Must be called after performing a transition, but not before the transition is finished.
50.45.5 Run(duration as single)

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Runs a transition effect for the given duration.

**Example:**

```vba
dim r as CGSTransitionRequestMBS
dim co as CGSConnectionMBS // global property
dim ct as CGSTransitionMBS // global property
dim cw as CGSWindowMBS

cr=new CGSConnectionMBS

cw=co.CGSWindow(window1)

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSCube
r.TransitionOption=r.CGSLeft
r.HasBackGround=false
r.HasBackColor=false
r.Win=cw

cr=co.NewTransition(r)
if cr<>Nil then
window1.Refresh // draw new window

crrun(2)
else
MsgBox "Error creating the transition."
end if
```

**Notes:** Same as calling Invoke, Wait and Release.

50.45.6 Wait(duration as single)

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Waits the given time in second.

**Example:**

```vba
// instead of wait(5) you can do this to give time to other threads and timers of your application:

dim ct as CGSTransitionMBS
dim t as Integer

t=ticks+300 // 60th of a second * 300 = 5 seconds
```
while ticks<t
c.t.wait(0.1)
app.YieldToNextThread
wend

Notes: All the CPU time is given away to other applications to give maximum performance to the transition.

50.45.7 Properties

50.45.8 Connection as CGSConnectionMBS

Notes: Every CGS class has a reference to the connection so the connection object stays in memory as long as one of the depending objects is being used.
(Read only property)

50.45.9 ConnectionHandle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The handle to the CGS connection being used.
Notes: Most of the functions need this value and it needs to be not zero.
(Read and Write property)

50.45.10 Handle as Integer

Notes: (Read and Write property)
Function: A cube transition running on the whole desktop with black background.
Function: A flip transition running on a window. (like Dashboard)
A wrap transition running on the window.

Function:
Function: A cube transition running on a window with black background.
Function: A cube transition running on the whole desktop with blue background.
**Function:** A cube transition running on the whole desktop.
50.46. **CLASS CGSTRANSITIONREQUESTMBS**

50.46 class CGSTransitionRequestMBS

50.46.1 class CGSTransitionRequestMBS

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for a transition request to the CoreGraphics System. **Notes:** Requires Mac OS X 10.4. All functions used by the CGS classes are private APIs, so Apple does not guarantee that they work in future Mac OS X versions.

50.46.2 Methods

50.46.3 Run(duration as single) as boolean

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Runs a transition. **Example:**

```vba
dim r as CGSTransitionRequestMBS
dim co as CGSConnectionMBS ' global property
dim cw as CGSWindowMBS ' global property

c=co.new CGSConnectionMBS

cw=co.CGSWindow(window1)

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSCube
r.TransitionOption=r.CGSLeft
r.HasBackGround=false
r.HasBackColor=false
r.Win=cw

call r.run(5)
```

**Notes:**

LastError is set. Transitions seem not to work in Carbon PEF builds. MachO works.
50.46.4 Properties

50.46.5 Blue as Single

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Blue part of the backcolor.
Notes:
Range is from 0.0 (no color) to 1.0 (full color).
(Read and Write property)

50.46.6 Green as Single

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Green part of the backcolor.
Notes:
Range is from 0.0 (no color) to 1.0 (full color).
(Read and Write property)

50.46.7 HasBackColor as Boolean

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Whether the background on the transition has a color.
Example:

```pascal
dim r as CGSTransitionRequestMBS
dim co as CGSConnectionMBS // global property
dim ct as CGSTransitionMBS // global property

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSWarpSwitch
r.TransitionOption=r.CGSLeft
r.HasBackGround=true
r.HasBackColor=true
r.red=0 // all zero is black, all one is white
r.Blue=0
r.Green=0

ct=co.NewTransition(r)
if ct<>Nil then
    window1.Refresh
    ct.Invoke(2)
    ct.Wait(2)
    ct.Release
```
else
MsgBox "Error creating the transition."
end if

Notes: (Read and Write property)

50.46.8 HasBackGround as Boolean

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Whether you want to use the background or not.

**Example:**
dim r as new CGSTransitionRequestMBS
r.HasBackGround=false // best for a window in place transition

Notes:
If HasBackGround is true, a background is drawn behind the transition which may have a background color.
(Read and Write property)

50.46.9 Red as Single

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Red part of the backcolor.

**Notes:**
Range is from 0.0 (no color) to 1.0 (full color).
(Read and Write property)

50.46.10 TransitionOption as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The transition options to use.

**Example:**
dim r as CGSTransitionRequestMBS
r.TransitionOption=r.CGSLeft

Notes:
One of the constants:

- CGSDown = 0  Old desktop moves down.
- CGSLeft = 1  Old desktop moves left.
- CGSRight = 2  Old desktop moves right.
- CGSInRight = 3  CGSSwap: Old desktop moves into screen, new comes from right.
- CGSBottomLeft = 5  CGSSwap: Old desktop moves to bottom left, new comes from top right.
- CGSBottomRight = 6  Old desktop to bottom right, New from top left.
- CGSDownTopRight = 7  CGSSwap: Old desktop moves down, new from top right.
- CGSUp = 8  Old desktop moves up.
- CGSTopLeft = 9  Old desktop moves top left.
- CGSTopRight = 10  CGSSwap: old to top right, new from bottom left.
- CGSUpBottomRight = 11  CGSSwap: old desktop up, new from bottom right.
- CGSSwapBottom = 12  CGSSwap: old in, new from bottom.
- CGSLeftBottomRight = 13  CGSSwap: old one moves left, new from bottom right.
- CGSRightBottomLeft = 14  CGSSwap: old one moves right, new from bottom left.
- CGSSwapBottomRight = 15  CGSSwap: old one in, new from bottom right.
- CGSSwapOut = 16  CGSSwap: old in, new out.

(Read and Write property)

50.46.11 TransitionType as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The transition to use.

**Notes:**

One of the constants:

- CGSNone = 0  No transition effect.
- CGSFade = 1  Cross-fade.
- CGSSlide = 2  Zoom/fade towards us.
- CGSReveal = 3  Reveal new desktop under old.
- CGSSlide = 4  Slide old in and new out.
- CGSWarpFade = 5  Warp old and fade out revealing new.
- CGSSwap = 6  Swap desktops over graphically.
- CGSCube = 7  The well-known cube effect.
- CGSWarpSwitch = 8  Warp old, switch and un-warp.
- CGSFlip = 9  The flip effect known from Dashboard.

(Read and Write property)
50.46. CLASS CGSTRANSITIONREQUESTMBS

50.46.12 Win as CGSWINDOWMBS

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The window to use for the transition.
**Notes:**
Set to nil to do a full screen transition.
(Read and Write property)

50.46.13 Constants

50.46.14 CGSBottomLeft = 5

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** CGSwap: Old desktop moves to bottom left, new comes from top right.

50.46.15 CGSBottomRight = 6

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** Old desktop to bottom right, New from top left.

50.46.16 CGSCube = 7

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** The well-known cube effect.

50.46.17 CGSDown = 0

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** Old desktop moves down.

50.46.18 CGSDownTopRight = 7

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** CGSwap: Old desktop moves down, new from top right.
50.46.19  CGSFade = 1

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** Cross-fade effect.

50.46.20  CGSFlip = 9

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** The flip transition effect. (like Dashboard)

**Example:**

```vbnet
dim r as CGSTransitionRequestMBS
dim co as CGSConnectionMBS // global property
dim ct as CGSTransitionMBS // global property
dim cw as CGSWindowMBS

go=new CGSConnectionMBS

cw=go.CGSWindow(window1)

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSFlip
r.TransitionOption=r.CGSLeft
r.HasBackGround=false
r.HasBackColor=false
r.Win=cw

c=go.NewTransition(r)
if c<>Nil then
    window1.Refresh
    c.Invoke(1)
    c.Wait(1)
    c.Release
else
    MsgBox "Error creating the transition."
end if
```

50.46.21  CGSInBottom = 12

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** CGSSwap: old in, new from bottom.
50.46. **CLASS CGSTRANSITIONREQUESTMBS**

50.46.22 **CGSInBottomRight = 15**

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** CGSSwap: old in, new from bottom right.

50.46.23 **CGSInOut = 16**

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** CGSSwap: old in, new out.

50.46.24 **CGSInRight = 3**

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** CGSSwap: Old desktop moves into screen, new comes from right.

50.46.25 **CGSLeft = 1**

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** Old desktop moves left.

50.46.26 **CGSLeftBottomRight = 13**

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** CGSSwap: old one moves left, new from bottom right.

50.46.27 **CGSNone = 0**

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** No transition effect.

50.46.28 **CGSReveal = 3**

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** Reveal new desktop under old.

50.46.29 **CGSRight = 2**

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** Old desktop moves right.

**Example:**
// flip transition for the window
dim r as CGSTransitionRequestMBS
dim co as new CGSConnectionMBS
dim w as CGSWindowMBS = co.CGSWindow(window1)

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSSFlip
r.TransitionOption=r.CGSRight
r.HasBackGround=false
r.HasBackColor=false
r.Win=w

dim ct as CGSTransitionMBS = co.NewTransition(r)
if ct<>Nil then
  PagePanel1.Value = 0
  Refresh
ct.invoke 0.5
ct.wait 0.5
ct.release
end if

50.46.30  CGSRightBottomLeft = 14

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** CGSSwap: old one moves right, new from bottom left.

50.46.31  CGSSlide = 4

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** Slide old out and new in. **Example:**

dim r as CGSTransitionRequestMBS
dim co as CGSConnectionMBS  // global property
dim ct as CGSTransitionMBS  // global property
dim cw as CGSWindowMBS

c=nh new CGSConnectionMBS

cw=co.CGSWindow(window1)

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSSlide
r.TransitionOption=r.CGSLef
50.46. CLASS CGSTRANSITIONREQUESTMBS

r.win=cw

cr=co.NewTransition(r)
if cr<>Nil then
  window1.Refresh
cr.Run(2)
else
  MsgBox "Error creating the transition."
end if

50.46.32  CGSSwap = 6

MBS MacCG Plugin, Plugin Version: 7.4. **Function**: Swap desktops over graphically.

50.46.33  CGSTopLeft = 9

MBS MacCG Plugin, Plugin Version: 7.4. **Function**: Old desktop moves top left.

50.46.34  CGSTopRight = 10

MBS MacCG Plugin, Plugin Version: 7.4. **Function**: CGSSwap: old to top right. new from bottom left.

50.46.35  CGSUp = 8

MBS MacCG Plugin, Plugin Version: 7.4. **Function**: Old desktop moves up.

50.46.36  CGSUpBottomRight = 11

MBS MacCG Plugin, Plugin Version: 7.4. **Function**: CGSSwap: old desktop up, new from bottom right.

50.46.37  CGSWarpFade = 5

MBS MacCG Plugin, Plugin Version: 7.4. **Function**: Warp old and fade out revealing new.

Example:
dim r as CGSTransitionRequestMBS
dim co as CGSConnectionMBS // global property
dim ct as CGSTransitionMBS // global property
dim cw as CGSWindowMBS

c=co.new CGSConnectionMBS

cw=co.CGSWindow(window1)

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSWarpFade
r.TransitionOption=r.CGSLef	r.win=cw

c=co.NewTransition(r)
if c<>Nil then
window1.Refresh
c.Run(2)
else
MsgBox "Error creating the transition."
end if

50.46.38  CGSWarpSwitch = 8

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** Warp old, switch and un-warp.

**Example:**

dim r as CGSTransitionRequestMBS
dim co as CGSConnectionMBS // global property
dim ct as CGSTransitionMBS // global property
dim cw as CGSWindowMBS

c=co.new CGSConnectionMBS

cw=co.CGSWindow(window1)

r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSWarpSwitch
r.TransitionOption=r.CGSLef	r.HasBackGround=false
r.HasBackColor=false
r.Win=cw

c=co.NewTransition(r)
if c<>Nil then
window1.Refresh
c.Invoke(5)
c.Wait(5)
c.Release
else
MsgBox "Error creating the transition."
end if

50.46.39  CGSZoom = 2

MBS MacCG Plugin, Plugin Version: 7.4. **Function:** Zoom/fade towards us.
50.47 class CGSValueMBS

50.47.1 class CGSValueMBS

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for a value to the CoreGraphics System.

**Notes:**

Requires Mac OS X 10.4.

All functions used by the CGS classes are private APIs, so Apple does not guarantee that they work in future Mac OS X versions.

50.47.2 Methods

50.47.3 IntegerValue as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The integer value of this object.

50.47.4 StringValue as string

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The string value of this object.

50.47.5 Properties

50.47.6 Connection as CGSConnectionMBS

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The reference to the connection used.

**Notes:**

Every CGS class has a reference to the connection so the connection object stays in memory as long as one of the depending objects is being used.

(Read only property)
50.47. **CLASS CGSVALUEMBS**

50.47.7 **ConnectionHandle as Integer**

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The handle to the CGS connection being used.  
**Notes:** Most of the functions need this value and it needs to be not zero.  
(Read and Write property)

50.47.8 **Handle as Integer**

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal used handle.  
**Notes:** (Read and Write property)
### 50.48.1 Class CGSWindowListMBS

**Function:**
An array of CGSWindowMBS objects.

**Example:**
```vba
dim c as new CGSConnectionMBS
dim list as CGSWindowListMBS = c.GetWindowList

dim names() as string
dim u as Integer = List.Count - 1
for i as Integer = 0 to u
    dim w as CGSWindowMBS = List.Item(i)
    names.append w.Title
next
MsgBox str(List.Count) + " windows: " + Join(names, ", ")
```

### 50.48.2 Methods

#### 50.48.3 Item(index as Integer) as CGSWindowMBS

**Function:**
Returns the window with the given index.

**Notes:**
Index is from 0 to count-1.

### 50.48.4 Properties

#### 50.48.5 Connection as CGSConnectionMBS

**Function:**
The reference to the connection used.

**Notes:**
Every CGS class has a reference to the connection so the connection object stays in memory as long as one of the depending objects is being used.
(Read only property)
50.48. CLASS CGSWINOWLISTMBS

50.48.6  ConnectionHandle as Integer

MBS MacCG Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The handle to the CGS connection being used.
**Notes:**
Most of the functions need this value and it needs to be not zero.
(Read and Write property)

50.48.7  Count as Integer

MBS MacCG Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The number of CGSWindow objects in that array.
**Notes:** (Read and Write property)

50.48.8  Handle as Integer

MBS MacCG Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The handle to the window list.
**Notes:** (Read and Write property)
50.49 class CGSWindowMBS

50.49.1 class CGSWindowMBS

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for a window in the CoreGraphics System.

**Notes:**
Requires Mac OS X 10.4.
All functions used by the CGS classes are private APIs, so Apple does not guarantee that they work in future Mac OS X versions.

To find all processes on Mac, use the ProcessMBS class.
To find all windows on Windows, use the WindowsListMBS class.

Not official supported by Apple and some effects don’t work well on latest OS X versions!

50.49.2 Methods

50.49.3 Flush

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Flushes this window.

**Example:**
```vbnet
dim co as CGSConnectionMBS
dim cw as CGSWindowMBS
cw=co.CGSWindow(window1)
cw.Flush
```

**Notes:** Lasterror is set.

50.49.4 Height as Double

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The height of this window.

**Example:**
CLASS CGSWINDOWMBS

Dim co As CGSConnectionMBS
Dim cw As CGSWindowMBS

co = New CGSConnectionMBS
cw = co.CGSWindow(window1)

MsgBox str(cw.height)

50.49.5 Left as Double

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The left position of this window.
**Example:**

```vbnet
dim co as CGSConnectionMBS
dim cw as CGSWindowMBS

c0 = new CGSConnectionMBS
cw = co.CGSWindow(window1)

MsgBox str(cw.left)
```

50.49.6 Level as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The window level of this window.
**Notes:** See WindowGroupMBS.Level or OverlayWindow.Level for details.

50.49.7 Move(byref x as single, byref y as single)

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Moves the window.

50.49.8 Order(mode as Integer, relativeToWindow as CGSWindowMBS=nil)

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Reorders the window.
**Notes:**
Lasterror is set.
Mode must be kCGSOrderAbove, kCGSOrderBelow or kCGSOrderOut.

### 50.49.9 Title as string

MBS MacCG Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The window title.

### 50.49.10 Top as Double

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The top position of this window.
**Example:**
```vbs
Dim co As CGSConnectionMBS
Dim cw As CGSWindowMBS

Co = New CGSConnectionMBS
Cw = Co.CGSWindow(window1)
MsgBox Str(Cw.top)
```
**Notes:** In Pixel from the top of the screen.

### 50.49.11 Uncover

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Uncovers the window.
**Notes:** Lasterror is set.

### 50.49.12 Warp(w as Integer, h as Integer, value as memoryblock)

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Sets the wrap of a window.
**Example:**
```vbs
Dim w, h as Integer
Dim m as memoryblock
Dim localx, localy, gobalx, gobaly as Integer
```

50.49. CLASS CGSWINDOWMBS

```
dim offset as Integer

m=newmemoryblock(w*h*16)
// for each row
// for each point in row
m.SingleValue(offset)=localx
offset=offset+4
m.SingleValue(offset)=localy
offset=offset+4
m.SingleValue(offset)=globalx
offset=offset+4
m.SingleValue(offset)=globaly
offset=offset+4
```

Notes:

the memoryblock must be of size w*h*sizeof(single)*4.
a single is 4 bytes, so this is 16*w*h
w is the number of horizontal points you define.
h is the number of vertical points you define.

Basically you define for a local point in the window the point onscreen where it is moved to. See the example project for more details.

50.49.13 Width as Double

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The width of this window.

**Example:**
```
dim co as CGSConnectionMBS
dim cw as CGSWindowMBS

cw=co.CGSWindow(window1)
```

MsgBox str(cw.width)
50.49.14 **Workspace as CGSWorkspaceMBS**

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The workspace where this window is part of.

50.49.15 **Properties**

50.49.16 **Connection as CGSConnectionMBS**

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The reference to the connection used.
**Notes:**
Every CGS class has a reference to the connection so the connection object stays in memory as long as one of the depending objects is being used.
(Read only property)

50.49.17 **ConnectionHandle as Integer**

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The handle to the CGS connection being used.
**Notes:**
Most of the functions need this value and it needs to be not zero.
(Read and Write property)

50.49.18 **Handle as Integer**

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The window handle.
**Notes:**
This is not a WindowRef or a NSWindow pointer!
(Read and Write property)

50.49.19 **LastError as Integer**

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Last error code reported.
**Notes:**
The list of CoreGraphics error (from Mac OS X 10.4)

- kCGErrorSuccess = 0 Success
- kCGErrorFailure = 1000 Failure
- kCGErrorIllegalArgument = 1001 Illegal Argument
- kCGErrorInvalidConnection = 1002 Invalid Connection
- kCGErrorInvalidContext = 1003 Invalid Context
- kCGErrorCannotComplete = 1004 Cannot complete
- kCGErrorNameTooLong = 1005 Name is too long
- kCGErrorNotImplemented = 1006 Not implemented
- kCGErrorOutOfRange = 1007 Out of bounds
- kCGErrorTypeError = 1008 Type error
- kCGErrorNoCurrentPoint = 1009 No current point
- kCGErrorInvalidOperation = 1010 Invalid Operation
- kCGErrorNoneAvailable = 1011 Internal errors have taken place
- kCGErrorApplicationRequiresNewerSystem = 1015 The application being launched says in its bundle info that it requires a newer version of the system than is currently running.
- kCGErrorApplicationNotPermittedToExecute = 1016 Macintosh Manager is active and this application is not permitted to run
- kCGErrorApplicationIncorrectExecutableFormatFound = 1023 The application being launched does not have any executable code for the current system.
- kCGErrorApplicationIsLaunching = 1024 The application is in the process of launching but hasn’t checked in yet. Any launch data provided will be given to the application when it does check in.
- kCGErrorApplicationAlreadyRunning = 1025 The application being launched was already running (and had already checked in) and so any launch data provided can not be delivered to it by CPS
- kCGErrorApplicationCanOnlyBeRunInOneSessionAtATime = 1026 The application being launched is incompatible with multiple user sessions and is already running in another session by another user.
- kCGErrorApplicationNotAllowedByClassic = 1027 To avoid deadlock Classic can’t launch another Classic application by going thru CPS. This error gets returned in that case and it signals TruBlueEnvironment that it must handle this launch on its own.
- kCGErrorForkFailed = 1028 CPS was unable to fork a new process in order to launch an application.

(Read and Write property)

### 50.49.20 AffineTransform as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The transformation of this window.

**Example:**

```vba
// rotates the window.
dim a as CGAffineTransformMBS
a=CGAffineTransformMBS.MakeRotation(1)
a=a.Translate(-Width,-Height)
dim co as CGSConnectionMBS
dim cw as CGSWindowMBS
co=new CGSConnectionMBS
cw=co.CGSWindow(window1)
cw.AffineTransform=a
```
50.49.21 Alpha as single

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The alpha value for this window. **Example:**
```
    dim cw as CGSWindowMBS
    dim co as new CGSConnectionMBS

    cw=co.CGSWindow(window1)
    cw.Alpha=0.2

    // same as:

    // self.TransparencyMBS=0.2
```

**Notes:**
0 is invisible and 1.0 is visible.
You may prefer to use the window TransparencyMBS property instead as it uses documented APIs. (Read and Write computed property)

50.49.22 EventMask as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The event mask of this window. **Notes:** (Read and Write computed property)
50.49.23 Constants

50.49.24 kCGSOrderAbove = 1
MBS MacCG Plugin, Plugin Version: 7.4. **Function:** Window is ordered above target.

50.49.25 kCGSOrderBelow = -1
MBS MacCG Plugin, Plugin Version: 7.4. **Function:** Window is ordered below target.

50.49.26 kCGSOrderOut = 0
MBS MacCG Plugin, Plugin Version: 7.4. **Function:** Window is removed from the on-screen.
50.50 class CGSWorkspaceMBS

50.50.1 class CGSWorkspaceMBS

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for a workspace to the CoreGraphics System.
**Notes:**
Requires Mac OS X 10.4.
All functions used by the CGS classes are private APIs, so Apple does not guarantee that they work in future Mac OS X versions.

Not official supported by Apple and some effects don’t work well on latest OS X versions!

50.50.2 Methods

50.50.3 GetWorkspaceWindowList as CGSWindowListMBS

MBS MacCG Plugin, Plugin Version: 8.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the list of windows for this workspace.
**Notes:** Returns nil on any error.

50.50.4 MoveWindows(target as CGSWorkspaceMBS)

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Moves all windows from one workspace to another.
**Notes:** Lasterror is set.

50.50.5 Properties

50.50.6 Connection as CGSConnectionMBS

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The reference to the connection used.
**Notes:**
Every CGS class has a reference to the connection so the connection object stays in memory as long as one of the depending objects is being used.
(Read only property)
50.50.7  ConnectionHandle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The handle to the CGS connection being used.
**Notes:**
Most of the functions need this value and it needs to be not zero.
(Read and Write property)

50.50.8  Handle as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The internal used handle to the workspace.
**Notes:** (Read and Write property)

50.50.9  LastError as Integer

MBS MacCG Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Last error code reported.
**Notes:**
The list of CoreGraphics error (from Mac OS X 10.4)

\[
\begin{align*}
lCGErrorSuccess &= 0 \quad \text{Success} \\
lCGErrorFailure &= 1000 \quad \text{Failure} \\
lCGErrorIllegalArgument &= 1001 \quad \text{Illegal Argument} \\
lCGErrorInvalidConnection &= 1002 \quad \text{Invalid Connection} \\
lCGErrorInvalidContext &= 1003 \quad \text{Invalid Context} \\
lCGErrorCannotComplete &= 1004 \quad \text{Cannot complete} \\
lCGErrorNameTooLong &= 1005 \quad \text{Name is too long} \\
lCGErrorNotImplemented &= 1006 \quad \text{Not implemented} \\
lCGErrorOutOfRange &= 1007 \quad \text{Out of bounds} \\
lCGErrorTypeCheck &= 1008 \quad \text{Type error} \\
lCGErrorNoCurrentPoint &= 1009 \quad \text{No current point} \\
lCGErrorInvalidOperation &= 1010 \quad \text{Invalid Operation} \\
lCGErrorNoneAvailable &= 1011 \quad \text{Internal errors have taken 1012 1013 and 1014} \\
lCGErrorApplicationRequiresNewerSystem &= 1015 \quad \text{The application being launched says in it’s bundle info that it requires a newer version of the system than is currently running.} \\
lCGErrorApplicationNotPermittedToExecute &= 1016 \quad \text{Macintosh Manager is active and this application is not permitted to run} \\
lCGErrorApplicationIncorrectExecutableFormatFound &= 1023 \quad \text{The application being launched does not have any executable code for the current system.} \\

lCGErrorClassicApplicationsMustBeLaunchedByClassic &= 1027 \quad \text{To avoid deadlock Classic can’t launch another Classic application by going thru CPS. This error gets returned in that case and it signals TruBlueEnvironment that it must handle this launch on its own.} \\
lCGErrorForkFailed &= 1028 \quad \text{CPS was unable to fork a new process in order to launch an application.}
\end{align*}
\]
(Read and Write property)
50.51. module CGWindowMBS

50.51.1. module CGWindowMBS

**Function:** This module contains CoreGraphics functions related to windows.

**Example:**

```plaintext
// screenshot of all windows on screens
Backdrop = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, 0, 0, 0)
```

50.51.2. Methods

50.51.3. CreateWindowList(windowOption as Integer, WindowID as Integer = 0) as UInt32()

**Function:** Returns the list of window IDs associated with the specified windows in the current user session.

**Example:**

```plaintext
dim a(-1) as UInt32 = CGWindowMBS.CreateWindowList(0,0)
MsgBox str(UBound(a)+1) + " windows"
```

**Notes:**

- windowOption: The options describing which window IDs to return. Typical options let you obtain IDs for all windows or for windows above or below the window specified in the relativeToWindow parameter.

- WindowID: The ID of the window to use as a reference point when determining which other windows to return. For options that do not require a reference window, this parameter can be kCGNullWindowID.

Returns an array of CGWindowID values corresponding to the desired windows. If there are no windows matching the desired criteria, the function returns an empty array. If you call this function from outside of a GUI security session or when no window server is running, this function returns nil.

Available in Mac OS X v10.5 and later.
50.51.4 CreateWindowListCGImage(left as Double, top as Double, width as Double, height as Double, windowOption as Integer, WindowID as Integer = 0, ImageOption as Integer = 0) as Variant

**Function:** Takes a screenshot from a list of windows.

**Notes:** Same as CreateWindowListImage, but returns a CGImageMBS. Declared as Variant to reduce plugin interdependencies.

50.51.5 CreateWindowListImage(left as Double, top as Double, width as Double, height as Double, windowOption as Integer, WindowID as Integer = 0, ImageOption as Integer = 0) as picture

**Function:** Takes a screenshot from a list of windows.

**Example:**
```
Dim p As Picture

‘ Screenshot of everything:
p = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, CGWindowMBS.kCGWindowListOptionAll, 0, CGWindowMBS.kCGWindowImageDefault)

‘ Screenshot of everything behind a window:
p = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, CGWindowMBS.kCGWindowListOptionOnScreenBelowWindow, CGWindowMBS.GetWindowID(window1), CGWindowMBS.kCGWindowImageDefault)

‘ Screenshot of everything in front of a window (dock and menubar):
p = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, CGWindowMBS.kCGWindowListOptionOnScreenAboveWindow, CGWindowMBS.GetWindowID(window1), CGWindowMBS.kCGWindowImageDefault)

‘ Screenshot of a window
p = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, CGWindowMBS.kCGWindowListOptionIncludingWindow, CGWindowMBS.GetWindowID(window1), CGWindowMBS.kCGWindowImageDefault)

‘ Only shadow of a window (will be in the mask)
p = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, CGWindowMBS.kCGWindowListOptionIncludingWindow, CGWindowMBS.GetWindowID(window1), CGWindowMBS.kCGWindowImageOnlyShadows)

‘ Desktop decoration is white
p = CGWindowMBS.CreateWindowListImage(0, 0, 0, 0, CGWindowMBS.kCGWindowListExcludeDesktopElements, CGWindowMBS.GetWindowID(window1), CGWindowMBS.kCGWindowImageShouldBeOpaque)
```

**Notes:**
Parameters:

- left: Left coordinate rectangle
- top: Top coordinate rectangle
- width: Width of rectangle
- height: Height of rectangle
- windowOption: A combination of kCGWindowListOption* flags
- WindowID: The window ID or 0.
- ImageOption: A combination of kCGWindowImage* flags

If you pass a rectangle with all values zero, you select the whole screen.
Returns the screenshot as picture or nil on any error.

Window Options:

- kCGWindowListOptionAll: 0 List all windows in this user session, including both on and off-screen windows. relativeToWindow should be kCGNullWindowID=0.
- kCGWindowListOptionOnScreenOnly: 1 List all on-screen windows in this user session, ordered from front to back. relativeToWindow should be kCGNullWindowID=0.
- kCGWindowListOptionOnScreenAboveWindow: 2 List all on-screen windows above the specified window ordered from front to back. relativeToWindow should be the window number.
- kCGWindowListOptionOnScreenBelowWindow: 4 List all on-screen windows below the specified window ordered from front to back. relativeToWindow should be the window number.
- kCGWindowListOptionIncludingWindow: 8 Include the named window in any list, effectively creating ‘at-or-above’ or ‘at-or-below’ lists. relativeToWindow should be the window number.
- kCGWindowListExcludeDesktopElements: 16 Exclude any windows from the list that are elements of the desktop, including the background picture and icons on the desktop.

Image Options:

- kCGWindowImageDefault: 0 Default behavior: If a rect of CGRectNull is used bounds computation includes the framing effects, such as a shadow.
- kCGWindowImageBoundsIgnoreFraming: 1 If a rect of CGRectNull is used, ignore framing effects for bounds computation
- kCGWindowImageShouldBeOpaque: 2 The captured image should be opaque. Empty areas are white
- kCGWindowImageOnlyShadows: 4 Capture only shadows.

50.51.6 GetWindowID(w as window) as Integer

Function: Queries the CoreGraphics Window ID for the given window.
Notes:
Returns 0 on any error.
This ID can be used for CreateWindowListImage.
50.51.7 GetWindowListInfo(windowOption as Integer, WindowID as Integer = 0) as dictionary()

Function: Generates and returns information about the selected windows in the current user session.

Example:

dim a(-1) as Dictionary = CGWindowMBS.GetWindowListInfo(0,0)

dim u as Integer = UBound(a)
if u > 10 then u = 10 // show only 10 times

dim lines(-1) as string
for i as Integer = 0 to u
    dim d as Dictionary = a(i)
    lines.Append d.Value(CGWindowMBS.kCGWindowName) + " of " + d.Value(CGWindowMBS.kCGWindowOwnerName)
next

// shows 11 windows with names. Not all windows have names.
MsgBox Join(lines, EndOfLine)

Notes:

option: The options describing which window dictionaries to return. Typical options let you return dictionaries for all windows or for windows above or below the window specified in the relativeToWindow parameter. For more information, see "Window List Option Constants."

WindowID: The ID of the window to use as a reference point when determining which other window dictionaries to return. For options that do not require a reference window, this parameter can be 0.

Returns an array of CFDictionaryRef types, each of which contains information about one of the windows in the current user session. If there are no windows matching the desired criteria, the function returns an empty array. If you call this function from outside of a GUI security session or when no window server is running, this function returns nil.

You can use this function to get detailed information about the configuration of one or more windows in the current user session. For example, you can use this function to get the bounds of the window, its window ID, and information about how it is managed by the window server. For the list of keys and values that may be present in the dictionary, see kCGWindow* constants.
Generating the dictionaries for system windows is a relatively expensive operation. As always, you should profile your code and adjust your usage of this function appropriately for your needs.

Available in Mac OS X v10.5 and later.

### 50.51.8 Constants

#### 50.51.9 kCGBackingStoreBuffered = 2

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the backing store constants.

#### 50.51.10 kCGBackingStoreNonretained = 1

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the backing store constants.

#### 50.51.11 kCGBackingStoreRetained = 0

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the backing store constants.

#### 50.51.12 kCGNullWindowID = 0

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** The number for an invalid window ID.

#### 50.51.13 kCGWindowAlpha = "kCGWindowAlpha"

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the possible keys in the window info dictionary.  
**Notes:** The alpha fade of the window. The value of this key is a floating-point value. The value 1.0 is normal (opaque); the value 0.0 is fully transparent (invisible).
50.51.14  \textit{kCGWindowBackingLocationVideoMemory} = "kCGWindowBackingLocationVideoMemory"

MBS MacFrameworks Plugin, Plugin Version: 11.2. \textbf{Function:} One of the possible keys in the window info dictionary.
\textbf{Notes:} Optional. If present, true if the window backing store is in video memory, false otherwise. If the key is not present, then the window backing store is in main memory. The value of this key is a Boolean.

50.51.15  \textit{kCGWindowBounds} = "kCGWindowBounds"

MBS MacFrameworks Plugin, Plugin Version: 11.2. \textbf{Function:} One of the possible keys in the window info dictionary.
\textbf{Example:}

```vba
dim a(-1) as Dictionary = CGWindowMBS.GetWindowListInfo(CGWindowMBS.kCGWindowListOptionOnScreenOnly,0)

//cycle thru window names and get window size
for each d as Dictionary in a
    dim winodname as string = d.Lookup(CGWindowMBS.kCGWindowName, "")
    if Instr(1, winodname, "Play") > 0 then
        dim bounds as Dictionary = d.Lookup(CGWindowMBS.kCGWindowBounds, nil)
        dim x as Integer = bounds.Lookup("X", 0)
        dim y as Integer = bounds.Lookup("Y", 0)
        dim w as Integer = bounds.Lookup("Width", 0)
        dim h as Integer = bounds.Lookup("Height", 0)
        MsgBox "Found window at "+str(x)+"/"+str(y)+" with size "+str(w)+"/"+str(h)
    end if
next
```

\textbf{Notes:} The bounds of the window in screen space, with the origin at the upper-left corner of the main display. The value of this key is a Dictionary.

50.51.16  \textit{kCGWindowImageBoundsIgnoreFraming} = 1

MBS MacFrameworks Plugin, Plugin Version: 11.2. \textbf{Function:} One of the image options constants.
\textbf{Notes:} If null rect is passed as the screen bounds, then then bounds computation excludes window frame ornamentation, such as a shadow.
50.51. **MODULE CGWINDOWMBS**

**50.51.17 kCGWindowImageDefault = 0**

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the image options constants. **Notes:** If null rectangle is passed as the screen bounds, then then bounds computation includes window frame ornamentation, such as a shadow.

**50.51.18 kCGWindowImageOnlyShadows = 4**

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the image options constants. **Notes:** Only draw the windows' shadows, not the windows themselves.

**50.51.19 kCGWindowImageShouldBeOpaque = 2**

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the image options constants. **Notes:** Force the created image to be opaque. Empty areas are white.

**50.51.20 kCGWindowIsOnscreen = ”kCGWindowIsOnscreen”**

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the possible keys in the window info dictionary. **Notes:** Optional. If present, true if the window is ordered on screen, false otherwise. If the key is not present, then the window is not ordered on screen. The value of this key is a boolean.

**50.51.21 kCGWindowLayer = ”kCGWindowLayer”**

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the possible keys in the window info dictionary. **Notes:** The window layer number of the window. The value of this key is a 32-bit signed integer value.

**50.51.22 kCGWindowListExcludeDesktopElements = 16**

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the window list option constants. **Notes:** Exclude any windows from the list that are elements of the desktop.
50.51.23  kCGWindowListOptionAll = 0

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the window list option constants. **Notes:** List all windows in this user session, including both on- and off-screen windows. The parameter WindowID should be kCGNullWindowID.

50.51.24  kCGWindowListOptionIncludingWindow = 8

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the window list option constants. **Notes:** Include the window specified by WindowID in any list, effectively creating 'at-or-above' or 'at-or-below' lists.

50.51.25  kCGWindowListOptionOnScreenAboveWindow = 2

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the window list option constants. **Notes:** List all on-screen windows above the window specified by WindowID, ordered from front to back.

50.51.26  kCGWindowListOptionOnScreenBelowWindow = 4

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the window list option constants. **Notes:** List all on-screen windows below the window specified by WindowID, ordered from front to back.

50.51.27  kCGWindowListOptionOnScreenOnly = 1

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the window list option constants. **Notes:** List all on-screen windows in this user session, ordered from front to back. The parameter WindowID should be kCGNullWindowID.

50.51.28  kCGWindowMemoryUsage = "kCGWindowMemoryUsage"

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the possible keys in the window info dictionary. **Notes:** An estimate of the memory in bytes currently used by the window and its supporting data structures. The value of this key is a 64-bit signed integer value.
50.51.29 **kCGWindowName = ”kCGWindowName”**

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the possible keys in the window info dictionary.

**Example:**

```vbnet
// find window with containing ”Play” in name.
dim a(-1) as Dictionary = CGWindowMBS.GetWindowListInfo(CGWindowMBS.kCGWindowListOptionOnScreenOnly, 0)
for each d as Dictionary in a
dim windowname as string = d.Lookup(CGWindowMBS.kCGWindowName, ””)
if Instr(1,windowname,"Play") >0 then
msgBox ”I found it and the ID is ”+d.Lookup(CGWindowMBS.kCGWindowNumber, ””)
end if
next
```

**Notes:** Optional. If present, the name of the window. The value of this key is a string.

---

50.51.30 **kCGWindowNumber = ”kCGWindowNumber”**

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the possible keys in the window info dictionary.

**Example:**

```vbnet
// find window with containing ”Play” in name.
dim a(-1) as Dictionary = CGWindowMBS.GetWindowListInfo(CGWindowMBS.kCGWindowListOptionOnScreenOnly, 0)
for each d as Dictionary in a
dim windowname as string = d.Lookup(CGWindowMBS.kCGWindowName, ””)
if Instr(1,windowname,"Play") >0 then
msgBox ”I found it and the ID is ”+d.Lookup(CGWindowMBS.kCGWindowNumber, ””)
end if
next
```

**Notes:** The window ID, a unique value within the user session representing the window. The value of this key is a 32-bit signed integer value.
**50.51.31 kCGWindowOwnerName = ”kCGWindowOwnerName”**

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the possible keys in the window info dictionary.  
**Notes:** Optional. If present, the name of the application process which owns the window. The value of this key is a string.

**50.51.32 kCGWindowOwnerPID = ”kCGWindowOwnerPID”**

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the possible keys in the window info dictionary.  
**Notes:** The process ID of the process that owns the window. The value of this key is a 32-bit signed integer value.

**50.51.33 kCGWindowSharingNone = 0**

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the sharing state constants.  
**Notes:** No sharing.

**50.51.34 kCGWindowSharingReadOnly = 1**

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the sharing state constants.  
**Notes:** Read only.

**50.51.35 kCGWindowSharingReadWrite = 2**

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the sharing state constants.  
**Notes:** Read and Write

**50.51.36 kCGWindowSharingState = ”kCGWindowSharingState”**

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the possible keys in the window info dictionary.  
**Notes:** The sharing state of the window, one of kCGWindowSharingNone, kCGWindowSharingReadOnly, or kCGWindowSharingReadWrite. The value of this key is a 32-bit signed integer value.
50.51.37 kCGWindowStoreType = ”kCGWindowStoreType"

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the possible keys in the window info dictionary.  
**Notes:** The backing store type of the window, one of kCGBackingStoreRetained, kCGBackingStoreNonretained, or kCGBackingStoreBuffered. The value of this key is a 32-bit signed integer value.

50.51.38 kCGWindowWorkspace = ”kCGWindowWorkspace"

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the possible keys in the window info dictionary.  
**Notes:** Optional. If present, the workspace ID of the workspace associated with the window. The value of this key is a 32-bit signed integer value.
50.52 class OverlayWindowMBS

50.52.1 class OverlayWindowMBS

MBS MacCG Plugin, Plugin Version: 2.9, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
A class for an overlay window.

**Notes:**
Please consider using OverlayMBS instead of OverlayWindowMBS. OverlayMBS is cross platform for Mac and Windows.
OverlayWindowMBS is not supported for 64 bit targets.

This window can be on top of all other windows or on some layer between. As it can be transparent you can use it to draw on it to draw on the screen.
(e.g. a ruler)

Some Realbasic versions block event handling on Realbasic windows which are behind the overlay window.
RB 2006r5 does fix that.

Only supported on Mac OS X with 32 bit. Please use OverlayMBS windows for all new projects.

50.52.2 Methods

50.52.3 AttachToWindow(TargetWindow as window, LiveResize as boolean)

MBS MacCG Plugin, Plugin Version: 3.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Attaches the overlay window to flow just over the target RB window.

**Notes:**
If LiveResize is true the BoundsChanged event will fire when the window is being resized or moved, not just after the user finished.
This connection can’t currently be removed unless you destroy the Overlay window.

Currently not supported on Cocoa.
See also:

- 50.52.4 AttachToWindow(TargetWindow as window, LiveResize as boolean, KeepEqualSize as boolean) 8345
- 50.52.5 AttachToWindow(TargetWindow as window, LiveResize as boolean, KeepEqualSize as boolean, OtherWindow as OverlayWindowMBS) 8345
50.52.4 AttachToWindow(TargetWindow as window, LiveResize as boolean, KeepEqualSize as boolean)

MBS MacCG Plugin, Plugin Version: 4.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Attaches the overlay window to flow just over the target RB window.

**Notes:**
Sames as the other AttachToWindow variation, but if KeepEqualSize, the window is not resized to the whole window and the window is not resized if the parent window resizes.

Currently not supported on Cocoa.

See also:

- 50.52.3 AttachToWindow(TargetWindow as window, LiveResize as boolean)
- 50.52.4 AttachToWindow(TargetWindow as window, LiveResize as boolean, KeepEqualSize as boolean)

50.52.5 AttachToWindow(TargetWindow as window, LiveResize as boolean, KeepEqualSize as boolean, OtherWindow as OverlayWindowMBS)

MBS MacCG Plugin, Plugin Version: 4.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Attaches the overlay window to flow just over the target RB window.

**Notes:**
Sames as the other AttachToWindow variation, but the new window will coexists with another Overlaywindow attached to the same parent window.
(this should work with more than 2 windows, if you just pass an already created window when attaching another one.)

Currently not supported on Cocoa.

See also:

- 50.52.3 AttachToWindow(TargetWindow as window, LiveResize as boolean)
- 50.52.4 AttachToWindow(TargetWindow as window, LiveResize as boolean, KeepEqualSize as boolean)

50.52.6 close

MBS MacCG Plugin, Plugin Version: 2.9, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Closes the window.
50.52.7 Context as CGContextMBS

MBS MacCG Plugin, Plugin Version: 2.9, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new context object to draw into the window.
**Notes:** Don’t forget to call flush of the context object to make the changes visible.

50.52.8 Create(left as Integer, top as Integer, width as Integer, height as Integer) as Integer

MBS MacCG Plugin, Plugin Version: 2.9, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new window.
**Example:**

```plaintext
// Doing the Dock’s poff animation
// No error checking in this code!

Sub poff(x as Integer, y as Integer)
    # pragma disableautowaitcursor
    dim f as FolderItem
    dim png as PNGpictureMBS
    dim o as OverlayWindowMBS
    dim p, m as Picture
    dim c as CGContextMBS
    dim cp as CGImageMBS
    dim r as CGRectMBS
    dim t, i as Integer

    // 128 is full size
    const targetwidth=128
    const targetheight=128

    f=CoreServicesFolderMBS(-32766)
    f=f.Child("Dock.app")
    f=f.Child("Contents")
    f=f.Child("Resources")
    f=f.Child("poof.png")
    png=f.OpenAsPNGMBS(0)
    o=new OverlayWindowMBS
```
if o.Create(x,y,targetwidth,targetheight)=0 then

o.Show

for i=0 to 4
    c=o.Context
    p=NewPicture(targetwidth,targetheight,32)
    p.Graphics.DrawPicture png.pict,0,(-128)*i

    m=NewPicture(targetwidth,targetheight,32)
    m.Graphics.DrawPicture png.mask,0,(-128)*i

    cp=CGCreateImageMBS(p,m)
    r=CGMakeRectMBS(0,0,targetwidth,targetheight)

    c.ClearRect r
    c.DrawPicture cp,r

    c.Flush

    t=ticks
    while abs(t-ticks)<5
    wend
    next

end if

End Sub

Notes:

Returns a Mac OS error code. 0 means successful. -1 means that the function is not available, e.g., on Windows. Any other value is a Mac OS error code and you can use the MacErrorString function to get what it means.

Only supported on Mac OS X with 32 bit. Please use OverlayMBS windows for all new projects.
50.52.9  Flush

MBS MacCG Plugin, Plugin Version: 2.9, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Flushes the window’s graphics.

50.52.10  Hide

MBS MacCG Plugin, Plugin Version: 2.9, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Hides the window.
**Notes:** Changes the state of the window to invisible.

50.52.11  InstallEventHandler

MBS MacCG Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Registers an event handler so Mac OS X informs us about the mouse events.

50.52.12  RemoveEventHandler

MBS MacCG Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Removes the event handler for the mouse events.

50.52.13  SetBounds(left as Integer, top as Integer, width as Integer, height as Integer)

MBS MacCG Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Changes the bounds of the overlay window in one run.
**Notes:** If you change left, top, width and height each after the other you may have several unneeded redraws.

50.52.14  Show

MBS MacCG Plugin, Plugin Version: 2.9, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Shows the window.
**Notes:** Changes the state of the window to visible.
50.52.15 TransitionOverlay(parent as OverlayWindowMBS, effect as Integer, action as Integer) as Integer

MBS MacCG Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Runs window transition. **Notes:** see other TransitionOverlay method for details. See also:

- 50.52.16 TransitionOverlay(parent as OverlayWindowMBS, effect as Integer, action as Integer, Async as boolean, duration as Double) as Integer
- 50.52.17 TransitionOverlay(parent as OverlayWindowMBS, effect as Integer, action as Integer, left as Integer, top as Integer, width as Integer, height as Integer) as Integer
- 50.52.18 TransitionOverlay(parent as OverlayWindowMBS, effect as Integer, action as Integer, left as Integer, top as Integer, width as Integer, height as Integer, Async as boolean, duration as Double) as Integer

50.52.16 TransitionOverlay(parent as OverlayWindowMBS, effect as Integer, action as Integer, Async as boolean, duration as Double) as Integer

MBS MacCG Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Runs window transition with additional parameters. **Notes:** see other TransitionOverlay method for details. See also:

- 50.52.15 TransitionOverlay(parent as OverlayWindowMBS, effect as Integer, action as Integer) as Integer
- 50.52.17 TransitionOverlay(parent as OverlayWindowMBS, effect as Integer, action as Integer, left as Integer, top as Integer, width as Integer, height as Integer) as Integer
- 50.52.18 TransitionOverlay(parent as OverlayWindowMBS, effect as Integer, action as Integer, left as Integer, top as Integer, width as Integer, height as Integer, Async as boolean, duration as Double) as Integer

50.52.17 TransitionOverlay(parent as OverlayWindowMBS, effect as Integer, action as Integer, left as Integer, top as Integer, width as Integer, height as Integer) as Integer

MBS MacCG Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Runs window transition with additional rectangle. **Notes:** see other TransitionOverlay method for details. See also:

- 50.52.15 TransitionOverlay(parent as OverlayWindowMBS, effect as Integer, action as Integer) as Integer
50.52.18 TransitionOverlay(parent as OverlayWindowMBS, effect as Integer, action as Integer, left as Integer, top as Integer, width as Integer, height as Integer, Async as boolean, duration as Double) as Integer

MBS MacCG Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Runs window transition with additional parameters and rectangle.  
**Notes:** Transitions a window from one state to another with appropriate animation and sound.

- **self:** The window that should be transitioned.  
- **parent:** For use with kWindowSheetTransitionEffect. This is the parent window of the sheet.  
- **effect:** The type of visual effect to use.  
- **action:** The action to take on the window.  
- **left:** The rectangle to be used.  
- **top:** The rectangle to be used.  
- **width:** The rectangle to be used.  
- **height:** The rectangle to be used.  
- **async:** Whether the transition should run synchronously or asynchronously. If Async is true, TransitionWindow will return immediately, and the transition will run using an event loop timer. You must run your event loop for the transition to occur. If Async is false, TransitionWindow will block until the transition is completed.  
- **duration:** The duration of the fade, in seconds. For use with the Sheet, Slide, Fade, and Genie transition effects; ignored for other effects. You may pass 0 to use the default duration. The effect is not guaranteed to last precisely this long, but should be a close approximation.

Returns Mac OS error code like 0 for success, -1 for parameter error in the plugin or -50 for parameter error.

Visual effects that are provided by TransitionWindow:

**Actions:** Modifications to window state that are provided by TransitionWindow

- 50.52.20 TransitionWindow(parent as window, effect as Integer, action as Integer, Async as boolean, duration as Double) as Integer
kWindowZoomTransitionEffect 1 Finder-like zoom rectangles. Use with TransitionWindow and Show or Hide transition actions.

kWindowSheetTransitionEffect 2 Zoom in/out from parent. Use with TransitionWindowAndParent and Show or Hide transition actions. Available in Mac OS X, and in CarbonLib 1.5 and later.

kWindowSlideTransitionEffect 3 Slide the window into its new position. Use with TransitionWindow and Move or Resize transition actions. Available in Mac OS X, and in CarbonLib 1.5 and later.

kWindowFadeTransitionEffect 4 Fade the window into or out of visibility. Use with the Show or Hide transition actions. Available in Mac OS X 10.3 and later.

kWindowGenieTransitionEffect 5 Use the Genie effect that the Dock uses to minimize or maximize a window to show or hide the window. Use with the Show or Hide transition actions. Available in Mac OS X 10.3 and later.

kWindowShowTransitionAction 1 Shows the window. Use with the Zoom, Sheet, Fade, or Genie transition effects. For the Zoom, Sheet, and Genie effects, the rectangle parameter is the global coordinates from which to start the animation; rectangle is optional for the Zoom and Sheet effects, and in that case, the animation begins at the center of the window. The Genie effect requires a rectangle parameter. The Fade effect does not use the inRect parameter.

kWindowHideTransitionAction 2 Hides the window. Use with the Zoom, Sheet, Fade, or Genie transition effects. For the Zoom, Sheet, and Genie effects, the rectangle parameter is the global coordinates at which to end the animation; Recangle is optional for the Zoom and Sheet effects, and in that case, the animation ends at the center of the window. The Genie effect requires a rectangle. The Fade effect does not use the inRect parameter.

kWindowMoveTransitionAction 3 Moves the window. Use with the Slide transition effect. The rectangle parameter is the global coordinates of the window’s new structure bounds; Rectangle must be provided. Available in Mac OS X, and in CarbonLib 1.5 and later.

kWindowResizeTransitionAction 4 Resizes the window. Use with the Slide transition effect. The rectangle parameter is the global coordinates of the window’s new structure bounds; Rectangle must be provided. Available in Mac OS X, and in CarbonLib 1.5 and later.

• 50.52.21 TransitionWindow(parent as window, effect as Integer, action as Integer, left as Integer, top as Integer, width as Integer, height as Integer) as Integer

50.52.23 UnAttachToWindow

MBS MacCG Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Removes the link to the parent window.

50.52.24 WindowLevelForKey(key as Integer) as Integer

MBS MacCG Plugin, Plugin Version: 2.9, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: A function to get the value for the window level out of a level key.

Example:
dim w as OverlayWindowMBS

// Call Create before setting level

w.level=w.WindowLevelForKey(2) // window between desktop picture and desktop icons

Notes:

Windows may be assigned to a particular level. When assigned to a level, the window is ordered relative to all other windows in that level. Windows with a higher level are sorted in front of windows with a lower level.

A common set of window levels is defined here for use within higher level frameworks. The levels are accessed via a key and function, so that levels may be changed or adjusted in future releases without breaking binary compatibility.

Some constants for the level keys

- kCGBaseWindowLevelKey 0
- kCGMinimumWindowLevelKey 1
- kCGDesktopWindowLevelKey 2
- kCGBackstopMenuLevelKey 3
- kCGNormalWindowLevelKey 4
- kCGFloatingWindowLevelKey 5
- kCGTornOffMenuWindowLevelKey 6
- kCGDockWindowLevelKey 7
- kCGMainMenuWindowLevelKey 8
- kCGStatusWindowLevelKey 9
- kCGModalPanelWindowLevelKey 10
- kCGPopUpMenuWindowLevelKey 11
- kCGDraggingWindowLevelKey 12
- kCGScreenSaverWindowLevelKey 13
- kCGMaximumWindowLevelKey 14
- kCGOverlayWindowLevelKey 15
- kCGHelpWindowLevelKey 16
- kCGUtilityWindowLevelKey 17
- kCGDesktopIconWindowLevelKey 18
- kCGNumberOfWindowLevelKeys 19

50.52.25 Properties

50.52.26 Handle as Integer

MBS MacCG Plugin, Plugin Version: 2.9, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The handle to the open window.

Notes:
The Value is of type WindowRef.
(Read and Write property)

50.52.27 Height as Integer

MBS MacCG Plugin, Plugin Version: 2.9, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The height of the window.
**Notes:**
Only valid if there is a window.
(Read and Write property)

50.52.28 Left as Integer

MBS MacCG Plugin, Plugin Version: 2.9, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The x coordinate of the window.
**Notes:**
Only valid if there is a window.
(Read and Write property)

50.52.29 Level as Integer

MBS MacCG Plugin, Plugin Version: 2.9, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The level of the window.
**Example:**
```vbs
dim w as OverlayWindowMBS
// Call Create before setting level
w.level=w.WindowLevelForKey(2) // window between desktop picture and desktop icons
```

**Notes:**
See the WindowLevelForKey function for details.
(Read and Write property)
50.52. **CLASS OVERLAYWINDOWMBS**

### 50.52.30 Release as boolean

MBS MacCG Plugin, Plugin Version: 2.9, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** whether the close method or the destructor will close the window. **Notes:** (Read and Write property)

### 50.52.31 Top as Integer

MBS MacCG Plugin, Plugin Version: 2.9, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The y coordinate of the window. **Notes:**

Only valid if there is a window. (Read and Write property)

### 50.52.32 Width as Integer

MBS MacCG Plugin, Plugin Version: 2.9, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The width of the window. **Notes:**

Only valid if there is a window. (Read and Write property)

### 50.52.33 WindowID as Integer

MBS MacCG Plugin, Plugin Version: 10.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Queries the CoreGraphics Window ID for the given window. **Notes:**

Returns 0 on any error. This ID can be used for CGWindowListCreateImageMBS. (Read only property)

### 50.52.34 HasNoShadow as Boolean

MBS MacCG Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** True if this window has no shadow. **Example:**
`dim thewindow as OverlayWindowMBS
thewindow.HasNoShadow=true `remove shadow`

**Notes:**
Works only after the window was created.
(Read and Write computed property)

### 50.52.35 HideOnFullScreen as Boolean

MBS MacCG Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The window will hide itself if full screen mode is entered by an application or another window.  
**Notes:**
Works only after the window was created.  
(Read and Write computed property)

### 50.52.36 HideOnSuspend as Boolean

MBS MacCG Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The window will hide itself if the application goes to background.  
**Notes:**
Works only after the window was created.  
(Read and Write computed property)

### 50.52.37 IgnoreClicks as Boolean

MBS MacCG Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Can be used to control whether mouse clicks are ignored for this window.  
**Notes:**
Works only after the window was created.  
(Read and Write computed property)

### 50.52.38 Transparency as Double

MBS MacCG Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The transparency of the window.  
**Notes:**
A value from 0 (invisible) to 1.0 (visible).
(Read and Write computed property)

50.52.39  Events

50.52.40  MouseDown(x as Double, y as Double, ModifierKeys as Integer, MouseButton as Integer, ClickCount as Integer) as boolean

50.52.41  MouseDragged(x as Double, y as Double, ModifierKeys as Integer, MouseDeltaX as Double, MouseDeltaY as Double, MouseButton as Integer) as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: Called when you drag the mouse.
Notes: This event is called whether or not you return true in MouseDown.

50.52.42  MouseEnter(x as Double, y as Double, ModifierKeys as Integer) as boolean

MBS MacCG Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: The mouse was moved into the screen area of the window.

50.52.43  MouseExit(x as Double, y as Double, ModifierKeys as Integer) as boolean

MBS MacCG Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: The mouse was moved out of the screen area of the window.

50.52.44  MouseMoved(x as Double, y as Double, ModifierKeys as Integer, MouseDeltaX as Double, MouseDeltaY as Double) as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: Called when the mouse moves.
50.52.45  MouseUp(x as Double, y as Double, ModifierKeys as Integer, Mouse-Button as Integer, ClickCount as Integer) as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: Called when the mouse button is released.

50.52.46  MouseWheelMoved(x as Double, y as Double, ModifierKeys as Integer, axis as Integer, delta as Integer) as boolean

MBS MacCG Plugin, Plugin Version: 3.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: Called when the mouse wheel moves.

50.52.47  WindowBoundsChanged

50.52.48  WindowClosed

MBS MacCG Plugin, Plugin Version: 3.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: Called when the window is closed.

50.52.49  WindowHidden

MBS MacCG Plugin, Plugin Version: 3.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: Called when the window is hidden.

50.52.50  WindowPaint

MBS MacCG Plugin, Plugin Version: 11.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function: An event called whenever the system requests a paint of the window.
50.52. CLASS OVERLAYWINDOWMBS

50.52.51 WindowShown

MBS MacCG Plugin, Plugin Version: 3.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when the window is shown.
50.53 class QDPictMBS

50.53.1 class QDPictMBS

MBS MacCG Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class to draw QuickDraw PICT data to a CoreGraphics context. **Deprecated:** This item is deprecated and should no longer be used. **Notes:**

Note: QuickDraw picture data typically comes in two forms: a PICT resource that begins the picture header data at the beginning of the resource and PICT files that begin with 512 bytes of arbitrary data, followed by the picture header data. For this reason, the routines that create a QTPict object attempt to find the picture header data beginning at either the first byte of the data provided or at byte 513 of the data provided.

Additionally the Picture Bounds must not be an empty rect.
This class has been deprecated by Apple.

50.53.2 Methods

50.53.3 Constructor(dataProvider as CGDataProviderMBS)

MBS MacCG Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new QTPictMBS object based on a data provider. **Notes:**

Create a QDPict object, using dataProvider to obtain the QDPict’s data. It is assumed that either the first byte or the 513th byte of data in the file referenced by the URL is the first byte of the picture header. If the URL does not begin PICT data at one of these places in the data fork then the handle property will be 0.
See also:

- 50.53.4 Constructor(file as folderitem) 8362
- 50.53.5 Constructor(url as string) 8363

50.53.4 Constructor(file as folderitem)

MBS MacCG Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new QTPictMBS object based on a file. **See also:**

- 50.53.3 Constructor(dataProvider as CGDataProviderMBS) 8362
- 50.53.5 Constructor(url as string) 8363
50.53.5 Constructor(url as string)

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new QTPictMBS object based on an url.

**Notes:**
Create a QDPict from an url.
It is assumed that either the first byte or the 513th byte of data in the file referenced by the URL is the first byte of the picture header. If the URL does not begin PICT data at one of these places in the data fork then the handle property will be 0.

See also:
- 50.53.3 Constructor(dataProvider as CGDataProviderMBS)
- 50.53.4 Constructor(file as folderitem)

50.53.6 DrawToCGContext(context as CGContextMBS, r as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Draws the picture into the given context.

**Notes:**
You can increase the drawing resolution by passing a bigger rectangle.
Lasterror is set. -1 if context or rectangle are invalid.

Draw picture in the rectangular area specified by r. The PICT bounds of the page is scaled, if necessary, to fit into the rectangle. To get unscaled results, supply a rect the size of the rect returned by GetBounds.

50.53.7 GetBounds as CGRectMBS

MBS MacCG Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries the bounds of the picture.

**Notes:**
This are the bounds in pixel for 72 dpi.

Return the Picture Bounds of the QuickDraw picture represented by the picture. This rectangle is in the default user space with one unit = 1/72 inch.

50.53.8 GetResolution(byref xRes as single, byref yRes as single)

MBS MacCG Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries the resolution of the picture.
Notes:
Return the resolution of the QuickDraw picture represented by the picture. This data, together with the CGRect returned by GetBounds, can be used to compute the size of the picture in pixels, which is what QuickDraw really records into pictures.

50.53.9  Height as Double

Function: The height of the picture.
Notes: This value is using 72 dpi.

50.53.10  HorizontalResolution as Double

Function: The horizontal resolution.

50.53.11  VerticalResolution as Double

Function: The vertical resolution.

50.53.12  Width as Double

Function: The width of the picture.
Notes: This value is using 72 dpi.

50.53.13  Properties

50.53.14  Handle as Integer

Function: The internal handle.
Notes: (Read and Write property)
50.53. **CLASS QDPICTMBS**

### 50.53.15 LastError as Integer

MBS MacCG Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The last error code.
**Notes:**
Set by DrawToCGContext.
(Read and Write property)
50.54 class QuartzFilterManagerMBS

50.54.1 class QuartzFilterManagerMBS

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class to manage the quartz filters on the system.

50.54.2 Methods

50.54.3 filterPanel as NSPanelMBS

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the panel where users can select a filter.
Example:

```dim m as QuartzFilterManagerMBS
dim p as NSPanelMBS
m=new QuartzFilterManagerMBS
p=m.filterPanel
p.Show```

Notes: Returns nil on any error.

50.54.4 filters as QuartzFilterMBS()

Function: Returns an array with all filters.
Example:

```dim q as new QuartzFilterManagerMBS
dim a() as QuartzFilterMBS
a=q.filters
MsgBox str(ubound(a)+1)+" filters found."
```
50.54.5 filtersInDomains(domains() as string) as QuartzFilterMBS()

Function: Returns an array with all filters in the given domains.
Example:

```vba
dim domains() as string = array(QuartzFilterManagerMBS.kQuartzFilterPrintingDomain)
dim a() as QuartzFilterMBS = QuartzFilterManagerMBS.filtersInDomains(domains)
MsgBox str(ubound(a)+1)+" filters found."
```

50.54.6 filterView as QuartzFilterViewMBS

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The view which you can use to select views.
Notes: You can use the panel as an extra window or add this view to one of your settings windows.

50.54.7 selectedFilter as QuartzFilterMBS

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The currently selected filter.

50.54.8 selectFilter(filter as QuartzFilterMBS) as boolean

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Selects a filter.
Notes: Returns true on success.

50.54.9 Properties

50.54.10 Handle as Integer

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal used handle to the filter manager.
Notes: (Read and Write property)
50.54.11 Events

50.54.12 `didAddFilter(filter as QuartzFilterMBS)`

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The given filter was added to the filter list.

50.54.13 `didModifyFilter(filter as QuartzFilterMBS)`

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The given filter was modified.

50.54.14 `didRemoveFilter(filter as QuartzFilterMBS)`

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The given filter was removed.

50.54.15 `didSelectFilter(filter as QuartzFilterMBS)`

MBS Mac Controls Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The selection changed to the new filter.

50.54.16 Constants

50.54.17 `kQuartzFilterApplicationDomain=”kQuartzFilterApplicationDomain”`

MBS MacControls Plugin, Plugin Version: 11.2. **Function:** One of the filter domain constants. **Example:**

```vba
dim domains() as string = array(QuartzFilterManagerMBS.kQuartzFilterApplicationDomain)
dim a() as QuartzFilterMBS = QuartzFilterManagerMBS.filtersInDomains(domains)
MsgBox str(ubound(a)+1)+” filters found.”
```
50.54.18 kQuartzFilterPDFWorkflowDomain="kQuartzFilterPDFWorkflowDomain"

MBS MacControls Plugin, Plugin Version: 11.2. **Function:** One of the filter domain constants. **Example:**

```vba
dim domains() as string = array(QuartzFilterManagerMBS.kQuartzFilterPDFWorkflowDomain)
dim a() as QuartzFilterMBS = QuartzFilterManagerMBS.filtersInDomains(domains)
MsgBox str(ubound(a)+1)+" filters found."
```

50.54.19 kQuartzFilterPrintingDomain="kQuartzFilterPrintingDomain"

MBS MacControls Plugin, Plugin Version: 11.2. **Function:** One of the filter domain constants. **Example:**

```vba
dim domains() as string = array(QuartzFilterManagerMBS.kQuartzFilterPrintingDomain)
dim a() as QuartzFilterMBS = QuartzFilterManagerMBS.filtersInDomains(domains)
MsgBox str(ubound(a)+1)+" filters found."
```
class QuartzFilterMBS

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.

Function: The Quartz filter class.

Example:

// Create a couple of PDF files to test different Quartz filters

// get some picture
dim pic as Picture = LogoMBS(500)
dim image as new NSImageMBS(pic)

// create page with picture
dim page as new PDFPageMBS(image)

// create new document
dim doc as new PDFDocumentMBS

// add page
doc.insertPage(page,0)

// get filters
dim manager as new QuartzFilterManagerMBS
dim filters() as QuartzFilterMBS = Manager.filters

for each filter as QuartzFilterMBS in filters

// save PDF with this filter
dim file as FolderItem = SpecialFolder.Desktop.Child(filterlocalizedName+”.pdf”)
call doc.write(file, filter)

next

Notes:

This filters can be used to change PDFs on writing like to reduce the file size.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.
50.55. **CLASS QUARTZFILTERMBS**

50.55.2 **Methods**

50.55.3 **applyToContext(CGContextHandle as Integer) as boolean**

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  
**Function:** Applies a filter to a given context.  
**Example:**

```vba
dim c as CGContextMBS // your context
dim fi as QuartzFilterMBS

fi=QuartzFilterMBS.quartzFilterWithFile(SpecialFolder.Desktop.Child("Reduce File Size.qfilter"))

call fi.applyToContext(c.Handle)
```

**Notes:** Returns true on success.

50.55.4 **Constructor**

**Function:** The private constructor.

50.55.5 **localizedName as string**

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  
**Function:** The localized name of the filter.  
**Example:**

```vba
dim q as new QuartzFilterManagerMBS

dim s(-1) as string

dim a() as QuartzFilterMBS = q.filters

for each f as QuartzFilterMBS in a
    s.append f.localizedName
next

MsgBox Join(s,EndOfLine)
```
50.55.6 `quartzFilterWithFile(file as folderitem) as QuartzFilterMBS`

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** Loads a quartz filter from the given folderitem.
**Example:**
```
dim c as CGContextMBS // your context
dim fi as QuartzFilterMBS
dim file as folderitem

file=SpecialFolder.Desktop.Child("Reduce File Size.qfilter")
fi=QuartzFilterMBS.quartzFilterWithFile(file)

call fi.applyToContext(c.Handle)
```

**Notes:**
Returns nil on any error.
Requires Mac OS X 10.5.

50.55.7 `quartzFilterWithURL(url as string) as QuartzFilterMBS`

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** Loads the quartz filter from the given URL.
**Notes:**
Returns nil on any error.
Requires Mac OS X 10.5.

50.55.8 `removeFromContext(CGContextHandle as Integer)`

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** Removes a filter from a CGContext.
**Notes:** Pass CGContextMBS.handle and make sure it is not 0.

50.55.9 `url as string`

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** The URL where this filter is located.
**Example:**
```
50.55. CLASS QUARTZFILTERMBS

```vba
dim q as new QuartzFilterManagerMBS
dim s(-1) as string

dim a() as QuartzFilterMBS = q.filters

for each f as QuartzFilterMBS in a
    s.append f.url
next

MsgBox Join(s, EndOfLine)
```

50.55.10 Properties

50.55.11 Handle as Integer

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** The internal handle to the filter object.
**Notes:** (Read and Write property)
50.56  class QuartzFilterViewMBS

50.56.1  class QuartzFilterViewMBS

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The view to select quartz filters.
Notes:
You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

50.56.2  Methods

50.56.3  Constructor

Function: Creates a new Quartz Filter View with size 100/100 and position 0/0
Example:
    dim t as new QuartzFilterViewMBS

Notes: On success the handle property is not zero.
See also:

- 50.56.4 Constructor(Handle as Integer) 8374
- 50.56.5 Constructor(left as Double, top as Double, width as Double, height as Double) 8375

50.56.4  Constructor(Handle as Integer)

Function: Creates an object based on the given QuartzFilterViewMBS handle.
Example:
    dim t as new QuartzFilterViewMBS(0, 0, 100, 100)
dim v as new QuartzFilterViewMBS(t.handle)
    MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)

Notes: The handle is casted to a QuartzFilterView and the plugin retains this handle.
See also:
50.56. **CLASS QUARTZFILTERVIEWMBS**

- 50.56.3 Constructor
- 50.56.5 Constructor(left as Double, top as Double, width as Double, height as Double)

50.56.5 **Constructor(left as Double, top as Double, width as Double, height as Double)**

**Function:** Creates a new Quartz Filter View with the given size and position.

**Example:**

```vbnet
dim x as new QuartzFilterViewMBS(0, 0, 100, 100)
```

**Notes:**

On success the handle property is not zero.
The new movie view object must be inserted into the view hierarchy of an NSWindow before it can be used.
This method is the designated initializer for the QuartzFilterView class.

See also:

- 50.56.3 Constructor
- 50.56.4 Constructor(Handle as Integer)

50.56.6 **sizeToFit**

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.

**Function:** Resizes the view to the best size.
Chapter 51

CoreGraphics Events

51.1 class CGEventMBS

51.1.1 class CGEventMBS

MBS MacCF Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a CoreGraphics event.

**Notes:**
Subclass of the CFObjectMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

51.1.2 Methods

51.1.3 available as boolean

MBS MacCF Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this class is available.

**Notes:** Returns true on macOS 10.4 or newer.

51.1.4 Constructor

MBS MacCF Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.
51.1.5 Copy as CGEventMBS

MBS MacCF Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Return a copy of event.

51.1.6 Properties

51.1.7 Flags as Integer

MBS MacCF Plugin, Plugin Version: 17.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
The event flags of an event.
**Notes:** (Read and Write property)

51.1.8 Timestamp as UInt64

MBS MacCF Plugin, Plugin Version: 17.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
The timestamp of an event.
**Notes:** (Read and Write property)

51.1.9 Type as Integer

MBS MacCF Plugin, Plugin Version: 17.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
The event type of an event (left mouse down, for example).
**Notes:**
See constants like kCGMouseButtonLeft.
(Read and Write property)

51.1.10 UnicodeString as String

MBS MacCF Plugin, Plugin Version: 17.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
The Unicode string associated with a keyboard event.
**Notes:**
By default, the system translates the virtual key code in a keyboard event into a Unicode string based on the keyboard ID in the event source. This function allows you to manually override this string. Note that application frameworks may ignore the Unicode string in a keyboard event and do their own translation based on the virtual key code and perceived event state.
(Read and Write property)
51.1.11  **UnicodeStringLength as Integer**

MBS MacCF Plugin, Plugin Version: 17.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Return the length of the unicode string associated with a keyboard event. **Notes:** (Read only property)

51.1.12  **DoubleValueField(field as Integer) as Double**

MBS MacCF Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The floating-point value of a field in an event. **Notes:** Before setting a value, the event type must be set using a typed event creation function such as CGEventCreateMouseEvent, or by setting type property.

If you are creating a mouse event generated by a tablet, call this function and specify the field kCGMouseEventSubtype with a value of kCGEventMouseSubtypeTabletPoint or kCGEventMouseSubtypeTabletProximity before setting other parameters. (Read and Write computed property)

51.1.13  **IntegerValueField(field as Integer) as Int64**

MBS MacCF Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The integer value of a field in an event. **Notes:** Before calling this function, the event type must be set using a typed event creation function such as CGEventCreateMouseEvent, or by setting type property.

In cases where the field value is represented within the event by a fixed point number or an integer, the result is scaled to the appropriate range as part of creating the floating-point representation. (Read and Write computed property)

51.1.14  **Constants**

51.1.15  **kCGEventFlagsChanged = 12**

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event type constants. **Notes:** Key flags changed, e.g. modifier keys pressed.
51.1.16  kCGEventKeyDown = 10

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event type constants.  
**Notes:** Key Down

51.1.17  kCGEventKeyUp = 11

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event type constants.  
**Notes:** Key up.

51.1.18  kCGEventLeftMouseDown = 1

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event type constants.  
**Notes:** left mouse-down event

51.1.19  kCGEventLeftMouseDragged = 6

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event type constants.  
**Notes:** left mouse-dragged event

51.1.20  kCGEventLeftMouseUp = 2

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event type constants.  
**Notes:** left mouse-up event

51.1.21  kCGEventMouseMoved = 5

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event type constants.  
**Notes:** mouse-moved event

51.1.22  kCGEventNull = 0

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event type constants.  
**Notes:** The null event. (not defined)
51.1. CLASS CGEVENTMBS

51.1.23 kCGEventOtherMouseDown = 25

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event type constants.  
**Notes:** other mouse-down event

51.1.24 kCGEventOtherMouseDragged = 27

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event type constants.  
**Notes:** other mouse-dragged event

51.1.25 kCGEventOtherMouseUp = 26

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event type constants.  
**Notes:** other mouse-up event

51.1.26 kCGEventRightMouseDown = 3

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event type constants.  
**Notes:** right mouse-down event

51.1.27 kCGEventRightMouseDragged = 7

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event type constants.  
**Notes:** right mouse-dragged event

51.1.28 kCGEventRightMouseUp = 4

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event type constants.  
**Notes:** right mouse-up event

51.1.29 kCGEventScrollWheel = 22

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event type constants.  
**Notes:** Scroll Wheel event.
51.1.30  kCGEventTabletPointer = 23
MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event type constants.  
**Notes:** Tablet pointer event.

51.1.31  kCGEventTabletProximity = 24
MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event type constants.  
**Notes:** Tablet Proximity event.

51.1.32  kCGEventTapDisabledByTimeout = & hFFFFFFFE
MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event type constants.  
**Notes:** Out of band event types. These are delivered to the event tap callback to notify it of unusual conditions that disable the event tap.

51.1.33  kCGEventTapDisabledByUserInput = & hFFFFFFFF
MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event type constants.  
**Notes:** Out of band event types. These are delivered to the event tap callback to notify it of unusual conditions that disable the event tap.

51.1.34  kCGMouseButtonCenter = 2
MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the mouse button constants.  
**Notes:** Center

51.1.35  kCGMouseButtonLeft = 0
MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the mouse button constants.  
**Notes:** Left

51.1.36  kCGMouseButtonRight = 1
MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the mouse button constants.  
**Notes:** Right
51.1.37 kCGScrollEventUnitLine = 1

MBS MacCF Plugin, Plugin Version: 17.4. **Function**: One of the constants that specify the unit of measurement for a scrolling event.

**Notes**: Line

51.1.38 kCGScrollEventUnitPixel = 0

MBS MacCF Plugin, Plugin Version: 17.4. **Function**: One of the constants that specify the unit of measurement for a scrolling event.

**Notes**: Pixel
51.2 class CGEventTapMBS

51.2.1 class CGEventTapMBS

MBS MacCF Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a Event taps. **Notes:**

Taps may be placed at the point where HIDSystem events enter the server, at the point where HIDSystem and remote control events enter a session, at the point where events have been annotated to flow to a specific application, or at the point where events are delivered to the application. Taps may be inserted at a specified point at the head of pre-existing filters, or appended after any pre-existing filters.

Taps may be passive event listeners, or active filters. An active filter may pass an event through unmodified, modify an event, or discard an event. When a tap is registered, it identifies the set of events to be observed with a mask, and indicates if it is a passive or active event filter. Multiple event type bitmasks may be ORed together.

Taps may only be placed at kCGHIDEventTap by a process running as the root user. An exception is raised for other users.

