up e.g. while your setup assistant is showing.  **Notes:** New in version 1.6 of Sparkle.

147.3.41  **updateShouldPromptForPermissionToCheckForUpdates as boolean**

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event to decide whether the updater should prompt for permission to check for updates.  **Notes:** Use this to override the default behavior for Sparkle prompting the user about automatic update checks.

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

147.3.42  **updateShouldRelaunchApplication as boolean**

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Whether app should be relaunched.  **Notes:** Some apps *can not* be relaunched in certain circumstances. They can use this method to prevent a relaunch "hard". New in version 1.6 of Sparkle.
147.3. **CLASS SUUPDATERMBS**

147.3.43 **updaterWillRelaunchApplication**

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called immediately before relaunching.

**Notes:**

Plugin version 8.7 makes sure this method is executed on the main thread.

The current Sparkle (1.5b6) implementation seems to force quit the application so this method is the last chance for your application to clean up.

147.3.44 **updaterWillShowModalAlert**

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called before an updater shows a modal alert window, to give the host the opportunity to hide attached windows etc. that may get in the way.

**Notes:** New in version 1.6 of Sparkle.

147.3.45 **userDidCancelDownload**

MBS MacExtras Plugin, Plugin Version: 16.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when the user clicks the cancel button while an update is being downloaded.

**Notes:** This is a newer event which is only called in 64-bit version.

147.3.46 **versionComparatorForUpdater as SUVersionComparisonMBS**

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event allows you to provide a custom version comparator.

**Notes:**

If you don’t implement this event or return nil, the standard version comparator will be used.

Please make sure that the SUVersionComparisonMBS object lives longer, so it can be used later. e.g. keep a reference in an app property.
147.3.47 willDownloadUpdate(item as SUAppcastItemMBS, request as Variant)

Function: Called immediately before downloading the specified update.
Notes:
item: The appcast item corresponding to the update that is proposed to be downloaded.
request: The mutable URL request that will be used to download the update. (NSMutableURLRequestMBS object)

This is a newer event which is only called in 64-bit version.

147.3.48 willInstallUpdate(update as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is called immediately before installing the specified update.
Notes:
If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

Plugin version 8.7 makes sure this method is executed on the main thread.

147.3.49 willInstallUpdateOnQuit(update as SUAppcastItemMBS)

Function: Called when an update is scheduled to be silently installed on quit.
Notes:
New in version 1.6 of Sparkle.
If you like to install now instead, you can call InvokeImmediateInstallation method.

147.3.50 Constants

147.3.51 SUAppcastError = 1002

Notes: An error occurred in retrieving update information.
147.3.52 SUAppcastParseError = 1000

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.  
**Notes:**  
An error occurred while parsing the update feed.  
The appcast must be valid xml.

147.3.53 SUAuthenticationFailure = 4001

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.  
**Notes:** Unable to grant authorization to perform action because it is explicitly turned off.

147.3.54 SUDowngradeError = 4006

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.  
**Notes:** The update contains an older version.

147.3.55 SUFileCopyFailure = 4000

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.  
**Notes:** File copy failed.

147.3.56 SUInstallationError = 4005

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.  
**Notes:** An error occurred while installing the update.

147.3.57 SUMissingInstallerToolError = 4003

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.  
**Notes:** The installer tool is missing.
147.3.58  **SUMissingUpdateError** = 4002

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.  
**Notes:**  
Couldn’t find an appropriate update in the downloaded package.  
App name or bundle ID must match to current app.

147.3.59  **SUNoUpdateError** = 1001

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.  
**Notes:** You already have the newest version.

147.3.60  **SURelaunchError** = 4004

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.  
**Notes:** Failed to relaunch.

147.3.61  **SURunningFromDiskImageError** = 1003

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.  
**Notes:** The app runs from disk image and can’t update.

147.3.62  **SUSignatureError** = 3001

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.  
**Notes:** The signature doesn’t match.

147.3.63  **SUSparkleErrorDomain** = "SUSparkleErrorDomain"

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** The error domain for all Sparkle errors.

147.3.64  **SUSystemPowerOffError** = 5000

MBS Mac Extras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.  
**Notes:** The update will not be installed because the user requested for the system to power off.
147.3.65  **SUTemporaryDirectoryError = 2000**

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.  
**Notes:** Failed to get temp file.

147.3.66  **SUUnarchivingError = 3000**

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.  
**Notes:** Failed to unarchive the update.

147.3.67  **SUUpdaterAppcastItemNotificationKey = "SUUpdaterAppcastItemNotificationKey"**

MBS MacExtras Plugin, Plugin Version: 14.4. **Function:** One of the keys for user info dictionary.  
**Notes:** Key for the SUAppcastItem object in the SUUpdaterDidFindValidUpdateNotification & SUUpdaterWillInstallUpdateNotification userInfo dictionaries.

147.3.68  **SUUpdaterAppcastNotificationKey = "SUUpdaterAppcastNotificationKey"**

MBS MacExtras Plugin, Plugin Version: 14.4. **Function:** Key for the SUAppcast object in the SUUpdaterDidFinishLoadingAppCastNotification userInfo.

147.3.69  **SUUpdaterDidFindValidUpdateNotification = "SUUpdaterDidFindValidUpdateNotification"**

MBS MacExtras Plugin, Plugin Version: 14.4. **Function:** One of the notification constants for use with NSNotificationObserverMBS class.  
**Notes:** Object for this notification is the updater.
147.3.70 SUUpdaterDidFinishLoadingAppCastNotification = "SUUpdaterDidFinishLoadingAppCastNotification"

MBS MacExtras Plugin, Plugin Version: 14.4. Function: One of the notification constants for use with NSNotificationObserverMBS class. Notes: Object for this notification is the updater.

147.3.71 SUUpdaterDidNotFindUpdateNotification = "SUUpdaterDidNotFindUpdateNotification"

MBS MacExtras Plugin, Plugin Version: 14.4. Function: One of the notification constants for use with NSNotificationObserverMBS class. Notes: Object for this notification is the updater.

147.3.72 SUUpdaterWillInstallUpdateNotification = "SUUpdaterWillInstallUpdateNotification"

MBS MacExtras Plugin, Plugin Version: 14.4. Function: One of the notification constants for use with NSNotificationObserverMBS class. Notes: Object for this notification is the updater.

147.3.73 SUUpdaterWillRelaunchApplicationNotification = "SUUpdaterWillRelaunchApplicationNotification"

MBS MacExtras Plugin, Plugin Version: 14.4. Function: One of the notification constants for use with NSNotificationObserverMBS class. Notes: Object for this notification is the updater.

147.3.74 SUUpdaterWillRestartNotification = "SUUpdaterWillRestartNotification"

147.4. **class SUVersionComparisonMBS**

147.4.1 **class SUVersionComparisonMBS**

MBS Mac Extras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Implement this class to provide version comparison facilities for Sparkle. **Notes:** Or use the default implementation by not implementing the versionComparatorForUpdater event.

147.4.2 **Methods**

147.4.3 **Constructor**

MBS Mac Extras Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.

147.4.4 **Destructor**

MBS Mac Extras Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.

147.4.5 **Properties**

147.4.6 **Handle as Integer**

MBS Mac Extras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal handle for this object. **Notes:** (Read and Write property)

147.4.7 **Events**

147.4.8 **compareVersion(VersionA as string, VersionB as string) as Integer**

MBS Mac Extras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The method to compare two version strings. **Notes:** Should return NSOrderedAscending if b > a, NSOrderedDescending if b < a, and NSOrderedSame if they are equivalent.
This function may be called on the main thread or some other thread, so disable stack checking in your event.

147.4.9 Constants

147.4.10 NSOrderedAscending = -1

MBS MacExtras Plugin, Plugin Version: 8.6. **Function:** One of the order constants.

147.4.11 NSOrderedDescending = 1

MBS MacExtras Plugin, Plugin Version: 8.6. **Function:** One of the order constants.

147.4.12 NSOrderedSame = 0

MBS MacExtras Plugin, Plugin Version: 8.6. **Function:** One of the order constants.
147.5  class WinSparkleMBS

147.5.1  class WinSparkleMBS

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for WinSparkle library.
**Notes:**
Please first use LoadLibrary, than set properties and finally call Initialize.
Optionally you can later call Check methods.

147.5.2  Methods

147.5.3  CheckUpdateWithoutUI

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Checks if an update is available.
**Example:**
WinSparkleMBS.CheckUpdateWithoutUI

**Notes:**
No progress UI is shown to the user when checking. If an update is available, the usual "update available"
window is shown; this function is *not* completely UI-less.
Use with caution, it usually makes more sense to use the automatic update checks on interval option or
manual check with visible UI.
This function returns immediately.
This function respects "Skip this version" choice by the user.

147.5.4  CheckUpdateWithUI

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Checks if an update is available, showing progress UI to the user.
**Example:**
WinSparkleMBS.CheckUpdateWithUI

**Notes:**
Normally, WinSparkle checks for updates on startup and only shows its UI when it finds an update. If the
application disables this behavior, it can hook this function to "Check for updates..." menu item.
When called, background thread is started to check for updates. A small window is shown to let the user know the progress. If no update is found, the user is told so. If there is an update, the usual "update available" window is shown. This function returns immediately.

Because this function is intended for manual, user-initiated checks for updates, it ignores "Skip this version" even if the user checked it previously.

### 147.5.5 CheckUpdateWithUIAndInstall

**MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.**  
**Function:** Checks if an update is available, showing progress UI to the user and immediately installing the update if one is available.  
**Example:**  
`WinSparkleMBS.CheckUpdateWithUIAndInstall`

**Notes:**  
This is useful for the case when users should almost always use the newest version of your software. When called, WinSparkle will check for updates showing a progress UI to the user. If an update is found the update prompt will be skipped and the update will be installed immediately. If your application expects to do something after checking for updates you may wish to use DidNotFindUpdate and UpdateCancelled events.

### 147.5.6 Cleanup

**MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.**  
**Function:** Cleans up after WinSparkle.  
**Example:**  
`WinSparkleMBS.Cleanup`

**Notes:** Should be called by the app when it’s shutting down. Cancels any pending Sparkle operations and shuts down its helper threads.
147.5. Initialize

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Starts WinSparkle.
**Example:**
WinSparkleMBS.Initialize

**Notes:**
If WinSparkle is configured to check for updates on startup, proceeds to perform the check. You should only call this function when your app is initialized and shows its main window.

This call doesn’t block and returns almost immediately. If an update is available, the respective UI is shown later from a separate thread.

147.5.8 LoadLibrary(File as folderitem) as boolean

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the WinSparkle DLL.
**Example:**

```vba
dim f as FolderItem = GetFolderItem("WinSparkle.dll")
if WinSparkleMBS.LoadLibrary(f) then
    MsgBox "OK"
else
    MsgBox "Failed to load DLL."
end if
```

**Notes:** Returns true on success.
See also:

- 147.5.9 LoadLibrary(Path as string) as boolean

147.5.9 LoadLibrary(Path as string) as boolean

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the WinSparkle DLL.
**Example:**

```vba
if WinSparkleMBS.LoadLibrary("Libs\WinSparkle.dll") then
    MsgBox "OK"
```

else
MsgBox "Failed to load DLL."
end if

**Notes:** Returns true on success.
See also:
- 147.5.8 LoadLibrary(File as folderitem) as boolean

### 147.5.10 Properties

#### 147.5.11 AppCastURL as String

**Function:** Sets URL for the app’s appcast.

**Example:**

```
WinSparkleMBS.AppCastURL = "https://www.monkeybreadsoftware.test/test/test.xml"
```

**Notes:**

Only http and https schemes are supported.

If this function isn’t called by the app, the URL is obtained from Windows resource named "FeedURL" of type "APPCAST".

Always use HTTPS feeds, do not use unencrypted HTTP! This is necessary to prevent both leaking user information and preventing various MITM attacks.

See https://github.com/vslavik/winsparkle/wiki/Appcast-Feeds for more information about appcast feeds.  
(Read and Write property)

#### 147.5.12 AppName as String

**Function:** Application name.

**Example:**

```
WinSparkleMBS.CompanyName = "Monkeybread Software"
WinSparkleMBS.AppName = "Test App"
WinSparkleMBS.AppVersion = "1.2.3"
```
Notes:
This is both shown to the user and used in HTTP User-Agent header.

CompanyName and AppName are used to determine the location of WinSparkle settings in registry. (HK-CU\Software\<CompanyName>\<AppName>\WinSparkle is used.)

If not set, this value is read from VERSIONINFO/StringFileInfo resources.
(Read and Write property)

147.5.13 AppVersion as String

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Version of the app, as string (e.g. "1.2" or "1.2rc1").

**Example:**

WinSparkleMBS.CompanyName = "Monkeybread Software"
WinSparkleMBS.AppName = "Test App"
WinSparkleMBS.AppVersion = "1.2.3"

Notes:
If not set, this value is read from VERSIONINFO/StringFileInfo resources.
(Read and Write property)

147.5.14 AutomaticCheckForUpdates as Boolean

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether updates are checked automatically or only through a manual call.

**Example:**

WinSparkleMBS.AutomaticCheckForUpdates = true

Notes:
If disabled, CheckUpdateWithUI must be used explicitly.

True to have updates checked automatically, false otherwise.
CHAPTER 147. SPARKLE

Defaults to false when not yet configured (as happens on first start).
(Read and Write property)

147.5.15 BuildVersion as String

Example:
WinSparkleMBS.BuildVersion = "123"

Notes:
This is the internal version number that is not normally shown to the user. It can be used for finer granularity that official release versions, e.g. for interim builds.

If this function is called, then the provided *build* number is used for comparing versions; it is compared to the "version" attribute in the appcast and corresponds to OS X Sparkle’s CFBundleVersion handling. If used, then the appcast must also contain the "shortVersionString" attribute with human-readable display version string. The version passed to AppVersion property corresponds to this and is used for display.
(Read and Write property)

147.5.16 CanShutdown as Boolean

Example:
WinSparkleMBS.CanShutdown = false

Notes:
By default true.
Set to false when you have something like an open edited document.
(Read and Write property)

147.5.17 CompanyName as String

147.5. CLASS WINSPARKLEMBS

Example:

WinSparkleMBS.CompanyName = "Monkeybread Software"
WinSparkleMBS.AppName = "Test App"
WinSparkleMBS.AppVersion = "1.2.3"

Notes:
CompanyName and AppName are used to determine the location of WinSparkle settings in registry. (HK-CU\Software\<CompanyName>\<AppName>\WinSparkle is used.) If not set, this value is read from VERSIONINFO/StringFileInfo resources. (Read and Write property)

147.5.18 Language as String

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets UI language from its ISO code.
**Example:**

WinSparkleMBS.Language = "en-US"

Notes:
Language and LanguageID properties set user interface language. One must be set before Initialize to have any effect. If none of them is called, WinSparkle detects the UI language automatically.

ISO 639 language code with an optional ISO 3116 country code, e.g. "fr", "pt-PT", "pt-BR" or "pt_BR", (Read and Write property)

147.5.19 LanguageID as Integer

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets UI language from its Win32 LANGID code.
**Notes:**
Language and LanguageID properties set user interface language. One must be set before Initialize to have any effect. If none of them is called, WinSparkle detects the UI language automatically. (Read and Write property)
147.5.20 LastCheckTime as Integer

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the time for the last update check.  
**Notes:**  
Default value is -1, indicating that the update check has never run.  
(Read only property)

147.5.21 RegistryPath as String

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The registry path where settings will be stored.  
**Example:**  
WinSparkleMBS.RegistryPath = "Software\My App\Updates"  
**Notes:**  
Normally, these are stored in "HKCU\Software\<company_name>\<app_name>\WinSparkle" but if your application needs to store the data elsewhere for some reason, using this function is an alternative. Note that path is relative to HKCU/HKLM root and the root is not part of it. For example:  
(Read and Write property)

147.5.22 UpdateCheckInterval as Integer

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The automatic update interval.  
**Example:**  
WinSparkleMBS.UpdateCheckInterval = 7200  
**Notes:**  
The interval in seconds between checks for updates. The minimum update interval is 3600 seconds (1 hour).  
(Read and Write property)
147.5.23 Events

147.5.24 DidFindUpdate

MBS Win Plugin, Plugin Version: 17.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Called when an update was found.

147.5.25 DidNotFindUpdate

MBS Win Plugin, Plugin Version: 17.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Called when an update was not found.

147.5.26 Error

MBS Win Plugin, Plugin Version: 17.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Called when an update failed due to an error.

147.5.27 ShutdownRequest

MBS Win Plugin, Plugin Version: 17.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event to ask the host to shut down immediately after launching the installer. **Notes:** Its implementation should gracefully terminate the application.

147.5.28 UpdateCancelled

MBS Win Plugin, Plugin Version: 17.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The update was cancelled.
Chapter 148

Special Folders

148.1  Globals

148.1.1  ALMLocationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = ALMLocationsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

- -32768 On System Disk
- -32767 On Appropriate Disk
- -32766 System Domain, on Mac OS X mostly inside the folder /System.
- -32765 Local Domain (on Netbooting for example)
- -32764 Network Domain (on Netbooting for example)
- -32763 User Domain, on Mac OS X mostly inside the users folder.
- -32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateALMLocationsFolder function.
148.1.2 ALMModulesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:***

```vba
const kUserDomain = -32763
dim f as folderitem = ALMModulesFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateALMModulesFolder function.

148.1.3 ALMPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = ALMPreferencesFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateALMPreferencesFolder function.
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

### 148.1.4 AppearanceFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = AppearanceFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppearanceFolder function.

### 148.1.5 AppleExtrasFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
const kUserDomain = -32763
dim f as folderitem = AppleExtrasFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppleExtrasFolder function.

### 148.1.6 AppleMenuFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = AppleMenuFolderMBS(kUserDomain)
```

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateAppleMenuFolder function.

### 148.1.7 AppleShareAuthenticationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
148.1. **GLOBALS**

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder `/System`.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = AppleShareAuthenticationFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder `/System`.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the `CreateAppleShareAuthenticationFolder` function.

**148.1.8** `AppleshareAutomountServerAliasesFolderMBS(domain as Integer) as folderitem`  

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.  

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = AppleshareAutomountServerAliasesFolderMBS(kUserDomain)
```
CHAPTER 148. SPECIAL FOLDERS

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppleshareAutomountServerAliasesFolderMBS function.

148.1.9 AppleShareSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.
Example:
const kUserDomain = -32763
dim f as folderitem = AppleShareSupportFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppleShareSupportFolder function.
148.1.10 ApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbs
const kUserDomain = -32763
dim f as folderitem = ApplicationsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

- -32768 On System Disk
- -32767 On Appropriate Disk
- -32766 System Domain, on Mac OS X mostly inside the folder /System.
- -32765 Local Domain (on Netbooting for example)
- -32764 Network Domain (on Netbooting for example)
- -32763 User Domain, on Mac OS X mostly inside the users folder.
- -32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateApplicationsFolder function.
On Windows, only the System Domain is supported.

148.1.11 ApplicationSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbs
dim f as folderitem
f=preferencesFolderMBS(-32763)
if f=nil then // On Windows always nil
    f=applicationsupportFolderMBS(-32763)
end if
msgBox f.absolutePath
```

// example output:
// ”Mac OS X:Users:cs:Library:Preferences:” on Mac OS X
// “Mac OS 9:Systemordner:Preferences” on a german Mac OS 9
// “C:\Dokumente und Einstellungen\Christian\Anwendungsdaten\” on a german Windows XP.

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateApplicationSupportFolder function.

Realbasic ApplicationSupport function points to ”/Library/Application Support” while ApplicationSupport-
FolderMBS points to different locations on my test system depending on the domain code:

-32768 ->”/Library/Application Support”
-32767 ->”/Library/Application Support”
-32766 ->nil
-32765 ->”/Library/Application Support”
-32764 ->nil
-32763 ->”/Users/cs/Library/Application Support”
-32762 ->”/Volumes/Mac OS 9/Systemordner/Application Support”
0 ->”/Library/Application Support”

At last it is your decision to use the correct one!

148.1.12 AssistantsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem
to this folder if it exists on that system.
Example:

const kUserDomain = -32763
dim f as folderitem = AssistantsFolderMBS(kUserDomain)
Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateAssistantsFolder function.

148.1.13 AudioAlertSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = AudioAlertSoundsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.
CHAPTER 148. SPECIAL FOLDERS

Also take a look on the CreateAudioAlertSoundsFolder function.

148.1.14 AudioComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.

Example:

```
const kUserDomain = -32763
dim f as folderitem = AudioComponentsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateAudioComponentsFolder function.

148.1.15 AudioDigidesignFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.

Example:

```
const kUserDomain = -32763
dim f as folderitem = AudioDigidesignFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):
148.1. GLOBALS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateAudioDigitdesignFolderMBS function.

148.1.16 AudioPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```
const kUserDomain = -32763
dim f as folderitem = AudioPlugInsFolderMBS(kUserDomain)
```

**Notes:**
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateAudioPlugInsFolder function.
148.1.17 AudioPresetsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.  
**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = AudioPresetsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!  
The codes for domain are (The Demo includes a module for these):

- 32768 On System Disk
- 32767 On Appropriate Disk
- 32766 System Domain, on Mac OS X mostly inside the folder /System.
- 32765 Local Domain (on Netbooting for example)
- 32764 Network Domain (on Netbooting for example)
- 32763 User Domain, on Mac OS X mostly inside the users folder.
- 32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateAudioPresetsFolderMBS function.

148.1.18 AudioSoundBanksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.  
**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = AudioSoundBanksFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!  
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateAudioSoundBanksFolder function.
148.1. **GLOBALS**

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

### 148.1.19 AudioSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = AudioSoundsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateAudioSoundsFolder function.

### 148.1.20 AudioSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
const kUserDomain = -32763
dim f as folderitem = AudioSupportFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateAudioSupportFolder function.

148.1.21  AudioVSTFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.
Example:
const kUserDomain = -32763
dim f as folderitem = AudioVSTFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateAudioVSTFolderMBS function.

148.1.22  AutomatorWorkflowsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.
148.1. **GLOBALS**

-32768 On System Disk  
-32767 On Appropriate Disk  
-32766 System Domain, on Mac OS X mostly inside the folder /System.  
-32765 Local Domain (on Netbooting for example)  
-32764 Network Domain (on Netbooting for example)  
-32763 User Domain, on Mac OS X mostly inside the users folder.  
-32762 Classic Domain, the current used Classic System folder.

Example:

```plaintext
const kUserDomain = -32763
dim f as folderitem = AutomatorWorkflowsFolderMBS(kUserDomain)
```

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk  
-32767 On Appropriate Disk  
-32766 System Domain, on Mac OS X mostly inside the folder /System.  
-32765 Local Domain (on Netbooting for example)  
-32764 Network Domain (on Netbooting for example)  
-32763 User Domain, on Mac OS X mostly inside the users folder.  
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateAutomatorWorkflowsFolderMBS function.

### 148.1.23 **AutosaveInformationFolderMBS**

**Function:**

Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = AutosaveInformationFolderMBS(kUserDomain)
```

**Notes:**
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder `/System`
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateAutosaveInformationFolderMBS function.

148.1.24 **BootTimeStartupItemsFolderMBS**(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system. **Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = BootTimeStartupItemsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder `/System`
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateBootTimeStartupItemsFolderMBS function.
148.1.25  CachedDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```vba
const kUserDomain = -32763
dim f as folderitem = CachedDataFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateCachedDataFolder function.

148.1.26  CarbonLibraryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```vba
const kUserDomain = -32763
dim f as folderitem = CarbonLibraryFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateCarbonLibraryFolder function.
-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

148.1.27  ChewableItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = ChewableItemsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateChewableItemsFolder function.

148.1.28  classicDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
```
148.1. GLOBALS

```
const kUserDomain = -32763
dim f as folderitem = ClassicDesktopFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateClassicDesktopFolder function.

148.1.29  ClassicPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.

Example:

```
const kUserDomain = -32763
dim f as folderitem = ClassicPreferencesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateClassicPreferencesFolderMBS function.

148.1.30  ColorPickersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.
-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Example:

```javascript
const kUserDomain = -32763
dim f as folderitem = ColorPickersFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateColorPickersFolderMBS function.

148.1.31  ColorSyncCMMFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

Example:

```javascript
const kUserDomain = -32763
dim f as folderitem = ColorSyncCMMFolderMBS(kUserDomain)
```

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateColorSyncCMMFolder function.

148.1.32 ColorSyncFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vb
const kUserDomain = -32763
dim f as folderitem = ColorSyncFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateColorSyncFolder function.
148.1.33  ColorSyncProfilesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = ColorSyncProfilesFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk  
-32766  System Domain, on Mac OS X mostly inside the folder /System.  
-32765  Local Domain (on Netbooting for example)  
-32764  Network Domain (on Netbooting for example)  
-32763  User Domain, on Mac OS X mostly inside the users folder.  
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateColorSyncProfilesFolder function.

148.1.34  ColorSyncScriptingFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = ColorSyncScriptingFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk  
-32766  System Domain, on Mac OS X mostly inside the folder /System.  
-32765  Local Domain (on Netbooting for example)  
-32764  Network Domain (on Netbooting for example)  
-32763  User Domain, on Mac OS X mostly inside the users folder.  
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateColorSyncScriptingFolder function.
148.1. GLOBALS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

148.1.35 ComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vb
const kUserDomain = -32763
dim f as folderitem = ComponentsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateComponentsFolder function.

148.1.36 CompositionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
const kUserDomain = -32763

```vbnet
dim f as folderitem = CompositionsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateCompositionsFolderMBS function.

### 148.1.37 ContextualMenuItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763

```vbnet
dim f as folderitem = ContextualMenuItemsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateContextualMenuItemsFolder function.

### 148.1.38 ControlPanelDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: Returns a folderitem to this folder if it exists on that system.
148.1. GLOBALS

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Example:

```vbs
const kUserDomain = -32763
dim f as folderitem = ControlPanelDisabledFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateControlPanelDisabledFolder function.

148.1.39  ControlPanelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem
to this folder if it exists on that system.

Example:

```vbs
const kUserDomain = -32763
dim f as folderitem = ControlPanelFolderMBS(kUserDomain)
```

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateControlPanelFolder function.

148.1.40 ControlStripModulesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = ControlStripModulesFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateControlStripModulesFolder function.
148.1.41  CoreServicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = CoreServicesFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateCoreServicesFolder function.

148.1.42  CreateALMLocationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = CreateALMLocationsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the ALMLocationsFolder function.

148.1.43 CreateALMModulesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateALMModulesFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the ALMModulesFolder function.
148.1.44 CreateALMPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```vba
const kUserDomain = -32763
dim f as folderitem = CreateALMPreferencesFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk  
-32767 On Appropriate Disk  
-32766 System Domain, on Mac OS X mostly inside the folder /System.  
-32765 Local Domain (on Netbooting for example)  
-32764 Network Domain (on Netbooting for example)  
-32763 User Domain, on Mac OS X mostly inside the users folder.  
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the ALMPreferencesFolder function.

148.1.45 CreateAppearanceFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```vba
const kUserDomain = -32763
dim f as folderitem = CreateAppearanceFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):
18472 CHAPTER 148. SPECIAL FOLDERS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the AppearanceFolder function.

148.1.46 CreateAppleExtrasFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.
Example:
const kUserDomain = -32763
dim f as folderitem = CreateAppleExtrasFolderMBS(kUserDomain)

Notes:
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the AppleExtrasFolder function.
148.1.47 CreateAppleMenuFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
cnst kUserDomain = -32763
dim f as folderitem = CreateAppleMenuFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

- 32768 On System Disk
- 32767 On Appropriate Disk
- 32766 System Domain, on Mac OS X mostly inside the folder /System.
- 32765 Local Domain (on Netbooting for example)
- 32764 Network Domain (on Netbooting for example)
- 32763 User Domain, on Mac OS X mostly inside the users folder.
- 32762 Classic Domain, the current used Classic System folder.

Also take a look on the AppleMenuFolder function.

148.1.48 CreateAppleShareAuthenticationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
cnst kUserDomain = -32763
dim f as folderitem = CreateAppleShareAuthenticationFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the AppleShareAuthenticationFolder function.

148.1.49 CreateAppleshareAutomountServerAliasesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system. **Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateAppleshareAutomountServerAliasesFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the AppleshareAutomountServerAliasesFolderMBS function.
148.1.50 CreateAppleShareSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```
const kUserDomain = -32763
dim f as folderitem = CreateAppleShareSupportFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the AppleShareSupportFolder function.

148.1.51 CreateApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```
const kUserDomain = -32763
dim f as folderitem = CreateApplicationsFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):
CHAPTER 148. SPECIAL FOLDERS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the ApplicationsFolder function.
On Windows, only the System Domain is supported.

148.1.52 CreateApplicationSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. Function: Returns a folderitem
to this folder if it exists on that system.
Example:
const kUserDomain = -32763
dim f as folderitem = CreateApplicationSupportFolderMBS(kUserDomain)

Notes:
If this folder is supported by the operation system version, the folder is created and returned. If the folder
could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the ApplicationSupportFolder function.
148.1. GLOBALS

Realbasic ApplicationSupport function points to "/Library/Application Support" while ApplicationSupportFolderMBS points to different locations on my test system depending on the domain code:

-32768 ->"/Library/Application Support"
-32767 ->"/Library/Application Support"
-32766 ->nil
-32765 ->"/Library/Application Support"
-32764 ->nil
-32763 ->"/Users/cs/Library/Application Support"
-32762 ->"/Volumes/Mac OS 9/Systemordner/Application Support"
0 ->"/Library/Application Support"

At last it is your decision to use the correct one!

148.1.53 CreateAssistantsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateAssistantsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the AssistantsFolder function.
148.1.54  CreateAudioAlertSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateAudioAlertSoundsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the AudioAlertSoundsFolder function.

148.1.55  CreateAudioComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateAudioComponentsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the AudioComponentsFolder function.

148.1.56 CreateAudioDigidesignFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateAudioDigidesignFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the AudioDigidesignFolderMBS function.
148.1.57  CreateAudioPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = CreateAudioPlugInsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the AudioPlugInsFolder function.

148.1.58  CreateAudioPresetsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = CreateAudioPresetsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
148.1. GLOBALS

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the AudioPresetsFolderMBS function.

148.1.59  CreateAudioSoundBanksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = CreateAudioSoundBanksFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the AudioSoundBanksFolder function.
148.1.60 CreateAudioSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

Example:

```dim f as folderitem = CreateAudioSoundsFolderMBS(kUserDomain)```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the AudioSoundsFolder function.

148.1.61 CreateAudioSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

Example:

```dim f as folderitem = CreateAudioSupportFolderMBS(kUserDomain)```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
148.1. GLOBALS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the AudioSupportFolder function.

148.1.62 CreateAudioVSTFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system. **Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateAudioVSTFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the AudioVSTFolderMBS function.
CHAPTER 148. SPECIAL FOLDERS

148.1.63 CreateAutomatorWorkflowsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateAutomatorWorkflowsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the AutomatorWorkflowsFolderMBS function.

148.1.64 CreateAutosaveInformationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateAutosaveInformationFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
148.1. GLOBALS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the AutosaveInformationFolderMBS function.

148.1.65 CreateBootTimeStartupItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a folderitem to this folder if it exists on that system.

**Example:**

const kUserDomain = -32763
dim f as folderitem = CreateBootTimeStartupItemsFolderMBS(kUserDomain)

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder
could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the BootTimeStartupItemsFolderMBS function.
CHAPTER 148. SPECIAL FOLDERS

148.1.66 CreateCachedDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system. Example:

const kUserDomain = -32763
dim f as folderitem = CreateCachedDataFolderMBS(kUserDomain)

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CachedDataFolder function.

148.1.67 CreateCarbonLibraryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system. Example:

const kUserDomain = -32763
dim f as folderitem = CreateCarbonLibraryFolderMBS(kUserDomain)

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):
-32768 On System Disk  
-32767 On Appropriate Disk  
-32766 System Domain, on Mac OS X mostly inside the folder /System.  
-32765 Local Domain (on Netbooting for example)  
-32764 Network Domain (on Netbooting for example)  
-32763 User Domain, on Mac OS X mostly inside the users folder.  
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CarbonLibraryFolder function.

148.1.68 CreateChewableItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system. **Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateChewableItemsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version! The codes for domain are (The Demo includes a module for these):

-32768 On System Disk  
-32767 On Appropriate Disk  
-32766 System Domain, on Mac OS X mostly inside the folder /System.  
-32765 Local Domain (on Netbooting for example)  
-32764 Network Domain (on Netbooting for example)  
-32763 User Domain, on Mac OS X mostly inside the users folder.  
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the ChewableItemsFolder function.
148.1.69  **CreateClassicDesktopFolderMBS**(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = CreateClassicDesktopFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

- -32768 On System Disk
- -32767 On Appropriate Disk
- -32766 System Domain, on Mac OS X mostly inside the folder /System.
- -32765 Local Domain (on Netbooting for example)
- -32764 Network Domain (on Netbooting for example)
- -32763 User Domain, on Mac OS X mostly inside the users folder.
- -32762 Classic Domain, the current used Classic System folder.

Also take a look on the ClassicDesktopFolder function.

148.1.70  **CreateClassicPreferencesFolderMBS**(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = CreateClassicPreferencesFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the ClassicPreferencesFolderMBS function.

### 148.1.71 CreateColorPickersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = CreateColorPickersFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the ColorPickersFolderMBS function.
148.1.72 CreateColorSyncCMMFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = CreateColorSyncCMMFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the ColorSyncCMMFolder function.

148.1.73 CreateColorSyncFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = CreateColorSyncFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the ColorSyncFolder function.

### 148.1.74 CreateColorSyncProfilesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = CreateColorSyncProfilesFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder alrready exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the ColorSyncProfilesFolder function.
148.1.75  CreateColorSyncScriptingFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.  

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateColorSyncScriptingFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned.  If the folder could not be created or is not supported, nil is returned.  If the folder already exists, it is just returned.  

Note that not every folder exists on every Mac OS Version!  

The codes for domain are (The Demo includes a module for these):

- -32768  On System Disk  
- -32767  On Appropriate Disk  
- -32766  System Domain, on Mac OS X mostly inside the folder /System.  
- -32765  Local Domain (on Netbooting for example)  
- -32764  Network Domain (on Netbooting for example)  
- -32763  User Domain, on Mac OS X mostly inside the users folder.  
- -32762  Classic Domain, the current used Classic System folder.  

Also take a look on the ColorSyncScriptingFolder function.

148.1.76  CreateComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.  

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateComponentsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned.  If the folder could not be created or is not supported, nil is returned.  If the folder already exists, it is just returned.  

Note that not every folder exists on every Mac OS Version!  

The codes for domain are (The Demo includes a module for these):
148.1. GLOBALS

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the ComponentsFolder function.

148.1.77  CreateCompositionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a folderitem to this folder if it exists on that system.

**Example:**

const kUserDomain = -32763
dim f as folderitem = CreateCompositionsFolderMBS(kUserDomain)

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CompositionsFolderMBS function.
CHAPTER 148. SPECIAL FOLDERS

148.1.78 CreateContextualMenuItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbscript
const kUserDomain = -32763
dim f as folderitem = CreateContextualMenuItemsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

- -32768 On System Disk
- -32767 On Appropriate Disk
- -32766 System Domain, on Mac OS X mostly inside the folder /System.
- -32765 Local Domain (on Netbooting for example)
- -32764 Network Domain (on Netbooting for example)
- -32763 User Domain, on Mac OS X mostly inside the users folder.
- -32762 Classic Domain, the current used Classic System folder.

Also take a look on the ContextualMenuItemsFolder function.

148.1.79 CreateControlPanelDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbscript
const kUserDomain = -32763
dim f as folderitem = CreateControlPanelDisabledFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the ControlPanelDisabledFolder function.

148.1.80 CreateControlPanelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```
cost kUserDomain = -32763
dim f as folderitem = CreateControlPanelFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the ControlPanelFolder function.
148.1.81 CreateControlStripModulesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.  
**Example:**
```
const kUserDomain = -32763
dim f as folderitem = CreateControlStripModulesFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

- -32768 On System Disk  
- -32767 On Appropriate Disk  
- -32766 System Domain, on Mac OS X mostly inside the folder /System.  
- -32765 Local Domain (on Netbooting for example)  
- -32764 Network Domain (on Netbooting for example)  
- -32763 User Domain, on Mac OS X mostly inside the users folder.  
- -32762 Classic Domain, the current used Classic System folder.

Also take a look on the ControlStripModulesFolder function.

148.1.82 CreateCoreServicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.  
**Example:**
```
const kUserDomain = -32763
dim f as folderitem = CreateCoreServicesFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.  
Note that not every folder exists on every Mac OS Version!  
The codes for domain are (The Demo includes a module for these):
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CoreServicesFolder function.

148.1.83 CreateCurrentUserFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.  
**Example:**

```vbscript
const kUserDomain = -32763
dim f as folderitem = CreateCurrentUserFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CurrentUserFolder function.
148.1.84 CreateCurrentUserRemoteFolderLocationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.

Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateCurrentUserRemoteFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CurrentUserRemoteFolder function.

148.1.85 CreateCurrentUserRemoteFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.

Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateCurrentUserRemoteFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CurrentUserRemoteFolder function.

### 148.1.86 CreateDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateDesktopFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the SpecialFolder.Desktop function.
148.1.87  CreateDesktopPicturesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateDesktopPicturesFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the DesktopPicturesFolder function.

148.1.88  CreateDeveloperApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

The developer application folder.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateDeveloperApplicationsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):
148.1. GLOBALS

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the DeveloperApplicationsFolderMBS function.

148.1.89  CreateDeveloperDocsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateDeveloperDocsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the DeveloperDocsFolder function.
148.1.90 CreateDeveloperFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateDeveloperFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk  
-32767 On Appropriate Disk  
-32766 System Domain, on Mac OS X mostly inside the folder /System.  
-32765 Local Domain (on Netbooting for example)  
-32764 Network Domain (on Netbooting for example)  
-32763 User Domain, on Mac OS X mostly inside the users folder.  
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the DeveloperFolder function.

148.1.91 CreateDeveloperHelpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateDeveloperHelpFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the DeveloperHelpFolder function.

148.1.92 CreateDictionariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The folder for the dictionaries.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateDictionariesFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the DictionariesFolderMBS function.
148.1.93  CreateDirectoryServicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```lisp
const kUserDomain = -32763
dim f as folderitem = CreateDirectoryServicesFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk  
-32766  System Domain, on Mac OS X mostly inside the folder /System.  
-32765  Local Domain (on Netbooting for example)  
-32764  Network Domain (on Netbooting for example)  
-32763  User Domain, on Mac OS X mostly inside the users folder.  
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the DirectoryServicesFolder function.

148.1.94  CreateDirectoryServicesPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```lisp
const kUserDomain = -32763
dim f as folderitem = CreateDirectoryServicesPlugInsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
148.1. GLOBALS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the DirectoryServicesPlugInsFolder function.

148.1.95 CreateDisplayExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateDisplayExtensionsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the DisplayExtensionsFolder function.
CHAPTER 148. SPECIAL FOLDERS

148.1.96 CreateDocumentationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = CreateDocumentationFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

- 32768 On System Disk
- 32767 On Appropriate Disk
- 32766 System Domain, on Mac OS X mostly inside the folder /System.
- 32765 Local Domain (on Netbooting for example)
- 32764 Network Domain (on Netbooting for example)
- 32763 User Domain, on Mac OS X mostly inside the users folder.
- 32762 Classic Domain, the current used Classic System folder.

Also take a look on the DocumentationFolder function.

148.1.97 CreateDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = CreateDocumentsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
148.1.98  CreateDomainLibraryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  Function: Returns a folderitem to this folder if it exists on that system.  
Example:
const kUserDomain = -32763
dim f as folderitem = CreateDomainLibraryFolderMBS(kUserDomain)

Notes:
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the DomainLibraryFolder function.
CHAPTER 148. SPECIAL FOLDERS

148.1.99  CreateDomainTopLevelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```
const kUserDomain = -32763

dim f as folderitem = CreateDomainTopLevelFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the DomainTopLevelFolder function.

148.1.100  CreateDownloadsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```
const kUserDomain = -32763

dim f as folderitem = CreateDownloadsFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
148.1.101  CreateEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateEditorsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the DownloadsFolderMBS function.
148.1.102 CreateExtensionDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateExtensionDisabledFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

- `-32768` On System Disk
- `-32767` On Appropriate Disk
- `-32766` System Domain, on Mac OS X mostly inside the folder /System.
- `-32765` Local Domain (on Netbooting for example)
- `-32764` Network Domain (on Netbooting for example)
- `-32763` User Domain, on Mac OS X mostly inside the users folder.
- `-32762` Classic Domain, the current used Classic System folder.

Also take a look on the ExtensionDisabledFolder function.

148.1.103 CreateExtensionFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateExtensionFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the ExtensionFolder function.

148.1.104 CreateFavoritesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```bc
const kUserDomain = -32763
dim f as folderitem = CreateFavoritesFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the FavoritesFolder function.
148.1.105  CreateFileSystemSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateFileSystemSupportFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

- -32768  On System Disk
- -32767  On Appropriate Disk
- -32766  System Domain, on Mac OS X mostly inside the folder /System.
- -32765  Local Domain (on Netbooting for example)
- -32764  Network Domain (on Netbooting for example)
- -32763  User Domain, on Mac OS X mostly inside the users folder.
- -32762  Classic Domain, the current used Classic System folder.

Also take a look on the FileSystemSupportFolder function.

148.1.106  CreateFindByContentFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateFindByContentFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the FindByContentFolder function.

148.1.107 CreateFindByContentIndexesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system. **Example:**

```vbs
const kUserDomain = -32763
dim f as folderitem = CreateFindByContentIndexesFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the FindByContentIndexesFolderMBS function.
148.1.108 CreateFindByContentPluginsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateFindByContentPluginsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

- -32768 On System Disk
- -32767 On Appropriate Disk
- -32766 System Domain, on Mac OS X mostly inside the folder /System.
- -32765 Local Domain (on Netbooting for example)
- -32764 Network Domain (on Netbooting for example)
- -32763 User Domain, on Mac OS X mostly inside the users folder.
- -32762 Classic Domain, the current used Classic System folder.

Also take a look on the FindByContentPluginsFolder function.

148.1.109 CreateFindSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateFindSupportFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):
148.1. GLOBALS

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the FindSupportFolder function.

148.1.110  CreateFolderActionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateFolderActionsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the FolderActionsFolder function.
148.1.111  CreateFontCollectionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.

Example:

const kUserDomain = -32763
dim f as folderitem = CreateFontCollectionsFolderMBS(kUserDomain)

Notes:
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the FontCollectionsFolderMBS function.

148.1.112  CreateFontsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.

Example:

const kUserDomain = -32763
dim f as folderitem = CreateFontsFolderMBS(kUserDomain)

Notes:
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):
-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the FontsFolder function.

148.1.113  CreateFrameworksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.  
**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateFrameworksFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the FrameworksFolder function.
148.1.114  CreateGenEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem
to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateGenEditorsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder
could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

- -32768 On System Disk
- -32767 On Appropriate Disk
- -32766 System Domain, on Mac OS X mostly inside the folder /System.
- -32765 Local Domain (on Netbooting for example)
- -32764 Network Domain (on Netbooting for example)
- -32763 User Domain, on Mac OS X mostly inside the users folder.
- -32762 Classic Domain, the current used Classic System folder.

Also take a look on the GenEditorsFolder function.

148.1.115  CreateHelpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem
to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateHelpFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder
could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

- -32768 On System Disk
- -32767 On Appropriate Disk
- -32766 System Domain, on Mac OS X mostly inside the folder /System.
- -32765 Local Domain (on Netbooting for example)
- -32764 Network Domain (on Netbooting for example)
- -32763 User Domain, on Mac OS X mostly inside the users folder.
- -32762 Classic Domain, the current used Classic System folder.
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the HelpFolder function.

### 148.1.116 CreateiMovieFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateiMovieFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the iMovieFolderMBS function.
148.1.117  CreateiMoviePlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a folderitem to this folder if it exists on that system.
**Example:**
```vba
const kUserDomain = -32763
dim f as folderitem = CreateiMoviePlugInsFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768    On System Disk
-32767    On Appropriate Disk
-32766    System Domain, on Mac OS X mostly inside the folder /System.
-32765    Local Domain (on Netbooting for example)
-32764    Network Domain (on Netbooting for example)
-32763    User Domain, on Mac OS X mostly inside the users folder.
-32762    Classic Domain, the current used Classic System folder.

Also take a look on the iMoviePlugInsFolderMBS function.

148.1.118  CreateiMovieSoundEffectsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a folderitem to this folder if it exists on that system.
**Example:**
```vba
const kUserDomain = -32763
dim f as folderitem = iMovieSoundEffectsFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768    On System Disk
-32767    On Appropriate Disk
-32766    System Domain, on Mac OS X mostly inside the folder /System.
-32765    Local Domain (on Netbooting for example)
-32764    Network Domain (on Netbooting for example)
-32763    User Domain, on Mac OS X mostly inside the users folder.
-32762    Classic Domain, the current used Classic System folder.
-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateIndexFilesFolderMBS function.

148.1.119  CreateIndexFilesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```
const kUserDomain = -32763
dim f as folderitem = IndexFilesFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateIndexFilesFolderMBS function.
148.1.120  CreateInputManagersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateInputManagersFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk  
-32766  System Domain, on Mac OS X mostly inside the folder /System.  
-32765  Local Domain (on Netbooting for example)  
-32764  Network Domain (on Netbooting for example)  
-32763  User Domain, on Mac OS X mostly inside the users folder.  
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the InputManagersFolderMBS function.

148.1.121  CreateInputMethodsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = InputMethodsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):
### 148.1.1.122 CreateInstallerLogsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateInstallerLogsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

- `32768` On System Disk
- `32767` On Appropriate Disk
- `32766` System Domain, on Mac OS X mostly inside the folder `/System`
- `32765` Local Domain (on Netbooting for example)
- `32764` Network Domain (on Netbooting for example)
- `32763` User Domain, on Mac OS X mostly inside the users folder.
- `32762` Classic Domain, the current used Classic System folder.

Also take a look on the CreateInputMethodsFolderMBS function.
148.1.123 **CreateInstallerReceiptsFolderMBS**(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateInstallerReceiptsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk  
-32767 On Appropriate Disk  
-32766 System Domain, on Mac OS X mostly inside the folder /System.  
-32765 Local Domain (on Netbooting for example)  
-32764 Network Domain (on Netbooting for example)  
-32763 User Domain, on Mac OS X mostly inside the users folder.  
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the InstallerReceiptsFolder function.

148.1.124 **CreateInternetFolderMBS**(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateInternetFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):
148.1. GLOBALS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the InternetFolder function.

148.1.125 CreateInternetPlugInFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbscript
const kUserDomain = -32763
dim f as folderitem = CreateInternetPlugInFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the InternetPlugInFolder function.
148.1.126 CreateInternetSearchSitesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateInternetSearchSitesFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the InternetSearchSitesFolder function.

148.1.127 CreateInternetSitesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateInternetSitesFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
148.1. GLOBALS

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the InternetSitesFolder function.

148.1.128  CreateISSDownloadsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateISSDownloadsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the ISSDownloadsFolder function.
148.1.129  CreateKernelExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbs
const kUserDomain = -32763
dim f as folderitem = CreateKernelExtensionsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk  
-32766  System Domain, on Mac OS X mostly inside the folder /System.  
-32765  Local Domain (on Netbooting for example)  
-32764  Network Domain (on Netbooting for example)  
-32763  User Domain, on Mac OS X mostly inside the users folder.  
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the KernelExtensionsFolder function.

148.1.130  CreateKeyboardLayoutsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbs
const kUserDomain = -32763
dim f as folderitem = KeyboardLayoutsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
148.1. GLOBALS

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateKeyboardLayoutsFolderMBS function.

148.1.131  CreateKeychainFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.
Example:

const kUserDomain = -32763
dim f as folderitem = CreateKeychainFolderMBS(kUserDomain)

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the KeychainFolder function.
148.1.132 CreateLauncherItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system. 
**Example:**
```
const kUserDomain = -32763
dim f as folderitem = CreateLauncherItemsFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk  
-32767 On Appropriate Disk  
-32766 System Domain, on Mac OS X mostly inside the folder /System.  
-32765 Local Domain (on Netbooting for example)  
-32764 Network Domain (on Netbooting for example)  
-32763 User Domain, on Mac OS X mostly inside the users folder.  
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the LauncherItemsFolder function.

148.1.133 CreateLibraryAssistantsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.  
**Example:**
```
const kUserDomain = -32763
dim f as folderitem = LibraryAssistantsFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. 
Note that not every folder exists on every Mac OS Version! 
The codes for domain are (The Demo includes a module for these):
-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateLibraryAssistantsFolderMBS function.

148.1.134  CreateLocalesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateLocalesFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the LocalesFolder function.
148.1.135 CreateLogsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The log files folder.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateLogsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk  
-32767 On Appropriate Disk  
-32766 System Domain, on Mac OS X mostly inside the folder /System.  
-32765 Local Domain (on Netbooting for example)  
-32764 Network Domain (on Netbooting for example)  
-32763 User Domain, on Mac OS X mostly inside the users folder.  
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the LogsFolderMBS function.

148.1.136 CreateMacOSReadMesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateMacOSReadMesFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):
-32768  On System Disk  
-32767  On Appropriate Disk  
-32766  System Domain, on Mac OS X mostly inside the folder /System.  
-32765  Local Domain (on Netbooting for example)  
-32764  Network Domain (on Netbooting for example)  
-32763  User Domain, on Mac OS X mostly inside the users folder.  
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the MacOSReadMesFolder function.

148.1.137  CreateMagicTemporaryItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.  
**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = MagicTemporaryItemsFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.  
Note that not every folder exists on every Mac OS Version!  
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk  
-32766  System Domain, on Mac OS X mostly inside the folder /System.  
-32765  Local Domain (on Netbooting for example)  
-32764  Network Domain (on Netbooting for example)  
-32763  User Domain, on Mac OS X mostly inside the users folder.  
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateMagicTemporaryItemsFolderMBS function.
148.1.138 CreateManagedItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateManagedItemsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the ManagedItemsFolderMBS function.

148.1.139 CreateMIDIDriversFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateMIDIDriversFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
148.1. GLOBALS

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the MIDIDriversFolder function.

148.1.140  CreateModemScriptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.  

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateModemScriptsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the ModemScriptsFolder function.
148.1.141  
CreateMovieDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.  
**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateMovieDocumentsFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version! The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk  
-32766  System Domain, on Mac OS X mostly inside the folder /System.  
-32765  Local Domain (on Netbooting for example)  
-32764  Network Domain (on Netbooting for example)  
-32763  User Domain, on Mac OS X mostly inside the users folder.  
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the MovieDocumentsFolder function.

148.1.142  
CreateMultiprocessingFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.  
**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateMultiprocessingFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version! The codes for domain are (The Demo includes a module for these):
GLOBALS

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the MultiprocessingFolder function.

148.1.143  CreateMusicDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateMusicDocumentsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the MusicDocumentsFolder function.
148.1.144  CreateOpenDocEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = CreateOpenDocEditorsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk  
-32766  System Domain, on Mac OS X mostly inside the folder /System.  
-32765  Local Domain (on Netbooting for example)  
-32764  Network Domain (on Netbooting for example)  
-32763  User Domain, on Mac OS X mostly inside the users folder.  
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the OpenDocEditorsFolder function.

148.1.145  CreateOpenDocFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = CreateOpenDocFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the OpenDocFolder function.

148.1.146 CreateOpenDocLibrariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CreateOpenDocLibrariesFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the OpenDocLibrariesFolder function.
148.1.147  CreateOpenDocShellPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```javascript
const kUserDomain = -32763
dim f as folderitem = CreateOpenDocShellPlugInsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk  
-32766  System Domain, on Mac OS X mostly inside the folder /System.  
-32765  Local Domain (on Netbooting for example)  
-32764  Network Domain (on Netbooting for example)  
-32763  User Domain, on Mac OS X mostly inside the users folder.  
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the OpenDocShellPlugInsFolder function.

148.1.148  CreatePictureDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```javascript
const kUserDomain = -32763
dim f as folderitem = CreatePictureDocumentsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the PictureDocumentsFolder function.
As there is no such folder on Mac OS Classic, you always get null there.

148.1.149 CreatePreferencePanesFolderMBS(domain as Integer) as folderitem

Example:
const kUserDomain = 32763
dim f as folderitem = CreatePreferencePanesFolderMBS(kUserDomain)

Notes:
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the PreferencePanesFolderMBS function.
148.1.150  CreatePreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```python
const kUserDomain = -32763
dim f as folderitem = CreatePreferencesFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk  
-32766  System Domain, on Mac OS X mostly inside the folder /System.  
-32765  Local Domain (on Netbooting for example)  
-32764  Network Domain (on Netbooting for example)  
-32763  User Domain, on Mac OS X mostly inside the users folder.  
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the PreferencesFolder function.

148.1.151  CreatePrinterDescriptionFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```python
const kUserDomain = -32763
dim f as folderitem = CreatePrinterDescriptionFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
148.1.152 CreatePrinterDriverFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbscript
const kUserDomain = -32763
dim f as folderitem = CreatePrinterDriverFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

```
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.
```

Also take a look on the PrinterDriverFolder function.
148.1.153 CreatePrintersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.
Example:

const kUserDomain = -32763
dim f as folderitem = CreatePrintersFolderMBS(kUserDomain)

Notes:
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the PrintersFolder function.

148.1.154 CreatePrintingPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.
Example:

const kUserDomain = -32763
dim f as folderitem = CreatePrintingPlugInsFolderMBS(kUserDomain)

Notes:
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the PrintingPlugInsFolder function.

**148.1.155 CreatePrintMonitorDocsFolderMBS***(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreatePrintMonitorDocsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the PrintMonitorDocsFolder function.
148.1.156 CreatePrivateFrameworksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: Returns a folderitem to this folder if it exists on that system.

**Example**:

```vbnet
const kUserDomain = -32763
dim f as folderitem = CreatePrivateFrameworksFolderMBS(kUserDomain)
```

**Notes**:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the PrivateFrameworksFolder function.

148.1.157 CreatePublicFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: Returns a folderitem to this folder if it exists on that system.

**Example**:

```vbnet
const kUserDomain = -32763
dim f as folderitem = CreatePublicFolderMBS(kUserDomain)
```

**Notes**:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the PublicFolder function.

148.1.158 CreateQuickLookFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateQuickLookFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the QuickLookFolderMBS function.
148.1.159  **CreateQuickTimeComponentsFolderMBS**(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateQuickTimeComponentsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk  
-32766  System Domain, on Mac OS X mostly inside the folder /System.  
-32765  Local Domain (on Netbooting for example)  
-32764  Network Domain (on Netbooting for example)  
-32763  User Domain, on Mac OS X mostly inside the users folder.  
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the QuickTimeComponentsFolder function.

148.1.160  **CreateQuickTimeExtensionsFolderMBS**(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateQuickTimeExtensionsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):
148.1. GLOBALS

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the QuickTimeExtensionsFolder function.

148.1.161  CreateRecentApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```pascal
const kUserDomain = -32763
dim f as folderitem = CreateRecentApplicationsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the RecentApplicationsFolder function.
148.1.162 CreateRecentDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateRecentDocumentsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk  
-32767 On Appropriate Disk  
-32766 System Domain, on Mac OS X mostly inside the folder /System.  
-32765 Local Domain (on Netbooting for example)  
-32764 Network Domain (on Netbooting for example)  
-32763 User Domain, on Mac OS X mostly inside the users folder.  
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the RecentDocumentsFolder function.

148.1.163 CreateRecentServersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateRecentServersFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the RecentServersFolder function.

148.1.164  CreateScriptingAdditionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateScriptingAdditionsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the SharedLibrariesFolder function.

148.1.167  CreateSharedUserDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateSharedUserDataFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the SharedUserDataFolder function.
148.1.168  CreateShutdownFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.

Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateShutdownFolderMBS(kUserDomain)
```

Notes:
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the ShutdownFolder function.

148.1.169  CreateShutdownItemsDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.

Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateShutdownItemsDisabledFolderMBS(kUserDomain)
```

Notes:
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):
148.1.170  CreateSoundSetsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateSoundSetsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the SoundSetsFolder function.
148.1.171 CreateSpeakableItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateSpeakableItemsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the SpeakableItemsFolder function.

148.1.172 CreateSpeechFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateSpeechFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
148.1.173 CreateSpotlightImportersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```
const kUserDomain = -32763
dim f as folderitem = SpotlightImportersFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateSpotlightImportersFolderMBS function.
148.1.174  **CreateSpotlightMetadataCacheFolderMBS(domain as Integer) as folderitem**

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system. **Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = SpotlightMetadataCacheFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version! The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk  
-32766  System Domain, on Mac OS X mostly inside the folder /System. 
-32765  Local Domain (on Netbooting for example) 
-32764  Network Domain (on Netbooting for example) 
-32763  User Domain, on Mac OS X mostly inside the users folder. 
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateSpotlightMetadataCacheFolderMBS function.

148.1.175  **CreateSpotlightSavedSearchesFolderMBS(domain as Integer) as folderitem**

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system. **Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateSpotlightSavedSearchesFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version! The codes for domain are (The Demo includes a module for these):
148.1. GLOBALS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the SpotlightSavedSearchesFolderMBS function.

148.1.176 CreateStartupFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```pascal
const kUserDomain = -32763
dim f as folderitem = CreateStartupFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the StartupFolder function.
Chapter 148. Special Folders

148.1.177 CreateStartupItemsDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbs
const kUserDomain = -32763
dim f as folderitem = CreateStartupItemsDisabledFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

- `-32768` On System Disk
- `-32767` On Appropriate Disk
- `-32766` System Domain, on Mac OS X mostly inside the folder `/System`
- `-32765` Local Domain (on Netbooting for example)
- `-32764` Network Domain (on Netbooting for example)
- `-32763` User Domain, on Mac OS X mostly inside the users folder.
- `-32762` Classic Domain, the current used Classic System folder.

Also take a look on the StartupItemsDisabledFolder function.

148.1.178 CreateStationeryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbs
const kUserDomain = -32763
dim f as folderitem = CreateStationeryFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the StationeryFolder function.

148.1.179 CreateSystemControlPanelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.

Example:

```
cost kUserDomain = -32763
dim f as folderitem = CreateSystemControlPanelFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the SystemControlPanelFolder function.
148.1.180  CreateSystemDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateSystemDesktopFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the SystemDesktopFolder function.

148.1.181  CreateSystemExtensionDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateSystemExtensionDisabledFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the SystemExtensionDisabledFolder function.

148.1.182 CreateSystemFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.

Example:

const kUserDomain = -32763
dim f as folderitem = CreateSystemFolderMBS(kUserDomain)

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the SystemFolder function.
148.1.183  CreateSystemPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.  
**Example:**

```swift
const kUserDomain = -32763
dim f as folderitem = CreateSystemPreferencesFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.  
Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk  
-32766  System Domain, on Mac OS X mostly inside the folder /System.  
-32765  Local Domain (on Netbooting for example)  
-32764  Network Domain (on Netbooting for example)  
-32763  User Domain, on Mac OS X mostly inside the users folder.  
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the SystemPreferencesFolder function.

148.1.184  CreateSystemSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.  
**Example:**

```swift
const kUserDomain = -32763
dim f as folderitem = CreateSystemSoundsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.  
Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
148.1. GLOBALS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the SystemSoundsFolder function.

148.1.185 CreateSystemTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateSystemTrashFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the SystemTrashFolder function.
148.1.186  CreateTemporaryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system. **Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = CreateTemporaryFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the TemporaryFolder function.

148.1.187  CreateTemporaryItemsInCacheDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system. **Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = CreateTemporaryItemsInCacheDataFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!
148.1. GLOBALS

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the TemporaryItemsInCacheDataFolderMBS function.

148.1.188 CreateTemporaryItemsInUserDomainFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a folderitem to this folder if it exists on that system.

**Example:**
const kUserDomain = -32763
dim f as folderitem = CreateTemporaryItemsInUserDomainFolderMBS(kUserDomain)

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the TemporaryItemsInUserDomainFolderMBS function.
148.1.189  CreateTextEncodingsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateTextEncodingsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk  
-32767 On Appropriate Disk  
-32766 System Domain, on Mac OS X mostly inside the folder /System.  
-32765 Local Domain (on Netbooting for example)  
-32764 Network Domain (on Netbooting for example)  
-32763 User Domain, on Mac OS X mostly inside the users folder.  
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the TextEncodingsFolder function.

148.1.190  CreateThemesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = CreateThemesFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the ThemesFolder function.

148.1.191  CreateTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```
const kUserDomain = -32763
dim f as folderitem = CreateTrashFolderMBS(kUserDomain)
```

**Notes:**
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the TrashFolder function.
148.1.192  CreateUserSpecificTmpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```pascal
const kUserDomain = -32763
dim f as folderitem = CreateUserSpecificTmpFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

- `-32768` On System Disk
- `-32767` On Appropriate Disk
- `-32766` System Domain, on Mac OS X mostly inside the folder `/System`
- `-32765` Local Domain (on Netbooting for example)
- `-32764` Network Domain (on Netbooting for example)
- `-32763` User Domain, on Mac OS X mostly inside the users folder.
- `-32762` Classic Domain, the current used Classic System folder.

Also take a look on the UsersFolder function.

148.1.193  CreateUserSpecificTmpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```pascal
const kUserDomain = -32763
dim f as folderitem = CreateUserSpecificTmpFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the UserSpecificTmpFolder function.

### 148.1.194 CreateUtilitiesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateUtilitiesFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned.

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the UtilitiesFolder function.
148.1.195  CreateVoicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```pascal
const kUserDomain = -32763
dim f as folderitem = CreateVoicesFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk  
-32766  System Domain, on Mac OS X mostly inside the folder /System.  
-32765  Local Domain (on Netbooting for example)  
-32764  Network Domain (on Netbooting for example)  
-32763  User Domain, on Mac OS X mostly inside the users folder.  
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the VoicesFolder function.

148.1.196  CreateVolumeRootFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```pascal
const kUserDomain = -32763
dim f as folderitem = CreateVolumeRootFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the VolumeRootFolder function.

148.1.197  CreateVolumeSettingsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**  Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CreateVolumeSettingsFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned. Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the VolumeSettingsFolder function.
CHAPTER 148. SPECIAL FOLDERS

148.1.198 CreateWhereToEmptyTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbs
const kUserDomain = -32763
dim f as folderitem = CreateWhereToEmptyTrashFolderMBS(kUserDomain)
```

**Notes:**

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder already exists, it is just returned. Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

- -32768 On System Disk
- -32767 On Appropriate Disk
- -32766 System Domain, on Mac OS X mostly inside the folder /System.
- -32765 Local Domain (on Netbooting for example)
- -32764 Network Domain (on Netbooting for example)
- -32763 User Domain, on Mac OS X mostly inside the users folder.
- -32762 Classic Domain, the current used Classic System folder.

Also take a look on the WhereToEmptyTrashFolder function.

148.1.199 CurrentUserFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbs
const kUserDomain = -32763
dim f as folderitem = CurrentUserFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):
148.1. GLOBALS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateCurrentUserFolder function.

148.1.200  

CurrentUserRemoteFolderLocationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  
**Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = CurrentUserRemoteFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateCurrentUserRemoteFolder function.
148.1.201 CurrentUserRemoteFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = CurrentUserRemoteFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateCurrentUserRemoteFolder function.

148.1.202 DesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = DesktopFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateDesktopFolder function.
-32788 On System Disk
-32787 On Appropriate Disk
-32786 System Domain, on Mac OS X mostly inside the folder /System.
-32785 Local Domain (on Netbooting for example)
-32784 Network Domain (on Netbooting for example)
-32783 User Domain, on Mac OS X mostly inside the users folder.
-32782 Classic Domain, the current used Classic System folder.

148.1.203 DesktopPicturesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```
const kUserDomain = -32763
dim f as folderitem = DesktopPicturesFolderMBS(kUserDomain)
```

**Notes:**
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32788 On System Disk
-32787 On Appropriate Disk
-32786 System Domain, on Mac OS X mostly inside the folder /System.
-32785 Local Domain (on Netbooting for example)
-32784 Network Domain (on Netbooting for example)
-32783 User Domain, on Mac OS X mostly inside the users folder.
-32782 Classic Domain, the current used Classic System folder.

Also take a look on the CreateDesktopPicturesFolder function.

148.1.204 DeveloperApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The developer application folder.

**Example:**
const kUserDomain = -32763
dim f as folderitem = DeveloperApplicationsFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateDeveloperApplicationsFolderMBS function.

### 148.1.205 DeveloperDocsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

const kUserDomain = -32763
dim f as folderitem = DeveloperDocsFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateDeveloperDocsFolder function.

### 148.1.206 DeveloperFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Example:

```javascript
const kUserDomain = -32763
dim f as folderitem = DeveloperFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateDeveloperFolder function.

148.1.207  DeveloperHelpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

Example:

```javascript
const kUserDomain = -32763
dim f as folderitem = DeveloperHelpFolderMBS(kUserDomain)
```

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateDeveloperHelpFolder function.

**148.1.208 DictionariesFolderMBS(domain as Integer) as folderitem**

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The folder for the dictionaries.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = DictionariesFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateDictionariesFolderMBS function.
148.1.209  DirectoryServicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```cpp
const kUserDomain = -32763
dim f as folderitem = DirectoryServicesFolderMBS(kUserDomain)
```

**Notes:**
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateDirectoryServicesFolder function.

148.1.210  DirectoryServicesPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```cpp
const kUserDomain = -32763
dim f as folderitem = DirectoryServicesPlugInsFolderMBS(kUserDomain)
```

**Notes:**
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateDirectoryServicesPlugInsFolder function.
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

148.1.211 DisplayExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = DisplayExtensionsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateDisplayExtensionsFolder function.

148.1.212 DocumentationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
148.1. GLOBALS

```vba
const kUserDomain = -32763
```

```vba
dim f as folderitem = DocumentationFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateDocumentationFolder function.
On Windows only the user and the system domain are supported.

148.1.213 DocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
```

```vba
dim f as folderitem = DocumentsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateDocumentsFolder function.
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

148.1.214 DomainLibraryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbscript
const kUserDomain = -32763
dim f as folderitem = DomainLibraryFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateDomainLibraryFolder function.

148.1.215 DomainTopLevelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
const kUserDomain = -32763

\[
\text{dim f as folderitem = DomainTopLevelFolderMBS(kUserDomain)}
\]

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateDomainTopLevelFolder function.

148.1.216 DownloadsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

\[
\text{const kUserDomain = -32763}
\]
\[
\text{dim f as folderitem = DownloadsFolderMBS(kUserDomain)}
\]

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateDownloadsFolderMBS function.

148.1.217 EditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Example:

```javascript
const kUserDomain = -32763
dim f as folderitem = EditorsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateEditorsFolder function.

148.1.218  ExtensionDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

Example:

```javascript
const kUserDomain = -32763
dim f as folderitem = ExtensionDisabledFolderMBS(kUserDomain)
```

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateExtensionDisabledFolder function.

148.1.219  ExtensionFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.

Example:

const kUserDomain = -32763
dim f as folderitem = ExtensionFolderMBS(kUserDomain)

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateExtensionFolder function.
148.1.220  FavoritesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```
const kUserDomain = -32763
dim f as folderitem = FavoritesFolderMBS(kUserDomain)
```

**Notes:**
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk  
-32766  System Domain, on Mac OS X mostly inside the folder /System.  
-32765  Local Domain (on Netbooting for example)  
-32764  Network Domain (on Netbooting for example)  
-32763  User Domain, on Mac OS X mostly inside the users folder.  
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateFavoritesFolder function.

148.1.221  FileSystemSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```
const kUserDomain = -32763
dim f as folderitem = FileSystemSupportFolderMBS(kUserDomain)
```

**Notes:**
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk  
-32766  System Domain, on Mac OS X mostly inside the folder /System.  
-32765  Local Domain (on Netbooting for example)  
-32764  Network Domain (on Netbooting for example)  
-32763  User Domain, on Mac OS X mostly inside the users folder.  
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateFileSystemSupportFolder function.
148.1. GLOBALS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

148.1.222 FindByContentFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = FindByContentFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateFindByContentFolder function.

148.1.223 FindByContentIndexesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763

Dim f As FolderItem = FindByContentIndexesFolderMBS(kUserDomain)

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateFindByContentIndexesFolderMBS function.

148.1.224 FindByContentPluginsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

Const kUserDomain = -32763
Dim f As FolderItem = FindByContentPluginsFolderMBS(kUserDomain)

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateFindByContentPluginsFolderMBS function.

148.1.225 FindSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
148.1. **GLOBALS**

-32768 On System Disk  
-32767 On Appropriate Disk  
-32766 System Domain, on Mac OS X mostly inside the folder /System.  
-32765 Local Domain (on Netbooting for example)  
-32764 Network Domain (on Netbooting for example)  
-32763 User Domain, on Mac OS X mostly inside the users folder.  
-32762 Classic Domain, the current used Classic System folder.

**Example:**

```javascript
const kUserDomain = -32763
dim f as folderitem = FindSupportFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk  
-32767 On Appropriate Disk  
-32766 System Domain, on Mac OS X mostly inside the folder /System.  
-32765 Local Domain (on Netbooting for example)  
-32764 Network Domain (on Netbooting for example)  
-32763 User Domain, on Mac OS X mostly inside the users folder.  
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateFindSupportFolder function.

### 148.1.226 `FolderActionsFolderMBS(domain as Integer) as folderitem`

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.  

**Example:**

```javascript
const kUserDomain = -32763
dim f as folderitem = FolderActionsFolderMBS(kUserDomain)
```

**Notes:**
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateFolderActionsFolder function.

148.1.227  FontCollectionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = FontCollectionsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateFontCollectionsFolderMBS function.
148.1. GLOBALS

148.1.228  FontsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = FontsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

- -32768  On System Disk
- -32767  On Appropriate Disk
- -32766  System Domain, on Mac OS X mostly inside the folder /System.
- -32765  Local Domain (on Netbooting for example)
- -32764  Network Domain (on Netbooting for example)
- -32763  User Domain, on Mac OS X mostly inside the users folder.
- -32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateFontsFolder function.

148.1.229  FrameworksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = FrameworksFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateFrameworksFolder function.
CHAPTER 148. SPECIAL FOLDERS

148.1.230 GenEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.

Example:

const kUserDomain = -32763
dim f as folderitem = GenEditorsFolderMBS(kUserDomain)

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateGenEditorsFolder function.

148.1.231 HelpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.

Example:
148.1. GLOBALS

const kUserDomain = -32763
dim f as folderitem = HelpFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateHelpFolder function.

148.1.232 iMovieFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns a folderitem to this folder if it exists on that system.
Example:
const kUserDomain = -32763
dim f as folderitem = iMovieFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateiMovieFolderMBS function.

148.1.233 iMoviePlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns a folderitem to this folder if it exists on that system.
CHAPTER 148. SPECIAL FOLDERS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = iMoviePlugInsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateiMoviePlugInsFolderMBS function.

148.1.234 iMovieSoundEffectsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.

Example:

```
const kUserDomain = -32763
dim f as folderitem = iMovieSoundEffectsFolderMBS(kUserDomain)
```

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateiMovieSoundEffectsFolderMBS function.

148.1.235  IndexFilesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = IndexFilesFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateIndexFilesFolderMBS function.
148.1.236 InputManagersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = InputManagersFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

- -32768 On System Disk
- -32767 On Appropriate Disk
- -32766 System Domain, on Mac OS X mostly inside the folder /System.
- -32765 Local Domain (on Netbooting for example)
- -32764 Network Domain (on Netbooting for example)
- -32763 User Domain, on Mac OS X mostly inside the users folder.
- -32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateInputManagersFolderMBS function.

148.1.237 InputMethodsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = InputMethodsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateInputMethodsFolderMBS function.
148.1. GLOBALS

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

148.1.238  InstallerLogsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
cnst kUserDomain = -32763
dim f as folderitem = InstallerLogsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateInstallerLogsFolder function.

148.1.239  InstallerReceiptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
CHAPTER 148. SPECIAL FOLDERS

const kUserDomain = -32763
dim f as folderitem = InstallerReceiptsFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateInstallerReceiptsFolder function.

148.1.240  InternetFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem
to this folder if it exists on that system.
Example:
const kUserDomain = -32763
dim f as folderitem = InternetFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateInternetFolder function.

148.1.241  InternetPlugInFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem
to this folder if it exists on that system.
148.1. GLOBALS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Example:

const kUserDomain = -32763
dim f as folderitem = InternetPlugInFolderMBS(kUserDomain)

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateInternetPlugInFolder function.

148.1.242 InternetSearchSitesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem
to this folder if it exists on that system.
Example:

const kUserDomain = -32763
dim f as folderitem = InternetSearchSitesFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateInternetSearchSitesFolder function.

148.1.243  InternetSitesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.  
**Example:**

```pascal
const kUserDomain = -32763
dim f as folderitem = InternetSitesFolderMBS(kUserDomain)
```

**Notes:**
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateInternetSitesFolder function.
148.1.244  **ISSDownloadsFolderMBS**(*domain as Integer*) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
cnst kUserDomain = -32763
dim f as folderitem = ISSDownloadsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateISSDownloadsFolder function.

148.1.245  **KernelExtensionsFolderMBS**(*domain as Integer*) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
cnst kUserDomain = -32763
dim f as folderitem = KernelExtensionsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateKernelExtensionsFolder function.
148.1.246 KeyboardLayoutsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
cnst kUserDomain = -32763
dim f as folderitem = KeyboardLayoutsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateKeyboardLayoutsFolderMBS function.

148.1.247 KeychainFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
148.1. GLOBALS

const kUserDomain = -32763
dim f as folderitem = KeychainFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateKeychainFolder function.

148.1.248 LauncherItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem
to this folder if it exists on that system.
Example:
const kUserDomain = -32763
dim f as folderitem = LauncherItemsFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateLauncherItemsFolder function.

148.1.249 LibraryAssistantsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns a folderitem to this folder if it exists on that system.
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Example:

```plaintext
const kUserDomain = -32763
dim f as folderitem = LibraryAssistantsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateLibraryAssistantsFolderMBS function.

148.1.250 LocalesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = LocalesFolderMBS(kUserDomain)
```

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateLocalesFolder function.

148.1.251 LogsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The log files folder.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = LogsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateLogsFolderMBS function.
148.1.252 MacOSReadMesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbs
const kUserDomain = -32763
dim f as folderitem = MacOSReadMesFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateMacOSReadMesFolder function.

148.1.253 MagicTemporaryItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbs
const kUserDomain = -32763
dim f as folderitem = MagicTemporaryItemsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateMagicTemporaryItemsFolderMBS function.
148.1. GLOBALS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

148.1.254 ManagedItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = ManagedItemsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateManagedItemsFolderMBS function.

148.1.255 MIDIDriversFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
const kUserDomain = -32763
dim f as folderitem = MIDIDriversFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateMIDIDriversFolder function.

148.1.256  ModemScriptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

Example:
const kUserDomain = -32763
dim f as folderitem = ModemScriptsFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateModemScriptsFolder function.

148.1.257  MovieDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
148.1.  GLOBALS

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Example:

```vba
const kUserDomain = -32763
dim f as folderitem = MovieDocumentsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateMovieDocumentsFolder function.

148.1.258  MultiprocessingFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = MultiprocessingFolderMBS(kUserDomain)
```

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateMultiprocessingFolder function.

148.1.259 MusicDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```text
const kUserDomain = -32763
dim f as folderitem = MusicDocumentsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateMusicDocumentsFolder function.
148.1.260 OpenDocEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = OpenDocEditorsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateOpenDocEditorsFolder function.

148.1.261 OpenDocFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = OpenDocFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateOpenDocFolder function.
CHAPTER 148. SPECIAL FOLDERS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

148.1.262 OpenDocLibrariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
cnst kUserDomain = -32763
dim f as folderitem = OpenDocLibrariesFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateOpenDocLibrariesFolder function.

148.1.263 OpenDocShellPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
148.1. GLOBALS

const kUserDomain = -32763
dim f as folderitem = OpenDocShellPlugInsFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateOpenDocShellPlugInsFolder function.

148.1.264 PictureDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

const kUserDomain = -32763
dim f as folderitem = PictureDocumentsFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreatePictureDocumentsFolder function.

As there is no such folder on Mac OS Classic, you always get nil there.
CHAPTER 148. SPECIAL FOLDERS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

148.1.265 PreferencePanesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The preferences panes folder.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = PreferencePanesFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreatePreferencePanesFolderMBS function.

148.1.266 PreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
148.1. GLOBALS

```vbs
dim f as folderitem

f = preferencesFolderMBS(-32763)
if f=nil then // On Windows always nil
f = applicationsupportFolderMBS(-32763)
end if

msgBox f.absolutePath
```

// example output:
// "Mac OS X:Users:cs:Library:Preferences:" on Mac OS X
// "Mac OS 9:Systemordner:Preferences" on a german Mac OS 9
// "C:\Dokumente und Einstellungen\Christian\Anwendungsdaten\" on a german Windows XP.

**Notes:**

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreatePreferencesFolder function.

148.1.267 PrinterDescriptionFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbs
const kUserDomain = -32763
dim f as folderitem = PrinterDescriptionFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreatePrinterDescriptionFolder function.

148.1.268  PrinterDriverFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.
Example:
const kUserDomain = -32763
dim f as folderitem = PrinterDriverFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreatePrinterDriverFolder function.
148.1.269  PrintersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```
const kUserDomain = -32763
dim f as folderitem = PrintersFolderMBS(kUserDomain)
```

**Notes:**
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

- -32768  On System Disk
- -32767  On Appropriate Disk
- -32766  System Domain, on Mac OS X mostly inside the folder /System.
- -32765  Local Domain (on Netbooting for example)
- -32764  Network Domain (on Netbooting for example)
- -32763  User Domain, on Mac OS X mostly inside the users folder.
- -32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreatePrintersFolder function.

148.1.270  PrintingPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
```
const kUserDomain = -32763
dim f as folderitem = PrintingPlugInsFolderMBS(kUserDomain)
```

**Notes:**
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreatePrintingPlugInsFolder function.
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

148.1.271 PrintMonitorDocsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = PrintMonitorDocsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreatePrintMonitorDocsFolder function.

148.1.272 PrivateFrameworksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
148.1. GLOBALS

const kUserDomain = -32763
dim f as folderitem = PrivateFrameworksFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreatePrivateFrameworksFolder function.

148.1.273  PublicFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

Example:
const kUserDomain = -32763
dim f as folderitem = PublicFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreatePublicFolder function.

148.1.274  QuickLookFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Example:

const kUserDomain = -32763
dim f as folderitem = QuickLookFolderMBS(kUserDomain)

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateQuickLookFolderMBS function.

148.1.275 QuickTimeComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.  
**Example:**

const kUserDomain = -32763
dim f as folderitem = QuickTimeComponentsFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateQuickTimeComponentsFolder function.

148.1.276 QuickTimeExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = QuickTimeExtensionsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateQuickTimeExtensionsFolder function.
148.1.277  RecentApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.

Example:

const kUserDomain = -32763
dim f as folderitem = RecentApplicationsFolderMBS(kUserDomain)

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateRecentApplicationsFolder function.

148.1.278  RecentDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.

Example:

const kUserDomain = -32763
dim f as folderitem = RecentDocumentsFolderMBS(kUserDomain)

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateRecentDocumentsFolder function.
148.1. **GLOBALS**

-32768 On System Disk  
-32767 On Appropriate Disk  
-32766 System Domain, on Mac OS X mostly inside the folder /System.  
-32765 Local Domain (on Netbooting for example)  
-32764 Network Domain (on Netbooting for example)  
-32763 User Domain, on Mac OS X mostly inside the users folder.  
-32762 Classic Domain, the current used Classic System folder.

### 148.1.279 `RecentServersFolderMBS(domain as Integer) as folderitem`

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.  
**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = RecentServersFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!  
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk  
-32767 On Appropriate Disk  
-32766 System Domain, on Mac OS X mostly inside the folder /System.  
-32765 Local Domain (on Netbooting for example)  
-32764 Network Domain (on Netbooting for example)  
-32763 User Domain, on Mac OS X mostly inside the users folder.  
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the `CreateRecentServersFolder` function.

### 148.1.280 `ScriptingAdditionsFolderMBS(domain as Integer) as folderitem`

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.  
**Example:**
const kUserDomain = -32763
dim f as folderitem = ScriptingAdditionsFolderMBS(kUserDomain)

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateScriptingAdditionsFolder function.

148.1.281 ScriptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

const kUserDomain = -32763
dim f as folderitem = ScriptsFolderMBS(kUserDomain)

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateScriptsFolder function.

148.1.282 SharedLibrariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
148.1. GLOBALS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Example:

```javascript
const kUserDomain = -32763
dim f as folderitem = SharedLibrariesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateSharedLibrariesFolder function.

148.1.283 SharedUserDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.

Example:

```javascript
const kUserDomain = -32763
dim f as folderitem = SharedUserDataFolderMBS(kUserDomain)
```

Notes:
CHAPTER 148. SPECIAL FOLDERS

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateSharedUserDataFolder function.

### 148.1.284 ShutdownFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = ShutdownFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateShutdownFolder function.
148.1.285  **ShutdownItemsDisabledFolderMBS(domain as Integer) as folderitem**

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = ShutdownItemsDisabledFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk  
-32766  System Domain, on Mac OS X mostly inside the folder /System.  
-32765  Local Domain (on Netbooting for example)  
-32764  Network Domain (on Netbooting for example)  
-32763  User Domain, on Mac OS X mostly inside the users folder.  
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateShutdownItemsDisabledFolder function.

148.1.286  **SoundSetsFolderMBS(domain as Integer) as folderitem**

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = SoundSetsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768  On System Disk  
-32767  On Appropriate Disk  
-32766  System Domain, on Mac OS X mostly inside the folder /System.  
-32765  Local Domain (on Netbooting for example)  
-32764  Network Domain (on Netbooting for example)  
-32763  User Domain, on Mac OS X mostly inside the users folder.  
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateSoundSetsFolder function.
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

148.1.287 SpeakableItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = SpeakableItemsFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateSpeakableItemsFolder function.

148.1.288 SpeechFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
const kUserDomain = -32763
dim f as folderitem = SpeechFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateSpeechFolder function.

148.1.289  SpotlightImportersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a folderitem to this folder if it exists on that system.
**Example:**

const kUserDomain = -32763
dim f as folderitem = SpotlightImportersFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateSpotlightImportersFolderMBS function.

148.1.290  SpotlightMetadataCacheFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a folderitem to this folder if it exists on that system.
-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = SpotlightMetadataCacheFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateSpotlightMetadataCacheFolderMBS function.

### 148.1.291  SpotlightSavedSearchesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```
const kUserDomain = -32763
dim f as folderitem = SpotlightSavedSearchesFolderMBS(kUserDomain)
```

**Notes:**
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateSpotlightSavedSearchesFolderMBS function.

148.1.292 StartupFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = StartupFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateStartupFolder function.
148.1.293  **StartupItemsDisabledFolderMBS**(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = StartupItemsDisabledFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateStartupItemsDisabledFolder function.

148.1.294  **StationeryFolderMBS**(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = StationeryFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateStationeryFolder function.
148.1. **GLOBALS**

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

---

### 148.1.295 SystemControlPanelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vbnet
const kUserDomain = -32763
dim f as folderitem = SystemControlPanelFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemControlPanelFolder function.

---

### 148.1.296 SystemDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
const kUserDomain = -32763
dim f as folderitem = SystemDesktopFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemDesktopFolder function.

148.1.297  SystemExtensionDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

Example:

const kUserDomain = -32763
dim f as folderitem = SystemExtensionDisabledFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateSystemExtensionDisabledFolder function.

148.1.298  SystemFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
148.1. GLOBALS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Example:

```plaintext
const kUserDomain = -32763
dim f as folderitem = SystemFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemFolder function.

148.1.299 SystemPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = SystemPreferencesFolderMBS(kUserDomain)
```

**Notes:**
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemPreferencesFolder function.

148.1.300  SystemSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.
Example:

const kUserDomain = -32763
dim f as folderitem = SystemSoundsFolderMBS(kUserDomain)

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemSoundsFolder function.
148.1.301  **SystemTrashFolderMBS**(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = SystemTrashFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

- `-32768`  On System Disk
- `-32767`  On Appropriate Disk
- `-32766`  System Domain, on Mac OS X mostly inside the folder `/System`
- `-32765`  Local Domain (on Netbooting for example)
- `-32764`  Network Domain (on Netbooting for example)
- `-32763`  User Domain, on Mac OS X mostly inside the users folder.
- `-32762`  Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemTrashFolder function.

148.1.302  **TemporaryFolderMBS**(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = TemporaryFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateTemporaryFolder function.
148.1.303 TemporaryItemsInCacheDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```vba
const kUserDomain = -32763
dim f as folderitem = TemporaryItemsInCacheDataFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version! The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateTemporaryItemsInCacheDataFolderMBS function.

148.1.304 TemporaryItemsInUserDomainFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
148.1. GLOBALS

const kUserDomain = -32763

dim f as folderitem = TemporaryItemsInUserDomainFolderMBS(kUserDomain)

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateTemporaryItemsInUserDomainFolderMBS function.

148.1.305 TextEncodingsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

const kUserDomain = -32763

dim f as folderitem = TextEncodingsFolderMBS(kUserDomain)

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateTextEncodingsFolder function.

148.1.306 ThemesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
CHAPTER 148. SPECIAL FOLDERS

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Example:

const kUserDomain = -32763
dim f as folderitem = ThemesFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768  On System Disk
-32767  On Appropriate Disk
-32766  System Domain, on Mac OS X mostly inside the folder /System.
-32765  Local Domain (on Netbooting for example)
-32764  Network Domain (on Netbooting for example)
-32763  User Domain, on Mac OS X mostly inside the users folder.
-32762  Classic Domain, the current used Classic System folder.

Also take a look on the CreateThemesFolder function.

148.1.307  TrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem
to this folder if it exists on that system.
Example:

const kUserDomain = -32763
dim f as folderitem = TrashFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateTrashFolder function.

148.1.308 UsersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = UsersFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateUserStorageFolder function.
148.1.309 **UserSpecificTmpFolderMBS**(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```dim f as folderitem = UserSpecificTmpFolderMBS(kUserDomain)```

**Notes:**

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk  
-32767 On Appropriate Disk  
-32766 System Domain, on Mac OS X mostly inside the folder /System.  
-32765 Local Domain (on Netbooting for example)  
-32764 Network Domain (on Netbooting for example)  
-32763 User Domain, on Mac OS X mostly inside the users folder.  
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateUserSpecificTmpFolder function.

148.1.310 **UtilitiesFolderMBS**(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```dim f as folderitem = UtilitiesFolderMBS(kUserDomain)```

**Notes:**

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768 On System Disk  
-32767 On Appropriate Disk  
-32766 System Domain, on Mac OS X mostly inside the folder /System.  
-32765 Local Domain (on Netbooting for example)  
-32764 Network Domain (on Netbooting for example)  
-32763 User Domain, on Mac OS X mostly inside the users folder.  
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateUtilitiesFolder function.
148.1. GLOBALS

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

148.1.311 VoicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

```plaintext
const kUserDomain = -32763
dim f as folderitem = VoicesFolderMBS(kUserDomain)
```

**Notes:**

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateVoicesFolder function.

148.1.312 VolumeRootFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**
const kUserDomain = -32763
dim f as folderitem = VolumeRootFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateVolumeRootFolder function.

148.1.313 VolumeSettingsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.
Example:
const kUserDomain = -32763
dim f as folderitem = VolumeSettingsFolderMBS(kUserDomain)

Notes:
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateVolumeSettingsFolder function.

148.1.314 WhereToEmptyTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a folderitem to this folder if it exists on that system.
-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Example:

```javascript
const kUserDomain = -32763
dim f as folderitem = WhereToEmptyTrashFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768 On System Disk
-32767 On Appropriate Disk
-32766 System Domain, on Mac OS X mostly inside the folder /System.
-32765 Local Domain (on Netbooting for example)
-32764 Network Domain (on Netbooting for example)
-32763 User Domain, on Mac OS X mostly inside the users folder.
-32762 Classic Domain, the current used Classic System folder.

Also take a look on the CreateWhereToEmptyTrashFolder function.

148.1.315 WindowsBurnAreaFolderMBS as folderitem

MBS Util Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the folder which Windows uses to store temporary data for burning a CD/DVD. **Notes:** Returns nil on any error.
148.1.316  WindowsFolderMBS as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

dim f as folderitem
f=WindowsFolderMBS

148.1.317  WindowsSystemFolderMBS as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

**Example:**

dim f as folderitem
f=WindowsSystemFolderMBS
Chapter 149

Speech

149.1 class NSSpeechRecognizerMBS

149.1.1 class NSSpeechRecognizerMBS

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class to handle the cocoa speech recognition. **Notes:** Available in Mac OS X v10.3 and later.

149.1.2 Methods

149.1.3 commands as string()

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the current list of commands.

149.1.4 Destructor

149.1.5 SetCommands(commands() as string)

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the list of commands for which the receiver should listen to commands.
Notes: If the receiver is already listening, the current command list is updated and listening continues. commands should be an array of strings. The commands must be in U.S. English.

### 149.1.6 StartListening

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Tells the speech recognition engine to begin listening for commands.  
**Notes:** When a command is recognized the message didRecognizeCommand is called.

### 149.1.7 StopListening

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Tells the speech recognition engine to suspend listening for commands.

### 149.1.8 Properties

#### 149.1.9 BlocksOtherRecognizers as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the receiver should block all other recognizers (that is, other applications attempting to understand spoken commands) when listening.  
**Notes:** (Read and Write property)

#### 149.1.10 DisplayedCommandsTitle as string

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the title of the commands section or "" if there is no title.  
**Notes:** Commands are displayed in the Speech Commands window indented under a section with this title. (Read and Write property)

#### 149.1.11 ListensInForegroundOnly as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the receiver should only enable its commands when the receiver’s application is the frontmost one.
149.1. CLASS NSSPEECHRECOGNIZERMBS

Notes: (Read and Write property)

149.1.12 Events

149.1.13 DidRecognizeCommand(command as string)

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Invoked when the recognition engine has recognized the application command command. **Notes:** command is one of the strings from the array passed to setCommands. The delegate typically evaluates which command was recognized and performs the related action.
149.2  class NSSpeechSynthesizerMBS

149.2.1  class NSSpeechSynthesizerMBS

**Function:** The class to handle the cocoa speech synthesizing.  
**Notes:**  
Available in Mac OS X v10.3 and later.

More details on Apple’s website:  

149.2.2  Methods

149.2.3  addSpeechDictionary(speechDictionary as dictionary)

**Function:** Registers the given speech dictionary with the receiver.  
**Notes:**  
speechDictionary: Speech dictionary to add to the receiver’s dictionaries.  

See the discussion of UseSpeechDictionary in Speech Synthesis Manager Reference for more information.  
Available in OS X v10.5 and later.

149.2.4  attributesForVoice(voice as String) as NSVoiceMBS

**Function:** Returns information about a voice or nil.

149.2.5  availableVoice(index as Integer) as String

**Function:** Returns name of a voice.  
**Notes:**  
The available voices can be listed using this function.  
Index is from 0 to count-1.
149.2. CLASS NSSpeechSynthesizerMBS

149.2.6 availableVoices as String()

Function: Returns the array with the identifiers for the available voices.
Example:
MsgBox Join(NSSpeechSynthesizerMBS.availableVoices)

Notes: Same as availableVoice() and availableVoicesCount, but this function returns an array which is very useful for for-each-loops.

149.2.7 availableVoicesCount as Integer

149.2.8 Constructor

Notes:
This constructor is needed for the events to fire.
The given voice must be valid!
See also:
  • 149.2.9 Constructor(voice as string)

149.2.9 Constructor(voice as string)

Notes: This constructor is needed for the events to fire.
See also:
  • 149.2.8 Constructor

149.2.10 continueSpeaking

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Continues speaking after it has been paused.
CHAPTER 149. SPEECH

Notes: Mac OS X 10.5 only.

149.2.11 defaultVoice as String

Example:

```plaintext
dim s as NSSpeechSynthesizerMBS
s=new NSSpeechSynthesizerMBS
MsgBox s.defaultVoice
```

149.2.12 Destructor

149.2.13 isAnyApplicationSpeaking as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Indicates whether any other application is currently speaking through the sound output device.

149.2.14 NSSpeechCharacterModeProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```plaintext
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS
call s.setObjectForProperty(s.NSSpeechModeLiteral, s.NSSpeechCharacterModeProperty, e)
msgBox s.objectForProperty(s.NSSpeechCharacterModeProperty, e)
call s.setObjectForProperty(s.NSSpeechModeNormal, s.NSSpeechCharacterModeProperty, e)
msgBox s.objectForProperty(s.NSSpeechCharacterModeProperty, e)
```
Notes:
Get or set the synthesizer’s current text-processing mode. A string that specifies whether the channel is currently in text input mode or phoneme input mode. When the character-processing mode is NSSpeechModeNormal, input characters are spoken as you would expect to hear them. When the mode is NSSpeechModeLiteral, each character is spoken literally, so that the word "cat" is spoken "CAT".
Available in OS X v10.5 and later.

149.2.15 NSSpeechCommandDelimiterProperty as String

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes:
Set the embedded speech command delimiter characters to be used for the synthesizer. A dictionary that contains the delimiter information. See "Command Delimiter Keys" for the keys you can use to specify values in this dictionary.
By default, the opening delimiter is " [ [ " and the closing delimiter is " ] ] ". Your application might need to change these delimiters temporarily if those character sequences occur naturally in a text buffer that is to be spoken. Your application can also disable embedded command processing by passing empty delimiters (as empty strings). See "Speech Command Delimiter" for the keys you can use to specify values in this dictionary.
Available in OS X v10.5 and later.

149.2.16 NSSpeechCommandPrefix as String

Function: One of the constants speech-command delimiters keys used in NSSpeechCommandDelimiterProperty.
Notes:
The command delimiter string that prefixes a command, by default, this is [ [ .
Available in OS X v10.5 and later.

149.2.17 NSSpeechCommandSuffix as String

Function: One of the constants speech-command delimiters keys used in NSSpeechCommandDelimiterProperty.
Notes:
The command delimiter string that suffices a command, by default, this is ]] . Available in OS X v10.5 and later.

**149.2.18 NSSpeechCurrentVoiceProperty as String**

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.

**Notes:**
Set the current voice on the synthesizer to the specified voice. A dictionary that contains the phoneme symbols and example words defined for the current synthesizer. Your application might use this information to show the user what symbols to use when entering phonemic text directly. See "NSSpeechPhonemeSymbolsProperty Dictionary Keys" for the keys you can use to specify values in this dictionary.
Available in OS X v10.5 and later.

**149.2.19 NSSpeechDictionaryAbbreviations as String**

**Function:** One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.

**Notes:**
An array of dictionary objects containing the keys NSSpeechDictionaryEntrySpelling and NSSpeechDictionaryEntryPhonemes.
Available in OS X v10.5 and later.

**149.2.20 NSSpeechDictionaryEntryPhonemes as String**

**Function:** One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.

**Notes:**
The phonemic representation of an entry. A string.
Available in OS X v10.5 and later.
149.2.21 NSSpeechDictionaryEntrySpelling as String

Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes:
The spelling of an entry. A string.
Available in OS X v10.5 and later.

149.2.22 NSSpeechDictionaryLocaleIdentifier as String

Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes:
The canonical locale identifier string describing the dictionary’s locale. A locale is generally composed of three pieces of ordered information: a language code, a region code, and a variant code. Refer to documentation about NSLocale or Locales Programming Guide for more information
Available in OS X v10.5 and later.

149.2.23 NSSpeechDictionaryModificationDate as String

Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes:
A string representation of the dictionary’s last modification date in the international format (YYYY-MM-DD HH:MM:SS HHMM). If the same word appears across multiple dictionaries, the one from the dictionary with the most recent date will be used.
Available in OS X v10.5 and later.

149.2.24 NSSpeechDictionaryPronunciations as String

Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes: An array of dictionary objects containing the keys NSSpeechDictionaryEntrySpelling and NSSpeechDictionaryEntryPhonemes.
149.2.25 NSSpeechErrorCount as String

Function: One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
Notes:
The number of errors that have occurred in processing the current text string, since the last call to objectForProperty with the NSSpeechErrorsProperty property. A Number
Using the NSSpeechErrorOldestCode keys and the NSSpeechErrorNewestCode keys, you can get information about the oldest and most recent errors that occurred since the last call to objectForProperty, but you cannot get information about any intervening errors.
Available in OS X v10.5 and later.

149.2.26 NSSpeechErrorNewestCharacterOffset as String

Function: One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
Notes:
The position in the text string of the most recent error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A Number.
Available in OS X v10.5 and later.

149.2.27 NSSpeechErrorNewestCode as String

Function: One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
Notes:
The error code of the most recent error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A number
Available in OS X v10.5 and later.

149.2.28 NSSpeechErrorOldestCharacterOffset as String

Function: One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
Notes:
The position in the text string of the first error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A number
Available in OS X v10.5 and later.

149.2.29 NSSpeechErrorOldestCode as String

Function: One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
Notes:
The error code of the first error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A Number
Available in OS X v10.5 and later.

149.2.30 NSSpeechErrorsProperty as String

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes:
This property lets you get information about various run-time errors that occur during speaking, such as the detection of badly formed embedded commands. Errors returned directly by the Speech Synthesis Manager are not reported here.
If your application implements the didEncounterErrorAtIndex event, the event can use this property to get error information.
Available in OS X v10.5 and later.

149.2.31 NSSpeechInputModeProperty as String

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes:
Get or set the synthesizer’s current text-processing mode. A string that specifies whether the channel is currently in text input mode or phoneme input mode. The supported values are listed in "Speaking Modes for NSSpeechInputModeProperty."
When in phoneme-processing mode, a text string is interpreted to be a series of characters representing various phonemes and prosodic controls. Some synthesizers might support additional input-processing modes
and define constants for these modes.
Available in OS X v10.5 and later.

149.2.32 NSSpeechModeLiteral as String

Function: One of the constants defining the available text-processing and number-processing modes for a
synthesizer. This key is used with NSSpeechInputModeProperty and NSSpeechNumberModeProperty.
Notes:
Indicates that each digit or character is spoken literally (so that 12 is spoken as "one, two", or the word
"cat" is spoken as "C A T").
Available in OS X v10.5 and later.

149.2.33 NSSpeechModeNormal as String

Function: One of the constants defining the available text-processing and number-processing modes for a
synthesizer. This key is used with NSSpeechInputModeProperty and NSSpeechNumberModeProperty.
Notes:
Indicates that the synthesizer assembles digits into numbers (so that 12 is spoken as "twelve") and text into
words.
Available in OS X v10.5 and later.

149.2.34 NSSpeechModePhoneme as String

Function: One of the constants identify input modes are used with NSSpeechInputModeProperty.
Notes:
Indicates that the synthesizer is in phoneme-processing mode. When in phoneme-processing mode, a text
buffer is interpreted to be a series of characters representing various phonemes and prosodic controls.
Available in OS X v10.5 and later.

149.2.35 NSSpeechModeText as String

Function: One of the constants identify input modes are used with NSSpeechInputModeProperty.
Notes:
Indicates that the synthesizer is in text-processing mode.
Available in OS X v10.5 and later.

149.2.36 NSSpeechNumberModeProperty as String

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the
characteristics of a synthesizer.
Example:

dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS

call s.setObjectForProperty(s.NSSpeechModeLiteral, s.NSSpeechNumberModeProperty, e)
msgBox s.objectForProperty(s.NSSpeechNumberModeProperty, e)

call s.setObjectForProperty(s.NSSpeechModeNormal, s.NSSpeechNumberModeProperty, e)
msgBox s.objectForProperty(s.NSSpeechNumberModeProperty, e)

Notes:
Get or set the synthesizer’s current number-processing mode. A string that specifies whether the synthe-
sizer is currently in normal or literal number-processing mode. The constants NSSpeechModeNormal and
NSSpeechModeLiteral are the possible values of this string.
When the number-processing mode is NSSpeechModeNormal, the synthesizer assembles digits into numbers
(so that ”12” is spoken as ”twelve”). When the mode is NSSpeechModeLiteral, each digit is spoken literally
(so that ”12” is spoken as ”one, two”).
Available in OS X v10.5 and later.

149.2.37 NSSpeechOutputToFileURLProperty as String

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the
characteristics of a synthesizer.
Notes:
Set the speech output destination to a file or to the computer’s speakers. A NSURL object. To write the
speech output to a file, use the file’s NSURL; to generate the sound through the computer’s speakers, use
nil.
Available in OS X v10.5 and later.
149.2.38 NSSpeechPhonemeInfoExample as String

**Function:** One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
**Notes:**
An example word that illustrates the use of the phoneme.
Available in OS X v10.5 and later.

149.2.39 NSSpeechPhonemeInfoHiliteEnd as String

**Function:** One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
**Notes:**
The character offset into the example word that identifies the location of the end of the phoneme.
Available in OS X v10.5 and later.

149.2.40 NSSpeechPhonemeInfoHiliteStart as String

**Function:** One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
**Notes:**
The character offset into the example word that identifies the location of the beginning of the phoneme.
Available in OS X v10.5 and later.

149.2.41 NSSpeechPhonemeInfoOpcode as String

**Function:** One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
**Notes:**
The opcode as Number.
Available in OS X v10.5 and later.

149.2.42 NSSpeechPhonemeInfoSymbol as String

**Function:** One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
**Notes:**
149.2. CLASS NSSPEECHSYNTHESIZERMBS

149.2.43 NSSpeechPhonemeSymbolsProperty as String

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
**Notes:**
Get a list of phoneme symbols and example words defined for the synthesizer. A Dictionary object that contains the phoneme symbols and example words defined for the current synthesizer.
Your application might use this information to show the user what symbols to use when entering phonemic text directly. See "NSSpeechPhonemeSymbolsProperty Dictionary Keys" for a description of the keys present in the dictionary.
Available in OS X v10.5 and later.

149.2.44 NSSpeechPitchBaseProperty as String

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
**Example:**
```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS

dim n as Integer = s.objectForProperty(s.NSSpeechPitchBaseProperty, e)
msgBox str(n)
```
**Notes:**
Get or set a synthesizer’s baseline speech pitch. An number that specifies the baseline speech pitch.
Typical voice frequencies range from around 90 hertz for a low-pitched male voice to perhaps 300 hertz for a high-pitched child’s voice. These frequencies correspond to approximate pitch values in the ranges of 30.000 to 40.000 and 55.000 to 65.000, respectively.
Note: The change in speech pitch may not be noticeable until the next sentence or paragraph is spoken.
Available in OS X v10.5 and later.
149.2.45 NSSpeechPitchModProperty as String

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.  
**Example:**
```vbscript
dim s as new NSSpeechSynthesizerMBS  
dim e as NSErrorMBS  

dim n as Double = s.objectForProperty(s.NSSpeechPitchModProperty, e)  
msgBox str(n)
```

**Notes:**  
Get or set a synthesizer’s pitch modulation. A number object that specifies the synthesizer’s pitch modulation.  
Pitch modulation is also expressed as a floating-point value in the range of 0.000 to 127.000. These values correspond to MIDI note values, where 60.000 is equal to middle C on a piano scale. The most useful speech pitches fall in the range of 40.000 to 55.000. A pitch modulation value of 0.000 corresponds to a monotone in which all speech is generated at the frequency corresponding to the speech pitch. Given a speech pitch value of 46.000, a pitch modulation of 2.000 would mean that the widest possible range of pitches corresponding to the actual frequency of generated text would be 44.000 to 48.000.

Note: The change in pitch modulation may not be noticeable until the next sentence or paragraph is spoken. Available in OS X v10.5 and later.

149.2.46 NSSpeechRateProperty as String

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.  
**Example:**
```vbscript
dim s as new NSSpeechSynthesizerMBS  
dim e as NSErrorMBS  

dim value as Double = s.objectForProperty(s.NSSpeechRateProperty, e)  
MsgBox str(value)
```

**Notes:**  
Get or set the synthesizer’s baseline speech pitch. A number that specifies the synthesizer’s baseline speech pitch.
Typical voice frequencies range from around 90 hertz for a low-pitched male voice to perhaps 300 hertz for a high-pitched child's voice. These frequencies correspond to approximate pitch values in the ranges of 30,000 to 40,000 and 55,000 to 65,000, respectively.
Available in OS X v10.5 and later.

### 149.2.47 NSSpeechRecentSyncProperty as String

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
**Notes:**
Get the message code for the most recently encountered synchronization command. A number that specifies the most recently encountered synchronization command.

Available in OS X v10.5 and later.

### 149.2.48 NSSpeechResetProperty as String

**Function:** One of the constants used with setObjectForProperty to get or set the characteristics of a synthesizer.
**Notes:**
Set a synthesizer back to its default state. There is no value associated with this property; to reset the channel to its default state, set the key to nil.
You can use this function to, for example, set speech pitch and speech rate to default values.
Available in OS X v10.5 and later.

### 149.2.49 NSSpeechStatusNumberOfCharactersLeft as String

**Function:** One of the constants identify speech status keys used with NSSpeechStatusProperty.
**Notes:**
The number of characters left in the input string of text.
When the value of this key is zero, you can destroy the input string.
Available in OS X v10.5 and later.
149.2.50 NSSpeechStatusOutputBusy as String

Function: One of the constants identify speech status keys used with NSSpeechStatusProperty.
Notes:
Indicates whether the synthesizer is currently producing speech.
A synthesizer is considered to be producing speech even at some times when no audio data is being produced through the computer’s speaker. This occurs, for example, when the synthesizer is processing input, but has not yet initiated speech or when speech output is paused.
Available in OS X v10.5 and later.

149.2.51 NSSpeechStatusOutputPaused as String

Function: One of the constants identify speech status keys used with NSSpeechStatusProperty.
Notes:
Indicates whether speech output in the synthesizer has been paused by sending the message pauseSpeakingAt-Boundary.
Available in OS X v10.5 and later.

149.2.52 NSSpeechStatusPhonemeCode as String

Function: One of the constants identify speech status keys used with NSSpeechStatusProperty.
Notes:
Indicates that the synthesizer is in phoneme-processing mode. When in phoneme-processing mode, a text buffer is interpreted to be a series of characters representing various phonemes and prosodic controls.
Available in OS X v10.5 and later.

149.2.53 NSSpeechStatusProperty as String

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS

call s.startSpeakingString "Hello"
```
149.2. CLASS NSSPEECHSYNTHESIZERMBS

```vbnet
dim status as Dictionary = s.objectForProperty(s.NSSpeechStatusProperty, e)
dim CharactersLeft as Integer = status.Value(s.NSSpeechStatusNumberOfCharactersLeft)

MsgBox str(CharactersLeft)+" Characters left"
```

Notes:
Get speech-status information for the synthesizer. A dictionary that contains speech-status information for
the synthesizer. See "NSSpeechStatusProperty Dictionary Keys" for a description of the keys present in the
dictionary.
Available in OS X v10.5 and later.

149.2.54 NSSpeechSynthesizerInfoIdentifier as String

Function: One of the constants are keys used in the NSSpeechSynthesizerInfoProperty dictionary.
Notes: The identifier of the speech synthesizer.
Available in OS X v10.5 and later.

149.2.55 NSSpeechSynthesizerInfoProperty as String

Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the
characteristics of a synthesizer.
Notes: Get information about the speech synthesizer being used on the specified synthesizer. A dictionary object
that contains information about the speech synthesizer being used on the specified synthesizer. See "Speech
Synthesizer Property Keys" for a description of the keys present in the dictionary.
Available in OS X v10.5 and later.

149.2.56 NSSpeechSynthesizerInfoVersion as String

Function: One of the constants are keys used in the NSSpeechSynthesizerInfoProperty dictionary.
Notes: The version of the speech synthesizer.
Available in OS X v10.5 and later.
149.2.57 NSSpeechVolumeProperty as String

**Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.  
**Example:**

```vbnet
dim s as new NSSpeechSynthesizerMBS  
dim e as NSErrorMBS  
dim value as Double = s.objectForProperty(s.NSSpeechVolumeProperty, e)  
MsgBox str(value)
```

**Notes:**

Get or set the speech volume for a synthesizer. A Number that specifies the synthesizer’s speech volume. Volumes are expressed in floating-point values ranging from 0.0 through 1.0. A value of 0.0 corresponds to silence, and a value of 1.0 corresponds to the maximum possible volume. Volume units lie on a scale that is linear with amplitude or voltage. A doubling of perceived loudness corresponds to a doubling of the volume. Available in OS X v10.5 and later.

You may prefer to simply use the volume property.

149.2.58 objectForProperty(PropertyName as string, byref error as NSErrorMBS) as Variant

**Function:** Provides the value of a receiver’s property.  
**Notes:**

PropertyName: Property to get.  
error: On output, error that occurred while obtaining the value of speechProperty.

Returns the value of speechProperty.  
Available in OS X v10.5 and later.

149.2.59 pauseSpeakingAtBoundary(boundary as Integer)

**Function:** Pauses the speaking on the given boundary.
149.2. CLASS NSSPEECHSYNTHESIZERMBS

Example:

```vba
dim s as NSSpeechSynthesizerMBS // your synthesizer
s.pauseSpeakingAtBoundary s.NSSpeechSentenceBoundary // pause on end of sentence.
```

Notes:

Mac OS X 10.5 only.
boundary can be NSSpeechImmediateBoundary, NSSpeechSentenceBoundary or NSSpeechWordBoundary.

### 149.2.60 phonemesFromText(text as string) as string

**Function:** Returns the phonems from a given text.

**Example:**

```vba
dim s as new NSSpeechSynthesizerMBS
MsgBox s.phonemesFromText("Hello")
// shows ".hEHl1OW."
```

Notes: Mac OS X 10.5 only.

### 149.2.61 setObjectForProperty(value as Variant, PropertyName as string, byref error as NSErrorMBS) as boolean

**Function:** Specifies the value of a receiver’s property.

**Notes:**

PropertyName: Property to set.
Error: On output, error that occurred while setting speechProperty.

Returns true when the speechProperty was set. False when there was an error, specified in error.
Available in OS X v10.5 and later.
149.2.62  **SetVoice(voice as string) as boolean**

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Sets the receiver’s current voice.  
**Notes:** Returns true on success.

149.2.63  **StartSpeakingString(text as string) as boolean**

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Begins speaking synthesized text through the system’s default sound output device.  
**Example:**
```
dim s as new NSSpeechSynthesizerMBS
s.rate=300 // not slow
s.volume=0.5 // not loud
call s.startSpeakingString "Hello World"
```

**Notes:**  
Returns true when synthesis starts successfully, false otherwise.

If the receiver is currently speaking synthesized speech when startSpeakingString is called, that process is stopped before text is spoken.

When synthesis of text finishes normally or is stopped, the message didFinishSpeaking(true) is called.  
**See also:**
- 149.2.64 StartSpeakingString(text as string, file as folderitem) as boolean
- 149.2.65 startSpeakingString(Text as String, URL as string) as boolean

149.2.64  **StartSpeakingString(text as string, file as folderitem) as boolean**

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Begins synthesizing text into a sound (AIFF) file.  
**Notes:**  
Returns true when synthesis starts successfully, false otherwise.

When synthesis of text finishes normally or is stopped, the message didFinishSpeaking(True) is called.
One example of how you might use this method is in an email program that automatically converts new messages into sound files that can be stored on an iPod for later listening.

See also:

- 149.2.63 StartSpeakingString(text as string) as boolean
- 149.2.65 startSpeakingString(Text as String, URL as string) as boolean

149.2.65 startSpeakingString(Text as String, URL as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Begins synthesizing text into a sound (AIFF) file. **Notes:**
Returns true when synthesis starts successfully, false otherwise.

When synthesis of text finishes normally or is stopped, the message didFinishSpeaking(True) is called.

One example of how you might use this method is in an email program that automatically converts new messages into sound files that can be stored on an iPod for later listening.

See also:

- 149.2.63 StartSpeakingString(text as string) as boolean
- 149.2.64 StartSpeakingString(text as string, file as folderitem) as boolean

149.2.66 StopSpeaking

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Stops synthesis in progress. **Notes:** If the receiver is currently generating speech, synthesis is halted, and the message didFinishSpeaking(false) is called.

149.2.67 stopSpeakingAtBoundary(boundary as Integer)

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Stops speech on the next w **Notes:** Mac OS X 10.5 only.
149.2.68 Properties

149.2.69 IsSpeaking as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Indicates whether the receiver is currently generating synthesized speech. **Notes:**

true when the receiver is generating synthesized speech, false otherwise.
(Read only property)

149.2.70 rate as Double

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The current rate of the speech. **Example:**

```plaintext
dim s as NSSpeechSynthesizerMBS
s=new NSSpeechSynthesizerMBS
MsgBox str(s.rate)
// shows e.g. "160"
```

**Notes:**

Mac OS X 10.5 only.
The range of supported rates is not predefined by the Speech Synthesis framework; but the synthesizer may only respond to a limited range of speech rates. Average human speech occurs at a rate of 180 to 220 words per minute.
(Read and Write property)

149.2.71 UsesFeedbackWindow as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Indicates whether the receiver uses the speech feedback window. **Notes:** (Read and Write property)

149.2.72 Voice as string

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The current voice. **Example:**
149.2. CLASS NSSPEECHSYNTHESIZERMBS

```vbscript
dim s as new NSSpeechSynthesizerMBS
MsgBox s.voice
// shows e.g. "com.apple.speech.synthesis.voice.Zarvox"
```

**Notes:** (Read and Write property)

### 149.2.73 volume as Double

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The volume of the speech.  
**Example:**

```vbscript
dim s as new NSSpeechSynthesizerMBS
MsgBox str(s.volume)
// shows e.g. 1
```

**Notes:**

No sound is zero, full sound one.  
Mac OS X 10.5 only.

Volumes are expressed in floating-point units ranging from 0.0 through 1.0. A value of 0.0 corresponds to silence, and a value of 1.0 corresponds to the maximum possible volume. Volume units lie on a scale that is linear with amplitude or voltage. A doubling of perceived loudness corresponds to a doubling of the volume.

Setting a value outside this range is undefined.  
(Read and Write property)

### 149.2.74 Events

#### 149.2.75 didEncounterErrorAtIndex(characterIndex as Integer, text as string, message as string)

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** An event called when an error has been found in the text while speaking.  
**Notes:** Mac OS X 10.5 only.
**149.2.76  didEncounterSyncMessage(message as string)**

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** A sync message was found in the text.

**Notes:**
See Apple Speech documentation about the special tags you need to place in the text to get this event. Mac OS X 10.5 only.

**149.2.77  didFinishSpeaking(finishedSpeaking as boolean)**

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when speaking through the sound output device is done.

**Notes:** finishedSpeaking is true when finished normally and false when StopSpeaking was called.

**149.2.78  willSpeakPhoneme(phonemeOpcode as Integer)**

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sent just before a synthesized phoneme is spoken through the sound output device.

**Notes:**
phonemeOpcode: Phoneme that sender is about to speak into the sound output device.

One use of this method might be to animate a mouth on screen to match the generated speech.

Important: The delegate is not sent this message when the SpeechSynthesizer object is synthesizing speech to a file (startSpeakingString).

**149.2.79  willSpeakWord(Position as Integer, Length as Integer, Text as String)**

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sent just before a synthesized word is spoken through the sound output device.

**Notes:**
Position and Length: Word that sender is about to speak into the sound output device.
text: Text that is being synthesized by sender.

One use of this method might be to visually highlight the word being spoken.

Important: The delegate is not sent this message when the SpeechSynthesizer object is synthesizing speech
149.2. \textit{CLASS NSSPEECHSYNTHESIZERMBS} to a file \((\text{startSpeakingString})\).

149.2.80 \textbf{Constants}

149.2.81 \textbf{NSSpeechImmediateBoundary}=0

MBS MacCocoa Plugin, Plugin Version: 7.7. \textbf{Function:} One of the constants for the pauseSpeakingAt-Boundary method.

\textbf{Notes:} Mac OS X 10.5 only.

149.2.82 \textbf{NSSpeechSentenceBoundary}=2

MBS MacCocoa Plugin, Plugin Version: 7.7. \textbf{Function:} One of the constants for the pauseSpeakingAt-Boundary method.

\textbf{Notes:} Mac OS X 10.5 only.

149.2.83 \textbf{NSSpeechWordBoundary}=1

MBS MacCocoa Plugin, Plugin Version: 7.7. \textbf{Function:} One of the constants for the pauseSpeakingAt-Boundary method.

\textbf{Notes:} Mac OS X 10.5 only.
149.3 class NSVoiceMBS

149.3.1 class NSVoiceMBS

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A voice on Mac OS X with its attributes.

**Notes:**
Available in Mac OS X v10.3 and later.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

149.3.2 Methods

149.3.3 Age as Integer

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The perceived age (in years) of the voice.

149.3.4 Constructor

149.3.5 Demotext as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A demonstration string to speak.

149.3.6 Gender as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The perceived gender of the voice.

**Notes:** May be either GenderNeuter ("VoiceGenderNeuter"), GenderFemale ("VoiceGenderFemale"), or GenderMale ("VoiceGenderMale").
149.3.7 GenderFemale as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the possible values for the gender property.

149.3.8 GenderMale as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the possible values for the gender property.

149.3.9 GenderNeuter as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the possible values for the gender property.

149.3.10 Identifier as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A unique string identifying the voice. The identifiers of the system voices are listed below. **Notes:**

Identifiers of the Mac OS X system voices
- com.apple.speech.synthesis.voice.Agnes
- com.apple.speech.synthesis.voice.Albert
- com.apple.speech.synthesis.voice.BadNews
- com.apple.speech.synthesis.voice.Bahh
- com.apple.speech.synthesis.voice.Bells
- com.apple.speech.synthesis.voice.Boing
- com.apple.speech.synthesis.voice.Bruce
- com.apple.speech.synthesis.voice.Bubbles
- com.apple.speech.synthesis.voice.Cellos
- com.apple.speech.synthesis.voice.Deranged
- com.apple.speech.synthesis.voice.Fred
- com.apple.speech.synthesis.voice.GoodNews
- com.apple.speech.synthesis.voice.Hysterical
- com.apple.speech.synthesis.voice.Junior
- com.apple.speech.synthesis.voice.Kathy
- com.apple.speech.synthesis.voice.Organ
- com.apple.speech.synthesis.voice.Princess
- com.apple.speech.synthesis.voice.Ralph
- com.apple.speech.synthesis.voice.Trinoids
- com.apple.speech.synthesis.voice.Vicki
149.3.11 Language as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The language of the voice (currently US English only). **Notes:** Language has been replaced by LocaleIdentifier in Mac OS X 10.5.

149.3.12 LocaleIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The locale identifier. **Example:**

```vbnet
dim v as NSVoiceMBS
dim s as NSSpeechSynthesizerMBS
dim n as string

s=new NSSpeechSynthesizerMBS

n=s.voice
v=s.attributesForVoice(n)

MsgBox n+EndOfLine+v.LocaleIdentifier
// shows for example ”en_US”
```

**Notes:**

Mac OS X 10.5 only.

Language has been replaced by LocaleIdentifier in Mac OS X 10.5.

149.3.13 Name as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the voice suitable for display.
149.3. CLASS NSVOICEMBS

149.3.14 NSVoiceAge as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the properties names. **Notes:** The perceived age (in years) of the voice. A string.

149.3.15 NSVoiceDemoText as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the properties names. **Notes:** A demonstration string to speak. A String.

149.3.16 NSVoiceGender as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the properties names. **Notes:** The perceived gender of the voice.

149.3.17 NSVoiceIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the properties names. **Notes:** A unique string identifying the voice.

Identifiers of the OS X system voices:
- com.apple.speech.synthesis.voice.Agnes
- com.apple.speech.synthesis.voice.Albert
- com.apple.speech.synthesis.voice.Alex
- com.apple.speech.synthesis.voice.BadNews
- com.apple.speech.synthesis.voice.Bahh
- com.apple.speech.synthesis.voice.Bells
- com.apple.speech.synthesis.voice.Boing
- com.apple.speech.synthesis.voice.Bruce
- com.apple.speech.synthesis.voice.Bubbles
- com.apple.speech.synthesis.voice.Cellos
- com.apple.speech.synthesis.voice.Deranged
- com.apple.speech.synthesis.voice.Fred
- com.apple.speech.synthesis.voice.GoodNews
- com.apple.speech.synthesis.voice.Hysterical
149.3.18 **NSVoiceIndividuallySpokenCharacters as String**

**Function:** One of the properties names.

**Notes:**
A list of unicode character id ranges that define the unicode characters that can be spoken in character-by-character mode by this voice. Each list entry is a dictionary containing two keys: "UnicodeCharBegin", an integer value containing the beginning unicode id of this range; and "UnicodeCharBegin", an integer value containing the ending unicode id of this range.
These ranges can be used by your application to determine if the voice can speak the name of an individual character when spoken in character-by-character mode. Some voices may not provide this attribute.
Available in OS X v10.5 and later.

149.3.19 **NSVoiceLanguage as String**

**Function:** One of the properties names.

**Notes:**
The language of the voice (currently US English only). A string
Deprecated: Use NSVoiceLocaleIdentifier instead.
Deprecated in OS X v10.5.

149.3.20 **NSVoiceLocaleIdentifier as String**

**Function:** One of the properties names.

**Notes:**
The language of the voice. A string
149.3. CLASS NSVOICEMBS

The canonical locale identifier string describing the voice’s locale. A locale is generally composed of three pieces of ordered information: a language code, a region code, and a variant code. Refer to documentation about the NSLocale class or Locales Programming Guide for more information. Available in OS X v10.5 and later.

149.3.21 NSVoiceName as String

149.3.22 NSVoiceSupportedCharacters as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the properties names. Notes: A list of unicode character id ranges that define the unicode characters supported by this voice. a dictionary containing two keys: "UnicodeCharBegin", an integer value containing the beginning unicode id of this range; and "UnicodeCharBegin", an integer value containing the ending unicode id of this range. The synthesizer will convert or ignore any characters not contained in the range of supported characters. Some voices may not provide this attribute. Available in OS X v10.5 and later.

149.3.23 Properties as Dictionary

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns dictionary with all the properties for this voice. Notes: This dictionary may contain additional information if Apple adds more features in newer Mac OS X versions.
149.4 class SpeechChannelMBS

149.4.1 class SpeechChannelMBS

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A SpeechMBS channel.

**Example:**

```vbs
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel

call c.Speak("Hello")

MsgBox str(c.TextBytesToSpeak)
```

**Deprecated:** This item is deprecated and should no longer be used. You can use NSSpeechSynthesizerMBS instead.

149.4.2 Methods

149.4.3 close

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The destructor.

**Notes:**

There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.

(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

149.4.4 ContinueSpeech as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Continue speaking.

**Example:**

```vbs
dim c as SpeechChannelMBS // your channel

MsgBox str(C.ContinueSpeech)
```

**Notes:** Renamed from Continue to ContinueSpeech in v5.3 to fix a problem with Realbasic 2005r3.
149.4. CLASS SPEECHCHANNELMBS

149.4.5 PauseEndOfSentence as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Pauses speaking at the end of the current sentence.

**Example:**

```vba
dim c as SpeechChannelMBS // your channel
MsgBox str(C.PauseEndOfSentence)
```

149.4.6 PauseEndOfWord as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Pauses speaking at the end of the current word.

**Example:**

```vba
dim c as SpeechChannelMBS // your channel
MsgBox str(C.PauseEndOfWord)
```

149.4.7 PauseImmediate as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Pauses speaking.

**Example:**

```vba
dim c as SpeechChannelMBS // your channel
MsgBox str(C.PauseImmediate)
```

149.4.8 Reset

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Resets the SpeechMBS channel to some default values.

**Example:**

```vba
dim c as SpeechChannelMBS // your channel

c.reset
```
Notes: Resets e.g. pitchbase, pitchmodulation, volume, rate.

149.4.9 SetOutputFile(file as folderitem) as boolean

Function: Sets the destination file.
Example:

dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel
dim f as FolderItem = SpecialFolder.Desktop.Child(“test.aiff”)

call c.SetOutputFile(f)
call c.Speak(“Hello”)

MsgBox str(c.TextBytesToSpeak)

Notes:
Returns true on success and false on any error.
Requires Mac OS X 10.3.

149.4.10 Speak(s as string) as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: Speak the given text.
Example:

dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel

MsgBox str(c.Speak(“Hello”))

Notes: v5.1: Now encoding safe and stores result in lasterror property.
149.4. CLASS SPEECHCHANNELMBS

149.4.11 SpeechBusy as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns how much SpeechChannels are currently in use of your application.

**Example:**

```pascal
dim c as SpeechChannelMBS // your channel
MsgBox str(c.SpeechBusy)
```

149.4.12 SpeechBusySystemWide as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns how much SpeechChannels are currently in use on this Mac.

**Example:**

```pascal
dim c as SpeechChannelMBS // your channel
MsgBox str(c.SpeechBusySystemWide)
```

149.4.13 Stop as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Stops speaking.

**Example:**

```pascal
dim c as SpeechChannelMBS // your channel
MsgBox str(c.Stop)
```

149.4.14 StopEndOfSentence as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Stops speaking at the end of the current sentence.

**Example:**

```pascal
dim c as SpeechChannelMBS // your channel
MsgBox str(c.StopEndOfSentence)
```
149.4.15 StopEndOfWord as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Stops speaking at the end of the current word.

**Example:**

```vbs
dim c as SpeechChannelMBS // your channel
MsgBox str(c.StopEndOfWord)
```

149.4.16 StopImmediate as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Stops speaking.

**Example:**

```vbs
dim c as SpeechChannelMBS // your channel
MsgBox str(c.StopImmediate)
```

149.4.17 Properties

149.4.18 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 5.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The last error code.

**Example:**

```vbs
dim c as SpeechChannelMBS // your channel
MsgBox str(c.Lasterror)
```

**Notes:**

A Mac OS error code.
From the plugin -1 is bad parameter and 0 is success.
(Read only property)
149.4. CLASS SPEECHCHANNELMBS

149.4.19 Paused as boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Are we paused?  
**Example:**

```vbs
    dim s as new SpeechMBS
    dim c as SpeechChannelMBS = s.Voice(1).NewChannel

    MsgBox str(c.Paused)
```

**Notes:** (Read only property)

149.4.20 PitchBase as Double

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The pitch base used for speaking.  
**Example:**

```vbs
    dim c as SpeechChannelMBS // your channel

    MsgBox str(C.PitchBase)
```

**Notes:** (Read and Write property)

149.4.21 PitchModulation as Double

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The pitch modulation used for speaking.  
**Example:**

```vbs
    dim c as SpeechChannelMBS // your channel

    MsgBox str(C.PitchModulation)
```

**Notes:** (Read and Write property)
149.4.22 Playing as boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Are we playing?  
**Example:**

```vbs
dim c as SpeechChannelMBS // your channel
MsgBox str(c.Playing)
```

**Notes:** (Read only property)

149.4.23 Rate as Double

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The rate used for speaking.  
**Example:**

```vbs
dim c as SpeechChannelMBS // your channel
MsgBox str(c.Rate)
```

**Notes:**  
Normally around 175 words/minute.  
(Read and Write property)

149.4.24 SpeakCharactersLiteral as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** whether to speak characters literal.  
**Example:**

```vbs
dim c as SpeechChannelMBS // your channel
MsgBox str(c.SpeakCharactersLiteral)
```

**Notes:**  
Speaks Hello like "H-E-L-L-O"  
(Read and Write property)
149.4.25 SpeakNumbersLiteral as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** whether to speak numbers literal.

**Example:**

```plaintext
dim c as SpeechChannelMBS // your channel

MsgBox str(c.SpeakNumbersLiteral)
```

**Notes:**

Speaks 11 not like "elven", but like "one, one".
(Read and Write property)

149.4.26 TextBytesToSpeak as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** How much text is left in the text buffer?

**Example:**

```plaintext
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel

call c.Speak("Hello")

MsgBox str(c.TextBytesToSpeak)
```

**Notes:** (Read only property)

149.4.27 Voice as VoiceMBS

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The VoiceMBS used for that SpeechChannelMBS.

**Example:**

```plaintext
dim c as SpeechChannelMBS // your channel

MsgBox c.Voice.Name
```
149.4.28 Volume as Double

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The current volume.

**Example:**

```plaintext
dim c as SpeechChannelMBS // your channel

MsgBox str(c.Volume)
```

**Notes:**

From 0 to 65535.
(Read and Write property)
149.5. CLASS SPEECHMBS

149.5  class SpeechMBS

149.5.1  class SpeechMBS

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for the Mac OS speech synthesizer.

**Deprecated:** This item is deprecated and should no longer be used. You can use NSSpeechSynthesizerMBS instead. **Notes:**

For Mac OS X you can also use the NSSpeechSynthesizerMBS class and for recognition the NSSpeechRecognizerMBS class.

You can try Speech with some declares, but your app won’t start if the Speech extension is not installed. This plugin won’t stop, but simply will just tell you that the Speech is not available, so you can react in your application.

149.5.2  Methods

149.5.3  close

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The destructor.

**Notes:**

There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.

(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

149.5.4  DefaultVoice as VoiceMBS

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the default VoiceMBS.

**Example:**

```plaintext
dim s as new SpeechMBS
dim v as VoiceMBS = s.DefaultVoice
MsgBox v.Name
```
149.5.5  **Speak(s as string) as Boolean**

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Speaks a text using the default settings.

**Example:**

```vbnet
dim s as new SpeechMBS

call s.Speak("Hello")

MsgBox "you hear me?"
```

**Notes:**

Returns directly to caller.
Returns true if speaking is working.

v5.1: Now encoding safe and stores result in lasterror property.

149.5.6  **SpeechBusy as Integer**

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns how much SpeechChannels are currently in use of your application.

**Example:**

```vbnet
dim s as new SpeechMBS

MsgBox str(s.SpeechBusy)
```

149.5.7  **SpeechBusySystemWide as Integer**

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns how much SpeechChannels are currently in use on this Mac.

**Example:**

```vbnet
dim s as new SpeechMBS

MsgBox str(s.SpeechBusySystemWide)
```
149.5. CLASS SPEECHMBS

149.5.8 Voice(index as Integer) as VoiceMBS

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the VoiceMBS with this number.

**Example:**

```plaintext
dim s as new SpeechMBS
MsgBox s.Voice(1).Name
```

**Notes:** Index is from 1 to VoiceCount.

149.5.9 Properties

149.5.10 Available as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Is SpeechMBS available?

**Notes:** (Read only property)

149.5.11 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 5.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The last error code.

**Notes:**
A Mac OS error code.
from the plugin -1 is bad parameter and 0 is success.
(Read only property)

149.5.12 VersionMajor as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The major Version number.

**Example:**

```plaintext
dim s as SpeechMBS
s=new SpeechMBS
msgbox hex(s.VersionMajor)+"."+hex(s.versionMinor\16)+"."+hex(s.versionMinor mod 16)
```
149.5.13 versionMinor as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The minor Version number.
**Example:**
```
dim s as SpeechMBS
s=new SpeechMBS
msgbox hex(s.VersionMajor)+"."+hex(s.versionMinor\16)+"."+hex(s.versionMinor mod 16)
```

**Notes:** (Read only property)

149.5.14 VersionRev as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The revision Version number.
**Example:**
```
dim s as new SpeechMBS
MsgBox str(s.VersionRev)
```

**Notes:** (Read only property)

149.5.15 VersionStage as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The Stage Version number.
**Example:**
```
dim s as new SpeechMBS
MsgBox str(s.VersionStage)
```

**Notes:**
Some constants:

developStage & h20
alphaStage & h40
betaStage & h60
finalStage & h80

(Read only property)

149.5.16 VoiceCount as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** How much voices are present?

**Example:**

```vbnet
dim s as new SpeechMBS
MsgBox str(s.VoiceCount)
```

**Notes:**

If you add or remove VoiceMBS files, please call this function as SpeechMBS can then recognize those changes.

(Read only property)
149.6  class VoiceMBS

149.6.1  class VoiceMBS

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This class represents a voice.

**Example:**

```plaintext
dim s as new SpeechMBS

MsgBox s.Voice(2).name
```

**Deprecated:** This item is deprecated and should no longer be used. You can use NSVoiceMBS instead.

149.6.2  Methods

149.6.3  close

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The destructor.

**Notes:**

There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.

(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

149.6.4  NewChannel as SpeechChannelMBS

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new SpeechChannel using the given voice.

**Example:**

```plaintext
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel

MsgBox str(c.Speak("Hello"))
```

**Notes:** Returns nil on any error.
149.6. CLASS VOICEMBS

149.6.5 Properties

149.6.6 age as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The approximate age in years of the individual represented by the VoiceMBS.

**Example:**

```vbs
Dim s As New SpeechMBS
MsgBox Str(s.Voice(1).Age)
```

**Notes:** (Read only property)

149.6.7 comment as string

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Additional text information about the VoiceMBS. The information might indicate how much memory the VoiceMBS requires. Some synthesizers use this field to store a phrase that can be spoken.

**Example:**

```vbs
Dim s As New SpeechMBS
MsgBox s.Voice(1).Comment
```

**Notes:** (Read only property)

149.6.8 file as folderitem

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The file of this VoiceMBS.

**Notes:**
May be nil.
(Read only property)

149.6.9 gender as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The gender of this VoiceMBS.
Example:

dim s as new SpeechMBS

MsgBox str(s.Voice(1).gender)

Notes:
Some constants for this property:

kNeuter 0
kMale 1
kFemale 2

(Read only property)

149.6.10 language as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** A code that indicates the language of VoiceMBS output.

Example:

dim s as new SpeechMBS

MsgBox str(s.Voice(1).language)

Notes:
Language constants:

(Read only property)

149.6.11 name as string

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The name of this VoiceMBS.

Example:

dim s as new SpeechMBS

MsgBox s.Voice(1).name
Notes: (Read only property)

149.6.12 region as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** A code that indicates the region represented by the VoiceMBS.

**Example:**

dim s as new SpeechMBS

MsgBox str(s.Voice(1).region)

Notes:

Some region constants:

(Read only property)

149.6.13 ResID as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** There can be several voices in one file, but this VoiceMBS has this ResID.

**Example:**

dim s as new SpeechMBS

MsgBox str(s.Voice(1).ResID)

Notes: (Read only property)

149.6.14 script as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The script code of text that the VoiceMBS can process.

**Example:**
dim s as new SpeechMBS

MsgBox str(s.Voice(1).script)

Notes:
Script constants:

(Read only property)

149.6.15 version as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: The version of this VoiceMBS.

Example:

dim s as new SpeechMBS

MsgBox str(s.Voice(1).Version)

Notes: (Read only property)

149.7  class WinSpeechMBS

149.7.1  class WinSpeechMBS

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A class for speech on Windows.

**Notes:**

You need to install the ”Microsoft Reader” to get this working.

see also:

149.7.2  Methods

149.7.3  close

MBS Win Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The destructor.

**Notes:**

There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.

(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

149.7.4  DisplayUI(type as string, title as string, parent as window)

MBS Win Plugin, Plugin Version: 8.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Displays the UI from the underlying text-to-speech engine’s object token.

**Notes:**

Type specifies which UI you want.
Title is optional the title of the window.
You can optionally specify a parent window.
Lasterror is set.
See also:

• 149.7.5 DisplayUI(type as string, title as string=””)
149.7. CLASS WINSPEECHMBS

149.7.5 DisplayUI(type as string, title as string ="")

MBS Win Plugin, Plugin Version: 8.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Displays the UI from the underlying text-to-speech engine’s object token.

**Notes:**
- Type specifies which UI you want.
- Title is optional the title of the window.
- You can optionally specify a parent window.
- Lasterror is set.
- See also:
  - 149.7.4 DisplayUI(type as string, title as string, parent as window)

149.7.6 IsUISupported(type as string) as boolean

MBS Win Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Checks if the underlying text-to-speech engine’s object token supports the requested UI.

**Notes:**
- Returns whether the specified UI is supported. True indicates the UI is supported, and false indicates the UI is not supported.
- Lasterror is set.

149.7.7 ListVoices as boolean

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Makes a list of voices which is later returned using the NextVoice function.

149.7.8 NextVoice as WinVoiceMBS

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the next voice in the list.

**Notes:** Returns nil on the end of the list.

149.7.9 Pause

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Pauses speech.
149.7.10 Resume

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Resumes speech.

149.7.11 Skip(sentenceCount as Integer) as Integer

MBS Win Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Causes the voice to skip forward or backward the specified number of items within the text of the current speak call.
**Notes:**

- sentenceCount is the number of sentences to skip. If negative, you skip backward.
- Returns the actual number of items skipped.
- Lasterror is set.

149.7.12 Speak(text as string, Purge as Boolean = false, ContainsXML as boolean = false)

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Speaks a string.
**Notes:**

- The string must be a 16bit unicode string.
- Version 7.8 of the plugins convert to unicode automatically.
- If Purge is true an existing speech will be stopped.
- If ContainsXML is true, you can include xml commands in the text. See MSDN page: http://msdn.microsoft.com/en-us/library/ms717077%28v=vs.85%29.aspx

149.7.13 SpeakFile(file as folderitem, unicodestring as string, AudioFormat as Integer = 0, ContainsXML as boolean = false)

MBS Win Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Speaks a string to a file.
**Notes:**

- The string must be a 16bit unicode string.
- File is a valid folderitem where the WAV file is stored.
The function will not return before the speaking is complete. Lasterror is set.

Version 7.8 of the plugins convert to unicode automatically.

For AudioFormat, please use kAudioFormat* constants. Default is 22Khz Mono which is default format for speech API.

If ContainsXML is true, you can include xml commands in the text. See MSDN page: http://msdn.microsoft.com/en-us/library/ms717077(v=vs.85).aspx

149.7.14 WaitUntilDone(msTimeout as Integer)

MBS Win Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Blocks the caller until either the voice has completed speaking or the specified time interval has elapsed. **Notes:**

msTimeout: Timeout period in milliseconds. INFINITE may be used to prevent this method from timing out.

INFINITE is -1.

Lasterror is set.

149.7.15 Properties

149.7.16 Handle as Integer

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The handle to the speech object. **Notes:**

If handle is 0 there is no Speech software installed. (Read only property)

149.7.17 IsDone as Boolean

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns true if the voice has finished speaking. **Notes:**
149.7.18 **IsSpeaking as Boolean**

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns true if the voice is speaking.

**Notes:**

Lasterror is set.

(Read only property)

149.7.19 **Lasterror as Integer**

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code reported.

**Notes:**

You may get the Speech SDK from Microsoft for more details.

(Read only property)

149.7.20 **Priority as Integer**

MBS Win Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current voice priority level.

**Notes:**

The default priority is SPVPRI_NORMAL.

Lasterror is set.

Assuming an output object which implements ISpAudio, speak requests of similar priority voices are queued, and are spoken one at a time in the order they are issued. That is, speak requests from normal priority voices are put in one queue, while speak requests from alert priority voices (with priority SPVPRI_ALERT) are put in another queue.

Alert priority voices take priority over normal voices. If one or more speak requests from alert priority voices are pending, a normal voice that is speaking will be interrupted on the next alert boundary (see ISpVoice::SetAlertBoundary). When all the queued alert priority voice speak requests have been processed, the normal voice will continue.

Voices with the SPVPRI_OVER priority speak over (mix with) all other audio in the system with no syn-
chronization. SPVRI_OVER priority voices only mix on Windows 2000.

If the output object does not implement ISpAudio, no serialization will occur, and all voices will be treated as if their priority is SPVRI_OVER.
(Read and Write property)

149.7.21 Rate as Integer

Notes: Ranges from kMinRate to kMaxRate.
(Read and Write property)

149.7.22 SyncSpeakTimeout as Integer

MBS Win Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: The timeout interval in milliseconds after which, synchronous Speak calls to this instance of the voice will timeout.
Notes: Timeouts occur when waiting for access to the output object. This means that for a normal priority voice (see Priority for more information on priorities) and an output device which implements ISpAudio, a timeout may occur while waiting to reacquire the output object after an interruption by an alert priority voice. For voices of both normal and alert priorities, a timeout may also occur while waiting to reacquire the output object after the voice has been paused and resumed (see Pause and Resume).

Wait times are not accumulated - that is, if a voice waits for n milliseconds to initially acquire the output object, and is then paused and resumed, it will again wait for up to msTimeout milliseconds to reacquire the output object, not msTimeout - n milliseconds.
(Read and Write property)

149.7.23 Voice as WinVoiceMBS

Notes: Set to nil to use the default voice.
(Read and Write property)
149.7.24 Volume as Integer

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The volume for the voice.
**Notes:**
Ranges from kMinVolume to kMaxVolume.
(Read and Write property)

149.7.25 Constants

149.7.26 kAudioFormat_11kHz16BitMono = 10

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
**Notes:** 11 kHz, 16 Bit, Mono

149.7.27 kAudioFormat_11kHz16BitStereo = 11

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.

**Notes:** TrueSpeech, 8 kHz, 1 Bit, Mono

149.7.91 \( \text{kMaxRate} = 10 \)

MBS Win Plugin, Plugin Version: 3.3. **Function:** The maximum for the rate property.

149.7.92 \( \text{kMaxVolume} = 100 \)

MBS Win Plugin, Plugin Version: 3.3. **Function:** The maximum for the volume property.

149.7.93 \( \text{kMinRate} = -10 \)

MBS Win Plugin, Plugin Version: 3.3. **Function:** The minimum for the rate property.
149.7.94  \( \text{kMinVolume} = 0 \)

MBS Win Plugin, Plugin Version: 3.3. **Function:** The minimum for the volume property.

149.7.95  \( \text{PriorityAlert} = 1 \)

MBS Win Plugin, Plugin Version: 8.1. **Function:** One of the priority constants.

149.7.96  \( \text{PriorityNormal} = 0 \)

MBS Win Plugin, Plugin Version: 8.1. **Function:** One of the priority constants.

149.7.97  \( \text{PriorityOver} = 2 \)

MBS Win Plugin, Plugin Version: 8.1. **Function:** One of the priority constants.

149.7.98  \( \text{SPDUI\_AddRemoveWord = ”AddRemoveWord”} \)

MBS Win Plugin, Plugin Version: 8.1. **Function:** One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

149.7.99  \( \text{SPDUI\_AudioProperties = ”AudioProperties”} \)

MBS Win Plugin, Plugin Version: 8.1. **Function:** One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

149.7.100  \( \text{SPDUI\_AudioVolume = ”AudioVolume”} \)

MBS Win Plugin, Plugin Version: 8.1. **Function:** One of the constants for the User Interfaces used with IsUISupported and DisplayUI.
149.7. CLASS WINSPEECHMBS

149.7.101  **SPDUI_EngineProperties = ”EngineProperties”**

MBS Win Plugin, Plugin Version: 8.1. **Function:** One of the constants for the User Intefaces used with IsUISupported and DisplayUI.

149.7.102  **SPDUI_MicTraining = ”MicTraining”**

MBS Win Plugin, Plugin Version: 8.1. **Function:** One of the constants for the User Intefaces used with IsUISupported and DisplayUI.

149.7.103  **SPDUI_RecoProfileProperties = ”RecoProfileProperties”**

MBS Win Plugin, Plugin Version: 8.1. **Function:** One of the constants for the User Intefaces used with IsUISupported and DisplayUI.

149.7.104  **SPDUI_UserTraining = ”UserTraining”**

MBS Win Plugin, Plugin Version: 8.1. **Function:** One of the constants for the User Intefaces used with IsUISupported and DisplayUI.
149.8 class WinVoiceMBS

149.8.1 class WinVoiceMBS

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A class for a voice.

149.8.2 Methods

149.8.3 Description as string

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The name of the voice.
**Notes:** Returns a 16bit unicode string.

149.8.4 Properties

149.8.5 Handle as Integer

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The handle to the voice.
**Notes:** (Read only property)

149.8.6 Lasterror as Integer

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code reported.
**Notes:** (Read only property)
Chapter 150

Spell Checking

150.1 class NSSpellCheckerMBS

150.1.1 class NSSpellCheckerMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The spell checker class.

Notes:
The NSSpellChecker object is used by a client (e.g. a document in an application) to spell-check a given String.
There is only one NSSpellChecker instance per application (since spell-checking is interactive and you only have one mouse and one keyboard).

The string being spell-checked need only be valid for the duration of the call to checkSpellingOfString or countWordsInString.

Requires Mac OS X 10.2.

150.1.2 Methods

150.1.3 availableLanguages as string()

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a list of the available languages.

Notes: Requires Mac OS X 10.5.
150.1.4 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initiates a grammatical analysis of a given string.

**Notes:**

text: String to analyze.
start: Location within string at which to start the analysis.
language: Language use in string. When nil, the language selected in the Spelling panel is used.
wrap: true to specify that the analysis continue to the beginning of string when the end is reached. false to have the analysis stop at the end of string.
outDetails: Optional. On output, dictionaries describing grammar-analysis details within the flagged grammatical unit. See the NSSpellServer class for information about these dictionaries.

Returns Location of the first flagged grammatical unit.

Available in Mac OS X v10.5 and later.

See also:

- 150.1.5 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean, Details() as dictionary) as NSRangeMBS

150.1.5 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean, Details() as dictionary) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initiates a grammatical analysis of a given string.

**Notes:**

text: String to analyze.
start: Location within string at which to start the analysis.
language: Language use in string. When nil, the language selected in the Spelling panel is used.
wrap: true to specify that the analysis continue to the beginning of string when the end is reached. false to have the analysis stop at the end of string.
outDetails: Optional. On output, dictionaries describing grammar-analysis details within the flagged grammatical unit. See the NSSpellServer class for information about these dictionaries.

Returns Location of the first flagged grammatical unit.

Available in Mac OS X v10.5 and later.

See also:

- 150.1.4 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS
150.1. CLASS NSSPELLCHECKERMBS

150.1.6 checkSpellingOfString(text as string, start as Integer) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initiates a spell-check of a string.
**Notes:** Returns the range of the first misspelled word.
See also:

- 150.1.7 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS
- 150.1.8 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean, byref WordCount as Integer) as NSRangeMBS

150.1.7 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initiates a spell-check of a string.
**Notes:** Returns the range of the first misspelled word.
See also:

- 150.1.6 checkSpellingOfString(text as string, start as Integer) as NSRangeMBS
- 150.1.8 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean, byref WordCount as Integer) as NSRangeMBS

150.1.8 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean, byref WordCount as Integer) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initiates a spell-check of a string.
**Notes:** Returns the range of the first misspelled word (and optionally the wordCount by reference).
See also:

- 150.1.6 checkSpellingOfString(text as string, start as Integer) as NSRangeMBS
- 150.1.7 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS

150.1.9 completionsForPartialWordRange(start as Integer, length as Integer, text as string, language as string=”)” as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Searches possible completions for the given word.
**Notes:**
Returns an array of strings, in the order in which they should be presented, representing complete words that the user might be trying to type when starting by typing the partial word at the given range in the given string.

Within the text, length characters are picked starting at at position (0 based) and matched agains the dictionary defined by language.
Up to around 100 words are returned.

Requires Mac OS X 10.3.
Returns an empty string on any error.

150.1.10  countWordsInString(word as string, language as string=“”) as Integer

Example:

dim text as string = "Hello World"
dim spell as NSpellCheckerMBS // your spellchecker

msgBox str(spell.countWordsInString(text,"en"))

Notes:
Returns the number of words in text. The language argument specifies the language used in the string. If language is the empty string, the current selection in the Spelling panel’s pop-up menu is used.

Returns -1 if text is nil or this spellchecker function is not available.

Returns -1 if counting words isn’t supported by the spell server selected.

150.1.11  forgetWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Removes the given word from the user dictionary.
150.1.12 guessesForWord(range as NSRangeMBS, word as string, language as string) as string()

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array of possible substitutions for the specified string. **Notes:**

- range: The range of the string to check.
- word: The string to guess
- language: The language of the string

Returns an array of strings containing possible replacement words. Available in Mac OS X v10.6 and later. See also:

- 150.1.13 guessesForWord(word as string) as string()

150.1.13 guessesForWord(word as string) as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array with words matching the given word. **Example:**

```vbs
' Example:
dim a() as string
dim s as new NSSpellCheckerMBS
a=s.guessesForWord("Hell")
msgbox str(ubound(a)+1)+" suggestions."
```

**Notes:**

- Returns nil on any error.

Returns an array of suggested spellings for the misspelled word word. If word contains all capital letters, or its first letter is capitalized, the suggested words are capitalized in the same way. See also:

- 150.1.12 guessesForWord(range as NSRangeMBS, word as string, language as string) as string()

150.1.14 hasLearnedWord(word as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Checks whether a word has been learned. **Notes:**
CHAPTER 150. SPELL CHECKING

Returns true if the word is known. Requires Mac OS X 10.5.

150.1.15  ignoredWords as string()

Example:

```vbscript
dim spell as new NSSpellCheckerMBS
dim f as FolderItem
dim i,c as Integer
dim t as TextOutputStream
dim n(-1) as string

f=SpecialFolder.Preferences.Child("SpellCheck RB.pref")
t=f.CreateTextFile
if t<>nil and spell<>nil then
    n=spell.ignoredWords
    MsgBox Join(n,EndOfLine)
end if
```

Notes: Returns nil on any error.

150.1.16  ignoreWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Adds the word to the ignore list so it will be ignored for spell checking in this NSSpellCheckerMBS object.
Notes: Requires Mac OS X 10.2.

150.1.17  isAutomaticSpellingCorrectionEnabled as boolean

Notes: Available in Mac OS X v10.6 and later.
150.1.18  isAutomaticTextReplacementEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether automatic spelling replacement is enabled.  
**Notes:** Available in Mac OS X v10.6 and later.

150.1.19  languageMenuEntries as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The entries from the language menu of the panel.  
**Notes:**  
Copies the list of menu entries from the panel.

Currently you can use this names to show to the user and see what languages are available. It uses a private property which works for Mac OS X 10.4 and 10.5.  
For the language function you need the short names:

- Australian English en_AU
- British English en_GB
- Canadian English en_CA
- Deutsch de
- English en
- Espaol es
- Franais fr
- Italiano it
- Multilingual Multilingual
- Nederlands nl
- Portugus pt
- Portugus do Brasil pt_BR
- Svenska sv

150.1.20  learnWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Learns the given word.  
**Notes:** Requires Mac OS X 10.5.
CHAPTER 150. SPELL CHECKING

150.1.21 NSSpellCheckerDidChangeAutomaticSpellingCorrectionNotification as string

Function: One of the notification names.
Notes:
Use with NSNotificationObserverMBS class.
This notification is posted when the spell checker did change text using automatic spell checking correction.
The are posted application’s to the default notification center.
Available in Mac OS X v10.7 and later.

150.1.22 NSSpellCheckerDidChangeAutomaticTextReplacementNotification as string

Function: One of the notification names.
Notes:
Use with NSNotificationObserverMBS class.
This notification is posted when the spell checker changed text using automatic text replacement. The are posted application’s to the default notification center.
Available in Mac OS X v10.7 and later.

150.1.23 NSTextCheckingDocumentAuthorKey as string

Notes:
An string containing the name of an author to be associated with the document

Available in Mac OS X v10.6 and later.

150.1.24 NSTextCheckingDocumentTitleKey as string

Notes:
A string containing the title to be associated with the document.
150.1.25 **NSTextCheckingDocumentURLKey as string**

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the options dictionary. 
**Notes:** 
An NSURL to be associated with the document.

Available in Mac OS X v10.6 and later.

150.1.26 **NSTextCheckingOrthographyKey as string**

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the options dictionary. 
**Notes:** 
An NSOrthography instance indicating an orthography to be used as a starting point for orthography checking, or as the orthography if orthography checking is not enabled.

Available in Mac OS X v10.6 and later.

150.1.27 **NSTextCheckingQuotesKey as string**

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the options dictionary. 
**Notes:** 
An NSArray containing four strings to be used with NSTextCheckingTypeQuote (opening double quote, closing double quote, opening single quote, and closing single quote in that order); if not specified, values will be taken from user’s preferences.

Available in Mac OS X v10.6 and later.

150.1.28 **NSTextCheckingReferenceDateKey as string**

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the options dictionary.
Notes:
An NSDate to be associated with the document, used as a referent for relative dates; if not specified, the current date will be used.

Available in Mac OS X v10.6 and later.

150.1.29 NSTextCheckingReferenceTimeZoneKey as string

Notes: An NSTimeZone to be associated with the document, used as a reference for dates without time zones; if not specified, the current time zone will be used.

Available in Mac OS X v10.6 and later.

150.1.30 NSTextCheckingRegularExpressionsKey as string

Notes: Available in Mac OS X 10.7 or newer.
Currently not directly supported with our plugins.

150.1.31 NSTextCheckingReplacementsKey as string

Notes: A dictionary containing replacements to be used with NSTextCheckingTypeReplacement; if not specified, values will be taken from user’s preferences.

Available in Mac OS X v10.6 and later.
150.1.32  setIgnoredWords(words() as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the ignored word list.

**Example:**

```vba
dim spell as NSSpellCheckerMBS // your spellchecker

dim f as FolderItem
dim t as TextInputStream
dim words(-1), line as string

f=SpecialFolder.Preferences.Child("SpellCheck RB.pref")
t=f.OpenAsTextFile
if t<>nil and spell<>nil then
    while not t.eof
        line=t.ReadLine(encodings.UTF8)
        if line<>"" then
            words.Append line
        end if
    wend

    spell.setIgnoredWords words
end if
```

150.1.33  setLanguage(language as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Allows programmatic setting of the language to spell-check in.

**Notes:**

Normally chosen by a pop-up-list in the spelling panel and defaulted to the user’s preferred language, so call this with care.
Set to "" to use the language from the panel popup menu.

150.1.34  sharedSpellCheckerExists as boolean

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns whether the application’s NSSpellChecker has already been created.

**Notes:** Returns true if the shared spell checker already exists, otherwise false.
150.1.35 spellingPanel as NSPanelMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The spelling panel used for spell checking.

150.1.36 unlearnWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Tells the spell checker to unlearn a given word. **Notes:**
Available in Mac OS X v10.5 and later.
Same as the older forgetWord.

150.1.37 updatePanels

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Updates the available panels to account for user changes. **Notes:**
This method should be called when a client changes some relevant setting, such as what kind of spelling, grammar checking, or substitutions it uses.
Available in Mac OS X v10.6 and later.

150.1.38 updateSpellingPanelWithGrammarString(lang as string, detail as dictionary)

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies a grammar-analysis detail to highlight in the Spelling panel. **Notes:**
problemString: Problematic grammatical unit identified by checkGrammarOfString.
detail: One of the grammar-analysis details provided by checkGrammarOfString.
Available in Mac OS X v10.5 and later.
150.1.39  updateSpellingPanelWithMisspelledWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Updates the panel with the word. **Notes:** The checkSpellingOfString methods return the range of the misspelled word found. It is up to the client to select that word in their document and to cause the spelling panel to update itself to reflect the found misspelling. Clients can call updateSpellPanelWithMisspelledWord to insure that the spell panel is up to date.

150.1.40  userPreferredLanguages as string()

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Provides a subset of the available languages to be used for spell checking. **Notes:**

Returns an array containing the user’s preferred languages for spell checking. The order is set in the system preferences.

If automaticallyIdentifiesLanguages is true, then text checking will automatically use this method as appropriate; otherwise, it will use the language set by Language property.

The older checkSpellingOfString and checkGrammarOfString methods will use the language set by Language property, if they are called with an empty language argument.

Available in Mac OS X v10.6 and later.

150.1.41  userQuotesArrayForLanguage(lang as string) as string()

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the default values for quote replacement. **Example:**

```dim n as new NSSpellCheckerMBS
dim en(-1) as string = n.userQuotesArrayForLanguage("en")
MsgBox Join(en," ")```

**Notes:**

An array of quote replacements used by the NSTextCheckingQuotesKey key-value pair.
Available in Mac OS X v10.6 and later.

150.1.42  userReplacementsDictionary as dictionary

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the dictionary used when replacing words.
Notes:
The key-value pairs in this dictionary are used by the NSTextCheckingQuotesKey when replacing characters and words.

Available in Mac OS X v10.6 and later.

150.1.43  Properties

150.1.44  accessoryView as NSViewMBS

Notes:
The accessory view can be any custom view you want to display with the spelling panel. The accessory view is displayed below the spelling checker and the panel automatically resizes to accommodate the accessory view.

This method posts a notification named NSWindowDidResizeNotification with the Spelling panel object to the default notification center.

The accessory view or nil if there is none.
(Read and Write property)

150.1.45  automaticallyIdentifiesLanguages as boolean

Notes:
Available in Mac OS X v10.6 and later.
(Read and Write property)
150.1.46 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The handle to the used NSSpellChecker reference.  
**Notes:** (Read and Write property)

150.1.47 language as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The current language used.  
**Example:**
```
dim c as NSSpellCheckerMBS

C=new NSSpellCheckerMBS

C.Language="en"

MsgBox C.Language // shows en

C.Language="Dutch"

MsgBox C.Language // shows nl

C.Language="Multilingual"

MsgBox C.Language // shows Multilingual
```

**Notes:** (Read and Write property)

150.1.48 Length as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The last length of the position where an error was found.  
**Notes:**

Length is 0 if no location was found.  
(Read and Write property)
150.1.49 Location as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The last location where an error was found. **Notes:** (Read and Write property)

150.1.50 substitutionsPanel as NSPanelMBS

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The substitutions panel. **Notes:** (Read only property)

150.1.51 Tag as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The document tag for the current document. **Notes:**

Every NSSpellCheckerMBS gets a new tag. The tag identifies which ignore list is used. This value is set automatically. (Read and Write property)

150.1.52 WordFieldValue as string

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The word textfield content string. **Notes:** (Read and Write computed property)

150.1.53 Events

150.1.54 Correct

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** An event sent whenever the Correct button is pressed.
150.1. FindNext

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: An event sent whenever the Find Next button is pressed.

150.1. Ignore

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: An event sent whenever the Ignore button is pressed.

150.1. Constants

150.1. NSCorrectionIndicatorTypeDefault = 0

MBS MacCocoa Plugin, Plugin Version: 11.3. Function: One of the correction indicator type constants. Notes: The default indicator that shows a proposed correction. Available in Mac OS X v10.7 and later.

150.1. NSCorrectionIndicatorTypeGuesses = 2

MBS MacCocoa Plugin, Plugin Version: 11.3. Function: One of the correction indicator type constants. Notes: Shows multiple alternatives from which the user may choose the appropriate spelling. Available in Mac OS X v10.7 and later.

150.1. NSCorrectionIndicatorTypeReversion = 1

MBS MacCocoa Plugin, Plugin Version: 11.3. Function: One of the correction indicator type constants. Notes: Provides the option to revert to the original form after a correction has been made. Available in Mac OS X v10.7 and later.
150.1.61 NSCorrectionResponseAccepted = 1

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the constants passed to recordresponse method.
**Notes:**
The user accepted the correction.
Available in Mac OS X v10.7 and later.

150.1.62 NSCorrectionResponseEdited = 4

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the constants passed to recordresponse method.
**Notes:**
After the correction was accepted, the user edited the corrected word (to something other than its original form.
Available in Mac OS X v10.7 and later.

150.1.63 NSCorrectionResponseIgnored = 3

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the constants passed to recordresponse method.
**Notes:**
The user continued in such a way as to ignore the correction.
Available in Mac OS X v10.7 and later.

150.1.64 NSCorrectionResponseNone = 0

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the constants passed to recordresponse method.
**Notes:**
No response was received from the user.
Available in Mac OS X v10.7 and later.

150.1.65 NSCorrectionResponseRejected = 2

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the constants passed to recordresponse method.
Notes:
The user rejected the correction by dismissing the correction indicator.
Available in Mac OS X v10.7 and later.

150.1.66 NSCorrectionResponseReverted = 5
MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the constants passed to recordresponse method.
**Notes:**
After the correction was accepted, the user reverted the correction back to the original word.
Available in Mac OS X v10.7 and later.

150.1.67 NSGrammarCorrections = ”NSGrammarCorrections”
MBS MacCocoa Plugin, Plugin Version: 9.6. **Function:** One of the key constants for the dictionaries in the details array.

150.1.68 NSGrammarRange = ”NSGrammarRange”
MBS MacCocoa Plugin, Plugin Version: 9.6. **Function:** One of the key constants for the dictionaries in the details array.

150.1.69 NSGrammarUserDescription = ”NSGrammarUserDescription”
MBS MacCocoa Plugin, Plugin Version: 9.6. **Function:** One of the key constants for the dictionaries in the details array.
Chapter 151

Spotlight

151.1 class MDItemMBS

151.1.1 class MDItemMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: This is the class that represents a file and the metadata associated with the file. Notes: Available in Mac OS X version 10.4 and later.

151.1.2 Methods

151.1.3 AllAttributes as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns a list with all possible attribute names in the system. Notes:
dim item as new MDItemMBS(SpecialFolder.Desktop)
MsgBox join(item.AllAttributes, EndOfLine)

151.1.4 AttributeBoolean(name as string) as boolean

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the value for this attribute.
151.1.5 AttributeDouble(name as string) as Double

**Function:** Returns the value for this attribute.

151.1.6 AttributeMultiValued(name as string) as boolean

**Function:** Whether the given attribute is an array of multiple values.

151.1.7 AttributeNames as string()

**Function:** Returns an array containing the attribute names existing in the metadata item.  
**Example:**
```
dim item as new MDItemMBS(SpecialFolder.Desktop)
MsgBox join(item.AttributeNames, EndOfLine)
```

**Notes:** Available in Mac OS X version 10.4 and later.

151.1.8 AttributeString(name as string) as string

**Function:** Returns the value for this attribute.  
**Example:**
```
dim item as new MDItemMBS(SpecialFolder.Desktop)
MsgBox item.AttributeString(item.kMDItemFSName)
```

151.1.9 AttributeStringArray(name as string) as string()

**Function:** Returns the value for this attribute.
151.1.10  **AttributeType(name as string) as string**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The type of the attribute.
**Example:**
```
dim item as new MDItemMBS(SpecialFolder.Desktop)
```
```
MsgBox item.AttributeType(item.kMDItemFSName)  //"String"
```

**Notes:** Returns "Boolean", "Number", "Date" or "String".

151.1.11  **Constructor(path as folderitem)**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates an MDItem object for a file at the specified path.
**Example:**
```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
dim m as new MDItemMBS(f)
```
```
MsgBox m.DisplayName
```

**Notes:**
path: A path to the file from which to create the MDItem.

Available in Mac OS X version 10.4 and later.

151.1.12  **DisplayDescriptionForAttribute(name as string) as string**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The display description for the attribute.
**Notes:**
```
dim item as new MDItemMBS(SpecialFolder.Desktop)
```
```
MsgBox item.DisplayDescriptionForAttribute(item.kMDItemDisplayName)
// shows "Lokalisiert angezeigter Name der Datei" in German
```
151.1.13 DisplayNameForAttribute(name as string) as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The display name for this attribute.

**Example:**
```vba
dim item as new MDItemMBS(SpecialFolder.Desktop)
MsgBox item.DisplayNameForAttribute(item.kMDItemDisplayName)
// shows "Anzeigename" in German
```

151.1.14 GetAttribute(name as string) as Variant

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the value of the given attribute for the item.

**Notes:**
name: The name of the desired attribute.

A variant, or nil on failure, or if the attribute does not exist, or if the attribute is not readable.

151.1.15 GetAttributes as dictionary

MBS MacOSX Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Queries all attributes with all names and values.

See also:

- 151.1.16 GetAttributes(names() as string) as dictionary

151.1.16 GetAttributes(names() as string) as dictionary

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the values of the given attributes for the item.

**Notes:**
names: An array of the names of the desired attributes.
A dictionary where the keys are the attribute names, and the values are the attribute values, or nil on failure.
If an attribute does not exist, or is unreadable, there will be no key-value pair for it in the dictionary.
See also:

- 151.1.15 GetAttributes as dictionary
151.1.17 kMDItemAcquisitionMake as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: The manufacturer of the device used to acquire the document contents. A string.

151.1.18 kMDItemAcquisitionModel as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: The model of the device used to acquire the document contents. For example, 100, 200, 400, etc. A string.

151.1.19 kMDItemAlbum as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: The title for a collection of media. This is analogous to a record album, or photo album. A string.

151.1.20 kMDItemAltitude as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: The altitude of the item in meters above sea level, expressed using the WGS84 datum. Negative values lie below sea level. A number.

151.1.21 kMDItemAperture as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: The aperture setting used to acquire the document contents. This unit is the APEX value. A number.

151.1.22 kMDItemAppleLoopDescriptors as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes:
Specifies multiple pieces of descriptive information about a loop. An array of strings.

Besides genre and instrument, files can contain descriptive information that help users in refining searches.

151.1.23  kMDItemAppleLoopsKeyFilterType as string

Notes:
Specifies key filtering information about a loop. Loops are matched against projects that often in a major or minor key. A string.

To assist users in identifying loops that will "fit" with their compositions, loops can be tagged with one of the following key filters: "AnyKey" "Minor" "Major" "NeitherKey" "BothKeys". "AnyKey" means that it fits with anything (whether in a major key, minor key or neither). "Minor" fits with compositions in a minor key. "NeitherKey" doesn’t work well with compositions that are in major or minor key. "BothKeys" means it fits with major or minor key.

151.1.24  kMDItemAppleLoopsLoopMode as string

Notes:
Specifies how a file should be played. A string.

Tagged files can either be loops or non-loops (e.g., a cymbal crash). "Looping" indicates if the file should be treated as a loop. "Non-looping" indicates the file should not be treated as a loop.

151.1.25  kMDItemAppleLoopsRootKey as string

Notes: Specifies the loop’s original key. The key is the root note or tonic for the loop, and does not include the scale type. A string.
151.1. CLASS MDITEMMBS

151.1.26 kMDItemApplicationCategories as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** Available in Mac OS X 10.7 and later.

151.1.27 kMDItemAttributeChangeDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** The date and time of the last change made to a metadata attribute. A date.

151.1.28 kMDItemAudiences as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** The audience for which the file is intended. The audience may be determined by the creator or the publisher or by a third party. An array of strings.

151.1.29 kMDItemAudioBitRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** The audio bit rate. A number.

151.1.30 kMDItemAudioChannelCount as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** Number of channels in the audio data contained in the file. A number.

This integer value only represents the number of discreet channels of audio data found in the file. It does not indicate any configuration of the data in regards to a user’s speaker setup.
151.1.31 kMDItemAudioEncodingApplication as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** The name of the application that encoded the data contained in the audio file. A string.

151.1.32 kMDItemAudioSampleRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** Sample rate of the audio data contained in the file. The sample rate is a float value representing hz (audio_frames/second). For example: 44100.0, 22254.54. A number.

151.1.33 kMDItemAudioTrackNumber as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** The track number of a song or composition when it is part of an album. A number (integer).

151.1.34 kMDItemAuthorAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** This attribute indicates the author addresses of the document. An array of string. Requires Mac OS X 10.6.

151.1.35 kMDItemAuthorEmailAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** This attribute indicates the author of the emails message addresses. (This is always the email address, and not the human readable version). An array of string. Requires Mac OS X 10.5.
151.1. **CLASS MDITEMMBS**

151.1.36 **kMDItemAuthors as string**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.

**Notes:**
The author, or authors, of the contents of the file. An array of strings.
The order of the authors is preserved, but does not represent the main author or relative importance of the authors.

151.1.37 **kMDItemBitsPerSample as string**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.

**Notes:** The number of bits per sample. For example, the bit depth of an image (8-bit, 16-bit etc...) or the bit depth per audio sample of uncompressed audio data (8, 16, 24, 32, 64, etc...). A number.

151.1.38 **kMDItemCameraOwner as string**

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.

**Notes:** Available in Mac OS X 10.7 and later.

151.1.39 **kMDItemCFBundleIdentifier as string**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.

**Notes:** If this item is a bundle, then this is the CFBundleIdentifier. A string.

151.1.40 **kMDItemCity as string**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.

**Notes:**
Identifies city of origin according to guidelines established by the provider. A string.

For example, "New York", "Cupertino", or "Toronto".
151.1.41 kMDItemCodecs as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The codecs used to encode/decode the media. An array of strings.

151.1.42 kMDItemColorSpace as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The color space model used by the document contents. For example, "RGB", "CMYK", "YUV", or "YCbCr". A string.

151.1.43 kMDItemComment as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** A comment related to the file. This differs from the Finder comment, kMDItemFinderComment. A string.

151.1.44 kMDItemComposer as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The composer of the music contained in the audio file. A string.

151.1.45 kMDItemContactKeywords as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** A list of contacts that are associated with this document, not including the authors. An array of strings.

151.1.46 kMDItemContentCreationDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:**
The date that the contents of the file were created. A date.

This is different than the file creation date. Its can be used to store when the file contents were first created, or first modified.

151.1.47 kMDItemContentModificationDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.

**Notes:**
The date and time that the contents of the file were last modified. A date.

This is not necessarily the file modification date.

151.1.48 kMDItemContentType as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.

**Notes:** For example, a jpeg image file will have a value of public.jpeg/public.image/public.data. The value of this attribute is set by the MDImporter. Changes to this value are lost when the file attributes are next imported.

151.1.49 kMDItemContentTypeTree as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.

**Notes:** Array of string

151.1.50 kMDItemContributors as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.

**Notes:**
The entities responsible for making contributions to the content of the resource. An array of strings.

Examples of a contributor include a person, an organization or a service.
151.1.51  **kMDItemCopyright as string**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The copyright owner of the file contents. A string.

151.1.52  **kMDItemCountry as string**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The full, publishable name of the country or primary location where the intellectual property of the item was created, according to guidelines of the provider. A string.

151.1.53  **kMDItemCoverage as string**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:**

The extent or scope of the content of the resource. A string.

Coverage will typically include spatial location (a place name or geographic co-ordinates), temporal period (a period label, date, or date range) or jurisdiction (such as a named administrative entity).

Recommended best practice is to select a value from a controlled vocabulary, and that, where appropriate, named places or time periods be used in preference to numeric identifiers such as sets of co-ordinates or date ranges.

151.1.54  **kMDItemCreator as string**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Application used to create the document content (e.g. "Word", "AppleWorks", etc.). A string.

151.1.55  **kMDItemDateAdded as string**

MBS MacOSX Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:**
This is the date that the file was moved into the current location.
Not all files will have this attribute.
Not all file systems support this attribute.

151.1.56  kMDItemDeliveryType as string

Notes: The delivery type. Values are "Fast start" or "RTSP". A string.

151.1.57  kMDItemDescription as string

Notes: A description of the content of the resource. The description may include an abstract, table of contents, reference to a graphical representation of content or a free-text account of the content. A string.

151.1.58  kMDItemDirector as string

Notes: Director of the movie. A string. Requires Mac OS X 10.5.

151.1.59  kMDItemDisplayName as string

Notes: The localized version of the file name. A string.

151.1.60  kMDItemDownloadedDate as string

Notes: Available in Mac OS X 10.7 and later.
151.1.61 kMDItemDueDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: Date this item is due. A date.

151.1.62 kMDItemDurationSeconds as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: The duration, in seconds, of the content of file. A value of 10.5 represents media that is 10 and 1/2 seconds long. A number.

151.1.63 kMDItemEditors as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: The list of editor/editors that has worked on this file. There could be 0 or more editors of a particular file. The order of the editors in the array is preserved, but is not intended to represent the main editor or relative importance of the editors. Type is An array of strings.

151.1.64 kMDItemEmailAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: Email addresses related to this item. An array of strings.

151.1.65 kMDItemEncodingApplications as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: Application used to convert the original content into it’s current form. For example, a PDF file might have an encoding application set to ”Distiller”. An array of strings.

151.1.66 kMDItemExecutableArchitectures as string

151.1. CLASS MDITEMMBS

Notes: Available in Mac OS X 10.7 and later.

151.1.67 kMDItemEXIFGPSVersion as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: The version of GPSInfoIFD header that was used to generate the metadata. A string. Requires Mac OS X 10.5.

151.1.68 kMDItemEXIFVersion as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: The version of the EXIF header used to generate the metadata. A string.

151.1.69 kMDItemExposureMode as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: The exposure mode used to acquire the document contents. A number. Possible values are 0 (auto exposure), 1 (manual exposure) and 2 (auto bracket).

151.1.70 kMDItemExposureProgram as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: The class of the exposure program used by the camera to set exposure when the image is taken. Possible values include: Manual, Normal, and Aperture priority. A string.

151.1.71 kMDItemExposureTimeSeconds as string

151.1.72 kMDItemExposureTimeString as string

151.1.73 kMDItemFinderComment as string

151.1.74 kMDItemFlashOnOff as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: Indicates if a camera flash was used. A number.

151.1.75 kMDItemFNumber as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: The diameter of the diaphragm aperture in terms of the effective focal length of the lens.

151.1.76 kMDItemFocalLength as string

151.1.77 kMDItemFocalLength35mm as string

151.1. CLASS MDITEMMBS

151.1.78 kMDItemFonts as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Fonts used in this item. You should store the font’s full name, the postscript name, or the font family name, based on the available information. An array of strings.

151.1.79 kMDItemFSContentChangeDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The date the file contents last changed. A date.

151.1.80 kMDItemFSCreationDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The date and time that the file was created. A date.

151.1.81 kMDItemFSExists as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** This attribute is deprecated and was never implemented.

151.1.82 kMDItemFSHasCustomIcon as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Boolean indicating if this file has a custom icon. Type is a boolean.

151.1.83 kMDItemFSInvisible as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Indicates whether the file is invisible. A boolean.
**151.1.84 kMDItemFSIsExtensionHidden as string**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Indicates whether the file extension of the file is hidden. A boolean.

**151.1.85 kMDItemFSIsReadable as string**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** This attribute is deprecated and was never implemented.

**151.1.86 kMDItemFSIsStationery as string**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Boolean indicating if this file is stationery. Type is a boolean.

**151.1.87 kMDItemFSIsWriteable as string**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** This attribute is depreciated and was never implemented.

**151.1.88 kMDItemFSLabel as string**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Index of the Finder label of the file. Possible values are 0 through 7. A number.

**151.1.89 kMDItemFSName as string**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The file name of the item. A string.
151.1.90  kMDItemFSNodeCount as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Number of files in a directory. A number.

151.1.91  kMDItemFSOwnerGroupID as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The group ID of the owner of the file. A number.

151.1.92  kMDItemFSOwnerUserID as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The user ID of the owner of the file. A number.

151.1.93  kMDItemFSSize as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The size, in bytes, of the file on disk. A number.

151.1.94  kMDItemGenre as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Genre of the movie. A string. Requires Mac OS X 10.5.

151.1.95  kMDItemGPSAreaInformation as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
151.1.96  kMDItemGPSDateStamp as string

151.1.97  kMDItemGPSDestBearing as string

151.1.98  kMDItemGPSDestDistance as string

151.1.99  kMDItemGPSDestLatitude as string

151.1.100  kMDItemGPSDestLongitude as string

151.1.101  kMDItemGPSDifferential as string

151.1  CLASS MDITEMMBS

Notes: Available in Mac OS X 10.7 and later.

151.1.102  kMDItemGPSDOP as string

151.1.103  kMDItemGPSMapDatum as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

151.1.104  kMDItemGPSMeasureMode as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

151.1.105  kMDItemGPSProcessingMethod as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

151.1.106  kMDItemGPSStatus as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
**Notes:** Available in Mac OS X 10.7 and later.

151.1.107  kMDItemGPSTrack as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
**Notes:**
The direction of travel of the item, in degrees from true north. A number.
Requires Mac OS X 10.5.

151.1.108  kMDItemHasAlphaChannel as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Indicates if this image file has an alpha channel. A boolean.

151.1.109  kMDItemHeadline as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** A publishable entry providing a synopsis of the contents of the file. For example, "Apple Introduces the iPod Photo". A string.

151.1.110  kMDItemIdentifier as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** A formal identifier used to reference the resource within a given context. A string.

151.1.111  kMDItemImageDirection as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** The direction of the item’s image, in degrees from true north. A number.  
Requires Mac OS X 10.5.

151.1.112  kMDItemInformation as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** Information about the item. A string.  
Requires Mac OS X 10.5.

151.1.113  kMDItemInstantMessageAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** Instant message addresses related to this item. An array of strings.
151.1.114  kMDItemInstructions as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Editorial instructions concerning the use of the item, such as embargoes and warnings. For example, "Second of four stories". A string.

151.1.115  kMDItemIsApplicationManaged as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Available in Mac OS X 10.7 and later.

151.1.116  kMDItemIsGeneralMIDISequence as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Indicates whether the MIDI sequence contained in the file is setup for use with a General MIDI device. A boolean.

151.1.117  kMDItemIsLikelyJunk as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Available in Mac OS X 10.7 and later.

151.1.118  kMDItemISOSpeed as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The ISO speed used to acquire the document contents. A number.

151.1.119  kMDItemKeySignature as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The key of the music contained in the audio file. For example: C, Dm, F# m, Bb. A string.
151.1.120  kMDItemKeywords as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**  One of the item attribute constants.  
**Notes:**  Keywords associated with this file.  For example, ”Birthday”, ”Important”, etc.  An array of strings.

151.1.121  kMDItemKind as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**  One of the item attribute constants.  
**Notes:**  A description of the kind of item this file represents.  A string.

151.1.122  kMDItemLabelIcon as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**  One of the item attribute constants.  
**Notes:**  Available in Mac OS X 10.7 and later.

151.1.123  kMDItemLabelID as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**  One of the item attribute constants.  
**Notes:**  Available in Mac OS X 10.7 and later.

151.1.124  kMDItemLabelKind as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**  One of the item attribute constants.  
**Notes:**  Available in Mac OS X 10.7 and later.

151.1.125  kMDItemLabelUUID as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**  One of the item attribute constants.  
**Notes:**  Available in Mac OS X 10.7 and later.
151.1.126 kMDItemLanguages as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Indicates the languages of the intellectual content of the resource. Recommended best practice for the values of the Language element is defined by RFC 3066. An array of strings.

151.1.127 kMDItemLastUsedDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The date and time that the file was last used. This value is updated automatically by LaunchServices everytime a file is opened by double clicking, or by asking LaunchServices to open a file. A date.

151.1.128 kMDItemLatitude as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The latitude of the item in degrees north of the equator, expressed using the WGS84 datum. Negative values lie south of the equator. A number. Requires Mac OS X 10.5.

151.1.129 kMDItemLayerNames as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The names of the layers in the file. An array of strings.

151.1.130 kMDItemLensModel as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Available in Mac OS X 10.7 and later.
151.1. CLASS MDITEMMBS

151.1.131 kMDItemLongitude as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The longitude of the item in degrees east of the prime meridian, expressed using the WGS84 datum. Negative values lie west of the prime meridian. A number. Requires Mac OS X 10.5.

151.1.132 kMDItemLyricist as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The lyricist, or text writer, of the music contained in the audio file. A string.

151.1.133 kMDItemMaxAperture as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The smallest f-number of the lens. Ordinarily it is given in the range of 00.00 to 99.99. A number.

151.1.134 kMDItemMediaTypes as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The media types present in the content. An array of strings.

151.1.135 kMDItemMeteringMode as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The metering mode used to take the image. A string. Possible values are: Unknown, Average, CenterWeightedAverage, Spot, MultiSpot, Pattern, and Partial.
151.1.136 kMDItemMusicalGenre as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** The musical genre of the song or composition contained in the audio file. For example: Jazz, Pop, Rock, Classical. A string.

151.1.137 kMDItemMusicalInstrumentCategory as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** Specifies the category of an instrument. A string.

Files should have an instrument associated with them ("Other Instrument" is provided as a catch-all). For some categories, such as "Keyboards", there are instrument names which provide a more detailed instrument definition, for example "Piano" or "Organ".

151.1.138 kMDItemMusicalInstrumentName as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** Specifies the name of instrument relative to the instrument category. A string.

Files can have an instrument name associated with them if they have certain instrument categories. For example, the "Percussion" category has multiple instruments, including "Conga" and "Bongo".

151.1.139 kMDItemNamedLocation as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** The name of the location or point of interest associated with the item. The name may be user provided. A string
151.1.140  kMDItemNumberOfPages as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Number of pages in the document. A number.

151.1.141  kMDItemOrganizations as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The company or organization that created the document. An array of strings.

151.1.142  kMDItemOrientation as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The orientation of the document contents. Possible values are 0 (landscape) and 1 (portrait). A number.

151.1.143  kMDItemOriginalFormat as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:**
Original format of the movie.
A string.
Requires Mac OS X 10.5

151.1.144  kMDItemOriginalSource as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:**
Original source of the movie. A string.
Requires Mac OS X 10.5.
151.1.145 kMDItemPageHeight as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Height of the document page, in points (72 points per inch). For PDF files this indicates the height of the first page only. A number.

151.1.146 kMDItemPageWidth as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Width of the document page, in points (72 points per inch). For PDF files this indicates the width of the first page only. A number.

151.1.147 kMDItemParticipants as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The list of people who are visible in an image or movie or written about in a document. Type is array of strings. Requires Mac OS X 10.6.

151.1.148 kMDItemPath as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The complete path to the file. A string.

151.1.149 kMDItemPerformers as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Performers in the movie. An array of string. Requires Mac OS X 10.5.
151.1. CLASS MDITEMMBS

151.1.150 kMDItemPhoneNumbers as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Phone numbers related to this item. An array of strings.

151.1.151 kMDItemPixelCount as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The total number of pixels in the contents. Same as kMDItemPixelWidth x kMDItemPixelHeight. A number.

151.1.152 kMDItemPixelHeight as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The height, in pixels, of the contents. For example, the image height or the video frame height. A number.

151.1.153 kMDItemPixelWidth as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** The width, in pixels, of the contents. For example, the image width or the video frame width. A number.

151.1.154 kMDItemProducer as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Producer of the content. A string. Requires Mac OS X 10.5.

151.1.155 kMDItemProfileName as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The name of the color profile used by the document contents. A string.

151.1.156 kMDItemProjects as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: The list of projects that this file is part of. For example, if you were working on a movie all of the files could be marked as belonging to the project "My Movie". An array of strings.

151.1.157 kMDItemPublishers as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: The entity responsible for making the resource available. For example, a person, an organization, or a service. Typically, the name of a publisher should be used to indicate the entity. An array of strings.

151.1.158 kMDItemRecipientAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: This attribute indicates the recipient addresses of the document. array of string. Requires Mac OS X 10.6.

151.1.159 kMDItemRecipientEmailAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the item attribute constants. Notes: This attribute indicates the recipients email addresses. (This is always the email address, and not the human readable version). An array of string. Requires Mac OS X 10.5.

151.1.160 kMDItemRecipients as string

151.1. CLASS MDITEMMBS

Notes: Recipients of this item. An array of strings.

151.1.161 kMDItemRecordingDate as string

Notes: The recording date of the song or composition. A date.

This is in contrast to kMDItemContentCreationDate which, could indicate the creation date of an edited or 'mastered' version of the original art.

151.1.162 kMDItemRecordingYear as string

Notes: Indicates the year the item was recorded. For example, 1964, 2003, etc. A number.

151.1.163 kMDItemRedEyeOnOff as string

Notes: Indicates if red-eye reduction was used to take the picture. A boolean.

Possible values are 0 (no red-eye reduction mode or unknown) and 1 (red-eye reduction used).

151.1.164 kMDItemResolutionHeightDPI as string

Notes: Resolution height of this image in DPI. A number.
151.1.165 kMDItemResolutionWidthDPI as string

Notes: Resolution width, in DPI, of this image. A number.

151.1.166 kMDItemRights as string

Notes: Provides a link to information about rights held in and over the resource. A string.

Contains a rights management statement for the resource, or reference a service providing such information. Rights information often encompasses Intellectual Property Rights (IPR), Copyright, and various Property Rights.

If this attribute is absent, no assumptions can be made about the status of these and other rights with respect to the resource.

151.1.167 kMDItemSecurityMethod as string

Notes: The security or encryption method used for the file. A number.

151.1.168 kMDItemSpeed as string

Notes: The speed of the item, in kilometers per hour. A number.

Requires Mac OS X 10.5
151.1.169  kMDItemStarRating as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** User rating of this item. For example, the stars rating of an iTunes track. A number.

151.1.170  kMDItemStateOrProvince as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Identifies the province or state of origin according to guidelines established by the provider. For example, "CA", "Ontario", or "Sussex". A string.

151.1.171  kMDItemStreamable as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Whether the content is prepared for streaming. A boolean.

151.1.172  kMDItemSubject as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** Subject of the this item. Type is a string.

151.1.173  kMDItemSupportFileType as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** array of strings

151.1.174  kMDItemTempo as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants. **Notes:** A float value that specifies the beats per minute of the music contained in the audio file. A number.
151.1.175 kMDItemTextContent as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.

**Notes:**
Contains a text representation of the content of the document. Data in multiple fields should be combined using a whitespace character as a separator. A string.

An application’s Spotlight importer provides the content of this attribute. Applications can search for values in this attribute, but are not able to read the content of this attribute directly.

151.1.176 kMDItemTheme as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.

**Notes:** Theme of the this item. Type is a string.

151.1.177 kMDItemTimeSignature as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.

**Notes:** The time signature of the musical composition contained in the audio/MIDI file. For example: ”4/4”, ”7/8”. A string.

151.1.178 kMDItemTimestamp as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.

**Notes:**
The timestamp on the item. This generally is used to indicate the time at which the event captured by the item took place.

Mac OS X 10.5
151.1. CLASS MITEMMBS

151.1.179  kMDItemTitle as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** The title of the file. For example, this could be the title of a document, the name of a song, or the subject of an email message. A string.

151.1.180  kMDItemTotalBitRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** The total bit rate, audio and video combined, of the media. A number.

151.1.181  kMDItemURL as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** URL of the item.

Mac OS X 10.5

151.1.182  kMDItemVersion as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** The version number of this file. A string

151.1.183  kMDItemVideoBitRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.  
**Notes:** The video bit rate. A number.
151.1.184 kMDItemWhereFroms as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the item attribute constants.
**Example:**
```vba
    dim file as FolderItem = DownloadsFolderMBS(0).Child("test.html")
    dim item as new MDItemMBS(file)
    dim value as Variant = item.GetAttribute(MDItemMBS.kMDItemWhereFroms)
    if value <> nil then
        dim values() as Variant = value
        dim Link as String = values(0)
        MsgBox Link
    end if
```

**Notes:**
Describes where the file was obtained from. An array of strings.

For example, a downloaded file may refer to the URL, files received by email may indicate the sender’s email address, message subject, etc.

151.1.185 kMDItemWhiteBalance as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the item attribute constants.
**Notes:** The white balance setting used to acquire the document contents. Possible values are 0 (auto white balance) and 1 (manual). A number.

151.1.186 Properties

151.1.187 DisplayName as String

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The localized version of the file name.
**Example:**
```vba
    dim item as new MDItemMBS(SpecialFolder.Desktop)
    MsgBox item.DisplayName // shows "Schreibtisch"
```
Notes:
This is a shortcut for AttributeString(kMDItemDisplayName).
(Read only property)

151.1.188  FSName as String

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The file name of the item.
**Example:**
```
dim item as new MDItemMBS(SpecialFolder.Desktop)
MsgBox item.FSName  // shows "Desktop"
```

Notes:
This is a shortcut for AttributeString(kMDItemFSName).
(Read only property)

151.1.189  FSSize as Int64

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The size, in bytes, of the file on disk.
**Example:**
```
dim item as new MDItemMBS(SpecialFolder.Desktop)
MsgBox str(item.FSSize)  // shows 0
```

Notes:
This is a shortcut for AttributeString(kMDItemFSSize).
(Read only property)

151.1.190  Handle as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The internal reference to the item.
151.1.191  Path as String

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The complete path to the file.

**Example:**

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.path // shows ”/Users/cs/Desktop”
```

**Notes:**
This is a shortcut for AttributeString(kMDItemPath).
(Read only property)

151.1.192  Tag as Variant

MBS MacOSX Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The attached value.

**Notes:**
You can use this property as you like.
(Read and Write property)
151.2. **CLASS MDQUERYBATCHINGPARAMSMBS**

151.2  **class MDQueryBatchingParamsMBS**

151.2.1  **class MDQueryBatchingParamsMBS**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This class containing the progress notification batching parameters of an MDQuery. **Notes:** The first notification can be triggered by either firstmaxnum or firstmaxms limit being exceeded. Subsequent notifications are triggered by either the progressmaxnum or progressmaxms limit. The default batching parameters are undefined and subject to change.

151.2.2  **Properties**

151.2.3  **firstMaxMS as Integer**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum number of milliseconds that can pass before a progress notification is sent out. **Notes:**

This value is advisory, in that the notification will be triggered "at some point after firstmaxms milliseconds have passed since the query began accumulating results", but generally not very long after, for the first progress notification. (Read and Write property)

151.2.4  **firstMaxNum as Integer**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum number of results that can accumulate before a progress notification is sent out by the MDQuery, for the first notification. **Notes:** (Read and Write property)

151.2.5  **progressMaxMS as Integer**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum number of milliseconds that can pass before a progress notification is sent out. **Notes:**

This value is advisory, in that the notification will be triggered "at some point after firstmaxms milliseconds have passed since the query began accumulating results", but generally not very long after, for progress notifications after the first, during the initial gathering phase of the query. (Read and Write property)
151.2.6 progressMaxNum as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum number of results that can accumulate before a progress notification is sent out by the MDQuery, for notifications after the first, during the initial gathering phase of the query. **Notes:** (Read and Write property)

151.2.7 updateMaxMS as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum number of milliseconds that can pass before a progress notification is sent out. **Notes:**

This value is advisory, in that the notification will be triggered "at some point after firstmaxms milliseconds have passed since the query began accumulating results", but generally not very long after, for update notifications after the gathering phase of the query has finished. (Read and Write property)

151.2.8 updateMaxNum as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum number of results that can accumulate before an update notification is sent out by the MDQuery, for update notifications after the gathering phase of the query has finished. **Notes:** (Read and Write property)
151.3 class MDQueryMBS

MDQueryMBS encapsulates all queries against the MetaData database.

Example:

dim m as new MDQueryMBS("* == ""Hello"")
call m.Execute(m.kMDQuerySynchronous)
MsgBox str(m.ResultCount) // shows a lot of results

Notes:

Depending on what and how you want to search, you can decide whether MDQueryMBS or CatSearchMBS is the better choice.

Available in Mac OS X version 10.4 and later.

Queries gather results or process updates only while the current thread’s run loop is running. Queries normally operate asynchronously, and only send out progress notifications as the list is being collected. The query list is kept up to date with respect to value lists and sorting as the progress notifications are sent out, so the query is in a good state during those events.

An MDQuery presents its results as if it were a simple array object. The results are MDItem.

Query Sorting: Sorting the results from a query can be performed in one of two ways. First is to let the library sort the results for you by passing an array of attributes to sort on to constructor. The default sort provided by the constructor is an ascending sort strings are compared using CFStringCompare() with the options kCFCompareNonliteral | kCFCompareLocalized | kCFCompareNumerically.

If used in a thread, please use a loop with calling NSRunLoopMBS.currentRunLoop.runUntilDate(nil) to give time for update events to fire.
151.3.2 Methods

151.3.3 AttributeValueOfResultAtIndex(name as string, index as UInt32) as Variant

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the value of the named attribute for the result at the given index.

**Notes:**

name: The attribute name for which to return the values. If the attribute is not one of those requested in
the valueListAttrs or sortingAttrs parameters to one of the query creation functions, the result will be nil.

index: The index into the query’s result list. If the index is negative, or is equal to or larger than the current
number of results in the query, the behavior is undefined.

Returns the value of the attribute, or nil if the attribute doesn’t exist in the query on that result.

151.3.4 Constructor(query as MDQueryMBS, queryString as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates a new query, which is a subset of the given query.

**Notes:**

Only results matched by the given query can be matched by the query expression of this query.

query: The parent query of the new query.

queryString: The query expression string for this query. This expression in effect may further restrict the
matches found by the parent query. If the string is empty the behavior is undefined.

valueListAttributes: An optional array of attribute names. The query will collect the values of these at-
tributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow
a user to further qualify the items for which they are searching. This parameter may be empty if no value
lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of
an MDQuery. The attribute names are strings.

sortingAttributes: An optional array of attribute names. The query will results of the query based on the
values of these attributes. The first name in the array is used as the primary sort key, the second as the
secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This param-
eter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the
CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do
the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting
yourself. The attribute names are strings.

151.3.5 Constructor(query as MDQueryMBS, queryString as string, valueListAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new query, which is a subset of the given query.

**Notes:**
Only results matched by the given query can be matched by the query expression of this query.

query: The parent query of the new query.
queryString: The query expression string for this query. This expression in effect may further restrict the matches found by the parent query. If the string is empty the behavior is undefined.
valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are strings.
sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

CHAPTER 151. SPOTLIGHT

151.3.6 Constructor(query as MDQueryMBS, queryString as string, valueListAttributes() as string, sortingAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new query, which is a subset of the given query.

**Notes:**

Only results matched by the given query can be matched by the query expression of this query.

query: The parent query of the new query.
queryString: The query expression string for this query. This expression in effect may further restrict the matches found by the parent query. If the string is empty the behavior is undefined.
valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are strings.
sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

151.3.7 Constructor(queryString as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new query with the given query expression.

**Notes:**

queryString: The query expression string for this query. The syntax for query expressions is explained above in the header overview documentation.
valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are string.

sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

The handle value is zero on failure.

### 151.3.8 Constructor(queryString as string, valueListAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new query with the given query expression.

**Notes:**

queryString: The query expression string for this query. The syntax for query expressions is explained above in the header overview documentation.

valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are string.

sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the...
secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

The handle value is zero on failure.

See also:

- 151.3.4 Constructor(query as MDQueryMBS, queryString as string) 18786
- 151.3.5 Constructor(query as MDQueryMBS, queryString as string, valueListAttributes() as string) 18787
- 151.3.6 Constructor(query as MDQueryMBS, queryString as string, valueListAttributes() as string, sortingAttributes() as string) 18788
- 151.3.7 Constructor(queryString as string) 18788
- 151.3.9 Constructor(queryString as string, valueListAttributes() as string, sortingAttributes() as string) 18790

151.3.9 Constructor(queryString as string, valueListAttributes() as string, sortingAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new query with the given query expression.

**Notes:**

queryString: The query expression string for this query. The syntax for query expressions is explained above in the header overview documentation.

valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are string.

sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.
151.3. **CLASS MDQUERYMBS**

The handle value is zero on failure.

See also:

- 151.3.4 Constructor(query as MDQueryMBS, queryString as string)
- 151.3.5 Constructor(query as MDQueryMBS, queryString as string, valueListAttributes() as string)
- 151.3.6 Constructor(query as MDQueryMBS, queryString as string, valueListAttributes() as string, sortingAttributes() as string)
- 151.3.7 Constructor(queryString as string)
- 151.3.8 Constructor(queryString as string, valueListAttributes() as string)

151.3.10 **CountOfResultsWithAttributeValue(name as string, Value as Variant) as UInt32**

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the number of results which have the given attribute and attribute value. Note that this count may change over time, as the query’s result list is updated.

**Notes:**

name: The attribute name for which to return the number of results with the given value. If the attribute is not one of those requested in the valueListAttrs parameter to one of the query creation functions, the behavior is undefined.

value: The attribute value for which to return the number of results with that value. This parameter may be nil, in which case the number of results that do not contain the named attribute is returned.

Returns the number of results with that attribute and value.

151.3.11 **DisableUpdates**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Disables updates to the query result list.

**Notes:** This should be called before iterating through the list of results to prevent the result list from changing during the iteration. The disabled state is a counter, and disabling can be done recursively and from different threads.

151.3.12 **EnableUpdates**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Re-enables updates to the query result list.
Notes: This should be called when finished iterating through the list of results, to allow changes to the result list to occur. Changes will be allowed when all the disables have been matched by a corresponding enable.

151.3.13  Execute(flags as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Run the query, and populate the query with the results.
Example:

```vbscript
dim q as new MDQueryMBS("kMDItemContentModificationDate>=$ time.now")
// you will want to use a MDQueryMBS subclass here to catch the events
if not q.Execute(q.kMDQueryWantsUpdates) then
    MsgBox "Failed to query"
end if
```

Notes:

Queries only gather results or process updates while the current thread’s run loop is running. Queries normally operate asynchronously, and send out progress and update notifications to report changes to the list of results that has been collected. Queries have two phases: the initial gathering of all currently matching results, and a second live-update phase where queries monitor the state of the system and update themselves to external changes in files or the operating environment (for example, as time advances, files which did not match the query when it was started may later match the query). Query notifications are posted within the context of the same thread which executes the query.

Here are three operational modes: (1) synchronous static queries, which collect the list of current results and then do not watch for updates to the results, (2) asynchronous static queries, which collect the results asynchronously after this function returns, and then do not watch for updates to the results, and (3) asynchronous live queries which collect the initial results asynchronously after this function returns, and then do watch for updates to the results, until the query is destroyed. There is little reason not to allow the fourth case, synchronous collection of initial results, followed by asynchronous monitoring for updates, so this may change in the future.

Flags: Options for the query.

Returns true if the query was started (executed in the case of a synchronous query), false otherwise. Queries cannot be executed more than once.
151.3.14 GetSortOptionFlagsForAttribute(fieldName as string) as Integer

**Function:** Gets the sort option flags for a sorting attribute. 

**Notes:** 

fieldName: The attribute name for which sort option flags are to be fetched. 

Returns an integer with flags. Currently can be 0 or 1. 

Available on Mac OS X 10.7 or later. 

151.3.15 IndexOfResult(it as MDItemMBS) as Integer

**Function:** Returns the current index of the given result. 

**Notes:** 

Note that the index of a result will change over time, as the query’s result list is updated. 

Returns the index of the given result, or -1 if the value is not one of the query’s existing results. 

151.3.16 IsGatheringComplete as boolean

**Function:** Returns true if the first phase of a query, the initial result gathering, has finished. 

**Notes:** A boolean indicating whether or not the first phase of a query has completed. 

151.3.17 QueryString as string

**Function:** Returns the query string of the query. 

151.3.18 ResultAtIndex(index as Integer) as MDItemMBS

**Function:** Returns the current result at the given index. 

**Notes:** 

This function causes the result object to be created if it hasn’t been created already. For performance reasons, it is not advisable to ask for results that you don’t need, to avoid the cost of creating them. If possible,
call this function to fetch only the results you need to display or otherwise process. Note that the index of
a particular result will change over time, as the query’s result list is updated.

index: The index into the query’s result list.

If the index is negative, or is equal to or larger than the current number of results in the query, the behavior
is undefined.

Returns the MDItem currently at the given index, or if a result-create function has been set, returns the
result returned by that function.

151.3.19 ResultCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns the number of results currently collected by the query.
Example:

```vbs
Dim m As New MDQueryMBS("kMDItemContentModificationDate>$ time.today")
Call m.Execute(m.kMDQuerySynchronous)
MsgBox str(m.ResultCount)+" files modified today"
```

Notes: Note that the number of results in a query will change over time as the query’s result list is updated.

151.3.20 Results(limit as Integer = -1) as MDItemMBS()

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Queries result items.
Notes:
Internally does what ResultAtIndex does for up to limit entries.
Limit with -1 will cause no limit.
If possible, call this function to fetch only the results you need to display or otherwise process.

151.3.21 SetMaxCount(size as Integer)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Use SetMaxCount to limit the number of results returned by the query engine.
151.3. CLASS MDQUERYMBS

Notes:
This must be called before the query is executed.
size: The maximum number of results desired.

151.3.22 SetSearchScope(paths() as folderitem, options() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Use SetSearchScope to limit the results returned by the query engine to those MDItem that appear within the specified directories.

Notes:
This may be used to limit searching to particular volumes. Tilde paths, or environment variables are not expanded. Calling this multiple times will replace the previous options. This must be called before the query is executed.

paths: An array of directories where you want to search. This array can be empty.
options: An array of scope options. Pass the kMDQueryScope* constants. This array can be empty.

151.3.23 SetSortOptionFlagsForAttribute(fieldName as string, flags as UInt32) as Boolean

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the sort flags for a query.

Notes:
fieldName: The attribute name for which sort option flags are to be set.

The attribute name must have been part of the sortingFlags when the query was created.

flags: An integer containing MDQuerySortOptionFlags to be applied to the attribute

Returns a boolean, true on success, false on failure.

Available on Mac OS X 10.7 or later.

151.3.24 SetSortOrder(sortingAttrs() as string) as Boolean

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the sort order for a query.
Notes:

sortingAttrs An array of attribute names, as in MDQueryCreate. The query’s result set will be sorted according to the order of these attributes. All names in the array have to have been passed as sortingAttrs when the query was created. The attribute names are strings.

Returns a boolean, true on success, false on failure.

Available on Mac OS X 10.7 or later.

151.3.25  **SortingAttributes as string()**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the list of attribute names the query is using to sort the results.

151.3.26  **Stop**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Stops the query from ever generating more results.

**Notes:** Queries may be executed only once, so a stopped query cannot be restarted. The query will also not generate any result updates. The query is static after this function returns. The query will do final processing of results that have come in but not yet been processed (because, say, the batching parameters hasn’t triggered that yet). That may trigger a progress notification, so be aware of that if you are stopping a query from within your progress note handler; that is, during this function, a recursive progress and/or finished notification might occur, which might recursively call your notification handler. It is safe to call this function recursively. You would call this function to stop a query that is generating way too many results to be useful, but still want to access the results that have come in so far. If a query is stopped before the gathering phase finishes, it will not report itself as finished, nor will it send out a finished notification.

151.3.27  **ValueListAttributes as string()**

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the list of attribute names for which the query is collecting the lists of values.

151.3.28  **ValuesOfAttribute(name as string) as Variant()**

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the list of values, from the results of the query, of the named attribute.

**Notes:**
151.3. CLASS MDQUERYMBS

The list is not ordered in any way. The list contains only one occurrence of each value. Note that this list may change over time, as the query's result list is updated.

name: The attribute name for which to return the values. If the attribute is not one of those requested in the valueListAttrs parameter to one of the query creation functions, the behavior is undefined.

Returns an array holding the value objects for that attribute.

151.3.29 Properties

151.3.30 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The internal reference for the MDQuery. Notes: (Read and Write property)

151.3.31 Tag as Variant

MBS MacOSX Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The attached value. Notes: You can use this property as you like. (Read and Write property)

151.3.32 BatchingParameters as MDQueryBatchingParamsMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The query whose batching parameters are to be set. Notes: (Read and Write computed property)

151.3.33 Events

151.3.34 Finish()

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: The event called when the query has finished. Notes: Called when the query has finished with the initial result-gathering phase, and may now proceed
into the live-update phase (if that option was chosen when the query was executed). This event often shortly
follows after the last progress notification. It is usually not necessary to update any displayed UI in response
to this event, since it doesn’t indicate any change in the result list of a query.

151.3.35 Progress(AddedItems() as MDItemMBS, ChangedItems() as MDItemMBS,
RemovedItems() as MDItemMBS)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function:
The event sent to indicate changes to the query’s results list during the initial gathering phase of a query’s
execution.
Notes:
Mostly adds will occur during this phase, but removals and changes can also occur, as in any update.
For performance reasons the arrays are empty in newer Mac OS X SDK versions.
In that case please use the result functions.

151.3.36 Update(AddedItems() as MDItemMBS, ChangedItems() as MDItemMBS,
RemovedItems() as MDItemMBS)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function:
The event is sent to indicate changes to the query’s results list during the second, live-update, phase of a
query’s execution.

151.3.37 Constants

151.3.38 kMDQueryReverseSortOrderFlag=1

MBS MacOSX Plugin, Plugin Version: 11.2. Function: A flag constant for calling SetSortOptionFlagsFor-
Attribute.
Notes:
Sort the attribute in reverse order.
Available on Mac OS X 10.7 or later.

151.3.39 kMDQueryScopeAllIndexed=”kMDQueryScopeAllIndexed”

MBS MacOSX Plugin, Plugin Version: 9.6. Function: One of the option constants for the search scope.
Notes: A constant, which can be passed in the scopeDirectories array, to specify that the search should be
restricted to indexed, locally mounted volumes and indexed user mounted remote volumes, plus the user’s
151.3. CLASS MDQUERYMBS

home directory.

151.3.40  kMDQueryScopeComputer=”kMDQueryScopeComputer”

MBS MacOSX Plugin, Plugin Version: 9.6. **Function:** One of the option constants for the search scope.  
**Notes:** A constant, which can be passed in the scopeDirectories array, to specify that the search should be restricted to all locally mounted volumes, plus the user’s home directory (which may be on a remote volume).

151.3.41  kMDQueryScopeComputerIndexed=”kMDQueryScopeComputerIndexed”

MBS MacOSX Plugin, Plugin Version: 9.6. **Function:** One of the option constants for the search scope.  
**Notes:** A constant, which can be passed in the scopeDirectories array, to specify that the search should be restricted to indexed, locally mounted volumes, plus the user’s home directory (which may be on a remote volume).

151.3.42  kMDQueryScopeHome=”kMDQueryScopeHome”

MBS MacOSX Plugin, Plugin Version: 9.6. **Function:** One of the option constants for the search scope.  
**Notes:** A constant, which can be passed in the scopeDirectories array, to specify that the search should be restricted to the volume and directory that contains the current user’s home directory.

151.3.43  kMDQueryScopeNetwork=”kMDQueryScopeNetwork”

MBS MacOSX Plugin, Plugin Version: 9.6. **Function:** One of the option constants for the search scope.  
**Notes:** A constant, which can be passed in the scopeDirectories array, to specify that the search should include all user mounted remote volumes.

151.3.44  kMDQueryScopeNetworkIndexed=”kMDQueryScopeNetworkIndexed”

MBS MacOSX Plugin, Plugin Version: 9.6. **Function:** One of the option constants for the search scope.  
**Notes:** A constant, which can be passed in the scopeDirectories array, to specify that the search should include indexed user mounted remote volumes.
151.3.45 kMDQuerySynchronous=1

MBS MacOSX Plugin, Plugin Version: 9.6. **Function**: One of the constants for executing a query.
**Notes**: Block during the gathering phase. If this parameter is true, the function will not return until the query has finished gathering the initial results. The run loop will run in the default mode, which will allow anything registered in that mode with this run loop to execute as well. If this parameter is false, the function returns immediately after starting the query asychronously.

151.3.46 kMDQueryWantsUpdates=4

MBS MacOSX Plugin, Plugin Version: 9.6. **Function**: One of the constants for executing a query.
**Notes**: When set, after gathering the initial results the query will watch for changes in the system which should update the list of results. This can be changes which cause new files to now match the query, or changes which cause files in the result list to continue to match, or no longer match, the query. Files which begin to match the query are added to the result list, and files which no longer match the query expression are removed from the result list.
Currently, this parameter is ignored if the synchronous parameter is true. This is subject to change, and you should always pass in the value you want here.
151.4.1 ShotlightMBS(searchString as string) as Integer

MBS MacOSX Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Displays a Spotlight search window.

**Example:**

`call ShotlightMBS("Hello")`

**Notes:**

searchString: An initial query string. Pass "" to open the search window with no initial query string.

Returns a Mac OS error code and -1 if the function is not available and 0 on success. Requires Mac OS X 10.4.
Chapter 152

SQL

152.1 class DB2MBS

152.1.1 class DB2MBS

MBS SQL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for some DB2 related API commands.

**Example:**

```vba
dim cmd as new SqlCommandMBS ' your command
dim con as new SQLConnectionMBS ' your connection
dim api as DB2MBS = con.NativeAPI

// now use an API function
MsgBox str(api.SQLRowCount(cmd))
```

**Notes:**

More commands are added as requested.
Subclass of the SQLAPIMBS class.

152.1.2 Methods

152.1.3 SQLExecDirect(cmd as SQLCommandMBS, text as string)

MBS SQL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes an SQL command directly without any preprocessing in the plugin.

**Example:**

```vba
18803
```
dim cmd as new SQLCommandMBS // your command
dim con as new SQLConnectionMBS // your connection
dim api as DB2MBS = con.NativeAPI

// now use an API function
const sql = "some sql command"
api.SQLExecDirect cmd, sql

Notes: Lasterror is set.

152.1.4 SQLRowCount(cmd as SQLCommandMBS) as Int64

MBS SQL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the affected number of rows for the last operation.
**Notes:** Lasterror is set.

152.1.5 Properties

152.1.6 Lasterror as Integer

MBS SQL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code.
**Notes:** (Read and Write property)

152.1.7 LibraryLoaded as Boolean

MBS SQL Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether DB2 library is loaded.
**Notes:** (Read only property)
152.2  class InformixMBS

152.2.1  class InformixMBS

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for Informix specific functions.
**Notes:** Subclass of the SQLAPIMBS class.

152.2.2  Methods

152.2.3  Error(cmd as SQLCommandMBS, byref SQLState as string, byref NativeError as Integer, byref ErrorMsg as string) as Integer

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries the error status.

152.2.4  GetCursorName(cmd as SQLCommandMBS) as string

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries cursor name for given recordset.

152.2.5  HDBC as Integer

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns Database Connection handle.

152.2.6  HENV as Integer

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The environment handle.

152.2.7  HSTMT(cmd as SQLCommandMBS) as Integer

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the statement handle for the command object.
**Notes:** Returns 0 on any error.
**152.2.8 SetCursorName(cmd as SQLCommandMBS, name as string) as boolean**

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets cursor name for given recordset.
**Notes:** Returns true on success.

**152.2.9 Properties**

**152.2.10 LibraryLoaded as Boolean**

MBS SQL Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether Informix library is loaded.
**Notes:** (Read only property)
152.3. **MODULE INTERNALPOSTGRESQLLIBRARYMBS**

152.3  **module InternalPostgreSQLLibraryMBS**

152.3.1  **module InternalPostgreSQLLibraryMBS**

MBS SQL Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
The module for our internal PostgreSQL engine.
**Example:**

```pascal
if InternalPostgreSQLLibraryMBS.Use then
    MsgBox "Using internal PostgreSQL."
else
    MsgBox "Failed, so please use library file."
end if
```

**Notes:** This is a PostgreSQL library built into a plugin, so you can decide with use of MBS SQL Plugin to use this plugin instead of providing your own external copy of PostgreSQL shared library.

152.3.2  **Methods**

152.3.3  **OpenSSLVersion as String**

MBS SQL Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Returns the version of the OpenSSL library.
**Example:**

```pascal
MsgBox InternalPostgreSQLLibraryMBS.OpenSSLVersion
```

152.3.4  **Use as boolean**

MBS SQL Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Registers the built in PostgreSQL client library for use.
**Example:**

```pascal
if InternalPostgreSQLLibraryMBS.Use then
    MsgBox "Using internal PostgreSQL."
else
    MsgBox "Failed, so please use library file."
end if
```

**Notes:** So instead of having SQL Plugin load libpg shared library from file, we use the one built into this
152.3.5 Version as Integer

MBS SQL Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Returns version of PostgreSQL version.

**Example:**

MsgBox str(InternalPostgreSQLLibraryMBS.Version)
// e.g. 90501 for 9.5.1
152.4. MODULE INTERNALSQLITELIBRARYMBS

152.4 module InternalSQLiteLibraryMBS

152.4.1 module InternalSQLiteLibraryMBS

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The module for our internal SQLite3 engine.

**Example:**

```plaintext
if InternalSQLiteLibraryMBS.Use then
    MsgBox "Using internal SQLite"
else
    MsgBox "Failed, so please use library file."
end if
```

**Notes:** This is a SQLite3 library built into a plugin, so you can decide with use of MBS SQL Plugin to use
this plugin instead of providing your own external copy of SQLite shared library.

152.4.2 Methods

152.4.3 CompileOption(index as Integer) as String

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries name of a compile option.

**Example:**

```plaintext
dim list() as string
for i as Integer = 0 to 100
    dim s as string = InternalSQLiteLibraryMBS.CompileOption(i)
    if s = "" then exit
    dim b as Boolean = InternalSQLiteLibraryMBS.CompileOptionUsed(s)
    dim t as string
    if b then
        t = ": yes"
    else
        t = ": no"
    end if
    list.Append s + t
next
MsgBox Join(list, EndOfLine)
```
152.4.4 CompileOptionUsed(optionName as String) as Boolean

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries if a given compile option was set on or off.

**Example:**

```vbs
dim list() as string
for i as Integer = 0 to 100
    dim s as string = InternalSQLiteLibraryMBS.CompileOption(i)
    if s = "" then exit
    dim b as Boolean = InternalSQLiteLibraryMBS.CompileOptionUsed(s)
    dim t as string
    if b then t = ": yes"
    else t = ": no"
    end if
    list.Append s + t
next
MsgBox Join(list, EndOfLine)
```

**Notes:** If you need a specific option set, please contact MBS support.

152.4.5 Shell(arguments() as string) as Integer

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs a SQLite shell command.

**Example:**

```vbs
dim arguments() as string

dim f as FolderItem = SpecialFolder.Desktop.Child("test.sqlite")
dim o as FolderItem = SpecialFolder.Desktop.Child("out.csv")
arguments.Append "sqlite3" // path to app
arguments.Append f.NativePath
arguments.Append ":-csv"
arguments.Append ":-header"
arguments.Append ":-cmd"
```
arguments.Append ".output " + o.NativePath
arguments.Append "-cmd"
arguments.Append "select * from Documentation;"

\[\text{dim n as Integer } = \text{InternalSQLiteLibraryMBS.Shell(arguments)}\]
\[\text{Break}\]

**Notes:**

Using the SQLite library inside the plugin.
For this the plugin includes the code from the SQLite command line tool.
The tool may print to stdout/stderr and could possibly read from stdin.

### 152.4.6 SourceID as String

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The source code ID.
**Example:**
MsgBox InternalSQLiteLibraryMBS.SourceID

### 152.4.7 Use as boolean

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Registers the built in SQLite library for use.
**Example:**
if InternalSQLiteLibraryMBS.Use then
MsgBox "Using internal SQLite"
else
MsgBox "Failed, so please use library file."
end if

**Notes:** So instead of having SQL Plugin load sqlite3 shared library from file, we use the one built into this plugin.
152.4.8 Version as String

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the version number.

**Example:**

MsgBox InternalSQLiteLibraryMBS.Version

152.4.9 VersionNumber as Integer

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the sqlite version number.

**Example:**

MsgBox str(InternalSQLiteLibraryMBS.VersionNumber)
152.5. **CLASS MYSQLMBS**

152.5 **class MySQLMBS**

152.5.1 **class MySQLMBS**

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for MySQL specific functionality.
**Notes:** Subclass of the SQLAPIMBS class.

152.5.2 **Methods**

152.5.3 **AffectedRows(Conn as SQLConnectionMBS) as UInt64**

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the number of affected rows in the last statement.
**Notes:**
see also

152.5.4 **Error(Conn as SQLConnectionMBS) as string**

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the last error text.
**Notes:**
see also

152.5.5 **ErrorNumber(Conn as SQLConnectionMBS) as UInt32**

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the last error code.
**Notes:**
see also
### 152.5.6 FieldCount(Conn as SQLConnectionMBS) as UInt32

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of columns for the most recent query on the connection.  
**Notes:**  
see also  

### 152.5.7 Info(Conn as SQLConnectionMBS) as string

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves an info string providing information about the most recently executed statement.  
**Notes:**  
see also  

### 152.5.8 InsertID(Conn as SQLConnectionMBS) as Int64

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the last auto increment value from last insert command.  
**Notes:**  
see also  

### 152.5.9 NumberOfRows(cmd as SQLCommandMBS) as UInt64

MBS SQL Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of records in a command.

### 152.5.10 SetSSL(Conn as SQLConnectionMBS, keyPath as string, CertificatePath as string, AuthorityPath as string, authorityFolderPath as string, Cipher as string)

MBS SQL Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets SSL connection parameters.  
**Notes:**
152.5. CLASS MYSQLMBS

Calls mysql_ssl_set internally.
Used for establishing secure connections using SSL. It must be called before Connect(). It does nothing unless SSL support is enabled in the client library.

keyPath is the path name to the key file.
CertificatePath is the path name to the certificate file.
AuthorityPath is the path name to the certificate authority file.
authorityFolderPath is the path name to a directory that contains trusted SSL CA certificates in PEM format.
Cipher is a list of permissible ciphers to use for SSL encryption.

Any unused SSL parameters may be given as empty string.
For paths, please use folderitem.UnixPathMBS and not folderitem.ShellPath.

Please switch to using the following options on the connection:

MYSQL_SSL_KEY
MYSQL_SSL_CERT
MYSQL_SSL_CA
MYSQL_SSL_CAPATH
MYSQL_SSL_CIPHER

They should be specified before the connection is made.
e.g.

db.Option("MYSQL_SSL_CIPHER") = "DHE-RSA-AES256-SHA"

Allows to specify MySQL SSL parameters that will be used with mysql_ssl_set. MySQL API method called only when at least one parameter specified. See MySQL documentation for more information about these options.

152.5.11 Properties

152.5.12 LibraryLoaded as Boolean

MBS SQL Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Whether mysql library is loaded.
Notes: (Read only property)
152.6 class PostgreSQLAPIMBS

152.6.1 class PostgreSQLAPIMBS

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for PostgreSQL specific functions.

**Notes:**
The Listen method and Notification event are in the SQLDatabaseMBS/SQLConnectionMBS classes directly.
Subclass of the SQLAPIMBS class.

152.6.2 Methods

152.6.3 DB(conn as SQLConnectionMBS) as string

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The database name used to create the connection.

152.6.4 ErrorMessage(conn as SQLConnectionMBS) as string

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error message.

152.6.5 Field(cmd as SQLCommandMBS, RecordIndex as Integer, FieldIndex as Integer) as string

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries a field by index for the row with the RecordIndex.

See also:

- 152.6.6 Field(cmd as SQLCommandMBS, RecordIndex as Integer, FieldName as string) as string

152.6.6 Field(cmd as SQLCommandMBS, RecordIndex as Integer, FieldName as string) as string

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries a field by name for the row with the RecordIndex.

See also:
152.6.7 FieldCount(cmd as SQLCommandMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The number of fields in the result.

152.6.8 Host(conn as SQLConnectionMBS) as string

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The host used to create the connection.

152.6.9 Options(conn as SQLConnectionMBS) as string

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The options used to create the connection.

152.6.10 Password(conn as SQLConnectionMBS) as string

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The password used to create the connection.

152.6.11 Port(conn as SQLConnectionMBS) as string

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The port used to create the connection.

152.6.12 RecordCount(cmd as SQLCommandMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The number of records in the result.
152.6.13  **TTY(conn as SQLConnectionMBS) as string**

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tty used to create the connection.

152.6.14  **User(conn as SQLConnectionMBS) as string**

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The user name used to create the connection.

152.6.15  **Properties**

152.6.16  **LibraryLoaded as Boolean**

MBS SQL Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether postgres library is loaded. **Notes:** (Read only property)
152.7  Globals

152.7.1  BuildRecordSetMBS(fieldNames() as string, values() as string) as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Builds a recordset from strings.

**Example:**

```
dim names() as string = array(“Firstname”, “Lastname”)
dim values() as string
values.append “Stefan”
values.append “Miller”
values.append “Patrick”
values.append “Maier”

dim r as RecordSet = BuildRecordSetMBS(names, values)
```

**Notes:**
- First array has field names. Second array has all values.
- As plugin can’t access multi dimensional arrays, we have to flatten it into one dimension and concat all rows.
- Returns nil on low memory.
- Array sizes should be like: Ubound(values)+1 = (ubound(fieldNames)+1) * RecordCount

152.7.2  CloneRecordSetMBS(rec as RecordSet) as RecordSet

MBS SQL Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates an in memory copy of the RecordSet.

**Notes:** This copied record set can be used instead of the original one and even after the original database connection is closed.

152.8  class RecordSet

152.8.1  class RecordSet

Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The built in recordset class in Real Studio.
152.8.2 Methods

152.8.3 CloneMBS as RecordSet

MBS SQL Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates an in memory copy of the RecordSet. **Notes:** This copied record set can be used instead of the original one and even after the original database connection is closed.
152.9. **CLASS SQLAPIMBS**

**152.9 class SQLAPIMBS**

**152.9.1 class SQLAPIMBS**

MBS SQL Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This is a class for the native APIs.
**Notes:** The plugin does not imple

**152.9.2 Properties**

**152.9.3 ClassName as String**

MBS SQL Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class name of the underlying C++ class.
**Notes:**
Sometimes useful to see which API currently is used.
(Read only property)

**152.9.4 Connection as SQLConnectionMBS**

MBS SQL Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The database connection this API is used with.
**Notes:** (Read only property)
152.10 class SQLBLobMBS

152.10.1 class SQLBLobMBS

**Notes:**

Basically this is a SQLStringMBS which is always marked to contain binary data. You only need this class to use the constructor with dataprovider to stream data to the database.

Subclass of the SQLLongOrLobMBS class.

152.10.2 Methods

152.10.3 Constructor

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

See also:

- 152.10.4 Constructor(Data as MemoryBlock)
- 152.10.5 Constructor(data as SQLStringMBS)
- 152.10.6 Constructor(Data as string, isText as Boolean = True)
- 152.10.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

152.10.4 Constructor(Data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new string object with data, e.g. for blob.

See also:

- 152.10.3 Constructor
- 152.10.5 Constructor(data as SQLStringMBS)
- 152.10.6 Constructor(Data as string, isText as Boolean = True)
- 152.10.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)
152.10. **CLASS SQLBLOBMBS**

152.10.5 **Constructor(data as SQLStringMBS)**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new blob object from a string object. See also:

- 152.10.3 Constructor
- 152.10.4 Constructor(Data as MemoryBlock)
- 152.10.6 Constructor(Data as string, isText as Boolean = True)
- 152.10.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

152.10.6 **Constructor(Data as string, isText as Boolean = True)**

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new string object with data or text copied from the data string. **Notes:** If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw. See also:

- 152.10.3 Constructor
- 152.10.4 Constructor(Data as MemoryBlock)
- 152.10.5 Constructor(data as SQLStringMBS)
- 152.10.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

152.10.7 **Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new blob object from a data provider. **Notes:** The blocksize specifies in which sizes data is requested from the provider. You must make sure that the data provider and this new blob object life long enough. Because the actual data is requested later when you do the update on the database. If BlockSize is 0, the default block size is used. See also:

- 152.10.3 Constructor
- 152.10.4 Constructor(Data as MemoryBlock)
- 152.10.5 Constructor(data as SQLStringMBS)
- 152.10.6 Constructor(Data as string, isText as Boolean = True)
152.11 class SQLBytesMBS

152.11.1 class SQLBytesMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a string of bytes. **Notes:** Subclass of the SQLStringMBS class.

152.11.2 Methods

152.11.3 Constructor

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor. **See also:**

- 152.11.4 Constructor(Data as MemoryBlock)
- 152.11.5 Constructor(data as SQLStringMBS)
- 152.11.6 Constructor(Data as string, isText as Boolean = True)

152.11.4 Constructor(Data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new string object with data, e.g. for blob. **See also:**

- 152.11.3 Constructor
- 152.11.5 Constructor(data as SQLStringMBS)
- 152.11.6 Constructor(Data as string, isText as Boolean = True)

152.11.5 Constructor(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new bytes object based on the given string object. **See also:**

- 152.11.3 Constructor
- 152.11.4 Constructor(Data as MemoryBlock)
- 152.11.6 Constructor(Data as string, isText as Boolean = True)
152.11. CLASS SQLBYTESMBS

152.11.6 Constructor(Data as string, isText as Boolean = True)

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new string object with data or text copied from the data string.

**Notes:** If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.

See also:

- 152.11.3 Constructor
- 152.11.4 Constructor(Data as MemoryBlock)
- 152.11.5 Constructor(data as SQLStringMBS)
152.12 class SQLCLobMBS

152.12.1 class SQLCLobMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A class for a clob (character large object).

**Notes:**
Basicly this is a SQLStringMBS which is always marked to contain text. You only need this class to use the
constructor with dataprovider to stream data to the database.
Subclass of the SQLLongOrLobMBS class.

152.12.2 Methods

152.12.3 Constructor

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

See also:
- 152.12.4 Constructor(data as SQLStringMBS)
- 152.12.5 Constructor(Data as string, isText as boolean=true)
- 152.12.6 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

152.12.4 Constructor(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new clob object from a string object.

See also:
- 152.12.3 Constructor
- 152.12.5 Constructor(Data as string, isText as boolean=true)
- 152.12.6 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

152.12.5 Constructor(Data as string, isText as boolean=true)

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new string object with data or text copied from the data string.

**Notes:** If isText is true, the data is interpreted as text and string encoding conversion may modify it. If
isText is false the bytes are copied raw.

See also:
152.12. CLASS SQLCLOBMBS

- 152.12.3 Constructor
- 152.12.4 Constructor(data as SQLStringMBS)
- 152.12.6 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

152.12.6 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new clob object from a data provider.

**Notes:**
The blocksize specifies in which sizes data is requested from the provider.
You must make sure that the data provider and this new clob object life long enough. Because the actual
data is requested later when you do the update on the database.

If BlockSize is 0, the default block size is used.
See also:

- 152.12.3 Constructor
- 152.12.4 Constructor(data as SQLStringMBS)
- 152.12.5 Constructor(Data as string, isText as boolean=true)
152.13 class SQLCommandMBS

152.13.1 class SQLCommandMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This is the central class for the using the SQL database access.

**Example:**

```vbscript
dim con as SQLConnectionMBS
dim cmd as SQLCommandMBS

try
    con = new SQLConnectionMBS // connection object
    cmd = new SQLCommandMBS // create command object

    // where is the library?
    con.SetFileOption con.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")

    // connect to database (mySQL in our example)
    // server: 192.168.1.80
    // port: 3306
    // database: test
    // name: root
    // no password
    con.Connect("192.168.1.80:3306@test","root","",SQLConnectionMBS.kMySQLClient)
    // associate a command with connection
    // connection can also be specified in SACommand constructor
    cmd.Connection = con