Taps placed at kCGHIDEventTap, kCGSessionEventTap, kCGAnnotatedSessionEventTap, or on a specific process may only receive key up and down events if access for assistive devices is enabled (Preferences Accessibility panel, Keyboard view) or the caller is enabled for assistive device access, as by AXMakeProcessTrusted. If the tap is not permitted to monitor these events when the tap is created, then the appropriate bits in the mask are cleared. If that results in an empty mask, then an exception is raised.

51.2.2 Methods

51.2.3 available as boolean

MBS MacCF Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Wether this class is available. **Notes:** Returns true for macOS 10.4 or newer.

51.2.4 Constructor(tapLocation as Integer, Place as Integer, Options as Integer, EventMask as Integer)

MBS MacCF Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates an event tap.
51.2. CLASS CGEVENTTAPMBS

51.2.5 Properties

51.2.6 Enabled as Boolean

MBS MacCF Plugin, Plugin Version: 17.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Wether this tap is enabled.
**Notes:** (Read and Write property)

51.2.7 Events

51.2.8 GotEvent(Proxy as Ptr, type as Integer, e as CGEventMBS) as CGEventMBS

MBS MacCF Plugin, Plugin Version: 17.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
The event called when you can process an event.
**Notes:** For an active tap, please return the event back.

51.2.9 Constants

51.2.10 kCGAnnotatedSessionEventTap = 2

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the constants that specify possible tapping points for events.
**Notes:** At the point where events have been annotated to flow to a specific application, or at the point where events are delivered to the application.

51.2.11 kCGEventMaskFlagsChanged = 4096

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event mask constants.
**Notes:** Key flags changed, e.g. modifier keys pressed.

51.2.12 kCGEventMaskForAllEvents = -1

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event mask constants.
**Notes:** Listen for all events.
51.2.13  kCGEventMaskKeyDown = 1024

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event mask constants.  
**Notes:** Key Down

51.2.14  kCGEventMaskKeyUp = 2048

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event mask constants.  
**Notes:** Key up.

51.2.15  kCGEventMaskLeftMouseDown = 2

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event mask constants.  
**Notes:** left mouse-down event

51.2.16  kCGEventMaskLeftMouseDragged = 64

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event mask constants.  
**Notes:** left mouse-dragged event

51.2.17  kCGEventMaskLeftMouseUp = 4

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event mask constants.  
**Notes:** left mouse-up event

51.2.18  kCGEventMaskMouseMoved = 32

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event mask constants.  
**Notes:** mouse-moved event

51.2.19  kCGEventMaskOtherMouseDown = & h2000000

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event mask constants.  
**Notes:** other mouse-down event
51.2.20  kCGEventMaskOtherMouseDownDragged = & h8000000

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event mask constants.  
**Notes:** other mouse-dragged event

51.2.21  kCGEventMaskOtherMouseUp = & h4000000

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event mask constants.  
**Notes:** other mouse-up event

51.2.22  kCGEventMaskRightMouseDown = 8

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event mask constants.  
**Notes:** right mouse-down event

51.2.23  kCGEventMaskRightMouseDownDragged = 128

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event mask constants.  
**Notes:** right mouse-dragged event

51.2.24  kCGEventMaskRightMouseUp = 16

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event mask constants.  
**Notes:** right mouse-up event

51.2.25  kCGEventMaskScrollWheel = & h400000

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event mask constants.  
**Notes:** Scroll Wheel event.

51.2.26  kCGEventMaskTabletPointer = & h800000

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event mask constants.  
**Notes:** Tablet pointer event.
51.2.27  kCGEventMaskTabletProximity = & h1000000

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the event mask constants.
**Notes:** Tablet Proximity event.

51.2.28  kCGEventTapOptionDefault = 0

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the constants that specify whether a new event tap is an active filter or a passive listener.
**Notes:** Default, active filter.

51.2.29  kCGEventTapOptionListenOnly = 1

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the constants that specify whether a new event tap is an active filter or a passive listener.
**Notes:** Listen only.

51.2.30  kCGHeadInsertEventTap = 0

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the constants that specify where a new event tap is inserted into the list of active event taps.
**Notes:** Insert in front.

51.2.31  kCGHIDEventTap = 0

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the constants that specify possible tapping points for events.
**Notes:** When HIDSystem events enter the server.

51.2.32  kCGSessionEventTap = 1

MBS MacCF Plugin, Plugin Version: 17.4. **Function:** One of the constants that specify possible tapping points for events.
**Notes:** At the point where HIDSystem and remote control events enter a session.
51.2.33  kCGTailAppendEventTap = 1

MBS MacCF Plugin, Plugin Version: 17.4. **Function**: One of the constants that specify where a new event tap is inserted into the list of active event taps.  
**Notes**: Append to the tail.
Chapter 52

CoreImage

52.1 class CIAttributeMBS

52.1.1 class CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for attributes of CoreImage Filters.

52.1.2 Properties

52.1.3 ClassName as string

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Class name of the filter.
**Notes:** (Read only property)

52.1.4 DefaultAffineTransform as NSAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The default value for this color.
**Notes:**
Only valid for affine transformations.
(Read only property)
52.1.5 DefaultColor as CIColorMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The default value for this color.
**Notes:**
Only valid for colors.
(Read only property)

52.1.6 DefaultNumber as Double

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The default value for this color.
**Notes:**
Only valid for numbers.
(Read only property)

52.1.7 DefaultValue as Variant

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The default value.
**Notes:** (Read only property)

52.1.8 DefaultVector as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The default value for this color.
**Notes:**
Only valid for vectors.
(Read only property)

52.1.9 description as string

MBS MacCG Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The description of this attribute.
**Notes:** (Read only property)
52.1. **CLASS CIATTRIBUTEMBS**

52.1.10 **DisplayName as string**

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The localized display name for the attribute.

**Notes:**
Not all attributes do have a localized name and not all do have a name at all. (e.g. outputImage normally has no display name)
(Read only property)

52.1.11 **HasMaxNumber as Boolean**

MBS MacCG Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this attribute has a defined maximum value.

**Notes:** (Read only property)

52.1.12 **HasMinNumber as Boolean**

MBS MacCG Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this attribute has a defined minimum value.

**Notes:** (Read only property)

52.1.13 **HasSliderMaxNumber as Boolean**

MBS MacCG Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this attribute has a defined slider maximum value.

**Notes:** (Read only property)

52.1.14 **HasSliderMinNumber as Boolean**

MBS MacCG Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this attribute has a defined slider minimum value.

**Notes:** (Read only property)

52.1.15 **IdentityAffineTransform as NSAffineTransformMBS**

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value to be used to keep the filter doing nothing.
Notes:
Only valid for affine transformations.
(Read only property)

52.1.16 IdentityNumber as Double

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The value to be used to keep the filter doing nothing.
**Notes:**
Only valid for numbers.
(Read only property)

52.1.17 IdentityValue as Variant

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The identity value.
**Notes:** (Read only property)

52.1.18 IdentityVector as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The value to be used to keep the filter doing nothing.
**Notes:**
Only valid for vectors.
(Read only property)

52.1.19 LocalizedDescription as string

MBS MacCG Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Description of the filter intended for UI display (eg. localized)
**Notes:** (Read only property)

52.1.20 MaxNumber as Double

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Maximum value for the attribute.
52.1. Class CIATTRIBUTEMBS

Notes:
Only valid for numbers.
If no value is defined, this property is zero and HasMaxNumber returns false.
(Read only property)

52.1.21 MinNumber as Double

Notes:
Only valid for numbers.
If no value is defined, this property is zero and HasMinNumber returns false.
(Read only property)

52.1.22 Name as string

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of this attribute.

Notes: (Read only property)

52.1.23 SliderMaxNumber as Double

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Maximum value for the slider.

**Example:**
```vbs
   dim f as CIFilterEdgesMBS
   dim a as CIAttributeMBS

   f = new CIFilterEdgesMBS

   a = f.AttributeInputIntensity
   Title = str(a.SliderMinNumber) + " " + str(a.SliderMaxNumber)
   f.inputIntensity = a.SliderMaxNumber

   Backdrop = f.outputImage.RenderPicture
```

Notes:
Only valid for numbers.
If no value is defined, this property is zero and HasSliderMaxNumber returns false.
(Read only property)

52.1.24  SliderMinNumber as Double

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Minimum value for the slider.
**Notes:**
Only valid for numbers.
If no value is defined, this property is zero and HasSliderMinNumber returns false.
(Read only property)

52.1.25  Type as string

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The type of this attribute.
**Notes:**
Types for numbers:
kCIAttributeTypeDistance
kCIAttributeTypeBoolean
kCIAttributeTypeTime
kCIAttributeTypeAngle
kCIAttributeTypeScalar

Types for vectors:
kCIAttributeTypePosition (2 Dimensions)
kCIAttributeTypeOffset (2 Dimensions)
kCIAttributeTypePosition3 (3 Dimensions)
kCIAttributeTypeRectangle (4 Dimensions)

Types for colors:
kCIAttributeTypeOpaqueColor

Types for images:
kCIAttributeTypeGradient
(Read only property)
52.1.26 Values as Dictionary

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries all values as dictionary. **Notes:** (Read only property)
52.2 class CIAztecCodeDescriptorMBS

52.2.1 class CIAztecCodeDescriptorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: CIAztecCodeDescriptor is a concrete subclass of CIBarcodeDescriptor that defines an abstract representation of an Aztec Code symbol.
Notes:
CIAztecCodeDescriptor may not be instantiated directly.
Subclass of the CIBarcodeDescriptorMBS class.

52.2.2 Methods

52.2.3 Constructor(errorCorrectedPayload as MemoryBlock, isCompact as Boolean, layerCount as Integer, dataCodewordCount as Integer)

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Initializes a descriptor that can be used as input to CIBarcodeGenerator.

52.2.4 descriptorWithPayload(errorCorrectedPayload as MemoryBlock, isCompact as Boolean, layerCount as Integer, dataCodewordCount as Integer) as CIAztecCodeDescriptorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Construct a descriptor that can be used as input to CIBarcodeGenerator.

52.2.5 Properties

52.2.6 dataCodewordCount as Integer

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The number of non-error-correction codewords carried by the Aztec code symbol.
Notes:
Used to determine the level of error correction in conjunction with the number of data layers. Valid values are 1...2048. Compact symbols can have up to 64 message codewords.

Note that this value can exceed the number of message codewords allowed by the number of data layers in this symbol. In this case, the actual number of message codewords is 1024 fewer than this value and the message payload is to be interpreted in an application-defined manner.
52.2.7 errorCorrectedPayload as MemoryBlock

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The error-corrected codewords that comprise the Aztec code symbol.

**Notes:**

Aztec Codes are formally specified in ISO/IEC 24778:2008(E).

The error corrected payload consists of the 6-, 8-, 10-, or 12-bit message codewords produced at the end of the step described in section 7.3.1.2 "Formation of data codewords", which exists immediately prior to adding error correction. These codewords have dummy bits inserted to ensure that an entire codeword isn’t all 0’s or all 1’s. Clients will need to remove these extra bits as part of interpreting the payload.

(Read only property)

52.2.8 isCompact as Boolean

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A boolean indicating whether the symbol is compact.

**Notes:**

Compact Aztec symbols use one-fewer ring in the central finder pattern than full-range Aztec symbols of the same number of data layers.

(Read only property)

52.2.9 layerCount as Integer

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of data layers in the Aztec code symbol.

**Notes:**

Combined with the isCompact property, the number of data layers determines the number of modules in the Aztec Code symbol. Valid values range from 1 to 32. Compact symbols can have up to 4 data layers.

The number of data layers also determines the number of bits in each data codeword of the message carried by the Aztec Code symbol.

(Read only property)
52.3 class CIBarcodeDescriptorMBS

52.3.1 class CIBarcodeDescriptorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** CIBarcodeDescriptor is an abstract base class that defines an abstract representation of a machine readable code’s symbol attributes.

*Notes:* Each subclass is sufficient to recreate the symbol exactly as seen or to be used with a custom parser. Subclasses of CIBarcodeDescriptor are defined for each code type to contain the formal specification of each symbology. Available on macOS 10.13.

52.3.2 Methods

52.3.3 Constructor(Handle as Integer)

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor with passing in a handle to an existing object.

*Notes:* Handle must be of type CIBarcodeDescriptor and will be retained.

52.3.4 copy as CIBarcodeDescriptorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of this barcode description.

52.3.5 Properties

52.3.6 description as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The description string to debug.

*Notes:* (Read only property)

52.3.7 Handle as Integer

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.
52.3.  \textit{CLASS CIBARCODEDESCRIPTORMBS} 8401

Notes: (Read only property)
52.4 class CIColorMBS

52.4.1 class CIColorMBS

52.4.2 Methods

52.4.3 blackColor as CIColorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns stock black color with sRGB color space.
**Notes:** Available in macOS 10.12 or newer.

52.4.4 blueColor as CIColorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns stock blue color with sRGB color space.
**Notes:** Available in macOS 10.12 or newer.

52.4.5 clearColor as CIColorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns stock clear color with sRGB color space.
**Notes:**
Transparent color.
Available in macOS 10.12 or newer.

52.4.6 colorWithCGColor(ColorValue as CGColorMBS) as CIColorMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new color based on a CoreGraphics color.
52.4. CLASS CICOLORMBS

52.4.7 colorWithRGB(Red as Double, Green as Double, Blue as Double) as CIColorMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a color object using the specified RGB color component values

**Notes:**

r: The value of the red component.
g: The value of the green component.
b: The value of the blue component.

Initializes Core Image color object that represents an RGB color in the color space specified by the Quartz 2D constant kCGColorSpaceGenericRGB.
See also:

- 52.4.8 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double) as CIColorMBS
- 52.4.9 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS
- 52.4.10 colorWithRGB(Red as Double, Green as Double, Blue as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS

52.4.8 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double) as CIColorMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a color object using the specified RGBA color component values.

**Notes:**

r: The value of the red component.
g: The value of the green component.
b: The value of the blue component.
a: The value of the alpha component.

Initializes a Core Image color object that represents an RGB color in the color space specified by the Quartz 2D constant kCGColorSpaceGenericRGB and an alpha value.
See also:

- 52.4.7 colorWithRGB(Red as Double, Green as Double, Blue as Double) as CIColorMBS
- 52.4.9 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS
- 52.4.10 colorWithRGB(Red as Double, Green as Double, Blue as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS
**52.4.9** colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Create a new color object in a given colorspace.  
**Notes:** 
Will return nil if the colorspace is not kCGColorSpaceModelRGB. Available in macOS 10.12 or newer.  
See also:

- 52.4.7 colorWithRGB(Red as Double, Green as Double, Blue as Double) as CIColorMBS
- 52.4.8 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double) as CIColorMBS
- 52.4.10 colorWithRGB(Red as Double, Green as Double, Blue as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS

**52.4.10** colorWithRGB(Red as Double, Green as Double, Blue as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Create a new color object in a given colorspace.  
**Notes:** 
Will return nil if the colorspace is not kCGColorSpaceModelRGB. Available in macOS 10.12 or newer.  
See also:

- 52.4.7 colorWithRGB(Red as Double, Green as Double, Blue as Double) as CIColorMBS
- 52.4.8 colorWithRGB(Red as Double, Green as Double, Blue as Double, Alpha as Double) as CIColorMBS
- 52.4.10 colorWithRGB(Red as Double, Green as Double, Blue as Double, ColorSpace as CGColorSpaceMBS) as CIColorMBS

**52.4.11** colorWithString(representation as String) as CIColorMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a color from a color string representation.
52.4. CLASS CICOLORMBS

52.4.12 Component(index as UInt32) as Double

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The color component with the given index.
**Notes:** Index is from 0 to NumberOfComponents - 1.

52.4.13 Constructor(ColorValue as CGColorMBS)

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates a new CIColor based on the given CoreGraphics color.
**Notes:** On success, the handle is not zero.
See also:
- 52.4.14 Constructor(Handle as Integer)
- 52.4.15 Constructor(Red as Double, Green as Double, Blue as Double)
- 52.4.16 Constructor(Red as Double, Green as Double, Blue as Double, Alpha as Double)
- 52.4.17 Constructor(Red as double, Green as Double, Blue as double, Alpha as Double, ColorSpace as CGColorSpaceMBS)
- 52.4.18 Constructor(Red as double, Green as Double, Blue as double, ColorSpace as CGColorSpaceMBS)

52.4.14 Constructor(Handle as Integer)

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Initializes object with given object reference.
**Notes:**
ref should be a CIColor* and the object is retained.
Raises UnsupportedOperationException if object is not a CIColor.
See also:
- 52.4.13 Constructor(ColorValue as CGColorMBS)
- 52.4.15 Constructor(Red as Double, Green as Double, Blue as Double)
- 52.4.16 Constructor(Red as Double, Green as Double, Blue as Double, Alpha as Double)
- 52.4.17 Constructor(Red as double, Green as Double, Blue as double, Alpha as Double, ColorSpace as CGColorSpaceMBS)
- 52.4.18 Constructor(Red as double, Green as Double, Blue as double, ColorSpace as CGColorSpaceMBS)
52.4.15 Constructor(Red as Double, Green as Double, Blue as Double)

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a color object using the specified RGB color component values.  

**Notes:**

r: The value of the red component.
g: The value of the green component.
b: The value of the blue component.

Initializes Core Image color object that represents an RGB color in the color space specified by the Quartz 2D constant kCGColorSpaceGenericRGB.

See also:

- 52.4.13 Constructor(ColorValue as CGColorMBS) 8405
- 52.4.14 Constructor(Handle as Integer) 8405

- 52.4.17 Constructor(Red as double, Green as Double, Blue as double, Alpha as Double, ColorSpace as CGColorSpaceMBS) 8407
- 52.4.18 Constructor(Red as double, Green as Double, Blue as double, ColorSpace as CGColorSpaceMBS) 8407

52.4.16 Constructor(Red as Double, Green as Double, Blue as Double, Alpha as Double)

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a color object using the specified RGBA color component values.  

**Notes:**

r: The value of the red component.
g: The value of the green component.
b: The value of the blue component.
a: The value of the alpha component.

Initializes a Core Image color object that represents an RGB color in the color space specified by the Quartz 2D constant kCGColorSpaceGenericRGB and an alpha value.

See also:

- 52.4.13 Constructor(ColorValue as CGColorMBS) 8405

- 52.4.16 Constructor(Red as Double, Green as Double, Blue as Double, Alpha as Double)
- 52.4.17 Constructor(Red as double, Green as Double, Blue as double, Alpha as Double, ColorSpace as CGColorSpaceMBS)
52.4.19  copy as CIColorMBS

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the color object.

52.4.20  cyanColor as CIColorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns stock cyan color with sRGB color space.
**Notes:** Available in macOS 10.12 or newer.

52.4.21  grayColor as CIColorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns stock gray color with sRGB color space.
**Notes:** Available in macOS 10.12 or newer.

52.4.22  greenColor as CIColorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns stock green color with sRGB color space.
**Notes:** Available in macOS 10.12 or newer.

52.4.23  magentaColor as CIColorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns stock magenta color with sRGB color space.
**Notes:** Available in macOS 10.12 or newer.

52.4.24  redColor as CIColorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns stock red color with sRGB color space.
**Notes:** Available in macOS 10.12 or newer.
52.4. CLASS CICOLORMBS

52.4.25 whiteColor as CIColorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns stock white color with sRGB color space. **Notes:** Available in macOS 10.12 or newer.

52.4.26 yellowColor as CIColorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns stock yellow color with sRGB color space. **Notes:** Available in macOS 10.12 or newer.

52.4.27 Properties

52.4.28 Alpha as Double

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The alpha value of the color. **Notes:** Values range between 0.0 to 1.0. (Read only property)

52.4.29 Blue as Double

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The (unpremultiplied) blue component of the color. **Notes:** Values range between 0.0 to 1.0. (Read only property)

52.4.30 ColorSpace as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The color space object associated with the color. **Notes:** nil on any error. (Read only property)
52.4.31  **description as String**

MBS MacCG Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the textual description for this color. **Notes:** (Read only property)

52.4.32  **Green as Double**

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The (unpremultiplied) green component of the color. **Notes:** Values range between 0.0 to 1.0. (Read only property)

52.4.33  **Handle as Integer**

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The handle to the CIColor object used internally. **Notes:** (Read only property)

52.4.34  **NumberOfComponents as Integer**

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of color components (including alpha). **Notes:** (Read only property)

52.4.35  **Red as Double**

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The (unpremultiplied) red component of the color. **Notes:** Values range between 0.0 to 1.0. (Read only property)
52.4.36  StringRepresentation as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a formatted string with the components of the color.
**Example:**
```vbnet
dim c as CIColorMBS

c=NewCIColorMBS(1,0,0)

MsgBox c.stringRepresentation  // shows "1 0 0 1"
```

**Notes:**
Returns "" on any error.
(Read only property)
52.5 class CIContextMBS

52.5.1 class CIContextMBS

52.5.2 Methods

52.5.3 ClearCaches

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Frees any cached data (such as temporary images) associated with the context. **Notes:** This also runs the garbage collector.

52.5.4 Constructor

MBS MacCG Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new CIContext without a specific target. **Notes:** Great to create a context and render something inside. See also:

- 52.5.5 Constructor(cgcontext as CGContextMBS) 8412
- 52.5.6 Constructor(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, WorkingColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean) 8413
- 52.5.7 Constructor(Handle as Integer) 8413
- 52.5.8 Constructor(Pic as Picture) 8414

52.5.5 Constructor(cgcontext as CGContextMBS)

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Create a new CoreImage context object, all output will be drawn into the CG context. **Notes:** On success, the handle is not zero. See also:

- 52.5.4 Constructor 8412
- 52.5.6 Constructor(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, WorkingColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean) 8413
52.5. **CLASS CICONTEXTMBS**

- 52.5.7 Constructor(Handle as Integer) 8413
- 52.5.8 Constructor(Pic as Picture) 8414

52.5.6 **Constructor(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, WorkingColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean)**

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Create a new CoreImage context object with options, all output will be drawn into the CG context.

**Notes:**
- OutputColorSpace: A CGColorSpaceMBS object defining the color space in which all intermediate operations are performed.
- WorkingColorSpace: A CGColorSpaceRef object defining the color space that images are converted to before rendering into the context.
- UseSoftwareRenderer: Whether you want software renderer only.

On success, the handle is not zero.
See also:

- 52.5.4 Constructor 8412
- 52.5.5 Constructor(cgcontext as CGContextMBS) 8412
- 52.5.7 Constructor(Handle as Integer) 8413
- 52.5.8 Constructor(Pic as Picture) 8414

52.5.7 **Constructor(Handle as Integer)**

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes object with given object reference.

**Notes:**
- ref should be a CIContext* and the object is retained.
- Raises UnsupportedOperationException if object is not a CIContext.
See also:

- 52.5.4 Constructor 8412
- 52.5.5 Constructor(cgcontext as CGContextMBS) 8412
52.5.8 Constructor(Pic as Picture)

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a context targeting the picture.  
**Notes:** Works only on Cocoa target.  
See also:

- 52.5.4 Constructor  
- 52.5.5 Constructor(cgcontext as CGContextMBS)  
- 52.5.6 Constructor(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, Working-ColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean)  
- 52.5.7 Constructor(Handle as Integer)

52.5.9 CreateCGImage(image as CIImageMBS, r as CGRectMBS = nil) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new image with the content of the CIImage.  
**Notes:**  
Render the region 'r' of image 'im' into a temporary buffer using the context, then create and return a new CoreGraphics image with the results.  
If r is nil, the whole image extent is used.  
See also:

- 52.5.10 CreateCGImage(image as CIImageMBS, r as CGRectMBS, ColorSpace as CGColorSpaceMBS) as CGImageMBS

52.5.10 CreateCGImage(image as CIImageMBS, r as CGRectMBS as CGColorSpaceMBS) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new image with the content of the CIImage.  
**Notes:**  
Render the region 'r' of image 'im' into a temporary buffer using the context, then create and return a new CoreGraphics image with the results.  
If r is nil, the whole image extent is used.  
See also:

- 52.5.9 CreateCGImage(image as CIImageMBS, r as CGRectMBS = nil) as CGImageMBS
52.5.11  `createCGLayer(size as CGSizeMBS, info as dictionary = nil) as CGLayerMBS`

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a CGLayer object from the provided parameters.  
**Notes:**
- `size`: The size, in default user space units, of the layer relative to the graphics context.  
- `info`: A dictionary, which is passed to CGLayerCreateWithContext as the auxiliaryInfo parameter. Pass nil because this parameter is reserved for future use.

Returns a CGLayer object.

After calling this method, Core Image draws content into the CGLayer object. Core Image creates a CGLayer object by calling the Quartz 2D function CGLayerCreateWithContext, whose prototype is:

```c
CGLayerRef CGLayerCreateWithContext (
    CGContextRef context,
    CGSize size,
    CFDictionaryRef auxiliaryInfo
);
```

Core Image passes the CIContext object as the context parameter, the size as the size parameter, and the dictionary as the auxiliaryInfo parameter. For more information on CGLayer objects, see Quartz 2D Programming Guide and CGLayer Reference.

Available in OS X v10.4 and later.

52.5.12  **Destructor**

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

52.5.13  **DrawImage(ciImage as CIImageMBS)**

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Render the ciImage to the the context’s destination.  
**Notes:** Rendering the image will cause the calculations to be done so this call is quite expensive.
52.5.14 **DrawImagePoint**(ciImage as CIImageMBS, DestPoint as CGPointMBS, SourceRect as CGRectMBS = nil)

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Render the subregion 'SourceRect' of 'ciImage' to point 'DestPoint' in the context’s destination. **Deprecated:** This item is deprecated and should no longer be used. You can use DrawImageRect instead. **Notes:**

Rendering the image will cause the calculations to be done so this call is quite expensive. If SourceRect is nil, we use the extent from image.

52.5.15 **DrawImageRect**(ciImage as CIImageMBS, DestRect as CGRectMBS, SourceRect as CGRectMBS = nil)

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Render the rectangle 'SourceRect' of 'ciImage' to the rectangle 'DestRect' in the context’s destination. **Notes:**

Rendering the image will cause the calculations to be done so this call is quite expensive. If SourceRect is nil, we use the extent from image.

52.5.16 **Flush**

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Flushes drawings to CGContext and target picture (if any).

52.5.17 **JPEGRepresentationOfImage**(Image as CIImageMBS, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil) as MemoryBlock

MBS MacCG Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Render a CIImage to JPEG data. **Example:**

```plaintext
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim i as new CIImageMBS(f)
dim c as new CIContextMBS

dim jpegData as MemoryBlock = c.JPEGRepresentationOfImage(i)

Break // see debugger
```
52.5. CLASS CICONTEXTMBS

Notes:
Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome.
Supported options keys are kCGImageDestinationLossyCompressionQuality, kCIImageRepresentationAVDepthData, kCIImageRepresentationDepthImage, kCIImageRepresentationDisparityImage.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.12 or later.

52.5.18 kCIContextCacheIntermediates as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**
One of the keys that may be passed in the dictionary while creating contexts.
**Notes:**
A boolean NSNumber controlling how intermediate buffers are cached.
If false, the context will empty intermediates during and after renders.
The default value is true.

52.5.19 kCIContextHighQualityDownsample as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**
One of the option keys.
**Notes:**
A boolean controlling the quality of affine downsample operations.
True imply that more quality is desired.
On iOS the the default value is false.
On OSX the the default value is true.

52.5.20 kCIContextOutputColorSpace as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**
A key for the color space to use for images before they are rendered to the context.
**Notes:**
By default, Core Image uses the GenericRGB color space, which leaves color matching to the system. You can specify a different output color space by providing a Quartz 2D CGColorSpace object (CGColorSpaceRef). (See Quartz 2D Programming Guide for information on creating and using CGColorSpace objects.)
To request that Core Image perform no color management, specify the NSNull object as the value for this key. Use this option for images that don’t contain color data (such as elevation maps, normal vector maps, and sampled function tables).

Available in OS X v10.6 and later.

**52.5.21 kCIContextOutputPremultiplied as String**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys that may be passed in the dictionary while creating contexts.

**Notes:**
A boolean controlling whether output renders produce alpha-premultiplied pixels. The default value is true.

**52.5.22 kCIContextPriorityRequestLow as String**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An number with a boolean value. When @YES the context will use low priority rendering on the GPU.

**52.5.23 kCIContextUseSoftwareRenderer as String**

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A key for enabling software renderer use. If the associated NSNumber object is true, then the software renderer is required.

**Notes:** Available in OS X v10.6 and later.

**52.5.24 kCIContextWorkingColorSpace as String**

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A key for the color space to use for image operations.

**Notes:**
By default, Core Image assumes that processing nodes are 128 bits-per-pixel, linear light, premultiplied RGBA floating-point values that use the GenericRGB color space. You can specify a different working color space by providing a Quartz 2D CGColorSpace object (CGColorSpaceRef). Note that the working color space must be RGB-based. If you have YUV data as input (or other data that is not RGB-based), you can use ColorSync functions to convert to the working color space. (See Quartz 2D Programming Guide for
52.5. CLASS CICONTEXTMBS

information on creating and using CGColorSpace objects.)

To request that Core Image perform no color management, specify the NSNull object as the value for this key. Use this option for images that don’t contain color data (such as elevation maps, normal vector maps, and sampled function tables).

Available in OS X v10.6 and later.

52.5.25 kCIContextWorkingFormat as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An option for the color format to use for intermediate results when rendering with the context. **Notes:** The value for this key is an NSNumber object containing a CIFormat value. The default working format is kCIFormatRGBA8 for CPU rendering and kCIFormatRGBAf for GPU rendering. GPU rendering also supports the kCIFormatRGBAh format for greater color precision, but this format requires twice as much memory and can be used only with color management enabled.

Available in OS X v10.4 and later.

52.5.26 kCIImageRepresentationAVDepthData as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the representation name. **Notes:** For the raw depth data.

52.5.27 kCIImageRepresentationDepthImage as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the representation name. **Notes:** For the depth image.

52.5.28 kCIImageRepresentationDisparityImage as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the representation name.
Notes: For the disparity image.

52.5.29 PNGRepresentationOfImage(Image as CIImageMBS, format as Integer = 24, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil) as MemoryBlock

MBS MacCG Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Render a CIImage to PNG data.

**Example:**

```vbnet
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim i as new CIImageMBS(f)
dim c as new CIContextMBS

dim pngData as MemoryBlock = c.PNGRepresentationOfImage(i)
```

Break // see debugger

**Notes:**
Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome and must match the specified format.
No options keys are supported at this time.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.13 or later.

52.5.30 ReclaimResources

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Frees temporary memory.

**Notes:** Runs the context’s garbage collector to reclaim any resources that are no longer required (e.g. removes textures from the texture cache that reference deleted images.) This method is called automatically after every rendering operation.
52.5. CLASS CICONTEXTMBS

52.5.31 TIFFRepresentationOfImage(Image as CIImageMBS, format as Integer = 24, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil) as MemoryBlock

Example:
```javascript
    dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
    dim i as new CIImageMBS(f)
    dim c as new CIContextMBS

    dim tiffData as MemoryBlock = c.TIFFRepresentationOfImage(i)

    Break // see debugger
```

Notes:
Image must have a finite non-empty extent. The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome and must match the specified format. No options keys are supported at this time. If colorspace is nil, we use generic RGB colorspace. Available on macOS 10.12 or later.

52.5.32 writeJPEGRepresentationOfImage(Image as CIImageMBS, file as FolderItem, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil, byref error as NSErrorMBS) as Boolean

Example:
```javascript
    dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
    dim i as new CIImageMBS(f)
    dim c as new CIContextMBS
    dim d as FolderItem = SpecialFolder.Desktop.Child("output.jpg")
    dim e as NSErrorMBS
    dim b as Boolean = c.writeJPEGRepresentationOfImage(i, d, e)

    if b then
        MsgBox "OK"
    else
        MsgBox "Failed"+EndOfLine+e.localizedDescription
    end if
```
Notes:

Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome.
Supported options keys are kCGImageDestinationLossyCompressionQuality, kCIImageRepresentationAVDepthData, kCIImageRepresentationDepthImage, kCIImageRepresentationDisparityImage.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.12 or later.

52.5.33 writePNGRepresentationOfImage(Image as CIImageMBS, file as FolderItem, format as Integer = 24, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil, byref error as NSErrorMBS) as Boolean

MBS MacCG Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Render a CIImage to PNG file.
**Example:**

```plaintext
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim i as new CIImageMBS(f)
dim c as new CIContextMBS
dim d as FolderItem = SpecialFolder.Desktop.Child("output.png")

dim e as NSErrorMBS
dim b as Boolean = c.writePNGRepresentationOfImage(i, d, e)
if b then
    MsgBox "OK"
else
    MsgBox "Failed" + EndOfFile + e.LocalizedDescription
end if
```

Notes:

Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome and must match the specified format.
No options keys are supported at this time.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.13 or later.
52.5.34  writeTIFFRepresentationOfImage(Image as CIImageMBS, file as FolderItem, format as Integer = 24, colorSpace as CGColorSpaceMBS = nil, options as dictionary = nil, byref error as NSErrorMBS) as Boolean

MBS MacCG Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Render a CIImage to TIFF file. **Example:**

```lisp
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim i as new CIImageMBS(f)
dim c as new CIContextMBS
dim d as FolderItem = SpecialFolder.Desktop.Child("output.tif")

dim e as NSErrorMBS
dim b as Boolean = c.writeTIFFRepresentationOfImage(i, d, e)
if b then
    MsgBox "OK"
else
    MsgBox "Failed" + EndOfLine + e.localizedDescription
end if
```

**Notes:**

Image must have a finite non-empty extent.
The CGColorSpace must be kCGColorSpaceModelRGB or kCGColorSpaceModelMonochrome and must match the specified format.
No options keys are supported at this time.
If colorspace is nil, we use generic RGB colorspace.
Available on macOS 10.12 or later.

52.5.35  Properties

52.5.36  CGContext as CGContextMBS

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The CGContextMBS targeted by this CIContext.
**Notes:** (Read and Write property)

52.5.37  description as String

MBS MacCG Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the textual description for this context.
**52.5.38 Handle as Integer**

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The handle to the CIContext object used internally. 
**Notes:** (Read only property)

**52.5.39 Picture as Picture**

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The picture used in the constructor (if any). 
**Notes:** (Read and Write property)

**52.5.40 Constants**

**52.5.41 kCIFormatA16 = 4**

MBS MacCG Plugin, Plugin Version: 17.3. **Function:** One of the image format constants. 
**Notes:**

Alpha with 16-bit. 
Available in macOS 10.11 or newer.

**52.5.42 kCIFormatA8 = 3**

MBS MacCG Plugin, Plugin Version: 17.3. **Function:** One of the image format constants. 
**Notes:**

Alpha with 8-bit. 
Available in macOS 10.11 or newer.

**52.5.43 kCIFormatABGR8 = 46**

MBS MacCG Plugin, Plugin Version: 17.3. **Function:** One of the image format constants. 
**Notes:**
52.5. **CLASS CICONTEXTMBS**

ABGR with 8-bit.
Available in macOS 10.11 or newer.

### 52.5.44 kCIFormatAf = 6

MBS MacCG Plugin, Plugin Version: 17.3. **Function:** One of the image format constants.  
**Notes:**
Alpha with float values.
Available in macOS 10.11 or newer.

### 52.5.45 kCIFormatAh = 5

MBS MacCG Plugin, Plugin Version: 17.3. **Function:** One of the image format constants.  
**Notes:**
Alpha with half floating point.
Available in macOS 10.11 or newer.

### 52.5.46 kCIFormatARGB8 = 23

MBS MacCG Plugin, Plugin Version: 17.3. **Function:** One of the image format constants.  
**Notes:** ARGB with 8-bit.

### 52.5.47 kCIFormatBGRA8 = 22

MBS MacCG Plugin, Plugin Version: 17.3. **Function:** One of the image format constants.  
**Notes:** BGRA with 8-bit.

### 52.5.48 kCIFormatR16 = 37

MBS MacCG Plugin, Plugin Version: 17.3. **Function:** One of the image format constants.  
**Notes:**
Red with 16-bit.
Available in macOS 10.11 or newer.
52.5.49  \texttt{kCIFormatR8 = 36}  

MBS MacCG Plugin, Plugin Version: 17.3. \textbf{Function:} One of the image format constants. 
\textbf{Notes:}
Red with 8-bit. 
Available in macOS 10.11 or newer.

52.5.50  \texttt{kCIFormatRf = 39}  

MBS MacCG Plugin, Plugin Version: 17.3. \textbf{Function:} One of the image format constants. 
\textbf{Notes:}
Red with floating point. 
Available in macOS 10.11 or newer.

52.5.51  \texttt{kCIFormatRG16 = 41}  

MBS MacCG Plugin, Plugin Version: 17.3. \textbf{Function:} One of the image format constants. 
\textbf{Notes:}
Red and green with 16-bit. 
Available in macOS 10.11 or newer.

52.5.52  \texttt{kCIFormatRG8 = 40}  

MBS MacCG Plugin, Plugin Version: 17.3. \textbf{Function:} One of the image format constants. 
\textbf{Notes:}
Red and green with 8-bit. 
Available in macOS 10.11 or newer.

52.5.53  \texttt{kCIFormatRGBA16 = 27}  

MBS MacCG Plugin, Plugin Version: 17.3. \textbf{Function:} One of the image format constants. 
\textbf{Notes:} RGBA with 16-bit.
52.5.54 kCIFormatRGBA8 = 24

MBS MacCG Plugin, Plugin Version: 17.3. **Function:** One of the image format constants. **Notes:** RGBA with 8-bit.

52.5.55 kCIFormatRGBAf = 34

MBS MacCG Plugin, Plugin Version: 17.3. **Function:** One of the image format constants. **Notes:** RGBA with floating point.

52.5.56 kCIFormatRGBAh = 31

MBS MacCG Plugin, Plugin Version: 17.3. **Function:** One of the image format constants. **Notes:** RGBA values that are IEEE 754-2008 half float compliant.

52.5.57 kCIFormatRGf = 43

MBS MacCG Plugin, Plugin Version: 17.3. **Function:** One of the image format constants. **Notes:**

Red and green with floating point values.
Available in macOS 10.11 or newer.

52.5.58 kCIFormatRGh = 42

MBS MacCG Plugin, Plugin Version: 17.3. **Function:** One of the image format constants. **Notes:**

Red and green with half precision floating point values.
Available in macOS 10.11 or newer.

52.5.59 kCIFormatRh = 38

MBS MacCG Plugin, Plugin Version: 17.3. **Function:** One of the image format constants. **Notes:**

Red with half precision floating point.
Available in macOS 10.11 or newer.
52.6 class CIDataMatrixCodeDescriptorMBS

52.6.1 class CIDataMatrixCodeDescriptorMBS

52.6.2 Methods

52.6.3 Constructor(errorCorrectedPayload as MemoryBlock, rowCount as Integer, columnCount as Integer, eccVersion as integer)

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Initializes a descriptor that can be used as input to CIBarcodeGenerator.

52.6.4 descriptorWithPayload(errorCorrectedPayload as MemoryBlock, rowCount as Integer, columnCount as Integer, eccVersion as integer) as CIDataMatrixCodeDescriptorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Construct a descriptor that can be used as input to CIBarcodeGenerator.

52.6.5 Properties

52.6.6 columnCount as Integer

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The number of module columns. Notes: Refer to ISO/IEC 16022:2006(E) for valid module row and column count combinations. (Read only property)
### 52.6.7  **eccVersion as Integer**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Data Matrix code ECC version.  
**Notes:**

Valid values are 000, 050, 080, 100, 140, and 200. Any symbol with an even number of rows and columns will be ECC 200.

ECC 000 - 140 symbols offer five levels of error correction using convolutional code error correction. Each successive level of error correction offers more protection for the message data and increases the size of the symbol required to carry a specific message. ECC 000 symbols offer no data protection. The other modes are described in ISO/IEC 16022:2006 and enumerated in this list only for completeness.

ECC 200 symbols utilize Reed-Solomon error correction. The error correction capacity for any given Data Matrix symbol is fixed by the size (in rows and columns) of the symbol. See Table 7 of ISO/IEC 16022:2006(E) for more details.  
(Read only property)

### 52.6.8  **errorCorrectedPayload as MemoryBlock**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The error corrected payload that comprise the Data Matrix code symbol.  
**Notes:**

DataMatrix symbols are specified in ISO/IEC 16022:2006(E). ECC 200-type symbols will always have an even number of rows and columns.

For ECC 200-type symbols, the phases of encoding data into a symbol are described in section 5.1 – Encode procedure overview. The error corrected payload comprises the de-interleaved bits of the message described at the end of Step 1: Data encodation.  
(Read only property)

### 52.6.9  **rowCount as Integer**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of module rows.  
**Notes:**

Refer to ISO/IEC 16022:2006(E) for valid module row and column count combinations.  
(Read only property)
52.6.10 Constants

52.6.11 ECCVersion000 = 0

MBS MacCG Plugin, Plugin Version: 17.4. **Function:** One of the constants indicating the Data Matrix code ECC version. 
**Notes:** Indicates error correction using convolutional code error correction with no data protection.

52.6.12 ECCVersion050 = 50

MBS MacCG Plugin, Plugin Version: 17.4. **Function:** One of the constants indicating the Data Matrix code ECC version. 
**Notes:** Indicates 1/4 of the symbol is dedicated to convolutional code error correction.

52.6.13 ECCVersion080 = 80

MBS MacCG Plugin, Plugin Version: 17.4. **Function:** One of the constants indicating the Data Matrix code ECC version. 
**Notes:** Indicates 1/3 of the symbol is dedicated to convolutional code error correction.

52.6.14 ECCVersion100 = 100

MBS MacCG Plugin, Plugin Version: 17.4. **Function:** One of the constants indicating the Data Matrix code ECC version. 
**Notes:** Indicates 1/2 of the symbol is dedicated to convolutional code error correction.

52.6.15 ECCVersion140 = 140

MBS MacCG Plugin, Plugin Version: 17.4. **Function:** One of the constants indicating the Data Matrix code ECC version. 
**Notes:** Indicates 3/4 of the symbol is dedicated to convolutional code error correction.

52.6.16 ECCVersion200 = 200

MBS MacCG Plugin, Plugin Version: 17.4. **Function:** One of the constants indicating the Data Matrix code ECC version. 
**Notes:** Indicates error correction using Reed-Solomon error correction. Data protection overhead varies
based on symbol size.
52.7 class CIDetectorMBS

52.7.1 class CIDetectorMBS

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Core Image class to detect features in images.
**Notes:** This class potentially holds onto a lot of state. Hence it may be beneficial from a performance perspective to re-use the same CIDetector instance. Specifying a CIContext when creating a detector may have an impact on performance since this context may be used when analyzing an image.

52.7.2 Methods

52.7.3 CIDetectorAccuracy as string

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The key in the options dictionary used to specify a accuracy / performance tradeoff to be used.

52.7.4 CIDetectorAccuracyHigh as string

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the values for use with the CIDetectorAccuracy key.
**Notes:** Lower performance, higher accuracy

52.7.5 CIDetectorAccuracyLow as string

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the values for use with the CIDetectorAccuracy key.
**Notes:** Lower accuracy, higher performance

52.7.6 CIDetectorAspectRatio as string

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys used in the options dictionary for featuresInImage.
**Notes:**
An option specifying the aspect ratio (width divided by height) of rectangles to search for.

The value of this key is an NSNumber object whose value is a positive floating-point number. Use this option with the CIDetectorTypeRectangle detector type to fine-tune the accuracy of the detector. For example, to
more accurately find a business card (3.5 x 2 inches) in an image, specify an aspect ratio of 1.75 (3.5 / 2).

52.7.7  **CIDetectorEyeBlink as string**

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An option for whether Core Image will perform additional processing to recognize closed eyes in detected faces.

**Notes:** Available in OS X v10.9 and later.

52.7.8  **CIDetectorFocalLength as string**

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys used in the options dictionary for featuresInImage.

**Notes:**

An option identifying the focal length used in capturing images to be processed by the detector.

The value of this key is an NSNumber object whose value is a floating-point number between -1.0 and 1.0. Use this option with the CIDetectorTypeRectangle detector type to fine-tune the accuracy of the detector.

52.7.9  **CIDetectorImageOrientation as string**

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An option for the display orientation of the image whose features you want to detect.

**Notes:**

The value of this key is an NSNumber object whose value is an integer between 1 and 8. The TIFF and EXIF specifications define these values to indicate where the pixel coordinate origin (0,0) of the image should appear when it is displayed. The default value is 1, indicating that the origin is in the top left corner of the image. For further details, see kCGImagePropertyOrientation.

Core Image only detects faces whose orientation matches that of the image. You should provide a value for this key if you want to detect faces in a different orientation.

Available in OS X v10.8 and later.

52.7.10  **CIDetectorMaxFeatureCount as string**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for featuresInImage.

**Notes:**
For rectangle detector, the value for this key is an integer number from 1 ... 256 that represents the maximum number of features to return.
valid value range: 1 <= CIDetectorMaxFeatureCount <= 256. The default value is 1.

### 52.7.11 CIDetectorMinFeatureSize as string

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
A key used to specify the minimum size that the detector will recognize as a feature.
**Notes:**
The value for this key is an NSNumber object ranging from 0.0 through 1.0 that represents a fraction of the minor dimension of the image.
Available in OS X v10.8 and later.

### 52.7.12 CIDetectorNumberOfAngles as string

MBS MacCG Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the configuration keys.
**Notes:**
The number of perspectives to use for detecting a face in video input.
The value for this key is a number 1, 3, 5, 7, 9, or 11. At higher numbers of angles, face detection in video becomes more accurate, but at a higher computational cost.
Available in OS X 10.11 and later.

### 52.7.13 CIDetectorReturnSubFeatures as string

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the options for featuresInImage.
**Notes:** The value for this key is a bool. Controls whether the text detector should detect subfeatures or not. The default value is false. Requires 64-bit.

### 52.7.14 CIDetectorSmile as string

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
An option for whether Core Image will perform additional processing to recognize smiles in detected faces.
52.7. **CLASS CIDETECTORMBS**

**Notes:** Available in OS X v10.9 and later.

### 52.7.15 CIDetectorTracking as string

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A key used to enable or disable face tracking for the detector.  
**Notes:** Use this option when you want to track faces across frames in a video.  
Available in OS X v10.8 and later.

### 52.7.16 CIDetectorTypeFace as string

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies a detector type for face recognition.

### 52.7.17 CIDetectorTypeQRCode as string

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the strings used to declare the detector for which you are interested.  
**Notes:** A detector that searches for Quick Response codes (a type of 2D barcode) in a still image or video, returning CIQRCodeFeature objects that provide information about detected barcodes.

### 52.7.18 CIDetectorTypeRectangle as string

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the strings used to declare the detector for which you are interested.  
**Notes:** A detector that searches for rectangular areas in a still image or video, returning CIRectangleFeature objects that provide information about detected regions.  
The rectangle detector finds areas that are likely to represent rectangular objects that appear in perspective in the image, such as papers or books seen on a desktop.
**52.7.19 CIDetectorTypeText as string**

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the strings used to declare the detector for which you are interested.

**Notes:**
A detector that searches for text in a still image or video, returning CITextFeature objects that provide information about detected regions.

The text detector finds areas that are likely to contain upright text, but does not perform optical character recognition.

**52.7.20 Constructor(Handle as Integer)**

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates a new CIDetectorMBS object for the given handle.

See also:
- 52.7.21 Constructor(type as string, context as CIContextMBS = nil, options as dictionary = nil) 8436

**52.7.21 Constructor(type as string, context as CIContextMBS = nil, options as dictionary = nil)**

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a new detector instance of the given type.

**Notes:**
The type is used to specify the usage intent.
The context argument specifies the CIContext to be used to operate on the image. May be nil.

If the input image to featuresInImage is the output of a CoreImage operation, it may improve performance to specify the same context that was used to operate on that image.

The detector may do image processing in this context and if the image is on the GPU and the specified context is a GPU context this may avoid additional upload to / download from the GPU. If the input image is on the CPU (or the output from a CPU based context) specifying a GPU based context (or vice versa) may reduce performance.

The options parameter lets you optionally specify a accuracy / performance tradeoff. Can be nil or an empty dictionary.

See also:
- 52.7.20 Constructor(Handle as Integer)
52.7. detectorOfType(type as string, context as CIContextMBS = nil, options as dictionary = nil) as CIDetectorMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a new detector instance of the given type.
**Notes:**
The type is used to specify the usage intent.
The context argument specifies the CIContext to be used to operate on the image. May be nil.

If the input image to featuresInImage is the output of a CoreImage operation, it may improve performance to specify the same context that was used to operate on that image.

The detector may do image processing in this context and if the image is on the GPU and the specified context is a GPU context this may avoid additional upload to / download from the GPU. If the input image is on the CPU (or the output from a CPU based context) specifying a GPU based context (or vice versa) may reduce performance.

The options parameter lets you optionally specify a accuracy / performance tradeoff. Can be nil or an empty dictionary.

52.7.23 featuresInImage(image as CIImageMBS) as CIFeatureMBS()

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array of CIFeature instances in the given image.
**Notes:** The array is sorted by confidence, highest confidence first.
See also:
- 52.7.24 featuresInImage(image as CIImageMBS, options as dictionary) as CIFeatureMBS() 8437

52.7.24 featuresInImage(image as CIImageMBS, options as dictionary) as CIFeatureMBS()

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array of CIFeature instances in the given image.
**Notes:**
The array is sorted by confidence, highest confidence first.
The options dictionary can contain a CIDetectorImageOrientation key value.
See also:
- 52.7.23 featuresInImage(image as CIImageMBS) as CIFeatureMBS() 8437
52.7.25 Properties

52.7.26 Handle as Integer

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
**Notes:** (Read only property)
52.8. CLASS CIFACEFEATUREMBS

52.8.1 class CIFaceFeatureMBS

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
A CIFaceFeature object describes a face detected in a picture.
**Notes:**
Its properties provide locations for the face’s eyes and mouth.
All positions are relative to the original image.
Subclass of the CIFeatureMBS class.

52.8.2 Methods

52.8.3 Constructor(Handle as Integer)

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates a new CIFaceFeature object from a handle value.

52.8.4 Properties

52.8.5 faceAngle as Double

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The rotation of the face. (read-only)
**Notes:**
Rotation is measured counterclockwise in radians, with zero indicating that a line drawn between the eyes is horizontal relative to the image orientation.
Available in OS X v10.9 and later.
(Read only property)

52.8.6 hasFaceAngle as boolean

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
A Boolean value that indicates whether information about face rotation is available. (read-only)
**Notes:**
Available in OS X v10.9 and later.
(Read only property)
52.8.7 hasLeftEyePosition as boolean

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean that indicates whether the detector found the face’s left eye. (read-only) **Notes:** (Read only property)

52.8.8 hasMouthPosition as boolean

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean that indicates whether the detector found the face’s mouth. (read-only) **Notes:** (Read only property)

52.8.9 hasRightEyePosition as boolean

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean that indicates whether the detector found the face’s right eye. (read-only) **Notes:** (Read only property)

52.8.10 hasSmile as boolean

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that indicates whether a smile is detected in the face. (read-only) **Notes:** Available in OS X v10.9 and later. For smiles to be detected, the key CIDetectorSmile must be present with a value of true in the dictionary passed to a detector’s featuresInImage method. (Read only property)

52.8.11 hasTrackingFrameCount as boolean

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether there is a tracking frame count. **Notes:** (Read only property)
52.8.12 **hasTrackingID** as boolean

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the tracking ID is set.  
**Notes:** (Read only property)

52.8.13 **leftEyeClosed** as boolean

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that indicates whether the a closed left eye is detected in the face. (read-only)  
**Notes:**  
"Left" is relative to the original (non-mirrored) image orientation, not to the owner of the eye.

For closed eyes to be detected, the key CIDetectorEyeBlink must be present with a value of true in the dictionary passed to a detector’s featuresInImage method.  
Available in OS X v10.9 and later.  
(Read only property)

52.8.14 **leftEyePosition** as CGPointMBS

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The coordinates of the left eye, in image coordinates. (read-only)  
**Notes:** (Read only property)

52.8.15 **mouthPosition** as CGPointMBS

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The coordinates of the mouth eye, in image coordinates (read-only)  
**Notes:** (Read only property)

52.8.16 **rightEyeClosed** as boolean

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that indicates whether the a closed left eye is detected in the face. (read-only)  
**Notes:**  
"Right" is relative to the original (non-mirrored) image orientation, not to the owner of the eye.
For closed eyes to be detected, the key CIDetectorEyeBlink must be present with a value of true in the dictionary passed to a detector’s featuresInImage method. Available in OS X v10.9 and later. (Read only property)

**52.8.17 rightEyePosition as CGPointMBS**

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The coordinates of the right eye, in image coordinates (read-only) **Notes:** (Read only property)

**52.8.18 trackingFrameCount as Integer**

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The tracking frame count. **Notes:** (Read only property)

**52.8.19 trackingID as Integer**

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The tracking ID. **Notes:** (Read only property)
52.9. **CLASS CIFEATUREMBS**

### 52.9.1 class CIFeatureMBS

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Generic feature found by a CIDetector.

### 52.9.2 Methods

#### 52.9.3 CIFeatureTypeFace as string

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys that define specific kinds of findable features.
**Notes:**
The discovered feature is a person's face.
Use the CIFaceFeatureMBS class to find more information about the detected feature.
Available in OS X v10.7 and later.

#### 52.9.4 CIFeatureTypeQRCode as string

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys that define specific kinds of findable features.
**Notes:**
The discovered feature is a Quick Response code (2D barcode).
Use the CIQRCodeFeature class to find more information about the detected feature.
Available in OS X v10.11 and later.

#### 52.9.5 CIFeatureTypeRectangle as string

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys that define specific kinds of findable features.
**Notes:**
The discovered feature is a rectangular object, though it might appear in perspective in the image.
Use the CIRectangleFeatureMBS class to find more information about the detected feature.
Available in OS X v10.10 and later.
52.9.6  CIFeatureTypeText as string

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys that define specific kinds of findable features.
**Notes:**
The discovered feature is a region likely to contain upright text.
Use the CITextFeature class to find more information about the detected feature.
Available in OS X v10.11 and later.

52.9.7  Constructor(Handle as Integer)

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates a new CIFeature object from a handle value.

52.9.8  Properties

52.9.9  bounds as CGRectMBS

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The bounds of the feature in the image it was detected in.
**Notes:** (Read only property)

52.9.10  Handle as Integer

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The internal object reference.
**Notes:** (Read only property)

52.9.11  type as string

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The type of the feature.
**Notes:** (Read only property)
52.10.1 class CIFilterAccordionFoldTransitionMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Accordion Fold Transition filter. **Notes:**

Details for this filter:

FilterName: CIF accordion Fold Transition
DisplayName English: Accordion Fold Transition
DisplayName German: Leporello-bergang
DisplayName French: Transition de type accordon
DisplayName Italian: Transizione foglio a fisarmonica
DisplayName Spanish: Transicion con pliegues a modo de acorden

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputBottomHeight: BottomHeight
- inputNumberOfFolds: NumberOfFolds
- inputFoldShadowAmount: FoldShadowAmount
- inputTime: Time

Output:

- outputImage

Subclass of the CIFilterMBS class.
52.10.2 Methods

52.10.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.10.4 Properties

52.10.5 Attribute inputBottomHeight as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Accordion Fold Transition attribute.
**Notes:**
This attribute should have this content:

- Name: inputBottomHeight
- Class: double
- Type: CIAttributeTypeDistance
- DisplayName: BottomHeight
- DefaultNumber: 0
- IdentityNumber: 0

(Read only property)

52.10.6 Attribute inputFoldShadowAmount as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Accordion Fold Transition attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.10. CLASS CIFILTERACCORDIONFOLDTRANSITIONMBS

Name: inputFoldShadowAmount
Class: double
Type: CIAttributeTypeScalar
DisplayName: FoldShadowAmount
DefaultNumber: 0.1
IdentityNumber: 0
MaxNumber: 1
MinNumber: 0
SliderMaxNumber: 1
SliderMinNumber: 0

52.10.7 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Accordion Fold Transition attribute.
**Notes:**

This attribute should have this content:

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

52.10.8 Attribute inputNumberOfFolds as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Accordion Fold Transition attribute.

**Notes:**

This attribute should have this content:

(Read only property)
Name: inputNumberOfFolds
Class: double
Type: CIAttributeTypeScalar
DisplayName: NumberOfFolds
DefaultNumber: 3
IdentityNumber: 0
MaxNumber: 50
MinNumber: 1
SliderMaxNumber: 10
SliderMinNumber: 1

52.10.9 Attribute inputTargetImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Details about the Accordion Fold Transition attribute.
Notes:
This attribute should have this content:

Name: inputTargetImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Target Image
DisplayName German: Zielbild
DisplayName French: Image cible
DisplayName Italian: Immagine target
DisplayName Spanish: Imagen de destino
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

52.10.10 Attribute inputTime as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Details about the Accordion Fold Transition attribute.
Notes:
This attribute should have this content:

(Read only property)
52.10. `CLASS CIFILTERACCORDIONFOLDTRANSITIONMBS` 8449

Name: inputTime
Class: double
Type: CIAttributeTypeTime
DisplayName English: Time
DisplayName German: Zeit
DisplayName French: Durée
DisplayName Italian: Tempo
DisplayName Spanish: Tiempo
DefaultNumber: 0
IdentityNumber: 0
MaxNumber: 1
MinNumber: 0
SliderMaxNumber: 1
SliderMinNumber: 0

52.10.11 `inputBottomHeight` as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute BottomHeight
**Notes:**

Name: inputBottomHeight
Class: double (NSNumber)
DisplayName English: BottomHeight
DisplayName German: BottomHeight
DisplayName French: BottomHeight
DisplayName Italian: BottomHeight
DisplayName Spanish: BottomHeight
Type: CIAttributeTypeDistance

See Attribute inputBottomHeight for more details.
(Read and Write property)

52.10.12 `inputFoldShadowAmount` as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute FoldShadowAmount
**Notes:**

See Attribute inputFoldShadowAmount for more details.
(Read and Write property)
52.10.13 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image

**Notes:**

Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

52.10.14 inputNumberOfFolds as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute NumberOfFolds

**Notes:**

Name: inputNumberOfFolds
Class: double (NSNumber)
DisplayName English: NumberOfFolds
DisplayName German: NumberOfFolds
DisplayName French: NumberOfFolds
DisplayName Italian: NumberOfFolds
DisplayName Spanish: NumberOfFolds
Type: CIAttributeTypeScalar

See AttributeinputNumberOfFolds for more details.
52.10.15  **inputTargetImage as CIImageMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Target Image  
**Notes:**
- Name: inputTargetImage
- Class: CIImageMBS (CIImage)
- DisplayName English: Target Image
- DisplayName German: Zielbild
- DisplayName French: Image cible
- DisplayName Italian: Immagine target
- DisplayName Spanish: Imagen de destino
- Type: CIAttributeTypeImage

See Attribute inputTargetImage for more details.  
(Read and Write property)

52.10.16  **inputTime as double**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Time  
**Notes:**
- Name: inputTime
- Class: double (NSNumber)
- DisplayName English: Time
- DisplayName German: Zeit
- DisplayName French: Dure
- DisplayName Italian: Tempo
- DisplayName Spanish: Tiempo
- Type: CIAttributeTypeTime

See Attribute inputTime for more details.  
(Read and Write property)
52.11  class CIFilterAdditionCompositingMBS

52.11.1  class CIFilterAdditionCompositingMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Addition filter.

**Notes:**

Details for this filter:

FilterName:  CIAdditionCompositing
DisplayName English:  Addition
DisplayName German:  Addition
DisplayName French:  Addition
DisplayName Italian:  Aggiunta
DisplayName Spanish:  Adicin

**Categories:**

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputBackgroundImage: Background Image

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.11.2 Methods

52.11.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.11.4 Properties

52.11.5 Attribute inputBackgroundImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Addition attribute.
**Notes:**
This attribute should have this content:

- **Name:** inputBackgroundImage
- **Class:** CIImageMBS
- **Type:** CIAttributeTypeImage
- **DisplayName English:** Background Image
- **DisplayName German:** Hintergrundbild
- **DisplayName French:** Image derrière-plan
- **DisplayName Italian:** Immagine di sfondo
- **DisplayName Spanish:** Imagen de fondo
- **DefaultNumber:** 0
- **IdentityNumber:** 0

(Read only property)

52.11.6 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Addition attribute.
**Notes:**
This attribute should have this content:

(Read only property)
CHAPTER 52. COREIMAGE

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

52.11.7  inputBackgroundImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Background Image

**Notes:**

Name: inputBackgroundImage
Class: CIImageMBS (CIImage)
DisplayName English: Background Image
DisplayName German: Hintergrundbild
DisplayName French: Image d'arrière-plan
DisplayName Italian: Immagine di sfondo
DisplayName Spanish: Imagen de fondo
Type: CIAttributeTypeImage

See Attribute inputBackgroundImage for more details.
(Read and Write property)

52.11.8  inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image

**Notes:**

See Attribute inputImage for more details.
(Read and Write property)
Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage
52.12.1 class CIFilterAffineClampMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Affine Clamp filter.
**Notes:**
Details for this filter:

FilterName: CIAffineClamp
DisplayName English: Affine Clamp
DisplayName German: Rand erweitern
DisplayName French: Attache affine
DisplayName Italian: Distanza affine
DisplayName Spanish: Fijacin afn

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputTransform: Transform

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.12.2 Methods

52.12.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.12.4 Properties

52.12.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Affine Clamp attribute.
**Notes:**
This attribute should have this content:

- **Name:** inputImage
- **Class:** CIImageMBS
- **Type:** CIAttributeTypeImage
- **DisplayName English:** Image
- **DisplayName German:** Bild
- **DisplayName French:** Image
- **DisplayName Italian:** Immagine
- **DisplayName Spanish:** Imagen
- **DefaultNumber:** 0
- **IdentityNumber:** 0

(Read only property)

52.12.6 Attribute inputTransform as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Affine Clamp attribute.
**Notes:**
This attribute should have this content:

(Read only property)
CHAPTER 52. COREIMAGE

Name: inputTransform
Class: NSAffineTransformMBS
DisplayName English: Transform
DisplayName German: Transformation
DisplayName French: Transformer
DisplayName Italian: Trasforma
DisplayName Spanish: Transformación
DefaultAffineTransform: [ 0.4, 0, 0, 0.4, 0, 0 ]
IdentityAffineTransform: [ 1, 0, 0, 1, 0, 0 ]

52.12.7 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image

**Notes:**

Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

52.12.8 inputTransform as NSAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Transform

**Notes:**

Name: inputTransform
Class: NSAffineTransformMBS (NSAffineTransform)
DisplayName English: Transform
DisplayName German: Transformation
DisplayName French: Transformer
DisplayName Italian: Trasforma
DisplayName Spanish: Transformación
Type:
52.12. CLASS CIFILTERAFFINECLAMPMBS

See Attribute\texttt{inputTransform} for more details.

(Read and Write property)
52.13 class CIFilterAffineTileMBS

52.13.1 class CIFilterAffineTileMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Affine Tile filter.

**Notes:**
Details for this filter:

- **FilterName:** CIAffineTile
- **DisplayName English:** Affine Tile
- **DisplayName German:** Affin kacheln
- **DisplayName French:** Mosaque affine
- **DisplayName Italian:** Mosaico affine
- **DisplayName Spanish:** Mosaico afln

**Categories:**

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- **inputImage:** Image
- **inputTransform:** Transform

**Output:**

- **outputImage**

Subclass of the CIFilterMBS class.
52.13.2 Methods

52.13.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.13.4 Properties

52.13.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Affine Tile attribute.
**Notes:**
This attribute should have this content:

- Name: inputImage
- Class: CIImageMBS
- Type: CIAttributeTypeImage
- DisplayName English: Image
- DisplayName German: Bild
- DisplayName French: Image
- DisplayName Italian: Immagine
- DisplayName Spanish: Imagen
- DefaultNumber: 0
- IdentityNumber: 0

(Read only property)

52.13.6 Attribute inputTransform as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Affine Tile attribute.
**Notes:**
This attribute should have this content:

(Read only property)
CHAPTER 52. COREIMAGE

52.13.7 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image

**Notes:**

- **Name:** inputImage
- **Class:** CIImageMBS (CIImage)
- **DisplayName English:** Image
- **DisplayName German:** Bild
- **DisplayName French:** Image
- **DisplayName Italian:** Immagine
- **DisplayName Spanish:** Imagen
- **Type:** CIAttributeTypeImage

See Attribute inputImage for more details.

(Read and Write property)

52.13.8 inputTransform as NSAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Transform

**Notes:**

- **Name:** inputTransform
- **Class:** NSAffineTransformMBS (NSAffineTransform)
- **DisplayName English:** Transform
- **DisplayName German:** Transformation
- **DisplayName French:** Transformer
- **DisplayName Italian:** Trasforma
- **DisplayName Spanish:** Transformación
- **DefaultAffineTransform:** \[ 0.4, 0, 0, 0.4, 0, 0 \]
- **IdentityAffineTransform:** \[ 1, 0, 0, 1, 0, 0 \]
52.13. CLASS CIFILTERAFFINETILEMBS

See AttributeinputTransform for more details.
(Read and Write property)
52.14 class CIFilterAffineTransformMBS

52.14.1 class CIFilterAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Affine Transform filter.

**Example:**

// Rotate image with CoreImage

// load image
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim image as new CIImageMBS(f)

// rotate 45 degree
dim n as new NSAffineTransformMBS
n.rotateByDegrees(45)
dim TransformFilter as new CIFilterAffineTransformMBS
TransformFilter.inputImage = image
TransformFilter.inputTransform = n

// get result
dim resultImage as CIImageMBS = TransformFilter.outputImage

// for saving to file
dim outputImage as NSImageMBS = resultImage.RenderNSImage(false)
f = SpecialFolder.Desktop.Child("output.png")
dim b as BinaryStream = BinaryStream.Create(f, true)
b.Write outputImage.PNGRepresentation

// as Real Studio picture object for display
dim pic as Picture = outputImage.CopyPictureWithMask
Backdrop = pic

**Notes:**

Details for this filter:

**Categories:**

- CICategoryGeometryAdjustment: Geometry Adjustment
52.14. CLASS CIFILTERAFFINETRANSFORMMBS

FilterName: CIAffineTransform
DisplayName English: Affine Transform
DisplayName German: Affin transformieren
DisplayName French: Affiner, transformer
DisplayName Italian: Trasformazione affine
DisplayName Spanish: Transformación afín

- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:
- inputImage: Image
- inputTransform: Transform

Output:
- outputImage

Subclass of the CIFilterMBS class.

52.14.2 Methods

52.14.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.14.4 Properties

52.14.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Affine Transform attribute.
**Notes:**
This attribute should have this content:

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

### 52.14.6 Attribute inputTransform as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Affine Transform attribute.

**Notes:**

This attribute should have this content:

Name: inputTransform
Class: NSAffineTransformMBS
Type: CIAttributeTypeTransform
DisplayName English: Transform
DisplayName German: Transformation
DisplayName French: Transformer
DisplayName Italian: Trasforma
DisplayName Spanish: Transformación
DefaultAffineTransform: [ 1, 0, 0, 1, 0, 0 ]
IdentityAffineTransform: [ 1, 0, 0, 1, 0, 0 ]

(Read only property)

### 52.14.7 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image

**Notes:**
52.14. **CLASS CIFILTERAFFINETRANSFORMMBS**

Name: inputImage  
Class: CIImageMBS (CIImage)  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
Type: CIAttributeTypeImage

See Attribute inputImage for more details.  
(Read and Write property)

52.14.8 **inputTransform as NSAffineTransformMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**  
The attribute Transform  
**Example:**

```csharp
// Rotate image with CoreImage

// load image
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim image as new CIImageMBS(f)

// rotate 45 degree
dim n as new NSAffineTransformMBS
n.rotateByDegrees(45)
dim TransformFilter as new CIFilterAffineTransformMBS
TransformFilter.inputImage = image
TransformFilter.inputTransform = n

// get result
dim resultImage as CIImageMBS = TransformFilter.outputImage

// for saving to file
dim outputImage as NSImageMBS = resultImage.RenderNSImage(false)
f = SpecialFolder.Desktop.Child("output.png")
dim b as BinaryStream = BinaryStream.Create(f, true)
b.Write(outputImage.PNGRepresentation)

// as Real Studio picture object for display
dim pic as Picture = outputImage.CopyPictureWithMask
```
BACKDROP = pic

Notes:

Name: inputTransform  
Class: NSAffineTransformMBS (NSAffineTransform)  
DisplayName English: Transform  
DisplayName German: Transformation  
DisplayName French: Transformer  
DisplayName Italian: Trasforma  
DisplayName Spanish: Transformacin  
Type: CIAttributeTypeTransform

See Attribute inputTransform for more details.  
(Read and Write property)
52.15. class CIFilterAreaAverageMBS

The Realbasic class for the CoreImage Area Average filter.

Notes:
Details for this filter:

FilterName: CIFilterAreaAverageMBS
DisplayName English: Area Average
DisplayName German: Bereichsdurchschnitt
DisplayName French: Moyenne de la zone
DisplayName Italian: Media area
DisplayName Spanish: Media del rea

Categories:

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputExtent: Extent

Output:

- outputImage

Subclass of the CIFilterMBS class.
52.15.2 Methods

52.15.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

**Notes:** On success the handle property is not zero and the filter has the default values set.

52.15.4 Properties

52.15.5 Attribute inputExtent as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Area Average attribute.

**Notes:**

This attribute should have this content:

Name: inputExtent
Class: CIVectorMBS
Type: CIAttributeTypeRectangle
DisplayName English: Extent
DisplayName German: Betrag
DisplayName French: tendue
DisplayName Italian: Ampiezza
DisplayName Spanish: Amplitud
DefaultVector: [ 0 0 640 80 ]
IdentityVector: n/a

(Read only property)

52.15.6 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Area Average attribute.

**Notes:**

This attribute should have this content:

(Read only property)
52.15. CLASS CIFILTERAREAVERAGE MBS

Name: inputImage  
Class: CIImageMBS  
Type: CIAtributeTypeImage  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
DefaultNumber: 0  
IdentityNumber: 0

52.15.7 inputExtent as CIVectorMBS

Notes:  
Name: inputExtent  
Class: CIVectorMBS (CIVector)  
DisplayName English: Extent  
DisplayName German: Betrag  
DisplayName French: tendue  
DisplayName Italian: Ampiezza  
DisplayName Spanish: Amplitud  
Type: CIAtributeTypeRectangle

See AttributeinputExtent for more details.  
(Read and Write property)

52.15.8 inputImage as CIImageMBS

Notes:  
See AttributeinputImage for more details.  
(Read and Write property)

52.16. class CIFilterAreaHistogramMBS

52.16.1.1 class CIFilterAreaHistogramMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Area Histogram filter.

**Notes:**

Details for this filter:

- **FilterName:** CIAreaHistogram
- **DisplayName English:** Area Histogram
- **DisplayName German:** Bereichs-Histogramm
- **DisplayName French:** Histogramme de la zone
- **DisplayName Italian:** Istogramma area
- **DisplayName Spanish:** Histograma del rea

**Categories:**

- **CICategoryReduction:** Reduction
- **CICategoryVideo:** Video
- **CICategoryStillImage:** Still Image
- **CICategoryBuiltIn:** Built-In

**Input:**

- **inputImage:** Image
- **inputExtent:** Extent
- **inputScale:** Scale
- **inputCount:** Count

**Output:**

- **outputData**
- **outputImage**

Subclass of the CIFilterMBS class.
52.16.2 Methods

52.16.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.16.4 Properties

52.16.5 Attribute inputCount as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Area Histogram attribute.
**Notes:**
This attribute should have this content:

- **Name:** inputCount
- **Class:** double
- **Type:** CIAttributeTypeScalar
- **DisplayName English:** Count
- **DisplayName German:** Anzahl
- **DisplayName French:** Compte
- **DisplayName Italian:** Conteggio
- **DisplayName Spanish:** Recuento
- **DefaultNumber:** 64
- **IdentityNumber:** 0
- **MaxNumber:** 2048
- **MinNumber:** 1
- **SliderMaxNumber:** 1000
- **SliderMinNumber:** 10

(Read only property)

52.16.6 Attribute inputExtent as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Area Histogram attribute.
**Notes:**
This attribute should have this content:

Name: inputExtent
Class: CIVectorMBS
Type: CIAttributeTypeRectangle
DisplayName English: Extent
DisplayName German: Betrag
DisplayName French: tendue
DisplayName Italian: Ampiezza
DisplayName Spanish: Amplitud

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- `inputImage`: Image
- `inputExtent`: Extent

**Output:**

- `outputImage`

Subclass of the CIFilterMBS class.
52.17.2 Methods

52.17.3 Constructor

Notes: On success the handle property is not zero and the filter has the default values set.

52.17.4 Properties

52.17.5 AttributeinputExtent as CIAttributeMBS

Notes: This attribute should have this content:

Name: inputExtent
Class: CIVectorMBS
Type: CIAttributeTypeRectangle
DisplayName English: Extent
DisplayName German: Betrag
DisplayName French: tendue
DisplayName Italian: Ampiezza
DisplayName Spanish: Amplitud
DefaultVector: [ 0 0 640 80 ]
IdentityVector: n/a

(Read only property)

52.17.6 AttributeinputImage as CIAttributeMBS

Notes: This attribute should have this content:

(Read only property)

See AttributeinputExtent for more details.
(Read and Write property)

#### 52.17.8 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image

**Notes:**

See AttributeinputImage for more details.
(Read and Write property)
Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage
52.18. class CIFilterAreaMaximumMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Area Maximum filter.

**Notes:**

Details for this filter:

FilterName: CIAreaMaximum  
DisplayName English: Area Maximum  
DisplayName German: Bereichsmaximum  
DisplayName French: Maximum de la zone  
DisplayName Italian: Massimo area  
DisplayName Spanish: Mximo del rea

**Categories:**

- CICategoryReduction: Reduction  
- CICategoryVideo: Video  
- CICategoryStillImage: Still Image  
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image  
- inputExtent: Extent

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.18.2 Methods

52.18.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.18.4 Properties

52.18.5 Attribute inputExtent as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Area Maximum attribute.
**Notes:**
This attribute should have this content:

```
Name:          inputExtent
Class:         CIVectorMBS
Type:          CIAttributeTypeRectangle
DisplayName English: Extent
DisplayName German: Betrag
DisplayName French: tendue
DisplayName Italian: Ampiezza
DisplayName Spanish: Amplitud
DefaultVector:  [ 0 0 640 80 ]
IdentityVector: n/a
```

(Read only property)

52.18.6 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Area Maximum attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.18. **CLASS CIFILTERAREAMAXIMUMMBS**

Name: inputImage  
Class: CIImageMBS  
Type: CIAttributeTypeImage  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
DefaultNumber: 0  
IdentityNumber: 0

---

52.18.7 **inputExtent as CIVectorMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Extent  
**Notes:**

Name: inputExtent  
Class: CIVectorMBS (CIVector)  
DisplayName English: Extent  
DisplayName German: Betrag  
DisplayName French: tendue  
DisplayName Italian: Ampiezza  
DisplayName Spanish: Amplitud  
Type: CIAttributeTypeRectangle

See AttributeinputExtent for more details.  
(Read and Write property)

---

52.18.8 **inputImage as CIImageMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image  
**Notes:**

See AttributeinputImage for more details.  
(Read and Write property)
Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage
52.19. class CIFilterAreaMinimumAlphaMBS

52.19.1 class CIFilterAreaMinimumAlphaMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Area Minimum Alpha filter.