    // create table
    cmd.setCommandText("Create table test_tbl(fid integer, fvarchar20 varchar(20), fblob blob")
    cmd.Execute

    // insert value
    cmd.setCommandText("Insert into test_tbl(fid, fvarchar20) values (1, 'Some string (1)')")
    cmd.Execute

    // commit changes on success
    con.Commit

    MsgBox("Table created, row inserted!")

catch r as SQLErrorExceptionMBS
    // SACommand::Rollback()
    // can also throw an exception
    // (if a network error for example),
    // we will be ready
```

try

// on error rollback changes
if con<>nil then
  con.rollback
end if
catch x as SQLErrorExceptionMBS
  // ignore
end try

// show error message
MsgBox r.message
end try

Notes: The plugin can cache the recordset locally. To enable you can call SQLCommandMBS.Cache or use the Option("AutoCache") = "true" on either command or connection or database objects. The plugin will then fetch all records and store them in memory. After this you can walk over the recordset and use FetchPos, FetchFirst, FetchLast, FetchPrev and FetchNext to locate the rows you need. When you call Field() you always get last row, but to read from cached result set, please use Value() function. When using RecordSet, the values are read via Value() functions automatically.

152.13.2 Methods

152.13.3 AsRecordSet as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a recordset using the command to query fields.

**Notes:**
You can use normal RecordSet functions to walk through fields and they simply control the command object. This is for convenience like passing RecordSet to report functions in Real Studio.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Real Studio includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.
152.13.4 Cache

MBS SQL Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Caches values.

**Notes:**
The plugin will load the whole recordset and store it in memory. Now you can move forward/backward as needed to read data.

If you set Option("AutoCache") = "true", the plugin will call Cache automatically for all result sets.

152.13.5 Cancel

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Attempts to cancel the pending result set, or current statement execution.

**Notes:**
Only if isExecuting is true, doing cancel makes sense.

Cancel can cancel the following types of processing on a statement:

A function running asynchronously on the statement.
A function running on the statement on another thread.
After an application calls a function asynchronously, it checks repeatedly to determine whether it has finished processing. While the function is processing, an application can call Cancel to cancel the function.

In a multithread application, the application can cancel a function that is running synchronously on a statement.

see also

152.13.6 Close

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes the specified command object.

**Notes:**
Use the Close method to close the command explicitly.

A command will be implicitly closed in destructor, so you don’t have to call Close method explicitly.
152.13.7 Constructor

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Creates a new command object with no connection and no command text.

See also:

- 152.13.8 Constructor(connection as SQLConnectionMBS, SQLCommand as String, CommandType as Integer = 0)

152.13.8 Constructor(connection as SQLConnectionMBS, SQLCommand as String, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

This constructor initializes a new SQLCommandMBS object.

**Example:**

```vbs
// your connection
dim con as SQLConnectionMBS
dim SQL as string = "Insert into test_tbl(fid, fvarchar20) values(:id, :name)"

// create command object
dim cmd as new SQLCommandMBS(con, sql)

// assign values by name of parameter:
    cmd.Param("id").setAsLong(2)
    cmd.Param("name").setAsString(new SQLStringMBS("Some string (2)"))

// Insert first row
    cmd.Execute
```

**Notes:**

- Connection: the connection to associated with the command.
- SQLCommand: A string which represents command text string (an SQL statement or a stored procedure name). If it is an empty string, no command text is associated with the command, and you have to call setCommandText method later.
- CommandType: The type of command like kCommandTypeUnknown, kCommandTypeSQLStatement, kCommandTypeSQLStatementRaw or kCommandTypeStoredProcedure.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

See also:
152.13.9 CreateParam(name as string, ParamType as Integer, DirType as Integer=0) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates parameter associated with the specified command.

**Notes:**
Parameters

- **name:** A string representing the name of parameter.
- **ParamType:** Type of the parameter’s value. Use the kDataType constants.
- **ParamSize:** An integer value represents parameter’s value size.
- **ParamPrecision:** An integer value represents parameter’s value precision.
- **ParamScale:** An integer value represents parameter’s value scale.
- **DirType:** Type of the parameter. Use the kParamDirType* constants.

Returns a new SQLParamMBS object on success or nil on any error.

Normally you should not create parameters by yourself. The Library automatically detects whether the command has parameters in terms of the command text and implicitly creates a set of SAParam objects.

Nevertheless, if you call CreateParam explicitly you have to delete all SAParam objects created automatically by the Library before. Use DestroyParams method before the first call of CreateParam method.

See also:

- 152.13.10 CreateParam(name as string, ParamType as Integer, NativeType as Integer, ParamSize as Integer, ParamPrecision as Integer, ParamScale as Integer, DirType as Integer=0) as SQLParamMBS

152.13.10 CreateParam(name as string, ParamType as Integer, NativeType as Integer, ParamSize as Integer, ParamPrecision as Integer, ParamScale as Integer, DirType as Integer=0) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates parameter associated with the specified command.

**Notes:**
Parameters
name: A string representing the name of parameter.
ParamType: Type of the parameter’s value. Use the kDataType constants.
ParamSize: An integer value represents parameter’s value size.
ParamPrecision: An integer value represents parameter’s value precision.
ParamScale: An integer value represents parameter’s value scale.
DirType: Type of the parameter. Use the kParamDirType* constants.

Returns a new SQLParamMBS object on success or nil on any error.

Normally you should not create parameters by yourself. The Library automatically detects whether the command has parameters in terms of the command text and implicitly creates a set of SAParam objects.

Nevertheless, if you call CreateParam explicitly you have to delete all SAParam objects created automatically by the Library before. Use DestroyParams method before the first call of CreateParam method.
See also:

- 152.13.9 CreateParam(name as string, ParamType as Integer, DirType as Integer=0) as SQLParamMBS

152.13.11 DestroyParams

Notes:
DestroyParams method destroys all parameters either created automatically by the Library or by user.

Normally you should not create and delete parameters by yourself. The Library automatically detects whether the command has parameters, implicitly creates a set of SAParam objects and then deletes them in SACommanddestructor. But if you have some reason to create parameters explicitly use CreateParam method and then call DestroyParams method to delete all parameters after your work with parameters is over.

152.13.12 Execute

Example:

// your connection
dim con as SQLConnectionMBS
dim SQL as string = "Insert into test_tbl(fid, fvarchar20) values(:id, :name)"
// create command object
dim cmd as new SQLCommandMBS(con, sql)

// assign values by name of parameter:
cmd.Param("id").setAsLong(2)
cmd.Param("name").setAsString(new SQLStringMBS("Some string (2)"))

// Insert first row
cmd.Execute

Notes:
Use the Execute method to execute the query or stored procedure specified in the command text. Execute method calls Prepare method implicitly if needed. If the command has input parameters, they should be bound before calling Execute method. Input parameters represented by SAParam object. To bind input variables assign a value to SAParam object returning by Param or ParamByIndex methods.

A command (an SQL statement or procedure) can have a result set after executing. To check whether a result set exists use isResultSet method. If result set exists, a set of SAField objects is created after command execution. Rows from the result set can be fetched one by one using FetchNext method. To get field description or value use Field method.

Output parameters represented by SAParam objects. They are available after command execution. To get parameter description or value use Param or ParamByIndex methods.

152.13.13 ExecuteCommand(SQLCommand as string, CommandType as Integer=0)

Notes:
This is a convenience function.
Internally it calls setCommandText with the given command and calls Execute.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.
152.13. **CLASS SQLCOMMANDMBS**

152.13.14 **ExecuteCommandMT**(SQLCommand as string, CommandType as Integer=0)

MBS SQL Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Executes the given command.

**Notes:**
This is a convenience function.
Internally it calls setCommandText with the given command and calls Execute.

The work is performed on an extra thread, so this function can yield time to other Xojo (Real Studio) threads. And it calls the Working event regularly. For best user experience run this command on a Xojo (Real Studio) thread, so your GUI stays responsive.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

152.13.15 **ExecuteMT**

MBS SQL Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Executes the current command.

**Notes:**
Use the Execute method to execute the query or stored procedure specified in the command text. Execute method calls Prepare method implicitly if needed. If the command has input parameters, they should be bound before calling Execute method. Input parameters represented by SAParam object. To bind input variables assign a value to SAParam object returning by Param or ParamByIndex methods.

A command (an SQL statement or procedure) can have a result set after executing. To check whether a result set exists use isResultSet method. If result set exists, a set of SAField objects is created after command execution. Rows from the result set can be fetched one by one using FetchNext method. To get field description or value use Field method.

Output parameters represented by SAParam objects. They are available after command execution. To get parameter description or value use Param or ParamByIndex methods.

The work is performed on an extra thread, so this function can yield time to other Xojo (Real Studio) threads. And it calls the Working event regularly. For best user experience run this command on a Xojo (Real Studio) thread, so your GUI stays responsive.
152.13.16  FetchFirst as boolean

MBS SQL Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Fetches first row from a result set.
**Notes:**
Same as FetchNext, but jumps to the first row.
Returns true if the row was fetched; otherwise false.

Not supported for Interbase and SQLite.

When you cache the result set, you can always move within the result set.

152.13.17  FetchLast as boolean

MBS SQL Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Fetches last row from a result set.
**Notes:**
Same as FetchNext, but jumps to the last row.
Returns true if the row was fetched; otherwise false.

Not supported for Interbase and SQLite.

When you cache the result set, you can always move within the result set.

152.13.18  FetchNext as boolean

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Fetches next row from a result set.
**Notes:**
Returns true if the next row was fetched; otherwise false.

Use FetchNext method to fetch row by row from the result set.

Each column of fetched row is represented by SAField object. If a result set exists after the last command execution, a set of SAField objects is created implicitly. To check whether a result set exists use isResultSet method. FetchNext method updates value parts of SAField objects.

To get field description or value use Field method.
When you cache the result set, you can always move within the result set.

152.13.19  **FetchPos(offset as Integer, relative as boolean = false) as boolean**

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fetches a row by index.

**Notes:**
Returns true if the row was fetched; otherwise false.
You may need to request recordset to be scrollable to have this work.
For that, please set Option("Scrollable") = "true" before doing the query.

When you cache the result set, you can always move within the result set.

152.13.20  **FetchPrior as boolean**

MBS SQL Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fetches previous row from a result set.

**Notes:**
Returns true if the row was fetched; otherwise false.
Same as FetchNext, just going back inside the result set.

Not supported for Interbase and SQLite.

When you cache the result set, you can always move within the result set.

152.13.21  **Field(index as Integer) as SQLFieldMBS**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the column specified by its position in the result set.

**Example:**

```vbnet
dim c as SQLCommandMBS // your command object

// get field by name
dim f1 as SQLFieldMBS = c.Field("FirstName")

// get field by Index
dim f2 as SQLFieldMBS = c.Field(1)
```
Notes:

index: A one-based field number in a result set.

Use Field method to access a field by its name or position in the result set.
For Cached result sets, please use Value() function to get values.

Using an index smaller than 1 and greater then the value returned by FieldCount method will result in a failed assertion.

A set of SAField objects creates implicitly after the command execution if the result set exists. SAField object contains full information about a column: name, type, size, value.
See also:

- 152.13.22 Field(name as string) as SQLFieldMBS

152.13.22 Field(name as string) as SQLFieldMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Returns the column specified by its name in the result set.
Example:

dim c as SQLCommandMBS // your command object

    // get field by name
dim f1 as SQLFieldMBS = c.Field("FirstName")

    // get field by Index
    dim f2 as SQLFieldMBS = c.Field(1)

Notes:

name: A string that represents a name of the requested field.

Returns a reference to a SAField object.

Use Field method to access a field by its name or position in the result set.
For Cached result sets, please use Value() function to get values.

Using a non-existent field name will throw an exception.
A set of SAField objects creates implicitly after the command execution if the result set exists. SAField object contains full information about a column: name, type, size, value.

See also:

- 152.13.21 Field(index as Integer) as SQLFieldMBS

152.13.23 FieldNames as String()

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an array with all the field names for quick inspection.

152.13.24 Open

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens the specified command object.

**Notes:**

Use the Open method to open the command explicitly.

A command will be implicitly opened by any method that needs an open command, therefore you don’t have to call it explicitly.

To test whether a command is opened use isOpened method.

152.13.25 Param(ID as Integer) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the command parameter specified by its position.

**Notes:**

ID: A position of parameter specified in the command text. Normally position is a number stated in the command text after a colon (for example, 1 for :1, 5 for :5).

Returns a reference to a SAParam object which is only valid as long as the param object is not deleted by the library.

Use Param method to access a parameter by its name or position (in SQL statement). If, for example, you want to walk through all the parameters use ParamByIndex method.
If parameters were not created before calling Param method the Library creates them implicitly (can query native API if needed and therefore can throw exception on error) and then returns the specified parameter.

Passing a value of name or position which does not specified in the command text will throw an exception.

SAParam object contains full information about a parameter: name, type, size, etc. Values for the input parameters can be assigned to SAParam object. See also:

- 152.13.26 Param(name as string) as SQLParamMBS

152.13.26  Param(name as string) as SQLParamMBS

Example:

```vbs
// your connection
dim con as SQLConnectionMBS
dim SQL as string = "Insert into test_tbl(fid, fvarchar20) values(:id, :name)"

// create command object
dim cmd as new SQLCommandMBS(con, sql)

// assign values by name of parameter:
cmd.Param("id").setAsLong(2)
cmd.Param("name").setAsString(new SQLStringMBS("Some string (2)"))

// Insert first row
cmd.Execute
```

Notes:

Name: A string that represents a name of the requested parameter. Normally name is a string stated in the command text after a colon (for example, 'city' for :city, 'my city' for :"my city") or a parameter name in a stored procedure or function.

Returns a reference to a SAParam object which is only valid as long as the param object is not deleted by the library.

Use Param method to access a parameter by its name or position (in SQL statement). If, for example, you want to walk through all the parameters use ParamByIndex method.
If parameters were not created before calling Param method the Library creates them implicitly (can query native API if needed and therefore can throw exception on error) and then returns the specified parameter.

Passing a value of name or position which does not specified in the command text will throw an exception.

SAParam object contains full information about a parameter: name, type, size, etc. Values for the input parameters can be assigned to SAParam object.

See also:

- 152.13.25 Param(ID as Integer) as SQLParamMBS

152.13.27  ParamByIndex(index as Integer) as SQLParamMBS

Returns the command parameter specified by index.

Notes:
Index: A zero-based index of the requested parameter in the array of SAParam objects. It must be greater than or equal to 0 and 1 less than the value returned by ParamCount method.

Returns a reference to a SAParam object.

Normally you should use Param method to access a parameter by its name or position (in SQL statement). ParamByIndex method can be used if, for example, you want to walk through all the parameters.

If parameters were not created before calling ParamByIndex method the Library creates them implicitly (can query native API if needed and therefore can throw exception on error) and then returns the specified parameter.

Passing a negative value of index or a value greater or equal than the value returned by ParamCount method will result in a failed assertion.

SAParam object contains full information about a parameter: name, type, size, etc. Values for the input parameters can be assigned to SAParam object.

152.13.28  Prepare

Prepares command before execution.
Prepare method compiles the command, but does not execute it. The method detects syntax errors in command text and verifies the existence of database objects.

Execute method calls Prepare method implicitly if needed, therefore you don’t have to call it explicitly.

152.13.29  setCommandText(SQLCommand as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the command text.

**Example:**

```vbnet
dim s as new SQLCommandMBS
s.setCommandText "select * from test"
MsgBox s.CommandText
```

**Notes:**

SQLCommand: A string which represents command text string (an SQL statement or a stored procedure name).
CommandType: The type of command like kCommandTypeUnknown, kCommandTypeSQLStatement, kCommandTypeSQLStatementRaw or kCommandTypeStoredProcedure.

It's not necessary to set a command type explicitly, because it is defined automatically in terms of command text string. But if you still have any reason to do it, use one of the kCommandType* constants. To get command type use CommandType method.

152.13.30  SetParameters(Params as dictionary)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the parameters based on the keys and values in the dictionary.

**Example:**

```vbnet
dim con as SQLConnectionMBS  // your connection
dim pic as picture  // some picture

// get picture data
dim jpegData as MemoryBlock = pic.GetData(Picture.FormatJPEG, 80)

// parse a SQL command
```
dim sql as string = "Insert into BlobTest(name, image) values (:name, :image)"
dim cmd as new SQLCommandMBS(con, sql)

dim d as new Dictionary
    // set by param index
d.Value(0) = "test.jpg"
    // set by param name
d.Value("image") = jpegData

    // set all parameters together
    cmd.SetParameters d
    cmd.Execute

Notes:
Keys can be String, Text or numeric types. Text and String are used to pick parameters by name. Numeric values are used to pick parameter by index (zero based). MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Raises exceptions if you pass anything which is not recognized. Other types are translated as good as possible.

152.13.31 Value(index as Integer) as SQLValueReadMBS

MBS SQL Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value specified by its position in the result set.

**Example:**

dim c as SQLCommandMBS // your command object

    // get field by name
dim f1 as SQLValueReadMBS = c.Value("FirstName")

    // get field by Index
dim f2 as SQLValueReadMBS = c.Value(1)

Notes:
You can use Value() to get values for normal or cached result sets.

index: A one-based field number in a result set.

Use Value method to access a field by its name or position in the result set.
For Cached result sets, please use Value() function to get values.

Using an index smaller than 1 and greater then the value returned by FieldCount method will result in a failed assertion.

A set of SAField objects creates implicitly after the command execution if the result set exists. SAField object contains full information about a column: name, type, size, value.

See also:

- 152.13.32 Value(name as string) as SQLValueReadMBS

### 152.13.32 Value(name as string) as SQLValueReadMBS

MBS SQL Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value specified by its name in the result set.

**Example:**

```vbs
dim c as SQLCommandMBS // your command object

// get value by name
dim f1 as SQLValueReadMBS = c.Value("FirstName")

// get value by Index
dim f2 as SQLValueReadMBS = c.Value(1)
```

**Notes:**

You can use Value() to get values for normal or cached result sets.

name: A string that represents a name of the requested field.

Returns a reference to a SAValueRead object.

Use Value method to access a field by its name or position in the result set. Using a non-existent field name will throw an exception.

A set of SAField objects creates implicitly after the command execution if the result set exists. SAField object contains full information about a column: name, type, size, value.

See also:

- 152.13.31 Value(index as Integer) as SQLValueReadMBS
152.13.33 Properties

152.13.34 CommandCount as Integer

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of current command objects.

**Notes:**
- This method should help you find leaked objects by keeping track of current count from the plugin perspective.
- This includes SQLCommandMBS and RecordSet objects.
  (Read only property)

152.13.35 CommandText as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the command text associated with the SACommand object.

**Example:**

```vbnet
dim s as new SQLCommandMBS(nil, "select * from test")
MsgBox s.CommandText
```

**Notes:**
- Use the CommandText method to return the command text declared in SACommand constructor or set-CommandText method.
- All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.
  (Read and Write property)

152.13.36 CommandType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the command type currently associated with the SACommand object.

**Notes:**
- One of the following values from SACommandType_t enum:
  - kCommandTypeUnknown Command type is not defined. Library will detect command type automatically when needed.
- `kCommandTypeSQLStmt` Command is an SQL statement.
- `kCommandTypeSQLStmtRaw` Command is an SQL statement that mustn’t be interpreted by SQLAPI++.
- `kCommandTypeStoredProc` Command is a stored procedure or a function.

Remarks

The command type can be explicitly set in `SACommand` constructor and `setCommandText` method, but it’s not necessary to do it.

The `CommandType` method returns the command type value that was specified in `SACommand` constructor or `setCommandText` method. If you declared the command type value as `kCommandTypeUnknown` (the default value) then command type is detected by the Library and the `CommandType` method returns this detected value.

(Read only property)

### 152.13.37  Connection as `SQLConnectionMBS`

**Notes:**

When you set the connection on a command object that already has associated connection, the previous association will be correctly discarded (with closing opened command if needed) and new connection will be set.

If you attempt to call any method on a `SACommand` object that requires database access with no valid connection, an error occurs.

(Read and Write property)

### 152.13.38  FieldCount as `Integer`

**MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:** Returns the number of fields (columns) in a result set.

**Notes:**

FieldCount method returns the number of fields created implicitly after the command execution if a result set exists.

A field is represented by `SAField` object. You can get field value and description using `Field` method.

(Read only property)
152.13. **CLASS SQLCOMMANDMBS**

### 152.13.39 Fields as Dictionary

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Provides dictionary with all fields.

**Notes:**
This dictionary should help for debugging to inspect all fields and their text value.
(Read only property)

### 152.13.40 hasCache as Boolean

MBS SQL Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether cache is active.

**Notes:** (Read only property)

### 152.13.41 isExecuted as boolean

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this command was already executed.

**Notes:** (Read only property)

### 152.13.42 isExecuting as Boolean

MBS SQL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this command is executing.

**Notes:**
You only see this true if you use threaded queries and look on the property from another thread.
(Read only property)

### 152.13.43 isOpened as boolean

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the SACommand object is opened; otherwise false.

**Notes:** (Read only property)
152.13.44  isResultSet as boolean

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Tests whether a result set exists after the command execution.  
**Notes:**  
Returns true if the result set exists; otherwise false.  
(Read only property)

152.13.45  Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a dictionary with all options.  
**Notes:**  
For debugging, it may be useful to inspect options in debugger.  
(Read only property)

152.13.46  ParamCount as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of parameters associated with the SACommand object.  
**Notes:**  
ParamCount method returns the number of parameters created explicitly by using CreateParam method or (if parameters were not created before) creates them implicitly (can query native API if needed and therefore can throw exception on error) and returns the number of created parameters.  
Command parameter is represented by SAParam object. You can look SAParam objects through and assign their values with Param and ParamByIndex methods.  
(Read only property)

152.13.47  Parameters as Dictionary

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Provides dictionary with all parameters.  
**Notes:**  
This dictionary should help for debugging to inspect all parameters and their text value.  
(Read only property)
152.13. **CLASS SQLCOMMANDMBS**

### RowsAffected as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of rows affected by the last insert/update/delete command execution.

**Example:**

```vbnet
dim con as SQLConnectionMBS // your connection

dim sql as string = "UPDATE Test SET MyField=1"
dim c as new SQLCommandMBS(con, sql)

c.Execute

MsgBox str(c.RowsAffected)
```

**Notes:** (Read only property)

### Tag as Variant

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tag property.

**Example:**

```vbnet
dim c as SQLCommandMBS // your command object

// store reference to window/control, so we have it available in events
c.Tag = self
```

**Notes:**

You can store here whatever you like.

(Read and Write property)

### Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string value of a specific command option.

**Example:**

```vbnet
dim cmd as SQLCommandMBS // your command

// turn on auto cache
```
cmd.Option("AutoCache") = "true"

Notes:
see also:
(Read and Write computed property)

152.13.51 Events

152.13.52 Trace(traceInfo as Integer, SQL as string)

MBS SQL Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The event to trace SQL commands.

152.13.53 Working

MBS SQL Plugin, Plugin Version: 10.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The event called while the ExecuteMT and ExecuteCommandMT methods are running.

152.13.54 Constants

152.13.55 kCommandTypeSQLStatement = 1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the constants for the command type.
**Notes:** Command is an SQL statement.

152.13.56 kCommandTypeSQLStatementRaw = 2

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the constants for the command type.
**Notes:** Command is an SQL statement that mustn’t be interpreted by SQLAPI.

152.13.57 kCommandTypeStoredProcedure = 3

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the constants for the command type.
**Notes:** Command is a stored procedure or a function.
152.13.58  kCommandTypeUnknown = 0

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the constants for the command type. **Notes:** Used by default. Library detects command type automatically.

152.13.59  kOptionPreFetchRows = ”PreFetchRows”

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the option constants. **Example:**

```vbs
    dim cmd as new SQLCommandMBS
    // do something

    dim nBulkSize as Integer = 1000
    cmd.Option(SQLCommandMBS.kOptionPreFetchRows) = str(nBulkSize)
```

152.13.60  kParamDirTypeInput = 0

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the parameter direction type constants. **Notes:** Input parameter.

152.13.61  kParamDirTypeInputOutput = 1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the parameter direction type constants. **Notes:** Input/output parameter.

152.13.62  kParamDirTypeOutput = 2

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the parameter direction type constants. **Notes:** Output parameter.
152.13.63  kParamDirTypeReturn = 3

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the parameter direction type constants.  
**Notes:** Returning parameter.
152.14.  **CLASS SQLCONNECTIONMBS**

152.14  **class SQLConnectionMBS**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** The class for a SQL Plugin Database connection.

**Example:**

```vbnet
dim con as new SQLConnectionMBS

try

    // where is the library?
    con.SetFileOption con.kOptionLibraryMySQL, SpecialFolder.UserHome.Child(“libmysqlclient.dylib”)

    // connect to database
    // in this example it is Oracle,
    // but can also be Sybase, Informix, DB2
    // SQLServer, InterBase, SQLBase and ODBC

dim server as string = ”192.168.1.80:3306@test”

    con.Connect(server,”root”,””,SQLConnectionMBS.kMySQLClient)

    MsgBox ”We are connected!”

    // Disconnect is optional
    // autodisconnect will occur in destructor if needed
    con.Disconnect

    msgbox ”We are disconnected!”

catch r as RuntimeException

    MsgBox r.message

    // SAConnection::Rollback()
    // can also throw an exception
    // (if a network error for example),
    // we will be ready

try

    // on error rollback changes
    con.Rollback

catch rr as runtimeexception

    MsgBox rr.message

end try

end try
```
Notes:

Supported databases: Oracle, Microsoft SQL Server, DB2, Sybase, Informix, InterBase/Firebird, SQLBase, MySQL, PostgreSQL and ODBC and SQLite.

With Xojo 2013r1, you only need a database server license from Xojo, Inc. if you use the SQLDatabaseMBS class. The SQLConnectionMBS class does not require this license. But some features like getting a recordset do need the license as they refer to the SQLDatabaseMBS class.

Please free all RecordSets and SQLCommand objects before you close the SQLConnection or the SQL-Database. The plugin keeps references from RecordSets and SQLCommand to prevent automatic destruction of the database connection. If you close a database connection while you have RecordSets and SQLCommand in use, things may go wrong.

The plugin can cache the recordset locally. To enable you can call SQLCommandMBS.Cache or use the Option("AutoCache") = "true" on either command or connection or database objects. The plugin will than fetch all records and store them in memory. After this you can walk over the recordset and use FetchPos, FetchFirst, FetchLast, FetchPrev and FetchNext to locate the rows you need. When you call Field() you always get last row, but to read from cached result set, please use Value() function. When using RecordSet, the values are read via Value() functions automatically.

You can use InternalPostgreSQLLibraryMBS or InternalSQLiteLibraryMBS if you like to use our built in SQLite or PostgreSQL database libraries.

152.14.2 Methods

152.14.3 Commit

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves any changes and ends the current transaction.

**Notes:**

Use Commit method to write transaction changes permanently to a database. It commits the work of all commands that associated with that connection.

All changes to the database since the last commit are made permanent and cannot be undone. Before a commit, all changes made since the start of the transaction can be rolled back using Rollback method.
**152.14. CLASS SQLCONNECTIONMBS**

**152.14.4 Connect(DBString as string, UserID as string, Password as string, client as Integer = 0)**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Opens the connection to a data source.

**Example:**

```vbnet
dim con as SQLConnectionMBS ' your connection

// some calls for MS SQL Server:
con.Connect("srv2@pubs", "", "", SQLConnectionMBS.kSQLServerClient)
con.Connect("@pubs", "", "", SQLConnectionMBS.kSQLServerClient)
con.Connect("BEDLAM\SQL2005EX_EN@pubs", "", "", SQLConnectionMBS.kSQLServerClient)
con.Connect("BEDLAM\SQLEXPRESS@master", "", "", SQLConnectionMBS.kSQLServerClient)

// for MySQL:

con.Connect("192.168.1.80:3306@test", "root", "password", SQLConnectionMBS.kMySQLClient)

// for PostgreSQL:

con.Connect("somedb", "name", "password", SQLConnectionMBS.kPostgreSQLClient)

// with options
con.Connect("PostgreSQL:127.0.0.1,5432@dbname=postgres connection_timeout=10 sslmode=require", "name", "password", SQLConnectionMBS.kPostgreSQLClient)

// for SQLite:

con.Connect("/test.db", "", "", SQLConnectionMBS.kSQLiteClient)
```

**Notes:**

- **DBString:** Name of database this connection will connect to (see Server specific notes).
- **UserID:** A string containing a user name to use when establishing the connection (see Server specific notes).
- **Password:** A string containing a password to use when establishing the connection.
- **client:** Optional. One of the following values from k*Client constants.

Using the Connect method on a SAConnection object establishes the physical connection to a data source. After this method successfully completes, the connection is live and you can issue commands against it and process the results.

If you use the default value of Client parameter, you should set Client before using Connect.
To check whether a connection established use isConnected method. To check whether a connection is broken or not use isAlive method.

see also for server specific notes:

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.

For Firebird, if you connect to a database and you have 32/64bit mismatch, you get error number 3.

152.14.5  ConnectMT(DBString as string, UserID as string, Password as string, 
client as Integer = 0)

MBS SQL Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Opens the connection to a data source.
Notes:

DBString:  Name of database this connection will connect to (see Server specific notes).
UserID:  A string containing a user name to use when establishing the connection (see Server specific notes).
Password:  A string containing a password to use when establishing the connection.
client:  Optional. One of the following values from k*Client constants.

Using the Connect method on a SAConnection object establishes the physical connection to a data source. After this method successfully completes, the connection is live and you can issue commands against it and process the results.

If you use the default value of Client parameter, you should set Client before using Connect.

To check whether a connection established use isConnected method. To check whether a connection is broken or not use isAlive method.

see also for server specific notes:

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.
The work is performed on an extra thread, so this function can yield time to other Xojo (Real Studio) threads. And it calls the Working event regularly. For best user experience run this command on a Xojo (Real Studio) thread, so your GUI stays responsive.

The MT method will not trigger WillConnect and DidConnect events.

### 152.14.6 Disconnect

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Disconnects the connection from the database.

### 152.14.7 InsertRecord(TableName as String, Record as Dictionary)

MBS SQL Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convenience function to insert a record. **Notes:** The plugin builds for you SQL statement with prepared statement and runs the insert command with values. Please note that it does not work if field names contain spaces.

### 152.14.8 Listen

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Start listening for notifications. **Notes:** Works only for PostgreSQL Client. Please set client or connect before calling this method.

### 152.14.9 Rollback

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Cancels any changes made during the current transaction and ends the transaction. **Notes:** Rollback method rolls back the database to the state it was in at the completion of the last commit operation. All uncommitted work is undone. Rollback method rolls back the work of all commands that associated with that connection.
To commit all changes made since the start of the transaction use Commit method.

152.14.10 SetFileOption(name as string, file as folderitem)

MBS SQL Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets an option with passing a file path.

**Example:**
```
dim db as new SQLConnectionMBS
    // where is the library?
    db.SetFileOption SQLConnectionMBS.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")
```

**Notes:** Makes sure the path is correct and you have a 32bit library. 64 bit libraries will not work with Real Studio.

152.14.11 SQLExecute(command as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Executes a SQL command and ignores result.

**Notes:**
This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

152.14.12 SQLExecuteMT(command as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Executes a SQL command and ignores result.

**Notes:**
This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

The work is performed on an extra thread, so this function can yield time to other Xojo (Real Studio) threads. And it calles the Working event regularly. For best user experience run this command on a Xojo (Real Studio) thread, so your GUI stays responsive.
All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

152.14.13  SQLSelect(command as string, CommandType as Integer = 0) as string

MBS SQL Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes a SQL command and returns the first field’s string value. **Notes:**
This is a convenience function. Internally it creates a SQLCommandMBS with the given command and calls Execute. If the result is a record set, the first field from the first row is returned. This is basically useful for commands like "select sqlite_version()".

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

152.14.14  SQLSelectAsRecordSet(command as string, CommandType as Integer = 0) as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes a SQL command and returns the result as RecordSet object. **Notes:**
This is a convenience function. Internally it creates a SQLCommandMBS with the given command and calls Execute.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Real Studio includes our SQLDatabase plugin which provides the RecordSet functionality.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.
152.14.15  SQLSelectAsRecordSetMT(command as string, CommandType as Integer = 0) as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Executes a SQL command and returns the result as RecordSet object. Notes: This is a convenience function. Internally it creates a SQLCommandMBS with the given command and calls Execute.

The work is performed on an extra thread, so this function can yield time to other Xojo (Real Studio) threads. And it calles the Working event regularly. For best user experience run this command on a Xojo (Real Studio) thread, so your GUI stays responsive.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Real Studio includes our SQLDatabase plugin which provides the RecordSet functionality.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

152.14.16  SQLSelectMT(command as string, CommandType as Integer = 0) as string

MBS SQL Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Executes a SQL command and returns the first field’s string value. Notes: This is a convenience function. Internally it creates a SQLCommandMBS with the given command and calls Execute. If the result is a record set, the first field from the first row is returned. This is basically useful for commands like "select sqlite_version()".

The work is performed on an extra thread, so this function can yield time to other Xojo (Real Studio) threads. And it calles the Working event regularly. For best user experience run this command on a Xojo (Real Studio) thread, so your GUI stays responsive.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.
152.14.17 Properties

152.14.18 AutoCommit as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether autocommit is enabled or disabled for the current connection.  
**Example:**

```vbnet
Dim con as SQLConnectionMBS // your database connection
con.AutoCommit = SQLConnectionMBS.kAutoCommitOn
```

**Notes:**  
If autocommit is on, the database is committed automatically after each SQL command. Otherwise, transaction is committed only after Commit calling.  
(Read and Write property)

152.14.19 Client as Integer

**Notes:** (Read and Write property)

152.14.20 ClientVersion as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the DBMS client API version number.  
**Notes:**  
The higher word contains the major client version (the XX value in the XX.YY version number); the lower word contains the minor client version (the YY value in the XX.YY version number).  
If an DBMS client was not set calling ClientVersion method will throw an exception.  
(Read only property)

152.14.21 ConnectionCount as Integer

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of current connection objects.  
**Notes:**
This method should help you find leaked objects by keeping track of current count from the plugin perspective.
This includes SQLConnectionMBS and SQLDatabaseMBS objects.
(Read only property)

### 152.14.22 Error as Boolean

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether an error occurred.
**Notes:**
This is set always when an error occurs and cleared if no error happened.
Be aware that the next call to a plugin function may reset error status.
If you look on this property in debugger, it’s probably already cleared by the debugger querying a property.
(Read only property)

### 152.14.23 ErrorCode as Integer

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code.
**Notes:**
This is set always when an error occurs and cleared if no error happened.
(Read only property)

### 152.14.24 ErrorMessage as string

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error message.
**Notes:**
This is set always when an error occurs and cleared if no error happened.
(Read only property)

### 152.14.25 isAlive as boolean

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the database server connection status for a particular connection object.
**Notes:**
Returns true if the database server is active and accessible; otherwise false.
This method uses the safe query execution for most supported DBMS-es. The query uses the well known database table or procedure (mysql_ping is used for MySQL). If the query fails the method returns false. (Read only property)

152.14.26 isConnected as boolean

Notes: Returns true if connected; otherwise false.
(Read only property)

152.14.27 IsolationLevel as Integer

Notes: Use the kReadCommitted, kReadUncommitted, kRepeatableRead, kSerializable and kLevelUnknown constants.
(Read and Write property)

152.14.28 LastStatement as String

Notes: (Read only property)

152.14.29 NativeAPI as Variant

Notes: Returns a SQLAPIMBS object.
(Read only property)
152.14.30 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a dictionary with all options.

**Notes:**
For debugging, it may be useful to inspect options in debugger.
(Read only property)

152.14.31 RaiseExceptions as Boolean

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to raise exceptions.

**Notes:**
Default is true which means we set error, ErrorCode and ErrorMessage properties and than raise SQLExceptionMBS exception.
If you set to false, we don’t raise the exception and you have similar behavior as with database class.
We recommend to use exceptions as they are not so easily ignored like an error property being true.
(Read and Write property)

152.14.32 Scrollable as Boolean

MBS SQL Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to make internally created SQLCommand objects scrollable.

**Notes:**
Since plugin version 15.0, Scrollable is false by default.
(Read and Write property)

152.14.33 ServerVersion as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the currently connected DBMS server version number.

**Notes:**
The higher word contains the major server version (the XX value in the XX.YY version number); the lower word contains the minor server version (the YY value in the XX.YY version number).
(Read only property)
152.14.34 ServerVersionString as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Gets the currently connected DBMS server version string.

**Notes:**
A server version string may contain some useful information about server brand, configuration and so on. It is a good idea to display this information in all your applications.

(Read only property)

152.14.35 SQLiteEncryptionKey as String

MBS SQL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The encryption key to use.

**Example:**
```vbnet
dim db as new SQLConnectionMBS
db.SQLiteEncryptionKey = "Hello"
```

**Notes:**
This key is applied to the database after connecting. In case of an error, the plugin raises an exception. An empty key can be used for having no encryption. Alternatively you can use SQLite3MBS.SetKey yourself.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:“, "aes128:“, or "aes256:“. The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix. If no prefix is given, we default to AES 128. To be compatible to Xojo (Real Studio), you can use AES128.

The string provided to the plugin is used with it’s current encoding. So be sure you use right text encoding for what you want. e.g. using "Miller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.
The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.
(Read and Write property)

152.14.36  Tag as Variant

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tag property.
**Notes:**
You can store here whatever you like.
(Read and Write property)

152.14.37  VariantsKeepSQLObjects as Boolean

MBS SQL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether variants should use SQL types.
**Notes:**
If set to true, we return datetime and numeric as SQLDateTimeMBS and SQLNumericMBS objects.
If false, we return them as date and double.
(Read and Write property)

152.14.38  Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A string value of a specific connection or command option.
**Example:**

dim c as SQLConnectionMBS // your connection

// for Microsoft SQL use OLEDB, so you don’t need native SQL drivers installed...
c.Option("UseAPI") = "OLEDB"
c.Option("SQLNCLI.LIBS") = "sqlsrv32.dll" // Library included in Windows Vista and newer

// for SQLite, set flag to open database file read only:
c.Option("SQLiteVFSFlags") = "1"

// set 10 seconds timeout for MySQL
c.Option("MYSQL_OPT_CONNECT_TIMEOUT") = "10"

// turn on auto cache
c.Option("AutoCache") = "true"
// set connection timeout for ODBC:
c.Option("SQL_ATTR_CONNECTION_TIMEOUT") = "10"

Notes:
see also:
(Read and Write computed property)

152.14.39  Events

152.14.40  DidConnect

MBS SQL Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
Event called after connection was made.
**Notes:** After we got connected, you can apply various options on the new connection here.

152.14.41  PostgresNotification(NotificationName as string, PID as Integer, Extras as String)

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
A postgresSQL notification was received.
**Notes:** Provides notification name, process ID of app and optional extra information.

152.14.42  Trace(traceInfo as Integer, SQL as string, Command as SQLCommandMBS)

MBS SQL Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
The event to trace SQL commands.

152.14.43  WillConnect

MBS SQL Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
Event called before connection is established.
**Notes:** Last chance to set connection options.
152.14.44 Working

MBS SQL Plugin, Plugin Version: 10.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called while the SQLExecuteMT and SQLSelectMT methods are running.

152.14.45 Constants

152.14.46 \( \text{kANSILevel0} = 0 \)

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the ANSI level constants. **Notes:** ANSI Level 0

152.14.47 \( \text{kANSILevel1} = 1 \)

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the ANSI level constants. **Notes:** ANSI Level 1

152.14.48 \( \text{kANSILevel2} = 2 \)

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the ANSI level constants. **Notes:** ANSI Level 2

152.14.49 \( \text{kANSILevel3} = 3 \)

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the ANSI level constants. **Notes:** ANSI Level 3

152.14.50 \( \text{kAutoCommitOff} = 0 \)

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the constants for the autocommit property. **Notes:** Autocommit is off.
152.14.51 kAutoCommitOn = 1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the constants for the autocommit property.  
**Notes:** Autocommit is on.

152.14.52 kAutoCommitUnknown = -1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the constants for the autocommit property.  
**Notes:** Autocommit unknown

152.14.53 kClientNotSpecified = 0

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.  
**Notes:** Client is not specified.

152.14.54 kCubeSQLClient = 13

MBS SQL Plugin, Plugin Version: 18.0. **Function:** One of the database client constants.  
**Notes:** CubeSQL client. (coming soon)

152.14.55 kDB2Client = 6

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.  
**Notes:** DB2 client.

152.14.56 kErrorBindVarNotFound = 7

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Bind variable not found.

152.14.57 kErrorClientInitFails = 6

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Initialization failed for client.
152.14.58  kErrorClientNotSet = 1

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Client not set.

152.14.59  kErrorClientNotSupported = 2

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Unsupported client type for this platform.

152.14.60  kErrorClientVersionOld = 5

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Library file is too old.

152.14.61  kErrorFieldNotFound = 8

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Field not found.

152.14.62  kErrorGetLibraryVersionFails = 4

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Failed to query library version.

152.14.63  kErrorLoadLibraryFails = 3

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Failed to load a library. For example path could be wrong or 32/64bit mismatch.

152.14.64  kErrorNoMemory = 0

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Out of memory.
152.14.\ CLASS SQLCONNECTIONMBS

152.14.65 \ kErrorUnknownColumnType = 11
MBS SQL Plugin, Plugin Version: 16.0. Function: One of the SQL Plugin error codes.
Notes: Unknown column type.

152.14.66 \ kErrorUnknownDataType = 9
MBS SQL Plugin, Plugin Version: 16.0. Function: One of the SQL Plugin error codes.
Notes: Unknown data type.

152.14.67 \ kErrorUnknownParameterType = 10
MBS SQL Plugin, Plugin Version: 16.0. Function: One of the SQL Plugin error codes.
Notes: Unknown parameter type.

152.14.68 \ kErrorWrongConversion = 12
MBS SQL Plugin, Plugin Version: 16.0. Function: One of the SQL Plugin error codes.
Notes: Failed to convert a value, e.g. string to number.

152.14.69 \ kErrorWrongDatetime = 13
MBS SQL Plugin, Plugin Version: 16.0. Function: One of the SQL Plugin error codes.
Notes: Can’t convert text to date.

152.14.70 \ kFirebirdClient = 4
MBS SQL Plugin, Plugin Version: 10.4. Function: One of the database client constants.
Notes: InterBase/Firebird client.

152.14.71 \ kInformixClient = 7
MBS SQL Plugin, Plugin Version: 9.3. Function: One of the database client constants.
Notes: Informix client.
152.14.72  kInterBaseClient = 4

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.  
**Notes:** InterBase/Firebird client.

152.14.73  kLevelUnknown = -1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the isolation level constants.  
**Notes:** Unknown

152.14.74  kMySQLClient = 9

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.  
**Notes:** MySQL client.

152.14.75  kODBCClient = 1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.  
**Notes:** ODBC client.

152.14.76  kOptionAPPNAME = ”APPNAME”

MBS SQL Plugin, Plugin Version: 9.3. **Function:** A constant for the options.

152.14.77  kOptionLibraryDB2 = ”DB2CLI.LIBS”

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.  
**Example:**

```vbnet
dim con as SQLConnectionMBS ' your connection

dim f as FolderItem = GetFolderItem("db2cli.dll")
con.SetFileOption con.kOptionLibraryDB2, f
```
**152.14. CLASS SQLCONNECTIONMBS**

Notes: for DB2.

**152.14.78 kOptionLibraryFirebird = ”IBASE.LIBS”**

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.

**Example:**

```vbs
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("fbclient.dll")
con.SetFileOption con.kOptionLibraryFirebird, f
```

Notes: for Firebird.

**152.14.79 kOptionLibraryInformix = ”INFCLI.LIBS”**

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.

**Example:**

```vbs
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("ICLIT09B.dll")
con.SetFileOption con.kOptionLibraryInformix, f
```

Notes: for Informix.

**152.14.80 kOptionLibraryInterbase = ”IBASE.LIBS”**

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.

**Example:**

```vbs
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("ibclient64.dll")
con.SetFileOption con.kOptionLibraryInterbase, f
```
Notes: for Interbase.

152.14.81  kOptionLibraryMySQL = ”MYSQL.LIBS”

MBS SQL Plugin, Plugin Version: 10.5. Function: One of the option constant to specify the library with the SetFileOption method.
Example:

```vba
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("libmysqlclient.18.dylib")
con.SetFileOption con.kOptionLibraryMySQL, f
```

Notes: for MySQL. Library extension on Mac is ".dylib", on Linux ".so" and on Windows ".dll". You get this library with the MySQL download on their homepage.

152.14.82  kOptionLibraryODBC = ”ODBC.LIBS”

MBS SQL Plugin, Plugin Version: 10.5. Function: One of the option constant to specify the library with the SetFileOption method.
Example:

```vba
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("odbc32.dll")
con.SetFileOption con.kOptionLibraryODBC, f
```

Notes: for ODBC.

152.14.83  kOptionLibraryOracle = ”OCI8.LIBS”

MBS SQL Plugin, Plugin Version: 10.5. Function: One of the option constant to specify the library with the SetFileOption method.
Example:

```vba
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("oci.dll")
con.SetFileOption con.kOptionLibraryOracle, f
```
Notes: for Oracle.

152.14.84  kOptionLibraryPostgreSQL = "LIBPQ.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.

**Example:**

dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("libpq.dll")
con.SetFileOption con.kOptionLibraryPostgreSQL, f

Notes: for Postgre SQL.

152.14.85  kOptionLibrarySeparator = ":;"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the platform specific path separator.

**Notes:**
Use with SetFileOption to specify multiple file paths for a library. Has a different value on the different platforms.

152.14.86  kOptionLibrarySQLAnywhere = "SQLANY.LIBS"

MBS SQL Plugin, Plugin Version: 15.2. **Function:** One of the option constant to specify the library with the SetFileOption method.

**Example:**

dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("dbcapi.dll")
con.SetFileOption con.kOptionLibrarySQLAnywhere, f

Notes: for SQL Anywhere.
152.14.87  kOptionLibrarySQLBase = "SQLBASE.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.

**Example:**

```vbscript
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("sqlwntm.dll")
con.SetFileOption con.kOptionLibrarySQLBase, f
```

**Notes:** for SQLbase.

152.14.88  kOptionLibrarySQLite = "SQLITE.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.

**Example:**

```vbscript
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("sqlite.dylib")
con.SetFileOption con.kOptionLibrarySQLite, f
```

**Notes:** for SQLite. Can also be the spatialite library.

152.14.89  kOptionLibrarySybaseComn = "SYBCOMN.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.

**Notes:** for Sybase.

152.14.90  kOptionLibrarySybaseCS = "SYBCS.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.
dim f as FolderItem = GetFolderItem("libsybcs.dll")
con.SetFileOption con.kOptionLibrarySybaseCS, f

Notes: for Sybase.

**152.14.91 kOptionLibrarySybaseCT = "SYBCT.LIBS"**

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.

**Example:**
```vbscript
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("libsybct.dll")
con.SetFileOption con.kOptionLibrarySybaseCT, f
```

Notes: for Sybase.

**152.14.92 kOptionLibrarySybaseIntl = "SYBINTL.LIBS"**

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.

Notes: for Sybase.

**152.14.93 kOptionLibrarySybaseTCL = "SYBTCL.LIBS"**

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.

Notes: for Sybase.

**152.14.94 kOptionWSID = "WSID"**

MBS SQL Plugin, Plugin Version: 9.3. **Function:** A constant for the options.
152.14.95  kOracleClient = 2

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.  
**Notes:** Oracle client.

For Windows the file is "oci.dll", for Linux libclntsh.so and for Mac OS X libclntsh.dylib.

152.14.96  kPostgreSQLClient = 10

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.  
**Notes:** PostgreSQL client.

152.14.97  kReadCommitted = 1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the isolation level constants.  
**Notes:** Read committed.

152.14.98  kReadUncommitted = 0

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the isolation level constants.  
**Notes:** Read uncommitted.

152.14.99  kRepeatableRead = 2

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the isolation level constants.  
**Notes:** Repeatable read.

152.14.100  kSerializable = 3

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the isolation level constants.  
**Notes:** Serializable.
152.14.101  kSQLAnywhereClient = 12

MBS SQL Plugin, Plugin Version: 18.0. **Function:** One of the database client constants.
**Notes:** SQL Anywhere client.

152.14.102  kSQLBaseClient = 5

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.
**Notes:** SQLbase client.

152.14.103  kSQLiteClient = 11

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.
**Notes:** SQLite client. Or spatialite.

152.14.104  kSQLServerClient = 3

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.
**Notes:**
Mircosoft SQL Server client.

You may need to download the client packages for accessing SQL Server. Files like the SQLNCLI dll may be missing. You can download for example the Feature Pack for Microsoft SQL Server 2005 from the microsoft download page.

152.14.105  kSybaseClient = 8

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.
**Notes:** Sybase client.
152.15 class SQLDatabaseMBS

152.15.1 class SQLDatabaseMBS

Example:

dim db as new SQLDatabaseMBS

// where is the library?
db.SetFileOption SQLConnectionMBS.kOptionLibrarySQLite, getfolderitem("/usr/lib/libsqlite3.0.dylib", folderitem.PathType-Shell)

// connect to database
// in this example it is SQLite,
// but can also be Sybase, Oracle, Informix, DB2, SQLServer, InterBase, MySQL, SQLBase and ODBC

dim path as string

if TargetMacOS then
    path = "/tmp/test.db" // put the database in the temporary folder
else
    path = "test.db" // for Windows and Linux in the current folder the application is inside.
end if

db.DatabaseName = "sqlite:"+path

if db.Connect then
    MsgBox "We are connected!"

    // Disconnect is optional
    // autodisconnect will ocur in destructor if needed
    db.close

    msgbox "We are disconnected!"
end if

Notes:

You can use the SQL plugin without using Xojo (Real Studio) built in database classes if you use the SQL-ConnectionMBS and SQLCommandMBS classes.

Or you use the SQLDatabaseMBS class which is a subclass of the database class and can be used with REALbasics RecordSet class. The current implementation is not complete. You can connect with passing
the database URL in the DatabaseName property of the SQLDatabaseMBS class. You prefix this URL with the database type you are using.

You can use Execute and Select to run SQL statements. Errors can be queries with the lasterror properties. For the RecordSet, you can get the column count, the column names and values and move to the next row. All the other methods like deleting a record or updating a value are not implemented and you need to use SQL commands to do this.

Supported databases: Oracle, Microsoft SQL Server, DB2, Sybase, Informix, InterBase/Firebird, SQLBase, MySQL, PostgreSQL and ODBC and SQLite.

As field and table schema functions are not implemented, you can’t use this database with the database browser features in the Xojo (Real Studio) IDE. The plugin does not provide RecordCount on RecordSet class. For that you need to make a extra SELECT count(*) query.

With Xojo 2013r1, you only need a database server license from Xojo, Inc. if you use the SQLDatabaseMBS class. The SQLConnectionMBS class does not require this license. But some features like getting a recordset do need the license as they refer to the SQLDatabaseMBS class.

Please free all RecordSets and SQLCommand objects before you close the SQLConnection or the SQL-Database. The plugin keeps references from RecordSets and SQLCommand to prevent automatic destruction of the database connection. If you close a database connection while you have RecordSets and SQLCommand in use, things may go wrong.

The plugin can cache the recordset locally. To enable you can call SQLCommandMBS.Cache or use the Option(“AutoCache”) = "true” on either command or connection or database objects. The plugin will than fetch all records and store them in memory. After this you can walk over the recordset and use FetchPos, FetchFirst, FetchLast, FetchPrev and FetchNext to locate the rows you need. When you call Field() you always get last row, but to read from cached result set, please use Value() function. When using RecordSet, the values are read via Value() functions automatically.

You can use InternalPostgreSQLLibraryMBS or InternalSQLiteLibraryMBS if you like to use our built in SQLite or PostgreSQL database libraries. Subclass of the Database class.
152.15.2 Methods

152.15.3 Connect as boolean

**Example:**

```plaintext
dim db as new SQLDatabaseMBS

// where is the library?
db.SetFileOption SQLConnectionMBS.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")

// connect to database
// in this example it is MySQL,
// but can also be Sybase, Informix, Oracle, DB2
// SQLServer, InterBase, SQLBase and ODBC

db.DatabaseName="mysql:192.168.1.80:3306@test"
db.UserName="root"
db.Password=""

// or postgreSQL with timeout and ssl mode
db.DatabaseName="PostgreSQL:127.0.0.1,5432@dbname=postgres connection_timeout=10 sslmode=require"

if db.Connect then

MsgBox "We are connected!"

// Disconnect is optional
// autodisconnect will ocur in destructor if needed
else

MsgBox db.ErrorMessage

end if
```

**Notes:**

Returns true on success and false on failure.

Please set the DatabaseName, UserName and Password properties. The Host property is ignored. The database name must contain the complete information and a prefix for the kind of database.
Use this prefixes: "ODBC:“, "Oracle:“, "SQLServer:“, "Firebird:“, "InterBase:“, "SQLBase:“, "DB2:“, "Informix:“, "Sybase:“, "MySQL:“, "PostgreSQL:“ or "SQLite:“.

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.

For Firebird, if you connect to a database and you have 32/64bit mismatch, you get error number 3.

152.15.4 ConnectMT as Boolean

MBS SQL Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Connects to the database. **Notes:**

Returns true on success and false on failure.

Please set the DatabaseName, UserName and Password properties. The Host property is ignored.

The database name must contain the complete information and a prefix for the kind of database.

Use this prefixes: "ODBC:“, "Oracle:“, "SQLServer:“, "Firebird:“, "InterBase:“, "SQLBase:“, "DB2:“, "Informix:“, "Sybase:“, "MySQL:“, "PostgreSQL:“ or "SQLite:“.

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.

Same as Connect, but if you run this on a thread, the plugin gives time to other threads so the rest of your application runs just fine.

The MT method will not trigger WillConnect and DidConnect events.

152.15.5 Constructor(globals as SQLGlobalsMBS = nil)

MBS SQL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor. **Notes:** Please don’t call this directly as it’s called automatically with using new command.
152.15.6 Listen

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Start listening for notifications.
**Notes:**
Works only for PostgresSQL Client.
Please set client or connect before calling this method.

152.15.7 Prepare(SQL as string) as SQLPreparedStatementMBS

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Prepares a statement.
**Notes:**
Returns prepared statement or nil in case of error.
Please check ErrorMessage property for errors.

152.15.8 SetFileOption(name as string, file as folderitem)

MBS SQL Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets an option with passing a file path.
**Example:**
```
Dim db As New SQLDatabaseMBS

// where is the library?
db.SetFileOption SQLConnectionMBS.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")
```

**Notes:** Makes sure the path is correct and you have a 32bit library. 64 bit libraries will not work with Real Studio.

152.15.9 SQLExecute(Sql as string, CommandType as Integer)

MBS SQL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Runs the SQLExecute threaded.
**Notes:** Same as SQLExecute, but with additional CommandType parameter.
152.15.10  SQLExecuteMT(Sql as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the SQLExecute threaded. **Notes:** Same as SQLExecute, but if you run this on a thread, the plugin gives time to other threads so the rest of your application runs just fine.

152.15.11  SQLSelect(Sql as string, CommandType as Integer) as RecordSet

MBS SQL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the SQLSelect threaded. **Notes:**

Same as SQLSelect, but with additional CommandType parameter.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Real Studio includes our SQLDatabase plugin which provides the RecordSet functionality.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlying database supports those and Scrollable result sets is enabled/supported.

152.15.12  SQLSelectMT(Sql as string, CommandType as Integer = 0) as RecordSet

MBS SQL Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the SQLSelect threaded. **Notes:**

Same as SQLSelect, but if you run this on a thread, the plugin gives time to other threads so the rest of your application runs just fine.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Real Studio includes our SQLDatabase plugin which provides the RecordSet functionality.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlying database supports those and Scrollable result sets is enabled/supported.
152.15.13 Properties

152.15.14 AutoCommit as Integer

MBS SQL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether autocommit is enabled or disabled for the current connection.

**Example:**

```vbnet
dim db as SQLDatabaseMBS // your database connection
db.AutoCommit = SQLDatabaseMBS.kAutoCommitOn
```

**Notes:**

If autocommit is on, the database is committed automatically after each SQL command. Otherwise, transaction is committed only after Commit calling.

(Read and Write property)

152.15.15 Client as Integer

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The current DBMS client assigned for the connection.

**Notes:** (Read and Write property)

152.15.16 ClientVersion as Integer

MBS SQL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the DBMS client API version number.

**Notes:**

The higher word contains the major client version (the XX value in the XX.YY version number); the lower word contains the minor client version (the YY value in the XX.YY version number).

If an DBMS client was not set calling ClientVersion method will throw an exception.

(Read only property)

152.15.17 Connection as SQLConnectionMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The connection for this database used in the background.

**Notes:**
Note that methods on this connection object can raise exceptions while methods on the SQLDatabaseMBS class sets the error properties.
(Read only property)

152.15.18 isAlive as boolean

MBS SQL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the database server connection status for a particular connection object.  
**Notes:**
Returns true if the database server is active and accessible; otherwise false.  
This method uses the safe query execution for most supported DBMS-es. The query uses the well known database table or procedure (mysql_ping is used for MySQL). If the query fails the method returns false.  
(Read only property)

152.15.19 isConnected as boolean

MBS SQL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the connection state for a particular connection object.  
**Notes:**
Returns true if connected; otherwise false.  
(Read only property)

152.15.20 IsolationLevel as Integer

MBS SQL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The transaction isolation level.  
**Notes:**
Use the kReadCommitted, kReadUncommitted, kRepeatableRead, kSerializable and kLevelUnknown constants.  
(Read and Write property)

152.15.21 LastStatement as String

**Notes:** (Read only property)
152.15.22 NativeAPI as Variant

MBS SQL Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a set of functions of native DBMS client API.
**Notes:**
Returns a SQLAPI.MBS object.
(Read only property)

152.15.23 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a dictionary with all options.
**Notes:**
For debugging, it may be useful to inspect options in debugger.
(Read only property)

152.15.24 RaiseExceptions as Boolean

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether to raise exceptions.
**Notes:**
Default is false which means we set error, ErrorCode and ErrorMessage properties and not raise SQLErrorExceptionMBS exception.
If you set to true, we do raise the exception and you have similar behavior as with SQLConnection class.
We recommend to use exceptions as they are not so easily ignored like an error property being true.
(Read and Write property)

152.15.25 Scrollable as Boolean

MBS SQL Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether to make internally created SQLCommand objects scrollable.
**Notes:**
Since plugin version 15.0, Scrollable is false by default.
(Read and Write property)
152.15. **CLASS SQLDATABASEMBS**

### 152.15.26 ServerVersion as Integer

MBS SQL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Gets the currently connected DBMS server version number.

**Notes:**
The higher word contains the major server version (the XX value in the XX.YY version number); the lower word contains the minor server version (the YY value in the XX.YY version number).
(Read only property)

### 152.15.27 ServerVersionString as string

MBS SQL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Gets the currently connected DBMS server version string.

**Notes:**
A server version string may contain some useful information about server brand, configuration and so on. It is a good idea to display this information in all your applications.
(Read only property)

### 152.15.28 SQLiteEncryptionKey as String

MBS SQL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The encryption key to use.

**Example:**
```plaintext
dim db as new SQLDatabaseMBS
db.SQLiteEncryptionKey = "Hello"
```

**Notes:**
This key is applied to the database after connecting. In case of an error, the plugin raises an exception. An empty key can be used for having no encryption. Alternatively you can use SQLite3MBS.SetKey yourself.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.
The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:“, or "aes256:“. The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix. If no prefix is given, we default to AES 128. To be compatible to Xojo (Real Studio), you can use AES128.

The string provided to the plugin is used with it’s current encoding. So be sure you use right text encoding for what you want. e.g. using "Mller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.

152.15.29 Tag as Variant

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tag property.
**Notes:**
You can store here whatever you like.
(Read and Write property)

152.15.30 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets an option for the connection.
**Example:**
```vba
dim c as SQLDatabaseMBS // your database connection

// for Microsoft SQL use OLEDB, so you don’t need native SQL drivers installed...
c.Option("UseAPI") = "OLEDB"
c.Option("SQLNCLILIBS") = "sqlsrv32.dll" // Library included in Windows Vista and newer

// for SQLite, set flag to open database file read only:
c.Option("SQLiteVFSFlags") = "1"

// turn on auto cache
c.Option("AutoCache") = "true"

// set connection timeout for ODBC:
c.Option("SQL_ATTR_CONNECTION_TIMEOUT") = "10"
```
152.15.31  **Events**

152.15.32  **DidConnect**

MBS SQL Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Event called after connection was made. **Notes:** After we got connected, you can apply various options on the new connection here.

152.15.33  **PostgresNotification** *(NotificationName as string, PID as Integer, Extras as String)*

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A postgresSQL notification was received. **Notes:** Provides notification name, process ID of app and optional extra information.

152.15.34  **Trace** *(traceInfo as Integer, SQL as string, Command as SQLCommandMBS)*

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event to trace SQL commands.

152.15.35  **WillConnect**

MBS SQL Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Event called before connection is established. **Notes:** Last chance to set connection options.

152.15.36  **Constants**

152.15.37  **kANSILevel0 = 0**

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the ANSI level constants. **Notes:** ANSI Level 0
152.15.38 \quad \text{kANSILevel1} = 1

MBS SQL Plugin, Plugin Version: 12.3. \textbf{Function:} One of the ANSI level constants.
\textbf{Notes:} ANSI Level 1

152.15.39 \quad \text{kANSILevel2} = 2

MBS SQL Plugin, Plugin Version: 12.3. \textbf{Function:} One of the ANSI level constants.
\textbf{Notes:} ANSI Level 2

152.15.40 \quad \text{kANSILevel3} = 3

MBS SQL Plugin, Plugin Version: 12.3. \textbf{Function:} One of the ANSI level constants.
\textbf{Notes:} ANSI Level 3

152.15.41 \quad \text{kAutoCommitOff} = 0

MBS SQL Plugin, Plugin Version: 12.3. \textbf{Function:} One of the constants for the autocommit property.
\textbf{Notes:} Autocommit is off.

152.15.42 \quad \text{kAutoCommitOn} = 1

MBS SQL Plugin, Plugin Version: 12.3. \textbf{Function:} One of the constants for the autocommit property.
\textbf{Notes:} Autocommit is on.

152.15.43 \quad \text{kAutoCommitUnknown} = -1

MBS SQL Plugin, Plugin Version: 12.3. \textbf{Function:} One of the constants for the autocommit property.
\textbf{Notes:} Autocommit unknown
152.15.44  kCommandTypeSQLStatement = 1

MBS SQL Plugin, Plugin Version: 14.1. **Function:** One of the constants for the command type.  
**Notes:** Command is an SQL statement.

152.15.45  kCommandTypeSQLStatementRaw = 2

MBS SQL Plugin, Plugin Version: 14.1. **Function:** One of the constants for the command type.  
**Notes:** Command is an SQL statement that mustn’t be interpreted by SQLAPI.

152.15.46  kCommandTypeStoredProcedure = 3

MBS SQL Plugin, Plugin Version: 14.1. **Function:** One of the constants for the command type.  
**Notes:** Command is a stored procedure or a function.

152.15.47  kCommandTypeUnknown = 0

MBS SQL Plugin, Plugin Version: 14.1. **Function:** One of the constants for the command type.  
**Notes:** Used by default. Library detects command type automatically.

152.15.48  kErrorBindVarNotFound = 7

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Bind variable not found.

152.15.49  kErrorClientInitFails = 6

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Initialization failed for client.

152.15.50  kErrorClientNotSet = 1

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Client not set.
152.15.51  kErrorClientNotSupported = 2

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Unsupported client type for this platform.

152.15.52  kErrorClientVersionOld = 5

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Library file is too old.

152.15.53  kErrorFieldNotFound = 8

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Field not found.

152.15.54  kErrorGetLibraryVersionFails = 4

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Failed to query library version.

152.15.55  kErrorLoadLibraryFails = 3

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Failed to load a library. For example path could be wrong or 32/64bit mismatch.

152.15.56  kErrorNoMemory = 0

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Out of memory.

152.15.57  kErrorUnknownColumnType = 11

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Unknown column type.
152.15.58  kErrorUnknownDataType = 9

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Unknown data type.

152.15.59  kErrorUnknownParameterType = 10

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Unknown parameter type.

152.15.60  kErrorWrongConversion = 12

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Failed to convert a value, e.g. string to number.

152.15.61  kErrorWrongDatetime = 13

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.  
**Notes:** Can’t convert text to date.

152.15.62  kLevelUnknown = -1

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the isolation level constants.  
**Notes:** Unknown

152.15.63  kOptionLibraryDB2 = ”DB2CLI.LIBS”

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method.  
**Notes:** for DB2.

152.15.64  kOptionLibraryFirebird = ”IBASE.LIBS”

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method.
152.15.65  \texttt{kOptionLibraryInformix = "INFCLI.LIBS"}

MBS SQL Plugin, Plugin Version: 12.3. \textbf{Function:} One of the option constant to specify the library with the \texttt{SetFileOption} method.  
\textbf{Notes:} for Informix.

152.15.66  \texttt{kOptionLibraryInterbase = "IBASE.LIBS"}

MBS SQL Plugin, Plugin Version: 12.3. \textbf{Function:} One of the option constant to specify the library with the \texttt{SetFileOption} method.  
\textbf{Notes:} for Interbase.

152.15.67  \texttt{kOptionLibraryMySQL = "MYSQL.LIBS"}

MBS SQL Plugin, Plugin Version: 12.3. \textbf{Function:} One of the option constant to specify the library with the \texttt{SetFileOption} method.  
\textbf{Notes:} for MySQL. Library extension on Mac is ".dylib", on Linux ".so" and on Windows ".dll". You get this library with the MySQL download on their homepage.

152.15.68  \texttt{kOptionLibraryODBC = "ODBC.LIBS"}

MBS SQL Plugin, Plugin Version: 12.3. \textbf{Function:} One of the option constant to specify the library with the \texttt{SetFileOption} method.  
\textbf{Notes:} for ODBC.

152.15.69  \texttt{kOptionLibraryOracle = "OCI8.LIBS"}

MBS SQL Plugin, Plugin Version: 12.3. \textbf{Function:} One of the option constant to specify the library with the \texttt{SetFileOption} method.  
\textbf{Notes:} for Oracle.
152.15. CLASS SQLDATABASEMBS

152.15.70 kOptionLibraryPostgreSQL = "LIBPQ.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method. 
**Notes:** for PostgreSQL.

152.15.71 kOptionLibrarySQLAnywhere = "SQLANY.LIBS"

MBS SQL Plugin, Plugin Version: 15.2. **Function:** One of the option constant to specify the library with the SetFileOption method. 
**Notes:** for SQL Anywhere.

152.15.72 kOptionLibrarySQLBase = "SQLBASE.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method. 
**Notes:** for SQLbase.

152.15.73 kOptionLibrarySQLite = "SQLITE.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method. 
**Notes:** for SQLite. Can also be the spatialite or SQLcipher library.

152.15.74 kOptionLibrarySybaseComn = "SYBCOMN.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method. 
**Notes:** for Sybase.

152.15.75 kOptionLibrarySybaseCS = "SYBCS.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method. 
**Notes:** for Sybase.
152.15.76  kOptionLibrarySybaseCT = ”SYBCT.LIBS”

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method.  
**Notes:** for Sybase.

152.15.77  kOptionLibrarySybaseIntl = ”SYBINTL.LIBS”

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method.  
**Notes:** for Sybase.

152.15.78  kOptionLibrarySybaseTCL = ”SYBTCL.LIBS”

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method.  
**Notes:** for Sybase.

152.15.79  kReadCommitted = 1

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the isolation level constants.  
**Notes:** Read committed.

152.15.80  kReadUncommitted = 0

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the isolation level constants.  
**Notes:** Read uncommitted.

152.15.81  kRepeatableRead = 2

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the isolation level constants.  
**Notes:** Repeatable read.
152.15. CLASS SQLDATABASEMBS

152.15.82 kSerializable = 3

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the isolation level constants. **Notes:** Serializable.
152.16  class SQLDataConsumerMBS

152.16.1  class SQLDataConsumerMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for a data consumer.
**Notes:** If you query a clob/blob value, that value may not fit into memory, so you may prefer to get a
callback for data and write it to a file in small chunks.

152.16.2  Events

152.16.3  Write(PieceType as Integer, data as string, Length as UInt32, BlobSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The event called to process data.
**Notes:**
PieceType is kOnePiece, kFirstPiece, kLastPiece or kNextPiece.
Data is the raw data in a binary string.
Length is the number of bytes and BlobSize the size of data blocks used.

152.16.4  Constants

152.16.5  kFirstPiece = 1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the piece type constants.
**Notes:** The first piece is processed. You may setup everything you need to handle the data.

152.16.6  kLastPiece = 3

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the piece type constants.
**Notes:** The last piece is processed. You can close files/network connections.

152.16.7  kNextPiece = 2

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the piece type constants.
**Notes:** The next piece is processed. Not the first one or the last one, but one between.
MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the piece type constants.  
**Notes:** The whole data stream is delivered in one call of the event.
152.17 class SQLDataProviderMBS

152.17.1 class SQLDataProviderMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a data provider.  
**Notes:** Use this to set a blob/clob object with streaming data. For example if you want to add a 1 GB big file to the database without loading it into RAM in one piece, you can use this class to read it in small chunks.

152.17.2 Events

152.17.3 Read(byref PieceType as Integer, Length as UInt32) as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called whenever new data is needed.  
**Notes:**  
PieceType is kOnePiece, kFirstPiece, kLastPiece or kNextPiece.  
If your stream is on the end, you set this to kLastPiece.  
Return the raw data in a string.  
Length is the number of bytes.

152.17.4 Constants

152.17.5 kFirstPiece = 1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the piece type constants.  
**Notes:** The first piece is processed. You may setup everything you need to handle the data.

152.17.6 kLastPiece = 3

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the piece type constants.  
**Notes:** The last piece is processed. You can close files/network connections.

152.17.7 kNextPiece = 2

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the piece type constants.  
**Notes:** The next piece is processed. Not the first one or the last one, but one between.
MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the piece type constants. **Notes:** The whole data stream is delivered in one call of the event.
152.18 class SQLDateTimeMBS

152.18.1 class SQLDateTimeMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The SQL date/time value class.

**Example:**

```vbs
dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)
MsgBox d.StringValue // shows "2008-03-04T23:10:20"
```

152.18.2 Methods

152.18.3 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0)

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new SQL Datetime with the given values.

**See also:**

- 152.18.4 Constructor(other as SQLDateTimeMBS)
- 152.18.5 Constructor(value as Date)
- 152.18.6 Constructor(value as Double)
- 152.18.7 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "")
- 152.18.8 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String)

152.18.4 Constructor(other as SQLDateTimeMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of the SQL Date Time.

**Example:**

```vbs
dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)
dim e as new SQLDateTimeMBS(d)
MsgBox e.StringValue // shows "2008-03-04T23:10:20"
```
152.18. CLASS SQLDATETIMEMBS

See also:

- 152.18.3 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0)  
- 152.18.5 Constructor(value as Date)  
- 152.18.6 Constructor(value as Double)  
- 152.18.7 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "")  
- 152.18.8 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String)

152.18.5 Constructor(value as Date)

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes the datetime value with the given date.  

See also:

- 152.18.3 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0)  
- 152.18.4 Constructor(other as SQLDateTimeMBS)  
- 152.18.6 Constructor(value as Double)  
- 152.18.7 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "")  
- 152.18.8 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String)

152.18.6 Constructor(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new SQL date time value based on the double value.  

**Example:**

    dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)  
    dim e as new SQLDateTimeMBS(d.DoubleValue+1) // clone with one day more  
    MsgBox e.StringValue // shows "2008-03-05T23:10:20"

See also:
152.18.7 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "")

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new SQL Datetime with the given values.

**Example:**

```vbnet
dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)
MsgBox d.StringValue // shows "2008-03-04T23:10:20"
```

- 152.18.3 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 18904
- 152.18.4 Constructor(other as SQLDateTimeMBS) 18904
- 152.18.5 Constructor(value as Date) 18905
- 152.18.6 Constructor(value as Double) 18905
- 152.18.8 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 18906

152.18.8 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String)

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new SQL Datetime with the given values.

See also:
152.18. CLASS SQLDATETIMEMBS

- 152.18.3 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 18904
- 152.18.4 Constructor(other as SQLDateTimeMBS) 18904
- 152.18.5 Constructor(value as Date) 18905
- 152.18.6 Constructor(value as Double) 18905
- 152.18.7 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 18906

152.18.9  Set(value as Date)

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Assigns the datetime value with the given date.

152.18.10  Properties

152.18.11  DateValue as Date

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the value of this datetime object as a date object.
**Notes:** (Read only property)

152.18.12  Day as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the day this SADateTime object represents (1 31).
**Notes:** (Read only property)

152.18.13  DayOfWeek as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the day of the week this SADateTime object represents (Sunday = 1).
**Notes:** (Read only property)

152.18.14  DayOfYear as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the day of the year this SADateTime object represents (Jan 1 = 1).
152.18.15 DoubleValue as Double

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The double value of this date/time.

**Notes:**
Use these operators to get current date/time value using standard double representation. Days are represented by whole number increments starting with 30 December 1899, midnight as time zero. Hour values are expressed as the absolute value of the fractional part of the number.

<table>
<thead>
<tr>
<th>Date and time</th>
<th>Representation</th>
</tr>
</thead>
<tbody>
<tr>
<td>30 December 1899, midnight</td>
<td>0.00</td>
</tr>
<tr>
<td>1 January 1900, midnight</td>
<td>2.00</td>
</tr>
<tr>
<td>4 January 1900, midnight</td>
<td>5.00</td>
</tr>
<tr>
<td>4 January 1900, 6 A.M.</td>
<td>5.25</td>
</tr>
<tr>
<td>4 January 1900, noon</td>
<td>5.50</td>
</tr>
<tr>
<td>4 January 1900, 9 P.M.</td>
<td>5.875</td>
</tr>
</tbody>
</table>

(Read only property)

152.18.16 Fraction as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value of the fraction of second (0 to 999,999,999) this SQLDateTime object represents.

**Notes:**
The value of the fraction field is the number of billionths of a second and ranges from 0 through 999,999,999 (1 less than 1 billion). For example, the value of the fraction field for a half-second is 500,000,000, for a thousandth of a second (one millisecond) is 1,000,000, for a millionth of a second (one microsecond) is 1,000, and for a billionth of a second (one nanosecond) is 1.

(Read only property)

152.18.17 Hour as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the hour this SADateTime object represents (0–23).

**Notes:** (Read only property)
152.18. CLASS SQLDATETIMEMEMBS

152.18.18  Minute as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the minute this SADateTime object represents (0  59).
**Notes:** (Read only property)

152.18.19  Month as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the month this SADateTime object represents (1  12).
**Notes:** (Read only property)

152.18.20  Second as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the second this SADateTime object represents (0  59).
**Notes:** (Read only property)

152.18.21  StringValue as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The string value for this date/time.
**Notes:** (Read only property)

152.18.22  TimeZone as String

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The time zone.
**Notes:**
Should be in format "00:00" and should be supported for Oracle and Postgres.
(Read and Write property)

152.18.23  Year as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the year this SADateTime object represents.
**152.19. CLASS SQLERROREXCEPTIONMBS**

**152.19 class SQLErrorExceptionMBS**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The error exception class to report SQL errors.

**Notes:**
The SQLDatabaseMBS class sets its error properties on an error. All other SQL classes raise exceptions where you can check the message property.
Subclass of the RuntimeException class.

**152.19.2 Properties**

**152.19.3 ErrorClass as Integer**

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a class of error.

**Notes:**
Returns one of the following values:

<table>
<thead>
<tr>
<th>ErrorClass</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SA_No_Error</td>
<td>0</td>
<td>No error occurred</td>
</tr>
<tr>
<td>SA_UserGenerated_Error</td>
<td>1</td>
<td>User-generated error</td>
</tr>
<tr>
<td>SA_Library_Error</td>
<td>2</td>
<td>The Library error occurred</td>
</tr>
<tr>
<td>SA_DBMS_API_Error</td>
<td>3</td>
<td>DBMS API error occurred</td>
</tr>
</tbody>
</table>

A SQLErrorExceptionMBS object handles the next error classes:

- User-generated errors
- Library errors
- DBMS API errors

The Library errors are generated by the Library itself. It can be like detecting some mistake in passing arguments to the function or referencing the parameter with an inappropriate name. To get a Library-defined error text call ErrorMessage method.

The DBMS API errors come to the Library from the DBMS Client or Server. In this case the Library returns an error code and text Client- or Server-defined. To get error code and error text returned by the server call NativeError and ErrorMessage methods.
The User-generated exception is "SQLAPI++ compatible" exception thrown by the user. To throw user exception use throwUserException method.

(Read and Write property)

152.19.4 ErrorMessage as String

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Gets an error text.

**Notes:**
A error text depends on a class of error.

If error class is Library error the ErrorMessage method returns Library-defined error text. If error class is DBMS API error the ErrorMessage method returns an error text gotten from DBMS Server or Client. If error class is User-defined error the ErrorMessage method returns an error text specified by user (see throwUserException method).

To get the error class call ErrorClass method.
(same as Message property)
(Read and Write property)

152.19.5 ErrorPosition as Integer

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Gets an error position in SQL statement.

**Notes:**
Returns an integer value representing error position.
Not all DBMS servers allow to get error position. See Server specific notes to get detailed information about returned value.

If a command object’s associated SQL statement contains any syntax errors, an exception will be thrown when you try to compile. ErrorPosition method returns the error position within the command string.

Server specific notes

(Read and Write property)
### 152.19. CLASS SQLERROREXCEPTIONMBS

<table>
<thead>
<tr>
<th>DBMS server</th>
<th>ErrorPosition method returned value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle</td>
<td>ErrorPosition returns parse error offset.</td>
</tr>
<tr>
<td>SQL Server</td>
<td>ErrorPosition returns the number of line within SQL statement where error occurred.</td>
</tr>
<tr>
<td>Sybase</td>
<td>ErrorPosition returns the number of line within SQL statement where error occurred.</td>
</tr>
<tr>
<td>DB2</td>
<td>ErrorPosition returns -1. DB2 does not support this function.</td>
</tr>
<tr>
<td>Informix</td>
<td>ErrorPosition returns -1. Informix does not support this function.</td>
</tr>
<tr>
<td>InterBase</td>
<td>ErrorPosition returns -1. InterBase does not support this function.</td>
</tr>
<tr>
<td>SQLBase</td>
<td>ErrorPosition returns character position of the syntax error within an SQL statement. The first character is position 0.</td>
</tr>
<tr>
<td>MySQL</td>
<td>ErrorPosition returns -1. MySQL does not support this function.</td>
</tr>
<tr>
<td>PostgreSQL</td>
<td>ErrorPosition returns -1. PostgreSQL does not support this function.</td>
</tr>
<tr>
<td>ODBC</td>
<td>ErrorPosition returns -1. ODBC does not support this function.</td>
</tr>
</tbody>
</table>

### 152.19.6 NativeError as Integer

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Gets a native code associated with current error.

**Notes:**

Returns an integer value represents a native code associated with current error.

If error class is DBMS API error the NativeError method returns error code received from DBMS Server or Client. If error class is User-defined error the NativeError method returns an error code specified by user (see throwUserException method). If error class is Library error the NativeError method returns -1.

To get the error class call ErrorClass method.

See server specific documentation to get more information about DBMS API error code.

(same as ErrorNumber property)

(Read and Write property)
152.20 class SQLFieldMBS

152.20.1 class SQLFieldMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This is the class for a SQL field in a record.
Notes:
Be aware that field objects exists only as long as their SQLCommand exists.
Subclass of the SQLValueReadMBS class.

152.20.2 Methods

152.20.3 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer)

Notes:
BlockSize: Size of piece of data you want to get to the consumer event.

After a command execution all output parameters are updated by their values, including Long and BLob(CLob) parameters. If you want to control piecewise reading of Long or BLob(CLob) data you should do the following:

Before a command execution set kLongOrLobReaderManual reading mode (see LongOrLobReaderMode) for Long or BLob(CLob) parameters you want to process by a data consumer. After that SQLAPI++ will skip reading output Long and BLob(CLob) parameters that you set to be read manually.
After command execution use ReadLongOrLob method for each output parameter defined to be read manually.
Note, that if the command has result set(s) (it is possible in some servers, see Server specific notes) then output parameters are available only after all result sets are completely processed using FetchNext method.
See also:

• 152.20.4 ReadLongOrLob(toFile as FolderItem) 18914
• 152.20.5 ReadLongOrLob(toStream as Writeable) 18915

152.20.4 ReadLongOrLob(toFile as FolderItem)

Example:
152.20. CLASS SQLFIELDMBS

```vba
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim field as SQLFieldMBS = cmd.Field("image")
// read blob content to binarystream
field.ReadLongOrLob(f)
```

**Notes:** May raise IOExceptions if things go wrong.
See also:

- 152.20.3 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 18914
- 152.20.5 ReadLongOrLob(toStream as Writeable) 18915

### 152.20.5 ReadLongOrLob(toStream as Writeable)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Starts reading of Long or BLob(CLob) value to the given writeable stream.

**Example:**

```vba
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim b as BinaryStream = BinaryStream.Create(f, true)
dim field as SQLFieldMBS = cmd.Field("image")
// read blob content to binarystream
field.ReadLongOrLob(b)
```

**Notes:** This allows you to read in chunks the data to a stream, e.g. binarystream, textoutputstream or socket.
See also:

- 152.20.3 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 18914
- 152.20.4 ReadLongOrLob(toFile as FolderItem) 18914

### 152.20.6 Properties

### 152.20.7 FieldNativeType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns native type code of the field.

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**
Deprecated. Please use NativeType property instead.
(Read only property)

152.20.8 FieldPrecision as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Returns precision of the field value (the total number of allowable digits).
Deprecated: This item is deprecated and should no longer be used. Notes:

Deprecated. Please use Precision property instead.
(Read only property)

152.20.9 FieldScale as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Returns scale of the field value (the number of digits to the right of the decimal point).
Deprecated: This item is deprecated and should no longer be used. Notes:

Deprecated. Please use Scale property instead.
(Read and Write property)

152.20.10 FieldSize as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Returns field data size.
Deprecated: This item is deprecated and should no longer be used. Notes:

Deprecated. Please use Size property instead.
(Read only property)

152.20.11 FieldType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Returns field data type.
Deprecated: This item is deprecated and should no longer be used. Notes:

Value is one of the kDataType* constants.
Deprecated. Please use Type property instead.
(Read and Write property)
152.20. CLASS SQLFIELDMBS

152.20.12 isFieldRequired as boolean

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Shows if it is possible for the field value to be null.
**Notes:**
Returns true if the field value can be null; false otherwise. (Read only property)

152.20.13 Name as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns name of the field.
**Notes:** (Read only property)

152.20.14 NativeType as Integer

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns native type code of the field.
**Notes:** (Read only property)

152.20.15 Pos as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a one-based position of the field in a result set.
**Notes:** (Read only property)

152.20.16 Precision as Integer

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns precision of the field value (the total number of allowable digits).
**Notes:** (Read only property)

152.20.17 Scale as Integer

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns scale of the field value (the number of digits to the right of the decimal point).
CHAPTER 152. SQL

Notes: (Read and Write property)

152.20.18 Size as Integer

Notes: (Read only property)

152.20.19 Type as Integer

Example:

```vba
dim db as SQLConnectionMBS
dim cmd as new SQLCommandMBS(db, ”select * from test”)

cmd.Execute

dim f as SQLFieldMBS = cmd.Field(”test”)

if f.Type = f.kDataTypeLong then
MsgBox ”type is long”
end if
```

Notes:
Value is one of the kDataType* constants.
(Read and Write property)

152.20.20 Option(name as string) as string

Notes:
See for more details:
(Read and Write computed property)
152.21.1 class SQLGlobalsMBS

152.21.2 Methods

152.21.3 GetEnv(name as string) as string

152.21.4 GetVersion as String

152.21.5 GetVersionBuild as Integer

152.21.6 GetVersionMajor as Integer

152.21.7 GetVersionMinor as Integer

152.21.8  **PutEnv(line as string) as boolean**

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets environment variable.  
**Notes:** Line format should be "key=value" and returns true on success and false on failure.

152.21.9  **RaiseException(message as string)**

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Raises an exception to test exception handling in SQL Plugin.  
**Notes:** Raises directly a SQLErrorExceptionMBS with the given message.

152.21.10  **RaiseSQLErrorException(UserCode as Integer, message as string)**

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Raises an exception to test exception handling in SQL Plugin.  
**Notes:** Raises a SAUserException which the plugin catches and translates to a SQLErrorExceptionMBS in Real Studio.

152.21.11  **SetCurrentWorkingDirectory(path as folderitem) as boolean**

MBS SQL Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the current working directory.  
**Notes:** This is often useful to make sure the DLLs in that folder are found.  
See also:

- 152.21.12  **SetCurrentWorkingDirectory(path as String) as boolean**

152.21.12  **SetCurrentWorkingDirectory(path as String) as boolean**

MBS SQL Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the current working directory.  
**Notes:** This is often useful to make sure the DLLs in that folder are found.  
See also:

- 152.21.11  **SetCurrentWorkingDirectory(path as folderitem) as boolean**
152.21.13 SetEnv(name as string, value as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets an environment variable.
**Notes:**
Existing variable with same name will be overwritten.
Returns true on success and false on failure.

152.21.14 SetLicenseCode(n as string, enddate as Integer, v1 as Integer, v2 as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Registeres the SQL plugin and library.
**Notes:** Once you ordered a license, you receive details on how to call this method.

152.21.15 Setlocale(category as Integer, locale as string)

MBS SQL Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the locale to use.
**Notes:**
The Setlocale function sets the C library’s notion of natural language formatting style for particular sets of routines. Each such style is called a ’locale’ and is invoked using an appropriate name passed as a C string.

The setlocale() function recognizes several categories of routines. These are the categories and the sets of routines they select:

- **LocaleAll**
  Set the entire locale generically.

- **LocaleCollate**
  Set a locale for string collation routines. This controls alphabetic ordering in strcoll() and strxfrm().

- **LocaleCType**
  Set a locale for the ctype and multibyte functions. This controls recognition of upper and lower case, alphabetic or non-alphabetic characters, and so on.

- **LocaleMessages**
  Set a locale for message catalogs, see catopen function.

- **LocaleMonetary**
  Set a locale for formatting monetary values; this affects the localeconv() function.

- **LocaleNumeric**
  Set a locale for formatting numbers. This controls the formatting of decimal points in input and output of floating point numbers in functions such as printf() and scanf(), as well as values returned by localeconv().

- **LocaleTime**
  Set a locale for formatting dates and times using the strftime() function.
Only three locales are defined by default: the empty string "" (which denotes the native environment) and the "C" and "POSIX" locales (which denote the C-language environment). By default, C programs start in the "C" locale.

152.21.16  UnSetEnv(name as string) as boolean

152.21.17  Events

152.21.18  Trace(traceInfo as Integer, SQL as string, Connection as SQLConnectionMBS, Command as SQLCommandMBS)

152.21.19  Constants

152.21.20  LocaleAll=0

MBS SQL Plugin, Plugin Version: 9.3. Function: One of the locale category constants for SetLocale. Notes: Set the entire locale generically.

152.21.21  LocaleCollate=1

MBS SQL Plugin, Plugin Version: 9.3. Function: One of the locale category constants for SetLocale. Notes: Set a locale for string collation routines. This controls alphabetic ordering in strcoll() and strxfrm().

152.21.22  LocaleCType=2

MBS SQL Plugin, Plugin Version: 9.3. Function: One of the locale category constants for SetLocale. Notes: Set a locale for the ctype(3) and multibyte(3) functions. This controls recognition of upper and lower case, alphabetic or non-alphabetic characters, and so on.
152.21.23  LocaleMessages=6

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the locale category constants for SetLocale.  
**Notes:** Set a locale for message catalogs, see catopen(3) function.

152.21.24  LocaleMonetary=3

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the locale category constants for SetLocale.  
**Notes:** Set a locale for formatting monetary values; this affects the localeconv() function.

152.21.25  LocaleNumeric=4

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the locale category constants for SetLocale.  
**Notes:** Set a locale for formatting numbers. This controls the formatting of decimal points in input and output of floating point numbers in functions such as printf() and scanf(), as well as values returned by localeconv().

152.21.26  LocaleTime=5

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the locale category constants for SetLocale.  
**Notes:** Set a locale for formatting dates and times using the strftime() function.
152.22 class SQLIntervalMBS

152.22.1 class SQLIntervalMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class in the SQL Plugin for an interval.

152.22.2 Methods

152.22.3 Constructor

See also:

- 152.22.4 Constructor(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0)
- 152.22.5 Constructor(value as Double)

152.22.4 Constructor(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new interval with the given values.
See also:

- 152.22.3 Constructor
- 152.22.5 Constructor(value as Double)

152.22.5 Constructor(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new interval with the given time delta.
**Example:**

```lisp
dim n as new SQLIntervalMBS(5)
```

MsgBox n.StringValue // shows "120:00:00" for 120 hours

152.22.  CLASS SQLINTERVALMBS

- 152.22.3 Constructor

- 152.22.4 Constructor(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0)

152.22.6  Dec(interval as SQLIntervalMBS)

152.22.7  Inc(interval as SQLIntervalMBS)

152.22.8  SetInterval(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0)

152.22.9  Properties

152.22.10  Days as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The days in this interval. Notes: (Read only property)

152.22.11  DoubleValue as Double

```
dim n as new SQLIntervalMBS(1,2,3,4)
MsgBox str(n.DoubleValue) // shows ”1.085463” for 1 day, 2 hours, 3 minutes and 4 seconds
```
Notes: (Read only property)

152.22.12 Fraction as Integer

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The fraction of a second in nano seconds.

**Notes:**
Range 0..999999999.
(Read only property)

152.22.13 Hours as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The hours value.

**Notes:** (Read only property)

152.22.14 Minutes as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minutes value.

**Notes:** (Read only property)

152.22.15 Seconds as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The seconds value.

**Notes:** (Read only property)

152.22.16 StringValue as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The interval as a string.

**Example:**
152.22. CLASS SQLINTERVALMBS

dim n as new SQLIntervalMBS(5)

MsgBox n.StringValue  // shows "120:00:00" for 120 hours

Notes: (Read only property)

152.22.17 TotalDays as Double

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The total days value.
**Example:**
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.TotalDays)  // shows "1"

Notes: (Read only property)

152.22.18 TotalHours as Double

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The total hours value.
**Example:**
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.TotalHours)  // shows "26"

Notes: (Read only property)

152.22.19 TotalMinutes as Double

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The total minutes value.
**Example:**
dim n as new SQLIntervalMBS(1,2,3,4)
MsgBox str(n.TotalMinutes) // shows "1563"

Notes: (Read only property)

152.22.20 TotalSeconds as Double

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The total seconds value. **Notes:**

dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.GetTotalSeconds) // shows "93784" (Read only property)
152.23. **CLASS SQLITE3BACKUPMBS**

152.23  **class SQLite3BackupMBS**

152.23.1  **class SQLite3BackupMBS**

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The object for a running backup.

**Notes:**
The backup object records state information about an ongoing online backup operation. The sqlite3_backup object is created by a call to BackupInit() and is destroyed by a call to BackupFinish().
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

152.23.2  **Methods**

152.23.3  **Constructor**

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

152.23.4  **Properties**

152.23.5  **Handle as Integer**

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The internal object reference.
**Notes:** (Read only property)
152.24  class SQLite3MBS

152.24.1  class SQLite3MBS

MBS SQL Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for the native SQLite API. 
**Example:**

```vba
dim con as new SQLConnectionMBS
dim path as string = "/tmp/test.db" // change path for Windows!

con.Connect(path,"","",SQLConnectionMBS.kSQLiteClient)

dim api as SQLAPIMBS = con_NativeAPI
if api isa SQLite3MBS then
    dim s as SQLite3MBS = SQLite3MBS(api)
    MsgBox s.Version
end if
```

**Notes:** Subclass of the SQLAPIMBS class.

152.24.2  Methods

152.24.3  BackupFinish(Backup as SQLite3BackupMBS) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finishes a backup run.
**Notes:**

When BackupStep has returned kErrorDone, or when the application wishes to abandon the backup operation, the application should destroy the SQLite3BackupMBS by passing it to BackupFinish. The BackupFinish interfaces releases all resources associated with the SQLite3BackupMBS object. If BackupStep has not yet returned kErrorDone, then any active write-transaction on the destination database is rolled back. The SQLite3BackupMBS object is invalid and may not be used following a call to BackupFinish. The value returned by BackupFinish is kErrorOK if no BackupStep errors occurred, regardless or whether or not BackupStep completed. If an out-of-memory condition or IO error occurred during any prior BackupStep call on the same SQLite3BackupMBS object, then BackupFinish returns the corresponding error code. A return of kErrorBusy or kErrorLocked from BackupStep is not a permanent error and does not affect the return value of BackupFinish.
BackupInit(Dest as SQLConnectionMBS, DestName as String, Source as SQLConnectionMBS, SourceName as String) as SQLite3BackupMBS

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Initializes a backup.

**Notes:**
The backup API copies the content of one database into another. It is useful either for creating backups of databases or for copying in-memory databases to or from persistent files.

See also
http://www.sqlite.org/c3ref/backup_finish.html

Exclusive access is required to the destination database for the duration of the operation. However the source database is only read-locked while it is actually being read; it is not locked continuously for the entire backup operation. Thus, the backup may be performed on a live source database without preventing other users from reading or writing to the source database while the backup is underway.

To perform a backup operation:

- BackupInit is called once to initialize the backup,
- BackupStep is called one or more times to transfer the data between the two databases, and finally
- BackupFinish is called to release all resources associated with the backup operation.

There should be exactly one call to BackupFinish for each successful call to BackupInit.

The D and N arguments to BackupInit(D,N,S,M) are the database connection associated with the destination database and the database name, respectively. The database name is "main" for the main database, "temp" for the temporary database, or the name specified after the AS keyword in an ATTACH statement for an attached database. The S and M arguments passed to BackupInit(D,N,S,M) identify the database connection and database name of the source database, respectively. The source and destination database connections (parameters S and D) must be different or else BackupInit(D,N,S,M) will file with an error. If an error occurs within BackupInit(D,N,S,M), then nil is returned and an error code and error message are store3d in the destination database connection D. The error code and message for the failed call to BackupInit can be retrieved using the ErrCode and ErrorMessage functions. A successful call to BackupInit returns a SQLite3BackupMBS object. The SQLite3BackupMBS object may be used with the BackupStep and BackupFinish functions to perform the specified backup operation.

Concurrent Usage of Database Handles
The source database connection may be used by the application for other purposes while a backup operation is underway or being initialized. If SQLite is compiled and configured to support threadsafe database connections, then the source database connection may be used concurrently from within other threads. However, the application must guarantee that the destination database connection is not passed to any other
API (by any thread) after BackupInit is called and before the corresponding call to BackupFinish. SQLite does not currently check to see if the application incorrectly accesses the destination database connection and so no error code is reported, but the operations may malfunction nevertheless. Use of the destination database connection while a backup is in progress might also also cause a mutex deadlock.

If running in shared cache mode, the application must guarantee that the shared cache used by the destination database is not accessed while the backup is running. In practice this means that the application must guarantee that the disk file being backed up to is not accessed by any connection within the process, not just the specific connection that was passed to BackupInit.

The SQLite3BackupMBS object itself is partially threadsafe. Multiple threads may safely make multiple concurrent calls to BackupStep. However, the BackupRemaining and BackupPageCount APIs are not strictly speaking threadsafe. If these are invoked at the same time as another thread is invoking BackupStep it is possible that they return invalid values.

/*

152.24.5 BackupPageCount(Backup as SQLite3BackupMBS) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Returns the number of pages in total.
Notes:
Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source database file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

152.24.6 BackupRemaining(Backup as SQLite3BackupMBS) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Returns the number of pages remaining.
Notes:
Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source database file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.
152.24.7 BackupStep(Backup as SQLite3BackupMBS, Pages as Integer) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Copies up to Pages pages between the source and destination databases specified by SQLite3BackupMBS object.

**Notes:**

If N is negative, all remaining source pages are copied. If BackupStep(B,N) successfully copies N pages and there are still more pages to be copied, then the function returns kErrorOK. If BackupStep(B,N) successfully finishes copying all pages from source to destination, then it returns kErrorDone. If an error occurs while running BackupStep(B,N), then an error code is returned. As well as kErrorOK and kErrorDone, a call to BackupStep may return kErrorReadOnly, kErrorNoMem, kErrorBusy, kErrorLocked, or an kErrorIOACCESS | kErrorIOXXX extended error code.

The BackupStep might return kErrorReadOnly if the destination database was opened read-only or if the destination is an in-memory database with a different page size from the source database.

If BackupStep cannot obtain a required file-system lock, then the sqlite3_busy_handler | busy-handler function is invoked (if one is specified). If the busy-handler returns non-zero before the lock is available, then kErrorBusy is returned to the caller. In this case the call to BackupStep can be retried later. If the source database connection is being used to write to the source database when BackupStep is called, then kErrorLocked is returned immediately. Again, in this case the call to BackupStep can be retried later on. (If kErrorIOACCESS | kErrorIOXXX, kErrorNoMem, or kErrorReadOnly is returned, then there is no point in retrying the call to BackupStep. These errors are considered fatal.) The application must accept that the backup operation has failed and pass the backup operation handle to the BackupFinish to release associated resources.

The first call to BackupStep obtains an exclusive lock on the destination file. The exclusive lock is not released until either BackupFinish is called or the backup operation is complete and BackupStep returns kErrorDone. Every call to BackupStep obtains a shared lock on the source database that lasts for the duration of the BackupStep call. Because the source database is not locked between calls to BackupStep, the source database may be modified mid-way through the backup process. If the source database is modified by an external process or via a database connection other than the one being used by the backup operation, then the backup will be automatically restarted by the next call to BackupStep. If the source database is modified by the using the same database connection as is used by the backup operation, then the backup database is automatically updated at the same time.

152.24.8 EnableLoadExtension(Conn as SQLConnectionMBS, OnOff as boolean)

MBS SQL Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enables/disables extension loading for the given connection.

152.24.9 ErrCode(Conn as SQLConnectionMBS) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The ErrCode function returns the numeric result code or extended result code for the most recent failed
sqlite3 API call associated with a database connection.

**Notes:** If a prior API call failed but the most recent API call succeeded, the return value from ErrCode is undefined.

### 152.24.10 `ErrMsgMessage(Conn as SQLConnectionMBS) as string`

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the most recent error message in english for the given connection.

### 152.24.11 `LastInsertRowID(Conn as SQLConnectionMBS) as Int64`

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns Last Insert Rowid.

**Notes:**

Each entry in an SQLite table has a unique 64-bit signed integer key called the ROWID. The rowid is always available as an undeclared column named ROWID, OID, or _ROWID_ as long as those names are not also used by explicitly declared columns. If the table has a column of type INTEGER PRIMARY KEY then that column is another alias for the rowid.

This routine returns the rowid of the most recent successful INSERT into the database from the database connection in the first argument. If no successful INSERTs have ever occurred on that database connection, zero is returned.

(If an INSERT occurs within a trigger, then the rowid of the inserted row is returned by this routine as long as the trigger is running. But once the trigger terminates, the value returned by this routine reverts to the last value inserted before the trigger fired.)

An INSERT that fails due to a constraint violation is not a successful INSERT and does not change the value returned by this routine. `^Thus INSERT OR FAIL, INSERT OR IGNORE, INSERT OR ROLLBACK, and INSERT OR ABORT make no changes to the return value of this routine when their insertion fails. `^ (When INSERT OR REPLACE encounters a constraint violation, it does not fail. The INSERT continues to completion after deleting rows that caused the constraint problem so INSERT OR REPLACE will always change the return value of this interface.)`

For the purposes of this routine, an INSERT is considered to be successful even if it is subsequently rolled back.

This function is accessible to SQL statements via the `last_insert_rowid()` SQL function.

If a separate thread performs a new INSERT on the same database connection while the LastInsertRowID
function is running and thus changes the last insert rowid, then the value returned by LastInsertRowID is unpredictable and might not equal either the old or the new last insert rowid.

### 152.24.12 LoadExtension(Conn as SQLConnectionMBS, file as FolderItem, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads an SQLite extension library from the named file. 
**Notes:**
The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 152.24.13 LoadExtension(Conn as SQLConnectionMBS, path as String, ByRef ErrorMessage as String) as Integer

### 152.24.13 LoadExtension(Conn as SQLConnectionMBS, path as String, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads an SQLite extension library from the named file.
**Notes:**
The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 152.24.12 LoadExtension(Conn as SQLConnectionMBS, file as FolderItem, ByRef ErrorMessage as String) as Integer

### 152.24.14 MemoryHighwater(reset as boolean) as Int64

MBS SQL Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries maximum memory usage so far.
**Notes:** Can be reset with reset parameter being true.
See also:
152.24.15  ReKey(Conn as SQLConnectionMBS, Key as String) as Integer

MBS SQL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
You can change the key on a database using the Rekey Function.

**Notes:**
An empty key decrypts the database.

Rekeying requires that every page of the database file be read, decrypted, reencrypted with the new key, then written out again. Consequently, rekeying can take a long time on a larger database.

Most SEE variants allow you to encrypt an existing database that was created using the public domain version of SQLite. This is not possible when using the authenticating version of the encryption extension in see-aes128-ccm. If you do encrypt a database that was created with the public domain version of SQLite, no nonce will be used and the file will be vulnerable to a chosen-plaintext attach. If you call SetKey() immediately after Open when you are first creating the database, space will be reserved in the database for a nonce and the encryption will be much stronger. If you do not want to encrypt right away, call SetKey() anyway, with an empty key, and the space for the nonce will be reserved in the database even though no encryption is done initially.

A public domain version of the SQLite library can read and write an encrypted database with an empty key. You only need the encryption extension if the key is non-empty.

Returns a SQLite error code.

152.24.16  SetBusyHandler(Conn as SQLConnectionMBS, MaxAttempts as Integer = 5)

MBS SQL Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Installs busy handler for this connection.

**Notes:**
This routine sets a callback function that might be invoked whenever an attempt is made to open a database table that another thread or process has locked.

The plugin has an busy handler which will wait up to MaxAttempts and yield to other Xojo threads while waiting. Passing 5 should wait up to 100ms.

There can only be a single busy handler defined for each database connection. Setting a new busy handler
clears any previously set handler.) Note that calling SetBusyTimeout will also set or clear the busy handler.

The busy callback should not take any actions which modify the database connection that invoked the busy handler. Any such actions result in undefined behavior.

### 152.24.17 SetBusyTimeout(Conn as SQLConnectionMBS, TimeOutMS as Integer = 20)

MBS SQL Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This routine sets a busy handler that sleeps for a specified amount of time when a table is locked.

**Notes:**
The handler will sleep multiple times until at least "ms" milliseconds of sleeping have accumulated. After at least "ms" milliseconds of sleeping, the handler returns 0 which causes SQLite query to return SQLite Busy or IO Blocked error.

Calling this routine with an argument less than or equal to zero turns off all busy handlers.

(There can only be a single busy handler for a particular database connection any any given moment. If another busy handler was defined (using SetBusyHandler prior to calling this routine, that other busy handler is cleared.)

### 152.24.18 SetKey(Conn as SQLConnectionMBS, Key as String) as Integer

MBS SQL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Applies encryption to a database connection.

**Notes:**
Returns a SQLite error code.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:," "aes128:," or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix.
The string provided to the plugin is used with it’s current encoding. So be sure you use right text encoding for what you want. e.g. using ”Mller” as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.

### 152.24.19 TableColumnMetaData

```c
TableColumnMetaData(Conn as SQLConnectionMBS, DBName as string, TableName as string, ColumnName as string, byref DataType as string, byref CollationSequence as string, byref NotNull as boolean, byref PrimaryKey as boolean, byref AutoIncrement as Boolean) as Integer
```

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Extract Metadata About A Column Of A Table  
**Notes:**  
Not available in all sqlite libraries!

This routine returns metadata about a specific column of a specific database table accessible using the database connection handle passed as the first function argument. The column is identified by the second, third and fourth parameters to this function. The second parameter is either the name of the database (i.e. ”main”, ”temp”, or an attached database) containing the specified table or NULL. If it is NULL, then all attached databases are searched for the table using the same algorithm used by the database engine to resolve unqualified table references. The third and fourth parameters to this function are the table and column name of the desired column, respectively. Neither of these parameters may be NULL. Metadata is returned by writing to the memory locations passed as the 5th and subsequent parameters to this function. Any of these arguments may be NULL, in which case the corresponding element of metadata is omitted.

CollationSequence is assigned the Name of default collation sequence. NotNull is set to true if column has a NOT NULL constraint. PrimaryKey is set to true if column is part of the PRIMARY KEY and AutoIncrement is set to true if column is AUTOINCREMENT.

If the specified table is actually a view, an error code is returned.

If the specified column is "rowid", "oid" or "_rowid," and an INTEGER PRIMARY KEY column has been explicitly declared, then the output parameters are set for the explicitly declared column. (If there is no explicitly declared INTEGER PRIMARY KEY column, then the output parameters are set as follows:
152.24. CLASS SQLITE3MBS

data type: "INTEGER"
collation sequence: "BINARY"
not null: false
primary key: true
auto increment: false

(This function may load one or more schemas from database files. If an error occurs during this process, or if the requested table or column cannot be found, an error code is returned and an error message left in the database connection (to be retrieved using ErrMessage).)

This API is only available if the library was compiled with the SQLITE_ENABLE_COLUMN_METADATA C-preprocessor symbol defined.

152.24.20 Threadsafe as Integer

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Test To See If The Library Is Threadsafe.

**Notes:**
The threadsafe() function returns zero if and only if SQLite was compiled muting code omitted due to the SQLITE_THREADSAFE compile-time option being set to 0.

SQLite can be compiled with or without mutexes. When the SQLITE_THREADSAFE C preprocessor macro is 1 or 2, mutexes are enabled and SQLite is threadsafe. When the SQLITE_THREADSAFE macro is 0, the mutexes are omitted. Without the mutexes, it is not safe to use SQLite concurrently from more than one thread.

Enabling mutexes incurs a measurable performance penalty. So if speed is of utmost importance, it makes sense to disable the mutexes. But for maximum safety, mutexes should be enabled. The default behavior is for mutexes to be enabled.

This interface can be used by an application to make sure that the version of SQLite that it is linking against was compiled with the desired setting of the SQLITE_THREADSAFE macro.

This interface only reports on the compile-time mutex setting of the SQLITE_THREADSAFE flag. If SQLite is compiled with SQLITE_THREADSAFE=1 or =2 then mutexes are enabled by default but can be fully or partially disabled using a call to sqlite3_config() with the verbs SQLITE_CONFIG_SINGLETHREAD, SQLITE_CONFIG_MULTITHREAD, or SQLITE_CONFIG_MUTEX. *(The return value of the sqlite3_threadsafe() function shows only the compile-time setting of thread safety, not any run-time changes to that setting made by sqlite3_config(). In other words, the return value from sqlite3_threadsafe() is unchanged by calls to sqlite3_config().)*
See the threading mode documentation for additional information.

### 152.24.21 Properties

#### 152.24.22 LibraryLoaded as Boolean

MBS SQL Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether SQLite library is loaded. 
**Notes:** (Read only property)

#### 152.24.23 MemoryHighwater as Int64

MBS SQL Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries maximum memory usage so far. 
**Notes:** Can be reset with reset parameter. 
(Read only property) 
See also:

- 152.24.14 MemoryHighwater(reset as boolean) as Int64

#### 152.24.24 MemoryUsed as Int64

MBS SQL Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries memory in use by SQLite. 
**Notes:** This is memory allocated, but not yet freed. Value is zero until SQLite3 initialized. 
(Read only property)

#### 152.24.25 Version as string

MBS SQL Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The version string of the SQLite library. 
**Notes:** (Read only property)
152.24.26  VersionNumber as Integer

MBS SQL Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The version number of the SQLite library.
**Notes:** (Read only property)

152.24.27  Constants

152.24.28  kErrorAbort = 4

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
**Notes:** Callback routine requested an abort.

152.24.29  kErrorAuth = 23

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
**Notes:** Authorization denied

152.24.30  kErrorBusy = 5

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
**Notes:** The database file is locked.

152.24.31  kErrorCantopen = 14

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
**Notes:** Unable to open the database file.

152.24.32  kErrorConstraint = 19

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
**Notes:** Abort due to constraint violation.
152.24.33 kErrorCorrupt = 11

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes. **Notes:** The database disk image is malformed.

152.24.34 kErrorDone = 101

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes. **Notes:** sqlite3::step() has finished executing.

152.24.35 kErrorEmpty = 16

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes. **Notes:** Database is empty

152.24.36 kErrorError = 1

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes. **Notes:** SQL error or missing database.

152.24.37 kErrorFormat = 24

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes. **Notes:** Auxiliary database format error.

152.24.38 kErrorFull = 13

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes. **Notes:** Insertion failed because database is full.

152.24.39 kErrorInternal = 2

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes. **Notes:** Internal logic error in SQLite
152.24.40  kErrorInterrupt = 9

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes. **Notes:** Operation terminated by sqlite3Interrupt().

152.24.41  kErrorIoerr = 10

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes. **Notes:** Some kind of disk I/O error occurred.

152.24.42  kErrorLocked = 6

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes. **Notes:** A table in the database is locked.

152.24.43  kErrorMismatch = 20

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes. **Notes:** Data type mismatch.

152.24.44  kErrorMisuse = 21

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes. **Notes:** Library used incorrectly.

152.24.45  kErrorNolfs = 22

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes. **Notes:** Uses OS features not supported on host.

152.24.46  kErrorNoMem = 7

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes. **Notes:** Out of memory.
152.24.47  kErrorNotADB = 26

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.  
**Notes:** File opened that is not a database file.

152.24.48  kErrorNotFound = 12

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.  
**Notes:** NOT USED. Table or record not found.

152.24.49  kErrorOk = 0

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.  
**Notes:** Successful result

152.24.50  kErrorPerm = 3

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.  
**Notes:** Access permission denied.

152.24.51  kErrorProtocol = 15

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.  
**Notes:** NOT USED. Database lock protocol error.

152.24.52  kErrorRange = 25

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.  
**Notes:** 2nd parameter to sqlite3_bind out of range.

152.24.53  kErrorReadonly = 8

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.  
**Notes:** Attempt to write a readonly database.
152.24. **CLASS SQLITE3MBS**

152.24.54  kErrorRow = 100

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes. **Notes:** sqlite3_step() has another row ready.

152.24.55  kErrorSchema = 17

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes. **Notes:** The database schema changed.

152.24.56  kErrorToobig = 18

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes. **Notes:** String or BLOB exceeds size limit.
152.25 class SQLLongBinaryMBS

152.25.1 class SQLLongBinaryMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A class for a long binary object.

**Notes:**
Basicly this is a SQLStringMBS which is always marked to contain binary data. You only need this class to use the constructor with dataprovider to stream data to the database.
Subclass of the SQLLongOrLobMBS class.

152.25.2 Methods

152.25.3 Constructor

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

See also:

- 152.25.4 Constructor(Data as MemoryBlock) 18946
- 152.25.5 Constructor(data as SQLStringMBS) 18947
- 152.25.6 Constructor(Data as string, isText as Boolean = True) 18947
- 152.25.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 18947

152.25.4 Constructor(Data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new string object with data, e.g. for blob.

See also:

- 152.25.3 Constructor 18946
- 152.25.5 Constructor(data as SQLStringMBS) 18947
- 152.25.6 Constructor(Data as string, isText as Boolean = True) 18947
- 152.25.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 18947
152.25. CLASS SQLLONGBINARYMBS

152.25.5 Constructor(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Creates a new long binary object from a string object.
See also:

- 152.25.3Constructor  
- 152.25.4 Constructor(Data as MemoryBlock)  
- 152.25.6 Constructor(Data as string, isText as Boolean = True)  
- 152.25.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

152.25.6 Constructor(Data as string, isText as Boolean = True)

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Creates a new string object with data or text copied from the data string.
Notes: If isText is true, the data is interpreted as text and string encoding conversion may modify it. If
isText is false the bytes are copied raw.
See also:

- 152.25.3 Constructor  
- 152.25.4 Constructor(Data as MemoryBlock)  
- 152.25.5 Constructor(data as SQLStringMBS)  
- 152.25.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

152.25.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Creates a new long binary object from a data provider.
Notes:
The blocksize specifies in which sizes data is requested from the provider.
You must make sure that the data provider and this new blob object life long enough. Because the actual
data is requested later when you do the update on the database.

If BlockSize is 0, the default block size is used.

- 152.25.3 Constructor  
- 152.25.4 Constructor(Data as MemoryBlock)  
- 152.25.5 Constructor(data as SQLStringMBS)  
- 152.25.6 Constructor(Data as string, isText as Boolean = True)
152.26 class SQLLongCharMBS

152.26.1 class SQLLongCharMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A class for the long character data type.

**Notes:**

Basically this is a SQLStringMBS which is always marked to contain text. You only need this class to use the constructor with dataprovider to stream data to the database.

Subclass of the SQLLongOrLobMBS class.

152.26.2 Methods

152.26.3 Constructor

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

See also:

- 152.26.4 Constructor(data as SQLStringMBS) 18948
- 152.26.5 Constructor(Data as string, isText as boolean=true) 18948
- 152.26.6 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 18949

152.26.4 Constructor(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new long character object from a string object.

See also:

- 152.26.3 Constructor 18948
- 152.26.5 Constructor(Data as string, isText as boolean=true) 18948
- 152.26.6 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 18949

152.26.5 Constructor(Data as string, isText as boolean=true)

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new string object with data or text copied from the data string.

**Notes:** If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.

See also:
152.26. CLASS SQLLONGCHARMBS

- 152.26.3 Constructor
- 152.26.4 Constructor(data as SQLStringMBS)
- 152.26.6 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

152.26.6 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

**Notes:**

The blocksize specifies in which sizes data is requested from the provider.
You must make sure that the data provider and this new long character object life long enough. Because the actual data is requested later when you do the update on the database.

If BlockSize is 0, the default block size is used.

See also:

- 152.26.3 Constructor
- 152.26.4 Constructor(data as SQLStringMBS)
- 152.26.5 Constructor(Data as string, isText as boolean=true)
152.27 class SQLLongOrLobMBS

152.27.1 class SQLLongOrLobMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The super class for Long Binary/Text and BLOB/CLOB classes. **Notes:** Subclass of the SQLStringMBS class.
152.28 class SQLNotInitializedExceptionMBS

152.28.1 class SQLNotInitializedExceptionMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The exception raised if you call a method on an object which was not properly initialized. **Notes:** Subclass of the RuntimeException class.
152.29.1 class SQLNullMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class used internally for null values.
152.30.  CLASS SQLNUMERICMBS

152.30  class SQLNumericMBS

152.30.1  class SQLNumericMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for numeric values.

152.30.2  Methods

152.30.3  Constructor

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates an empty numeric object.
See also:

- 152.30.4 Constructor(value as Double) 18953
- 152.30.5 Constructor(value as string) 18953

152.30.4  Constructor(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new numeric object based on the given double value.
See also:

- 152.30.3 Constructor 18953
- 152.30.5 Constructor(value as string) 18953

152.30.5  Constructor(value as string)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new numeric object based on the given string.
See also:

- 152.30.3 Constructor 18953
- 152.30.4 Constructor(value as Double) 18953

152.30.6  NumericWithCurrency(value as Currency) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new numeric value object with given currency value.
Example:

```vbs
// test code for currency
dim c1 as Currency = 12345678.
dim c2 as Currency = 1234567.8
dim c3 as Currency = 123456.78
dim c4 as Currency = 12345.678
dim c5 as Currency = 1234.5678
dim c6 as Currency = 123.45678

dim n1 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c1)
dim n2 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c2)
dim n3 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c3)
dim n4 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c4)
dim n5 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c5)
dim n6 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c6)

dim s1 as string = n1.StringValue
dim s2 as string = n2.StringValue
dim s3 as string = n3.StringValue
dim s4 as string = n4.StringValue
dim s5 as string = n5.StringValue
dim s6 as string = n6.StringValue

dim d1 as Double = n1.DoubleValue
dim d2 as Double = n2.DoubleValue
dim d3 as Double = n3.DoubleValue
dim d4 as Double = n4.DoubleValue
dim d5 as Double = n5.DoubleValue
dim d6 as Double = n6.DoubleValue

dim x1 as Currency = n1.CurrencyValue
dim x2 as Currency = n2.CurrencyValue
dim x3 as Currency = n3.CurrencyValue
dim x4 as Currency = n4.CurrencyValue
dim x5 as Currency = n5.CurrencyValue
dim x6 as Currency = n6.CurrencyValue

// check for errors
if x1 <> c1 then break
if x2 <> c2 then break
if x3 <> c3 then break
if x4 <> c4 then break
if x5 <> c5 then break
if x6 <> c6 then break

if x1*10000 <> round(d1 * 10000) then Break
if x2*10000 <> round(d2 * 10000) then Break
```
if x3*10000 <> round(d3 * 10000) then Break
if x4*10000 <> round(d4 * 10000) then Break
if x5*10000 <> round(d5 * 10000) then Break
if x6*10000 <> round(d6 * 10000) then Break

Break // if no break before, it’s okay.

152.30.7  NumericWithDouble(value as Double) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new number with the given double value.

152.30.8  NumericWithInt64(value as Int64) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new number with the given Int64 value.

152.30.9  NumericWithString(value as string) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new number with the given string value.
Notes: If string is empty, we return a number with zero as value.

152.30.10  NumericWithUInt64(value as UInt64) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new number with the given unsigned integer value.

152.30.11  Properties

152.30.12  CurrencyValue as Currency

MBS SQL Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The currency value.
Example:
// test code for currency
dim c1 as Currency = 12345678.
dim c2 as Currency = 1234567.8
dim c3 as Currency = 123456.78
dim c4 as Currency = 12345.678
dim c5 as Currency = 1234.5678
dim c6 as Currency = 123.45678

dim n1 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c1)
dim n2 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c2)
dim n3 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c3)
dim n4 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c4)
dim n5 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c5)
dim n6 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c6)

dim s1 as string = n1.StringValue
dim s2 as string = n2.StringValue
dim s3 as string = n3.StringValue
dim s4 as string = n4.StringValue
dim s5 as string = n5.StringValue
dim s6 as string = n6.StringValue

dim d1 as Double = n1.DoubleValue
dim d2 as Double = n2.DoubleValue
dim d3 as Double = n3.DoubleValue
dim d4 as Double = n4.DoubleValue
dim d5 as Double = n5.DoubleValue
dim d6 as Double = n6.DoubleValue

dim x1 as Currency = n1.CurrencyValue
dim x2 as Currency = n2.CurrencyValue
dim x3 as Currency = n3.CurrencyValue
dim x4 as Currency = n4.CurrencyValue
dim x5 as Currency = n5.CurrencyValue
dim x6 as Currency = n6.CurrencyValue

// check for errors
if x1<>c1 then break
if x2<>c2 then break
if x3<>c3 then break
if x4<>c4 then break
if x5<>c5 then break
if x6<>c6 then break

if x1*10000 <> round(d1 * 10000) then Break
if x2*10000 <> round(d2 * 10000) then Break
if x3*10000 <> round(d3 * 10000) then Break
if x4*10000 <> round(d4 * 10000) then Break
if x5*10000 <> round(d5 * 10000) then Break
if x6*10000 <> round(d6 * 10000) then Break

Break // if no break before, it’s okay.

**Notes:** (Read and Write property)

**152.30.13 DoubleValue as Double**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The double value for this number.  
**Notes:** (Read and Write property)

**152.30.14 Int64Value as Int64**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The number value as an int64.  
**Notes:** (Read and Write property)

**152.30.15 precision as Integer**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The maximum number of digits in base 10.  
**Notes:** (Read only property)

**152.30.16 scale as Integer**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The number of digits to the right of the decimal point.  
**Notes:** (Read only property)

**152.30.17 sign as Integer**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The sign: 1 for positive numbers, 0 for negative numbers.
152.30.18  **StringValue as string**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The string value of this number.
**Notes:** (Read and Write property)

152.30.19  **UInt64Value as UInt64**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The number value as an uint64.
**Notes:** (Read and Write property)
152.31  class SQLParamMBS

152.31.1  class SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The SQL class for parameters. **Notes:** Subclass of the SQLValueMBS class.

152.31.2  Methods

152.31.3  ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Long or Lob data reading mode. **Notes:**

SQLAPI++ Library provides two ways to read Long or BLOB(CLOB) object’s value (usually SQLField or SQLParam objects):

1. reading of Long or Lob data at once into an internal buffer (like ordinary string or binary values);
2. piecewise reading of Long or Lob data using user defined callback.

kLongOrLobReaderDefault reading mode used by default.

If you want to control piecewise reading of Long or BLOB(CLOB) data you should set LongOrLobReaderMode and use kLongOrLobReaderManual reading mode for Long or BLOB(CLOB) parameters or fields you want to process with your data consumer. After that each fetch will skip reading Long and BLOB(CLOB) parameters that you set to be read manually. To read field or parameter defined to be read manually you should call ReadLongOrLob method for each of them after the fetch. ReadLongOrLob method will repeatedly call the data consumer Write event.

See also:

- 152.31.4 ReadLongOrLob(toFile as FolderItem)
- 152.31.5 ReadLongOrLob(toStream as Writeable)

152.31.4  ReadLongOrLob(toFile as FolderItem)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Starts reading of Long or BLOB(CLOB) value to the given file. **Example:**

```javascript
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
```
```vbnet
dim Param as SQLParamMBS = cmd.Param("image")
    // read blob content to binarystream
Param.ReadLongOrLob(f)
```

**Notes:** May raise IOExceptions if things go wrong.
See also:

- 152.31.3 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 18959
- 152.31.5 ReadLongOrLob(toStream as Writeable) 18960

### 152.31.5 ReadLongOrLob(toStream as Writeable)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Starts reading of Long or BLob(CLob) value to the given writeable stream.

**Example:**
```vbnet
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim b as BinaryStream = BinaryStream.Create(f, true)
dim param as SQLParamMBS = cmd.param("image")
    // read blob content to binarystream
param.ReadLongOrLob(b)
```

**Notes:** This allows you to read in chunks the data to a stream, e.g. binarystream, textoutputstream or socket.
See also:

- 152.31.3 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 18959
- 152.31.4 ReadLongOrLob(toFile as FolderItem) 18959

### 152.31.6 Properties

#### 152.31.7 DirType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The direction type of parameter (input, output, etc.).

**Notes:**
Use the kParamDirType* constants.
Usually the Library automatically detects parameter’s direction type and implicitly creates an appropriate SAParam object. But not all of DBMS clients/servers provide complete parameters information. In that situation programmer need to describe parameter’s direction type explicitly. See Server specific notes for details.

http://www.sqlapi.com/OnLineDoc/Param_ParamDirType.html
(Read and Write property)

152.31.8 Name as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of the parameter.
**Notes:** (Read only property)

152.31.9 NativeType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The native type code of the parameter.
**Notes:** (Read and Write property)

152.31.10 Precision as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The precision of the parameter value (the total number of allowable digits).
**Notes:** (Read and Write property)

152.31.11 Scale as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The scale of the parameter value (the number of digits to the right of the decimal point).
**Notes:** (Read and Write property)

152.31.12 Size as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parameter’s data size.
**Notes:** (Read and Write property)
152.31.13  Type as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The parameter’s data type.
**Notes:**
See the kDataType constants.
(Read and Write property)

152.31.14  Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The string value of a specific parameter option.
**Notes:**
see also:
(Read and Write computed property)

152.31.15  Constants

152.31.16  kParamDirTypeInput=0

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the parameter direction type constants.
**Notes:** Input parameter.

152.31.17  kParamDirTypeInputOutput=1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the parameter direction type constants.
**Notes:** Input/output parameter.

152.31.18  kParamDirTypeOutput=2

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the parameter direction type constants.
**Notes:** Output parameter.
MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the parameter direction type constants. **Notes:** Returning parameter.
152.32 class SQLPositionMBS

152.32.1 class SQLPositionMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for a position value.

152.32.2 Methods

152.32.3 Constructor(withID as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new Position value with an ID.
See also:

- 152.32.4 Constructor(withName as string)

152.32.4 Constructor(withName as string)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new Position value with a name.
See also:

- 152.32.3 Constructor(withID as Integer)
152.33. **CLASS SQLPREPAREDSTATEMENTMBS**

152.33  **class SQLPreparedStatementMBS**

MBS SQL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for prepared statements if you work with SQLDatabaseMBS class.

**Notes:**
If you work with SQLCommandMBS class, you can set parameters there directly.

For the SQL string you number parameters with colon and number. Like this: :1, :2, :3.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

152.33.2  **Methods**

152.33.3  **Bind(name As String, value as Variant)**

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Defines the value for one parameter.

**Example:**
```plaintext
dim db as SQLDatabaseMBS // your db connection
dim sql as string = "Insert into test_tbl(fid, fvarchar20) values(:fid, :fvarchar20)"
dim v as Variant = db.Prepare(sql)
dim p as SQLPreparedStatementMBS = v

p.BindType("fid", SQLPreparedStatementMBS.kTypeLong)
p.BindType("fvarchar20", SQLPreparedStatementMBS.kTypeString)
p.Bind("fid", 2345)
p.Bind("fvarchar20", "Hello World by name")
p.SQLExecute
```

**Notes:**
Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB).
Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

See also:
152.33.4  Bind(name As String, value as Variant, type as Integer)

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Defines one parameter with value and type.

**Example:**
```
dim db as SQLDatabaseMBS // your db connection
dim sql as string = "Insert into test_tbl(fid, fvarchar20) values(:fid, :fvarchar20)"
dim v as Variant = db.Prepare(sql)
dim p as SQLPreparedStatementMBS = v

p.Bind("fid", 2345, SQLPreparedStatementMBS.kTypeLong)
p.Bind("fvarchar20", "Hello World by name", SQLPreparedStatementMBS.kTypeString)
```

**p.SQLExecute**

**Notes:**
Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value. Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With plugin version 16.4 and newer binding type is optional. In that case the type is determined from the value type.

See also:

- 152.33.3 Bind(name As String, value as Variant)
- 152.33.5 Bind(Values as Dictionary)
- 152.33.6 Bind(values() as Variant)
- 152.33.7 Bind(zeroBasedIndex as Integer, value as Variant)
- 152.33.8 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer)
152.33.5  **Bind(Values as Dictionary)**

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the parameters based on the keys and values in the dictionary.

**Example:**

```vba
' Get an insert command
   dim sql as string = "Insert into BlobTest(name, image) values (:name, :image)"
   dim p as SQLPreparedStatementMBS = db.Prepare(sql)

   ' Put parameter values in a dictionary
   dim d as new Dictionary
   d.Value(0) = "logo.jpg"
   d.Value("image") = jpegData

   ' Bind values and run it
   p.Bind(d)
   p.SQLExecute
```

**Notes:**

- The dictionary is saved to fill parameters later.
- Keys can be String, Text or numeric types. Text and String are used to pick parameters by name. Numeric values are used to pick parameter by index (zero based).
- MemoryBlock and Strings without text encoding are converted to byte values (BLOB).
- Texts and Strings with encoding are converted to text values.
- Raises exceptions if you pass anything which is not recognized.
- Other types are translated as good as possible.

- 152.33.4 Bind(name As String, value as Variant, type as Integer) 18966
- 152.33.6 Bind(values() as Variant) 18968
- 152.33.7 Bind(zeroBasedIndex as Integer, value as Variant) 18968
- 152.33.8 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 18969
152.33.6 Bind(values() as Variant)

MBS SQL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the value list with the given values.

**Notes:**
You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value. Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

- 152.33.7 Bind(zeroBasedIndex as Integer, value as Variant) 18968
- 152.33.8 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 18969

152.33.7 Bind(zeroBasedIndex as Integer, value as Variant)

MBS SQL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Defines the value for one parameter.

**Notes:**
You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value. Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

152.33. **CLASS SQLPREPAREDSTATEMENTMBS**

- 152.33.5 Bind(Values as Dictionary)  
- 152.33.6 Bind(values() as Variant)  
- 152.33.8 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer)

152.33.8 **Bind(zeroBasedIndex as Integer, value as Variant, type as Integer)**

MBS SQL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Defines one parameter with value and type.
**Notes:**
You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value. Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With plugin version 16.4 and newer binding type is optional. In that case the type is determined from the value type.

See also:
- 152.33.3 Bind(name As String, value as Variant)  
- 152.33.4 Bind(name As String, value as Variant, type as Integer)  
- 152.33.5 Bind(Values as Dictionary)  
- 152.33.6 Bind(values() as Variant)  
- 152.33.7 Bind(zeroBasedIndex as Integer, value as Variant)

152.33.9 **BindType(name As String, type as Integer)**

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Defines the type of one value.
**Example:**
```vbnet
dim db as SQLDatabaseMBS '// your db connection
dim sql as string = "Insert into test_tbl(fid, fvarchar20) values(:fid, :fvarchar20)"
dim v as Variant = db.Prepare(sql)
dim p as SQLPreparedStatementMBS = v
```
p.BindType("fid", SQLPreparedStatementMBS.kTypeLong)
p.BindType("fvarchar20", SQLPreparedStatementMBS.kTypeString)
p.Bind("fid", 2345)
p.Bind("fvarchar20", "Hello World by name")
p.SQLExecute

Notes: With plugin version 16.4 and newer binding type is optional. In that case the type is determined from the value type.
See also:

- 152.33.10 BindType(types() as Integer) 18970
- 152.33.11 BindType(zeroBasedIndex as Integer, type as Integer) 18970

152.33.10  BindType(types() as Integer)

MBS SQL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Defines the types for all values.

Notes:
You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

With plugin version 16.4 and newer binding type is optional. In that case the type is determined from the value type.
See also:

- 152.33.9 BindType(name As String, type as Integer) 18969
- 152.33.11 BindType(zeroBasedIndex as Integer, type as Integer) 18970

152.33.11  BindType(zeroBasedIndex as Integer, type as Integer)

MBS SQL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Defines the type of one value.

Notes:
You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

With plugin version 16.4 and newer binding type is optional. In that case the type is determined from the value type.
See also:
152.33. **CLASS SQLPREPARESTATEMENTMBS**

- 152.33.9 **BindType(name As String, type as Integer)**
- 152.33.10 **BindType(types() as Integer)**

152.33.12 **Clear**

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Cleans all parameters for reusing the SQL Prepared statement.

152.33.13 **Constructor**

MBS SQL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

**Notes:**
This constructor makes sure you don’t create useless SQLPreparedStatementMBS objects by error. The only way to create an object is to use the prepare method in the database class.
This constructor is private to make sure you don’t create an object from this class by error. Please use designated functions to create objects.

152.33.14 **SQLExecute(ParamArray bindItems as Variant)**

MBS SQL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Runs the SQL command with the given parameters.

**Notes:**
You can decide whether you pass values here or call Bind methods.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

152.33.15 **SQLExecuteMT(ParamArray bindItems as Variant)**

MBS SQL Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Runs the SQL command with the given parameters.

**Notes:**
You can decide whether you pass values here or call Bind methods.
The work is performed on an extra thread, so this function can yield time to other Xojo (Real Studio) threads. And it calls the Working event regularly. For best user experience run this command on a Xojo (Real Studio) thread, so your GUI stays responsive.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

152.33.16 SQLSelect(ParamArray bindItems as Variant) As RecordSet

MBS SQL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the query with the given parameters.

**Notes:**
Returns the recordset object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Real Studio includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

152.33.17 SQLSelectMT(ParamArray bindItems as Variant) As RecordSet

MBS SQL Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the query with the given parameters.

**Notes:**
Returns the recordset object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Real Studio includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.
The work is performed on an extra thread, so this function can yield time to other Xojo (Real Studio) threads. And it calles the Working event regularly. For best user experience run this command on a Xojo (Real Studio) thread, so your GUI stays responsive.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

### 152.33.18 Properties

#### 152.33.19 Scrollable as Boolean

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the plugin will ask for a scrollable recordset when doing SQLSelect. **Notes:** Since plugin version 15.0, Scrollable is false by default. (Read and Write property)

### 152.33.20 SQL as String

MBS SQL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The SQL command for this prepared statement. **Notes:** (Read and Write property)

### 152.33.21 Constants

#### 152.33.22 kTypeBlob = 14

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants. **Notes:** Binary large Object. Pass a string or memoryblock.

#### 152.33.23 kTypeBool = 1

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants. **Notes:** Boolean
152.33.24  kTypeBytes = 11

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
**Notes:**
a binary string.
(which is a string without text encoding)

152.33.25  kTypeClob = 15

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
**Notes:** Character Large Object

152.33.26  kTypeDateTime = 8

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
**Notes:** Date and/or Time.

152.33.27  kTypeDouble = 6

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
**Notes:** double float value.

152.33.28  kTypeInterval = 9

MBS SQL Plugin, Plugin Version: 13.5. **Function:** One of the data type constants.
**Notes:**
An interval.
Please pass SQLIntervalMBS in the variant. If the variant contains anything else, the plugin will pass nil value.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.
152.33. **CLASS SQLPREPAREDSTATEMENTMBS**

152.33.29  **kTypeLong = 4**

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants. **Notes:** signed 32 bit integer

152.33.30  **kTypeLongBinary = 12**

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants. **Notes:** Long binary.

152.33.31  **kTypeLongChar = 13**

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants. **Notes:** Long string.

152.33.32  **kTypeNull = 99**

MBS SQL Plugin, Plugin Version: 14.3. **Function:** One of the data type constants. **Notes:** NULL value

152.33.33  **kTypeNumeric = 7**

MBS SQL Plugin, Plugin Version: 13.5. **Function:** One of the data type constants. **Notes:**

A number (Int64 or double). This can be used for Int64 or Double values. Depending of the type of number in the variant, the plugin will either make an Int64 or a double internally.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

152.33.34  **kTypeShort = 2**

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants. **Notes:** signed 16 bit integer
152.33.35  kTypeString  =  10
MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
**Notes:** String

152.33.36  kTypeULong  =  5
MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
**Notes:** unsigned 32 bit integer

152.33.37  kTypeUnknown  =  0
MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
**Notes:** unknown type

152.33.38  kTypeUShort  =  3
MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
**Notes:** unsigned 16 bit integer
152.34. CLASS SQLSTRINGMBS

152.34 class SQLStringMBS

152.34.1 class SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for strings in this plugin.

**Example:**

```vbscript
dim s as new SQLStringMBS("Hello ")
MsgBox "Characters: "+str(s.GetLength)+" Bytes: "+str(s.GetBinaryLength)

dim a as string= s.CopyBinaryData
dim b as string= s.CopyText

MsgBox a // RB shows garbage as it tries to display bytes as UTF8 which does not work
MsgBox b // displays correct
```

**Notes:** A string can be text (with text encoding) or bytes (raw binary data).

152.34.2 Methods

152.34.3 Compare(text as SQLStringMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Compares this string object with another string.

**Notes:**
Function performs a case-sensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical, <0 if this string object is less than text, or >0 if this string object is greater than text.

See also:

- 152.34.4 Compare(text as string) as Integer

152.34.4 Compare(text as string) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Compares this string object with another string.

**Notes:**
Function performs a case-sensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical, <0 if this string object is less than text, or >0 if this string object is greater than text.

See also:

- 152.34.3 Compare(text as SQLStringMBS) as Integer

152.34.5 CompareNoCase(text as SQLStringMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compares this string object with another string.

**Notes:**

Function performs a case-insensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical (ignoring case), <0 if this string object is less than text (ignoring case), or >0 if this string object is greater than text (ignoring case).

See also:

- 152.34.6 CompareNoCase(text as string) as Integer

152.34.6 CompareNoCase(text as string) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compares this string object with another string.

**Notes:**

Function performs a case-insensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical (ignoring case), <0 if this string object is less than text (ignoring case), or >0 if this string object is greater than text (ignoring case).

See also:

- 152.34.5 CompareNoCase(text as SQLStringMBS) as Integer

152.34.7 Constructor

See also:

- 152.34.8 Constructor(Data as MemoryBlock)
152.34. **CLASS SQLSTRINGMBS**

- 152.34.9 Constructor(Data as string, isText as Boolean = True)
- 152.34.10 Constructor(other as SQLStringMBS)

152.34.8 **Constructor(Data as MemoryBlock)**

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new string object with data, e.g. for blob.
See also:
- 152.34.7 Constructor
- 152.34.9 Constructor(Data as string, isText as Boolean = True)
- 152.34.10 Constructor(other as SQLStringMBS)

152.34.9 **Constructor(Data as string, isText as Boolean = True)**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new string object with data or text copied from the data string.
**Notes:** If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.
See also:
- 152.34.7 Constructor
- 152.34.8 Constructor(Data as MemoryBlock)
- 152.34.10 Constructor(other as SQLStringMBS)

152.34.10 **Constructor(other as SQLStringMBS)**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new string object with data copied from the other string object.
See also:
- 152.34.7 Constructor
- 152.34.8 Constructor(Data as MemoryBlock)
- 152.34.9 Constructor(Data as string, isText as Boolean = True)

152.34.11 **CopyBinaryData as string**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Copies the bytes from the internal buffer ignoring any text encoding.
152.34.12 CopyText as string
MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the characters of this string as text. **Notes:** Text encoding conversion may happen.

152.34.13 Empty
MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Forces a string to have 0 length.

152.34.14 GetBinaryLength as UInt32
MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a count of the bytes in the binary data buffer. **Deprecated:** This item is deprecated and should no longer be used. You can use BinaryLength instead. **Notes:** Deprecated. Please use BinaryLength property.

152.34.15 GetLength as UInt32
MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of characters in a SAString object. **Deprecated:** This item is deprecated and should no longer be used. You can use Length instead. **Notes:** Deprecated. Please use Length property.
For multibyte character sets, GetLength counts each 8-bit character; that is, a lead and trail byte in one multibyte character are counted as two bytes.

152.34.16 Left(count as Integer) as SQLStringMBS
MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Extracts the left part of a string.

152.34.17 MakeLower
MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes all characters in the string to lower case.
152.34. CLASS SQLSTRINGMBS

152.34.18 MakeUpper

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes all characters in the string to upper case.

152.34.19 Mid(first as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Extracts the middle part of a string.
**Notes:** first: The zero-based index of the first character in this string object that is to be included in the extracted substring.
See also:

- 152.34.20 Mid(first as Integer, Count as Integer) as SQLStringMBS

152.34.20 Mid(first as Integer, Count as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Extracts the middle part of a string.
**Notes:**
first: The zero-based index of the first character in this string object that is to be included in the extracted substring.
count: The number of characters to extract from this string object. If this parameter is not supplied, then the remainder of the string is extracted.
See also:

- 152.34.19 Mid(first as Integer) as SQLStringMBS

152.34.21 Operator_Convert as string

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert operation for assignment to string.
See also:

- 152.34.22 Operator_Convert(text as string)

152.34.22 Operator_Convert(text as string)

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert operation for assigning text string.
See also:
152.34.23  Right(count as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Extracts the right part of a string.

152.34.24  TrimLeft

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Trim leading whitespace characters from the string.

152.34.25  TrimRight

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Trim trailing whitespace characters from the string.

152.34.26  Properties

152.34.27  BinaryLength as UInt32

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a count of the bytes in the binary data buffer.
**Notes:** (Read only property)

152.34.28  DebugText as String

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Text content for debugging.
**Notes:**
We show up to 1000 characters here for debugger.
(Read only property)
152.34. CLASS SQLSTRINGMBS

152.34.29  IsEmpty as boolean

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
Tests whether a String object contains no characters.
**Notes:**
Returns true if length is zero.
(Read only property)

152.34.30  Length as UInt32

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
Returns the number of characters in a SAString object.
**Notes:**
For multibyte character sets, GetLength counts each 8-bit character; that is, a lead and trail byte in one
multibyte character are counted as two bytes.
(Read only property)
152.35 class SQLUnsupportedExceptionMBS

152.35.1 class SQLUnsupportedExceptionMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for an exception to report that the function is not supported on this platform. **Notes:** This one raises only if the plugin is compiled for Mac OS Classic. Subclass of the RuntimeException class.
152.36. CLASS SQLVALUEMBS

152.36   class SQLValueMBS

152.36.1   class SQLValueMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The SQL class for mutable values.
**Notes:** Subclass of the SQLValueReadMBS class.

152.36.2   Methods

152.36.3   Constructor(DataType as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new empty value object with the given data type.

152.36.4   setAsBlob(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets parameter’s value as BLOB data using a memoryblock.
**See also:**
- 152.36.5 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32)
- 152.36.6 setAsBlob(data as SQLStringMBS)
- 152.36.7 setAsBlob(data as string)
- 152.36.8 setAsBlob(file as folderItem)
- 152.36.9 setAsBlob(stream as Readable)

152.36.5   setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets parameter’s value as BLOB data (SQLString)
**Notes:**
When you call the SQLCommandMBS.Execute method all input parameters are bound with their values,
including Long and BLOB(CLob) parameters.
That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically
use the most appropriate size for current DBMS.

• 152.36.4 setAsBlob(data as MemoryBlock) 18985
• 152.36.6 setAsBlob(data as SQLStringMBS) 18986
• 152.36.7 setAsBlob(data as string) 18986
• 152.36.8 setAsBlob(file as folderItem) 18987
• 152.36.9 setAsBlob(stream as Readable) 18987

152.36.6 setAsBlob(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets parameter’s value as BLOB data (SQLString)
See also:

• 152.36.4 setAsBlob(data as MemoryBlock) 18985
• 152.36.5 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 18985
• 152.36.7 setAsBlob(data as string) 18986
• 152.36.8 setAsBlob(file as folderItem) 18987
• 152.36.9 setAsBlob(stream as Readable) 18987

152.36.7 setAsBlob(data as string)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets parameter’s value as BLOB data (SQLString)
**Example:**

dim c as SQLCommandMBS // your command object
dim JPEGData as string // some data

c.Param("imageData").setAsBlob JPEGData

See also:

• 152.36.4 setAsBlob(data as MemoryBlock) 18985
• 152.36.5 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 18985
• 152.36.6 setAsBlob(data as SQLStringMBS) 18986
• 152.36.8 setAsBlob(file as folderItem) 18987
• 152.36.9 setAsBlob(stream as Readable) 18987
**152.36.8 setAsBlob(file as folderItem)**

**Example:**

```dim cmd as SQLCommandMBS  // your command object```

```// pass folderitem to BLOB field```
```dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")```
```cmd.Param("image").setAsBlob(f)```

**Notes:**
The file will be read later when statement is executed.
May not work when using preemptive threads.

See also:

- 152.36.4 setAsBlob(data as MemoryBlock)
- 152.36.5 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32)
- 152.36.6 setAsBlob(data as SQLStringMBS)
- 152.36.7 setAsBlob(data as string)
- 152.36.9 setAsBlob(stream as Readable)

**152.36.9 setAsBlob(stream as Readable)**

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets field with content of stream.

**Example:**

```dim cmd as SQLCommandMBS  // your command object```

```// pass BinaryStream to BLOB field```
```dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")```
```dim b as BinaryStream = BinaryStream.open(f)```
```cmd.Param("image").setAsBlob(b)```

**Notes:**
The stream will be read later when statement is executed.
May not work when using preemptive threads.

See also:
152.36.10  setAsBool(value as boolean)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets parameter’s value as bool data.

152.36.11  setAsBytes(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets parameter’s value as binary data from memoryblock.
See also:

- 152.36.12 setAsBytes(data as string) 18988
- 152.36.13 setAsBytes(value as SQLBytesMBS) 18989
- 152.36.14 setAsBytes(value as SQLStringMBS) 18989

152.36.12  setAsBytes(data as string)

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set the value to be bytes with content of given string.
**Notes:**
For BLOB fields or parameters.
Same as the other variant, but avoids creating extra SQLStringMBS object.
See also:

- 152.36.11 setAsBytes(data as MemoryBlock) 18988
- 152.36.13 setAsBytes(value as SQLBytesMBS) 18989

- 152.36.18 setAsClob(stream as Readable) 18990
- 152.36.19 setAsClob(text as SQLStringMBS) 18991
- 152.36.20 setAsClob(text as string) 18991

152.36.17  setAsClob(file as folderItem)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets field with content of file.
**Notes:**
The file will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 152.36.15 setAsClob(data as MemoryBlock) 18989
- 152.36.16 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 18990
- 152.36.18 setAsClob(stream as Readable) 18990
- 152.36.19 setAsClob(text as SQLStringMBS) 18991
- 152.36.20 setAsClob(text as string) 18991

152.36.18  setAsClob(stream as Readable)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets field with content of stream.
**Notes:**
The stream will be read later when statement is executed. May not work when using preemptive threads. See also:

- 152.36.15 setAsClob(data as MemoryBlock)
- 152.36.16 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32)
- 152.36.17 setAsClob(file as folderItem)
- 152.36.18 setAsClob(stream as Readable)
- 152.36.19 setAsClob(text as SQLStringMBS)
- 152.36.20 setAsClob(text as string)

**152.36.19 setAsClob(text as SQLStringMBS)**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter’s value as CLOB data (SQLString) See also:

- 152.36.15 setAsClob(data as MemoryBlock)
- 152.36.16 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32)
- 152.36.17 setAsClob(file as folderItem)
- 152.36.18 setAsClob(stream as Readable)
- 152.36.20 setAsClob(text as string)

**152.36.20 setAsClob(text as string)**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter’s value as CLOB data (SQLString) See also:

- 152.36.15 setAsClob(data as MemoryBlock)
- 152.36.16 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32)
- 152.36.17 setAsClob(file as folderItem)
- 152.36.18 setAsClob(stream as Readable)
- 152.36.19 setAsClob(text as SQLStringMBS)
### 152.36.21 setAsDate(value as date)

MBS SQL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter’s value with a date.

**Example:**

```plaintext
dim cmd as SQLCommandMBS // your command object
dim d as new date(2012,12,24,16,0,0) // some date
cmd.Param(3).setAsDate(d) // set third parameter
```

**Notes:** Same as setAsDateTime, but here we take a date object to make it more convenient.

### 152.36.22 setAsDateTime(value as SQLDateTimeMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter’s value as SQLDateTime data.

### 152.36.23 setAsDefault

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Forces to use the default parameter’s value.

**Notes:**

Forces DBMS API to use the default parameter value as the input value for an input or input/output parameter in a procedure.

If DBMS API does not support the concept of "default parameter values" in stored procedures, this setting will be ignored.

If you set this flag for the parameter that doesn’t have a default value, the effect is DBMS defined (e.g. an error can be returned or NULL can be bound).

To cancel using the default parameter value you should call any other SQLValue::setAs... method to bind a parameter value.

To check whether this flag is set or not use isDefault method.
152.36. **CLASS SQLVALUEMBS**

152.36.24  **setAsDouble(value as Double)**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter’s value as Double data.

152.36.25  **setAsInterval(value as SQLIntervalMBS)**

152.36.26  **setAsLong(value as Int32)**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter’s value as long data.

152.36.27  **setAsLongBinary(data as MemoryBlock)**

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter’s value as long binary data from memoryblock. See also:

- 152.36.28 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 18993
- 152.36.29 setAsLongBinary(data as SQLStringMBS) 18994
- 152.36.30 setAsLongBinary(data as string) 18994
- 152.36.31 setAsLongBinary(file as folderItem) 18995
- 152.36.32 setAsLongBinary(stream as Readable) 18995

152.36.28  **setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32)**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter’s value as long binary data (SQLString) **Notes:**

When you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters. That is the time when the data provider Read event runs to get the values in the block size you specify.
The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.

- 152.36.36 setAsLongChar(stream as Readable) 18997
- 152.36.37 setAsLongChar(text as SQLStringMBS) 18997
152.36.39 setAsNull

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets value to null.

152.36.40 setAsNumeric(value as SQLNumericMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as SQLNumeric data.

152.36.41 setAsShort(value as Int16)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as short data.

152.36.42 setAsString(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Private method. **Notes:** This method should make sure you don’t accidentally a memoryblock instead of a text. See also:

- 152.36.43 setAsString(value as SQLStringMBS)
- 152.36.44 setAsString(value as string)

152.36.43 setAsString(value as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter’s value as character string data (SQLString) See also:

- 152.36.42 setAsString(data as MemoryBlock)
- 152.36.44 setAsString(value as string)

152.36.44 setAsString(value as string)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter’s value as character string data.
152.36. CLASS SQLVALUEMBS

Notes: Same as setAsString, but for your convenience with a REALbasic string instead of a SQLStringMBS object.
See also:

• 152.36.42 setAsString(data as MemoryBlock) 18998
• 152.36.43 setAsString(value as SQLStringMBS) 18998

152.36.45 setAsText(value as text)

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Sets the value using text value.
Notes: Available on Xojo 2015 and newer.

152.36.46 setAsULong(value as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Sets parameter’s value as unsigned long data.

152.36.47 setAsUnknown

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Sets parameter’s type as unknown.

152.36.48 setAsUShort(value as UInt16)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Sets parameter’s value as unsigned short data.
Notes: Sets value as unsigned short data.

152.36.49 setAsValueRead(value as SQLValueReadMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Sets parameter’s value from SQLParam or SQLField objects.
Notes: This method allows using SQLField or SQLParam object received from one SQL statement as a parameter for another SQL statement.
152.36.50 setVariant(value as Variant)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the value based on a variant.

**Example:**

dim con as SQLConnectionMBS // your connection
dim pic as picture // some picture

    // get picture data
dim jpegData as MemoryBlock = pic.GetData(Picture.FormatJPEG, 80)

    // get a command for an Insert command
dim sql as string = "Insert into BlobTest(name, image) values (:name, :image)"
dim cmd as new SQLCommandMBS(con, sql)

    // set values by variant
    cmd.Param("name").setVariant "logo.jpg"
    cmd.Param("image").setVariant jpegData

    // do the insert
    cmd.Execute

**Notes:**
MemoryBlock and Strings without text encoding are converted to byte values (BLOB).
Texts and Strings with encoding are converted to text values.
Raises exceptions if you pass anything which is not recognized.
Other types are translated as good as possible.

152.36.51 Properties

152.36.52 isDefault as boolean

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the plugin has been forced to use parameter’s default value by calling setAsDefault method; false otherwise.

**Notes:** (Read only property)
152.37. CLASS SQLVALUEREADMBS

152.37 class SQLValueReadMBS

152.37.1 class SQLValueReadMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class used in the SQL Plugin for value objects which can be read.

152.37.2 Methods

152.37.3 asBLob as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value as BLob (SQLString) data. **Notes:** If the value of current object is NULL, asBLob method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value’s type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLOB (kDataTypeCLOB), asBLob method returns the object’s value as SQLString object.

If the value’s type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value’s type of SQLValueRead object.

152.37.4 asBLobMemory as MemoryBlock

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value as BLob data in a memoryblock.

152.37.5 asBLobString as String

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value as BLob data in a string.
152.37.6 \textit{asBytes as SQLStringMBS}

\textbf{Notes:}

If the value of current object is NULL, asBytes method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value’s type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLOB (kDataTypeBLOB) or CLOB (kDataTypeCLOB), asBytes method returns the object’s value as SQLString object.

If the value’s type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric) or date-time (kDataTypeDateTime), asBytes method returns a block of data with size sizeof(value’s type) as SQLString object.

If the value’s type of current object is cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value’s type of SQLValueRead object.

152.37.7 \textit{asCLOB as SQLStringMBS}

\textbf{Notes:}

If the value of current object is NULL, asCLOB method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value’s type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLOB (kDataTypeBLOB) or CLOB (kDataTypeCLOB), asCLOB method returns the object’s value as SQLString object.

If the value’s type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value’s type of SQLValueRead object.
152.37. CLASS SQLVALUEREADMBS

152.37.8 asDate as Date

MBS SQL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value as date.

**Example:**
```vbnet
dim cmd as SQLCommandMBS // your command object
dim d as date = cmd.Field("mydate").asDate // read date value
```

**Notes:**
If the value of current object is NULL, asDate method returns an empty date object. Use isNull method to make sure if the value is NULL or not.

If the value’s type of current object is kDataTypeDateTime, asDate method returns date object.

If the value’s type of current object is any data type except kDataTypeDateTime, the result is undefined and debug version asserts.

Use DataType method to get the value’s type of SQLValueRead object.

152.37.9 asDateTime as SQLDateTimeMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value as SQLDateTimeMBS object.

**Notes:**
If the value of current object is NULL, asDateTime method returns an empty SQLDateTime object. Use isNull method to make sure if the value is NULL or not.

If the value’s type of current object is kDataTypeDateTime, asDateTime method returns SQLDateTime object.

If the value’s type of current object is any data type except kDataTypeDateTime, the result is undefined and debug version asserts.

Use DataType method to get the value’s type of SQLValueRead object.
152.37.10  asInterval as SQLIntervalMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value as interval (SQLIntervalMBS).

152.37.11  asLongBinary as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value as long binary (SQLString) data. **Notes:**

If the value of current object is NULL, asLongBinary method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value’s type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLOB (kDataTypeBLOB) or CLOB (kDataTypeCLOB), asLongBinary method returns the object’s value as SQLString object.

If the value’s type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value’s type of SQLValueRead object.

152.37.12  asLongChar as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value as long character (SQLString) data. **Notes:**

If the value of current object is NULL, asLongChar method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value’s type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLOB (kDataTypeBLOB) or CLOB (kDataTypeCLOB), asLongChar method returns the object’s value as SQLString object.

If the value’s type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.
Use `DataType` method to get the value’s type of `SQLValueRead` object.

**152.37.13 asNumeric as SQLNumericMBS**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value as SQLNumeric data.

**Notes:**

If the value of current object is NULL, `asNumeric` method returns 0. Use `isNull` method to make sure if the value is NULL or not.

If the value’s type of current object is exact numeric value (kDataTypeNumeric), `asNumeric` method returns the original value with no conversion.

If the value’s type of current object is bool (kDataTypeBool), short (kDataTypeShort), double (kDataTypeDouble) or long (kDataTypeLong), `asNumeric` method converts it to SQLNumeric.

If the value’s type of current object is string (kDataTypeString), `asNumeric` method tries to convert it from SQLChar* value. If the conversion is possible and correct, `asNumeric` converts to SQLNumeric from SQLChar* value. If conversion is incorrect `asNumeric` method throws an exception.

If the value’s type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use `DataType` method to get the value’s type of `SQLValueRead` object.

**152.37.14 asString as SQLStringMBS**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** returns the value as string (SQLString) data.

**Notes:**

If the value of current object is NULL, `asString` method returns an empty string. Use `isNull` method to make sure if the value is NULL or not.

If the value’s type of current object is bool (kDataTypeBool), `asString` method returns "true" or "false" string (SQLString object).

If the value’s type of current object is short (kDataTypeShort), `asString` method converts it to decimal string (SQLString object) like function printf("%hd", ...) does.
If the value’s type of current object is long (kDataTypeLong), asString method converts it to decimal string (SQLString object) like function printf("% ld", ...) does.

If the value’s type of current object is double (kDataTypeDouble), asString method converts it to decimal string (SQLString object) like function printf("% g", ...) does.

If the value’s type of current object is numeric (kDataTypeNumeric), asString method converts it to decimal string (SQLString object) without precision loss.

If the value’s type of current object is date-time (kDataTypeDateTime), asString method converts it to string (SQLString object) like function asctime(...) does.

If the value’s type of current object is string (kDataTypeString, kDataTypeLongChar, kDataTypeClob), asString method returns the original object’s value as SQLString object.

If the value’s type of current object is binary (kDataTypeBytes, kDataTypeLongBinary, kDataTypeBLOB), asString method converts it to hexadecimal string (SQLString object).

If the value’s type of current object is cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value’s type of SQLValueRead object. For numbers, this may give english decimal separator. For getting localized one, please use AsDoubleValue and use cstr() function.

### 152.37.15 Constructor(DataType as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new empty value object for the given data type. See also:

- 152.37.16 Constructor(value as SQLValueReadMBS)

### 152.37.16 Constructor(value as SQLValueReadMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new value object by copying the given one. See also:
152.37. **CLASS SQLVALUEREADMBS**

- 152.37.15 Constructor(DataType as Integer)

152.37.17 **Properties**

152.37.18 **asBool as boolean**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value of current object as bool data.

**Notes:**

- If the value of current object is NULL, asBool method returns false. Use isNull method to make sure if the value is NULL or not.

- If the value’s type of current object is bool (kDataTypeBool), asBool method returns the original value with no conversion.

- If the value’s type of current object is short (kDataTypeShort), long (kDataTypeLong) or double (kDataTypeDouble), asBool method converts it to bool data type. Conversion returns false if the value is 0; true otherwise.

- If the value’s type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value’s type of SQLValueRead object.

(Read only property)

152.37.19 **asDouble as Double**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** returns the value as Double data.

**Notes:**

- If the value of current object is NULL, asDouble method returns 0. Use isNull method to make sure if the value is NULL or not.

- If the value’s type of current object is double (kDataTypeDouble), asDouble method returns the original value with no conversion.

- If the value’s type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong) or numeric (kDataTypeNumeric), asDouble method converts it to double (kDataTypeDouble) data type.
If the value’s type of current object is string (kDataTypeString), asDouble method tries to convert it to double value. If the conversion is possible and correct, asDouble returns kDataTypeDouble value. If conversion is incorrect asDouble method throws an exception.

If the value’s type of current object is kDataTypeDateTime, asDouble method converts it to standard double representation. Days are represented by whole number increments starting with 30 December 1899, midnight as time zero. Hour values are expressed as the absolute value of the fractional part of the number. See SQLDateTime::operator double() for more details.

If the value’s type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value’s type of SQLValueRead object.
(Read only property)

152.37.20  asLong as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value as long data.

**Notes:**
If the value of current object is NULL, asLong method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value’s type of current object is long ( kDataTypeLong), asLong method returns the original value with no conversion.

If the value’s type of current object is bool (kDataTypeBool), short (kDataTypeShort), double (kDataTypeDouble) or numeric (kDataTypeNumeric), asLong method converts it to long data type. Note, that in this case the returned value can be truncated.

If the value’s type of current object is string (kDataTypeString), asLong method tries to convert it to long ( kDataTypeLong) value. If the conversion is possible and correct, asLong returns kDataTypeLong value. If conversion is incorrect asLong method throws an exception.

If the value’s type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value’s type of SQLValueRead object.
(Read only property)
152.37. **CLASS SQLVALUEREADMBS**

**152.37.21 asShort as Int16**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the value as short.

**Notes:**
- If the value of current object is NULL, asShort method returns 0. Use isNull method to make sure if the value is NULL or not.
- If the value’s type of current object is short, asShort method returns the original value with no conversion.
- If the value’s type of current object is bool (kDataTypeBool), long (kDataTypeLong), unsigned long (kDataTypeULong), double (kDataTypeDouble) or numeric (kDataTypeNumeric), asShort method converts it to short data type. Note, that in this case the returned value can be truncated.
- If the value’s type of current object is string (kDataTypeString), asShort method tries to convert it to short value. If the conversion is possible and correct, asShort returns the value. If conversion is incorrect asShort method throws an exception.
- If the value’s type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value’s type of SAValueRead object.
(Read only property)

**152.37.22 asStringValue as String**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the value string.

**Notes:**
- Same as asString but returns a REALbasic string.
- Please use SQLStringMBS and CopyBinaryData if the string you want to read is a BLOB value, else text encoding will change your data!
- For numbers, this may give english decimal separator. For getting localized one, please use AsDoubleValue and use cstr() function.
(Read only property)
152.37.23  asText as Text

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the value as text.
**Notes:**
Only intended for text, not for blobs.
Available on Xojo 2015 and newer.
(Read only property)

152.37.24  asULong as UInt32

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the value as an unsigned 32 bit integer value.
**Notes:**
If the value of current object is NULL, asULong method returns 0. Use isNull method to make sure if the
value is NULL or not.

If the value’s type of current object is long (kDataTypeLong), asULong method returns the original value
with no conversion.

If the value’s type of current object is bool (kDataTypeBool), short (kDataTypeShort), double (kDataType-
Double) or numeric (kDataTypeNumeric), asULong method converts it to long data type. Note, that in this
case the returned value can be truncated.

If the value’s type of current object is string (kDataTypeString), asULong method tries to convert it to long
( kDataTypeLong) value. If the conversion is possible and correct, asULong returns kDataTypeLong value.
If conversion is incorrect asULong method throws an exception.

If the value’s type of current object is any data type except the described above, the result is undefined and
debug version asserts.

Use DataType method to get the value’s type of SQLValueRead object.
(Read only property)

152.37.25  asUShort as UInt16

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the value as unsigned short.
**Notes:**
If the value of current object is NULL, asUShort method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value’s type of current object is unsigned short, asUShort method returns the original value with no conversion.

If the value’s type of current object is bool (kDataTypeBool), long (kDataTypeLong), unsigned long (kDataTypeULong), double (kDataTypeDouble) or numeric (kDataTypeNumeric), asUShort method converts it to unsigned short data type. Note, that in this case the returned value can be truncated.

If the value’s type of current object is string (kDataTypeString), asUShort method tries to convert it to unsigned short value. If the conversion is possible and correct, asUShort returns the value. If conversion is incorrect asUShort method throws an exception.

If the value’s type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value’s type of SAValueRead object. (Read only property)

**152.37.26  asVariant as Variant**

MBS SQL Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value as a variant. **Notes:** This is a convenience function. May return nil, date, number or string. BLOB strings without encoding and text strings as UTF-8. (Read only property)

**152.37.27  DataType as Integer**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns SAValueRead object’s data type. **Notes:** One of the kDataType constants. (Read only property)
152.37.28  **isNull as boolean**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the value of current object is NULL; otherwise false. **Notes:** (Read only property)

152.37.29  **LongOrLobReaderMode as Integer**

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Long or Lob data reading mode. **Notes:**

SQLAPI++ Library provides two ways to read Long or BLOB(CLOB) object’s value (usually SQLField or SQLParam objects):

1. reading of Long or Lob data at once into an internal buffer (like ordinary string or binary values);
2. piecewise reading of Long or Lob data using user defined callback.

kLongOrLobReaderDefault reading mode used by default.

If you want to control piecewise reading of Long or BLOB(CLOB) data you should set LongOrLobReaderMode and use kLongOrLobReaderManual reading mode for Long or BLOB(CLOB) parameters or fields you want to process with your data consumer. After that each fetch will skip reading Long and BLOB(CLOB) parameters that you set to be read manually. To read field or parameter defined to be read manually you should call ReadLongOrLob method for each of them after the fetch. ReadLongOrLob method will repeatedly call the data consumer Write event. **(Read and Write property)**

152.37.30  **Constants**

152.37.31  **kDataTypeBLOB=14**

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the field type constants  
**Notes:** Data type is BLOB data (SQLStringMBS).

152.37.32  **kDataTypeBool=1**

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the field type constants  
**Notes:** Data type is a boolean.
152.37.33  kDataTypeBytes=11

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the field type constants  
**Notes:** Data type is binary string (SQLStringMBS).

152.37.34  kDataTypeCLob=15

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the field type constants  
**Notes:** Data type is CLob data (SQLStringMBS).

152.37.35  kDataTypeCursor=16

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the field type constants  
**Notes:** Data type is Oracle REF CURSOR (SQLCommand).

152.37.36  kDataTypeDateTime=8

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the field type constants  
**Notes:** Data type is SQLDateTime.

152.37.37  kDataTypeDouble=6

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the field type constants  
**Notes:** This is a normal double variable.

152.37.38  kDataTypeInterval=9

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the field type constants  
**Notes:** Data type is an interval (SQLIntervalMBS).

152.37.39  kDataTypeLong=4

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the field type constants  
**Notes:** A 32 bit integer.
152.37.40  kDataTypeLongBinary=12

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the field type constants **Notes:** Data type is long binary data (SQLStringMBS).

152.37.41  kDataTypeLongChar=13

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the field type constants **Notes:** Data type is long character data (SQLStringMBS).

152.37.42  kDataTypeNumeric=7

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the field type constants **Notes:** Data type is SQLNumeric (used internally).

152.37.43  kDataTypeShort=2

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the field type constants **Notes:** Data type is a 16 bit signed integer.

152.37.44  kDataTypeSpecificToDBMS=17

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the field type constants **Notes:** Data type is server-specific.

152.37.45  kDataTypeString=10

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the field type constants **Notes:** Data type is character string (SQLString).

152.37.46  kDataTypeULong=5

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the field type constants **Notes:** Data type is a 32 bit unsigned integer.
152.37. CLASS SQLVALUEREADMBS

152.37.47 kDataTypeUnknown=0

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the field type constants
**Notes:** Data type is unknown.

152.37.48 kDataTypeUShort=3

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the field type constants
**Notes:** A 16 bit unsigned integer.

152.37.49 kLongOrLobReaderModeDefault=0

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the read modes.
**Notes:** Long or Lob(CLob) data reading mode is default (automatic).

152.37.50 kLongOrLobReaderModeManual=1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the read modes.
**Notes:** Long or Lob(CLob) data reading mode is manual.
Chapter 153

StandardAlert

153.1 class StandardAlertMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** This class offers you customized standard alert dialogs. **Deprecated:** This item is deprecated and should no longer be used. You can use NSAalertMBS for Cocoa projects instead. **Notes:**

You may create your own module around to give yourself some nice functions like this:

```vba
Sub ErrorAlert(error as string, explanation as string)
    dim s as StandardAlertMBS
    s=new StandardAlertMBS
    s.Type=2
    s.Error=error
    s.explanation=explanation
    s.UseDefaultDefaultButtonCaption=true
    s.whichisCancelButton=0
    s.whichisDefaultButton=1
    s.Moveable=true
    s.position=0
    s.run

    msgBox str(s.resultError)
End Sub
```

19017
153.1.2 Methods

153.1.3 close

MBS Util Plugin, Plugin Version: 4.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The destructor.

**Notes:**

There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.

(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

153.1.4 Run

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Shows the alert dialog.

153.1.5 Properties

153.1.6 CancelButtonCaption as String

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The button caption to use for the cancel button.

**Notes:**

On Mac OS Classic, a MacRoman encoded string is needed.

(Read and Write property)

153.1.7 DefaultButtonCaption as String

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The button caption to use for the default button.

**Notes:**

On Mac OS Classic, a MacRoman encoded string is needed.

(Read and Write property)

153.1.8 Error as string

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The error message.

**Notes:**
153.1. CLASS STANDARDALERTMBS

Limited to 255 characters.
On Mac OS Classic, a MacRoman encoded string is needed.
(Read and Write property)

153.1.9  **Explanation as string**

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The explanation to the error message.
**Notes:**
Limited to 255 characters.
On Mac OS Classic, a MacRoman encoded string is needed.
(Read and Write property)

153.1.10  **HelpButton as boolean**

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** whether the dialog should have an help button.
**Notes:** (Read and Write property)

153.1.11  **Moveable as boolean**

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** whether the dialog should be moveable.
**Notes:** (Read and Write property)

153.1.12  **OtherButtonCaption as String**

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The button caption to use for the third button.
**Example:**
```
dim s as StandardAlertMBS  // your StandardAlertMBS

If s.OtherButtonCaption="" and not s.UseDefaultOtherButtonCaption then
   ' no third button will be shown
end if
```

**Notes:**
On Mac OS Classic, a MacRoman encoded string is needed.
(Read and Write property)

153.1.13 Position as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Which position the dialog should have.

**Notes:**

Possible values:

0 Defaultposition
1 Center on main screen
2 Main screen
3 Stagger on main screen
4 Center on parent window
5 Parent Window
6 Stagger on parent window
7 Center on parent screen
8 Parent screen
9 Stagger on parent screen

(Read and Write property)

153.1.14 ResultButton as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The code for the button which was pressed.

**Notes:**

e.g. it may return 1 for ok and 2 for cancel if you have this two buttons.
(Read and Write property)

153.1.15 ResultError as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The error code of the Run method.

**Notes:**
StandardAlertMBS was introduced with Mac OS 8.1 so it may be not available. In this case the ResultError property has the value -1.

You get Error -50 if the properties of the object are out of range.
(Read and Write property)

153.1.16 Type as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Which type of alert.

**Notes:**
Possible values:

- 0  Stop
- 1  Note
- 2  Caution
- 3  Plain

(Read and Write property)

153.1.17 UseDefaultCancelButtonCaption as Boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** whether to use the default caption for the cancel button.

**Notes:** (Read and Write property)

153.1.18 UseDefaultDefaultButtonCaption as Boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** whether to use the default caption for the default button.

**Notes:** (Read and Write property)

153.1.19 UseDefaultOtherButtonCaption as Boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** whether to use the default caption for the button.

**Notes:**
Should show "Don’t save".
(Read and Write property)

153.1.20 WhichisCancelButton as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Which button should be the cancel button.

**Notes:**
Possible values on Mac:

- 0 Default
- 1 OK Button
- 2 Cancel Button
- 3 Other Button
- 4 Help Button

(Read and Write property)

153.1.21 WhichisDefaultButton as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Which button should be the default button.

**Notes:**
Possible values on Mac:

- 0 Default
- 1 OK Button
- 2 Cancel Button
- 3 Other Button
- 4 Help Button

On Windows it is the number of the default button.
(Read and Write property)
153.1.22  WindowsButtons as Integer

MBS Util Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Which buttons to show on Windows.

**Notes:**

Possible values:

- 0  OK
- 1  OK Cancel
- 2  Retry Cancel
- 3  Yes No
- 4  Yes No Cancel
- 5  Abort Retry Ignore

(Read and Write property)

153.1.23  WindowsTitle as string

MBS Util Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The title for the dialog on Win32.

**Notes:** (Read and Write property)
Chapter 154

Statusitem

154.1  class NSStatusBarButtonMBS

154.1.1  class NSStatusBarButtonMBS

MBS MacControls Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: StatusBarButtons are the visual representation of NSStatusItems, and are primarily displayed
on the right side of the menu bar.
Notes:
When a template image is set as the `c image property of the status bar button, it is rendered with the
correct menu bar style. This guarantees that the button will look correct in various button states and ap-
pearances (such as dark menu bar).

Available on Mac OS X 10.10 and newer.
Subclass of the NSButtonMBS class.

154.1.2  Methods

154.1.3  Available as boolean

MBS MacControls Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether this class is available.
Notes: Returns true on OS X 10.10.
154.1.4 Properties

154.1.5 appearsDisabled as Boolean

MBS MacControls Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether icon appears disabled.
Notes:
When true the status bar icon has a disabled/off appearance while still being functional, such as allowing
selection and actions. Defaults to false.
(Read and Write property)
154.2. class NSStatusItemMBS

154.2.1 class NSStatusItemMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: A class to handle a NSStatusItem which is a tiny little item in the menubar. Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

154.2.2 Methods

154.2.3 Available as boolean

154.2.4 Close

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The destructor. Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you. (e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

154.2.5 CreateMenu as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Creates a new menu. Notes: Handle is not 0 after this call was successfull.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that. See also:
154.2.6 CreateMenu(length as single) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates the StatusItem menu with the given width.

**Example:**

```plaintext
dim e as new NSStatusItemMBS
call e.CreateMenu(24) // best for a 16x16 picture
```

**Notes:**

**Constants:**

- NSVariableStatusItemLength = -1
- NSSquareStatusItemLength = -2

Other values between 0 and 10000 are used for the length. Bad values like 20000 will crash the application.

Handle is not 0 after this call was successful.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that.

See also:

- 154.2.5 CreateMenu as boolean

154.2.7 CreateMenuMiddle(length as single) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Same as CreateMenu but tries to place Statusitem on the right side.

**Deprecated:** This item is deprecated and should no longer be used. You can use CreateMenu instead.

**Notes:**

Uses private Apple API which may break on future Mac OS X versions. Returns false if Apple changes something in the future and the function we use will not be available. So if this function returns false, you can call CreateMenu to continue. Works on Mac OS X 10.4 to 10.6 and make the new statusitem being the rightmost one (left to Apples MenuItems).
154.2. **CLASS NSSTATUSITEMMBS**

Constants:

```plaintext
NSVariableStatusItemLength  -1
NSSquareStatusItemLength    -2
```

Other values between 0 and 10000 are used for the length. Bad values like 20000 will crash the application.

Handle is not 0 after this call was successful.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that.

Deprecated.

### 154.2.8 **CreateMenuRight**(length as single) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Same as CreateMenu but tries to place Statusitem on the right side. **Deprecated:** This item is deprecated and should no longer be used. You can use CreateMenu instead. **Notes:**

Uses private Apple API which may break on future Mac OS X versions. Returns false if Apple changes something in the future and the function we use will not be available. So if this function returns false, you can call CreateMenu to continue. Works on Mac OS X 10.4 to 10.6 and make the new statusitem being the rightmost one.

If you run this code after you used CreateMenuRight, the new menu will be right of all other statusitems:

```plaintext
dim sh as new Shell
sh.Execute "killall", "SystemUIServer"
```

Constants:

```plaintext
NSVariableStatusItemLength  -1
NSSquareStatusItemLength    -2
```

Other values between 0 and 10000 are used for the length. Bad values like 20000 will crash the application.
Handle is not 0 after this call was successful.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that.

Deprecated.

154.2.9 DrawStatusBarBackground(x as Double, y as Double, width as Double, height as Double, highlight as boolean)

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Draws the menu background pattern for a custom status-bar item in regular or highlight pattern. **Notes:**

- x, y, width and height: A rectangle defining the area of a custom status-bar item.
- highlight: true to draw the background pattern in the standard highlight pattern, false to not highlight the pattern.

You can use this method to help a custom status-bar item emulate the behavior of a standard item.

Available in Mac OS X v10.3 and later.

154.2.10 MenuIsVertical as boolean

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if the statusitem has a vertical orientation. **Example:**

MsgBox str(NSStatusItemMBS.MenuIsVertical)

154.2.11 MenuThickness as Double

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The thickness of the status bar. **Example:**

MsgBox str(NSStatusItemMBS.MenuThickness)
### 154.2.12 popUpStatusItemMenu(menu as NSMenuMBS)

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Displays a menu under a custom status bar item. **Notes:** You can use this method to cause a popup menu to appear under a custom status bar item when the user clicks the item. Note that view must exist (that is, it must not be nil).

### 154.2.13 SendActionOn(mode as Integer)

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the conditions on which action event is called. **Notes:**

mask is set with one or more of the following bit masks described in NSEvent Constants: NSLeftMouseDownMask, NSLeftMouseUpMask, NSLeftMouseDraggedMask, and NSPeriodicMask.

mode is set with one or more of the following bit masks:

```plaintext
const NSLeftMouseDownMask  = & h00002
const NSLeftMouseUpMask    = & H00004
const NSLeftMouseDraggedMask = & h00040
const NSPeriodicMask       = & h10000
```

### 154.2.14 Properties

#### 154.2.15 alternateImage as NSImageMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An alternate image to be displayed when a status bar item is highlighted. **Notes:** (Read and Write property)

#### 154.2.16 attributedTitle as NSAttributedStringMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attributed string that is displayed at the status item’s position in the status bar. **Notes:**
If an image is also set, the title appears to the right of the image.
(Read and Write property)

154.2.17 Button as Variant

MBS MacCocoa Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The button that is displayed in the status bar.
Notes:
Value is a NSStatusBarButtonMBS object. Returned as Variant to reduce plugin dependencies.
This is created automatically on the creation of the StatusItem. Behavior customization for the button, such as image, target/action, tooltip, can be set with this property.
Available on Mac OS X 10.10 and newer.
(Read only property)

154.2.18 Enabled as boolean

Function: Whether this status item is enabled.
Notes: (Read and Write property)

154.2.19 Handle as Integer

Function: The handle of the NSStatusItem object used internally.
Notes: (Read and Write property)

154.2.20 Height as single

Function: The height of the status item.
Notes:
Should be 22 pixels.
This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
154.2. CLASS NSSTATUSITEMMBS

(Read only property)

154.2.21 HighlightMode as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Whether the receiver is highlighted when clicked.

Notes:
If you use HighlightMode and Menu, you need to first assign the menu and later set HighlightMode to true. (Read and Write property)

154.2.22 image as NSImageMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The image that is displayed at the statusitem’s position in the status bar.

Notes:
nil if an image has not been set. (Read and Write property)

154.2.23 Left as single

Notes:
Valid only after item was drawn the first time. This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions. (Read only property)

154.2.24 Length as single

Notes:
Constants for special values:

(Read and Write property)
154.2.25 Menu as NSMenuMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The menu attached to this statusitem.

**Notes:**
Nil if no menu is attached.
(Read and Write property)

154.2.26 Title as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The title of the status item.

**Notes:** (Read and Write property)

154.2.27 ToolTip as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The help tag for a menu item.

**Notes:** (Read and Write property)

154.2.28 Top as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The top position of the status item.

**Notes:**
Always 0.
This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
(Read only property)

154.2.29 View as NSViewMBS

MBS MacCocoa Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the view to be used for this status menuitem.
Notes:
Using a custom view you can draw whatever you like in the menu item.
You can set it to nil to remove the view.
(Read and Write property)

154.2.30 Width as single

Notes:
This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
(Read only property)

154.2.31 Window as NSWindowMBS

Notes:
This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
Returns nil on 64 bit target.
(Read only property)

154.2.32 Events

154.2.33 Action

Notes:
Mouse position can be calculated based on System.MouseX/System.MouseY relative to Left/Top. Mouse status can be read using System.MouseDown.

This event is limited. You can’t for example do everything like quit an application. For using quit, start a timer which will remove the menu 500ms later and than quit 500ms later.
This event is coming from the Cocoa event system. What you can do is a bit limited when using GUI functions from Realbasic. To avoid some redraw errors, you may want to start a timer and let your Realbasic code run a millisecond after the menu code has finished. Depending on what you do, you can see the menu not redrawing properly (staying highlighted) and crashes if the Realbasic code modifies some global Cocoa states.

154.2.34 DoubleAction

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: The event called when the user double clicks on the statusitem. Notes:

If two Action Events happen very fast, this one is called the second time so you can e.g. react on double clicks. Mouse position can be calculated based on System.MouseX/System.MouseY relative to Left/Top. Mouse status can be read using System.MouseDown.

This event is coming from the Cocoa event system. What you can do is a bit limited when using GUI functions from Realbasic. To avoid some redraw errors, you may want to start a timer and let your Realbasic code run a millisecond after the menu code has finished. Depending on what you do, you can see the menu not redrawing properly (staying highlighted) and crashes if the Realbasic code modifies some global Cocoa states.

154.2.35 Screenshots

154.2.36 NSStatusItem.jpg

Function: The NSStatusItem running a menu on the top right of the menubar.
Chapter 155

StoreKit

155.1 class AppReceiptIAPMBS

155.1.1 class AppReceiptIAPMBS

Function: The class to represent an in-app purchase in the app receipt. 
Example:

```vbs
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show purchases
dim inAppPurchases() as AppReceiptIAPMBS = r.inAppPurchases
for each p as AppReceiptIAPMBS in inAppPurchases
    MsgBox str(p.quantity)+”x”+p.productIdentifier+” ”+p.purchaseDate.AbbreviatedDate
next
```

Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

155.1.2 Methods

155.1.3 Constructor

Function: The private constructor.
155.1.4 isActiveAutoRenewableSubscriptionForDate(d as Date) as boolean

**Function:** Returns whether the auto renewable subscription is active for the given date.
**Notes:**
- `date`: The date in which the auto-renewable subscription should be active. If you are using the current date, you might not want to take it from the device in case the user has changed it.
- Returns true if the auto-renewable subscription is active for the given date, false otherwise.

Auto-renewable subscription lapses are possible. If you are checking against the current date, you might want to deduct some time as tolerance.
If this method fails Apple recommends to refresh the receipt and try again once.

155.1.5 Properties

155.1.6 cancellationDate as Date

**Function:** For a transaction that was canceled by Apple customer support, the date of the cancellation.
**Notes:** (Read only property)

155.1.7 originalPurchaseDate as Date

**Function:** For a transaction that restores a previous transaction, the date of the original transaction.
**Notes:**
- This value corresponds to the original transaction’s transactionDate property.
- In an auto-renewable subscription receipt, this indicates the beginning of the subscription period, even if the subscription has been renewed.
  (Read only property)

155.1.8 originalTransactionIdentifier as String

**Function:** For a transaction that restores a previous transaction, the transaction identifier of the original transaction.
**Notes:**
Otherwise, identical to the transaction identifier.
This value corresponds to the original transaction’s transactionIdentifier property.
All receipts in a chain of renewals for an auto-renewable subscription have the same value for this field.
(Read only property)

155.1.9  productIdentifier as String

Function: The product identifier of the item that was purchased.
Example:

```vbs
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show purchases
dim inAppPurchases() as AppReceiptIAPMBS = r.inAppPurchases
for each p as AppReceiptIAPMBS in inAppPurchases
    MsgBox str(p.quantity)+"x " +p.productIdentifier+" " +p.purchaseDate.AbbreviatedDate
next
```

Notes:
This value corresponds to the productIdentifier property of the SKPayment object stored in the transactions payment property.
(Read only property)

155.1.10  purchaseDate as Date

Function: The date and time that the item was purchased.
Notes:
This value corresponds to the transactions transactionDate property.

For a transaction that restores a previous transaction, the purchase date is the date of the restoration. Use originalPurchaseDate to get the date of the original transaction.

In an auto-renewable subscription receipt, this is always the date when the subscription was purchased or renewed, regardless of whether the transaction has been restored.
(Read only property)
155.1.11 quantity as Integer

Function: The number of items purchased.
Example:

```vbnet
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show purchases
dim inAppPurchases() as AppReceiptIAPMBS = r.inAppPurchases
for each p as AppReceiptIAPMBS in inAppPurchases
    MsgBox str(p.quantity) + "x " + p.productIdentifier + " " + p.purchaseDate.AbbreviatedDate
next
```

Notes:
This value corresponds to the quantity property of the SKPayment object stored in the transactions payment property.
(Read only property)

155.1.12 subscriptionExpirationDate as Date

Function: The expiration date for the subscription.
Notes:
Only present for auto-renewable subscription receipts.
(Read only property)

155.1.13 transactionIdentifier as String

Function: The transaction identifier of the item that was purchased.
Notes:
This value corresponds to the transaction’s transactionIdentifier property.
(Read only property)
155.1.14  webOrderLineItemID as Integer

MBS MacCloud Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The primary key for identifying subscription purchases. **Notes:** (Read only property)
155.2 class AppReceiptMBS

155.2.1 class AppReceiptMBS

**Function:** The class for an app receipt.

**Example:**

```vbscript
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.bundleIdentifier
```

**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

155.2.2 Methods

155.2.3 bundleReceipt as AppReceiptMBS

**Function:** Returns the app receipt contained in the bundle, if any and valid.

**Notes:**

Extracts the receipt in ASN1 from the PKCS # 7 container, and then parses the ASN1 data into a AppReceiptMBS instance. If an Apple Root certificate is available, it will also verify that the signature of the receipt is valid.

Returns the app receipt contained in the bundle, or nil if there is no receipt or if it is invalid.

155.2.4 Constructor

155.2.5  containsActiveAutoRenewableSubscriptionOfProductIdentifier(productIdentifier as string, d as date) as boolean

**Function:** Returns whether the receipt contains an active auto-renewable subscription for the given product identifier and for the given date.

**Notes:**

- **productIdentifier:** The identifier of the auto-renewable subscription.
- **date:** The date in which the latest auto-renewable subscription should be active. If you are using the current date, you might not want to take it from the device in case the user has changed it.
- Returns true if the latest auto-renewable subscription is active for the given date, false otherwise.

Auto-renewable subscription lapses are possible. If you are checking against the current date, you might want to deduct some time as tolerance.
If this method fails Apple recommends to refresh the receipt and try again once.

155.2.6  containsInAppPurchaseOfProductIdentifier(productIdentifier as string) as boolean

**Function:** Returns whether there is an in-app purchase in the receipt for the given product.

**Notes:**

- **productIdentifier:** The identifier of the product.
- True if there is an in-app purchase for the given product, false otherwise.

155.2.7  inAppPurchases as AppReceiptIAPMBS()

**Function:** Array of in-app purchases contained in the receipt.

155.2.8  receiptForFile(file as folderitem) as AppReceiptMBS

**Function:** Returns the app receipt contained in the given file, if any and valid.

**Example:**

```
    dim a as new AppReceiptVerificatorMBS
    dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
    dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)
```
// testing with receipt from current Dash app
a.bundleIdentifier = "com.kapeli.dash"
a.bundleVersion = "2.1.2"

if a.verifyReceipt(r) then
  MsgBox "My receipt is valid"
else
  MsgBox "My receipt is invalid."
end if

Notes:
Extracts the receipt in ASN1 from the PKCS # 7 container, and then parses the ASN1 data into a AppReceiptMBS instance. If an Apple Root certificate is available, it will also verify that the signature of the receipt is valid.
Returns the receipt contained in the given file, or nil if there is no receipt or if it is invalid.

155.2.9 setAppleRootCertificate(Data as Memoryblock)
Function: Sets the certificate data of the Apple Root certificate that will be used to verify the signature of the bundle receipt.
Notes:
If none is provided, the resource AppleIncRootCertificate.cer will be used. If no certificate is available, no signature verification will be performed.
Data: The contents of the Apple Root certificate file to use.
See also:
• 155.2.10 setAppleRootCertificate(File as FolderItem)

155.2.10 setAppleRootCertificate(File as FolderItem)
Function: Sets the file of the Apple Root certificate that will be used to verify the signature of the bundle receipt.
Notes:
If none is provided, the resource AppleIncRootCertificate.cer will be used. If no certificate is available, no signature verification will be performed.
File: The folderitem of the Apple Root certificate.
See also:
• 155.2.9 setAppleRootCertificate(Data as Memoryblock)
155.2. CLASS APPRECEIPTMBS

155.2.11 verifyReceiptHash as boolean

MBS MacCloud Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns whether the receipt hash corresponds to the device’s GUID by calculating the expected hash using the GUID, bundleIdentifierData and opaqueValue. **Notes:** Returns true if the hash contained in the receipt corresponds to the device’s GUID, false otherwise.

155.2.12 Properties

155.2.13 appVersion as String

MBS MacCloud Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The app’s version number. **Example:**

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.appVersion
```

**Notes:**

This corresponds to the value of CFBundleVersion (in iOS) or CFBundleShortVersionString (in OS X) in the Info.plist. (Read only property)

155.2.14 bundleIdentifier as String

MBS MacCloud Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The bundle identifier. **Example:**

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.bundleIdentifier
```
Notes:
This corresponds to the value of CFBundleIdentifier in the Info.plist file.
(Read only property)

155.2.15 bundleIdentifierData as Memoryblock

Function: The bundle identifier as data.
Notes: The bundle identifier as data, as contained in the receipt. Used to verify the receipt’s hash.
(Read only property)

155.2.16 creationDate as Date

Function: The creation date of the receipt.
Notes: (Read only property)

155.2.17 expirationDate as Date

Function: The date that the app receipt expires.
Notes: Only for apps purchased through the Volume Purchase Program. If nil, the receipt does not expire. When 
validating a receipt, compare this date to the current date to determine whether the receipt is expired. Do 
not try to use this date to calculate any other information, such as the time remaining before expiration. 
(Read only property)

155.2.18 opaqueValue as Memoryblock

Function: An opaque value used as part of the SHA-1 hash.
Notes: (Read only property)
155.2. CLASS APPRECEIPTMBS

155.2.19 originalAppVersion as String

Function: The version of the app that was originally purchased.
Example:

```vbs
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.originalAppVersion
```

Notes:
This corresponds to the value of CFBundleVersion (in iOS) or CFBundleShortVersionString (in OS X) in the Info.plist file when the purchase was originally made. In the sandbox environment, the value of this field is always "1.0".
(Read only property)

155.2.20 purchaseDate as Date

Function: Another date.
Notes:
Digging in a receipt we found this field and assume it is the original purchase date.
(Read only property)

155.2.21 receiptHash as Memoryblock

Function: A SHA-1 hash, used to validate the receipt.
Notes: (Read only property)

155.2.22 transactionDate as Date

Function: Another date.
Notes:
Digging in a receipt we found this field and assume it is the transaction date.
(Read only property)
155.3.  **CLASS APPRECEIPTVERIFICATORMBS**

### 155.3.1  **class AppReceiptVerificatorMBS**

MBS MacCloud Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Reference implementation of an app receipt verificator. **Example:**

```vbs
dim a as new AppReceiptVerificatorMBS
if a.verifyAppReceipt then
MsgBox "My receipt is valid"
else
MsgBox "My receipt is invalid."
end if
```

**Notes:** If security is a concern you might want to avoid using a verificator whose code is open source.

### 155.3.2  Methods

#### 155.3.3  Constructor

#### 155.3.4  ExitApp(code as Integer = 173)

MBS MacCloud Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Quits the application directly. **Example:**

```vbs
AppReceiptVerificatorMBS.ExitApp 173
```

**Notes:**

This does not call the destructors and CancelClose events. The app is quit right away.
If you use code 173 the Finder will show error message that app needs to be downloaded again from Mac App Store.
155.3.5 GUID as string

Function: Reads the GUID of the Mac.
Example:
```vba
Dim g As String = AppReceiptVerificatorMBS.GUID
MsgBox EncodeHex(g)
```

Notes: This is normally build from the MAC ID of the ethernet card.

155.3.6 verifyAppReceipt as boolean

Function: Verifies the app’s receipt file.
Example:
```vba
Dim a As New AppReceiptVerificatorMBS
If a.verifyAppReceipt Then
    MsgBox "My receipt is valid"
Else
    MsgBox "My receipt is invalid."
End If
```

Notes:
Verifies the receipt by checking the integrity of the receipt, comparing its bundle identifier and bundle version to the values returned by the corresponding properties and verifying the receipt hash.

Returns true if the receipt is verified, false otherwise.
If validation fails, Apple recommends to refresh the receipt and try again.

If you set bundleVersion and/or bundleIdentifier properties, we use those values. Else we pick them from the info.plist of the app.

155.3.7 verifyReceipt(Receipt as AppReceiptMBS) as boolean

Function: Verifies the given receipt file.
Example:

dim a as new AppReceiptVerificatorMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// testing with receipt from current Dash app
a.bundleIdentifier = "com.kapeli.dash"
a.bundleVersion = "2.1.2"

if a.verifyReceipt(r) then
    MsgBox "My receipt is valid"
else
    MsgBox "My receipt is invalid."
end if

Notes:

Verifies the receipt by checking the integrity of the receipt, comparing its bundle identifier and bundle version
to the values returned by the corresponding properties and verifying the receipt hash.

Returns true if the receipt is verified, false otherwise.
If validation fails, Apple recommends to refresh the receipt and try again.

155.3.8 Properties

155.3.9 bundleIdentifier as String

Function: The value that will be used to validate the bundle identifier included in the app receipt.
Notes:

Given that it is possible to modify the app bundle in jailbroken devices, setting this value from a hardcoded
string might provide better protection.
Returns the given value, or the app’s bundle identifier by default.
(Read and Write property)

155.3.10 bundleVersion as String

Function: The value that will be used to validate the bundle version included in the app receipt.
Notes:
Given that it is possible to modify the app bundle in jailbroken devices, setting this value from a hardcoded string might provide better protection.
Returns the given value, or the app’s bundle version by default.
(Read and Write property)

155.3.11 FailReason as String

Function: The reason for a failure.
Notes:
This is for debugging and to help you to find the reason for why a verification fails.
(Read only property)

155.3.12 MACAddress as MemoryBlock

Function: The MAC Address to use.
Example:

// get the one of this Mac
dim m as MemoryBlock = AppReceiptVerificatorMBS.MACAddress

// now set a fake one
dim x as MemoryBlock = DecodeHex("12347890ABCD")
AppReceiptVerificatorMBS.MACAddress = x

// and display
MsgBox EncodeHex(m)+EndOfLine+EncodeHex(AppReceiptVerificatorMBS.MACAddress)

Notes:
Can be queried to automatically get the one we detect.
Or set to use a custom one for testing.
(Read and Write property)
155.4  class SKDownloadMBS

155.4.1  class SKDownloadMBS

**Function:** This storeKit class gives you information about the download status of a content file.

**Notes:**
Available in Mac OS X 10.8 and newer.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

155.4.2  Methods

155.4.3  Constructor

**Function:** The private constructor.

155.4.4  contentURLForProductID(productID as string) as string

**Function:** Queries content URL for a product.

155.4.5  deleteContentForProductID(productID as string)

**Function:** Deletes the content for that identifier from disk.

155.4.6  Properties

155.4.7  contentIdentifier as string

**Function:** Product identifier entered in iTunesConnect.
**Notes:** (Read only property)
155.4.8  contentLength as Int64

MBS MacCloud Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Filesize of the asset. Notes: (Read only property)

155.4.9  contentURL as string

MBS MacCloud Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Content URL. Notes: (Read only property)

155.4.10  contentVersion as string

155.4.11  error as NSErrorMBS

MBS MacCloud Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Last error, can be nil. Notes: (Read only property)

155.4.12  Handle as Integer

155.4.13  progress as Double

MBS MacCloud Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Download progress. Notes: (Read only property)
155.4. CLASS SKDOWNLOADMBS

155.4.14 state as Integer

**Notes:** (Read only property)

155.4.15 timeRemaining as Double

MBS MacCloud Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Estimated number of seconds remaining in the download.  
**Notes:** (Read only property)

155.4.16 Transaction as SKPaymentTransactionMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The transaction associated with the downloadable file  
**Notes:**  
Available in MacOS 10.11 or newer.  
(Read only property)

155.4.17 Constants

155.4.18 kStateActive = 1

MBS MacCloud Plugin, Plugin Version: 12.3. **Function:** One of the download state constants.  
**Notes:** Active

155.4.19 kStateCancelled = 5

MBS MacCloud Plugin, Plugin Version: 12.3. **Function:** One of the download state constants.  
**Notes:** Cancelled

155.4.20 kStateFailed = 4

MBS MacCloud Plugin, Plugin Version: 12.3. **Function:** One of the download state constants.  
**Notes:** Failed
155.4.21  \textbf{kStateFinished} = 3

MBS MacCloud Plugin, Plugin Version: 12.3. \textbf{Function:} One of the download state constants. 
\textbf{Notes:} Finished

155.4.22  \textbf{kStatePaused} = 2

MBS MacCloud Plugin, Plugin Version: 12.3. \textbf{Function:} One of the download state constants. 
\textbf{Notes:} Paused

155.4.23  \textbf{kStateWaiting} = 0

MBS MacCloud Plugin, Plugin Version: 12.3. \textbf{Function:} One of the download state constants. 
\textbf{Notes:} Waiting
155.5. **CLASS SKMUTABLEPAYMENTMBS**

**155.5  class SKMutablePaymentMBS**

**155.5.1  class SKMutablePaymentMBS**

**Function:** The mutable class for SKPaymentMBS.

**Notes:**

The SKMutablePayment class defines a request to the Apple App Store to process payment for additional functionality offered by your application. A payment encapsulates a string that identifies a particular product and the quantity of that item the user would like to purchase.

When a mutable payment is added to the payment queue, the payment queue copies the contents into an immutable request before queueing the request. Your application can safely change the contents of the mutable payment object.

Please also check the documentation from Apple for the SKMutablePayment class.

Subclass of the SKPaymentMBS class.

**155.5.2  Methods**

**155.5.3  Constructor(payment as SKPaymentMBS)**

**Function:** Creates a mutable copy of the given payment.

See also:

- 155.5.4 Constructor(product as SKProductMBS)

**155.5.4  Constructor(product as SKProductMBS)**

**Function:** Creates a new payment for the specified product.

**Example:**

```pascal
dim product as SKProductMBS  // your product
dim queue as SKPaymentQueueMBS  // your queue

dim payment as new SKMutablePaymentMBS(product)
payment.quantity = 5

MsgBox str(payment.quantity) + " units of " + product.localizedDescription
```
queue.addPayment payment

See also:

- 155.5.3 Constructor(payment as SKPaymentMBS)

155.5.5 paymentWithProduct(product as SKProductMBS) as SKMutablePaymentMBS

Function: Returns a new payment for the specified product with the given quantity.
Example:

```dim product as SKProductMBS // your product
dim payment as SKMutablePaymentMBS = SKMutablePaymentMBS.paymentWithProduct(product)
```

MsgBox str(payment.quantity) + " units of " + product.localizedDescription

Notes:

product: The product the user wishes to purchase.
quantity: Optional quantity. If you don’t pass it, we default to 1.

This factory Method in Cocoa Core Competencies uses the productIdentifier property obtained from the product parameter to create and return a new payment with that identifier.

Available in Mac OS X v10.7 and later.
See also:

- 155.5.6 paymentWithProduct(product as SKProductMBS, quantity as Integer) as SKMutablePaymentMBS

155.5.6 paymentWithProduct(product as SKProductMBS, quantity as Integer) as SKMutablePaymentMBS

Function: Returns a new payment for the specified product with the given quantity.
Example:

```dim product as SKProductMBS // your product
dim payment as SKMutablePaymentMBS = SKMutablePaymentMBS.paymentWithProduct(product, 5)
```
MsgBox str(payment.quantity) + " units of " + product.localizedTitle

Notes:
product: The product the user wishes to purchase.
quantity: Optional quantity. If you don’t pass it, we default to 1.

This factory Method in Cocoa Core Competencies uses the productIdentifier property obtained from the
product parameter to create and return a new payment with that identifier.

Available in Mac OS X v10.7 and later.
See also:
• 155.5.5 paymentWithProduct(product as SKProductMBS) as SKMutablePaymentMBS

155.5.7 Properties

155.5.8 applicationUsername as String

Notes: (Read and Write property)

155.5.9 productIdentifier as string

Function: A string that identifies a product that can be purchased from within your application.
Notes:
The product identifier is a string previously agreed on between your application and the Apple App Store.

Available in Mac OS X v10.7 and later.
(Read and Write property)

155.5.10 quantity as Integer

Function: The number of items the user wants to purchase.
Notes:
The quantity property must be greater than 0.
Available in Mac OS X v10.7 and later.
(Read and Write property)

155.5.11 `requestData` as `Memoryblock`

**Function:** Reserved for future use.
**Notes:**
The default value is nil. If `requestData` is not nil, your payment will be rejected by the Apple App Store.

Available in Mac OS X v10.7 and later.
(Read and Write property)
155.6. CLASS SKPAYMENTMBS

155.6 class SKPaymentMBS

155.6.1 class SKPaymentMBS

Function: The class for a payment in the App Store.
Notes:
The SKPayment class defines a request to the Apple App Store to process payment for additional functionality offered by your application. A payment encapsulates a string that identifies a particular product and the quantity of those items the user would like to purchase.

Please also check the documentation from Apple for the SKPayment class.
Available in Mac OS X v10.7 and later.

155.6.2 Methods

155.6.3 Constructor(product as SKProductMBS)

Function: Creates a new payment for the specified product.
Example:

```
dim product as SKProductMBS // your product
dim queue as SKPaymentQueueMBS // your queue

dim payment as new SKPaymentMBS(product)
MsgBox str(payment.quantity) + " units of " + product.localizedTitle
queue.addPayment payment
```

155.6.4 copy as SKPaymentMBS

155.6.5 mutableCopy as SKMutablePaymentMBS

155.6.6 paymentWithProduct(product as SKProductMBS) as SKPaymentMBS

**Function:** Returns a new payment for the specified product.

**Example:**

```vbnet
dim product as SKProductMBS // your product
dim queue as SKPaymentQueueMBS // your queue

dim payment as SKPaymentMBS = SKPaymentMBS.paymentWithProduct(product)
MsgBox str(payment.quantity) + " units of " + product.localizedDescription
queue.addPayment payment
```

**Notes:**

- **product:** The product the user wishes to purchase.

This factory method in Cocoa Core Competencies uses the `productIdentifier` property obtained from the `product` parameter to create and return a new payment with that identifier. The `quantity` property defaults to 1.

To create a `SKPaymentMBS` object with a `quantity` greater than 1, create a `SKMutablePaymentMBS` object, adjust its `quantity` property and then add it to the payment queue.

Available in Mac OS X v10.7 and later.

155.6.7 Properties

155.6.8 applicationUsername as String

**Function:** Application-specific user identifier. Optional.

**Notes:** (Read only property)
155.6.9 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal reference to the SKPayment object. **Notes:** (Read and Write property)

155.6.10 productIdentifier as string

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A string used to identify a product that can be purchased from within your application. (read-only) **Notes:** The product identifier is a string previously agreed on between your application and the Apple App Store. Available in Mac OS X v10.7 and later. (Read only property)

155.6.11 quantity as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of items the user wants to purchase. (read-only) **Notes:** Default value is 1. Available in Mac OS X v10.7 and later. (Read only property)

155.6.12 requestData as Memoryblock

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Reserved for future use. (read-only) **Notes:** The default value is nil. If requestData is not nil, your payment will be rejected by the Apple App Store. Available in Mac OS X v10.7 and later. (Read only property)
155.7 class SKPaymentQueueMBS

155.7.1 class SKPaymentQueueMBS

Function: The SKPaymentQueue class defines a queue of payment transactions to send to the Apple App Store.
Notes: To use the payment queue, you add one or more payments. When payments are added to the queue, Store Kit connects to the Apple App Store and presents a user interface so that the user can authorize payment. As payments are fulfilled, the payment queue updates transactions and delivers them through events.

Available in Mac OS X v10.7 and later.
Please also check the documentation from Apple for the SKPaymentQueue class.
The plugin installs a transaction observer for you.

155.7.2 Methods

155.7.3 addPayment(payment as SKPaymentMBS)

Function: Adds a payment request to the queue.
Notes: payment: A payment request.

The payment request must have a product identifier registered with the Apple App Store and a quantity greater than 0. If either property is invalid, addPayment throws an exception.

When a payment request is added to the queue, the payment queue processes that request with the Apple App Store and arranges for payment from the user. When that transaction is complete or if a failure occurs, the payment queue sends the SKPaymentTransaction object that encapsulates the request to all transaction observers.

155.7.4 cancelDownload(download as SKDownloadMBS)

Notes: Available in Mac OS X 10.8 and newer.
155.7.5  cancelDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Cancel a few downloads.  
**Notes:** Available in Mac OS X 10.8 and newer.

155.7.6  canMakePayments as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns whether the user is allowed to make payments.  
**Example:**

```plaintext
if SKPaymentQueueMBS.canMakePayments then
    MsgBox "can make payments"
else
    MsgBox "not available"
end if
```

**Notes:** A Mac can be restricted from accessing the Apple App Store. For example, parents can restrict their children’s ability to purchase additional content. Your application should confirm that the user is allowed to authorize payments before adding a payment to the queue. Your application may also want to alter its behavior or appearance when the user is not allowed to authorize payments.

155.7.7  Constructor

**Notes:**

Please make a subclass of this class to fill code into the events.  
And please only have one instance of this class.

155.7.8  Destructor

MBS MacCloud Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destroyer.
155.7.9 finishTransaction(transaction as SKPaymentTransactionMBS)

Function:Completes a pending transaction. 
Notes: 
transaction: The transaction to finish. 

Your application should call this method from a transaction observer that received a notification from the payment queue. Calling finishTransaction on a transaction removes it from the queue. Your application should call finishTransaction only after it has successfully processed the transaction and unlocked the functionality purchased by the user. 

Calling finishTransaction on a transaction that is in the SKPaymentTransactionMBS.StatePurchasing state throws an exception.

155.7.10 pauseDownload(download as SKDownloadMBS)

Notes: Available in Mac OS X 10.8 and newer. 

155.7.11 pauseDownloads(downloads() as SKDownloadMBS)

Notes: Available in Mac OS X 10.8 and newer. 

155.7.12 restoreCompletedTransactions

Notes: 
Your application calls this method to restore transactions that were previously finished so that you can process them again. For example, your application would use this to allow a user to unlock previously purchased content onto a new device. 

When you create a new product to be sold in your store, you choose whether that product can be restored or not. See the In App Purchase Programming Guide for more information.
The payment queue will deliver a new transaction for each previously completed transaction that can be restored. Each transaction includes a copy of the original transaction.

After the transactions are delivered, the payment queue calls the observer’s `paymentQueueRestoreCompletedTransactionsFinished` event. If an error occurred while restoring transactions, the observer will be notified through its `paymentQueue:restoreCompletedTransactionsFailedWithError` event.

### 155.7.13 `resumeDownload(download as SKDownloadMBS)`

MBS MacCloud Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Resumes one download. **Notes:** Available in Mac OS X 10.8 and newer.

### 155.7.14 `resumeDownloads(downloads() as SKDownloadMBS)`

MBS MacCloud Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Resumes a few downloads. **Notes:** Available in Mac OS X 10.8 and newer.

### 155.7.15 `startDownload(download as SKDownloadMBS)`

MBS MacCloud Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Start one download. **Notes:** Available in Mac OS X 10.8 and newer.

### 155.7.16 `startDownloads(downloads() as SKDownloadMBS)`

MBS MacCloud Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Starts a few downloads. **Notes:** Available in Mac OS X 10.8 and newer.

### 155.7.17 `transactions as SKPaymentTransactionMBS()`

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array of pending transactions. **Notes:** The value of this property is undefined when there are no observers attached to the payment queue.
155.7.18  Properties

155.7.19  Handle as Integer

155.7.20  Events

155.7.21  paymentQueueRestoreCompletedTransactionsFinished

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: Tells the observer that the payment queue has finished sending restored transactions. Notes: This method is called after all restorable transactions have been processed by the payment queue. Your application is not required to do anything in this method.

155.7.22  removedTransactions(transactions() as SKPaymentTransactionMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: Tells an observer that one or more transactions have been removed from the queue. Notes: transactions: An array of the transactions that were removed.

Your application does not typically need to implement this event but might implement it to update its own user interface to reflect that a transaction has been completed.

155.7.23  restoreCompletedTransactionsFailedWithError(Error as NSErrorMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: Tells the observer that an error occurred while restoring transactions.

155.7.24  updatedDownloads(downloads() as SKDownloadMBS)

**updatedTransactions(transactions() as SKPaymentTransactionMBS)**

**Function:** Tells an observer that one or more transactions have been updated.
**Notes:**

transactions: An array of the transactions that were updated.

The application should process each transaction by examining the transaction’s transactionState property. If transactionState is SKPaymentTransactionStatePurchased, payment was successfully received for the desired functionality. The application should make the functionality available to the user. If transactionState is SKPaymentTransactionStateFailed, the application can read the transaction’s error property to return a meaningful error to the user.

Once a transaction is processed, it should be removed from the payment queue by calling the payment queue’s finishTransaction: method, passing the transaction as a parameter.

Important: Once the transaction is finished, Store Kit can not tell you that this item is already purchased. It is important that applications process the transaction completely before calling finishTransaction:. 
155.8  class SKPaymentTransactionMBS

155.8.1  class SKPaymentTransactionMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The SKPaymentTransactionMBS class defines objects residing in the payment queue. **Notes:**

A payment transaction is created whenever a payment is added to the payment queue. Transactions are delivered to your application when the App Store has finished processing the payment. Completed transactions provide a receipt and transaction identifier that your application can use to save a permanent record of the processed payment.

Please also check the documentation from Apple for the SKPaymentTransaction class. Available in Mac OS X v10.7 and later. This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

155.8.2  Methods

155.8.3  Constructor

155.8.4  downloads as SKDownloadMBS()

MBS MacCloud Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the downloads for this transaction. **Notes:** Available in Mac OS X 10.8 and newer.

155.8.5  Properties

155.8.6  error as NSErrorMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An object describing the error that occurred while processing the transaction. **Notes:**

The error property is undefined except when transactionState is set to StateFailed. Your application can read the error property to determine why the transaction failed.
155.8. **CLASS SKPAYMENTTRANSACTIONMBS**

(Read only property)

155.8.7 **Handle as Integer**

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal reference to the SKPaymentTransaction object. **Notes:** (Read and Write property)

155.8.8 **originalTransaction as SKPaymentTransactionMBS**

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The transaction that was restored by the App Store. **Notes:** The contents of this property are undefined except when transactionState is set to StateRestored. When a transaction is restored, the current transaction holds a new transaction identifier, receipt, and so on. Your application will read this property to retrieve the restored transaction. (Read only property)

155.8.9 **payment as SKPaymentMBS**

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The payment for the transaction. **Notes:** Each payment transaction is created in response to a payment that your application added to the payment queue. (Read only property)

155.8.10 **transactionDate as date**

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The date the transaction was added to the App Store’s payment queue. **Notes:** The contents of this property are undefined except when transactionState is set to StatePurchased or StateRestored. (Read only property)
155.8.11  transactionIdentifier as string

**Function:** A string that uniquely identifies a successful payment transaction.  
**Notes:**  
The contents of this property are undefined except when transactionState is set to StatePurchased or StateRestored. The transactionIdentifier is a string that uniquely identifies the processed payment. Your application may wish to record this string as part of an audit trail for App Store purchases. See In App Purchase Programming Guide for more information.  
(Read only property)

155.8.12  transactionState as Integer

**Function:** The current state of the transaction.  
**Notes:**  
see State* constants.  
(Read only property)

155.8.13  Constants

155.8.14  StateDeferred = 4

MBS MacCloud Plugin, Plugin Version: 18.1. **Function:** One of the transaction state constants.  
**Notes:** Transaction is neither purchased nor failed, yet.

155.8.15  StateFailed = 2

MBS MacCloud Plugin, Plugin Version: 11.2. **Function:** One of the transaction state constants.  
**Notes:** The transaction failed. Check the error property to determine what happened.

155.8.16  StatePurchased = 1

MBS MacCloud Plugin, Plugin Version: 11.2. **Function:** One of the transaction state constants.  
**Notes:** The App Store successfully processed payment. Your application should provide the content the user purchased.
155.8. **CLASS SKPAYMENTTRANSACTIONMBS**

### 155.8.17 StatePurchasing = 0

MBS MacCloud Plugin, Plugin Version: 11.2. **Function:** One of the transaction state constants. **Notes:** The transaction is being processed by the App Store.

### 155.8.18 StateRestored = 3

MBS MacCloud Plugin, Plugin Version: 11.2. **Function:** One of the transaction state constants. **Notes:** This transaction restores content previously purchased by the user. Read the originalTransaction property to obtain information about the original purchase.
155.9 class SKProductDiscountMBS

155.9.1 class SKProductDiscountMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for product discounts. **Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

155.9.2 Methods

155.9.3 Constructor

MBS MacCloud Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

155.9.4 Properties

155.9.5 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference. **Notes:** (Read and Write property)

155.9.6 NumberOfPeriods as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of periods this price is valid. **Notes:** (Read only property)

155.9.7 PaymentMode as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The payment mode. **Notes:** (Read only property)
155.9. **CLASS SKPRODUCTDISCOUNTMBS**

### 155.9.8 Price as Double

MBS MacCloud Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The price of the product. **Notes:** (Read only property)

### 155.9.9 priceLocale as NSLocaleMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The price locale. **Notes:** (Read only property)

### 155.9.10 PriceString as String

MBS MacCloud Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The price as formatted string. **Notes:** (Read only property)

### 155.9.11 subscriptionPeriod as SKProductSubscriptionPeriodMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The subscription period. **Notes:** (Read only property)

### 155.9.12 Constants

#### 155.9.13 kPaymentModeFreeTrial = 2

MBS MacCloud Plugin, Plugin Version: 18.1. **Function:** One of the payment modes. **Notes:** Free trial

#### 155.9.14 kPaymentModePayAsYouGo = 0

MBS MacCloud Plugin, Plugin Version: 18.1. **Function:** One of the payment modes. **Notes:** Pay as you go
155.9.15  kPaymentModePayUpFront = 1

MBS MacCloud Plugin, Plugin Version: 18.1. **Function:** One of the payment modes.  
**Notes:** Pay Upfront
155.10.1 class SKProductMBS

Function: The App Store class for a product.
Notes:
SKProductMBS objects are returned as part of an didReceiveResponse event in SKProductsRequestMBS class and are used to provide information about a product previously registered with the Apple App Store.

Please also check the documentation from Apple for the SKProduct class.
Available in Mac OS X v10.7 and later.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

155.10.2 Methods

155.10.3 Constructor

155.10.4 contentLengths as Int64()

Notes: Available in Mac OS X 10.8 and newer.

155.10.5 Properties

155.10.6 contentLength as Int64

Function: Total filesize of the assets.
Notes:
Available in Mac OS X 10.8 and newer.
(Read only property)
155.10.7 **contentVersion as string**

**Notes:**
Available in Mac OS X 10.8 and newer. 
(Read only property)

155.10.8 **downloadable as boolean**

MBS MacCloud Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this is a download item. 
**Notes:**
Available in Mac OS X 10.8 and newer. 
(Read only property)

155.10.9 **Handle as Integer**

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal reference to the SKProduct object. 
**Notes:** (Read and Write property)

155.10.10 **introductoryPrice as SKProductDiscountMBS**

**Notes:**
Available on MacOS 10.13.2 or later. 
Value is nil on older systems. 
(Read only property)

155.10.11 **localizedDescription as string**

**Notes:**
The description is localized based on the currentLocale property.
155.10. **CLASS SKPRODUCTMBS**

(Read only property)

### 155.10.12 localizedTitle as string

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the product. **Notes:** The description is localized based on the currentLocale property. (Read only property)

### 155.10.13 price as Double

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The cost of the product in the local currency. **Notes:** Use PriceString to get a localized formatted price. (Read only property)

### 155.10.14 priceLocale as NSLocaleMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The locale used to format the price of the product. **Notes:** (Read only property)

### 155.10.15 priceString as string

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The cost of the product in the local currency. **Notes:** We format the price in the locale currency format. (Read only property)

### 155.10.16 productIdentifier as string

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The string that identifies the product to the Apple App Store.
155.10.17  subscriptionPeriod as SKProductSubscriptionPeriodMBS

Function: Subscription period.
Notes:
Available on MacOS 10.13.2 or later.
Value is nil on older systems.
(Read only property)
155.11. CLASS SKPRODUCTSREQUESTMBS

155.11 class SKProductsRequestMBS

155.11.1 class SKProductsRequestMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An SKProductsRequestMBS object is used to retrieve localized information about a list of products from the Apple App Store. **Notes:** Your application uses this request to present localized prices and other information to the user without having to maintain that list itself.

To use an SKProductsRequest object, you initialize it with a list of product identifier strings, attach a delegate, and then call the request’s start method. When the request completes, you receive the didReceiveResponse event.

Please also check the documentation from Apple for the SKProductsRequest class. Available in Mac OS X v10.7 and later.

155.11.2 Methods

155.11.3 cancel

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Cancels a previously started request. **Notes:** When you cancel a request, the events are not called with an error.

155.11.4 Constructor(productIdentifiers() as string)

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes the request with the set of product identifiers. **Notes:** productIdentifiers: The list of product identifiers for the products you wish to retrieve descriptions of.

155.11.5 Destructor

MBS MacCloud Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.
155.11.6 start

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sends the request to the Apple App Store.  
**Notes:** The results for a request are sent to the events.

155.11.7 Properties

155.11.8 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal reference to the SKProductsRequest object.  
**Notes:** (Read and Write property)

155.11.9 Events

155.11.10 didFailWithError(error as NSErrorMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called if the request failed to execute.  
**Notes:**

error: The error that caused the request to fail.

When the request fails, your application should release the request. The requestDidFinish event is not called after this method is called.

155.11.11 didFinish

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when the request has completed.  
**Notes:** This method is called after all processing of the request has been completed.

155.11.12 didReceiveResponse(products() as SKProductMBS, invalidProductIdentifiers() as string)

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when the Apple App Store responds to the product request.  
**Notes:**
products: A list of products, one product for each valid product identifier provided in the original request.
invalidProductIdentifiers: An array of product identifier strings that were not recognized by the Apple App Store. This array should typically be empty.
155.12 class SKProductSubscriptionPeriodMBS

155.12.1 class SKProductSubscriptionPeriodMBS

Function: The class for a subscription period.
Notes:
Available on MacOS 10.13.2.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

155.12.2 Methods

155.12.3 Constructor

Function: The private constructor.

155.12.4 Properties

155.12.5 Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)

155.12.6 numberOfUnits as Integer

Function: The number of units.
Notes: (Read only property)

155.12.7 unit as Integer

Function: The unit of the period from day to year.
Notes: (Read only property)
155.12. **CLASS SKPRODUCTSUBSCRIPTIONPERIODMBS**

155.12.8  **Constants**

155.12.9  **PeriodUnitDay = 0**

MBS MacCloud Plugin, Plugin Version: 18.1. **Function:** One of the period units.  **Notes:** Day

155.12.10  **PeriodUnitMonth = 2**

MBS MacCloud Plugin, Plugin Version: 18.1. **Function:** One of the period units.  **Notes:** Month

155.12.11  **PeriodUnitWeek = 1**

MBS MacCloud Plugin, Plugin Version: 18.1. **Function:** One of the period units.  **Notes:** Week

155.12.12  **PeriodUnitYear = 3**

MBS MacCloud Plugin, Plugin Version: 18.1. **Function:** One of the period units.  **Notes:** Year
155.13   class SKReceiptRefreshRequestMBS

155.13.1  class SKReceiptRefreshRequestMBS

Function: The SKReceiptRefreshRequest class allows an app to refresh its receipt.
Notes:
With this API, the app can request a new receipt if the receipt is invalid or missing. In the sandbox environment, you can request a receipt with any combination of properties to test the state transitions related to Volume Purchase Plan receipts.
Requires Mac OS X 10.9.

155.13.2  Methods

155.13.3  cancel

Notes: When you cancel a request, the events are not called with an error.

155.13.4  Constructor(properties as dictionary = nil)

Notes: In the test enviroment, the properties that the new receipt should have. For keys, see SKReceiptProperty* methods.
In the production environment, set this parameter to nil.

155.13.5  Destructor

155.13.6  SKReceiptPropertyIsExpired as string

155.13.  CLASS SK RECEIPT REFRESHREQUESTMBS

Notes: A key whose value is a Boolean value, indicating whether the receipt is expired.

155.13.7  SKReceiptPropertyIsRevoked as string

Notes: A key whose value is a Boolean value, indicating whether the receipt has been revoked.

155.13.8  SKReceiptPropertyIsVolumePurchase as string

Notes: A key whose value is a Boolean value, indicating whether the receipt is a Volume Purchase Plan receipt.

155.13.9  start

Notes: The results for a request are sent to the events.

155.13.10  Properties

155.13.11  Handle as Integer

Notes: (Read and Write property)

155.13.12  receiptProperties as Dictionary

Notes: (Read only property)
155.13.13 Events

155.13.14 `didFailWithError(error as NSErrorMBS)`

**Function:** Called if the request failed to execute.  
**Notes:**  
error: The error that caused the request to fail.  

When the request fails, your application should release the request. The requestDidFinish event is not called after this method is called.

155.13.15 `didFinish`

**Function:** Called when the request has completed.  
**Notes:** This method is called after all processing of the request has been completed.
## 155.14.1 module StoreKitMBS

**Notes:** Be aware that StoreKit requires your app to be signed.

### 155.14.2 Methods

#### 155.14.3 available as Boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the StoreKit framework is available.  
**Example:**

```plaintext```
msgbox "StoreKit available: " +str(StoreKitMBS.available)
```

**Notes:** Should always be true on Mac OS X 10.7 and newer.

#### 155.14.4 SKErrorDomain as string

#### 155.14.5 Constants

#### 155.14.6 SKErrorClientInvalid = 1

MBS MacCloud Plugin, Plugin Version: 11.2. **Function:** One of the StoreKit error codes.  
**Notes:** client is not allowed to issue the request, etc.

#### 155.14.7 SKErrorPaymentCancelled = 2

MBS MacCloud Plugin, Plugin Version: 11.2. **Function:** One of the StoreKit error codes.  
**Notes:** user cancelled the request, etc.
155.14.8 SKErrorPaymentInvalid = 3

MBS MacCloud Plugin. **Function:** One of the StoreKit error codes. **Notes:** purchase identifier was invalid, etc.

155.14.9 SKErrorPaymentNotAllowed = 4

MBS MacCloud Plugin, Plugin Version: 11.2. **Function:** One of the StoreKit error codes. **Notes:** this machine is not allowed to make the payment

155.14.10 SKErrorUnknown = 0

MBS MacCloud Plugin, Plugin Version: 11.2. **Function:** One of the StoreKit error codes. **Notes:** unknown error
Chapter 156

String

156.1 Globals

156.1.1 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Finds bytes or byte ranges in a string.

**Example:**

// search for question mark or uppercase letters A to Z
MsgBox str(InStrByteRangeMBS("Hello?", ",?", 65, 90)) // shows 1 as H is found.

MsgBox str(InStrByteRangeMBS("hello?", ",?", 65, 90)) // shows 6 as ? is found.

**Notes:**

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.

See also:

19091
156.1.2 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds bytes or byte ranges in a string.

**Example:**

```vba
// search for question mark or uppercase letters A to Z or numbers from 0 to 9
MsgBox str(InStrByteRangeMBS("Hello?", "?", 65, 90, 48, 57)) // shows 1 as H is found.
MsgBox str(InStrByteRangeMBS("hello?", "?", 65, 90, 48, 57)) // shows 6 as ? is found
MsgBox str(InStrByteRangeMBS("Hello 123", "?", 65, 90, 48, 57)) // shows 1 as H is found.
MsgBox str(InStrByteRangeMBS("hello 123", "?", 65, 90, 48, 57)) // shows 7 as 1 is found.
```

**Notes:**

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.

See also:

- 156.1.1 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer) as Integer
156.1.3 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer

Example:

// search for question mark, low byte values, high byte values or numbers from 0 to 9
MsgBox str(InStrByteRangeMBS("Hello?", ",?", 0, 31, 127, 255, 48, 57 )) // shows 6 as ? is found.
MsgBox str(InStrByteRangeMBS("123", ,?", 0, 31, 127, 255, 48, 57 )) // shows 1 as 1 is found.
MsgBox str(InStrByteRangeMBS(EndOfLine.Windows, ,?", 0, 31, 127, 255, 48, 57 )) // shows 1 as chr(13) is found.
MsgBox str(InStrByteRangeMBS("Hello", ,?", 0, 31, 127, 255, 48, 57 )) // shows 0 as nothing is found.

Notes:

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.

156.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds bytes or byte ranges in a string.

**Example:**
```
// search for uppercase letters A to Z
MsgBox str(InStrByteRangeMBS(“Hello?”, 65, 90)) // shows 1 as H is found.

MsgBox str(InStrByteRangeMBS(“hello?”, 65, 90)) // shows 0 as nothing is found.
```

**Notes:**
You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.

156.1.6 `InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer`

**156.1.5 `InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer`**

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds bytes or byte ranges in a string.

**Example:**

```vbnet
// search for uppercase letters A to Z or numbers from 0 to 9
MsgBox str(InStrByteRangeMBS(“Hello?”, 65, 90, 48, 57)) // shows 1 as H is found.
MsgBox str(InStrByteRangeMBS(“hello?”, 65, 90, 48, 57)) // shows 0 as nothing is found.
MsgBox str(InStrByteRangeMBS(“Hello 123”, 65, 90, 48, 57)) // shows 1 as H is found.
MsgBox str(InStrByteRangeMBS(“hello 123”, 65, 90, 48, 57)) // shows 7 as 1 is found.
```

**Notes:**

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.

- **156.1.1 `InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer) as Integer`**
- **156.1.2 `InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer`**
- **156.1.3 `InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer`**
- **156.1.4 `InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer`**
- **156.1.6 `InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer`**
156.1.6  InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds bytes or byte ranges in a string.

**Example:**

// search for low byte values, high byte values or numbers from 0 to 9
MsgBox str(InStrByteRangeMBS(“Hello?”, 0, 31, 127, 255, 48, 57 )) // shows 0 as nothing is found.
MsgBox str(InStrByteRangeMBS(“123”, 0, 31, 127, 255, 48, 57 )) // shows 1 as 1 is found.
MsgBox str(InStrByteRangeMBS(EndOfLine.Windows, 0, 31, 127, 255, 48, 57 )) // shows 1 as chr(13) is found.
MsgBox str(InStrByteRangeMBS(“Hello”, 0, 31, 127, 255, 48, 57 )) // shows 0 as nothing is found.

**Notes:**

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.

See also:

- 156.1.1 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer) as Integer 19091
- 156.1.2 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 19092
- 156.1.3 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 19093
- 156.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer 19094
- 156.1.5 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 19095
156.1.7 InStrBytesMBS(target as string, find as string) as Integer

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the first position of one of the bytes given in the find string in the target string.
**Example:**
```
MsgBox str(InStrBytesMBS(“Hello”, ”e”)) // shows 2, as e is found
MsgBox str(InStrBytesMBS(“Hello”, ”abcd”)) // shows 0, as nothing is found
MsgBox str(InStrBytesMBS(“Hello World”, ”abcd”)) // shows 11, as d is found
```

**Notes:**
You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).
The find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

Returns 0 if nothing is found or the position of the found character.

156.1.8 EncodingNameMBS(extends Text as string) as string

MBS Util Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries the text encoding name for this string.
**Example:**
```vba
dim t as string = ”Hello World”
MsgBox ”InternetName: ” + t.Encoding.InternetName
MsgBox ”InternetNameMBS: ” + t.Encoding.InternetNameMBS
MsgBox ”EncodingNameMBS: ” + t.EncodingNameMBS
```

156.1.9 RemoveAccentsMBS(text as string, IgnoreCase as boolean = false) as string

MBS Util Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Removes accents from text.
**Example:**
```vba
dim s as string = ”L’lve prfr”
dim a as string = RemoveAccentsMBS(s)
dim b as string = RemoveAccentsMBS(s, true)
// check values in debugger
```
Notes:
Optionally also ignores case and outputs text in capital letters.
The plugin has a long replacement list of unicode code points to do this.

Useful as a preparation to convert to ASCII text, so all accents are removed before conversion.

156.1.10 SplitCommaSeparatedValuesMBS(text as string, delimiter as string = " ", quote as string = "") as string()

Example:

// 1. read a CSV file:

dim file as FolderItem = SpecialFolder.Desktop.Child("test.csv")
dim t as TextInputStream = TextInputStream.open(file)

// use right encoding for your file!
t.Encoding = encodings.MacRoman

while not t.EOF
    dim line as string = t.ReadLine
    dim items() as string = SplitCommaSeparatedValuesMBS(line)

    // process items array
wend

// 2. compare with split:

dim test as string = "Hello,""World,test"",end"

dim a() as string = split(test, ",")
dim b() as string = SplitCommaSeparatedValuesMBS(test, ",")

MsgBox Join(a,EndOfLine)+EndOfLine+EndOfLine+Join(b,EndOfLine)

Notes:
This function is better for CSV data than the Split function as it handles quoted text right.
For 17.5 we rewrote this function. Now auto detects the delimiter (comma or semicolon) if none passed.
Default quote character is " if nothing is passed. Please only one character for delimiter.

Version 18.0 can detect tab character, too.

156.1.11 CheckUTF8MBS(data as ptr, size as Integer, Placeholder as string) as string

MBS Util Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns string as UTF-8 and replacing invalid UTF-8 sequences with placeholder.

**Notes:**
This function is more save than simply DefineEncoding as it makes sure the returned text actually is valid UTF-8.
You can replace missing characters with empty text, question mark or any other symbol.

This function is overloaded, so you can directly pass in string, memoryblock or ptr+size.
Checks byte sequence with up to 4 byte long sequences. Does not verify whether code points are valid.
See also:
- 156.1.12 CheckUTF8MBS(data as string, Placeholder as string) as string
- 156.1.13 CheckUTF8MBS(mem as MemoryBlock, Placeholder as string) as string

156.1.12 CheckUTF8MBS(data as string, Placeholder as string) as string

MBS Util Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns string as UTF-8 and replacing invalid UTF-8 sequences with placeholder.

**Example:**
```vba
// some random bytes
dim t as string = RandomBytesStringMBS(20, false)

// and some text
t = t + " "

// checked
dim s as string = CheckUTF8MBS(t, ""

MsgBox s
```

**Notes:**
This function is more save than simply DefineEncoding as it makes sure the returned text actually is valid UTF-8.
You can replace missing characters with empty text, question mark or any other symbol.

This function is overloaded, so you can directly pass in string, memoryblock or ptr+size. Checks byte sequence with up to 4 byte long sequences. Does not verify whether code points are valid. See also:

- 156.1.11 CheckUTF8MBS(data as ptr, size as Integer, Placeholder as string) as string
- 156.1.13 CheckUTF8MBS(mem as MemoryBlock, Placeholder as string) as string

156.1.13 CheckUTF8MBS(mem as MemoryBlock, Placeholder as string) as string

MBS Util Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns string as UTF-8 and replacing invalid UTF-8 sequences with placeholder.

**Example:**

```vbnet
// some random bytes
dim t as string = RandomBytesStringMBS(20, false)

// and some text
t = t + " "

// checked in memoryblock
dim m as MemoryBlock = t
dim s as string = CheckUTF8MBS(m, "")

MsgBox s
```

**Notes:**

This function is more save than simply DefineEncoding as it makes sure the returned text actually is valid UTF-8.

You can replace missing characters with empty text, question mark or any other symbol.

This function is overloaded, so you can directly pass in string, memoryblock or ptr+size. Checks byte sequence with up to 4 byte long sequences. Does not verify whether code points are valid. See also:

- 156.1.11 CheckUTF8MBS(data as ptr, size as Integer, Placeholder as string) as string
- 156.1.12 CheckUTF8MBS(data as string, Placeholder as string) as string
156.1.14 ConcatBinaryStringsMBS(a as string, b as string) as string

MBS Util Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Concats the given strings with binary encoding.

**Example:**

```vbscript
dim a as string = "Hello"
dim b as string = "World"
dim c as string = ConcatBinaryStringsMBS(a, b)
dim d as string = ConvertEncoding(b, encodings.UTF16)
dim e as string = ConcatBinaryStringsMBS(a, d)

MsgBox "ConcatBinaryStringsMBS" + vbCrLf + vbCrLf + c + vbCrLf + EncodingToHexMBS(c) + vbCrLf + vbCrLf + e + vbCrLf + EncodingToHexMBS(e)
```

**Notes:** If RB concats strings the encoding is changed before concating to match the other strings.

See also:

- 156.1.15 ConcatBinaryStringsMBS(a as string, b as string, c as string) as string
- 156.1.16 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string) as string
- 156.1.17 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string) as string
- 156.1.18 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string, f as string) as string

156.1.15 ConcatBinaryStringsMBS(a as string, b as string, c as string) as string

MBS Util Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Concats the given strings with binary encoding.

**Notes:** If RB concats strings the encoding is changed before concating to match the other strings.

See also:

- 156.1.14 ConcatBinaryStringsMBS(a as string, b as string) as string
- 156.1.16 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string) as string
- 156.1.17 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string) as string
- 156.1.18 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string, f as string) as string
156.1.16 **ConcatBinaryStringsMBS**(a as string, b as string, c as string, d as string) as string

MBS Util Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Concats the given strings with binary encoding. **Notes:** If RB concats strings the encoding is changed before concating to match the other strings. See also:

- 156.1.14 ConcatBinaryStringsMBS(a as string, b as string) as string 19101
- 156.1.15 ConcatBinaryStringsMBS(a as string, b as string, c as string) as string 19101
- 156.1.16 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string) as string 19102
- 156.1.18 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string, f as string) as string 19102

156.1.17 **ConcatBinaryStringsMBS**(a as string, b as string, c as string, d as string, e as string) as string

MBS Util Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Concats the given strings with binary encoding. **Notes:** If RB concats strings the encoding is changed before concating to match the other strings. See also:

- 156.1.14 ConcatBinaryStringsMBS(a as string, b as string) as string 19101
- 156.1.15 ConcatBinaryStringsMBS(a as string, b as string, c as string) as string 19101
- 156.1.16 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string) as string 19102
- 156.1.18 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string, f as string) as string 19102

156.1.18 **ConcatBinaryStringsMBS**(a as string, b as string, c as string, d as string, e as string, f as string) as string

MBS Util Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Concats the given strings with binary encoding. **Notes:** If RB concats strings the encoding is changed before concating to match the other strings. See also:

- 156.1.14 ConcatBinaryStringsMBS(a as string, b as string) as string 19101
- 156.1.15 ConcatBinaryStringsMBS(a as string, b as string, c as string) as string 19101
- 156.1.16 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string) as string 19102
### 156.1.19  **CountOccurancesMBS(s as string, find as string) as Integer**

MBS Util Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts the occurrences of a string.

**Example:**

```vba
dim s as string
s="111110001110101010111"

MsgBox str(CountOccurancesMBS(s,"1")) // 14
MsgBox str(CountOccurancesMBS(s,"0")) // 7
MsgBox str(len(s)) // 21
```

**Notes:** Returns the number of occurrences of a substring in a string.

### 156.1.20  **CreateStringMBS(Length as Integer, Content as String) as string**

MBS Util Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a string based on a pattern.

**Example:**

```vba
dim c as string = CreateStringMBS( 20, "Hello")
dim t as string = CreateStringMBS( 10, chrb( 255))
```

**Notes:**
The content string is repeated until size is matched and returned.
The string returned has the same encoding set as the content string.

### 156.1.21  **DecodingFromHTTLMBS(s as string) as string**

MBS Util Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Decodes a string with HTML escaped characters.

**Example:**

```vba
```
```
dim html as string = "<p><B>Grüße</B></p>"

dim htmltext as string = RemoveHTMLTagsMBS(html)

dim text as string = DecodingFromHTMLMBS(htmltext)

MsgBox text // shows: Gre
```

**Notes:**
The source string is converted to a native string if it is not already in ASCII. Than for every character the functions looks for the unescaped character code and returns a normal unicode string.

e.g. "München" -> "Mnchen"

This functions uses Realbasic unicode strings, so you may need to convert back to a NativeString before saving the string to a file. (using e.g. ConvertEncoding(string, encodings.UTF8))

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.

Speed optimized in version 2.8 to be a hundred times faster.
Added Linux support in v5.1.

The result of this function is unpredictable on bad input strings.
(e.g. no encoding, or encoding does not match the content of the string)

---

**156.1.22 DecodingFromMySQLMBS(s as string) as string**

MBS Util Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Decodes a string from MySQL.

**Example:**

MsgBox DecodingFromMySQLMBS("test\t\test\% 2.doc")

**Notes:** Replaces all the escapes in a mysql string like (\0, \t or \%) to their binary replacement.
156.1.23 DecodingFromQuotedPrintableMBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Decodes a string with quoted printable encoding.  
**Example:**

```vcl
msgbox DecodingFromQuotedPrintableMBS("Hi, =A1=92")
```

**Notes:**
The decoded string is marked to have an ASCII encoding, but you may need to set the encoding to something like ISO. Than you need a text converter to make something printable from it.

May return "" on low memory conditions.

156.1.24 DecodingFromURLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Decodes a string with URL escaped characters.  
**Example:**

```vcl
dim s as string
dim t as string
dim u as string
t="Hello World 

s= EncodingToURLMBS(t,0)
u=DecodingFromURLMBS(s,0)

SetEncodingOfStringMBS u,GetEncodingOfStringMBS(t) // restore encoding

// Hello World
MsgBox t
// Hello% 20World% 20% C3% A4% C3% B6% C3% BC
MsgBox s
// Hello World
MsgBox u
```

**Notes:**
Decodes an URL encoded ASCII string. The string returned is marked as a binary string (without encoding).
You need to set the encoding to whatever the original was (ISO-9660 or UTF8 for example).

e.g. "Wie%20geht’s%3F" ->"Wie geht’s?"

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.
See also:

- 156.1.25 DecodingFromURLMBS(s as string, options as Integer) as string

156.1.25 DecodingFromURLMBS(s as string, options as Integer) as string

Example:

dim s as string
dim t as string
dim u as string
t="Hello World"
s= EncodingToURLMBS(t,1)
u=DecodingFromURLMBS(s,1)
SetEncodingOfStringMBS u,GetEncodingOfStringMBS(t) // restore encoding

// Hello World
MsgBox t
// Hello+World+% C3% A4% C3% BC
MsgBox s
// Hello World
MsgBox u

Notes:

Decodes an URL encoded ASCII string. The string returned is marked as a binary string (without encoding).
You need to set the encoding to whatever the original was (ISO-9660 or UTF8 for example).

e.g. "Wie%20geht’s%3F" ->"Wie geht’s?"

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.

Pass 1 for the options parameter to get PHP/Perl compatible output (+ instead of spaces and % 20 for spaces).
Added Linux support in v5.1.
See also:

• 156.1.24 DecodingFromURLMBS(s as string) as string

156.1.26 DecodingFromXMLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Decodes a string with XML escaped characters.
**Notes:** see DecodingFromHTMLMBS.

156.1.27 DetectUnicodeMarkersMBS(s as string) as Integer

MBS Util Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Tries to get the unicode marker from the string.
**Example:**

```plaintext
const EncodingUnknown=0
const EncodingUTF8=1
const EncodingUTF16be=3
const EncodingUTF16le=4
const EncodingUTF32be=6
const EncodingUTF32le=7

dim text as string = "Hello World" // this text does not have a marker..

msgbox str(DetectUnicodeMarkersMBS(text))
```

**Notes:** For some UTF16 LittleEndian strings this function may return UTF32.

156.1.28 EncodeEmailSubjectMBS(s as string) as string

MBS Util Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Encodes an email subject.
Text is encoded with UTF-8 Quoted Printable encoding.
CHAPTER 156. STRING

If text does not need to be encoded (pure ASCII), we return the input text.

**Example:**

MsgBox EncodeEmailSubjectMBS("Hello World") + EndOfLine + EncodeEmailSubjectMBS("Test ")

156.1.29  **EncodingToHTMLMBS(s as string, options as Integer = 0) as string**

MBS Util Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a string with HTML escaped characters.

**Example:**

```basic
dim f as folderItem
dim b as binaryStream

f = getsaveFolderItem("text/html","new.html")
if f<>nil then
    b = f.createBinaryFile("text/html")
    if b<>nil then
        b.write nativeStringMBS(EncodingToHTMLMBS(editfield1.text))
        b.close
    end if
end if
```

**Notes:**

The source string is converted to unicode if it is not already in unicode. Then for every character the function looks for the escaped character code and returns a HTML encoded string.

e.g. "Mnchen" -> "M &uuml;nchen"

This function uses Realbasic unicode strings, so you may need to convert back to a NativeString before saving the string to a file.

Return characters (chr(10) and chr(13)) are not converted to `<BR>` codes.

May return "" on low memory conditions.

The result of this function is unpredictable on bad input strings.
(e.g. no encoding, or encoding does not match the content of the string)

Options can be 1 to not encode ASCII values <128, so quotes, <, >and & are not encoded.
156.1.30 EncodingToQuotedPrintableMBS(s as string, LineLen as Integer = 72) as string

MBS Util Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a string with quoted printable characters.
**Example:**
```vbs
dim a as string = "Hello !"
dim b as string = EncodingToQuotedPrintableMBS(a)
dim c as string = ConvertEncoding(a, encodings.ISOLatin1)
dim d as string = EncodingToQuotedPrintableMBS(c)
dim e as string = EncodeQuotedPrintable(a)
dim f as string = EncodeQuotedPrintable(c)

MsgBox b+EndOfLine+d+EndOfLine+e+EndOfLine+f
```

**Notes:**
Line wrap is per default at 72 characters but you can pass some other positive value here.
Quoted printable encoded strings have some ISO encoding as base, you need to pass a valid ISO string to
this function to get the correct result.
May return "" on low memory conditions.

156.1.31 EncodingToURLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a string with URL escaped characters.
**Example:**
```vbs
msgbox EncodingToURLMBS("Wie geht's?")
```

**Notes:**
Encodings a string for an URL. Use with UTF8 or ISO-9660 encoded strings. This function does not work
correctly with UTF16 strings.

E.g. "Wie geht's?" ->"Wie% 20geht's% 3F"

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

See also:

- 156.1.32 EncodingToURLMBS(s as string, options as Integer) as string

156.1.32 EncodingToURLMBS(s as string, options as Integer) as string

MBS Util Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a string with URL escaped characters.

**Example:**
```vbs
    dim s as string = "20101210 1244 - Sky Cinema +24 - Wen die Geister lieben"
    MsgBox EncodingToURLMBS(s)
    MsgBox EncodingToURLMBS(s,1)
    // gives: 20101210%201244+%20Sky%20Cinema%20%2B24%20%20Wen%20die%20Geister%20lieben
    MsgBox EncodingToURLMBS(s,2)
```

**Notes:**
Encodings a string for an URL. Use with UTF8 or ISO-9660 encoded strings. This function does not work correctly with UTF16 strings.

e.g. "Wie geht’s?” -> ”% 20geht’s% 3F”

May return ”” on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.

Pass 1 for the options parameter to get PHP/Perl compatible output (+ instead of spaces and % 20 for spaces).
Pass 2 for the options parameter to get plus to % 2B and space to % 20. Added in plugin version 10.6.
See also:

- 156.1.31 EncodingToURLMBS(s as string) as string
156.1.33 EncodingToXMLMBS(s as string, options as Integer = 0) as string

MBS Util Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a string with XML escaped characters. **Notes:** see EncodingToHTMLEMBS.

156.1.34 GetStringsFromDataMBS(data as MemoryBlock, MinLength as Integer = 0) as string()

MBS Util Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Looks for strings within a data block. **Notes:**

| Looks over the bytes in the data block to see if there are useful byte sequences which could be text. Returns an array with all text fragments found.

This function is UTF8 aware and will work well for UTF-8 encoded text fragments. See also:

- 156.1.35 GetStringsFromDataMBS(data as ptr, size as Integer, MinLength as Integer = 0) as string() 19111
- 156.1.36 GetStringsFromDataMBS(data as String, MinLength as Integer = 0) as string() 19112

156.1.35 GetStringsFromDataMBS(data as ptr, size as Integer, MinLength as Integer = 0) as string()

MBS Util Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Looks for strings within a data block. **Notes:**

| Looks over the bytes in the data block to see if there are useful byte sequences which could be text. Returns an array with all text fragments found.

This function is UTF8 aware and will work well for UTF-8 encoded text fragments. See also:

- 156.1.34 GetStringsFromDataMBS(data as MemoryBlock, MinLength as Integer = 0) as string() 19111
- 156.1.36 GetStringsFromDataMBS(data as String, MinLength as Integer = 0) as string() 19112
156.1.36  **GetStringFromDataMBS**(data as String, MinLength as Integer = 0) as string()

MBS Util Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Looks for strings within a data block.

**Example:**
```
    dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
    dim b as BinaryStream = BinaryStream.Open(f)
    dim s as string = b.Read(b.Length)
    dim texts() as string = GetStringsFromDataMBS(s, 3)
```

**Notes:**
Looks over the bytes in the data block to see if there are useful byte sequences which could be text.
Returns an array with all text fragments found.

This function is UTF8 aware and will work well for UTF-8 encoded text fragments.
See also:

- 156.1.34 GetStringsFromDataMBS(data as MemoryBlock, MinLength as Integer = 0) as string() 19111
- 156.1.35 GetStringsFromDataMBS(data as ptr, size as Integer, MinLength as Integer = 0) as string() 19111

156.1.37  **GetUnicodeMarkersMBS**(kind as Integer) as string

MBS Util Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the unicode marker with the given code.

**Example:**
```
    const EncodingUnknown=0
    const EncodingUTF8=1
    const EncodingUTF16=2  // native
    const EncodingUTF16be=3
    const EncodingUTF16le=4
    const EncodingUTF32=5  // native
    const EncodingUTF32be=6
    const EncodingUTF32le=7

    msgbox EncodingToHexMBS(GetUnicodeMarkersMBS(EncodingUTF8))
```
156.1. GLOBALS

Notes: If you concat strings, RB may convert the string to UTF8.

156.1.38 HexstringMBS(input as string, hexlen as Integer, linelen as Integer, linestart as string, lineend as string, spacer as string, filler as string) as string

MBS Util Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Creates a hexadecimal string. Example:

```vba
dim s as string
s=HexstringMBS("Hello World",2,10,"<",">"+endofline,"","0")
```

Notes:
Fails if input="" or hexlen<1 or linelen<1 or on low memory conditions. If filler is "", filler is set to "0".

Memory requirement is around 5 times the memory for input.
Or exactly:

```
mem=20+linelen*hexlen*(1+len(filler))+2*(linelen*hexlen*len(filler)+len(lineend)+len(linestart))*len(input)/2/hexlen)
```

All strings must be in the encoding you want to have. Can raise OutOfMemoryException on low memory.

156.1.39 IsASCIIStringMBS(s as string) as boolean

MBS Util Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Checks if this string is an ASCII string. Notes:
False if one of the characters of the string has a numeric value of 128 or higher. (->string is not a 7 bit ASCII string)
True if all bytes are in the valid ASCII range.
See also:

- 156.1.40 IsASCIIStringMBS(s as string, mode as Integer) as boolean
156.40  IsASCIIStringMBS(s as string, mode as Integer) as boolean

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Checks if this string is an ASCII string.

**Notes:**
Does not work for 16bit unicode strings.
But it works fine with UTF8.

Mode values:

0  False if one of the characters of the string has a numeric value of 128 or higher.
   (->string is not a 7 bit ASCII string)
1  False if one of the characters of the string has a numeric value >128 or <32.
   (->string may not be printable in ASCII, which may require some kind of Base64 encoding to transfer it.)
2  False if one of the characters of the string has a numeric value below 32.
   (->string may contain line breaks or other control characters)

Added Linux support in v5.1.
See also:

- 156.39 IsASCIIStringMBS(s as string) as boolean

156.41  JaroWinklerDistanceMBS(a as string, b as string) as Double

MBS Util Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calculates the string distance.

**Example:**
```vba
dim s1 as string = "Hello"
dim s2 as string = "Hallo"
dim s3 as string = "Helo"
dim s4 as string = "Helllo"

dim d1 as Double = levenshteinDistanceMBS(s1,s1)
dim d2 as Double = levenshteinDistanceMBS(s1,s2)
dim d3 as Double = levenshteinDistanceMBS(s1,s3)
dim d4 as Double = levenshteinDistanceMBS(s1,s4)

dim d5 as Double = jaroWinklerDistanceMBS(s1,s1)
```

// 0 for equal, the more it goes to 1.0
dim d6 as Double = jaroWinklerDistanceMBS(s1,s2)
dim d7 as Double = jaroWinklerDistanceMBS(s1,s3)
dim d8 as Double = jaroWinklerDistanceMBS(s1,s4)

break // check values in debugger

Notes:
Value is normalized, so 0.0 is equal text and 1.0 is totally unequal.

see also

156.1.42 LevenshteinDistanceMBS(a as string, b as string) as Double

MBS Util Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates the string distance. **Example:**

dim s1 as string = ”Hello”
dim s2 as string = ”Hallo”
dim s3 as string = ”Helo”
dim s4 as string = ”Hello”

// 0 for equal, the more it goes to 1.0

dim d1 as Double = levenshteinDistanceMBS(s1,s1)
dim d2 as Double = levenshteinDistanceMBS(s1,s2)
dim d3 as Double = levenshteinDistanceMBS(s1,s3)
dim d4 as Double = levenshteinDistanceMBS(s1,s4)

dim d5 as Double = jaroWinklerDistanceMBS(s1,s1)
dim d6 as Double = jaroWinklerDistanceMBS(s1,s2)
dim d7 as Double = jaroWinklerDistanceMBS(s1,s3)
dim d8 as Double = jaroWinklerDistanceMBS(s1,s4)

break // check values in debugger

Notes:
Value is normalized, so 0.0 is equal text and 1.0 is totally unequal.

see also
156.1.43 NativeStringMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a native string with the given string as content.  
**Notes:**  
If the string in the parameter s is already native it is returned unchanged and without allocating additional memory. Else the string is copied into a new string with native characters.  
On Mac OS Classic native means MacRoman encoding, on Mac OS X it’s UTF8 and on Windows the ANSI Codepage.  
May return "" on low memory conditions.  
Strings and encoding work only perfectly for RB 4.5 or newer.  
Added Linux support in v5.1.

156.1.44 RandomBytesStringMBS(Length as Integer, ASCII as boolean=false) as string

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a string with random content.  
**Example:**
```vbnet
dim s as string

s = RandomBytesStringMBS(10, true)
MsgBox s

s = RandomBytesStringMBS(10, false)
MsgBox s
```

**Notes:**  
Length is the number of bytes in the string.  
If ASCII is true the string returned is in an ASCII string.
156.1.45 RemoveHTMLTagsMBS(AsciiTextWithTags as string) as string

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Removes all html tags from the string.

**Example:**
msgbox RemoveHTMLTagsMBS("<P>Hello</P>") // returns "Hello"

**Notes:**
Returns "" on low memory.
Written to be used with UTF8 strings.
Added Linux support in v5.1.

156.1.46 RemoveHTMLTagsWithMBS(AsciiTextWithTags as string, Replacement as string) as string

MBS Util Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Removes all html tags from the string and replaces them with the replacement string.

**Example:**
msgbox RemoveHTMLTagsWithMBS("<P>Hello</P>",") // returns " Hello"

**Notes:**
Returns "" on low memory.
Written to be used with UTF8 strings.

156.1.47 ReplaceNonPrintableCharactersMBS(s as string, replacevalue as Integer=46) as string

MBS Util Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Replaces bytes in the string which are not printable with the given byte value.

**Example:**
MsgBox ReplaceNonPrintableCharactersMBS("Hello World")
MsgBox ReplaceNonPrintableCharactersMBS("Hello World")
MsgBox ReplaceNonPrintableCharactersMBS("Hello World",32)

**Notes:**
All bytes in range 32 to 127 are copied and all others replaces with the given byte value. Default is 46 which is a dot.
Returns always an ASCII string.
On low memory this function returns an empty string.

### 156.1.48 ScientificStrMBS(d as Double, digits as Integer) as string

MBS Util Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the given value formatted as scientific number with the given number of digits.

**Example:**
```vbnet
dim d as Double = 3.1415926535897
MsgBox ScientificStrMBS(d,6)+EndOfLine+ScientificStrMBS(d,9)
```

### 156.1.49 SplitMBS(value as String, delimiter as String = “ ”) as String()

MBS DataTypes Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Splits string.

**Example:**
```vbnet
dim a() as string = SplitMBS(”Hello World Test”, ” ”)
dim b() as string = SplitMBS(”Gre”, ””)
dim c() as string = SplitMBS(”Just$ test$ a$ test$ test”, ”$ test$ ”)
```

**Notes:**
Similar to the Split() function, but without the problems we see with Split function. See feedback cases for Split.

If delimiter is “”, we return an array with all characters in string.
Else we split given string with delimiter.

### 156.1.50 SQLReplaceBooleanMBS(SQL as string) as string

MBS Util Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Replaces all false/true strings with 0/1 and handles quotes correctly.

**Example:**
MsgBox SQLReplaceBooleanMBS("INSERT INTO criteria VALUES ('1','9999','0001','000001557',false);")

Notes:
SQLite used in REALSQLDatabase does not like false and true literals for boolean values. You need to use 0 and 1. So this function helps you converting old queries using false/true.
false and true inside a quoted string are not changed.

156.1.51 StrCompBytesMBS(a as string, b as string) as Integer

MBS Util Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Compares two strings.
Example:
msgbox str(StrCompBytesMBS("Hello","hello"))

Notes:
Returns zero if the two strings are identical.
Returns 1 or -1 if the strings are different.
Empty strings are equal.

Compares the bytes of both strings independend of the text encoding.
So if a="A" in UTF-8 and b="A" in UTF-16 they will not be equal!

156.1.52 StrCompCharactersMBS(a as string, b as string) as Integer

MBS Util Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Compares two strings.
Example:
msgbox str(StrCompCharactersMBS("Hello","hello"))

Notes:
Returns zero if the two strings are identical.
Returns 1 or -1 if the strings are different.
Empty strings are equal.
Compares the characters of both strings. If the text encodings are not equal, they are both converted to UTF-8 before comparing them.

So if a="A" in UTF-8 and b="A" in UTF-16 they will be equal!

**156.1.53 StringANDMBS(a as string,b as string) as string**

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies a binary AND on the bytes from the both strings.

**Notes:**
- If a is "" or memory is low, the result is "".
- If b is shorter as a the b string is used several times.
- The function is optimized for several cases, e.g. the case where b is only one, two or four bytes long.
- Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.
- Added Linux support in v5.1.

**156.1.54 StringIsHTMLreadyMBS(s as string) as boolean**

MBS Util Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Test whether a string is html safe.

**Example:**

```plaintext
Function html(t as string) As string
    # pragma disablebackgroundtasks
    # pragma disableautowaitcursor

    if StringIsHTMLreadyMBS(t) then
        Return t
    else
        t=EncodingToHTMLMBS(t)
        Return ConvertEncoding(t,encodings.UTF8)
    end if
End Function
```

**Notes:**
- String which are not html safe, need to go through EncodingToHTMLMBS.
- Using this function saves a lot of time!

Returns true for strings which are html safe.
156.1.55  **StringIsXMLreadyMBS** (s as string) as boolean

MBS Util Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Test whether a string is xml safe.  
**Notes:**  
String which are not html safe, need to go through EncodingToXMLMBS. Using this function saves a lot of time!  

Returns true for strings which are xml safe.

156.1.56  **StringORMBS** (a as string, b as string) as string

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies a binary OR on the bytes from the both strings.  
**Notes:**  
If a is "" or memory is low, the result is "".  
If b is shorter as a the b string is used several times.  
The function is optimized for several cases, e.g. the case where b is only one, two or four bytes long.  
Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.  
Added Linux support in v5.1.

156.1.57  **StringXOR2MBS** (data as string, XorMask as string, MaskOffset as Integer = 0) as string

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies a binary XOR on the bytes from the both strings.  
**Example:**  
```vba  
dim s as string = StringXORMBS("Hello", "World")  
dim t as string = StringXOR2MBS("Hello", "World")  
MsgBox EncodeHex(S)+" " +EncodeHex(t)  
```
```vba  
dim ss as string = StringXORMBS(s, "World")  
dim tt as string = StringXOR2MBS(t, "World")  
MsgBox ss+" " +tt  
```
Notes:

If data is "" or memory is low, the result is "".
If XorMask is shorter as data the XorMask string is used several times.
Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.

The difference between StringXORMBS and StringXOR2MBS is that the second version xors also with position of byte in string, so your text looks a little bit more random.
MaskOffset specifies where in the XorMask string to start. This is useful for partial blocks.

156.1.58 StringXORMBS(data as string, XorMask as string, MaskOffset as Integer = 0) as string

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies a binary XOR on the bytes from the both strings.
**Notes:**

If data is "" or memory is low, the result is "".
If XorMask is shorter as data the XorMask string is used several times.
The function is optimized for several cases, e.g. the case where b is only one, two or four bytes long.
Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.
MaskOffset specifies where in the XorMask string to start. This is useful for partial blocks.

156.1.59 StrMBS(d as Double) as string

MBS Util Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Formats numbers more human readable

**Example:**

// shows: 0.000000012339 1.234560e-8
MsgBox StrMBS(0.00000001234)+" "+str(0.00000001234)

// shows 123456789.0 1.234568e+8
MsgBox StrMBS(123456789.0)+" "+str(123456789.0)

**Notes:** The idea is to have a dynamically changing number of digits. We have no scientific notation and up to 15 digits visible (not counting zeros).
156.1.60  UnicodeStringMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a unicode string with the given string as content.

**Notes:**
- If the string in the parameter s is already unicode it is returned unchanged and without allocating additional memory. Else the string is copied into a new string with unicode (16bit) characters.
- May return "" on low memory conditions.
- Strings and encoding work only perfectly for RB 4.5 or newer.
- Added Linux support in v5.1.

The result of this function is unpredictable on bad input strings.
(e.g. no encoding, or encoding does not match the content of the string)

156.1.61  ConvertUnicodeToCharacterCompositionMBS(text as string) as string

MBS Util Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts unicode characters to composed normalization form.

**Example:**

```vbs
dim s1 as string = ConvertUnicodeToCharacterDecompositionMBS(""
MsgBox s1+": " + EncodeHex(s1)

dim s2 as string = ConvertUnicodeToCharacterCompositionMBS(""
MsgBox s2+": " + EncodeHex(s2)
```

**Notes:**
- This function replaces character represented by decomposed representation with the composed representation.

see also

156.1.62  ConvertUnicodeToCharacterDecompositionMBS(text as string) as string

MBS Util Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts unicode characters to decomposed normalization form.

**Example:**
**CHAPTER 156. STRING**

```vbs
Dim s1 As String = ConvertUnicodeToCharacterDecompositionMBS(""")
MsgBox s1 + ": " + EncodeHex(s1)

Dim s2 As String = ConvertUnicodeToCharacterCompositionMBS(""")
MsgBox s2 + ": " + EncodeHex(s2)
```

**Notes:**
This function replaces character represented by one unicode character by the decomposed variant.

See also

### 156.1.63 DecodingFromCP1252MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Decodes a string with ISO 8859 encoding.

**Notes:**
The source string must be really an CP1252 string!
The string returned is Unicode and you may try NativeString to make a string you can display better.

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

### 156.1.64 DecodingFromHexMBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Decodes a Hex string to a binary string.

**Example:**
```vbs
Dim s As String

s = EncodingToHexMBS("Hallo")
MsgBox DecodingFromHexMBS(s)
```

**Notes:**
May return "" on low memory conditions.
Added Linux support in v5.1.
The string returned has no defined string encoding, so use DefineEncoding on the result if needed.

156.1.65 DecodingFromISO8859MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Decodes a string with ISO 8859 encoding.
Example:

```
dim s as String

s=EncodingToISO8859MBS("hallo ")

MsgBox s
s=DecodingFromISO8859MBS(s)
MsgBox s
s=NativeStringMBS(s)
MsgBox s
```

Notes:
The source string must be really an ISO 8859-1 string!
The string returned is Unicode and you may try NativeString to make a string you can display better.

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

156.1.66 EncodingToCP1252MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Returns a string encoded with Codepage 1252.
Notes:
The string is converted to Unicode (if it’s not already Unicode) and than encoded to a CP 1252 string which is returned with encoding set to binary.
(other encodings are available, but currently not in the plugin)
May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

156.1.67 EncodingToHexMBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Encodes a binary string to a hex string.

**Example:**

```
dim s1 as string = "Hello World"
dim s2 as string = EncodingToHexMBS(s1)

dim t1 as string = "Umlauts "
dim t2 as string = EncodingToHexMBS(t1)

dim u as new UUIDMBS
dim u1 as string = u.ValueString
dim u2 as string = EncodingToHexMBS(u1)
```

```
break // see variables in debugger
```

**Notes:**
May return "" on low memory conditions.
Added Linux support in v5.1.

156.1.68 EncodingToISO8859MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a string encoded with ISO 8859-1.

**Example:**

```
dim s as String
s = EncodingToISO8859MBS("hallo ")

MsgBox s
```

```
s = DecodingFromISO8859MBS(s)

MsgBox s
```
156.1.  **GLOBALS**

s=NativeStringMBS(s)

MsgBox s

**Notes:**
The string is converted to Unicode (if it’s not already Unicode) and then encoded to a ISO 8859-1 string which is returned with encoding set to binary. (other encodings are available, but currently not in the plugin)

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

---

156.1.69  **JoinDataMBS(blocks() as memoryblock) as string**

**Function:** Joins an array of memoryblocks in new string.
**Example:**

```vbscript
dim s() as MemoryBlock

// make memoryblock with a space character
dim m as MemoryBlock = "Hello"

s.Append m
s.Append m
s.Append m

// now join
dim r as string = JoinDataMBS(s)

// define to be ASCII:
r = DefineEncoding(r, encodings.ASCII)

// and show
MsgBox r
```

**Notes:**
Returned string has no encoding defined.
Raises OutOfMemoryException in case of low memory.
See also:
• 156.1.70 JoinDataMBS(strings() as string) as string
• 156.1.71 JoinDataMBS(values() as Variant) as string

156.1.70  JoinDataMBS(strings() as string) as string

Function: Joins an array of strings in new string.
Example:

```vba
dim s() as string
s.Append "Hello"
s.Append " "
s.Append "World"

// now join
dim r as string = JoinDataMBS(s)

// define to be ASCII:
r = DefineEncoding(r, encodings.ASCII)

// and show
MsgBox r
```

Notes:
Returned string has no encoding defined.
Raises OutOfMemoryException in case of low memory.
See also:
• 156.1.69 JoinDataMBS(blocks() as memoryblock) as string
• 156.1.71 JoinDataMBS(values() as Variant) as string

156.1.71  JoinDataMBS(values() as Variant) as string

Function: Joins an array of variants in new string.
Example:

```vba
dim s() as Variant

// make memoryblock with a space character
dim m as new MemoryBlock(1)
m.Int8Value(0) = 32
```
s.Append "Hello"
s.Append m
s.Append "World"

// now join
dim r as string = JoinDataMBS(s)

// define to be ASCII:
r = DefineEncoding(r, encodings.ASCII)

// and show
MsgBox r

Notes:
Variants can be memoryblocks or strings or normal objects which can give stringValue.
Returned string has no encoding defined.
Raises OutOfMemoryException in case of low memory.
See also:

• 156.1.69 JoinDataMBS(blocks() as memoryblock) as string
• 156.1.70 JoinDataMBS(strings() as string) as string

156.1.72 JoinStringMBS(strings() as string) as string

Function: Joins an array of strings in new string.
Example:

dim s() as string

s.Append "Hello"
s.Append "   
s.Append "World"

dim r as string = JoinStringMBS(s)

MsgBox r

Notes:
Converts all strings if necessary into UTF-8. If you want to join them as they are, please use JoinDataMBS.
Raises OutOfMemoryException in case of low memory.
156.1.73  JoinStringMBS(values() as Variant) as string

Function: Joins an array of strings in new string.

Example:

dim s() as Variant
s.Append "Hello"
s.Append " "
s.Append "World"

dim r as string = JoinStringMBS(s)

Notes:
Converts all strings if necessary into UTF-8.
Raises OutOfMemoryException in case of low memory.

See also:

- 156.1.72 JoinStringMBS(strings() as string) as string

156.2  class StringHandleMBS

156.2.1  class StringHandleMBS

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: A class for attaching strings together very fast.

Example:

dim s as StringHandleMBS
s=new StringHandleMBS

// Add some text
s.Add "Hello"
s.Add " "
s.Add "World"
// Insert a string
s.Insert " great",6

// check it
MsgBox s.Copy

// Delete the great from above
s.Delete 6,7

// check
MsgBox s.Copy

// Insert again
s.Insert " great ",6

// check
MsgBox s.Copy

// Now we extract the middle, so it’s deleted
MsgBox s.Extract(6,7)

// check again
MsgBox s.copy

Notes: The class initialized itself on the first use.

156.2.2 Methods

156.2.3 Add(data as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Adds the string at the end of the current data.
Notes: Note that all strings added must have the same encoding.

156.2.4 clone as StringHandleMBS

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Creates a new StringHandleMBS object with the same content.
156.2.5 Constructor

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor of this class.

See also:

- 156.2.6 Constructor(initvalue as string)

156.2.6 Constructor(initvalue as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The second constructor of this class which sets the value directly to the given REALbasic string.

**Example:**

```realbasic
// An utility function you can define in a module:

Function BinaryReplaceAll(s as string, a as string, b as string) As string
    dim h as StringHandleMBS
    h=new StringHandleMBS(s)
    h.ReplaceAll(a, b)
    Return h.Copy
End Function
```

See also:

- 156.2.5 Constructor

156.2.7 Copy as string

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the content as a REALbasic string.

**Notes:** This string will have the encoding set in the encoding property.

156.2.8 Delete(start as Integer, length as Integer)

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Deletes the bytes within the range.

**Notes:**

One based like RB’s string functions.

The start and length parameters use bytes not characters as unit. You can use the Copy method to get a RB
### 156.2.9 Extract(start as Integer, length as Integer) as string

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Returns a part of the string.

**Notes:**

One based and the returned part is removed form the string data.
The start and length parameters use bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

### 156.2.10 Insert(data as string, position as Integer)

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Inserts the string data at the given byte position.

**Notes:**

One based.

Note that on Unicode the character position and the byte position are not equal!
(On 16bit Unicode charpos=2*bytepos and on US ASCII charpos=bytepos)

The position parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

### 156.2.11 InStr(srcOfs as Integer, target as String) as Integer

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Searches for a binary string inside the StringHandle.

**Notes:**

The same as InStr but with a second parameter to specify the start of the search inside the string handle.

The srcOfs parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

See also:

- 156.2.12 InStr(target as String) as Integer
156.2.12  **Instr(target as String) as Integer**

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Searches for a binary string inside the StringHandle.
**Example:**

```vbs
// We test if RB returns the same values as the plugin

dim s as String
dim h as StringHandleMBS

s="Christian"
h=new StringHandleMBS

h.Add s

MsgBox "MBS: " +str(h.InStr(5,"ia"))+", RB: " +str(InStr(s,"ia"))
MsgBox "MBS: " +str(h.InStr("xy"))+", RB: " +str(InStr(s,"xy"))
```

**Notes:**

Works like InstrB in RB which searches in binary mode.
Note that the string you use for searching must have the same encoding as the strings inside the stringhandle or you won’t find stuff like ”ü” (umlauts).
The search is case sensitive.
See also:

- 156.2.11 Instr(srcOfs as Integer, target as String) as Integer

156.2.13  **Left(length as Integer) as String**

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns a copy of the first left bytes of the string.
**Notes:**

May return less strings if the stored string is not long enough.

The length parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.
156.2. CLASS STRINGHANDLEMBS

156.2.14 Mid(start as Integer, length as Integer) as string

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Returns a part of the string.

**Notes:**
- One based.
- The length parameter uses bytes not characters as unit. You can use the Copy method to get a RB string for characterwise editing.

156.2.15 Replace(a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Replaces the first string found with content of a with the content of b.

**Example:**
```vba
dim s as StringHandleMBS
s=new StringHandleMBS
s.Add "Hallo Leutle, Hellau"
s.Replace("H","h")
s.Replace("l","i")
MsgBox s.Copy+" "+str(s.Len)
```

**Notes:**
- Note that all strings are compared binary and must have the same encoding.
- Basically this is just a call to instr, one to delete and one to insert.

See also:

- 156.2.16 Replace(startpos as Integer, a as String, b as string)

156.2.16 Replace(startpos as Integer, a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Replaces the first string found with content of a with the content of b.

**Notes:**
- If you don’t give a startpos parameter the call uses one and is equal to Replace(a,b).
- Startpos is one based like all indexes in this class.
- The startpos parameter uses bytes not characters as unit. You can use the Copy method to get a RB string for characterwise editing.
for characterwise editing.
See also:

- 156.2.15 Replace(a as String, b as string)

### 156.2.17 ReplaceAll(a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Replaces all strings with content of a with the content of b.
**Example:**
```vba
dim s as StringHandleMBS
s=new StringHandleMBS
s.Add "Hallo Leutle, Hellau"
s.Replaceall("H","h")
s.Replaceall("l","i")
MsgBox s.Copy+" "+str(s.Len)
```

**Notes:**
Note that all strings are compared binary and must have the same encoding.
Basicly this is just a loop with calls to instr, to delete and to insert.
See also:

- 156.2.18 ReplaceAll(startpos as Integer, a as String, b as string)

### 156.2.18 ReplaceAll(startpos as Integer, a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Replaces all strings with content of a with the content of b.
**Notes:**
If you don’t give a startpos parameter the call uses one and is equal to ReplaceAll(a,b).
Startpos is one based like all indexes in this class.

The startpos parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string
for characterwise editing.
See also:

- 156.2.17 ReplaceAll(a as String, b as string)
156.2. CLASS STRINGHANDLEMBS

156.2.19 Right(length as Integer) as string

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Returns a copy of the first right bytes of the string.

**Example:**

```
// There was a small bug in the Right and the Mid function for the version 3.1 of this plugin.
// This test failed in 3.1, but works in 3.2:

dim Text as StringHandleMBS
dim Part as String

Text = New StringHandleMBS
Text.Add "." + chr(13) + chr(10)

Part = Text.Copy
' Now Part is ".<CR><LF" which is correct

if lenb(Part)<>3 then
    MsgBox ",Failed on Copy ",+str(lenb(Part))
end if

Part = Text.Right(1)
' Now Part is ",<LF>" which is correct

if lenb(Part)<>1 then
    MsgBox ",Failed on Right(1 )",+str(lenb(Part))
end if

Part = Text.Right(2)
' Now Part is ",<CR><LF>" which is correct

if lenb(Part)<>2 then
    MsgBox ",Failed on Right(2 )",+str(lenb(Part))
end if

Part = Text.Right(3)
' Now Part is " which is wrong!

if lenb(Part)<>3 then
    MsgBox ",Failed on Right(3 )",+str(lenb(Part))
end if
```

**Notes:**

May return less strings if the stored string is not long enough.
The length parameter uses bytes not characters as unit. You can use the Copy method to get a RB string for
characterwise editing.

156.2.20 Truncate(length as Integer)

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Truncates the string handle content.
Notes:
Sets the length of the string back to the given value if it’s greater.

The length parameter uses bytes not characters as unit. You can use the Copy method to get a RB string for characterwise editing.

156.2.21 Properties

156.2.22 BlockLen as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The size of the memory currently used for this class.
Notes:
This value increases by BlockSize if more memory is needed. (Read only property)

156.2.23 BlockSize as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The size of the blocks to allocate for storing the data.
Notes: (Read and Write property)

156.2.24 Encoding as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The encoding to use for returned strings.
Notes:
Only useful on Realbasic 4.5 and newer.

Some example values for encoding:
156.2. CLASS STRINGHANDLEMBS

MacRoman 0 Also for ASCII or binary data used.
WindowsLatin1 \& h0500 ANSI codepage 1252
ISOLatin1 \& h0201 ISO 8859-1
NextStepLatin \& h0B01 NextStep encoding
Unicode \& h0100 16 bit Unicode
UTF8 \& h08000100 8 bit Unicode
Invalid \& hFFFFFFFF (Binary)
Invalid \& hFFFF (Binary)

(Read and Write property)

156.2.25 Len as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns the len in bytes of the stored string.
Notes: (Read only property)

156.2.26 ReplaceCount as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: After a call to one of the Replace functions the number of items replaced.
Notes: (Read and Write property)
156.3 class StyledText

156.3.1 class StyledText

156.3.2 Properties

156.3.3 RTFDataMBS as string

Notes:
This is a replacement for the built-in RTFData property. We tried to make the results exactly like the original. Speed should be a little bit faster than the official method. (Read and Write computed property)
156.4 class TextEncoding

156.4.1 class TextEncoding

Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Built in class from Xojo for text encodings.

156.4.2 Methods

156.4.3 InternetNameMBS as string

MBS Util Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the name of this text encoding. **Notes:** We have this method in MBS Plugin as InternetName function does not work on Linux/Windows. (See feedback case 30712)
Chapter 157

Sudden Motion Sensor

157.1 module UniMotionMBS

157.1.1 module UniMotionMBS

MBS MacOSX Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
This module handles communication with the UniMotion library.

**Notes:**
UniMotion - Unified Motion detection for Apple portables.

157.1.2 Methods

157.1.3 DetectSMS as Integer

MBS MacOSX Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

Returns the value of SMS hardware present or unknown if no hardware is detected.

**Example:**

```vba
dim type as Integer = UniMotionMBS.DetectSMS

if type=0 then
 MsgBox "Unknown motion hardware or none found."
 quit
end if
```

**Notes:**

Use the constants powerbook, ibook, highrespb and macbookpro.

Use the value returned from DetectSMS as the type for the other functions.

Don’t call readsms(detectsms...) as this will do extra work.

If you can’t save the type between calls pass 0 as type to avoid extra work.

157.1.4 LoadLibrary(file as folderitem) as boolean

MBS MacOSX Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

Loads the library from the folderitem.

**Example:**

```vba
dim f as FolderItem

f=GetFolderItem("libUniMotion.dylib")
if UniMotionMBS.LoadLibrary(f) then
 'ok
MainWindow.Show
else
 MsgBox "Failed to load the UniMotion library."
 quit
end if
```

**Notes:** Returns true on success and false on failure.
157.1.5 ReadSMS(type as Integer, byref x as Integer, byref y as Integer, byref z as Integer) as boolean

**Function:** Reads the "calibrated" values (same as raw if no calibration data exists)  
**Notes:** Returns true on success and false on failure.

157.1.6 ReadSMSraw(type as Integer, byref x as Integer, byref y as Integer, byref z as Integer) as boolean

**Function:** Reads the raw, unmodified values.  
**Notes:** Returns true on success and false on failure.

157.1.7 ReadSMSrawBytes(type as Integer) as memoryblock

**Function:** Reads the raw data bytes.  
**Notes:**  
The raw SMS data (useful for debugging)  
Note that endian issues make reading the raw bytes non-trivial.  
Returns nil or a memoryblock with the data.

157.1.8 ReadSMSreal(type as Integer, byref x as Double, byref y as Double, byref z as Double) as boolean

**Function:** Reads the real (1.0 = 1G) values (requires calibration data).  
**Notes:**  
Note that this is the preferred API as it need not change with new machines.  
If no "scale" calibration data exists defaults will be used based on the machine type.  

Returns true on success and false on failure.
157.1.9  ReadSMSscaled(type as Integer, byref x as Integer, byref y as Integer, byref z as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the scaled values, like real but easier to handle. **Notes:** This reverses the backwards polarity of x and increases the range of the older machines to match the MacBook [Pro] sensor. Returns true on success and false on failure.

157.1.10  Constants

157.1.11  highrespb=3

MBS MacOSX Plugin, Plugin Version: 9.1. **Function:** One of the constants used by DetectSMS.

157.1.12  ibook=2

MBS MacOSX Plugin, Plugin Version: 9.1. **Function:** One of the constants used by DetectSMS.

157.1.13  macbookpro=4

MBS MacOSX Plugin, Plugin Version: 9.1. **Function:** One of the constants used by DetectSMS.

157.1.14  powerbook=1

MBS MacOSX Plugin, Plugin Version: 9.1. **Function:** One of the constants used by DetectSMS.

157.1.15  unknown=0

MBS MacOSX Plugin, Plugin Version: 9.1. **Function:** One of the constants used by DetectSMS.
Chapter 158

System

158.1  Globals

158.1.1  GetHelpTagDelayMBS as Integer

MBS MacOSX Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the delay time for the help tags.

**Example:**

```
msgbox str(GetHelpTagDelayMBS)
```

**Notes:**
A positive value is for milliseconds and a negative value for microseconds.
It looks like the setting of this property is not recognized always.
This setting is also per application and not saved between sessions.

158.1.2  GetHelpTagDisplayedMBS as boolean

MBS MacOSX Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** whether the help tags are displayed.

**Notes:** This setting is per application and not saved between sessions.
158.1.3  SetHelpTagDelayMBS(value as Integer)

MBS MacOSX Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the delay time for the help tags.

**Example:**

```basic
if GetHelpTagDelayMBS<>5000 then // change to 5 seconds
SetHelpTagDelayMBS 5000
end if
```

**Notes:**

A positive value is for milliseconds and a negative value for microseconds.
It looks like the setting of this property is not recognized always.
This setting is also per application and not saved between sessions.

Realbasic 2006r3 does set this value whenever a window comes to front, so if you want to set it really, use some code like in the example above in a timer to change it to your need.

158.1.4  SetHelpTagDisplayedMBS(value as boolean)

MBS MacOSX Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets whether the help tags are displayed.

**Notes:** This setting is per application and not saved between sessions.

158.1.5  GetWindowsColorProfileMBS as folderitem

MBS Win Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the path to the color profile for the main screen on Windows.

**Example:**

```basic
dim f as folderitem
f=getwindowsColorProfileMBS
msgBox f.absolutePath
```

**Notes:** Returns nil on any error.
158.1.6 GetWindowsDisplayColorProfileMBS(DisplayIndex as Integer) as folderitem

MBS Win Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the path to the color profile for the given screen on Windows.  
**Example:**
```vbscript
dim f as folderitem
f=GetWindowsDisplayColorProfileMBS(1)
msgBox f.absolutePath
```

**Notes:**
- Index is zero based.
- Returns nil on any error.
- See also:
  - 158.1.7 GetWindowsDisplayColorProfileMBS(DisplayName as String) as folderitem

158.1.7 GetWindowsDisplayColorProfileMBS(DisplayName as String) as folderitem

MBS Win Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the path to the color profile for the given screen on Windows.  
**Notes:** Same as GetWindowsDisplayColorProfileMBS, but without index and taking a name.  
See also:
  - 158.1.6 GetWindowsDisplayColorProfileMBS(DisplayIndex as Integer) as folderitem

158.1.8 CrashNiceMBS

MBS Util Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Crashes the application.  
**Notes:** Does a nil object dereference which leads to a crash.

158.1.9 CrashUglyMBS

MBS Util Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Crashes the application.  
**Notes:** This function should hide the stack list so it should be impossible to know what function crashed.
It may take a second to finish it, but CrashReporter (on Mac OS X) and other tools will not be able to show you which function crashed.

### 158.1.10 DelayMBS(time as Double)

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Stopps the application for the given time.  

**Example:**

```
DelayMBS 1.5 // wait one and a half seconds
```

**Notes:**

The application should take nearly 0% CPU Power till time has gone.  
If you need more options like blocking other RB threads, check the DelayMBS method with mode parameter.

Another example from Kirk Clendinning:

```
Property: lastupdate as Integer

Sub YieldProcessorTime(periodticks as Integer, widthmilliseconds as Integer)
    // use the Monkeybread Software delay to yield time for a screen update
    // every period*ticks for a pulse width of width milliseconds
    if ticks > lastupdate + periodTicks then
        delayMBS widthmilliseconds/1000
        lastupdate = ticks
    end if

    exception err
    ExceptionReport(err, "Utils:Methods:YieldProcessorTime")
end sub
```

`YieldProcessorTime(15, 20)` gives me a delay of 20ms every 250ms. But, since the delayMBS yields time more efficiently than using a RB thread, this turns out to be a much more effective way to update progress bars etc.  
I don’t need the delay per se, but since RB still hasn’t written a good yield function (that I know of) your delayMSB works instead.

Please use optional mode flags with DelayDontWaitNextEvent when using on thread.
158.1.  GLOBALS

Using DelayMBS on Web Applications can cause problems as the server is paused than for all clients, a really bad thing.

See also:

- 158.1.11 DelayMBS(time as Double, mode as Integer)

158.1.11  DelayMBS(time as Double, mode as Integer)

MBS Util Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Stops the application for the given time.

**Example:**

DelayMBS 1.5, 0  // wait one and a half seconds

**Notes:**

Like DelayMBS with one parameter but additional mode parameter:

combine the following constants:

```plaintext
const DelayDontMPYield = 1  // Don't give additional time for other OS threads
const DelayDontRBYield = 2  // Don't give REALbasic time for other REALbasic threads
const DelayDontThreadYield = 4 // Don't give addition time for other OS threads
const DelayDontQuickTimeYield = 8 // Don't give time for QuickTime Movieplayer
const DelayDontWait = 16     // Don't give CPU time for other OS threads
const DelayDontWaitNextEvent = 32 // Don't give CPU time to handle events on Mac OS X to avoid beachball cursor
const DelayDontSleep = 64    // Don't give CPU time for other OS threads (Windows)
```

Using DelayDontWaitNextEvent may show the beach ball cursor, but will have the OpenDocument event working as other AppleEvents. Please use DelayDontWaitNextEvent option for running on threads.

Using DelayMBS on Web Applications can cause problems as the server is paused than for all clients, a really bad thing.

See also:

- 158.1.10 DelayMBS(time as Double)

158.1.12  SleepMBS(time as Double)

MBS Util Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sleeps the current thread for the given time in seconds.

**Example:**

DelayMBS 1.5  // wait one and a half seconds
dim sock as TCPSocket  // some socket
dim done as Boolean  // some global property

do

SleepMBS(0.1)  // 100 ms
sock.poll

loop until done

Notes:
Sleep does not yield CPU time to other functions, so you really sleep the whole process. Useful for console projects which sleep for a few milliseconds in a loop polling a socket.

If you need to give CPU time to socket, other threads or for quicktime movie playback, please use DelayMBS.

158.1.13  InstallSystemExceptionHandlerMBS(Message as string = "")

MBS Main Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. Function: Installs an exception handler to show a message dialog with custom message before the app crashes.
Example:
InstallSystemExceptionHandlerMBS "My message"

Notes:
If message is empty, the default message is "An unhandled C++ exception occurred. The application will now quit. A common reason for this is simply running out of memory.".

The plugin allocates some memory which we release later to make sure there is free memory for the message box.

On Windows this method does not work as currently we use static runtime on Windows which does not allow the plugin to access the runtime inside the RB framework.

158.1.14  AbortMBS

Notes:
Any open streams are flushed and closed.
The abort function never returns.

158.1.15 ExitMBS(code as Integer)

MBS Util Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Perform normal program termination.

**Notes:**
See "man 3 exit" on the terminal on Mac OS X or Linux for details.
You define your own error codes. Zero is no error by convention.

158.1.16 GlobalIdleTimeMBS as Double

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Queries the current global idle time on a Mac.

**Example:**
MsgBox Format(GlobalIdleTimeMBS,"0.0")+" seconds idle"

**Notes:**
The return value is the number of seconds the user did not use mouse or keyboard.
Returns 0 on any error.

158.1.17 MacGlobalIdleTimeMBS as UInt64

MBS MacOSX Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries the current global idle time on a Mac.

**Example:**
MsgBox Format(MacGlobalIdleTimeMBS/1000000000.0,"0.0")+" seconds idle"

**Notes:**
The return value is the number of nanoseconds the user did not use mouse or keyboard.
Returns 0 on any error.
Depreciated in 13.2 plugins in favor of GlobalIdleTimeMBS.

158.1.18 MacMountServerVolumeMBS(URL as string, MountDir as String, User as String, Password as String, byref Disk as FolderItem, flags as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: This routine will mount the server specified by url at mountDir (or the default location if mountDir is empty).

Example:

dim flags as Integer = 0
dim disk as FolderItem
dim URL as string = ”smb://Test.local”
dim user as string = ”root”
dim pass as string = ”xxx”

dim e as Integer = MacMountServerVolumeMBS(URL, ””, user, pass, disk, flags)

if e = 0 then
  MsgBox ”OK”
else
  MsgBox disk.NativePath
end if

Notes:

An optional user and password can be passed in for authentication. If no user or password is provided then the underlying file system will handle authentication if required. This routine returns after the mount is complete.

url: The server to mount.
mountDir: The directory to mount the server to (default if empty).
user: String to pass as user for authentication.
password: String to pass as password for authenticated log in.
Disk: The folderItem of the newly mounted volume.
Flags: Options (such as kFSMountServerMarkDoNotDisplay and kFSMountServerMountOnMountDir).

<table>
<thead>
<tr>
<th>Constant</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>kFSMountServerMarkDoNotDisplay</td>
<td>1</td>
<td>Specify this option if you do want the volume displayed as a stand along volume in the UI.</td>
</tr>
</tbody>
</table>
**158.1.19  MacUnmountVolumeMBS(volume as folderItem, Force as Boolean, byref dissenter as Integer) as Integer**

MBS MacOSX Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This routine unmounts the volume specified by FolderItem.

**Example:**

```vba
dim u as Integer = VolumeCount-1
for i as Integer = 0 to u
    dim v as FolderItem = volume(i)
    if v.Name = "TestServer" then
        dim dissenter as Integer = 0
        dim e as Integer = MacUnmountVolumeMBS(v, false, dissenter)
        if e = 0 then
            MsgBox "Unmounted"
        else
            MsgBox "Failed to unmount with error " + str(e) + ". The app with PID " + str(dissenter) + " blocks it."
        end if
    end if
next
```

**Notes:**

If the volume cannot be unmounted the pid of the process which denied the unmount will be returned in the dissenter parameter. This routine returns after the unmount is complete.

**Force:** Specify true if you want the volume forcibly unmounted. Force unmounting a volume will very likely result in data loss since the volume will be ejected even if there are open files on it. This option should be reserved for situations such as the backing store for a volume is gone (so the data is lost regardless).

**dissenter:** pid of the process which denied the unmount if the unmount is denied.

Returns Mac OS X error code. Zero for success.
158.1.20 StartDictationMBS

MBS MacOSX Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Starts dictation. 
**Notes:** This is for Carbon application. For Cocoa use methods on NSApplicationMBS.

158.1.21 ArrayIsAMBS(v as Variant, ClassName as string) as boolean

MBS Util Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if variant contains an array of the given class type. 
**Example:**
```vba
dim w() as MouseCursor
w.Append System.Cursors.ArrowEastWest
w.Append System.Cursors.ArrowNorthSouth

dim v as Variant = w

if ArrayIsAMBS(w, "MouseCursor") then
    MsgBox "OK"
end if
```

**Notes:** 
If the variant contains an array of some class, variant or object and has at least one value, the plugin checks this first value for being of type of the same class. Like an ISA check. 
This helps to solve feedback case 12213. 
Returns false if variant has no array, if variant is nil, if array is not an array of objects or if first object is nil.

158.1.22 BacktraceMBS(MaxFrames as Integer = 0, skip as Integer = 2) as string()

MBS Util Plugin, Plugin Version: 13.0, Console & Web: No, Mac: Yes, Win: No, Linux: Yes. **Function:** Queries the stack trace of the current function. 
**Example:**
```
MsgBox Join(BacktraceMBS, EndOfLine)
```

**Notes:**
MaxFrames: How many steps to show at maximum. Default is 128 currently.
skip: How many entries to skip. Default is 2 to not show this function.
Requires Mac OS X 10.5 or Linux.
Skip is 2 to hide this plugin function in the list.

158.1.23 GetAutoMemoryAddressMBS(o as auto) as integer

MBS Util Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries memory address of auto object. **Notes:** Allows you to compare if two variables refer same object.

158.1.24 GetObjectMemoryAddressMBS(o as object) as integer

MBS Util Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries memory address of object. **Notes:** Allows you to compare if two variables refer same object.

158.1.25 GetStringMemoryAddressMBS(s as string) as integer

MBS Util Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries memory address of string. **Notes:** Allows you to compare if two variables refer same string.

158.1.26 GetTextMemoryAddressMBS(s as text) as integer

MBS Util Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries memory address of text object. **Notes:** Allows you to compare if two variables refer same text.

158.1.27 GetVariantArrayMBS(VariantContainingArray as Variant) as Variant()

MBS Util Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries a variant containing array for an array and returns it as an array of variant. **Example:**

```vbnet
dim test() as Dictionary
test.Append new Dictionary
```
dim v() as Variant = GetVariantArrayMBS(test)
dim dic as Dictionary = v(0)
Break

Notes:
Works with all arrays of objects (any type).
Raises exception if the array can’t be converted or the variant contains no array.

158.1.28 GetVariantArrayUboundMBS(v as Variant) as Integer

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries array ubound for an array inside a variant.

Notes:
If you have an array in the variant, you’d normally assign it to an array to query values from array.
This function queries ubound directly.
Returns -3 if variant is nil and -2 if variant contains not an object array.
Updated in 13.5 plugins to raise exception is array is nil.

158.1.29 GetVariantArrayValueMBS(v as Variant, index as Integer) as Variant

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries an object from an array of objects inside a variant.

Example:

```vbnet
// some part of app builds an array
dim a() as pair
a.Append 1: "Hello"
a.Append 2: "World"

// passes it as Variant somewhere else

dim v as Variant = a

// and later you may want to get values back without knowing the array type

// this raises TypeMismatchException
'dim o() as Object = v

// so use plugin to get objects:
dim v1 as Variant = GetVariantArrayValueMBS(v, 0)
```
158.1. GLOBALS

```vba
Dim v2 As Variant = GetVariantArrayValueMBS(v, 1)

// now you can check type and cast to the object type
Dim p1 As pair = v1
Dim p2 As pair = v2

MsgBox p1.Right + " " + p2.Right
```

Notes:
This function is to allow getting objects from an array inside a variant without known the class used to
declare array.
Returns nil on any error.
Updated in 13.5 plugins to raise exception is array is nil.
Also updated to work with object, variant, string, date, integer, double, single, boolean, Int64 arrays. Other
array types will raise exception.

158.1.30 MillisecondsMBS as Double

MBS Util Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries current milliseconds time.
**Notes:** Like Microseconds in Xojo (Real Studio), but queries system functions for milliseconds counter.

158.1.31 ObjectIsAMBS(o as object, ClassName as string) as boolean

MBS Util Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Checks if a given object is of a given class.
**Example:**
```vba
// you must know exact name of class

Dim v As Variant = window1

If ObjectIsAMBS(v, "window1.window1") Then
    MsgBox "OK"
End If

V = System.Cursors.MagnifyLarger

If ObjectIsAMBS(v, "MouseCursor") Then
    MsgBox "OK"
End If
```
Notes:
Like ISA operator, but with class name as string.
Returns false if o is nil.

158.1.32  SetVariantArrayValueMBS(v as Variant, index as Integer, value as Variant)

MBS Util Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets an object from an array of objects inside a variant.
**Example:**
```plaintext
// some part of app builds an array
dim a() as pair

// passes it as Variant somewhere else

dim v as Variant = a

// and later you may want to put values in array without knowing object type for array

// this raises TypeMismatchException
'dim o() as Object = v

// so use plugin

SetVariantArrayValueMBS(v, 0, "Hello")
SetVariantArrayValueMBS(v, 1, "World")

MsgBox a(0).Right + " " + a(1).Right
```

Notes:
This function is to allow setting objects in an array inside a variant without known the class used to declare array.
Also updated to work with object, variant, string, date, integer, double, single, boolean, Int64 arrays. Other array types will raise exception.
Be sure to only put objects of right class in the array! Else you risk crashes.

If index is 1 bigger than ubound, we append an element.
158.1.33  ExitWindowsMBS(mode as Integer) as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Shutdown a Windows PC.

**Example:**

```vba
dim b as boolean
b=ExitWindowsMBS(0)
```

**Notes:**

Mode constants:

<table>
<thead>
<tr>
<th>Mode</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LOGOFF</td>
<td>0</td>
<td>Shuts down all processes running in the security context of the process that called the ExitWindows function. Then it logs the user off.</td>
</tr>
<tr>
<td>SHUTDOWN</td>
<td>1</td>
<td>Shuts down the system to a point at which it is safe to turn off the power. All file buffers have been flushed to disk, and all running processes have stopped.</td>
</tr>
<tr>
<td>REBOOT</td>
<td>2</td>
<td>Shuts down the system and then restarts the system.</td>
</tr>
<tr>
<td>FORCE</td>
<td>4</td>
<td>Forces processes to terminate. When this flag is set, the system does not send the <code>WM_QUERYENDSESSION</code> and <code>WM_ENDSESSION</code> messages. This can cause the applications to lose data. Therefore, you should only use this flag in an emergency.</td>
</tr>
<tr>
<td>POWEROFF</td>
<td>8</td>
<td>Shuts down the system and turns off the power. The system must support the power-off feature.</td>
</tr>
<tr>
<td>FORCEIFHUNG</td>
<td>16</td>
<td>(Windows 2000) Forces processes to terminate if they do not respond to the <code>WM_QUERYENDSESSION</code> or <code>WM_ENDSESSION</code> message. This flag is ignored if FORCE is used.</td>
</tr>
</tbody>
</table>

Returns true if successfull.

The ExitWindows function returns as soon as it has initiated the shutdown. The shutdown or logoff then proceeds asynchronously.

During a shutdown or log-off operation, applications that are shut down are allowed a specific amount of time to respond to the shutdown request. If the time expires, the system displays a dialog box that allows the user to forcibly shut down the application, to retry the shutdown, or to cancel the shutdown request. If the FORCE value is specified, the system always forces applications to close and does not display the dialog box. If the FORCEIFHUNG value is specified, the system forces hung applications to close and does not display the dialog box.

Windows NT: To shut down or restart the system, the calling process must use the AdjustTokenPrivileges function to enable the SE_SHUTDOWN_NAME privilege.
158.1.34 GetDoubleClickIntervalMBS as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the time in ticks which makes two clicks to one double click.

**Example:**

```vbs
sub MouseUp(X as Integer, Y as Integer)
    dim currentClickTicks as Integer
    currentClickTicks = ticks

    if (currentClickTicks - lastClickTicks) <= GetDoubleClickIntervalMBS then
        if abs(x - lastClickX) <= 5 and abs (y - lastClickY) <= 5 then
            DoubleClick //Fire new Doubleclick event
            return
        end
    end
    lastClickTicks = currentClickTicks
    lastClickX = x
    lastClickY = y
    MouseUp
End sub
```

**Notes:** Time returned in ticks. One tick is 1/60 of a second.

158.1.35 GetMaximumOpenFileCountMacOSXMBS as Integer

MBS MacCF Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** The number of simultan open files

**Example:**

```vbs
msgbox str(GetMaximumOpenFileCountMacOSXMBS)
```

**Notes:**

On Mac OS X per default a process can have 256 files open at the same time.
This function allows you to increase the number of open files. It seems that you can't have more than 10240 files open on Mac OS X.
Returns -2 if the function is not available and -1 if the current number of open files is unknown.
158.1.36 GetSystemUIModeMBS as Integer

MBS MacOSX Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the current Mac OS X System UI Mode for your application.
**Notes:**
Returns -1 on any error.
See SetSystemUIModeMBS for more details.
Please use presentationOptions in NSApplicationMBS for Cocoa applications.

158.1.37 GetSystemUIModeOptionsMBS as Integer

MBS MacOSX Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the current Mac OS X System UI Mode options for your application.
**Notes:**
Returns -1 on any error.
See SetSystemUIModeMBS for more details.
Please use presentationOptions in NSApplicationMBS for Cocoa applications.

158.1.38 IsWindows95MBS as boolean

MBS Win Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Checks whether operation system is Windows 95/98/ME.
**Example:**
```
if IsWindows95MBS then
MsgBox "Windows 95/98/ME"
else
MsgBox "no Windows 95/98/ME"
end if
```
**Notes:** Returns true or false on Windows and alway false on other platforms.

158.1.39 IsWindowsAdminUserMBS as boolean

MBS Win Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Checks whether the current user is an Admin User on Windows.
**Example:**
```
if IsWindowsAdminUserMBS then
MsgBox "Is admin user."
```
else
MsgBox "no admin user."
end if

Notes: Returns true or false on Windows and alway false on other platforms.

158.1.40   IsWindowsNTMBS as boolean

MBS Win Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function: Checks whether operation system is Windows NT/2000/XP.
Example:
if IsWindowsNTMBS then
MsgBox "Windows NT/2000/XP"
else
MsgBox "no Windows NT/2000/XP"
end if

Notes: Returns true or false on Windows and alway false on other platforms.

158.1.41   MacCountryCodeMBS as string

MBS MacClassic Plugin, Plugin Version: 3.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: Returns the country code for
Example:
msgbox MacCountryCodeMBS // Shows DE in Germany.

Notes:
On any error returns "".
Requires Mac OS 8.6 or newer (or Mac OS X).
Fix in Plugin version 4.0 to no longer return random strings, but now you must accept that this function may fail on Mac if it has nothing to report. (unkown reason)
158.1.42  OpenMacOSXPreferencesPaneMBS(name as string) as Integer

MBS MacOSX Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Opens a named preference pane on Mac OS X.

**Example:**

```vba
dim e as Integer
e=OpenMacOSXPreferencesPaneMBS("Network")
```

**Notes:**

Returns a Mac OS X error code. For example -43 if file not found, -1 if function is not available or 0 if successfull.

Possible values for Mac OS X:
- UniversalAccessPref
- StartupDisk
- Speech
- Sound
- Network
- MyAccount
- Mouse
- LoginItems
- Localization
- Keyboard
- Internet
- Ink
- General
- EnergySaver
- DigiHubDiscs
- DesktopPictures
- Dock
- ColorSync
- QuickTime
- Classic
- Bluetooth
- ARDPref
- DateAndTime
- Accounts
- Displays
- SoftwareUpdate
- SharingPref
- ScreenSaver
158.1.43  **RunningOnCarbonXMBS as boolean**

MBS MacOSX Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if we are running Carbon on Mac OS X.

**Example:**

```plaintext
defining RunningOnCarbonXMBS as boolean

if RunningOnCarbonXMBS then
    ' do Stuff for Mac OS X only
end if
```

**Notes:** Does always return false on Windows and Mac OS Classic.

158.1.44  **SetMaximumOpenFileCountMacOSXMBS(Value as Integer)**

MBS MacCF Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** The number of simultaneous open files

**Example:**

```plaintext
SetMaximumOpenFileCountMacOSXMBS 500
```

**Notes:**

On Mac OS X per default a process can have 256 files open at the same time.
This function allows you to increase the number of open files. It seems that you can’t have more than 10240 files open on Mac OS X.

158.1.45  **SetSystemUIModeMBS(mode as Integer, Options as Integer)**

MBS MacOSX Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the current System UI mode for your application.

**Notes:**

Details from Apple’s documentation:

Sets the presentation mode for system-provided user interface elements.

The presentation mode of an application determines which system-provided user interface elements are visible on the screen. When the frontmost application changes its presentation mode, a kEventAppSystemUIModeChanged Carbon event is sent to all applications that have registered for the event. This event is also sent when an application is activated; it contains the newly active application’s presentation mode.
Note that the system UI mode is a per-process state. Switching from a process that is suppressing system UI to another process that is not will cause system UI elements to become visible automatically. Switching back to the first process will suppress system UI elements again.

The modes available:

- **kUIModeNormal** 0: In this mode, all standard system UI elements are visible.
- **kUIModeContentSuppressed** 1: In this mode, system UI elements which cover the "content area" of the screen (the area other than the menu bar) are hidden. However, these elements may automatically show themselves in response to mouse movements or other user activity; specifically, the Dock will still show itself automatically when the mouse moves into the Dock’s auto-show region.
- **kUIModeContentHidden** 2: In this mode, system UI elements which cover the "content area" of the screen (the area other than the menu bar) are hidden. Unlike kUIModeContentSuppressed, most UI elements will not automatically show themselves in this mode.
- **kUIModeAllHidden** 3: In this mode, all system UI elements, including the menu bar, are hidden. Most system UI elements will not automatically show themselves in this mode. The application may request that the menu bar automatically show itself while in this mode by passing the kUIOptionAutoShowMenuBar flag to SetSystemUIMode.

The options which you can combine:

- **kUIOptionAutoShowMenuBar** 1: Requests that the menu bar automatically show itself when the user moves the mouse into the screen area that would ordinarily be occupied by the menu bar. Only valid with kUIModeAllHidden.
- **kUIOptionAnimateMenuBar** 2: Requests that the menu bar animate on or offscreen, if the UIMode is also being changed such that the menu bar will change visibility. Unlike other UI options, this option is not stored and only affects the behavior of this call to SetSystemUIMode. Valid for all modes. Available in Mac OS X 10.7 and later.
- **kUIOptionDisableAppleMenu** 4: Disables all items in the Apple menu. Valid for all modes.
- **kUIOptionDisableProcessSwitch** 8: The active application may not be changed while this process is active. Currently disables the Command-Tab and Command-Shift-Tab key sequences to switch the active process, and the global window rotation key sequence selected by the user in the Keyboard preference pane. SetFrontProcess may still be used to explicitly switch the active process. Only valid with modes other than kUIModeNormal.
- **kUIOptionDisableForceQuit** 16: The Force Quit window may not be displayed while this process is active. Currently disables the Command-Option-Escape key sequence to open the Force Quit window and the Force Quit menu item in the Apple menu. Only valid with modes other than kUIModeNormal.
- **kUIOptionDisableSessionTerminate** 32: The current login session may not be terminated while this process is active. Currently disables the Power key and the Restart, Shut Down, and Log Out menu items in the Apple menu. Only valid with modes other than kUIModeNormal.

Please use presentationOptions in NSApplicationMBS for Cocoa applications.
158.1.46  ShowCharacterPaletteMBS

**Function:**  
Shows the character palette.  
**Example:**  
ShowCharacterPaletteMBS

**Notes:**  
Works on Mac OS X 10.3 and newer.  
We have no way to close this window.

158.1.47  SystemControlByNameMBS(name as string) as memoryblock

**Function:**  
The SystemControlByNameMBS function retrieves system information and allows processes with appropriate privileges to set system information.  
**Example:**  
```vbnet
dim m1 as MemoryBlock = SystemControlByNameMBS("hw.physicalcpu")
dim m2 as MemoryBlock = SystemControlByNameMBS("hw.logicalcpu")
MsgBox "physicalcpu: " +str(m1.Long(0))+EndOfLine+"logicalcpu: " +str(m2.Long(0))
```

**Notes:**  
The name is given as an ASCII string.  
Returns nil on any error.  
See also:  
- 158.1.48 SystemControlByNameMBS(name as string, input as memoryblock) as memoryblock

158.1.48  SystemControlByNameMBS(name as string, input as memoryblock) as memoryblock

**Function:**  
The SystemControlByNameMBS function retrieves system information and allows processes with appropriate privileges to set system information.  
**Notes:**  
The name is given as an ASCII string.  
Returns nil on any error.
158.1. **GLOBALS**

See also:

- 158.1.47 SystemControlByNameMBS(name as string) as memoryblock
- 158.1.49 SystemControlMBS(name as memoryblock) as memoryblock
- 158.1.50 SystemControlMBS(name as memoryblock, input as memoryblock) as memoryblock

---

### 158.1.49 SystemControlMBS(name as memoryblock) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** The SystemControlMBS function retrieves system information and allows processes with appropriate privileges to set system information.

**Example:**

```vba
Function IsRosetta() As boolean
    Const CTL_HW = 6
    Const HW_MODEL = 2

    Dim mib, m As MemoryBlock
    mib = newMemoryBlock(8)
    mib.Long(0) = CTL_HW
    mib.Long(4) = HW_MODEL

    m = SystemControlMBS(mib)
    If m <> nil Then
        If m.CString(0) = "PowerMac" Then
            Return true
        End If
    End If
End Function
```

**Notes:**

- name is a MIB which can be constructed or queried with SystemControlNameToMIBMBS.
- Returns nil on any error.

See also:

- 158.1.50 SystemControlMBS(name as memoryblock, input as memoryblock) as memoryblock

---

### 158.1.50 SystemControlMBS(name as memoryblock, input as memoryblock) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** The SystemControlMBS function retrieves system information and allows processes with appropriate privileges to set system information.

**Notes:**
Returns nil on any error.
name is a MIB which can be constructed or queried with SystemControlNameToMIBMBS.
See also:

- 158.1.49 SystemControlMBS(name as memoryblock) as memoryblock

158.1.51 SystemControlNameToMIBMBS(name as string) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Searches the given MIB for the given name.
**Notes:**
Name is an ASCII string.
Returns nil on any error.

158.1.52 WindowsSystemMetricsMBS(what as Integer) as Integer

MBS Win Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The WindowsSystemMetrics function retrieves various system metrics (widths and heights of display elements) and system configuration settings.
**Example:**

cost SM_CYSMICON = 50

MsgBox str(WindowsSystemMetricsMBS(SM_CYSMICON))

**Notes:**
All dimensions retrieved by GetSystemMetrics are in pixels.
If the function fails, the return value is zero.

Values for the what parameter:

The SM_ALLOW setting specifies how the system arranges minimized windows, and consists of a starting position and a direction. The starting position can be one of the following values:

The direction in which to arrange can be one of the following values:

see also
158.1.53 **WindowsGetProcessIntegrityLevelMBS as Integer**

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The function gets the integrity level of the current process.

**Example:**

```plaintext
msgbox str(WindowsGetProcessIntegrityLevelMBS)
```

**Notes:**
Integrity level is only available on Windows Vista and newer operating systems, thus GetProcessIntegrityLevel throws a C++ exception if it is called on systems prior to Windows Vista.

Returns the integrity level of the current process. It is usually one of these values:

158.1.54 **WindowsIsApplicationRunAsAdminMBS as boolean**

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The function checks whether the current process is run as administrator.

**Example:**

```plaintext
msgbox str(WindowsIsApplicationRunAsAdminMBS)
```

**Notes:**
In other words, it dictates whether the primary access token of the process belongs to user account that is a member of the local Administrators group and it is elevated.

Returns true if the primary access token of the process belongs to user account that is a member of the local Administrators group and it is elevated. Returns false if the token does not.

158.1.55 **WindowsIsProcessElevatedMBS as boolean**

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The function gets the elevation information of the current process.

**Example:**

```plaintext
msgbox str(WindowsIsProcessElevatedMBS)
```

**Notes:**
It dictates whether the process is elevated or not. Token elevation is only available on Windows Vista and newer operating systems, thus IsProcessElevated returns always false if it is called on systems prior to Windows Vista. It is not appropriate to use this function to determine whether a process is run as administrator.

Returns true if the process is elevated. Returns false if it is not.

158.1.56  **WindowsIsUserInAdminGroupMBS as boolean**

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The function checks whether the primary access token of the process belongs to user account that is a member of the local Administrators group, even if it currently is not elevated.

**Example:**
```
msgbox str(WindowsIsUserInAdminGroupMBS)
```

**Notes:** Returns true if the primary access token of the process belongs to user account that is a member of the local Administrators group. Returns false if the token does not.

158.2  **module BuildConstantsMBS**

158.2.1  **module BuildConstantsMBS**

MBS Main Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A module with build constants for you.

**Example:**
```
MsgBox BuildConstantsMBS.DateTime
```

158.2.2  **Constants**

158.2.3  **Date = ”21. 5.2018”**

MBS Main Plugin, Plugin Version: 11.0. **Function:** The constant for the date.

**Example:**
```
MsgBox BuildConstantsMBS.Date
```
Notes:
Format is dd.mm.yyyy like 24.12.2010.
This is the date when the plugin was loaded to the Real Studio IDE. You can use this constant to know in your application when it was built. Not exactly, but within a few hours exact.

158.2.4  **DateTime = ”Mon May 21 08:16:51 2018”**

MBS Main Plugin, Plugin Version: 11.0. **Function:** The constant for the date and time.

**Example:**

MsgBox BuildConstantsMBS.DateTime

Notes: This is the time when the plugin was loaded to the Real Studio IDE. You can use this constant to know in your application when it was built. Not exactly, but within a few hours exact.

158.2.5  **Day = 21**

MBS Main Plugin, Plugin Version: 11.0. **Function:** The day.

158.2.6  **Hour = 8**

MBS Main Plugin, Plugin Version: 11.0. **Function:** The hour.

158.2.7  **Minute = 16**

MBS Main Plugin, Plugin Version: 11.0. **Function:** The minute.

158.2.8  **Month = 5**

MBS Main Plugin, Plugin Version: 11.0. **Function:** The month.
158.2.9 Second = 51

MBS Main Plugin, Plugin Version: 11.0. **Function:** The second.

158.2.10 Time = ”8:16:51”

MBS Main Plugin, Plugin Version: 11.0. **Function:** The constant for the time.
**Example:**
MsgBox BuildConstantsMBS.Time

**Notes:**
Format is like hh:mm:ss like 11:22:33.
This is the time when the plugin was loaded to the Real Studio IDE. You can use this constant to know in your application when it was built. Not exactly, but within a few hours exact.

158.2.11 Year = 2018

MBS Main Plugin, Plugin Version: 11.0. **Function:** The year.
158.2. **MODULE BUILDCONSTANTS**

**SM.ARRANGE**

Flags specifying how the system arranged minimized windows. For more information about minimized windows, see the following Remarks section.

**SM.CLEANBOOT**

Value that specifies how the system was started: 0 Normal boot; 1 Fail-safe boot; 2 Fail-safe with network boot; Fail-safe boot (also called SafeBoot) bypasses the user's startup files.

**SM.CMETERS**

Value that specifies the layout of the monitor on the desktop. (Windows 2000 or newer)

**SM.CMONITORS**

Number of display monitors on the desktop. (Windows 2000 or newer)

**SM.CMOUSEBUTTONS**

Number of buttons on mouse, or zero if no mouse is installed.

**SM.CXBOARD**

Width, in pixels, of a window border.

**SM.CXCURSOR**

Width, in pixels, of a cursor. The system cannot create cursors of other sizes.

**SM.CXDLFRAME**

Thickness, in pixels, of the sizing border around the perimeter of a window that can be resized. (or SM.CXFIXEDFRAME)

**SM.CXDOUBLECLK**

Width, in pixels, of the rectangle around the location of a first click in a double-click sequence. The second click must occur within this rectangle for the system to consider the two clicks a double-click. (The two clicks must also occur within a specified time.)

**SM.CXDRAG**

Width, in pixels, of a rectangle centered on a drag point to allow for limited movement of the mouse pointer before a drag operation begins. This allows the user to click and release the mouse button easily without unintentionally starting a drag operation.

**SM.CXEDGE**

Width, in pixels, of a 3-D border.

**SM.CXFRAME**

Thickness, in pixels, of the sizing border around the perimeter of a window that can be resized. (or SM.CXSIZEFRAME)

**SM.CXFULLSCREEN**

Width of the client area for a full-screen window on the primary display monitor.

**SM.CXHSCROLL**

Width, in pixels, of the arrow bitmap on a horizontal scroll bar.

**SM.CXHTHUMB**

Width, in pixels, of the thumb box in a horizontal scroll bar.

**SM.CXICON**

The default width, in pixels, of an icon. The LoadIcon function can load only icons of these dimensions.

**SM.CXICONSPACING**

Width, in pixels, of a grid cell for items in large icon view. Each item fits into a rectangle of this size when arranged. These values are always greater than or equal to SM.CXICON and SM.CYICON.

**SM.CXMAXIFIED**

Default maximum width, in pixels, of a maximized top-level window on the primary display monitor.

**SM.CXMAXTRACK**

Default maximum width, in pixels, of a window that has a caption and sizing borders. This metric refers to the entire desktop. The user cannot drag the window frame to a size larger than these dimensions.

**SM.CXMENUCHECK**

Width, in pixels, of the default menu check-mark bitmap.

**SM.CXMENUKSIZE**

Width, in pixels, of menu bar buttons, such as the child window close button used in the multiple document interface.

**SM.CXMIN**

Minimum width, in pixels, of a window.

**SM.CXMINIMIZED**

Width, in pixels, of a normal minimized window.

**SM.CXMINSPACING**

Width, in pixels, of a grid cell for minimized windows. Each minimized window fits into a rectangle this size when arranged. These values are always greater than or equal to SM.CXMINIMIZED and SM.CYMINIMIZED.

**SM.CXMINTRACK**

Minimum tracking width, in pixels, of a window. The user cannot drag the window frame to a size smaller than these dimensions. A window can override these values by processing the WM_GETMINMAXINFO message.

**SM.CXSCREEN**

Width, in pixels, of the screen of the primary display monitor.

**SM.CXSIZE**

Width, in pixels, of a button in a window’s caption or title bar.

**SM.CXSMSIZE**

Recommended width, in pixels, of a small icon. Small icons typically appear in window captions and in small icon view.

**SM.CXVSCREEN**

Width, in pixels, of the virtual screen. The virtual screen is the bounding rectangle of all display monitors. (Windows 98/ME and 2000 or newer)

**SM.CXVSCROLL**

Width, in pixels, of a vertical scroll bar; and height, in pixels, of the arrow bitmap on a vertical scroll bar.

**SM.CYBOARD**

Height, in pixels, of a window border.

**SM.CYCAPTION**

Height, in pixels, of a normal caption area.

**SM.CYCOURCE**

Height, in pixels, of a cursor. The system cannot create cursors of other sizes.

**SM.CYDLFRAME**

Thickness, in pixels, of the frame around the perimeter of a window that has a caption but is not sizable. (or SM.CYFIXEDFRAME)

**SM.CYDOUBLECLK**

Height, in pixels, of the rectangle around the location of a first click in a double-click sequence. The second click must occur within this rectangle for the system to consider the two clicks a double-click. (The two clicks must also occur within a specified time.)

**SM.CYDRAG**

Height, in pixels, of a rectangle centered on a drag point to allow for limited movement of the mouse pointer before a drag operation begins. This allows the user to click and release the mouse button easily without unintentionally starting a drag operation.

**SM.CYEDGE**

Thickness, in pixels, of the frame around the perimeter of a window that has a 3-D border.

**SM.CYFRAME**

Thickness, in pixels, of the sizing border around the perimeter of a window that can be resized. (or SM.CYSIZEFRAME)

**SM.CYFULLSCREEN**

Width of the client area for a full-screen window on the primary display monitor.

**SM.CYHSCROLL**

Width, in pixels, of the arrow bitmap on a horizontal scroll bar.

**SM.CYHTHUMB**

Width, in pixels, of the thumb box in a horizontal scroll bar.

**SM.CYICON**

The default width, in pixels, of an icon. The LoadIcon function can load only icons of these dimensions.

**SM.CYICONSPACING**

Width, in pixels, of a grid cell for items in large icon view. Each item fits into a rectangle of this size when arranged. These values are always greater than or equal to SM.CYICON and SM.CXICON.

**SM.CYMAXIFIED**

Default maximum width, in pixels, of a maximized top-level window on the primary display monitor.

**SM.CYMAXTRACK**

Default maximum width, in pixels, of a window that has a caption and sizing borders. This metric refers to the entire desktop. The user cannot drag the window frame to a size larger than these dimensions.

**SM.CYMENUCHECK**

Width, in pixels, of the default menu check-mark bitmap.

**SM.CYMENUKSIZE**

Width, in pixels, of menu bar buttons, such as the child window close button used in the multiple document interface.

**SM.CYMIN**

Minimum width, in pixels, of a window.

**SM.CYMINIMIZED**

Width, in pixels, of a normal minimized window.

**SM.CYMINSPACING**

Width, in pixels, of a grid cell for minimized windows. Each minimized window fits into a rectangle this size when arranged. These values are always greater than or equal to SM.CYMINIMIZED and SM.CYCYNIMIZED.

**SM.CYMINTRACK**

Minimum tracking width, in pixels, of a window. The user cannot drag the window frame to a size smaller than these dimensions. A window can override these values by processing the WM_GETMINMAXINFO message.

**SM.CYSCREEN**

Width, in pixels, of the screen of the primary display monitor.

**SM.CYSIZE**

Width, in pixels, of a button in a window’s caption or title bar.

**SM.CYSMSIZE**

Recommended width, in pixels, of a small icon. Small icons typically appear in window captions and in small icon view.

**SM.CXSMICON**

Width, in pixels, of small caption buttons.

**SM.CXVSCREEN**

Width, in pixels, of the virtual screen. The virtual screen is the bounding rectangle of all display monitors. (Windows 98/ME and 2000 or newer)
ARW_BOTTOMLEFT  0x0000L Start at the lower-left corner of the screen (default position).
ARW_BOTTOMRIGHT 0x0001L Start at the lower-right corner of the screen. Equivalent to ARW_STARTRIGHT.
ARW_HIDE         0x0008L Hide minimized windows by moving them off the visible area of the screen.
ARW_TOPLEFT      0x0002L Start at the upper-left corner of the screen. Equivalent to ARW_STARTTOP.
ARW_TOPRIGHT     0x0003L Start at the upper-right corner of the screen. Equivalent to ARW_STARTTOP | SRW_STARTRIGHT.

ARW_DOWN         0x0004L Arrange vertically, top to bottom.
ARW_LEFT         0x0000L Arrange horizontally, left to right.
ARW_RIGHT        0x0000L Arrange horizontally, right to left.
ARW_UP           0x0004L Arrange vertically, bottom to top.

SECURITY_MANDATORY_UNTRUSTED_RID  = & h0  Means untrusted level. It is used by processes started by the Anonymous group. Blocks most write access.
SECURITY_MANDATORY_LOW_RID         = & h1000 Means low integrity level. It is used by Protected Mode Internet Explorer. Blocks write access to most objects (such as files and registry keys) on the system.
SECURITY_MANDATORY_MEDIUM_RID      = & h2000 Means medium integrity level. It is used by normal applications being launched while UAC is enabled.
SECURITY_MANDATORY_HIGH_RID        = & h3000 Means high integrity level. It is used by administrative applications launched through elevation when UAC is enabled, or normal applications if UAC is disabled and the user is an administrator.
SECURITY_MANDATORY_SYSTEM_RID      = & h4000 Means system integrity level. It is used by services and other system-level applications (such as Wininit, Winlogon, Smss, etc.).
158.3 class GlobalExceptionHandlerMBS

158.3.1 class GlobalExceptionHandlerMBS

MBS Main Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Installs an exception handler to show a message dialog with custom message before the app crashes. **Notes:**
The plugin allocates some memory which we release later to make sure there is free memory for the message box.

On Windows this method does not work as currently we use static runtime on Windows which does not allow the plugin to access the runtime inside the RB framework.

158.3.2 Events

158.3.3 GotException

MBS Main Plugin, Plugin Version: 11.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Called when an unhandled C++ exception was raised. **Notes:** Your application is in a very instable state when this event is called. Don’t do much here and quit soon with ExitMBS/AbortMBS.
158.4 class LinuxSysInfoMBS

158.4.1 class LinuxSysInfoMBS

MBS Linux Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The class to query memory and processor statistics.

**Example:**

```vbnet
dim l as new LinuxSysInfoMBS

MsgBox str(l.FreeRam) + “ bytes free.”
```

158.4.2 Methods

158.4.3 Constructor

MBS Linux Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Queries values and fills properties.

158.4.4 loads(index as Integer) as Double

MBS Linux Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** 1, 5, and 15 minute load averages.

158.4.5 Properties

158.4.6 availablePhysicalPages as Integer

MBS Linux Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Return number of available physical pages of memory in the system.

**Notes:** (Read only property)

158.4.7 BufferRam as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Memory used by buffers.

**Notes:** (Read only property)
158.4. CLASS LINUXSYSINFOMBS

158.4.8 FreeHigh as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Available high memory size. **Notes:** (Read only property)

158.4.9 FreeRam as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Available memory size. **Example:**

```vba
dim l as new LinuxSysInfoMBS
MsgBox str(l.FreeRam)+" bytes free."
```

**Notes:** (Read only property)

158.4.10 FreeSwap as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Swap space still available. **Notes:** (Read only property)

158.4.11 MemoryUnit as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Memory unit size in bytes. **Notes:** (Read only property)

158.4.12 NumberOfProcesses as Integer

MBS Linux Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Number of current processes. **Example:**

```vba
dim l as new LinuxSysInfoMBS
MsgBox str(l.NumberOfProcesses)+" processes"
```
158.4.13 **NumberOfProcessors as Integer**

MBS Linux Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Return number of available processors.

**Example:**

```vba
dim l as new LinuxSysInfoMBS
MsgBox str(l.NumberOfProcessors) + " processors"
```

**Notes:** (Read only property)

158.4.14 **NumberOfProcessorsConfigured as Integer**

MBS Linux Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Return number of configured processors.

**Notes:** (Read only property)

158.4.15 **PhysicalPages as Integer**

MBS Linux Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Return number of physical pages of memory in the system.

**Notes:** (Read only property)

158.4.16 **SharedRam as UInt64**

MBS Linux Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Amount of shared memory.

**Notes:** (Read only property)
158.4. **CLASS LINUXSYSINFOMBS**

158.4.17 **TotalHigh as UINT64**

MBS Linux Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Total high memory size.  
**Notes:** (Read only property)

158.4.18 **TotalRam as UINT64**

MBS Linux Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Total usable main memory size.  
**Notes:** (Read only property)

158.4.19 **TotalSwap as UINT64**

MBS Linux Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Total swap space size.  
**Notes:** (Read only property)

158.4.20 **upTime as Integer**

MBS Linux Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Seconds since boot.  
**Notes:** (Read only property)

158.4.21 **Valid as Boolean**

MBS Linux Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Whether constructor got values.  
**Notes:** Should be true on Linux and false on other platforms.  
(Read only property)
158.5  class SignalHandlerMBS

158.5.1  class SignalHandlerMBS

MBS Util Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** A signal handler for an unix signal.

**Notes:**

You can use this class to catch signals like SIGALRM oder SIGQUIT.

See

158.5.2  Methods

158.5.3  alarm(seconds as Integer)

MBS Util Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Set signal timer alarm.

**Example:**

SignalHandlerMBS.alarm 1

**Notes:**

The alarm() function sets a timer to deliver the signal SIGALRM to the calling process after the specified number of seconds. If an alarm has already been set with alarm() but has not been delivered, another call to alarm() will supersede the prior call. The request alarm(0) voids the current alarm and the signal SIGALRM will not be delivered.

Due to setitimer restriction the maximum number of seconds allowed is 100000000.

alarm sends signal 14 after the time out.

158.5.4  ClearFlag(signalIndex as Integer)

MBS Util Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears the flag with given index.

**Notes:** Please call this after you got IsFlagSet.
158.5. **CLASS SIGNALHANDLERMBS**

### 158.5.5 ClearFlags

MBS Util Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears all flags.

### 158.5.6 ClearStacktrace(signalIndex as Integer)

MBS Util Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Clears stored stack trace for the signal with given index.

### 158.5.7 Close

MBS Util Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Releases this object’s resources.

### 158.5.8 IsFlagSet(signalIndex as Integer) as boolean

MBS Util Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if a given flag was set.

### 158.5.9 QueryStacktrace(signalIndex as Integer, skip as Integer = 2) as string()

MBS Util Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Queries stack at the time the signal handler was triggered. **Notes:**

Useful to know later which code got the signal. Works for flag handlers and for the event handlers if enabled.

### 158.5.10 SendSignal(PID as Integer, Signal as Integer) as boolean

MBS Util Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Sends a signal. **Example:**

```c
// send signal to a process
// PID is 17779 here
// 9 means kill on Mac OS X
```
call SignalHandlerMBS.SendSignal(17779, 9)

Notes:
Returns true on success and false on failure.
Without a signal handler the target app could quit.

Lookup signal.h for the list of signals. They can be different on Mac and Linux.

158.5.11 SendSignalToSelf(Signal as Integer) as boolean

MBS Util Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Send a signal to the current process
**Notes:**
Returns true on success and false on failure.
Without a signal handler the target app could quit.

158.5.12 SetDefaultHandler(signalIndex as Integer) as boolean

MBS Util Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Defines to use the default handler for the given signal number.
**Example:**
```
Const SIGALRM = 14
if SignalHandlerMBS.SetDefaultHandler(SIGALRM) then
    MsgBox "Done"
else
    MsgBox "Failed"
end if
```
**Notes:** Returns true on success and false on failure.

158.5.13 SetEventHandler(signalIndex as Integer, CollectStackTrace as boolean = false) as boolean

MBS Util Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Defines to call the Signal Event whenever a signal with the given number is received.
**Notes:**
158.5. **CLASS SIGNALHANDLERMBS**

Returns true on success and false on failure.
If CollectStackTrace is true, you can later use QueryStacktrace to get the stack trace from the time the signal was captured.

### 158.5.14 SetFlagHandler(signalIndex as Integer, CollectStackTrace as boolean = false) as boolean

MBS Util Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Defines to set the flag whenever a signal with the given number is received.  
**Notes:**
Returns true on success and false on failure.  
Please use IsFlagSet in your app regularly to check if the flag was set.
If CollectStackTrace is true, you can later use QueryStacktrace to get the stack trace from the time the signal was captured.

### 158.5.15 SetIgnore(signalIndex as Integer) as boolean

MBS Util Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Defines to ignore the event with the given number.  
**Example:**

```vbnet
Const SIGALRM = 14  
if SignalHandlerMBS.SetIgnore(SIGALRM) then  
 MsgBox "Done"  
else  
 MsgBox "Failed"  
end if
```

**Notes:** Returns true on success and false on failure.

### 158.5.16 SignalStatus(signalIndex as Integer) as Integer

MBS Util Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Queries the signal state.  
**Notes:** Returns 0 (unknown), kSignalDefault, kSignalEvent, kSignalFlag or kSignalIgnored.
158.5.17 Events

158.5.18 Signal(n as Integer)

MBS Util Plugin, Plugin Version: 8.5, Console & Web: No, Mac: Yes, Win: No, Linux: Yes. **Function:** A signal was called and you set an event handler.

**Example:**

```vba
Sub Signal(n as Integer)
    // restore system handler in case we get that crash again!
    MySignalHandlerMBS.SetDefaultHandler n

    // Mac and Linux can have different signal numbers:

    # if TargetMacOS then
    dim c as string = "Signal " +str(n)+" on Mac OS X"
    # elseif TargetLinux then
    dim c as string = "Signal " +str(n)+" on Linux"
    # else
    dim c as string = "Signal " +str(n)+" on ?"
    # endif

    dim BackTraceLines() as string
    # if mbs.BuildNumber>17662 and not TargetWin32 then // new in 13.0 plugins
    BackTraceLines = BacktraceMBS
    # endif

    // show your bug reporter (or the MBS one)
    'dim b as new Bugreporter
    'b.ShowExceptionReporter c, BackTraceLines

    // quit now without cleaning up the RB runtime which may crash again
    ExitMBS 1
End Sub
```

**Notes:** This function may be called at any time, so you need to use code which is thread safe. (see ThreadMBS class)
158.5.19 Constants

158.5.20 kSignalDefault = 1

MBS Util Plugin, Plugin Version: 8.5. **Function:** One of the signal state values. **Notes:** The signal calls default handler.

158.5.21 kSignalEvent = 3

MBS Util Plugin, Plugin Version: 8.5. **Function:** One of the signal state values. **Notes:** The signal raises an event and sets the flag.

158.5.22 kSignalFlag = 4

MBS Util Plugin, Plugin Version: 14.0. **Function:** One of the signal state values. **Notes:** The signal sets a flag.

158.5.23 kSignalIgnored = 2

MBS Util Plugin, Plugin Version: 8.5. **Function:** One of the signal state values. **Notes:** The signal is ignored.
158.6 module SystemInformationMBS

158.6.1 module SystemInformationMBS

MBS Util Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A module to collect all the system information functions.

**Example:**

```msgbox "Welcome "+SystemInformationMBS.Username+"!"
```

158.6.2 Methods

158.6.3 AvailableRAM as Double

MBS Util Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the size of the available memory.

**Example:**

```msgBox format(SystemInformationMBS.AvailableRAM/1024/1024,"0")+" MB of RAM free."
```

**Notes:**

This function is useful if you want to know how much memory you can allocate without the system swapping.

On Windows, Mac OS X and Linux you can normally allocate up to 2 or 3 GB of memory in your address-room. A swap file on disc is used to cache memory which does not fit into physical memory.

So if you need to allocate a buffer to store temporary data, you can use this function to calculate a good size.

For example a file copy function could use something like this:

```// a quarter of free memory is good to leave room for some OS buffers:
buffersize=SystemInformationMBS.AvailableRAM/4
```

```// minimum 4 MB
if buffersize<1024*1024*4 then
buffersize<1024*1024*4
end if
```

```// maximum 128 MB to make chunks not too big and application too unresponsive
```
if buffersize < 1024*1024*128 then
buffersize < 1024*1024*128
end if

In older plugins this function was named AvailableRAMMBS.

158.6.4 BusSpeed as Double

MBS Util Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the speed of the System bus in Hz.
**Example:**
msgbox "Your main CPU has " + format(SystemInformationMBS.BusSpeed/1000000.0,"0") + " MHz"

158.6.5 Computername as string

MBS Util Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the name of the computer.
**Example:**
msgbox "Hi, I'm " + SystemInformationMBS.Computername + "."

**Notes:**
On Mac OS, the name is queried in this order:
1. Try to ask the Mac OS X Corefoundation for the name.
2. Try to ask via AppleEvents the Finder or FileSharing.
3. Read it from the system resources.

On Linux or Windows the system name.

In older plugins this function was named ComputerNameMBS.

158.6.6 CPUBrandString as string

MBS Util Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the CPU brand string.
**Example:**
MsgBox SystemInformationMBS.CPUBrandString

Notes:
If it is an Intel x86 Chip or something compatible, you get strings like this: "Intel(R) Core(TM) i7 CPU M 620 @ 2.67GHz" (Same as CPUIDMBS.BrandString). But on PowerPC chips we return strings like "PowerPC G5 (970MP)" (same as CPUInfoMBS.CPUName).

May return "" if the processor is unknown.

158.6.7 CPUSpeed as Double

MBS Util Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns the Speed of the main CPU in Hz.
Example:
msgbox "Your main CPU has " + format(SystemInformationMBS.CPUSpeed/1000000.0,"0") + " MHz"

158.6.8 DomainName as string

MBS Util Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. Function:
Returns the domain name of a Windows PC.
Example:
msgbox SystemInformationMBS.DomainName

Notes: Returns an empty string on any error.

158.6.9 HardDiscSerial as string

MBS Util Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. Function:
Returns the hard disc serial number of the first hard disc which has a serial number.
Example:
MsgBox SystemInformationMBS.HardDiscSerial

Notes:
This function can return "" if nothing is found. Seems to return always empty string on Mac OS X 10.4 as the system properties dictionary does not contain the serial number there.

On Windows this function sometimes returns empty string, but later works again on the same machine. Reason unknown.

158.6.10  **HostName as string**

MBS Util Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**  Returns the hostname for this computer.  
**Example:**  
MsgBox SystemInformationMBS.HostName

158.6.11  **Is64bitWindows as boolean**

MBS Util Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**  Whether the Windows you are using is a 64bit Windows.  
**Example:**  
msgbox str(SystemInformationMBS.Is64bitWindows)

**Notes:**  
Returns true for x64 Windows editions.  
This function could also be named isWoW64 for "is Windows on Windows 64 bit."

Returns always true on 64bit target.

158.6.12  **isElCapitan(orHigher as boolean = true) as boolean**

MBS Util Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**  Whether the operation system is Mac OS X 10.11 El Capitan or newer.  
**Example:**  
MsgBox str(SystemInformationMBS.isElCapitan)
### 158.6.13 `isHighSierra(orHigher as boolean = true) as boolean` 

MBS Util Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the operation system is macOS 10.13 High Sierra or newer.  
**Example:**  
```ObjC 
MsgBox str(SystemInformationMBS.isHighSierra) 
```

**Notes:**  
Returns true on Mac OS X 10.11.  
If orHigher is set, it will also return true on 10.12.

### 158.6.14 `isLeopard(orHigher as boolean = true) as boolean` 

MBS Util Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the operation system is Mac OS X 10.5 Leopard or newer.  
**Example:**  
```ObjC 
MsgBox str(SystemInformationMBS.isLeopard) 
```

**Notes:** Returns true on Mac OS X 10.13.  
If orHigher is set, it will also return true on 10.14.

### 158.6.15 `isLion(orHigher as boolean = true) as boolean` 

MBS Util Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the operation system is Mac OS X 10.7 Lion or newer.  
**Example:**  
```ObjC 
MsgBox str(SystemInformationMBS.isLion) 
```

**Notes:** Returns true on Mac OS X 10.7 or newer.
158.6.  MODULE SystemInformationMBS

158.6.16  isMacOSX as Boolean

MBS Util Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
Returns true if being called on Mac OS X.
**Example:**
msgbox str(SystemInformationMBS.isMacOSX)

158.6.17  isMavericks(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
Whether the operation system is Mac OS X 10.9 Mavericks or newer.
**Example:**
MsgBox str(SystemInformationMBS.isMavericks)

**Notes:** Returns true on Mac OS X 10.9 or newer.

158.6.18  isMountainLion(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
Whether the operation system is Mac OS X 10.8 Mountain Lion or newer.
**Example:**
MsgBox str(SystemInformationMBS.isMountainLion)

**Notes:** Returns true on Mac OS X 10.8 or newer.

158.6.19  isSierra(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
Whether the operation system is macOS 10.12 Sierra or newer.
**Example:**
MsgBox str(SystemInformationMBS.isSierra)

**Notes:**
158.6.20  **isSnowLeopard**(or Higher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether the operation system is Mac OS X 10.6 Snow Leopard or newer.
**Example:**
MsgBox str(SystemInformationMBS.isSnowLeopard)

**Notes:** Returns true on Mac OS X 10.6 or newer.

158.6.21  **isWindows10**(or Higher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns true if called on Windows 10.
**Example:**
msgbox str(SystemInformationMBS.isWindows10)

**Notes:**
If orHigher, than it returns true if OS Version is newer.

158.6.22  **isWindows2000**(or Higher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns true if called on Windows 2000.
**Example:**
msgbox str(SystemInformationMBS.isWindows2000)

**Notes:**
And False on Mac OS X, Linux, Windows 7/XP/Vista/ME/98/95.
If orHigher, than it returns true if OS Version is newer.
158.6.23  isWindows7(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if called on Windows 7.
**Example:**
msgbox str(SystemInformationMBS.isWindows7)

**Notes:**
And False on Mac OS X, Linux, Windows Vista/XP/2000/ME/98/95. If orHigher, than it returns true if OS Version is newer.

158.6.24  isWindows8(orHigher as boolean = false) as Boolean

**Example:**
msgbox str(SystemInformationMBS.isWindows8)

**Notes:**
And False on Mac OS X, Linux, Windows 7/Vista/XP/2000/ME/98/95. If orHigher, than it returns true if OS Version is newer.

158.6.25  isWindows81(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if called on Windows 8.1
**Example:**
msgbox str(SystemInformationMBS.isWindows81)

**Notes:**
And False on Mac OS X, Linux, Windows 7/Vista/XP/2000/ME/98/95/8/10. If orHigher, than it returns true if OS Version is newer.
158.6.26  isWindowsVista(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns true if called on Windows Vista.

**Example:**
msgbox str(SystemInformationMBS.isWindowsVista)

**Notes:**
And False on Mac OS X, Linux, Windows 7/XP/2000/ME/98/95. If orHigher, than it returns true if OS Version is newer.

158.6.27  isWindowsXP(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns true if called on Windows XP.

**Example:**
msgbox str(SystemInformationMBS.isWindowsXP)

**Notes:**
And False on Mac OS X, Linux, Windows 7/Vista/2000/ME/98/95. If orHigher, than it returns true if OS Version is newer.

158.6.28  isYosemite(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether the operation system is Mac OS X 10.10 Yosemite or newer.

**Example:**
MsgBox str(SystemInformationMBS.isYosemite)

**Notes:** Returns true on Mac OS X 10.10 or newer.
158.6.29 LogicalRAM as Double

MBS Util Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the size of the logical installed memory. **Example:**

```plaintext
msgBox format(SystemInformationMBS.LogicalRAM/1024/1024,"0")+" MB of RAM built in."
```

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

On Mac OS Classic the virtual memory used or the physical memory. The virtual memory includes the memory used for filemapping. You’ll have some MB more than you might exspect, because the Mac OS ROM needs for example 3 MB and this is added. So 320 MB physical RAM can lead into 330 MB logical RAM. 320 MB physical plus 1 MB minimum for virtual memory plus 3 MB for the Mac ROM and around 6 MB for some application file mapping.

Result changed from integer to double in plugin version 3.4 to return correct results on 2 GB RAM.

On Windows the total virtual memory size.
On Linux always 4 GB.

In older plugins this function was named LogicalRAMMBS.

158.6.30 MACAddress as string

MBS Util Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the hardware ethernet address of the first ethernet card. **Example:**

```plaintext
msgBox SystemInformationMBS.MACAddress
```

**Notes:**

It returns a string with 6 bytes.
Works now with MBS Plugin 2.6 for Mac OS Classic, Carbon inside Classic and Mac OS X, but may not work for a Classic application running on Mac OS X. And may fail on some machines if no OpenTransport is running.

On Windows and Mac OS X you can have multiple ethernet cards and you should use a command line tool with the shell class to find what you need.
For example on Windows:

ipconfig /all

or on Mac OS X:

ifconfig -a

You can replace this function with usage of the NetworkInterface class in newer RB versions.

Added Linux support in version 16.4.

158.6.31 MACAddressString as string

MBS Util Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the hardware ethernet address of the first ethernet card.

**Example:**

msgBox SystemInformationMBS.MACAddressString

**Notes:**

Same as MACAddress, but with different format of output.

You can replace this function with usage of the NetworkInterface class in newer RB versions.

The plugin asks on Mac OS X the IOKit framework for the primary ethernet interface. We are not sure what Apple really defines for being the primary one, so let’s test it:

- Ethernet on and Airport off -> Ethernet MAC Address
- Ethernet off and Airport on -> Ethernet MAC Address

Added Linux support in version 16.4.
158.6.32 MacBugFixVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The BugFix part of the Mac OS version number.

**Example:**

MsgBox str(SystemInformationMBS.MacBugFixVersion)

**Notes:** The bug fix system version number; in 10.4.17 this would be the decimal value 17.

158.6.33 MacHasHardwareAcceleratedCoreImage as boolean

MBS Util Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries whether hardware acceleration is used for CoreImage.

**Example:**

```
if SystemInformationMBS.MacHasHardwareAcceleratedCoreImage then
    MsgBox "CoreImage should be very fast."
else
    MsgBox "CoreImage may be slow."
end if
```

**Notes:** Queries OpenGL whether programmable fragments are supported.

158.6.34 MachineID(flags as Integer = 15) as string

**Example:**

```
// this is how we build it.
Dim t As String = "MachineID" + SystemInformationMBS.HardDiscSerial + SystemInformationMBS.MacSerialNumber + SystemInformationMBS.MacModel + SystemInformationMBS.CPUBrandString

// you could extend it with SystemInformationMBS.WinProductKey

Dim m As String = MD5StringMBS(t)

MsgBox "Machine ID:" + SystemInformationMBS.MachineID + EndOfLine + "My Machine ID:" + m
```
CHAPTER 158. SYSTEM

Notes:
Returns a 32 byte long hex string with a Machine ID.
Example value: "EE53748365B25996B51B7F4C99F9083".

This ID is based on the results of the MacSerialNumber, MacModel, CPUBrandString and HardDiscSerial functions. If all 4 functions have no value, the result is always "A2254DEF74608D76B1A49BD2E82A". Also the result could change in future if we fix a bug in one of the functions so that the result values differ.

It is not based on the MACAddressString function as your MAC Address can change when switching between wired and wireless networks. Also we do not check the PhysicalRAM as RAM is a typical thing which changes over time.

You can store this value in some preferences/license file and later compare it against the current value to see if the machine may have changed. In that case ask user to revalidate license, for example by asking for the serial number.

It can happen that 2 PCs have the same MachineID, typical two virtual machines. So this ID is not unique. But it is very likely that two different computers produce different MachineIDs.

Added flags parameter in 14.1:

flagHardDiscSerial 1 Use hard disk serial.
flagMacSerialNumber 2 Use Mac Serial number (on Mac)
flagMacModel 4 Use Mac Model (on Mac)
flagCPUBrandString 8 Use CPU Brand String.
flagWinProductKey 16 Use Product Key (on Windows only)

The Machine ID may be different if one of the components returns a different result. Result may be different in whether app runs as admin or not on Windows.

158.6.35 MacMajorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The major Mac OS version number.
Example:

// show major version number
MsgBox str(SystemInformationMBS.MacMajorVersion)

// and show all three version numbers together:
MsgBox str(SystemInformationMBS.MacMajorVersion)+"."+str(SystemInformationMBS.MacMinorVersion)+"."+str(Sys-
158.6.  **MODULE SYSTEMINFORMATIONMBS**

```vbs
Dim SystemInformationMBS, MacBugFixVersion
```

**Notes:** The major system version number; in 10.4.17 this would be the decimal value 10.

### 158.6.36  MacMinorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minor Mac OS version number.

**Example:**

```vbs
MsgBox str(SystemInformationMBS.MacMinorVersion)
```

**Notes:** The minor system version number; in 10.4.17 this would be the decimal value 4.

### 158.6.37  MacModel as string

MBS Util Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the Mac model string.