**Notes:**
Details for this filter:

- **FilterName:** CIAreaMinimumAlpha
- **DisplayName English:** Area Minimum Alpha
- **DisplayName German:** Bereichsminimum im Alpha-Kanal
- **DisplayName French:** Alpha minimum de la zone
- **DisplayName Italian:** Alfa minimo area
- **DisplayName Spanish:** Alfa minimo del rea

**Categories:**

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputExtent: Extent

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.19.2 Methods

52.19.3 Constructor

Notes: On success the handle property is not zero and the filter has the default values set.

52.19.4 Properties

52.19.5 Attribute inputExtent as CIAttributeMBS

Notes: This attribute should have this content:

<table>

52.22  class CIFilterAttributedTextImageGeneratorMBS

52.22.1  class CIFilterAttributedTextImageGeneratorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Attributed Text Image Generator filter. **Notes:**

Details for this filter:

- **FilterName:** CIAttributedTextImageGenerator
- **DisplayName English:** Attributed Text Image Generator
- **DisplayName German:** Attributtextbildgenerator
- **DisplayName French:** Génrateur d’image de texte attribué
- **DisplayName Italian:** Generatore immagine di testo attribuita
- **DisplayName Spanish:** Generador de imágenes con texto con atributos

**Categories:**

- **CICategoryGenerator:** Generator
- **CICategoryVideo:** Video
- **CICategoryStillImage:** Still Image
- **CICategoryBuiltIn:** Built-In

**Input:**

- **inputText:** Text
- **inputScaleFactor:** Scale Factor

**Output:**

- **outputImage**

Subclass of the CIFilterMBS class.
52.22.2 Methods

52.22.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.22.4 Properties

52.22.5 Attribute `inputScaleFactor` as `CIAttributeMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Attributed Text Image Generator attribute.
**Notes:**
This attribute should have this content:

Name: `inputScaleFactor`
Class: `double`
Type: `CIAttributeTypeScalar`
DisplayName English: Scale Factor
DisplayName German: Skalierungsfaktor
DisplayName French: Facteur dchelle
DisplayName Italian: Fattore di scala
DisplayName Spanish: Factor de escala
DefaultNumber: 1
IdentityNumber: 0
SliderMaxNumber: 4
SliderMinNumber: 1

(Read only property)

52.22.6 Attribute `inputText` as `CIAttributeMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Attributed Text Image Generator attribute.
**Notes:**
This attribute should have this content:
52.22. **CLASS CIFILTERATTRIBUTEDTEXTIMAGEGENERATORMBS**

Name: inputText  
Class: NSAttributedStringMBS  
DisplayName: Text

(Read only property)

52.22.7 **inputScaleFactor as double**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Scale Factor  
**Notes:**

Name: inputScaleFactor  
Class: double (NSNumber)  
DisplayName English: Scale Factor  
DisplayName German: Skalierungsfaktor  
DisplayName French: Facteur d'echelle  
DisplayName Italian: Fattore di scala  
DisplayName Spanish: Factor de escala  
Type: CIAttributeTypeScalar

See Attribute inputScaleFactor for more details.  
(Read and Write property)

52.22.8 **inputText as Variant**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Text  
**Notes:**

Name: inputText  
Class: NSAttributedStringMBS (NSAttributedString)  
DisplayName English: Text  
DisplayName German: Text  
DisplayName French: Text  
DisplayName Italian: Text  
DisplayName Spanish: Text  
Type:

See Attribute inputText for more details.
(Read and Write property)
52.23. class CIFilterAztecCodeGeneratorMBS

52.23.1 class CIFilterAztecCodeGeneratorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Aztec Code Generator filter.

**Notes:**

Details for this filter:

- FilterName: CIAztecCodeGenerator
- DisplayName English: Aztec Code Generator
- DisplayName German: Aztec-Code-Generator
- DisplayName French: Générateur de code Aztec
- DisplayName Italian: Generatore codice Aztec
- DisplayName Spanish: Generador de código Aztec

**Categories:**

- CICategoryGenerator: Generator
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputMessage: Message
- inputCorrectionLevel: CorrectionLevel
- inputLayers: Layers
- inputCompactStyle: CompactStyle

**Output:**

- outputImage
- outputCGImage

Subclass of the CIFilterMBS class.
52.23.2 Methods

52.23.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor. **Notes:** On success the handle property is not zero and the filter has the default values set.

52.23.4 Properties

52.23.5 Attribute inputCompactStyle as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Aztec Code Generator attribute. **Notes:** This attribute should have this content:

- Name: inputCompactStyle
- Class: double
- DisplayName: CompactStyle
- DefaultNumber: 0
- IdentityNumber: 0
- MaxNumber: 1
- MinNumber: 0
- SliderMaxNumber: 1
- SliderMinNumber: 0

(Read only property)

52.23.6 Attribute inputCorrectionLevel as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Aztec Code Generator attribute. **Notes:** This attribute should have this content:

(Read only property)
Name: inputCorrectionLevel  
Class: double  
DisplayName: CorrectionLevel  
DefaultNumber: 23  
IdentityNumber: 0  
MaxNumber: 95  
MinNumber: 5  
SliderMaxNumber: 95  
SliderMinNumber: 5

52.23.7 Attribute inputLayers as CIAAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Aztec Code Generator attribute.  
**Notes:**  
This attribute should have this content:

Name: inputLayers  
Class: double  
DisplayName: Layers  
DefaultNumber: 0  
IdentityNumber: 0  
MaxNumber: 32  
MinNumber: 1  
SliderMaxNumber: 32  
SliderMinNumber: 1

(Read only property)

52.23.8 Attribute inputMessage as CIAAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Aztec Code Generator attribute.  
**Notes:**  
This attribute should have this content:

(Read only property)
Name: inputMessage
Class: Memoryblock
DisplayName: Message
DefaultNumber: 0
IdentityNumber: 0

52.23.9 inputCompactStyle as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute CompactStyle

**Notes:**

Name: inputCompactStyle
Class: double (NSNumber)
DisplayName English: CompactStyle
DisplayName German: CompactStyle
DisplayName French: CompactStyle
DisplayName Italian: CompactStyle
DisplayName Spanish: CompactStyle
Type:

See Attribute inputCompactStyle for more details.
(Read and Write property)

52.23.10 inputCorrectionLevel as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute CorrectionLevel

**Notes:**

Name: inputCorrectionLevel
Class: double (NSNumber)
DisplayName English: CorrectionLevel
DisplayName German: CorrectionLevel
DisplayName French: CorrectionLevel
DisplayName Italian: CorrectionLevel
DisplayName Spanish: CorrectionLevel
Type:

See Attribute inputCorrectionLevel for more details.
(Read and Write property)
52.23.11  inputLayers as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Layers

**Notes:**
- Name: inputLayers
- Class: double (NSNumber)
- DisplayName English: Layers
- DisplayName German: Layers
- DisplayName French: Layers
- DisplayName Italian: Layers
- DisplayName Spanish: Layers

See Attribute inputLayers for more details.
(Read and Write property)

52.23.12  inputMessage as Memoryblock

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Message

**Notes:**
- Name: inputMessage
- Class: Memoryblock (NSData)
- DisplayName English: Message
- DisplayName German: Message
- DisplayName French: Message
- DisplayName Italian: Message
- DisplayName Spanish: Message

See Attribute inputMessage for more details.
(Read and Write property)
52.24 class CIFilterBarcodeGeneratorMBS

52.24.1 class CIFilterBarcodeGeneratorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Barcode Generator filter.

**Notes:**
Details for this filter:

<table>
<thead>
<tr>
<th>FilterName:</th>
<th>CIBarcodeGenerator</th>
</tr>
</thead>
<tbody>
<tr>
<td>DisplayName English:</td>
<td>Barcode Generator</td>
</tr>
<tr>
<td>DisplayName German:</td>
<td>Barcode-Generator</td>
</tr>
<tr>
<td>DisplayName French:</td>
<td>Gnrateur de code-barres</td>
</tr>
<tr>
<td>DisplayName Italian:</td>
<td>Generatore codice a barre</td>
</tr>
<tr>
<td>DisplayName Spanish:</td>
<td>Generador de cdigos de barras</td>
</tr>
</tbody>
</table>

**Categories:**
- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**
- inputBarcodeDescriptor: BarcodeDescriptor

**Output:**
- outputCGImageForQRCodeDescriptor
- outputCGImageForAztecCodeDescriptor
- outputCGImageForPDF417CodeDescriptor
- outputCGImageForDataMatrixCodeDescriptor
- outputCGImage
- outputImage

Subclass of the CIFilterMBS class.
52.24.2 Methods

52.24.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

**Notes:** On success the handle property is not zero and the filter has the default values set.

52.24.4 Properties

52.24.5 AttributeinputBarcodeDescriptor as CIAtributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Barcode Generator attribute.

**Notes:**

This attribute should have this content:

```plaintext
Name: inputBarcodeDescriptor
Class: CIBarcodeDescriptorMBS
DisplayName: BarcodeDescriptor
```

(Read only property)

52.24.6 inputBarcodeDescriptor as CIBarcodeDescriptorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute BarcodeDescriptor

**Notes:**

```plaintext
Name: inputBarcodeDescriptor
Class: CIBarcodeDescriptorMBS (CIBarcodeDescriptor)
DisplayName English: BarcodeDescriptor
DisplayName German: BarcodeDescriptor
DisplayName French: BarcodeDescriptor
DisplayName Italian: BarcodeDescriptor
DisplayName Spanish: BarcodeDescriptor
Type:
```

See AttributeinputBarcodeDescriptor for more details.
(Read and Write property)
52.25. class CIFilterBarsSwipeTransitionMBS

52.25.1 class CIFilterBarsSwipeTransitionMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Bars Swipe Transition filter.

**Notes:**

Details for this filter:

- **FilterName:** CIBarsSwipeTransition
- **DisplayName English:** Bars Swipe Transition
- **DisplayName German:** Balken-Swipe-bergang
- **DisplayName French:** Transition de type balayage
- **DisplayName Italian:** Transizione colpi a barre
- **DisplayName Spanish:** Transicion barras araadas

**Categories:**

- **CICategoryTransition:** Transition
- **CICategoryVideo:** Video
- **CICategoryStillImage:** Still Image
- **CICategoryBuiltIn:** Built-In

**Input:**

- **inputImage:** Image
- **inputTargetImage:** Target Image
- **inputAngle:** Angle
- **inputWidth:** Width
- **inputBarOffset:** Bar Offset
- **inputTime:** Time

**Output:**

- **outputImage**

Subclass of the CIFilterMBS class.
52.25.2 Methods

52.25.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.25.4 Properties

52.25.5 Attribute inputAngle as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Bars Swipe Transition attribute.
**Notes:**
This attribute should have this content:

```
Name: inputAngle
Class: double
Type: CIAttributeTypeAngle
DisplayName English: Angle
DisplayName German: Winkel
DisplayName French: Angle
DisplayName Italian: Angolo
DisplayName Spanish: ngulo
DefaultNumber: 3.141593
IdentityNumber: 0
SliderMaxNumber: 6.283185
SliderMinNumber: 0
```
(Read only property)

52.25.6 Attribute inputBarOffset as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Bars Swipe Transition attribute.
**Notes:**
This attribute should have this content:
52.25. **CLASS CIFILTERBARSSWIPETRANSITIONMBS**

Name: inputBarOffset  
Class: double  
Type: CIAttributeTypeScalar  
DisplayName English: Bar Offset  
DisplayName German: Balkenversatz  
DisplayName French: Dcalage de la barre  
DisplayName Italian: Scarto della barra  
DisplayName Spanish: Desviacin barra  
DefaultNumber: 10  
IdentityNumber: 0  
MaxNumber: 0  
MinNumber: 1  
SliderMaxNumber: 100  
SliderMinNumber: 1

(Read only property)

52.25.7 **AttributeinputImage as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Bars Swipe Transition attribute.  
**Notes:**

This attribute should have this content:

Name: inputImage  
Class: CIImageMBS  
Type: CIAttributeTypeImage  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
DefaultNumber: 0  
IdentityNumber: 0

(Read only property)
52.25.8 AttributeinputTargetImage as CIAttributeMBS

Notes:
This attribute should have this content:

Name: inputTargetImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Target Image
DisplayName German: Zielbild
DisplayName French: Image cible
DisplayName Italian: Immagine target
DisplayName Spanish: Imagen de destino
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

52.25.9 AttributeinputTime as CIAttributeMBS

Notes:
This attribute should have this content:

(Read only property)

52.25.10 AttributeinputWidth as CIAttributeMBS

Notes:
This attribute should have this content:

(Read only property)
52.25. **CLASS CIFILTERBARSSWIPETRANSITIONMBS**

Name: inputTime
Class: double
Type: CIAttributeTypeTime
DisplayName English: Time
DisplayName German: Zeit
DisplayName French: Dure
DisplayName Italian: Tempo
DisplayName Spanish: Tiempo
DefaultNumber: 0
IdentityNumber: 0
MaxNumber: 1
MinNumber: 0
SliderMaxNumber: 1
SliderMinNumber: 0

Name: inputWidth
Class: double
Type: CIAttributeTypeDistance
DisplayName English: Width
DisplayName German: Breite
DisplayName French: Largeur
DisplayName Italian: Larghezza
DisplayName Spanish: Anchura
DefaultNumber: 30
IdentityNumber: 0
MaxNumber: 0
MinNumber: 2
SliderMaxNumber: 300
SliderMinNumber: 2

### 52.25.11 inputAngle as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Angle

**Notes:**
See Attribute inputAngle for more details.
(Read and Write property)

### 52.25.12 inputBarOffset as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Bar Offset
Name: inputAngle
Class: double (NSNumber)
DisplayName English: Angle
DisplayName German: Winkel
DisplayName French: Angle
DisplayName Italian: Angolo
DisplayName Spanish: ngulo
Type: CIAttributeTypeAngle

Notes:

Name: inputBarOffset
Class: double (NSNumber)
DisplayName English: Bar Offset
DisplayName German: Balkenversatz
DisplayName French: Dcalage de la barre
DisplayName Italian: Scarto della barra
DisplayName Spanish: Desviacin barra
Type: CIAttributeTypeScalar

See Attribute inputBarOffset for more details.
(Read and Write property)

52.25.13 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The attribute Image

Notes:

Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

See Attribute inputImage for more details.
(Read and Write property)
52.25.14 inputTargetImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Target Image  
**Notes:**

Name: inputTargetImage  
Class: CIImageMBS (CIImage)  
DisplayName English: Target Image  
DisplayName German: Zielbild  
DisplayName French: Image cible  
DisplayName Italian: Immagine target  
DisplayName Spanish: Imagen de destino  
Type: CIAttributeTypeImage

See Attribute inputTargetImage for more details.  
(Read and Write property)

52.25.15 inputTime as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Time  
**Notes:**

Name: inputTime  
Class: double (NSNumber)  
DisplayName English: Time  
DisplayName German: Zeit  
DisplayName French: Dure  
DisplayName Italian: Tempo  
DisplayName Spanish: Tiempo  
Type: CIAttributeTypeTime

See Attribute inputTime for more details.  
(Read and Write property)

52.25.16 inputWidth as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Width  
**Notes:**
Name: inputWidth
Class: double (NSNumber)
DisplayName English: Width
DisplayName German: Breite
DisplayName French: Largeur
DisplayName Italian: Larghezza
DisplayName Spanish: Anchura
Type: CIAttributeTypeDistance

See Attribute inputWidth for more details.
(Read and Write property)
52.26. **CLASS CIFILTERBICUBICSCALETRANSFORMMBS**

52.26. **class CIFilterBicubicScaleTransformMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Bicubic Scale Transform filter.

**Notes:**

Details for this filter:

<table>
<thead>
<tr>
<th>FilterName:</th>
<th>CIBicubicScaleTransform</th>
</tr>
</thead>
<tbody>
<tr>
<td>DisplayName English:</td>
<td>Bicubic Scale Transform</td>
</tr>

<td>Transformation dchelle bicubique</td>
</tr>
<tr>
<td>DisplayName Italian:</td>
<td>Trasforma scala bicubica</td>
</tr>
<tr>
<td>DisplayName Spanish:</td>
<td>Transformar mediante escala bicbica</td>
</tr>
</tbody>
</table>

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputScale: Scale
- inputAspectRatio: Aspect Ratio
- inputB: B
- inputC: C

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.26.2 Methods

52.26.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.26.4 Properties

52.26.5 Attribute inputAspectRatio as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Bicubic Scale Transform attribute.
**Notes:**
This attribute should have this content:

Name: inputAspectRatio
Class: double
Type: CIAttributeTypeScalar
DisplayName English: Aspect Ratio
DisplayName German: Seitenverhältnis
DisplayName French: Proportions
DisplayName Italian: Proporzioni
DisplayName Spanish: Proporciones
DefaultNumber: 1
IdentityNumber: 1
SliderMaxNumber: 2
SliderMinNumber: 0.5

(Read only property)

52.26.6 Attribute inputB as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Bicubic Scale Transform attribute.
**Notes:**
This attribute should have this content:
52.26. CLASS CIFILTERBICUBICSCALETRANSFORMMBS

Name: inputB
Class: double
Type: CIAttributeTypeScalar
DisplayName: B
DefaultNumber: 0
IdentityNumber: 0
MaxNumber: 1
MinNumber: 0
SliderMaxNumber: 1
SliderMinNumber: 0

(Read only property)

52.26.7 AttributeinputC as CIAttributeMBS

This attribute should have this content:

Name: inputC
Class: double
Type: CIAttributeTypeScalar
DisplayName: C
DefaultNumber: 0.75
IdentityNumber: 0
MaxNumber: 1
MinNumber: 0
SliderMaxNumber: 1
SliderMinNumber: 0

(Read only property)

52.26.8 AttributeinputImage as CIAttributeMBS

Notes:
CHAPTER 52. COREIMAGE

This attribute should have this content:

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

52.26.9 Attribute inputScale as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Bicubic Scale Transform attribute.

**Notes:**

This attribute should have this content:

Name: inputScale
Class: double
Type: CIAttributeTypeScalar
DisplayName English: Scale
DisplayName German: Skalierung
DisplayName French: chelle
DisplayName Italian: Scala
DisplayName Spanish: Escala
DefaultNumber: 1
IdentityNumber: 1
SliderMaxNumber: 100
SliderMinNumber: 0.05

(Read only property)
52.26.10 inputAspectRatio as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Aspect Ratio

**Notes:**

- **Name:** inputAspectRatio
- **Class:** double (NSNumber)
- **DisplayName English:** Aspect Ratio
- **DisplayName German:** Seitenverhältnis
- **DisplayName French:** Proportions
- **DisplayName Italian:** Proporzioni
- **DisplayName Spanish:** Proporciones
- **Type:** CIAttributeTypeScalar

See Attribute inputAspectRatio for more details.
(Read and Write property)

52.26.11 inputB as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute B

**Notes:**

- **Name:** inputB
- **Class:** double (NSNumber)
- **DisplayName English:** B
- **DisplayName German:** B
- **DisplayName French:** B
- **DisplayName Italian:** B
- **DisplayName Spanish:** B
- **Type:** CIAttributeTypeScalar

See Attribute inputB for more details.
(Read and Write property)

52.26.12 inputC as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute C

**Notes:**
Name: inputC
Class: double (NSNumber)
DisplayName English: C
DisplayName German: C
DisplayName French: C
DisplayName Italian: C
DisplayName Spanish: C
Type: CIAttributeTypeScalar

See AttributeinputC for more details.
(Read and Write property)

52.26.13 inputImage as CIImageMBS

Notes:

Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

52.26.14 inputScale as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The attribute Scale
Notes:

See AttributeinputScale for more details.
(Read and Write property)
Name: inputScale
Class: double (NSNumber)
DisplayName English: Scale
DisplayName German: Skalierung
DisplayName French: chelle
DisplayName Italian: Scala
DisplayName Spanish: Escala
Type: CIAttributeTypeScalar
52.27 class CIFilterBlendWithAlphaMaskMBS

52.27.1 class CIFilterBlendWithAlphaMaskMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Blend With Alpha Mask filter.

**Notes:**

Details for this filter:

- **FilterName:** CIFilterBlendWithAlphaMask
- **DisplayName English:** Blend With Alpha Mask
- **DisplayName German:** Mit Alpha-Maske berblenden
- **DisplayName French:** Fusion avec masque Alpha
- **DisplayName Italian:** Sfumatura con maschera alfa
- **DisplayName Spanish:** Fusionar con la mascara alfa

**Categories:**

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputBackgroundImage: Background Image
- inputMaskImage: Mask Image

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.27.2 Methods

52.27.3 Constructor

Notes: On success the handle property is not zero and the filter has the default values set.

52.27.4 Properties

52.27.5 Attribute inputBackgroundImage as CIAttributeMBS

Notes: This attribute should have this content:

Name: inputBackgroundImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Background Image
DisplayName German: Hintergrundbild

DisplayName German: Hintergrundbild
DisplayName French: Image derrière-plan
DisplayName Italian: Immagine di sfondo
DisplayName Spanish: Imagen de fondo
Type: `CIAttributeTypeImage`

52.27.9 **inputImage as CIImageMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image

Notes:

Name: `inputImage`
Class: `CIImageMBS (CIImage)`
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: `CIAttributeTypeImage`

See Attribute `inputImage` for more details.
(Read and Write property)

52.27.10 **inputMaskImage as CIImageMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Mask Image

Notes:

Name: `inputMaskImage`
Class: `CIImageMBS (CIImage)`
DisplayName English: Mask Image
DisplayName German: Maske
DisplayName French: Image du masque
DisplayName Italian: Immagine maschera
DisplayName Spanish: Imagen de mascara
Type: `CIAttributeTypeImage`

See Attribute `inputMaskImage` for more details.
(Read and Write property)
52.28. class CIFilterBlendWithBlueMaskMBS

52.28.1 class CIFilterBlendWithBlueMaskMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Blend With Blue Mask filter.

**Notes:**
Details for this filter:

- **FilterName:** CIFBlendWithBlueMask
- **DisplayName English:** Blend With Blue Mask
- **DisplayName German:** Mit blauer Maske
- **DisplayName French:** Fusion avec masque bleu
- **DisplayName Italian:** Sfumatura con maschera blu
- **DisplayName Spanish:** Fusionar con la mascara azul

**Categories:**

- **CICategoryStylize:** Stylize
- **CICategoryVideo:** Video
- **CICategoryStillImage:** Still Image

52.30. **CLASS CIFILTERBLENDWITHREDMASKMBS**

52.30  class CIFilterBlendWithRedMaskMBS

52.30.1  class CIFilterBlendWithRedMaskMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Blend With Red Mask filter.

**Notes:**

Details for this filter:

- **FilterName:** CIBlendWithRedMask
- **DisplayName English:** Blend With Red Mask
- **DisplayName German:** Mit roter Maske
- **DisplayName French:** Fusion avec masque rouge
- **DisplayName Italian:** Sfumatura con maschera rossa
- **DisplayName Spanish:** Fusionar con la mascara roja

**Categories:**

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- **inputImage:** Image
- **inputBackgroundImage:** Background Image
- **inputMaskImage:** Mask Image

**Output:**

- **outputImage**

Subclass of the CIFilterMBS class.
52.30.2 Methods

52.30.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor. **Notes:** On success the handle property is not zero and the filter has the default values set.

52.30.4 Properties

52.30.5 Attribute inputBackgroundImage as CIAttributMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Blend With Red Mask attribute. **Notes:** This attribute should have this content:

```
Name:         inputBackgroundImage
Class:        CIImageMBS
Type:         CIAttributeTypeImage
DisplayName English: Background Image
DisplayName German: Hintergrundbild
DisplayName French: Image darrrire-plan
DisplayName Italian: Immagine di sfondo
DisplayName Spanish: Imagen de fondo
DefaultNumber: 0
IdentityNumber: 0
```

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Mask Image

**Notes:**

Name: inputMaskImage
Class: CIImageMBS (CIImage)
DisplayName English: Mask Image
DisplayName German: Maske
DisplayName French: Image du masque
DisplayName Italian: Immagine maschera
DisplayName Spanish: Imagen de mascara
Type: CIAttributeTypeImage

See Attribute inputMaskImage for more details.
52.30. CLASS CIFILTERBLENDWITHREDMASKMBS

(Read and Write property)
52.31 class CIFilterBloomMBS

52.31.1 class CIFilterBloomMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Bloom filter.  
**Notes:** Details for this filter:

FilterName: CIFlame  
DisplayName English: Bloom  
DisplayName German: berstrahlen  
DisplayName French: Floraison  
DisplayName Italian: Velatura  
DisplayName Spanish: Veladura

Categories:

- CICategoryStylize: Stylize  
- CICategoryVideo: Video  
- CICategoryStillImage: Still Image  
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image  
- inputRadius: Radius  
- inputIntensity: Intensity

Output:

- outputImage

Subclass of the CIFilterMBS class.
52.31. CLASS CIFILTERBLOOMMBS

52.31.2 Methods

52.31.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The constructor. Notes: On success the handle property is not zero and the filter has the default values set.

52.31.4 Properties

52.31.5 AttributeinputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Details about the Bloom attribute. Notes: This attribute should have this content:

Name: inputImage
Class: CIImageMBS

**Output:**

- **outputImage**

Subclass of the CIFilterMBS class.
52.34.2 Methods

52.34.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

**Notes:** On success the handle property is not zero and the filter has the default values set.

52.34.4 Properties

52.34.5 Attribute inputAngle as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Bump Distortion Linear attribute.

**Notes:**

This attribute should have this content:

- **Name:** inputAngle
- **Class:** double
- **Type:** CIAttributeTypeAngle
- **DisplayName English:** Angle
- **DisplayName German:** Winkel
- **DisplayName French:** Angle
- **DisplayName Italian:** Angolo
- **DisplayName Spanish:** ngulo
- **DefaultNumber:** 0
- **IdentityNumber:** 0
- **SliderMaxNumber:** 6.283185
- **SliderMinNumber:** 0

*(Read only property)*

52.34.6 Attribute inputCenter as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Bump Distortion Linear attribute.

**Notes:**

This attribute should have this content:
CHAPTER 52. COREIMAGE

Name: inputCenter
Class: CIVectorMBS
Type: CIAttributeTypePosition
DisplayName English: Center
DisplayName German: Mitte
DisplayName French: Centre
DisplayName Italian: Centro
DisplayName Spanish: Centro
DefaultVector: [ 150 150 ]
IdentityVector: n/a

(Read only property)

52.34.7 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Details about the Bump Distortion Linear attribute.
Notes:

This attribute should have this content:

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

52.34.8 Attribute inputRadius as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Details about the Bump Distortion Linear attribute.
Notes:

This attribute should have this content:
### 52.34. CLASS CIFILTERBUMPDISTORTIONLINEARMBS

**Name:** inputRadius  
**Class:** double  
**Type:** CIAttributeTypeDistance  
**DisplayName English:** Radius  
**DisplayName German:** Radius  
**DisplayName French:** Rayon  
**DisplayName Italian:** Raggio  
**DisplayName Spanish:** Radio  
**DefaultNumber:** 300  
**IdentityNumber:** 0  
**SliderMaxNumber:** 600  
**SliderMinNumber:** 0

(Read only property)

### 52.34.9 Attribute inputScale as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Bump Distortion Linear attribute.  
**Notes:**  
This attribute should have this content:

**Name:** inputScale  
**Class:** double  
**Type:** CIAttributeTypeScalar  
**DisplayName English:** Scale  
**DisplayName German:** Skalierung  
**DisplayName French:** chelle  
**DisplayName Italian:** Scala  
**DisplayName Spanish:** Escala  
**DefaultNumber:** 0.5  
**IdentityNumber:** 1  
**MaxNumber:** 0  
**MinNumber:** -1  
**SliderMaxNumber:** 1  
**SliderMinNumber:** 0

(Read only property)
52.34.10  inputAngle as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Angle

**Notes:**
- Name: inputAngle
- Class: double (NSNumber)
- DisplayName English: Angle
- DisplayName German: Winkel
- DisplayName French: Angle
- DisplayName Italian: Angolo
- DisplayName Spanish: ngulo
- Type: CIAttributeTypeAngle

See Attribute inputAngle for more details.
(Read and Write property)

52.34.11  inputCenter as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Center

**Notes:**
- Name: inputCenter
- Class: CIVectorMBS (CIVector)
- DisplayName English: Center
- DisplayName German: Mitte
- DisplayName French: Centre
- DisplayName Italian: Centro
- DisplayName Spanish: Centro
- Type: CIAttributeTypePosition

See Attribute inputCenter for more details.
(Read and Write property)

52.34.12  inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image

**Notes:**
Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

See Attribute inputImage for more details.
(Read and Write property)

52.34.13 inputRadius as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Radius

**Notes:**

Name: inputRadius
Class: double (NSNumber)
DisplayName English: Radius
DisplayName German: Radius
DisplayName French: Rayon
DisplayName Italian: Raggio
DisplayName Spanish: Radio
Type: CIAttributeTypeDistance

See Attribute inputRadius for more details.
(Read and Write property)

52.34.14 inputScale as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Scale

**Notes:**

See Attribute inputScale for more details.
(Read and Write property)

- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputCenter: Center
- inputRadius: Radius
- inputScale: Scale

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.35.2 Methods

52.35.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor. **Notes:** On success the handle property is not zero and the filter has the default values set.

52.35.4 Properties

52.35.5 Attribute inputCenter as CIAtributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Bump Distortion attribute. **Notes:** This attribute should have this content:

Name: inputCenter  
Class: CIVectorMBS  
Type: CIAttributeTypePosition  
DisplayName English: Center  
DisplayName German: Mitte  
DisplayName French: Centre  
DisplayName Italian: Centro  
DisplayName Spanish: Centro  
DefaultVector: [ 150 150 ]  
IdentityVector: n/a

(Read only property)

52.35.6 Attribute inputImage as CIAtributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Bump Distortion attribute. **Notes:** This attribute should have this content:

(Read only property)
52.35. CLASS CIFILTERBUMPDISTORTIONMBS

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

52.35.7 Attribute inputRadius as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Bump Distortion attribute.

**Notes:**
This attribute should have this content:

Name: inputRadius
Class: double
Type: CIAttributeTypeDistance
DisplayName English: Radius
DisplayName German: Radius
DisplayName French: Rayon
DisplayName Italian: Raggio
DisplayName Spanish: Radio
DefaultNumber: 300
IdentityNumber: 0
SliderMaxNumber: 600

DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

52.35.11 inputRadius as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Radius

**Notes:**

Name: inputRadius
Class: double (NSNumber)
DisplayName English: Radius
DisplayName German: Radius
DisplayName French: Rayon
DisplayName Italian: Raggio
DisplayName Spanish: Radio
Type: CIAttributeTypeDistance

See Attribute inputRadius for more details.
(Read and Write property)

52.35.12 inputScale as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Scale

**Notes:**

Name: inputScale
Class: double (NSNumber)
DisplayName English: Scale
DisplayName German: Skalierung
DisplayName French: chelle
DisplayName Italian: Scala
DisplayName Spanish: Escala
Type: CIAttributeTypeScalar

See Attribute inputScale for more details.
(Read and Write property)
52.36. class CIFilterCheckerboardGeneratorMBS

52.36.1 class CIFilterCheckerboardGeneratorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Checkerboard filter.

**Notes:**
Details for this filter:

- FilterName: CICheckerboardGenerator
- DisplayName English: Checkerboard
- DisplayName German: Schachbrettmuster
- DisplayName French: Damier
- DisplayName Italian: Scacchiera
- DisplayName Spanish: Tablero

**Categories:**
- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**
- inputCenter: Center
- inputColor0: Color 1
- inputColor1: Color 2
- inputWidth: Width
- inputSharpness: Sharpness

**Output:**
- outputImage

Subclass of the CIFilterMBS class.
52.36.2 Methods

52.36.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.36.4 Properties

52.36.5 Attribute `inputCenter` as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Checkerboard attribute.
**Notes:**
This attribute should have this content:

```
Name:           inputCenter
Class:          CIVectorMBS
Type:           CIAttributeTypePosition
DisplayName English:  Center
DisplayName German: Mitte
DisplayName French: Centre
DisplayName Italian: Centro
DisplayName Spanish: Centro
DefaultVector:   [ 150 150 ]

MinNumber: 1
SliderMaxNumber: 50
SliderMinNumber: 2

(Read only property)

52.38.9 inputCenter as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The attribute Center
Notes:

Name: inputCenter
Class: CIVectorMBS (CIVector)
DisplayName English: Center
DisplayName German: Mitte
DisplayName French: Centre
DisplayName Italian: Centro
DisplayName Spanish: Centro
Type: CIAttributeTypePosition

See AttributeinputCenter for more details.
(Read and Write property)

52.38.10 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The attribute Image
Notes:
52.38. **CLASS CIFILTERCIRCULARSCREENMBS**

Name: inputImage  
Class: CIImageMBS (CIImage)  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
Type: CIAttributeTypeImage

See AttributeinputImage for more details.  
(Read and Write property)

### 52.38.11 inputSharpness as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**  
The attribute Sharpness

**Notes:**

Name: inputSharpness  
Class: double (NSNumber)  
DisplayName English: Sharpness  
DisplayName German: Schärfe  
DisplayName French: Nettet  
DisplayName Italian: Nitidezza  
DisplayName Spanish: Nitidez  
Type: CIAttributeTypeScalar

See AttributeinputSharpness for more details.  
(Read and Write property)

### 52.38.12 inputWidth as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**  
The attribute Width

**Notes:**

See AttributeinputWidth for more details.  
(Read and Write property)
Name: inputWidth
Class: double (NSNumber)
DisplayName English: Width
DisplayName German: Breite
DisplayName French: Largeur
DisplayName Italian: Larghezza
DisplayName Spanish: Anchura
Type: CIAttributeTypeDistance
52.39. **CLASS CIFILTERCIRCULARWRAPMBS**

52.39  **class CIFilterCircularWrapMBS**

52.39.1  **class CIFilterCircularWrapMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**
The Realbasic class for the CoreImage Circular Wrap Distortion filter.

**Example:**

```realbasic
dim p as Picture = LogoMBS(500)
dim data as string = PictureToPNGStringMBS(p,80)
dim i as new CIImageMBS(data)

dim c as new CIFilterCircularWrapMBS
c.inputImage = i

dim o as CIImageMBS = c.outputImage
Backdrop = o.RenderPicture
```

**Notes:**

**Details for this filter:**

- **FilterName:** CICircularWrap
- **DisplayName English:** Circular Wrap Distortion
- **DisplayName German:** Kreisförmig krummen
- **DisplayName French:** Dformation Bouclage circulaire
- **DisplayName Italian:** Distorsione involucro circolare
- **DisplayName Spanish:** Distorsión a modo de envoltura circular

**Categories:**

- **CICategoryDistortionEffect:** Distortion Effect
- **CICategoryVideo:** Video
- **CICategoryStillImage:** Still Image
- **CICategoryBuiltIn:** Built-In

**Input:**

- inputImage: Image
- inputCenter: Center
CHAPTER 52. COREIMAGE

- inputRadius: Radius
- inputAngle: Angle

Output:

- outputImage

Subclass of the CIFilterMBS class.

52.39.2 Methods

52.39.3 Constructor

Notes: On success the handle property is not zero and the filter has the default values set.

52.39.4 Properties

52.39.5 Attribute inputAngle as CIAttributeMBS

Notes: This attribute should have this content:

<table>
<thead>
<tr>
<th>Name</th>
<th>inputAngle</th>

<td>3.141593</td>
</tr>
<tr>
<td>SliderMinNumber</td>
<td>-3.141593</td>
</tr>
</tbody>
</table>
52.39.6 Attribute inputCenter as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Details about the Circular Wrap Distortion attribute.
Notes:
This attribute should have this content:

Name: inputCenter
Class: CIVectorMBS
Type: CIAttributeTypePosition
DisplayName English: Center
DisplayName German: Mitte
DisplayName French: Centre
DisplayName Italian: Centro
DisplayName Spanish: Centro
DefaultVector: [ 150 150 ]
IdentityVector: n/a

(Read only property)

52.39.7 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Details about the Circular Wrap Distortion attribute.
Notes:
This attribute should have this content:

(Read only property)

52.39.8 Attribute inputRadius as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Details about the Circular Wrap Distortion attribute.
Notes:
This attribute should have this content:
### 52.39.9 inputAngle as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Angle

**Example:**

```vbnet
dim p as Picture = LogoMBS(500)
dim data as string = PictureToPNGStringMBS(p,80)
dim i as new CIImageMBS(data)

dim c as new CIFilterCircularWrapMBS
  c.inputImage = i
  c.inputAngle = 0.1

dim o as CIImageMBS = c.outputImage
Backdrop = o.RenderPicture
```
Notes:

Name: inputAngle
Class: double (NSNumber)
DisplayName English: Angle
DisplayName German: Winkel
DisplayName French: Angle
DisplayName Italian: Angolo
DisplayName Spanish: A
Type: CIAttributeTypeAngle

See Attribute inputAngle for more details.
(Read and Write property)

52.39.10 inputCenter as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Center

Notes:

Name: inputCenter
Class: CIVectorMBS (CIVector)
DisplayName English: Center
DisplayName German: Mitte
DisplayName French: Centre
DisplayName Italian: Centro
DisplayName Spanish: Centro
Type: CIAttributeTypePosition

See Attribute inputCenter for more details.
(Read and Write property)

52.39.11 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image

**Example:**
```
dim p as Picture = LogoMBS(500)
dim data as string = PictureToPNGStringMBS(p,80)
dim i as new CIImageMBS(data)
```
dim c as new CIFilterCircularWrapMBS
    c.inputImage = i

    dim o as CIImageMBS = c.outputImage
    Backdrop = o.RenderPicture

**Notes:**

Name: inputImage  
Class: CIImageMBS (CIImage)  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
Type: CIAttributeTypeImage

See AttributeinputImage for more details.  
(Read and Write property)

### 52.39.12 inputRadius as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**  
The attribute Radius  
**Notes:**

Name: inputRadius  
Class: double (NSNumber)  
DisplayName English: Radius  
DisplayName German: Radius  
DisplayName French: Rayon  
DisplayName Italian: Raggio  
DisplayName Spanish: Radio  
Type: CIAttributeTypeDistance

See AttributeinputRadius for more details.  
(Read and Write property)
52.40. class CIFilterClampMBS

52.40.1 class CIFilterClampMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Clamp filter.

**Notes:**
Details for this filter:

- **FilterName**: CIClamp
- **DisplayName English**: Clamp
- **DisplayName German**: Arretieren
- **DisplayName French**: Attacher
- **DisplayName Italian**: Morsetto
- **DisplayName Spanish**: Fijar

**Categories:**

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputExtent: Extent

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.40.2 Methods

52.40.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.  
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.40.4 Properties

52.40.5 Attribute `inputExtent` as `CIAttributeMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Clamp attribute.  
**Notes:**  
This attribute should have this content:

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>

52.43.1  class CIFilterColorBlendModeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Color Blend Mode filter.

**Notes:**
Details for this filter:

- **FilterName:** CIColorBlendMode
- **DisplayName English:** Color Blend Mode
- **DisplayName German:** Mischmethode Farbe
- **DisplayName French:** Mode de fusion des couleurs
- **DisplayName Italian:** Modalit sfumatura colore
- **DisplayName Spanish:** Modo de mezcla de color

**Categories:**

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputBackgroundImage: Background Image

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.43. CLASS CIFILTERCOLORBLENDMODEMBS

52.43.2 Methods

52.43.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.43.4 Properties

52.43.5 Attribute inputBackgroundImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Color Blend Mode attribute.
**Notes:**
This attribute should have this content:

- **Name:** inputBackgroundImage
- **Class:** CIImageMBS
- **Type:** CIAttributeTypeImage
- **DisplayName English:** Background Image
- **DisplayName German:** Hintergrundbild
- **DisplayName French:** Image darrriere-plan
- **DisplayName Italian:** Immagine di sfondo
- **DisplayName Spanish:** Imagen de fondo
- **DefaultNumber:** 0
- **IdentityNumber:** 0

*(Read only property)*

52.43.6 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Color Blend Mode attribute.
**Notes:**
This attribute should have this content:

*(Read only property)*
52.43.7 inputBackgroundImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Background Image

**Notes:**

See Attribute inputBackgroundImage for more details.
(Read and Write property)

52.43.8 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image

**Notes:**

See Attribute inputImage for more details.
(Read and Write property)
Name: inputImage
Class: CIImageMBS (CIImage)

52.48. **CLASS CIFILTERCOLORCUBEMBS**

52.48 **class CIFilterColorCubeMBS**

52.48.1 **class CIFilterColorCubeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Color Cube filter.

**Notes:**

Details for this filter:

- **FilterName:** CIColorCube
- **DisplayName English:** Color Cube
- **DisplayName German:** Farbwürfel
- **DisplayName French:** Cube de couleur
- **DisplayName Italian:** Cubo colore
- **DisplayName Spanish:** Cubo de color

**Categories:**

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- **inputImage:** Image
- **inputCubeDimension:** Cube Dimension
- **inputCubeData:** Cube Data

**Output:**

- **outputImage**

Subclass of the CIFilterMBS class.
52.48.2 Methods

52.48.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.48.4 Properties

52.48.5 Attribute inputCubeData as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Color Cube attribute.
**Notes:** This attribute should have this content:

- **Name:** inputCubeData
- **Class:** Memoryblock
- **DisplayName English:** Cube Data
- **DisplayName German:** Wrfeldaten
- **DisplayName French:** Donnes du cube
- **DisplayName Italian:** Dati cubo
- **DisplayName Spanish:** Datos del cubo
- **DefaultNumber:** 0
- **IdentityNumber:** 0

(Read only property)

DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

See Attribute inputImage for more details.
52.48. CLASS CIFILTERCOLORCUBEMBS 8643

(Read and Write property)
52.49.1 class CIFilterColorCubesMixedWithMaskMBS

**Function:**
The Realbasic class for the CoreImage Color Cubes Mixed With Mask filter.

**Notes:**
Details for this filter:

- **FilterName:** CIColorCubesMixedWithMask
- **DisplayName English:** Color Cubes Mixed With Mask
- **DisplayName German:** Mit Maske gemischte Farbwürfel
- **DisplayName French:** Cubes de couleur mélangés avec masque
- **DisplayName Italian:** Cubi di colori misti con maschera
- **DisplayName Spanish:** Cubos de color mezclados con la mascara

**Categories:**

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputMaskImage: Mask Image
- inputCubeDimension: Cube Dimension
- inputCube0Data: Cube 0 Data
- inputCube1Data: Cube 1 Data
- inputColorSpace: ColorSpace

**Output:**
52.49. CLASS CIFILTERCOLORCUBESMIXEDWITHMASKMBS

- outputImage

Subclass of the CIFilterMBS class.

52.49.2 Methods

52.49.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.49.4 Properties

52.49.5 Attribute inputColorSpace as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Color Cubes Mixed With Mask attribute.
**Notes:**
This attribute should have this content:

- Name: inputColorSpace
- Class: CGColorSpaceMBS
- DisplayName: ColorSpace
- DefaultNumber: 0
- IdentityNumber: 0

(Read only property)

52.49.6 Attribute inputCube0Data as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Color Cubes Mixed With Mask attribute.
**Notes:**
This attribute should have this content:
CHAPTER 52. COREIMAGE

Name: inputCube0Data
Class: Memoryblock
DisplayName English: Cube 0 Data
DisplayName German: Daten Würfel 0
DisplayName French: Donnes du cube 0
DisplayName Italian: Dati 0 cubo
DisplayName Spanish: Datos del cubo 0
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

52.49.7 Attribute inputCube1Data as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Color Cubes Mixed With Mask attribute.
**Notes:**

This attribute should have this content:

Name: inputCube1Data
Class: Memoryblock
DisplayName English: Cube 1 Data
DisplayName German: Daten Würfel 1
DisplayName French: Donnes du cube 1
DisplayName Italian: Dati 1 cubo
DisplayName Spanish: Datos del cubo 1
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

52.49.8 Attribute inputCubeDimension as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Color Cubes Mixed With Mask attribute.
**Notes:**

This attribute should have this content:
52.49. **CLASS CIFILTERCOLORCUBESMIXEDWITHMASKMBS**

Name: inputCubeDimension  
Class: double  
Type: CIAttributeTypeCount  
DisplayName English: Cube Dimension  
DisplayName German: Würfelmaße  
DisplayName French: Dimension du cube  
DisplayName Italian: Dimensione cubo  
DisplayName Spanish: Dimensión del cubo  
DefaultNumber: 2  
IdentityNumber: 2  
MaxNumber: 128  
MinNumber: 2

(Read only property)

52.49.9 **Attribute inputImage as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Color Cubes Mixed With Mask attribute.  
**Notes:**

This attribute should have this content:

Name: inputImage  
Class: CIImageMBS  
Type: CIAttributeTypeImage  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
DefaultNumber: 0  
IdentityNumber: 0

(Read only property)

52.49.10 **Attribute inputMaskImage as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Color Cubes Mixed With Mask attribute.  
**Notes:**
This attribute should have this content:

Name: inputMaskImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Mask Image
DisplayName German: Maske
DisplayName French: Image du masque
DisplayName Italian: Immagine maschera
DisplayName Spanish: Imagen de mascara
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

52.49.11 inputColorSpace as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute ColorSpace

**Notes:**

Name: inputColorSpace
Class: CGColorSpaceMBS (NSObject)
DisplayName English: ColorSpace
DisplayName German: ColorSpace
DisplayName French: ColorSpace
DisplayName Italian: ColorSpace
DisplayName Spanish: ColorSpace
Type:

See Attribute inputColorSpace for more details.
(Read and Write property)

52.49.12 inputCube0Data as Memoryblock

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Cube 0 Data

**Notes:**

See Attribute inputCube0Data for more details.
(Read and Write property)

See Attribute inputCubeDimension for more details.
52.49.15 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image

**Notes:**

Name: inputImage  
Class: CIImageMBS (CIImage)  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
Type: CIAttributeTypeImage

See AttributeinputImage for more details.  
(Read and Write property)

52.49.16 inputMaskImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Mask Image

**Notes:**

Name: inputMaskImage  
Class: CIImageMBS (CIImage)  
DisplayName English: Mask Image  
DisplayName German: Maske  
DisplayName French: Image du masque  
DisplayName Italian: Immagine maschera  
DisplayName Spanish: Imagen de mascara  
Type: CIAttributeTypeImage

See AttributeinputMaskImage for more details.  
(Read and Write property)
52.50. class CIFilterColorCubeWithColorSpaceMBS

52.50.1 class CIFilterColorCubeWithColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Color Cube with ColorSpace filter.

**Notes:**
Details for this filter:

- **FilterName:** CIColorCubeWithColorSpace
- **DisplayName English:** Color Cube with ColorSpace
- **DisplayName German:** Farbwürfel mit ColorSpace
- **DisplayName French:** Cube de couleur avec ColorSpace
- **DisplayName Italian:** Cubo colore con spazio colore
- **DisplayName Spanish:** Cubo de color con espacio de color

**Categories:**

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputCubeDimension: Cube Dimension
- inputCubeData: Cube Data
- inputColorSpace: ColorSpace

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
### 52.50.2 Methods

#### 52.50.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

### 52.50.4 Properties

#### 52.50.5 Attribute `inputColorSpace` as `CIAttributeMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Color Cube with ColorSpace attribute.
**Notes:**
This attribute should have this content:

Name: `inputColorSpace`
Class: `CGColorSpaceMBS`
DisplayName: `ColorSpace`
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

#### 52.50.6 Attribute `inputCubeData` as `CIAttributeMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Color Cube with ColorSpace attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.50. **CLASS CIFILTERCOLORCUBEWITHCOLORSPACEMBS**

Name: inputCubeData  
Class: Memoryblock  
DisplayName English: Cube Data  
DisplayName German: Wrfeldaten  
DisplayName French: Donnes du cube  
DisplayName Italian: Dati cubo  
DisplayName Spanish: Datos del cubo  
DefaultNumber: 0  
IdentityNumber: 0

52.50.7 **Attribute inputCubeDimension as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**  
Details about the Color Cube with ColorSpace attribute.  
**Notes:**  
This attribute should have this content:

Name: inputCubeDimension  
Class: double  
Type: CIAttributeTypeCount  
DisplayName English: Cube Dimension  
DisplayName German: Wrfelmae  
DisplayName French: Dimension du cube  
DisplayName Italian: Dimensione cubo  
DisplayName Spanish: Dimensin del cubo  
DefaultNumber: 2  
IdentityNumber: 2  
MaxNumber: 128  
MinNumber: 2

(Read only property)

52.50.8 **Attribute inputImage as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**  
Details about the Color Cube with ColorSpace attribute.  
**Notes:**  
This attribute should have this content:

(Read only property)
52.50.9  inputColorSpace as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute ColorSpace

**Notes:**

See AttributeinputColorSpace for more details.
(Read and Write property)

52.50.10  inputCubeData as Memoryblock

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Cube Data

**Notes:**

See AttributeinputCubeData for more details.
(Read and Write property)
52.50. **CLASS CIFILTERCOLORCUBEWITHCOLORSPACEMBS**

Name: inputCubeData  
Class: Memoryblock (NSData)  
DisplayName English: Cube Data  
DisplayName German: Wrfeldaten  
DisplayName French: Donnes du cube  
DisplayName Italian: Dati cubo  
DisplayName Spanish: Datos del cubo  
Type:  

---

### 52.50.11 inputCubeDimension as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**  
The attribute Cube Dimension  
**Notes:**  
Name: inputCubeDimension  
Class: double (NSNumber)  
DisplayName English: Cube Dimension  
DisplayName German: Wrfelmae  
DisplayName French: Dimension du cube  
DisplayName Italian: Dimensione cubo  
DisplayName Spanish: Dimension del cubo  
Type: CIAttributeTypeCount  

See Attribute inputCubeDimension for more details.  
(Read and Write property)

---

### 52.50.12 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**  
The attribute Image  
**Notes:**  
Name: inputImage  
Class: CIImageMBS (CIImage)  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
Type: CIAttributeTypeImage  

See Attribute inputImage for more details.
(Read and Write property)
52.51. CLASS CIFILTERCOLORCURVESMBS

52.51 class CIFilterColorCurvesMBS

52.51.1 class CIFilterColorCurvesMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Color Curves filter. **Notes:**

Details for this filter:

<table>
<thead>
<tr>
<th>FilterName</th>
<th>DisplayName English</th>
<th>DisplayName German</th>
<th>DisplayName French</th>
<th>DisplayName Italian</th>
<th>DisplayName Spanish</th>
</tr>
</thead>
<tbody>
<tr>
<td>CIColorCurves</td>
<td>Color Curves</td>
<td>Farbkurven</td>
<td>Courbes de couleur</td>
<td>Curve colore</td>
<td>Curvas de colores</td>
</tr>
</tbody>
</table>

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCurvesData: CurvesData
- inputCurvesDomain: Curves Domain
- inputColorSpace: ColorSpace

Output:

- outputImage

Subclass of the CIFilterMBS class.
52.51.2 Methods

52.51.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

**Notes:** On success the handle property is not zero and the filter has the default values set.

52.51.4 Properties

52.51.5 Attribute inputColorSpace as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Color Curves attribute.

**Notes:**

This attribute should have this content:

```
Name:           inputColorSpace
Class:          CGColorSpaceMBS
DisplayName:    ColorSpace
DefaultNumber:  0
IdentityNumber: 0
```

(Read only property)

52.51.6 Attribute inputCurvesData as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Color Curves attribute.

**Notes:**

This attribute should have this content:

```
Name:           inputCurvesData
Class:          Memoryblock
DisplayName:    CurvesData
DefaultNumber:  0
IdentityNumber: 0
```
52.51. Attribute inputCurvesDomain as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Color Curves attribute.

**Notes:**
This attribute should have this content:

```
Name:               inputCurvesDomain
Class:              CIVectorMBS
DisplayName English: Curves Domain
DisplayName German:  Kurven-Domain
DisplayName French:  Domaine des courbes
DisplayName Italian:  Dominio curve
DisplayName Spanish:  Dominio de curvas
DefaultVector:      [ 0 1 ]
IdentityVector:     n/a
```

(Read only property)

52.51.8 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Color Curves attribute.

**Notes:**
This attribute should have this content:

```
Name:               inputImage
Class:              CIImageMBS
Type:               CIAttributeTypeImage
DisplayName English: Image
DisplayName German:  Bild
DisplayName French:  Image
DisplayName Italian:  Immagine
DisplayName Spanish:  Imagen
DefaultNumber:      0
IdentityNumber:     0
```
52.51.9  inputColorSpace as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute ColorSpace

**Notes:**
Name: inputColorSpace
Class: CGColorSpaceMBS (NSObject)
DisplayName English: ColorSpace
DisplayName German: ColorSpace
DisplayName French: ColorSpace
DisplayName Italian: ColorSpace
DisplayName Spanish: ColorSpace
Type:

See AttributeinputColorSpace for more details.
(Read and Write property)

52.51.10  inputCurvesData as Memoryblock

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute CurvesData

**Notes:**
Name: inputCurvesData
Class: Memoryblock (NSData)
DisplayName English: CurvesData
DisplayName German: CurvesData
DisplayName French: CurvesData
DisplayName Italian: CurvesData
DisplayName Spanish: CurvesData
Type:

See AttributeinputCurvesData for more details.
(Read and Write property)
52.51.11  inputCurvesDomain as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Curves Domain

**Notes:**

<table>
<thead>
<tr>
<th>Name:</th>
<th>inputCurvesDomain</th>
</tr>
</thead>

<td>CIAttributeTypeImage</td>
</tr>
</tbody>
</table>

See Attribute inputImage for more details.
(Read and Write property)
CHAPTER 52. COREIMAGE

52.52 class CIFilterColorDodgeBlendModeMBS

52.52.1 class CIFilterColorDodgeBlendModeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Color Dodge Blend Mode filter.

**Notes:**

Details for this filter:

FilterName: CIColorDodgeBlendMode
DisplayName English: Color Dodge Blend Mode
DisplayName German: Mischmethode Farbig abwedeln
DisplayName French: Mode de fusion Densit couleur negative
DisplayName Italian: Modalit sfumatura colore schermato
DisplayName Spanish: Modo de mezcla por evasin de color

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputBackgroundImage: Background Image

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.52.2 Methods

52.52.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor. **Notes:** On success the handle property is not zero and the filter has the default values set.

52.52.4 Properties

52.52.5 Attribute inputBackgroundImage as CIAtributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Color Dodge Blend Mode attribute. **Notes:**

This attribute should have this content:

- Name: inputBackgroundImage
- Class: CIImageMBS
- Type: CIAtributeTypeImage
- DisplayName English: Background Image
- DisplayName German: Hintergrundbild
- DisplayName French: Image darrrire-plan
- DisplayName Italian: Immagine di sfondo

- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputGradientImage: Gradient Image

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.54.2 Methods

52.54.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.54.4 Properties

52.54.5 Attribute inputGradientImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Color Map attribute.
**Notes:**
This attribute should have this content:

```
Name: inputGradientImage
Class: CIImageMBS
Type: CIAttributeTypeGradient
DisplayName English: Gradient Image
DisplayName German: Bild für Verlauf
DisplayName French: Image du dgrad
DisplayName Italian: Immagine gradiente
DisplayName Spanish: Imagen degradada
DefaultNumber: 0
IdentityNumber: 0
```

(Read only property)

52.54.6 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Color Map attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.54. CLASS CIFILTERCOLORMAPMBS

Name: inputImage
Class: CIImageMBS
Type: CIAuto
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

52.54.7 inputGradientImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The attribute Gradient Image
Notes:
Name: inputGradientImage
Class: CIImageMBS (CIImage)
DisplayName English: Gradient Image
DisplayName German: Bild für Verlauf
DisplayName French: Image du dgrad
DisplayName Italian: Immagine gradiente
DisplayName Spanish: Imagen degradada
Type: CIAuto

See Attribute inputGradientImage for more details.
(Read and Write property)

52.54.8 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The attribute Image
Notes:
See Attribute inputImage for more details.
(Read and Write property)
Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage
52.55. class CIFilterColorMatrixMBS

52.55.1 class CIFilterColorMatrixMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Color Matrix filter.

**Notes:**
Details for this filter:

<table>
<thead>
<tr>
<th>FilterName</th>
<th>CIColorMatrix</th>
</tr>
</thead>
<tbody>
<tr>
<td>DisplayName English</td>
<td>Color Matrix</td>
</tr>
<tr>
<td>DisplayName German</td>
<td>Farbmatrix</td>
</tr>
<tr>
<td>DisplayName French</td>
<td>Matrice de couleurs</td>
</tr>
<tr>
<td>DisplayName Italian</td>
<td>Matrice colore</td>
</tr>
<tr>
<td>DisplayName Spanish</td>
<td>Matriz de color</td>
</tr>
</tbody>
</table>

**Categories:**

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputRVector: Red Vector
- inputGVector: Green Vector
- inputBVector: Blue Vector
- inputAVector: Alpha Vector
- inputBiasVector: Bias Vector

**Output:**
• outputImage

Subclass of the CIFilterMBS class.

## 52.55.2 Methods

## 52.55.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

## 52.55.4 Properties

### 52.55.5 Attribute `inputAVector` as `CIAttributeMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Color Matrix attribute.
**Notes:**
This attribute should have this content:

- **Name:** inputAVector
- **Class:** CIVectorMBS
- **DisplayName English:** Alpha Vector
- **DisplayName German:** Alpha-Vektor
- **DisplayName French:** Vecteur alpha
- **DisplayName Italian:** Vettore alfa
- **DisplayName Spanish:** Vector alfa
- **DefaultVector:** [0 0 0 1]
- **IdentityVector:** [0 0 0 1]

(Read only property)

### 52.55.6 Attribute `inputBiasVector` as `CIAttributeMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Color Matrix attribute.
**Notes:**
This attribute should have this content:

Name: inputBiasVector
Class: CIVectorMBS
DisplayName English: Bias Vector
DisplayName German: Bias-Vektor
DisplayName French: Vecteur de biais
DisplayName Italian: Vettore BIAS
DisplayName Spanish: Vector oblicuo
DefaultVector: [ 0 0 0 0 ]
IdentityVector: [ 0 0 0 0 ]

(Read only property)

52.55.7 Attribute inputBVector as CIAttributeMBS

Notes:
This attribute should have this content:

Name: inputBVector
Class: CIVectorMBS
DisplayName English: Blue Vector
DisplayName German: Blau-Vektor
DisplayName French: Vecteur bleu
DisplayName Italian: Vettore blu
DisplayName Spanish: Vector azul
DefaultVector: [ 0 0 1 0 ]
IdentityVector: [ 0 0 1 0 ]

(Read only property)

52.55.8 Attribute inputGVector as CIAttributeMBS

Notes:
This attribute should have this content:

Name: inputGVector
Class: CIVectorMBS
DisplayName English: Green Vector
DisplayName German: Grn-Vektor
DisplayName French: Vecteur vert
DisplayName Italian: Vettore verde
DisplayName Spanish: Vector verde
DefaultVector: [ 0 1 0 0 ]
IdentityVector: [ 0 1 0 0 ]

(Read only property)

52.55.9 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Color Matrix attribute.

**Notes:**

This attribute should have this content:

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

52.55.10 Attribute inputRVector as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Color Matrix attribute.

**Notes:**
This attribute should have this content:

<table>
<thead>
<tr>
<th>Name</th>
<th>inputRVector</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class</td>
<td>CIVectorMBS</td>
</tr>
<tr>
<td>DisplayName English</td>
<td>Red Vector</td>
</tr>
<tr>
<td>DisplayName German</td>
<td>Rot-Vektor</td>
</tr>
<tr>
<td>DisplayName French</td>
<td>Vecteur rouge</td>
</tr>
<tr>
<td>DisplayName Italian</td>
<td>Vettore rosso</td>
</tr>
<tr>
<td>DisplayName Spanish</td>
<td>Vector rojo</td>
</tr>
<tr>
<td>DefaultVector</td>
<td>[ 1 0 0 0 ]</td>
</tr>
<tr>
<td>IdentityVector</td>
<td>[ 1 0 0 0 ]</td>
</tr>
</tbody>
</table>

(Read only property)

52.55.11 inputAVector as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Alpha Vector

**Notes:**

<table>
<thead>
<tr>
<th>Name</th>
<th>inputAVector</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class</td>
<td>CIVectorMBS (CIVector)</td>
</tr>
<tr>
<td>DisplayName English</td>
<td>Alpha Vector</td>
</tr>
<tr>
<td>DisplayName German</td>
<td>Alpha-Vektor</td>
</tr>
<tr>
<td>DisplayName French</td>
<td>Vecteur alpha</td>
</tr>
<tr>
<td>DisplayName Italian</td>
<td>Vettore alfa</td>
</tr>
<tr>
<td>DisplayName Spanish</td>
<td>Vector alfa</td>
</tr>
</tbody>
</table>

See Attribute inputAVector for more details.
(Read and Write property)

52.55.12 inputBiasVector as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Bias Vector

**Notes:**

See Attribute inputBiasVector for more details.
(Read and Write property)
8678

CHAPTER 52. COREIMAGE

Name: inputBiasVector
Class: CIVectorMBS (CIVector)
DisplayName English: Bias Vector
DisplayName German: Bias-Vektor
DisplayName French: Vecteur de biais
DisplayName Italian: Vettore BIAS
DisplayName Spanish: Vector oblicuo
Type:

52.55.13 inputBVector as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Blue Vector

**Notes:**

Name: inputBVector
Class: CIVectorMBS (CIVector)
DisplayName English: Blue Vector
DisplayName German: Blau-Vektor
DisplayName French: Vecteur bleu
DisplayName Italian: Vettore blu
DisplayName Spanish: Vector azul
Type:

See Attribute inputBVector for more details.
(Read and Write property)

52.55.14 inputGVector as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Green Vector

**Notes:**

Name: inputGVector
Class: CIVectorMBS (CIVector)
DisplayName English: Green Vector
DisplayName German: Grn-Vektor
DisplayName French: Vecteur vert
DisplayName Italian: Vettore verde
DisplayName Spanish: Vector verde
Type:

See Attribute inputGVector for more details.
52.55.15  inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image

**Notes:**

Name: inputImage  
Class: CIImageMBS (CIImage)  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
Type: CIAttributeTypeImage

See AttributeinputImage for more details.  
(Read and Write property)

52.55.16  inputRVector as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Red Vector

**Notes:**

Name: inputRVector  
Class: CIVectorMBS (CIVector)  
DisplayName English: Red Vector  
DisplayName German: Rot-Vektor  
DisplayName French: Vecteur rouge  
DisplayName Italian: Vettore rosso  
DisplayName Spanish: Vector rojo  
Type: 

See AttributeinputRVector for more details.  
(Read and Write property)
52.56 class CIFilterColorMonochromeMBS

52.56.1 class CIFilterColorMonochromeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Color Monochrome filter.

**Notes:**
Details for this filter:

- **FilterName:** CIColorMonochrome
- **DisplayName English:** Color Monochrome
- **DisplayName German:** Einfarbig
- **DisplayName French:** Couleur monochrome
- **DisplayName Italian:** Colore monocromo
- **DisplayName Spanish:** Color monocromo

**Categories:**
- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**
- **inputImage:** Image
- **inputColor:** Color
- **inputIntensity:** Intensity

**Output:**
- **outputImage**

Subclass of the CIFilterMBS class.
52.56.2 Methods

52.56.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.56.4 Properties

52.56.5 Attribute inputColor as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Color Monochrome attribute.
**Notes:**
This attribute should have this content:

<table>
<thead>
<tr>
<th>Name</th>
<th>inputColor</th>
</tr>
</thead>
<tbody>
<tr>

<td>0</td>
</tr>
</tbody>
</table>

(Read only property)

52.56.6 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Color Monochrome attribute.
**Notes:**
This attribute should have this content:

(Read only property)
Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

52.56.7 Attribute inputIntensity as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Color Monochrome attribute.

**Notes:**

This attribute should have this content:

Name: inputIntensity
Class: double
Type: CIAttributeTypeScalar
DisplayName English: Intensity
DisplayName German: Intensität
DisplayName French: Intensité
DisplayName Italian: Intensità
DisplayName Spanish: Intensidad
DefaultNumber: 1
IdentityNumber: 0
SliderMaxNumber: 1
SliderMinNumber: 0

(Read only property)

52.56.8 inputColor as CIColorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Color

**Notes:**

See Attribute inputColor for more details.

(Read and Write property)
52.56. **CLASS CIFILTERCOLORMONOCHROMEMBS**

Name: inputColor  
Class: CIColorMBS (CIColor)  
DisplayName English: Color  
DisplayName German: Farbe  
DisplayName French: Couleur  
DisplayName Italian: Colore  
DisplayName Spanish: Color  
Type: CIAttributeTypeOpaqueColor

52.56.9 **inputImage as CIImageMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**  
The attribute Image

**Notes:**

Name: inputImage  
Class: CIImageMBS (CIImage)  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
Type: CIAttributeTypeImage

See Attribute inputImage for more details.  
(Read and Write property)

52.56.10 **inputIntensity as double**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**  
The attribute Intensity

**Notes:**

Name: inputIntensity  
Class: double (NSNumber)  
DisplayName English: Intensity  
DisplayName German: Intensität  
DisplayName French: Intensité  
DisplayName Italian: Intensità  
DisplayName Spanish: Intensidad  
Type: CIAttributeTypeScalar

See Attribute inputIntensity for more details.
(Read and Write property)
52.57. class CIFilterColorPolynomialMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Color Polynomial filter.

**Notes:**
Details for this filter:

FilterName: CIColorPolynomial
DisplayName English: Color Polynomial
DisplayName German: Farb-Polynom
DisplayName French: Fonction polynomiale de la couleur
DisplayName Italian: Polinomio cromatico
DisplayName Spanish: Polinomio cromtico

**Categories:**
- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**
- inputImage: Image
- inputRedCoefficients: RedCoefficients
- inputGreenCoefficients: GreenCoefficients
- inputBlueCoefficients: BlueCoefficients
- inputAlphaCoefficients: AlphaCoefficients

**Output:**
• outputImage

Subclass of the CIFilterMBS class.

### 52.57.2 Methods

### 52.57.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

**Notes:** On success the handle property is not zero and the filter has the default values set.

### 52.57.4 Properties

### 52.57.5 Attribute inputAlphaCoefficients as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Color Polynomial attribute.

**Notes:**

This attribute should have this content:

```
Name: inputAlphaCoefficients
Class: CIVectorMBS
DisplayName: AlphaCoefficients
DefaultVector: [0 1 0 0]
IdentityVector: [0 1 0 0]
```

(Read only property)

### 52.57.6 Attribute inputBlueCoefficients as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Color Polynomial attribute.

**Notes:**

This attribute should have this content:
52.57. **CLASS CIFILTERCOLORPOLYNOMIALMBS**

Name: inputBlueCoefficients  
Class: CIVectorMBS  
DisplayName: BlueCoefficients  
DefaultVector: \[ 0 \ 1 \ 0 \ 0 \]  
IdentityVector: \[ 0 \ 1 \ 0 \ 0 \]  

(Read only property)

52.57.7 **Attribute inputGreenCoefficients as CIAtributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Color Polynomial attribute.  
**Notes:**  
This attribute should have this content:

Name: inputGreenCoefficients  
Class: CIVectorMBS  
DisplayName: GreenCoefficients  
DefaultVector: \[ 0 \ 1 \ 0 \ 0 \]  
IdentityVector: \[ 0 \ 1 \ 0 \ 0 \]  

(Read only property)

52.57.8 **Attribute inputImage as CIAtributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Color Polynomial attribute.  
**Notes:**  
This attribute should have this content:

(Read only property)

52.57.9 **Attribute inputRedCoefficients as CIAtributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Color Polynomial attribute.
Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

Notes:
This attribute should have this content:

Name: inputRedCoefficients
Class: CIVectorMBS
DisplayName: RedCoefficients
DefaultVector: [ 0 1 0 0 ]
IdentityVector: [ 0 1 0 0 ]

(Read only property)

52.57.10 inputAlphaCoefficients as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The attribute AlphaCoefficients
Notes:
Name: inputAlphaCoefficients
Class: CIVectorMBS (CIVector)
DisplayName English: AlphaCoefficients
DisplayName German: AlphaCoefficients
DisplayName French: AlphaCoefficients
DisplayName Italian: AlphaCoefficients
DisplayName Spanish: AlphaCoefficients
Type:

See Attribute inputAlphaCoefficients for more details.
(Read and Write property)
52.57.11 inputBlueCoefficients as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute BlueCoefficients

**Notes:**

Name: inputBlueCoefficients  
Class: CIVectorMBS (CIVector)  
DisplayName English: BlueCoefficients  
DisplayName German: BlueCoefficients  
DisplayName French: BlueCoefficients  
DisplayName Italian: BlueCoefficients  
DisplayName Spanish: BlueCoefficients  
Type:  

See Attribute inputBlueCoefficients for more details.  
(Read and Write property)

52.57.12 inputGreenCoefficients as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute GreenCoefficients

**Notes:**

Name: inputGreenCoefficients  
Class: CIVectorMBS (CIVector)  
DisplayName English: GreenCoefficients  
DisplayName German: GreenCoefficients  
DisplayName French: GreenCoefficients  
DisplayName Italian: GreenCoefficients  
DisplayName Spanish: GreenCoefficients  
Type:  

See Attribute inputGreenCoefficients for more details.  
(Read and Write property)

52.57.13 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image

**Notes:**
Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

See Attribute inputImage for more details.
(Read and Write property)

52.57.14 inputRedCoefficients as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The attribute RedCoefficients
Notes:

Name: inputRedCoefficients
Class: CIVectorMBS (CIVector)
DisplayName English: RedCoefficients
DisplayName German: RedCoefficients
DisplayName French: RedCoefficients
DisplayName Italian: RedCoefficients
DisplayName Spanish: RedCoefficients
Type:

See Attribute inputRedCoefficients for more details.
(Read and Write property)
class CIColorFilterColorPosterizeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Color Posterize filter.

**Notes:**
Details for this filter:

- **FilterName:** CIColorPosterize
- **DisplayName English:** Color Posterize
- **DisplayName German:** Farbe auflösen
- **DisplayName French:** Posteriser la couleur
- **DisplayName Italian:** Posterizzazione colore
- **DisplayName Spanish:** Posterización de color

**Categories:**

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputLevels: Levels

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.58.2 Methods

52.58.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.58.4 Properties

52.58.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Color Posterize attribute.
**Notes:**
This attribute should have this content:

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen

52.59. class CIFilterColumnAverageMBS

52.59.1 class CIFilterColumnAverageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Column Average filter.

**Notes:**
Details for this filter:

<table>
<thead>
<tr>
<th>FilterName</th>
<th>CIColumnAverage</th>
</tr>
</thead>
<tbody>
<tr>
<td>DisplayName English</td>
<td>Column Average</td>
</tr>
<tr>
<td>DisplayName German</td>
<td>Spaltendurchschnitt</td>
</tr>
<tr>
<td>DisplayName French</td>
<td>Moyenne des colonnes</td>
</tr>
<tr>
<td>DisplayName Italian</td>
<td>Media colonna</td>
</tr>
<tr>
<td>DisplayName Spanish</td>
<td>Media de la columna</td>
</tr>
</tbody>
</table>

**Categories:**

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputExtent: Extent

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.59.2 Methods

52.59.3 Constructor

Notes: On success the handle property is not zero and the filter has the default values set.

52.59.4 Properties

52.59.5 Attribute inputExtent as CIAttributeMBS

Notes: This attribute should have this content:

Name: inputExtent
Class: CIVectorMBS
Type: CIAttributeTypeRectangle
DisplayName English: Extent
DisplayName German: Betrag
DisplayName French: tendue
DisplayName Italian: Ampiezza
DisplayName Spanish: Amplitud
Default Vector: [ 0 0 640 80 ]
Identity Vector: n/a

(Read only property)

52.59.6 Attribute inputImage as CIAttributeMBS

Notes: This attribute should have this content:

(Read only property)
52.59. **CLASS CIFILTERCOLUMNNAVERAGEMBS**

Name: inputImage  
Class: CIImageMBS

### 52.65.10 `inputWeights` as `CIVectorMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute `Weights`

**Notes:**

- **Name:** `inputWeights`
- **Class:** `CIVectorMBS` (CIVector)
- **DisplayName English:** Weights
- **DisplayName German:**Weights
- **DisplayName French:**Weights
- **DisplayName Italian:**Weights
- **DisplayName Spanish:**Weights
- **Type:**

See Attribute `inputWeights` for more details.
(Read and Write property)
52.66  class CIFilterConvolution9VerticalMBS

52.66.1  class CIFilterConvolution9VerticalMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Vertical 9 Convolution filter.

**Notes:**
Details for this filter:

- **FilterName:** CIConvolution9Vertical
- **DisplayName English:** Vertical 9 Convolution
- **DisplayName German:** Vertikale 9-Faltung
- **DisplayName French:** Convolution9 verticale
- **DisplayName Italian:** Convoluzione verticale 9
- **DisplayName Spanish:** Convolución vertical con 9 valores

**Categories:**

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputWeights: Weights
- inputBias: Bias

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.66.2 Methods

52.66.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.66.4 Properties

52.66.5 Attribute inputBias as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Vertical 9 Convolution attribute.
**Notes:**
This attribute should have this content:

```
Name: inputBias
Class: double
DisplayName: Bias
DefaultNumber: 0
IdentityNumber: 0
```

(Read only property)

52.66.6 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Vertical 9 Convolution attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.66.7  Attribute inputWeights as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Vertical 9 Convolution attribute.
**Notes:**
This attribute should have this content:

Name: inputWeights
Class: CIVectorMBS
DisplayName: Weights
DefaultVector: [0 0 0 0 1 0 0 0]
IdentityVector: [0 0 0 0 1 0 0 0]

(Read only property)

52.66.8  inputBias as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Bias
**Notes:**
Name: inputBias
Class: double (NSNumber)
DisplayName English: Bias
DisplayName German: Bias
DisplayName French: Bias
DisplayName Italian: Bias
DisplayName Spanish: Bias
Type:
See Attribute inputBias for more details.
(Read and Write property)

### 52.66.9 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image

**Notes:**

- **Name:** inputImage
- **Class:** CIImageMBS (CIImage)
- **DisplayName English:** Image
- **DisplayName German:** Bild
- **DisplayName French:** Image
- **DisplayName Italian:** Immagine
- **DisplayName Spanish:** Imagen
- **Type:** CIAttributeTypeImage

See Attribute inputImage for more details.
(Read and Write property)

### 52.66.10 inputWeights as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Weights

**Notes:**

- **Name:** inputWeights
- **Class:** CIVectorMBS (CIVector)
- **DisplayName English:** Weights
- **DisplayName German:** Weights
- **DisplayName French:** Weights
- **DisplayName Italian:** Weights
- **DisplayName Spanish:** Weights
- **Type:**

See Attribute inputWeights for more details.
(Read and Write property)
52.67 class CIFilterCopyMachineTransitionMBS

52.67.1 class CIFilterCopyMachineTransitionMBS

**Notes**:

Details for this filter:

FilterName: CICopyMachineTransition
DisplayName English: Copy Machine
DisplayName German: Kopieren
DisplayName French: Photocopieur
DisplayName Italian: Fotocopiatrice
DisplayName Spanish: Copiar mquina

**Categories**:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input**:

- inputImage: Image
- inputTargetImage: Target Image
- inputExtent: Extent
- inputColor: Color
- inputTime: Time
- inputAngle: Angle
- inputWidth: Width
- inputOpacity: Opacity

**Output**:
52.67. CLASS CIFILTERCOPYMACHINETRANSITIONMBS

- outputImage

Subclass of the CIFilterMBS class.

52.67.2 Methods

52.67.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

**Notes:** On success the handle property is not zero and the filter has the default values set.

52.67.4 Properties

52.67.5 Attribute inputAngle as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Copy Machine attribute.

**Notes:**

This attribute should have this content:

- **Name:** inputAngle
- **Class:** double
- **Type:** CIAttributeTypeAngle
- **DisplayName English:** Angle
- **DisplayName German:** Winkel
- **DisplayName French:** Angle
- **DisplayName Italian:** Angolo
- **DisplayName Spanish:** Ángulo
- **DefaultNumber:** 0
- **IdentityNumber:** 0
- **SliderMaxNumber:** 6.283185
- **SliderMinNumber:** 0

(Read only property)
52.67.6 Attribute inputColor as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Copy Machine attribute.
**Notes:**
This attribute should have this content:

- **Name:** inputColor
- **Class:** CIColorMBS
- **Type:** CIAttributeTypeOpaqueColor
- **DisplayName English:** Color
- **DisplayName German:** Farbe
- **DisplayName French:** Couleur
- **DisplayName Italian:** Colore
- **DisplayName Spanish:** Color
- **DefaultColor:** Red = 0.6, Green = 1, Blue = 0.8, Alpha = 1
- **IdentityNumber:** 0

(Read only property)

52.67.7 Attribute inputExtent as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Copy Machine attribute.
**Notes:**
This attribute should have this content:

- **Name:** inputExtent
- **Class:** CIVectorMBS
- **Type:** CIAttributeTypeRectangle
- **DisplayName English:** Extent
- **DisplayName German:** Betrag
- **DisplayName French:** tendue
- **DisplayName Italian:** Ampiezza
- **DisplayName Spanish:** Amplitud
- **DefaultVector:** [ 0 0 300 300 ]
- **IdentityVector:** n/a

(Read only property)
52.67.8 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Copy Machine attribute.

**Notes:**

This attribute should have this content:

Name: inputImage  
Class: CIImageMBS  
Type: CIAttributeTypeImage  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
DefaultNumber: 0  
IdentityNumber: 0

(Read only property)

52.67.9 Attribute inputOpacity as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Copy Machine attribute.

**Notes:**

This attribute should have this content:

Name: inputOpacity  
Class: double  
Type: CIAttributeTypeScalar  
DisplayName English: Opacity  
DisplayName German: Deckkraft  
DisplayName French: Opacité  
DisplayName Italian: Opacità  
DisplayName Spanish: Opacidad  
DefaultNumber: 1.3  
IdentityNumber: 1.3  
SliderMaxNumber: 3  
SliderMinNumber: 0

(Read only property)
52.67.10  Attribute inputTargetImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Copy Machine attribute.

**Notes:**

This attribute should have this content:

- **Name:** inputTargetImage
- **Class:** CIImageMBS
- **Type:** CIAttributeTypeImage
- **DisplayName English:** Target Image
- **DisplayName German:** Zielbild
- **DisplayName French:** Image cible
- **DisplayName Italian:** Immagine target
- **DisplayName Spanish:** Imagen de destino
- **DefaultNumber:** 0
- **IdentityNumber:** 0

(Read only property)

52.67.11  Attribute inputTime as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Copy Machine attribute.

**Notes:**

This attribute should have this content:

(Read only property)

52.67.12  Attribute inputWidth as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Copy Machine attribute.

**Notes:**

This attribute should have this content:
52.67. CLASS CIFILTERCOPYMACHINETRANSITIONMBS

Name: inputTime
Class: double
Type: CIAttributeTypeTime
DisplayName English: Time
DisplayName German: Zeit
DisplayName French: Durée
DisplayName Italian: Tempo
DisplayName Spanish: Tiempo
DefaultNumber: 0
IdentityNumber: 0
MaxNumber: 1
MinNumber: 0
SliderMaxNumber: 1
SliderMinNumber: 0

Name: inputWidth
Class: double
Type: CIAttributeTypeDistance
DisplayName English: Width
DisplayName German: Breite
DisplayName French: Largeur
DisplayName Italian: Larghezza
DisplayName Spanish: Anchura
DefaultNumber: 200
IdentityNumber: 200
MaxNumber: 0
MinNumber: 0.1
SliderMaxNumber: 500
SliderMinNumber: 0.1

(Read only property)

52.67.13 inputAngle as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The attribute Angle
Notes:
See Attribute inputAngle for more details.
(Read and Write property)
Name: inputAngle
Class: double (NSNumber)
DisplayName English: Angle
DisplayName German: Winkel
DisplayName French: Angle
DisplayName Italian: Angolo
DisplayName Spanish: ngulo
Type: CIAttributeTypeAngle

52.67.14 inputColor as CIColorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The attribute Color
Notes:
Name: inputColor
Class: CIColorMBS (CIColor)
DisplayName English: Color
DisplayName German: Farbe
DisplayName French: Couleur
DisplayName Italian: Colore
DisplayName Spanish: Color
Type: CIAttributeTypeOpaqueColor

See Attribute inputColor for more details.
(Read and Write property)

52.67.15 inputExtent as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The attribute Extent
Notes:
Name: inputExtent
Class: CIVectorMBS (CIVector)
DisplayName English: Extent
DisplayName German: Betrag
DisplayName French: tendue
DisplayName Italian: Ampiezza
DisplayName Spanish: Amplitud
Type: CIAttributeTypeRectangle

See Attribute inputExtent for more details.
52.67.16 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image
**Notes:**

Name: inputImage  
Class: CIImageMBS (CIImage)  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
Type: CIAttributeTypeImage

See Attribute inputImage for more details.
(Read and Write property)

52.67.17 inputOpacity as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Opacity
**Notes:**

Name: inputOpacity  
Class: double (NSNumber)  
DisplayName English: Opacity  
DisplayName German: Deckkraft  
DisplayName French: Opacit  
DisplayName Italian: Opacit  
DisplayName Spanish: Opacidad  
Type: CIAttributeTypeScalar

See Attribute inputOpacity for more details.
(Read and Write property)
52.67.18 inputTargetImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Target Image

**Notes:**

Name: inputTargetImage
Class: CIImageMBS (CIImage)
DisplayName English: Target Image
DisplayName German: Zielbild
DisplayName French: Image cible
DisplayName Italian: Immagine target
DisplayName Spanish: Imagen de destino
Type: CIAttributeTypeImage

See Attribute inputTargetImage for more details.
(Read and Write property)

52.67.19 inputTime as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Time

**Notes:**

Name: inputTime
Class: double (NSNumber)
DisplayName English: Time
DisplayName German: Zeit
DisplayName French: Dure
DisplayName Italian: Tempo
DisplayName Spanish: Tiempo
Type: CIAttributeTypeTime

See Attribute inputTime for more details.
(Read and Write property)

52.67.20 inputWidth as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Width

**Notes:**
Name: inputWidth
Class: double (NSNumber)
DisplayName English: Width
DisplayName German: Breite
DisplayName French: Largeur
DisplayName Italian: Larghezza
DisplayName Spanish: Anchura
Type: CIAttributeTypeDistance

See AttributeinputWidth for more details.
(Read and Write property)
52.68 class CIFilterCropMBS

52.68.1 class CIFilterCropMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Crop filter.

**Notes:**
Details for this filter:

- **FilterName:** CICrop
- **DisplayName English:** Crop
- **DisplayName German:** Freistellen
- **DisplayName French:** Recadrer
- **DisplayName Italian:** Ritaglia
- **DisplayName Spanish:** Recortar

**Categories:**

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputRectangle: Rectangle

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.68.2 Methods

52.68.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.68.4 Properties

52.68.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Crop attribute.
**Notes:**
This attribute should have this content:

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

52.68.6 Attribute inputRectangle as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Crop attribute.
**Notes:**
This attribute should have this content:

(Read only property)

**Input:**

- inputImage: Image
- inputDisparityImage: DisparityImage
- inputAperture: Aperture
- inputLeftEyePositions: Left Eye Positions
- inputRightEyePositions: Right Eye Positions
- inputChinPositions: Chin Positions
- inputNosePositions: Nose Positions
- inputFocusRect: Focus Rectangle
- inputLumaNoiseScale: Luma Noise Scale
- inputScaleFactor: Scale Factor
• **inputCalibrationData**: `CalibrationData`
• **inputAuxDataMetadata**: `AuxDataMetadata`

Output:

• **outputImage**

Subclass of the CIFilterMBS class.

### 52.71.2 Methods

#### 52.71.3 Constructor

**MBS MacCG Plugin, Plugin Version**: 17.4, **Console & Web**: Yes, **Mac**: Yes, **Win**: No, **Linux**: No. **Function**: The constructor. **Notes**: On success the handle property is not zero and the filter has the default values set.

### 52.71.4 Properties

#### 52.71.5 **Attribute** `inputAperture` as `CIAttributeMBS`

**MBS MacCG Plugin, Plugin Version**: 17.4, **Console & Web**: Yes, **Mac**: Yes, **Win**: No, **Linux**: No. **Function**: Details about the Depth Blur Effect attribute. **Notes**: This attribute should have this content:

<table>
<thead>
<tr>
<th>Name</th>
<th>inputAperture</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class</td>
<td>double</td>
</tr>
<tr>
<td>Type</td>
<td><code>CIAttributeTypeScalar</code></td>
</tr>
<tr>
<td>DisplayName</td>
<td>Aperture</td>
</tr>
<tr>
<td>DefaultNumber</td>
<td>0</td>
</tr>
<tr>
<td>IdentityNumber</td>
<td>0</td>
</tr>
<tr>
<td>MaxNumber</td>
<td>22</td>
</tr>
<tr>
<td>MinNumber</td>
<td>0</td>
</tr>
<tr>
<td>SliderMaxNumber</td>
<td>22</td>
</tr>
<tr>
<td>SliderMinNumber</td>
<td>1</td>
</tr>
</tbody>
</table>

(Read only property)
52.71. **CLASS CIFILTERDEPTHBLOUREFFECTMBS**

### 52.71.6 Attribute `inputAuxDataMetadata` as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Depth Blur Effect attribute.

**Notes:**

This attribute should have this content:

- **Name:** `inputAuxDataMetadata`
- **Class:** `Dictionary`
- **DisplayName:** `AuxDataMetadata`

(Read only property)

### 52.71.7 Attribute `inputCalibrationData` as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Depth Blur Effect attribute.

**Notes:**

This attribute should have this content:

- **Name:** `inputCalibrationData`
- **Class:** `Variant`
- **DisplayName:** `CalibrationData`

(Read only property)

### 52.71.8 Attribute `inputChinPositions` as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Depth Blur Effect attribute.

**Notes:**

This attribute should have this content:

(Read only property)
### 52.71.9 Attribute inputDisparityImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Depth Blur Effect attribute. **Notes:**

This attribute should have this content:

<table>
<thead>
<tr>
<th>Name</th>
<th>inputDisparityImage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class</td>
<td>CIImageMBS</td>
</tr>
<tr>
<td>DisplayName</td>
<td>DisparityImage</td>
</tr>
<tr>
<td>DefaultNumber</td>
<td>0</td>
</tr>
<tr>
<td>IdentityNumber</td>
<td>0</td>
</tr>
</tbody>
</table>

(Read only property)

### 52.71.10 Attribute inputFocusRect as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Depth Blur Effect attribute. **Notes:**

This attribute should have this content:

(Read only property)
52.71. CLASS CIFILTERDEPTHBLUREFFECTMBS

Name: inputFocusRect
Class: CIVectorMBS
Type: CIAttributeTypeRectangle
DisplayName English: Focus Rectangle
DisplayName German: Fokusrechteck
DisplayName French: Rectangle de mise au point
DisplayName Italian: Rettangolo di messa a fuoco
DisplayName Spanish: Rectngulo focal
DefaultVector: n/a
IdentityVector: [ -1.70141e+38 -1.70141e+38 3.40282e+38 3.40282e+38 ]

52.71.11 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Depth Blur Effect attribute.

**Notes:**
This attribute should have this content:

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

52.71.12 Attribute inputLeftEyePositions as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Depth Blur Effect attribute.

**Notes:**
This attribute should have this content:

(Read only property)
Name: inputLeftEyePositions
Class: CIVectorMBS
Type: CIAttributeTypePosition
DisplayName English: Left Eye Positions
DisplayName German: Positionen der linken Augen
DisplayName French: Positions de lil gauche
DisplayName Italian: Posizioni occhio sinistro
DisplayName Spanish: Posiciones de ojo izquierdo
DefaultVector: n/a
IdentityVector: n/a

52.71.13 Attribute inputLumaNoiseScale as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Depth Blur Effect attribute.
**Notes:**
This attribute should have this content:

Name: inputLumaNoiseScale
Class: double
Type: CIAttributeTypeScalar
DisplayName English: Luma Noise Scale
DisplayName German: Luma-Rauschen-Skalierung
DisplayName French: chelle de bruit de luminance
DisplayName Italian: Scala rumore di luminanza
DisplayName Spanish: Escala de ruido de luminancia
DefaultNumber: 0
IdentityNumber: 0
MaxNumber: 0.1
MinNumber: 0
SliderMaxNumber: 0.1
SliderMinNumber: 0

(Read only property)

52.71.14 Attribute inputNosePositions as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Depth Blur Effect attribute.
**Notes:**
This attribute should have this content:
52.71. **CLASS CIFILTERDEPTHBLUREFFECTMBS**

Name: inputNosePositions  
Class: CIVectorMBS  
Type: CIAttributeTypePosition  
DisplayName English: Nose Positions  
DisplayName German: Nasenpositionen  
DisplayName French: Positions du nez  
DisplayName Italian: Posizioni naso  
DisplayName Spanish: Posiciones de nariz  
DefaultVector: n/a  
IdentityVector: n/a

(Read only property)

52.71.15 **AttributeinputRightEyePositions as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Depth Blur Effect attribute.  
**Notes:**  
This attribute should have this content:

Name: inputRightEyePositions  
Class: CIVectorMBS  
Type: CIAttributeTypePosition  
DisplayName English: Right Eye Positions  
DisplayName German: Positionen der rechten Augen  
DisplayName French: Positions de l’œil droit  
DisplayName Italian: Posizioni occhio destro  
DisplayName Spanish: Posiciones de ojo derecho  
DefaultVector: n/a  
IdentityVector: n/a

(Read only property)

52.71.16 **AttributeinputScaleFactor as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Depth Blur Effect attribute.  
**Notes:**
This attribute should have this content:

Name: inputScaleFactor
Class: double
Type: CIAttributeTypeScalar
DisplayName English: Scale Factor
DisplayName German: Skalierungsfaktor
DisplayName French: Facteur d'echelle
DisplayName Italian: Fattore di scala
DisplayName Spanish: Factor de escala
DefaultNumber: 1
IdentityNumber: 0
SliderMaxNumber: 1
SliderMinNumber: 0

(Read only property)

52.71.17 inputAperture as double

Notes:

Name: inputAperture
Class: double (NSNumber)
DisplayName English: Aperture
DisplayName German: Aperture
DisplayName French: Aperture
DisplayName Italian: Aperture
DisplayName Spanish: Aperture
Type: CIAttributeTypeScalar

See Attribute inputAperture for more details.
(Read and Write property)

52.71.18 inputAuxDataMetadata as Dictionary

Notes:
52.71. **CLASS CIFILTERDEPTHBLUREFFECTMBS**

Name: inputAuxDataMetadata
Class: Dictionary (NSDictionary)
DisplayName English: AuxDataMetadata
DisplayName German: AuxDataMetadata
DisplayName French: AuxDataMetadata
DisplayName Italian: AuxDataMetadata
DisplayName Spanish: AuxDataMetadata
Type:

See Attribute inputAuxDataMetadata for more details.
(Read and Write property)

---

52.71.19 **inputCalibrationData as Variant**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute CalibrationData
**Notes:**

Name: inputCalibrationData
Class: Variant (AVCameraCalibrationData)
DisplayName English: CalibrationData
DisplayName German: CalibrationData
DisplayName French: CalibrationData
DisplayName Italian: CalibrationData
DisplayName Spanish: CalibrationData
Type:

See Attribute inputCalibrationData for more details.
(Read and Write property)

---

52.71.20 **inputChinPositions as CIVectorMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Chin Positions
**Notes:**

See Attribute inputChinPositions for more details.
(Read and Write property)
52.71.21  inputDisparityImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute DisparityImage

**Notes:**

Name: inputDisparityImage  
Class: CIImageMBS (CIImage)  
DisplayName English: DisparityImage  
DisplayName German: DisparityImage  
DisplayName French: DisparityImage  
DisplayName Italian: DisparityImage  
DisplayName Spanish: DisparityImage  
Type: CIAttributeTypePosition

See Attribute inputDisparityImage for more details.  
(Read and Write property)

52.71.22  inputFocusRect as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Focus Rectangle

**Notes:**

Name: inputFocusRect  
Class: CIVectorMBS (CIVector)  
DisplayName English: Focus Rectangle  
DisplayName German: Fokusrechteck  
DisplayName French: Rectangle de mise au point  
DisplayName Italian: Rettangolo di messa a fuoco  
DisplayName Spanish: Rectngulo focal  
Type: CIAttributeTypeRectangle

See Attribute inputFocusRect for more details.
52.71. **CLASS CIFILTERDEPTHBLUREFFECTMBS**

(Read and Write property)

52.71.23  **inputImage as CIImageMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image

**Notes:**

<table>
<thead>
<tr>
<th>Name</th>
<th>inputImage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class:</td>
<td>CIImageMBS (CIImage)</td>
</tr>
<tr>
<td>DisplayName English:</td>
<td>Image</td>
</tr>
<tr>
<td>DisplayName German:</td>
<td>Bild</td>
</tr>
<tr>
<td>DisplayName French:</td>
<td>Image</td>
</tr>
<tr>
<td>DisplayName Italian:</td>
<td>Immagine</td>
</tr>
<tr>
<td>DisplayName Spanish:</td>
<td>Imagen</td>
</tr>
<tr>
<td>Type:</td>
<td>CIAttributeTypeImage</td>
</tr>
</tbody>
</table>

See Attribute inputImage for more details.
(Read and Write property)

52.71.24  **inputLeftEyePositions as CIVectorMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Left Eye Positions

**Notes:**

<table>
<thead>
<tr>
<th>Name</th>
<th>inputLeftEyePositions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class:</td>
<td>CIVectorMBS (CIVector)</td>
</tr>
<tr>
<td>DisplayName English:</td>
<td>Left Eye Positions</td>
</tr>
<tr>
<td>DisplayName German:</td>
<td>Positionen der linken Augen</td>
</tr>
<tr>
<td>DisplayName French:</td>
<td>Positions de l'il gauche</td>
</tr>
<tr>
<td>DisplayName Italian:</td>
<td>Posizioni occhio sinistro</td>
</tr>
<tr>
<td>DisplayName Spanish:</td>
<td>Posiciones de ojo izquierdo</td>
</tr>
<tr>
<td>Type:</td>
<td>CIAttributeTypePosition</td>
</tr>
</tbody>
</table>

See Attribute inputLeftEyePositions for more details.
(Read and Write property)
52.71.25  **inputLumaNoiseScale as double**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Luma Noise Scale

**Notes:**
- Name: inputLumaNoiseScale
- Class: double (NSNumber)
- DisplayName English: Luma Noise Scale
- DisplayName German: Luma-Rauschen-Skalierung
- DisplayName French: chelle de bruit de luminance
- DisplayName Italian: Scala rumore di luminanza
- DisplayName Spanish: Escala de ruido de luminancia
- Type: CIAttributeTypeScalar

See Attribute inputLumaNoiseScale for more details.
(Read and Write property)

52.71.26  **inputNosePositions as CIVectorMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Nose Positions

**Notes:**
- Name: inputNosePositions
- Class: CIVectorMBS (CIVector)
- DisplayName English: Nose Positions
- DisplayName German: Nasenpositionen
- DisplayName French: Positions du nez
- DisplayName Italian: Posizioni naso
- DisplayName Spanish: Posiciones de nariz
- Type: CIAttributeTypePosition

See Attribute inputNosePositions for more details.
(Read and Write property)

52.71.27  **inputRightEyePositions as CIVectorMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Right Eye Positions

**Notes:**
### 52.71. CLASS CIFILTERDEPTHBLUREFFECTMBS

<table>
<thead>
<tr>
<th>Name:</th>
<th>inputRightEyePositions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class:</td>
<td>CIVectorMBS (CIVector)</td>
</tr>
<tr>
<td>DisplayName English:</td>
<td>Right Eye Positions</td>

<tr>
<td>DisplayName French:</td>
<td>Positions de l’œil droit</td>
</tr>
<tr>
<td>DisplayName Italian:</td>
<td>Posizioni occhio destro</td>
</tr>
<tr>
<td>DisplayName Spanish:</td>
<td>Posiciones de ojo derecho</td>
</tr>
<tr>
<td>Type:</td>
<td>CIAttributeTypePosition</td>
</tr>
</tbody>
</table>

See AttributeinputRightEyePositions for more details.
(Read and Write property)

### 52.71.28 inputScaleFactor as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Scale Factor

**Notes:**

<table>
<thead>
<tr>
<th>Name:</th>
<th>inputScaleFactor</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class:</td>
<td>double (NSNumber)</td>
</tr>
<tr>
<td>DisplayName English:</td>
<td>Scale Factor</td>
</tr>
<tr>
<td>DisplayName German:</td>
<td>Skalierungsfaktor</td>
</tr>
<tr>
<td>DisplayName French:</td>
<td>Facteur d’échelle</td>
</tr>
<tr>
<td>DisplayName Italian:</td>
<td>Fattore di scala</td>
</tr>
<tr>
<td>DisplayName Spanish:</td>
<td>Factor de escala</td>
</tr>
<tr>
<td>Type:</td>
<td>CIAttributeTypeScalar</td>
</tr>
</tbody>
</table>

See AttributeinputScaleFactor for more details.
(Read and Write property)
52.72  class CIFilterDepthOfFieldMBS

52.72.1  class CIFilterDepthOfFieldMBS

Notes:

Details for this filter:

FilterName:          CIDepthOfField
DisplayName English: Depth of Field
DisplayName German:  Schrfentiefe
DisplayName French:  Profondeur de champ
DisplayName Italian: Profondit di campo
DisplayName Spanish: Profundidad de campo

Categories:

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputPoint0: Point 0
- inputPoint1: Point 1
- inputSaturation: Saturation
- inputUnsharpMaskRadius: Unsharp Mask Radius
- inputUnsharpMaskIntensity: Unsharp Mask Intensity
- inputRadius: Radius

Output:
Subclass of the CIFilterMBS class.

### 52.72.2 Methods

#### 52.72.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

### 52.72.4 Properties

#### 52.72.5 Attribute `inputImage` as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Depth of Field attribute.
**Notes:**
This attribute should have this content:

<table>
<thead>
<tr>
<th>Name</th>
<th>inputImage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class</td>
<td>CIImageMBS</td>
</tr>
<tr>
<td>Type</td>
<td>CIAttributeTypeImage</td>
</tr>
<tr>

<tr>
<td>DisplayName Spanish</td>
<td>Imagen</td>
</tr>
<tr>
<td>DefaultNumber</td>
<td>0</td>
</tr>
<tr>
<td>IdentityNumber</td>
<td>0</td>
</tr>
</tbody>
</table>

(Read only property)

#### 52.72.6 Attribute `inputPoint0` as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Depth of Field attribute.
**Notes:**
This attribute should have this content:

<table>
<thead>
<tr>
<th>Name:</th>
<th>inputPoint0</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class:</td>
<td>CIVectorMBS</td>
</tr>
<tr>
<td>Type:</td>
<td>CIAttributeTypePosition</td>

<tr>
<td>DisplayName Italian:</td>
<td>Punto 1</td>
</tr>
<tr>
<td>DisplayName Spanish:</td>
<td>Punto 1</td>
</tr>
<tr>
<td>Default Vector:</td>
<td>[ 300 300 ]</td>
</tr>
<tr>
<td>Identity Vector:</td>
<td>n/a</td>
</tr>
</tbody>
</table>

(Read only property)

### 52.72.8 Attribute inputRadius as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Depth of Field attribute.

**Notes:**
52.72. **CLASS CIFILTERDEPTHOFFIELDMBS**

This attribute should have this content:

- **Name:** inputRadius
- **Class:** double
- **Type:** CIAttributeTypeScalar
- **DisplayName English:** Radius
- **DisplayName German:** Radius
- **DisplayName French:** Rayon
- **DisplayName Italian:** Raggio
- **DisplayName Spanish:** Radio
- **DefaultNumber:** 6
- **IdentityNumber:** 0
- **SliderMaxNumber:** 30
- **SliderMinNumber:** 0

(Read only property)

52.72.9 **Attribute inputSaturation as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

Details about the Depth of Field attribute.

**Notes:**

This attribute should have this content:

- **Name:** inputSaturation
- **Class:** double
- **Type:** CIAttributeTypeScalar
- **DisplayName English:** Saturation
- **DisplayName German:** Sttigung
- **DisplayName French:** Saturation
- **DisplayName Italian:** Saturazione
- **DisplayName Spanish:** Saturacin
- **DefaultNumber:** 1.5
- **IdentityNumber:** 0
- **SliderMaxNumber:** 10
- **SliderMinNumber:** 0

(Read only property)
52.72.10  Attribute inputUnsharpMaskIntensity as CIAttributeMBS

Notes:
This attribute should have this content:

Name: inputUnsharpMaskIntensity
Class: double
Type: CIAttributeTypeScalar
DisplayName English: Unsharp Mask Intensity
DisplayName German: Intensität von Unschärfe maskieren
DisplayName French: Intensité du masque flou
DisplayName Italian: Intensità maschera di contrasto
DisplayName Spanish: Intensidad de la mascara de desenfoque
DefaultNumber: 0.5
IdentityNumber: 0
SliderMaxNumber: 10
SliderMinNumber: 0

(Read only property)

52.72.11  Attribute inputUnsharpMaskRadius as CIAttributeMBS

Notes:
This attribute should have this content:

(Read only property)

52.72.12  inputImage as CIImageMBS

Notes:
See Attribute inputImage for more details.
(Read and Write property)
52.72. **CLASS CIFILTERDEPTHOFFIELDMBS**

Name: inputUnsharpMaskRadius
Class: double
Type: CIAttributeTypeScalar
DisplayName English: Unsharp Mask Radius
DisplayName German: Radius von Unscharf maskieren
DisplayName French: Rayon du masque flou
DisplayName Italian: Raggio maschera di contrasto
DisplayName Spanish: Radio de la mscara de desenfoque
DefaultNumber: 2.5
IdentityNumber: 0
SliderMaxNumber: 10
SliderMinNumber: 0

Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

### 52.72.13 inputPoint0 as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Point 0

**Notes:**

Name: inputPoint0
Class: CIVectorMBS (CIVector)
DisplayName English: Point 0
DisplayName German: Punkt 0
DisplayName French: Point0
DisplayName Italian: Punto 0
DisplayName Spanish: Punto 0
Type: CIAttributeTypePosition

See Attribute inputPoint0 for more details.
(Read and Write property)
52.72.14  inputPoint1 as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Point 1

**Notes:**

- Name: inputPoint1
- Class: CIVectorMBS (CIVector)
- DisplayName English: Point 1
- DisplayName German: Punkt 1
- DisplayName French: Point 1
- DisplayName Italian: Punto 1
- DisplayName Spanish: Punto 1
- Type: CIAttributeTypePosition

See Attribute inputPoint1 for more details.
(Read and Write property)

52.72.15  inputRadius as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Radius

**Notes:**

- Name: inputRadius
- Class: double (NSNumber)
- DisplayName English: Radius
- DisplayName German: Radius
- DisplayName French: Rayon
- DisplayName Italian: Raggio
- DisplayName Spanish: Radio
- Type: CIAttributeTypeScalar

See Attribute inputRadius for more details.
(Read and Write property)

52.72.16  inputSaturation as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Saturation

**Notes:**
Name: inputSaturation
Class: double (NSNumber)
DisplayName English: Saturation
DisplayName German: Sttigung
DisplayName French: Saturation
DisplayName Italian: Saturazione
DisplayName Spanish: Saturacin
Type: CIAttributeTypeScalar

See Attribute inputSaturation for more details.
(Read and Write property)

52.72.17 inputUnsharpMaskIntensity as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Unsharp Mask Intensity
**Notes:**
Name: inputUnsharpMaskIntensity
Class: double (NSNumber)
DisplayName English: Unsharp Mask Intensity
DisplayName German: Intensitt von Unscharf maskieren
DisplayName French: Intensit du masque flou
DisplayName Italian: Intensit maschera di contrasto
DisplayName Spanish: Intensidad de la mascara de desenfoque
Type: CIAttributeTypeScalar

See Attribute inputUnsharpMaskIntensity for more details.
(Read and Write property)

52.72.18 inputUnsharpMaskRadius as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Unsharp Mask Radius
**Notes:**
See Attribute inputUnsharpMaskRadius for more details.
(Read and Write property)

52.73. class CIFilterDepthToDisparityMBS

52.73.1 class CIFilterDepthToDisparityMBS

Notes:
Details for this filter:

FilterName: CIDepthToDisparity
DisplayName English: Depth To Disparity
DisplayName German: Tiefe zu Abweichung
DisplayName French: Profondeur en disparité
DisplayName Italian: Da profondità a disparità
DisplayName Spanish: De profundidad a disparidad

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.
52.73.2 Methods

52.73.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor. **Notes:** On success the handle property is not zero and the filter has the default values set.

52.73.4 Properties

52.73.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Depth To Disparity attribute. **Notes:** This attribute should have this content:

Name: inputImage  
Class: CIImageMBS  
Type: CIAttributeTypeImage  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
DefaultNumber: 0  
IdentityNumber: 0

(Read only property)

52.73.6 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image. **Notes:** See Attribute inputImage for more details. (Read and Write property)

52.74 class CIFilterDifferenceBlendModeMBS

52.74.1 class CIFilterDifferenceBlendModeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Difference Blend Mode filter.

**Notes:**
Details for this filter:

| FilterName: | CIDifferenceBlendMode |
| DisplayName English: | Difference Blend Mode |
| DisplayName German: | Mischmethode Differenz |
| DisplayName French: | Mode de fusion Diffrence |
| DisplayName Italian: | Modalit sfumatura differenza |
| DisplayName Spanish: | Diferenciar modo de mezcla |

**Categories:**
- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

**Input:**
- inputImage: Image
- inputBackgroundImage: Background Image

**Output:**
- outputImage

Subclass of the CIFilterMBS class.
52.74.2 Methods

52.74.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.74.4 Properties

52.74.5 Attribute inputBackgroundImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Difference Blend Mode attribute.
**Notes:**
This attribute should have this content:

CHAPTER 52. COREIMAGE

52.76 class CIFilterDisintegrateWithMaskTransitionMBS

52.76.1 class CIFilterDisintegrateWithMaskTransitionMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Disintegrate With Mask filter.

**Notes:**

Details for this filter:

FilterName: CIDisintegrateWithMaskTransition

DisplayName English: Disintegrate With Mask

DisplayName German: bergang mit Maske

DisplayName French: Dsintgrer avec masque

DisplayName Italian: Disintegra con maschera

DisplayName Spanish: Desintegrar con mascara

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputMaskImage: Mask Image
- inputTime: Time
- inputShadowRadius: Shadow Radius
- inputShadowDensity: Shadow Density
- inputShadowOffset: Shadow Offset

Output:
• outputImage

Subclass of the CIFilterMBS class.

### 52.76.2 Methods

### 52.76.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

### 52.76.4 Properties

### 52.76.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Disintegrate With Mask attribute.
**Notes:**
This attribute should have this content:

### 52.76.6 Attribute inputMaskImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Disintegrate With Mask attribute.
**Notes:**
This attribute should have this content:

Name: inputMaskImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Mask Image
DisplayName German: Maske
DisplayName French: Image du masque
DisplayName Italian: Immagine maschera
DisplayName Spanish: Imagen de mascara
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

52.76.7 Attribute inputShadowDensity as CIAttributeMBS

Notes:
This attribute should have this content:

Name: inputShadowDensity
Class: double
Type: CIAttributeTypeScalar
DisplayName English: Shadow Density
DisplayName German: Schattendichte
DisplayName French: Densité de l'ombre
DisplayName Italian: Densità ombra
DisplayName Spanish: Densidad del sombreado
DefaultNumber: 0.65
IdentityNumber: 0
MaxNumber: 1
MinNumber: 0
SliderMaxNumber: 1
SliderMinNumber: 0

(Read only property)
52.76.8 Attribute inputShadowOffset as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Disintegrate With Mask attribute. **Notes:**

This attribute should have this content:

Name: inputShadowOffset  
Class: CIVectorMBS  
Type: CIAttributeTypeOffset  
DisplayName English: Shadow Offset  
DisplayName German: Schattenabstand  
DisplayName French: Dcalage de lombre  
DisplayName Italian: Offset ombra  
DisplayName Spanish: Proyeccion del sombreado  
DefaultVector: [ 0 -10 ]  
IdentityVector: [ 0 0 ]

(Read only property)

52.76.9 Attribute inputShadowRadius as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Disintegrate With Mask attribute. **Notes:**

This attribute should have this content:

Name: inputShadowRadius  
Class: double  
Type: CIAttributeTypeDistance  
DisplayName English: Shadow Radius  
DisplayName German: Schattenradius  
DisplayName French: Rayon de lombre  
DisplayName Italian: Raggio dell’ombra  
DisplayName Spanish: Radio del sombreado  
DefaultNumber: 8  
IdentityNumber: 0  
SliderMaxNumber: 50  
SliderMinNumber: 0

(Read only property)
52.76.10  Attribute inputTargetImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Disintegrate With Mask attribute.

**Notes:**
This attribute should have this content:

Name: inputTargetImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Target Image
DisplayName German: Zielbild
DisplayName French: Image cible
DisplayName Italian: Immagine target
DisplayName Spanish: Imagen de destino
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

52.76.11  Attribute inputTime as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Disintegrate With Mask attribute.

**Notes:**
This attribute should have this content:

(Read only property)

52.76.12  inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image

**Notes:**
See Attribute inputImage for more details.
(Read and Write property)
52.76. CLASS CIFILTERDISINTEGRATEWITHMASKTRANSITIONMBS

Name: inputTime
Class: double
Type: CIAtributeTypeTime
DisplayName English: Time
DisplayName German: Zeit
DisplayName French: Dure
DisplayName Italian: Tempo
DisplayName Spanish: Tiempo
DefaultNumber: 0
IdentityNumber: 0
MaxNumber: 1
MinNumber: 0
SliderMaxNumber: 1
SliderMinNumber: 0

Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen

52.76.13 inputMaskImage as CIImageMBS

Notes:

Name: inputMaskImage
Class: CIImageMBS (CIImage)
DisplayName English: Mask Image
DisplayName German: Maske
DisplayName French: Image du masque
DisplayName Italian: Immagine maschera
DisplayName Spanish: Imagen de mascara
Type: CIAtributeTypeImage

See Attribute inputMaskImage for more details.
(Read and Write property)
52.76.14  inputShadowDensity as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Shadow Density
**Notes:**
- Name: inputShadowDensity
- Class: double (NSNumber)
- DisplayName English: Shadow Density
- DisplayName German: Schattendichte
- DisplayName French: Densité de lombre
- DisplayName Italian: Densità ombra
- DisplayName Spanish: Densidad del sombreado
- Type: CIAttributeTypeScalar

See Attribute inputShadowDensity for more details.
(Read and Write property)

52.76.15  inputShadowOffset as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Shadow Offset
**Notes:**
- Name: inputShadowOffset
- Class: CIVectorMBS (CIVector)
- DisplayName English: Shadow Offset
- DisplayName German: Schattenabstand
- DisplayName French: Décalage de lombre
- DisplayName Italian: Offset ombra
- DisplayName Spanish: Proyección del sombreado
- Type: CIAttributeTypeOffset

See Attribute inputShadowOffset for more details.
(Read and Write property)

52.76.16  inputShadowRadius as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Shadow Radius
**Notes:**
52.76. **CLASS CIFILTERDISINTEGRATEWITHMASKTRANSITIONMBS**

Name: inputShadowRadius  
Class: double (NSNumber)  
DisplayName English: Shadow Radius  
DisplayName German: Schattenradius  
DisplayName French: Rayon de lombre  
DisplayName Italian: Raggio dell’ombra  
DisplayName Spanish: Radio del sombreado  
Type: CIAttributeTypeDistance

See Attribute inputShadowRadius for more details.  
(Read and Write property)

### 52.76.17 inputTargetImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Target Image  
Notes:

Name: inputTargetImage  
Class: CIImageMBS (CIImage)  
DisplayName English: Target Image  
DisplayName German: Zielbild  
DisplayName French: Image cible  
DisplayName Italian: Immagine target  
DisplayName Spanish: Imagen de destino  
Type: CIAttributeTypeImage

See Attribute inputTargetImage for more details.  
(Read and Write property)

### 52.76.18 inputTime as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Time  
Notes:

See Attribute inputTime for more details.  
(Read and Write property)

**CLASS CIFILTERDISPARITYTODEPTHMBS**

### 52.77 class CIFilterDisparityToDepthMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Disparity To Depth filter.

**Notes:**

Details for this filter:

- **FilterName:** CIDisparityToDepth
- **DisplayName English:** Disparity To Depth
- **DisplayName German:** Abweichung zu Tiefe
- **DisplayName French:** Disparit en profondeur
- **DisplayName Italian:** Da disparit a profondit
- **DisplayName Spanish:** De disparidad a profundidad

**Categories:**

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.77.2 Methods

52.77.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.77.4 Properties

52.77.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Disparity To Depth attribute.
**Notes:**
This attribute should have this content:

- **Name:** inputImage
- **Class:** CIImageMBS
- **Type:** CIAttributeTypeImage
- **DisplayName English:** Image
- **DisplayName German:** Bild
- **DisplayName French:** Image
- **DisplayName Italian:** Immagine
- **DisplayName Spanish:** Imagen
- **DefaultNumber:** 0
- **IdentityNumber:** 0

(Read only property)

52.77.6 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image
**Notes:**
See Attribute inputImage for more details.
(Read and Write property)
Name: inputImage
Class: CIImageMBS (CIImage)

DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage
52.78 class CIFilterDisplacementDistortionMBS

52.78.1 class CIFilterDisplacementDistortionMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Displacement Distortion filter.

**Notes:**
Details for this filter:

- **FilterName:** CIDisplacementDistortion
- **DisplayName English:** Displacement Distortion
- **DisplayName German:** Verzerrung Verdrängung
- **DisplayName French:** Dformation Dplacement
- **DisplayName Italian:** Distorsione spostamento
- **DisplayName Spanish:** Distorsión de desplazamiento

**Categories:**
- **CICategoryDistortionEffect:** Distortion Effect
- **CICategoryVideo:** Video
- **CICategoryStillImage:** Still Image
- **CICategoryBuiltIn:** Built-In

**Input:**
- **inputImage:** Image
- **inputDisplacementImage:** Displacement Image
- **inputScale:** Scale

**Output:**
- **outputImage**

Subclass of the CIFilterMBS class.
52.78.2 Methods

52.78.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.78.4 Properties

52.78.5 Attribute `inputDisplacementImage` as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Displacement Distortion attribute.
**Notes:**
This attribute should have this content:

- Name: `inputDisplacementImage`
- Class: CIImageMBS
- DisplayName English: Displacement Image
- DisplayName German: Bildverschiebung
- DisplayName French: Image du déplacement
- DisplayName Italian: Immagine spostamento
- DisplayName Spanish: Imagen de desplazamiento
- DefaultNumber: 0
- IdentityNumber: 0

52.78.6 Attribute `inputImage` as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Displacement Distortion attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.78.7  **Attribute inputScale as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Displacement Distortion attribute.

**Notes:**

This attribute should have this content:

Name:    inputScale  
Class:    double  
Type:    CIAttributeTypeDistance  
DisplayName English:    Scale  
DisplayName German:    Skalierung  
DisplayName French:    Chelle  
DisplayName Italian:    Scala  
DisplayName Spanish:    Escala  
DefaultNumber:    50  
IdentityNumber:    0  
SliderMaxNumber:    200  
SliderMinNumber:    0

(Read only property)

52.78.8  **inputDisplacementImage as CIImageMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Displacement Image

**Notes:**

See Attribute inputDisplacementImage for more details.

(Read and Write property)
Name: inputDisplacementImage
Class: CIImageMBS (CIImage)
DisplayName English: Displacement Image
DisplayName German: Bildverschiebung
DisplayName French: Image du dplacement
DisplayName Italian: Immagine spostamento
DisplayName Spanish: Imagen de desplazamiento

52.78.9  inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image

**Notes:**

Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

(Read and Write property)

52.78.10  inputScale as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Scale

**Notes:**

Name: inputScale
Class: double (NSNumber)
DisplayName English: Scale
DisplayName German: Skalierung
DisplayName French: Chelle
DisplayName Italian: Scala
DisplayName Spanish: Escala
Type: CIAttributeTypeDistance

See Attribute inputScale for more details.
(Read and Write property)
52.79. class CIFilterDissolveTransitionMBS

52.79.1 class CIFilterDissolveTransitionMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Dissolve filter. **Notes:**

Details for this filter:

FilterName: CIDissolveTransition
DisplayName English: Dissolve
DisplayName German: berblenden
DisplayName French: Dissoudre
DisplayName Italian: Dissolvenza
DisplayName Spanish: Disolucin

Categories:

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputTargetImage: Target Image
- inputTime: Time

Output:

- outputImage

Subclass of the CIFilterMBS class.
52.79.2 Methods

52.79.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.79.4 Properties

52.79.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Dissolve attribute.

52.80.1  class CIFilterDivideBlendModeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Divide Blend Mode filter.

**Notes:**
Details for this filter:

- **FilterName:** CIDivideBlendMode
- **DisplayName English:** Divide Blend Mode
- **DisplayName German:** Mischmethode Teilen
- **DisplayName French:** Mode de fusion Diviser
- **DisplayName Italian:** Modalit sfumatura dissolvenza
- **DisplayName Spanish:** Dividir modo de mezcla

**Categories:**

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputBackgroundImage: Background Image

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.80.2 Methods

52.80.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.80.4 Properties

52.80.5 Attribute inputBackgroundImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Divide Blend Mode attribute.
**Notes:**
This attribute should have this content:

```
Name: inputBackgroundImage

52.81.1 class CIFilterDotScreenMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Dot Screen filter.

**Notes:**

Details for this filter:

FilterName: CIDotScreen

DisplayName English: Dot Screen
DisplayName German: Punktfrmiges Halbtonraster
DisplayName French: cran en pointill
DisplayName Italian: Schermo a punti
DisplayName Spanish: Pantalla punteada

Categories:

- CICategoryHalftoneEffect: Halftone Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width
- inputSharpness: Sharpness

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.81.2 Methods

52.81.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.81.4 Properties

52.81.5 Attribute inputAngle as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Dot Screen attribute.
**Notes:**
This attribute should have this content:

- **Name:** inputAngle
- **Class:** double
- **Type:** CIAttributeTypeAngle
- **DisplayName English:** Angle
- **DisplayName German:** Winkel
- **DisplayName French:** Angle
- **DisplayName Italian:** Angolo
- **DisplayName Spanish:** angulo

52.83.10  **inputLumaSigma as double**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Luma Sigma

**Notes:**

See Attribute inputLumaSigma for more details.
(Read and Write property)
**52.83. CLASS CIFILTEREDGEPRESERVEUPSAMPLEFILTERMBS**

- **Name:** inputLumaSigma
- **Class:** double (NSNumber)
- **DisplayName**
  - English: Luma Sigma
  - German: Luma-Sigma
  - French: Sigma de la luminance
  - Italian: Sigma luminanza
  - Spanish: Desviación estándar sigma de luminancia
- **Type:** CIAttributeTypeScalar

**52.83.11 inputSmallImage as CIImageMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Small Image **Notes:**

- **Name:** inputSmallImage
- **Class:** CIImageMBS (CIImage)
- **DisplayName**
  - English: Small Image
  - German: Kleines Bild
  - French: Petite image
  - Italian: Immagine di dimensioni ridotte
  - Spanish: Imagen pequeña
- **Type:**

See Attribute inputSmallImage for more details. (Read and Write property)

**52.83.12 inputSpatialSigma as double**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Spatial Sigma **Notes:**

- **Name:** inputSpatialSigma
- **Class:** double (NSNumber)
- **DisplayName**
  - English: Spatial Sigma
  - German: Räumliches Sigma
  - French: Sigma spatial
  - Italian: Sigma spaziale
  - Spanish: Desviación estándar sigma espacial
- **Type:** CIAttributeTypeScalar

See Attribute inputSpatialSigma for more details.

52.84. CLASS CIFILTEREDGESMBS

52.84 class CIFilterEdgesMBS

52.84.1 class CIFilterEdgesMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Edges filter. 

**Notes:**

Details for this filter:

- **FilterName:** CIEdges
- **DisplayName English:** Edges
- **DisplayName German:** Kanten
- **DisplayName French:** Contours
- **DisplayName Italian:** Estremit
- **DisplayName Spanish:** Bordes

**Categories:**

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputIntensity: Intensity

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.84.2 Methods

52.84.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.84.4 Properties

52.84.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Edges attribute.
**Notes:**
This attribute should have this content:

CHAPTER 52. COREIMAGE

52.90 class CIFilterFlashTransitionMBS

52.90.1 class CIFilterFlashTransitionMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Flash filter.

**Notes:**
Details for this filter:

- **FilterName:** CIFlashTransition
- **DisplayName English:** Flash
- **DisplayName German:** Blinken
- **DisplayName French:** Flash
- **DisplayName Italian:** Flash
- **DisplayName Spanish:** Flash

**Categories:**

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- **inputImage:** Image
- **inputTargetImage:** Target Image
- **inputCenter:** Center
- **inputExtent:** Extent
- **inputColor:** Color
- **inputTime:** Time
- **inputMaxStriationRadius:** Maximum Striation Radius
- **inputStriationStrength:** Striation Strength
- **inputStriationContrast:** Striation Contrast
- **inputFadeThreshold:** Fade Threshold
52.90. CLASS CIFILTERFLASHTRANSITIONMBS

Output:

- outputImage

Subclass of the CIFilterMBS class.

52.90.2 Methods

52.90.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.  
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.90.4 Properties

52.90.5 Attribute inputCenter as CIAtributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Flash attribute.  
**Notes:** This attribute should have this content:

Name: inputCenter  
Class: CIVectorMBS  
Type: CIAtributeTypePosition  
DisplayName English: Center  
DisplayName German: Mitte  
DisplayName French: Centre  
DisplayName Italian: Centro  
DisplayName Spanish: Centro  
DefaultVector: [ 150 150 ]  
IdentityVector: n/a

IdentityNumber: 100
SliderMaxNumber: 200
SliderMinNumber: 1

(Read only property)

52.92.9  inputAngle as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Angle

**Notes:**

Name: inputAngle
Class: double (NSNumber)
DisplayName English: Angle
DisplayName German: Winkel
DisplayName French: Angle
DisplayName Italian: Angolo
DisplayName Spanish: ngulo
Type: CIAttributeTypeAngle

See AttributeinputAngle for more details.
(Read and Write property)

52.92.10  inputCenter as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Center

**Notes:**
See AttributeinputCenter for more details.
52.92. **CLASS CIFILTERFOURFOLDROTATEDTILEMBS**

Name: inputCenter
Class: CIVectorMBS (CIVector)
DisplayName English: Center
DisplayName German: Mitte
DisplayName French: Centre
DisplayName Italian: Centro
DisplayName Spanish: Centro
Type: CIAtributeTypePosition

(Read and Write property)

52.92.11 **inputImage as CIImageMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image

Notes:

Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAtributeTypeImage

See AttributeinputImage for more details.

(Read and Write property)

52.92.12 **inputWidth as double**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Width

Notes:

See AttributeinputWidth for more details.

52.93. class CIFilterFourfoldTranslatedTileMBS

52.93.1 class CIFilterFourfoldTranslatedTileMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Fourfold Translated Tile filter.

**Notes:**
Details for this filter:

- FilterName: CIFourfoldTranslatedTile
- DisplayName English: Fourfold Translated Tile
- DisplayName German: 4-fach bersetzte Kachel
- DisplayName French: Mosaque dplace 4 fois
- DisplayName Italian: Mosaico traslato in quattro direzioni
- DisplayName Spanish: Mosaico desplazado cuatro veces

**Categories:**
- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**
- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width
- inputAcuteAngle: Acute Angle

**Output:**
- outputImage

Subclass of the CIFilterMBS class.
52.93.2 Methods

52.93.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.93.4 Properties

52.93.5 Attribute `inputAcuteAngle` as `CIAttributeMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Fourfold Translated Tile attribute.
**Notes:**
This attribute should have this content:

Name: `inputAcuteAngle`
Class: `double`
Type: `CIAttributeTypeAngle`
DisplayName English: Acute Angle
DisplayName German: Spitzer Winkel
DisplayName French: Angle aigu
DisplayName Italian: Angolo acuto
DisplayName Spanish: ngulo agudo
DefaultNumber: 1.570796
IdentityNumber: 1.570796
SliderMaxNumber: 3.141593
SliderMinNumber: -3.141593

(Read only property)

52.93.6 Attribute `inputAngle` as `CIAttributeMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Fourfold Translated Tile attribute.
**Notes:**
This attribute should have this content:

### 52.93.8 Attribute inputImage as CIAttributeMBS

**MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.**  
**Function:**  
Details about the Fourfold Translated Tile attribute.  
**Notes:**
52.93.9 Attribute inputWidth as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Details about the Fourfold Translated Tile attribute.
Notes:
This attribute should have this content:

Name: inputWidth
Class: double
Type: CIAttributeTypeDistance
DisplayName English: Width
DisplayName German: Breite
DisplayName French: Largeur
DisplayName Italian: Larghezza
DisplayName Spanish: Ancha
DefaultNumber: 100
IdentityNumber: 100
SliderMaxNumber: 200
SliderMinNumber: 1

(Read only property)
52.93.10  \textbf{inputAcuteAngle as double}

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. \textbf{Function:}
The attribute Acute Angle

\textbf{Notes:}

Name: \texttt{inputAcuteAngle}
Class: double (NSNumber)
DisplayName English: Acute Angle
DisplayName German: Spitzer Winkel
DisplayName French: Angle aigu
DisplayName Italian: Angolo acuto
DisplayName Spanish: ngulo agudo
Type: CIAttributeTypeAngle

See Attribute\texttt{inputAcuteAngle} for more details.
(Read and Write property)

52.93.11  \textbf{inputAngle as double}

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. \textbf{Function:}
The attribute Angle

\textbf{Notes:}

Name: \texttt{inputAngle}
Class: double (NSNumber)
DisplayName English: Angle
DisplayName German: Winkel
DisplayName French: Angle
DisplayName Italian: Angolo
DisplayName Spanish: ngulo
Type: CIAttributeTypeAngle

See Attribute\texttt{inputAngle} for more details.
(Read and Write property)

52.93.12  \textbf{inputCenter as CIVectorMBS}

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. \textbf{Function:}
The attribute Center

\textbf{Notes:}
Name: inputCenter
Class: CIVectorMBS (CIVector)
DisplayName English: Center
DisplayName German: Mitte
DisplayName French: Centre
DisplayName Italian: Centro
DisplayName Spanish: Centro
Type: CIAttributeTypePosition

See Attribute inputCenter for more details.
(Read and Write property)

52.93.13 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The attribute Image
 Notes:
Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen

52.94 class CIFilterGammaAdjustMBS

52.94.1 class CIFilterGammaAdjustMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Gamma Adjust filter.

**Notes:**

Details for this filter:

- **FilterName:** CIGammaAdjust
- **DisplayName English:** Gamma Adjust
- **DisplayName German:** Gamma anpassen
- **DisplayName French:** Ajustement gamma
- **DisplayName Italian:** Regolazione gamma
- **DisplayName Spanish:** Ajuste de gama

**Categories:**

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputPower: Power

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.94.2  Methods

52.94.3  Constructor

Notes: On success the handle property is not zero and the filter has the default values set.

52.94.4  Properties

52.94.5  Attribute inputImage as CIAttributeMBS

Notes:
This attribute should have this content:

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

52.94.6  Attribute inputPower as CIAttributeMBS

Notes:
This attribute should have this content:

(Read only property)
Name: inputPower
Class: double
Type: CIAttributeTypeScalar
DisplayName English: Power
DisplayName German: Strike
DisplayName French: Puissance
DisplayName Italian: Energia
DisplayName Spanish: Alimentación
DefaultNumber: 0.75
IdentityNumber: 1
SliderMaxNumber: 4
SliderMinNumber: 0.25

52.94.7 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image

**Notes:**

Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

52.94.8 inputPower as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Power

**Notes:**

See AttributeinputPower for more details.
(Read and Write property)
Name: inputPower
Class: double (NSNumber)
DisplayName English: Power
DisplayName German: Strke
DisplayName French: Puissance
DisplayName Italian: Energia
DisplayName Spanish: Alimentacin
Type: CIAttributeTypeScalar
52.95 class CIFilterGaussianBlurMBS

52.95.1 class CIFilterGaussianBlurMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Gaussian Blur filter.

**Example:**

```plaintext
dim CIFilter as new CIFilterGaussianBlurMBS
dim ROIpic as Picture = LogoMBS(500)
dim CGImage as CGImageMBS = CGCreateImageMBS(ROIpic)
dim ciimage as CIImageMBS = NewCIImageWithCGImageMBS(CGImage)
CIFilter.inputImage = CIImage
 CIFilter.inputRadius = 10 //the property which holds the blur radius

dim result as CIImageMBS = cifilter.outputImage

dim r as Picture = result.RenderPicture

window1.Backdrop = r
```

**Notes:**

Details for this filter:

- **FilterName:** CIGaussianBlur
- **DisplayName English:** Gaussian Blur
- **DisplayName German:** Gausche Unschrfe
- **DisplayName French:** Flou gaussien
- **DisplayName Italian:** Sfumatura gaussiana
- **DisplayName Spanish:** Difuminado gaussiano

**Categories:**

- CICategoryBlur: Blur
- CICategoryStillImage: Still Image
- CICategoryVideo: Video
- CICategoryBuiltIn: Built-In

**Input:**
Class CIFilterGaussianBlurMBS

- inputImage: Image
- inputRadius: Radius

Output:

- outputImage

Warning: Due to the blur, the output image may be bigger, so you need to crop space on the border to get back to old size.
Subclass of the CIFilterMBS class.

52.95.2 Methods

52.95.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.95.4 Properties

52.95.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Gaussian Blur attribute.
**Notes:**
This attribute should have this content:

<table>

See Attribute inputRadius for more details.
(Read and Write property)
52.96 class CIFilterGaussianGradientMBS

52.96.1 class CIFilterGaussianGradientMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Gaussian Gradient filter.

**Notes:**
Details for this filter:

- **FilterName:** CIGaussianGradient
- **DisplayName English:** Gaussian Gradient
- **DisplayName German:** Dgrad gaussien
- **DisplayName French:** Gradiente gaussiano
- **DisplayName Italian:** Degradado gaussiano

**Categories:**

- CICategoryGradient: Gradient
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputCenter: Center
- inputColor0: Color 1
- inputColor1: Color 2
- inputRadius: Radius

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.96.2 Methods

52.96.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.96.4 Properties

52.96.5 Attribute inputCenter as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Gaussian Gradient attribute.
**Notes:** This attribute should have this content:

Name: inputCenter  
Class: CIVectorMBS  
Type: CIAttributeTypePosition  
DisplayName English: Center  
DisplayName German: Mitte  
DisplayName French: Centre  
DisplayName Italian: Centro  
DisplayName Spanish: Centro

DisplayName English: Color 1
DisplayName German: Farbe 1
DisplayName French: Couleur 1
DisplayName Italian: Colore 1
DisplayName Spanish: Color 1
Type: CIAttributeTypeColor

52.96.11 inputColor1 as CIColorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Color 2

**Notes:**

Name: inputColor1
Class: CIColorMBS (CIColor)
DisplayName English: Color 2
DisplayName German: Farbe 2
DisplayName French: Couleur 2
DisplayName Italian: Colore 2
DisplayName Spanish: Color 2
Type: CIAttributeTypeColor

See Attribute inputColor1 for more details. (Read and Write property)

52.96.12 inputRadius as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Radius

**Notes:**

Name: inputRadius
Class: double (NSNumber)
DisplayName English: Radius
DisplayName German: Radius
DisplayName French: Rayon
DisplayName Italian: Raggio
DisplayName Spanish: Radio
Type: CIAttributeTypeDistance

See Attribute inputRadius for more details.
52.96. CLASS CIFILTERGAUSSIANGRADIENTMBS

(Read and Write property)
52.97  class CIFilterGeneratorMBS

52.97.1  class CIFilterGeneratorMBS

**Function:** An object that creates and configures chains of individual image filters. 

**Notes:** 

The CIFilterGenerator class provides methods for creating a CIFilter object by chaining together existing 
CIFilter objects to create complex effects. (A filter chain refers to the CIFilter objects that are connected in 
the CIFilterGenerator object.) The complex effect can be encapsulated as a CIFilterGenerator object and 
saved as a file so that it can be used again. The filter generator file contains an archived instance of all the 
CIFilter objects that are chained together.

Any filter generator files that you copy to /Library/Graphics/Image Units/ are loaded when any of the 
loading methods provided by the CIPlugIn class are invoked. A CIFilterGenerator object is registered by 
its filename or, if present, by a class attribute that you supply in its description.

You can create a CIFilterGenerator object programmatically, using the methods provided by the CIFilter-
Generator class, or by using the editor view provided by Core Image (see CIFilter Image Kit Additions).

52.97.2  Methods

52.97.3  connectObject(sourceObject as Variant, sourceKey as string, targetO-
object as Variant, targetKey as String)

**Function:** Adds an object to the filter chain. 

**Notes:** 

sourceObject: A CIFilterMBS object, a CIImageMBS object, or a the path (an string or folderitem object) 
to an image. 

sourceKey: The key that specifies the source object. For example, if the source is the output image of a 
filter, pass the outputImage key. Pass nil if the source object is used directly.

targetObject: The object that to link the source object to. 

targetKey: The key that specifies the target for the source. For example, if you are connecting the source 
to the input image of a CIFilterMBS object, you would pass the inputImage key.

52.97.4  Constructor

**Function:** Creates and returns an empty filter generator object.
52.97. **CLASS CIFILTERGENERATORMBS** 8903

**Notes:** You use the returned object to connect two or more CIFilter objects and input images. It is also valid to have only one CIFilter object in a filter generator.

- 52.97.5 Constructor(File as folderItem) 8903
- 52.97.6 Constructor(Handle as Integer) 8903
52.97.8  copy as CIFilterGeneratorMBS

MBS MacCG Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the object.

52.97.9  disconnectObject(sourceObject as Variant, sourceKey as string, targetObject as Variant, targetKey as String)

MBS MacCG Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Removes the connection between two objects in the filter chain.

**Notes:**

- **sourceObject:** A CIFilterMBS object, a CIImageMBS object, or a the path (an string or folderitem object) to an image.
- **sourceKey:** The key that specifies the source object. Pass nil if the source object is used directly.
- **targetObject:** The object that you want to disconnect the source object from.
- **targetKey:** The key that specifies the target that the source object is currently connected to.

52.97.10  exportKey(key as string, targetObject as Variant, exportedKeyName as String)

MBS MacCG Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Exports an input or output key of an object in the filter chain.

**Notes:**

- **key:** The key to export from the target object (for example, inputImage).
- **targetObject:** The object associated with the key (for example, the filter).
- **exportedKeyName:** A unique name to use for the exported key. Pass "" to use the original key name.

When you create a CIFilterMBS object from a CIFilterGeneratorMBS object, you might want the filter client to be able to set some of the parameters associated with the filter chain. You can make a parameter settable by exporting the key associated with the parameter. If the exported key represents an input parameter of the filter, the key is exported as an input key. If the key represents an output parameter, it is exported as an output key.

52.97.11  filterGenerator as CIFilterGeneratorMBS

MBS MacCG Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an empty filter generator object.

**Notes:** You use the returned object to connect two or more CIFilter objects and input images. It is also valid to have only one CIFilter object in a filter generator.
52.97.12  `filterGeneratorWithContentsOfFile(File as folderItem) as CIFilterGeneratorMBS`

MBS MacCG Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a filter generator object and initializes it with the contents of a filter generator file. **Notes:** Returns a CIFilterGeneratorMBS object; returns nil if the file can't be read.

52.97.13  `filterGeneratorWithContentsOfURL(URL as string) as CIFilterGeneratorMBS`

MBS MacCG Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a filter generator object and initializes it with the contents of a filter generator file. **Notes:** Returns a CIFilterGeneratorMBS object; returns nil if the file can't be read.

52.97.14  `filterWithName(name as String) as CIFilterMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries filter based on its name. **Notes:** Returns nil in case of error.

52.97.15  `kCIFilterGeneratorExportedKey as String`

MBS MacCG Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the dictionary keys describing exports. **Notes:** The key (CIFilterGeneratorExportedKey) for the exported parameter. The associated value is the key name of the parameter you are exporting, such as inputRadius.

52.97.16  `kCIFilterGeneratorExportedKeyName as String`

MBS MacCG Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the dictionary keys describing exports. **Notes:** The key (CIFilterGeneratorExportedKey) for the exported parameter. The associated value is the key name of the parameter you are exporting, such as inputRadius.
52.97.17  kCIFilterGeneratorExportedKeyTargetObject as String

MBS MacCG Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the dictionary keys describing exports.
**Notes:** The target object (CIFilterGeneratorExportedKeyTargetObject) for the exported key. The associated value is the name of the object, such as CIMotionBlur.

52.97.18  registerFilterName(name as string)

MBS MacCG Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Registers the name associated with a filter chain.
**Notes:**

name: A unique name for the filter chain you want to register.

This method allows you to register the filter chain as a named filter in the Core Image filter repository. You can then create a CIFilterMBS object from it using the the filterWithName method of the CIFilterMBS class.

52.97.19  removeExportedKey(exportedKeyName as string)

MBS MacCG Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Removes a key that was previously exported.

52.97.20  setAttributes(attributes as dictionary, ExportedKey as string)

MBS MacCG Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Sets a dictionary of attributes for an exported key.
**Notes:**

attributes: A dictionary that describes the attributes associated with the specified key.
key: The exported key whose attributes you want to set.

By default, the exported key inherits the attributes from its original key and target object. You can use this method to change one or more of the existing attributes for the key, such as the default value or maximum value. For more information on attributes, see CIFilterMBS and Core Image Programming Guide.
52.97. CLASS CIFILTERGENERATORMBS

52.97.21 writeToFile(File as FolderItem, atomically as Boolean = true) as Boolean

Notes:
File: A location for the file generator file.
atomically: Pass true to specify that Core Image should create an interim file to avoid overwriting an existing file.

Returns true if the object is successfully archived to the file.
Use this method to save your filter chain to a file for later use.

52.97.22 writeToFile(URL as String, atomically as Boolean = true) as Boolean

Notes:
URL: A location for the file generator file.
atomically: Pass true to specify that Core Image should create an interim file to avoid overwriting an existing file.

Returns true if the object is successfully archived to the file.
Use this method to save your filter chain to a file for later use.

52.97.23 Properties

52.97.24 classAttributes as Dictionary

Notes:
For more information about class attributes for a filter, see Core Image Programming Guide and the filter attributes key constants defined in CIFilterMBS.
(Read and Write property)
52.97.25 **exportedKeys as Dictionary**

MBS MacCG Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array of the exported keys. **Notes:**

An array of dictionaries that describe the exported key and target object. See kCIFilterGeneratorExportedKey, kCIFilterGeneratorExportedKeyTargetObject, and kCIFilterGeneratorExportedKey for keys used in the dictionary.

This method returns the keys that you exported using the exportKey method or that were exported before being written to the file from which you read the filter chain.

(Read only property)

52.97.26 **filter as CIFilterMBS**

MBS MacCG Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a filter object based on the filter chain. **Notes:**

The topology of the filter chain is immutable, meaning that any changes you make to the filter chain are not reflected in the filter. The returned filter has the input an output keys that are exported.

(Read only property)

52.97.27 **Handle as Integer**

MBS MacCG Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal reference to the object. **Notes:** (Read only property)
52.98.  **CLASS CIFILTERGLASSDISTORTIONMBS**

52.98  **class CIFilterGlassDistortionMBS**

52.98.1  **class CIFilterGlassDistortionMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Glass Distortion filter.

**Notes:**

Details for this filter:

- **FilterName:** CIGlassDistortion
- **DisplayName English:** Glass Distortion
- **DisplayName German:** Verzerrung Glas
- **DisplayName French:** Dformation Verre
- **DisplayName Italian:** Distorsione vetro
- **DisplayName Spanish:** Distorsin vidriosa

Categories:

- **CICategoryDistortionEffect:** Distortion Effect
- **CICategoryVideo:** Video
- **CICategoryStillImage:** Still Image
- **CICategoryBuiltIn:** Built-In

**Input:**

- **inputImage:** Image
- **inputTexture:** Texture
- **inputCenter:** Center
- **inputScale:** Scale

**Output:**

- **outputImage**

Subclass of the CIFilterMBS class.
52.98.2 Methods

52.98.3 Constructor

Notes: On success the handle property is not zero and the filter has the default values set.

52.98.4 Properties

52.98.5 Attribute inputCenter as CIAttributeMBS

Notes: This attribute should have this content:

Name: inputCenter
Class: CIVectorMBS
Type: CIAttributeTypePosition
DisplayName English: Center
DisplayName German: Mitte
DisplayName French: Centre
DisplayName Italian: Centro
DisplayName Spanish: Centro
DefaultVector: [ 150 150 ]
IdentityVector: n/a

(Read only property)

52.98.6 Attribute inputImage as CIAttributeMBS

Notes: This attribute should have this content:

(Read only property)
Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

52.98.7 Attribute inputScale as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Details about the Glass Distortion attribute.
Notes:
This attribute should have this content:

Name: inputScale
Class: double
Type: CIAttributeTypeDistance
DisplayName English: Scale
DisplayName German: Skalierung
DisplayName French: chelle
DisplayName Italian: Scala
DisplayName Spanish: Escala
DefaultNumber: 200
IdentityNumber: 0
SliderMaxNumber: 500
SliderMinNumber: 0.01

(Read only property)

52.98.8 Attribute inputTexture as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Details about the Glass Distortion attribute.
Notes:
This attribute should have this content:
Name: inputTexture  
Class: CIImageMBS  
Type: CIAttributeTypeImage  
DisplayName English: Texture  
DisplayName German: Struktur  
DisplayName French: Texture  
DisplayName Italian: Trama  
DisplayName Spanish: Textura  
DefaultNumber: 0  
IdentityNumber: 0  

(Read only property)

52.98.9 inputCenter as CIVectorMBS

Function: The attribute Center

Notes:

Name: inputCenter  
Class: CIVectorMBS (CIVector)  
DisplayName English: Center  
DisplayName German: Mitte  
DisplayName French: Centre  
DisplayName Italian: Centro  
DisplayName Spanish: Centro  
Type: CIAttributeTypePosition

See AttributeinputCenter for more details.  
(Read and Write property)

52.98.10 inputImage as CIImageMBS

Function: The attribute Image

Notes:

See AttributeinputImage for more details.  
(Read and Write property)
52.98. **CLASS CIFILTERGLASSDISTORTIONMBS**

Name: inputImage  
Class: CIImageMBS (CIImage)  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
Type: CIAttributeTypeImage

52.98.11  **inputScale as double**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Scale  
**Notes:**  
Name: inputScale  
Class: double (NSNumber)  
DisplayName English: Scale  
DisplayName German: Skalierung  
DisplayName French: chelle  
DisplayName Italian: Scala  
DisplayName Spanish: Escala  
Type: CIAttributeTypeDistance

See AttributeinputScale for more details.  
(Read and Write property)

52.98.12  **inputTexture as CIImageMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Texture  
**Notes:**  
Name: inputTexture  
Class: CIImageMBS (CIImage)  
DisplayName English: Texture  
DisplayName German: Struktur  
DisplayName French: Texture  
DisplayName Italian: Trama  
DisplayName Spanish: Textura  
Type: CIAttributeTypeImage

See AttributeinputTexture for more details.
(Read and Write property)
**52.99.  CLASS CIFILTERGLASSLOZENGEMBS**

**52.99  class CIFilterGlassLozengeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Glass Lozenge filter.  
**Notes:**

Details for this filter:

- **FilterName**: CIGlassLozenge
- **DisplayName English**: Glass Lozenge
- **DisplayName German**: Glasrhombus
- **DisplayName French**: Losange de verre
- **DisplayName Italian**: Losanga vetro
- **DisplayName Spanish**: Romboedro vidrioso

**Categories:**

- **CICategoryDistortionEffect**: Distortion Effect
- **CICategoryVideo**: Video
- **CICategoryStillImage**: Still Image
- **CICategoryBuiltIn**: Built-In

**Input:**

- **inputImage**: Image
- **inputPoint0**: Point 0
- **inputPoint1**: Point 1
- **inputRadius**: Radius
- **inputRefraction**: Refraction

**Output:**

- **outputImage**

Subclass of the CIFilterMBS class.
52.99.2 Methods

52.99.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.99.4 Properties

52.99.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Glass Lozenge attribute.
**Notes:**
This attribute should have this content:

<table>
<thead>
<tr>
<th>Name</th>
<th>inputImage</th>

(Read only property)

52.99.6 Attribute inputPoint0 as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Glass Lozenge attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.99. **CLASS CIFILTERGLASSLOZENGEMBS**

Name: inputPoint0  
Class: CIVectorMBS  
Type: CIAttributeTypePosition  
DisplayName English: Point 0  
DisplayName German: Punkt 0  
DisplayName French: Point0  
DisplayName Italian: Punto 0  
DisplayName Spanish: Punto 0  
DefaultVector: [ 150 150 ]  
IdentityVector: n/a

52.99.7 **Attribute inputPoint1 as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Glass Lozenge attribute.  
**Notes:**  
This attribute should have this content:

Name: inputPoint1  
Class: CIVectorMBS  
Type: CIAttributeTypePosition  
DisplayName English: Point 1  
DisplayName German: Punkt 1  
DisplayName French: Point1  
DisplayName Italian: Punto 1  
DisplayName Spanish: Punto 1  
DefaultVector: [ 350 150 ]  
IdentityVector: n/a

(Read only property)

52.99.8 **Attribute inputRadius as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Glass Lozenge attribute.  
**Notes:**  
This attribute should have this content:

(Read only property)
52.99.9  Attribute inputRefraction as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Glass Lozenge attribute.
**Notes:**
This attribute should have this content:

```
Name: inputRefraction
Class: double
Type: CIAttributeTypeScalar
DisplayName English: Refraction
DisplayName German: Lichtbrechung
DisplayName French: Rfraction
DisplayName Italian: Rifrazione
DisplayName Spanish: Refraccion
DefaultNumber: 1.7
IdentityNumber: 1
SliderMaxNumber: 5
SliderMinNumber: 0
```

(Read only property)

52.99.10  inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image
**Notes:**
See Attribute inputImage for more details.
52.99. **CLASS CIFILTERGLASSLOZENGE**

Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

(Read and Write property)

52.99.11 **inputPoint0 as CIVectorMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Point 0
**Notes:**

Name: inputPoint0
Class: CIVectorMBS (CIVector)
DisplayName English: Point 0
DisplayName German: Punkt 0
DisplayName French: Point 0
DisplayName Italian: Punto 0
DisplayName Spanish: Punto 0
Type: CIAttributeTypePosition

See AttributeinputPoint0 for more details.
(Read and Write property)

52.99.12 **inputPoint1 as CIVectorMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Point 1
**Notes:**

See AttributeinputPoint1 for more details.
(Read and Write property)
Name: inputPoint1
Class: CIVectorMBS (CIVector)
DisplayName English: Point 1
DisplayName German: Punkt 1
DisplayName French: Point 1
DisplayName Italian: Punto 1
DisplayName Spanish: Punto 1
Type: CIAttributeTypePosition

52.99.13 inputRadius as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Radius

**Notes:**
Name: inputRadius
Class: double (NSNumber)
DisplayName English: Radius
DisplayName German: Radius
DisplayName French: Rayon
DisplayName Italian: Raggio
DisplayName Spanish: Radio
Type: CIAttributeTypeDistance

See Attribute inputRadius for more details.
(Read and Write property)

52.99.14 inputRefraction as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Refraction

**Notes:**
Name: inputRefraction
Class: double (NSNumber)
DisplayName English: Refraction
DisplayName German: Lichtbrechung
DisplayName French: Rfraction
DisplayName Italian: Rifrazione
DisplayName Spanish: Refraccion
Type: CIAttributeTypeScalar

See Attribute inputRefraction for more details.
52.99. CLASS CIFILTERGLASSLOZENGEMBS

(Read and Write property)
52.100  class CIFilterGlideReflectedTileMBS

52.100.1  class CIFilterGlideReflectedTileMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Glide Reflected Tile filter.

**Notes:**
Details for this filter:

- **FilterName:** CIFilterGlideReflectedTile
- **DisplayName English:** Glide Reflected Tile
- **DisplayName German:** Gleitende reflektierte Kachel
- **DisplayName French:** Mosaque rflchie Glide
- **DisplayName Italian:** Mosaico riflesso di scivolamento
- **DisplayName Spanish:** Mosaico de deslizamiento reflejado

**Categories:**

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- **inputImage:** Image
- **inputCenter:** Center
- **inputAngle:** Angle
- **inputWidth:** Width

**Output:**

- **outputImage**

Subclass of the CIFilterMBS class.
52.100.2  Methods

52.100.3  Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.100.4  Properties

52.100.5  AttributeinputAngle as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Glide Reflected Tile attribute.
**Notes:**
This attribute should have this content:

Name: inputAngle  
Class: double  
Type: CIAttributeTypeAngle  
DisplayName English: Angle  
DisplayName German: Winkel

(Read and Write property)

52.100.12 inputWidth as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Width

**Notes:**

See AttributeinputWidth for more details.
(Read and Write property)
Name: inputWidth
Class: double (NSNumber)
DisplayName English: Width
DisplayName German: Breite
DisplayName French: Largeur
DisplayName Italian: Larghezza
DisplayName Spanish: Anchura
Type: CIAttributeTypeDistance
52.101.1 class CIFilterGloomMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Gloom filter.

**Notes:**
Details for this filter:

- **FilterName:** CIGloom
- **DisplayName English:** Gloom
- **DisplayName German:** Dster
- **DisplayName French:** Tnbres
- **DisplayName Italian:** Oscurit
- **DisplayName Spanish:** Oscurecer

**Categories:**
- **CICategoryStylize:** Stylize
- **CICategoryVideo:** Video
- **CICategoryStillImage:** Still Image
- **CICategoryBuiltIn:** Built-In

**Input:**
- **inputImage:** Image
- **inputRadius:** Radius
- **inputIntensity:** Intensity

**Output:**
- **outputImage**

Subclass of the CIFilterMBS class.
52.101.2 Methods

52.101.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.101.4 Properties

52.101.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Gloom attribute.
**Notes:**
This attribute should have this content:

<table>
<thead>
<tr>
<th>Name</th>
<th>inputImage</th>
</tr>

DisplayName French: Quantité de surbrillance  
DisplayName Italian: Quantità luci  
DisplayName Spanish: Cantidad de resaltados  
Type: CIAttributeTypeScalar

See AttributeinputHighlightAmount for more details.  
(Read and Write property)
52.106.10  inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image

**Notes:**

- **Name:** inputImage
- **Class:** CIImageMBS (CIImage)
- **DisplayName English:** Image
- **DisplayName German:** Bild
- **DisplayName French:** Image
- **DisplayName Italian:** Immagine
- **DisplayName Spanish:** Imagen
- **Type:** CIAttributeTypeImage

See Attribute inputImage for more details.
(Read and Write property)

52.106.11  inputRadius as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Radius

**Notes:**

- **Name:** inputRadius
- **Class:** double (NSNumber)
- **DisplayName English:** Radius
- **DisplayName German:** Radius
- **DisplayName French:** Rayon
- **DisplayName Italian:** Raggio
- **DisplayName Spanish:** Radio
- **Type:** CIAttributeTypeScalar

See Attribute inputRadius for more details.
(Read and Write property)

52.106.12  inputShadowAmount as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Shadow Amount

**Notes:**
<table>
<thead>
<tr>
<th>Name</th>
<th>inputShadowAmount</th>

</table>

See Attribute `inputShadowAmount` for more details.
(Read and Write property)
52.107. class CIFilterHistogramDisplayFilterMBS

52.107.1 class CIFilterHistogramDisplayFilterMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Histogram Display filter.