**Example:**

```vbs
msgbox SystemInformationMBS.MacModel
```

**Notes:** for example "<powermac7,3>".

### 158.6.38  MacSerialNumber as string

MBS Util Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the serial number of your local Mac.

**Example:**

```vbs
msgbox SystemInformationMBS.MacSerialNumber
```

**Notes:**
May return an empty string in case of an error.
(e.g. when being user on Windows or if the Mac does not know its serialnumber)
158.6.39 MacUUID as string

MBS Util Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the unique identifier for the given Mac.

**Example:**

```
msgbox SystemInformationMBS.MacUUID
```

**Notes:** Returns "" on any error.

158.6.40 MacVRAMSize as Int64

MBS Util Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries the size of the main video graphics memory size.

**Example:**

```
msgbox format(SystemInformationMBS.MacVRAMSize, "0") + " Bytes VRAM."
```

**Notes:**

Walks over the list of displays, asks on each display for its VRAM size and returns the first value found.

For some reason this seems not to return more than 256 MB of memory.

158.6.41 OSName as string

MBS Util Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a string to display which OS Version you have.

**Example:**

```
msgBox SystemInformationMBS.OSName
' may show: Mac OS X
```

**Notes:**

Return values possible:
Windows NT
Windows 2000
Windows XP
Windows Vista
and a few other Windows versions like 6.2 alias 8.

In older plugins this function was named OSNameMBS.

### 158.6.42 OSVersionString as string

MBS Util Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a string to display which OS Version you have.

**Example:**

```plaintext
msgBox SystemInformationMBS.OSVersionString
' may show: Mac OS X 10.1.2
```

**Notes:**

GetOSVersionStr returns the version string of the OS.
Some Possible values:

"System 7.5.3",
"MacOS 8",
"MacOS 9.1",
"MacOS X 10.4.1",
"Windows NT 3.5",
"Windows 2000 (Service Pack 3)".

In older plugins this function was named OSVersionStrMBS.

### 158.6.43 PhysicalRAM as Double

MBS Util Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the size of the physical installed memory.

**Example:**

```plaintext
msgBox format(SystemInformationMBS.PhysicalRAM/1024/1024,"0")+" MB of RAM built in."
```

**Notes:**
On old Windows versions some hundred KBs less for DOS.

Result changed from integer to double in plugin version 3.4 to return correct results on 2 GB RAM. In v5.2 changed to return correct values on Macs with more than 4 GB of RAM.

On Windows the total physical memory size.

In older plugins this function was named PhysicalRAMMBS.

### 158.6.44 ProcessorCount(Mode as Integer = 0) as Integer

MBS Util Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of processors on the target system. **Example:**

```vb
MsgBox _
str(SystemInformationMBS.ProcessorCount(SystemInformationMBS.kProcessorCountDefault ))+” default” + EndOfLine + _
str(SystemInformationMBS.ProcessorCount(SystemInformationMBS.kProcessorCountLogical ))+” logical” + EndOfLine + _
str(SystemInformationMBS.ProcessorCount(SystemInformationMBS.kProcessorCountPhysical)) +” physical"
```

**Notes:**

With plugin version 18.0, we added mode parameter. Pass 1 for physical CPU (kProcessorCountPhysical) and 2 for logical CPU count (kProcessorCountLogical) on Mac/Win.

On Windows or Mac OS the number of cores.
On Linux the number of configured CPUs.

Returns 1 on any error.

### 158.6.45 ShortUsername as string

MBS Util Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the short name of the current user. **Example:**

```vb
msgbox ”Welcome ” + SystemInformationMBS.ShortUsername+”!”
```
Notes:
On Linux and Mac OS X the short user name.
On all other cases the same as UserName function.

158.6.46 SystemFont as string

MBS Util Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the name of the used system font.

**Example:**

```plaintext
msgbox "You are using the system font "+SystemInformationMBS.SystemFont+"."
```

Notes:
On Windows the system function returns "System" for our tests. Please tell us if this function is not working for you correct on Windows.
On Linux something like "Sans 10" is returned.

In older plugins this function was named SystemFontMBS.

158.6.47 Username as string

MBS Util Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the name of the current user.

**Example:**

```plaintext
msgbox "Welcome "+SystemInformationMBS.Username+"!"
```

Notes:
Code for Multiple User on Mac OS 9 is build in, but I can’t test it.

This is tried on Mac OS:
1. Mac OS X Username function.
3. Mulitple User Username (Mac OS 9)
4. System username from system resource.

In older plugins this function was named UserNameMBS.

158.6.48  **WinBuildNumber as Integer**

MBS Util Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The build number of the operating system.

**Example:**

MsgBox str(SystemInformationMBS.WinBuildNumber)

**Notes:** For example returns 2600 on Windows XP Build 2600.

158.6.49  **WinCSDVersion as string**

MBS Util Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
A string, such as "Service Pack 3", that indicates the latest Service Pack installed on the system.

**Example:**

MsgBox SystemInformationMBS.WinCSDVersion

**Notes:**
Shows here "Service Pack 3" on a Windows XP installation.
If no Service Pack has been installed, the string is empty.

158.6.50  **WindowsAero as boolean**

MBS Util Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Whether Windows is using the Aero Interface?

**Example:**

msgbox str(SystemInformationMBS.WindowsAero)

**Notes:** True if Aero is used. False if the status is unknown (e.g. on Windows XP) or Aero is not used.
158.6.  MODULE SYSTEMINFORMATIONMBS

158.6.51  WinMajorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The major version number of the operating system.
**Example:**
MsgBox str(SystemInformationMBS.WinMajorVersion)

**Notes:** Returns 5 on Windows 2000/XP and 6 on Windows Vista/7/8.

158.6.52  WinMinorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The minor version number of the operating system.
**Example:**
MsgBox str(SystemInformationMBS.WinMinorVersion)

**Notes:** Returns 0 on Windows 2000/Vista and 1 on Windows XP/7 and 2 on Windows 8.

158.6.53  WinPlatformId as Integer

MBS Util Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The operating system platform.
**Example:**
MsgBox str(SystemInformationMBS.WinPlatformId)

**Notes:**
This member can be VER_PLATFORM_WIN32_NT (2).
e.g. 2 on Windows XP.

158.6.54  WinProductKey as string

MBS Util Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Returns the product key of the Windows installation.
**Notes:** Returns "" on any error.
158.6.55 WinProductKey(path as string, name as string, keyStartIndex as Integer = 52) as string

MBS Util Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the product key of the Windows installation.

**Notes:**
- Returns "" on any error.
- With the right path and name you can read also the office versions.

For Office 10, it looks like you need to use 808 as offset.

See also:

- 158.6.54 WinProductKey as string

158.6.56 WinProductType as Integer

MBS Util Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Any additional information about the system.

**Example:**

MsgBox str(SystemInformationMBS.WinProductType)

**Notes:**
- e.g. 1 on Windows XP.

This member can be one of the following values:

- **VER_NT_DOMAIN_CONTROLLER** 2 The system is a domain controller and the operating system is Windows Server 2008, Windows Server 2003, or Windows 2000 Server.
- **VER_NT_SERVER** 3 The operating system is Windows Server 2008, Windows Server 2003, or Windows 2000 Server. Note that a server that is also a domain controller is reported as **VER_NT_DOMAIN_CONTROLLER**, not **VER_NT_SERVER**.
158.6. **MODULE SYSTEMINFORMATIONMBS**

### 158.6.57 WinServicePackMajor as Integer

MBS Util Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The major version number of the latest Service Pack installed on the system. **Example:**

```
MsgBox str(SystemInformationMBS.WinServicePackMajor)
```

**Notes:** For example, for Service Pack 3, the major version number is 3. If no Service Pack has been installed, the value is zero.

### 158.6.58 WinServicePackMinor as Integer

MBS Util Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The minor version number of the latest Service Pack installed on the system. **Example:**

```
MsgBox str(SystemInformationMBS.WinServicePackMinor)
```

**Notes:** For example, for Service Pack 3, the minor version number is 0.

### 158.6.59 WinSuiteMask as Integer

MBS Util Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A bit mask that identifies the product suites available on the system. **Example:**

```
MsgBox str(SystemInformationMBS.WinSuiteMask)
```

**Notes:**

e.g. 256 on Windows XP.

This member can be a combination of the following values.
CHAPTER 158. SYSTEM

VER_SUITE_BACKOFFICE & h4000 Microsoft BackOffice components are installed.
VER_SUITE_EMBEDDEDNT & h0040 Windows XP Embedded is installed.
VER_SUITE_SINGLEUSERS & h0100 Remote Desktop is supported, but only one interactive session is supported. This value is set unless the system is running in application server mode.
VER_SUITE_SMALLBUSINESS & h0020 Microsoft Small Business Server was once installed on the system, but may have been upgraded to another version of Windows. Refer to the Remarks section for more information about this bit flag.
VER_SUITE_SMALLBUSINESS_RESTRICTED & h0020 Microsoft Small Business Server is installed with the restrictive client license in force. Refer to the Remarks section for more information about this bit flag.
VER_SUITE TERMINAL & h0010 Terminal Services is installed. This value is always set. If VER_SUITE_TERMINAL is set but VER_SUITE_SINGLEUSERS is not set, the system is running in application server mode.
VER_SUITE_WH_SERVER & h8000 Windows Home Server is installed.

158.6.60 Constants

158.6.61 kProcessorCountDefault = 0

MBS Util Plugin, Plugin Version: 13.0. **Function:** One of the mode values for ProcessorCount function. **Notes:** Default behavior.

158.6.62 kProcessorCountLogical = 1

MBS Util Plugin, Plugin Version: 13.0. **Function:** One of the mode values for ProcessorCount function. **Notes:** Logical Processors

158.6.63 kProcessorCountPhysical = 2

MBS Util Plugin, Plugin Version: 13.0. **Function:** One of the mode values for ProcessorCount function. **Notes:** Physical Processors
Chapter 159

SystemConfiguration

159.1 class SCNetworkReachabilityMBS

159.1.1 class SCNetworkReachabilityMBS

Notes:
The SCNetworkReachability class allow an application to determine the status of a system’s current network configuration and the reachability of a target host. In addition, the reachability can be monitored with a notification being provided when/if the status has changed.

The term "reachable" reflects whether a data packet, sent by an application into the network stack, can be sent to the target host/address. Please note that there is no guarantee that the data packet will actually be received by the host.

Requires Mac OS X 10.3 or newer.
Subclass of the CFObjectMBS class.

159.1.2 Methods

159.1.3 CreateWithAddress(ip as string) as boolean

Notes: Returns true on success.
159.1.4 CreateWithAddressPair(LocalIP as string, RemoteIP as string) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a reference to the specified network address.  
**Notes:**  
Returns true on success.  
LocalIP: The local address associated with a network connection.  
RemoteIP: The remote address associated with a network connection.  
One of the IP addresses can be empty.

159.1.5 CreateWithName(name as string) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a reference to the specified network host/node name.  
**Notes:** Returns true on success.

159.1.6 ErrorString(errorcode as Integer) as string

**Notes:** A utility function which works at any time.

159.1.7 Properties

159.1.8 Error as Integer

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the last error code.  
**Notes:**  
A utility function which works with all SystemConfiguration methods.  
(Read only property)

159.1.9 Flags as Integer

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determines if the given target is reachable using the current network configuration.  
**Notes:**
### 159.1. CLASS SCNETWORKREACHABILITYMBS

</tbody>
</table>

Returns 0 on any error.

See the event for the flag constants.

(Read only property)

### 159.1.10 Events

### 159.1.11 Changed(flags as Integer)

**Function:**
The reachability changed.

**Notes:**
useful constants:

<table>
<thead>
<tr>
<th>constant</th>
<th>value</th>
</tr>
</thead>
<tbody>
<tr>
<td>kSCNetworkFlagsTransientConnection</td>
<td>1</td>
</tr>
<tr>
<td>kSCNetworkFlagsReachable</td>
<td>2</td>
</tr>
<tr>
<td>kSCNetworkFlagsConnectionRequired</td>
<td>4</td>
</tr>
<tr>
<td>kSCNetworkFlagsConnectionAutomatic</td>
<td>8</td>
</tr>
<tr>
<td>kSCNetworkFlagsInterventionRequired</td>

</tr>
<tr>
<td>kSCNetworkFlagsIsLocalAddress</td>
<td>65536</td>
</tr>
<tr>
<td>kSCNetworkFlagsIsDirect</td>
<td>131072</td>
</tr>
</tbody>
</table>

Flags that indicate whether the specified network nodename/address is reachable, requires a connection, requires some user intervention in establishing the connection, and whether the calling application must
initiate the connection using the (TBD???) API.

kSCNetworkFlagsTransientConnection
This flag indicates that the specified nodename/address can be reached via a transient (e.g. PPP) connection.

kSCNetworkFlagsReachable
This flag indicates that the specified nodename/address can be reached using the current network configuration.

kSCNetworkFlagsConnectionRequired
This flag indicates that the specified nodename/address can be reached using the current network configuration but a connection must first be established.

As an example, this status would be returned for a dialup connection that was not currently active but could handle network traffic for the target system.

kSCNetworkFlagsConnectionAutomatic
This flag indicates that the specified nodename/address can be reached using the current network configuration but a connection must first be established. Any traffic directed to the specified name/address will initiate the connection.

kSCNetworkFlagsInterventionRequired
This flag indicates that the specified nodename/address can be reached using the current network configuration but a connection must first be established. In addition, some form of user intervention will be required to establish this connection (e.g. providing a password, authentication token, etc.).

kSCNetworkFlagsIsLocalAddress
This flag indicates that the specified nodename/address is one associated with a network interface on the current system.

kSCNetworkFlagsIsDirect
This flag indicates that network traffic to the specified nodename/address will not go through a gateway but is routed directly to one of the interfaces in the system.
159.2. CLASS SCPREFERENCESMBS

159.2 class SCPreferencesMBS

159.2.1 class SCPreferencesMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
A class for System Configuration Preferences.

**Notes:**
Please remember that you may need root access to change something.

The SCPReferences classes allow an application to load and store XML configuration data in a controlled
manner and provide the necessary notifications to other applications that need to be aware of configuration
changes.

The stored XML configuration data is accessed using a prefsID. A nil value indicates that the default system preferences are to be accessed.
A string which starts with a leading "/" character specifies the path to the file containing the preferences to be accessed. A string which does not start with a leading "/" character specifies a file relative to the default system preferences directory.

The Path APIs make certain assumptions about the layout of the preferences data. These APIs view the
data as a collection of dictionaries of key/value pairs and an associated path name. The root path ("/")
identifies the top-level dictionary. Additional path components specify the keys for sub-dictionaries.

For example, the following dictionary can be accessed via two paths. The root ("/") path would return a
dictionary with all keys and values. The path "/path1" would only return the dictionary with the "key3"
and "key4" properties.

```xml
<dict>
 <key>key1</key>
 <string>val1</string>
 <key>key2</key>
 <string>val2</string>
 <key>path1</key>
 <dict>
  <key>key3</key>
  <string>val3</string>
  <key>key4</key>
  <string>val4</string>
 </dict>
</dict>
```

Each dictionary can also include the kSCResvLink key. The value associated with this key is interpreted as
a "link" to another path. If this key is present, a call to the GetPathValue() API will return the dictionary
specified by the link.
Subclass of the CFObjectMBS class.

159.2.2 Methods

159.2.3 AddValue(key as CFStringMBS, value as CFObjectMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Adds data for a preference key.
**Notes:**
This function associates new data with the specified key. In order to commit these changes to permanent
storage a call must be made to CommitChanges.

Returns true if the value was added; false if the key already exists or if an error occurred.

159.2.4 ApplyChanges as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Requests that the currently stored configuration preferences be applied to the active configuration.
**Notes:** Returns true if the lock was obtained; false if an error occurred.

159.2.5 CommitChanges as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Commits changes made to the configuration preferences to persistent storage.
**Notes:**
This function commits any changes to permanent storage. An implicit call to Lock/Unlock will be made if
exclusive access has not already been established.

Note: This routine commits changes to persistent storage. Call ApplyChanges to apply the changes to the
running system.

Returns true if the lock was obtained; false if an error occurred.
159.2.6 Create(name as CFStringMBS, prefid as CFStringMBS) as boolean

Notes:
name: A string that describes the name of the calling process.
prefID: A string that identifies the name of the group of preferences to be accessed/upated.

159.2.7 CreateUniquePathChild(prefix as CFStringMBS) as CFStringMBS

Notes:
prefix: A string that represents the parent path.
Returns a string representing the new (unique) child path; nil if the specified path does not exist.

159.2.8 CreateWithAuthorization(name as CFStringMBS, prefid as CFStringMBS, AuthorizationHandle as Integer) as boolean

Notes:
name: A string that describes the name of the calling process.
prefID: A string that identifies the name of the group of preferences to be accessed/upated.
AuthorizationHandle: Handle to authorization object for root access.

159.2.9 ErrorString(errorcode as Integer) as string

Notes: A utility function which works at any time.

159.2.10 GetPathLink(path as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the link (if one exists) associated with the specified path.
Notes:
path: A string that represents the path to be returned.
The dictionary associated with the specified path; nil if the path is not a link or does not exist.

159.2.11 GetPathValue(path as CFStringMBS) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns the dictionary associated with the specified path.
Notes:
path: A string that represents the path to be returned.
Returns the dictionary associated with the specified path; nil if the path does not exist.

159.2.12 GetValue(key as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns the data associated with a preference key.
Notes:
This function retrieves data associated with a key for the prefsID.
You could read stale data and not know it, unless you first call Lock.
Returns the value associated with the specified preference key; If no value was located, nil is returned.

159.2.13 KeyList as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns an array of currently defined preference keys.
Notes: Returns nil on any error.

159.2.14 Lock(wait as boolean) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Locks access to the configuration preferences.
Notes:
This function obtains exclusive access to the configuration preferences associated with this prefsID. Clients attempting to obtain exclusive access to the preferences will either receive an kSCStatusPrefsBusy error or block waiting for the lock to be released.
wait: A boolean flag indicating whether the calling process should block waiting for another process to complete its update operation and release its lock.

Returns true if the lock was obtained; false if an error occurred.

159.2.15 RemovePathValue(path as CFStringMBS) as boolean

Notes:
path: A string that represents the path to be returned.
Returns a boolean indicating the success (or failure) of the call.

159.2.16 RemoveValue(key as CFStringMBS) as boolean

Notes:
This function removes the data associated with the specified key. In order to commit these changes to permanent storage a call must be made to CommitChanges.

Returns true if the value was removed; false if the key did not exist or if an error occurred.

159.2.17 SetComputerName(name as CFStringMBS) as boolean

Notes:
In order to commit these changes to permanent storage a call must be made to CommitChanges. A call to ApplyChanges is also required for the new name to become active. A boolean indicating the success (or failure) of the call.

159.2.18 SetLocalHostName(name as CFStringMBS) as boolean

Notes:
In order to commit these changes to permanent storage a call must be made to CommitChanges.

A call to ApplyChanges is also required for the new name to become active.

### 159.2.19 SetPathLink(path as CFStringMBS, link as CFObj ectMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Associates a link to a second dictionary at the specified path.

**Notes:**
- path: A string that represents the path to be updated.
- link: A string that represents the link to be stored at the specified path.

Returns a boolean indicating the success (or failure) of the call.

### 159.2.20 SetPathValue(path as CFStringMBS, value as CFDictionaryMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Associates a dictionary with the specified path.

**Notes:**
- path: A string that represents the path to be updated.
- value: A dictionary that represents the data to be stored at the specified path.

Returns a boolean indicating the success (or failure) of the call.

### 159.2.21 SetValue(key as CFStringMBS, value as CFObj ectMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Updates the data associated with a preference key.

**Notes:**

This function adds or replaces the value associated with the specified key. In order to commit these changes to permanent storage a call must be made to CommitChanges.

Returns true if the value was set; false if an error occurred.

### 159.2.22 Signature as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a sequence of bytes that can be used to determine if the saved configuration preferences have
159.2. CLASS SCPREFERENCESMBS

changed.
Notes: A CFBinaryDataMBS that reflects the signature of the configuration preferences at the time of the call to Create.

159.2.23 Unlock as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Releases exclusive access to the configuration preferences.
**Notes:**
This function releases the exclusive access "lock" for this prefsID. Other clients will be now be able to establish exclusive access to the preferences.

Returns true if the lock was obtained; false if an error occurred.

159.2.24 Properties

159.2.25 Error as Integer

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the last error code.
**Notes:**
A utility function which works with all SystemConfiguration methods.

(Read only property)
159.3  Globals

159.3.1  kSCNetworkReachabilityMBSTypeID as Integer

MBS MacCF Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the CoreFoundation TypeID for SCNetworkReachability.

159.3.2  kSCPreferencesMBSTypeID as Integer

MBS MacCF Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the CoreFoundation TypeID for SCPreferences.

159.4  class SystemConfigurationMBS

159.4.1  class SystemConfigurationMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
A class for the global System Configuration framework functions.
**Notes:** See the file "SCSchemaDefinitions.h" for details on the constants.

159.4.2  Methods

159.4.3  ComputerName as string

MBS MacCF Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the current computer name.
**Example:**
```
dim s as new SystemConfigurationMBS
msgbox s.ComputerName
```

**Notes:** Returns "" on an error.

159.4.4  ComputerNameEncoding as Integer

MBS MacCF Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The encoding of the computer name.
159.4.5 ConsoleUser as string

MBS MacCF Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

Gets the name of the currently logged-in user.

**Example:**

```vbscript
dim s as new SystemConfigurationMBS
msgbox s.ConsoleUser
```

**Notes:** Returns the user currently logged into the system; ”” if no user is logged in or if an error was encountered.

159.4.6 ConsoleUserGID as Integer

MBS MacCF Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

Gets the group ID of the currently logged-in user.

**Notes:** The group ID of the current console user.

159.4.7 ConsoleUserUID as Integer

MBS MacCF Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

Gets the user ID of the currently logged-in user.

**Notes:** The user ID of the current console user.

159.4.8 kSCCompAnyRegex as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

Just a constant for the System Configuration API functions.

159.4.9 kSCCompGlobal as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

Just a constant for the System Configuration API functions.
159.4. CLASS SYSTEMCONFIGURATIONMBS

159.4.10 kSCCompHostNames as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.11 kSCCompInterface as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.12 kSCCompNetwork as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.13 kSCCompService as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.14 kSCCompSystem as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.15 kSCCompUsers as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.16 kSCDynamicStoreDomainFile as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4.17  kSCDynamicStoreDomainPlugin as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.18  kSCDynamicStoreDomainPrefs as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.19  kSCDynamicStoreDomainSetup as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.20  kSCDynamicStoreDomainState as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.21  kSCDynamicStorePropNetInterfaces as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.22  kSCDynamicStorePropNetPrimaryInterface as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.23  kSCDynamicStorePropNetPrimaryService as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4.24 kSCDynamicStorePropNetServiceIDs as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.25 kSCDynamicStorePropSetupCurrentSet as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.26 kSCDynamicStorePropSetupLastUpdated as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.27 kSCEntNet6to4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.28 kSCEntNetAirPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.29 kSCEntNetDHCP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.30 kSCEntNetDNS as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4.31 kSCEntNetEthernet as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.32 kSCEntNetFireWire as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.33 kSCEntNetInterface as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.34 kSCEntNetIPv4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.35 kSCEntNetIPv6 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.36 kSCEntNetL2TP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.37 kSCEntNetLink as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4. CLASS SYSTEMCONFIGURATIONMBS

159.4.38 kSCEntNetModem as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Just a constant for the System Configuration API functions.

159.4.39 kSCEntNetPPP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Just a constant for the System Configuration API functions.

159.4.40 kSCEntNetPPPoE as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Just a constant for the System Configuration API functions.

159.4.41 kSCEntNetPPPSerial as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Just a constant for the System Configuration API functions.

159.4.42 kSCEntNetPPTP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Just a constant for the System Configuration API functions.

159.4.43 kSCEntNetProxies as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Just a constant for the System Configuration API functions.

159.4.44 kSCEntUsersConsoleUser as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Just a constant for the System Configuration API functions.
159.4.45  kSCPrefCurrentSet as CFStringRefMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.46  kSCPrefNetworkServices as CFStringRefMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.47  kSCPrefSets as CFStringRefMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.48  kSCPrefSystem as CFStringRefMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.49  kSCPropInterfaceName as CFStringRefMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.50  kSCPropMACAddress as CFStringRefMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.51  kSCPropNet6to4Relay as CFStringRefMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4.52  kSCPropNetAirPortAllowNetCreation as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.53  kSCPropNetAirPortAuthPassword as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.54  kSCPropNetAirPortAuthPasswordEncryption as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.55  kSCPropNetAirPortJoinMode as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.56  kSCPropNetAirPortPowerEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.57  kSCPropNetAirPortPreferredNetwork as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.58  kSCPropNetAirPortSavePasswords as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4.59 kSCPropNetDNSDomainName as CFStringMBS
MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.60 kSCPropNetDNSSearchDomains as CFStringMBS
MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.61 kSCPropNetDNSServerAddresses as CFStringMBS
MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.62 kSCPropNetDNSSortList as CFStringMBS
MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.63 kSCPropNetEthernetMediaOptions as CFStringMBS
MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.64 kSCPropNetEthernetMediaSubType as CFStringMBS
MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.65 kSCPropNetEthernetMTU as CFStringMBS
MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4.66  kSCPropNetInterfaceDeviceName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.67  kSCPropNetInterfaceHardware as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.68  kSCPropNetInterfaces as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.69  kSCPropNetInterfaceSubType as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.70  kSCPropNetInterfaceSupportsModemOnHold as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.71  kSCPropNetInterfaceType as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.72  kSCPropNetIPv4Addresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4.73  kSCPropNetIPv4BroadcastAddresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.74  kSCPropNetIPv4ConfigMethod as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.75  kSCPropNetIPv4DestAddresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.76  kSCPropNetIPv4DHCPClientID as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.77  kSCPropNetIPv4Router as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.78  kSCPropNetIPv4SubnetMasks as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.79  kSCPropNetIPv6Addresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4. CLASS SYSTEMCONFIGURATIONMBS

159.4.80 kSCPropNetIPv6ConfigMethod as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.81 kSCPropNetIPv6DestAddresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.82 kSCPropNetIPv6Flags as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.83 kSCPropNetIPv6PrefixLength as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.84 kSCPropNetIPv6Router as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.85 kSCPropNetL2TPIPSecSharedSecret as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.86 kSCPropNetL2TPIPSecSharedSecretEncryption as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4.87 kSCPropNetL2TPTransport as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.88 kSCPropNetLinkActive as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.89 kSCPropNetLinkDetaching as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.90 kSCPropNetLocalHostName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.91 kSCPropNetModemConnectionScript as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.92 kSCPropNetModemConnectSpeed as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.93 kSCPropNetModemDataCompression as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.
159.4. CLASS SYSTEM CONFIGURATION MBS

159.4.94 kSCPropNetModemDialMode as CFStringMBS
MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.95 kSCPropNetModemErrorCorrection as CFStringMBS
MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.96 kSCPropNetModemHoldCallWaitingAudibleAlert as CFStringMBS
MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.97 kSCPropNetModemHoldDisconnectOnAnswer as CFStringMBS
MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.98 kSCPropNetModemHoldEnabled as CFStringMBS
MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.99 kSCPropNetModemHoldReminder as CFStringMBS
MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.100 kSCPropNetModemHoldReminderTime as CFStringMBS
MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4.101  kSCPropNetModemNote as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.102  kSCPropNetModemPulseDial as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.
159.4.103  kSCPropNetModemSpeaker as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.104  kSCPropNetModemSpeed as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.105  kSCPropNetOverridePrimary as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.106  kSCPropNetPPPACSPEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.107  kSCPropNetPPPAuthEAPPlugins as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.108  kSCPropNetPPPAuthName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.109  kSCPropNetPPPAuthPassword as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4.110 kSCPropNetPPPAuthPasswordEncryption as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.111 kSCPropNetPPPAuthPrompt as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.112 kSCPropNetPPPAuthProtocol as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.113 kSCPropNetPPPCCPEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.114 kSCPropNetPPPCommAlternateRemoteAddress as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.115 kSCPropNetPPPCommConnectDelay as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.116 kSCPropNetPPPCommDisplayTerminalWindow as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4.117 kSCPropNetPPPCommRedialCount as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.118 kSCPropNetPPPCommRedialEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.119 kSCPropNetPPPCommRedialInterval as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.120 kSCPropNetPPPCommRemoteAddress as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.121 kSCPropNetPPPCommTerminalScript as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.122 kSCPropNetPPPCommUseTerminalScript as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.123 kSCPropNetPPPConnectTime as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4.124  kSCPropNetPPPDeviceLastCause as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.125  kSCPropNetPPPDPialOnDemand as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.126  kSCPropNetPPPDPconnectOnIdle as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.127  kSCPropNetPPPDPconnectOnIdleTimer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.128  kSCPropNetPPPDPconnectOnLogout as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.129  kSCPropNetPPPDPconnectOnSleep as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.130  kSCPropNetPPPDPconnectTime as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4. CLASS SYSTEMCONFIGURATIONMBS

159.4.131  kSCPropNetPPPIIdleReminder as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.132  kSCPropNetPPPIIdleReminderTimer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.133  kSCPropNetPPPIPCPCPCompressionVJ as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.134  kSCPropNetPPPLastCause as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.135  kSCPropNetPPPLCPCPCompressionACField as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.136  kSCPropNetPPPLCPCPCompressionPField as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.137  kSCPropNetPPPLCPEchoEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.
159.4.138  kSCPropNetPPPLCEchoFailure as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.139  kSCPropNetPPPLCEchoInterval as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.140  kSCPropNetPPPLCPMRU as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.141  kSCPropNetPPPLCPMTU as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.142  kSCPropNetPPPLCPRReceiveACCM as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.143  kSCPropNetPPPLCPTTransmitACCM as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.144  kSCPropNetPPPLLogfile as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.
159.4.145  kSCPropNetPPPOverridePrimary as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.146  kSCPropNetPPPPlugins as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.147  kSCPropNetPPPRetryConnectTime as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.148  kSCPropNetPPPSessionTimer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.149  kSCPropNetPPPStatus as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.150  kSCPropNetPPPUseSessionTimer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.151  kSCPropNetPPPVerboseLogging as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4.152  kSCPropNetProxiesExceptionsList as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.153  kSCPropNetProxiesFTPEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.154  kSCPropNetProxiesFTPPassive as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.155  kSCPropNetProxiesFTPPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.156  kSCPropNetProxiesFTPPProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.157  kSCPropNetProxiesGopherEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.158  kSCPropNetProxiesGopherPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4. CLASS SYSTEMCONFIGURATIONMBS

159.4.159 kSCPropNetProxiesGopherProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.160 kSCPropNetProxiesHTTPEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.161 kSCPropNetProxiesHTTPPPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.162 kSCPropNetProxiesHTTPProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.163 kSCPropNetProxiesHTTPSEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.164 kSCPropNetProxiesHTTPSPPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.165 kSCPropNetProxiesHTTPSProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4.166  kSCPropNetProxiesRTSPEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.167  kSCPropNetProxiesRTSPPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.168  kSCPropNetProxiesRTSPProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.169  kSCPropNetProxiesSOCKSEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.170  kSCPropNetProxiesSOCKSPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.171  kSCPropNetProxiesSOCKSProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.172  kSCPropNetServiceOrder as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4. CLASS SYSTEMCONFIGURATIONMBS

159.4.173 kSCPropSystemComputerName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.174 kSCPropSystemComputerNameEncoding as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.175 kSCPropUserDefinedName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.176 kSCPropVersion as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.177 kSCResvInactive as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions. **Notes:** Value should be "_INACTIVE_

159.4.178 kSCResvLink as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions. **Notes:** Value should be "_LINK_

159.4.179 kSCValNetAirPortAuthPasswordEncryptionKeychain as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4.180  kSCValNetAirPortJoinModeAutomatic as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.181  kSCValNetAirPortJoinModePreferred as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.182  kSCValNetAirPortJoinModeRecent as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.183  kSCValNetAirPortJoinModeStrongest as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.184  kSCValNetInterfaceSubTypeL2TP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.185  kSCValNetInterfaceSubTypePPPoE as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.
159.4.186 kSCValNetInterfaceSubTypePPPSerial as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.187 kSCValNetInterfaceSubTypePPTP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.188 kSCValNetInterfaceType6to4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.189 kSCValNetInterfaceTypeEthernet as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.190 kSCValNetInterfaceTypeFireWire as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.191 kSCValNetInterfaceTypePPP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.192 kSCValNetIPv4ConfigMethodBOOTP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4.193  kSCValNetIPv4ConfigMethodDHCP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.194  kSCValNetIPv4ConfigMethodINFORM as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.195  kSCValNetIPv4ConfigMethodLinkLocal as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.196  kSCValNetIPv4ConfigMethodManual as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.197  kSCValNetIPv4ConfigMethodPPP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.198  kSCValNetIPv6ConfigMethod6to4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.199  kSCValNetIPv6ConfigMethodAutomatic as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
**159.4. CLASS SYSTEMCONFIGURATIONMBS**

**159.4.200 kSCValNetIPv6ConfigMethodManual as CFStringMBS**

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

**159.4.201 kSCValNetIPv6ConfigMethodRouterAdvertisement as CFStringMBS**

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

**159.4.202 kSCValNetL2TPIPSecSharedSecretEncryptionKeychain as CFStringMBS**

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

**159.4.203 kSCValNetL2TPTransportIP as CFStringMBS**

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

**159.4.204 kSCValNetL2TPTransportIPSec as CFStringMBS**

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

**159.4.205 kSCValNetModemDialModeIgnoreDialTone as CFStringMBS**

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

**159.4.206 kSCValNetModemDialModeManual as CFStringMBS**

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4.207 kSCValNetModemDialModeWaitForDialTone as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.208 kSCValNetPPPAuthPasswordEncryptionKeychain as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.209 kSCValNetPPPAuthPromptAfter as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.210 kSCValNetPPPAuthPromptBefore as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.211 kSCValNetPPPAuthProtocolCHAP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.212 kSCValNetPPPAuthProtocolEAP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.

159.4.213 kSCValNetPPPAuthProtocolMSCHAP1 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just a constant for the System Configuration API functions.
159.4. CLASS SYSTEMCONFIGURATIONMBS

159.4.214 kSCValNetPPPAuthProtocolMSCHAP2 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.215 kSCValNetPPPAuthProtocolPAP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Just a constant for the System Configuration API functions.

159.4.216 LocalHostName as string

MBS MacCF Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the current local host name.
**Example:**
```vbscript
dim s as new SystemConfigurationMBS
msgbox s.LocalHostName
```

**Notes:** Returns the current local host name; "" if the name has not been set or if an error was encountered.

159.4.217 Location as string

MBS MacCF Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the current location identifier.
**Example:**
```vbscript
dim s as new SystemConfigurationMBS
msgbox s.Location
```

**Notes:** Returns a string representing the current location identifier; "" if no location identifier has been defined or if an error was encountered.

159.4.218 MachineName as string

MBS MacCF Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The local machine name.
159.4.219  NetworkCheckReachabilityByAddress(ip as string, byref flags as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determines if the given network address is reachable using the current network configuration. **Notes:**

d: The network address of the desired host.
flags: An integer that will be filled with a set of SCNetworkConnectionFlags detailing the reachability of the specified address.
Returns true if the network connection flags are valid; false if the status could not be determined.
(see the SCNetworkReachabilityMBS class for more details)

159.4.220  NetworkCheckReachabilityByName(nodename as string, byref flags as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determines if the given network host/node name is reachable using the current network configuration. **Notes:**

odename: The node name of the desired host.
flags: An integer that will be filled with a set of SCNetworkConnectionFlags detailing the reachability of the specified node name.
Returns true if the network connection flags are valid; false if the status could not be determined.
(see the SCNetworkReachabilityMBS class for more details)

159.4.221  NetworkInterfaceRefreshConfiguration(ifname as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sends a notification to interested configuration agents to have them immediately retry their configuration over a particular network interface. **Notes:**

This API must be invoked by root (uid == 0).
ifname: The BSD name of the network interface e.g. NewCFStringMBS("en0").
Returns true if the notification was sent; false otherwise.
159.4.222 ShortUserName as string

MBS MacCF Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The short user name.

159.4.223 UserName as string

MBS MacCF Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The user name.

**Notes:** The function UserName returns a string based on the read UID (RUID, as returned by getuid) of the calling process. This can result in unexpected behavior (that is, Name returning different results than ConsoleUser) for processes that manipulate their UID.
Chapter 160

Tapi

160.1 class ITAddressMBS

160.1.1 class ITAddressMBS

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for an address.
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

160.1.2 Methods

160.1.3 Calls as ITCallInfoMBS()

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates an array of calls currently active on the address.
**Notes:** Sets lasterror property.

160.1.4 Constructor

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The private constructor.
160.1.5 **CreateCall(DestAddress as string = "", AddressType as Integer = 1, MediaTypes as Integer = 0)** as TAPICallControlMBS

**Notes:**

Creates a new Call object that can be used to make an outgoing call and returns a TAPICallControlMBS object. The newly created call is in the StateIdle state and has no media or terminals selected.

See also MediaTypes and LineAddressType constants.

160.1.6 **Properties**

160.1.7 **AddressName as String**

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets the displayable name of the address.

**Notes:**

Returns the containing a displayable address name.
Sets lasterror property.
(Read only property)

160.1.8 **DialableAddress as String**

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets the text which can be used to connect to this address.

**Notes:**

The text corresponds to the destination address string that another application would use to connect to this address, such as a phone number or an e-mail name.
You can use this address with the CreateCall method.
Sets lasterror property.
(Read only property)

160.1.9 **DoNotDisturb as Boolean**

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets the current status of the do not disturb feature on the address.

**Notes:**
The do not disturb feature may not be available on all addresses. If true, the do not disturb feature has been activated. If false, the do not disturb feature is not active. Sets lasterror property. (Read and Write property)

### 160.1.10 Handle as Integer

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal object reference. **Notes:** This is an ITAddress* pointer. (Read and Write property)

### 160.1.11 Lasterror as Integer

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code. **Notes:** Set by all the methods to indicate the last error. Value is 0 if no error. (Read and Write property)

### 160.1.12 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The error message for the last error. **Notes:** (Read and Write property)

### 160.1.13 MessageWaiting as Boolean

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Determines if the address has a message waiting. **Notes:** Returns true if a message is waiting; false, if no message is waiting. Sets lasterror property. (Read and Write property)
160.1.14 ServiceProviderName as String

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Gets the name of the Telephony Service Provider (TSP) that supports this address.
**Notes:**
For example, Unimdm.tsp for the Unimodem service provider or H323.tsp for the H323 service provider.
Sets lasterror property.
(Read only property)

160.1.15 State as Integer

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Gets the current state of the address.
**Notes:**
Sets lasterror property.
Can be StateInService or StateOutOfService.
(Read only property)

160.1.16 Constants

160.1.17 LineAddressTypeDomainName = 8

MBS Win Plugin, Plugin Version: 14.4. **Function:** One of the line address types.
**Notes:** Address type is a domain name.

160.1.18 LineAddressTypeEmailName = 4

MBS Win Plugin, Plugin Version: 14.4. **Function:** One of the line address types.
**Notes:** Address type is an e-mail name.

160.1.19 LineAddressTypeIPAddress = 16

MBS Win Plugin, Plugin Version: 14.4. **Function:** One of the line address types.
**Notes:** Address type is an IP address.
160.1.20  **LineAddressTypePhoneNumber = 1**

MBS Win Plugin, Plugin Version: 14.4. **Function:** One of the line address types.  
**Notes:** Address type is a standard phone number.

160.1.21  **LineAddressTypeSDP = 2**

MBS Win Plugin, Plugin Version: 14.4. **Function:** One of the line address types.  
**Notes:** Address type is Session Description Protocol (SDP) conference.

160.1.22  **MediaTypeAudio = 8**

MBS Win Plugin, Plugin Version: 14.4. **Function:** One of the media types.  
**Notes:** An audio media stream that is entering or leaving the computer. An entering media stream would typically be played on speakers, or sent to a handset device and a leaving stream would typically be captured through a microphone or handset device.

160.1.23  **MediaTypeDataModem = 16**

MBS Win Plugin, Plugin Version: 14.4. **Function:** One of the media types.  
**Notes:** A data media stream that is associated with a data modem.

160.1.24  **MediaTypeG3Fax = 32**

MBS Win Plugin, Plugin Version: 14.4. **Function:** One of the media types.  
**Notes:** A data media stream that is associated with a G3 protocol fax.

160.1.25  **MediaTypeMultiTrack = & h10000**

MBS Win Plugin, Plugin Version: 14.4. **Function:** One of the media types.  
**Notes:** A stream is on a multitrack terminal.

160.1.26  **MediaTypeVideo = & h8000**

MBS Win Plugin, Plugin Version: 14.4. **Function:** One of the media types.  
**Notes:** A video media stream that is entering or leaving the computer. An entering media stream would
typically be rendered in a video window and a leaving media stream would typically be captured with a video camera.

160.1.27 StateInService = 0

MBS Win Plugin, Plugin Version: 14.4. **Function:** One of the address state constants. **Notes:** Normal state; the address can be used.

160.1.28 StateOutOfService = 1

MBS Win Plugin, Plugin Version: 14.4. **Function:** One of the address state constants. **Notes:** The address is temporarily out of service, but may go back into service at some time.
160.2. class ITCallInfoMBS

160.2.1 class ITCallInfoMBS

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for information about a call. **Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

160.2.2 Methods

160.2.3 Constructor

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The private constructor. **Notes:** Lasterror is set. This constructor is private to make sure you don’t create an object from this class by error. Please use designated functions to create objects.

160.2.4 Properties

160.2.5 Address as ITAddressMBS

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the address of the call. **Notes:** Lasterror is set. (Read only property)

160.2.6 CalledIDName as String

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The name of the called location. **Notes:** Lasterror is set. (Read only property)
**160.2.7 CalledIDNumber as String**

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The number of the called location. **Notes:** Lasterror is set. (Read only property)

**160.2.8 CalledPartyFriendlyName as String**

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The called party friendly name. **Notes:** Lasterror is set. (Read only property)

**160.2.9 CallerIDName as String**

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The name of the caller. **Notes:** Lasterror is set. (Read only property)

**160.2.10 CallerIDNumber as String**

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The number of the caller. **Notes:** Lasterror is set. (Read only property)

**160.2.11 CallingPartyID as String**

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The identifier of the calling party. **Notes:**
Lasterror is set.  
(Read only property)

### 160.2.12 Comment as String

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A comment about the call provided by the application that originated the call. The call state must be StateIdle when setting the comment.  
**Notes:**  
Lasterror is set.  
(Read only property)

### 160.2.13 ConnectedIDName as String

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The name of the connected location.  
**Notes:**  
Lasterror is set.  
(Read only property)

### 160.2.14 ConnectedIDNumber as String

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The number of the connected location.  
**Notes:**  
Lasterror is set.  
(Read only property)

### 160.2.15 DisplayableAddress as String

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A displayable version of the called or calling address.  
**Notes:**  
Lasterror is set.  
(Read only property)
160.2.16 Handle as Integer

**Notes:**
This is an ITCallInfo* pointer.
(Read and Write property)

160.2.17 Lasterror as Integer

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
**Notes:**
Set by all the methods to indicate the last error.
Value is 0 if no error.
(Read and Write property)

160.2.18 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The error message for the last error.
**Notes:** (Read and Write property)

160.2.19 RedirectingIDName as String

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The name of the location that redirected the call.
**Notes:**
Lasterror is set.
(Read only property)

160.2.20 RedirectingIDNumber as String

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The number of the location that redirected the call.
**Notes:**
Lasterror is set.
160.2.21 RedirectionIDName as String

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The name of the location to which a call has been redirected.
**Notes:**
Lasterror is set.
(Read only property)

160.2.22 RedirectionIDNumber as String

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The number of the location to which a call has been redirected.
**Notes:**
Lasterror is set.
(Read only property)

160.2.23 State as Integer

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The current state call.
**Notes:**
Can be StateConnected, StateDisconnected, StateHold, StateIdle, StateInProgress, StateOffering or StateQueued.
Lasterror is set.
(Read only property)

160.2.24 Constants

160.2.25 StateConnected = 2

MBS Win Plugin, Plugin Version: 14.4. **Function:** One of the state constants.
**Notes:** Call has been connected to the remote end and communication can take place.
160.2.26  **StateDisconnected = 3**

MBS Win Plugin, Plugin Version: 14.4.  **Function:** One of the state constants.
**Notes:** Call has been disconnected. There are several causes for disconnection. See the table of valid call state transitions below.

160.2.27  **StateHold = 5**

MBS Win Plugin, Plugin Version: 14.4.  **Function:** One of the state constants.
**Notes:** The call is in the hold state.

160.2.28  **StateIdle = 0**

MBS Win Plugin, Plugin Version: 14.4.  **Function:** One of the state constants.
**Notes:** The call has been created, but Connect has not been called yet. A call can never transition into the idle state. This is the initial state for both incoming and outgoing calls.

160.2.29  **StateInProgress = 1**

MBS Win Plugin, Plugin Version: 14.4.  **Function:** One of the state constants.
**Notes:** Connect has been called, and the service provider is working on making a connection. This state is valid only on outgoing calls. This message is optional, because a service provider may have a call transition directly to the connected state.

160.2.30  **StateOffering = 4**

MBS Win Plugin, Plugin Version: 14.4.  **Function:** One of the state constants.
**Notes:** A new call has appeared, and is being offered to an application. If the application has owner privileges on the call, it can either call Answer or Disconnect while the call is in the offering state. Current call privilege can be determined by calling Privilege.

160.2.31  **StateQueued = 6**

MBS Win Plugin, Plugin Version: 14.4.  **Function:** One of the state constants.
**Notes:** The call is queued.
160.3  class TAPICallControlMBS

160.3.1  class TAPICallControlMBS

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The interface used by the application to connect, answer, and perform basic telephony operations on a call object.

**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

160.3.2  Methods

160.3.3  Answer

**Notes:**
This method can succeed only if the call state is StateOffering.
Lasterror is set.

160.3.4  BlindTransfer(DestAddress as String)

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** performs a blind or single-step transfer of the specified call to the specified destination address.

**Notes:**
The application must be the owner of the call. After a successful transfer, the call state transitions to StateDisconnected.

DestAddress: Text containing destination address for the transfer.
Lasterror is set.

160.3.5  Conference(otherCall as TAPICallControlMBS, sync as boolean)

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Adds a consultation call to the conference in which the current call is a participant.

**Notes:**
If an associated ITCallHub object does not exist, it is created.
otherCall: The consultation call.
Sync: Indicates whether the call should be conferenced synchronously (true) or asynchronously (false). See Connect method for additional explanation. Lasterror is set.

160.3.6 Connect(sync as boolean)

Notes:
Sync: Boolean indicating whether connection is to be performed synchronously (true) or asynchronously (false).

If the call is asynchronous, the application will receive information about the call’s progress through the TAPIMBS CallStateChanged event. Connect may return no error, but the actual connection may fail (and the application will be notified through the event).
If the call is synchronous, this method will not return until the call is in the connected state or fails. Lasterror is set.

To make a call, please find the ITAddressMBS for the line, use CreateCall there. Than use TAPICallControlMBS.Connect here.

160.3.7 Constructor

160.3.8 Dial(DestAddress as String)

Notes:
DestAddress: Representation of address to be dialed. The format must conform to a standard dialable address. Lasterror is set.
160.3.9  **Disconnect(Mode as Integer)**

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Disconnects the call.

**Notes:**

The call state will transition to StateDisconnected after the method completes successfully. Pass DisconnectModeNoAnswer, DisconnectModeNormal or DisconnectModeReject. Lasterror is set.

160.3.10  **Finish(Mode as Integer)**

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Called on a consultation call to finish a conference or a transfer.

**Notes:**

Pass FinishModeAsConference or FinishModeAsTransfer. Lasterror is set.

160.3.11  **HandoffDirect(ApplicationName as String)**

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Hands off the call to another application.

**Notes:**

This indicates that the application no longer requires ownership of the call.

ApplicationName: Text containing the specific application name to hand off call to. Can be full path name or executable name. Lasterror is set.

160.3.12  **HandoffIndirect(MediaType as Integer)**

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Hands off the call to another application based on the media type of the call.

**Notes:**

If multiple applications have registered as able to handle the types involved, TAPI will hand off to the highest-priority application, which is usually the one that registered first. This indicates that the application no longer requires ownership of the call.

for media types, please check constants in ITAddressMBS class and this website:
160.3.13 Hold(hold as boolean)

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Places or removes the call from the hold.
**Notes:**
If Hold is true and the method succeeds, the call state transitions to the StateHold state. If Hold is false, the call state transitions to StateConnected.
Lasterror is set.

160.3.14 ParkDirect(ParkAddress as String)

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Parks the call at a specified address.
**Notes:**
ParkAddress: Text containing the address where the call is to be parked.
Lasterror is set.

160.3.15 ParkIndirect as string

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Parks the call and returns the parked address.
**Notes:**
Returns representation of the address where the call was parked.
Lasterror is set.

160.3.16 Pickup(GroupID as String)

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Picks up a call alerting at the specified group identification.
**Notes:**
GroupID: The group identifier to which the alerting station belongs.
Lasterror is set.
160.3. CLASS TAPICALLCONTROLMBS

160.3.17 RemoveFromConference

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Removes the call from a conference if it is involved in one. **Notes:** Lasterror is set.

160.3.18 SetQOS(MediaType as Integer, ServiceLevel as Integer)

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets the quality of service level for the call. **Notes:**

for media types, please check constants in ITAddressMBS class and this website:

Lasterror is set.

160.3.19 SwapHold(otherCall as TAPICallControlMBS)

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Swaps the call (which is active) with the specified call on hold. **Notes:**

Swapping the active call with the call on consultation hold allows the application to toggle between these two calls. This is typical in call waiting. OtherCall: Call, currently on hold, that is to be made active. Lasterror is set.

160.3.20 Transfer(otherCall as TAPICallControlMBS, sync as boolean)

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Transfers the current call to the destination address. **Notes:**

otherCall: Other interface of consultation call created for the transfer. Sync: Indicates whether the method should be completed synchronously (true) or asynchronously (false). Lasterror is set.
160.3.21 Unpark

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
Gets the call from park.
**Notes:**
To unpark a call, CreateCall must be called using as the destination address the current parked location of the call.
LastError is set.

160.3.22 Properties

160.3.23 Handle as Integer

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The internal object reference.
**Notes:**
This is an ITBasicCallControl* pointer.
(Read and Write property)

160.3.24 Lasterror as Integer

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The last error code.
**Notes:**
Set by all the methods to indicate the last error.
Value is 0 if no error.
(Read and Write property)

160.3.25 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The error message for the last error.
**Notes:** (Read and Write property)
160.3.26 Constants

160.3.27 DisconnectModeNoAnswer = 1

Notes: The call is being disconnected because it has not been answered.
(For example, an application may set a certain amount of time for the user to answer the call. If the user
does not answer, the application can call Disconnect with the NOANSWER code.)
Lasterror is set.

160.3.28 DisconnectModeNormal = 0

Notes: The call is being disconnected as part of the normal cycle of the call.
Lasterror is set.

160.3.29 DisconnectModeReject = 2

Notes: The user rejected the offered call.
Lasterror is set.

160.3.30 FinishModeAsConference = 1

Notes: A call is being added to a conference call.
Lasterror is set.

160.3.31 FinishModeAsTransfer = 0

Notes:
A call transfer is being finished.
Lasterror is set.

160.3.32   QualityOfServerLevelBestEffort = 2

Notes: Quality of service level desired is ”best effort”.

160.3.33   QualityOfServerLevelIfAvailable = 1

Notes: Quality of service level desired if available.

160.3.34   QualityOfServerLevelNeeded = 0

Notes: Quality of service level required.
160.4  class TAPIMBS

160.4.1 class TAPIMBS

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The central class for TAPI. **Notes:** MBS Plugin implements TAPI (telephone API) on Windows to catch incoming calls, so you can display e.g. customer data for the phone number when customer calls. Also you can create new call objects to dial or query information on calls or addresses.

160.4.2 Methods

160.4.3 Addresses as ITAddressMBS()

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns an array with all addresses. **Notes:** Lasterror is set.

160.4.4 Available as boolean

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Whether TAPI is available. **Notes:** Returns true on Windows and false elsewhere.

160.4.5 Constructor

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The constructor.

160.4.6 Destructor

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The destructor.
160.4.7 ListenOnAllAddresses

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries list of addresses and registers event handlers to receive events.

**Notes:**
Please call this method to get the IncomingCall event working. Lasterror is set.

160.4.8 Properties

160.4.9 EventFilter as Integer

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The event filter.

**Notes:**
The plugin sets this to EventCallNotification + EventCallState automatically.

See constants:
(Read and Write property)

160.4.10 Handle as Integer

**Notes:**
This is an ITTAPI* pointer.
(Read and Write property)

160.4.11 Lasterror as Integer

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.

**Notes:**
Set by all the methods to indicate the last error.
Value is 0 if no error.
(Read and Write property)
160.4.12 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The error message for the last error.  **Notes:** (Read and Write property)

160.4.13 Events

160.4.14 CallStateChanged(CallInfo as ITCallInfoMBS)

MBS Win Plugin, Plugin Version: 14.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
The call state changed.  **Notes:** The Call state has changed.

160.4.15 IncomingCall(CallInfo as ITCallInfoMBS, BasicCallControl as TAPI-CallControlMBS)

MBS Win Plugin, Plugin Version: 14.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
A new call is incoming.

160.4.16 Constants

160.4.17 EventCallNotification = & h4

MBS Win Plugin, Plugin Version: 14.4. **Function:** One of the event types. **Notes:** A new communications session has appeared on the address and the TAPI DLL has created a new call object. This could be a result from an incoming session, a session handed off by another application, or a session being parked on the address.

160.4.18 EventCallState = & h8

MBS Win Plugin, Plugin Version: 14.4. **Function:** One of the event types. **Notes:** The Call state has changed.
Chapter 161

Tidy

161.1 class TidyAttributeMBS

161.1.1 class TidyAttributeMBS

161.1.2 Properties

161.1.3 Document as TidyDocumentMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The document of this attribute. Notes: (Read only property)

161.1.4 ID as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The attribute ID. Notes: (Read only property)

19283
161.1.5 IsABBR as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the ABBR attribute. **Notes:** (Read only property)

161.1.6 IsALINK as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the ALINK attribute. **Notes:** (Read only property)

161.1.7 IsALT as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the ALT attribute. **Notes:** (Read only property)

161.1.8 IsBGCOLOR as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the BGCOLOR attribute. **Notes:** (Read only property)

161.1.9 IsCHECKED as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the CHECKED attribute. **Notes:** (Read only property)

161.1.10 IsCOLSPAN as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the COLSPAN attribute. **Notes:** (Read only property)
161.1. CLASS TIDYATTRIBUTEMBS

161.1.11 IsCONTENT as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the CONTENT attribute. **Notes:** (Read only property)

161.1.12 IsDATAFLD as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the DATAFLD attribute. **Notes:** (Read only property)

161.1.13 IsEvent as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the Event attribute. **Notes:** (Read only property)

161.1.14 IsFOR as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the FOR attribute. **Notes:** (Read only property)

161.1.15 IsHEIGHT as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the HEIGHT attribute. **Notes:** (Read only property)

161.1.16 IsHREF as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the HREF attribute. **Notes:** (Read only property)
161.1.17  **IsHTTP_EQUIV as Boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the HTTP_EQUIV attribute. **Notes:** (Read only property)

161.1.18  **IsID as Boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the ID attribute. **Notes:** (Read only property)

161.1.19  **IsISMAP as Boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the ISMAP attribute. **Notes:** (Read only property)

161.1.20  **IsLANG as Boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the LANG attribute. **Notes:** (Read only property)

161.1.21  **IsLANGUAGE as Boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the LANGUAGE attribute. **Notes:** (Read only property)

161.1.22  **IsLINK as Boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the LINK attribute. **Notes:** (Read only property)
161.1.23 IsLONGDESC as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the LONGDESC attribute.

**Notes:** (Read only property)

161.1.24 IsNAME as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the NAME attribute.

**Notes:** (Read only property)

161.1.25 IsOnBLUR as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the OnBLUR attribute.

**Notes:** (Read only property)

161.1.26 IsOnCLICK as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the OnCLICK attribute.

**Notes:** (Read only property)

161.1.27 IsOnFOCUS as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the OnFOCUS attribute.

**Notes:** (Read only property)

161.1.28 IsOnKEYDOWN as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the OnKEYDOWN attribute.

**Notes:** (Read only property)
161.1.29  **IsOnKEYPRESS as Boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the OnKEYPRESS attribute.
**Notes:** (Read only property)

161.1.30  **IsOnKEYUP as Boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the OnKEYUP attribute.
**Notes:** (Read only property)

161.1.31  **IsOnMOUSEDOWN as Boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the OnMOUSEDOWN attribute.
**Notes:** (Read only property)

161.1.32  **IsOnMOUSEMOVE as Boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the OnMOUSEMOVE attribute.
**Notes:** (Read only property)

161.1.33  **IsOnMOUSEOUT as Boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the OnMOUSEOUT attribute.
**Notes:** (Read only property)

161.1.34  **IsOnMOUSEOVER as Boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the OnMOUSEOVER attribute.
**Notes:** (Read only property)
161.1. CLASS TIDYATTRIBUTEMBS

161.1.35 IsOnMOUSEUP as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the OnMOUSEUP attribute. **Notes:** (Read only property)

161.1.36 IsProp as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the Prop attribute. **Notes:** (Read only property)

161.1.37 IsREL as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the REL attribute. **Notes:** (Read only property)

161.1.38 IsROWSPAN as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the ROWSPAN attribute. **Notes:** (Read only property)

161.1.39 IsSELECTED as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the SELECTED attribute. **Notes:** (Read only property)

161.1.40 IsSRC as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the SRC attribute. **Notes:** (Read only property)
161.1.41  IsSTYLE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the STYLE attribute.  
**Notes:** (Read only property)

161.1.42  IsSUMMARY as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the SUMMARY attribute.  
**Notes:** (Read only property)

161.1.43  IsTARGET as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the TARGET attribute.  
**Notes:** (Read only property)

161.1.44  IsTEXT as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the TEXT attribute.  
**Notes:** (Read only property)

161.1.45  IsTITLE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the TITLE attribute.  
**Notes:** (Read only property)

161.1.46  IsTYPE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the TYPE attribute.  
**Notes:** (Read only property)
161.1. **CLASS TIDYATTRIBUTEMBS**

161.1.47 **IsUSEMAP as Boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the USEMAP attribute. **Notes:** (Read only property)

161.1.48 **IsVALUE as Boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this attribute is the VALUE attribute. **Notes:** (Read only property)

161.2.313  TidyAttrVALUE=154

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.2.314  TidyAttrVALUETYPE=155

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.2.315  TidyAttrVERSION=156

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.2.316  TidyAttrVIEWBOX=308

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.2.317  TidyAttrVLINK=157

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.2.318  TidyAttrVOCAB=322

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.
161.2. MODULE TIDYATTRIDMBS

161.2.319 TidyAttrVSPACE=158

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.2.320 TidyAttrWIDTH=159

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.2.321 TidyAttrWRAP=160

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.2.322 TidyAttrX=306

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.2.323 TidyAttrXMLNS=163

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.2.324 TidyAttrXMLNSXLINK=325

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.2.325 TidyAttrXML_LANG=161

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.2.326 TidyAttrXML_SPACE=162

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.
161.2.327 TidyAttrY=307

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.2.328 TidyAttrZOOMANDPAN=310

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.
161.3 module TidyConfigCategoryMBS

161.3.1 module TidyConfigCategoryMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A module with constants for use with the Tidy classes.

161.3.2 Constants

161.3.3 TidyDiagnostics=1

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.

161.3.4 TidyEncoding=3

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.

161.3.5 TidyMarkup=0

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.

161.3.6 TidyMiscellaneous=4

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.

161.3.7 TidyPrettyPrint=2

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.
161.4 module TidyDoctypeModesMBS

161.4.1 module TidyDoctypeModesMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A module with constants for use with the Tidy classes.

161.4.2 Constants

161.4.3 TidyDoctypeAuto=2

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.4.4 TidyDoctypeHtml5=0

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.4.5 TidyDoctypeLoose=4

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.4.6 TidyDoctypeOmit=1

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.4.7 TidyDoctypeStrict=3

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.4.8 TidyDoctypeUser=5

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.
161.5. CLASS TIDYDOCUMENTMBS

161.5  class TidyDocumentMBS

161.5.1  class TidyDocumentMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A document in the tidy library.

**Example:**

```vbnet
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim s As String=t.SaveString
MsgBox s // show fixed html
```

**Notes:** The main class for using the tidy library in Realbasic.

161.5.2  Methods

161.5.3  AccessWarningCount as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of Tidy accessibility warnings encountered.

161.5.4  Body as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The body node in the html tree.

161.5.5  CleanAndRepair as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Execute configured cleanup and repair operations on parsed markup.

**Example:**

```vbnet
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair
```
161.5.6 ConfigErrorCount as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of Tidy configuration errors encountered.

161.5.7 CopyConfig(otherDocument as TidyDocumentMBS) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copy current configuration settings from one document to another.

161.5.8 DetectedGenericXml as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Input is generic XML (not HTML or XHTML)?

161.5.9 DetectedHtmlVersion as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Detected HTML version: 0, 2, 3 or 4.

161.5.10 DetectedXhtml as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Input is XHTML?

161.5.11 ErrorBuffer as string

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the error text save in the error buffer. **Notes:** You need to use InstallErrorBuffer before using this function.
**161.5.12 ErrorCount as Integer**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of Tidy errors encountered. **Notes:** If >0, output is suppressed unless ForceOutput is set.

**161.5.13 ErrorSummary**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Write more complete information about errors to current error sink.

**161.5.14 FileExists(filename as string) as boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the file with that name exists.

**161.5.15 GeneralInfo**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Write more general information about markup to current error sink.

**161.5.16 GetBooleanOption(OptionID as Integer) as boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the value of a boolean option.

**161.5.17 GetIntegerOption(OptionID as Integer) as Integer**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the value of an integer option.

**161.5.18 GetStringOption(OptionID as Integer) as string**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the value of a string option.
161.5.19  **Head as TidyNodeMBS**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The head node in the html tree.

161.5.20  **Html as TidyNodeMBS**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The html node in the html tree.

161.5.21  **InstallErrorBuffer**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Installs an error buffer.
**Notes:** Use ErrorBuffer to get the text later.

161.5.22  **LibraryVersion as string**

MBS Tools Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The version number of the library.

161.5.23  **LoadConfigFile(filename as string) as Integer**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Load an ASCII Tidy configuration file.

161.5.24  **LoadConfigFileWithEncoding(Filename as string, CharacterEncoding as string) as Integer**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Load a Tidy configuration file with the specified character encoding.

161.5.25  **NextOption(Iterator as TidyIteratorMBS) as TidyOptionMBS**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds the next option in the list.
161.5.26 NextRelatedOption(Iterator as TidyIteratorMBS) as TidyOptionMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get next related option.

161.5.27 NextUserDeclaredTag(OptionID as Integer, Iterator as TidyIteratorMBS) as string

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get next declared tag of specified type: TidyInlineTags, TidyBlockTags, TidyEmptyTags or TidyPreTags.
**Notes:** See TidyOptionIdMBS for constants.

161.5.28 OptionCharcterEncodingName(OptionID as Integer) as String

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get character encoding name.
**Notes:** Used with TidyCharEncoding, TidyOutCharEncoding, TidyInCharEncoding options.

161.5.29 OptionCurrentPick(OptionID as Integer) as String

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get current pick list value for option by ID.
**Notes:** Useful for enum types.

161.5.30 OptionForID(OptionID as Integer) as TidyOptionMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Finds option based on given ID.
**Notes:** Returns nil on failure.

161.5.31 OptionForName(OptionName as string) as TidyOptionMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Finds option by name.
161.5.32 OptionIDForName(OptionName as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds Option by name. **Notes:** Returns nil on failure.

161.5.33 OptionList as TidyIteratorMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An iterator running through all the options available.

161.5.34 OptionResetToDefault(OptionID as Integer) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Resets the option to default value.

161.5.35 OptionsDifferentThanDefault as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Any settings different than default?

161.5.36 OptionsDifferentThanSnapshot as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Any settings different than snapshot?

161.5.37 OptionsResetAllToDefault as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reset all options to their default values.

161.5.38 OptionsResetToSnapshot as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reset config settings to snapshot (after document processing).
161.5. **CLASS TIDYDOCUMENTMBS**

161.5.39 **OptionsSnapshot as boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Take a snapshot of current config settings.

161.5.40 **ParseFile(filename as string) as Integer**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Parse markup in named file.

161.5.41 **ParseSource(theInput as TidyInputMBS) as Integer**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Parse markup in given generic input source.

161.5.42 **ParseString(data as string) as Integer**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Parse markup in given string.

**Example:**
```vba
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim s As String=t.SaveString
MsgBox s // show fixed html
```

161.5.43 **ParseStringOption(OptionName as string, value as string) as boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Parses a string to set an option.

**Example:**
```vba
dim t as new TidyDocumentMBS

MsgBox str(t.OptionQuiet)
dim b1 as boolean = t.ParseStringOption("Quiet","true")
```
MsgBox str(t.OptionQuiet)

dim b2 as boolean = t.ParseStringOption("Quiet","false")
MsgBox str(t.OptionQuiet)

Notes:
Useful if you don’t know the type of the option.
Returns true on success and false on failure.

161.5.44  RelatedOptionsList(Option as TidyOptionMBS) as TidyIteratorMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Iterate over a list of related options.

161.5.45  ReleaseDate as string

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Get release date (version) for current library.

161.5.46  ReportDoctype as Integer

MBS Tools Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The report document type.

161.5.47  Root as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The root node in the html tree.

161.5.48  RunDiagnostics as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Run configured diagnostics on parsed and repaired markup.
Notes: Must call CleanAndRepair first.
161.5. SaveConfig(theOutput as TidyOutputMBS) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Save current settings to given output sink.
**Notes:** Only non-default values are written.

161.5.50 SaveConfigFile(filename as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Save current settings to named file.
**Notes:** Only non-default values are written.

161.5.51 SaveFile(filename as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Save to named file.

161.5.52 SaveOutput(theOutput as TidyOutputMBS) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Save to given generic output.

161.5.53 SaveString as string

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Save to a string.
**Example:**
```vbscript
dim t as new TidyDocumentMBS
call t.ParseString("<p>Hello World</p>")  // pass here bad html
call t.CleanAndRepair
dim s As String=t.SaveString
MsgBox s  // show fixed html
```

**Notes:**
Returns "" on failure.

The returned string has no encoding set. You need to use DefineEncoding.

### 161.5.54 SetBooleanOption(OptionID as Integer, value as boolean) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets an option with a given boolean value.  
**Notes:** Returns true on success and false on failure.

### 161.5.55 SetCharacterEncoding(encodingName as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set the input/output character encoding for parsing markup.  
**Notes:** Values include: ascii, latin1, raw, utf8, iso2022, mac, win1252, utf16le, utf16be, utf16, big5 and shiftjis. Case in-sensitive.

### 161.5.56 SetErrorFile(filename as string) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Redirects error output to named file.  
**Notes:** Returns true on success.

### 161.5.57 SetInputCharacterEncoding(encodingName as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set the input character encoding for parsing markup.  
**Example:**

```vba
dim t as new TidyDocumentMBS
MsgBox str(t.OptionInCharEncoding)
call t.SetInputCharacterEncoding "utf8"
MsgBox str(t.OptionInCharEncoding)
```

**Notes:** Values include: ascii, latin1, raw, utf8, iso2022, mac, win1252, utf16le, utf16be, utf16, big5 and shiftjis. Case in-sensitive.
### 161.5.58  SetIntegerOption(OptionID as Integer, value as Integer) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets an option with a given integer value. **Notes:** Returns true on success and false on failure.

### 161.5.59  SetOutputCharacterEncoding(encodingName as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set the output character encoding for parsing markup. **Notes:** Values include: ascii, latin1, raw, utf8, iso2022, mac, win1252, utf16le, utf16be, utf16, big5 and shiftjis. Case in-sensitive.

### 161.5.60  SetStringOption(OptionID as Integer, value as string) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets an option with a given string value. **Notes:** Returns true on success and false on failure.

### 161.5.61  Status as Integer

### 161.5.62  UserDeclaredTagList as TidyIteratorMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Iterate over user declared tags.

### 161.5.63  WarningCount as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of warnings encountered.
161.5.64 Properties

161.5.65 ErrorOutput as TidyOutputMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The output where the error report is written to. Notes: (Read and Write property)

161.5.66 Handle as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The internal reference to the tidy document object. Notes: (Read only property)

161.5.67 OptionAccessibilityCheck as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The tidy option accessibility-check. Notes: This option specifies what level of accessibility checking, if any, that Tidy should perform. Level 0 (Tidy Classic) is equivalent to Tidy Classic’s accessibility checking. For more information on Tidy’s accessibility checking, visit Tidy’s Accessibility Page (http://www.html-tidy.org/accessibility/). (Read and Write property)

161.5.68 OptionAccessibilityCheckLevel as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This option specifies what level of accessibility checking, if any, that Tidy should do. Deprecated: This item is deprecated and should no longer be used. Notes: Level 0 is equivalent to Tidy Classic’s accessibility checking. For more information on Tidy’s accessibility checking, visit the Adaptive Technology Resource Centre at the University of Toronto. :

http://www.aprompt.ca/Tidy/accessibilitychecks.html (Read and Write property)
161.5.69  **OptionAddXmlDecl as Boolean**

**Notes:**
This option specifies if Tidy should add the XML declaration when outputting XML or XHTML.
Note that if the input already includes an &lt;?xml ... ?&gt; declaration then this option will be ignored.
If the encoding for the output is different from ascii, one of the utf* encodings, or raw, then the declaration is always added as required by the XML standard.
(Read and Write property)

161.5.70  **OptionAddXmlSpace as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option add-xml-space.

**Notes:**
This option specifies if Tidy should add xml:space="preserve" to elements such as &lt;pre&gt;, &lt;style&gt; and &lt;script&gt; when generating XML.
This is needed if the whitespace in such elements is to be parsed appropriately without having access to the DTD.
(Read and Write property)

161.5.71  **OptionAltText as String**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option alt-text.

**Notes:**
This option specifies the default alt= text Tidy uses for &lt;img&gt; attributes when the alt= attribute is missing.
Use with care, as it is your responsibility to make your documents accessible to people who cannot see the images.
(Read and Write property)

161.5.72  **OptionAnchorAsName as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option anchor-as-name.

**Notes:**
This option controls the deletion or addition of the name attribute in elements where it can serve as anchor.
If set to yes a name attribute, if not already existing, is added along an existing id attribute if the DTD allows it. If set to no any existing name attribute is removed if an id attribute exists or has been added. (Read and Write property)

161.5.73 OptionAsciiChars as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option ascii-chars.

**Notes:**
Can be used to modify behavior of the clean option when set to yes. If set to yes when using clean, &amp;emdash;, &amp;rdquo;, and other named character entities are down-graded to their closest ASCII equivalents. (Read and Write property)

161.5.74 OptionAssumeXmlProcins as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option assume-xml-procins.

**Notes:**
This option specifies if Tidy should change the parsing of processing instructions to require ?&gt; as the terminator rather than &gt;. This option is automatically set if the input is in XML. (Read and Write property)

161.5.75 OptionBare as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option bare.

**Notes:**
This option specifies if Tidy should strip Microsoft specific HTML from Word 2000 documents, and output spaces rather than non-breaking spaces where they exist in the input. (Read and Write property)

161.5.76 OptionBlockTags as String

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option specifies new block-level tags.
161.5. CLASS TIDYDOCUMENTMBS

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags. Note you can’t change the content model for elements such as `<TABLE>`, `<UL>`, `<OL>` and `<DL>`. This option is ignored in XML mode.

(Read and Write property)

### 161.5.77 OptionBodyOnly as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

This option specifies if Tidy should print only the contents of the body tag as an HTML fragment. **Deprecated:** This item is deprecated and should no longer be used. **Notes:**

If set to "auto", this is performed only if the body tag has been inferred. Useful for incorporating existing whole pages as a portion of another page. This option has no effect if XML output is requested.

Value is 0 for no, 1 for yes and 2 for auto.

(Read and Write property)

### 161.5.78 OptionBreakBeforeBr as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

The tidy option break-before-br. **Notes:**

This option specifies if Tidy should output a line break before each `<br>` element.

(Read and Write property)

### 161.5.79 OptionCharEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

The tidy option char-encoding. **Notes:**

This option specifies the character encoding Tidy uses for both the input and output. For ascii Tidy will accept Latin-1 (ISO-8859-1) character values, but will use entities for all characters whose value > 127.

For raw, Tidy will output values above 127 without translating them into entities.

For latin1, characters above 255 will be written as entities.

For utf8, Tidy assumes that both input and output are encoded as UTF-8.

You can use iso2022 for files encoded using the ISO-2022 family of encodings e.g. ISO-2022-JP.

For mac and win1252, Tidy will accept vendor specific character values, but will use entities for all characters.
whose value &gt; 127.
For unsupported encodings, use an external utility to convert to and from UTF-8.
(Read and Write property)

161.5.80 OptionClean as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option clean.
**Notes:**
This option specifies if Tidy should perform cleaning of some legacy presentational tags (currently &lt;i&gt;, &lt;b&gt;, &lt;center&gt; when enclosed within appropriate inline tags, and &lt;font&gt;). If set to yes then legacy tags will be replaced with CSS &lt;style&gt; tags and structural markup as appropriate.
(Read and Write property)

161.5.81 OptionCoerceEndtags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option coerce-endtags.
**Notes:**
This option specifies if Tidy should coerce a start tag into an end tag in cases where it looks like an end tag was probably intended; for example, given
&lt;span&gt;foo &lt;b&gt;bar&lt;/b&gt; baz&lt;/span&gt;
Tidy will output
&lt;span&gt;foo &lt;b&gt;bar&lt;/b&gt; baz&lt;/span&gt;
(Read and Write property)

161.5.82 OptionCssPrefix as String

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option css-prefix.
**Notes:**
This option specifies the prefix that Tidy uses for styles rules.
By default, c will be used.
(Read and Write property)
161.5. **CLASS TIDYDOCUMENTMBS**

161.5.83 **OptionDecorateInferredUl as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option decorate-inferred-ul.
**Notes:**
This option specifies if Tidy should decorate inferred `<ul>` elements with some CSS markup to avoid indentation to the right.
(Read and Write property)

161.5.84 **OptionDoctype as String**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option doctype.
**Notes:**
This option specifies the DOCTYPE declaration generated by Tidy.
If set to omit the output won't contain a DOCTYPE declaration. Note this this also implies numeric-entities is set to yes.
If set to html5 the DOCTYPE is set to `<!DOCTYPE html>`.
If set to auto (the default) Tidy will use an educated guess based upon the contents of the document.
If set to strict, Tidy will set the DOCTYPE to the HTML4 or XHTML1 strict DTD.
If set to loose, the DOCTYPE is set to the HTML4 or XHTML1 loose (transitional) DTD.
Alternatively, you can supply a string for the formal public identifier (FPI).
For example:
doctype: "-//ACME//DTD HTML 3.14159//EN"
If you specify the FPI for an XHTML document, Tidy will set the system identifier to an empty string. For an HTML document, Tidy adds a system identifier only if one was already present in order to preserve the processing mode of some browsers. Tidy leaves the DOCTYPE for generic XML documents unchanged.
This option does not offer a validation of document conformance.
(Read and Write property)

161.5.85 **OptionDoctypeMode as Integer**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option doctype-mode.
**Notes:**
(Read only property)
161.5.86  **OptionDropEmptyElements as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option drop-empty-elements.

**Notes:**
This option specifies if Tidy should discard empty elements.
(Read and Write property)

161.5.87  **OptionDropEmptyParas as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option drop-empty-paras.

**Notes:**
This option specifies if Tidy should discard empty paragraphs.
(Read and Write property)

161.5.88  **OptionDropFontTags as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option drop-font-tags.

**Notes:**
Deprecated; do not use. This option is destructive to &lt;font&gt; tags, and it will be removed from future versions of Tidy. Use the clean option instead.
If you do set this option despite the warning it will perform as clean except styles will be inline instead of put into a CSS class. &lt;font&gt; tags will be dropped completely and their styles will not be preserved. If both clean and this option are enabled, &lt;font&gt; tags will still be dropped completely, and other styles will be preserved in a CSS class instead of inline.
See clean for more information.
(Read and Write property)

161.5.89  **OptionDropPropAttrs as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This option specifies if Tidy should strip out proprietary attributes, such as MS data binding attributes.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)
161.5. CLASS TIDYDOCUMENTMBS

161.5.90 OptionDropProprietaryAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option drop-proprietary-attributes. 
**Notes:**
This option specifies if Tidy should strip out proprietary attributes, such as Microsoft data binding attributes. Additionally attributes that aren’t permitted in the output version of HTML will be dropped if used with strict-tags-attributes. 
(Read and Write property)

161.5.91 OptionDuplicateAttrs as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the options. 
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

161.5.92 OptionEmacs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option specifies if Tidy should change the format for reporting errors and warnings to a format that is more easily parsed by GNU Emacs. 
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

161.5.93 OptionEmacsFile as String

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Used internally. 
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

161.5.94 OptionEmptyTags as String

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option specifies new empty inline tags. 
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** 
This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags. Remember to also declare empty tags as either inline or blocklevel. This option is ignored in XML mode.
161.5.95 OptionEncloseBlockText as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option enclose-block-text.

**Notes:**
This option specifies if Tidy should insert a `<p>` element to enclose any text it finds in any element that allows mixed content for HTML transitional but not HTML strict.

(Read and Write property)

161.5.96 OptionEncloseBodyText as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option specifies if Tidy should enclose any text it finds in the body element within a `<p>` element.

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**
This is useful when you want to take existing HTML and use it with a style sheet.

(Read and Write property)

161.5.97 OptionEncloseText as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option enclose-text.

**Notes:**
This option specifies if Tidy should enclose any text it finds in the body element within a `<p>` element. This is useful when you want to take existing HTML and use it with a style sheet.

(Read and Write property)

161.5.98 OptionErrFile as String

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option specifies the error file Tidy uses for errors and warnings.

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**
Normally errors and warnings are output to "stderr".

(Read and Write property)
161.5.99 OptionErrorFile as String

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option error-file.
**Notes:**
This option specifies the error file Tidy uses for errors and warnings. Normally errors and warnings are
output to stderr.
(Read and Write property)

161.5.100 OptionEscapeCdata as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option escape-cdata.
**Notes:**
This option specifies if Tidy should convert \&lt;! [ CDATA [ ] ] &gt; sections to normal text.
(Read and Write property)

161.5.101 OptionEscapeScripts as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option escape-scripts.
**Notes:**
This option causes items that look like closing tags, like &lt;/g to be escaped to &lt;/g. Set this option
to 'no' if you do not want this.
(Read and Write property)

161.5.102 OptionFixBackslash as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option fix-backslash.
**Notes:**
This option specifies if Tidy should replace backslash characters \\ in URLs with forward slashes /.
(Read and Write property)
161.5.103 OptionFixBadComments as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option fix-bad-comments.  
**Notes:**  
This option specifies if Tidy should replace unexpected hyphens with = characters when it comes across adjacent hyphens.  
The default is yes.  
This option is provided for users of Cold Fusion which uses the comment syntax: &lt;!— —&gt;.  
(Read and Write property)
161.5.104 OptionFixComments as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This option specifies if Tidy should replace unexpected hyphens with "=" characters when it comes across adjacent hyphens.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**
The default is yes. This option is provided for users of Cold Fusion which uses the comment syntax: <!— —>
(Read and Write property)

161.5.105 OptionFixUri as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option fix-uri.
**Notes:**
This option specifies if Tidy should check attribute values that carry URIs for illegal characters and if such are found, escape them as HTML4 recommends.
(Read and Write property)

161.5.106 OptionForceOutput as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option force-output.
**Notes:**
This option specifies if Tidy should produce output even if errors are encountered.
Use this option with care; if Tidy reports an error, this means Tidy was not able to (or is not sure how to) fix the error, so the resulting output may not reflect your intention.
(Read and Write property)

161.5.107 OptionGdoc as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option gdoc.
**Notes:**
This option specifies if Tidy should enable specific behavior for cleaning up HTML exported from Google Docs.
(Read and Write property)
### 161.5.108 OptionGnuEmacs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option gnu-emacs.

**Notes:**
This option specifies if Tidy should change the format for reporting errors and warnings to a format that is more easily parsed by GNU Emacs.
(Read and Write property)

### 161.5.109 OptionGnuEmacsFile as String

**Notes:**
Used internally.
(Read and Write property)

### 161.5.110 OptionHideComments as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option hide-comments.

**Notes:**
This option specifies if Tidy should print out comments.
(Read and Write property)

### 161.5.111 OptionHideEndtags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option hide-endtags.

**Notes:**
This option is an alias for omit-optional-tags.
(Read and Write property)

### 161.5.112 OptionHtmlOut as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option specifies if Tidy should generate pretty printed output, writing it as HTML.
161.5. CLASS TIDYDOCUMENTMBS

**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

### 161.5.113 OptionInCharEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This option specifies the character encoding Tidy uses for the input.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**
See char-encoding for more info.
(Read and Write property)

### 161.5.114 OptionIndent as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option indent.
**Notes:**
This option specifies if Tidy should indent block-level tags.
If set to auto Tidy will decide whether or not to indent the content of tags such as &lt;title&gt;, &lt;h1-&gt;.&lt;h6&gt;, &lt;li&gt;, &lt;td&gt;, or &lt;p&gt; based on the content including a block-level element.
Setting indent to yes can expose layout bugs in some browsers.
Use the option indent-spaces to control the number of spaces or tabs output per level of indent, and indent-with-tabs to specify whether spaces or tabs are used.
(Read and Write property)

### 161.5.115 OptionIndentAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option indent-attributes.
**Notes:**
This option specifies if Tidy should begin each attribute on a new line.
(Read and Write property)

### 161.5.116 OptionIndentCdata as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option indent-cdata.
**Notes:**
This option specifies if Tidy should indent &lt;! [ CDATA [ ] ] &gt; sections.
161.5.117 OptionIndentContent as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
One of the options.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

161.5.118 OptionIndentSpaces as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option indent-spaces.
**Notes:**
This option specifies the number of spaces or tabs that Tidy uses to indent content when indent is enabled.
Note that the default value for this option is dependent upon the value of indent-with-tabs (see also).
(Read and Write property)

161.5.119 OptionIndentWithTabs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option indent-with-tabs.
**Notes:**
This option specifies if Tidy should indent with tabs instead of spaces, assuming indent is yes.
Set it to yes to indent using tabs instead of the default spaces.
Use the option indent-spaces to control the number of tabs output per level of indent. Note that when indent-with-tabs is enabled the default value of indent-spaces is reset to 1.
Note tab-size controls converting input tabs to spaces. Set it to zero to retain input tabs.
(Read and Write property)

161.5.120 OptionInlineTags as String

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This option specifies new non-empty inline tags. This option takes a space or comma separated list of tag names.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**
Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags. This option is ignored in XML mode.
161.5. **CLASS TIDYDOCUMENTMBS**

(Read and Write property)

### 161.5.121 OptionInputEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option input-encoding.

**Notes:**

This option specifies the character encoding Tidy uses for the input. See char-encoding for more info.

(Read and Write property)

### 161.5.122 OptionInputXml as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option input-xml.

**Notes:**

This option specifies if Tidy should use the XML parser rather than the error correcting HTML parser.

(Read and Write property)

### 161.5.123 OptionJoinClasses as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option join-classes.

**Notes:**

This option specifies if Tidy should combine class names to generate a single, new class name if multiple class assignments are detected on an element.

(Read and Write property)

### 161.5.124 OptionJoinStyles as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option join-styles.

**Notes:**

This option specifies if Tidy should combine styles to generate a single, new style if multiple style values are detected on an element.

(Read and Write property)
161.5.125  **OptionKeepFileTimes as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option specifies if Tidy should keep the original modification time of files that Tidy modifies in place. **Deprecated:** This item is deprecated and should no longer be used. **Notes:**

The default is no. Setting the option to yes allows you to tidy files without causing these files to be uploaded to a web server when using a tool such as SiteCopy. Note this feature is not supported on some platforms. (Read and Write property)

161.5.126  **OptionKeepTime as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option keep-time. **Notes:**

This option specifies if Tidy should keep the original modification time of files that Tidy modifies in place. Setting the option to yes allows you to tidy files without changing the file modification date, which may be useful with certain tools that use the modification date for things such as automatic server deployment. Note this feature is not supported on some platforms. (Read and Write property)

161.5.127  **OptionLanguage as String**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option language. **Notes:**

Currently not used, but this option specifies the language Tidy would use if it were properly localized. For example: en. (Read and Write property)

161.5.128  **OptionLiteralAttribs as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option specifies if Tidy should ensure that whitespace characters within attribute values are passed through unchanged. **Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)
161.5. OptionLiteralAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option literal-attributes.

**Notes:**
This option specifies how Tidy deals with whitespace characters within attribute values. If the value is no Tidy normalizes attribute values by replacing any newline or tab with a single space, and further by replacing any contiguous whitespace with a single space. To force Tidy to preserve the original, literal values of all attributes and ensure that whitespace within attribute values is passed through unchanged, set this option to yes.

(Read and Write property)

161.5.130 OptionLogicalEmphasis as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option logical-emphasis.

**Notes:**
This option specifies if Tidy should replace any occurrence of &lt;i&gt; with &lt;em&gt; and any occurrence of &lt;b&gt; with &lt;strong&gt; and any occurrence of &lt;i&gt; &lt;b&gt; and any occurrence of &lt;strong&gt; &lt;i&gt; with &lt;strong&gt;&lt;em&gt; and &lt;em&gt;&lt;strong&gt; for any attributes are preserved unchanged. This option can be set independently of the clean option.

(Read and Write property)

161.5.131 OptionLowerLiterals as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option lower-literals.

**Notes:**
This option specifies if Tidy should convert the value of an attribute that takes a list of predefined values to lower case. This is required for XHTML documents.

(Read and Write property)

161.5.132 OptionMakeBare as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option specifies if Tidy should strip Microsoft specific HTML from Word 2000 documents, and output spaces rather than non-breaking spaces where they exist in the input.

**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)
161.5.133  OptionMakeClean as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option specifies if Tidy should strip out surplus presentational tags and attributes replacing them by style rules and structural markup as appropriate. **Deprecation**: This item is deprecated and should no longer be used. **Notes:**

It works well on the HTML saved by Microsoft Office products.
(Read and Write property)

161.5.134  OptionMark as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option specifies if Tidy should add a meta element to the document head to indicate that the document has been tidied. **Deprecation**: This item is deprecated and should no longer be used. **Notes:**

Tidy won’t add a meta element if one is already present.
(Read and Write property)

161.5.135  OptionMarkup as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option markup. **Notes:**

This option specifies if Tidy should generate a pretty printed version of the markup. Note that Tidy won’t generate a pretty printed version if it finds significant errors (see force-output).
(Read and Write property)

161.5.136  OptionMergeDivs as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option merge-divs. **Notes:**

This option can be used to modify the behavior of clean when set to yes. This option specifies if Tidy should merge nested &lt;div&gt; such as &lt;div&gt;&lt;div&gt;...&lt;/div&gt;&lt;/div&gt;.
If set to auto the attributes of the inner &lt;div&gt; are moved to the outer one. Nested &lt;div&gt; with id attributes are not merged.
If set to yes the attributes of the inner &lt;div&gt; are discarded with the exception of class and style.
161.5.137  **OptionMergeEmphasis** as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option merge-emphasis.

**Notes:**
This option specifies if Tidy should merge nested &lt;b&gt; and &lt;i&gt; elements; for example, for the case
&lt;b class="rtop-2"&gt;foo &lt;b class="r2-2"&gt;bar&lt;/b&gt; baz&lt;/b&gt;,
Tidy will output &lt;b class="rtop-2"&gt;foo bar baz&lt;/b&gt;.
(Read and Write property)

161.5.138  **OptionMergeSpans** as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option merge-spans.

**Notes:**
This option can be used to modify the behavior of clean when set to yes.
This option specifies if Tidy should merge nested &lt;span&gt; such as &lt;span&gt;&lt;span&gt;...&lt;/span&gt;&lt;/span&gt;.
The algorithm is identical to the one used by merge-divs.
(Read and Write property)

161.5.139  **OptionNcr** as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option ncr.

**Notes:**
This option specifies if Tidy should allow numeric character references.
(Read and Write property)

161.5.140  **OptionNewBlocklevelTags** as String

**Notes:**
This option specifies new block-level tags. This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.

Note you can’t change the content model for elements such as &lt;table&gt;, &lt;ul&gt;, &lt;ol&gt; and &lt;dl&gt;.

This option is ignored in XML mode.

(Read and Write property)

### 161.5.141 OptionNewEmptyTags as String

*Function:* The tidy option new-empty-tags.

*Notes:*

This option specifies new empty inline tags. This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.

Remember to also declare empty tags as either inline or blocklevel.

This option is ignored in XML mode.

(Read and Write property)

### 161.5.142 OptionNewInlineTags as String

*Function:* The tidy option new-inline-tags.

*Notes:*

This option specifies new non-empty inline tags. This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.

This option is ignored in XML mode.

(Read and Write property)

### 161.5.143 OptionNewline as Integer

*Function:* The tidy option newline.

*Notes:*

The default is appropriate to the current platform.

Generally CRLF on PC-DOS, Windows and OS/2; CR on Classic Mac OS; and LF everywhere else (Linux, Mac OS X, and Unix).
161.5.144 OptionNewPreTags as String

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option new-pre-tags.

**Notes:**
This option specifies new tags that are to be processed in exactly the same way as HTML’s `&lt;pre&gt;` element. This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.

Note you cannot as yet add new CDATA elements.
This option is ignored in XML mode.
(Read and Write property)

161.5.145 OptionNumEntities as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This option specifies if Tidy should output entities other than the built-in HTML entities (`&amp;`, `&lt;`, `&gt;`, and `&quot;`) in the numeric rather than the named entity form.

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**
Only entities compatible with the DOCTYPE declaration generated are used. Entities that can be represented in the output encoding are translated correspondingly.
(Read and Write property)

161.5.146 OptionNumericEntities as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option numeric-entities.

**Notes:**
This option specifies if Tidy should output entities other than the built-in HTML entities (`&amp;amp;`, `&amp;lt;`, `&amp;gt;`, and `&amp;quot;`) in the numeric rather than the named entity form.
Only entities compatible with the DOCTYPE declaration generated are used.
Entities that can be represented in the output encoding are translated correspondingly.
(Read and Write property)
161.5.147 OptionOmitOptionalTags as Boolean

**Notes:**  
This option specifies if Tidy should omit optional start tags and end tags when generating output. Setting this option causes all tags for the &lt;html&gt;, &lt;head&gt; and &lt;body&gt; elements to be omitted from output, as well as such end tags as &lt;/p&gt;, &lt;/li&gt;, &lt;/dt&gt;, &lt;/dd&gt;, &lt;/option&gt;, &lt;/tr&gt;, &lt;/td&gt; and &lt;/th&gt;. This option is ignored for XML output.  
(Read and Write property)

161.5.148 OptionOutCharEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option specifies the character encoding Tidy uses for the output. **Deprecated:** This item is deprecated and should no longer be used.  
**Notes:**  
See char-encoding for more info. May only be different from input-encoding for Latin encodings (ascii, latin0, latin1, mac, win1252, ibm858).  
(Read and Write property)

161.5.149 OptionOutFile as String

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option specifies the output file Tidy uses for markup. **Deprecated:** This item is deprecated and should no longer be used.  
**Notes:**  
Normally markup is written to "stdout".  
(Read and Write property)

161.5.150 OptionOutputBom as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option output-bom.  
**Notes:**  
This option specifies if Tidy should write a Unicode Byte Order Mark character (BOM; also known as Zero Width No-Break Space; has value of U+FEFF) to the beginning of the output, and only applies to UTF-8 and UTF-16 output encodings. If set to auto this option causes Tidy to write a BOM to the output only if a BOM was present at the beginning of the input.
A BOM is always written for XML/XHTML output using UTF-16 output encodings.
(Read and Write property)

161.5.151 OptionOutputEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option output-encoding.
**Notes:**
This option specifies the character encoding Tidy uses for the output.
Note that this may only be different from input-encoding for Latin encodings (ascii, latin0, latin1, mac, win1252, ibm858).
See char-encoding for more information
(Read and Write property)

161.5.152 OptionOutputFile as String

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option output-file.
**Notes:**
This option specifies the output file Tidy uses for markup. Normally markup is written to stdout.
(Read and Write property)

161.5.153 OptionOutputHtml as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option output-html.
**Notes:**
This option specifies if Tidy should generate pretty printed output, writing it as HTML.
(Read and Write property)

161.5.154 OptionOutputXhtml as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option output-xhtml.
**Notes:**
This option specifies if Tidy should generate pretty printed output, writing it as extensible HTML.
This option causes Tidy to set the DOCTYPE and default namespace as appropriate to XHTML, and will
use the corrected value in output regardless of other sources.
For XHTML, entities can be written as named or numeric entities according to the setting of numeric-entities.
The original case of tags and attributes will be preserved, regardless of other options.
(Read and Write property)

161.5.155 OptionOutputXml as Boolean

Notes:
This option specifies if Tidy should pretty print output, writing it as well-formed XML.
Any entities not defined in XML 1.0 will be written as numeric entities to allow them to be parsed by an XML parser.
The original case of tags and attributes will be preserved, regardless of other options.
(Read and Write property)

161.5.156 OptionPreserveEntities as Boolean

Notes:
This option specifies if Tidy should preserve well-formed entities as found in the input.
(Read and Write property)

161.5.157 OptionPreTags as String

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This option specifies new tags that are to be processed in exactly the same way as HTML’s <PRE>element. Deprecated: This item is deprecated and should no longer be used. Notes:
This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags. Note you can not as yet add new CDATA elements (similar to <SCRIPT>). This option is ignored in XML mode.
(Read and Write property)

161.5.158 OptionPunctuationWrap as Boolean

Notes:
This option specifies if Tidy should line wrap after some Unicode or Chinese punctuation characters. (Read and Write property)

161.5.159 OptionPunctWrap as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This option specifies if Tidy should line wrap after some Unicode or Chinese punctuation characters. Deprecated: This item is deprecated and should no longer be used. Notes: (Read and Write property)

161.5.160 OptionQuiet as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The tidy option quiet. Notes: This option specifies if Tidy should output the summary of the numbers of errors and warnings, or the welcome or informational messages. (Read and Write property)

161.5.161 OptionQuoteAmpersand as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The tidy option quote-ampersand. Notes: This option specifies if Tidy should output unadorned & amp; characters as & amp;amp;.
(Read and Write property)

161.5.162 OptionQuoteMarks as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The tidy option quote-marks. Notes: This option specifies if Tidy should output & quot; characters as & amp;quot; as is preferred by some editing environments. The apostrophe character ' is written out as & amp;# 39; since many web browsers don’t yet support & amp;apos;.
161.5.163  OptionQuoteNbsp as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option quote-nbsp.

**Notes:**
This option specifies if Tidy should output non-breaking space characters as entities, rather than as the Unicode character value 160 (decimal).
(Read and Write property)

161.5.164  OptionRepeatedAttributes as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option repeated-attributes.

**Notes:**
This option specifies if Tidy should keep the first or last attribute, if an attribute is repeated, e.g. has two align attributes.
(Read and Write property)

161.5.165  OptionReplaceColor as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option replace-color.

**Notes:**
This option specifies if Tidy should replace numeric values in color attributes with HTML/XHTML color names where defined, e.g. replace # ffffff with white.
(Read and Write property)

161.5.166  OptionShowBodyOnly as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option show-body-only.

**Notes:**
This option specifies if Tidy should print only the contents of the body tag as an HTML fragment.
If set to auto, this is performed only if the body tag has been inferred.
Useful for incorporating existing whole pages as a portion of another page.
This option has no effect if XML output is requested.  
(Read and Write property)

161.5.167  **OptionShowErrors as Integer**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**  
The tidy option show-errors.  
**Notes:**  
This option specifies the number Tidy uses to determine if further errors should be shown. If set to 0, then no errors are shown.  
(Read and Write property)

161.5.168  **OptionShowInfo as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**  
The tidy option show-info.  
**Notes:**  
This option specifies if Tidy should display info-level messages.  
(Read and Write property)

161.5.169  **OptionShowMarkup as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**  
This option specifies if Tidy should generate a pretty printed version of the markup.  
**Deprecated:** This item is deprecated and should no longer be used.  
**Notes:**  
Note that Tidy won’t generate a pretty printed version if it finds significant errors (see force-output).  
(Read and Write property)

161.5.170  **OptionShowWarnings as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**  
The tidy option show-warnings.  
**Notes:**  
This option specifies if Tidy should suppress warnings. This can be useful when a few errors are hidden in a flurry of warnings.  
(Read and Write property)
161.5.171  **OptionSkipNested as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option skip-nested.  
**Notes:**  
This option specifies that Tidy should skip nested tags when parsing script and style data.  
(Read and Write property)

161.5.172  **OptionSlideStyle as String**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option slide-style.  
**Notes:**  
This option has no function and is deprecated.  
(Read and Write property)

161.5.173  **OptionSortAttributes as Integer**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option sort-attributes.  
**Notes:**  
This option specifies that Tidy should sort attributes within an element using the specified sort algorithm.  
If set to alpha, the algorithm is an ascending alphabetic sort.  
(Read and Write property)

161.5.174  **OptionSplit as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option split.  
**Notes:**  
This option has no function and is deprecated.  
(Read and Write property)

161.5.175  **OptionStrictTagsAttributes as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option strict-tags-attributes.
Notes:

This option ensures that tags and attributes are applicable for the version of HTML that Tidy outputs. When set to yes (the default) and the output document type is a strict doctype, then Tidy will report errors. If the output document type is a loose or transitional doctype, then Tidy will report warnings. Additionally if drop-proprietary-attributes is enabled, then not applicable attributes will be dropped, too. When set to no, these checks are not performed.

(Read and Write property)

161.5.176 OptionTabSize as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option tab-size.

**Notes:**

This option specifies the number of columns that Tidy uses between successive tab stops. It is used to map tabs to spaces when reading the input.

(Read and Write property)

161.5.177 OptionTidyMark as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option tidy-mark.

**Notes:**

This option specifies if Tidy should add a meta element to the document head to indicate that the document has been tidied.

Tidy won’t add a meta element if one is already present.

(Read and Write property)

161.5.178 OptionUppercaseAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option uppercase-attributes.

**Notes:**

This option specifies if Tidy should output attribute names in upper case.

The default is no, which results in lower case attribute names, except for XML input, where the original case is preserved.

(Read and Write property)
161.5.179  **OptionUpperCaseAttrs as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option specifies if Tidy should output attribute names in upper case.

**Deprecated:** This item is deprecated and should no longer be used. **Notes:**

The default is no, which results in lower case attribute names, except for XML input, where the original case is preserved.

(Read and Write property)

161.5.180  **OptionUppercaseTags as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option uppercase-tags.

**Notes:**

This option specifies if Tidy should output tag names in upper case. The default is no which results in lower case tag names, except for XML input where the original case is preserved.

(Read and Write property)

161.5.181  **OptionVerticalSpace as Integer**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option vertical-space.

**Notes:**

This option specifies if Tidy should add some extra empty lines for readability. The default is no. If set to auto Tidy will eliminate nearly all newline characters.

(Read and Write property)

161.5.182  **OptionVertSpace as Integer**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option specifies if Tidy should add some empty lines for readability.

**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)
161.5. OptionWord2000 as Boolean

**Notes:**

This option specifies if Tidy should go to great pains to strip out all the surplus stuff Microsoft Word 2000 inserts when you save Word documents as "Web pages". It doesn’t handle embedded images or VML. You should consider using Word’s "Save As: Web Page, Filtered".

(Read and Write property)

161.5. OptionWrap as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option wrap.

**Notes:**

This option specifies the right margin Tidy uses for line wrapping. Tidy tries to wrap lines so that they do not exceed this length. Set wrap to 0(zero) if you want to disable line wrapping.

(Read and Write property)

161.5. OptionWrapAsp as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option wrap-asp.

**Notes:**

This option specifies if Tidy should line wrap text contained within ASP pseudo elements, which look like: &lt;% ... %&gt;.

(Read and Write property)

161.5. OptionWrapAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option wrap-attributes.

**Notes:**

This option specifies if Tidy should line-wrap attribute values, meaning that if the value of an attribute causes a line to exceed the width specified by wrap, Tidy will add one or more line breaks to the value, causing it to be wrapped into multiple lines. Note that this option can be set independently of wrap-script-literals. By default Tidy replaces any newline or tab with a single space and replaces any sequences of whitespace with a single space.
To force Tidy to preserve the original, literal values of all attributes, and ensure that whitespace characters within attribute values are passed through unchanged, set literal-attributes to yes.
(Read and Write property)

### 161.5.187 OptionWrapAttVals as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option specifies if Tidy should line wrap attribute values, for easier editing.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** This option can be set independently of wrap-script-literals.
(Read and Write property)

### 161.5.188 OptionWrapJste as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tidy option wrap-jste.
**Notes:** This option specifies if Tidy should line wrap text contained within JSTE pseudo elements, which look like:
& lt;# ... # & gt;.
(Read and Write property)

### 161.5.189 OptionWrapLen as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option specifies the right margin Tidy uses for line wrapping.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** Tidy tries to wrap lines so that they do not exceed this length. Set wrap to zero if you want to disable line wrapping.
(Read and Write property)

### 161.5.190 OptionWrapPhp as Boolean

**Notes:** This option specifies if Tidy should line wrap text contained within PHP pseudo elements, which look like:
& lt;?php ... ?& gt;.
161.5.191 OptionWrapScriptlets as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This option specifies if Tidy should line wrap string literals that appear in script attributes.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**
Tidy wraps long script string literals by inserting a backslash character before the line break.
(Read and Write property)

161.5.192 OptionWrapScriptLiterals as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option wrap-script-literals.
**Notes:**
This option specifies if Tidy should line wrap string literals that appear in script attributes.
Tidy wraps long script string literals by inserting a backslash character before the line break.
(Read and Write property)

161.5.193 OptionWrapSection as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This option specifies if Tidy should line wrap text contained within `< ![ ... ] >` section tags.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

161.5.194 OptionWrapSections as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option wrap-sections.
**Notes:**
This option specifies if Tidy should line wrap text contained within `&lt; ![ ... ] &gt;` section tags.
(Read and Write property)
161.5.195 OptionWriteBack as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The tidy option write-back.
**Notes:**
This option specifies if Tidy should write back the tidied markup to the same file it read from.
You are advised to keep copies of important files before tidying them, as on rare occasions the result may
not be what you expect.
(Read and Write property)

161.5.196 OptionXhtmlOut as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This option specifies if Tidy should generate pretty printed output, writing it as extensible HTML.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**
This option causes Tidy to set the DOCTYPE and default namespace as appropriate to XHTML. If a DOCT-
TYPE or namespace is given they will checked for consistency with the content of the document. In the
case of an inconsistency, the corrected values will appear in the output. For XHTML, entities can be written
as named or numeric entities according to the setting of the "numeric-entities" option. The original case of
tags and attributes will be preserved, regardless of other options.
(Read and Write property)

161.5.197 OptionXmlDecl as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This option specifies if Tidy should add the XML declaration when outputting XML or XHTML.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**
Note that if the input already includes an "<?xml ... ?>" declaration then this option will be ignored. If the
encoding for the output is different from "ascii", one of the utf encodings or "raw", the declaration is always
added as required by the XML standard.
(Read and Write property)

161.5.198 OptionXmlOut as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This option specifies if Tidy should pretty print output, writing it as well-formed XML.
**Deprecated:** This item is deprecated and should no longer be used. **Notes:**
Any entities not defined in XML 1.0 will be written as numeric entities to allow them to be parsed by a
XML parser. The original case of tags and attributes will be preserved, regardless of other options.
161.5. **CLASS TIDYDOCUMENTMBS**

(Read and Write property)

161.5.199 **OptionXmlPIs as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the options. **Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

161.5.200 **OptionXmlSpace as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option specifies if Tidy should add xml:space=’preserve’ to elements such as <PRE>, <STYLE> and <SCRIPT> when generating XML. **Deprecated:** This item is deprecated and should no longer be used. **Notes:**

This is needed if the whitespace in such elements is to be parsed appropriately without having access to the DTD. (Read and Write property)

161.5.201 **OptionXmlTags as Boolean**

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set this option if the input is xml. **Deprecated:** This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

161.5.202 **Events**

161.5.203 **Filter(level as Integer, line as Integer, column as Integer, message as string) as boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The filter called for every error and warning. **Notes:**

Callback to filter messages by diagnostic level: info, warning, etc. Just set diagnostic output handler to redirect all diagnostics output.

Return false to proceed with output, true to cancel.
PrettyPrintProgress(line as Integer, column as Integer, destLine as Integer)

MBS Tools Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reports progress on the print process.
161.6. module TidyDupAttrModesMBS

161.6.1 module TidyDupAttrModesMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A module with constants for use with the Tidy classes.

161.6.2 Constants

161.6.3 TidyKeepFirst=0

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.

161.6.4 TidyKeepLast=1

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.
161.7  class TidyInputMBS

161.7.1  class TidyInputMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Delivers raw bytes of input.

161.7.2  Events

161.7.3  EndOfFile as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Return true if all your data is processed. **Notes:** Return false if more data is available for the GetByte call.

161.7.4  GetByte as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Read one byte and returns it to the tidy library.

161.7.5  UngetByte(value as Integer)

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a byte to the buffer for later processing.
161.8. class TidyIteratorMBS

161.8.1 class TidyIteratorMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
An iterator for various uses.

161.8.2 Properties

161.8.3 Handle as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The internal reference to the tidy iterator object.
**Notes:** (Read only property)
161.9 module TidyLineEndingMBS

161.9.1 module TidyLineEndingMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A module with constants for use with the Tidy classes.

161.9.2 Constants

161.9.3 TidyCR=2

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.

161.9.4 TidyCRLF=1

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.

161.9.5 TidyLF=0

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.
161.10. **CLASS TIDYNODEMBS**

161.10  **class TidyNodeMBS**

161.10.1  **class TidyNodeMBS**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A node in the document parse tree.

161.10.2  **Properties**

161.10.3  **Child as TidyNodeMBS**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The child node of this node.
**Example:**

dim t as TidyDocumentMBS  // the tidy document
dim n as TidyNodeMBS
dim c as TidyNodeMBS

// iterating over root and its children (for more children you need recursion)
n=t.Root
while n<>nil
MsgBox n.Text

c=n.Child
while c<>nil
MsgBox c.Text

c=c.NextNode
wend

n=n.NextNode
wend

**Notes:** (Read only property)

161.10.4  **Column as Integer**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The position of this node.
**Notes:** (Read only property)
161.10.5 Document as TidyDocumentMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The document of this node.
**Notes:** (Read only property)

161.10.6 FirstAttribute as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first attribute for this node.
**Notes:** (Read only property)

161.10.7 GetABBR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first ABBR attribute for this node.
**Notes:** (Read only property)

161.10.8 GetALINK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first ALINK attribute for this node.
**Notes:** (Read only property)

161.10.9 GetALT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first ALT attribute for this node.
**Notes:** (Read only property)

161.10.10 GetBGCOLOR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first BGCOLOR attribute for this node.
**Notes:** (Read only property)
161.10.11  GetCHECKED as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first CHECKED attribute for this node.
**Notes:** (Read only property)

161.10.12  GetCOLSPAN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first COLSPAN attribute for this node.
**Notes:** (Read only property)

161.10.13  GetCONTENT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first CONTENT attribute for this node.
**Notes:** (Read only property)

161.10.14  GetDataFLD as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first DATAFLD attribute for this node.
**Notes:** (Read only property)

161.10.15  GetFOR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first FOR attribute for this node.
**Notes:** (Read only property)

161.10.16  GetHEIGHT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first HEIGHT attribute for this node.
**Notes:** (Read only property)
161.10.17  GetHREF as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first HREF attribute for this node.
**Notes:** (Read only property)

161.10.18  GetHTTP_EQUIV as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first HTTP_EQUIV attribute for this node.
**Notes:** (Read only property)

161.10.19  GetID as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first ID attribute for this node.
**Notes:** (Read only property)

161.10.20  GetISMAP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first ISMAP attribute for this node.
**Notes:** (Read only property)

161.10.21  GetLANG as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first LANG attribute for this node.
**Notes:** (Read only property)

161.10.22  GetLANGUAGE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first LANGUAGE attribute for this node.
**Notes:** (Read only property)
161.10. CLASS TIDYNODEMBS

161.10.23  GetLINK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first LINK attribute for this node. **Notes:** (Read only property)

161.10.24  GetLONGDESC as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first LONGDESC attribute for this node. **Notes:** (Read only property)

161.10.25  GetName as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first NAME attribute for this node. **Notes:** (Read only property)

161.10.26  GetOnBLUR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first OnBLUR attribute for this node. **Notes:** (Read only property)

161.10.27  GetOnCLICK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first OnCLICK attribute for this node. **Notes:** (Read only property)

161.10.28  GetOnFOCUS as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first OnFOCUS attribute for this node. **Notes:** (Read only property)
161.10.29  GetOnKEYDOWN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first OnKEYDOWN attribute for this node.  
**Notes:** (Read only property)

161.10.30  GetOnKEYPRESS as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first OnKEYPRESS attribute for this node.  
**Notes:** (Read only property)

161.10.31  GetOnKEYUP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first OnKEYUP attribute for this node.  
**Notes:** (Read only property)

161.10.32  GetOnMOUSEDOWN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first OnMOUSEDOWN attribute for this node.  
**Notes:** (Read only property)

161.10.33  GetOnMOUSEMOVE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first OnMOUSEMOVE attribute for this node.  
**Notes:** (Read only property)

161.10.34  GetOnMOUSEOUT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first OnMOUSEOUT attribute for this node.  
**Notes:** (Read only property)
161.10.35 GetOnMOUSEOVER as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first OnMOUSEOVER attribute for this node. **Notes:** (Read only property)

161.10.36 GetOnMOUSEUP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first OnMOUSEUP attribute for this node. **Notes:** (Read only property)

161.10.37 GetREL as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first REL attribute for this node. **Notes:** (Read only property)

161.10.38 GetROWSPAN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first ROWSPAN attribute for this node. **Notes:** (Read only property)

161.10.39 GetSELECTED as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first SELECTED attribute for this node. **Notes:** (Read only property)

161.10.40 GetSRC as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first SRC attribute for this node. **Notes:** (Read only property)
161.10.41 GetSTYLE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first STYLE attribute for this node. **Notes:** (Read only property)

161.10.42 GetSUMMARY as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first SUMMARY attribute for this node. **Notes:** (Read only property)

161.10.43 GetTARGET as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first TARGET attribute for this node. **Notes:** (Read only property)

161.10.44 GetTEXT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first TEXT attribute for this node. **Notes:** (Read only property)

161.10.45 GetTITLE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first TITLE attribute for this node. **Notes:** (Read only property)

161.10.46 GetTYPE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first TYPE attribute for this node. **Notes:** (Read only property)
161.10.47   GetUSEMAP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first USEMAP attribute for this node.
**Notes:** (Read only property)

161.10.48   GetVALUE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first VALUE attribute for this node.
**Notes:** (Read only property)

161.10.49   GetVLINK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first VLINK attribute for this node.
**Notes:** (Read only property)

161.10.50   GetWIDTH as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first WIDTH attribute for this node.
**Notes:** (Read only property)

161.10.51   GetXMLNS as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The first XMLNS attribute for this node.
**Notes:** (Read only property)

161.10.52   Handle as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The internal reference to the tidy node object.
**Notes:** (Read only property)
161.10.53 HasText as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether there is text attached to this node.
**Notes:**
Returns true if yes.
(Read only property)

161.10.54 ID as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The node ID.
**Notes:** (Read only property)

161.10.55 IsDATALIST as Boolean

MBS Tools Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this node is a data list.
**Notes:** (Read only property)

161.10.56 IsProperty as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the node is a property.
**Notes:** (Read only property)

161.10.57 Line as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The position of this node.
**Notes:** (Read only property)

161.10.58 Name as string

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of this node.
161.10. **CLASS TIDYNODEMBS**

**Notes:** (Read only property)

161.10.59 **NextNode as TidyNodeMBS**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The next node in the node list of the parent node. 
**Notes:** (Read only property)

161.10.60 **NodeIsA as boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a A node. 
**Notes:** (Read only property)

161.10.61 **NodeIsADDRESS as boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a ADDRESS node. 
**Notes:** (Read only property)

161.10.62 **NodeIsAPPLET as boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a APPLET node. 
**Notes:** (Read only property)

161.10.63 **NodeIsAREA as boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a AREA node. 
**Notes:** (Read only property)

161.10.64 **NodeIsB as boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a B node.
161.10.65 NodeIsBASE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a BASE node.
**Notes:** (Read only property)

161.10.66 NodeIsBASEFONT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a BASEFONT node.
**Notes:** (Read only property)

161.10.67 NodeIsBIG as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a BIG node.
**Notes:** (Read only property)

161.10.68 NodeIsBLINK as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a BLINK node.
**Notes:** (Read only property)

161.10.69 NodeIsBLOCKQUOTE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a BLOCKQUOTE node.
**Notes:** (Read only property)

161.10.70 NodeIsBODY as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a BODY node.
161.10. **CLASS TIDYNODEMBS**

**Notes:** (Read only property)

### 161.10.71 NodeIsBR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a BR node.

**Notes:** (Read only property)

### 161.10.72 NodeIsCAPTION as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a CAPTION node.

**Notes:** (Read only property)

### 161.10.73 NodeIsCENTER as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a CENTER node.

**Notes:** (Read only property)

### 161.10.74 NodeIsCOL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a COL node.

**Notes:** (Read only property)

### 161.10.75 NodeIsCOLGROUP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a COLGROUP node.

**Notes:** (Read only property)

### 161.10.76 NodeIsDD as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a DD node.
161.10.77  **NodeIsDIR** as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a DIR node.
**Notes:** (Read only property)

161.10.78  **NodeIsDIV** as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a DIV node.
**Notes:** (Read only property)

161.10.79  **NodeIsDL** as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a DL node.
**Notes:** (Read only property)

161.10.80  **NodeIsDT** as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a DT node.
**Notes:** (Read only property)

161.10.81  **NodeIsEM** as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a EM node.
**Notes:** (Read only property)

161.10.82  **NodeIsEMBED** as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a EMBED node.
161.10. CLASS TIDYNODEMBS

Notes: (Read only property)

161.10.83 NodeIsFONT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a FONT node.
Notes: (Read only property)

161.10.84 NodeIsFORM as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a FORM node.
Notes: (Read only property)

161.10.85 NodeIsFRAME as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a FRAME node.
Notes: (Read only property)

161.10.86 NodeIsFRAMESET as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a FRAMESET node.
Notes: (Read only property)

161.10.87 NodeIsH1 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a H1 node.
Notes: (Read only property)

161.10.88 NodeIsH2 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a H2 node.
161.10.89  **NodeIsH3** as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a H3 node. **Notes:** (Read only property)

161.10.90  **NodeIsH4** as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a H4 node. **Notes:** (Read only property)

161.10.91  **NodeIsH5** as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a H5 node. **Notes:** (Read only property)

161.10.92  **NodeIsH6** as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a H6 node. **Notes:** (Read only property)

161.10.93  **NodeIsHEAD** as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a HEAD node. **Notes:** (Read only property)

161.10.94  **NodeIsHeader** as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a Header node.
161.10. CLASS TIDYNODEMBS

Notes: (Read only property)

161.10.95 NodeIsHR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a HR node. **Notes:** (Read only property)

161.10.96 NodeIsHTML as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a HTML node. **Notes:** (Read only property)

161.10.97 NodeIsI as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a I node. **Notes:** (Read only property)

161.10.98 NodeIsIFRAME as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a IFRAME node. **Notes:** (Read only property)

161.10.99 NodeIsIMG as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a IMG node. **Notes:** (Read only property)

161.10.100 NodeIsINPUT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a INPUT node.
161.10.101  NodeIsISINDEX as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a ISINDEX node. **Notes:** (Read only property)

161.10.102  NodeIsLABEL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a LABEL node. **Notes:** (Read only property)
161.10.103  **NodeIsLAYER as boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a LAYER node.  
**Notes:** (Read only property)

161.10.104  **NodeIsLI as boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a LI node.  
**Notes:** (Read only property)

161.10.105  **NodeIsLINK as boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a LINK node.  
**Notes:** (Read only property)

161.10.106  **NodeIsLISTING as boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a LISTING node.  
**Notes:** (Read only property)

161.10.107  **NodeIsMAP as boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a MAP node.  
**Notes:** (Read only property)

161.10.108  **NodeIsMARQUEE as boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a MARQUEE node.  
**Notes:** (Read only property)
161.10.109 NodeIsMENU as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a MENU node. **Notes:** (Read only property)

161.10.110 NodeIsMETA as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a META node. **Notes:** (Read only property)

161.10.111 NodeIsNOBR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a NOBR node. **Notes:** (Read only property)

161.10.112 NodeIsNOFRAMES as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a NOFRAMES node. **Notes:** (Read only property)

161.10.113 NodeIsNOSCRIPy as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a NOSCRIPy node. **Notes:** (Read only property)

161.10.114 NodeIsOBJECT as boolean

161.10.127  NodeIsSPAN as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a SPAN node.  
**Notes:** (Read only property)

161.10.128  NodeIsSTRIKE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a STRIKE node.  
**Notes:** (Read only property)

161.10.129  NodeIsSTRONG as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a STRONG node.  
**Notes:** (Read only property)

161.10.130  NodeIsSTYLE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a STYLE node.  
**Notes:** (Read only property)

161.10.131  NodeIsTABLE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a TABLE node.  
**Notes:** (Read only property)

161.10.132  NodeIsTD as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a TD node.  
**Notes:** (Read only property)
161.10.133  NodeIsText as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a Text node. **Notes:** (Read only property)

161.10.134  NodeIsTEXTAREA as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a TEXTAREA node. **Notes:** (Read only property)

161.10.135  NodeIsTH as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a TH node. **Notes:** (Read only property)

161.10.136  NodeIsTITLE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a TITLE node. **Notes:** (Read only property)

161.10.137  NodeIsTR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a TR node. **Notes:** (Read only property)

161.10.138  NodeIsU as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a U node. **Notes:** (Read only property)
161.10. CLASS TIDYNODEMBS

161.10.139  NodeIsUL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a UL node. **Notes:** (Read only property)

161.10.140  NodeIsWBR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a WBR node. **Notes:** (Read only property)

161.10.141  NodeIsXMP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a XMP node. **Notes:** (Read only property)

161.10.142  Parent as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parent node of this node. **Notes:** (Read only property)

161.10.143  PrevNode as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The previous node in the node list of the parent node. **Notes:** (Read only property)

161.10.144  Text as string

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The text of this node. **Example:**

```dim t as new TidyDocumentMBS```
call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim s As TidyNodeMBS = t.Root

MsgBox s.Text

Notes:
This text has no encoding defined.
(Read only property)

161.10.145 Type as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The type of this node.
**Notes:** (Read only property)

161.10.146 Value as string

MBS Tools Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The decoded value of the node as UTF-8 String.
**Example:**
dim t as new TidyDocumentMBS
call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair
dim nodes(-1) as TidyNodeMBS
dim root as TidyNodeMBS = t.Root

// we iterate over all child nodes
nodes.Append root.Child
nodes.Append root.NextNode

while UBound(nodes) >= 0
dim n as TidyNodeMBS = nodes.Pop
if n<>Nil then
    nodes.Append n.Child // maybe a child?
nodes.Append n.NextNode // maybe a sibling?

if n.HasText then
MsgBox n.Value // Shows "Hello World"
end if
end if
wend

161.13. **CLASS TIDYOPTIONMBS**

161.13  **class TidyOptionMBS**

161.13.1 **class TidyOptionMBS**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An option in the tidy preferences.

161.13.2 **Methods**

161.13.3 **Category as Integer**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Category of the option.

161.13.4 **DefaultBoolean as boolean**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The default value for a boolean property.

161.13.5 **DefaultInteger as Integer**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The default value for an integer property.

161.13.6 **DefaultString as String**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The default value for a string property.

161.13.7 **Description as string**

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Description of the option.
161.13.8  ID as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get ID of given Option.

161.13.9  IsReadOnly as boolean

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Is Option read-only?

161.13.10 Name as string

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get name of given Option.

161.13.11  Type as Integer

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get datatype of given Option.

161.13.12 Properties

161.13.13 Document as TidyDocumentMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The document of this option.
**Notes:** (Read only property)

161.13.14  Handle as Integer

MBS Tools Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The internal reference to the tidy option object.
**Notes:** (Read only property)
161.14.  MODULE TIDYOPTIONTYPEMBS

161.14  module TidyOptionTypeMBS

161.14.1  module TidyOptionTypeMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A module with constants for use with the Tidy classes.

161.14.2  Constants

161.14.3  TidyBoolean=2

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.

161.14.4  TidyInteger=1

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.

161.14.5  TidyString=0

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.
161.15 class TidyOutputMBS

161.15.1 class TidyOutputMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Accepts raw bytes of output from the tidy library.

161.15.2 Events

161.15.3 WriteByte(value as Integer)

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds one byte to the output buffer.
161.16. **MODULE TIDYREPORTLEVELKEYSMBS**

161.16  **module TidyReportLevelKeysMBS**

161.16.1  **module TidyReportLevelKeysMBS**

MBS Tools Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The module for report level keys.

161.16.2  **Constants**

161.16.3  **TidyAccessString=603**

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.16.4  **TidyBadDocumentString=605**

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.16.5  **TidyConfigString=602**

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.16.6  **TidyErrorString=604**

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.16.7  **TidyFatalString=606**

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.

161.16.8  **TidyInfoString=600**

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.
161.16.9  TidyWarningString=601

MBS Tools Plugin, Plugin Version: 17.1. **Function:** A constant for use with the Tidy classes.
module TidyReportLevelMBS

161.17.1 module TidyReportLevelMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A module with constants for use with the Tidy classes.

161.17.2 Constants

161.17.3 TidyAccess=3

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.

161.17.4 TidyBadDocument=5

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.

161.17.5 TidyConfig=2

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.

161.17.6 TidyError=4

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.

161.17.7 TidyFatal=6

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.

161.17.8 TidyInfo=0

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.
161.17.9 TidyWarning=1

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.
161.18.  MODULE TIDYTAGIDMBS

161.18  module TidyTagIdMBS

161.18.1  module TidyTagIdMBS

MBS Tools Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A module with constants for use with the Tidy classes.

161.18.2  Constants

161.18.3  TidyTagA=1

MBS Tools Plugin, Plugin Version: 5.4. **Function:** A constant for use with the Tidy classes.

Chapter 162

TIFF

162.1 Globals

162.1.1  CombineBitCMYKtoRGBMBS(CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, Files() as FolderItem, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, byref output as picture, CacheSizeRead as Integer) as Integer

MBS Images Plugin, Plugin Version: 6.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Combines 1bit raw image files to one 8bit RGB tiff.

**Example:**

```vbs
    dim t(4) as FolderItem
    dim dC(4), dM(4), dY(4), dK(4) as Double
    dim nC(4), nM(4), nY(4), nK(4) as Integer
    dim i as Integer
    dim p as Picture

    //Cyan
dK(0)=0.0
dC(0)=1.0
dM(0)=0.0
dY(0)=0.0
    //Magenta
dK(1)=0.00
dC(1)=0.0
    dM(1)=1.0
dY(1)=0.0
    //Yellow
    dK(2)=0.00
```

19461
\[ dC(2)=0.0 \\
\][\( dM(2)=0.0 \) ]
\[ dY(2)=1.0 \\
\] 
//Black
\[ dK(3)=1.00 \]
\[ dC(3)=0.0 \]
\[ dM(3)=0.0 \]
\[ dY(3)=0.0 \]
//Pantone, Sonderfarbe, S0
\[ dK(4)=0.00 \]
\[ dC(4)=0.60 \]
\[ dM(4)=0.35 \]
\[ dY(4)=0.15 \]
//Bilder
\[ t(0)=GetFolderItem("test.Cyan.bit") \]
\[ t(1)=GetFolderItem("test.Magenta.bit") \]
\[ t(2)=GetFolderItem("test.Yellow.bit") \]
\[ t(3)=GetFolderItem("test.Black.bit") \]
\[ t(4)=GetFolderItem("test.S0.bit") \]
for i=0 to 4
\[ nC(i)=dC(i)\times1000.0 \]
\[ nM(i)=dM(i)\times1000.0 \]
\[ nY(i)=dY(i)\times1000.0 \]
\[ nK(i)=dK(i)\times1000.0 \]
next
// Scale 1/n, 1/3, 1/2, 1, 2, 3, n
Title=str(CombineBitCMYKtoRGBMBS(nC,nM,nY,nK, t, 1, 545,567,0,0,545,567,p,0))
Backdrop=p
Width=p.Width
Height=p.Height

Notes:
All arrays have the same size specifying for each 1bit grayscale source image the colors to be used in the final image.
Result image is written to the output picture which is created. Error code is returned which is 0 for no error.
CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on what you do.
162.1.2  TIFFStringToPictureMBS(data as string) as picture

MBS Images Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Opens a tiff string and returns the RGB image for this tiff file.
**Notes:**
Returns nil on any error.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

162.1.3  TIFFStringToTiffPictureMBS(data as string) as TiffPictureMBS

MBS Images Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Opens a tiff string and returns a TiffPictureMBS object.
**Notes:**
if you want to read the picture after this line you need to call ReadBW, ReadRGB or use the Scanline methods.
Returns nil on any error.

162.1.4  CombineTiff1BitCMYKtoTiffMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, TiffData() as TiffPictureMBS, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, ditherMode as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Combines 1bit tiff image files to one CMYK tiff.
**Notes:**
All arrays have the same size specifying for each 1bit grayscale source image the colors to be used in the final image.
Result image is written to the output picture which is created. Error code is returned which is 0 for no error.
Compression can be set before data is written to current tiff which is for output. The tiff object for output must be perfectly setup before using this function.
162.1.5 CombineBitCMYKtoCMYKMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, Files() as FolderItem, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, CacheSizeRead as Integer) as Integer

MBS Images Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Combines 1bit raw image files to one CMYK tiff.

**Notes:**
All arrays have the same size specifying for each 1bit grayscale source image the colors to be used in the final image.
Result image is written to the output picture which is created. Error code is returned which is 0 for no error. CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on what you do.

162.1.6 CombineTiffCMYKtoCMYKMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, TiffData() as TiffPictureMBS) as Integer

MBS Images Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Combines grayscale tiff images to one CMYK tiff.

**Example:**
```plaintext
class PLANARCONFIG
  CONTIG=1
  CONTIG=2
  CONTIG=3
  CONTIG=4
end class

class PHOTOMETRIC
  RGB=1
  RGB=2
  RGB=3
end class

class FILLORDER
  MSB2LSB=1
  MSB2LSB=2
end class

class PHOTOMETRIC
  SEPARATED=1
  SEPARATED=2
end class

const PLANARCONFIG_CONTIG=1
const PHOTOMETRIC_RGB=2
const FILLORDER_MSB2LSB=1
const PHOTOMETRIC_SEPARATED=5

  u.VerticalResolution=v.VerticalResolution
  u.Orientation=v.Orientation
  u.PlanarConfig=PLANARCONFIG_CONTIG
  u.Photometric=PHOTOMETRIC_RGB
  u.FillOrder=MSB2LSB
  Title=str(CombineTiffCMYKtoRGBMBS(ot, nC, nM, nY, nK, t))
  ot.Close
end if

//Neues Bild anzeigen
pnach=f.OpenAsPicture
if pnach<>Nil then
  Window1.Width=pNach.Width
  Window1.Height=pNach.Height
  Window1.Backdrop=pNach
end if

Notes:
All arrays have the same size specifying for each 8bit grayscale source image the colors to be used in the final image.
Result image is written to the current tiffpicture. Error code is returned which is 0 for no error.
You need to set yourself all needed tiffpicture parameters for the output image and you must create it before.
CombineTiff1BitCMYKtoTiffMBS(dest as TiffPictureMBS, TiffData as TiffPictureMBS, scalex as Double, scaley as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, ditherMode as Integer = 0) as Integer

CombineTiff8BitCMYKtoTiffMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, TiffData() as TiffPictureMBS, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, ditherMode as Integer = 0) as Integer

class TiffPictureMBS

162.2.3 AddCustomTag(Tag as Integer, FieldReadCount as Integer, FieldWriteCount as Integer, FieldType as Integer, FieldBit as Integer, OkToChange as Integer, PassCount as Integer, FieldName as string) as boolean

**Example:**

```vba
const TIFFTAG_ASCII = 40666
const TIFFTAG_LONG = 40667
const TIFFTAG_SHORT = 40668
const TIFFTAG_RATIONAL = 40669
const TIFFTAG_FLOAT = 40670
const TIFFTAG_DOUBLE = 40671
const TIFFTAG_BYTE = 40672

const TIFFTAG_SOFTWARE = 305
const TIFF_BYTE = 1
const TIFF_ASCII = 2
const TIFF_SHORT = 3 // integer 16 bit signed
const TIFF_LONG = 4 // integer 32 bit
const TIFF_FLOAT = 11
const TIFF_DOUBLE = 12

const FIELD_CUSTOM = 65

dim t as new TiffPictureMBS

// open tiff

if not t.AddCustomTag(TIFFTAG_ASCII, -1, -1, TIFF_ASCII, FIELD_CUSTOM, 1, 0, "MyString") then
    MsgBox "AddCustomTag failed1."
end if
```

**Notes:** See tiff documentation for details.
162.2. **CLASS TIFFPICTUREMBS**

### 162.2.4 AddImage as boolean

MBS Images Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Writes existing picture and header information to file and starts a new one.

**Example:**

```vbs
dim t as TiffPictureMBS
dim f as FolderItem
dim p as Picture

f=SpecialFolder.Desktop.Child(“test.tif”)
t=new TiffPictureMBS
if t.Create(f) then
  p=NewPicture(100,100,32)
p.Graphics.ForeColor=rgb(255,0,0)
p.Graphics.FillOval 0,0,100,100
t.Pict=p
  if t.WriteRGB then
    if t.AddImage then
      p=NewPicture(100,100,32)
p.Graphics.ForeColor=rgb(0,0,255)
p.Graphics.FillOval 0,0,100,100
t.Pict=p
      if t.WriteRGB then
        MsgBox “Written multi picture tiff.”
    end if
  end if
  end if
end if
```

**Notes:**

Returns true on success and false on any error.

Calls TIFFWriteDirectory internally.

### 162.2.5 close

MBS Images Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Closes the Tiff handle.

**Notes:**

In 5.1 and older the destructor.
In 5.2 and later only closes the tiff handle so you can still read the pictures, the output or input buffer.
162.2.6 CombinePictureWithMask as picture

MBS Images Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a new picture which is created using the picture and it’s mask.

**Example:**

```vbs
dim t as TiffPictureMBS
' ...
canvas1.backdrop=t.CombinePictureWithMask
```

162.2.7 Create(file as folderitem) as boolean

**Example:**

```vbs
dim p as Picture
dim f as FolderItem
dim t as TiffPictureMBS

p=NewPicture(100,100,32)
f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS
t.Pict=p
if t.Create(f) then
if t.WriteRGB then
t.Close
MsgBox "Ok"
f.Launch
end if
end if
```

**Notes:**

Returns true on success.

This function uses paths like all Tiff functions, so be sure there are not two volumes named equal on a Mac OS Classic system.
162.2. CLASS TIFFPICTUREMBS

See also:

- 162.2.8 Create(file as folderitem, endian as Integer) as boolean

162.2.8 Create(file as folderitem, endian as Integer) as boolean

Endian settings:

- 0 Default (System)
- 1 BigEndian (Mac)
- 2 LittleEndian (Win)

This function uses paths like all Tiff functions, so be sure there are not two volumes named equal on a Mac OS Classic system.

See also:

- 162.2.7 Create(file as folderitem) as boolean

162.2.9 CreateString(Size as Integer) as boolean

MBS Images Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new string based tiff writer. **Example:**

```vbs
Function PictureToTiffStringMBS(pic as picture) As string
dim t as TIFFPictureMBS

t=new TIFFPictureMBS
if t.CreateString(& h100000) then
    t.Pict=pic
    if t.WriteRGB then
        t.Close
    Return t.OutputBuffer
end if
end if
End Function
```
Notes:
Same as the Create() function, but memory based. You can now use functions like Scanline(), WriteSW() or WriteRGB() to put the picture data.

Returns true on success.
The Warning and Error events may show you reasons why it does not work.

The size parameter you pass in is a guess for the initial size of the memory block used. If more data is written, the memory block is resized, but it is quite slow to resize a memory block, so make a good guess!

You can and should use this function to write yourself a PictureToTiffString function. The plugin can not well make such a function as there are thousands of possible parameters combination you may want to use. (compared to the JPEG library where you only have the compression level parameter.)
See also:

* 162.2.10 CreateString(Size as Integer, Mode as string) as boolean

162.2.10 CreateString(Size as Integer, Mode as string) as boolean

MBS Images Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new string based tiff writer.
**Notes:**
Same as the other CreateString method, but you can pass a mode string to the library.

mode="wb" for big endian and mode="wl" for little endian.
See also:

* 162.2.9 CreateString(Size as Integer) as boolean

162.2.11 Flush as boolean

MBS Images Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Flush causes any pending writes for the specified file (including writes for the current directory) to be done.
**Notes:** In normal operation this call is never needed - the library automatically does any flushing required.
162.2. CLASS TIFFPICTUREMBS

162.2.12 FlushData as boolean

MBS Images Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: FlushData flushes any pending image data for the specified file to be written out; directory-related data are not flushed. Notes: In normal operation this call is never needed | the library automatically does any flushing required.

162.2.13 GetColorMap(byref red as memoryblock, byref green as memoryblock, byref blue as memoryblock) as boolean

162.2.14 GetColorProfile as string

```vbnet
dim f as FolderItem
dim t as TiffPictureMBS
dim s as string
dim p as LCMS2ProfileMBS
f=SpecialFolder.Desktop.Child("horsehead_steinberg_big.tif")
t=f.OpenAsTiffMBS
s=t.GetColorProfile
p = LCMS2ProfileMBS.OpenProfileFromString(s)
MsgBox p.Name
```

Notes: Returns "" on any error.
162.2.15 GetData(Tag as Integer) as string

MBS Images Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the string stored for this tag.

162.2.16 GetField(Tag as Integer, mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the value associated with the given tag id.

**Notes:**
- Please look for Tag values in the tiff specification.
- Returns true on success.
- Please make sure to use the correct setter depending on data type associated with the tag.
- The memoryblock you pass in must be big enough to hold whatever data the library stores there.

162.2.17 GetFieldByte(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the value associated with the given tag id.

**Notes:**
- Please look for Tag values in the tiff specification.
- Returns true on success.
- Please make sure to use the correct setter depending on data type associated with the tag.

162.2.18 GetFieldCount(Tag as Integer, byref count as Integer, mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the value associated with the given tag id.

**Example:**

'TIFF Tag ImageID

'TIFD Image
'Code 32781 (hex 0x800D)
'Name ImageID
'Type ASCII
'Count N
'Default None
'Description

','
162.2. CLASS TIFFPICTUREMBS

'OPI-related.
'
'ImageID is the full pathname of the original, high-resolution image, or any other identifying string that
uniquely identifies the original image.
'
'The high-resolution image is not required to be in TIFF format. It can be in any format that an OPI
Consumer wishes to support.

Dim tiffImport As TiffPictureMBS
Dim xx as string

tiffImport = New TiffPictureMBS
Call tiffImport.Open(SpecialFolder.Desktop.Child("test.tif"))

// the memoryblock is a storage for the data. In this case a pointer to the CString
dim m as MemoryBlock=NewMemoryBlock(4)
dim count as Integer

if tiffImport.GetFieldCount(32781, count, m) then
    MsgBox str(count)
    MsgBox m.Ptr(0).CString(0)
end if

tiffImport.close

Notes:

This is the special version using memoryblock so you can use it for reading values with a count value.

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

162.2.19 GetFieldDefaultedByte(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Reads the value associated with the given tag id.

Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and
it has a default value, then the default value is returned.

162.2.20 GetFieldDefaultedDouble(Tag as Integer, byref value as Double) as boolean

MBS Images Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the value associated with the given tag id. **Notes:**
Please look for Tag values in the tiff specification. Returns true on success. May return a default value. Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

162.2.21 GetFieldDefaultedInteger(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the value associated with the given tag id. **Notes:**
Please look for Tag values in the tiff specification. Returns true on success. May return a default value. Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

162.2.22 GetFieldDefaultedShort(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the value associated with the given tag id. **Notes:**
Please look for Tag values in the tiff specification. Returns true on success. May return a default value. Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.
162.2. CLASS TIFFPICTUREMBS

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

162.2.23 GetFieldDefaultedSingle(Tag as Integer, byref value as Single) as boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the value associated with the given tag id. **Notes:**

Please look for Tag values in the tiff specification.

Returns true on success. May return a default value.

Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

162.2.24 GetFieldDefaultedString(Tag as Integer, byref value as String) as boolean

MBS Images Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the value associated with the given tag id. **Example:**

```vbnet
dim t as TiffPictureMBS
dim f as FolderItem
dim s as string

f=SpecialFolder.Desktop.Child("ChristianSchmitz.tif")
t=f.OpenAsTiffMBS

const TIFFTAGSOFTWARE=305

if t.GetFieldDefaultedString(TIFFTAGSOFTWARE, s) then
    MsgBox "TIFFTAGSOFTWARE"+EndOfLine+s
end if
```

**Notes:**

Please look for Tag values in the tiff specification.

Returns true on success. May return a default value.

Please make sure to use the correct setter depending on data type associated with the tag.

The string is returned with ascii encoding. You may need to define a different encoding if this is not correct.
GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

162.2.25  GetFieldDouble(Tag as Integer, byref value as Double) as boolean

MBS Images Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Reads the value associated with the given tag id.
**Notes:**
Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

162.2.26  GetFieldInteger(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Reads the value associated with the given tag id.
**Notes:**
Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

162.2.27  GetFieldMemory(Tag as Integer, byref ItemCount as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Reads the value associated with the given tag id.
**Notes:**
This is the special version using memoryblock so you can use it for reading values with a count value.
Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

162.2.28  GetFieldShort(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Reads the value associated with the given tag id.
162.2. CLASS TIFFPICTUREMBS

Notes:
Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

162.2.29 GetFieldSingle(Tag as Integer, byref value as Single) as boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Reads the value associated with the given tag id.
Notes:
Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

162.2.30 GetFieldString(Tag as Integer, byref value as string) as boolean

MBS Images Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Reads the value associated with the given tag id.
Example:

dim t as TiffPictureMBS
dim f as FolderItem
dim s as string

f=SpecialFolder.Desktop.Child("test.tif")
t=f.OpenAsTiffMBS

const TIFFTAGSOFTWARE=305

if t.GetFieldString(TIFFTAGSOFTWARE, s) then
MsgBox "TIFFTAGSOFTWARE"+EndOfLine+s
end if

const TIFFTAGHOSTCOMPUTER=316

if t.GetFieldString(TIFFTAGHOSTCOMPUTER, s) then
MsgBox "TIFFTAGHOSTCOMPUTER"+EndOfLine+s
end if

const TIFFTAGIMAGEDESCRIPITION=270

if t.GetFieldString(TIFFTAGIMAGEDESCRIPITION, s) then
MsgBox "TIFFTAGIMAGEDESCRIPITION"+EndOfLine+s
end if

const TIFFTAG_MAKE=271

if t.GetFieldString(TIFFTAG_MAKE, s) then
MsgBox "TIFFTAG_MAKE"+EndOfLine+s
end if

const TIFFTAG_ARTIST=315

if t.GetFieldString(TIFFTAG_ARTIST, s) then
MsgBox "TIFFTAG_ARTIST"+EndOfLine+s
end if

Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.
The string is returned with ascii encoding. You may need to define a different encoding if this is not correct.

162.2.31 GetXMP as string

Example:

dim f as FolderItem
dim t as TiffPictureMBS
dim s as string

f=SpecialFolder.Desktop.Child("test.tif")

t=f.OpenAsTiffMBS

s=tGetXMP

MsgBox left(s,500)

Notes: Returns "" on any error.
162.2. CLASS TIFFPICTUREMBS

162.2.32 ImageCount as Integer

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of images in the TIFF file. **Notes:** Returns 0 on any error.

162.2.33 ImageIndex as Integer

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The current image index. **Notes:** 0 based.

162.2.34 IsLastImage as boolean

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the current picture is the last picture. **Notes:** Useful if you walk through all pictures using NextImage.

162.2.35 MirrorVertical(output as TiffPictureMBS) as boolean

MBS Images Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Mirrors the current picture to another tiff object. **Notes:** You may be able to pass the current tiff file as the output one if you have it open for read and write. Returns true on success and false on failure. Works for any color depth or color mode.

162.2.36 NextImage as boolean

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the next image in the TIFF file. **Notes:** Returns true on success and false on any error. See also:

- 162.2.37 NextImage(HeaderOnly as boolean) as boolean
19484

CHAPTER 162. TIFF

162.2.37  NextImage(HeaderOnly as boolean) as boolean

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the next image.
**Notes:** If HeaderOnly is false the current picture is read into the picture & mask properties.
See also:

• 162.2.36 NextImage as boolean

162.2.38  Open(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a tiff file for readonly access.
**Notes:**
You need to use the ReadRGB method or the Scanline property to get data from this file.
Returns true on success.
See also:

• 162.2.39 Open(file as folderitem, Mode as string) as boolean

162.2.39  Open(file as folderitem, Mode as string) as boolean

MBS Images Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a tiff file for readonly access.
**Example:**
```vba
dim file as folderitem = SpecialFolder.desktop.child("test.tif")
dim st as new MyTiff
// open for appending
if not st.Open(file,"r+") then
    MsgBox "Open Tiff failed!"
else
    // change one setting
    st.Copyright = "Hello World"

    // and save
    call st.SaveImage
    st.Close
end if
```

**Notes:**
162.2. CLASS TIFFPICTUREMBS

Same as the other Open method, but you can pass a mode string to the library.

The open mode parameter can include the following flags in addition to the "r" (Read), "w" (Write), and "a" (Append) flags. Note however that option flags must follow the read-write-append specification.

See also:

- 162.2.38 Open(file as folderitem) as boolean

162.2.40 OpenString(data as string) as boolean

MBS Images Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a tiff image located in a binary string.

**Example:**

```vba
Function TiffStringToPicture(data as string) As picture
  Dim t as MyTiffPictureMBS
  t = new MyTiffPictureMBS
  If t.OpenString(data) Then
    If t.ReadRGB Then
      Return t.Pict
    End If
  End If
  Return nil // failed
End Function
```

**Notes:**

Same as the Open() function, but memory based. You can now use functions like Scanline(), ReadSW() or ReadRGB() to get the picture data.

Returns true on success.

The Warning and Error events may show you reasons why it does not work.

The string you pass is saved in the data property of the class for later use.

You can and should use this function to write yourself a TiffStringToPicture function.

See also:

- 162.2.41 OpenString(data as string, Mode as string) as boolean
162.2.41  **OpenString(data as string, Mode as string) as boolean**

MBS Images Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a tiff image located in a binary string.  
**Notes:** Same as the other OpenString method, but you can pass a mode string to the library.  
See also:

- 162.2.40 OpenString(data as string) as boolean

162.2.42  **RawStripSize(strip as UInt32) as UInt64**

MBS Images Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of bytes in a raw strip (i.e. not decoded).

162.2.43  **ReadBW as boolean**

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the current picture in BW mode.  
**Example:**

```vba
dim f as FolderItem  
dim p as Picture  
dim t as TiffPictureMBS  

f=SpecialFolder.Desktop.Child("Multipage fax.tif")  
t=f.OpenAsTiffMBS(true)  

if t.ReadBW then  
title=str(t.ImageCount)  
p=t.pict  
Title=str(p.Depth)  
Canvas1.Backdrop=p  
end if
```

**Notes:**  
Returns true on success and false on any error.  
Only if the current picture is a 1bit black& white picture, a new picture is created in the pict property and the data is copied inside.  
Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.
162.2. CLASS TIFFPICTUREMBS

This method uses the YieldTicks property and may yield time to other threads.
See also:

- 162.2.44 ReadBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean

162.2.44 ReadBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the current picture in BW mode.

**Example:**

dim f as FolderItem
dim p as Picture
dim t as TiffPictureMBS

f=SpecialFolder.Desktop.Child("Multipage fax.tif")
t=f.OpenAsTiffMBS(true)

if t.ReadBW(0,0,t.width/2,t.height/2) then
title=str(t.ImageCount)
p=t.pict
Title=str(p.Depth)
Canvas1.Backdrop=p
end if

**Notes:**

Returns true on success and false on any error.
Only if the current picture is a 1bit black& white picture, a new picture is created in the pict property and the data is copied inside.

Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.

This method uses the YieldTicks property and may yield time to other threads.
See also:

- 162.2.43 ReadBW as boolean
162.2.45 ReadEncodedStrip(strip as UInt32, byref data as Memoryblock) as UInt32

MBS Images Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Read and decode a strip of data from an open TIFF file.

**Notes:**
Read the specified strip of data and place up to size bytes of decompressed information in the (user supplied) data buffer.

The value of strip is a "raw strip number". That is, the caller must take into account whether or not the data are organized in separate planes (PlanarConfiguration=2). To read a full strip of data the data buffer should typically be at least as large as the number returned by StripSize.

The library attempts to hide bit- and byte-ordering differences between the image and the native machine by converting data to the native machine order. Bit reversal is done if the FillOrder tag is opposite to the native machine bit order. 16- and 32-bit samples are automatically byte-swapped if the file was written with a byte order opposite to the native machine byte order.

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedStrip returns -1 if an error was encountered.

162.2.46 ReadEncodedTile(tile as UInt32, byref data as Memoryblock) as Integer

MBS Images Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Read and decode a tile of data from an open TIFF file.

**Notes:**
Read the specified tile of data and place up to size bytes of decompressed information in the (user supplied) data buffer.

The value of tile is a "raw tile number". That is, the caller must take into account whether or not the data are organized in separate planes (PlanarConfiguration=2). ComputeTile automatically does this when converting an (x,y,z,sample) coordinate quadruple to a tile number. To read a full tile of data the data buffer should be at least as large as the value returned by TileSize.

The library attempts to hide bit- and byte-ordering differences between the image and the native machine by converting data to the native machine order. Bit reversal is done if the FillOrder tag is opposite to the native machine bit order. 16- and 32-bit samples are automatically byte-swapped if the file was written with a byte order opposite to the native machine byte order.

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedTile returns 1 if an error was encountered.
162.2.47 ReadPreviewBW as boolean

MBS Images Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the current picture in BW mode as a preview.

**Notes:**
This method is faster than ReadBW, because it reads only every 8th line and every 8th pixel in each row. So the picture you get is much smaller, but may be enough for a preview.

Returns true on success and false on any error.
Only if the current picture is a 1bit black & white picture, a new picture is created in the pict property and the data is copied inside.

Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.

This method uses the YieldTicks property and may yield time to other threads.

See also:
- 162.2.48 ReadPreviewBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean

162.2.48 ReadPreviewBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the current picture in BW mode as a preview.

**Notes:**
This method is faster than ReadBW, because it reads only every 8th line and every 8th pixel in each row. So the picture you get is much smaller, but may be enough for a preview.

Returns true on success and false on any error.
Only if the current picture is a 1bit black & white picture, a new picture is created in the pict property and the data is copied inside.

Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.

This method uses the YieldTicks property and may yield time to other threads.

See also:
- 162.2.47 ReadPreviewBW as boolean
162.2.49  ReadPreviewRGB(ReduceFactor as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Reads a CMYK or RGB picture and stores it in the pict and name properties.
**Notes:**
This method is faster than ReadRGB, because it reads only every ReduceFactor-th line and every Reduce-
Factor-th pixel in each row. So the picture you get is much smaller, but may be enough for a preview.

Returns true on success.
ReadRGB does converting on the picture data if needed so you can read CMYK, RGB, BW and other image
data using this function.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

162.2.50  ReadRawStrip(strip as UInt32, byref data as Memoryblock) as UInt32

MBS Images Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Return the undecoded contents of a strip of data from an open TIFF file.
**Notes:**
Read the contents of the specified strip into the (user supplied) data buffer. Note that the value of strip is a "raw strip number". That is, the caller must take into account whether or not the data is organized in separate planes (PlanarConfiguration=2). To read a full strip of data the data buffer should typically be at least as large as the number returned by StripSize.

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedStrip returns -1 if an error was encountered.

162.2.51  ReadRawTile(tile as UInt32, byref data as Memoryblock) as Integer

MBS Images Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Return an undecoded tile of data from an open TIFF file.
**Notes:**
Read the contents of the specified tile into the (user supplied) data buffer. Note that the value of tile is a "raw tile number". That is, the caller must take into account whether or not the data is organized in separate planes (PlanarConfiguration=2). ComputeTile automatically does this when converting an (x,y,z,sample) coordinate quadruple to a tile number. To read a full tile of data the data buffer should typically be at least as large as the value returned by TileSize.

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedTile returns 1
162.2. CLASS TIFFPICTUREMBS

if an error was encountered.

162.2.52 ReadRGB as boolean

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Reads a CMYK or RGB picture and stores it in the pict and name properties.
**Notes:**
Returns true on success.
ReadRGB does converting on the picture data if needed so you can read CMYK, RGB, BW and other image data using this function.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.
See also:

- 162.2.53 ReadRGB(byref ErrorMessage as string, Dest as MemoryBlock = nil) as memoryblock 19491

162.2.53 ReadRGB(byref ErrorMessage as string, Dest as MemoryBlock = nil) as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Reads the image into a memoryblock as RGB.
**Notes:**
The Scanline() array gives you the raw uncompressed data. But this method decodes the data into a RGBA image.

The Memoryblock has the size of 4*width*height. Each pixel has one byte for red, one byte for green, one byte for blue and one byte for alpha. If no alpha is in the file, all pixels have the same alpha of 255.

If the decompression fails the function returns nil. (e.g. out of memory).
If the decoding fails, you also get an error message.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

If dest is not nil and big enough, the plugin will use it and return it on success. This can avoid additional memory allocations which can cost CPU time (especially to clear the bytes).
See also:

- 162.2.52 ReadRGB as boolean 19491
162.2.54  ReadRGBMemoryBegin(byref ErrorMessage as string) as boolean

MBS Images Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Starts a RGBA reader for the given TIFF picture.

**Notes:**
Like ReadRGB, but with ReadRGBMemoryBegin, ReadRGBMemoryEnd and ReadRGBMemoryStep you can read the RGBA data in portions.

The Memoryblock returned by ReadRGBMemoryStep has the size of 4\times width\times height. Each pixel has one byte for red, one byte for green, one byte for blue and one byte for alpha. If no alpha is in the file, all pixels have the same alpha of 255.

If the decompression fails the function returns false. (e.g. out of memory).
If the decoding fails, you also get an error message.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

162.2.55  ReadRGBMemoryEnd

MBS Images Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Cleans up the internal data structures created by ReadRGBMemoryBegin.

162.2.56  ReadRGBMemoryStep(x as Integer, y as Integer, width as Integer, height as Integer, Dest as MemoryBlock = nil) as memoryblock

MBS Images Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the image into a memoryblock as RGBA.

**Example:**

```vba
dim t as new TiffPictureMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("test.tif")
dim e as string
if t.Open(f) then
    if t.ReadRGBMemoryBegin(e) then
        dim w as Integer = t.Width
        dim h as Integer = t.Height
        dim p as new PictureMBS(w, h, PictureMBS.ImageFormatRGB)
        for y as Integer = 0 to h-1 step 100
```
162.2. CLASS TIFFPICTUREMBS

```vbnet
dim m as MemoryBlock = t.ReadRGBMemoryStep(0, y, w, 100)
for i as Integer = 0 to 99
p.RowInFormat(i+y, PictureMBS.ImageFormatRGBA)=m
next
next
t.ReadRGBMemoryEnd
Backdrop = p.copypicture(0,0,1000,1000) // display a portion
end if
end if
```

Notes:
As you see in the example, you can use this method to easily read huge TIFF files into a PictureMBS object.

If the decompression fails the function returns nil. (e.g. out of memory).
Please make sure that the range in x and y, width and height is right.

If dest is not nil and big enough, the plugin will use it and return it on success. This can avoid additional memory allocations which can cost CPU time (especially to clear the bytes).

162.2.57 ReadWithLUT(ColorLookupTable() as color) as boolean

MBS Images Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Reads the current picture with a Color Lookup Table.
**Notes:**
Returns true on success and false on any error.
Works with 8, 16 and 32 bits per sample. And with 1 or 3 samples per pixels (Gray or RGB). The lookup table has 256 entries for 8 bit and 65536 entries for 16/32 bit.
This method uses the YieldTicks property and may yield time to other threads.
See also:
- 162.2.58 ReadWithLUT(ColorLookupTable() as color, left as Integer, top as Integer, width as Integer, height as Integer) as boolean
162.2.58 **ReadWithLUT**(ColorLookupTable() as color, left as Integer, top as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the current picture with a Color Lookup Table. **Notes:**

Returns true on success and false on any error.

Works with 8, 16 and 32 bits per sample. And with 1 or 3 samples per pixel (Gray or RGB). The lookup table has 256 entries for 8 bit and 65536 entries for 16/32 bit.

This method uses the YieldTicks property and may yield time to other threads.

See also:

- 162.2.57 ReadWithLUT(ColorLookupTable() as color) as boolean

162.2.59 **RewriteDirectory** as boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes existing picture and header information to file replacing the old data. **Notes:**

Returns true on success and false on any error.

As the data is added to the file and just the reference to the old data is deleted, the filesize will grow.

Calls TIFFReWriteDirectory internally. Same as SaveImage.

162.2.60 **SaveImage** as boolean

MBS Images Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes existing picture and header information to file replacing the old data. **Notes:**

Returns true on success and false on any error.

As the data is added to the file and just the reference to the old data is deleted, the filesize will grow.

Calls TIFFReWriteDirectory internally. Same as RewriteDirectory.

162.2.61 **Scanline**(mem as Ptr, index as Integer, sample as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads an image scanline in a memoryblock.
Notes:
Returns false on any error. The Memoryblock must be big enough. The BytesPerRow functions returns the number of bytes needed. The first scanline has the index of 0. This is the fastest way to read scanlines. You provide the memoryblock and you can reuse it for all calls to this method for one tiff. See also:

- 162.2.127 Scanline(index as Integer, sample as Integer = 0) as memoryblock

162.2.62 SetColorMap(red as memoryblock, green as memoryblock, blue as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Sets the color map for a paletten image. Notes:
The memoryblock must be 2^bitspersample * 2 bytes big. Returns true on success and false on failure.

162.2.63 SetColorProfile(ProfileData as String) as boolean

MBS Images Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Sets the color profile for this tiff file. Notes: Returns true on success and false on failure.

162.2.64 SetData(Tag as Integer, data as string) as boolean

MBS Images Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Writes the string for this tag.

162.2.65 SetFieldByte(Tag as Integer, value as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Sets the tiff data field with the given tag to the given value. Notes:
Please look for Tag values in the tiff specification. Returns true on success. Please make sure to use the correct setter depending on data type associated with the tag.
162.2.66 SetFieldDouble(Tag as Integer, value as Double) as boolean

MBS Images Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Sets the tiff data field with the given tag to the given value.
Notes:
Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

162.2.67 SetFieldInteger(Tag as Integer, value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Sets the tiff data field with the given tag to the given value.
Example:
```vba
dim t as TiffPictureMBS
dim f as FolderItem

const TIFFTAG_IMAGELENGTH=257 // integer
const TIFFTAG_IMAGEWIDTH=256 // integer

f=GetTemporaryFolderItem
t=new TiffPictureMBS
if t.Create(f) then
    if t.SetFieldInteger(TIFFTAG_IMAGELENGTH,100) then
        if t.Height=100 then
            MsgBox "ok"
        end if
    end if
end if
```
Notes:
Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.
162.2.68  SetFieldMemory(Tag as Integer, ItemCount as Integer, data as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the tiff data field with the given tag to the given value.

**Notes:**
This is the special version of the setter which passes a memoryblock and a count value so you can set an array using this method.

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

162.2.69  SetFieldShort(Tag as Integer, value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the tiff data field with the given tag to the given value.

**Notes:**
Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

162.2.70  SetFieldSingle(Tag as Integer, value as Single) as boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the tiff data field with the given tag to the given value.

**Notes:**
Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

162.2.71  SetFieldString(Tag as Integer, value as string) as boolean

MBS Images Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets one of the fields to the value of the string.

**Example:**

```vbnet
dim m,p as Picture
dim f as FolderItem
```
dim t as TiffPictureMBS
dim g as Graphics
dim s as string

// make pictures
p=NewPicture(100,100,32)
m=NewPicture(100,100,32)

p.Graphics.ForeColor=Rgb(0,255,0) // fill green
p.Graphics.FillRect 0,0,100,100

p.Graphics.ForeColor=Rgb(255,0,0) // fill red
p.Graphics.FillOval 0,0,100,100

m.Graphics.ForeColor=Rgb(0,0,0) // fill black (invisible so green not seen)
m.Graphics.FillRect 0,0,100,100

m.Graphics.ForeColor=Rgb(255,255,255) // fill white (Visible)
m.Graphics.FillOval 0,0,100,100

// save
f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS
t.Pict=p
t.Mask=m

if t.Create(f) then
if t.WriteRGB then

const TIFFTAG_SOFTWARE=305
s="Example Software"
call t.SetFieldString TIFFTAG_SOFTWARE,s

const TIFFTAG_HOSTCOMPUTER=316
s="Example HostComputer"
call t.SetFieldString TIFFTAG_HOSTCOMPUTER,s

const TIFFTAG_IMAGEDESCRIPTION=270
s="Example ImageDescription"
call t.SetFieldString TIFFTAG_IMAGEDESCRIPTION,s

const TIFFTAG_MAKE=271
s="Example Make"
162.2. CLASS TIFFPICTUREMBS

call t.SetFieldString TIFFTAG_MAKE,s

const TIFFTAG_ARTIST=315

s="Example Artist"
call t.SetFieldString TIFFTAG_ARTIST,s

t.Close
MsgBox "Ok"
f.Launch
end if
end if

Notes:
Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.
You have to pass in the string with the correct encoding.

162.2.72 SetImageIndex(index as Integer) as boolean

Example:

dim t as TiffPictureMBS // your tiff picture

if t.SetImageIndex(1) then
Canvas1.Backdrop=t.pict
end if

Notes:
Reads automatically a RGB picture for you, so the pict property is filled on success.
Returns true on success.
Index is zero based.
See also:

• 162.2.73 SetImageIndex(index as Integer, HeaderOnly as boolean) as boolean
162.2.73 SetImageIndex(index as Integer, HeaderOnly as boolean) as boolean

Notes:
If HeaderOnly is false the current picture is read into the pict & mask properties.
Returns true on success.
See also:
- 162.2.72 SetImageIndex(index as Integer) as boolean

162.2.74 SetXMP(ProfileData as String) as boolean

Notes: Returns true on success and false on failure.

162.2.75 VStripSize(nrows as UInt32) as UInt64

162.2.76 VTileSize(nrows as UInt32) as UInt64

162.2.77 WriteBW as boolean

Example:
```
dim p as Picture
dim f as FolderItem
dim t as TiffPictureMBS

p=NewPicture(100,100,32)
p.Graphics.ForeColor=rgb(0,0,0)
p.Graphics.FillOval 0,0,100,100
```
f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS

if t.Create(f) then
  t.Pict=p
if t.WriteBW then
  MsgBox "ok"
  end if
  end if

Backdrop=p

Notes:

Uses the pictures in the pict property to write a picture.
Currently masks are not supported.

The following settings are made before the image data is written:
PlanarConfig = PLANARCONFIG_CONTIG
Photometric = PHOTOMETRIC_MINISBLACK
BitsPerSample = 1
SamplesPerPixel = 1
FillOrder = FILLODER_MSB2LSB
VerticalResolution = 72
HorizontalResolution = 72
Orientation = ORIENTATION_TOPLEFT
ResolutionUnit = RESUNIT_INCH
Compression = COMPRESSION_NONE

You may change settings before or later. For example if you set Compression before it should be used for
writing image data to the file.
Returns true on success.

This method uses the YieldTicks property and may yield time to other threads.

162.2.78  WriteEncodedStrip(strip as UInt32, data as Memoryblock, size as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Compress and write a strip of data to an open TIFF file.

Notes:
Compress size bytes of raw data from buf and write the result to the specified strip; replacing any previously written data. Note that the value of strip is a raw strip number.” That is, the caller must take into account whether or not the data are organized in separate planes (PlanarConfiguration=2).

The library writes encoded data using the native machine byte order. Correctly implemented TIFF readers are expected to do any necessary byte-swapping to correctly process image data with BitsPerSample greater than 8.

The strip number must be valid according to the current settings of the ImageLength and RowsPerStrip tags. An image may be dynamically grown by increasing the value of ImageLength prior to each call to WriteEncodedStrip.

Returns 1 is returned if an error was encountered. Otherwise, the value of size is returned. If size is zero, we use the size of memoryblock.

162.2.79 WriteEncodedTile(tile as UInt32, data as Memoryblock, size as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compress and write a tile of data to an open TIFF file. **Notes:** Compress size bytes of raw data from buf and append the result to the end of the specified tile. Note that the value of tile is a "raw tile number". That is, the caller must take into account whether or not the data are organized in separate planes (PlanarConfiguration=2). ComputeTile automatically does this when converting an (x,y,z,sample) coordinate quadruple to a tile number.

The library writes encoded data using the native machine byte order. Correctly implemented TIFF readers are expected to do any necessary byte-swapping to correctly process image data with BitsPerSample greater than 8.

Returns 1 is returned if an error was encountered. Otherwise, the value of size is returned. If size is zero, we use the size of memoryblock.

162.2.80 WriteGray as boolean

MBS Images Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Write a grayscale image with 256 colors. **Example:**
dim t as TiffPictureMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS
if t.Create(f) then
    t.Pict=LogoMBS(500)
call t.WriteGray
t.Close
end if

Notes:
Uses the pictures in the pict property to write a picture.
Currently masks are not supported.

The following settings are made before the image data is written:
PlanarConfig = PLANARCONFIG_CONTIG
Photometric = PHOTOMETRIC_MINISBLACK
BitsPerSample = 8
SamplesPerPixel = 1
FillOrder = FILLORDER_MSB2LSB
VerticalResolution = 72
HorizontalResolution = 72
Orientation = ORIENTATION_TOPLEFT
ResolutionUnit = RESUNIT_INCH
Compression = COMPRESSION_NONE

You may change settings before or later. For example if you set Compression before it should be used for
writing image data to the file.
Returns true on success.

This method uses the YieldTicks property and may yield time to other threads.
Version 13.1 of our plugins writes a 16 bit Gray image if you set BitsPerSample to 16 before calling this
method.

162.2.81 WriteRawStrip(strip as UInt32, data as Memoryblock, size as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Write a strip of raw data to an open TIFF file.
Notes:
Append size bytes of raw data to the specified strip.

The strip number must be valid according to the current settings of the ImageLength and RowsPerStrip tags. An image may be dynamically grown by increasing the value of ImageLength prior to each call to WriteRawStrip.

Returns -1 is returned if an error occurred. Otherwise, the value of size is returned.

If size is zero, we use the size of memoryblock.

**162.2.82 WriteRawTile(tile as UInt32, data as Memoryblock, size as Integer = 0) as Integer**

MBS Images Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Write a tile of raw data to an open TIFF file  
**Notes:**  
Append size bytes of raw data to the specified tile.  
Returns 1 is returned if an error occurred. Otherwise, the value of size is returned.  
If size is zero, we use the size of memoryblock.

**162.2.83 WriteRGB as boolean**

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes a RGB image.  
**Example:**

```vbnet
dim m,p as Picture  
dim f as FolderItem  
dim t as TiffPictureMBS  
dim g as Graphics  

p=NewPicture(100,100,32)  
m=NewPicture(100,100,32)  

p.Graphics.ForeColor=Rgb(0,255,0) // fill green  
p.Graphics.Fillrect 0,0,100,100  

p.Graphics.ForeColor=Rgb(255,0,0) // fill red  
p.Graphics.FillOval 0,0,100,100  

m.Graphics.ForeColor=Rgb(0,0,0) // fill black (invisible so green not seen)  
m.Graphics.Fillrect 0,0,100,100
```
m.Graphics.ForeColor=Rbg(255,255,255) // fill white (Visible)
m.Graphics.FillOval 0,0,100,100

f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS
t.Pict=p
t.Mask=m

if t.Create(f) then
if t.WriteRGB then
  t.Close
  MsgBox "Ok"
  f.Launch
end if
end if

Notes:

Uses the pictures in the mask and pict properties to write a picture. If mask is set, the picture is saved with an alpha channel.

The following settings are made before the image data is written:
PlanarConfig = PLANARCONFIG_CONTIG
Photometric = PHOTOMETRIC_RGB
BitsPerSample = 8
SamplesPerPixel = 3
FillOrder = FILLORDER_MSB2LSB
VerticalResolution = 72
HorizontalResolution = 72
Orientation = ORIENTATION_TOPLEFT
ResolutionUnit = RESUNIT_INCH
Compression = COMPRESSION_NONE

You may change settings before or later. For example if you set Compression before it should be used for writing image data to the file.
Returns true on success.

This method uses the YieldTicks property and may yield time to other threads.
162.2.84  Properties

162.2.85  BitsPerSample as Integer

MBS Images Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The count of bits for each pixel component.
**Notes:**
Should normally by 8 for RGB images.
(Read and Write property)

162.2.86  BytesPerRow as Int64

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The number of bytes needed for each row in a scan line.
**Notes:**
0 on any error.
(Read only property)

162.2.87  Compression as Integer

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The compression used.
**Notes:**
some constants:
The data for this property is stored in the Tiff file.
(Read and Write property)

162.2.88  Copyright as String

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The copyright notice of this image.
**Example:**
```vba
dim file as folderitem = SpecialFolder.desktop.child("test.tif")
dim st as new MyTiff

// open for appending
if not st.Open(file,"r+") then
```

CHAPTER 162. TIFF
MsgBox "Open Tiff failed!"
else
    // change one setting
    st.Copyright = "Hello World"
    // and save
call st.SaveImage
st.Close
end if

Notes:
The data for this property is stored in the Tiff file.
(Read and Write property)

162.2.89  DateTime as String

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Date and time of the TIFF file.
Notes:
Check some TIFF files for the format used.

The data for this property is stored in the Tiff file.
(Read and Write property)

162.2.90  DocumentName as String

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The name of the document.
Notes:
The data for this property is stored in the Tiff file.
(Read and Write property)

162.2.91  ExtraSamples as MemoryBlock

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The settings for the extra samples.
Notes:
A memory block filled with an array of shorts (16bit integers).

Constants:

The data for this property is stored in the Tiff file.
(Read and Write property)

### 162.2.92 FillOrder as Integer

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The fill order of the bits in a byte.

**Notes:**

Constants:

- (MSB = Most significant bit, LSB = Least significant bit)

The data for this property is stored in the Tiff file.
(Read and Write property)

### 162.2.93 height as Integer

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The height of the picture.

**Notes:** (Read and Write property)

### 162.2.94 HorizontalPosition as Single

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The x Offset of this image in the drawing area.

**Notes:**

The data for this property is stored in the Tiff file.
(Read and Write property)
162.2.95 **HorizontalResolution as Single**

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The horizontal resolution used.  
**Notes:**  
Value depends on ResolutionUnit value.

The data for this property is stored in the Tiff file.  
(Read and Write property)

162.2.96 **HostComputer as String**

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Name of the machine where the tiff file was created.  
**Notes:**  
The data for this property is stored in the Tiff file.  
(Read and Write property)

162.2.97 **ImageDescription as String**

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Information about the image.  
**Notes:**  
The data for this property is stored in the Tiff file.  
(Read and Write property)

162.2.98 **InputBuffer as String**

MBS Images Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The string passed for OpenString.  
**Notes:**  
Used for the read requests from the Tiff library.  
(Read only property)
162.2.99 IsTiled as Boolean

MBS Images Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a non-zero value if the image data has a tiled organization.

**Notes:**
Zero is returned if the image data is organized in strips.
(Read only property)

162.2.100 JPEGQuality as Integer

MBS Images Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The JPEG quality.

**Example:**

```plaintext
dim logo as Picture = LogoMBS(500)
dim pic as new PictureMBS(logo)

// save tiff with jpeg compression
dim f as FolderItem = SpecialFolder.Desktop.Child("test.tif")
dim t as TiffPictureMBS

if pic <> nil then
t = new TiffPictureMBS

if t.Create(F) then
t.Height = pic.Height
t.Width = pic.Width

t.RowsPerStrip = 1
t.PlanarConfig = t.kPlanarConfigContig
t.Photometric = t.kPhotometricRGB
t.BitsPerSample = 8
t.SamplesPerPixel = 3
t.FillOrder = t.kFillOrderMSB2LSB
t.Orientation = t.kOrientationTopLeft
t.ResolutionUnit = t.kResUnitInch
t.VerticalResolution = 72.0
t.HorizontalResolution = 72.0
t.Compression = t.kCompressionJPEG
t.RowsPerStrip = 32
t.JPEGQuality = 75

// copy lines
for i as Integer = 0 to t.Height - 1
```
162.2. CLASS TIFFPICTUREMBS

```
t.Scanline(i) = pic.RowInFormat(i, PictureMBS.ImageFormatRGB)
next

t.Close
end if
end if
```

Notes:
Default is 75.
(Read and Write property)

162.2.101 Make as String

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Scanner manufacturer name.
Notes:
The data for this property is stored in the Tiff file.
(Read and Write property)

162.2.102 mask as picture

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mask of the picture.
Notes:
May be nil.
(Read and Write property)

162.2.103 Model as String

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Scanner model name/number.
Notes:
The data for this property is stored in the Tiff file.
(Read and Write property)
When creating a new file force information be written with Little-Endian byte order (but see below). By default the library will create new files using the native CPU byte order.

When creating a new file force information be written with Big-Endian byte order (but see below). By default the library will create new files using the native CPU byte order.

Force image data that is read or written to be treated with bits filled from Least Significant Bit (LSB) to Most Significant Bit (MSB). Note that this is the opposite to the way the library has worked from its inception.

Force image data that is read or written to be treated with bits filled from Most Significant Bit (MSB) to Least Significant Bit (LSB); this is the default.

Force image data that is read or written to be treated with bits filled in the same order as the native CPU.

Enable the use of memory-mapped files for images opened read-only. If the underlying system does not support memory-mapped files or if the specific image being opened cannot be memory-mapped then the library will fallback to using the normal system interface for reading information. By default the library will attempt to use memory-mapped files.

Disable the use of memory-mapped files.

Enable the use of "strip chopping" when reading images that are comprised of a single strip or tile of uncompressed data. Strip chopping is a mechanism by which the library will automatically convert the single-strip image to multiple strips, each of which has about 8 Kilobytes of data. This facility can be useful in reducing the amount of memory used to read an image because the library normally reads each strip in its entirety. Strip chopping does however alter the apparent contents of the image because when an image is divided into multiple strips it looks as though the underlying file contains multiple separate strips. Finally, note that default handling of strip chopping is a compile-time configuration parameter. The default behaviour, for backwards compatibility, is to enable strip chopping.

Disable the use of strip chopping when reading images.

162.2.104  NumberOfStrips as UInt32

MBS Images Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of strips in the image.  
**Notes:** (Read only property)

162.2.105  NumberOfTiles as UInt32

MBS Images Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of tiles in the image.  
**Notes:** (Read only property)

162.2.106  Orientation as Integer

MBS Images Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The orientation of this image.  
**Example:**

// creates a tif file with a horizontal flipped image  
// red rectangle is on the left in the image data, but with orientation tag it should be displayed on the right side.  
// Mac OS X Preview.app shows it correctly.

```vbs
dim p as Picture
dim t as TiffPictureMBS
dim f as FolderItem

cnst ORIENTATION_TOPLEFT = 1  /* row 0 top, col 0 lhs */
cnst ORIENTATION_TOPRIGHT = 2  /* row 0 top, col 0 rhs */
cnst ORIENTATION_BOTRIGHT = 3  /* row 0 bottom, col 0 rhs */
cnst ORIENTATION_BOTLEFT = 4  /* row 0 bottom, col 0 lhs */
cnst ORIENTATION_LEFTTOP = 5  /* row 0 lhs, col 0 top */
cnst ORIENTATION_RIGHTTOP = 6  /* row 0 rhs, col 0 top */
cnst ORIENTATION_RIGHTBOT = 7  /* row 0 rhs, col 0 bottom */
cnst ORIENTATION_LEFTBOT = 8  /* row 0 lhs, col 0 bottom */
p=NewPicture(150,100,32)
p.Graphics.ForeColor=rgb(255,0,0)
p.Graphics.FillRect 0,0,10,10
t=new TiffPictureMBS
f=SpecialFolder.Desktop.Child("test.tif")
```
if t.Create(f) then
  t.Pict=p
  t.Orientation=ORIENTATION_TOPRIGHT
if t.WriteRGB then
  end if
  t.Orientation=ORIENTATION_TOPRIGHT
end if

Notes:

Orientation:

The orientation of the image with respect to the rows and columns.
Tag = 274 (112.H)
Type = SHORT
N = 1
1 = The 0th row represents the visual top of the image, and the 0th column represents the visual left-hand side.
2 = The 0th row represents the visual top of the image, and the 0th column represents the visual right-hand side.
3 = The 0th row represents the visual bottom of the image, and the 0th column represents the visual right-hand side.
4 = The 0th row represents the visual bottom of the image, and the 0th column represents the visual left-hand side.
5 = The 0th row represents the visual left-hand side of the image, and the 0th column represents the visual top.
6 = The 0th row represents the visual right-hand side of the image, and the 0th column represents the visual top.
7 = The 0th row represents the visual right-hand side of the image, and the 0th column represents the visual bottom.
8 = The 0th row represents the visual left-hand side of the image, and the 0th column represents the visual bottom.

Default is 1.
Support for orientations other than 1 is not a Baseline TIFF requirement.
(This text was sent in by David Austin)
(Read and Write property)
162.2.107 OutputBuffer as String

MBS Images Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The current output data from the CreateString function. **Notes:** Between CreateString and Close the plugin will record all the output data and you can get a copy using this property. (Read only property)

162.2.108 PageName as String

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of the current page. **Notes:** The data for this property is stored in the Tiff file. (Read and Write property)

162.2.109 Photometric as Integer

MBS Images Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A property of the TIFF image. **Example:**

```vbnet
// read and write a BW fax tiff with compression

dim d as new OpenDialog()
dim f as FolderItem = GetFolderItem(“myfax.tiff”)if f = nil then return end if

dim tiff as new TiffPictureMBS()if not tiff.Open(f) then MsgBox(“Error while opening.”) return end if

if not tiff.ReadBW() then MsgBox(“Error reading.”) end if

dim tiff2 as TiffPictureMBS = new TiffPictureMBS()```
162.2. CLASS TIFFPICTUREMBS

`dim f2 as FolderItem = SpecialFolder.Desktop.Child("Copy.tiff")
if not tiff2.Create(f2) then
MsgBox("Error creating file.")
end if

const COMPRESSION_CCITTFFAX3=3
const WhiteIsZero=0
const BlackIsZero=1

tiff2.Pict = tiff.pict
tiff2.Photometric=WhiteIsZero
tiff2.Compression=COMPRESSION_CCITTFFAX3
if not tiff2.WriteBW() then
MsgBox("Error writing.") // Error
end if

tiff2.Close()

Notes:

PhotometricInterpretation:
The color space of the image data.
Tag = 262 (106.H)
Type = SHORT
N = 1

0 = WhiteIsZero. For bilevel and grayscale images: 0 is imaged as white. 2**BitsPerSample-1 is imaged as black. This is the normal value for Compression=2.

1 = BlackIsZero. For bilevel and grayscale images: 0 is imaged as black. 2**BitsPerSample-1 is imaged as white. If this value is specified for Compression=2, the image should display and print reversed.

2 = RGB. In the RGB model, a color is described as a combination of the three primary colors of light (red, green, and blue) in particular concentrations. For each of the three components, 0 represents minimum intensity, and 2**BitsPerSample - 1 represents maximum intensity. Thus an RGB value of (0,0,0) represents black, and (255,255,255) represents white, assuming 8-bit components. For PlanarConfiguration = 1, the components are stored in the indicated order: first Red, then Green, then Blue. For PlanarConfiguration = 2, the StripOffsets for the component planes are stored in the indicated order: first the Red component plane StripOffsets, then the Green plane StripOffsets, then the Blue plane StripOffsets.

3= Palette color. In this model, a color is described with a single component. The value of the component is used as an index into the red, green and blue curves in the ColorMap field to retrieve an RGB triplet that defines the color. When PhotometricInterpretation=3 is used, ColorMap must be present and SamplesPerPixel must be 1.
4 = Transparency Mask. This means that the image is used to define an irregularly shaped region of another image in the same TIFF file. SamplesPerPixel and BitsPerSample must be 1. PackBits compression is recommended. The 1-bits define the interior of the region; the 0-bits define the exterior of the region. A reader application can use the mask to determine which parts of the image to display. Main image pixels that correspond to 1-bits in the transparency mask are imaged to the screen or printer, but main image pixels that correspond to 0-bits in the mask are not displayed or printed. The image mask is typically at a higher resolution than the main image, if the main image is grayscale or color so that the edges can be sharp.

There is no default for PhotometricInterpretation, and it is required. Do not rely on applications defaulting to what you want.

(This text was sent in by David Austin)

For more details see:
(Read and Write property)

162.2.110  pict as picture

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The picture data of the picture.
**Notes:** (Read and Write property)

162.2.111  PlanarConfig as Integer

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The storage organization used.
**Notes:**
Value is 1 for a single image plane and 2 for separated planes.

The data for this property is stored in the Tiff file.
(Read and Write property)

162.2.112  RasterScanlineSize as UInt64

**Notes:**
162.2. CLASS TIFFPICTUREMBS

Returns the size in bytes of a complete decoded and packed raster scanline. Note that this value may be different from the value returned by ScanlineSize if data is stored as separate planes.
(Read only property)

162.2.113 ResolutionUnit as Integer

Notes:
constants:

RESUNIT_NONE     1  no meaningful units
RESUNIT_INCH     2  english
RESUNIT_CENTIMETER 3  metric

The data for this property is stored in the Tiff file.
(Read and Write property)

162.2.114 RowsPerStrip as Integer

Notes:
Should be same as the height for our uses. (with one strip)
(Read and Write property)

162.2.115 SampleFormat as Integer

Notes:
Value is 1 for unsigned integer, 2 for signed integer, 3 for IEEE floating point, 4 for untyped data (e.g. JPEG compressed), 5 for complex signed int and 6 for complex IEEE floating point.
(Read and Write property)
162.2.116  **SamplesPerPixel as Integer**

MBS Images Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** The count of components used for each pixel.

**Notes:**

SamplesPerPixel = 1 = Grayscale, 3 = RGB, 4 = CMYK, ...
Photometric = 0 or 1 = Grayscale depending on white point, 2 = RGB, 5 = CMYK, ...

For other formats see:
(Read and Write property)

162.2.117  **Software as String**

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** The software name used to make this image.

**Notes:**

The data for this property is stored in the Tiff file.
(Read and Write property)

162.2.118  **StripSize as UInt64**

MBS Images Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** Returns the equivalent size for a strip of data as it would be returned in a call to ReadEncodedStrip or as it would be expected in a call to WriteEncodedStrip.

**Notes:** (Read only property)

162.2.119  **TileRowSize as UInt64**

MBS Images Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** Returns the number of bytes of a row of data in a tile.

**Notes:** (Read only property)

162.2.120  **TileSize as UInt64**

MBS Images Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** Returns the equivalent size for a tile of data as it would be returned in a call to ReadTile or as it would be expected in a call to WriteTile.
162.2. CLASS TIFFPICTUREMBS

Notes: (Read only property)

162.2.121 Version as Integer

MBS Images Plugin, Plugin Version: 5.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The version of the Tiff library used. **Notes:** Updated to 3.7.1 in plugin version 5.0. (Read only property)

162.2.122 VersionString as String

MBS Images Plugin, Plugin Version: 5.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The version of the Tiff library used. **Example:**

```vbs
dim z as new TiffPictureMBS

MsgBox z.VersionString

// shows for example:
// LIBTIFF, Version 3.9.4
// Copyright (c) 1988-1996 Sam Leffler
// Copyright (c) 1991-1996 Silicon Graphics, Inc.
```

Notes: (Read only property)

162.2.123 VerticalPosition as Single

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The y Offset of this image in the drawing area. **Notes:** The data for this property is stored in the Tiff file. (Read and Write property)
162.2.124 VerticalResolution as Single

MBS Images Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The vertical resolution used.

**Notes:**
Value depends on ResolutionUnit value.

The data for this property is stored in the Tiff file.
(Read and Write property)

162.2.125 width as Integer

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The width of the picture.

**Notes:** (Read and Write property)

162.2.126 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** How much time is given back to REALbasic for other ticks.

**Example:**

```basic
dim t as new TiffPictureMBS
t.YieldTicks=6 // only use 1/10th of a second
```

**Notes:**
If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let REALbasic redraw a progressbar.
(Read and Write property)

162.2.127 Scanline(index as Integer, sample as Integer = 0) as memoryblock

**Notes:**
162.2. CLASS TIFFPICTUREMBS

Returns nil on any error.
If you set the value, make sure the Memoryblock is big enough. The BytesPerRow functions returns the number of bytes needed.

The data for this property is stored in the Tiff file.
The first scanline has the index of 0.
(Read and Write computed property)
See also:

- 162.2.61 Scanline(mem as Ptr, index as Integer, sample as Integer = 0) as boolean

162.2.128 Scanlines(index as Integer, count as Integer, sample as Integer = 0, lineStepScanlines as Integer = 1, lineStepReturn as Integer = 1) as memoryblock

Notes:
Returns nil on any error.
If you set the value, make sure the Memoryblock is big enough. The BytesPerRow functions returns the number of bytes needed.

The data for this property is stored in the Tiff file.
The first scanline has the index of 0. Count is the number of scanlines you want to read/write.

If lineStepScanlines is >1, we skip scan lines so we read less data.
If lineStepReturn is >1, we return only every nth row.

If rows can be read with skipping, you should try lineStepScanlines = 2 or more for skipping lines.
If that doesn’t work due to tiled data, you can use lineStepReturn = 2 or more.
This skipping is to quicker get preview pictures.
(Read and Write computed property)

162.2.129 Events

162.2.130 Error(libModule as string, message as string)

MBS Images Plugin, Plugin Version: 4.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: An event called whenever an error is to be reported.
162.2.131  Progress(line as Integer, total as Integer)

**Notes:** Used in CombineBitCMYKtoCMYK, CombineTiffCMYKtoRGB and CombineTiffCMYKtoCMYK methods.

162.2.132  Warning(libModule as string, message as string)

MBS Images Plugin, Plugin Version: 4.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An event called whenever a warning is to be reported.

162.2.133  Constants

162.2.134  kCompressionAdobeDeflate = 8

MBS Images Plugin, Plugin Version: 13.0. **Function:** One of the compression constants.  
**Notes:** Deflate compression, as recognized by Adobe

162.2.135  kCompressionCCITTFAX3 = 3

MBS Images Plugin, Plugin Version: 13.0. **Function:** One of the compression constants.  
**Notes:** CCITT Group 3 fax encoding

**Notes:** Horizontal differencing

162.2.187  \( k_{\text{PredictorNone}} = 1 \)

MBS Images Plugin, Plugin Version: 15.1. **Function:** One of the possible predictor settings.
**Notes:** no prediction scheme used
162.2. CLASS TIFFPICTUREMBS

162.2.188  kResUnitCentimeter = 3

MBS Images Plugin, Plugin Version: 13.0. **Function:** One of the Resolution Unit constants.  
**Notes:** Metric

162.2.189  kResUnitInch = 2

MBS Images Plugin, Plugin Version: 13.0. **Function:** One of the Resolution Unit constants.  
**Notes:** English

162.2.190  kResUnitNone = 1

MBS Images Plugin, Plugin Version: 13.0. **Function:** One of the Resolution Unit constants.  
**Notes:** no meaningful units
Chapter 163

TimeZone

163.1 class TimeZoneMBS

163.1.1 class TimeZoneMBS

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Allows you to access information about the current time zone.

**Example:**

```vbnet
dim t as new TimeZoneMBS
MsgBox str(t.GmtDeltaTotalseconds)
```

**Notes:** on Mac OS Cocoa applications, better use newer NSTimezoneMBS class.

163.1.2 Properties

163.1.3 DaylightName as String

**Example:**

```vbnet
dim t as new TimeZoneMBS
MsgBox t.DaylightName
```

**Notes:**

19535
For example, "PDT" could indicate Pacific Daylight Time. This string can be empty. e.g. "Mitteleuropische Sommerzeit"
On Mac, please use NSTimeZoneMBS class.
(Read only property)

163.1.4 GmtDeltaHours as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the GMT offset in hours.
**Example:**
```vbnet
dim t as TimeZoneMBS

t=new TimeZoneMBS

msgbox format(t.GmtDeltaHours,"+00")+ ":" +format(t.GmtDeltaminutes,"00")+ ":" +format(t.GmtDeltaseconds,"00")
```

**Notes:**
On Windows this information is not available.
(Read only property)

163.1.5 GmtDeltaMinutes as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the GMT offset in minutes.
**Example:**
```vbnet
dim t as TimeZoneMBS

t=new TimeZoneMBS

msgbox format(t.GmtDeltaHours,"+00")+ ":" +format(t.GmtDeltaminutes,"00")+ ":" +format(t.GmtDeltaseconds,"00")
```

**Notes:**
On Windows this information is not available.
(Read only property)
163.1. **CLASS TIMEZONEMBS**

### 163.1.6 GmtDeltaSeconds as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the GMT offset in seconds.

**Example:**

```vbnet
dim t as TimeZoneMBS
t=new TimeZoneMBS

msgbox format(t.GmtDeltaHours,"+00")+":"+format(t.GmtDeltaMinutes,"00")+":"+format(t.GmtDeltaSeconds,"00")
```

**Notes:** (Read only property)

### 163.1.7 GmtDeltaTotalSeconds as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the GMT offset in seconds.

**Example:**

```vbnet
dim t as new TimeZoneMBS

MsgBox str(t.GmtDeltaTotalSeconds)
```

**Notes:** (Read only property)

### 163.1.8 Latitude as Double

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the latitude of the current position on earth.

**Example:**

```vbnet
dim longdeg,longmin as Integer
dim t as TimeZoneMBS
t=new TimeZoneMBS

longdeg=floor(t.longitude*90)
longmin=floor((t.longitude*90-longdeg)*60)
statictext1.text=format(longdeg,"0")+""
```
163.1.9 Longitude as Double

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the longitude of the current position on earth.

**Example:**

```vbscript
dim latdeg, latmin as Integer
dim t as TimeZoneMBS
t = new TimeZoneMBS
latdeg = floor(t.latitude * 90)
latmin = floor((t.latitude * 90 - latdeg) * 60)
```

**Notes:**

On Windows this information is not available.
(Read only property)

163.1.10 StandardName as String

**Example:**

```vbscript
dim t as new TimeZoneMBS
MsgBox t.StandardName
```

**Notes:**

For example, "EST" could indicate Eastern Standard Time. This string can be empty.
163.1. CLASS TIMEZONEMBS

e.g. "Mitteleuropische Zeit"
On Mac, please use NSTimeZoneMBS class.
(Read only property)
Chapter 164

TouchBar

164.1 class LAContextMBS

164.1.1 class LAContextMBS

MBS Mac64bit Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The class for local authentication via password or TouchID.

164.1.2 Methods

164.1.3 Available as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Whether the class is available.
Notes: Returns true on OS X 10.10 and newer in 64-bit application.

164.1.4 canEvaluatePolicy(Policy as Integer, byref Error as NSErrorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Determines if a particular policy can be evaluated.
Example:

```plaintext
try
dim e as NSErrorMBS

if lc.canEvaluatePolicy(lc.PolicyDeviceOwnerAuthenticationWithBiometrics, e) then
```

19541
List.AddItem "Can authenticate with biometrics."
else
List.AddItem "Can’t authenticate with biometrics."
end if
if e <> nil then
List.AddItem "Error: " + e.localizedDescription
end if

catch ex as NSError
List.AddItem "Exception: " + ex.localizedDescription
end try

Notes:

Policies can have certain requirements which, when not satisfied, would always cause the policy evaluation to fail. Examples can be a passcode set or a fingerprint enrolled with Touch ID. This method allows easy checking for such conditions.

Applications should consume the returned value immediately and avoid relying on it for an extensive period of time. At least, it is guaranteed to stay valid until the application enters background.

policy: Policy for which the preflight check should be run.

error: contains error information if policy evaluation is not possible.

Returns true if the policy can be evaluated, false otherwise.

164.1.5 Constructor

164.1.6 evaluatePolicy(Policy as Integer, localizedReason as String, Tag as Variant = nil)

Example:
dim lc as LAContextMBS // your context

try

lc.evaluatePolicy(lc.PolicyDeviceOwnerAuthenticationWithBiometrics, "We need to test.")

catch ex as NSExceptionMBS

List.AddRow "Exception: " + ex.Message

end try

Notes:

Policy evaluation may involve prompting user for various kinds of interaction or authentication. Actual behavior is dependent on evaluated policy, device type, and can be affected by installed configuration profiles.

Be sure to keep a strong reference to the context while the evaluation is in progress. Otherwise, an evaluation would be canceled when the context is being deallocated.

The method does not block. Instead the event is called asynchronously when evaluation finishes.

Implications of successful policy evaluation are policy specific. In general, this operation is not idempotent. Policy evaluation may fail for various reasons, including user cancel, system cancel and others, see error codes.

policy: Policy to be evaluated.
localizedReason: Application reason for authentication. This string must be provided in correct localization and should be short and clear. It will be eventually displayed in the authentication dialog subtitle. A name of the calling application will be already displayed in title, so it should not be duplicated here.

164.1.7 invalidate

MBS Mac64bit Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Invalidates the context.
Notes:

The context is invalidated automatically when it is (auto)released. This method allows invalidating it manually while it is still in scope.

Invalidation terminates any existing policy evaluation and the respective call will fail with LAErrorAppCancel. After the context has been invalidated, it can not be used for policy evaluation and an attempt to do
so will fail with LAErrorInvalidContext.

Invalidating a context that has been already invalidated has no effect.

164.1.8 Properties

164.1.9 evaluatedPolicyDomainState as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Contains policy domain state.
Notes:
This property is set only when evaluatePolicy is called and successful Touch ID authentication was performed, or when canEvaluatePolicy succeeds for a biometric policy. It stays nil for all other cases. If finger database was modified (fingers were removed or added), evaluatedPolicyDomainState data will change. Nature of such database changes cannot be determined but comparing data of evaluatedPolicyDomainState after different evaluatePolicy will reveal the fact database was changed between calls.
(Read only property)

164.1.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object handle.
Notes: (Read and Write property)

164.1.11 localizedFallbackTitle as String

MBS Mac64bit Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Fallback button title.
Example:

dim lc as new MyLAContextMBS
lc.localizedFallbackTitle = "Just a test"

Notes:
Allows fallback button title customization. A default title "Enter Password" is used when this property is left nil. If set to empty string, the button will be hidden.
(Read and Write property)
164.1.12 touchIDAuthenticationAllowableReuseDuration as Double

MBS Mac64bit Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. 
**Function:** Time interval for accepting a successful Touch ID unlock from the past. 
**Notes:**
This property can be set with a time interval in seconds. If the device was successfully unlocked by Touch ID within this time interval, then Touch ID authentication on this context will succeed automatically and the reply block will be called without prompting user for Touch ID.

The default value is 0, meaning that no previous TouchID authentication can be reused.

The maximum supported interval is 5 minutes and setting the value beyond 5 minutes does not increase the accepted interval.
(Read and Write property)

164.1.13 Events

164.1.14 evaluatePolicyResult(Success as Boolean, error as NSErrorMBS, Policy as Integer, localizedReason as String, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 17.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. 
**Function:** The event called for the result of evaluatePolicy method. 
**Notes:**
success: Reply parameter that is true if the policy has been evaluated successfully or false if the evaluation failed.

error: Reply parameter that is nil if the policy has been evaluated successfully, or it contains error information about the evaluation failure.

Typical error codes returned by this call are: 
ErrorUserFallback if user tapped the fallback button 
ErrorUserCancel if user has tapped the Cancel button 
ErrorSystemCancel if some system event interrupted the evaluation (e.g. Home button pressed).
164.1.15 Constants

164.1.16 CredentialTypeApplicationPassword = 0

MBS Mac64bit Plugin, Plugin Version: 17.0. Function: The credential type for an application password.

164.1.17 kErrorAppCancel = -9

MBS Mac64bit Plugin, Plugin Version: 17.0. Function: One of the error codes. Notes: Authentication was canceled by application (e.g. invalidate was called while authentication was in progress).

164.1.18 kErrorAuthenticationFailed = -1

MBS Mac64bit Plugin, Plugin Version: 17.0. Function: One of the error codes. Notes: Authentication was not successful, because user failed to provide valid credentials.

164.1.19 kErrorInvalidContext = -10

MBS Mac64bit Plugin, Plugin Version: 17.0. Function: One of the error codes. Notes: LAContext passed to this call has been previously invalidated.

164.1.20 kErrorPasscodeNotSet = -5

MBS Mac64bit Plugin, Plugin Version: 17.0. Function: One of the error codes. Notes: Authentication could not start, because passcode is not set on the device.

164.1.21 kErrorSystemCancel = -4

MBS Mac64bit Plugin, Plugin Version: 17.0. Function: One of the error codes. Notes: Authentication was canceled by system (e.g. another application went to foreground).
164.1. CLASS LACONTEXTMBS

164.1.22  kErrorTouchIDLockout = -8

MBS Mac64bit Plugin, Plugin Version: 17.0. **Function:** One of the error codes.  
**Notes:** Authentication was not successful, because there were too many failed Touch ID attempts and Touch ID is now locked. Passcode is required to unlock Touch ID, e.g. evaluating PolicyDeviceOwnerAuthenticationWithBiometrics will ask for passcode as a prerequisite.

164.1.23  kErrorTouchIDNotAvailable = -6

MBS Mac64bit Plugin, Plugin Version: 17.0. **Function:** One of the error codes.  
**Notes:** Authentication could not start, because Touch ID is not available on the device.

164.1.24  kErrorTouchIDNotEnrolled = -7

MBS Mac64bit Plugin, Plugin Version: 17.0. **Function:** One of the error codes.  
**Notes:** Authentication could not start, because Touch ID has no enrolled fingers.

164.1.25  kErrorUserCancel = -2

MBS Mac64bit Plugin, Plugin Version: 17.0. **Function:** One of the error codes.  
**Notes:** Authentication was canceled by user (e.g. tapped Cancel button).

164.1.26  kErrorUserFallback = -3

MBS Mac64bit Plugin, Plugin Version: 17.0. **Function:** One of the error codes.  
**Notes:** Authentication was canceled, because the user tapped the fallback button (Enter Password).

164.1.27  kLAErrorDomain = ”com.apple.LocalAuthentication”

MBS Mac64bit Plugin, Plugin Version: 17.0. **Function:** The error domain for Local Authentication.

164.1.28  PolicyDeviceOwnerAuthentication = 2

MBS Mac64bit Plugin, Plugin Version: 17.0. **Function:** The policy for owner authentication.
164.1.29 PolicyDeviceOwnerAuthenticationWithBiometrics = 1

MBS Mac64bit Plugin, Plugin Version: 17.0. **Function:** The policy for owner authentication with biometrics.
164.2. CLASS NSCOLORPICKERTOUCHBARITEMMBS

164.2 class NSColorPickerTouchBarItemMBS

164.2.1 class NSColorPickerTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a TouchBar item showing a color picker. **Notes:** Subclass of the NSTouchBarItemMBS class.

164.2.2 Methods

164.2.3 colorPicker(identifier as string) as NSColorPickerTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a bar item containing a button with the standard color picker icon that invokes the color picker. **Example:**

```dim t as NSColorPickerTouchBarItemMBS = NSColorPickerTouchBarItemMBS.colorPicker("test")
t.customizationLabel = "Drawing Color"
```

**Notes:** You may want to use AddHandler method to add an event handler to this object. See also:

- 164.2.4 colorPicker(identifier as string, buttonImage as NSImageMBS) as NSColorPickerTouchBarItemMBS

164.2.4 colorPicker(identifier as string, buttonImage as NSImageMBS) as NSColorPickerTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a bar item containing a button with the provided image that invokes the color picker. **Notes:** You may want to use AddHandler method to add an event handler to this object. See also:

- 164.2.3 colorPicker(identifier as string) as NSColorPickerTouchBarItemMBS

164.2.5 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The designated initializer. **Example:**
dim t as new NSColorPickerTouchBarItemMBS("test")
t.customizationLabel = "Drawing Color"

Notes: This instantiates a new touch bar item with the specified initializer.

164.2.6  strokeLinePicker(identifier as string) as NSColorPickerTouchBarItemMBS

Function: Creates a bar item containing a button with the standard stroke color picker icon that invokes
the color picker.
Notes:
You may want to use AddHandler method to add an event handler to this object.
Should be used when the item is used for picking stroke colors.

164.2.7  textColorPicker(identifier as string) as NSColorPickerTouchBarItemMBS

Function: Creates a bar item containing a button with the standard text color picker icon that invokes the
color picker.
Notes:
You may want to use AddHandler method to add an event handler to this object.
Should be used when the item is used for picking text colors.

164.2.8  Properties

164.2.9  color as NSColorMBS

Function: The selected color of the picker.
Notes: (Read and Write property)

164.2.10  colorList as NSColorListMBS

Function: The color list displayed in the list color picker.
Notes:
Defaults to the standard system color list. Setting a custom color list will disable the additional tints/shades that appear on long-press.
(Read and Write property)

### 164.2.11 customizationLabel as String

**Function:** The localized string labelling this item during user customization.
**Example:**
```
dim t as new NSColorPickerTouchBarItemMBS("test")
t.customizationLabel = "Drawing Color"
```

**Notes:**
The default value is empty string.
(Read and Write property)

### 164.2.12 enabled as Boolean

**Function:** Enables or disabled the color picker.
**Notes:**
If it is currently being shown in a popover, it will be dismissed.
(Read and Write property)

### 164.2.13 showsAlpha as Boolean

**Function:** Whether or not the picker should allow picking a color with non-1.0 alpha.
**Notes:**
Defaults to "not NSColor.ignoresAlpha".
(Read and Write property)
164.2.14 Events

164.2.15 Action

164.3 class NSCustomTouchBarItemMBS

164.3.1 class NSCustomTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The class for a TouchBar item showing a custom view.
Notes: Subclass of the NSTouchBarItemMBS class.

164.3.2 Methods

164.3.3 Constructor(identifier as string)

Example:

```
dim t as new NSCustomTouchBarItemMBS("test")
t.customizationLabel = "My Test"
```

Notes: This instantiates a new touch bar item with the specified initializer.

164.3.4 Properties

164.3.5 customizationLabel as String

Example:

```
dim t as new NSCustomTouchBarItemMBS("test")
t.customizationLabel = "Drawing Color"
```

Notes:
The default value is empty string.
(Read and Write property)
164.3.6 view as NSViewMBS

Function: A view to be displayed in the touch bar in the location corresponding to this item.
Notes: By default, the getter for this property will return this item’s view controller’s view. If this property is set explicitly, the view controller will be set to nil.
(Read and Write property)

164.3.7 viewController as NSViewControllerMBS

Function: A view controller whose view is to be displayed in the touch bar in the location corresponding to this item.
Notes: By default, this property is nil.
When set, this item’s view property will automatically return the view associated with this view controller.
(Read and Write property)
164.4  class NSGroupTouchBarItemMBS

164.4.1  class NSGroupTouchBarItemMBS

**Function:**  The class for a TouchBar item showing a group.  
**Notes:**  Subclass of the NSTouchBarItemMBS class.

164.4.2  Methods

164.4.3  Constructor(identifier as string)

**Function:**  The designated initializer.  
**Example:**

```vbnet
dim t as new NSGroupTouchBarItemMBS("test")
t.customizationLabel = "My Group"
```

**Notes:**  This instantiates a new touch bar item with the specified initializer.

164.4.4  groupItemWithIdentifier(identifier as string, items() as NSTouchBarItemMBS) as NSGroupTouchBarItemMBS

**Function:**  Returns an autoreleased NSGroupTouchBarItem with a groupTouchBar built from the given items array.  
**Example:**

```vbnet
dim t as NSGroupTouchBarItemMBS = NSGroupTouchBarItemMBS.groupItemWithIdentifier("test")
t.customizationLabel = "My Group"
```

**Notes:**  Customization is not enabled by default when creating a NSGroupTouchBarItem this way.
164.4.5 Properties

164.4.6 `customizationLabel` as String

**Function:** The localized string labelling this item during user customization.
**Notes:**
The default value is empty string.
(Read and Write property)

164.4.7 `groupTouchBar` as NSViewControllerMBS

**Function:** A touch bar, presented seamlessly as part of the touch bar this item is hosted in.
**Notes:**
This touch bar may have its own principal item, and can be customized (or not) per the normal touch bar customization rules.
By default this is an empty touch bar that cannot be customized.
(Read and Write property)
164.5. **CLASS NSPOPOVERTOUCHBARITEMMBS**

164.5  **class NSPopoverTouchBarItemMBS**

164.5.1  **class NSPopoverTouchBarItemMBS**

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a TouchBar item showing a popover.  
**Notes:** Subclass of the NSTouchBarItemMBS class.

164.5.2  **Methods**

164.5.3  **Constructor(identifier as string)**

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The designated initializer.  
**Notes:** This instantiates a new touch bar item with the specified initializer.

164.5.4  **dismissPopover**

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This method will restore the previously visible main touch bar.  
**Notes:** This method can be invoked explicitly to order out a popover if interacting with an item inside it should close it.

164.5.5  **showPopover**

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Replaces the main touch bar with this item’s popover touch bar.  
**Notes:** If this item is not visible, this method will have no effect. If this item ceases to be visible, the popover touch bar will automatically be ordered out.

164.5.6  **Properties**

164.5.7  **collapsedRepresentation as NSViewMBS**

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The view displayed when the item is in its hosted touch bar.  
**Notes:**
By default, this is an NSButton whose target is this popover item, whose action is showPopover, and whose image and title are bound to this item’s collapsedRepresentationImage and collapsedRepresentationLabel respectively.
(Read and Write property)

### 164.5.8 collapsedRepresentationImage as NSImageMBS

**Function:** The image displayed by the button used by default for the default collapsed representation.
**Notes:**
If the collapsedRepresentation button has been replaced by a different view, this property may not have any effect.
(Read and Write property)

### 164.5.9 collapsedRepresentationLabel as String

**Function:** The localized string displayed by the button used by default for the default collapsed representation.
**Notes:**
If the collapsedRepresentation button has been replaced by a different view, this property may not have any effect. This property is archived.
(Read and Write property)

### 164.5.10 customizationLabel as String

**Function:** The localized string labelling this item during user customization.
**Notes:**
The default value is empty string.
(Read and Write property)

### 164.5.11 popoverTouchBar as NSTouchBarMBS

**Function:** The touch bar displayed when this item is "popped."
**Notes:**
By default this is an empty touch bar that cannot be customized. This property is archived.
164.5. **pressAndHoldTouchBar** as NSTouchBarMBS

**Function:** A touchbar to be used exclusively for press-and-hold popovers.

**Notes:**
This touch bar can be the same as the one used for ”popoverTouchBar” property, but does not have to be. When non-nil this touch bar will be displayed while the user holds their finger down on the collapsed representation and released when the user raises their finger. This tracking behavior is automatic, but popovers with custom collapsed representations will still need to send showPopover to start tracking.

(Read and Write property)

164.5.13 **showsCloseButton** as Boolean

**Function:** When true, automatically displays a close button in the popover.

**Notes:**
When false it is the responsibility of the client to dismiss the popover.

(Read and Write property)
164.6 class NSSliderTouchBarItemMBS

164.6.1 class NSSliderTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a TouchBar item showing a slider.
**Notes:** Subclass of the NSTouchBarItemMBS class.

164.6.2 Methods

164.6.3 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The designated initializer.
**Example:**
```
Dim t As NSSliderTouchBarItemMBS = New NSSliderTouchBarItemMBS("test")
t.customizationLabel = "My Slider"
```

**Notes:** This instantiates a new touch bar item with the specified initializer.

164.6.4 Properties

164.6.5 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The localized string labelling this item during user customization.
**Notes:**
The default value is empty string.
(Read and Write property)

164.6.6 label as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The text label displayed along with the slider.
**Example:**
```
Dim t As NSSliderTouchBarItemMBS = New NSSliderTouchBarItemMBS("test")
t.label = "Pen Size"
```
Notes:
If set to nil, the label will not have space reserved in the item.
(Read and Write property)

164.6.7 maxValue as Double

Function: The maximum value of the slider.
Example:

```javascript
  dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
  t.minValue = 0.0
  t.maxValue = 1.0
  t.value = 0.5
```

Notes: (Read and Write property)

164.6.8 minValue as Double

Function: The minimum value of the slider.
Example:

```javascript
  dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
  t.minValue = 0.0
  t.maxValue = 1.0
  t.value = 0.5
```

Notes: (Read and Write property)

164.6.9 slider as NSSliderMBS

Function: The slider displayed by the bar item.
Example:
```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.minValue = 0.0
t.maxValue = 1.0
t.value = 0.5
```

Notes:

It is automatically created, but can be set to a custom subclass.
Value, minValue, maxValue, etc can all be read and set through the slider.
(Read and Write property)

164.6.10 value as Double

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The current value of the slider.
**Notes:** (Read and Write property)

164.6.11 Events

164.6.12 Action

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The slider changed.
164.7  class NSTouchBarItemMBS

164.7.1  class NSTouchBarItemMBS

Function: The class for a touch bar item.

164.7.2  Methods

164.7.3  Available as Boolean

Function: Whether this class is available.
Example:
if NSTouchBarItemMBS.Available then
    MsgBox "This Mac may have a TouchBar or not."
else
    MsgBox "This Mac is too old for a TouchBar."
end if

Notes: Returns true on macOS 10.12.1 and newer, if the version with TouchBar support is installed.

164.7.4  Constructor(identifier as string)

Function: The designated initializer.
Notes: This instantiates a new touch bar item with the specified initializer.

164.7.5  NSTouchBarItemIdentifierFixedSpaceLarge as String

Function: The identifier of an item appropriate for use as a large space in the touch bar.
Example:
// create flexible space item
dim t as new NSTouchBarItemMBS(NSTouchBarItemMBS.NSTouchBarItemIdentifierFixedSpaceLarge)
Notes: Generally, you can use this identifier in a touch bar’s itemIdentifiers array, and it will instantiate that space for you.

164.7.6 NSTouchBarItemIdentifierFixedSpaceSmall as String

Function: The identifier of an item appropriate for use as a small space in the touch bar.
Example:

// create fixed space item
dim t as new NSTouchBarItemMBS(NSTouchBarItemMBS.NSTouchBarItemIdentifierFixedSpaceSmall)

Notes: Generally, you can use this identifier in a touch bar’s itemIdentifiers array, and it will instantiate that space for you.

164.7.7 NSTouchBarItemIdentifierFlexibleSpace as String

Function: The identifier of an item appropriate for use as a flexible space in the touch bar.
Example:

// create flexible space item
dim t as new NSTouchBarItemMBS(NSTouchBarItemMBS.NSTouchBarItemIdentifierFlexibleSpace)

Notes: Generally, you can use this identifier in a touch bar’s itemIdentifiers array, and it will instantiate that space for you.

164.7.8 NSTouchBarItemIdentifierOtherItemsProxy as String

Function: The identifier of the special "other items proxy."
Example:

// create proxy item
dim t as new NSTouchBarItemMBS(NSTouchBarItemMBS.NSTouchBarItemIdentifierOtherItemsProxy)

Notes:
Generally, you can use this identifier in a touch bar’s itemIdentifiers array, and a special proxy item will be instantiated for you. When the touch bar containing this item is visible, touch bars provided by items closer to the first responder will be nested inside the space denoted for this item. Space items on either side of this item will be automatically massaged to handle cases where the touch bar containing this identifier is itself the bar closest to the first responder (or closer bars are empty.) Note that a touch bar lacking this item identifier will be replaced in its entirety by touch bars closer to the first responder.

164.7.9 Properties

164.7.10 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The localized string labelling this item during user customization. Notes: The default value is empty string. (Read only property)

164.7.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The internal object reference. Notes: (Read and Write property)

164.7.12 identifier as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The identifier of this item. Notes: Apart from spaces, item identifiers should be globally unique. (Read only property)

164.7.13 view as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Intended for subclassing. Notes:
By default, this method returns this item’s view controller’s view. (Read only property)

164.7.14 viewController as NSViewControllerMBS

Function: Intended for subclassing.
Notes:
By default, this method returns nil. (Read only property)

164.7.15 visibilityPriority as Single

Function: If there are more items in the touch bar than can be displayed, some will be hidden.
Example:
```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.visibilityPriority = t.PriorityLow
```
Notes:
Items with high visibility priority will be hidden after items with low visibility priority. (Read and Write property)

164.7.16 visible as Boolean

Function: When true, this item is attached to a visible touch bar, and is being displayed.
Notes:
Note that some types of items are never considered visible, for example spaces, other items proxys, and groups.
This property is key value observable. (Read only property)
164.7.17 Events

164.7.18 Hidden

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called when the item is hidden.

164.7.19 Shown

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called when the item is shown.

164.7.20 Constants

164.7.21 PriorityHigh = 1000

MBS Mac64bit Plugin, Plugin Version: 16.5. **Function:** One of the values for visibilityPriority property. **Notes:** Items with high visibility priority will be hidden after items with low visibility priority.

164.7.22 PriorityLow = -1000

MBS Mac64bit Plugin, Plugin Version: 16.5. **Function:** One of the values for visibilityPriority property. **Notes:** Items with high visibility priority will be hidden after items with low visibility priority.

164.7.23 PriorityNormal = 0

MBS Mac64bit Plugin, Plugin Version: 16.5. **Function:** One of the values for visibilityPriority property. **Notes:** Items with high visibility priority will be hidden after items with low visibility priority.
164.8  class NSTouchBarMBS

164.8.1  class NSTouchBarMBS

164.8.2  Methods

164.8.3  AssignToApp

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: Assigns the TouchBar to be the main TouchBar for the whole app.

164.8.4  AssignToWindow(window as NSWindowMBS)

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: Assigns the TouchBar to be the given window. **Notes**: The TouchBar on MacBook Pro will show this entries, if the given window is the front window. See also:

• 164.8.5 AssignToWindow(window as window)

164.8.5  AssignToWindow(window as window)

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function**: Assigns the TouchBar to be the given window. **Notes**: The TouchBar on MacBook Pro will show this entries, if the given window is the front window. See also:

• 164.8.4 AssignToWindow(window as NSWindowMBS)

164.8.6  Available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: Whether this class is available. **Example**:

```javascript
if NSTouchBarMBS.Available then
    MsgBox "This Mac may have a TouchBar or not."
else
```
164.8. CLASS NSTOUCHBARMBS

MsgBox "This Mac is too old for a TouchBar."
end if

Notes: Returns true on macOS 10.12.1 and newer, if the version with TouchBar support is installed.

164.8.7 Constructor

164.8.8 customizationAllowedItemIdentifiers as String()

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The items that are presented in the customization palette for the user to add to the touch bar. Notes: These items will be presented to the user in the order specified in this array.

164.8.9 customizationRequiredItemIdentifiers as String()

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Some items are too important to be removed. Notes: The corresponding item identifiers should be listed here. During customization the user will be prevented from removing these items from the touch bar.

164.8.10 defaultItemIdentifiers as String()

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: An array of identifiers specifying the items in this touch bar. Notes: When constructing the instantiated items array, the identifiers in this array will be fed through the item-ForIdentifier method. Item identifiers should be globally unique, excepting NSTouchBarItemIdentifierFixedSpaceSmall, NSTouchBarItemIdentifierFixedSpaceLarge, NSTouchBarItemIdentifierFlexibleSpace, and NSTouchBarItemIdentifierOtherItemsProxy.

This array also corresponds to the item ordering for the receiver in the default set in the customization palette.
164.8.11 itemForIdentifier(identifier as string) as NSTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an instantiated NSTouchBarItem for the given identifier. **Notes:** Items are resolved from the following locations, in order:

- items already in the instantiated items array
- items in the defaultTouchBarItems set
- items returned from the delegate’s -touchBar:makeItemForIdentifier: method
- some special identifiers are handled automatically

NSTouchBarItemIdentifierFixedSpaceSmall -> NSTouchBar will automatically create a standard small space
NSTouchBarItemIdentifierFixedSpaceLarge -> NSTouchBar will automatically create a standard large space
NSTouchBarItemIdentifierFlexibleSpace -> NSTouchBar will automatically create a standard flexible space
NSTouchBarItemIdentifierOtherItemsProxy -> NSTouchBar will automatically create a special item that acts as a proxy for the items of touch bars closer to the first responder.

164.8.12 itemIdentifiers as String()

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The resolved array of item identifiers. If the bar has not been customized this will match the defaultItemIdentifiers.

164.8.13 RemoveTouchBarFromApp

MBS Mac64bit Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Removes TouchBar for app.

164.8.14 RemoveTouchBarFromWindow(window as NSWindowMBS)

MBS Mac64bit Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Removes TouchBar for window. **See also:**

- 164.8.15 RemoveTouchBarFromWindow(window as window)
164.8. CLASS NSTOUCHBARMBS

164.8.15 RemoveTouchBarFromWindow(window as window)

MBS Mac64bit Plugin, Plugin Version: 17.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Removes TouchBar for window.

See also:

- 164.8.14 RemoveTouchBarFromWindow(window as NSWindowMBS)

164.8.16 setCustomizationAllowedItemIdentifiers(Identifiers() as String)

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the items that are presented in the customization palette for the user to add to the touch bar.

**Notes:** These items will be presented to the user in the order specified in this array.

164.8.17 setCustomizationRequiredItemIdentifiers(Identifiers() as String)

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the items are too important to be removed.

**Notes:** The corresponding item identifiers should be listed here. During customization the user will be prevented from removing these items from the touch bar.

164.8.18 setDefaultItemIdentifiers(Identifiers() as String)

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the array of identifiers specifying the items in this touch bar.

164.8.19 setTemplateItems(Identifiers() as NSTouchBarItemMBS)

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the template item identifiers.

**Notes:**

Items in this set are the first step in resolving instantiated items from their identifiers. If an item identifier is specified in the itemIdentifiers array, and an item with that identifier is in this set, it will be added to the items array in the corresponding location.
164.8.20 templateItems as NSTouchBarItemMBS()

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Items in this set are the first step in resolving instantiated items from their identifiers. **Notes:** If an item identifier is specified in the itemIdentifiers array, and an item with that identifier is in this set, it will be added to the items array in the corresponding location.

164.8.21 toggleTouchBarCustomizationPalette

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Show or dismiss the customization palette for the currently displayed touch bars. **Notes:** NSApplication validates this selector against whether the current touch bars are customizable and, if configured on a menu item, will standardize and localize the title. If the current system does not have touch bar support, the menu item will be automatically hidden.

164.8.22 Properties

164.8.23 automaticCustomizeTouchBarMenuItemEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether or not a menu item to customize the touch bar can be automatically added to the main menu. **Notes:** It will only actually be added when a touch bar hardware or simulator is present. Defaults to false. Setting this property to True is the recommended way to add the customization menu item. But if non-standard placement of the menu item is needed, creating a menu item with an action of toggleTouchBarCustomizationPalette can be used instead. (Read and Write property)

164.8.24 customizationIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A string uniquely identifying this bar for customization purposes. **Notes:** All bars with this identifier will have their items coordinated automatically during customization or instantiation. Touch bars lacking a customizationIdentifier are not customizable. (Read and Write property)
164.8. CLASS NSTOUCHBARMBS

164.8.25 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.  
**Notes:** (Read and Write property)

164.8.26 principalItemIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifying a principal item identifier communicates that the item with that identifier has special significance to this touch bar. 
**Notes:**  
Currently, that item will be placed in the center of the resolved touch row. Note that multiple visible bars may each specify a principal item identifier - but only one of them can have the request honored.  
(Read and Write property)

164.8.27 visible as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** When true, the touch bar is attached to an eligible touch bar provider, and its items are displayable, assuming adequate space.  
**Notes:** (Read only property)

164.8.28 Events

164.8.29 DidEnterCustomization

MBS Mac64bit Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The customization did start.

164.8.30 DidExitCustomization

MBS Mac64bit Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The customization did exit.
164.8.31 Hidden

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called when the bar is hidden.

164.8.32 makeItemForIdentifier(identifier as string) as NSTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** When constructing the items array, this event will be invoked to construct a touch bar item if that item cannot be found in the defaultItems set.

164.8.33 Shown

MBS Mac64bit Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called when the bar is shown.

164.8.34 WillEnterCustomization

MBS Mac64bit Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The customization will start soon.

164.8.35 WillExitCustomization

MBS Mac64bit Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The customization will exit soon.
Chapter 165

Twain

165.1 class TwainIdentityMBS

165.1.1 class TwainIdentityMBS

Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

165.1.2 Methods

165.1.3 Constructor

165.1.4 Properties

165.1.5 Id as Integer

Notes: This field is only filled by the Source Manager. Neither an application nor a Source should fill this field. The Source uses the contents of this field to "identify" which application is invoking the operation sent to
19576

CHAPTER 165. TWAIN

the Source.
(Read and Write property)

165.1.6 Manufacturer as String

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. Function: String identifying the manufacturer of the application or Source. e.g. "Aldus". Notes: (Read and Write property)

165.1.7 ProductFamily as String

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. Function: Tells an application that performs device-specific operations which product family the Source supports. Notes: This is useful when a new Source has been released and the application doesn’t know about the particular Source but still wants to perform Custom operations with it. e.g. "ScanMan". (Read and Write property)

165.1.8 ProductName as String

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. Function: A string uniquely identifying the Source. Notes: This is the string that will be displayed to the user at Source select-time. This string must uniquely identify your Source for the user, and should identify the application unambiguously for Sources that care. e.g. "ScanJet Iic". (Read and Write property)

165.1.9 ProtocolMajor as Integer

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. Function: Major number of latest TWAIN version that this element supports. Notes: (Read and Write property)
165.1.10 ProtocolMinor as Integer

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Minor number of latest TWAIN version that this element supports. **Notes:** (Read and Write property)

165.1.11 SupportedGroups as Integer

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Supported groups.

**Notes:**

The application will normally set this field to specify which Data Group(s) it wants the Source Manager to sort Sources by when presenting the Select Source dialog, or returning a list of available Sources. The application sets this prior to invoking a SelectDS operation.

- The application may also set this field to specify which Data Group(s) it wants the Source to be able to acquire and transfer. The application must do this prior to sending the Source its EnableDS operation.
- The Source must set this field to specify which Data Group(s) it can acquire. It will do this in response to a OpenDS.
- Beginning with TWAIN 2.0 the Source Manager reserves the most significant two bytes in the SupportedGroups for the Data Flags (& h0001000 to & hFFFF0000).

DF_DSM2 identifies the Source Manager as TWAIN 2.0 compliant DF_APP2 is set by an Application that is TWAIN 2.0 compliant DF_DS2 is set by a Source that is TWAIN 2.0 compliant

(Read and Write property)

165.1.12 Version as TwainVersionMBS

**Notes:** (Read and Write property)
165.2 class TwainImageInfoMBS

165.2.1 class TwainImageInfoMBS

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Describes the "real" image data, that is, the complete image being transferred between the Source and application.

**Notes:**

The Source may transfer the data in a different format—the information may be transferred in "strips" or "tiles" in either compressed or uncompressed form. See the TW_IMAGEEMEMXFER structure for more information.

The term "sample" is referred to a number of times in this structure. It holds the same meaning as in the TIFF specification. A sample is a contiguous body of image data that can be categorized by the channel or "ink color" it was captured to describe. In an R-G-B (Red-Green-Blue) image, such as on your TV or computer's CRT, each color channel is composed of a specific color. There are 3 samples in an R-G-B: Red, Green, and Blue. A C-Y-M-K image has 4 samples. A Grayscale or Black and White image has a single sample.

Note: The value -1 in ImageWidth and ImageLength are special cases. It is possible for a Source to not know either its Width or Length. Applications need to consider this when allocating memory or otherwise dealing with the size of the Image.

This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

165.2.2 Methods

165.2.3 BitsPerSample(index as Integer) as Integer

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** For each sample, the number of bits of information.

**Notes:**

24-bit R-G-B will typically have 8 bits of information in each sample (8+8+8). Some 8-bit color is sampled at 3 bits Red, 3 bits Green, and 2 bits Blue. Such a scheme would put 3, 3, and 2 into the first 3 elements of this array. The supplied array allows up to 8 samples. Samples are not limited to 8 bits. However, both the application and Source must simultaneously support sample sizes greater than 8 bits per color.

Index from 0 to 7.

165.2.4 Constructor

165.2. CLASS TWAINIMAGEINFOMBS

165.2.5 Properties

165.2.6 BitsPerPixel as Integer

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:**
The number of bits in each image pixel (or bit depth).

**Notes:**
This value is invariant across the image. 24-bit R-G-B has BitsPerPixel = 24. 40-bit C-M-Y-K has BitsPer-
Pixel=40. 8-bit Grayscale has BitsPerPixel = 8. Black and White has BitsPerPixel = 1.
(Read and Write property)

165.2.7 Compression as Integer

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:**
The compression method used to process the data being transferred.

**Notes:**
Default is no compression.
(plugin currently only supports no compression)
(Read and Write property)

165.2.8 ImageLength as Integer

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:**
How tall/long, in pixels, the image to be transferred is.

**Notes:**
If the Source doesn’t know, set this field to -1 (hand scanners may do this).
-1 can only be used if the application has set ICAP_UNDEFINEDIMAGESIZE to TRUE.
(the plugin doesn’t support undefined image size)
(Read and Write property)

165.2.9 ImageWidth as Integer

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:**
How wide, in pixels, the entire image to be transferred is.

**Notes:**
If the Source doesn’t know, set this field to -1 (hand scanners may do this).
-1 can only be used if the application has set ICAP_UNDEFINEDIMAGESIZE to TRUE.
(the plugin doesn’t support undefined image size)
165.2.10  **PixelType as Integer**

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** This is the highest categorization for how the data being transferred should be interpreted by the application. **Notes:**

This is how the application can tell if the data is Black and White, Grayscale, or Color. Currently, the only color type defined is "tri-stimulus", or color described by three characteristics. Most popular color description methods use tri-stimulus descriptors. For simplicity, the constant used to identify tri-stimulus color is called TWPT_RB, for R-G-B color. There is no default for this value. Fill this field with the appropriate TWPT_xxxx constant.

The plugin does currently only support RGB, GRAY, BW and PALETTE.  

(Read and Write property)

165.2.11  **Planar as Boolean**

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Whether image is planar. **Notes:**

If SamplesPerPixel >1, indicates whether the samples follow one another on a pixel-by-pixel basis (R-G-B-R-G-B-R-G-B...) as is common with a one-pass scanner or all the pixels for each sample are grouped together (complete group of R, complete group of G, complete group of B) as is common with a three-pass scanner. If the pixel-by-pixel method (also known as "chunky") is used, the Source should set Planar = false. If the grouped method (also called "planar") is used, the Source should set Planar = true.  

(Read and Write property)

165.2.12  **RowBytes as Integer**

MBS Picture Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The number of bytes in a row. **Notes:**

This is not exactly the value as you may expect as Twain needs some rounding.  

(Read and Write property)
165.2. CLASS TWAINIMAGEINFOMBS

165.2.13 SamplesPerPixel as Integer

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The number of samples being returned.
**Notes:**
For R-G-B, this field would be set to 3. For C-M-Y-K, 4. For Grayscale or Black and White, 1.
(Read and Write property)

165.2.14 XResolution as Double

**Notes:**
In pixels per inch.
(Read and Write property)

165.2.15 YResolution as Double

**Notes:**
In pixels per inch.
(Read and Write property)
165.3 class TwainImageLayoutMBS

165.3.1 class TwainImageLayoutMBS

MBS Picture Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The class for an image layout.  
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

165.3.2 Methods

165.3.3 Constructor

165.3.4 Properties

165.3.5 Bottom as Double

MBS Picture Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The bottom coordinate of the item.  
**Notes:** (Read and Write property)

165.3.6 DocumentNumber as Integer

**Notes:** (Read and Write property)

165.3.7 FrameNumber as Integer

MBS Picture Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The frame number.  
**Notes:** (Read and Write property)
165.3.8 Height as Double

MBS Picture Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The height of the item.  
**Notes:** (Read only property)

165.3.9 Left as Double

MBS Picture Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The left coordinate of the item.  
**Notes:** (Read and Write property)

165.3.10 PageNumber as Integer

**Notes:** (Read and Write property)

165.3.11 Right as Double

MBS Picture Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The right coordinate of the item.  
**Notes:** (Read and Write property)

165.3.12 Top as Double

MBS Picture Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The top coordinate of the item.  
**Notes:** (Read and Write property)

165.3.13 Width as Double

MBS Picture Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The width of the item.  
**Notes:** (Read only property)
165.4  class TwainMBS

165.4.1  class TwainMBS

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
The plugin class for scanning with TWAIN compatible scanners.

**Notes:**
Use is like this:

- Declare subclass of TwainMBS so you can get events.
- Create new instance of your subclass and store object in some window/app/module property.
- For Windows call InstallEvent.
- To scan, call Acquire method.
- If driver runs synchronously, a modal window shows and you get back a picture object right away when scanning is done.
- If driver runs asynchronously, it shows a non modal window and you receive events.
- In TransferReady event you can call TransferImage method. In example a timer is triggered so this runs in the window.
- To cleanup, use DisableDS and CloseDS methods.
- We recommend only to have one instance of the TwainMBS object.

When Xojo or Real Studio is used (32 bit), we can of course only see and use devices with 32 bit drivers. Once Xojo will be ported to 64bit, we can only talk to 64bit drivers.

For 64-bit on Windows you can find 64-bit TwainDSM.dll here:
https://sourceforge.net/projects/twain-dsm/

165.4.2  Methods

165.4.3  **Acquire(modal as boolean = false, showUI as boolean = true) as picture**

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Acquires a new picture.

**Notes:**
Lasterror is set.
Plugin asks for asynchronously operation, so this function returns nil and success in lasterror.
If data source must be used with modal UI, this function returns with picture.

Modal can be true to ask for modal dialog. Seems to be only supported on Mac.

### 165.4.4 AllDevices as TwainIdentityMBS()

**Example:**