**Notes:**
Details for this filter:

- **FilterName:** CIHistogramDisplayFilter
- **DisplayName English:** Histogram Display
- **DisplayName German:** Histogrammanzeige
- **DisplayName French:** Affichage de l'histogramme
- **DisplayName Italian:** Visualizzazione istogramma
- **DisplayName Spanish:** Visualizacin de histograma

**Categories:**

- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- **inputImage:** Image
- **inputHeight:** Height
- **inputHighLimit:** HighLimit
- **inputLowLimit:** LowLimit

**Output:**

- **outputImage**

Subclass of the CIFilterMBS class.
52.107.2 Methods

52.107.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.107.4 Properties

52.107.5 Attribute inputHeight as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Histogram Display attribute.
**Notes:**
This attribute should have this content:

Name: inputHeight  
Class: double  
Type: CIAttributeTypeScalar  
DisplayName: Height  
DefaultNumber: 100  
IdentityNumber: 0  
MaxNumber: 200  
MinNumber: 1  
SliderMaxNumber: 100  
SliderMinNumber: 1

(Read only property)

52.107.6 Attribute inputHighLimit as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Histogram Display attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.107. CLASS CIFILTERHISTOGRAMDISPLAYFILTERMBS

Name: inputHighLimit
Class: double
Type: CIAttributeTypeScalar
DisplayName: HighLimit
DefaultNumber: 1

MaxNumber: 1
MinNumber: 0
SliderMaxNumber: 1
SliderMinNumber: 0

52.107.7 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Histogram Display attribute.

**Notes:**
This attribute should have this content:

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

52.107.8 Attribute inputLowLimit as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Histogram Display attribute.

**Notes:**
This attribute should have this content:

(Read only property)
52.107.9 inputHeight as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Height

**Notes:**

Name: inputHeight
Class: double (NSNumber)
DisplayName English: Height
DisplayName German: Height
DisplayName French: Height
DisplayName Italian: Height
DisplayName Spanish: Height
Type: CIAttributeTypeScalar

See Attribute inputHeight for more details.
(Read and Write property)

52.107.10 inputHighLimit as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute HighLimit

**Notes:**

See Attribute inputHighLimit for more details.
(Read and Write property)
52.107. CLASS CIFILTERHISTOGRAMDISPLAYFILTERMBS

Name: inputHighLimit
Class: double (NSNumber)
DisplayName English: HighLimit
DisplayName German: HighLimit
DisplayName French: HighLimit
DisplayName Italian: HighLimit
DisplayName Spanish: HighLimit
Type: CIAttributeTypeScalar

52.107.11 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image
**Notes:**

Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

See Attribute inputImage for more details.
(Read and Write property)

52.107.12 inputLowLimit as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute LowLimit
**Notes:**

Name: inputLowLimit
Class: double (NSNumber)
DisplayName English: LowLimit
DisplayName German: LowLimit
DisplayName French: LowLimit
DisplayName Italian: LowLimit
DisplayName Spanish: LowLimit
Type: CIAttributeTypeScalar

See Attribute inputLowLimit for more details.
(Read and Write property)
52.108. class CIFilterHoleDistortionMBS

52.108.1 class CIFilterHoleDistortionMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Hole Distortion filter.

**Notes:**

Details for this filter:

- **FilterName:** CIHoleDistortion
- **DisplayName English:** Hole Distortion
- **DisplayName German:** Verzerrung Loch
- **DisplayName French:** Distorsion Dformation Orifice
- **DisplayName Italian:** Distorsione foro
- **DisplayName Spanish:** Distorsión de orificios

**Categories:**

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- **inputImage:** Image
- **inputCenter:** Center
- **inputRadius:** Radius

**Output:**

- **outputImage**

Subclass of the CIFilterMBS class.
52.108.2 Methods

52.108.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.108.4 Properties

52.108.5 AttributeinputCenter as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Hole Distortion attribute.
**Notes:**
This attribute should have this content:

Name: inputCenter
Class: CIVectorMBS
Type: CIAttributeTypePosition
DisplayName English: Center
DisplayName German: Mitte
DisplayName French: Centre
DisplayName Italian: Centro
DisplayName Spanish: Centro
DefaultVector: [150 150]
IdentityVector: n/a

(Read only property)

52.108.6 AttributeinputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Hole Distortion attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.108. **CLASS CIFILTERHOLEDISTORTIONMBS**

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCount: Count
- inputCenter: Center
- inputAngle: Angle

Output:

- outputImage

Subclass of the CIFilterMBS class.
52.112.2 Methods

52.112.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.112.4 Properties

52.112.5 Attribute `inputAngle` as `CIAttributeMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Kaleidoscope attribute.
**Notes:**
This attribute should have this content:

<table>
<thead>
<tr>
<th>Name</th>
<th>inputAngle</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class:</td>
<td>double</td>
</tr>
<tr>
<td>Type:</td>
<td>CIAttributeTypeAngle</td>
</tr>
<tr>
<td>DisplayName English:</td>
<td>Angle</td>
</tr>
<tr>
<td>DisplayName German:</td>
<td>Winkel</td>

52.112.6 Attribute `inputCenter` as `CIAttributeMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Kaleidoscope attribute.
**Notes:**
This attribute should have this content:
Name: inputCenter
Class: CIVectorMBS
Type: CIAttributeTypePosition
DisplayName English: Center
DisplayName German: Mitte
DisplayName French: Centre
DisplayName Italian: Centro
DisplayName Spanish: Centro
DefaultVector: [150 150]
IdentityVector: n/a

(Read only property)

## 52.112.7 Attribute inputCount as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Kaleidoscope attribute.

**Notes:**
This attribute should have this content:

Name: inputCount
Class: double
Type: CIAttributeTypeScalar
DisplayName English: Count
DisplayName German: Anzahl
DisplayName French: Compte
DisplayName Italian: Conteggio
DisplayName Spanish: Recuento
DefaultNumber: 6
IdentityNumber: 0
MaxNumber: 0
MinNumber: 1
SliderMaxNumber: 64
SliderMinNumber: 1

(Read only property)
52.112.8  Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Kaleidoscope attribute.

**Notes:**

This attribute should have this content:

<table>
<thead>
<tr>
<th>Name</th>
<th>inputImage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class</td>
<td>CIImageMBS</td>
</tr>
<tr>
<td>Type</td>
<td>CIAttributeTypeImage</td>

CHAPTER 52. COREIMAGE

52.112.10  inputCenter as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Center

**Notes:**

Name: inputCenter  
Class: CIVectorMBS (CIVector)  
DisplayName English: Center  
DisplayName German: Mitte  
DisplayName French: Centre  
DisplayName Italian: Centro  
DisplayName Spanish: Centro  
Type: CIAttributeTypePosition

See AttributeinputCenter for more details.  
(Read and Write property)

52.112.11  inputCount as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Count

**Notes:**

Name: inputCount  
Class: double (NSNumber)  
DisplayName English: Count  
DisplayName German: Anzahl  
DisplayName French: Compte  
DisplayName Italian: Conteggio  
DisplayName Spanish: Recuento  
Type: CIAttributeTypeScalar

See AttributeinputCount for more details.  
(Read and Write property)

52.112.12  inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image

**Notes:**
Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

See Attribute inputImage for more details.
(Read and Write property)
52.113 class CIFilterLabDeltaEMBS

52.113.1 class CIFilterLabDeltaEMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Lab E filter.

**Notes:**
Details for this filter:

- FilterName: CILabDeltaE
- DisplayName English: Lab E
- DisplayName German: Lab E
- DisplayName French: Lab E
- DisplayName Italian: Lab E
- DisplayName Spanish: Valores E del espacio de color Lab

**Categories:**
- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**
- inputImage: Image
- inputImage2: Image2

**Output:**
- outputImage

Subclass of the CIFilterMBS class.
52.113.2 Methods

52.113.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.113.4 Properties

52.113.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Lab E attribute.
**Notes:**
This attribute should have this content:

<table>
<thead>
<tr>
<th>Name</th>
<th>inputImage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class</td>
<td>CIImageMBS</td>
</tr>
<tr>

52.113.6 Attribute inputImage2 as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Lab E attribute.
**Notes:**
This attribute should have this content:

(Read only property)
CHAPTER 52. COREIMAGE

52.113.7 inputImage as CIImageMBS

Notes:

Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

52.113.8 inputImage2 as CIImageMBS

Notes:

Name: inputImage2
Class: CIImageMBS (CIImage)
DisplayName English: Image2
DisplayName German: Image2
DisplayName French: Image2
DisplayName Italian: Image2
DisplayName Spanish: Image2
Type:

See AttributeinputImage2 for more details.
(Read and Write property)
52.114.1 class CIFilterLanczosScaleTransformMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Lanczos Scale Transform filter.

**Notes:**
Details for this filter:

- FilterName: CILanczosScaleTransform
- DisplayName English: Lanczos Scale Transform
- DisplayName German: Lanczos Skalierungstransformation
- DisplayName French: Transformation d'echelle de Lanczos
- DisplayName Italian: Trasforma scala di Lanczos
- DisplayName Spanish: Transformar mediante escala Lanczos

**Categories:**
- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**
- inputImage: Image
- inputScale: Scale
- inputAspectRatio: Aspect Ratio

**Output:**
- outputImage

Subclass of the CIFilterMBS class.
52.114.2 Methods

52.114.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.114.4 Properties

52.114.5 Attribute inputAspectRatio as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Lanczos Scale Transform attribute.
**Notes:**
This attribute should have this content:

- **Name:** inputAspectRatio
- **Class:** double
- **Type:** CIAttributeTypeScalar
- **DisplayName English:** Aspect Ratio
- **DisplayName German:** Seitenverhältnis
- **DisplayName French:** Proportions
- **DisplayName Italian:** Proporzioni
- **DisplayName Spanish:** Proporciones
- **DefaultNumber:** 1
- **IdentityNumber:** 1
- **SliderMaxNumber:** 2
- **SliderMinNumber:** 0.5

(Read only property)

52.114.6 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Lanczos Scale Transform attribute.
**Notes:**
This attribute should have this content:
52.114. CLASS CFILTERLANCZOSCALETRANSFORMMBS

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen

52.114.7 AttributeinputScale as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Lanczos Scale Transform attribute.

**Notes:**
This attribute should have this content:

Name: inputScale
Class: double
Type: CIAttributeTypeScalar
DisplayName English: Scale
DisplayName German: Skalierung
DisplayName French: chelle
DisplayName Italian: Scala
DisplayName Spanish: Escala
DefaultNumber: 1
IdentityNumber: 1
SliderMaxNumber: 1.5
SliderMinNumber: 0.05

(Read only property)

52.114.8 inputAspectRatio as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Aspect Ratio

**Notes:**
Name: inputAspectRatio
Class: double (NSNumber)
DisplayName English: Aspect Ratio
DisplayName German: Seitenverhältnis
DisplayName French: Proportions
DisplayName Italian: Proporzioni
DisplayName Spanish: Proporciones
Type: CIAttributeTypeScalar

See AttributeinputAspectRatio for more details.
(Read and Write property)

52.114.9 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image

**Notes:**
Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)

52.114.10 inputScale as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Scale

**Notes:**
See AttributeinputScale for more details.

52.115 class CIFilterLenticularHaloGeneratorMBS

52.115.1 class CIFilterLenticularHaloGeneratorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Lenticular Halo filter. 
**Notes:**
Details for this filter:

| FilterName: | CILenticularHaloGenerator |
| DisplayName English: | Lenticular Halo |
| DisplayName German: | Linsenfrmiges Halo |
| DisplayName French: | Halo lenticulaire |
| DisplayName Italian: | Alone lenticolare |
| DisplayName Spanish: | Halo lenticular |

**Categories:**

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputCenter: Center
- inputColor: Color
- inputHaloRadius: Halo Radius
- inputHaloWidth: Halo Width
- inputHaloOverlap: Halo Overlap
- inputStriationStrength: Striation Strength
- inputStriationContrast: Striation Contrast
- inputTime: Time

**Output:**
52.115. Class CIFilterLenticularHaloGeneratorMBS

- outputImage

Subclass of the CIFilterMBS class.

52.115.2 Methods

52.115.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

**Notes:** On success the handle property is not zero and the filter has the default values set.

52.115.4 Properties

52.115.5 Attribute inputCenter as CIAttributeMBS

Type: CIAttributeTypeImage
52.120.1 class CIFilterLinearGradientMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Linear Gradient filter.

**Example:**

```realbasic
// create gradient
dim vektor1 as CIVectorMBS = CIVectorMBS.vectorWithXY(800,600)
dim vektor2 as CIVectorMBS = CIVectorMBS.vectorWithXY(0,0)

dim CiGradientFilter as new CIFilterLinearGradientMBS
CiGradientFilter.SetDefaults
CiGradientFilter.inputPoint0 = vektor1
CiGradientFilter.inputPoint1 = vektor2
CiGradientFilter.inputColor0 = CIColorMBS.colorWithRGB(1,1,1)
CiGradientFilter.inputColor1 = CIColorMBS.colorWithRGB(1,0.5,0.3)

dim r as CIImageMBS = CiGradientFilter.outputImage
Backdrop = r.RenderPicture(800, 600)
```

**Notes:**

Details for this filter:

- **FilterName:** CILinearGradient
- **DisplayName English:** Linear Gradient
- **DisplayName German:** Linearer Verlauf
- **DisplayName French:** Dgrad linaire
- **DisplayName Italian:** Gradiente lineare
- **DisplayName Spanish:** Degradado lineal

**Categories:**

- **CICategoryGradient:** Gradient
- **CICategoryVideo:** Video
- **CICategoryStillImage:** Still Image
- **CICategoryBuiltIn:** Built-In
Input:

- inputPoint0: Point 0
- inputPoint1: Point 1
- inputColor0: Color 1
- inputColor1: Color 2

Output:

- outputImage

Subclass of the CIFilterMBS class.

### 52.120.2 Methods

### 52.120.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor. **Notes:** On success the handle property is not zero and the filter has the default values set.

### 52.120.4 Properties

### 52.120.5 Attribute inputColor0 as CIAttributeMBS

52.122.1 class CIFilterLineOverlayMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Line Overlay filter.

**Notes:**

Details for this filter:

- **FilterName:** CILineOverlay
- **DisplayName English:** Line Overlay
- **DisplayName German:** Linienberlagerung
- **DisplayName French:** Incrustation de lignes
- **DisplayName Italian:** Sovrapposizione linea
- **DisplayName Spanish:** Lnea superpuesta

**Categories:**

- CICategoryBuiltIn: Built-In
- CICategoryStillImage: Still Image
- CICategoryVideo: Video
- CICategoryStylize: Stylize

**Input:**

- inputImage: Image
- inputNRNoiseLevel: NR Noise Level
- inputNRSharpness: NR Sharpness
- inputEdgeIntensity: Edge Intensity
- inputThreshold: Threshold
- inputContrast: Contrast

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.122.2 Methods

52.122.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.122.4 Properties

52.122.5 Attribute inputContrast as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Line Overlay attribute.
**Notes:**
This attribute should have this content:

- Name: inputContrast
- Class: double
- Type: CIAttributeTypeScalar
- DisplayName English: Contrast
- DisplayName German: Kontrast
- DisplayName French: Contraste
- DisplayName Italian: Contrasto
- DisplayName Spanish: Contraste
- DefaultNumber: 50
- IdentityNumber: 1
- MaxNumber: 0
- MinNumber: 0.25
- SliderMaxNumber: 200
- SliderMinNumber: 0.25

(Read only property)

52.122.6 Attribute inputEdgeIntensity as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Line Overlay attribute.
**Notes:**
This attribute should have this content:

Name: inputEdgeIntensity
Class: double
Type: CIAttributeTypeScalar
DisplayName English: Edge Intensity
DisplayName German: Edge Intensity
DisplayName French: Intensit des contours
DisplayName Italian: Intensità margini
DisplayName Spanish: Intensidad del borde
DefaultNumber: 1
IdentityNumber: 0
SliderMaxNumber: 200
SliderMinNumber: 0

(Read only property)

52.122.7 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Line Overlay attribute.

**Notes:**
This attribute should have this content:

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

(Read only property)
52.122.8  Attribute input NRNoiseLevel as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Line Overlay attribute.  
**Notes:**  
This attribute should have this content:

```plaintext
Name: inputNRNoiseLevel  
Class: double  
Type: CIAttributeTypeScalar  
DisplayName English: NR Noise Level  
DisplayName German: NR Rauschpegel  
DisplayName French: Niveau de bruit NR  
DisplayName Italian: Livello disturbo NS  
DisplayName Spanish: Nivel de ruido NR  
DefaultNumber: 0.07

SliderMaxNumber: 0.1  
SliderMinNumber: 0
```

(Read only property)

52.122.9  Attribute input NRSharpness as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Line Overlay attribute.  
**Notes:**  
This attribute should have this content:

(Read only property)

52.122.10  Attribute input Threshold as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Line Overlay attribute.  
**Notes:**  
This attribute should have this content:
Name: inputNRSharpness  
Class: double  
Type: CIAttributeTypeScalar  
DisplayName English: NR Sharpness  
DisplayName German: NR Schärfe  
DisplayName French: Nettet NR  
DisplayName Italian: Nitidezza NR  
DisplayName Spanish: Nitidez NR  
DefaultNumber: 0.71  
IdentityNumber: 0  
SliderMaxNumber: 2  
SliderMinNumber: 0

Name: inputThreshold  
Class: double  
Type: CIAttributeTypeScalar  
DisplayName English: Threshold  
DisplayName German: Schwellenwert  
DisplayName French: Seuil  
DisplayName Italian: Soglia  
DisplayName Spanish: Umbral  
DefaultNumber: 0.1  
IdentityNumber: 0  
SliderMaxNumber: 1  
SliderMinNumber: 0

(Read only property)

**52.122.11 inputContrast as double**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Contrast

**Notes:**
See AttributeinputContrast for more details.
(Read and Write property)

**52.122.12 inputEdgeIntensity as double**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Edge Intensity
9040

CHAPTER 52. COREIMAGE

Name: inputContrast
Class: double (NSNumber)
DisplayName English: Contrast
DisplayName German: Kontrast
DisplayName French: Contraste
DisplayName Italian: Contrasto
DisplayName Spanish: Contraste
Type: CIAttributeTypeScalar

Notes:

Name: inputEdgeIntensity
Class: double (NSNumber)
DisplayName English: Edge Intensity
DisplayName German: Edge Intensity
DisplayName French: Intensit des contours
DisplayName Italian: Intensit margini
DisplayName Spanish: Intensidad del borde
Type: CIAttributeTypeScalar

See Attribute inputEdgeIntensity for more details.
(Read and Write property)

52.122.13 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The attribute Image

Notes:

Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

See Attribute inputImage for more details.
(Read and Write property)
52.122.14  inputNRNoiseLevel as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute NR Noise Level
**Notes:**
Name: inputNRNoiseLevel
Class: double (NSNumber)
DisplayName English: NR Noise Level
DisplayName German: NR Rauschpegel
DisplayName French: Niveau de bruit NR
DisplayName Italian: Livello disturbo NS
DisplayName Spanish: Nivel de ruido NR
Type: CIAttributeTypeScalar

See Attribute inputNRNoiseLevel for more details.
(Read and Write property)

52.122.15  inputNRSharpness as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute NR Sharpness
**Notes:**
Name: inputNRSharpness
Class: double (NSNumber)
DisplayName English: NR Sharpness
DisplayName German: NR Schärfe
DisplayName French: Nettet NR
DisplayName Italian: Nitidezza NR
DisplayName Spanish: Nitidez NR
Type: CIAttributeTypeScalar

See Attribute inputNRSharpness for more details.
(Read and Write property)

52.122.16  inputThreshold as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Threshold
**Notes:**
Name: inputThreshold
Class: double (NSNumber)
DisplayName English: Threshold
DisplayName German: Schwellenwert
DisplayName French: Seuil
DisplayName Italian: Soglia
DisplayName Spanish: Umbral
Type: CIAttributeTypeScalar

See Attribute inputThreshold for more details.
(Read and Write property)
52.123. CLASS CIFILTERLINESCREENMBS

52.123  class CIFilterLineScreenMBS

52.123.1  class CIFilterLineScreenMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Line Screen filter.

**Notes:**

Details for this filter:

FilterName: CILineScreen
DisplayName English: Line Screen
DisplayName German: Liniertes Halbtonraster
DisplayName French: cran traits
DisplayName Italian: Schermo lineare
DisplayName Spanish: Pantalla de lneas

Categories:

- CICategoryHalftoneEffect: Halftone Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width
- inputSharpness: Sharpness

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.123.2 Methods

52.123.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

**Notes:** On success the handle property is not zero and the filter has the default values set.

52.123.4 Properties

52.123.5 Attribute inputAngle as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Line Screen attribute.

**Notes:**

This attribute should have this content:

Name: inputAngle
Class: double
Type: CIAttributeTypeAngle
DisplayName English: Angle
DisplayName German: Winkel
DisplayName French: Angle
DisplayName Italian: Angolo
DisplayName Spanish: ngulo
DefaultNumber: 0
IdentityNumber: 0
SliderMaxNumber: 3.141593
SliderMinNumber: -3.141593

(Read only property)

52.123.6 Attribute inputCenter as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Line Screen attribute.

**Notes:**

This attribute should have this content:
52.123. **CLASS CIFILTERLINESCREENMBS**

SliderMaxNumber: 50
SliderMinNumber: 2

(Read only property)
52.123. CLASS CIFILTERLINESCREENMBS

52.123.10  inputAngle as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Angle
**Notes:**

Name: inputAngle
Class: double (NSNumber)
DisplayName English: Angle
DisplayName German: Winkel
DisplayName French: Angle
DisplayName Italian: Angolo
DisplayName Spanish: ngulo
Type: CIAttributeTypeAngle

See Attribute inputAngle for more details.
(Read and Write property)

52.123.11  inputCenter as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Center
**Notes:**

Name: inputCenter
Class: CIVectorMBS (CIVector)
DisplayName English: Center
DisplayName German: Mitte
DisplayName French: Centre
DisplayName Italian: Centro
DisplayName Spanish: Centro
Type: CIAttributeTypePosition

See Attribute inputCenter for more details.
(Read and Write property)

52.123.12  inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image
**Notes:**
### 52.123.13 inputSharpness as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Sharpness

**Notes:**

- **Name:** inputSharpness
- **Class:** double (NSNumber)
- **DisplayName English:** Sharpness
- **DisplayName German:** Schärfe
- **DisplayName French:** Nettet
- **DisplayName Italian:** Nitidezza
- **DisplayName Spanish:** Nitidez
- **Type:** CIAttributeTypeScalar

See Attribute inputSharpness for more details.
(Read and Write property)

### 52.123.14 inputWidth as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Width

**Notes:**

See Attribute inputWidth for more details.
(Read and Write property)
Name: inputWidth
Class: double (NSNumber)
DisplayName English: Width
DisplayName German: Breite
DisplayName French: Largeur
DisplayName Italian: Larghezza
DisplayName Spanish: Anchura
Type: CIAttributeTypeDistance
52.124 class CIFilterLuminosityBlendModeMBS

52.124.1 class CIFilterLuminosityBlendModeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Luminosity Blend Mode filter. **Notes:**

Details for this filter:

FilterName: CILuminosityBlendMode
DisplayName English: Luminosity Blend Mode
DisplayName German: Mischmethode Leuchtkraft
DisplayName French: Mode de fusion Luminosit
DisplayName Italian: Modalit sfumatura luminosit
DisplayName Spanish: Modo de mezcla por luminosidad

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.
52.124.2 Methods

52.124.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.124.4 Properties

52.124.5 Attribute inputBackgroundImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Luminosity Blend Mode attribute.
**Notes:**

52.125 class CIFilterMaskedVariableBlurMBS

52.125.1 class CIFilterMaskedVariableBlurMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Masked Variable Blur filter.

**Notes:**

Details for this filter:

- FilterName: CIMaskedVariableBlur
- DisplayName English: Masked Variable Blur
- DisplayName German: Maskierte variable Weichzeichnung
- DisplayName French: Flou variable masqu
- DisplayName Italian: Sfocatura variabile mascherata
- DisplayName Spanish: Desenfoque variable con mascara

**Categories:**

- CICategoryBlur: Blur
- CICategoryStillImage: Still Image
- CICategoryVideo: Video
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputMask: Mask
- inputRadius: Radius

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.125.2 Methods

52.125.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.  
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.125.4 Properties

52.125.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Masked Variable Blur attribute.  
**Notes:**  
This attribute should have this content:

Name: inputImage  
Class: CIImageMBS  
Type: CIAttributeTypeImage

52.126. class CIFilterMaskToAlphaMBS

The Realbasic class for the CoreImage Mask to Alpha filter.

Notes:

Details for this filter:

FilterName: CIMaskToAlpha
DisplayName English: Mask to Alpha
DisplayName German: Mit Alpha-Kanal maskieren
DisplayName French: Masque vers alpha
DisplayName Italian: Maschera ad alfa
DisplayName Spanish: Mscara a alfa

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image

Output:

- outputImage

Subclass of the CIFilterMBS class.
52.126.2 Methods

52.126.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.126.4 Properties

52.126.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Mask to Alpha attribute.
**Notes:**
This attribute should have this content:

- Name: inputImage
- Class: CIImageMBS
- Type: CIAttributeTypeImage

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.127.2 Methods

52.127.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.127.4 Properties

52.127.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Maximum Component attribute.
**Notes:**
This attribute should have this content:

<table>
<thead>
<tr>
<th>Name</th>
<th>inputImage</th>
</tr>
</thead>
<tbody>
<tr>

52.128. class CIFilterMaximumCompositingMBS

52.128.1 class CIFilterMaximumCompositingMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Maximum filter.

**Notes:**

Details for this filter:

- **FilterName:** CIMaximumCompositing
- **DisplayName English:** Maximum
- **DisplayName German:** Maximum
- **DisplayName French:** Maximum
- **DisplayName Italian:** Massima
- **DisplayName Spanish:** Mximo

**Categories:**

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryHighDynamicRange: High Dynamic Range
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputBackgroundImage: Background Image

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.128.2 Methods

52.128.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.128.4 Properties

52.128.5 Attribute `inputBackgroundImage` as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Maximum attribute.
**Notes:**
This attribute should have this content:

<table>
<thead>
<tr>
<th>Name</th>

52.128.6 Attribute `inputImage` as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Maximum attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.128. CLASS CIFILTERMAXIMUMCOMPOSITINGMBS

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

52.128.7 inputBackgroundImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Background Image
**Notes:**

Name: inputBackgroundImage
Class: CIImageMBS (CIImage)
DisplayName English: Background Image
DisplayName German: Hintergrundbild
DisplayName French: Image derrière-plan
DisplayName Italian: Immagine di sfondo
DisplayName Spanish: Imagen de fondo
Type: CIAttributeTypeImage

See Attribute inputBackgroundImage for more details.
(Read and Write property)

52.128.8 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image
**Notes:**

See Attribute inputImage for more details.

52.129. **CLASS CIFILTERMBS**

52.129 **class CIFilterMBS**

52.129.1 **class CIFilterMBS**

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** CIFilter are filter objects for CoreImage that encapsulate the filter with its attributes. **Notes:** Mac OS X 10.4 only.

52.129.2 **Methods**

52.129.3 **attributesDictionary as dictionary**

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a dictionary of key-value pairs that describe the filter. **Example:**

```plaintext
dim d as new CIFilterComicEffectMBS
dim a as Dictionary = d.attributesDictionary
break // see values in debugger
```

**Notes:** Returns a dictionary that contains a key for each input and output parameter for the filter. Each key is a dictionary that contains all the attributes of an input or output parameter.

52.129.4 **AttributesItem(index as Integer) as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the attribute with the given index. **Notes:**

- Index is zero based.
- Nil on any error.

See also:

- 52.129.5 **AttributesItem(name as string) as CIAttributeMBS**

52.129.5 **AttributesItem(name as string) as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the attribute with the given name.
CHAPTER 52. COREIMAGE

Notes: nil on error.
See also:

- 52.129.4 AttributesItem(index as Integer) as CIAttributeMBS

52.129.6 AttributesName(index as Integer) as string

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The name of the attribute with the given index.

52.129.7 Categories as string()

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Array of filter category names.
Notes: nil on any error.

52.129.8 Constructor(Handle as Integer)

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Initializes object with given object reference.
Notes:
ref should be a CIFilter* and the object is retained.
Raises UnsupportedOperationError if object is not a CIFilter.

52.129.9 copy as CIFilterMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates a copy of the filter.

52.129.10 filterArrayFromSerializedXMP(xmpData as MemoryBlock, extent as CGRectMBS, byref NSError as Variant) as CIFilterMBS()

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns an array of filter objects de-serialized from XMP data.
Notes:
xmpData: The XMP data created previously by calling serializedXMPFromFilters.
extent: The extent of the image from which the XMP data was extracted.
e: The address of an variant for receiving errors, otherwise nil. This is a NSErrorMBS.

Available in OS X v10.9 and later.

52.129.11 FilterNamesInCategories(categories() as String) as string()

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

Returns an array containing all published filter names that belong to all listed categories.

**Notes:**

categories: string array with the constants kCICategory*.

Returns nil on any error.

52.129.12 FilterNamesInCategory(category as String) as string()

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

Returns an array containing all published filter names in a category.

**Example:**

```java
// load list of filters into Listbox

dim a() as string

dim cf as CIFilterMBS

// get all image categories
a=cIFilterMBS.FilterNamesInCategory(CIFilterMBS.kCICategoryStillImage)

StaticText1.text=str(UBound(a))+" filters."

for each s as string in a

    // add to listbox
    ListBox1.AddRow s

    // load this filter
    cf=CIFilterMBS.FilterWithName(s)

    // And look into the attributes for the Displayname
    if cf<>nil then
        ListBox1.cell(Listbox1.LastIndex,1)=cf.DisplayName
    end if

next
```
CHAPTER 52. COREIMAGE

Notes: nil on any error.

52.129.13 FilterWithHandle(handle as Integer) as CIFilterMBS

MBS MacCG Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new filter object based on the given handle.

**Example:**

```vbscript
// some filter
dim x as new CIFilterCropMBS

// create a copy
dim f as CIFilterMBS = CIFilterMBS.FilterWithHandle(x.Handle)

// and show name
MsgBox f.FilterName
```

Notes:
The object is retained.
Returns nil on error.

52.129.14 filterWithImageData(Data as MemoryBlock, options as Dictionary) as CIFilterMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a CIFilter that will in turn return a properly processed CIImage as "outputImage".

**Notes:** Note that when using this initializer, you should pass in a source type identifier hint (kCGImageSourceTypeInfo) key/value pair in order to help the decoder determine the file type, as otherwise confusion and incorrect results are possible.

52.129.15 filterWithImageFile(File as FolderItem, options as Dictionary) as CIFilterMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a CIFilter that will in turn return a properly processed CIImage as "outputImage".
52.129.16  filterWithURL(URL as String, options as Dictionary) as CIFilterMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a CIFilter that will in turn return a properly processed CIImage as "outputImage".

52.129.17  FilterWithName(name as String) as CIFilterMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new filter of type 'name'. All input values will be undefined.

**Example:**
```
   dim cf as CIFilterMBS
   // load this filter
   cf=CIFilterMBS.FilterWithName("CIAffineTile")
```

**Notes:** Returns filter object for the name if found.
See also:
- 52.129.18 FilterWithName(name as String, options as Dictionary) as CIFilterMBS

52.129.18 FilterWithName(name as String, options as Dictionary) as CIFilterMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new filter of type 'name'.
**Notes:**
The filter's input parameters are set from the dictionary of key-value pairs.
On OSX, any of the filter input parameters not specified in the dictionary will be undefined.
On iOS, any of the filter input parameters not specified in the dictionary will be set to default values.
Available in macOS 10.10 or newer.
See also:
- 52.129.17 FilterWithName(name as String) as CIFilterMBS

52.129.19  InputKeys as string()

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array containing the names of all inputs in the filter.
52.129.20  kCIActiveKeys as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the options for image filter initialization.
**Notes:**
Read-only array containing a list of keys that affect the output image.
Depending on the RAW decoder version (kCIInputDecoderVersionKey) and the input image type, some
input keys might have no effect.

52.129.21  kCIApplyOptionColorSpace as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the apply options.
**Notes:**
If used, the value of the kCIApplyOptionColorSpace key be must be an RGB CGColorSpaceMBS.
Using this option specifies that the output of the kernel is in this color space.
If not specified, the output of the kernel is in the working color space of the rendering CIContextMBS.

52.129.22  kCIApplyOptionDefinition as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the apply options.

52.129.23  kCIApplyOptionExtent as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the apply options.

52.129.24  kCIApplyOptionUserInfo as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the apply options.
52.129.25  kCIAttributeClass as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Class name of the filter.
**Notes:** The class name of the filter.

52.129.26  kCIAttributeDefault as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Default value for the slider.
**Notes:** The default value, specified as a floating-point value, for a filter parameter.

52.129.27  kCIAttributeDescription as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the filter attributes.
**Notes:** The localized description of the filter. This description should inform the end user what the filter does and be short enough to display in the user interface for the filter. It is not intended to be technically detailed.

52.129.28  kCIAttributeDisplayName as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Display name of this attribute (localized).
**Notes:** The localized version of the filter name that is displayed in the user interface.

52.129.29  kCIAttributeFilterAvailable_iOS as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the filter attributes.
**Notes:** The iOS version in which the filter first became available, specified as a string.

52.129.30  kCIAttributeFilterAvailable_Mac as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the filter attributes.
**Notes:** The OS X version in which the filter first became available, specified as a string.
52.129.31 kCIAttributeFilterCategories as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Array of filter category names (see below)
**Notes:** An array of filter category keys that specifies all the categories in which the filter is a member.

52.129.32 kCIAttributeFilterDisplayName as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Name of the filter intended for UI display (eg. localized).
**Notes:** The localized display name of the attribute.

52.129.33 kCIAttributeFilterName as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constant for the name of the filter.

52.129.34 kCIAttributeIdentity as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The identity value for this attribute.
**Notes:** If supplied as a value for a parameter, the parameter has no effect on the input image.

52.129.35 kCIAttributeMax as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Maximum value for the attribute.
**Notes:** The maximum value for a filter parameter, specified as a floating-point value.

52.129.36 kCIAttributeMin as String

**Notes:** The minimum value for a filter parameter, specified as a floating-point value.
52.129.37  kCIAttributeName as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the filter attributes.  
**Notes:** The name of the attribute.

52.129.38  kCIAttributeReferenceDocumentation as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the filter attributes.  
**Notes:** The localized reference documentation for the filter. The reference should provide developers with technical details.

52.129.39  kCIAttributeSliderMax as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Default value for the slider.  
**Notes:** The maximum value, specified as a floating-point value, to use for a slider that controls input values for a filter parameter.

52.129.40  kCIAttributeSliderMin as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Minimum value for the slider.  
**Notes:** The minimum value, specified as a floating-point value, to use for a slider that controls input values for a filter parameter.

52.129.41  kCIAttributeType as string

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Type of the attribute.  
**Notes:** An attribute may have a type which defines what kind this attribute type is. e.g. a number attribute may be a time or a distance.
52.129.42 kCIAttributeTypeAngle as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the types for numbers. **Notes:** An angle.

52.129.43 kCIAttributeTypeBoolean as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the types for numbers. **Notes:** A Boolean value.

52.129.44 kCIAttributeTypeColor as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the attribute data types. **Notes:** A Core Image color (CIColor object) that specifies red, green, and blue component values.

52.129.45 kCIAttributeTypeCount as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the attribute data types. **Notes:** A positive integer value.

52.129.46 kCIAttributeTypeDistance as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the types for numbers. **Notes:** A distance.

52.129.47 kCIAttributeTypeGradient as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the types for colors. **Notes:** An n-by-1 gradient image used to describe a color ramp.
52.129.  CLASS CIFILTERMBS

52.129.48  kCIAttributeTypeImage as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**
One of the attribute data types.
**Notes:** A CIImage object.

52.129.49  kCIAttributeTypeInteger as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**
One of the attribute data types.
**Notes:** An integer value.

52.129.50  kCIAttributeTypeOffset as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**
One of the types for 2-element vectors.
**Notes:** An offset. (A 2-element vector type.)

52.129.51  kCIAttributeTypeOpaqueColor as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**
One of the types for colors.
**Notes:** A Core Image color (CIColor object) that specifies red, green, and blue component values. Use this key for colors with no alpha component. If the key is not present, Core Image assumes color with alpha.

52.129.52  kCIAttributeTypePosition as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**
One of the types for 2-element vectors.
**Notes:** A two-dimensional location in the working coordinate space. (A 2-element vector type.)

52.129.53  kCIAttributeTypePosition3 as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**
One of the types for 3-element vectors.
**Notes:** A three-dimensional location in the working coordinate space. (A 3-element vector type.)
52.129.54  kCIAttributeTypeRectangle as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the types for 4-element vectors.
**Notes:** A Core Image vector that specifies the x and y values of the rectangle origin, and the width (w) and
height (h) of the rectangle. The vector takes the form \([ x, y, w, h ]\). (A 4-element vector type.)

52.129.55  kCIAttributeTypeScalar as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the types for numbers.
**Notes:** A scalar value.

52.129.56  kCIAttributeTypeTime as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the attribute data types.
**Notes:** A parametric time for transitions, specified as a floating-point value in the range of 0.0 to 1.0.

52.129.57  kCIAttributeTypeTransform as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the attribute data types.
**Notes:** An CGAffineTransform is associated with attribute.

52.129.58  kCICategoryBlur as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the categories.
**Notes:** A filter that softens images, decreasing the contrast between the edges in an image. Examples of
blur filters are Gaussian blur and zoom blur.

52.129.59  kCICategoryBuiltIn as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the categories.
**Notes:** A filter provided by Core Image. This distinguishes built-in filters from plug-in filters.
52.129.60  kCICategoryColorAdjustment as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the categories. **Notes:** A filter that changes color values. Color adjustment filters are used to eliminate color casts, adjust hue, and correct brightness and contrast. Color adjustment filters do not perform color management; ColorSync performs color management. You can use Quartz 2D to specify the color space associated with an image.

52.129.61  kCICategoryColorEffect as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the categories. **Notes:** A filter that modifies the color of an image to achieve an artistic effect. Examples of color effect filters include filters that change a color image to a sepia image or a monochrome image or that produces such effects as posterizing.

52.129.62  kCICategoryCompositeOperation as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the categories. **Notes:** A filter operates on two image sources, using the color values of one image to operate on the other. Composite filters perform computations such as computing maximum values, minimum values, and multiplying values between input images. You can use compositing filters to add effects to an image, crop an image, and achieve a variety of other effects.

52.129.63  kCICategoryDistortionEffect as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the categories. **Notes:** A filter that reshapes an image by altering its geometry to create a 3D effect. Using distortion filters, you can displace portions of an image, apply lens effects, make a bulge in an image, and perform other operation to achieve an artistic effect.

52.129.64  kCICategoryFilterGenerator as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the categories. **Notes:** A filter created by chaining several filters together and then packaged as a CIFilterGenerator object.
52.129.65 kCICategoryGenerator as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the categories. **Notes:** A filter that generates a pattern, such as a solid color, a checkerboard, or a star shine. The generated output is typically used as input to another filter.

52.129.66 kCICategoryGeometryAdjustment as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the categories. **Notes:** A filter that changes the geometry of an image. Some of these filters are used to warp an image to achieve an artistic effects, but these filters can also be used to correct problems in the source image. For example, you can apply an affine transform to straighten an image that is rotated with respect to the horizon.

52.129.67 kCICategoryGradient as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the categories. **Notes:** A filter that generates a fill whose color varies smoothly. Exactly how color varies depends on the type of gradient: linear, radial, or Gaussian.

52.129.68 kCICategoryHalftoneEffect as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the categories. **Notes:** A filter that simulates a variety of halftone screens, to mimic the halftone process used in print media. The output of these filters has the familiar newspaper look of the various dot patterns. Filters are typically named after the pattern created by the virtual halftone screen, such as circular screen or hatched screen.

52.129.69 kCICategoryHighDynamicRange as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the categories. **Notes:** A filter that works on high dynamic range pixels.
52.129.70 kCICategoryInterlaced as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the categories. **Notes:** A filter that works on interlaced images.

52.129.71 kCICategoryNonSquarePixels as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the categories. **Notes:** A filter that works on non-square pixels.

52.129.72 kCICategoryReduction as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the categories. **Notes:** A filter that reduces image data. These filters are used to solve image analysis problems.

52.129.73 kCICategorySharpen as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the categories. **Notes:** A filter that sharpens images, increasing the contrast between the edges in an image. Examples of sharpen filters are unsharp mask and sharpen luminance.

52.129.74 kCICategoryStillImage as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the categories. **Notes:** A filter that works on still images.

52.129.75 kCICategoryStylize as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the categories. **Notes:** A filter that makes a photographic image look as if it was painted or sketched. These filters are typically used alone or in combination with other filters to achieve artistic effects.
**52.129.76** kCICategoryTileEffect as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the categories.  
**Notes:** A filter that typically applies an effect to an image and then create smaller versions of the image (tiles), which are then laid out to create a pattern that's infinite in extent.

**52.129.77** kCICategoryTransition as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the categories.  
**Notes:** A filter that provides a bridge between two or more images by applying a motion effect that defines how the pixels of a source image yield to that of the destination image.

**52.129.78** kCICategoryVideo as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the categories.  
**Notes:** A filter that works on video images.

**52.129.79** kCIInputAllowDraftModeKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization.  
**Notes:** Boolean: Setting Draft Mode to true can improve image decoding speed without minimal loss of quality. The default value is false.

**52.129.80** kCIInputAngleKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.

**52.129.81** kCIInputAspectRatioKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.
52.129.82  kCIInputBackgroundImageKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.

52.129.83  kCIInputBaselineExposureKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization.
**Notes:**
Float: A value controlling the amount of baseline exposure applied to the image. A value of 0 indicates no baseline exposure, i.e. linear response. Default varies from with camera settings. Available on macOS 10.12 or newer.

52.129.84  kCIInputBiasKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.

52.129.85  kCIInputBoostKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization.
**Notes:**
Float: A value in the range of 0...1, controlling the amount of boost applied to the image. A value of 0 indicates no boost, i.e. linear response. Default is 1, full boost.

52.129.86  kCIInputBoostShadowAmountKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization.
**Notes:**
Float: The amount to boost the shadow areas of the image. Can be used to lighten details in shadows. Has no effect if the image used for initialization was not RAW.
52.129.87 kCIInputBrightnessKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.

52.129.88 kCIInputCenterKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.

52.129.89 kCIInputColorKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.

52.129.90 kCIInputColorNoiseReductionAmountKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization. **Notes:** Double: The amount of color noise reduction applied. Range is 0 to 1.

52.129.91 kCIInputContrastKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.

52.129.92 kCIInputDecoderVersionKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization. **Notes:** Version string representing the decoder version to be used. A newly initialized object defaults to the newest available decoder version for the given image type. User can request an alternative, older version in order to maintain compatibility with older releases. Must be one of kCISupportedDecoderVersions (below), otherwise a nil output image will be generated.
52.129.93 kCIInputDepthImageKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the common filter parameter keys. **Notes:** Available on macOS 10.13 or newer.

52.129.94 kCIInputDisableGamutMapKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization. **Notes:** Boolean: Setting DisableGamutMap to true disables gamut mapping. The default value is false.

52.129.95 kCIInputDisparityImageKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the common filter parameter keys. **Notes:** Available on macOS 10.13 or newer.

52.129.96 kCIInputEnableChromaticNoiseTrackingKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization. **Notes:** Boolean: Determines if progressive chromatic noise tracking (based on ISO and exposure time) should be used. default = true. Has no effect if the image used for initialization was not RAW.

52.129.97 kCIInputEnableSharpeningKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization. **Notes:** Boolean: Determines if the default sharpening should be on. default = true. Has no effect if the image used for initialization was not RAW.
52.129.98  kCIInputEnableVendorLensCorrectionKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization. **Notes:** Boolean: Determines if the default vendor lens correction be on. default = true if raw image used for initialization contains lens distortion parameters.

52.129.99  kCIInputEVKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.

52.129.100  kCIInputExtentKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.

52.129.101  kCIInputGradientImageKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.

52.129.102  kCIInputIgnoreImageOrientationKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization. **Notes:** Boolean: Normally, an image is loaded in its proper orientation, given the associated metadata gives an indication about the orientation. For special purposes it may be useful to load the image in its physical orientation. The exact meaning of this is dependent on the image in question. The default value is false.
52.129.103  kCIInputImageKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.

52.129.104  kCIInputImageOrientationKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization. **Notes:** Integer: Overriding this value allows the user to change the orientation of the image. The valid values are in range 1..8 and follow the EXIF specification. Changing this value makes for instance rotation in 90-degree increments easy. The value is disregarded when the kCIInputIgnoreImageOrientationKey flag is set.

52.129.105  kCIInputIntensityKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.

52.129.106  kCIInputLinearSpaceFilter as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization. **Notes:** CIFilterMBS: CIFilter to be applied to the RAW image while it is in linear space.

52.129.107  kCIInputLuminanceNoiseReductionAmountKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization. **Notes:** Double: The amount of luminance noise reduction applied. Range is 0 to 1.

52.129.108  kCIInputMaskImageKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.
52.129.109  kCIInputMoireAmountKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the options for image filter initialization.
**Notes:**
Double: The amount of moire reduction applied. Range is 0 to 1.
Available on macOS 10.13

52.129.110  kCIInputNeutralChromaticityXKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the options for image filter initialization.
**Notes:** Float: The X value of the chromaticity. You can always query this value and you’ll get the current
X value for neutral X,Y.

52.129.111  kCIInputNeutralChromaticityYKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the options for image filter initialization.
**Notes:** Float: The Y value of the chromaticity. You can always query this value and you’ll get the current
Y value for neutral X,Y.

52.129.112  kCIInputNeutralLocationKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the options for image filter initialization.
**Notes:**
CIVector: (x, y) location in geometric coordinates of the unrotated output image that should be used as neutral.
You can’t query this value - it’s undefined for reading.

52.129.113  kCIInputNeutralTemperatureKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the options for image filter initialization.
**Notes:** Float: The color temperature to be considered neutral. You can always query this value and you’ll get the current value for temperature.
52.129.114  kCIInputNeutralTintKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization. **Notes:** Float: The tint to be considered neutral. You can always query this value and you’ll get the current value for tint.

52.129.115  kCIInputNoiseReductionAmountKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization. **Notes:** Double: The amount of noise reduction applied. Range is 0 to 1.

52.129.116  kCIInputNoiseReductionContrastAmountKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization. **Notes:** Double: The amount of noise reduction contrast applied. Range is 0 to 1.

52.129.117  kCIInputNoiseReductionDetailAmountKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization. **Notes:** Double: The amount of noise reduction detail applied. Range is 0 to 1.

52.129.118  kCIInputNoiseReductionSharpnessAmountKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization. **Notes:** Double: The amount of noise reduction sharpness applied. Range is 0 to 1.

52.129.119  kCIInputRadiusKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.
52.129.120  kCIInputRefractionKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the input keys.

52.129.121  kCIInputSaturationKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the input keys.

52.129.122  kCIInputScaleFactorKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the options for image filter initialization.
**Notes:** Float: The desired scale factor at which the image will be eventually drawn. Setting this value can greatly improve the drawing performance. A value of 1 would mean identity, values smaller than 1 will result in a smaller output image. Changing the Scale Factor with enabled Draft Mode may also improve performance.

52.129.123  kCIInputScaleKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the input keys.

52.129.124  kCIInputShadingImageKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the input keys.

52.129.125  kCIInputSharpnessKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the input keys.
52.129.126  kCIInputTargetImageKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.

52.129.127  kCIInputTimeKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.

52.129.128  kCIInputTransformKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.

52.129.129  kCIInputVersionKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.

52.129.130  kCIInputWeightsKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the common filter parameter keys.

52.129.131  kCIInputWidthKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the input keys.

52.129.132  kCIOoutputImageKey as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The key for the output image.
52.129.133 kCIOOutputNativeSizeKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization. **Notes:**

CIVector containing the full native size of the unscaled image. The vector’s X value is the width, Y is the height.
This is not affected by changing either kCIInputIgnoreImageOrientationKey or kCIInputImageOrientationKey.

52.129.134 kCISupportedDecoderVersionsKey as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the options for image filter initialization. **Notes:** Array of dictionary: Array of all supported decoder versions for the given image type, sorted in increasingly newer order. Each entry is a NSDictionary with a number of key/value pairs. All entries would represent a valid version identifier to be passed in for kCIInputDecoderVersion. This value can be only read; setting this value will raise an exception. Currently, the only defined key is "version" which has as a value an String uniquely describing a given decoder version. This string may not be suitable for user interface display.

52.129.135 kCIUIParameterSet as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets of controls for various user scenarios. **Notes:** The set of input parameters to use. The associated value can be kCIUISetBasic, kCIUISetIntermediate, kCIUISetAdvanced, or kCIUISetDevelopment.

52.129.136 kCIUISetAdvanced as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the UI Set constants. **Notes:** Controls that are appropriate for an advanced user scenario.

52.129.137 kCIUISetBasic as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the UI Set constants. **Notes:** Controls that are appropriate for a basic user scenario, that is, the minimum of settings to control
the filter.

52.129.138  kCIUISetDevelopment as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the UI Set constants.  
**Notes:** Controls that should be visible only for development purposes.

52.129.139  kCIUISetIntermediate as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the UI Set constants.  
**Notes:** Controls that are appropriate for an intermediate user scenario.

52.129.140  localizedDescriptionForFilterName(filterName as String) as String

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the localized description of a filter for display in the user interface.  
**Example:**
MsgBox CIFilterMBS.localizedDescriptionForFilterName("CIComicEffect")

**Notes:**

filterName: The filter name.  
Returns the localized description of the filter.

Available in OS X v10.5 and later.

52.129.141  LocalizedNameForCategory(name as String) as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The localized name of a category.
52.129.142  LocalizedNameForFilterName(name as String) as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns the localized name of a filter.

52.129.143  localizedReferenceDocumentationForFilterName(filterName as String) as String

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns the location of the localized reference documentation that describes the filter.
Example:
MsgBox CIFilterMBS.localizedReferenceDocumentationForFilterName("CIComicEffect")

Notes:
filterName: The filter name.

Returns an URL that specifies the location of the localized documentation, or "" if the filter does not provide
localized reference documentation.

The URL can be a local file or a remote document on a web server. Because filters created prior to OS X
v10.5 could return nil, you should be make sure that your code handles this case gracefully.

Available in OS X v10.5 and later.

52.129.144  OutputKeys as string()

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns an array containing the names of all outputs in the filter.

52.129.145  serializedXMPFromFilters(filters() as CIFilterMBS, extent as CGRectMBS) as Memoryblock

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Serializes filter parameters into XMP form that is suitable for embedding in an image.
Notes:
filters: The array of filters to serialize. See Discussion for the filters that can be serialized.
extent: The extent of the input image to the filter.

At this time the only filters classes that can be serialized using this method are, CIAffineTransform, CICrop, and the filters returned by the CIImage methods autoAdjustmentFilters and autoAdjustmentFiltersWithOptions. The parameters of other filter classes will not be serialized.

Available in OS X v10.9 and later.

52.129.146 SetDefaults

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets all inputs to their default values (where default values are defined, other inputs are left as-is).

52.129.147 Properties

52.129.148 AttributesCount as Integer

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of attributes.

**Notes:** (Read only property)

52.129.149 description as String

MBS MacCG Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the textual description for this filter.

**Notes:** (Read only property)

52.129.150 DisplayName as string

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Name of the filter intended for UI display (eg. localized)

**Example:**

```dim cf as new CIFilterLuminosityBlendModeMBS
MsgBox cf.DisplayName // shows: "Luminosity Blend Mode"
```
52.129.151 Enabled as Boolean

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether filter is enabled for animation. **Notes:** The 'enabled' property is used only by CoreAnimation and is animatable. In Core Animation, a CIFilter only applied to its input when this property is set to true. (Read and Write property)

52.129.152 FilterName as string

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Name of the filter. **Notes:** (Read only property)

52.129.153 Handle as Integer

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The handle to the internal used CIFilter reference. **Notes:** (Read only property)

52.129.154 Name as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The filter name. **Notes:** On OSX this property is read-write. This can be useful when using CIFilters with CALayers to construct unique keypaths. For example, to set an attribute of a filter attached to a layer, a path such as "filters.myExposureFilter.inputEV" could be used. CALayer animations may also access filter attributes via key-paths. (Read and Write property)
52.129. CLASS CIFILTERMBS

52.129.155  outputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The output image.  
**Notes:** Available directly on OS X 10.10 or newer, but our plugin implements it also for older versions by using valueForKey internally.  
(Read only property)

52.129.156  ValueAsAffineTransform(key as string) as NSAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get or set a value as an affine transform.  
**Notes:** On if attributes classname is NSAffineTransform.  
(Read and Write computed property)

52.129.157  ValueAsCIColor(key as string) as CIColorMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get or set a value as a color.  
**Notes:** On if attributes classname is CIColor.  
(Read and Write computed property)

52.129.158  ValueAsCIImage(key as string) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get or set a value as an image.  
**Notes:** On if attributes classname is NSImage.  
(Read and Write computed property)

52.129.159  ValueAsCIVector(key as string) as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get or set a value as a vector.
Notes:

On if attributes classname is CIVector.
(Read and Write computed property)

52.129.160  ValueAsData(key as string) as memoryblock

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Get or set a value as a memoryblock.
Notes:

On if attributes classname is memoryblock.
(Read and Write computed property)

52.129.161  ValueAsNumber(key as string) as Double

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Get or set a value as a double.
Notes:

On if attributes classname is number.
(Read and Write computed property)

52.129.162  ValueAsString(key as string) as String

MBS MacCG Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Get or set a value as a string.
Notes:

On if attributes classname is NSString.
(Read and Write computed property)
52.130. class CIFilterMedianFilterMBS

52.130.1 class CIFilterMedianFilterMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Median filter.

**Notes:**
Details for this filter:

<table>
<thead>
<tr>
<th>FilterName</th>
<th>CIMedianFilter</th>
</tr>
</thead>
<tbody>
<tr>
<td>DisplayName English</td>
<td>Median</td>
</tr>
<tr>

</tbody>
</table>

**Categories:**

- CICategoryBlur: Blur
- CICategoryStillImage: Still Image
- CICategoryVideo: Video
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.130.2 Methods

52.130.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.130.4 Properties

52.130.5 AttributeinputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Median attribute.
**Notes:**
This attribute should have this content:

```
Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0
```

(Read only property)

52.130.6 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image
**Notes:**
See AttributeinputImage for more details.
(Read and Write property)
Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAtributeTypeImage
52.131 class CIFilterMinimumComponentMBS

52.131.1 class CIFilterMinimumComponentMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Minimum Component filter.

**Notes:**

Details for this filter:

- **FilterName:** CIMinimumComponent
- **DisplayName English:** Minimum Component
- **DisplayName German:** Minimaler Kanal
- **DisplayName French:** Composante minimum
- **DisplayName Italian:** Componente minimo
- **DisplayName Spanish:** Componente mínimo

**Categories:**

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.131.2 Methods

52.131.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.131.4 Properties

52.131.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Minimum Component attribute.
**Notes:**
This attribute should have this content:

- **Name:** inputImage
- **Class:** CIImageMBS
- **Type:** CIAttributeTypeImage
- **DisplayName English:** Image
- **DisplayName German:** Bild
- **DisplayName French:** Image
- **DisplayName Italian:** Immagine
- **DisplayName Spanish:** Imagen
- **DefaultNumber:** 0
- **IdentityNumber:** 0

(Read only property)

52.131.6 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image
**Notes:**
See Attribute inputImage for more details.
(Read and Write property)

DisplayName Italian: Raggio
DisplayName Spanish: Radio
Type:          CIAttributeTypeDistance
52.136 class CIFilterMorphologyMinimumMBS

52.136.1 class CIFilterMorphologyMinimumMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Morphology Minimum filter.  
**Notes:**

Details for this filter:

FilterName: CI::CIMorphologyMinimum
DisplayName English: Morphology Minimum
DisplayName German: Morphologisches Minimum
DisplayName French: Minimum morphologique
DisplayName Italian: Minimo morfologico
DisplayName Spanish: Mnimo morfolgico

Categories:

- CICategoryBlur: Blur
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputRadius: Radius

Output:

- outputImage

Subclass of the CIFilterMBS class.
52.136.2 Methods

52.136.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.136.4 Properties

52.136.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Morphology Minimum attribute.
**Notes:**
This attribute should have this content:

Name: inputImage  
Class: CIImageMBS  
Type: CIAttributeTypeImage  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image

</table>

See Attribute inputImage for more details.
(Read and Write property)
52.142 class CIFilterNoiseReductionMBS

52.142.1 class CIFilterNoiseReductionMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Noise Reduction filter.

**Notes:**
Details for this filter:

- **FilterName:** CINoiseReduction
- **DisplayName English:** Noise Reduction
- **DisplayName German:** Rauschunterdrückung
- **DisplayName French:** Réduction du bruit
- **DisplayName Italian:** Riduzione disturbo
- **DisplayName Spanish:** Reducción de ruido

Categories:

- CICategoryBlur: Blur
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- **inputImage:** Image
- **inputNoiseLevel:** Noise Level
- **inputSharpness:** Sharpness

Output:

- **outputImage**

Subclass of the CIFilterMBS class.
52.142.2 Methods

52.142.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.142.4 Properties

52.142.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Noise Reduction attribute.
**Notes:**
This attribute should have this content:

Name: inputImage  
Class: CIImageMBS  
Type: CIAttributeTypeImage  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
DefaultNumber: 0  
IdentityNumber: 0

(Read only property)

52.142.6 Attribute inputNoiseLevel as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Noise Reduction attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.142.7   **Attribute inputSharpness as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Noise Reduction attribute.

**Notes:**

This attribute should have this content:

Name:          inputSharpness  
Class:         double  
Type:         CIAttributeTypeScalar  
DisplayName English: Sharpness  
DisplayName German: Schärfe  
DisplayName French: Nettet  
DisplayName Italian: Nitidezza  
DisplayName Spanish: Nitidez  
DefaultNumber: 0.4  
IdentityNumber: 0  
SliderMaxNumber: 2  
SliderMinNumber: 0  

(Read only property)

52.142.8   **inputImage as CIImageMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image

**Notes:**

See Attribute inputImage for more details.
52.142. CLASS CIFILTERNOISEREDUCTIONMBS

Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

(Read and Write property)

52.142.9 inputNoiseLevel as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Noise Level
**Notes:**

Name: inputNoiseLevel
Class: double (NSNumber)
DisplayName English: Noise Level
DisplayName German: Rauschpegel
DisplayName French: Niveau de bruit
DisplayName Italian: Livello disturbo
DisplayName Spanish: Nivel de ruido
Type: CIAttributeTypeScalar

See AttributeinputNoiseLevel for more details.
(Read and Write property)

52.142.10 inputSharpness as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Sharpness
**Notes:**

See AttributeinputSharpness for more details.
(Read and Write property)

### 52.143.8 Attribute inputScale as CIAtributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Op Tile attribute. **Notes:** This attribute should have this content:
Name: inputScale
Class: double
Type: CIAttributeTypeScalar
DisplayName English: Scale
DisplayName German: Skalierung
DisplayName French: chelle
DisplayName Italian: Scala
DisplayName Spanish: Escala
DefaultNumber: 2.8
IdentityNumber: 1
SliderMaxNumber: 10
SliderMinNumber: 0.1

(Read only property)

52.143.9  **Attribute inputWidth as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Op Tile attribute.
**Notes:**
This attribute should have this content:

Name: inputWidth
Class: double
Type: CIAttributeTypeDistance
DisplayName English: Width
DisplayName German: Breite
DisplayName French: Largeur
DisplayName Italian: Larghezza
DisplayName Spanish: Anchura
DefaultNumber: 65
IdentityNumber: 65
SliderMaxNumber: 1000
SliderMinNumber: 1

(Read only property)
52.143.10  inputAngle as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Angle

**Notes:**

- Name: inputAngle
- Class: double (NSNumber)
- DisplayName English: Angle
- DisplayName German: Winkel
- DisplayName French: Angle
- DisplayName Italian: Angolo
- DisplayName Spanish: Angle
- Type: CIAttributeTypeAngle

See Attribute inputAngle for more details.
(Read and Write property)

52.143.11  inputCenter as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Center

**Notes:**

- Name: inputCenter
- Class: CIVectorMBS (CIVector)
- DisplayName English: Center
- DisplayName German: Mitte
- DisplayName French: Centre
- DisplayName Italian: Centro
- DisplayName Spanish: Centro
- Type: CIAttributeTypePosition

See Attribute inputCenter for more details.
(Read and Write property)

52.143.12  inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image

**Notes:**
Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

See Attribute inputImage for more details.
(Read and Write property)

52.143.13 inputScale as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Scale
**Notes:**

Name: inputScale
Class: double (NSNumber)
DisplayName English: Scale
DisplayName German: Skalierung
DisplayName French: Chelle
DisplayName Italian: Scala
DisplayName Spanish: Escala
Type: CIAttributeTypeScalar

See Attribute inputScale for more details.
(Read and Write property)

52.143.14 inputWidth as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Width
**Notes:**

See Attribute inputWidth for more details.
(Read and Write property)
Name: inputWidth
Class: double (NSNumber)
DisplayName English: Width
DisplayName German: Breite
DisplayName French: Largeur
DisplayName Italian: Larghezza
DisplayName Spanish: Anchura
Type: CIAttributeTypeDistance
52.144 class CIFilterOverlayBlendModeMBS

52.144.1 class CIFilterOverlayBlendModeMBS

Notes:

Details for this filter:

FilterName: CIOverlayBlendMode
DisplayName English: Overlay Blend Mode
DisplayName German: Mischmethode berlagerung
DisplayName French: Mode de fusion Superposition
DisplayName Italian: Modalit sfumatura sovrapposizione
DisplayName Spanish: Superponer modo de mezcla

Categories:

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputBackgroundImage: Background Image

Output:

- outputImage

Subclass of the CIFilterMBS class.
52.144.2 Methods

52.144.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.144.4 Properties

52.144.5 AttributeinputBackgroundImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Overlay Blend Mode attribute.
**Notes:**
This attribute should have this content:

Name: inputBackgroundImage  
Class: CIImageMBS  
Type: CIAttributeTypeImage  
DisplayName English: Background Image  
DisplayName German: Hintergrundbild  
DisplayName French: Image darrire-plan  
DisplayName Italian: Immagine di sfondo  
DisplayName Spanish: Imagen de fondo  
DefaultNumber: 0  
IdentityNumber: 0

(Read only property)

52.144.6 AttributeinputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Overlay Blend Mode attribute.

### 52.145.18 inputShadingImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Shading Image  
**Notes:**

- **Name:** inputShadingImage  
- **Class:** CIImageMBS (CIImage)  
- **DisplayName**  
  - English: Shading Image  
  - German: Bild schattieren  
  - French: Image dombrage  
  - Italian: Immagine ombreggiatura  
  - Spanish: Imagen de sombra  
- **Type:** CIAttributeTypeImage

See Attribute inputShadingImage for more details.  
(Read and Write property)

### 52.145.19 inputTargetImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Target Image  
**Notes:**

- **Name:** inputTargetImage  
- **Class:** CIImageMBS (CIImage)  
- **DisplayName**  
  - English: Target Image  
  - German: Zielfoto  
  - French: Image cible  
  - Italian: Immagine target  
  - Spanish: Imagen de destino  
- **Type:** CIAttributeTypeImage

See Attribute inputTargetImage for more details.  
(Read and Write property)

### 52.145.20 inputTime as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Time  
**Notes:**
Name: inputTime
Class: double (NSNumber)
DisplayName English: Time
DisplayName German: Zeit
DisplayName French: Dure
DisplayName Italian: Tempo
DisplayName Spanish: Tiempo
Type: CIAttributeTypeTime

See AttributeinputTime for more details.
(Read and Write property)
CHAPTER 52. COREIMAGE

52.146  class CIFilterPageCurlWithShadowTransitionMBS

52.146.1  class CIFilterPageCurlWithShadowTransitionMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Page Curl With Shadow filter.

**Notes:**

Details for this filter:

- **FilterName:** CIPageCurlWithShadowTransition
- **DisplayName English:** Page Curl With Shadow
- **DisplayName German:** Umblittern mit Schatten
- **DisplayName French:** Repli de page avec ombre
- **DisplayName Italian:** Piega pagina con ombra
- **DisplayName Spanish:** Página con el borde ondulado y sombra

**Categories:**

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- **inputImage:** Image
- **inputTargetImage:** Target Image
- **inputBacksideImage:** Backside Image
- **inputExtent:** Extent
- **inputTime:** Time
- **inputAngle:** Angle
- **inputRadius:** Radius
- **inputShadowSize:** ShadowSize
- **inputShadowAmount:** Shadow Amount
- **inputShadowExtent:** ShadowExtent
Output:

- outputImage

Subclass of the CIFilterMBS class.

### 52.146.2 Methods

### 52.146.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

**Notes:** On success the handle property is not zero and the filter has the default values set.

### 52.146.4 Properties

### 52.146.5 Attribute inputAngle as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Page Curl With Shadow attribute.

**Notes:**

This attribute should have this content:

```
Name: inputAngle
Class: double
Type: CIAttributeTypeAngle
DisplayName English: Angle
DisplayName German: Winkel
DisplayName French: Angle
DisplayName Italian: Angolo
DisplayName Spanish: ngulo
DefaultNumber: 0
IdentityNumber: 0
SliderMaxNumber: 3.141593
SliderMinNumber: -3.141593
```

(Read only property)
CHAPTER 52. COREIMAGE

52.146.6  Attribute inputBacksideImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Details about the Page Curl With Shadow attribute.

**Notes:**

This attribute should have this content:

Name: inputBacksideImage  
Class: CIImageMBS  
DisplayName English: Backside Image  
DisplayName German: Bild auf der Hinterseite  
DisplayName French: Image arrière  
DisplayName Italian: Immagine posteriore  
DisplayName Spanish: Imagen de reverso  
DefaultNumber: 0  
IdentityNumber: 0  

(Read only property)

52.146.7  Attribute inputExtent as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Details about the Page Curl With Shadow attribute.

**Notes:**

This attribute should have this content:

Name: inputExtent  
Class: CIVectorMBS  
Type: CIAttributeTypeRectangle  
DisplayName English: Extent  
DisplayName German: Betrag  
DisplayName French: tendue  
DisplayName Italian: Ampiezza  
DisplayName Spanish: Amplitud  
DefaultVector: [ 0 0 0 0 ]  
IdentityVector: n/a  

(Read only property)
52.146.8 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Page Curl With Shadow attribute.

**Notes:**
This attribute should have this content:

<table>
<thead>

52.146.19  inputRadius as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Radius
**Notes:**
Name: inputRadius
Class: double (NSNumber)
DisplayName English: Radius
DisplayName German: Radius
DisplayName French: Rayon
DisplayName Italian: Raggio
DisplayName Spanish: Radio
Type: CIAttributeTypeDistance

See Attribute inputRadius for more details.
52.146.20  inputShadowAmount as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Shadow Amount

**Notes:**

Name: inputShadowAmount  
Class: double (NSNumber)  
DisplayName English: Shadow Amount  
DisplayName German: Schattenumfang  
DisplayName French: Quantité d’ombre  
DisplayName Italian: Quantità ombreggiatura  
DisplayName Spanish: Cantidad de sombreado  
Type: CIAttributeTypeDistance

See Attribute inputShadowAmount for more details.  
(Read and Write property)

52.146.21  inputShadowExtent as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute ShadowExtent

**Notes:**

Name: inputShadowExtent  
Class: CIVectorMBS (CIVector)  
DisplayName English: ShadowExtent  
DisplayName German: ShadowExtent  
DisplayName French: ShadowExtent  
DisplayName Italian: ShadowExtent  
DisplayName Spanish: ShadowExtent  
Type: CIAttributeTypeRectangle

See Attribute inputShadowExtent for more details.  
(Read and Write property)
52.146.22  inputShadowSize as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute ShadowSize

**Notes:**

- **Name:** inputShadowSize
- **Class:** double (NSNumber)
- **DisplayName English:** ShadowSize
- **DisplayName German:** ShadowSize
- **DisplayName French:** ShadowSize
- **DisplayName Italian:** ShadowSize
- **DisplayName Spanish:** ShadowSize
- **Type:** CIAttributeTypeDistance

See Attribute inputShadowSize for more details.
(Read and Write property)

52.146.23  inputTargetImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Target Image

**Notes:**

- **Name:** inputTargetImage
- **Class:** CIImageMBS (CIImage)
- **DisplayName English:** Target Image
- **DisplayName German:** Zielbild
- **DisplayName French:** Image cible
- **DisplayName Italian:** Immagine target
- **DisplayName Spanish:** Imagen de destino

See Attribute inputTargetImage for more details.
(Read and Write property)

52.146.24  inputTime as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Time

**Notes:**
Name: inputTime
Class: double (NSNumber)
DisplayName English: Time
DisplayName German: Zeit
DisplayName French: Dure
DisplayName Italian: Tempo
DisplayName Spanish: Tiempo
Type: CIAttributeTypeTime

See Attribute inputTime for more details.
(Read and Write property)
52.147 class CIFilterParallelogramTileMBS

52.147.1 class CIFilterParallelogramTileMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Parallelogram Tile filter. **Notes:** Details for this filter:

- **FilterName:** CIParallelogramTile
- **DisplayName English:** Parallelogram Tile
- **DisplayName German:** Parallelogramme
- **DisplayName French:** Mosaque de paralllogrammes
- **DisplayName Italian:** Mosaico parallelogramma
- **DisplayName Spanish:** Mosaico paralelogramo

**Categories:**

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- **inputImage:** Image
- **inputCenter:** Center
- **inputAngle:** Angle
- **inputAcuteAngle:** Acute Angle
- **inputWidth:** Width

**Output:**

- **outputImage**

Subclass of the CIFilterMBS class.
52.147.2 Methods

52.147.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.147.4 Properties

52.147.5 Attribute inputAcuteAngle as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Parallelogram Tile attribute.
**Notes:**
This attribute should have this content:

Name: inputAcuteAngle  
Class: double  
Type: CIAttributeTypeAngle  
DisplayName English: Acute Angle  
DisplayName German: Spitzer Winkel  
DisplayName French: Angle aigu  
DisplayName Italian: Angolo acuto  
DisplayName Spanish: ngulo agudo  
DefaultNumber: 1.570796

52.147.8 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Parallelogram Tile attribute.

**Notes:**
This attribute should have this content:

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

**52.147.9 Attribute inputWidth as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Parallelogram Tile attribute.

**Notes:**
This attribute should have this content:

Name: inputWidth
Class: double
Type: CIAttributeTypeDistance
DisplayName English: Width
DisplayName German: Breite
DisplayName French: Largeur
DisplayName Italian: Larghezza
DisplayName Spanish: Anchura
DefaultNumber: 100
IdentityNumber: 100
SliderMaxNumber: 200
SliderMinNumber: 1

(Read only property)
### 52.147.10 inputAcuteAngle as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Acute Angle  
**Notes:**  
- Name: inputAcuteAngle  
- Class: double (NSNumber)  
- DisplayName English: Acute Angle  
- DisplayName German: Spitzer Winkel  
- DisplayName French: Angle aigu  
- DisplayName Italian: Angolo acuto  
- DisplayName Spanish: ngulo agudo  
- Type: CIAttributeTypeAngle  

See Attribute inputAcuteAngle for more details.  
(Read and Write property)

### 52.147.11 inputAngle as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Angle  
**Notes:**  
- Name: inputAngle  
- Class: double (NSNumber)  
- DisplayName English: Angle  
- DisplayName German: Winkel  
- DisplayName French: Angle  
- DisplayName Italian: Angolo  
- DisplayName Spanish: ngulo  
- Type: CIAttributeTypeAngle  

See Attribute inputAngle for more details.  
(Read and Write property)

### 52.147.12 inputCenter as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Center  
**Notes:**
### 52.147.13  `inputImage` as `CIImageMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image

**Notes:**

<table>
<thead>
<tr>
<th>Name</th>
<th>inputImage</th>

See Attribute `inputImage` for more details.
(Read and Write property)

### 52.147.14  `inputWidth` as `double`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Width

**Notes:**

See Attribute `inputWidth` for more details.
(Read and Write property)
Name: inputWidth
Class: double (NSNumber)
DisplayName English: Width
DisplayName German: Breite
DisplayName French: Largeur
DisplayName Italian: Larghezza
DisplayName Spanish: Anchura
Type: CIAtributeTypeDistance
52.148.1 class CIFilterPDF417BarcodeGeneratorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage PDF417 Barcode Generator filter.

**Notes:**
Details for this filter:

- **FilterName:** CIPDF417BarcodeGenerator
- **DisplayName English:** PDF417 Barcode Generator
- **DisplayName German:** PDF417 Barcode-Generator
- **DisplayName French:** Générateur de code-barres PDF417
- **DisplayName Italian:** Generatore codice a barre PDF417
- **DisplayName Spanish:** Generador de códigos de barras PDF417

**Categories:**

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- **inputMessage:** Message
- **inputMinWidth:** MinWidth
- **inputMaxWidth:** MaxWidth
- **inputMinHeight:** MinHeight
- **inputMaxHeight:** MaxHeight
- **inputDataColumns:** DataColumns
- **inputRows:** Rows
- **inputPreferredAspectRatio:** PreferredAspectRatio
- **inputCompactionMode:** CompactionMode
- **inputCompactStyle:** CompactStyle
CHAPTER 52. COREIMAGE

- inputCorrectionLevel: CorrectionLevel
- inputAlwaysSpecifyCompaction: AlwaysSpecifyCompaction

Output:

- outputImage
- outputCGImage

Subclass of the CIFilterMBS class.

52.148.2 Methods

52.148.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.148.4 Properties

52.148.5 Attribute inputAlwaysSpecifyCompaction as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the PDF417 Barcode Generator attribute.
**Notes:**

This attribute should have this content:

Name: inputAlwaysSpecifyCompaction
Class: double
DisplayName: AlwaysSpecifyCompaction
DefaultNumber: 0
IdentityNumber: 0
MaxNumber: 1
MinNumber: 0
SliderMaxNumber: 1
SliderMinNumber: 0

(Read only property)
52.148.6  Attribute inputCompactionMode as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the PDF417 Barcode Generator attribute. **Notes:**

This attribute should have this content:

```
Name:     inputCompactionMode
Class:    double
DisplayName:  CompactionMode
DefaultNumber:  0
IdentityNumber:  0
MaxNumber:  3
MinNumber:  0
SliderMaxNumber:  3
SliderMinNumber:  0
```

(Read only property)

52.148.7  Attribute inputCompactStyle as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the PDF417 Barcode Generator attribute. **Notes:**

This attribute should have this content:

```
Name:     inputCompactStyle
Class:    double
DisplayName:  CompactStyle
DefaultNumber:  0
IdentityNumber:  0
MaxNumber:  1
MinNumber:  0
SliderMaxNumber:  1
SliderMinNumber:  0
```

(Read only property)
52.148.8 Attribute inputCorrectionLevel as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Details about the PDF417 Barcode Generator attribute.
Notes:
This attribute should have this content:

```
Name: inputCorrectionLevel
Class: double
DisplayName: CorrectionLevel
DefaultNumber: 0
IdentityNumber: 0
MaxNumber: 8
MinNumber: 0
SliderMaxNumber: 8
SliderMinNumber: 0
```

(Read only property)

52.148.9 Attribute inputDataColumns as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Details about the PDF417 Barcode Generator attribute.
Notes:
This attribute should have this content:

```
Name: inputDataColumns
Class: double
DisplayName: DataColumns
DefaultNumber: 0
IdentityNumber: 0
MaxNumber: 30
MinNumber: 1
SliderMaxNumber: 30
SliderMinNumber: 1
```

(Read only property)
52.148.10 Attribute inputMaxHeight as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the PDF417 Barcode Generator attribute.