```vbnet
dim twain as TwainMBS ' your twain object
dim devices() as TwainIdentityMBS = twain.AllDevices
dim found as Boolean
dim NameToFind as string = "MyScanner123"

for each device as TwainIdentityMBS in devices
    if device.ProductName = NameToFind then
        found = true
        // lets use this one
        twain.SelectDS(device)
    endif
end for

if not found then
    MsgBox "No scanner found named: " + NameToFind
end if
```

### 165.4.5 AppIdentity as TwainIdentityMBS

**Notes:** That’s the identity the plugin used to register with twain library.
165.4.6 CanBW as boolean

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Whether device supports black and white pixel type.
**Notes:** Lasterror is set.

165.4.7 CanGray as boolean

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Whether device supports gray pixel type.
**Notes:** Lasterror is set.

165.4.8 CanPalette as boolean

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Whether current device supports palette pixel type.
**Notes:** Lasterror is set.

165.4.9 CanRGB as boolean

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Whether current device supports RGB pixel type.
**Notes:** Lasterror is set.

165.4.10 CloseDS

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Close data source.
**Notes:** Lasterror is set.

165.4.11 CloseDSM

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Closes the data source manager.
**Notes:** Lasterror is set.
165.4.12 Constructor(Country as Integer, Language as Integer)

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Initializes Twain engine with given localization.
**Notes:** Lasterror is set.

165.4.13 DisableDS

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Diables data source.
**Notes:** Lasterror is set.

165.4.14 DontUnload

MBS Picture Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Informs the plugin to not unload the twain library.
**Notes:** This avoids a crash for some people.

165.4.15 DSIdentity as TwainIdentityMBS

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Queries the details on the data source.
**Notes:** Lasterror is set.

165.4.16 GetEnumerationCapability(ID as Integer, byref ItemType as Integer, byref Count as Integer, byref CurrentIndex as Integer, byref DefaultIndex as Integer) as Integer()

MBS Picture Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Queries an enum capability.
**Example:**
```pascal
    dim t as TwainMBS // your twain object

    // check supported sizes
    const ICAP_SUPPORTEDSIZES = & h1122
    dim type5 as Integer
    dim EnumCount as Integer = 0
    dim EnumItemType as Integer = 0
```
dim EnumCurrentIndex as Integer = 0
dim EnumDefaultValue as Integer = 0
dim EnumValues() as Integer = t.GetEnumerationCapability(ICAP_SUPPORTEDSIZES, EnumItemType, EnumCount, EnumCurrentIndex, EnumDefaultValue)
dim e5 as Integer = t.LastError
dim c5 as Integer = t.ConditionCode

Notes:
Please review Twain Documentation for details.
Please open data source before via OpenDS method.
This should work fine for all integer enum types like boolean, 8, 16 or 32 bit integers.
Sets last error and condition code.
(if last error is 1 and condition code is 13, the capability is not supported)

165.4.17 GetIntegerCapability(ID as Integer, byref Type as Integer) as Integer

Example:

dim t as TwainMBS // your twain object

t.OpenDS

if t.LastError <> 0 then
MsgBox "Failed to open device: " + str(t.Lasterror)
Return
end if

const CAP_FEEDERENABLED = & h1002
const CAP_FEEDERLOADED = & h1003
const TWRC_FAILURE = 1
const TWCC_CAPUNSUPPORTED = 13

// query before
dim type1 as Integer
dim n1 as Integer = t.GetIntegerCapability(CAP_FEEDERENABLED, type1)
dim e1 as Integer = t.LastError
dim c1 as Integer = t.ConditionCode

// set on
t.SetBoolCapability CAP_FEEDERENABLED, true
dim e2 as Integer = t.LastError
dim c2 as Integer = t.ConditionCode
// query after
dim type3 as Integer
dim n3 as Integer = t.GetIntegerCapability(CAP_FEEDERENABLED, type3)
dim e3 as Integer = t.Lasterror
dim c3 as Integer = t.ConditionCode

// now query loaded?
dim type4 as Integer
dim n4 as Integer = t.GetIntegerCapability(CAP_FEEDERLOADED, type4)
dim e4 as Integer = t.Lasterror
dim c4 as Integer = t.ConditionCode

if e4 = TWRC_FAILURE AND c4 = TWCC_CAPUNSUPPORTED then
    // not supported!
    Break
end if

Notes:
Please review Twain Documentation for details.
Please open data source before via OpenDS method.
This should work fine for all integer types like boolean, 8, 16 or 32 bit integers.
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

165.4.18 ImageInfo as TwainImageInfoMBS

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Queries information about current image. **Notes:** Lasterror is set.

165.4.19 IsDSEnabled as boolean

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Whether data source is enabled.

165.4.20 OpenDS

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Opens the data source.
165.4.21 OpenDSM

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Opens Data source Manager.
**Notes:** Lasterror is set.

165.4.22 ProcessEvents

MBS Picture Plugin, Plugin Version: 12.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:**
Process events in plugin.
**Notes:**
Only for Windows needed for some Twain drivers. You call it after you run Acquire to let the plugin wait for the events to start the transfer.
When transfer is ready or dialog is cancelled, this method ends.
On Mac OS X or Linux this method does nothing so it’s no problem calling it.

165.4.23 SelectDS

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Queries dialog to ask the user to select a data source.
**Notes:** Lasterror is set.
See also:

- 165.4.24 SelectDS(device as TwainIdentityMBS)

165.4.24 SelectDS(device as TwainIdentityMBS)

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Selects the given device without dialog.
**Example:**
```
dim twain as TwainMBS // your twain object
dim devices() as TwainIdentityMBS = twain.AllDevices
dim found as Boolean
dim NameToFind as string = "MyScanner123"
for each device as TwainIdentityMBS in devices
    if device.ProductName = NameToFind then
```
found = true

// lets use this one
twain.SelectDS(device)

if twain.Lasterror <> 0 then
    MsgBox "Failed to select " + device.ProductName
else
    'MsgBox "OK"
    exit
end if
next

if not found then
    MsgBox "No scanner found named: " + NameToFind
end if

Notes: Lasterror is set.
See also:

• 165.4.23 SelectDS

165.4.25 SetBoolCapability(ID as Integer, Value as Boolean)

MBS Picture Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. Function:
Sets a capability with boolean.
Example:

dim t as TwainMBS // your twain object

t.OpenDS

if t.Lasterror <> 0 then
    MsgBox "Failed to open device: " + str(t.Lasterror)
    Return
end if

const CAP_FEEDERENABLED = & h1002
const CAP_FEEDERLOADED = & h1003
const TWRC_FAILURE = 1
const TWCC_CAPUNSUPPORTED = 13

// query before

dim type1 as Integer

dim n1 as Integer = t.GetIntegerCapability(CAP_FEEDERENABLED, type1)
dim e1 as Integer = t.Lasterror
dim c1 as Integer = t.ConditionCode

// set on
t.SetBoolCapability CAP_FEEDERENABLED, true
dim e2 as Integer = t.Lasterror
dim c2 as Integer = t.ConditionCode

// query after
dim type3 as Integer
dim n3 as Integer = t.GetIntegerCapability(CAP_FEEDERENABLED, type3)
dim e3 as Integer = t.Lasterror
dim c3 as Integer = t.ConditionCode

// now query loaded?
dim type4 as Integer
dim n4 as Integer = t.GetIntegerCapability(CAP_FEEDERLOADED, type4)
dim e4 as Integer = t.Lasterror
dim c4 as Integer = t.ConditionCode

if e4 = TWRC_FAILURE AND c4 = TWCC_CAPUNSUPPORTED then
  // not supported!
  Break
end if

Notes:

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
You may see problems if you use this method on a capability which is not a boolean.
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

165.4.26 SetFloatCapability(ID as Integer, Value as Double)

MBS Picture Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Sets a capability with floating point value.

Notes:

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
You may see problems if you use this method on a capability which is not a floating point value (FIX32).
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)
165.4.27 SetInt32Capability(ID as Integer, Value as Int32)

MBS Picture Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Sets a capability with 32 bit integer.
**Notes:**
Please review Twain Documentation for details.
Please open data source before via OpenDS method.
You may see problems if you use this method on a capability which is not a 32 bit integer.
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

165.4.28 SetUInt16Capability(ID as Integer, Value as UInt16)

MBS Picture Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Sets a capability with 16 bit integer.
**Notes:**
Please review Twain Documentation for details.
Please open data source before via OpenDS method.
You may see problems if you use this method on a capability which is not a 16 bit integer.
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

165.4.29 SupportsMemoryTransfer as boolean

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Whether the twain data source supports memory transfers.
**Notes:** As our plugin uses only memory transfers, the source must support this in order to work with our plugin.

165.4.30 TransferImage as picture

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Transfers an image.
**Notes:**
Lasterror is set.
Image data is converted to a normal RGB picture.
Can return nil on any error.
The events TransferStarted, TransferEnded and TransferProgress are called when a transfer is running.
165.4.31 Properties

165.4.32 AutoFeed as Integer

MBS Picture Plugin, Plugin Version: 13.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Whether plugin should auto feed (if feeder is enabled). **Notes:** Value is -1 if you didn’t set it before. This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable auto feed. If the scanner does not support auto feeding, the scanner will ignore this setting. (Read and Write property)

165.4.33 AutomaticBorderDetection as Integer

MBS Picture Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Whether plugin should enable automatic border detection. **Notes:** Value is -1 if you didn’t set it before. This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable auto border detection. If the scanner does not support this feature, the scanner will ignore this setting. 0 = off, 1 = on, -1 = default/undefined. (Read and Write property)

165.4.34 AutomaticBrightness as Integer

MBS Picture Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enables or disables the Source’s Auto-brightness function (if any). **Notes:** The plugin will apply this setting on the next scan. Value is 0 to disable, 1 to enable or -1 if undefined/default. (Read and Write property)

165.4.35 AutomaticRotate as Integer

MBS Picture Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Whether to enable automatic rotation when next scan starts. **Notes:** Value is -1 if you didn’t set it before. This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable auto-
matic rotation. If the scanner does not support this feature, the scanner will ignore this setting.
(Read and Write property)

165.4.36 Brightness as Double

MBS Picture Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The brightness setting to use.
**Notes:**
The plugin will apply this setting on the next scan.
Source should normalize the values into the range. Make sure that a '0' value is available as the Current Value when the Source starts up. If the Source’s range is asymmetric about the '0' value, set range maxima to 1000 and scale homogeneously from the '0' value in each direction. This will yield a positive range whose step size differs from the negative range’s step size.
Plugin uses value -10000 for undefined/default.
(Read and Write property)

165.4.37 ConditionCode as Integer

MBS Picture Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The condition code.
**Notes:**
If error code in Lasterror is 1, this Condition value is set. (-1 if unknown)

Possible codes:

(Read and Write property)

165.4.38 Contrast as Double

MBS Picture Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The contrast setting to use.
**Notes:**
The plugin will apply this setting on the next scan.
Scale the values available internally into a homogeneous range between -1000 and 1000. Make sure that a '0' value is available as the Current value when the Source starts up. If the Source’s range is asymmetric about the '0' value, set range maxima to 1000 and scale homogeneously from the '0' value in each direction. This will yield a positive range whose step size differs from the negative range’s step size.
TWCC_SUCCESS 0 Success
TWCC_BUMMER 1 Failure due to unknown causes
TWCC_LOWMEMORY 2 Not enough memory to perform operation
TWCC_NODS 3 No Data Source
TWCC_MAXCONNECTIONS 4 DS is connected to max possible applications
TWCC_OPERATIONERROR 5 DS or DSM reported error, application shouldn't
TWCC_BADCAP 6 Unknown capability
TWCC_BADPROTOCOL 9 Unrecognized MSG DG DAT combination
TWCC_BADVALUE 10 Data parameter out of range
TWCC_SEQERROR 11 DG DAT MSG out of expected sequence
TWCC_BADDEST 12 Unknown destination Application/Source in DSM_Entry
TWCC_CAPUNSUPPORTED 13 Capability not supported by source
TWCC_CAPBADOPERATION 14 Operation not supported by capability
TWCC_CAPSEQERROR 15 Capability has dependency on other capability
TWCC_FILEEXISTS 16 File System operation is denied (file is protected)
TWCC_DENIED 17 Operation failed because file already exists.
TWCC_FILENOTFOUND 18 File not found
TWCC_NOTEMPTY 19 Operation failed because directory is not empty
TWCC_PAPERJAM 20 The feeder is jammed
TWCC_PAPERDOUBLEFEED 21 The feeder detected multiple pages
TWCC_FILEWRITEERROR 22 Error writing the file (meant for things like disk full conditions)
TWCC_CHECKDEVICEONLINE 23 The device went offline prior to or during this operation

(Read and Write property)

165.4.39 DiscardBlankPages as Integer

MBS Picture Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Whether to have the scanner ask to discard blank pages.

**Notes:**
Value is -1 if you didn’t set it before.
This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable blank pages discarding. If the scanner does not support this feature, the scanner will ignore this setting.
(Read and Write property)

165.4.40 Duplex as Integer

MBS Picture Plugin, Plugin Version: 13.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to enable duplex when next scan starts.

**Notes:**
This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable duplex. If the scanner does not support duplex, the scanner will ignore this setting.
Value is -1 if not set, 0 to disable and 1 to enable.
(Read and Write property)
165.4.41 FeederEnabled as Integer

MBS Picture Plugin, Plugin Version: 13.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Whether to enable feeder when next scan starts. 
**Notes:**
This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable feeder. If the scanner does not support the feeder, the scanner will ignore this setting. 
Value is -1 if not set, 0 to disable and 1 to enable. 
(Read and Write property)

165.4.42 Gamma as Double

MBS Picture Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gamma correction value for the image data. 
**Notes:**
The plugin will apply this setting on the next scan. 
Default value 2.2. The setting is -10000 if not set. 
(Read and Write property)

165.4.43 Highlight as Double

MBS Picture Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specifies which value in an image should be interpreted as the lightest highlight. 
**Notes:**
The plugin will apply this setting on the next scan. 
All values lighter than this value will be clipped to this value. Whether lighter values are smaller or larger can be determined by examining the Current value of PixelFlavor. 
If more or less than 8 bits are used to describe the image, the actual data values should be normalized to fit within the 0-255 range. The normalization need not result in a homogeneous distribution if the original distribution was not homogeneous. 
Value can be between 0 and 255. 
Value can be between 0 and 255. 
Plugin uses value -10000 for undefined/default. 
(Read and Write property)
165.4.44 Lasterror as Integer

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The last error code.  
**Notes:** (Read and Write property)

165.4.45 Orientation as Integer

MBS Picture Plugin, Plugin Version: 13.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The orientation for the scanner.  
**Notes:**  
This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable feeder. If the scanner does not support the feeder, the scanner will ignore this setting.  
Value can be:

- 0 0 degree
- 1 90 degree
- 2 180 degree
- 3 270 degree
- 0 Portrait
- 3 Landscape

(Read and Write property)

165.4.46 Parent as Window

**Notes:** (Read and Write property)

165.4.47 PendingTransferCount as Integer

MBS Picture Plugin, Plugin Version: 13.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** How many pages are pending.  
**Notes:**
So when you transfer you can make a loop and run until PendingTransferCount is zero. PendingTransferCount may be -1 or 65535 for unknown number of pages. (Read and Write property)

**165.4.48 PixelType as Integer**

MBS Picture Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The pixel type requested. **Notes:** Value can be 0 for BW, 1 for Gray, 2 for RGB, 3 for Palette. The plugin can request als CMY (4), CMYK (5), YUV (6), YUVK (7) and CIEXYZ (8), but can’t currently decode those. Value is -1 if you didn’t set it before. This value is stored and next time you call Acquire the plugin will ask the scanner to use the given pixel type. If the scanner does not support this feature, the scanner will ignore this setting. (Read and Write property)

**165.4.49 ProvideSliceData as Boolean**

MBS Picture Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Whether to pass Memoryblock with data with Progress event for new rows arrived. **Notes:** (Read and Write property)

**165.4.50 ProvideSlicePicture as Boolean**

MBS Picture Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Whether to pass picture with Progress event for new rows arrived. **Notes:** (Read and Write property)

**165.4.51 ResX as Double**

MBS Picture Plugin, Plugin Version: 13.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The horizontal resolution for scanning. **Notes:** This value is stored and next time you call Acquire the plugin will ask the scanner to use this resolution. If the scanner does not support the resolution, the scanner will use the last valid setting. Use -1 to use the default setting.
165.4.52  ResY as Double

Notes: This value is stored and next time you call Acquire the plugin will ask the scanner to use this resolution. If the scanner does not support the resolution, the scanner will use the last valid setting. Use -1 to use the default setting.
(Read and Write property)

165.4.53 Shadow as Double

MBS Picture Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: Specifies which value in an image should be interpreted as the darkest shadow.
Notes: The plugin will apply this setting on the next scan. All values darker than this value will be clipped to this value.
Whether darker values are smaller or larger can be determined by examining the Current value of PixelFlavor.
Source
If more or less than 8 bits are used to describe the image, the actual data values should be normalized to fit within the 0-255 range. The normalization need not result in a homogeneous distribution if the original distribution was not homogeneous.
(Read and Write property)

165.4.54 DefaultDevice as TwainIdentityMBS

Notes: (Read and Write computed property)
165.4. CLASS TWAINMBS

165.4.55 Imagelayout as TwainImageLayoutMBS

MBS Picture Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Get/Set the image layout.
**Notes:**
LastError is set. DataSource must be open.
(Read and Write computed property)

165.4.56 Events

165.4.57 CloseRequest

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Closes a request.
**Notes:** Lasterror is set.

165.4.58 TransferEnded(pic as picture, ImageInfo as TwainImageInfoMBS, sliced as boolean, layout as TwainImageLayoutMBS)

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
The transfer finished.
**Notes:**
Pic: The final picture. Nil if sliced is true.
ImageInfo: Details about the image format.
Sliced: Whether the image was transferred in slices.

165.4.59 TransferProgress(percent as Double, dataRead as Int64, DataSize as Int64, ImageInfo as TwainImageInfoMBS, NewDataSize as Integer, NewData as Memoryblock, NewPicture as Picture, layout as TwainImageLayoutMBS, Columns as Integer, Rows as Integer, XOffset as Integer, YOffset as Integer)

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
The progress event.
**Notes:**
Percent: The percent value (0 to 100) of the progress.
dataRead: Number of bytes read.
DataSize: Total size of image in bytes.
ImageInfo: Details about the image format.
NewDataSize: The number of bytes received.
NewData: The memoryblock for the new data. Use NewDataSize to copy right amount of data as this memoryblock has no size value set.
NewPicture: The picture for the new data.
Layout: The image layout.
Columns: Number of columns got in this slice.
Rows: Number of rows got in this slice.
XOffset: Column start for this slice.
YOffset: Row start for this slice.

NewData is only valid if you set ProvideSliceData to true.
NewPicture is only valid if you set ProvideSlicePicture to true.

165.4.60 TransferReady

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
Called to tell you that a transfer is waiting.
**Notes:**
The user pressed button to start scan.
Please call TransferImage method when you are ready.

165.4.61 TransferStarted(DataSize as Int64, ImageInfo as TwainImageInfoMBS, layout as TwainImageLayoutMBS) as boolean

MBS Picture Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:**
A transfer started.
**Notes:**
DataSize total number of bytes expected.
ImageInfo: details on the image we receive.

You can return true to have the plugin not created one big picture.
A 42 inch scanner normally creates huge images, so you only can process them in slices.

165.4.62 Constants

165.4.63 TWCY_AFGHANISTAN = 1001

(Read and Write property)

165.5.9 MinorNum as Integer

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:**
The incremental revision number of your application or Source.
**Notes:**
e.g. The 1 in ”version 2.1”.
(Read and Write property)
Chapter 166

Unsanity Smart Crash Reporter

166.1 module UnsanitySmartCrashReporterMBS

166.1.1 module UnsanitySmartCrashReporterMBS

MBS MacOSX Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Contains API definitions to use with Smart Crash Reports.

**Notes:**

See the Unsanity Smart Crash Reports SDK for more details.

Smart Crash Reports is an enhancement for the Apple’s CrashReporter application introduced in Mac OS X 10.4. It allows 3rd party developers to register their own match specifiers, and if the crash log the user is about to submit contains the match specifier, the crash log will be sent to the developer as well as Apple. This greatly enhances the user experience of the OS, and allows developers to receive crashes and improve their software in a timely manner.

Smart Crash Reports requires no Application Enhancer or similar “patching” frameworks users have to install; they operate on the InputManager mechanism that built-in Mac OS X.

Smart Crash Reports is completely free to use for both users and developers; Unsanity is providing it as a service to the community being certain it will benefit all the users on the platform.

How does Smart Crash Reports work?
Whenever an application crashes on user’s computer and they click on the Report... button, Smart Crash Reports analyzes the crash log that is about to be submitted to Apple. If the crash log is determined to be related to a developer that registered the application or product (Contextual Menu Module, InputManager, or any other type of system plugin), then the user is given an option to submit the bug report to both that developer and Apple, thus giving the developer the chance to fix the bug in the crashed product in a timely manner.

19655
manner. For developers, there is two ways to make Smart Crash Reports recognize your product. First, and probably the simplest one, is to add a couple of new keys into the application’s Info.plist file that instruct Smart Crash Reports what to do in case that application crashes. However, this method only works for stand-alone applications and not plugins. Second method involves using of the supplied API calls to register a MatchSpecifier with the system. A match specifier is a simple string (no wildcards or regexp) that contains full or partial name of developer product(s) CFBundleIdentifier (for example, "com.somecompany."). When an application crashes on user’s computer, Smart Crash Reports system analyzes the crashed thread of the crash log to determine if it contains any of the match specifiers registered with it. If so, the crash is likely related to the developer who registered the match specifier, so Smart Crash Reports takes the appropriate action from there on.

How Developer Receives The Crash Reports
Developer can receive the crash reports that Smart Crash Reports detected as belonging to them in either of two ways:

- By E-Mail to the address provided during the match specifier registration (Unsanity server will handle the mailing for you)
- By a custom CGI script on your web server that processes CrashReporter logs

So, How to Make My Application Work With Smart Crash Reports so I Receive Crash Logs?
If you develop an application and would like to simply receive all the crash logs related to it, do this:

Obtain an E-mail Ticket ID for the E-mail you wish to receive reports at by going to the following URL: http://www.unsanity.com/goto/email-ticket/.
Add the following keys to your application Info.plist:

```xml
<key>SmartCrashReports_CompanyName</key>
<string>Your Company Name</string>
<key>SmartCrashReports_EmailTicket</key>
<string>SCR-XXXXXXXX</string>
```
Replace "Your Company Name" with a readable (short) company name, and "SCR-XXXXXXXX" with the Email Ticket ID you will receive in the E-mail after performing Step 1.
You're all done! If you’d like to use your own CGI to process the crash logs, replace SmartCrashReports_EmailTicket key with the SmartCrashReports_URL key.
Now your application is successfully registered with the Smart Crash Reports system and you will receive crash logs for it in the mail.

If you are developing a plugin, InputManager, and whatnot, you have to use the API provided to register your MatchSpecifier:

Download the Smart Crash Reports SDK. It will contain two files (among others), SmartCrashReportsAPI.o and SmartCrashReportsAPI.h. Add them to your project.
Obtain an E-mail Ticket ID for the E-mail you wish to receive reports at by going to the following URL: http://www.unsanity.com/goto/email-ticket/.
Somewhere in your application, or plugin, add the following line:
RegisterMatchSpecifier("", "Your Company Name", ",", "SCR-XXXXXXXX", ",");
Replace "Your Company Name" with a readable (short) company name, and "SCR-XXXXXXXX" with the
Email Ticket ID you will receive in the E-mail after performing Step 2.
Note: The best way to call this is after your application has finished launching, such as applicationDidFinishLaunching: in the NSApp delegate for Cocoa apps, or
whatever for any other types of projects.
There’s no Step 4! Now your product is successfully registered with the Smart Crash Reports system and
you will receive crash logs containing the match specifier in the crashed thread in the mail.

Notes: It is not necessary to register with Smart Crash Reports on every application launch; once you reg-
ister, it is permanent and will exist until user deletes the SCR database somehow. However, it takes little
speed/memory overhead so you can safely call it on every launch to avoid doing ’is registered already’ checks
and whatnot.

How to Make a CGI to Accept Crash Reports On Your Site?
If you wish to receive crash reports on your Web site, you can implement the custom Submit URL script
that user’s CrashReporter.app will contact directly. However, keep in mind that the following criteria should
be met:

Your web server script has to be in the same place over next several years, at the very least, to allow delivery
of crash reports to you.
You are responsible for adjusting the web script if the format CrashReporter.app sends crash reports in
changes.
Your web server should be accessible 24/7 and be on a reasonably fast connection to not delay user’s sub-
mission process.

For the above reasons, it is recommended to obtain the E-mail ticket from Unsanity and use the E-mail
feature of Smart Crash Reports. Unsanity will make sure the server is accessible, knows how to parse all
formats of submissions, and will safely redirect the crash reports to the email you provide.
If your own Web script is still the way you want to go, here is the list of keys currently known to be passed
to the script by the CrashReporter.app in a POST form data:

url_from: contains the subject of the crash report, usually "<Some Application>crash"
feedback_comments: user comments they entered in the additional info fields
bug_type: unknown constant, probably determines which POST elements are available; presently 9.
app_name: full crashed application name
app_version: version of the crashed application
os_version: Mac OS X version, in form 10.X.X:BUILD (for example, "10.4.2:8C46")
machine_config: Computer configuration string, for example, "PowerMac7,2 (2048 MB)"
page_source: Contains BASE64-encoded crash report
system_profile: Contains BASE64-encoded property list with a brief system profile of the user’s system.

Please note that these form keys are subject to change by Apple, so it is your responsibility to adjust the
scripts on your Web servers if such thing happens.

What Are The Licensing Terms for Smart Crash Reports and its SDK?
You are free to use and distribute Smart Crash Reports enabled products freely in any form without prior
permission from Unsanity, LLC. If you like the system and would like to return the favor Unsanity is doing
to the developer community, link to Smart Crash Reports somewhere on your SCR-enabled product page:
This product uses http://www.unsanity.com/smartcrashreports/ by Unsanity.

166.1.2 Methods

166.1.3 CanInstall as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Check whether this library can install Smart Crash Reports on user’s system.
**Notes:**
Returns TRUE if Smart Crash Reports can be installed, or FALSE if they are already installed (of the same
or newer version).
See the Unsanity Smart Crash Reports SDK for more details.
See also:

- 166.1.4 CanInstall(byref AuthenticationWillBeRequired as boolean) as Integer

166.1.4 CanInstall(byref AuthenticationWillBeRequired as boolean) as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Check whether this library can install Smart Crash Reports on user’s system.
**Notes:**
outOptionalAuthenticationWillBeRequired: the Boolean the param points to will be set to TRUE if an
authentication will be required to install Smart Crash Reports.
Returns TRUE if Smart Crash Reports can be installed, or FALSE if they are already installed (of the same
or newer version).
See the Unsanity Smart Crash Reports SDK for more details.
See also:

- 166.1.3 CanInstall as Integer

166.1.5 Install(inInstallFlags as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Attempt to install Smart Crash Reports on user’s system.
**Notes:**
166.1. MODULE UNSANITYSMARTCRASHREPORTERMBS

Presents a dialog asking the user if he/she want to install Smart Crash Reports, along with a link for more information, and Don’t Show Again checkbox, and, if confirmed by the user, installs Smart Crash Reports from the library’s archive, if possible. The confirmation dialog will block the host application until the user makes the choice.

inInstallFlags: A bit mask containing the installation options.
Returns an error code.

See the Unsanity Smart Crash Reports SDK for more details.

166.1.6 InstallableVersion as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Get the version of Smart Crash Reports that this library can install.
**Notes:**
Returns an unsigned integer containing the version of Smart Crash Reports (in CFBundleGetVersionNumber() format) bundled in this library.
See the Unsanity Smart Crash Reports SDK for more details.

166.1.7 InstalledVersion as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Get the version of Smart Crash Reports installed on user’s system.
**Notes:**
Returns an unsigned integer containing the version of Smart Crash Reports (in CFBundleGetVersionNumber() format), or 0 if Smart Crash Reports are not installed.
See the Unsanity Smart Crash Reports SDK for more details.
See also:
• 166.1.8 InstalledVersion(byref IsInstalledGlobally as boolean) as Integer

166.1.8 InstalledVersion(byref IsInstalledGlobally as boolean) as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Get the version of Smart Crash Reports installed on user’s system.
**Notes:**
IsInstalledGlobally: The Boolean the param points to will hold TRUE if Smart Crash Reports are installed for all users, or FALSE if they are installed for the current user only.
Returns an unsigned integer containing the version of Smart Crash Reports (in CFBundleGetVersionNumber() format), or 0 if Smart Crash Reports are not installed.
See the Unsanity Smart Crash Reports SDK for more details.

See also:

- 166.1.7 InstalledVersion as Integer

166.1.9  IsMatchSpecifierRegistered(inMatchString as string) as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Query whether the match specifier is registered with the Smart Crash Reports system.

**Notes:**
Queries whether the product is registered with the Smart Crash Reports system.

inMatchString: The match string to query for. Note that SCR will perform partial matches search, too, so for example if you have "com.mycompany" registered, and you query against "com.mycompany.otherapp", this function will return positive result.

See the Unsanity Smart Crash Reports SDK for more details.
See also:

- 166.1.10 IsMatchSpecifierRegistered(inMatchString as string, byref RealMatchString as string) as Integer

166.1.10  IsMatchSpecifierRegistered(inMatchString as string, byref RealMatchString as string) as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Query whether the match specifier is registered with the Smart Crash Reports system.

**Notes:**
Queries whether the product is registered with the Smart Crash Reports system.

inMatchString: The match string to query for. Note that SCR will perform partial matches search, too, so for example if you have "com.mycompany" registered, and you query against "com.mycompany.otherapp", this function will return positive result.

outOptionalRealMatchString: This variable will contain the "real" match string that SCR contains in the database. You can use it in calls to UnregisterProduct later, if you want.

**Result:**
0: The match string you have provided is not registered with SCR.
1: The match string you have provided is registered with SCR.
-1: inMatchString is "" or function not available.
See the Unsanity Smart Crash Reports SDK for more details.

See also:

- 166.1.9 IsMatchSpecifierRegistered(inMatchString as string) as Integer

166.1.11 RegisterMatchSpecifier(inMatchString as string, inCompanyName as string, inSubmissionURL as string, inSubmissionEmailTicket as string, inOptionalCommentsTemplate as string="") as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Registers your match specifier with the Smart Crash Reports system.

**Notes:**

Register your match specifier with the Smart Crash Reports system. Once this call is done, crash reports containing inMatchString in the crashed thread will be submitted to you, either to the submission URL (you have to implement the script on your web server), or to the submission email (Unsanity server will forward the report to you).

- **inMatchString:** The product ID string to match or "" to use the current bundle identifier. Normally, this is a part of a CFBundleIdentifier of your product. For example, if your product CFBundleIdentifier is "com.mycompany.myapp", it is a good idea to set inProductIDMatchString to "com.mycompany.", since it will catch all of the products of your company. If you pass "" to this argument, an attempt to use CFBundleIdentifier from the main bundle will be used, which is handy for most applications out there, but not acceptable for Contextual Menu Modules, Preference Panes and other plugins.

- **inCompanyName:** The company name in user-readable format. Smart Crash Reports will substitute "Apple" with this string, so make sure it's not too long. Example: "My Company"

- **inSubmissionURL:** The full URL to the script on your Web server that will handle the submissions, or "" if you prefer the crash report to be sent to you via email (in this case, inSubmissionEmail must be not ""). Example: "http://www.mycompany.com/cgi-bin/processor.cgi"

- **inSubmissionEmailTicket:** The email ticket for email you wish to receive crash report at, or "" if you are handling it yourself on your web server. If this is set, Unsanity server will handle the submission and email you the crash log. Important: this is NOT the email address. It is a unique email ticket that you have to register with Unsanity by going to http://www.unsanity.com/goto/email-ticket/. This is done for email verification purposes, and also to not expose your real email to end users, if they peek inside of the SCR database somehow.

- **inOptionalCommentsTemplate:** this string will be inserted into the "Description" field of the CrashReporter dialog. This can be useful if you want to put something like "Put your email here if you wish to be contacted by the developer regarding this crash log", or anything else.

Result codes:
noErr=0 Registration successful. If there is already such a match specifier registered, it is replaced with the fresh information supplied to this call.

paramErr=-50 inSubmissionURL and inSubmissionEmailTicket are "", or inMatchString is "", or inCompanyName is ""

cNoMemErr=-152 Not enough memory to perform selected operation.

permErr=-54 Not enough permissions to write changes to disk.

bdNamErr=37 The match string is malformed, or too wide to be accepted (don’t try to register "com.", etc!)

See the Unsanity Smart Crash Reports SDK for more details.

166.1.12 UnregisterMatchSpecifier(inMatchString as string) as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Unregisters your product(s) with the Smart Crash Reports system.

**Notes:**

Unregisters your product(s) with the Smart Crash Reports system. Performing this call will cause Smart Crash Reports to stop submitting bug reports for the inMatchString provided. Note that for this call to succeed, inMatchString must exactly match the one used in call to RegisterProduct.

inMatchString: The match string to unregister. This must be the same match string as used in the RegisterProduct call before.

**Result:**

noErr=0 Unregistration successful.

paramErr=-50 inMatchString is ""

cNoMemErr=-152 Not enough memory to perform selected operation.

permErr=-54 Not enough permissions to write changes to disk.

fnfErr=-43 The provided inMatchString was not found in the mart Crash Reports database. You can safely ignore this error, as it means that the match string you’ve provided does not exist already.

See the Unsanity Smart Crash Reports SDK for more details.
166.1.3  Constants

166.1.14  kUnsanitySCR_DoNotPresentInstallUI=4

MBS MacOSX Plugin, Plugin Version: 8.2. **Function:** One of the install flags.

**Notes:**
If set, the confirmation dialog shown to the user will not be used and the silent installation will be attempted.
If not set, the confirmation dialog will be shown to the user asking whether he/she wants to install Smart Crash Reports or not. The confirmation dialog will block the application until dismissed.

See the Unsanity Smart Crash Reports SDK for more details.

166.1.15  kUnsanitySCR_GlobalInstall=2

MBS MacOSX Plugin, Plugin Version: 8.2. **Function:** One of the install flags.

**Notes:**
If set, a global installation will be attempted (provided the user can authenticate). If not set, Smart Crash Reports will be installed for current user only.

See the Unsanity Smart Crash Reports SDK for more details.

166.1.16  kUnsanitySCR_InfoPlist_CommentsTemplate="SmartCrashReports_CommentsTemplate"

MBS MacOSX Plugin, Plugin Version: 8.2. **Function:** One of the keys defined for the Info.plist of the Application.

**Notes:** See the Unsanity Smart Crash Reports SDK for more details.

166.1.17  kUnsanitySCR_InfoPlist_CompanyName="SmartCrashReports_CompanyName"

MBS MacOSX Plugin, Plugin Version: 8.2. **Function:** One of the keys defined for the Info.plist of the Application.

**Notes:** See the Unsanity Smart Crash Reports SDK for more details.

166.1.18  kUnsanitySCR_InfoPlist_SubmissionEmailTicket="SmartCrashReports_EmailTicket"

MBS MacOSX Plugin, Plugin Version: 8.2. **Function:** One of the keys defined for the Info.plist of the Application.
Notes: See the Unsanity Smart Crash Reports SDK for more details.

166.1.19  kUnsanitySCR_InfoPlist_SubmissionURL="SmartCrashReports_URL"

MBS MacOSX Plugin, Plugin Version: 8.2. Function: One of the keys defined for the Info.plist of the Application.
Notes: See the Unsanity Smart Crash Reports SDK for more details.

166.1.20  kUnsanitySCR_Install_AuthFailure=-111

MBS MacOSX Plugin, Plugin Version: 8.2. Function: One of the result codes returned from the Install() function.
Notes:
Could not install because user failed to authenticate for the global install.

See the Unsanity Smart Crash Reports SDK for more details.

166.1.21  kUnsanitySCR_Install_InstalledGlobally=-13

MBS MacOSX Plugin, Plugin Version: 8.2. Function: One of the result codes returned from the Install() function.
Notes:
Smart Crash Reports are already installed globally and this API can not install into /Library as it would require additional fiddling with the authorization which is beyond the scope of this API.

See the Unsanity Smart Crash Reports SDK for more details.

166.1.22  kUnsanitySCR_Install_NoError=0

MBS MacOSX Plugin, Plugin Version: 8.2. Function: One of the result codes returned from the Install() function.
Notes:
No error. Installation succeeded.

See the Unsanity Smart Crash Reports SDK for more details.
166.1.23  kUnsanitySCR_Install_NoPermissions=-54

MBS MacOSX Plugin, Plugin Version: 8.2. **Function:** One of the result codes returned from the Install() function.
**Notes:**
Could not install because of file permission issues.

See the Unsanity Smart Crash Reports SDK for more details.

166.1.24  kUnsanitySCR_Install_OutOfMemory=-108

MBS MacOSX Plugin, Plugin Version: 8.2. **Function:** One of the result codes returned from the Install() function.
**Notes:**
Could not allocate needed memory for the installation.

See the Unsanity Smart Crash Reports SDK for more details.

166.1.25  kUnsanitySCR_Install_UserCancelled=-15

MBS MacOSX Plugin, Plugin Version: 8.2. **Function:** One of the result codes returned from the Install() function.
**Notes:**
The user cancelled.

See the Unsanity Smart Crash Reports SDK for more details.

166.1.26  kUnsanitySCR_Install_WillNotInstall=-14

MBS MacOSX Plugin, Plugin Version: 8.2. **Function:** One of the result codes returned from the Install() function.
**Notes:**
Could not install because a newer or same version of Smart Crash Reports is already installed.

See the Unsanity Smart Crash Reports SDK for more details.
Chapter 167

USB

167.1 class HIDAPIDeviceInfoMBS

167.1.1 class HIDAPIDeviceInfoMBS

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for device information.

167.1.2 Properties

167.1.3 InterfaceNumber as Integer

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The USB interface which this logical device represents.
**Notes:**
Valid on both Linux implementations in all cases, and valid on the Windows implementation only if the device contains more than one interface.
(Read only property)

167.1.4 ManufacturerString as String

**Notes:** (Read only property)
167.1.5  NextDevice as HIDAPIDeviceInfoMBS

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Next device.
**Notes:** (Read only property)

167.1.6  Path as String

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Platform-specific device path.
**Notes:** (Read only property)

167.1.7  ProductID as Integer

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Device Product ID.
**Notes:** (Read only property)

167.1.8  ProductString as String

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Product string.
**Notes:** (Read only property)

167.1.9  ReleaseNumber as Integer

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Device Release Number in binary-coded decimal, also known as Device Version Number.
**Notes:** (Read only property)

167.1.10  SerialNumber as String

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Serial Number.
**Notes:** (Read only property)
167.1.11 Usage as Integer

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Usage for this Device/Interface (Windows/Mac only).
**Notes:** (Read only property)

167.1.12 UsagePage as Integer

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Usage Page for this Device/Interface (Windows/Mac only).
**Notes:** (Read only property)

167.1.13 VendorID as Integer

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Device Vendor ID.
**Notes:** (Read only property)
167.2 class HIDAPIDeviceMBS

167.2.1 class HIDAPIDeviceMBS

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for a HIDAPI device.
**Notes:**
For HIDAPI see website:
https://github.com/signal11/hidapi

The MBS Plugin includes a copy of hidapi for Mac, Windows and Linux.
The linux version needs libudev installed.

You can optionally load a different version of hidapi with LoadLibrary methods.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

167.2.2 Methods

167.2.3 Close

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Close a HID device.

167.2.4 Constructor

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

167.2.5 Enumerate(VendorID as Integer = 0, ProduceID as Integer = 0) as HIDAPIDeviceInfoMBS

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Enumerate the HID Devices.
**Notes:** This function returns a linked list of all the HID devices attached to the system which match VendorID and ProduceID. If VendorID is set to 0 then any vendor matches. If ProduceID is set to 0 then any product matches. If VendorID and ProduceID are both set to 0, then all HID devices will be returned.
167.2.6 GetFeatureReport(ReportID as Integer, MaxLength as Integer) as MemoryBlock

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get a feature report from a HID device.

**Notes:**
Set the first byte of Data to the Report ID of the report to be read. Make sure to allow space for this extra byte in data. Upon return, the first byte will still contain the Report ID, and the report data will start in data.UInt8(1).

ReportID: The report ID to read.

This function returns the number of bytes read plus one for the report ID (which is still in the first byte), or -1 on error.

167.2.7 IndexedString(Index as Integer, MaxLen as Integer = 1024) as String

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get a string from a HID device, based on its string index.

**Notes:**
Index: The index of the string to get.
maxlen: The maximum length for read buffer.
Returns text read.

167.2.8 Init as Integer

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Initialize the HIDAPI library.

**Notes:**
This function initializes the HIDAPI library. Calling it is not strictly necessary, as it will be called automatically by Enumerate() and any of the Open*() functions if it is needed. This function should be called at the beginning of execution however, if there is a chance of HIDAPI handles being opened by different threads simultaneously.
This function returns 0 on success and -1 on error.

167.2.9 LoadError as String

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The load error message.
167.2.10  LoadLibrary(File as FolderItem) as boolean

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the library.
**Notes:**
Returns true on success.
You can load a custom libhidapi.dylib (Mac), libhidapi.so (Linux) or libhidapi.dll (Windows).
See also:

- 167.2.11 LoadLibrary(Path as string) as boolean

167.2.11  LoadLibrary(Path as string) as boolean

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the library.
**Notes:**
Returns true on success.
You can load a custom libhidapi.dylib (Mac), libhidapi.so (Linux) or libhidapi.dll (Windows).
See also:

- 167.2.10 LoadLibrary(File as FolderItem) as boolean

167.2.12  Open(VendorID as Integer, ProduceID as Integer, SerialNumber as String = "") as HIDAPIDeviceMBS

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Open a HID device using a Vendor ID (VID), Product ID (PID) and optionally a serial number.
**Notes:**
If SerialNumber is "", the first device with the specified VID and PID is opened.
VendorID: The Vendor ID (VID) of the device to open.
ProduceID: The Product ID (PID) of the device to open.
SerialNumber: The Serial Number of the device to open (Optionally ")

This function returns a pointer to a HIDAPIDeviceMBS object on success or nil on failure.

167.2.13  OpenPath(path as string) as HIDAPIDeviceMBS

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Open a HID device by its path name.
**Notes:**
The path name be determined by calling Enumerate(), or a platform-specific path name can be used (eg: /dev/hidraw0 on Linux).
Path: The path name of the device to open.
This function returns a pointer to a HIDAPIDeviceMBS object on success or nil on failure.

167.2.14 Read(MaxLength as Integer) as MemoryBlock

Notes:
Input reports are returned to the host through the INTERRUPT IN endpoint. The first byte will contain the Report number if the device uses numbered reports.
MaxLength: The number of bytes to read. For devices with multiple reports, make sure to read an extra byte for the report number.
This function returns the actual number of bytes read and -1 on error. If no packet was available to be read and the handle is in non-blocking mode, this function returns 0.

167.2.15 ReadTimeOut(MaxLength as Integer, TimeoutMS as Integer) as MemoryBlock

Notes:
Input reports are returned to the host through the INTERRUPT IN endpoint. The first byte will contain the Report number if the device uses numbered reports.
MaxLength: The number of bytes to read. For devices with multiple reports, make sure to read an extra byte for the report number.
TimeoutMS: timeout in milliseconds or -1 for blocking wait.
This function returns the actual number of bytes read and -1 on error. If no packet was available to be read within the timeout period, this function returns 0.
167.2.16 SendFeatureReport(data as MemoryBlock) as Integer

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Send a Feature report to the device. **Notes:**

Feature reports are sent over the Control endpoint as a Set_Report transfer. The first byte of Data must contain the Report ID. For devices which only support a single report, this must be set to 0. The remaining bytes contain the report data. Since the Report ID is mandatory, calls to SendFeatureReport() will always contain one more byte than the report contains. For example, if a hid report is 16 bytes long, 17 bytes must be passed to SendFeatureReport(): the Report ID (or 0, for devices which do not use numbered reports), followed by the report data (16 bytes). In this example, the length passed in would be 17.

data The data to send, including the report number as the first byte.

This function returns the actual number of bytes written and -1 on error. See also:

- 167.2.17 SendFeatureReport(data as String) as Integer

167.2.17 SendFeatureReport(data as String) as Integer

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Send a Feature report to the device. **Notes:**

Feature reports are sent over the Control endpoint as a Set_Report transfer. The first byte of Data must contain the Report ID. For devices which only support a single report, this must be set to 0. The remaining bytes contain the report data. Since the Report ID is mandatory, calls to SendFeatureReport() will always contain one more byte than the report contains. For example, if a hid report is 16 bytes long, 17 bytes must be passed to SendFeatureReport(): the Report ID (or 0, for devices which do not use numbered reports), followed by the report data (16 bytes). In this example, the length passed in would be 17.

data The data to send, including the report number as the first byte.

This function returns the actual number of bytes written and -1 on error. See also:

- 167.2.16 SendFeatureReport(data as MemoryBlock) as Integer

167.2.18 Shutdown as Integer

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finalize the HIDAPI library.
167.2. CLASS HIDAPIDeviceMBS

Notes:
This function frees all of the static data associated with HIDAPI. It should be called at the end of execution to avoid memory leaks.
This function returns 0 on success and -1 on error.

167.2.19 Write(data as MemoryBlock) as Integer

Notes:
The first byte of data must contain the Report ID. For devices which only support a single report, this must be set to 0x0. The remaining bytes contain the report data. Since the Report ID is mandatory, calls to Write() will always contain one more byte than the report contains. For example, if a hid report is 16 bytes long, 17 bytes must be passed to Write(), the Report ID (or 0x0, for devices with a single report), followed by the report data (16 bytes). In this example, the length passed in would be 17.
Write() will send the data on the first OUT endpoint, if one exists. If it does not, it will send the data through the Control Endpoint (Endpoint 0).

data: The data to send, including the report number as the first byte.

This function returns the actual number of bytes written and -1 on error.
See also:

- 167.2.20 Write(data as String) as Integer

167.2.20 Write(data as String) as Integer

Notes:
The first byte of data must contain the Report ID. For devices which only support a single report, this must be set to 0x0. The remaining bytes contain the report data. Since the Report ID is mandatory, calls to Write() will always contain one more byte than the report contains. For example, if a hid report is 16 bytes long, 17 bytes must be passed to Write(), the Report ID (or 0x0, for devices with a single report), followed by the report data (16 bytes). In this example, the length passed in would be 17.
Write() will send the data on the first OUT endpoint, if one exists. If it does not, it will send the data through the Control Endpoint (Endpoint 0).

data: The data to send, including the report number as the first byte.
This function returns the actual number of bytes written and -1 on error.

See also:

- 167.2.19 Write(data as MemoryBlock) as Integer

167.2.21 Properties

167.2.22 DeviceHandle as Integer

MBS USB Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The device handle used.
**Notes:**
For Windows a HANDLE to the open device, for Mac a IOHIDDeviceRef reference and Linux the handle from open function.
(Read only property)

167.2.23 Error as String

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get a string describing the last error which occurred.
**Notes:**
This function returns a string containing the last error which occurred or "" if none has occurred.
(Read only property)

167.2.24 FeatureReportLength as Integer

MBS USB Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:**
The length of a feature report.
**Notes:**
Not implemented for Linux.
Returns -1 if unknown.
On Mac this is more the maximum report length.
(Read only property)

167.2.25 Handle as Integer

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The internal object reference.
167.2. CLASS HIDAPIDEVICEMBS

Notes: (Read only property)

167.2.26 InputReportLength as Integer

MBS USB Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The length of an input report.
**Notes:**
Not implemented for Linux.
Returns -1 if unknown.
On Mac this is more the maximum report length.
(Read only property)

167.2.27 ManufacturerString as String

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Manufacturer String from a HID device.
**Notes:** (Read only property)

167.2.28 NonBlocking as Boolean

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set the device handle to be non-blocking.
**Notes:**
In non-blocking mode calls to Read() will return immediately with a value of 0 if there is no data to be read.
In blocking mode, Read() will wait (block) until there is data to read before returning.
Nonblocking can be turned on and off at any time.

Value true: enable or not the nonblocking reads.
Value false: to disable nonblocking.
(Read and Write property)

167.2.29 OutputReportLength as Integer

MBS USB Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The length of an output report.
**Notes:**
Not implemented for Linux.
Returns -1 if unknown.
On Mac this is more the maximum report length.
(Read only property)

167.2.30  ProductString as String

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The Product String from a HID device.
**Notes:** (Read only property)

167.2.31  SerialNumber as String

MBS USB Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The Serial Number String from a HID device.
**Notes:** (Read only property)
167.3. CLASS LIBUSBCONFIGDESCRIPTORMBS

167.3 class LibUSBConfigDescriptorMBS

167.3.1 class LibUSBConfigDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class representing the standard USB configuration descriptor. **Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

167.3.2 Methods

167.3.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

167.3.4 GetInterface(index as Integer) as LibUSBInterfaceMBS

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries interface by index.

167.3.5 Properties

167.3.6 AttributesBitmap as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Configuration characteristics. **Notes:** (Read only property)

167.3.7 Configuration as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Index of string descriptor describing this configuration. **Notes:** (Read only property)
167.3.8 ConfigurationValue as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Identifier value for this configuration. **Notes:** (Read only property)

167.3.9 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Descriptor type. **Notes:** (Read only property)

167.3.10 extra as MemoryBlock

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Extra descriptors. **Notes:** (Read only property)

167.3.11 extraLength as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Length of the extra descriptors, in bytes. **Notes:** (Read only property)

167.3.12 InterfaceDescriptors as Variant

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Array of interfaces supported by this configuration. **Notes:** (Read only property)

167.3.13 Length as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Size of this descriptor (in bytes) **Notes:** (Read only property)
167.3.14 MaxPower as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maximum power consumption of the USB device from this bus in this configuration when the device is fully operation.

**Notes:**
Expressed in units of 2 mA when the device is operating in high-speed mode and in units of 8 mA when the device is operating in super-speed mode.
(Read only property)

167.3.15 NumInterfaces as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of interfaces supported by this configuration.

**Notes:** (Read only property)

167.3.16 TotalLength as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Total length of data returned for this configuration.

**Notes:** (Read only property)
167.4 class LibUSBDeviceDescriptorMBS

167.4.1 class LibUSBDeviceDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A class representing the standard USB device descriptor.
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

167.4.2 Methods

167.4.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

167.4.4 Properties

167.4.5 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Descriptor type.
**Notes:** (Read only property)

167.4.6 DeviceClass as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
USB-IF class code for the device.
**Notes:** (Read only property)

167.4.7 DeviceProtocol as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
USB-IF protocol code for the device, qualified by the DeviceClass and DeviceSubClass values.
**Notes:** (Read only property)
167.4.8 DeviceReleaseNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Device release number in binary-coded decimal.
**Notes:** (Read only property)

167.4.9 DeviceSubClass as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** USB-IF subclass code for the device, qualified by the DeviceClass value.
**Notes:** (Read only property)

167.4.10 IndexManufacturer as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Index of string descriptor describing manufacturer.
**Notes:** (Read only property)

167.4.11 IndexProduct as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Index of string descriptor describing product.
**Notes:** (Read only property)

167.4.12 IndexSerialNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Index of string descriptor containing device serial number.
**Notes:** (Read only property)

167.4.13 Length as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Size of this descriptor (in bytes).
**Notes:** (Read only property)
167.4.14 MaxPacketSize0 as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maximum packet size for endpoint 0.  
**Notes:** (Read only property)

167.4.15 NumConfigurations as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of possible configurations.  
**Notes:** (Read only property)

167.4.16 ProductID as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** USB-IF product ID.  
**Notes:** (Read only property)

167.4.17 USBReleaseNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** USB specification release number in binary-coded decimal.  
**Notes:** (Read only property)

167.4.18 VendorID as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** USB-IF vendor ID.  
**Notes:** (Read only property)

167.4.19 Constants

167.4.20 kClassApplication = & hfe

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the USB class constants.  
**Notes:** Application
167.4.21  kClassAudio = 1

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the USB class constants.  
**Notes:** Audio

167.4.22  kClassComm = 2

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the USB class constants.  
**Notes:** Comm

167.4.23  kClassContentSecurity = 13

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the USB class constants.  
**Notes:** Security

167.4.24  kClassData = 10

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the USB class constants.  
**Notes:** Data

167.4.25  kClassDiagnosticDevice = & hdc

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the USB class constants.  
**Notes:** Diagnostic Device

167.4.26  kClassHID = 3

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the USB class constants.  
**Notes:** HID

167.4.27  kClassHUB = 9

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the USB class constants.  
**Notes:** HUB
167.4.28  \( \text{kClassImage} = 6 \)

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the USB class constants.  
**Notes:** Image

167.4.29  \( \text{kClassMassStorage} = 8 \)

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the USB class constants.  
**Notes:** Storage

167.4.30  \( \text{kClassPerInterface} = 0 \)

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the USB class constants.  
**Notes:** Classes per Interface

167.4.31  \( \text{kClassPersonalHealthcare} = 15 \)

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the USB class constants.  
**Notes:** Personal Healthcare

167.4.32  \( \text{kClassPhysical} = 5 \)

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the USB class constants.  
**Notes:** Physical

167.4.33  \( \text{kClassPrinter} = 7 \)

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the USB class constants.  
**Notes:** Printer

167.4.34  \( \text{kClassPTP} = 6 \)

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the USB class constants.  
**Notes:** PTP
167.4. CLASS LIBUSBDEVICESERSCRIPTORMBS

167.4.35  kClassSmartCard = 11

MBS USB Plugin, Plugin Version: 18.1. Function: One of the USB class constants. Notes: SmartCard

167.4.36  kClassVendorSpecific = 255

MBS USB Plugin, Plugin Version: 18.1. Function: One of the USB class constants. Notes: Vendor Specific

167.4.37  kClassVideo = 14

MBS USB Plugin, Plugin Version: 18.1. Function: One of the USB class constants. Notes: Video

167.4.38  kClassWireless = & he0

MBS USB Plugin, Plugin Version: 18.1. Function: One of the USB class constants. Notes: Wireless
167.5 class LibUSBDeviceMBS

167.5.1 class LibUSBDeviceMBS

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a device.

**Notes:**

This is both for a device as general and an open connection.

LibUSB abstracts on Mac, Windows and Linux for using USB devices. So far it’s the best generic USB interface we have.

You need libUSB dylib (mac), dll (Windows) and so (Linux) files from LibUSB. For Linux the LibUSB library is usually preinstalled with a LibUSB package, so the plugin finds it automatically.

167.5.2 Methods

167.5.3 AttachKernelDriver(interfaceNumber as Integer)

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Re-attach an interface’s kernel driver, which was previously detached using libusb_detach_kernel_driver().

**Notes:**

This call is only effective on Linux and returns kErrorNotSupported on all other platforms.

This functionality is not available on Darwin or Windows.

**Parameters:**

interfaceNumber: the interface to attach the driver from

LastError is set:

0 on success
kErrorNotFound if no kernel driver was active
kErrorInvalidParam if the interface does not exist
kErrorNoDevice if the device has been disconnected
kErrorNotSupported on platforms where the functionality is not available
kErrorBusy if the driver cannot be attached because the interface is claimed by a program or driver
another error code on other failure
167.5.4 BulkTransfer(endpoint as Integer, data as Ptr, Length as Integer, byref ActualLength as Integer, Timeout as Integer)

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Perform a USB bulk transfer.

**Notes:**

The direction of the transfer is inferred from the direction bits of the endpoint address.

For bulk reads, the length field indicates the maximum length of data you are expecting to receive. If less data arrives than expected, this function will return that data, so be sure to check the transferred output parameter.

You should also check the transferred parameter for bulk writes. Not all of the data may have been written.

Also check transferred when dealing with a timeout error code. libusb may have to split your transfer into a number of chunks to satisfy underlying O/S requirements, meaning that the timeout may expire after the first few chunks have completed. libusb is careful not to lose any data that may have been transferred; do not assume that timeout conditions indicate a complete lack of I/O.

**Parameters:**

- **endpoint** the address of a valid endpoint to communicate with
- **data** a suitably-sized data buffer for either input or output (depending on endpoint)
- **length** for bulk writes, the number of bytes from data to be sent. for bulk reads, the maximum number of bytes to receive into the data buffer.
- **transferred** output location for the number of bytes actually transferred.
- **timeout** timeout (in milliseconds) that this function should wait before giving up due to no response being received. For an unlimited timeout, use value 0.

Lasterror is set to:
- 0 on success (and populates transferred)
- kErrorTimeout if the transfer timed out (and populates transferred)
- kErrorPipe if the endpoint halted
- kErrorOverflow if the device offered more data, see Packets and overflows
- kErrorNoDevice if the device has been disconnected
- another error code on other failures
167.5.5 ClaimInterface(interfaceNumber as Integer)

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Claim an interface on a given device handle.

**Notes:**
You must claim the interface you wish to use before you can perform I/O on any of its endpoints.

It is legal to attempt to claim an already-claimed interface, in which case libusb just returns 0 without doing anything.

Claiming of interfaces is a purely logical operation; it does not cause any requests to be sent over the bus. Interface claiming is used to instruct the underlying operating system that your application wishes to take ownership of the interface.

This is a non-blocking function.

**Parameters:**

- **interfaceNumber:** the bInterfaceNumber of the interface you wish to claim

**LastError is set:**

- 0 on success
- kErrorNotFound if the requested interface does not exist
- kErrorBusy if another program or driver has claimed the interface
- kErrorNoDevice if the device has been disconnected
- a error code on other failure

167.5.6 ClearHalt(endpoint as Integer)

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Clear the halt/stall condition for an endpoint.

**Notes:**
Endpoints with halt status are unable to receive or transmit data until the halt condition is stalled.

You should cancel all pending transfers before attempting to clear the halt condition.

This is a blocking function.

**Parameters:**

- **endpoint:** the endpoint to clear halt status
Returns:
0 on success
kErrorNotFound if the endpoint does not exist
kErrorNoDevice if the device has been disconnected
another error code on other failure

167.5.7 Close

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Close a device handle.
Notes:
Should be called on all open handles before your application exits.
Internally, this function destroys the reference that was added by Open on the given device.
This is a non-blocking function; no requests are sent over the bus.

167.5.8 ControlTransfer(requestType as Integer, Request as Integer, Value as Integer, Index as Integer, data as Ptr, Length as Integer, Timeout as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Perform a USB control transfer.
Notes:
The direction of the transfer is inferred from the RequestType field of the setup packet.
The Value, Index and Length fields values should be given in host-endian byte order.

Parameters:

RequestType the request type field for the setup packet
Request the request field for the setup packet
Value the value field for the setup packet
Index the index field for the setup packet
data a suitably-sized data buffer for either input or output (depending on direction bits within bmRequestType)
Length the length field for the setup packet. The data buffer should be at least this size.
timeout timeout (in milliseconds) that this function should wait before giving up due to no response being received. For an unlimited timeout, use value 0.
on success, the number of bytes actually transferred is returned.

LastError is set to:
- kErrorTimeout if the transfer timed out
- kErrorPipe if the control request was not supported by the device
- kErrorNoDevice if the device has been disconnected
- another error code on other failures

167.5.9 DetachKernelDriver(interfaceNumber as Integer)

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Detach a kernel driver from an interface.

**Notes:**
If successful, you will then be able to claim the interface and perform I/O.
This functionality is not available on Darwin or Windows.

**Parameters:**
- interfaceNumber: the interface to detach the driver from

LastError is set:
- 0 on success
- kErrorNotFound if no kernel driver was active
- kErrorInvalidParam if the interface does not exist
- kErrorNoDevice if the device has been disconnected
- kErrorNotSupported on platforms where the functionality is not available
- another error code on other failure

167.5.10 Devices as LibUSBDeviceMBS()

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a list of USB devices currently attached to the system.

**Notes:**
This is your entry point into finding a USB device to operate.

This return value of this function indicates the number of devices in the resultant list.

The number of devices in the outputted list.
LastError is set to zero on success or or any error codes according to errors encountered by the backend.
167.5.11 ErrorName(ErrorCode as Integer) as String

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a constant string with the ASCII name of a libusb error code.

167.5.12 GetActiveConfigDescriptor as LibUSBConfigDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get the USB configuration descriptor for the currently active configuration.

**Notes:**
This is a non-blocking function which does not involve any requests being sent to the device.

Lasterror is set to:
0 on success
kErrorNotFound if the device is in unconfigured state
another error code on error.

167.5.13 GetConfigDescriptor(Index as Integer) as LibUSBConfigDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get a USB configuration descriptor based on its index.

**Notes:**
This is a non-blocking function which does not involve any requests being sent to the device.

**Parameters:**

Index the index of the configuration you wish to retrieve

Lasterror is set to:
0 on success
kErrorNotFound if the configuration does not exist
another error code on error
167.5.14 GetConfigDescriptorByValue(Value as Integer) as LibUSBConfigDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get a USB configuration descriptor with a specific ConfigurationValue.

**Notes:**
This is a non-blocking function which does not involve any requests being sent to the device.

Value: the bConfigurationValue of the configuration you wish to retrieve.

LastError is set to:
- 0 on success
- kErrorNotFound if the configuration does not exist
- another error code on error

167.5.15 GetConfiguration as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Determine the bConfigurationValue of the currently active configuration.

**Notes:**
You could formulate your own control request to obtain this information, but this function has the advantage that it may be able to retrieve the information from operating system caches (no I/O involved).

If the OS does not cache this information, then this function will block while a control transfer is submitted to retrieve the information.

This function will return a value of 0 in the config output parameter if the device is in unconfigured state.

Returns Configuration value of the active configuration (only valid for return code 0)

The lasterror is set to:
- 0 on success
- kErrorNoDevice if the device has been disconnected
- another error code on other failure
167.5.16 GetDescriptor(descType as Integer, descIndex as Integer, data as Ptr, Length as Integer) as Integer

Notes: This is a convenience function which formulates the appropriate control message to retrieve the descriptor.

Parameters:
- descType: the descriptor type, see libusb_descriptor_type
- descIndex: the index of the descriptor to retrieve
- data: output buffer for descriptor
- length: size of data buffer

Returns number of bytes returned in data or zero.
Sets lasterror to error code on failure.

167.5.17 GetDeviceDescriptor as LibUSBDeviceDescriptorMBS

Notes: This is a non-blocking function; the device descriptor is cached in memory.

Returns 0 on success or a error code on failure.

167.5.18 GetMaxISOPacketSize(EndPoint as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Calculate the maximum packet size which a specific endpoint is capable is sending or receiving in the duration of 1 microframe.
Notes: Only the active configuration is examined. The calculation is based on the wMaxPacketSize field in the endpoint descriptor as described in section 9.6.6 in the USB 2.0 specifications.

If acting on an isochronous or interrupt endpoint, this function will multiply the value found in bits 0:10 by the number of transactions per microframe (determined by bits 11:12). Otherwise, this function just returns
the numeric value found in bits 0:10.

This function is useful for setting up isochronous transfers, for example you might pass the return value from this function to libusb_set_iso_packet_lengths() in order to set the length field of every isochronous packet in a transfer.

Since v1.0.3.

Parameters:
endpoint: address of the endpoint in question

Returns the maximum packet size which can be sent/received on this endpoint.

The lasterror is set to:
0 for success.
kErrorNotFound if the endpoint does not exist
kErrorOther on other failure

167.5.19 GetMaxPacketSize(EndPoint as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Convenience function to retrieve the wMaxPacketSize value for a particular endpoint in the active device configuration.

Notes:
This function was originally intended to be of assistance when setting up isochronous transfers, but a design mistake resulted in this function instead. It simply returns the wMaxPacketSize value without considering its contents. If you’re dealing with isochronous transfers, you probably want libusb_get_max_iso_packet_size() instead.

Parameters:
endpoint: address of the endpoint in question

Returns the Max Packet Size value.

The lasterror is set:
0 for success.
kErrorNotFound if the endpoint does not exist
kErrorOther on other failure
167.5.20 **GetStringDescriptor**(descIndex as Integer, LangID as Integer = 0) as String

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieve a descriptor from a device.

**Notes:**
This is a convenience function which formulates the appropriate control message to retrieve the descriptor. The string returned is Unicode, as detailed in the USB specifications.

**Parameters:**
- descIndex: the index of the descriptor to retrieve
- LangID: the language ID for the string descriptor

Returns string.
Lasterror is set to zero or error code on failure.
See also:
- 167.5.21 **GetStringDescriptor**(descIndex as Integer, LangID as Integer = 0, data as Ptr, Length as Integer) as Integer

167.5.21 **GetStringDescriptor**(descIndex as Integer, LangID as Integer = 0, data as Ptr, Length as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieve a descriptor from a device.

**Notes:**
This is a convenience function which formulates the appropriate control message to retrieve the descriptor. The string returned is Unicode, as detailed in the USB specifications.

**Parameters:**
- descIndex: the index of the descriptor to retrieve
- LangID: the language ID for the string descriptor
- data: output buffer for descriptor
- length: size of data buffer

Returns number of bytes returned in data.
Lasterror is set to zero or error code on failure.
167.5.22 **GetStringDescriptorAscii(descIndex as Integer) as String**

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieve a string descriptor in ASCII.

**Notes:**
Wrapper around GetStringDescriptor(). Uses the first language supported by the device.

**Parameters:**

- descIndex  the index of the descriptor to retrieve

Returns string.
Lasterror is set to error code on failure and zero on success.
See also:

- 167.5.23 GetStringDescriptorAscii(descIndex as Integer, data as Ptr, Length as Integer) as Integer

167.5.23 **GetStringDescriptorAscii(descIndex as Integer, data as Ptr, Length as Integer) as Integer**

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieve a string descriptor in ASCII.

**Notes:**
Wrapper around GetStringDescriptor(). Uses the first language supported by the device.

**Parameters:**

- descIndex  the index of the descriptor to retrieve
- data  output buffer for ASCII string descriptor
- length  size of data buffer

Returns number of bytes returned in data.
Lasterror is set to error code on failure and zero on success.
See also:
167.5. CLASS LIBUSBDEVICEMBS

- 167.5.22 GetStringDescriptorAscii(descIndex as Integer) as String

167.5.24 HasCapability(Capability as UInt32) as Boolean

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Check at runtime if the loaded library has a given capability.  
**Notes:** Returns true if the running library has the capability, false otherwise.

167.5.25 Initialize as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initialize libusb.

167.5.26 InterruptTransfer(endpoint as Integer, data as Ptr, Length as Integer, byref ActualLength as Integer, Timeout as Integer)

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Perform a USB interrupt transfer.  
**Notes:**  
The direction of the transfer is inferred from the direction bits of the endpoint address.

For interrupt reads, the length field indicates the maximum length of data you are expecting to receive. If less data arrives than expected, this function will return that data, so be sure to check the transferred output parameter.

You should also check the transferred parameter for interrupt writes. Not all of the data may have been written.

Also check transferred when dealing with a timeout error code. libusb may have to split your transfer into a number of chunks to satisfy underlying O/S requirements, meaning that the timeout may expire after the first few chunks have completed. libusb is careful not to lose any data that may have been transferred; do not assume that timeout conditions indicate a complete lack of I/O.

The default endpoint bInterval value is used as the polling interval.

**Parameters:**

The lasterror property is set to:
The endpoint the address of a valid endpoint to communicate with.

Data a suitably-sized data buffer for either input or output (depending on endpoint).

Length for bulk writes, the number of bytes from data to be sent. For bulk reads, the maximum number of bytes to receive into the data buffer.

Transferred output location for the number of bytes actually transferred.

Timeout timeout (in milliseconds) that this function should wait before giving up due to no response being received. For an unlimited timeout, use value 0.

0 on success (and populates transferred)
kErrorTimeout if the transfer timed out
kErrorPipe if the endpoint halted
kErrorOverflow if the device offered more data, see Packets and overflows
kErrorNoDevice if the device has been disconnected
another error code on other error

167.5.27 KernelDriverActive(interfaceNumber as Integer) as Boolean

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Determine if a kernel driver is active on an interface.

**Notes:**

If a kernel driver is active, you cannot claim the interface, and libusb will be unable to perform I/O.

This functionality is not available on Windows.

**Parameters:**

interfaceNumber: the interface to check

LastError is set:

0 if no kernel driver is active
1 if a kernel driver is active
kErrorNoDevice if the device has been disconnected
kErrorNotSupported on platforms where the functionality is not available
another error code on other failure

167.5.28 LibraryLoaded as Boolean

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether library is loaded.
167.5.29 LibraryLoadErrorMessage as String

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The last error message from loading library.

167.5.30 LibVersion as LibUSBVersionMBS

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries version of library.

167.5.31 LoadLibrary(file as folderitem) as boolean

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Loads the libusb library.
**Notes:**
Returns true on success or false on failure.
The LibraryLoadErrorMessage function returns error message on failure.
See also:
- 167.5.32 LoadLibrary(path as string) as boolean

167.5.32 LoadLibrary(path as string) as boolean

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Loads the libusb library.
**Notes:**
Returns true on success or false on failure.
The LibraryLoadErrorMessage function returns error message on failure.
See also:
- 167.5.31 LoadLibrary(file as folderitem) as boolean

167.5.33 Open as Boolean

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Open a device and obtain a device handle.
**Notes:**
A handle allows you to perform I/O on the device in question.
Internally, this function adds a reference to the device. This reference is removed during Close().

This is a non-blocking function; no requests are sent over the bus.

The last error to:
0 on success
kErrorNoMemory on memory allocation failure
kErrorAccess if the user has insufficient permissions
kErrorNoDevice if the device has been disconnected
another error code on other failure

167.5.34 **OpenDevice(VID as Integer, PID as Integer) as LibUSBDeviceMBS**

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convenience function for finding a device with a particular VID/PID combination. **Notes:**

This function is intended for those scenarios where you are using libusb to knock up a quick test application - it allows you to avoid calling libusb_get_device_list() and worrying about traversing/freeing the list.

This function has limitations and is hence not intended for use in real applications: if multiple devices have the same IDs it will only give you the first one, etc.

**Parameters:**

- **VID** the idVendor value to search for
- **PID** the idProduct value to search for

**Returns:**
a handle for the first found device, or NULL on error or if the device could not be found.

167.5.35 **ReleaseInterface(interfaceNumber as Integer)**

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Release an interface previously claimed with ClaimInterface. **Notes:**

You should release all claimed interfaces before closing a device handle.
This is a blocking function. A SET_INTERFACE control request will be sent to the device, resetting interface state to the first alternate setting.

Parameters:
interfaceNumber: the bInterfaceNumber of the previously-claimed interface

The lasterror:
0 on success
kErrorNotFound if the interface was not claimed
kErrorNoDevice if the device has been disconnected
another error code on other failure

167.5.36  Reset

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Perform a USB port reset to reinitialize a device.

**Notes:**
The system will attempt to restore the previous configuration and alternate settings after the reset has completed.

If the reset fails, the descriptors change, or the previous state cannot be restored, the device will appear to be disconnected and reconnected. This means that the device handle is no longer valid (you should close it) and rediscover the device. An error code of kErrorNotFound indicates when this is the case.

This is a blocking function which usually incurs a noticeable delay.

Lasterror is set:
0 on success
kErrorNotFound if re-enumeration is required, or if the device has been disconnected
another error code on other failure

167.5.37  SetConfiguration(configuration as Integer)

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set the active configuration for a device.

**Notes:**
The operating system may or may not have already set an active configuration on the device. It is up to your application to ensure the correct configuration is selected before you attempt to claim interfaces and perform other operations.
If you call this function on a device already configured with the selected configuration, then this function will act as a lightweight device reset: it will issue a SET_CONFIGURATION request using the current configuration, causing most USB-related device state to be reset (altsetting reset to zero, endpoint halts cleared, toggles reset).

You cannot change/reset configuration if your application has claimed interfaces - you should free them with libusb_release_interface() first. You cannot change/reset configuration if other applications or drivers have claimed interfaces.

A configuration value of -1 will put the device in unconfigured state. The USB specifications state that a configuration value of 0 does this, however buggy devices exist which actually have a configuration 0.

You should always use this function rather than formulating your own SET_CONFIGURATION control request. This is because the underlying operating system needs to know when such changes happen.

This is a blocking function.

Parameters:
configuration: the bConfigurationValue of the configuration you wish to activate, or -1 if you wish to put the device in unconfigured state

The lasterror is set to:
0 on success
kErrorNotFound if the requested configuration does not exist
kErrorBusy if interfaces are currently claimed
kErrorNoDevice if the device has been disconnected
another error code on other failure

167.5.38 SetDebug(level as integer)

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set message verbosity.

**Notes:**
Level 0: no messages ever printed by the library (default)
Level 1: error messages are printed to stderr
Level 2: warning and error messages are printed to stderr
Level 3: informational messages are printed to stdout, warning and error messages are printed to stderr
The default level is 0, which means no messages are ever printed. If you choose to increase the message verbosity level, ensure that your application does not close the stdout/stderr file descriptors.

You are advised to set level 3. libusb is conservative with its message logging and most of the time, will only
log messages that explain error conditions and other oddities. This will help you debug your software.

If the LIBUSB_DEBUG environment variable was set when libusb was initialized, this function does nothing: the message verbosity is fixed to the value in the environment variable.

If libusb was compiled without any message logging, this function does nothing: you’ll never get any messages.
If libusb was compiled with verbose debug message logging, this function does nothing: you’ll always get messages from all levels.

167.5.39 SetInterfaceAltSetting(interfaceNumber as Integer, alternateSetting as Integer)

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Activate an alternate setting for an interface.

**Notes:**
The interface must have been previously claimed with ClaimInterface().

You should always use this function rather than formulating your own SET_INTERFACE control request. This is because the underlying operating system needs to know when such changes happen.

This is a blocking function.

**Parameters:**

- interfaceNumber: the InterfaceNumber of the previously-claimed interface
- alternateSetting: the AlternateSetting of the alternate setting to activate

The lasterror:
- 0 on success
- kErrorNotFound if the interface was not claimed, or the requested alternate setting does not exist
- kErrorNoDevice if the device has been disconnected
- another error code on other failure

167.5.40 Shutdown

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Deinitialize libusb.
Notes: Should be called after closing all open devices and before your application terminates.

167.5.41 Properties

167.5.42 BusNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get the number of the bus that a device is connected to.
Notes: (Read only property)

167.5.43 DeviceAddress as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get the address of the device on the bus it is connected to.
Notes: (Read only property)

167.5.44 DeviceHandle as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The handle to the device.
Notes: (Read only property)

167.5.45 DeviceSpeed as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get the negotiated connection speed for a device.
Notes:
a speed value, where kSpeedUnknown means that the OS doesn’t know or doesn’t support returning the negotiated speed.
(Read only property)

167.5.46 Handle as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The handle to the open device.
Notes: (Read only property)
167.5.47 IsOpen as Boolean

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether device is open. **Notes:** True if you called OpenDevice successful. (Read only property)

167.5.48 Lasterror as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code. **Notes:** (Read and Write property)

167.5.49 Constants

167.5.50 kCapabilitiesHasCapabilities = 0

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the capabilities constants. **Notes:** The HasCapability() API is available.

167.5.51 kCapabilitiesHasHIDAccess = 256

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the capabilities constants. **Notes:** The library can access HID devices without requiring user intervention. Note that before being able to actually access an HID device, you may still have to call additional libusb functions such as DetachKernelDriver.

167.5.52 kCapabilitiesHasHotplug = 1

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the capabilities constants. **Notes:** Hotplug support is available on this platform.
167.5.53  \textbf{kCapabilitiesSupportsDetachKernelDriver = 257}

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function:} One of the capabilities constants.  
\textbf{Notes:} The library supports detaching of the default USB driver, using DetachKernelDriver, if one is set by the OS kernel.

167.5.54  \textbf{kDescriptorTypeBOS = 6}

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function:} One of the descriptor type constants.  
\textbf{Notes:} BOS descriptor

167.5.55  \textbf{kDescriptorTypeConfig = 2}

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function:} One of the descriptor type constants.  
\textbf{Notes:} Configuration descriptor.

167.5.56  \textbf{kDescriptorTypeDevice = 1}

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function:} One of the descriptor type constants.  
\textbf{Notes:} Device descriptor.

167.5.57  \textbf{kDescriptorTypeDeviceCapabilities = 16}

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function:} One of the descriptor type constants.  
\textbf{Notes:} Device Capability descriptor

167.5.58  \textbf{kDescriptorTypeEndpoint = 5}

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function:} One of the descriptor type constants.  
\textbf{Notes:} Endpoint descriptor.

167.5.59  \textbf{kDescriptorTypeHID = \& h21}

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function:} One of the descriptor type constants.  
\textbf{Notes:} HID descriptor.
167.5.60  kDescriptorTypeHub = & h29

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the descriptor type constants.  
**Notes:** Hub descriptor.

167.5.61  kDescriptorTypeInterface = 4

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the descriptor type constants.  
**Notes:** Interface descriptor.

167.5.62  kDescriptorTypePhysical = & h23

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the descriptor type constants.  
**Notes:** Physical descriptor.

167.5.63  kDescriptorTypeReport = & h22

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the descriptor type constants.  
**Notes:** HID report descriptor.

167.5.64  kDescriptorTypeString = 3

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the descriptor type constants.  
**Notes:** String descriptor.

167.5.65  kDescriptorTypeSuperSpeedEndpointCompanion = & h30

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the descriptor type constants.  
**Notes:** SuperSpeed Endpoint Companion descriptor

167.5.66  kDescriptorTypeSuperSpeedHub = & h2A

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the descriptor type constants.  
**Notes:** SuperSpeed Hub descriptor
167.5.67 \textbf{kErrorAccess} = -3

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function}: One of the error constants.  
\textbf{Notes}: Access

167.5.68 \textbf{kErrorBusy} = -6

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function}: One of the error constants.  
\textbf{Notes}: Busy

167.5.69 \textbf{kErrorInterrupted} = -10

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function}: One of the error constants.  
\textbf{Notes}: Interrupted

167.5.70 \textbf{kErrorInvalidParam} = -2

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function}: One of the error constants.  
\textbf{Notes}: Invalid parameter

167.5.71 \textbf{kErrorIO} = -1

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function}: One of the error constants.  
\textbf{Notes}: I/O Error

167.5.72 \textbf{kErrorNoDevice} = -4

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function}: One of the error constants.  
\textbf{Notes}: No device.

167.5.73 \textbf{kErrorNoMemory} = -11

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function}: One of the error constants.  
\textbf{Notes}: Out of Memory
167.5. **CLASS LIBUSBDEVICEMBS**

167.5.74  **kErrorNotFound = -5**

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the error constants.  
**Notes:** Not found

167.5.75  **kErrorNotSupported = -12**

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the error constants.  
**Notes:** Function not supported

167.5.76  **kErrorOther = -99**

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the error constants.  
**Notes:** Other errors

167.5.77  **kErrorOverflow = -8**

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the error constants.  
**Notes:** Overflow

167.5.78  **kErrorPipe = -9**

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the error constants.  
**Notes:** Pipe

167.5.79  **kErrorTimeout = -7**

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the error constants.  
**Notes:** Timeout

167.5.80  **kLogLevelDebug = 4**

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the debug log level constants.  
**Notes:** debug and informational messages are printed to stdout, warnings and errors to stderr
167.5.81 \( \text{kLogLevelError} = 1 \)

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function}: One of the debug log level constants.  
\textbf{Notes}: error messages are printed to stderr

167.5.82 \( \text{kLogLevelInfo} = 3 \)

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function}: One of the debug log level constants.  
\textbf{Notes}: informational messages are printed to stdout, warning and error messages are printed to stderr

167.5.83 \( \text{kLogLevelNone} = 0 \)

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function}: One of the debug log level constants.  
\textbf{Notes}: no messages ever printed by the library (default)

167.5.84 \( \text{kLogLevelWarning} = 2 \)

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function}: One of the debug log level constants.  
\textbf{Notes}: warning and error messages are printed to stderr

167.5.85 \( \text{kSpeedFull} = 2 \)

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function}: One of the constants indicates the speed at which the device is operating.  
\textbf{Notes}: The device is operating at full speed (12MBit/s).

167.5.86 \( \text{kSpeedHigh} = 3 \)

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function}: One of the constants indicates the speed at which the device is operating.  
\textbf{Notes}: The device is operating at high speed (480MBit/s).

167.5.87 \( \text{kSpeedLow} = 1 \)

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function}: One of the constants indicates the speed at which the device is operating.
Notes: The device is operating at low speed (1.5MBit/s).

167.5.88  kSpeedSuper = 4

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the constants indicates the speed at which the device is operating.
**Notes:** The device is operating at super speed (5000MBit/s).

167.5.89  kSpeedUnknown = 0

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the constants indicates the speed at which the device is operating.
**Notes:** The OS doesn’t report or know the device speed.
167.6 class LibUSBEndpointDescriptorMBS

167.6.1 class LibUSBEndpointDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class representing the standard USB endpoint descriptor. **Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

167.6.2 Methods

167.6.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

167.6.4 Properties

167.6.5 AttributesBitmap as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Attributes which apply to the endpoint when it is configured using the bConfigurationValue. **Notes:** (Read only property)

167.6.6 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Descriptor type. **Notes:** (Read only property)

167.6.7 EndpointAddress as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The address of the endpoint described by this descriptor. **Notes:** (Read only property)
167.6.8  **EndpointDirection as Integer**

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The transfer direction.  
**Notes:** (Read only property)

167.6.9  **extra as MemoryBlock**

**Notes:** (Read only property)

167.6.10  **extraLength as Integer**

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Length of the extra descriptors, in bytes.  
**Notes:** (Read only property)

167.6.11  **Interval as Integer**

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Interval for polling endpoint for data transfers.  
**Notes:** (Read only property)

167.6.12  **Length as Integer**

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Size of this descriptor (in bytes)  
**Notes:** (Read only property)

167.6.13  **MaxPacketSize as Integer**

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maximum packet size this endpoint is capable of sending/receiving.  
**Notes:** (Read only property)
167.6.14 Refresh as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** For audio devices only: the rate at which synchronization feedback is provided. **Notes:** (Read only property)

167.6.15 SynchAddress as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** For audio devices only: the address if the synch endpoint. **Notes:** (Read only property)

167.6.16 TransferType as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The transfer type. **Notes:** (Read only property)

167.6.17 Constants

167.6.18 kEndpointDirectionIn = 0

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the Endpoint Directions constants. **Notes:** In: device-to-host

167.6.19 kEndpointDirectionOut = 128

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the Endpoint Directions constants. **Notes:** Out: host-to-device.

167.6.20 kTransferTypeBulk = 2

MBS USB Plugin, Plugin Version: 18.1. **Function:** One of the Transfer Type constants. **Notes:** Bulk endpoint.
167.6.21  \texttt{kTransferTypeBulkStream} = 4

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function:} One of the Transfer Type constants. 
\textbf{Notes:} Bulk stream transfer.

167.6.22  \texttt{kTransferTypeControl} = 0

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function:} One of the Transfer Type constants. 
\textbf{Notes:} Control endpoint.

167.6.23  \texttt{kTransferTypeInterrupt} = 3

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function:} One of the Transfer Type constants. 
\textbf{Notes:} Interrupt endpoint.

167.6.24  \texttt{kTransferTypeISOChronous} = 1

MBS USB Plugin, Plugin Version: 18.1. \textbf{Function:} One of the Transfer Type constants. 
\textbf{Notes:} Isochronous endpoint.
167.7 class LibUSBInterfaceDescriptorMBS

167.7.1 class LibUSBInterfaceDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: A class representing the standard USB interface descriptor. Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

167.7.2 Methods

167.7.3 Constructor

167.7.4 EndpointDescriptor(index as Integer) as LibUSBEndpointDescriptorMBS

167.7.5 Properties

167.7.6 AlternateSetting as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Value used to select this alternate setting for this interface. Notes: (Read only property)

167.7.7 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Descriptor type. Notes: (Read only property)
167.7. **CLASS LIBUSBINTERFACEDESCRIPTEMBS**

167.7.8 **Endpoints as Variant**

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Array of endpoint descriptors.
**Notes:** (Read only property)

167.7.9 **extra as MemoryBlock**

**Notes:** (Read only property)

167.7.10 **ExtraLength as Integer**

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Length of the extra descriptors, in bytes.
**Notes:** (Read only property)

167.7.11 **IndexInterface as Integer**

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Index of string descriptor describing this interface.
**Notes:** (Read only property)

167.7.12 **InterfaceClass as Integer**

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** USB-IF class code for this interface.
**Notes:** (Read only property)

167.7.13 **InterfaceNumber as Integer**

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of this interface.
**Notes:** (Read only property)
167.7.14 InterfaceProtocol as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** USB-IF protocol code for this interface, qualified by the InterfaceClass and InterfaceSubClass values. **Notes:** (Read only property)

167.7.15 InterfaceSubClass as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** USB-IF subclass code for this interface, qualified by the InterfaceClass value. **Notes:** (Read only property)

167.7.16 Length as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Size of this descriptor (in bytes) **Notes:** (Read only property)

167.7.17 NumEndpoints as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of endpoints used by this interface (excluding the control endpoint). **Notes:** (Read only property)
167.8. CLASS LIBUSBINTERFACEMBS

167.8  class LibUSBInterfaceMBS

167.8.1  class LibUSBInterfaceMBS

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A collection of alternate settings for a particular USB interface.
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

167.8.2  Methods

167.8.3  Constructor

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

167.8.4  InterfaceDescriptor(index as Integer) as LibUSBInterfaceDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries interface descriptor by index.

167.8.5  Properties

167.8.6  Count as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of alternate settings that belong to this interface.
**Notes:** (Read only property)

167.8.7  InterfaceDescriptors as Variant

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Array of interface descriptors.
**Notes:** (Read only property)
167.9 class LibUSBVersionMBS

167.9.1 class LibUSBVersionMBS

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Class representing the libusb version.

167.9.2 Methods

167.9.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
**Notes:** Queries library version if possible.

167.9.4 Properties

167.9.5 Describe as String

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Output of git describe tags at library build time.
**Notes:** (Read only property)

167.9.6 Major as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Library major version.
**Notes:**
Currently 1.
(Read only property)

167.9.7 Micro as Integer

**Notes:** (Read only property)
167.9.8 Minor as Integer

**Notes:** (Read only property)

167.9.9 Nano as Integer

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Library nano version. 
**Notes:** (Read only property)

167.9.10 RC as String

MBS USB Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Library release candidate suffix string, e.g. "-rc4". 
**Notes:** (Read only property)
167.10 class LinuxHIDInterfaceMBS

167.10.1 class LinuxHIDInterfaceMBS

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
The class for linux to connect to USB HID devices.

**Notes:**
For newer development, please use our HIDAPIMBS class.

The constructor does the initialisation of the HID Library and the destructor does the cleanup. This works
with several instances, too.

The plugin tries to load one of libhid.so, libhid.so.0 or libhid.so.0.0.0 and one of libusb.so or libusb-0.1.so.4
from your /usr/lib folder (or where else the path environment variable points to). If the libraries are missing,
this class will not work properly.

167.10.2 Methods

167.10.3 Available as boolean

MBS USB Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
Whether libhid is available.

**Notes:** Not all Linux distribution have libusb and libhid installed by default.

167.10.4 Close as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
Closes the device.

**Notes:** Returns error code. See kError* constants.

167.10.5 DumpTreeToStderr as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
Dumps the device tree to stderr.

**Example:**

```
dim h as LinuxHIDInterfaceMBS
// open device
call h.DumpTreeToStderr
```
Notes: Returns error code. See kError* constants.

167.10.6 DumpTreeToStdout as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Dumps the device tree to stdout.

**Example:**

```plaintext
dim h as LinuxHIDInterfaceMBS
// open device
call h.DumpTreeToStdout
```

Notes: Returns error code. See kError* constants.

167.10.7 ForceOpen(theInterface as Integer, Vendor as Integer, Product as Integer, retries as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Opens the USB device with the given interface index, vendor and product codes.

**Example:**

```plaintext
dim h as new LinuxHIDInterfaceMBS

const vendor = & h7C0
const product = & h1500
const retries = 3

dim e as Integer = h.ForceOpen(0, vendor, product, retries)
```

Notes:
Vendor or Product code can be kMatchAny (0) to match all devices.
You can use the MatchDevice event to learn which devices are there and return true there to select one.
Returns error code. See kError* constants.
167.10.8  GetInputReport(path() as Integer, data as memoryblock, offset as Integer, size as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. Function:
Reads an input report.
Notes:
Path: The path to the endpoint.
Data: the memoryblock to store the data.
Offset: The offset where to start inside the memoryblock.
Size: the length of the data int he memoryblock.

Returns error code. See kError* constants.

167.10.9  InterruptRead(EndPoint as Integer, mem as memoryblock, size as Integer, timeout as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. Function:
Reads data from an endpoint with timeout.
Notes:
EndPoint: The index of the endpoint.
mem: the memoryblock where to store the data.
size: the length of the data block to read.
timeout: the timeout in milliseconds.

Returns error code. See kError* constants.

167.10.10 InterruptWrite(EndPoint as Integer, mem as memoryblock, size as Integer, timeout as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. Function:
Writes data from an endpoint with timeout.
Notes:
EndPoint: The index of the endpoint.
mem: the memoryblock where to store the data.
size: the length of the data block to read.
timeout: the timeout in milliseconds.

Returns error code. See kError* constants.
167.10.11 IsInitialised as boolean

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Whether the HID library was initialised in the constructor. **Notes:** Should always be true on linux.

167.10.12 IsOpen as boolean

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Whether the device is opened. **Notes:** True if open, false if closed.

167.10.13 Open(theInterface as Integer, Vendor as Integer, Product as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Opens the USB device with the given interface index, vendor and product codes. **Example:**

```plaintext
dim h as new LinuxHIDInterfaceMBS

const vendor = & h7C0
const product = & h1500

dim e as Integer = h.Open(0, vendor, product)
```

**Notes:**
Vendor or Product code can be kMatchAny (0) to match all devices. You can use the MatchDevice event to learn which devices are there and return true there to select one. Returns error code. See kError* constants.

167.10.14 Reset

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Resets the device. **Notes:** Returns error code. See kError* constants.
167.10.15  SetDebugLevel(level as Integer)

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
Sets the debug level.
**Example:**
```vbnet
dim h as new LinuxHIDInterfaceMBS
h.SetDebugLevel(h.kDebugWarnings)
```

167.10.16  SetDebugOutputToStderr

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
Tells HID library to write debug output to stderr.
**Example:**
```vbnet
dim h as new LinuxHIDInterfaceMBS
h.SetDebugOutputToStderr
```

167.10.17  SetDebugOutputToStdout

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
Tells HID library to write debug output to stdout.
**Example:**
```vbnet
dim h as new LinuxHIDInterfaceMBS
h.SetDebugOutputToStdout
```

167.10.18  SetOutputReport(path() as Integer, data as memoryblock, offset as Integer, size as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
Writes data to the output.
**Example:**
```vbnet
dim h as LinuxHIDInterfaceMBS // your interface
dim n as Integer // some value
const IOW_PIPE_IO_PINS=0

dim m as MemoryBlock = NewMemoryBlock(4) // a device with 4 byte packets
```
m.Byte(3)=n
m.Byte(0)=IOW_PIPE_IO_PINS

dim path(-1) as Integer

path.Append & h00010000
path.Append 0

dim e as Integer = h.SetOutputReport(path, m, 0, m.size)

Notes:
Path: The path to the endpoint.
Data: the data to write.
Offset: The offset where to start inside the memoryblock.
Size: the length of the data inside the memoryblock.

Returns error code. See kError* constants.

See also:

• 167.10.19 SetOutputReport(path() as Integer, data as string) as Integer

167.10.19  SetOutputReport(path() as Integer, data as string) as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. Function:
Writes data to the output.

Notes:
Path: The path to the endpoint.
Data: the data to write.

Returns error code. See kError* constants.

• 167.10.18 SetOutputReport(path() as Integer, data as memoryblock, offset as Integer, size as Integer) as Integer

167.10.20  WriteIdentificationToStderr as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. Function:
Writes identification to stderr.

Notes: Returns error code. See kError* constants.
167.10.21  **WriteIdentificationToStdout as Integer**

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Writes identification to stdout.  
**Notes:** Returns error code. See kError* constants.

167.10.22  **Properties**

167.10.23  **Handle as Integer**

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The internal handle to the device connection.  
**Notes:** (Read and Write property)

167.10.24  **Events**

167.10.25  **MatchDevice(usbdev as LinuxUSBDeviceHandleMBS) as boolean**

MBS USB Plugin, Plugin Version: 10.3, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The event called to decide whether you want to connect to this device.  
**Example:**

```vbnet
Function MatchDevice(usbdev as LinuxUSBDeviceHandleMBS) As boolean
MsgBox usbdev.Device.Descriptor.SerialNumber
End Function
```

**Notes:**  
If several devices match the given vendor/product codes in Open/ForceOpen, you can decide here which one you accept.  
Return true to accept a device.

167.10.26  **Constants**

167.10.27  **kDebugAll = 31**

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the debug level constants.  
**Notes:** same as kDebugWarnings + kDebugTraces + kDebugNotices + kDebugErrors + kDebugAsserts
167.10.28  kDebugAsserts = 16
MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the debug level constants.

167.10.29  kDebugErrors = 1
MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the debug level constants.

167.10.30  kDebugNone = 0
MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the debug level constants.

167.10.31  kDebugNotices = 4
MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the debug level constants.

167.10.32  kDebugNoTraces = 23
MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the debug level constants. **Notes:** same as kDebugWarnings + kDebugNotices + kDebugErrors + kDebugAsserts

167.10.33  kDebugTraces = 8
MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the debug level constants.

167.10.34  kDebugWarnings = 2
MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the debug level constants.

167.10.35  kErrorAlreadyInitialised = 3
MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes. **Notes:** Device already initialised.
167.10.36  kErrorDeviceAlreadyOpened = 9

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes. **Notes:** Device already opened.

167.10.37  kErrorDeviceNotFound = 7

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes. **Notes:** Device is not found.

167.10.38  kErrorDeviceNotOpened = 8

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes. **Notes:** Device is not opened.

167.10.39  kErrorFailAlloc = 17

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes. **Notes:** Failed to allocate.

167.10.40  kErrorFailClaimIFace = 11

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes. **Notes:** Failed to claim the interface.

167.10.41  kErrorFailCloseDevice = 10

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes. **Notes:** Failed to close device.

167.10.42  kErrorFailDetachDriver = 12

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes. **Notes:** Failed to detach driver.
167.10. CLASS LINUXHIDINTERFACEMBS

167.10.43 kErrorFailFindBusses = 4
MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes. **Notes:** Failed to find buses.

167.10.44 kErrorFailFindDevices = 5
MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes. **Notes:** Failed to find devices.

167.10.45 kErrorFailGetReport = 20
MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes. **Notes:** Get Report failed.

167.10.46 kErrorFailIntRead = 21
MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes.

167.10.47 kErrorFailOpenDevice = 6
MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes. **Notes:** Failed to open device.

167.10.48 kErrorFailSetReport = 19
MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes. **Notes:** Set Report failed.

167.10.49 kErrorHIDDescShort = 14
MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes.
**167.10.50 kErrorInvalidParameter = 1**

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes. **Notes:** Invalid Parameter.

**167.10.51 kErrorNotFound = 22**

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes. **Notes:** Device not found.

**167.10.52 kErrorNotHIDDevice = 13**

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes. **Notes:** Not a HID Device.

**167.10.53 kErrorNotInitialised = 2**

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes. **Notes:** Not initialised.

**167.10.54 kErrorOutOfSpace = 18**

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes. **Notes:** Out of space.

**167.10.55 kErrorReportDescLong = 16**

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes.

**167.10.56 kErrorReportDescShort = 15**

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes.
MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the error codes.  
**Notes:** Success. No error.

MBS USB Plugin, Plugin Version: 10.3. **Function:** The vendor/product ID to match any device.
167.11 class LinuxUSBBusMBS

167.11.1 class LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The class for an USB Bus on Linux.

**Notes:** This class only works, if the plugin could load one of libusb.so or libusb-0.1.so.4 from your /usr/lib folder (or where else the path environment variable points to). If the libraries are missing, this class will not work properly.

167.11.2 Methods

167.11.3 Buses as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Returns the buses list.

**Notes:**
This function allows you to query the current buses and devices.
No device is opened and you just read through libusb data structures.

167.11.4 RescanBusses as Integer

MBS USB Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Finds all USB busses on system.

**Notes:**
RescanBusses will find all of the busses on the system.
Returns the number of changes since previous call to this function (total of new busses and busses removed).

The plugin performs RescanBusses and RescanDevices automatically on application launch.

167.11.5 RescanDevices as Integer

MBS USB Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Find all devices on all USB devices.

**Notes:**
RescanDevices will find all of the devices on each bus.
This should be called after RescanBusses.
Returns the number of changes since the previous call to this function (total of new device and devices
The plugin performs RescanBusses and RescanDevices automatically on application launch. So you can call RescanDevices at any time.

167.11.6 Properties

167.11.7 Devices as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The devices attached to this bus. **Notes:** (Read and Write property)

167.11.8 DirName as String

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The dir name. **Notes:** (Read and Write property)

167.11.9 Location as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The location value. **Notes:** (Read and Write property)

167.11.10 NextBus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The next bus. **Notes:** (Read and Write property)

167.11.11 PrevBus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The previous bus. **Notes:** (Read and Write property)
167.11.12 RootDevice as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The root device on this device. **Notes:** (Read and Write property)
167.12. class LinuxUSBDeviceDescriptionMBS

167.12.1. class LinuxUSBDeviceDescriptionMBS

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** A class for an USB device description.
**Notes:** Some linux installations require app to be run with sudo to allow reading USB device strings.

167.12.2. Properties

167.12.3. cdDevice as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The device version.
**Notes:**
Identifies the version of the device. This value is a binary-coded decimal number.
(Read and Write property)

167.12.4. cdUSB as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The USB version.
**Notes:**
Identifies the version of the USB specification that this descriptor structure complies with. This value is a binary-coded decimal number.
(Read and Write property)

167.12.5. DescriptorType as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The descriptor type.
**Notes:**
Specifies the descriptor type. Must be set to USB_DEVICE_DESCRIPTOR_TYPE.
(Read and Write property)
167.12.6  DeviceClass as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
The device class.
**Notes:**
Specifies the class code of the device as assigned by the USB specification group.
See the kDeviceClass* constants.
(Read and Write property)

167.12.7  DeviceProtocol as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
The device protocol.
**Notes:**
Specifies the protocol code of the device as assigned by the USB specification group.
(Read and Write property)

167.12.8  DeviceSubClass as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
The device sub class.
**Notes:**
Specifies the subclass code of the device as assigned by the USB specification group.
(Read and Write property)

167.12.9  Manufacturer as String

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
The manufacturer name string.
**Notes:**
A string containing the name of the manufacturer of this device.
Some linux installations require app to be run with sudo to allow reading USB device strings.
(Read and Write property)
167.12.10  MaxPacketSize0 as Integer

Notes:
Specifies the maximum packet size, in bytes, for endpoint zero of the device. The value must be set to 8, 16, 32, or 64.
(Read and Write property)

167.12.11  NumConfigurations as Integer

Notes:
Specifies the total number of possible configurations for the device.
(Read and Write property)

167.12.12  Product as Integer

Notes:
Specifies the product identifier. This value is assigned by the manufacturer and is device-specific. Only available when the device has been opened.
(Read and Write property)

167.12.13  ProductName as String

Notes:
A string that contains a description of the device. Some linux installations require app to be run with sudo to allow reading USB device strings.
(Read and Write property)
167.12.14 SerialNumber as String

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The serial number string for this device.

**Notes:**
A string that contains a manufacturer-determined serial number for the device. Can be empty if the library does not know it. Some linux installations require app to be run with sudo to allow reading USB device strings. (Read and Write property)

167.12.15 Vendor as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The vendor code for this device.

**Notes:**
Specifies the vendor identifier for the device as assigned by the USB specification committee. Only available when the device has been opened. (Read and Write property)

167.12.16 Constants

167.12.17 kDeviceClassAudio = 1

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the device class constants. **Notes:** Audio device.

167.12.18 kDeviceClassCOMM = 2

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the device class constants. **Notes:** COMM device.

167.12.19 kDeviceClassDATA = 10

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the device class constants. **Notes:** DATA device.
167.12.20  kDeviceClassHID = 3

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the device class constants. **Notes:** HID device.

167.12.21  kDeviceClassHUB = 9

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the device class constants. **Notes:** The device is an USB HUB.

167.12.22  kDeviceClassMassStorage = 8

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the device class constants. **Notes:** A mass storage device.

167.12.23  kDeviceClassPerInterface = 0

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the device class constants.

167.12.24  kDeviceClassPrinter = 7

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the device class constants. **Notes:** Printer device.

167.12.25  kDeviceClassVendorSpecific = 255

MBS USB Plugin, Plugin Version: 10.3. **Function:** One of the device class constants. **Notes:** Some vendor specific device.
167.13 class LinuxUSBDeviceHandleMBS

167.13.1 class LinuxUSBDeviceHandleMBS

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
The class for a device handle.

167.13.2 Properties

167.13.3 AltSetting as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
Some alt setting value.
**Notes:** (Read and Write property)

167.13.4 Bus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
The bus for this device handle.
**Notes:** (Read and Write property)

167.13.5 Config as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
A config value.
**Notes:** (Read and Write property)

167.13.6 Device as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
The device.
**Notes:** (Read and Write property)

167.13.7 InterfaceIndex as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
The interface index.
167.13. CLASS LINUXUSBDEVICEHANDLEMBS

Notes: (Read and Write property)
**167.14** class LinuxUSBDeviceMBS

**167.14.1** class LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The class for an USB device information on Linux.

**167.14.2** Methods

**167.14.3** Children(index as Integer) as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Returns the child device with the given index. **Notes:** Index is zero based and from 0 to ChildrenCount-1.

**167.14.4** Properties

**167.14.5** Bus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The bus this device is attached to. **Notes:** (Read and Write property)

**167.14.6** ChildrenCount as Integer

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The number of child devices. **Notes:** (Read and Write property)

**167.14.7** Descriptor as LinuxUSBDeviceDescriptionMBS

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The description for this device. **Notes:** (Read and Write property)
167.14.8 Filename as String

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The filename for this device. **Notes:** (Read and Write property)

167.14.9 NextDevice as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The next device on the same level. **Notes:** (Read and Write property)

167.14.10 PrevDevice as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The previous device on the same level. **Notes:** (Read and Write property)
167.15  class MacHIDMBS

167.15.1  class MacHIDMBS

MBS USB Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class to work with HID devices on Mac OS X.  
**Notes:** For newer development, please use our HIDAPIMBS class.

167.15.2  Methods

167.15.3  Close

MBS USB Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Closes the active connection.

167.15.4  Connect

MBS USB Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a connection to the current device.  
**Example:**

```vba
Function OpenUSBDevice() As boolean
    dim i as Integer
    dim h as MacHIDMBS
    h=FindDevice  // see FindFirst example
    if h=nil then
        MsgBox "No XYZ device found."
        Return false
    end if
    h.Connect
    if h.Lasterror<>0 then
        MsgBox "Failed to connect to USB Device."
        Return false
    end if
    h.InstallCallback
    Return true
```

**167.15. CLASS MACHIDMBS**

End Function

**Notes:**
Lasterror is set.

Lasterror values for this function:

-1  Not supported (Windows and Linux).
  0   Everything okay.
  1   Failed to get IOKit Plugin Interface for this IO object.
  2   Failed to query interface
  3   Failed to open interface
  4   Failed to create async port
  5   Failed to create async event source
  6   no longer used
  7   Failed to start queue

**167.15.5  Disconnect**

MBS USB Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Disconnects current USB device.

**Notes:** Lasterror is set.

**167.15.6  FindFirstDevice as boolean**

MBS USB Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Finds the first device and loads the properties.

**Example:**

Function FindDevice() As MyMacHIDMBS
  dim h as MyMacHIDMBS
  dim p as string

  h=new MyMacHIDMBS  // your own subclass of MacHIDMBS so you can get events

  if h.FindFirstDevice then
    p=h.Product
if p="MyProduct" then
Return h
end if

while h.FindNextDevice

p=h.Product
if p="MyProduct" then
Return h
end if

wend

end if
End Function

Notes: Returns true on success and false on failure.

167.15.7 FindNextDevice as boolean

167.15.8 HIDProperties as Variant

The plugin queries this dictionary to return SerialNumber, ProductID, Manufacturer, Product, VendorID and VersionNumber.

167.15.9 InstallCallback

167.15. CLASS MACHIDMBS

Notes:
Lasterror is set.
Please use after connect. For use with ReceivedData event.

167.15.10 Manufacturer as string

MBS USB Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The manufacturer name.
**Notes:** On any error an empty string is returned.

167.15.11 Product as string

MBS USB Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The product string of the selected device.
**Notes:** Lasterror is set.

167.15.12 ProductID as Integer

MBS USB Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The product ID of the selected device.
**Notes:** Lasterror is set.

167.15.13 ReadMessage(ReportID as Integer, reportType as Integer, length as Integer) as string

MBS USB Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Reads a message from usb device.
**Notes:**
This is for synchronously operation without the event/callback.
You can specify report id, report type and the maximum length to read.
Also set timeout property.

**Doesn’t work if InstallCallback with event is used.**
**167.15.14 ReadMessageMemory(ReportID as Integer, reportType as Integer, length as Integer) as memoryblock**

MBS USB Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Reads a message from usb device.
**Notes:**
This is for synchronously operation without the event/callback.
You can specify report id, report type and the maximum length to read.
Also set timeout property.

Doesn’t work if InstallCallback with event is used.

**167.15.15 SendMessage(data as string)**

MBS USB Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Sends a message to the USB device.
**Notes:**
A connection must be open.
Lasterror is set. Lasterror -536854447 is an USB timeout.
Uses kIOHIDReportTypeOutput.
See also:

- 167.15.16 SendMessage(ReportID as Integer, reportType as Integer, data as string)

**167.15.16 SendMessage(ReportID as Integer, reportType as Integer, data as string)**

MBS USB Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Sends a message to the USB device.
**Notes:**
A connection must be open.
Lasterror is set. Lasterror -536854447 is an USB timeout.
ReportType can be kIOHIDReportTypeOutput or kIOHIDReportTypeFeature.
See also:

- 167.15.15 SendMessage(data as string)
167.15. CLASS MACHIDMBS

167.15.17  SendMessageMemory(data as memoryblock, offset as Integer, length as Integer)

MBS USB Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sends a message to the USB device.

**Notes:**
A connection must be open.
LastError is set. Lasterror -536854447 is an USB timeout.
Internally ReportID=0 is used.

While writing a crossplatform application for one specific device we saw the following thing: The data buffer for the SendMessageMemory call must be 8 bytes long on Mac (with MacHIDMBS) and 61 bytes long for Windows (with WinHIDMBS) for our HID device. We have 1 byte for the ReportID and 60 data bytes where the first 8 are set like on the Mac. So if the calls fail on Windows, try with a higher length and check the WinHIDMBS.OutputReportByteLength property. Uses kIOHIDReportTypeOutput.

See also:

- 167.15.18 SendMessageMemory(ReportID as Integer, reportType as Integer, data as memoryblock, offset as Integer, length as Integer)

167.15.18  SendMessageMemory(ReportID as Integer, reportType as Integer, data as memoryblock, offset as Integer, length as Integer)

MBS USB Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sends a message to the USB device.

**Notes:**
A connection must be open.
LastError is set. Lasterror -536854447 is an USB timeout.
ReportType can be kIOHIDReportTypeOutput or kIOHIDReportTypeFeature.
See also:

- 167.15.17 SendMessageMemory(data as memoryblock, offset as Integer, length as Integer)

167.15.19  SerialNumber as string

MBS USB Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The serial number of the current selected device.

**Notes:** Lasterror is set.
167.15.20  VendorID as Integer

MBS USB Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The vendor ID of the selected device.
**Notes:** Lasterror is set.

167.15.21  VersionNumber as Integer

MBS USB Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The device specific version number.
**Notes:**
Value can be anything.
On any error, 0 is returned.

167.15.22  Properties

167.15.23  IOHIDDeviceInterface122Handle as Integer

MBS USB Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The internal handle for the device interface object.
**Notes:**
This is of type IOHIDDeviceInterface122** from IOKit.
(Read only property)

167.15.24  IOHIDObjectIteratorHandle as Integer

MBS USB Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The iterator used to find USB devices.
**Notes:**
This is of type io_iterator_t from IOKit.
(Read only property)

167.15.25  IOObjectHandle as Integer

MBS USB Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The internal object reference for current device.
**Notes:**
This is of type io_object_t from IOKit.
(Read only property)

**167.15.26 Lasterror as Integer**

MBS USB Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Last error code.
**Notes:**
- 0 is success.
- -1 means that the function is not available.
- else Mac OS USB error codes.
- error -536854447 is an USB timeout.
(Read and Write property)

**167.15.27 OnlyOneEventPerTick as Boolean**

MBS USB Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Whether to limit ReceivedData event.
**Notes:**
- Some devices send a lot of measurement data.
- This option allows to slow down and limit to 60 events per second.
- So if device sends a thousand data records per second, we can ignore over 90% and just pick a few to display.
(Read and Write property)

**167.15.28 TimeOut as Integer**

MBS USB Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Timeout value to use for sending/reading USB data.
**Notes:**
- Please specify time in Milliseconds. Default is 500ms.
(Read and Write property)

**167.15.29 Events**

**167.15.30 DeviceRemoved(result as Integer)**

MBS USB Plugin, Plugin Version: 8.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
The event called whenever the device is removed.
Notes: You need to call connect to install the callback which raises this event.

167.15.31  ReceivedData(data as string, size as Integer)

MBS USB Plugin, Plugin Version: 6.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: Data was received and is available for processing. Example:

Sub ReceivedData(data as string, size as Integer)
    dim m as MemoryBlock
    dim s as string
    dim n,i as Integer

    // Debug Output data received:
    m=data
    n=lenb(data)-1
    for i=0 to n
        s=s+str(m.Byte(i))+” ”
    next
    s=s+”= ”+data
    System.DebugLog s
End Sub

Notes: Event is only called when InstallCallback was used and a connection is open.

167.15.32  Constants

167.15.33  kIOHIDReportTypeFeature = 2

167.15.34  kIOHIDReportTypeInput = 0

MBS USB Plugin, Plugin Version: 14.0. **Function:** One of the report type constants.
**Notes:** Input report.

167.15.35  kIOHIDReportTypeOutput = 1

MBS USB Plugin, Plugin Version: 14.0. **Function:** One of the report type constants.
**Notes:** Output report.
167.16 class MacUSBDeviceMBS

167.16.1 class MacUSBDeviceMBS

MBS MacOSX Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The class for an USB Device on Mac OS X.

Example:

```vbs
// iterate over all devices without recursion and count devices
dim devices(-1) as MacUSBDeviceMBS

devices.Append MacUSBDeviceMBS.root

dim count as Integer = -1 // do not count Mac itself

while UBound(devices) >= 0
    dim dev as MacUSBDeviceMBS = devices.Pop

    count = count + 1

    for each child as MacUSBDeviceMBS in dev.children
        devices.Append child
    next
wend

MsgBox str(Count) + " USB devices."
```

Notes:

Use the root method to get the device hierarchy.

For Windows you can take a look on the WindowsDeviceMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

167.16.2 Methods

167.16.3 children as MacUSBDeviceMBS()

MBS MacOSX Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The array with all the USB device having the current device as parent.
167.16. CLASS MACUSBDEVICEMBS

167.16.4 Constructor