**Notes:**

This attribute should have this content:

```plaintext
Name: inputMaxHeight
Class: double
DisplayName: MaxHeight
DefaultNumber: 0
IdentityNumber: 0
MaxNumber: 283
MinNumber: 13
SliderMaxNumber: 283
SliderMinNumber: 13
```

(Read only property)

52.148.11 Attribute inputMaxWidth as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the PDF417 Barcode Generator attribute.

**Notes:**

This attribute should have this content:

```plaintext
Name: inputMaxWidth
Class: double
DisplayName: MaxWidth
DefaultNumber: 0
IdentityNumber: 0
MaxNumber: 583
MinNumber: 56
SliderMaxNumber: 583
SliderMinNumber: 56
```

(Read only property)
52.148.12  AttributeinputMessage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the PDF417 Barcode Generator attribute.  
**Notes:** This attribute should have this content:

- **Name:** inputMessage
- **Class:** Memoryblock
- **DisplayName:** Message
- **DefaultNumber:** 0
- **IdentityNumber:** 0

(Read only property)

52.148.13  AttributeinputMinHeight as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the PDF417 Barcode Generator attribute.  
**Notes:** This attribute should have this content:

- **Name:** inputMinHeight
- **Class:** double
- **DisplayName:** MinHeight
- **DefaultNumber:** 0
- **IdentityNumber:** 0
- **MaxNumber:** 283
- **MinNumber:** 13
- **SliderMaxNumber:** 283
- **SliderMinNumber:** 13

(Read only property)

52.148.14  AttributeinputMinWidth as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the PDF417 Barcode Generator attribute.
52.148.15  **Attribute inputPreferredAspectRatio as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the PDF417 Barcode Generator attribute.

**Notes:**
This attribute should have this content:

Name:       inputPreferredAspectRatio  
Class:      double  
DisplayName:  PreferredAspectRatio  
DefaultNumber:  0  
IdentityNumber:  0  
MaxNumber:  2.147484e+9  
MinNumber:  0  
SliderMaxNumber:  2.147484e+9  
SliderMinNumber:  0

(Read only property)
CHAPTER 52. COREIMAGE

Notes:
This attribute should have this content:

Name: inputRows
Class: double
DisplayName: Rows
DefaultNumber: 0
IdentityNumber: 0
MaxNumber: 90
MinNumber: 3
SliderMaxNumber: 90
SliderMinNumber: 3

(Read only property)

52.148.17  inputAlwaysSpecifyCompaction as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute AlwaysSpecifyCompaction

Notes:

Name: inputAlwaysSpecifyCompaction
Class: double (NSNumber)
DisplayName English: AlwaysSpecifyCompaction
DisplayName German: AlwaysSpecifyCompaction
DisplayName French: AlwaysSpecifyCompaction
DisplayName Italian: AlwaysSpecifyCompaction
DisplayName Spanish: AlwaysSpecifyCompaction

Type:

See Attribute inputAlwaysSpecifyCompaction for more details.
(Read and Write property)

52.148.18  inputCompactionMode as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute CompactionMode

Notes:

See Attribute inputCompactionMode for more details.
### 52.148. inputCompactStyle as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute CompactStyle
**Notes:**

<table>
<thead>
<tr>
<th>Name</th>
<th>inputCompactStyle</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class</td>
<td>double (NSNumber)</td>
</tr>
<tr>
<td>DisplayName English</td>

<tr>
<td>DisplayName French</td>
<td>CompactStyle</td>
</tr>
<tr>
<td>DisplayName Italian</td>
<td>CompactStyle</td>
</tr>
<tr>
<td>DisplayName Spanish</td>
<td>CompactStyle</td>
</tr>
</tbody>
</table>

See Attribute inputCorrectionLevel for more details.  
(Read and Write property)
52.148.21  **inputDataColumns as double**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute DataColumns

**Notes:**

Name: inputDataColumns
Class: double (NSNumber)
DisplayName English: DataColumns
DisplayName German: DataColumns
DisplayName French: DataColumns
DisplayName Italian: DataColumns
DisplayName Spanish: DataColumns
Type:

See AttributeinputDataColumns for more details.

(Read and Write property)

52.148.22  **inputMaxHeight as double**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute MaxHeight

**Notes:**

Name: inputMaxHeight
Class: double (NSNumber)
DisplayName English: MaxHeight
DisplayName German: MaxHeight
DisplayName French: MaxHeight
DisplayName Italian: MaxHeight
DisplayName Spanish: MaxHeight
Type:

See AttributeinputMaxHeight for more details.
### 52.148.23 inputMaxWidth as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute MaxWidth

**Notes:**

<table>
<thead>
<tr>
<th>Name</th>
<th>inputMaxWidth</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class</td>
<td>double (NSNumber)</td>

</tbody>
</table>

See Attribute `inputRows` for more details.
(Read and Write property)
CHAPTER 52. COREIMAGE

52.149 class CIFilterPerspectiveCorrectionMBS

52.149.1 class CIFilterPerspectiveCorrectionMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Perspective Correction filter.

**Notes:**

Details for this filter:

- **FilterName:** CIPerspectiveCorrection
- **DisplayName English:** Perspective Correction
- **DisplayName German:** Perspektivenkorrektur
- **DisplayName French:** Correction de la perspective
- **DisplayName Italian:** Correzione prospettiva
- **DisplayName Spanish:** Correccin de la perspectiva

**Categories:**

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryStillImage: Still Image
- CICategoryVideo: Video
- CICategoryBuiltIn: Built-In

**Input:**

- **inputImage:** Image
- **inputTopLeft:** Top Left
- **inputTopRight:** Top Right
- **inputBottomRight:** Bottom Right
- **inputBottomLeft:** Bottom Left
- **inputCrop:** Crop

**Output:**

- **outputImage**

Subclass of the CIFilterMBS class.
52.149.2 Methods

52.149.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.149.4 Properties

52.149.5 Attribute inputBottomLeft as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Perspective Correction attribute.
**Notes:**
This attribute should have this content:

- **Name:** inputBottomLeft
- **Class:** CIVectorMBS
- **Type:** CIAttributeTypePosition
- **DisplayName English:** Bottom Left
- **DisplayName German:** Unten links
- **DisplayName French:** En bas gauche
- **DisplayName Italian:** In basso a sinistra
- **DisplayName Spanish:** Abajo izquierda
- **DefaultVector:** [155 153]
- **IdentityVector:** n/a

(Read only property)

52.149.6 Attribute inputBottomRight as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Perspective Correction attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.149.7 Attribute inputCrop as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Perspective Correction attribute. **Notes:** This attribute should have this content:

Name: inputCrop  
Class: double  
Type: CIAttributeTypeBoolean  
DisplayName: Crop  
DefaultNumber: 1  
IdentityNumber: 0

(Read only property)

52.149.8 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Perspective Correction attribute. **Notes:** This attribute should have this content:

(Read only property)
52.149. **CLASS CIFILTERPERSPECTIVECORRECTIONMBS**

Name: inputImage  
Class: CIImageMBS

DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
DefaultNumber: 0  
IdentityNumber: 0

52.149.9 **Attribute inputTopLeft as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Perspective Correction attribute.  
**Notes:**  
This attribute should have this content:

- Name: inputTopLeft  
- Class: CIVectorMBS  
- Type: CIAttributeTypePosition  
- DisplayName English: Top Left  
- DisplayName German: Oben links  
- DisplayName French: En haut gauche  
- DisplayName Italian: In alto a sinistra  
- DisplayName Spanish: Arriba izquierda  
- DefaultVector: [118 484]  
- IdentityVector: n/a

(Read only property)

52.149.10 **Attribute inputTopRight as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Perspective Correction attribute.  
**Notes:**  
This attribute should have this content:

(Read only property)
### 52.149.11 `inputBottomLeft` as `CIVectorMBS`

**MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.**  
**Function:** The attribute Bottom Left  
**Notes:**

<table>
<thead>
<tr>
<th>Name</th>
<th><code>inputBottomLeft</code></th>
<th>Class</th>
<th><code>CIVectorMBS</code> (CIVector)</th>
</tr>
</thead>
<tbody>
<tr>

### 52.149.12 `inputBottomRight` as `CIVectorMBS`

**MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.**  
**Function:** The attribute Bottom Right  
**Notes:**

See Attribute `inputBottomRight` for more details.  
(Read and Write property)

### 52.149.13 `inputCrop` as double

**MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.**  
**Function:** The attribute Crop
52.149.  CLASS CIFILTERPERSPECTIVECORRECTIONMBS

Name: inputBottomRight
Class: CIVectorMBS (CIVector)
DisplayName English: Bottom Right
DisplayName German: Unten rechts
DisplayName French: En bas droite
DisplayName Italian: In basso a destra
DisplayName Spanish: Abajo derecha
Type: CIAttributeTypePosition

Notes:

Name: inputCrop
Class: double (NSNumber)
DisplayName English: Crop
DisplayName German: Crop
DisplayName French: Crop
DisplayName Italian: Crop
DisplayName Spanish: Crop
Type: CIAttributeTypeBoolean

See AttributeinputCrop for more details.
(Read and Write property)

52.149.14  inputImage as CII mageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image

Notes:

Name: inputImage
Class: CII mageMBS (CII mage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

See AttributeinputImage for more details.
(Read and Write property)
52.149.15  inputTopLeft as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Top Left  
**Notes:**

Name: inputTopLeft  
Class: CIVectorMBS (CIVector)  
DisplayName English: Top Left  
DisplayName German: Oben links  
DisplayName French: En haut gauche  
DisplayName Italian: In alto a sinistra  
DisplayName Spanish: Arriba izquierda  
Type: CIAttributeTypePosition

See Attribute inputTopLeft for more details.  
(Read and Write property)

52.149.16  inputTopRight as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Top Right  
**Notes:**

Name: inputTopRight  
Class: CIVectorMBS (CIVector)  
DisplayName English: Top Right  
DisplayName German: Oben rechts  
DisplayName French: En haut droite  
DisplayName Italian: In alto a destra  
DisplayName Spanish: Arriba derecha  
Type: CIAttributeTypePosition

See Attribute inputTopRight for more details.  
(Read and Write property)
class CIFilterPerspectiveTileMBS

FilterName: CIPerspectiveTile
DisplayName English: Perspective Tile
DisplayName German: Perspektivisch kacheln
DisplayName French: Mosaque en perspective
DisplayName Italian: Mosaico prospettiva
DisplayName Spanish: Mosaico en perspectiva

Categories:

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputTopLeft: Top Left
- inputTopRight: Top Right
- inputBottomRight: Bottom Right
- inputBottomLeft: Bottom Left

Output:

- outputImage

Subclass of the CIFilterMBS class.
52.150.2 Methods

52.150.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.150.4 Properties

52.150.5 Attribute inputBottomLeft as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Perspective Tile attribute.
**Notes:**
This attribute should have this content:

52.151.1 class CIFilterPerspectiveTransformMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Perspective Transform filter.

**Notes:**

Details for this filter:

- **FilterName:** CIPerspectiveTransform
- **DisplayName English:** Perspective Transform
- **DisplayName German:** Perspektivisch transformieren
- **DisplayName French:** Transformation en perspective
- **DisplayName Italian:** Trasformazione prospettiva
- **DisplayName Spanish:** Transformación en perspectiva

**Categories:**

- **CICategoryGeometryAdjustment:** Geometry Adjustment
- **CICategoryVideo:** Video
- **CICategoryStillImage:** Still Image
- **CICategoryBuiltIn:** Built-In

**Input:**

- **inputImage:** Image
- **inputTopLeft:** Top Left
- **inputTopRight:** Top Right
- **inputBottomRight:** Bottom Right
- **inputBottomLeft:** Bottom Left

**Output:**

- **outputImage**

Subclass of the CIFilterMBS class.
52.151.2 Methods

52.151.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.151.4 Properties

52.151.5 `AttributeinputBottomLeft` as `CIAttributeMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Perspective Transform attribute.
**Notes:**
This attribute should have this content:

Name:       inputBottomLeft  
Class:      CIVectorMBS  
Type:       CIAttributeTypePosition  
DisplayName English: Bottom Left  
DisplayName German: Unten links  
DisplayName French: En bas gauche  
DisplayName Italian: In basso a sinistra  
DisplayName Spanish: Abajo izquierda  
DefaultVector: [155 153]  
IdentityVector: n/a

(Read only property)

52.151.6 `AttributeinputBottomRight` as `CIAttributeMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Perspective Transform attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.151. **CLASS CIFILTERPERSPECTIVETRANSFORMMBS**

Name: inputBottomRight
Class: CIVectorMBS
Type: CIAtributeTypePosition
DisplayName English: Bottom Right
DisplayName German: Unten rechts
DisplayName French: En bas droite
DisplayName Italian: In basso a destra
DisplayName Spanish: Abajo derecha
DefaultVector: [ 548 140 ]
IdentityVector: n/a

52.151.7 **AttributeInputImage as CIAtributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Perspective Transform attribute.
**Notes:**
This attribute should have this content:

Name: inputImage
Class: CIImageMBS
Type: CIAtributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

52.151.8 **AttributeInputTopLeft as CIAtributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Perspective Transform attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.151.9  Attribute `inputTopRight` as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Perspective Transform attribute.

**Notes:**

This attribute should have this content:

```
Name: inputTopRight
Class: CIVectorMBS
Type: CIAttributeTypePosition
DisplayName English: Top Right
DisplayName German: Oben rechts
DisplayName French: En haut droite
DisplayName Italian: In alto a destra
DisplayName Spanish: Arriba derecha
DefaultVector: [ 646 507 ]
IdentityVector: n/a
```

(Read only property)

52.151.10  `inputBottomLeft` as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Bottom Left.

**Notes:**

See Attribute `inputBottomLeft` for more details.

(Read and Write property)
52.151. **CLASS CIFILTERPERSPECTIVETRANSFORMMBS**

Name: inputBottomLeft  
Class: CIVectorMBS (CIVector)  
DisplayName English: Bottom Left  
DisplayName German: Unten links  
DisplayName French: En bas gauche  
DisplayName Italian: In basso a sinistra  
DisplayName Spanish: Abajo izquierda  
Type: CIAttributeTypePosition

52.151.11 **inputBottomRight as CIVectorMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Bottom Right  
**Notes:**

Name: inputBottomRight  
Class: CIVectorMBS (CIVector)  
DisplayName English: Bottom Right  
DisplayName German: Unten rechts  
DisplayName French: En bas droite  
DisplayName Italian: In basso a destra  
DisplayName Spanish: Abajo derecha  
Type: CIAttributeTypePosition

See Attribute inputBottomRight for more details.  
(Read and Write property)

52.151.12 **inputImage as CIImageMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image  
**Notes:**

Name: inputImage  
Class: CIImageMBS (CIImage)  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
Type: CIAttributeTypeImage

See Attribute inputImage for more details.
52.151.13  inputTopLeft as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Top Left.

**Notes:**

Name: inputTopLeft
Class: CIVectorMBS (CIVector)
DisplayName English: Top Left
DisplayName German: Oben links
DisplayName French: En haut gauche
DisplayName Italian: In alto a sinistra
DisplayName Spanish: Arriba izquierda
Type: CIAttributeTypePosition

See AttributeinputTopLeft for more details.
(Read and Write property)

52.151.14  inputTopRight as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Top Right.

**Notes:**

Name: inputTopRight
Class: CIVectorMBS (CIVector)
DisplayName English: Top Right
DisplayName German: Oben rechts
DisplayName French: En haut droite
DisplayName Italian: In alto a destra
DisplayName Spanish: Arriba derecha
Type: CIAttributeTypePosition

See AttributeinputTopRight for more details.
(Read and Write property)
52.152.1  class CIFilterPerspectiveTransformWithExtentMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Perspective Transform with Extent filter.

**Notes:**
Details for this filter:

- **FilterName:** CIFilterPerspectiveTransformWithExtent
- **DisplayName English:** Perspective Transform with Extent
- **DisplayName German:** Perspektivische Transformation mit Ausbreitung
- **DisplayName French:** Transformation de perspective avec Extent
- **DisplayName Italian:** Trasformazione prospettiva con ampiezza
- **DisplayName Spanish:** Transformación en perspectiva con amplitud

**Categories:**
- **CICategoryGeometryAdjustment:** Geometry Adjustment
- **CICategoryVideo:** Video
- **CICategoryStillImage:** Still Image
- **CICategoryBuiltIn:** Built-In

**Input:**
- **inputImage:** Image
- **inputExtent:** Extent
- **inputTopLeft:** Top Left
- **inputTopRight:** Top Right
- **inputBottomRight:** Bottom Right
- **inputBottomLeft:** Bottom Left

**Output:**
- **outputImage

Subclass of the CIFilterMBS class.
52.152.2 Methods

52.152.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.152.4 Properties

52.152.5 Attribute inputBottomLeft as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Perspective Transform with Extent attribute.
**Notes:**
This attribute should have this content:

<table>
<thead>
<tr>
<th>Name</th>
<th>inputBottomLeft</th>
</tr>

</tr>
</tbody>
</table>

(Read only property)

52.152.6 Attribute inputBottomRight as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Perspective Transform with Extent attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.152. **CLASS CIFILTERPERSPECTIVETRANSFORMWITHEXTENTMBS**

Name: inputBottomRight  
Class: CIVectorMBS  
Type: CIAttributeTypePosition  
DisplayName English: Bottom Right  
DisplayName German: Unten rechts  
DisplayName French: En bas droite  
DisplayName Italian: In basso a destra  
DisplayName Spanish: Abajo derecha  
DefaultVector: [548 140]  
IdentityVector: n/a

52.152.7 **Attribute inputExtent as CIAttributeMBS**

Notes:  
This attribute should have this content:

Name: inputExtent  
Class: CIVectorMBS  
Type: CIAttributeTypeRectangle  
DisplayName English: Extent  
DisplayName German: Betrag  
DisplayName French: tendue  
DisplayName Italian: Ampiezza  
DisplayName Spanish: Amplitud  
DefaultVector: [0 0 300 300]  
IdentityVector: n/a

(Read only property)

52.152.8 **Attribute inputImage as CIAttributeMBS**

Notes:  
This attribute should have this content:

(Read only property)
Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

52.152.9 Attribute inputTopLeft as CIAttributeMBS

Notes:
This attribute should have this content:

Name: inputTopLeft
Class: CIVectorMBS
Type: CIAttributeTypePosition
DisplayName English: Top Left
DisplayName German: Oben links
DisplayName French: En haut gauche
DisplayName Italian: In alto a sinistra
DisplayName Spanish: Arriba izquierda
DefaultVector: [ 118 484 ]
IdentityVector: n/a

(Read only property)

52.152.10 Attribute inputTopRight as CIAttributeMBS

Notes:
This attribute should have this content:

(Read only property)
52.152.11 inputBottomLeft as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Bottom Left

**Notes:**

See Attribute inputBottomLeft for more details.
(Read and Write property)

52.152.12 inputBottomRight as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Bottom Right

**Notes:**

See Attribute inputBottomRight for more details.
(Read and Write property)

52.152.13 inputExtent as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Extent
**Name:** inputBottomRight  
**Class:** CIVectorMBS (CIVector)  
**DisplayName English:** Bottom Right  
**DisplayName German:** Unten rechts  
**DisplayName French:** En bas droite  
**DisplayName Italian:** In basso a destra  
**DisplayName Spanish:** Abajo derecha  
**Type:** CIAttributeTypePosition

**Notes:**

**Name:** inputExtent  
**Class:** CIVectorMBS (CIVector)  
**DisplayName English:** Extent  
**DisplayName German:** Betrag  
**DisplayName French:** tendue  
**DisplayName Italian:** Ampiezza  
**DisplayName Spanish:** Amplitud  
**Type:** CIAttributeTypeRectangle

See Attribute inputExtent for more details.  
(Read and Write property)

### 52.152.14 inputImage as CIImageMBS

**Function:** The attribute Image  
**Notes:**

**Name:** inputImage  
**Class:** CIImageMBS (CIImage)  
**DisplayName English:** Image  
**DisplayName German:** Bild  
**DisplayName French:** Image  
**DisplayName Italian:** Immagine  
**DisplayName Spanish:** Imagen  
**Type:** CIAttributeTypeImage

See Attribute inputImage for more details.  
(Read and Write property)
52.152.15  **inputTopLeft** as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Top Left  
**Notes:**

Name: inputTopLeft  
Class: CIVectorMBS (CIVector)  
DisplayName English: Top Left  
DisplayName German: Oben links  
DisplayName French: En haut gauche  
DisplayName Italian: In alto a sinistra  
DisplayName Spanish: Arriba izquierda  
Type: CIAttributeTypePosition

See Attribute inputTopLeft for more details.  
(Read and Write property)

52.152.16  **inputTopRight** as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Top Right  
**Notes:**

Name: inputTopRight  
Class: CIVectorMBS (CIVector)  
DisplayName English: Top Right  
DisplayName German: Oben rechts  
DisplayName French: En haut droite  
DisplayName Italian: In alto a destra  
DisplayName Spanish: Arriba derecha  
Type: CIAttributeTypePosition

See Attribute inputTopRight for more details.  
(Read and Write property)
52.153 class CILFilterPhotoEffectChromeMBS

52.153.1 class CILFilterPhotoEffectChromeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Photo Effect Chrome filter.

**Notes:**

Details for this filter:

- **FilterName:** CIPhotoEffectChrome
- **DisplayName English:** Photo Effect Chrome
- **DisplayName German:** Fotoeffekt Chrom
- **DisplayName French:** Effet de photo Chrom
- **DisplayName Italian:** Effetto foto Chrome
- **DisplayName Spanish:** Efecto fotográfico Chrome

**Categories:**

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryXMPSerializable: CICategoryXMPSerializable

**Input:**

- inputImage: Image

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.153.2 Methods

52.153.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.153.4 Properties

52.153.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Photo Effect Chrome attribute.
**Notes:**
This attribute should have this content:

52.157.6 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image
**Notes:**
See Attribute inputImage for more details.
(Read and Write property)
Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage
MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Photo Effect Process filter.

**Notes:**
Details for this filter:

- **FilterName:** CIPhotoEffectProcess
- **DisplayName English:** Photo Effect Process
- **DisplayName German:** Fotoeffekt Prozess
- **DisplayName French:** Effet de photo Traitement
- **DisplayName Italian:** Effetto foto Processing
- **DisplayName Spanish:** Efecto fotográfico Procesamiento

**Categories:**

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryXMPSerializable: CICategoryXMPSerializable

**Input:**

- **inputImage: Image**

**Output:**

- **outputImage**

Subclass of the CIFilterMBS class.
52.158.2 Methods

52.158.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.158.4 Properties

52.158.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Photo Effect Process attribute.
**Notes:**
This attribute should have this content:

- **Name:** inputImage
- **Class:** CIImageMBS
- **Type:** CIAttributeTypeImage
- **DisplayName English:** Image
- **DisplayName German:** Bild
- **DisplayName French:** Image
- **DisplayName Italian:** Immagine
- **DisplayName Spanish:** Imagen
- **DefaultNumber:** 0
- **IdentityNumber:** 0

(Read only property)

52.158.6 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image
**Notes:**
See Attribute inputImage for more details.
(Read and Write property)
Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage
52.159 class CIFilterPhotoEffectTonalMBS

52.159.1 class CIFilterPhotoEffectTonalMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Photo Effect Tonal filter.

**Notes:**
Details for this filter:

- **FilterName:** CIPhotoEffectTonal
- **DisplayName English:** Photo Effect Tonal
- **DisplayName German:** Fotoeffekt S/W mittel
- **DisplayName French:** Effet de photo Tonalits
- **DisplayName Italian:** Effetto foto Tonale
- **DisplayName Spanish:** Efecto fotográfico Tonal

**Categories:**

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryXMPSerializable: CICategoryXMPSerializable

**Input:**

- inputImage: Image

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.159.2 Methods

52.159.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.159.4 Properties

52.159.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Photo Effect Tonal attribute.
**Notes:**
This attribute should have this content:

- **Name:** inputImage
- **Class:** CIImageMBS
- **Type:** CIAttributeTypeImage

52.161 class CIFilterPinchDistortionMBS

52.161.1 class CIFilterPinchDistortionMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Pinch Distortion filter.

**Notes:**
Details for this filter:

FilterName: CIPinchDistortion
DisplayName English: Pinch Distortion
DisplayName German: Verzerrung Drcken
DisplayName French: Dformation Pincement
DisplayName Italian: Distorsione minima
DisplayName Spanish: Distorsin por contraccin

Categories:

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputCenter: Center
- inputRadius: Radius
- inputScale: Scale

Output:

- outputImage

Subclass of the CIFilterMBS class.
52.161.2 Methods

52.161.3 Constructor

Notes: On success the handle property is not zero and the filter has the default values set.

52.161.4 Properties

52.161.5 Attribute inputCenter as CIAttributeMBS

Notes: This attribute should have this content:

Name: inputCenter
Class: CIVectorMBS
Type: CIAttributeTypePosition
DisplayName English: Center
DisplayName German: Mitte
DisplayName French: Centre
DisplayName Italian: Centro
DisplayName Spanish: Centro
DefaultVector: [ 150 150 ]
IdentityVector: n/a

- **CICategoryGenerator:** Generator
- **CICategoryStillImage:** Still Image
- **CICategoryBuiltIn:** Built-In

**Input:**

- **inputMessage:** Message
- **inputCorrectionLevel:** CorrectionLevel

**Output:**

- **outputImage**
- **outputCGImage**

Subclass of the CIFilterMBS class.
52.165.2 Methods

52.165.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.165.4 Properties

52.165.5 Attribute inputCorrectionLevel as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the QRCode Generator attribute.
**Notes:**
This attribute should have this content:

<table>
<thead>
<tr>
<th>Name</th>
<th>inputCorrectionLevel</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class</td>
<td>String</td>
</tr>
<tr>
<td>DisplayName</td>
<td>CorrectionLevel</td>
</tr>
<tr>
<td>DefaultNumber</td>
<td>0</td>
</tr>
<tr>
<td>IdentityNumber</td>
<td>0</td>
</tr>
</tbody>
</table>

(Read only property)

52.165.6 Attribute inputMessage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the QRCode Generator attribute.
**Notes:**
This attribute should have this content:

<table>
<thead>
<tr>
<th>Name</th>
<th>inputMessage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class</td>
<td>Memoryblock</td>
</tr>
<tr>
<td>DisplayName</td>
<td>Message</td>
</tr>
<tr>
<td>DefaultNumber</td>
<td>0</td>
</tr>
<tr>
<td>IdentityNumber</td>
<td>0</td>
</tr>
</tbody>
</table>
52.165.7 inputCorrectionLevel as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute CorrectionLevel

**Notes:**

Name: inputCorrectionLevel
Class: String (NSString)
DisplayName English: CorrectionLevel
DisplayName German: CorrectionLevel
DisplayName French: CorrectionLevel
DisplayName Italian: CorrectionLevel
DisplayName Spanish: CorrectionLevel
Type: 

See Attribute inputCorrectionLevel for more details.
(Read and Write property)

52.165.8 inputMessage as Memoryblock

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Message

**Notes:**

Name: inputMessage
Class: Memoryblock (NSData)
DisplayName English: Message
DisplayName German: Message
DisplayName French: Message
DisplayName Italian: Message
DisplayName Spanish: Message
Type: 

See Attribute inputMessage for more details.
(Read and Write property)
52.166.1 class CIFilterRadialGradientMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Radial Gradient filter.

**Notes:**
Details for this filter:

FilterName: CIFilterRadialGradient
DisplayName English: Radial Gradient
DisplayName German: Radialer Verlauf
DisplayName French: Dgrad radial
DisplayName Italian: Gradiente radiale
DisplayName Spanish: Degradado radial

Categories:

- CICategoryGradient: Gradient
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputCenter: Center
- inputRadius0: Radius 1
- inputRadius1: Radius 2
- inputColor0: Color 1
- inputColor1: Color 2

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.166.2 Methods

52.166.3 Constructor

Notes: On success the handle property is not zero and the filter has the default values set.

52.166.4 Properties

52.166.5 Attribute inputCenter as CIAttributeMBS

Notes:
This attribute should have this content:

Name: inputCenter
Class: CIVectorMBS
Type: CIAttributeTypePosition
DisplayName English: Center
DisplayName German: Mitte
DisplayName French: Centre
DisplayName Italian: Centro
DisplayName Spanish: Centro
DefaultVector: [ 150 150 ]
IdentityVector: n/a

(Read only property)

52.166.6 Attribute inputColor0 as CIAttributeMBS

Notes:
This attribute should have this content:

(Read only property)
52.166. CL S C IFIL TRADIAL GRADIENT MBS

Name: inputColor0
Class: CIColorMBS
Type: CIAttributeTypeColor
DisplayName English: Color 1
DisplayName German: Farbe 1
DisplayName French: Couleur 1
DisplayName Italian: Colore 1
DisplayName Spanish: Color 1
DefaultColor: Red = 1, Green = 1, Blue = 1, Alpha = 1
IdentityNumber: 0

52.166.7 Attribute inputColor1 as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Radial Gradient attribute.
**Notes:**
This attribute should have this content:

Name: inputColor1
Class: CIColorMBS
Type: CIAttributeTypeColor
DisplayName English: Color 2
DisplayName German: Farbe 2
DisplayName French: Couleur 2
DisplayName Italian: Colore 2
DisplayName Spanish: Color 2
DefaultColor: Red = 0, Green = 0, Blue = 0, Alpha = 1
IdentityNumber: 0
(Read only property)

52.166.8 Attribute inputRadius0 as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Radial Gradient attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.166.9  Attribute inputRadius1 as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Radial Gradient attribute.

**Notes:**

This attribute should have this content:

Name: inputRadius1
Class: double
Type: CIAttributeTypeDistance
DisplayName English: Radius 2
DisplayName German: Radius 2
DisplayName French: Rayon 2
DisplayName Italian: Raggio 2
DisplayName Spanish: Radio 2
DefaultNumber: 100
IdentityNumber: 0
SliderMaxNumber: 800
SliderMinNumber: 0

(Read only property)

52.166.10  inputCenter as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Center

**Notes:**

See Attribute inputCenter for more details.
52.166. **CLASS CIFILTERRADIALGRADIENTMBS**

Name: inputCenter
Class: CIVectorMBS (CIVector)
DisplayName English: Center
DisplayName German: Mitte
DisplayName French: Centre
DisplayName Italian: Centro
DisplayName Spanish: Centro
Type: CIAttributeTypePosition

(Read and Write property)

52.166.11 **inputColor0 as CIColorMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Color 1

**Notes:**

Name: inputColor0
Class: CIColorMBS (CIColor)
DisplayName English: Color 1
DisplayName German: Farbe 1
DisplayName French: Couleur 1
DisplayName Italian: Colore 1
DisplayName Spanish: Color 1
Type: CIAttributeTypeColor

See Attribute inputColor0 for more details.
(Read and Write property)

52.166.12 **inputColor1 as CIColorMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Color 2

**Notes:**

See Attribute inputColor1 for more details.
(Read and Write property)
52.166.13  inputRadius0 as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Radius 1

**Notes:**

Name: inputRadius0
Class: double (NSNumber)
DisplayName English: Radius 1
DisplayName German: Radius 1
DisplayName French: Rayon 1
DisplayName Italian: Raggio 1
DisplayName Spanish: Radio 1
Type: CIAttributeTypeDistance

See Attribute inputRadius0 for more details.
(Read and Write property)

52.166.14  inputRadius1 as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Radius 2

**Notes:**

Name: inputRadius1
Class: double (NSNumber)
DisplayName English: Radius 2
DisplayName German: Radius 2
DisplayName French: Rayon 2
DisplayName Italian: Raggio 2
DisplayName Spanish: Radio 2
Type: CIAttributeTypeDistance

See Attribute inputRadius1 for more details.
52.166. CLASS CIFILTERRADIALGRADIENTMBS
(Read and Write property)
52.167 class CIFilterRandomGeneratorMBS

52.167.1 class CIFilterRandomGeneratorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Random Generator filter.  
**Notes:** Details for this filter:

FilterName: CIRandomGenerator  
DisplayName English: Random Generator  
DisplayName German: Zufallsmuster  
DisplayName French: Génrateur alatoire  
DisplayName Italian: Generatore casuale  
DisplayName Spanish: Generador aleatorio

Categories:

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

**Output:**

- outputImage

Subclass of the CIFilterMBS class.

52.167.2 Methods

52.167.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.  
**Notes:** On success the handle property is not zero and the filter has the default values set.
52.168. CLASS CIFILTERRIPPLETRANSITIONMBS

52.168  class CIFilterRippleTransitionMBS

52.168.1  class CIFilterRippleTransitionMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Ripple filter.

**Notes:**

Details for this filter:

- **FilterName:** CIRippleTransition
- **DisplayName English:** Ripple
- **DisplayName German:** Wellen
- **DisplayName French:** Ondulation
- **DisplayName Italian:** Increspatura
- **DisplayName Spanish:** Ondas

**Categories:**

- CICategoryTransition: Transition
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputTargetImage: Target Image
- inputShadingImage: Shading Image
- inputCenter: Center
- inputExtent: Extent
- inputTime: Time
- inputWidth: Width
- inputScale: Scale

**Output:**
52.168.2 Methods

52.168.3 Constructor

Notes: On success the handle property is not zero and the filter has the default values set.

52.168.4 Properties

52.168.5 Attribute inputCenter as CIAttributeMBS

Notes:
This attribute should have this content:

Name: inputCenter
Class: CIVectorMBS
Type: CIAttributeTypePosition
DisplayName English: Center
DisplayName German: Mitte
DisplayName French: Centre
DisplayName Italian: Centro
DisplayName Spanish: Centro
DefaultVector: [ 150 150 ]
IdentityVector: n/a

(Read only property)

52.168.6 Attribute inputExtent as CIAttributeMBS

Notes:
This attribute should have this content:

Name: inputExtent
Class: CIVectorMBS
Type: CIAttributeTypeRectangle
DisplayName English: Extent
DisplayName German: Betrag
DisplayName French: tendue
DisplayName Italian: Ampiezza
DisplayName Spanish: Amplitud
DefaultVector: [ 0 0 300 300 ]
IdentityVector: n/a

(Read only property)

52.168.7 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Ripple attribute.

**Notes:**

This attribute should have this content:

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

52.168.8 Attribute inputScale as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Ripple attribute.

**Notes:**
This attribute should have this content:

- **Name:** inputScale
- **Class:** double
- **Type:** CIAttributeTypeScalar
- **DisplayName English:** Scale
- **DisplayName German:** Skalierung
- **DisplayName French:** chelle
- **DisplayName Italian:** Scala
- **DisplayName Spanish:** Escala
- **DefaultNumber:** 50
- **IdentityNumber:** 0
- **MaxNumber:** 0
- **MinNumber:** -50
- **SliderMaxNumber:** 50
- **SliderMinNumber:** -50

(Read only property)

### 52.168.9 Attribute `inputShadingImage` as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Ripple attribute.

**Notes:**

This attribute should have this content:

- **Name:** inputShadingImage
- **Class:** CIImageMBS
- **Type:** CIAttributeTypeImage
- **DisplayName English:** Shading Image
- **DisplayName German:** Bild schattieren
- **DisplayName French:** Image dombrage
- **DisplayName Italian:** Immagine ombreggiatura
- **DisplayName Spanish:** Imagen de sombra
- **DefaultNumber:** 0
- **IdentityNumber:** 0

(Read only property)
52.168.10  Attribute inputTargetImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Ripple attribute.

**Notes:**

This attribute should have this content:

- **Name:** inputTargetImage
- **Class:** CIImageMBS
- **Type:** CIAttributeTypeImage
- **DisplayName English:** Target Image
- **DisplayName German:** Zielbild
- **DisplayName French:** Image cible
- **DisplayName Italian:** Immagine target
- **DisplayName Spanish:** Imagen de destino
- **DefaultNumber:** 0
- **IdentityNumber:** 0

(Read only property)

52.168.11  Attribute inputTime as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Ripple attribute.

**Notes:**

This attribute should have this content:

(Read only property)

52.168.12  Attribute inputWidth as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Ripple attribute.

**Notes:**

This attribute should have this content:

(Read only property)
Name: inputTime
Class: double
Type: CIAttributeTypeTime
DisplayName English: Time
DisplayName German: Zeit
DisplayName French: Dure
DisplayName Italian: Tempo
DisplayName Spanish: Tiempo
DefaultNumber: 0
IdentityNumber: 0
MaxNumber: 1
MinNumber: 0
SliderMaxNumber: 1
SliderMinNumber: 0

Name: inputWidth
Class: double
Type: CIAttributeTypeDistance
DisplayName English: Width
DisplayName German: Breite
DisplayName French: Largeur
DisplayName Italian: Larghezza
DisplayName Spanish: Anchura
DefaultNumber: 100
IdentityNumber: 0
MaxNumber: 0
MinNumber: 1
SliderMaxNumber: 300
SliderMinNumber: 10

52.168.13  inputCenter as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Center
**Notes:**
See Attribute inputCenter for more details.
(Read and Write property)

52.168.14  inputExtent as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Extent
52.168. **CLASS CIFILTERNIPPLETRANSITIONMBS**

Name: inputCenter  
Class: CIVectorMBS (CIVector)  
DisplayName English: Center  
DisplayName German: Mitte  
DisplayName French: Centre  
DisplayName Italian: Centro  
DisplayName Spanish: Centro  
Type: CIAtributeTypePosition

Notes:

Name: inputExtent  
Class: CIVectorMBS (CIVector)  
DisplayName English: Extent  
DisplayName German: Betrag  
DisplayName French: teneur  
DisplayName Italian: Ampiezza  
DisplayName Spanish: Amplitud  
Type: CIAtributeTypeRectangle

See Attribute inputExtent for more details.  
(Read and Write property)

52.168.15 **inputImage as CIImageMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**  
The attribute Image  
Notes:

Name: inputImage  
Class: CIImageMBS (CIImage)  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
Type: CIAtributeTypeImage

See Attribute inputImage for more details.  
(Read and Write property)
52.168.16  inputScale as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Scale

**Notes:**

Name: inputScale  
Class: double (NSNumber)  
DisplayName English: Scale  
DisplayName German: Skalierung  
DisplayName French: chelle  
DisplayName Italian: Scala  
DisplayName Spanish: Escala  
Type: CIAttributeTypeScalar

See Attribute inputScale for more details.  
(Read and Write property)

52.168.17  inputShadingImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Shading Image

**Notes:**

Name: inputShadingImage  
Class: CIImageMBS (CIImage)  
DisplayName English: Shading Image  
DisplayName German: Bild schattieren  
DisplayName French: Image dombrage  
DisplayName Italian: Immagine ombreggiatura  
DisplayName Spanish: Imagen de sombra  
Type: CIAttributeTypeImage

See Attribute inputShadingImage for more details.  
(Read and Write property)

52.168.18  inputTargetImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Target Image

**Notes:**
52.168.19  inputTime as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Time **Notes:**

Name: inputTime
Class: double (NSNumber)
DisplayName English: Time
DisplayName German: Zeit
DisplayName French: Dure
DisplayName Italian: Tempo
DisplayName Spanish: Tiempo
Type: CIAttributeTypeTime

See Attribute inputTime for more details.
(Read and Write property)

52.168.20  inputWidth as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Width **Notes:**

See Attribute inputWidth for more details.
(Read and Write property)
Name: inputWidth
Class: double (NSNumber)
DisplayName English: Width
DisplayName German: Breite
DisplayName French: Largeur
DisplayName Italian: Larghezza
DisplayName Spanish: Anchura
Type: CIAttributeTypeDistance
52.169.1  class CICFilterRowAverageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Row Average filter.
**Notes:**
Details for this filter:

- **FilterName:** CIRowAverage
- **DisplayName English:** Row Average
- **DisplayName German:** Zeilendurchschnitt
- **DisplayName French:** Moyenne de ranges
- **DisplayName Italian:** Media riga
- **DisplayName Spanish:** Media de la fila

**Categories:**
- CICategoryReduction: Reduction
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**
- inputImage: Image
- inputExtent: Extent

**Output:**
- outputImage

Subclass of the CIFilterMBS class.
52.169.2 Methods

52.169.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.169.4 Properties

52.169.5 Attribute inputExtent as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Row Average attribute.
**Notes:**
This attribute should have this content:

Name: inputExtent
Class: CIVectorMBS
Type: CIAttributeTypeRectangle
DisplayName English: Extent
DisplayName German: Betrag
DisplayName French: tendue
DisplayName Italian: Ampiezza
DisplayName Spanish: Amplitud
DefaultVector: [ 0 0 640 80 ]
IdentityVector: n/a

(Read only property)

52.169.6 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Row Average attribute.
**Notes:**
This attribute should have this content:

(Read only property)

52.171.2 Methods

52.171.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.171.4 Properties

52.171.5 Attribute inputBackgroundImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Screen Blend Mode attribute.
**Notes:**
This attribute should have this content:

Name: inputBackgroundImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Background Image
DisplayName German: Hintergrundbild
DisplayName French: Image d'arrière-plan
DisplayName Italian: Immagine di sfondo
DisplayName Spanish: Imagen de fondo
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

52.171.6 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Screen Blend Mode attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.171. **CLASS CIFILTERSCREENBLENDMODEMBS**

Name: inputImage  
Class: CIImageMBS  
Type: CIAttributeTypeImage  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
DefaultNumber: 0  
IdentityNumber: 0

52.171.7 **inputBackgroundImage as CIImageMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**  
The attribute Background Image  
**Notes:**

Name: inputBackgroundImage  
Class: CIImageMBS (CIImage)  
DisplayName English: Background Image  
DisplayName German: Hintergrundbild  
DisplayName French: Image darrire-plan  
DisplayName Italian: Immagine di sfondo  
DisplayName Spanish: Imagen de fondo  
Type: CIAttributeTypeImage

See AttributeinputBackgroundImage for more details.  
(Read and Write property)

52.171.8 **inputImage as CIImageMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**  
The attribute Image  
**Notes:**

See AttributeinputImage for more details.  
(Read and Write property)
Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage
52.172.1  class CIFilterSepiaToneMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Sepia Tone filter.

**Notes:**

Details for this filter:

- **FilterName:** CISepiaTone
- **DisplayName English:** Sepia Tone
- **DisplayName German:** Sepia-Farbtne
- **DisplayName French:** Ton spia
- **DisplayName Italian:** Tonalit seppia
- **DisplayName Spanish:** Tono sepi

**Categories:**

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In
- CICategoryXMPSerializable: CICategoryXMPSerializable

**Input:**

- inputImage: Image
- inputIntensity: Intensity

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.172.2 Methods

52.172.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.172.4 Properties

52.172.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Sepia Tone attribute.
**Notes:**
This attribute should have this content:

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0

(Read only property)

52.172.6 Attribute inputIntensity as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Sepia Tone attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.172. **CLASS CIFILTERSEPIATONEMBS**

Name: inputIntensity  
Class: double  
Type: CIAttributeTypeScalar  
DisplayName English: Intensity  
DisplayName German: Intensität  
DisplayName French: Intensité  
DisplayName Italian: Intensità  
DisplayName Spanish: Intensidad  
DefaultNumber: 1  
IdentityNumber: 0  
SliderMaxNumber: 1  
SliderMinNumber: 0

52.172.7 **inputImage as CIImageMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image  
**Notes:**

Name: inputImage  
Class: CIImageMBS (CIImage)  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
Type: CIAttributeTypeImage

See Attribute inputImage for more details.  
(Read and Write property)

52.172.8 **inputIntensity as double**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Intensity  
**Notes:**

See Attribute inputIntensity for more details.  
(Read and Write property)
Name: inputIntensity
Class: double (NSNumber)
DisplayName English: Intensity
DisplayName German: Intensität
DisplayName French: Intensité
DisplayName Italian: Intensità
DisplayName Spanish: Intensidad
Type: CIAttributeTypeScalar
52.173.1 class CIFilterShadedMaterialMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Shaded Material filter.

**Notes:**

Details for this filter:

- **FilterName:** CIShadedMaterial
- **DisplayName English:** Shaded Material
- **DisplayName German:** Schattiertes Material
- **DisplayName French:** Matéria ombré
- **DisplayName Italian:** Materiale ombreggiato
- **DisplayName Spanish:** Material sombreado

**Categories:**

- CICategoryStylize: Stylize
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- **inputImage:** Image
- **inputShadingImage:** Shading Image
- **inputScale:** Scale

**Output:**

- **outputImage**

Subclass of the CIFilterMBS class.
52.173.2 Methods

52.173.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.173.4 Properties

52.173.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Shaded Material attribute.
**Notes:**
This attribute should have this content:

- Name: inputImage
- Class: CIImageMBS
- Type: CIAttributeValueImage
- DisplayName English: Image
- DisplayName German: Bild
- DisplayName French: Image
- DisplayName Italian: Immagine
- DisplayName Spanish: Imagen
- DefaultNumber: 0
- IdentityNumber: 0

(Read only property)

52.173.6 Attribute inputScale as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Shaded Material attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.173. **CLASS CIFILTERSHADEDMATERIALMBS**

| Name: | inputScale |
| Class: | double |
| Type: | CIAttributeTypeDistance |
| DisplayName English: | Scale |
| DisplayName German: | Skalierung |
| DisplayName French: | chelle |
| DisplayName Italian: | Scala |
| DisplayName Spanish: | Escala |
| DefaultNumber: | 10 |
| IdentityNumber: | 0 |
| SliderMaxNumber: | 200 |
| SliderMinNumber: | 0.5 |

52.173.7 **Attribute inputShadingImage as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Shaded Material attribute.

**Notes:**

This attribute should have this content:

| Name: | inputShadingImage |
| Class: | CIImageMBS |
| Type: | CIAttributeTypeImage |
| DisplayName English: | Shading Image |
| DisplayName German: | Bild schattieren |
| DisplayName French: | Image dombrage |
| DisplayName Italian: | Immagine ombreggiatura |
| DisplayName Spanish: | Imagen de sombra |
| DefaultNumber: | 0 |
| IdentityNumber: | 0 |

(Read only property)

52.173.8 **inputImage as CIImageMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image

**Notes:**

See Attribute inputImage for more details.

(Read and Write property)
Name: inputImage  
Class: CIImageMBS (CIImage)  
DisplayName English: Image  
DisplayName German: Bild  
DisplayName French: Image  
DisplayName Italian: Immagine  
DisplayName Spanish: Imagen  
Type: CIAttributeTypeImage

52.173.9 inputScale as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**  
The attribute Scale

**Notes:**

Name: inputScale  
Class: double (NSNumber)  
DisplayName English: Scale  
DisplayName German: Skalierung  
DisplayName French: chelle  
DisplayName Italian: Scala  
DisplayName Spanish: Escala  
Type: CIAttributeTypeDistance

See Attribute inputScale for more details.  
(Read and Write property)

52.173.10 inputShadingImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**  
The attribute Shading Image

**Notes:**

Name: inputShadingImage  
Class: CIImageMBS (CIImage)  
DisplayName English: Shading Image  
DisplayName German: Bild schattieren  
DisplayName French: Image dombrage  
DisplayName Italian: Immagine ombreggiatura  
DisplayName Spanish: Imagen de sombra  
Type: CIAttributeTypeImage

See Attribute inputShadingImage for more details.
52.173.  CLASS CIFILTERSHADEDMATERIALMBS

(Read and Write property)
52.174 class CIFilterShapeMBS

52.174.1 class CIFilterShapeMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
A class to represent a filter shape in Realbasic.

52.174.2 Methods

52.174.3 Constructor(cgrect as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Create a shape representing the smallest integral rect containing `cgrect`.
See also:

- 52.174.4 Constructor(Handle as Integer)

52.174.4 Constructor(Handle as Integer)

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Initializes object with given object reference.
Notes:
ref should be a CIFilterShape* and the object is retained.
Raises UnsupportedOperationException if object is not a CIFilterShape.
See also:

- 52.174.3 Constructor(cgrect as CGRectMBS)

52.174.5 copy as CIFilterShapeMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates a copy of the filter shape object.

52.174.6 InsetByX(x as Integer, y as Integer) as CIFilterShapeMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Create a shape representing the shape inset by `delta`.
**52.174.7 IntersectWith(s as CIFilterShapeMBS) as CIFilterShapeMBS**

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Create a shape representing the intersection of the shape and 's'.

**52.174.8 IntersectWithRect(cgrect as CGRectMBS) as CIFilterShapeMBS**

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Create a shape representing the intersection of the shape and the smallest integral rect containing 'cgrect'.

**52.174.9 shapeWithRect(r as CGRectMBS) as CIFilterShapeMBS**

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a filter shape object and initializes it with a rectangle. **Notes:** R: A rectangle. The filter shape object will contain the smallest integral rectangle specified by this argument.

**52.174.10 TransformBy(CGAffineTransform as NSAffineTransformMBS, flag as boolean) as CIFilterShapeMBS**

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Create a shape from the result of transforming the shape by CGAffineTransform. **Notes:**
- If flag is false the new shape will contain all pixels in the transformed shape (and possibly some outside the transformed shape).
- If flag is false the new shape will contain a subset of the pixels in the transformed shape (but none of those outside the transformed shape).

**52.174.11 UnionWith(s as CIFilterShapeMBS) as CIFilterShapeMBS**

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Create a shape representing the union of the shape and 's'.

**52.174.12 UnionWithRect(cgrect as CGRectMBS) as CIFilterShapeMBS**

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Create a shape representing the union of the shape and the smallest integral rect containing 'cgrect'.
52.174.13 Properties

52.174.14 description as String

MBS MacCG Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the textual description for this filter shape. **Notes:** (Read only property)

52.174.15 extent as CGRectMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The extent of the filter shape. **Notes:** Extent is a rectangle that describes the filter shape in the working coordinate space with a fixed area. Available in OS X v10.11 and later. (Read only property)

52.174.16 Handle as Integer

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The handle to the internal used CIFilterShape reference. **Notes:** (Read only property)
52.175. class CIFilterSharpenLuminanceMBS

52.175.1 class CIFilterSharpenLuminanceMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Sharpen Luminance filter.

**Notes:**
Details for this filter:

FilterName: CISharpenLuminance
DisplayName English: Sharpen Luminance
DisplayName German: Luminanz scharfzeichnen
DisplayName French: Renforcer la luminance
DisplayName Italian: Luminosità nitidezza
DisplayName Spanish: Agudizar luminancia

**Categories:**
- CICategorySharpen: Sharpen
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**
- inputImage: Image
- inputSharpness: Sharpness

**Output:**
- outputImage

Subclass of the CIFilterMBS class.
52.175.2 Methods

52.175.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.175.4 Properties

52.175.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Sharpen Luminance attribute.
**Notes:**

This attribute should have this content:

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>

(Read only property)

52.175.6 Attribute inputSharpness as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Sharpen Luminance attribute.
**Notes:**

This attribute should have this content:

(Read only property)
52.175.  CLASS CIFILTERSHARPENLUMINANCEDMBS

Name:          inputSharpness
Class:         double
Type:          CIAttributeTypeScalar
DisplayName English: Sharpness
DisplayName German: Schärfe
DisplayName French: Nettet
DisplayName Italian: Nitidezza
DisplayName Spanish: Nitidez
DefaultNumber: 0.4
IdentityNumber: 0
SliderMaxNumber: 2
SliderMinNumber: 0

52.175.7  inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image
**Notes:**

Name:          inputImage
Class:         CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine

52.176. class CIFilterSixfoldReflectedTileMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Sixfold Reflected Tile filter.

**Notes:**

Details for this filter:

- **FilterName:** CISixfoldReflectedTile
- **DisplayName English:** Sixfold Reflected Tile
- **DisplayName German:** 6-fach reflektierte Kachel
- **DisplayName French:** Mosaque rflchie 6 fois
- **DisplayName Italian:** Mosaico riflesso in sei direzioni
- **DisplayName Spanish:** Mosaico reflejado seis veces

**Categories:**

- CICategoryTileEffect: Tile Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputCenter: Center
- inputAngle: Angle
- inputWidth: Width

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.176.2 Methods

52.176.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor. **Notes:** On success the handle property is not zero and the filter has the default values set.

52.176.4 Properties

52.176.5 AttributeinputAngle as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Sixfold Reflected Tile attribute. **Notes:** This attribute should have this content:

<table>
<thead>

52.184 class CIFilterSpotColorMBS

52.184.1 class CIFilterSpotColorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Spot Color filter.

**Notes:**

Details for this filter:

- **FilterName:** CISpotColor
- **DisplayName English:** Spot Color
- **DisplayName German:** Spot-Farbe
- **DisplayName French:** Couleur de la tache
- **DisplayName Italian:** Colore tinta piatta
- **DisplayName Spanish:** Color del punto

**Categories:**

- **CICategoryBuiltIn:** Built-In
- **CICategoryStillImage:** Still Image
- **CICategoryVideo:** Video
- **CICategoryStylize:** Stylize

**Input:**

- **inputImage:** Image
- **inputCenterColor1:** Center Color 1
- **inputReplacementColor1:** Replacement Color 1
- **inputCloseness1:** Closeness 1
- **inputContrast1:** Contrast 1
- **inputCenterColor2:** Center Color 2
- **inputReplacementColor2:** Replacement Color 2
- **inputCloseness2:** Closeness 2
- **inputContrast2:** Contrast 2
- **inputCenterColor3:** Center Color 3
52.184. CLASS CIFILTERSPOTCOLORMBS

- inputReplacementColor3: Replacement Color 3
- inputCloseness3: Closeness 3
- inputContrast3: Contrast 3

Output:

- outputImage

Subclass of the CIFilterMBS class.

52.184.2 Methods

52.184.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

**Notes:** On success the handle property is not zero and the filter has the default values set.

52.184.4 Properties

DisplayName Spanish: Imagen  
Type: CIAttributeTypeImage

See Attribute inputImage for more details.  
(Read and Write property)

52.185.15 **inputLightPointsAt** as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Light Points At  
**Notes:**

Name: inputLightPointsAt  
Class: CIVectorMBS (CIVector)  
DisplayName English: Light Points At  
DisplayName German: Lichtpunkte bei  
DisplayName French: Points lumineux  
DisplayName Italian: Punti luce a  
DisplayName Spanish: El foco apunta a  
Type: CIAttributeTypePosition3

See Attribute inputLightPointsAt for more details.  
(Read and Write property)

52.185.16 **inputLightPosition** as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Light Position  
**Notes:**

See Attribute inputLightPosition for more details.  
(Read and Write property)
Name: inputLightPosition  
Class: CIVectorMBS (CIVector)  
DisplayName English: Light Position  
DisplayName German: Lichtposition  
DisplayName French: Position de la lumire  
DisplayName Italian: Posizione luce  
DisplayName Spanish: Posici\n de la luz  
Type: CIAttributeTypePosition3
52.186. CLASS CIFILTERSRGBTONECURVETOLINEARMBS

52.186  class CIFilterSRGBToneCurveToLinearMBS

52.186.1  class CIFilterSRGBToneCurveToLinearMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage sRGB Tone Curve to Linear filter.

**Notes:**
Details for this filter:

- **FilterName:** CISRGBToneCurveToLinear
- **DisplayName English:** sRGB Tone Curve to Linear
- **DisplayName German:** sRGB-Farbtonkurve in eine lineare Farbtonkurve
- **DisplayName French:** Courbe tonale sRGB vers linaire
- **DisplayName Italian:** Da curva tonale sRGB a lineare
- **DisplayName Spanish:** Curva tonal de sRGB a lineal

**Categories:**

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

**Input:**

- **inputImage:** Image

**Output:**

- **outputImage**

Subclass of the CIFilterMBS class.
52.186.2 Methods

52.186.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

**Notes:** On success the handle property is not zero and the filter has the default values set.

52.186.4 Properties

52.186.5 AttributeinputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the sRGB Tone Curve to Linear attribute.

**Notes:**
This attribute should have this content:

52.187 class CIFilterStarShineGeneratorMBS

52.187.1 class CIFilterStarShineGeneratorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Star Shine filter.

**Notes:**
Details for this filter:

- FilterName: CIStarShineGenerator
- DisplayName English: Star Shine
- DisplayName German: Sternenlicht
- DisplayName French: Brillance dtoile
- DisplayName Italian: Stella luminosa
- DisplayName Spanish: Brillo estrellado

**Categories:**

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputCenter: Center
- inputColor: Color
- inputRadius: Radius
- inputCrossScale: Cross Scale
- inputCrossAngle: Cross Angle
- inputCrossOpacity: Cross Opacity
- inputCrossWidth: Cross Width
- inputEpsilon: Epsilon

**Output:**
Subclass of the CIFilterMBS class.

### 52.187.2 Methods

### 52.187.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

### 52.187.4 Properties

#### 52.187.5 Attribute inputCenter as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Star Shine attribute.
**Notes:**

This attribute should have this content:

- **Name:** inputCenter
- **Class:** CIVectorMBS
- **Type:** CIAttributeTypePosition
- **DisplayName English:** Center
- **DisplayName German:** Mitte
- **DisplayName French:** Centre
- **DisplayName Italian:** Centro
- **DisplayName Spanish:** Centro
- **DefaultVector:** [150 150]
- **IdentityVector:** n/a

(Read only property)

#### 52.187.6 Attribute inputColor as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Star Shine attribute.
**Notes:**
CHAPTER 52. COREIMAGE

This attribute should have this content:

Name: inputColor  
Class: CIColorMBS  
DisplayName English: Color  
DisplayName German: Farbe  
DisplayName French: Couleur  
DisplayName Italian: Colore  
DisplayName Spanish: Color  
DefaultColor: Red = 1, Green = 0.8, Blue = 0.6, Alpha = 1  
IdentityNumber: 0

52.188 class CIFilterStraightenFilterMBS

52.188.1 class CIFilterStraightenFilterMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Straighten filter.

**Notes:**
Details for this filter:

FilterName: CIStraightenFilter

DisplayName English: Straighten
DisplayName German: Begradigen
DisplayName French: Redresser
DisplayName Italian: Raddrizza
DisplayName Spanish: Enderezar

Categories:

- CICategoryGeometryAdjustment: Geometry Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputAngle: Angle

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.188.2 Methods

52.188.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.188.4 Properties

52.188.5 Attribute inputAngle as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Straighten attribute.
**Notes:**
This attribute should have this content:

Name: inputAngle  
Class: double  
Type: CIAttributeTypeAngle  
DisplayName English: Angle  
DisplayName German: Winkel  
DisplayName French: Angle  
DisplayName Italian: Angolo  
DisplayName Spanish: ngulo  
DefaultNumber: 0

52.191.1 class CIFilterSubtractBlendModeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Subtract Blend Mode filter.

**Notes:**

Details for this filter:

- **FilterName:** CISubtractBlendMode
- **DisplayName English:** Subtract Blend Mode
- **DisplayName German:** Mischmethode Subtrahieren
- **DisplayName French:** Mode de fusion Soustraction
- **DisplayName Italian:** Modalit sfumatura sottrazione
- **DisplayName Spanish:** Restar modo de mezcla

**Categories:**

- CICategoryCompositeOperation: Composite Operation
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputBackgroundImage: Background Image

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.191.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

### 52.193.13  inputAngle as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Angle

**Notes:**

See Attribute inputAngle for more details.

(Read and Write property)
52.193. **CLASS CIFILTERSWIPETRANSITIONMBS**

Name: inputAngle
Class: double (NSNumber)
DisplayName English: Angle
DisplayName German: Winkel
DisplayName French: Angle
DisplayName Italian: Angolo
DisplayName Spanish: ngulo
Type: CIAttributeTypeAngle

52.193.14 **inputColor as CIColorMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Color

Notes:

Name: inputColor
Class: CIColorMBS (CIColor)
DisplayName English: Color
DisplayName German: Farbe
DisplayName French: Couleur
DisplayName Italian: Colore
DisplayName Spanish: Color
Type: CIAttributeTypeOpaqueColor

See AttributeinputColor for more details.
(Read and Write property)

52.193.15 **inputExtent as CIVectorMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Extent

Notes:

Name: inputExtent
Class: CIVectorMBS (CIVector)
DisplayName English: Extent
DisplayName German: Betrag
DisplayName French: tendue
DisplayName Italian: Ampiezza
DisplayName Spanish: Amplitud
Type: CIAttributeTypeRectangle

See AttributeinputExtent for more details.
## 52.193.16 `inputImage` as `CIImageMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image

**Notes:**

<table>
<thead>
<tr>
<th>Name</th>
<th>inputImage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class</td>
<td>CIImageMBS (CIImage)</td>
</tr>
<tr>
<td>DisplayName English</td>

<tr>
<td>DisplayName Spanish</td>
<td>Imagen</td>
</tr>
<tr>
<td>Type</td>
<td>CIAttributeTypeImage</td>
</tr>
</tbody>
</table>

See Attribute `inputImage` for more details.

(Read and Write property)

## 52.193.17 `inputOpacity` as `double`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Opacity

**Notes:**

<table>
<thead>
<tr>
<th>Name</th>
<th>inputOpacity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class</td>
<td>double (NSNumber)</td>
</tr>
<tr>
<td>DisplayName English</td>
<td>Opacity</td>
</tr>
<tr>
<td>DisplayName German</td>
<td>Deckkraft</td>

<tr>
<td>DisplayName Italian</td>
<td>Opacit</td>
</tr>
<tr>
<td>DisplayName Spanish</td>
<td>Opacidad</td>
</tr>
<tr>
<td>Type</td>
<td>CIAttributeTypeScalar</td>
</tr>
</tbody>
</table>

See Attribute `inputOpacity` for more details.

(Read and Write property)
### 52.193.18  inputTargetImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Target Image  
**Notes:**

<table>
<thead>
<tr>
<th>Name</th>
<th>inputTargetImage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class</td>
<td>CIImageMBS (CIImage)</td>
</tr>
<tr>
<td>DisplayName English</td>
<td>Target Image</td>
</tr>
<tr>

<tr>
<td>DisplayName French</td>
<td>Image cible</td>
</tr>
<tr>
<td>DisplayName Italian</td>
<td>Immagine target</td>
</tr>
<tr>
<td>DisplayName Spanish</td>
<td>Imagen de destino</td>
</tr>
<tr>
<td>Type</td>
<td>CIAttributeTypeImage</td>
</tr>
</tbody>
</table>

See Attribute inputTargetImage for more details.  
(Read and Write property)

### 52.193.19  inputTime as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Time  
**Notes:**

<table>
<thead>
<tr>
<th>Name</th>
<th>inputTime</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class</td>
<td>double (NSNumber)</td>
</tr>
<tr>
<td>DisplayName English</td>
<td>Time</td>
</tr>
<tr>
<td>DisplayName German</td>
<td>Zeit</td>
</tr>
<tr>
<td>DisplayName French</td>
<td>Dure</td>
</tr>
<tr>
<td>DisplayName Italian</td>
<td>Tempo</td>
</tr>
<tr>
<td>DisplayName Spanish</td>
<td>Tiempo</td>
</tr>
<tr>
<td>Type</td>
<td>CIAttributeTypeTime</td>
</tr>
</tbody>
</table>

See Attribute inputTime for more details.  
(Read and Write property)

### 52.193.20  inputWidth as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Width  
**Notes:**
Name: inputWidth
Class: double (NSNumber)
DisplayName English: Width
DisplayName German: Breite
DisplayName French: Largeur
DisplayName Italian: Larghezza
DisplayName Spanish: Anchura
Type: CIAttributeTypeDistance

See Attribute inputWidth for more details.
(Read and Write property)
MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Realbasic class for the CoreImage Temperature and Tint filter.

**Notes:**
Details for this filter:

FilterName: CITemperatureAndTint
DisplayName English: Temperature and Tint
DisplayName German: Temperatur und FARBung
DisplayName French: Temperature et teinte
DisplayName Italian: Temperatura e tinta
DisplayName Spanish: Temperatura y tinte

Categories:
- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

**Input:**
- inputImage: Image
- inputNeutral: Neutral
- inputTargetNeutral: TargetNeutral

**Output:**
- outputImage

Subclass of the CIFilterMBS class.
52.194.2 Methods

52.194.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.194.4 Properties

52.194.5 AttributeinputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Temperature and Tint attribute.
**Notes:**
This attribute should have this content:

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0
(Read only property)

52.194.6 AttributeinputNeutral as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Temperature and Tint attribute.
**Notes:**
This attribute should have this content:
(Read only property)
52.194. Class CIFILTERTEMPERATUREANDTINTMBS

Name: inputNeutral
Class: CIVectorMBS
Type: CIAttributeTypeOffset
DisplayName: Neutral
DefaultVector: [ 6500 0 ]
IdentityVector: [ 6500 0 ]

52.194.7 Attribute inputTargetNeutral as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Temperature and Tint attribute.

**Notes:**
This attribute should have this content:

Name: inputTargetNeutral
Class: CIVectorMBS
Type: CIAttributeTypeOffset
DisplayName: TargetNeutral
DefaultVector: [ 6500 0 ]
IdentityVector: [ 6500 0 ]

(Read only property)

52.194.8 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image

**Notes:**

Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

See Attribute inputImage for more details.
(Read and Write property)
52.194.9  inputNeutral as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Neutral

**Notes:**

<table>
<thead>
<tr>
<th>Name</th>
<th>inputNeutral</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class</td>
<td>CIVectorMBS (CIVector)</td>
</tr>
<tr>
<td>DisplayName English</td>

<td>TargetNeutral</td>
</tr>
<tr>
<td>Type</td>
<td>CIAttributeTypeOffset</td>
</tr>
</tbody>
</table>

See Attribute inputTargetNeutral for more details.
(Read and Write property)
52.195.1 class CIFilterTextImageGeneratorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Text Image Generator filter. **Notes:** Details for this filter:

- **FilterName:** CITextImageGenerator
- **DisplayName English:** Text Image Generator
- **DisplayName German:** Textbildgenerator
- **DisplayName French:** Génrateur d'image de texte
- **DisplayName Italian:** Generatore immagine di testo
- **DisplayName Spanish:** Generador de imágenes con texto

**Categories:**

- CICategoryGenerator: Generator
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- **inputText:** Text
- **inputFontName:** FontName
- **inputFontSize:** FontSize
- **inputScaleFactor:** Scale Factor

**Output:**

- **outputImage**

Subclass of the CIFilterMBS class.
52.195.2 Methods

52.195.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.195.4 Properties

52.195.5 Attribute `inputFontName` as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Text Image Generator attribute.
**Notes:**
This attribute should have this content:

```
<table>
<thead>
<tr>
<th>Name</th>
<th>inputFontName</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class</td>
<td>String</td>
</tr>
<tr>
<td>DisplayName</td>
<td>FontName</td>
</tr>
<tr>
<td>DefaultNumber</td>
<td>0</td>
</tr>
<tr>
<td>IdentityNumber</td>
<td>0</td>
</tr>
</tbody>
</table>
```

(Read only property)

52.195.6 Attribute `inputFontSize` as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Text Image Generator attribute.
**Notes:**
This attribute should have this content:

(Read only property)
52.195. CLASS CIFILTERTEXTIMAGEGENERATORMBS

Name: inputFontSize  
Class: double  
Type: CIAttributeTypeScalar  
DisplayName: FontSize  
DefaultNumber: 12  
IdentityNumber: 0  
SliderMaxNumber: 128  
SliderMinNumber: 9

52.195.7 Attribute inputScaleFactor as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Text Image Generator attribute.  
**Notes:** This attribute should have this content:

Name: inputScaleFactor  
Class: double  
Type: CIAttributeTypeScalar  
DisplayName English: Scale Factor  
DisplayName German: Skalierungsfaktor  
DisplayName French: Facteur dchelle  
DisplayName Italian: Fattore di scala  
DisplayName Spanish: Factor de escala  
DefaultNumber: 1  
IdentityNumber: 0  
SliderMaxNumber: 4  
SliderMinNumber: 1

(Read only property)

52.195.8 Attribute inputText as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Text Image Generator attribute.  
**Notes:** This attribute should have this content:

(Read only property)
52.195.9  inputFontName as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute FontName

**Notes:**

- Name: inputFontName
- Class: String (NSString)
- DisplayName English: FontName
- DisplayName German: FontName
- DisplayName French: FontName
- DisplayName Italian: FontName
- DisplayName Spanish: FontName
- Type:

See AttributeinputFontName for more details.
(Read and Write property)

52.195.10  inputFontSize as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute FontSize

**Notes:**

- Name: inputFontSize
- Class: double (NSNumber)
- DisplayName English: FontSize
- DisplayName German: FontSize
- DisplayName French: FontSize
- DisplayName Italian: FontSize
- DisplayName Spanish: FontSize
- Type: CIAttributeTypeScalar

See AttributeinputFontSize for more details.
(Read and Write property)
52.195.11 inputScaleFactor as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Scale Factor

**Notes:**
- Name: inputScaleFactor
- Class: double (NSNumber)
- DisplayName English: Scale Factor
- DisplayName German: Skalierungsfaktor
- DisplayName French: Facteur dchelle
- DisplayName Italian: Fattore di scala
- DisplayName Spanish: Factor de escala
- Type: CIAttributeTypeScalar

See Attribute inputScaleFactor for more details.
(Read and Write property)

52.195.12 inputText as String

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Text

**Notes:**
- Name: inputText
- Class: String (NSString)
- DisplayName English: Text
- DisplayName German: Text
- DisplayName French: Text
- DisplayName Italian: Text
- DisplayName Spanish: Text
- Type: CIAttributeTypeScalar

See Attribute inputText for more details.
(Read and Write property)
52.196   class CIFilterThermalMBS

52.196.1 class CIFilterThermalMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Thermal filter.

**Notes:**

Details for this filter:

- **FilterName:** CIThermal
- **DisplayName English:** Thermal
- **DisplayName German:** Wmmebild
- **DisplayName French:** Thermique
- **DisplayName Italian:** Termico
- **DisplayName Spanish:** Trmica

**Categories:**

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.196.2 Methods

52.196.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.196.4 Properties

52.196.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Thermal attribute.
**Notes:**
This attribute should have this content:

```
Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0
```

(Read only property)

52.196.6 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image
**Notes:**
See Attribute inputImage for more details.
(Read and Write property)

### 52.197.8 Attribute `inputPoint2` as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Tone Curve attribute. **Notes:**
This attribute should have this content:

Name: inputPoint2  
Class: CIVectorMBS  
Type: CIAttributeTypeOffset  
DisplayName English: Point 2  
DisplayName German: Punkt 2  
DisplayName French: Point 2  
DisplayName Italian: Punto 2  
DisplayName Spanish: Punto 2  
DefaultVector: [ 0.5 0.5 ]  
IdentityVector: [ 0.5 0.5 ]

(Read only property)

52.197.9 Attribute inputPoint3 as CIAttributeMBS

Notes:

This attribute should have this content:

Name: inputPoint3  
Class: CIVectorMBS  
Type: CIAttributeTypeOffset  
DisplayName English: Point 3  
DisplayName German: Punkt 3  
DisplayName French: Point3  
DisplayName Italian: Punto 3  
DisplayName Spanish: Punto 3  
DefaultVector: [ 0.75 0.75 ]  
IdentityVector: [ 0.75 0.75 ]

(Read only property)

52.197.10 Attribute inputPoint4 as CIAttributeMBS

Notes:
This attribute should have this content:

Name: inputPoint4
Class: CIVectorMBS
Type: CIAttributeTypeOffset
DisplayName English: Point 4
DisplayName German: Punkt 4
DisplayName French: Point4
DisplayName Italian: Punto 4
DisplayName Spanish: Punto 4
DefaultVector: [ 1 1 ]
IdentityVector: [ 1 1 ]

(Read only property)

52.197.11  inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image

**Notes:**

Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage

See Attribute inputImage for more details.
(Read and Write property)

52.197.12  inputPoint0 as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Point 0

**Notes:**

See Attribute inputPoint0 for more details.
(Read and Write property)
Name: inputPoint0
Class: CIVectorMBS (CIVector)
DisplayName English: Point 0
DisplayName German: Punkt 0
DisplayName French: Point 0
DisplayName Italian: Punto 0
DisplayName Spanish: Punto 0
Type: CIAttributeTypeOffset

52.197.13 inputPoint1 as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Point 1

**Notes:**
Name: inputPoint1
Class: CIVectorMBS (CIVector)
DisplayName English: Point 1
DisplayName German: Punkt 1
DisplayName French: Point 1
DisplayName Italian: Punto 1
DisplayName Spanish: Punto 1
Type: CIAttributeTypeOffset

See Attribute inputPoint1 for more details.
(Read and Write property)

52.197.14 inputPoint2 as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Point 2

**Notes:**
Name: inputPoint2
Class: CIVectorMBS (CIVector)
DisplayName English: Point 2
DisplayName German: Punkt 2
DisplayName French: Point 2
DisplayName Italian: Punto 2
DisplayName Spanish: Punto 2
Type: CIAttributeTypeOffset

See Attribute inputPoint2 for more details.
52.197. CLASS CIFILTERTONECURVEMBS

(Read and Write property)

52.197.15  inputPoint3 as CIVectorMBS

This attribute should have this content:
52.201.9  **inputAngle as double**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Angle  
**Notes:**

See Attribute inputAngle for more details.  
(Read and Write property)

52.201.10  **inputCenter as CIVectorMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Center  
**Notes:**
See Attribute inputCenter for more details.
Name: inputCenter
Class: CIVectorMBS (CIVector)
DisplayName English: Center
DisplayName German: Mitte
DisplayName French: Centre
DisplayName Italian: Centro
DisplayName Spanish: Centro
Type: CIAtributeTypePosition

(Read and Write property)

52.201.11 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image
**Notes:**
Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAtributeTypeImage

See Attribute inputImage for more details.
(Read and Write property)

52.201.12 inputWidth as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Width
**Notes:**
See Attribute inputWidth for more details.
(Read and Write property)
Name: inputWidth
Class: double (NSNumber)
DisplayName English: Width
DisplayName German: Breite
DisplayName French: Largeur
DisplayName Italian: Larghezza
DisplayName Spanish: Anchura
Type: CIAttributeTypeDistance
52.202. CLASS CIFILERTWIRLDISTORTIONMBS

52.202.1 class CIFilterTwirlDistortionMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Twirl Distortion filter.

**Notes:**

Details for this filter:

- **FilterName:** CITwirlDistortion
- **DisplayName English:** Twirl Distortion
- **DisplayName German:** Verzerrung Wirbeln
- **DisplayName French:** Dformation Spirale
- **DisplayName Italian:** Distorsione spirale
- **DisplayName Spanish:** Distorsión por giro

**Categories:**

- CICategoryDistortionEffect: Distortion Effect
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputCenter: Center
- inputRadius: Radius
- inputAngle: Angle

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
CHAPTER 52. COREIMAGE

52.202.2 Methods

52.202.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.202.4 Properties

52.202.5 Attribute `inputAngle` as `CIAttributeMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Twirl Distortion attribute.
**Notes:**
This attribute should have this content:

- Name: `inputAngle`
- Class: `double`
- Type: `CIAttributeTypeAngle`
- DisplayName English: Angle
- DisplayName German: Winkel
- DisplayName French: Angle
- DisplayName Italian: Angolo
- DisplayName Spanish: ángulo
- DefaultNumber: 3.141593
- IdentityNumber: 0
- SliderMaxNumber: 12.56637
- SliderMinNumber: -12.56637

(Read only property)

52.202.6 Attribute `inputCenter` as `CIAttributeMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Twirl Distortion attribute.
**Notes:**
This attribute should have this content:
52.202. CLASS CIFILTERTWIRLDISTORTIONMBS

Name:          inputCenter
Class:         CIVectorMBS
Type:          CIAttributeTypePosition
DisplayName English: Center
DisplayName German: Mitte
DisplayName French: Centre
DisplayName Italian: Centro
DisplayName Spanish: Centro
DefaultVector:   [ 150 150 ]
IdentityVector:  n/a

(Read only property)

52.202.7 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Twirl Distortion attribute.

**Notes:**
This attribute should have this content:

Name:          inputImage
Class:         CIImageMBS
Type:          CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber:   0
IdentityNumber:  0

(Read only property)

52.202.8 Attribute inputRadius as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Twirl Distortion attribute.

**Notes:**
This attribute should have this content:
52.202.9  inputAngle as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**
The attribute Angle

**Notes:**

Name:           inputAngle
Class:          double (NSNumber)
DisplayName English:  Angle
DisplayName German: Winkel
DisplayName French: Angle
DisplayName Italian: Angolo
DisplayName Spanish: ngulo
Type:           CIAttributeTypeAngle

See Attribute inputAngle for more details.
(Read and Write property)

52.202.10  inputCenter as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**
The attribute Center

**Notes:**

See Attribute inputCenter for more details.

52.203.1  class CIFilterUnsharpMaskMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Unsharp Mask filter.

**Notes:**
Details for this filter:

FilterName: CIUnsharpMask
DisplayName English: Unsharp Mask
DisplayName German: Unscharf maskieren
DisplayName French: Rendre le masque flou
DisplayName Italian: Maschera di contrasto
DisplayName Spanish: Desenfocar mascara

Categories:

- CICategorySharpen: Sharpen
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputRadius: Radius
- inputIntensity: Intensity

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.203.2 Methods

52.203.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.203.4 Properties

52.203.5 Attribute inputImage as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Unsharp Mask attribute.
**Notes:**
This attribute should have this content:

(Read only property)

52.203.6 Attribute inputIntensity as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Unsharp Mask attribute.
**Notes:**
This attribute should have this content:

(Read only property)
Name: inputIntensity
Class: double
Type: CIAttributeTypeScalar
DisplayName English: Intensity
DisplayName German: Intensität
DisplayName French: Intensité
DisplayName Italian: Intensità
DisplayName Spanish: Intensidad
DefaultNumber: 0.5
IdentityNumber: 0
SliderMaxNumber: 1
SliderMinNumber: 0

52.203.7 Attribute inputRadius as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Unsharp Mask attribute.

**Notes:**

This attribute should have this content:

Name: inputRadius
Class: double
Type: CIAttributeTypeDistance
DisplayName English: Radius
DisplayName German: Radius
DisplayName French: Rayon
DisplayName Italian: Raggio
DisplayName Spanish: Radio
DefaultNumber: 2.5
IdentityNumber: 0
SliderMaxNumber: 100
SliderMinNumber: 0

(Read only property)

52.203.8 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The attribute Image

**Notes:**

See Attribute inputImage for more details.
52.203.9  **inputIntensity** as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**
The attribute Intensity

**Notes:**
See Attribute inputIntensity for more details.
(Read and Write property)

52.203.10  **inputRadius** as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**
The attribute Radius

**Notes:**
See Attribute inputRadius for more details.
(Read and Write property)
Name: inputRadius

DisplayName English: Radius
DisplayName German: Radius
DisplayName French: Rayon
DisplayName Italian: Raggio
DisplayName Spanish: Radio
Type: CIAttributeTypeDistance
52.204 class CIFilterVibranceMBS

52.204.1 class CIFilterVibranceMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Vibrance filter.

**Notes:**

Details for this filter:

FilterName: CIVibrance
DisplayName English: Vibrance
DisplayName German: Lebendigkeit
DisplayName French: Brillance
DisplayName Italian: Vivacità
DisplayName Spanish: Vivacidad

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputAmount: Amount

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.204.2 Methods

52.204.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.204.4 Properties

52.204.5 Attribute inputAmount as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Vibrance attribute.
**Notes:**
This attribute should have this content:

Name: inputAmount  
Class: double  
Type: CIAttributeTypeScalar  
DisplayName English: Amount  
DisplayName German: Strke  
DisplayName French: Montant  
DisplayName Italian: Quantit  
DisplayName Spanish: Cantidad

52.206. class CIFilterVignetteMBS

52.206.1 class CIFilterVignetteMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Vignette filter.

**Notes:**

Details for this filter:

- FilterName: CIVignette
- DisplayName English: Vignette
- DisplayName German: Vignette
- DisplayName French: Vignette
- DisplayName Italian: Vignettatura
- DisplayName Spanish: Degradado

Categories:

- CICategoryColorEffect: Color Effect
- CICategoryVideo: Video
- CICategoryInterlaced: Interlaced
- CICategoryStillImage: Still Image
- CICategoryBuiltIn: Built-In

**Input:**

- inputImage: Image
- inputIntensity: Intensity
- inputRadius: Radius

**Output:**

- outputImage

Subclass of the CIFilterMBS class.
52.206.2 Methods

52.206.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.206.4 Properties

52.206.5 Attribute `inputImage` as `CIAttributeMBS`

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Details about the Vignette attribute.
**Notes:**

This attribute should have this content:

Name: inputImage

SliderMinNumber: -1

52.206.7 **AttributeinputRadius as CIAttributeMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the Vignette attribute.

**Notes:**
This attribute should have this content:

Name: inputRadius
Class: double
Type: CIAttributeTypeScalar
DisplayName English: Radius
DisplayName German: Radius
DisplayName French: Rayon
DisplayName Italian: Raggio
DisplayName Spanish: Radio
DefaultNumber: 1
IdentityNumber: 0
MaxNumber: 2
MinNumber: 0
SliderMaxNumber: 2
SliderMinNumber: 0

(Read only property)
52.206.8 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Image

**Notes:**

- Name: inputImage
- Class: CIImageMBS (CIImage)
- DisplayName English: Image
- DisplayName German: Bild
- DisplayName French: Image
- DisplayName Italian: Immagine
- DisplayName Spanish: Imagen
- Type: CIAttributeTypeImage

See Attribute inputImage for more details.
(Read and Write property)

52.206.9 inputIntensity as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Intensity

**Notes:**

- Name: inputIntensity
- Class: double (NSNumber)
- DisplayName English: Intensity
- DisplayName German: Intensität
- DisplayName French: Intensité
- DisplayName Italian: Intensità
- DisplayName Spanish: Intensidad
- Type: CIAttributeTypeScalar

See Attribute inputIntensity for more details.
(Read and Write property)

52.206.10 inputRadius as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Radius

**Notes:**
Name: inputRadius
Class: double (NSNumber)
DisplayName English: Radius
DisplayName German: Radius
DisplayName French: Rayon
DisplayName Italian: Raggio
DisplayName Spanish: Radio
Type: CIAttributeTypeScalar

See Attribute inputRadius for more details.
(Read and Write property)
52.207 class CIFilterVortexDistortionMBS

52.207.1 class CIFilterVortexDistortionMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class for the CoreImage Vortex Distortion filter.

**Notes:**

Details for this filter:

- **FilterName:** CIVortexDistortion
- **DisplayName English:** Vortex Distortion
- **DisplayName German:** Verzerrung Vortex
- **DisplayName French:** Dformation Tourbillon
- **DisplayName Italian:** Distorsione Vortex
- **DisplayName Spanish:** Distorsión por vértice

Categories:

- **CICategoryDistortionEffect:** Distortion Effect
- **CICategoryVideo:** Video
- **CICategoryStillImage:** Still Image
- **CICategoryBuiltIn:** Built-In

**Input:**

- **inputImage:** Image
- **inputCenter:** Center
- **inputRadius:** Radius
- **inputAngle:** Angle

**Output:**

- **outputImage**

Subclass of the CIFilterMBS class.
52.207.2 Methods

52.207.3 Constructor

Notes: On success the handle property is not zero and the filter has the default values set.

52.207.4 Properties

52.207.5 AttributeinputAngle as CIAttributeMBS

Notes:

This attribute should have this content:

- **Name**: inputAngle
- **Class**: double
- **Type**: CIAttributeTypeAngle
- **DisplayName English**: Angle
- **DisplayName German**: Winkel
- **DisplayName French**: Angle
- **DisplayName Italian**: Angolo
- **DisplayName Spanish**: ángulo
- **DefaultNumber**: 56.54867
- **IdentityNumber**: 0
- **SliderMaxNumber**: 94.24778
- **SliderMinNumber**: -94.24778

(Read only property)

52.207.6 AttributeinputCenter as CIAttributeMBS

Notes:

This attribute should have this content:
CHAPTER 52. COREIMAGE

Name: inputCenter
Class: CIVectorMBS
Type: CIAttributeTypePosition
DisplayName English: Center
DisplayName German: Mitte
DisplayName French: Centre
DisplayName Italian: Centro
DisplayName Spanish: Centro
DefaultVector: [150 150]
IdentityVector: n/a
(Read only property)

52.207.7 Attribute inputImage as CIAttributeMBS

Notes:
This attribute should have this content:

Name: inputImage
Class: CIImageMBS
Type: CIAttributeTypeImage
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
DefaultNumber: 0
IdentityNumber: 0
(Read only property)

52.207.8 Attribute inputRadius as CIAttributeMBS

Notes:
This attribute should have this content:
Name:                     inputRadius  
Class:                    double  
Type:                     CISAttributeTypeDistance  
DisplayName English:     Radius  
DisplayName German:      Radius  
DisplayName French:      Rayon  
DisplayName Italian:     Raggio  
DisplayName Spanish:     Radio  
DefaultNumber:           300

52.207.12 inputRadius as double

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The attribute Radius
**Notes:**
See Attribute inputRadius for more details.
(Read and Write property)
Name: inputRadius
Class: double (NSNumber)
DisplayName English: Radius
DisplayName German: Radius
DisplayName French: Rayon
DisplayName Italian: Raggio
DisplayName Spanish: Radio
Type: CIAttributeTypeDistance
52.208 class CIFilterWhitePointAdjustMBS

52.208.1 class CIFilterWhitePointAdjustMBS

Notes:

Details for this filter:

FilterName: CIWhitePointAdjust
DisplayName English: White Point Adjust
DisplayName German: Weipunkt anpassen
DisplayName French: Ajustement du point blanc
DisplayName Italian: Regolazione punto di bianco
DisplayName Spanish: Ajuste de punto blanco

Categories:

- CICategoryColorAdjustment: Color Adjustment
- CICategoryVideo: Video
- CICategoryStillImage: Still Image
- CICategoryInterlaced: Interlaced
- CICategoryNonSquarePixels: Non-Square Pixels
- CICategoryBuiltIn: Built-In

Input:

- inputImage: Image
- inputColor: Color

Output:

- outputImage

Subclass of the CIFilterMBS class.
52.208.2 Methods

52.208.3 Constructor

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The constructor.
**Notes:** On success the handle property is not zero and the filter has the default values set.

52.208.4 Properties

52.208.5 Attribute inputColor as CIAttributeMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Details about the White Point Adjust attribute.
**Notes:**
This attribute should have this content:

Name: inputColor
Class: CIColorMBS
Type: CIAttributeTypeColor
DisplayName English: Color
DisplayName German: Farbe
DisplayName French: Couleur
DisplayName Italian: Colore
DisplayName Spanish: Color
DefaultColor: Red = 1, Green = 0.9, Blue = 0.8, Alpha = 1
IdentityNumber: 0

<td>CIAttributeTypePosition</td>
</tr>
</tbody>
</table>

See Attribute inputCenter for more details.

(Read and Write property)

### 52.210.10 inputImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

The attribute Image

**Notes:**

See Attribute inputImage for more details.

(Read and Write property)
Name: inputImage
Class: CIImageMBS (CIImage)
DisplayName English: Image
DisplayName German: Bild
DisplayName French: Image
DisplayName Italian: Immagine
DisplayName Spanish: Imagen
Type: CIAttributeTypeImage
52.211 class CIImageMBS

52.211.1 class CIImageMBS

52.211.2 Methods

52.211.3 AsNSImageMBS as Variant

MBS MacCG Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Creates a NSImageMBS which references the given CIImage.
Example:

```plaintext
// make a dummy CIImage
dim Logo as Picture = LogoMBS(500)
dim jpeg as string = PictureToJPEGStringMBS(logo, 80)
dim ci as CIImageMBS = CIImageMBS.imageWithData(jpeg)

// convert to NSImage
dim ni as NSImageMBS = ci.AsNSImageMBS

// and display
Backdrop = ni.CopyPictureWithMask
```

Notes:
Returns nil on error.
Result declared as Variant to avoid plugin dependencies.

52.211.4 autoAdjustmentFilters as CIFilterMBS()

Example:

```plaintext
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim image as CIImageMBS = CIImageMBS.imageWithContentsOfFile(f)

dim filters() as CIFilterMBS = image.autoAdjustmentFilters
```
dim beginImage as CIImageMBS = image
for each filter as CIFilterMBS in filters
    filter.ValueAsCIImage("inputImage") = beginImage
    beginImage = filter.ValueAsCIImage("outputImage")
next

Backdrop = beginImage.RenderPicture

Notes: An array of auto adjustment filters to apply to the image. The filters are preset with values for correcting deficiencies in the supplied image.

52.211.5 autoAdjustmentFiltersWithOptions(options as dictionary) as CIFilterMBS()

Example:

dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim image as CIImageMBS = CIImageMBS.imageWithContentsOfFile(f)

dim options as new Dictionary
options.Value(CIImageMBS.kCIImageAutoAdjustEnhance) = true
options.Value(CIImageMBS.kCIImageAutoAdjustRedEye) = true

dim filters() as CIFilterMBS = image.autoAdjustmentFiltersWithOptions(options)

dim beginImage as CIImageMBS = image
for each filter as CIFilterMBS in filters
    filter.ValueAsCIImage("inputImage") = beginImage
    beginImage = filter.ValueAsCIImage("outputImage")
next

Backdrop = beginImage.RenderPicture

Notes:
options: You can control which filters are returned by supplying one or more of the keys described in "Auto Adjustment Keys."
The options dictionary can also contain a CIDetectorImageOrientation key. This key is a number with the same value as defined by the TIFF and EXIF specifications; values can range from 1 through 8. The value specifies where the origin (0,0) of the image is located. If not present, the default value is 1, which means the origin of the image is top, left. For details on the image origin specified by each value, see kCGImage-
PropertyOrientation.

Returns an array of auto adjustment filters, filtered by the supplied options, to apply to the image. The filters are preset with values for correcting deficiencies in the supplied image.

52.211.6 Constructor(cgimage as CGImageMBS, cgcolorspace as CGColorSpaceMBS)

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a CIImage based on a CGImage.

**Notes:**

cgcolorspace: Use this colorspace when opening the image.
On success, the handle is not zero.

- 52.211.7 Constructor(cgimage as CGImageMBS, options as Dictionary = nil) 9536
- 52.211.8 Constructor(CGLayer as CGLayerMBS, options as Dictionary = nil) 9537
- 52.211.9 Constructor(data as memoryblock) 9538
- 52.211.10 Constructor(data as memoryblock, BytesPerRow as Integer, width as Integer, height as Integer, format as Integer, cgcolorspace as CGColorSpaceMBS) 9538
- 52.211.11 Constructor(data as memoryblock, cgcolorspace as CGColorSpaceMBS) 9539
- 52.211.12 Constructor(data as Memoryblock, Length as Integer, BytesPerRow as Integer, width as Integer, height as Integer, format as Integer, cgcolorspace as CGColorSpaceMBS) 9540
- 52.211.13 Constructor(file as FolderItem) 9540
- 52.211.14 Constructor(file as FolderItem, cgcolorspace as CGColorSpaceMBS) 9541
- 52.211.15 Constructor(Handle as Integer) 9541

52.211.7 Constructor(cgimage as CGImageMBS, options as Dictionary = nil)

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a CIImage based on a CGImage.

**Notes:** On success, the handle is not zero.
See also:

- 52.211.6 Constructor(cgimage as CGImageMBS, cgcolorspace as CGColorSpaceMBS) 9536
- 52.211.8 Constructor(CGLayer as CGLayerMBS, options as Dictionary = nil) 9537
- 52.211.9 Constructor(data as memoryblock) 9538
52.211. CLASS CIIMAGEMBS

- 52.211.10 Constructor(data as memoryblock, BytesPerRow as Integer, width as Integer, height as Integer, format as Integer, cgcolorspace as CGColorSpaceMBS) 9538
- 52.211.11 Constructor(data as memoryblock, cgcolorspace as CGColorSpaceMBS) 9539
- 52.211.12 Constructor(data as Memoryblock, Length as Integer, BytesPerRow as Integer, width as Integer, height as Integer, format as Integer, cgcolorspace as CGColorSpaceMBS) 9540
- 52.211.13 Constructor(file as FolderItem) 9540
- 52.211.14 Constructor(file as FolderItem, cgcolorspace as CGColorSpaceMBS) 9541
- 52.211.15 Constructor(Handle as Integer) 9541

52.211.8 Constructor(CGLayer as CGLayerMBS, options as Dictionary = nil)

Notes:
layer: A CGLayer object. For more information see Quartz 2D Programming Guide and CGLayer Reference.
options: A dictionary specifying image options.

Returns an image object initialized with the contents of the layer object and set up with the specified options. See also:

- 52.211.6 Constructor(cgimage as CGIImageMBS, cgcolorspace as CGColorSpaceMBS) 9536
- 52.211.7 Constructor(cgimage as CGIImageMBS, options as Dictionary = nil) 9536
- 52.211.9 Constructor(data as memoryblock) 9538
- 52.211.10 Constructor(data as memoryblock, BytesPerRow as Integer, width as Integer, height as Integer, format as Integer, cgcolorspace as CGColorSpaceMBS) 9538
- 52.211.11 Constructor(data as memoryblock, cgcolorspace as CGColorSpaceMBS) 9539
- 52.211.12 Constructor(data as Memoryblock, Length as Integer, BytesPerRow as Integer, width as Integer, height as Integer, format as Integer, cgcolorspace as CGColorSpaceMBS) 9540
- 52.211.13 Constructor(file as FolderItem) 9540
- 52.211.14 Constructor(file as FolderItem, cgcolorspace as CGColorSpaceMBS) 9541
- 52.211.15 Constructor(Handle as Integer) 9541
52.211.9 Constructor(data as memoryblock)

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a CIImage based on the image file content stored inside the data string.

**Example:**

```vba
dim p as Picture = LogoMBS(500)
dim data as string = PictureToPNGStringMBS(p,80)
dim i as new CIImageMBS(data)

dim c as new CIFilterCircularWrapMBS
    c.inputImage = i

dim o as CIImageMBS = c.outputImage
    Backdrop = o.RenderPicture
```

**Notes:** On success, the handle is not zero.

- 52.211.15 Constructor(Handle as Integer) 9541

52.211.10 Constructor(data as memoryblock, BytesPerRow as Integer, width as Integer, height as Integer, format as Integer, cgcolorspace as CGColorSpaceMBS)

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a CIImage from a RAW memory buffer.

**Notes:**

Format must be one of this constants: kCIFormatRGBA, kCIFormatRGBA16 and kCIFormatARGB8.
52.211. CLASS CIIMAGEMBS

On success, the handle is not zero.

See also:

52.211.16  copy as CIImageMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the image.

52.211.17  CreateCGImage(r as CGRectMBS = nil) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new image with the content of the CIImage.  
**Example:**

```plaintext
dim logo as Picture = LogoMBS(500)
dim ci as CIImageMBS = CIImageMBS.imageWithPicture(logo)
dim cg as CGImageMBS = ci.CreateCGImage
Backdrop = cg.Picture
```

**Notes:**

Render the region 'r' of image 'im' into a temporary buffer using the context, then create and return a new CoreGraphics image with the results.  
If r is nil, the whole image extent is used.  
See also:
52.211. CLASS CIIMAGEMBS

- 52.211.18 CreateCGImage(r as CGRectMBS, ColorSpace as CGColorSpaceMBS) as CGImageMBS

52.211.18 CreateCGImage(r as CGRectMBS, ColorSpace as CGColorSpaceMBS) as CGImageMBS

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates a new image with the content of the CIImage.

**Notes:**
Render the region 'r' of image 'im' into a temporary buffer using the context, then create and return a new
CoreGraphics image with the results.
If r is nil, the whole image extent is used.
See also:

- 52.211.17 CreateCGImage(r as CGRectMBS = nil) as CGImageMBS

52.211.19 emptyImage as CIImageMBS

MBS MacCG Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates and returns an empty image object.

**Example:**
```
dim image as CIImageMBS = CIImageMBS.emptyImage
MsgBox str(image.Width) // shows zero
```

**Notes:** Available in OS X v10.5 and later.

52.211.20 imageByApplyingOrientation(orientation as Integer) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a new image representing the original image with a transform appied to it based on an orientation value.

**Notes:**
Orientation values from 1 to 8 as defined in the TIFF spec are supported.
Returns original image if the image is of infinite extent.

Possible orientation values:
### 52.211.21 `ImageByApplyingTransform(transform as NSAffineTransformMBS)` as CIImageMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returs a new image representing the original image with the transform 'matrix' appended to it.

### 52.211.22 `imageByClampingToExtent` as CIImageMBS

MBS MacCG Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Return a new infinite image by replicating the pixels of the receiver image’s extent.

### 52.211.23 `imageByCompositingOverImage(dest as CIImageMBS)` as CIImageMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a new image created by compositing the original image over the specified destination image. **Notes:**
dest: An image to serve as the destination of the compositing operation.

Returns an image object representing the result of the compositing operation.

Calling this method is equivalent to using the CISourceOverCompositing filter. To use other compositing operations and blending modes, create a CIFilter object using one of the built-in filters from the CICategoryCompositeOperation category. For details, see Core Image Filter Reference.

Available in OS X v10.4 and later.
52.211.24  imageByCroppingToRect(r as CGRectMBS) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a new image that represents the original image after cropping to a rectangle. **Notes:** Available in OS X v10.5 and later.

52.211.25  imageWithCGImage(CGImage as CGImageMBS, colorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an image object from a Quartz 2D image using the specified color space. **Notes:** Returns nil on any error. See also:

- 52.211.26 imageWithCGImage(CGImage as CGImageMBS, options as Dictionary = nil) as CIImageMBS

52.211.26  imageWithCGImage(CGImage as CGImageMBS, options as Dictionary = nil) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an image object from a Quartz 2D image. **Notes:** Returns nil on any error. See also:

- 52.211.25 imageWithCGImage(CGImage as CGImageMBS, colorspace as CGColorSpaceMBS) as CIImageMBS

52.211.27  imageWithCGLayer(CGImage as CGImageMBS, options as Dictionary = nil) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an image object from the contents supplied by a CGLayer object, using the specified options. **Notes:** layer: A CGLayer object. For more information see Quartz 2D Programming Guide and CGLayer Reference. options: A dictionary specifying image options.

An image object initialized with the contents of the layer object and set up with the specified options.
### 52.211.28 imageWithColor(color as CIColorMBS) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an image of infinite extent that is initialized the specified color. **Notes:** Returns the image object initialized with the color represented by the CIColorMBS object. Available in OS X v10.5 and later.

### 52.211.29 imageWithContentsOfFile(file as folderitem) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an image object from the contents of a file. **Example:**
```jack"
dim file as FolderItem = SpecialFolder/Desktop/Child("mbs.jpg")
dim image as CIImageMBS = CIImageMBS/imageWithContentsOfFile(file)
Backdrop = image.RenderPicture"

**Notes:** Returns nil on any error. See also:
- 52.211.30 imageWithContentsOfFile(file as folderitem, colorspace as CGColorSpaceMBS) as CIImageMBS

### 52.211.30 imageWithContentsOfFile(file as folderitem, colorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an image object from the contents of a file. **Notes:** Returns nil on any error. See also:
- 52.211.29 imageWithContentsOfFile(file as folderitem) as CIImageMBS

### 52.211.31 imageWithContentsOfFileMT(file as folderitem) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an image object from the contents of a file. **Example:**
```jack"
dim file as FolderItem = SpecialFolder/Desktop/Child("mbs.jpg")
dim image as CIImageMBS = CIImageMBS/imageWithContentsOfFileMT(file)
```
52.211. CLASS CIIMAGEMBS

Backdrop = image.RenderPicture

Notes:
Returns nil on any error.
Must be called inside a Xojo (Real Studio) thread so time yields to main thread and you can keep the GUI running.

See also:

- 52.211.32 imageWithContentsOfFileMT(file as folderitem, colorspace as CGColorSpaceMBS) as CIImageMBS

52.211.32 imageWithContentsOfFileMT(file as folderitem, colorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates and returns an image object from the contents of a file.

**Example:**

```pascal
dim file as FolderItem = SpecialFolder.Desktop.Child("mbs.jpg")
dim cs as CGColorSpaceMBS = CGColorSpaceMBS.CreateDeviceRGB
dim image as CIImageMBS = CIImageMBS.imageWithContentsOfFileMT(file, cs)
Backdrop = image.RenderPicture
```

Notes:
Returns nil on any error.
Must be called inside a Xojo (Real Studio) thread so time yields to main thread and you can keep the GUI running.

See also:

- 52.211.31 imageWithContentsOfFileMT(file as folderitem) as CIImageMBS

52.211.33 imageWithContentsOfFileMT(Path as string, colorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates and returns an image object from the contents of a file.

**Example:**

```pascal
// load image
dim inputimage as CIImageMBS = CIImageMBS.imageWithContentsOfFileMT("/Library/Desktop Pictures/Rice Paddy.jpg", nil)
```
// rotate 90
ScaleXFilter = new CIFilterAffineTransformMBS
ScaleXFilter.inputImage = inputimage
af = new NSAffineTransformMBS
af.translate(inputimage.height, 0)
af.rotateByDegrees(90)
ScaleXFilter.inputTransform = af

// produce output
outputimage = ScaleXFilter.outputImage
outputimage.extent = outputimage.RenderPicture
Backdrop = outputimage.RenderPicture
Title = Str(Backdrop.Width) + " x " + Str(Backdrop.Height)

// write to PNG file
n = outputimage.AsNSImageMBS
n.PNGRepresentation = n.PNGRepresentation
f = SpecialFolder.Desktop.Child("test.png")
b = BinaryStream.Create(f, true)
b.Write data
b.Close

Notes: Returns nil on any error.

52.211.34  imageWithContentsOfURL(url as String) as CIImageMBS

Notes: Returns nil on any error.
See also:

• 52.211.35 imageWithContentsOfURL(URL as string, colorspace as CGColorSpaceMBS) as CIImageMBS 9548

52.211.35  imageWithContentsOfURL(URL as string, colorspace as CGColorSpaceMBS) as CIImageMBS

Notes: Returns nil on any error.
See also:
52.211.36  imageWithData(data as memoryblock, Options as Dictionary = nil) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an image object initialized with the supplied image data.

**Example:**

```pascal
dim logo as Picture = LogoMBS(500)
dim jpegData as string = PictureToJPEGStringMBS(logo, 75)
dim image as CIImageMBS = CIImageMBS.imageWithData(jpegData)
Backdrop = image.RenderPicture
```

**Notes:**

data: The data object that holds the contents of an image file (such as TIFF, GIF, JPG, or whatever else the system supports). The image data must be premultiplied.

Returns an image object initialized with the supplied data, or nil if the method cannot create an image representation from the contents of the supplied data object.

52.211.37  imageWithDataMT(data as memoryblock, Options as Dictionary = nil) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an image object initialized with the supplied image data.

**Example:**

```pascal
dim logo as Picture = LogoMBS(500)
dim jpegData as string = PictureToJPEGStringMBS(logo, 75)
dim image as CIImageMBS = CIImageMBS.imageWithDataMT(jpegData)
Backdrop = image.RenderPicture
```

**Notes:**

data: The data object that holds the contents of an image file (such as TIFF, GIF, JPG, or whatever else the system supports). The image data must be premultiplied.

Returns an image object initialized with the supplied data, or nil if the method cannot create an image representation from the contents of the supplied data object.

Must be called inside a Xojo (Real Studio) thread so time yields to main thread and you can keep the GUI...
52.211.38  imageWithPicture(Pic as Picture) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an image object from a Real Studio Picture.
**Example:**
```python
dim logo as Picture = LogoMBS(500)
dim ci as CIImageMBS = CIImageMBS.imageWithPicture(logo)
dim cg as CGImageMBS = ci.CreateCGImage
Backdrop = cg.Picture
```
**Notes:** Returns nil on any error.

52.211.39  kCIImageAutoAdjustCrop as string

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A key used to specify whether to return a filter that crops the image to focus on detected features.
**Notes:**
The value associated with this key is a Boolean value. If true, the returned filters include an operation that crops the image around the features specified with the kCIImageAutoAdjustFeatures option (or any features detected in the image, if that option is not present). Supply false to indicate not to return a crop filter. If you don’t specify this option, Core Image assumes its value is false.
Available in OS X v10.10 and later.

52.211.40  kCIImageAutoAdjustEnhance as string

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the Keys used in the options dictionary to control which filters Core Image returns.
**Notes:**
A key used to specify whether to return enhancement filters.
The value associated with this key is a CFBoolean value. Supply false to indicate not to return enhancement filters. If you don’t specify this option, Core Image assumes its value is true.
52.211.41 kCIImageAutoAdjustFeatures as string

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the Keys used in the options dictionary to control which filters Core Image returns. **Notes:**

A key used to specify an array of features to which to apply enhancement and red eye filter. The associated value is an array of CIFeatureMBS objects. If you don’t supply an array, the receiver will search for features using the CIDetectorMBS class.

52.211.42 kCIImageAutoAdjustLevel as string

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A key used to specify whether to return a filter that rotates the image to keep a level perspective. **Notes:**

The value associated with this key is a Boolean value. If true, Core Image analyzes the image to determine whether it would benefit from rotation for example, a landscape photo in which the horizon is not horizontal and returns a filter to perform that rotation. Supply false to indicate not to return a rotation filter. If you don’t specify this option, Core Image assumes its value is false.

Available in OS X v10.10 and later.

52.211.43 kCIImageAutoAdjustRedEye as string

MBS MacCG Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the Keys used in the options dictionary to control which filters Core Image returns. **Notes:**

A key used to specify whether to return a red eye filter. The value associated with this key is a Boolean value. Supply false to indicate not to return a red eye filter. If you don’t specify this option, Core Image assumes its value is true.

52.211.44 kCIImageTextureFormat as string

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys in the options dictionary when initializing an image. **Notes:**

The key for an OpenGL texture format. The value for this key must be an NSNumber object containing a Core Image pixel format constant. (See ”Pixel Formats.”) You may only use this key when initializing an image using the initWithTexture method.
52.211.45  kCIImageTextureTarget as string

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys in the options dictionary when initializing an image.
**Notes:**
The key for an OpenGL texture target. The value for this key must be an NSNumber object containing a sup-
ported OpenGL texture target constant, either GL_TEXTURE_2D or GL_TEXTURE_RECTANGLE_ARB. You may only use this key when initializing an image using the initWithTexture method.
Available in OS X v10.9 and later.

52.211.46  properties as Dictionary

MBS MacCG Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the metadata properties of an image.
**Notes:** If the image is the output of one or more CIFilters, then the metadata of the root inputImage will be returned.

52.211.47  releaseHandle

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Decrements the retain count of a CIImage reference.
**Notes:**
Each retain must have a release. Too many releases and your app will crash, too many retains and it will leak memory.
Use only if you really know what you are doing.

52.211.48  RenderNSImage(UseSoftwareRenderer as boolean = false) as Variant

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates a picture based of the CIImage content.
**Example:**
```plaintext
dim f as CIFilterEdgesMBS
f=new CIFilterEdgesMBS
```
52.211. CLASS CIIMAGE MBS

f.inputIntensity=5

dim n as NSImageMBS
n=f.outputImage.RenderNSImage(false)

Notes:

Creates a new NSImage, creates a CGContext for it, draws the image into the buffer and returns it as a Realbasic object.

Returns nil on failure.
Rendering the image will cause the calculations to be done so this call is quite expensive.

If UseSoftwareRenderer is true, the hardware acceleration is not used.

52.211.49 RenderPicture(Width as Integer = 0, Height as Integer = 0, UseSoftwareRenderer as boolean = false) as Picture

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. Function:
Creates a picture based of the CIImage content.
Example:

dim f as CIFilterEdgesMBS

f=new CIFilterEdgesMBS
f.inputIntensity=5
Backdrop=f.outputImage.RenderPicture

Notes:

Creates a new image buffer, creates a CGContext for it, draws the image into the buffer and returns it as a picture with mask. If you need picture with alpha channel, please use RenderPictureWithAlpha function.

Returns nil on failure.
Rendering the image will cause the calculations to be done so this call is quite expensive.

If UseSoftwareRenderer is true, the hardware acceleration is not used.
CHAPTER 52. COREIMAGE

52.211.50  RenderPictureWithAlpha(Width as Integer = 0, Height as Integer = 0, UseSoftwareRenderer as boolean = false) as Picture

MBS MacCG Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Creates a picture based of the CIImage content.

**Example:**

```xojo
dim f as CIFilterEdgesMBS

f=new CIFilterEdgesMBS
f.inputIntensity=5
Backdrop= f.outputImage.RenderPictureWithAlphaMT
```

**Notes:**

Creates a new image buffer, creates a CGContext for it, draws the image into the buffer and returns it as a Xojo picture with alpha channel.

Returns nil on failure.

Rendering the image will cause the calculations to be done so this call is quite expensive.

If UseSoftwareRenderer is true, the hardware acceleration is not used.

52.211.51  RenderPictureWithAlphaMT(Width as Integer = 0, Height as Integer = 0, UseSoftwareRenderer as boolean = false) as Picture

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Creates a picture based of the CIImage content.

**Notes:**

Same as the other RenderPictureWithAlpha function, but threaded.

Must be called inside a Xojo (Real Studio) thread so time yields to main thread and you can keep the GUI running.

Creates a new image buffer, creates a CGContext for it, draws the image into the buffer and returns it as a Xojo picture with alpha channel.

Returns nil on failure.

Rendering the image will cause the calculations to be done so this call is quite expensive.

If UseSoftwareRenderer is true, the hardware acceleration is not used.
### 52.211.52 retainHandle

**Notes:**  
Each retain must have a release. Too many releases and your app will crash, too many retains and it will leak memory.  
Use only if you really know what you are doing.

### 52.211.53 Properties

#### 52.211.54 colorSpace as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns if possible the color space of the image it was defined in.  
**Notes:**  
This method will return nil, if the color space cannot be determined.  
(Read only property)

#### 52.211.55 Definition as CIFilterShapeMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Return the Domain of Definition of the image.  
**Notes:**  
Nil on any error.  
(Read only property)

#### 52.211.56 description as String

MBS MacCG Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the textual description for this image.  
**Example:**

```vbnet
dim p as Picture = LogoMBS(500)
dim data as string = PictureToPNGStringMBS(p,80)
dim i as new CIImageMBS(data)
MsgBox i.description
```
52.211.57  Extent as CGRectMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The extent of the image in world coordinates.

**Example:**

```vbs
    dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
    dim i as new CIImageMBS(f)
    dim r as CGRectMBS = i.Extent
    MsgBox str(r.Width) + " x " + str(r.Height)
```

**Notes:**
Can be undefined. In that case x/y are -Infinity and width/height are Infinity (3.402823466 * 10^-38).
(Read only property)

52.211.58  Handle as Integer

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The handle to the CIImage object used internally.

**Notes:** (Read only property)

52.211.59  Height as Double

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The height of the image in pixel.

**Notes:** (Read only property)

52.211.60  RetainCount as Integer

52.211. Notes:
This is useful for debugging.
The retain count is for the CIImage reference, not the CIImageMBS object.
(Read only property)

52.211.61 url as string
Notes: Returns the URL of the image when the image was created using the imageWithContentsOfURL APIs. This method will return nil, if the URL cannot be determined.
(Read only property)

52.211.62 Width as Double
Notes: (Read only property)

52.211.63 Constants
52.211.64 kCIFormatARGB8 = 23
MBS MacCG Plugin, Plugin Version: 7.3. Function: One of the pixel formats: 32bpp, fixed point.

52.211.65 kCIFormatRGBA16 = 27
MBS MacCG Plugin, Plugin Version: 7.3. Function: One of the pixel formats: 64bpp, fixed point.

52.211.66 kCIFormatRGBAf = 34
52.212 class CIPDF417CodeDescriptorMBS

52.212.1 class CIPDF417CodeDescriptorMBS

Notes:
Refer to the ISO/IEC 15438:2006(E) for the PDF417 symbol specification.
Subclass of the CIBarcodeDescriptorMBS class.

52.212.2 Methods

52.212.3 Constructor(errorCorrectedPayload as MemoryBlock, isCompact as Boolean, rowCount as Integer, columnCount as Integer)

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Initializes a descriptor that can be used as input to CIBarcodeGenerator

52.212.4 descriptorWithPayload(errorCorrectedPayload as MemoryBlock, isCompact as Boolean, rowCount as Integer, columnCount as Integer) as CIPDF417CodeDescriptorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Construct a descriptor that can be used as input to CIBarcodeGenerator

52.212.5 Properties

52.212.6 columnCount as Integer

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Indicates the number of columns in the rectangular matrix, excluding the columns used to indicate the symbol structure.

Notes:
columnCount values range from 1 to 30.
(Read only property)
52.212.7 errorCorrectedPayload as MemoryBlock

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The error-corrected codewords which comprise the PDF417 symbol. The first codeword indicates the number of data codewords in the errorCorrectedPayload. **Notes:**

PDF417 codes are comprised of a start character on the left and a stop character on the right. Each row begins and ends with special characters indicating the current row as well as information about the dimensions of the PDF417 symbol. The errorCorrectedPayload represents the sequence of PDF417 codewords that make up the body of the message. The first codeword indicates the number of codewords in the message. This count includes the "count" codeword and any padding codewords, but does not include the error correction codewords. Each codeword is a 16-bit value in the range of 0..928. The sequence is to be interpreted as described in the PDF417 bar code symbology specification – ISO/IEC 15438:2006(E). (Read only property)

52.212.8 isCompact as Boolean

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A boolean indicating whether the symbol is compact. **Notes:**

Compact PDF417 symbols have abbreviated right-side guard bars. (Read only property)

52.212.9 rowCount as Integer

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates the number of rows in the rectangular matrix. **Notes:**

rowCount values range from 3 to 90. (Read only property)
**52.213** class CIQRCodeDescriptorMBS

**52.213.1** class CIQRCodeDescriptorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** CIQRCodeDescriptor is a concrete subclass of CIBarcodeDescriptor that defines an abstract representation of a QR code symbol. **Notes:** Subclass of the CIBarcodeDescriptorMBS class.

**52.213.2** Methods

**52.213.3** Constructor(errorCorrectedPayload as MemoryBlock, symbolVersion as Integer, maskPattern as Integer, errorCorrectionLevel as Integer)

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes a descriptor that can be used as input to CIBarcodeGenerator.

**52.213.4** descriptorWithPayload(errorCorrectedPayload as MemoryBlock, symbolVersion as Integer, maskPattern as Integer, errorCorrectionLevel as Integer) as CIQRCodeDescriptorMBS

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Construct a descriptor that can be used as input to CIBarcodeGenerator.

**52.213.5** Properties

**52.213.6** errorCorrectedPayload as MemoryBlock

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The error-corrected codewords that comprise the QR code symbol. **Notes:**

QR Codes are formally specified in ISO/IEC 18004:2006(E). Section 6.4.10 "Bitstream to codeword conversion" specifies the set of 8-bit codewords in the symbol immediately prior to splitting the message into blocks and applying error correction.

During decode, error correction is applied and if successful, the message is re-ordered to the state immediately following "Bitstream to codeword conversion." The errorCorrectedPayload corresponds to this sequence of 8-bit codewords.
52.213.7  errorCorrectionLevel as Integer

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The error correction level of the QR code. **Notes:**
QR Codes support four levels of Reed-Solomon error correction, in increasing error correction capability: L, M, Q, and H.
(Read only property)

52.213.8  maskPattern as Integer

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The data mask pattern for the QR code symbol. **Notes:**
QR Codes support eight data mask patterns, which are used to avoid large black or large white areas inside the symbol body. Valid values range from 0 to 7.
(Read only property)

52.213.9  symbolVersion as Integer

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The version property corresponds to the size of the QR Code. **Notes:**
QR Codes are square. ISO/IEC 18004 defines versions from 1 to 40, where a higher symbol version indicates a larger data carrying capacity. This field is required in order to properly interpret the error corrected payload.
(Read only property)

52.213.10  Constants

52.213.11  ErrorCorrectionLevelH = 72

MBS MacCG Plugin, Plugin Version: 17.4. **Function:** One of the constants indicating the percentage of the symbol that is dedicated to error correction. **Notes:** Indicates that approximately 65% of the symbol data is dedicated to error correction.
52.213.12 ErrorCorrectionLevelL = 76

MBS MacCG Plugin, Plugin Version: 17.4. **Function:** One of the constants indicating the percentage of the symbol that is dedicated to error correction.
**Notes:** Indicates that approximately 20% of the symbol data is dedicated to error correction.

52.213.13 ErrorCorrectionLevelM = 77

MBS MacCG Plugin, Plugin Version: 17.4. **Function:** One of the constants indicating the percentage of the symbol that is dedicated to error correction.
**Notes:** Indicates that approximately 37% of the symbol data is dedicated to error correction.

52.213.14 ErrorCorrectionLevelQ = 81

MBS MacCG Plugin, Plugin Version: 17.4. **Function:** One of the constants indicating the percentage of the symbol that is dedicated to error correction.
**Notes:** Indicates that approximately 55% of the symbol data is dedicated to error correction.
52.214. CLASS CIQRCodeFeatureMBS

52.214.1 class CIQRCodeFeatureMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The feature for a detected QRCode.

**Notes:**
A CIQRCodeFeature describes a Quick Response code (a two-dimensional barcode using the ISO/IEC 18004:2006 standard) detected in a video or still image. The properties of a QR code feature identify the corners of the barcode as it appears in perspective in the image and provide the message decoded from the barcode.

To detect QR codes in an image or video, choose the CIDetectorTypeQRCode type when initializing a CIDetector object.
Subclass of the CIFeatureMBS class.

52.214.2 Methods

52.214.3 Constructor(Handle as Integer)

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes an object using the given handle.

52.214.4 Properties

52.214.5 bottomLeft as CGPointMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The lower left corner of the detected barcode, in image coordinates.
**Notes:** (Read only property)

52.214.6 bottomRight as CGPointMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The lower right corner of the detected barcode, in image coordinates.
**Notes:** (Read only property)
52.214.7 **messageString as string**

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The string decoded from the detected barcode. **Notes:** (Read only property)

52.214.8 **symbolDescriptor as CIQRCodeDescriptorMBS**

MBS MacCG Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The QRCode symbol descriptor. **Notes:** Available on macOS 10.13 or newer. (Read only property)

52.214.9 **topLeft as CGPointMBS**

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The upper left corner of the detected barcode, in image coordinates. **Notes:** (Read only property)

52.214.10 **topRight as CGPointMBS**

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The upper right corner of the detected barcode, in image coordinates. **Notes:** (Read only property)
52.215. **CLASS CIRECTANGLEFEATUREMBS**

52.215 class CIRectangleFeatureMBS

52.215.1 class CIRectangleFeatureMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
A CIRectangleFeature object describes a quadrilateral region detected in a video or still image.

Notes:
A detected rectangle feature is not necessarily rectangular in the plane of the image; rather, the feature identifies a shape that may be rectangular in space but which appears in perspective in the image for example, a paper or book on a desk. The properties of a rectangle feature identify its corners in image coordinates.

For example, you can use rectangle feature detection together with the CIPerspectiveCorrection filter to detect rectangular objects in an image or video and transform them to their original orientation.

To detect rectangles in an image or video, choose the CIDetectorTypeRectangle type when initializing a CIDetector object, and use the CIDetectorAspectRatio option to specify the approximate shape of rectangular features to search for.

Subclass of the CIFeatureMBS class.

52.215.2 Methods

52.215.3 Constructor(Handle as Integer)

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates a new object from a handle.

52.215.4 Properties

52.215.5 bottomLeft as CGPointMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The lower left corner of the detected rectangle, in image coordinates.

Notes: (Read only property)

52.215.6 bottomRight as CGPointMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The lower right corner of the detected rectangle, in image coordinates.
52.215.7  topLeft as CGPointMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The upper left corner of the detected rectangle, in image coordinates.
**Notes:** (Read only property)

52.215.8  topRight as CGPointMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The upper right corner of the detected rectangle, in image coordinates.
**Notes:** (Read only property)
52.216. class CISamplerMBS

52.216.1 class CISamplerMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Realbasic class to wrap a CoreImage sampler.

52.216.2 Methods

52.216.3 Constructor(ciImage as CIImageMBS)

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new sampler based on the given image. **Notes:** On success handle will not be 0. See also:

- 52.216.4 Constructor(ciImage as CIImageMBS, matrix as NSAffineTransformMBS, WrapMode as String, FilterMode as string) 9567
- 52.216.5 Constructor(Handle as Integer) 9568

52.216.4 Constructor(ciImage as CIImageMBS, matrix as NSAffineTransformMBS, WrapMode as String, FilterMode as string)

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new sampler based on the given image. **Notes:**

- **matrix:** An affine transformation $\begin{bmatrix} a & b & c & d & tx & ty \end{bmatrix}$ defining the transformation to be applied to the sampler.
- **wrapmode:** A string defining how pixels outside the sampler’s extent are produced. Options include kCISamplerWrapBlack (pixels are transparent black, the default) and kCISamplerWrapClamp (coordinates are clamped to the extent).
- **FilterMode:** A string defining the filter to use when sampling the image. One of kCISamplerFilterNearest (point sampling) or kCISamplerFilterLinear (bilinear interpolation, the default).

On success handle will not be 0. See also:

- 52.216.3 Constructor(ciImage as CIImageMBS) 9567
- 52.216.5 Constructor(Handle as Integer) 9568
52.216.5 Constructor(Handle as Integer)

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Initializes object with given object reference.
**Notes:**
ref should be a CISampler* and the object is retained.
Raises UnsupportedOperationException if object is not a CISampler.
See also:
- 52.216.3 Constructor(ciImage as CIImageMBS)
- 52.216.4 Constructor(ciImage as CIImageMBS, matrix as NSAffineTransformMBS, WrapMode as String, FilterMode as string)

52.216.6 copy as CISamplerMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates a copy of the sampler.

52.216.7 kCISamplerAffineMatrix as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the option keys for creating a sampler.
**Notes:**
The key for an affine matrix. The associated value is an NSArray object ([a b c d tx ty] ) that defines the transformation to apply to the sampler.
Available in OS X v10.4 and later.

52.216.8 kCISamplerColorSpace as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the option keys for creating a sampler.
**Notes:**
The key for the color space to use when sampling the image. The associated value must be an RGB CGColorSpaceRef object. Using this option specifies that samples should be converted to this color space before being passed to a kernel. If not specified, samples will be passed to the kernel in the working color space of the Core Image context used to render the image.
Available in OS X v10.4 and later.

52.216.9  kCISamplerFilterLinear as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the values for filter modes. **Notes:** Bilinear interpolation.

52.216.10  kCISamplerFilterMode as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the option keys for creating a sampler. **Notes:** The key for the filtering to use when sampling the image. Possible values are kCISamplerFilterNearest and kCISamplerFilterLinear.

Available in OS X v10.4 and later.

52.216.11  kCISamplerFilterNearest as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the values for filter modes. **Notes:** Nearest neighbor sampling.

52.216.12  kCISamplerWrapBlack as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the values for wrap modes. **Notes:** Pixels are transparent black.

52.216.13  kCISamplerWrapClamp as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the values for wrap modes. **Notes:** Coordinates are clamped to the extent.
CHAPTER 52. COREIMAGE

52.216.14  kCISamplerWrapMode as String

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the option keys for creating a sampler.
**Notes:**
The key for the sampler wrap mode. The wrap mode specifies how Core Image produces pixels that are
outside the extent of the sample. Possible values are kCISamplerWrapBlack and kCISamplerWrapClamp.

Available in OS X v10.4 and later.

52.216.15  samplerWithImage(ciImage as CIImageMBS) as CISamplerMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates and returns a sampler that references an image.
**Notes:** A sampler object that references the image specified by the ciImage argument.
See also:

- 52.216.16 samplerWithImage(ciImage as CIImageMBS, matrix as NSAffineTransformMBS, WrapMode as String, FilterMode as string) as CISamplerMBS
- 52.216.17 samplerWithImage(ciImage as CIImageMBS, Options as Dictionary) as CISamplerMBS

52.216.16  samplerWithImage(ciImage as CIImageMBS, matrix as NSAffineTransformMBS, WrapMode as String, FilterMode as string) as CISamplerMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates a new sampler based on the given image.
**Notes:**
matrix: An affine transformation \[ \begin{bmatrix} a & b & c & d & tx & ty \end{bmatrix} \] defining the transformation to be applied to the sampler.
wrapmode: A string defining how pixels outside the sampler’s extent are produced. Options include kCISamplerWrapBlack (pixels are transparent black, the default) and kCISamplerWrapClamp (coordinates are clamped to the extent).
FilterMode: A string defining the filter to use when sampling the image. One of kCISamplerFilterNearest (point sampling) or kCISamplerFilterLinear (bilinear interpolation, the default).

On success handle will not be nil.
See also:
52.216.  **CLASS CISAMPLERMBS**

- 52.216.15 samplerWithImage(ciImage as CIImageMBS) as CISamplerMBS
- 52.216.17 samplerWithImage(ciImage as CIImageMBS, Options as Dictionary) as CISamplerMBS

### 52.216.17  samplerWithImage(ciImage as CIImageMBS, Options as Dictionary) as CISamplerMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates and returns a sampler that references an image using options specified in a dictionary. **Notes:** See kCISampler* shared methods for constants. See also:

- 52.216.15 samplerWithImage(ciImage as CIImageMBS) as CISamplerMBS
- 52.216.16 samplerWithImage(ciImage as CIImageMBS, matrix as NSAffineTransformMBS, WrapMode as String, FilterMode as string) as CISamplerMBS

### 52.216.18  Properties

#### 52.216.19  **Definition** as CIFilterShapeMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the shape containing the Domain Of Definition (DOD) of the sampler. **Notes:**
The DOD is defined such that it contains all non-transparent pixels produced by referencing the sampler. (Read only property)

#### 52.216.20  **description** as String

MBS MacCG Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the textual description for this sampler. **Notes:** (Read only property)

#### 52.216.21  **Extent** as CGRectMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the extent of the sampler. **Notes:**
Sampling outside the extent will bring the sampler’s wrap mode into action.
Returns nil on any error.
(Read only property)

### 52.216.22 Handle as Integer

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The handle to the internal used CISampler reference. **Notes:** (Read only property)
52.217.1  class CITextFeatureMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a text feature.

**Notes:**

A CITextFeature object describes a quadrilateral region likely to contain upright text detected in a video or still image. The properties of a text feature identify its corners in image coordinates.

Use this class to locate areas of text within an image for example, to extract and perspective-correct those portions of the image before performing your own optical character recognition or other processing tasks.

To detect rectangles in an image or video, choose the CIDetectorTypeText type when initializing a CIDetector object, and use the CIDetectorImageOrientation option to specify the desired orientation for finding upright text.

Subclass of the CIFeatureMBS class.

52.217.2  Methods

52.217.3  Constructor(Handle as Integer)

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor to create an object from a handle.

52.217.4  subFeatures as CIFeatureMBS()

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An array containing additional features detected within the feature.

**Notes:**

A text detector can identify both a major region that is likely to contain text as well as the areas within that region that likely to contain individual text features. Such features might be single characters, groups of closely-packed characters, or entire words.

Core Image populates this array only if you enable the CIDetectorReturnSubFeatures option when retrieving features.
52.217.5 Properties

52.217.6 bottomLeft as CGPointMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The lower left corner of the detected text region, in image coordinates.
**Notes:** (Read only property)

52.217.7 bottomRight as CGPointMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The lower right corner of the detected text region, in image coordinates.
**Notes:** (Read only property)

52.217.8 topLeft as CGPointMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The upper left corner of the detected text region, in image coordinates.
**Notes:** (Read only property)

52.217.9 topRight as CGPointMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The upper right corner of the detected text region, in image coordinates.
**Notes:** (Read only property)
52.218.  CLASS CIVECTORMBS

52.218  class CIVectorMBS

52.218.1  class CIVectorMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
A class for a vector in the CoreImage world.
**Notes:** May contain one to four floating point values.

52.218.2  Methods

52.218.3  CGAffineTransformValue as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the values stored in the CIVector object as an affine transform.
**Example:**
```
dim p as new CGAffineTransformMBS
dim v as new CIVectorMBS(p)
dim x as CGAffineTransformMBS = v.CGAffineTransformValue
MsgBox str(x.A)+" "+str(x.B)+" "+str(x.C)+" "+str(x.D)+" "+str(x.TX)+" "+str(x.TY)
```

**Notes:**
The first six values in the vector become the values that comprise the affine transform.
Available in OS X v10.9 and later.

52.218.4  CGPointValue as CGPointMBS

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the values stored in the CIVector object as a point.
**Example:**
```
dim p as new CGPointMBS(10, 20)
dim v as CIVectorMBS = CIVectorMBS.vectorWithCGPoint(p)
dim x as CGPointMBS = v.CGPointValue
MsgBox str(x.x)+" "+str(x.y)
```

**Notes:**
The vector’s X and Y property values become the CGPoint’s X and Y values.
52.218.5 CGRectValue as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the values stored in the CIVector object as an rect.

**Example:**

```dim p as new CGRectMBS(10, 20, 30, 40)
dim v as CIVectorMBS = CIVectorMBS.vectorWithCGRect(p)
dim x as CGRectMBS = v.CGRectValue
MsgBox str(x.Origin.X)+" "+str(x.Origin.y)+" "+str(x.Size.Width)+" "+str(x.Size.Height)```

**Notes:**
The vector’s X, Y, Z and W property values become the CGRect’s X, Y, height and width values.
Available in OS X v10.9 and later.

52.218.6 Constructor(Handle as Integer)

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Initializes object with given object reference.

**Notes:**
ref should be a CIVector* and the object is retained.
Raises UnsupportedOperationException if object is not a CIVector.

- 52.218.16 Constructor(x as Double, y as Double, z as Double, w as Double)
52.218. CLASS CIVECTORMBS

52.218.7 Constructor(p as CGPointMBS)

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a vector that is initialized with values provided by a CGPoint.

**Example:**

```vbs
dim p as new CGPointMBS(10, 20)
dim v as new CIVectorMBS(p)
MsgBox str(v.x)+" "+str(v.y)
```

**Notes:**
The CGPoint’s X and Y values are stored in the vector’s X and Y properties.

Available in OS X v10.9 and later.

- 52.218.16 Constructor(x as Double, y as Double, z as Double, w as Double) 9583

52.218.8 Constructor(r as CGRectMBS)

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a vector that is initialized with values provided by a CGRect.

**Example:**

```vbs
dim p as new CGRectMBS(10, 20, 30, 40)
dim v as new CIVectorMBS(p)
dim x as CGRectMBS = v.CGRectValue
MsgBox str(x.Origin.X)+" "+str(x.Origin.y)+" "+str(x.Size.Width)+" "+str(x.Size.Height)
```
Notes:

The CGRect structure’s X, Y, height and width values are stored in the vector’s X, Y, Z and W properties. Available in OS X v10.9 and later.

- 52.218.16 Constructor(x as Double, y as Double, z as Double, w as Double)

52.218.9 Constructor(StringRepresentation as String)

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new vector based on content of the string.

**Example:**

```plaintext
dim v as CIVectorMBS
v=New CIVectorMBS("[ 1 2 3 ]")
```

- 52.218.16 Constructor(x as Double, y as Double, z as Double, w as Double) 9583

52.218.10 Constructor(t as CGAffineTransformMBS)

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a vector that is initialized with values provided by a CGAffineTransform.

**Example:**

```vbnet
dim p as new CGAffineTransformMBS
dim v as new CIVectorMBS(p)
dim x as CGAffineTransformMBS = v.CGAffineTransformValue
MsgBox str(x.A)+" "+str(x.B)+" "+str(x.C)+" "+str(x.D)+" "+str(x.TX)+" "+str(x.TY)
```

**Notes:**
The six values that comprise the affine transform fill the first six positions of the resulting CIVector object. Available in OS X v10.9 and later.

- 52.218.15 Constructor(x as Double, y as Double, z as Double) 9582
- 52.218.16 Constructor(x as Double, y as Double, z as Double, w as Double) 9583
52.218. CLASS CIVECTORMBS

52.218.13 Constructor(x as Double)

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new vector based on one value.

**Example:**

```plaintext
dim x as Double
dim v as CIVectorMBS
v=New CIVectorMBS(x)
```

See also:

- 52.218.6 Constructor(Handle as Integer)

- 52.218.10 Constructor(t as CGAffineTransformMBS)
- 52.218.11 Constructor(values() as Double)
- 52.218.12 Constructor(values() as single)
- 52.218.14 Constructor(x as Double, y as Double)
- 52.218.15 Constructor(x as Double, y as Double, z as Double)
- 52.218.16 Constructor(x as Double, y as Double, z as Double, w as Double)

52.218.14 Constructor(x as Double, y as Double)

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new vector based on two values.

**Example:**

```plaintext
dim x,y as Double
dim v as CIVectorMBS
v=New CIVectorMBS(x,y)
```

See also:

- 52.218.6 Constructor(Handle as Integer)
- 52.218.7 Constructor(p as CGPointMBS)
52.218.15 Constructor(x as Double, y as Double, z as Double)

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new vector based on three values.

**Example:**

```plaintext
dim x,y,z as Double
dim v as CIVectorMBS
v=New CIVectorMBS(x,y,z)
```

See also:

- 52.218.6 Constructor(Handle as Integer)

- 52.218.8 Constructor(r as CGRectMBS)
- 52.218.9 Constructor(StringRepresentation as String)
- 52.218.10 Constructor(t as CGAffineTransformMBS)
- 52.218.11 Constructor(values() as Double)
- 52.218.12 Constructor(values() as single)
- 52.218.13 Constructor(x as Double)
- 52.218.14 Constructor(x as Double, y as Double)
- 52.218.16 Constructor(x as Double, y as Double, z as Double, w as Double)
52.218. CLASS CIVECTORMBS

52.218.16 Constructor(x as Double, y as Double, z as Double, w as Double)

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new vector based on 4 values.  
**Example:**

dim x,y,z,w as Double  
dim v as CIVectorMBS  
v=New CIVectorMBS(x,y,z,w)

See also:

- 52.218.6 Constructor(Handle as Integer)

- 52.218.8 Constructor(r as CGRectMBS)  
- 52.218.9 Constructor(StringRepresentation as String)  
- 52.218.10 Constructor(t as CGAffineTransformMBS)  
- 52.218.11 Constructor(values() as Double)  
- 52.218.12 Constructor(values() as single)  
- 52.218.13 Constructor(x as Double)  
- 52.218.14 Constructor(x as Double, y as Double)  
- 52.218.15 Constructor(x as Double, y as Double, z as Double)

52.218.17 copy as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the vector object.

52.218.18 Value(index as Integer) as Double

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value with the given index.  
**Notes:** Index is zero based.
52.218.19  vectorWithCGAffineTransform(t as CGAffineTransformMBS) as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a vector that is initialized with values provided by a CGAffineTransform. **Example:**

```
dim p as new CGAffineTransformMBS
dim v as CIVectorMBS = CIVectorMBS.vectorWithCGAffineTransform(p)
dim x as CGAffineTransformMBS = v.CGAffineTransformValue
MsgBox str(x.A)+" "+str(x.B)+" "+str(x.C)+" "+str(x.D)+" "+str(x.TX)+" "+str(x.TY)
```

**Notes:**
- t: A transform.
- Returns a vector initialized with the specified values.
- The six values that comprise the affine transform fill the first six positions of the resulting CIVector object.

52.218.20  vectorWithCGPoint(p as CGPointMBS) as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a vector that is initialized with values provided by a CGPoint. **Example:**

```
dim p as new CGPointMBS(10, 20)
dim v as CIVectorMBS = CIVectorMBS.vectorWithCGPoint(p)
MsgBox str(v.x)+" "+str(v.y)
```

**Notes:**
- p: A point.
- A vector initialized with the specified values.
- The CGPoint’s X and Y values are stored in the vector’s X and Y properties.

52.218.21  vectorWithCGRect(r as CGRectMBS) as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a vector that is initialized with values provided by a CGRect.
52.218. CLASS CIVECTORMBS

Example:

```dim p as new CGRectMBS(10, 20, 30, 40)
    dim v as CIVectorMBS = CIVectorMBS.vectorWithCGRect(p)
    dim x as CGRectMBS = v.CGRectValue
    MsgBox str(x.Origin.X)+" "+str(x.Origin.y)+" "+str(x.Size.Width)+" "+str(x.Size.Height)
```

Notes:

r: A rect.

Returns a vector initialized with the specified values. The CGRect’s X, Y, height and width values are stored in the vector’s X, Y, Z and W properties.

52.218.22 vectorWithString(s as string) as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new vector based on content of the string.

52.218.23 vectorWithValues(values() as Double) as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new vector based on the given values. See also:

- 52.218.24 vectorWithValues(values() as single) as CIVectorMBS

9585

52.218.24 vectorWithValues(values() as single) as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new vector based on the given values. See also:

- 52.218.23 vectorWithValues(values() as Double) as CIVectorMBS

9585

52.218.25 vectorWithX(x as Double) as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new vector based on one value.
vectorWithXY(x as Double, y as Double) as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new vector based on two values.

vectorWithXYZ(x as Double, y as Double, z as Double) as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new vector based on three values.

vectorWithXYZW(x as Double, y as Double, z as Double, w as Double) as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new vector based on 4 values.

Properties

Count as Integer

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Return the number of values stored in the vector. **Notes:** (Read only property)

Description as String

MBS MacCG Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the textual description for this vector. **Notes:** (Read only property)

Handle as Integer

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The handle to the CIVector reference used. **Notes:** (Read only property)
52.218. CLASS CIVECTORMBS

52.218.33 StringRepresentation as String

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the vector as a string

**Example:**

dim v as CIVectorMBS

v=NewCIVectorWithXYZMBS(1,2,3)

MsgBox v.StringRepresentation // shows "[ 1 2 3 ]"

**Notes:**

Value is "" on any error.

(Read only property)

52.218.34 W as Double

**Notes:** (Read only property)

52.218.35 X as Double

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The X value.

**Notes:** (Read only property)

52.218.36 Y as Double

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Y value.

**Notes:** (Read only property)

52.218.37 Z as Double

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Z value.
Notes: (Read only property)
52.219  class NSAffineTransformMBS

52.219.1  class NSAffineTransformMBS

MBS Main Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for transformation.  
**Notes:** As being used by CoreImage and by the NS* classes, it is a free plugin class requiring no registration.

52.219.2  Methods

52.219.3  appendTransform(transform as NSAffineTransformMBS)

MBS Main Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Transforms the transformation by applying the given transform on the current one.

52.219.4  CGAffineTransformToNSAffineTransform(CGAffineTransform as Variant) as NSAffineTransformMBS

MBS Main Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Converts NSAffineTransformMBS to CGAffineTransformMBS.  
**Example:**
```
dim n as new NSAffineTransformMBS(1,2,3,4,5,6)
dim c as CGAffineTransformMBS = NSAffineTransformMBS.NSAffineTransformToCGAffineTransform(n)
dim r as NSAffineTransformMBS = NSAffineTransformMBS.CGAffineTransformToNSAffineTransform(c)
```

**Notes:** To reduce plugin interdependencies, the parameter is declared as Variant and not as CGAffineTransformMBS.

52.219.5  Constructor

MBS Main Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor to create a new transformation.  
**Notes:** On success the handle property will not be 0.  
See also:

- 52.219.6 Constructor(m11 as Double, m12 as Double, m21 as Double, m22 as Double, tx as Double,
52.219.6 Constructor(m11 as Double, m12 as Double, m21 as Double, m22 as Double, tx as Double, ty as Double)

MBS Main Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new NSAffineTransformMBS based on the given values.

See also:

- 52.219.5 Constructor
- 52.219.7 Constructor(transform as NSAffineTransformMBS)

52.219.7 Constructor(transform as NSAffineTransformMBS)

MBS Main Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new transformation based on the values of an existing transformation. **Notes:** On success the handle property will not be 0.

See also:

- 52.219.5 Constructor
- 52.219.6 Constructor(m11 as Double, m12 as Double, m21 as Double, m22 as Double, tx as Double, ty as Double)

52.219.8 getValues(byref m11 as Double, byref m12 as Double, byref m21 as Double, byref m22 as Double, byref tx as Double, byref ty as Double)

MBS Main Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Copies all the values from the internal matrix.

52.219.9 invert

MBS Main Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Inverts the transformation.
52.219. CLASS NSAFFINETRANFORMMBS

52.219.10 NSAffineTransformToCGAffineTransform(NSAffineTransform as NSAffineTransformMBS) as Variant

MBS Main Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Converts NSAffineTransformMBS to CGAffineTransformMBS.

**Example:**

```vbnet
dim n as new NSAffineTransformMBS(1,2,3,4,5,6)
dim c as CGAffineTransformMBS = NSAffineTransformMBS.NSAffineTransformToCGAffineTransform(n)
dim r as NSAffineTransformMBS = NSAffineTransformMBS.CGAffineTransformToNSAffineTransform(c)
```

**Notes:** To reduce plugin interdependencies, the result is declared as Variant and not as CGAffineTransformMBS.

52.219.11 prependTransform(transform as NSAffineTransformMBS)

MBS Main Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Transforms the transformation by applying the given transform on the current one.

52.219.12 rotateByDegrees(angle as Double)

MBS Main Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Rotates transformation by the given angle in degrees.

**Example:**

```vbnet
dim t as new NSAffineTransformMBS
  t.rotateByDegrees 90 // rotate by 90 degrees
```

52.219.13 rotateByRadians(angle as Double)

MBS Main Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Rotates transformation by the given angle in radians.

**Example:**

```vbnet
const pi=3.14159265
  dim t as new NSAffineTransformMBS
  t.rotateByDegrees pi // rotate by 180 degrees
```
52.219.14  scale(scale as Double)

MBS Main Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Scales the transformation.

**Example:**

```plaintext
dim t as new NSAffineTransformMBS
t.scale 2.0 // double size
```

See also:

- 52.219.15 scale(scaleX as Double, scaleY as Double)

52.219.15  scale(scaleX as Double, scaleY as Double)

MBS Main Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Scales transformation.

**Example:**

```plaintext
dim t as new NSAffineTransformMBS
t.scale 1,2
```

See also:

- 52.219.14 scale(scale as Double)

52.219.16  setValues(m11 as Double, m12 as Double, m21 as Double, m22 as Double, tx as Double, tY as Double)

MBS Main Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Sets all the values from the internal matrix.

52.219.17  transform as NSAffineTransformMBS

MBS Main Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates and returns a new NSAffineTransform object initialized to the identity matrix.

**Example:**
52.219. CLASS NSAFFINETRANSFORMMBS

Dim a As NSAffineTransformMBS = NSAffineTransformMBS.transform
MsgBox str(a.m11)+", "+str(a.m12)+", "+str(a.m21)+", "+str(a.m22)+", "+str(a.tx)+", "+str(a.ty)

Notes: This matrix transforms any point to the same point.

52.219.18 transformBezierPath(NSBezierPath as Variant) as Variant

MBS Main Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Transforms a bezier path with current transformation.

52.219.19 transformPoint(byref x as Double, byref y as Double)

MBS Main Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Transforming the given point.

52.219.20 transformSize(byref width as Double, byref height as Double)

MBS Main Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Transforming the given size.

52.219.21 translate(deltaX as Double, deltaY as Double)

MBS Main Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Translates by the given delta.

52.219.22 Properties

52.219.23 Data as MemoryBlock

MBS Main Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The transform data structure.
Example:
Dim n as new NSAffineTransformMBS(1,2,3,4,5,6)
Dim m as MemoryBlock = n.Data
Break  // check in debugger

Notes:

Returns a copy of the structure as memoryblock.
Can be set with memoryblock of right size and content.

Due to CoreGraphics using 32bit floats in 32bit app, you need to use SingleValue there in the memoryblock which has a size of 24 bytes.

For 64-bit application, the sizes double and you need to use DoubleValue.
(Read and Write property)

52.219.24  m11 as Double

MBS Main Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The matrix value at position 1/1.
**Notes:** (Read only property)

52.219.25  m12 as Double

MBS Main Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The matrix value at position 1/2.
**Notes:** (Read only property)

52.219.26  m21 as Double

MBS Main Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The matrix value at position 2/1.
**Notes:** (Read only property)

52.219.27  m22 as Double

MBS Main Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The matrix value at position 2/2.
**Notes:** (Read only property)
52.219. CLASS NSAFFINETRANSFORMMBS

52.219.28  tx as Double

MBS Main Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The translate X value.
**Notes:** (Read only property)

52.219.29  ty as Double

MBS Main Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The translate Y value.
**Notes:** (Read only property)
52.220.1  NewCIColorMBS(red as single, green as single, blue as single, alpha as single=1.0) as CIColorMBS

Notes:
Returns nil on any error.
Requires Mac OS X 10.4 to work.

52.220.2  NewCIColorWithCGColorMBS(CGColor as Variant) as CIColorMBS

Notes:
CGColor parameter must be a CGColorMBS object.
Returns nil on any error.
Requires Mac OS X 10.4 to work.

52.220.3  NewCIColorWithStringMBS(s as String) as CIColorMBS

Example:

dim c as CIColorMBS
c=NewCIColorWithStringMBS(“1 0.5 0 1”)
MsgBox c.stringRepresentation // shows ”1 0.5 0 1”

Notes:
Returns nil on any error.
Requires Mac OS X 10.4 to work.
52.220.4 NewCIContextMBS(cgcontext as CGContextMBS) as CIContextMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Create a new CoreImage context object without options, all output will be drawn into the CG context. **Notes:**

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 52.220.5 NewCIContextMBS(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, WorkingColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean) as CIContextMBS

52.220.5 NewCIContextMBS(cgcontext as CGContextMBS, OutputColorSpace as CGColorSpaceMBS, WorkingColorSpace as CGColorSpaceMBS, UseSoftwareRenderer as Boolean) as CIContextMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Create a new CoreImage context object with options, all output will be drawn into the CG context. **Notes:**

OutputColorSpace: A CGColorSpaceMBS object defining the color space in which all intermediate operations are performed.
WorkingColorSpace: A CGColorSpaceRef object defining the color space that images are converted to before rendering into the context.
UseSoftwareRenderer: Whether you want software renderer only.

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 52.220.4 NewCIContextMBS(cgcontext as CGContextMBS) as CIContextMBS

52.220.6 NewCIImagewithBitmapDataMBS(data as memoryblock, BytesPerRow as Integer, Width as Integer, Height as Integer, Format as Integer, colorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a CIImage from a RAW memory buffer. **Notes:**

Format must be one of this constants: kCIFormatRGBAf, kCIFormatRGBA16 and kCIFormatARGB8.

Returns nil on any error.
 Requires Mac OS X 10.4 to work.
52.220.7  NewCIImagewithBitmapMemoryMBS(data as memoryblock, DataLength as Integer, BytesPerRow as Integer, Width as Integer, Height as Integer, Format as Integer, colorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a CIImage from a RAW memory buffer. **Notes:**

- Data points directly to the row data.
- Length is the size of the memoryblock in bytes.
- BytesPerRow is the size of a row in bytes.
- Width and height are the dimensions of the image.
- Format must be one of this constants: kCIFormatRGBAf, kCIFormatRGBA16 and kCIFormatARGB8.
- Colorspace is the CoreGraphics Colorspace object to be used.

Returns nil on any error.
Requires Mac OS X 10.4 to work.

52.220.8  NewCIImagewithCGImageMBS(cgimage as CGImageMBS, cgcolorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a CIImage based on a CGImage. **Notes:**

- cgcolorspace: Use this colorspace when opening the image.
Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 52.220.9  NewCIImagewithCGImageMBS(cgimage as CGImageMBS, options as dictionary = nil) as CIImageMBS

52.220.9  NewCIImagewithCGImageMBS(cgimage as CGImageMBS, options as dictionary = nil) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a CIImage based on a CGImage. **Notes:**
52.220. GLOBALS

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 52.220.8 NewCIImageWithCGImageMBS(cgimage as CGImageMBS, cgcolorspace as CGColorSpaceMBS) as CIImageMBS

52.220.10 NewCIImageWithDataMBS(Data as memoryblock, cgcolorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a CIImage based on the image file content stored inside the data string.
**Notes:**
cgcolorspace: Use this colorspace when opening the image.

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 52.220.11 NewCIImageWithDataMBS(Data as Memoryblock, Options as Dictionary = nil) as CIImageMBS

52.220.11 NewCIImageWithDataMBS(Data as Memoryblock, Options as Dictionary = nil) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a CIImage based on the image file content stored inside the data string.
**Notes:**

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

- 52.220.10 NewCIImageWithDataMBS(Data as memoryblock, cgcolorspace as CGColorSpaceMBS) as CIImageMBS

52.220.12 NewCIImageWithFileMBS(file as folderitem) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a CIImage based on the content of the file.
**Notes:**

Returns nil on any error.
CHAPTER 52. COREIMAGE

Requires Mac OS X 10.4 to work.

In plugin version 7.5 and Mac OS X 10.4.10 this method leaks the data because of a bug in the framework. See also:

- 52.220.13 NewCIImagewithFileMBS(file as folderitem, cgcolorspace as CGColorSpaceMBS) as CIImageMBS

52.220.13  NewCIImagewithFileMBS(file as folderitem, cgcolorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a CIImage based on the content of the file. **Notes:**

- cgcolorspace: Use this colorspace when opening the image.

Returns nil on any error.

Requires Mac OS X 10.4 to work.

In plugin version 7.5 and Mac OS X 10.4.10 this method leaks the data because of a bug in the framework. See also:

- 52.220.12 NewCIImagewithFileMBS(file as folderitem) as CIImageMBS

52.220.14  NewCIImagewithURLMBS(url as String) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a CIImage based on the content of the file where the URL points to. **Notes:**

- Returns nil on any error.

Requires Mac OS X 10.4 to work.

See also:

- 52.220.15 NewCIImagewithURLMBS(url as String, cgcolorspace as CGColorSpaceMBS) as CIImageMBS

52.220.15  NewCIImagewithURLMBS(url as String, cgcolorspace as CGColorSpaceMBS) as CIImageMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a CIImage based on the content of the file where the URL points to. **Notes:**
cicolorspace: Use this colorspace when opening the image.

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

• 52.220.14 NewCIImagewithURLMBS(url as String) as CIImageMBS

52.220.16 NewCISamplerMBS(ciImage as CIImageMBS) as CISamplerMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new sampler based on the given image.

**Notes:**

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

• 52.220.17 NewCISamplerMBS(ciImage as CIImageMBS, matrix as NSAffineTransformMBS, WrapMode as String, FilterMode as string) as CISamplerMBS

52.220.17 NewCISamplerMBS(ciImage as CIImageMBS, matrix as NSAffineTransformMBS, WrapMode as String, FilterMode as string) as CISamplerMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new sampler based on the given image.

**Notes:**

matrix: An affine transformation \([ a b c d tx ty ]\) defining the transformation to be applied to the sampler.

wrapmode: A string defining how pixels outside the sampler’s extent are produced. Options include kCISamplerWrapBlack (pixels are transparent black, the default) and kCISamplerWrapClamp (coordinates are clamped to the extent).

FilterMode: A string defining the filter to use when sampling the image. One of kCISamplerFilterNearest (point sampling) or kCISamplerFilterLinear (bilinear interpolation, the default).

Returns nil on any error.
Requires Mac OS X 10.4 to work.
See also:

• 52.220.16 NewCISamplerMBS(ciImage as CIImageMBS) as CISamplerMBS
52.220.18 NewCIVectorWithStringMBS(s as string) as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new vector based on content of the string.

**Example:**
```
dim v as CIVectorMBS
v=NewCIVectorWithStringMBS(" [ 1 2 3 ] ")
```

**Notes:**
- Returns nil on any error.
- Requires Mac OS X 10.4 to work.

52.220.19 NewCIVectorWithXMBS(x as Double) as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new vector based on one value.

**Example:**
```
dim x as Double = 1
dim v as CIVectorMBS
v=NewCIVectorWithXMBS(x)
```

**Notes:**
- Returns nil on any error.
- Requires Mac OS X 10.4 to work.

52.220.20 NewCIVectorWithXYMBS(x as Double, y as Double) as CIVectorMBS

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new vector based on two values.

**Example:**
```
dim x as Double = 1
dim y as Double = 2
dim v as CIVectorMBS
v=NewCIVectorWithXYMBS(x,y)
```

**Notes:**
Returns nil on any error.
Requires Mac OS X 10.4 to work.

### 52.220.21 `NewCIVectorWithXYZMBS(x as Double, y as Double, z as Double) as CIVectorMBS`

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new vector based on three values.

**Example:**
```vbnet
dim x as Double = 1
dim y as Double = 2
dim z as Double = 3
dim v as CIVectorMBS
v=NewCIVectorWithXYZMBS(x,y,z)
```

**Notes:**
Returns nil on any error.
Requires Mac OS X 10.4 to work.

### 52.220.22 `NewCIVectorWithXYZWMBS(x as Double, y as Double, z as Double, w as Double) as CIVectorMBS`

MBS MacCG Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new vector based on 4 values.

**Example:**
```vbnet
dim x as Double = 1
dim y as Double = 2
dim z as Double = 3
dim w as Double = 4
dim v as CIVectorMBS
v=NewCIVectorWithXYZWMBS(x,y,z,w)
```

**Notes:**
Returns nil on any error.
Requires Mac OS X 10.4 to work.
Chapter 53

CoreLocation

53.1 class CLGeocodeCompletionHandlerMBS

53.1.1 class CLGeocodeCompletionHandlerMBS

Function: The class to receive the Complete event from a geocoder.

53.1.2 Events

53.1.3 Completed(geocoder as CLGeocoderMBS, placemarks() as CLPlacemarkMBS, error as NSErrorMBS, tag as Variant)

Function: The event to be called when a geocoding request is complete.
Notes:
Upon completion of a geocoding request, a block of this form is called to give you a chance to process the results. The parameters of this block are as follows:

placemark: Contains an array of CLPlacemark objects. For most geocoding requests, this array should contain only one entry. However, forward-geocoding requests may return multiple placemark objects in situations where the specified address could not be resolved to a single location.
If the request was canceled or there was an error in obtaining the placemark information, this parameter is nil.
error: Contains an error object (if any) indicating why the placemark data was not returned. For a list of possible error codes, see CLLocationManager Class Reference.

9605
Available in OS X v10.8 and later.
Tag parameter added in version 14.2.
53.2. class CLGeocoderMBS

53.2.1. class CLGeocoderMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The CLGeocoder class provides services for converting between a coordinate (specified as a latitude and longitude) and the user-friendly representation of that coordinate.

**Notes:**

A user-friendly representation of the coordinate typically consists of the street, city, state, and country information corresponding to the given location, but it may also contain a relevant point of interest, landmarks, or other identifying information. A geocoder object is a single-shot object that works with a network-based service to look up placemark information for its specified coordinate value.

To use a geocoder object, create it and call one of its forward- or reverse-geocoding methods to begin the request. Reverse-geocoding requests take a latitude and longitude value and find a user-readable address. Forward-geocoding requests take a user-readable address and find the corresponding latitude and longitude value. Forward-geocoding requests may also return additional information about the specified location, such as a point of interest or building at that location. For both types of request, the results are returned using a CLPlacemark object. In the case of forward-geocoding requests, multiple placemark objects may be returned if the provided information yielded multiple possible locations.

To make smart decisions about what types of information to return, the geocoder server uses all the information provided to it when processing the request. For example, if the user is moving quickly along a highway, it might return the name of the overall region, and not the name of a small park that the user is passing through.

Applications should be conscious of how they use geocoding. Here are some rules of thumb for using this class effectively:

Send at most one geocoding request for any one user action.
If the user performs multiple actions that involve geocoding the same location, reuse the results from the initial geocoding request instead of starting individual requests for each action.
When you want to update the user’s current location automatically (such as when the user is moving), issue new geocoding requests only when the user has moved a significant distance and after a reasonable amount of time has passed. For example, in a typical situation, you should not send more than one geocoding request per minute.
Do not start a geocoding request at a time when the user will not see the results immediately. For example, do not start a request if your application is inactive or in the background.
The computer or device must have access to the network in order for the geocoder object to return detailed placemark information. Although, the geocoder stores enough information locally to report the localized country name and ISO country code for many locations. If country information is not available for a specific location, the geocoder may still report an error to your completion block.

see also
53.2.2 Methods

53.2.3 Available as boolean

Function: Returns true if this class is available.

53.2.4 cancelGeocode

Function: Cancels a pending geocoding request.
Notes:
You can use this method to cancel a pending request and free up the resources associated with that request. Canceling a pending request causes the completion handler event to be called.

If the request is not pending, because it has already returned or has not yet begun, this method does nothing. Available in OS X v10.8 and later.

53.2.5 Constructor

Function: The constructor.

53.2.6 geocodeAddressDictionary(addressDictionary as Dictionary, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil)

Function: Submits a forward-geocoding request using the specified address dictionary.
Notes:
addressDictionary: An Address Book dictionary containing information about the address to look up.
completionHandler: A handler object containing the code to execute at the end of the request. This code is called whether the request is successful or unsuccessful.

This method submits the specified location data to the geocoding server asynchronously and returns. Your completion handler block will be executed on the main thread. After initiating a forward-geocoding request,
53.2.7 geocodeAddressString(addressString as string, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil)

Function: Submits a forward-geocoding request using the specified string.
Notes:
addressString: A string describing the location you want to look up. For example, you could specify the string "1 Infinite Loop, Cupertino, CA" to locate Apple headquarters.
completionHandler: A handler object containing the code to execute at the end of the request. This code is called whether the request is successful or unsuccessful.

This method submits the specified location data to the geocoding server asynchronously and returns. Your completion handler block will be executed on the main thread. After initiating a forward-geocoding request, do not attempt to initiate another forward- or reverse-geocoding request. Available in OS X v10.8 and later.

See also:
- 53.2.8 geocodeAddressString(addressString as string, region as CLRegionMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil) 9609
- 53.2.9 geocodeAddressString(addressString as string, region as CLRegionMBS, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil) 9610

53.2.8 geocodeAddressString(addressString as string, region as CLRegionMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil)

Function: Submits a forward-geocoding request using the specified string and region information.
Notes:
addressString: A string describing the location you want to look up. For example, you could specify the string "1 Infinite Loop, Cupertino, CA" to locate Apple headquarters.
region: A geographical region to use as a hint when looking up the specified address. Specifying a region lets you prioritize the returned set of results to locations that are close to some specific geographical area, which is typically the user's current location. If nil and the application is authorized for location services, the set of results is prioritized based on the user's approximate location. Invoking this method does not trigger a location services authorization request.
completionHandler: A handler object containing the code to execute at the end of the request. This code is called whether the request is successful or unsuccessful.
This method submits the specified location data to the geocoding server asynchronously and returns. Your completion handler block will be executed on the main thread. After initiating a forward-geocoding request, do not attempt to initiate another forward- or reverse-geocoding request.

Available in OS X v10.8 and later.

See also:

- 53.2.7 `geocodeAddressString` (addressString as string, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil) 9609

- 53.2.9 `geocodeAddressString` (addressString as string, region as CLRegionMBS, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil) 9610

### 53.2.9 geocodeAddressString

(addressString as string, region as CLRegionMBS, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil) 9610

**Function:** Submits a forward-geocoding request using the specified string and region information.

**Notes:**

- **addressString:** A string describing the location you want to look up. For example, you could specify the string "1 Infinite Loop, Cupertino, CA" to locate Apple headquarters.
- **region:** A geographical region to use as a hint when looking up the specified address. Specifying a region lets you prioritize the returned set of results to locations that are close to some specific geographical area, which is typically the user’s current location. If nil and the application is authorized for location services, the set of results is prioritized based on the user’s approximate location. Invoking this method does not trigger a location services authorization request.
- **completionHandler:** A handler object containing the code to execute at the end of the request. This code is called whether the request is successful or unsuccessful.

This method submits the specified location data to the geocoding server asynchronously and returns. Your completion handler block will be executed on the main thread. After initiating a forward-geocoding request, do not attempt to initiate another forward- or reverse-geocoding request.

Available in OS X v10.8 and later.

For macOS 10.13 or newer we can optionally pass preferred locale.

See also:

- 53.2.7 `geocodeAddressString` (addressString as string, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil) 9609

- 53.2.8 `geocodeAddressString` (addressString as string, region as CLRegionMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil) 9609
53.2. CLASS CLGEOCODERMBS

53.2.10 geocodePostalAddress(postalAddress as Variant, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil)

Function: Queries coordinates for postal address.
Notes:
postalAddress must be a CNPostalAddressMBS.
For macOS 10.13 or newer.
See also:
• 53.2.11 geocodePostalAddress(postalAddress as Variant, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil)

53.2.11 geocodePostalAddress(postalAddress as Variant, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil)

Function: Queries coordinates for postal address.
Notes:
postalAddress must be a CNPostalAddressMBS.
For macOS 10.13 or newer.
See also:
• 53.2.10 geocodePostalAddress(postalAddress as Variant, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil)

53.2.12 isGeocoding as boolean

Function: A Boolean value indicating whether the receiver is in the middle of geocoding its value. (read-only)
Notes:
This property contains the value true if the process is ongoing or false if the process is done or has not yet been initiated.
Available in OS X v10.8 and later.
53.2.13 reverseGeocodeLocation(location as CLLocationMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil)

Function: Submits a reverse-geocoding request for the specified location.
Notes:
location: The location object containing the coordinate data to look up.
completionHandler: The handler object containing the code to execute at the end of the request. This code is called whether the request is successful or unsuccessful.

This method submits the specified location data to the geocoding server asynchronously and returns. Your completion handler block will be executed on the main thread. After initiating a reverse-geocoding request, do not attempt to initiate another reverse- or forward-geocoding request.

Available in OS X v10.8 and later.
See also:

- 53.2.14 reverseGeocodeLocation(location as CLLocationMBS, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil)

53.2.14 reverseGeocodeLocation(location as CLLocationMBS, preferredLocale as NSLocaleMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as variant = nil)

Function: Submits a reverse-geocoding request for the specified location.
Notes:
location: The location object containing the coordinate data to look up.
completionHandler: The handler object containing the code to execute at the end of the request. This code is called whether the request is successful or unsuccessful.

This method submits the specified location data to the geocoding server asynchronously and returns. Your completion handler block will be executed on the main thread. After initiating a reverse-geocoding request, do not attempt to initiate another reverse- or forward-geocoding request.

Available in OS X v10.8 and later.
For macOS 10.13 or newer we can optionally pass preferred locale.
See also:

- 53.2.13 reverseGeocodeLocation(location as CLLocationMBS, completionHandler as CLGeocodeCompletionHandlerMBS, tag as Variant = nil)
53.2.15 Properties

53.2.16 Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)
53.3 class CLHeadingMBS

53.3.1 class CLHeadingMBS

Function: A CLHeading object contains heading data generated by a CLLocationManager object.
Notes:
The heading data consists of computed values for true and magnetic north. It also includes the raw data for
the three-dimensional vector used to compute those values.

Typically, you do not create instances of this class yourself, nor do you subclass it. Instead, you receive
instances of this class through the delegate assigned to the CLLocationManager object whose startUpdatingHeading method you called.

Note: If you want heading objects to contain valid data for the trueHeading property, your location manager
object should also be configured to deliver location updates. You can start the delivery of these updates by
calling the location manager object’s startUpdatingLocation method.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

53.3.2 Methods

53.3.3 Available as boolean

Function: Returns true if this class is available.

53.3.4 Constructor

Function: The private constructor.

53.3.5 copy as CLHeadingMBS

Function: Creates a clone of this object.
53.3. CLASS CLHEADINGMBS

53.3.6 description as string

Function: Returns the heading data in a formatted text string.
Notes:
A string of the form "magneticHeading <magnetic>trueHeading <heading>accuracy <accuracy>x <x>y <y>z <z>@ <date-time>" where <magnetic>, <heading>, <accuracy>, <x>, <y>, and <z> are formatted floating-point numbers and <date-time> is a formatted date string that includes date, time, and time zone information.

Available in OS X v10.7 and later.

53.3.7 headingAccuracy as Double

Function: The maximum deviation (measured in degrees) between the reported heading and the true geomagnetic heading. (read-only)
Notes:
A positive value in this property represents the potential error between the value reported by the magneticHeading property and the actual direction of magnetic north. Thus, the lower the value of this property, the more accurate the heading. A negative value means that the reported heading is invalid, which can occur when the device is uncalibrated or there is strong interference from local magnetic fields.

Available in OS X v10.7 and later.

53.3.8 kCLHeadingFilterNone as Double

Function: Special value for heading filter to define that you don’t want to filter.

53.3.9 magneticHeading as Double

Function: The heading (measured in degrees) relative to magnetic north. (read-only)
Notes:
The value in this property represents the heading relative to the magnetic North Pole, which is different from the geographic North Pole. The value 0 means the device is pointed toward magnetic north, 90 means it is pointed east, 180 means it is pointed south, and so on. The value in this property should always be valid.
If the headingAccuracy property contains a negative value, the value in this property should be considered unreliable.

Available in OS X v10.7 and later.

### 53.3.10 timestamp as date

**Function:** The time at which this heading was determined. (read-only)

**Notes:** Available in OS X v10.7 and later.

### 53.3.11 trueHeading as Double

**Function:** The heading (measured in degrees) relative to true north. (read-only)

**Notes:**
The value in this property represents the heading relative to the geographic North Pole. The value 0 means the device is pointed toward true north, 90 means it is pointed due east, 180 means it is pointed due south, and so on. A negative value indicates that the heading could not be determined.

Important This property contains a valid value only if location updates are also enabled for the corresponding location manager object. Because the position of true north is different from the position of magnetic north on the Earth’s surface, Core Location needs the current location of the device to compute the value of this property.

Available in OS X v10.7 and later.

### 53.3.12 x as Double

**Function:** The geomagnetic data (measured in microteslas) for the x-axis. (read-only)

**Notes:**
This value represents the x-axis deviation from the magnetic field lines being tracked by the device.

Available in OS X v10.7 and later.
53.3.13  y as Double

Function: The geomagnetic data (measured in microteslas) for the y-axis. (read-only)
Notes: This value represents the y-axis deviation from the magnetic field lines being tracked by the device. Available in OS X v10.7 and later.

53.3.14  z as Double

Function: The geomagnetic data (measured in microteslas) for the z-axis. (read-only)
Notes: This value represents the z-axis deviation from the magnetic field lines being tracked by the device. Available in OS X v10.7 and later.

53.3.15  Properties

53.3.16  Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)
53.4  class CLLocationCoordinate2DMBS

53.4.1  class CLLocationCoordinate2DMBS

Function: The class for a location coordinate.

53.4.2  Methods

53.4.3  Constructor(latitude as Double = 0.0, longitude as Double = 0.0)

Function: Initializes a coordinate with values.

53.4.4  Properties

53.4.5  latitude as Double

Function: The latitude.
Notes: (Read and Write property)

53.4.6  longitude as Double

Function: The longitude.
Notes: (Read and Write property)
53.5. class CLLocationManagerMBS

53.5.1 class CLLocationManagerMBS

Function: The CoreLocation base class.
Example:

```vbnet
dim c as new CLLocationManagerMBS

c.startUpdatingLocation
```

Notes:
The CLLocationManagerMBS class defines the interface for configuring the delivery of location- and heading-related events to your application. You use an instance of this class to establish the parameters that determine when location and heading events should be delivered. You can also a location manager object to retrieve the most recent location data.

To use a CLLocationManagerMBS object to deliver location events, create an instance, configure the desired accuracy and distance filter values, and call the startUpdatingLocation method. The location service returns an initial location as quickly as possible, returning cached information when available. After delivery of the initial event notification, the CLLocationManagerMBS object may deliver additional events if the minimum threshold distance (as specified by the distanceFilter property) is exceeded or a more accurate location value is determined.

Important: The user has the option of denying an application’s access to the location service data. During its initial uses by an application, the Core Location framework prompts the user to confirm that using the location service is acceptable. If the user denies the request, the CLLocationManagerMBS object reports an appropriate error to its delegate during future requests.

See also documentation from Apple for the CLLocationManager class:
https://developer.apple.com/library/mac/#documentation/CoreLocation/Reference/CLLocationManager_Class/CLLocationManager.html

53.5.2 Methods

53.5.3 authorizationStatus as Integer

Function: Returns the application’s authorization status for using location services.
Notes:
The authorization status of a given application is managed by the system and determined by several factors.
Applications must be explicitly authorized to use location services by the user and location services must themselves currently be enabled for the system. This authorization takes place automatically when your application first attempts to use location services.

Available on Mac OS X 10.7 or later.

### 53.5.4 CheckEvents

MBS MacFrameworks Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  
**Function:** Checks for new events.  
**Notes:**  
This is a helper app to make CoreLocation geocoder work in web projects.  
Should not be called in desktop apps.  
But for a web app, use a Timer (not WebTimer) to run it on main loop every few milliseconds (e.g. 500 ms).

### 53.5.5 Constructor

**Function:** The constructor.  
**Example:**

```vba
dim c as new CLLocationManagerMBS
MsgBox str(c.Handle) // not zero on success
```

### 53.5.6 deferredLocationUpdatesAvailable as boolean

**Function:** Returns true if the device supports deferred location updates, otherwise false.  
**Notes:** Requires Mac OS X 10.9.

### 53.5.7 Destructor

**Function:** The destructor.
53.5.8 dismissHeadingCalibrationDisplay

**Function:** Dismisses the heading calibration view from the screen immediately.
**Notes:** Core Location uses the heading calibration alert to calibrate the available heading hardware as needed. The display of this view is automatic, assuming your delegate supports displaying the view at all. If the view is displayed, you can use this method to dismiss it after an appropriate amount of time to ensure that your application’s user interface is not unduly disrupted.

53.5.9 headingAvailable as boolean

**Function:** Returns a Boolean value indicating whether the location manager is able to generate heading-related events.
**Example:**
```
msgbox "headingAvailable available: " + str(CLLocationManagerMBS.headingAvailable)
```

**Notes:**
Returns true if heading data is available or false if it is not.

Heading data may not be available on all iOS-based devices. You should check the value returned by this method before asking the location manager to deliver heading-related events.

Available on Mac OS X 10.7 or later.

53.5.10 kCLErrorDomain as string

**Function:** The domain for Core Location errors. This value is used in the NSError class.

53.5.11 kCLErrorUserInfoAlternateRegionKey as string

**Function:** A key in the user information dictionary of an kCLErrorRegionMonitoringResponseDelayed error whose value is a CLRegionMBS object that the location services can more effectively monitor.
53.5.12 locationServicesAvailable as boolean

Function: Whether the CoreLocation framework is available.

Example:

if CLLocationManagerMBS.locationServicesAvailable then
    if CLLocationManagerMBS.locationServicesEnabled then
        MsgBox "available and enabled"
    else
        MsgBox "available and not enabled"
    end if
else
    MsgBox "Not available"
end if

Notes: Returns true on Mac OS X 10.6 and false on all other systems.

53.5.13 locationServicesEnabled as boolean

Function: A Boolean value indicating whether location services are enabled on the device.

Example:

if CLLocationManagerMBS.locationServicesAvailable then
    if CLLocationManagerMBS.locationServicesEnabled then
        MsgBox "available and enabled"
    else
        MsgBox "available and not enabled"
    end if
else
    MsgBox "Not available"
end if

53.5.14 monitoredRegions as CLRegionMBS()

Function: The array of shared regions monitored by all location manager objects.

Notes:

You cannot add regions to this property directly. Instead, you must register regions by calling the startMonitoringForRegion method. The regions in this property are shared by all instances of the CLLocationMan-
The objects in this set may not necessarily be the same objects you specified at registration time. Only the region data itself is maintained by the system. Therefore, the only way to uniquely identify a registered region is using its identifier property.

The location manager persists region data between launches of your application. If your application is terminated and then relaunched, the contents of this property are repopulated with region objects that contain the previously registered data.

Available on Mac OS X 10.7 or later.

53.5.15  regionMonitoringAvailable as boolean

Function: Returns a Boolean indicating whether region monitoring is supported on the current device.
Example:
msgbox "regionMonitoringAvailable available: " + str(CLLocationManagerMBS.regionMonitoringAvailable)

Notes:
Available on Mac OS X 10.7 or later.

Returns true if region monitoring is available or false if it is not.

Support for region monitoring may not be available on all devices and models. You should check the value of this property before attempting to set up any regions or initiate region monitoring.

Even if region monitoring support is present on a device, it may still be unavailable because the user disabled it for the current application or for all applications.

53.5.16  regionMonitoringEnabled as boolean

Function: Returns a Boolean indicating whether region monitoring is currently enabled.
Notes:
Returns true if region monitoring is available and is currently enabled or false if it is unavailable or not enabled.
The user can enable or disable location services (including region monitoring) altogether from the System Preferences.

You should check the return value of this method before starting region monitoring updates to determine if the user currently allows location services to be used at all. If this method returns false and you start region monitoring updates anyway, the Core Location framework prompts the user with a confirmation panel asking whether location services should be reenabled.

This method does not check to see if region monitoring capabilities are actually supported by the device. Therefore, you should also check the return value of the regionMonitoringAvailable class method before attempting to start region monitoring services.

Available on Mac OS X 10.7 or later.

53.5.17 significantLocationChangeMonitoringAvailable as boolean

Function: Returns true if the device supports significant location change monitoring, otherwise false.

Example:

```
msgbox "significantLocationChangeMonitoringAvailable available: " + str(CLLocationManagerMBS.significantLocationChangeMonitoringAvailable)
```

Notes:

Available on Mac OS X 10.7 or later.

This method indicates whether the device is able to report updates based on significant location changes only. (This primarily involves detecting changes in the cell tower currently associated with the device.) This capability provides tremendous power savings for applications that want to track a user’s approximate location and do not need highly accurate position information.

53.5.18 startMonitoringForRegion(region as CLRegionMBS)

Function: Starts monitoring the specified region.

Notes:

region: The region object that defines the boundary to monitor. This parameter must not be nil.
You must call this method separately for each region you want to monitor. If an existing region with the
same identifier is already being monitored by the application, the old region is replaced by the new one. The
regions you add using this method are shared by all location manager objects in your application and stored
in the monitoredRegions property.

Region events are delivered to the didEnterRegion and didExitRegion events. If there is an error, the location
manager calls the monitoringDidFailForRegion event instead.

53.5.19 startMonitoringSignificantLocationChanges

Function: Starts the generation of updates based on significant location changes.
Example:

```dim c as new CLLocationManagerMBS
c.startMonitoringSignificantLocationChanges```

Notes:
This method initiates the delivery of location events asynchronously, returning shortly after you call it. Location events are delivered to your delegate’s didUpdateToLocation event. The first event to be delivered is usually the most recently cached location event (if any) but may be a newer event in some circumstances. Obtaining a current location fix may take several additional seconds, so be sure to check the timestamps on the location events in your event code.

After returning a current location fix, the receiver generates update events only when a significant change in the user’s location is detected. For example, it might generate a new event when the device becomes associated with a different cell tower. It does not rely on the value in the distanceFilter property to generate events. Calling this method several times in succession does not automatically result in new events being generated. Calling stopMonitoringSignificantLocationChanges in between, however, does cause a new initial event to be sent the next time you call this method.

In addition to your subclass implementing the didUpdateToLocation event, it should also implement the
didFailWithError event to respond to potential errors.

Available in Mac OS X 10.7 or later.
53.5.20  startUpdatingHeading

Function: Starts the generation of updates that report the user’s current heading.

Notes:

This method returns immediately. Calling this method when the receiver is stopped causes it to obtain an
initial heading and notify your delegate. After that, the receiver generates update events when the value in
the headingFilter property is exceeded.

Before calling this method, you should always check the headingAvailable property to see whether heading
information is supported on the current device. If heading information is not supported, calling this method
has no effect and does not result in the delivery of events to your delegate.

Calling this method several times in succession does not automatically result in new events being generated.
Calling stopUpdatingHeading in between, however, does cause a new initial event to be sent the next time
you call this method.

If you start this service and your application is suspended, the system stops the delivery of events until your
application starts running again (either in the foreground or background). If your application is terminated,
the delivery of new heading events stops altogether and must be restarted by your code when the application
is relaunched.

Heading events are delivered to the didUpdateHeading event. If there is an error, the location manager calls
the didFailWithError event instead.

53.5.21  startUpdatingLocation

Function: Starts the generation of updates that report the user’s current location.

Example:

```dim c as new CLLocationManagerMBS
c.startUpdatingLocation```

Notes:

This method returns immediately. Calling this method when the receiver is stopped causes it to obtain an
initial location fix (which may take several seconds) and notify your delegate. After that, the receiver gen-
erates update events primarily when the value in the distanceFilter property is exceeded. Updates may be
delivered in other situations though. For example, the receiver may send another notification if the hardware
gathers a more accurate location reading.

Calling this method several times in succession does not automatically result in new events being generated. Calling stopUpdatingLocation in between, however, does cause a new initial event to be sent the next time you call this method.

### 53.5.22 stopMonitoringForRegion(region as CLRegionMBS)

**Function:** Stops monitoring the specified region.

**Notes:**
- region: The region object currently being monitored. This parameter must not be nil.
- If the specified region object is not currently being monitored, this method has no effect.

Available on Mac OS X 10.7 or later.

### 53.5.23 stopMonitoringSignificantLocationChanges

**Function:** Stops the delivery of location events based on significant location changes.

**Notes:**
- Use this method to stop the delivery of location events that was started using the startMonitoringSignificantLocationChanges method.
- Available on Mac OS X 10.7 or later.

### 53.5.24 stopUpdatingHeading

**Function:** Stops the generation of heading updates.

**Notes:**
- Call this method whenever your code no longer needs to receive heading-related events. Disabling event delivery gives the receiver the option of disabling the appropriate hardware (and thereby saving power) when no clients need location data. You can always restart the generation of heading updates by calling the startUpdatingHeading method again.
53.5.25 stopUpdatingLocation

**Function:** Stops the generation of location updates.

**Example:**

```dim c as new CLLocationManagerMBS
c.startUpdatingLocation
// later
c.stopUpdatingLocation```

**Notes:** You should call this method whenever your code no longer needs to receive location-related events. Disabling event delivery gives the receiver the option of disabling the appropriate hardware (and thereby saving power) when no clients need location data. You can always restart the generation of location updates by calling the startUpdatingLocation method again.

53.5.26 Properties

53.5.27 desiredAccuracy as Double

**Function:** The desired accuracy of the location data.

**Example:**

```dim c as new CLLocationManagerMBS
c.desiredAccuracy=CLLocationMBS.kCLLocationAccuracyBest```

**Notes:**

The receiver does its best to achieve the requested accuracy; however, the actual accuracy is not guaranteed.

You should assign a value to this property that is appropriate for your usage scenario. In other words, if you need only the current location within a few kilometers, you should not specify kCLLocationAccuracyBest for the accuracy. Determining a location with greater accuracy requires more time and more power.

When requesting high accuracy location data, the initial event delivered by the location service may not have the accuracy you requested. The location service delivers the initial event as quickly as possible. It then continues to determine the location with the accuracy you requested and delivers additional events, as necessary, when that data is available.
The default value of this property is kCLLocationAccuracyBest.
(Read and Write property)

### 53.5.28 distanceFilter as Double

**Function:** The minimum distance (measured in meters) a device must move laterally before an update event is generated.
**Example:**
```vbnet
dim c as new CLLocationManagerMBS
c.distanceFilter=CLLocationMBS.kCLDistanceFilterNone
```
**Notes:**
This distance is measured relative to the previously delivered location. Use the value kCLDistanceFilterNone to be notified of all movements.

The default value of this property is kCLDistanceFilterNone.
(Read and Write property)

### 53.5.29 Handle as Integer

**Function:** The internal reference to the CLLocationManager object.
**Example:**
```vbnet
dim c as new CLLocationManagerMBS
MsgBox str(c.Handle) // not zero on success
```
**Notes:** (Read and Write property)

### 53.5.30 location as CLLocationMBS

**Function:** The most recently retrieved user location.
**Example:**
dim c as new CLLocationMBS(1,2,3,4,5,nil)
MsgBox c.description

Notes:
The value of this property is nil if no location data has ever been retrieved.

It is a good idea to check the timestamp of the location that is returned. If the receiver is currently gathering location data, but the minimum distance filter is large, the returned location might be relatively old. If it is, you can stop the receiver and start it again to force an update.
(Read only property)

53.5.31  maximumRegionMonitoringDistance as Double

Function:  The largest boundary distance that can be assigned to a region.
Notes:
This property defines the largest boundary distance allowed from a region’s center point. Attempting to monitor a region with a distance larger than this value causes the location manager to send a kCLErrorRegionMonitoringFailure error to the delegate.

If region monitoring is unavailable or not supported, the value in this property is -1.

Available on Mac OS X 10.7 or later.
(Read only property)

53.5.32  purpose as string

Function:  An application-provided string that describes the reason for using location services.
Notes:
If this property is not "" and the system needs to ask for the user’s consent to use location services, it displays the provided string. You can use this string to explain why your application is using location services.

You must set the value of this property prior to starting any location services. Because the string is ultimately displayed to the user, you should always load it from a localized strings file.
53.5. **CLASS CLLOCATIONMANAGERMBS**

Available on Mac OS X 10.7 or later.
(Read and Write property)

### 53.5.33 Events

#### 53.5.34 `didChangeAuthorizationStatus(status as Integer)`

**Function:** Tells the delegate that the authorization status for the application changed.
**Notes:**

*status:* The new authorization status for the application.

This method is called whenever the application’s ability to use location services changes. Changes can occur because the user allowed or denied the use of location services for your application or for the system as a whole.

#### 53.5.35 `didEnterRegion(region as CLRegionMBS)`

**Function:** Tells the delegate that the user entered the specified region.
**Notes:**

*region:* An object containing information about the region that was entered.

The region object provided may not be the same one that was registered. As a result, you should never perform pointer-level comparisons to determine equality. Instead, use the region’s identifier string to determine if your delegate should respond.

#### 53.5.36 `didExitRegion(region as CLRegionMBS)`

**Function:** Tells the delegate that the user left the specified region.
**Notes:**

*manager:* The location manager object reporting the event.
*region:* An object containing information about the region that was exited.

The region object provided may not be the same one that was registered. As a result, you should never perform pointer-level comparisons to determine equality. Instead, use the region’s identifier string to determine
if your delegate should respond.

53.5.37 didFailWithError(error as NSErrorMBS)

Function: Tells you that the location manager was unable to retrieve a location value.
Notes:
error: The error object containing the reason why the location could not be retrieved.

If the location service is unable to retrieve a location fix right away, it reports a kCLErrorLocationUnknown error and keeps trying. In such a situation, you can simply ignore the error and wait for a new event.

If the user denies your application’s use of the location service, this method reports a kCLErrorDenied error. Upon receiving such an error, you should stop the location service.

53.5.38 didFinishDeferredUpdatesWithError(error as NSErrorMBS)

Function: Invoked when deferred updates will no longer be delivered.
Notes:
Stopping location, disallowing deferred updates, and meeting a specified criterion are all possible reasons for finishing deferred updates.

An error will be returned if deferred updates end before the specified criteria are met (see CLError). Requires Mac OS X 10.9.

53.5.39 didStartMonitoringForRegion(region as CLRegionMBS)

Function: Tells you that a new region is being monitored.
Notes: region: The region that is being monitored.

53.5.40 didUpdate(newLocation as CLLocationMBS, oldLocation as CLLocationMBS)

Function: Tells you that a new location value is available.
53.5. **CLASS CLLOCATIONMANAGERMBS**

**Notes:**

newLocation: The new location data.
oldLocation: The location data from the previous update. If this is the first update event delivered by this location manager, this parameter is nil.

By the time this event is called, the new location data is also available directly from the CLLocationManagerMBS object. The newLocation parameter may contain the data that was cached from a previous usage of the location service. You can use the timestamp property of the location object to determine how recent the location data is.

53.5.41 **didUpdateHeading(newHeading as CLHeadingMBS)**

**Function:** Tells you that the location manager received updated heading information.
**Notes:**

Implementation of this method is optional but expected if you start heading updates using the startUpdatingHeading method.

The location manager object calls this method after you initially start the heading service. Subsequent events are delivered when the previously reported value changes by more than the value specified in the headingFilter property of the location manager object.

53.5.42 **didUpdateLocations(locations() as CLLocationMBS)**

**Function:** Invoked when new locations are available.
**Notes:**

Required for delivery of deferred locations.
If implemented, updates will not be delivered to didUpdate.
Requires Mac OS X 10.9.

53.5.43 **monitoringDidFailForRegion(region as CLRegionMBS, error as NSErrorMBS)**

**Function:** Tells the delegate that a region monitoring error occurred.
**Notes:**

region: The region for which the error occurred.
error: An error object containing the error code that indicates why region monitoring failed.

If an error occurs while trying to monitor a given region, the location manager sends this message to its delegate. Region monitoring might fail because the region itself cannot be monitored or because there was a more general failure in configuring the region monitoring service.

Although implementation of this event is optional, it is recommended that you implement it if you use region monitoring in your application.

53.5.44 Constants

53.5.45 kCLAuthorizationStatusAuthorized = 3

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the authorization status constants. **Notes:** This application is authorized to use location services.

53.5.46 kCLAuthorizationStatusDenied = 2

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the authorization status constants. **Notes:** The user explicitly denied the use of location services for this application or location services are currently disabled in Settings.

53.5.47 kCLAuthorizationStatusNotDetermined = 0

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the authorization status constants. **Notes:** The user has not yet made a choice regarding whether this application can use location services.

53.5.48 kCLAuthorizationStatusRestricted = 1

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the authorization status constants. **Notes:** This application is not authorized to use location services. The user cannot change this application’s status, possibly due to active restrictions such as parental controls being in place.
53.5.49  kCLDeviceOrientationFaceDown = 6

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the orientation constants
Notes: The device is held parallel to the ground with the screen facing downwards.

53.5.50  kCLDeviceOrientationFaceUp = 5

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the orientation constants
Notes: The device is held parallel to the ground with the screen facing upwards.

53.5.51  kCLDeviceOrientationLandscapeLeft = 3

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the orientation constants
Notes: The device is in landscape mode, with the device held upright and the home button on the right side.

53.5.52  kCLDeviceOrientationLandscapeRight = 4

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the orientation constants
Notes: The device is in landscape mode, with the device held upright and the home button on the left side.

53.5.53  kCLDeviceOrientationPortrait = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the orientation constants
Notes: The device is in portrait mode, with the device held upright and the home button at the bottom.

53.5.54  kCLDeviceOrientationPortraitUpsideDown = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the orientation constants
Notes: The device is in portrait mode but upside down, with the device held upright and the home button at the top.

53.5.55  kCLDeviceOrientationUnknown = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3. Function: One of the orientation constants
Notes: The orientation is currently not known.
53.5.56 kCLErrorDenied = 1

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the error codes reported by the location manager error event. **Notes:** Access to the location service was denied by the user.

53.5.57 kCLErrorGeocodeCanceled = 10

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the CoreLocation error constants. **Notes:** The geocode request was canceled.

53.5.58 kCLErrorGeocodeFoundNoResult = 8

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the CoreLocation error constants. **Notes:** The geocode request yielded no result.

53.5.59 kCLErrorGeocodeFoundPartialResult = 9

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the CoreLocation error constants. **Notes:** The geocode request yielded a partial result.

53.5.60 kCLErrorHeadingFailure = 3

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the CoreLocation error constants. **Notes:** The heading could not be determined.

53.5.61 kCLErrorLocationUnknown = 0

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the error codes reported by the location manager error event. **Notes:** The location manager was unable to obtain a location value right now.

53.5.62 kCLErrorNetwork = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the CoreLocation error constants. **Notes:** The network was unavailable or a network error occurred.
53.5.63  kCLErrorRegionMonitoringDenied = 4

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the CoreLocation error constants. **Notes:** Access to the region monitoring service was denied by the user.

53.5.64  kCLErrorRegionMonitoringFailure = 5

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the CoreLocation error constants. **Notes:** A registered region cannot be monitored.

53.5.65  kCLErrorRegionMonitoringResponseDelayed = 7

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the CoreLocation error constants. **Notes:** Core Location will deliver events but they may be delayed.

53.5.66  kCLErrorRegionMonitoringSetupDelayed = 6

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the CoreLocation error constants. **Notes:** Core Location could not initialize the region monitoring feature immediately.
53.6 class CLLocationMBS

53.6.1 class CLLocationMBS

**Function:** A CLLocationMBS object represents the location data generated by a CLLocationManagerMBS object.

**Example:**

```dim c as new CLLocationMBS(50,7)```

```MsgBox c.description```

```// example output: <+50.00000000, +7.00000000>+/- 0.00m (speed -1.00 mps / course -1.00) @ 2009-08-28 23:59:58 +0200```

**Notes:**

This object incorporates the geographical coordinates and altitude of the device’s location along with values indicating the accuracy of the measurements and when those measurements were made. On some devices, this class also reports information about the speed and heading in which the device is moving.

Typically, you use a CLLocationManagerMBS object to create instances of this class based on the last known location of the user’s device. You can create instances yourself, however, if you want to cache custom location data or get the distance between two different coordinate points.

This class is designed to be used as is and should not be subclassed.

Requires Mac OS X 10.6

53.6.2 Methods

53.6.3 Available as boolean

**Function:** Returns true if this class is available.
53.6. **CLASS CLLOCATIONMBS**

### 53.6.4 Constructor(latitude as Double, longitude as Double)

**Function:** Initializes and returns a location object with the specified latitude and longitude.

**Example:**

```mbs
    dim c as new CLLocationMBS(50,7)
```

MsgBox c.description

```
    // example output: <+50.00000000, +7.000000000000000> +/- 0.00m (speed -1.00 mps / course -1.00) @ 2009-08-28 23:59:58 +0200
```

**Notes:**

- **latitude:** The latitude of the coordinate point.
- **longitude:** The longitude of the coordinate point.

Typically, you acquire location objects from the location service, but you can use this method to create new location objects for other uses in your application. When using this method, the other properties of the object are initialized to appropriate values. In particular, the altitude and horizontalAccuracy properties are set to 0, the verticalAccuracy property is set to -1 to indicate that the altitude value is invalid, and the timestamp property is set to the time at which the instance was initialized.

Requires Mac OS X 10.6

See also:

- 53.6.5 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, course as Double, speed as Double, timestamp as date) 9639
- 53.6.6 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, timestamp as date) 9640

### 53.6.5 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, course as Double, speed as Double, timestamp as date)

**Function:** Initializes a location object with the specified coordinate and course information.

**Notes:**

- **latitude and longitude:** A coordinate structure containing the latitude and longitude values.
- **altitude:** The altitude value for the location.
- **horizontalAccuracy:** The accuracy of the coordinate value. Specifying a negative number indicates that the coordinate value is invalid.
verticalAccuracy: The accuracy of the altitude value. Specifying a negative number indicates that the altitude value is invalid.
course: The direction of travel for the location.
speed: The current speed associated with this location.
timestamp: The time to associate with the location object. Typically, you would set this to the current time.

Typically, you acquire location objects from the location service, but you can use this method to create new location objects for other uses in your application.

Available on Mac OS X 10.7 or newer.
See also:

- 53.6.4 Constructor(latitude as Double, longitude as Double)
- 53.6.6 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, timestamp as date)

53.6.6 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, timestamp as date)

Function: Initializes and returns a location object with the specified coordinate information.
Example:

dim c as new CLLocationMBS(1,2,3,4,5,nil)

MsgBox c.description

Notes:

coordinate: A coordinate structure containing the latitude and longitude values.
alitude: The altitude value for the location.
horizontalAccuracy: The accuracy of the coordinate value. Specifying a negative number indicates that the coordinate value is invalid.
verticalAccuracy: The accuracy of the altitude value. Specifying a negative number indicates that the altitude value is invalid.
timestamp: The time to associate with the location object. Typically, you would set this to the current time.

Typically, you acquire location objects from the location service, but you can use this method to create new location objects for other uses in your application.
See also:

- 53.6.4 Constructor(latitude as Double, longitude as Double)
53.6. **CLASS CLLOCATIONMBS**

- 53.6.5 Constructor(latitude as Double, longitude as Double, altitude as Double, horizontalAccuracy as Double, verticalAccuracy as Double, course as Double, speed as Double, timestamp as date)

53.6.7 **copy as CLLocationMBS**

**Function:** Creates a copy of the object.

**Example:**

```plaintext
dim c as new CLLocationMBS(5,6)
dim n as CLLocationMBS = c.copy
MsgBox n.description
```

**Notes:** Internally a new CLLocation object is created with a copy of the data.

53.6.8 **distanceFromLocation(location as CLLocationMBS) as Double**

**Function:** Returns the distance (in meters) between the two locations.

**Example:**

```plaintext
// Nickenich 50 24' 48" N, 7 19' 47" E
// Andernach 50 26' 23" N, 7 24' 6" E

dim c1 as new CLLocationMBS(50.439722, 7.40167) // Andernach
dim c2 as new CLLocationMBS(50.413333, 7.32972) // Nickenich
MsgBox str(c1.distanceFromLocation(c2)) + ” meter”
```

**Notes:** This method measures the distance between the two locations by tracing a line between them that follows the curvature of the Earth. The resulting arc is a smooth curve and does not take into account specific altitude changes between the two locations.

53.6.9 **kCLDistanceFilterNone as Double**

**Function:** This constant indicates the minimum distance required before an event is generated.

**Notes:** All movements are reported.
53.6.10 kCLLocationAccuracyBest as Double

Function: A constant value you can use to specify the accuracy of a location.
Example:

```plaintext
dim c as new CLLocationManagerMBS

c.desiredAccuracy=CLLocationMBS.kCLLocationAccuracyBest
```

Notes: Use the best possible accuracy.

53.6.11 kCLLocationAccuracyBestForNavigation as Double

Function: A constant value you can use to specify the accuracy of a location.
Notes: Available on Mac OS X 10.7 or later.

53.6.12 kCLLocationAccuracyHundredMeters as Double

Function: A constant value you can use to specify the accuracy of a location.
Example:

```plaintext
dim c as new CLLocationManagerMBS

c.desiredAccuracy=CLLocationMBS.kCLLocationAccuracyHundredMeters
```

Notes: Accurate to within one hundred meters.

53.6.13 kCLLocationAccuracyKilometer as Double

Function: A constant value you can use to specify the accuracy of a location.
Example:
dim c as new CLLocationManagerMBS

c.desiredAccuracy=CLLocationMBS.kCLLocationAccuracyKilometer

Notes: Accurate to the nearest kilometer.

53.6.14 kCLLocationAccuracyNearestTenMeters as Double

Function: A constant value you can use to specify the accuracy of a location.  
Example:  
dim c as new CLLocationManagerMBS

c.desiredAccuracy=CLLocationMBS.kCLLocationAccuracyNearestTenMeters

Notes: Accurate to within ten meters of the desired target.

53.6.15 kCLLocationAccuracyThreeKilometers as Double

Function: A constant value you can use to specify the accuracy of a location.  
Example:  
dim c as new CLLocationManagerMBS

c.desiredAccuracy=CLLocationMBS.kCLLocationAccuracyThreeKilometers

Notes: Accurate to the nearest three kilometers.

53.6.16 Properties

53.6.17 altitude as Double

Function: The altitude in meters.  
Example:
dim c as new CLLocationMBS(1,2,3,4,5,nil)

MsgBox str(c.altitude)

Notes:
Positive values indicate altitudes above sea level. Negative values indicate altitudes below sea level.
(Read only property)

53.6.18 course as Double

Function: The direction in which the device is travelling.
Example:

dim c as CLLocationManagerMBS // your global instance

dim l as CLLocationMBS = c.location

if l<>Nil then
    MsgBox str(l.course)
end if

Notes:
Course values are measured in degrees starting at due north and continuing clockwise around the compass.
Thus, north is 0 degrees, east is 90 degrees, south is 180 degrees, and so on. Course values may not be
available on all devices. A negative value indicates that the direction is invalid.
(Read only property)

53.6.19 description as string

Function: Returns the location data in a formatted text string.
Example:

dim c as new CLLocationMBS(50.439722, 7.40167)

MsgBox C.description
// shows for example:
// <+50.43972200, +7.40167000>+/-. 00m (speed -1.00 mps / course -1.00) @ 2009-08-29 14:22:39 +0200
Notes:
A string of the form "<<latitude>, <longitude>>+/- <accuracy>m (speed <speed>kph / heading <heading>) @ <date-time>", where <latitude>, <longitude>, <accuracy>, <speed>, and <heading> are formatted floating point numbers and <date-time> is a formatted date string that includes date, time, and time zone information.

The returned string is intended for display purposes only.
(Read only property)

53.6.20 Handle as Integer

Function: The internal reference to the CLLocation object.
Example:

    dim c as CLLocationManagerMBS // your global instance
    
    dim l as CLLocationMBS = c.location

    if l<>Nil then
        MsgBox str(l.handle)
    end if

Notes: (Read and Write property)

53.6.21 horizontalAccuracy as Double

Function: The radius of uncertainty for the location, measured in meters.
Example:

    dim c as CLLocationManagerMBS // your global instance
    
    dim l as CLLocationMBS = c.location

    if l<>Nil then
        MsgBox str(l.horizontalAccuracy)
    end if
Notes:
The coordinate’s latitude and longitude identify the center of the circle and this value indicates the radius of that circle. A negative value indicates that the coordinate’s latitude and longitude are invalid.
(Read only property)

53.6.22 latitude as Double

Function: The geographical coordinate information.
Example:

```vbs
dim c as new CLLocationMBS(50.413333, 7.32972)
MsgBox str(C.latitude) // shows 50.413333
```

Notes: (Read only property)

53.6.23 longitude as Double

Function: The geographical coordinate information.
Example:

```vbs
dim c as new CLLocationMBS(50.413333, 7.32972)
MsgBox str(C.longitude) // shows 7.32972
```

Notes: (Read only property)

53.6.24 speed as Double

Function: The instantaneous speed of the device in meters per second.
Example:

```vbs
dim c as CLLocationManagerMBS // your global instance
dim l as CLLocationMBS = c.location
```
if l<>Nil then
    MsgBox str(l.speed)
end if

Notes:
This value reflects the instantaneous speed of the device in the direction of its current heading. A negative value indicates an invalid speed. Because the actual speed can change many times between the delivery of subsequent location events, you should use this property for informational purposes only.
(Read only property)

53.6.25 timestamp as date

Function: The time at which this location was determined.
Example:

    dim c as CLLocationManagerMBS // your global instance
    dim l as CLLocationMBS = c.location
    if l<>Nil then
        MsgBox l.timestamp.SQLDateTime
    end if

Notes: (Read only property)

53.6.26 verticalAccuracy as Double

Function: The accuracy of the altitude value in meters.
Example:

    dim c as CLLocationManagerMBS // your global instance
    dim l as CLLocationMBS = c.location
    if l<>Nil then
        MsgBox str(l.verticalAccuracy)
    end if
Notes:
The value in the altitude property could be plus or minus the value indicated by this property. A negative value indicates that the altitude value is invalid.
(Read only property)
53.7 class CLPlacemarkMBS

53.7.1 class CLPlacemarkMBS

Function: A CLPlacemark object stores placemark data for a given latitude and longitude.
Notes: Placemark data includes information such as the country, state, city, and street address associated with the specified coordinate. It can also include points of interest and geographically related data. Placemark objects are typically generated by a CLGeocoder object, although you can also create them explicitly yourself.

53.7.2 Methods

53.7.3 addressDictionary as Dictionary

Function: A dictionary containing the Address Book keys and values for the placemark. (read-only)
Notes:
The keys in this dictionary are those defined by the Address Book framework and used to access address information for a person. For a list of the strings that can be in this dictionary, see the Address Property constants in ABPerson Reference.

You can format the contents of this dictionary to get a full address string as opposed to building the address yourself.

Available in OS X v10.8 and later.

53.7.4 administrativeArea as string

Function: The state or province associated with the placemark. (read-only)
Notes:
If the placemark location is Apple's headquarters, for example, the value for this property would be the string "CA" or "California".
Available in OS X v10.8 and later.
### 53.7.5 areasOfInterest as string()

**Function:** The relevant areas of interest associated with the placemark. (read-only)

**Notes:**

Examples of an area of interest are the name of a military base or large national park or an attraction such as Eiffel Tower, Disneyland, or Golden Gate Park.

Available in OS X v10.8 and later.

### 53.7.6 Available as boolean

**Function:** Returns true if this class is available.

### 53.7.7 Constructor(placement as CLPlacemarkMBS)

**Function:** Initializes and returns a placemark object from another placemark object.

**Notes:**

You can use this method to transfer information from one placemark object to another placemark object.

Available in OS X v10.8 and later.

### 53.7.8 copy as CLPlacemarkMBS

**Function:** Creates a clone of this object.

### 53.7.9 country as string

**Function:** The name of the country associated with the placemark. (read-only)

**Notes:**

If the placemark location is Apple's headquarters, for example, the value for this property would be the string "United States".

Available in OS X v10.8 and later.
53.7. **CLASS CLPLACEMARKMBS**

### 53.7.10 description as string

**Function:** The description for debugging.

### 53.7.11 inlandWater as string

**Function:** The name of the inland water body associated with the placemark. (read-only)
**Notes:**
For coordinates that lie over an inland body of water, this property contains the name of that water bodythe name of a lake, stream, river, or other waterway.
Available in OS X v10.8 and later.

### 53.7.12 ISOcountryCode as string

**Function:** The abbreviated country name. (read-only)
**Notes:**
This string is the standard abbreviation used to refer to the country. For example, if the placemark location is Apple’s headquarters, the value for this property would be the string "US".
Available in OS X v10.8 and later.

### 53.7.13 locality as string

**Function:** The city associated with the placemark. (read-only)
**Notes:**
If the placemark location is Apple’s headquarters, for example, the value for this property would be the string "Cupertino".
Available in OS X v10.8 and later.

### 53.7.14 location as CLLocationMBS

**Function:** The location object containing latitude and longitude information. (read-only)
**Notes:**
This object is used to initialize the placemark object.
Available in OS X v10.8 and later.

### 53.7.15 name as string

**Function:** The name of the placemark. (read-only)
**Notes:** Available in OS X v10.8 and later.

### 53.7.16 ocean as string

**Function:** The name of the ocean associated with the placemark. (read-only)
**Notes:** For coordinates that lie over an ocean, this property contains the name of the ocean.
Available in OS X v10.8 and later.

### 53.7.17 postalAddress as variant

**Function:** The address as CNPostalAddressMBS object.

### 53.7.18 postalCode as string

**Function:** The postal code associated with the placemark. (read-only)
**Notes:** If the placemark location is Apple’s headquarters, for example, the value for this property would be the string "95014".
Available in OS X v10.8 and later.

### 53.7.19 region as CLRegionMBS

**Function:** The geographic region associated with the placemark. (read-only)
**Notes:** Available in OS X v10.8 and later.
53.7. **CLASS CLPLACEMARKMBS**

53.7.20  **subAdministrativeArea as string**

**Function:** Additional administrative area information for the placemark. (read-only)  
**Notes:**  
Subadministrative areas typically correspond to counties or other regions that are then organized into a larger administrative area or state. For example, if the placemark location is Apple's headquarters, the value for this property would be the string "Santa Clara", which is the county in California that contains the city of Cupertino.  

Available in OS X v10.8 and later.

53.7.21  **subLocality as string**

**Function:** Additional city-level information for the placemark. (read-only)  
**Notes:**  
This property contains additional information, such as the name of the neighborhood or landmark associated with the placemark. It might also refer to a common name that is associated with the location.  
Available in OS X v10.8 and later.

53.7.22  **subThoroughfare as string**

**Function:** Additional street-level information for the placemark. (read-only)  
**Notes:**  
Subthroughfares provide information such as the street number for the location. For example, if the placemark location is Apple's headquarters (1 Infinite Loop), the value for this property would be the string "1".  

Available in OS X v10.8 and later.

53.7.23  **thoroughfare as string**

**Function:** The street address associated with the placemark. (read-only)  
**Notes:**  
The street address contains the street name. For example, if the placemark location is Apple’s headquarters, the value for this property would be the string "Infinite Loop".
Available in OS X v10.8 and later.

53.7.24 Properties

53.7.25 Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)
53.8. CLASS CLREGIONMBS

53.8 class CLRegionMBS

53.8.1 class CLRegionMBS

Function: The CLRegion class defines a geographical area that can be tracked.

Example:

```dim c as new CLRegionMBS(50.413333, 7.329722, 3000, "Nickenich")
```

```msgbox c.identifier+" "+str(c.latitude)+"/"+str(c.longitude)+", "+str(c.radius)+" m"
```

Notes:
When an instance of this class is registered with a CLLocationManagerMBS object, the location manager generates an appropriate event whenever the user crosses the boundaries of the defined area.

To use this class, create an instance of it and use the startMonitoringForRegion method of a CLLocationManager object to begin monitoring it.

Please also check the documentation from Apple for the CLRegion class.
Available on Mac OS X 10.7 or later.

53.8.2 Methods

53.8.3 Available as boolean

Function: Returns true if this class is available.

53.8.4 Constructor(latitude as Double, longitude as Double, radius as Double, identifier as string)

Function: Initializes a region object defining a circular area.

Notes:
latitude and longitude: The center point of the region.
radius: The distance (measured in meters) from the center point that marks the boundary of the region.
identifier: A unique identifier to associate with the region object. You use this identifier to differentiate regions within your application. This value must not be "".
identifier is a description for the region that could be displayed to the user, and ideally should be chosen by the user.

On success the handle property is not zero.

53.8.5 containsCoordinate(latitude as Double, longitude as Double) as boolean

Function: Returns a Boolean value indicating whether the region contains the specified coordinate.
Notes:
latitude and longitude: The coordinate to test against the region.
Returns true if the coordinate lies within the region’s boundaries or false if it does not.

53.8.6 copy as CLRegionMBS

Function: Creates a copy of the region object.

53.8.7 identifier as string

Function: The identifier for the region object.
Example:
```dim c as new CLRegionMBS(50.413333, 7.329722, 3000, "Nickenich")
msgbox c.identifier
```

53.8.8 latitude as Double

Function: The position of the center of the region.
53.8. CLASS CLREGIONMBS

53.8.9  longitude as Double

**Function:** The position of the center of the region.

53.8.10  radius as Double

**Function:** The radius (measured in meters) that defines the region’s outer boundary.

53.8.11  Properties

53.8.12  Handle as Integer

**Function:** The internal CLRegion object reference.
**Notes:** (Read and Write property)
Chapter 54

CoreML

54.1  class MLDictionaryConstraintMBS

54.1.1  class MLDictionaryConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Constraint describing expected NSDictionary properties. **Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

54.1.2  Methods

54.1.3  Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

54.1.4  Properties

54.1.5  Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference. **Notes:** (Read and Write property)
54.1.6 keyType as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** Required key type.
**Notes:**
See MLFeatureValueMBS.Type* constants.
(Read only property)
54.2. class MLDictionaryFeatureProviderMBS

54.2.1 class MLDictionaryFeatureProviderMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A concrete convenience class conforming to MLFeatureProvider protocol. **Notes:** Subclass of the MLFeatureProviderMBS class.

54.2.2 Methods

54.2.3 Constructor(content as Dictionary, byref error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Create from a generic dictionary by converting all values to MLFeatureValues or from a dictionary with values already stored as MLFeatureValues. **Notes:** An error results if the values are not or cannot be represented as MLFeatureValues.

54.2.4 objectForKeyedSubscript(script as string) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get the value for specified feature.

54.2.5 Properties

54.2.6 Content as Dictionary

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Dictionary holding the feature values. **Notes:** When you query this, you get a copy of the dictionary, so any modification doesn’t go back to the feature provider. (Read only property)
54.3 class MLFeatureDescriptionMBS

54.3.1 class MLFeatureDescriptionMBS

54.3.2 Methods

54.3.3 Constructor

54.3.4 copy as MLFeatureDescriptionMBS

54.3.5 isAllowedValue(value as MLFeatureValueMBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Check if MLFeatureValue is valid based on this description.

54.3.6 Properties

54.3.7 dictionaryConstraint as MLDictionaryConstraintMBS

Notes:

Only set when type is dictionary.
(Read only property)
54.3. **CLASS MLFEATUREDESCRIPTIONMBS**

### 54.3.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: The internal object reference. **Notes**: (Read and Write property)

### 54.3.9 imageConstraint as MLImageConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: Constraint for image. **Notes**: Only set when type is image. (Read only property)

### 54.3.10 isOptional as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: Whether this feature can take an undefined value or not. **Notes**: (Read only property)

### 54.3.11 multiArrayConstraint as MLMultiArrayConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: Constraint for multi array. **Notes**: Only set when type is array. (Read only property)

### 54.3.12 Name as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: Name of feature. **Notes**: (Read only property)
54.3.13  Type as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: Type of data.
**Notes**: (Read only property)

54.3.14  Constants

54.3.15  TypeDictionary = 6

MBS Mac64bit Plugin, Plugin Version: 17.4. **Function**: One of the type constants.
**Notes**: Numerically weighted hashable objects (e.g. word counts)

54.3.16  TypeDouble = 2

MBS Mac64bit Plugin, Plugin Version: 17.4. **Function**: One of the type constants.
**Notes**: Continuous values

54.3.17  TypeImage = 4

MBS Mac64bit Plugin, Plugin Version: 17.4. **Function**: One of the type constants.
**Notes**: CVPixelBufferRef or converted by plugin to Xojo picture.

54.3.18  TypeInt64 = 1

MBS Mac64bit Plugin, Plugin Version: 17.4. **Function**: One of the type constants.
**Notes**: Discrete values, sometimes used to hold numeric encoding of a categorical value

54.3.19  TypeInvalid = 0

MBS Mac64bit Plugin, Plugin Version: 17.4. **Function**: One of the type constants.
**Notes**: Undefined type.
54.3. **CLASS MLFEATUREDESCRIPTIONMBS**

### 54.3.20 TypeMultiArray = 5

MBS Mac64bit Plugin, Plugin Version: 17.4. **Function:** One of the type constants.  
**Notes:** An array of values.

### 54.3.21 TypeString = 3

MBS Mac64bit Plugin, Plugin Version: 17.4. **Function:** One of the type constants.  
**Notes:** Text or categorical strings
54.4 class MLFeatureProviderMBS

54.4.1 class MLFeatureProviderMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** Protocol for accessing a feature value for a feature name.

**Notes:**

In Xojo defined as class, but in objective-c just a protocol.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

54.4.2 Methods

54.4.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** The private constructor.

54.4.4 featureNames as String()

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** Queries list of all feature names available.

54.4.5 featureValueForName(featureName as String) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** Queries value for feature by name.
**Notes:** Returns nil if the provided featureName is not in the set of featureNames

54.4.6 Properties

54.4.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** The internal object reference.
**Notes:** (Read and Write property)
54.5 class MLFeatureValueMBS

54.5.1 class MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An immutable variant holding a data value of a supported MLFeatureType.  
**Notes:**  
MLFeatureValue does not support type conversion in its accessor properties. It can also have a missing or undefined value of a well defined type.

54.5.2 Methods

54.5.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

54.5.4 copy as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy.

54.5.5 featureValueWithDictionary(value as Dictionary, byref error as NSErrorMBS) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates new feature based on a dictionary.  
**Notes:**  
Copies the dictionary.  
For encoding a sparse feature set or for encoding probabilities. Input keys that are not number or string are rejected on construction and return a MLMModelErrorFeatureTypeMismatch error. Further validation for consistency occurs on evaluation.

54.5.6 featureValueWithDouble(value as double) as MLFeatureValueMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns feature object for given value.
54.5.7 featureValueWithInt64(value as Int64) as MLFeatureValueMBS

54.5.8 featureValueWithMultiArray(value as MLMultiArrayMBS) as MLFeatureValueMBS

54.5.9 featureValueWithPicture(value as Picture) as MLFeatureValueMBS

54.5.10 featureValueWithString(value as string) as MLFeatureValueMBS

54.5.11 isEqualToFeatureValue(value as MLFeatureValueMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Queries whether two feature objects are the same.

54.5.12 undefinedFeatureValueWithType(type as Integer) as MLFeatureValueMBS

54.5.13  Properties

54.5.14  CIImageValue as Variant

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries image as CIImageMBS object.  
**Notes:** (Read only property)

54.5.15  dictionaryValue as Dictionary

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  
**Function:** Populated value if the type is TypeDictionary.  
**Notes:**  
When you query the dictionary, you get a copy.  
(Read only property)

54.5.16  doubleValue as Double

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  
**Function:** Populated value if the type is TypeDouble.  
**Notes:** (Read only property)

54.5.17  Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  
**Function:** The internal object reference.  
**Notes:** (Read and Write property)

54.5.18  int64Value as Int64

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  
**Function:** Populated value if the type is TypeInt64.  
**Notes:** (Read only property)
54.5.19 multiArrayValue as MLMultiArrayMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Populated value if the type is TypeMultiArray. **Notes:** (Read only property)

54.5.20 PictureHeight as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The picture height. **Notes:** Populated value if the type is TypeImage. (Read only property)

54.5.21 PictureValue as Picture

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Populated value if the type is TypeImage. **Notes:** (Read only property)

54.5.22 PictureWidth as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The picture width. **Notes:** Populated value if the type is TypeImage. (Read only property)

54.5.23 stringValue as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Populated value if the type is TypeString. **Notes:** (Read only property)
54.5. **CLASS MLFEATUREVALUEMBS**

54.5.24 **Type as Integer**

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Type of the value for which the corresponding property below is held. **Notes:** (Read only property)

54.5.25 **Undefined as Boolean**

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** True if the value represents a missing or undefined value. **Notes:** (Read only property)

54.5.26 **value as Variant**

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries value as variant. **Notes:** (Read only property)

54.5.27 **Constants**

54.5.28 **TypeDictionary = 6**

MBS Mac64bit Plugin, Plugin Version: 17.4. **Function:** One of the type constants. **Notes:** Numerically weighted hashable objects (e.g. word counts)

54.5.29 **TypeDouble = 2**

MBS Mac64bit Plugin, Plugin Version: 17.4. **Function:** One of the type constants. **Notes:** Continuous values

54.5.30 **TypeName = 4**

MBS Mac64bit Plugin, Plugin Version: 17.4. **Function:** One of the type constants. **Notes:** CVPixelBufferRef or converted by plugin to Xojo picture.
54.5.31 TypeInt64 = 1

MBS Mac64bit Plugin, Plugin Version: 17.4. **Function:** One of the type constants.  
**Notes:** Discrete values, sometimes used to hold numeric encoding of a categorical value.

54.5.32 TypeInvalid = 0

MBS Mac64bit Plugin, Plugin Version: 17.4. **Function:** One of the type constants.  
**Notes:** Undefined type.

54.5.33 TypeMultiArray = 5

MBS Mac64bit Plugin, Plugin Version: 17.4. **Function:** One of the type constants.  
**Notes:** An array of values.

54.5.34 TypeString = 3

MBS Mac64bit Plugin, Plugin Version: 17.4. **Function:** One of the type constants.  
**Notes:** Text or categorical strings.
54.6. **CLASS MLIMAGECONSTRAINTMBS**

54.6  **class MLImageConstraintMBS**

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Constraint on image properties.  
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

54.6.2  **Methods**

54.6.3  **Constructor**

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

54.6.4  **Properties**

54.6.5  **Handle as Integer**

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.  
**Notes:** (Read and Write property)

54.6.6  **PixelFormatType as Integer**

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The accepted kCVPixelFormatType for the image.  
**Notes:** (Read only property)

54.6.7  **pixelsHigh as Integer**

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The required height of the image.  
**Notes:** (Read only property)
54.6.8 pixelsWide as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The required width of the image.

**Notes:** (Read only property)
54.7. CLASS MLMODELDESCRIPTIONMBS

54.7 class MLModelDescriptionMBS

54.7.1 class MLModelDescriptionMBS

Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

54.7.2 Methods

54.7.3 Constructor

54.7.4 Properties

54.7.5 Handle as Integer

Notes: (Read and Write property)

54.7.6 inputDescriptionsByName as Dictionary

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Description of the inputs to the model.
Notes: (Read only property)

54.7.7 metadata as Dictionary

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Optional metadata describing the model.
Notes: (Read only property)
54.7.8 outputDescriptionsByName as Dictionary

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Description of the outputs from the model.  
**Notes:** (Read only property)

54.7.9 predictedFeatureName as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Name of the primary target / predicted output feature in the output descriptions.  
**Notes:** (Read only property)

54.7.10 predictedProbabilitiesName as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Key for all predicted probabilities stored as a MLFeatureTypeDictionary in the output descriptions.  
**Notes:** (Read only property)
54.8 class MLModelMBS

54.8.1 class MLModelMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Construct a model and evaluate on a specific set of input features.
Notes:
Inputs and outputs are accessed via the MLFeatureProvider protocol.
Returns a model or nil if there is an error.

Available on macOS 10.13 or newer.

54.8.2 Methods

54.8.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether CoreML is available.
Notes: Should return true on macOS 10.13 or newer.

54.8.4 compileModelAtURL(URL as string, byref error as NSErrorMBS) as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Compile a .mlmodel for this device.
Notes:
URL: URL file path to .mlmodel file you wish to compile
error: Any errors are surfaced here

Returns a URL to the compiled .mlmodelc bundle if successful.
The model is compiled to a temporary location on disk.
You must move the compiled model to a permanent location if you wish to keep it.

54.8.5 compileModelFile(File as folderItem, byref error as NSErrorMBS) as folderItem

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Compile a .mlmodel for this device.
Example:
dim SourceFile as FolderItem = SpecialFolder.Desktop.child("resnet50.MLmodel")
dim Error as NSErrorMBS

dim Tempfile as FolderItem = MLModelMBS.compileModelFile(SourceFile, Error)

if Tempfile <> nil then
tempfile.MoveFileTo SpecialFolder.Desktop
MsgBox "OK"
else
MsgBox Error.localizedDescription
end if

Notes:
File: FolderItem for .mlmodel file you wish to compile
error: Any errors are surfaced here

Returns a folderitem to the compiled .mlmodelc bundle if successful.
The model is compiled to a temporary location on disk.
You must move the compiled model to a permanent location if you wish to keep it.

54.8.6 Constructor

54.8.7 MLModelAuthorKey as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the metadata dictionary.
Notes: The author of this model.

54.8.8 MLModelCreatorDefinedKey as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the metadata dictionary.
Notes: Any additional pertinent information specified by the model creator.
54.8.9 MLModelDescriptionKey as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the metadata dictionary.
Notes: A short description of what the model does and/or its purpose

54.8.10 MLModelErrorDomain as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The error domain string for the CoreML errors.

54.8.11 MLModelLicenseKey as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the metadata dictionary.
Notes: License information for the model.

54.8.12 MLModelVersionStringKey as String

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the keys for the metadata dictionary.
Notes: A version number encoded as a string.

54.8.13 modelWithContentsOfFile(file as FolderItem, byref error as NSErrorMBS) as MLModelMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Construct a model given the location of its on-disk representation.
Notes: Returns nil on error.

54.8.14 modelWithContentsOfFile(Path as string, byref error as NSErrorMBS) as MLModelMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Construct a model given the location of its on-disk representation.
Notes: Returns nil on error.
54.8.15 `modelWithContentsOfURL(URL as string, byref error as NSErrorMBS) as MLModelMBS`

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Construct a model given the location of its on-disk representation.  
**Notes:** Returns nil on error.

54.8.16 `predictionFromFeatures(input as MLFeatureProviderMBS, options as MLPredictionOptionsMBS = nil, byref error as NSErrorMBS) as MLFeatureProviderMBS`

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** All models can predict on a specific set of input features.

54.8.17 `predictionFromFeaturesMT(input as MLFeatureProviderMBS, options as MLPredictionOptionsMBS = nil, byref error as NSErrorMBS) as MLFeatureProviderMBS`

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** All models can predict on a specific set of input features.  
**Notes:** The work is performed on an extra thread, so this function can yield time to other Xojo threads. And it calles the Working event regularly. For best user experience run this command on a Xojo thread, so your GUI stays responsive.

54.8.18 Properties

54.8.19 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.  
**Notes:** (Read and Write property)

54.8.20 `modelDescription as MLModelDescriptionMBS`

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A model holds a description of its required inputs and expected outputs.  
**Notes:** (Read only property)
54.8.21 Constants

54.8.22 ErrorDescriptionMismatch = 2
MBS Mac64bit Plugin, Plugin Version: 17.4. Function: One of the error codes. Notes: Mismatch error.

54.8.23 ErrorFeatureType = 1
MBS Mac64bit Plugin, Plugin Version: 17.4. Function: One of the error codes. Notes: Type error.

54.8.24 ErrorGeneric = 0
MBS Mac64bit Plugin, Plugin Version: 17.4. Function: One of the error codes. Notes: Generic error.

54.8.25 ErrorIO = 3
54.9 class MLMultiArrayConstraintMBS

54.9.1 class MLMultiArrayConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Constraint describing expected MLMultiArray properties. **Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

54.9.2 Methods

54.9.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

54.9.4 shape as Integer()

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Required shape of array. **Notes:** One value for each dimension.

54.9.5 Properties

54.9.6 dataType as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Required dataType. **Notes:** (Read only property)

54.9.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference. **Notes:** (Read and Write property)
54.9. CLASS MLMULTIARRAYCONSTRAINTMBS

54.9.8 shape0 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The shape(0) value.
Notes: Convenience property to see value in debugger.
(Read only property)

54.9.9 shape1 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The shape(1) value.
Notes: Convenience property to see value in debugger.
(Read only property)

54.9.10 shape2 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The shape(2) value.
Notes: Convenience property to see value in debugger.
(Read only property)
54.10 class MLMultiArrayMBS

54.10.1 class MLMultiArrayMBS

54.10.2 Methods

54.10.3 Constructor(dataPointer as Ptr, shape() as Integer, dataType as Integer, strides() as Integer, byref error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Create by wrapping existing data.
Notes: Please make sure that memory is not deallocated too early, e.g. by subclassing and freeing it in destructor.
See also:

- 54.10.4 Constructor(shape() as Integer, dataType as Integer, byref error as NSErrorMBS)

54.10.4 Constructor(shape() as Integer, dataType as Integer, byref error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Create by C-style contiguous array by allocating and managing the necessary memory.
See also:

- 54.10.3 Constructor(dataPointer as Ptr, shape() as Integer, dataType as Integer, strides() as Integer, byref error as NSErrorMBS)

54.10.5 shape as Integer()

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: An array containing the sizes of each dimension in the multiarray.

54.10.6 strides as Integer()

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: An array containing the stride in memory for each dimension.
Notes: The element referred to by a multidimensional index is located at an offset equal to sum_d index [
54.10. CLASS MLMULTIARRAYMBS

54.10.7 Properties

54.10.8 count as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Count of total number of elements. Notes: (Read only property)

54.10.9 dataPointer as Ptr

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Unsafe pointer to underlying buffer holding the data. Notes: (Read only property)

54.10.10 dataType as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Type of element held. Notes: See DataType* constants. (Read only property)

54.10.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The internal object reference. Notes: (Read and Write property)

54.10.12 shape0 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The shape(0) value. Notes:
Convenience property to see value in debugger.
(Read only property)

54.10.13  shape1 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The shape(1) value.
Notes:
Convenience property to see value in debugger.
(Read only property)

54.10.14  shape2 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The shape(2) value.
Notes:
Convenience property to see value in debugger.
(Read only property)

54.10.15  strides0 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The strides(0) value.
Notes:
Convenience property to see value in debugger.
(Read only property)

54.10.16  strides1 as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The strides(1) value.
Notes:
Convenience property to see value in debugger.
(Read only property)
54.10. **CLASS MLMULTIARRAYMBS**

54.10.17 **strides2 as Integer**

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.

**Function:** The strides(2) value.

**Notes:**
Convenience property to see value in debugger.
(Read only property)

54.10.18 **doubleValue(index as Integer) as Double**

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.

**Function:** Query or set value for single dimensional array.

**Notes:**
Pass the index for the value to query.
(Read and Write computed property)
See also:

• 54.10.19 doubleValue(indexes() as Integer) as Double

9687

54.10.19 **doubleValue(indexes() as Integer) as Double**

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.

**Function:** Query or set value for multi dimensional array.

**Notes:**
Pass one index value for each dimension in the array.
(Read and Write computed property)
See also:

• 54.10.18 doubleValue(index as Integer) as Double

9687

54.10.20 **integerValue(index as Integer) as Integer**

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.

**Function:** Query or set value for single dimensional array.

**Notes:**
Pass the index for the value to query.
(Read and Write computed property)
See also:

• 54.10.21 integerValue(indexes() as Integer) as Integer

9688
54.10.21 integerValue(indexes() as Integer) as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** Query or set value for multi dimensional array.
**Notes:**
Pass one index value for each dimension in the array.
(Read and Write computed property)
See also:

- 54.10.20 integerValue(index as Integer) as Integer

54.10.22 singleValue(index as Integer) as Single

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** Query or set value for single dimensional array.
**Notes:**
Pass the index for the value to query.
(Read and Write computed property)
See also:

- 54.10.23 singleValue(indexes() as Integer) as Single

54.10.23 singleValue(indexes() as Integer) as Single

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** Query or set value for multi dimensional array.
**Notes:**
Pass one index value for each dimension in the array.
(Read and Write computed property)
See also:

- 54.10.22 singleValue(index as Integer) as Single

54.10.24 Constants

54.10.25 DataTypeDouble = & h10040

MBS Mac64bit Plugin, Plugin Version: 17.4. **Function:** One for the data types for arrays.
**Notes:** Data is double values.
54.10. CLASS MLMULTIARRAYMBS

54.10.26 **DataTypeFloat32 = & h10020**

MBS Mac64bit Plugin, Plugin Version: 17.4. **Function:** One for the data types for arrays. **Notes:** Data is single values (32-bit).

54.10.27 **DataTypeInt32 = & h20020**

MBS Mac64bit Plugin, Plugin Version: 17.4. **Function:** One for the data types for arrays. **Notes:** Data is 32-bit integer values.
54.11 class MLPredictionOptionsMBS

54.11.1 class MLPredictionOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: An object to hold options / controls / parameters of how model prediction is performed. Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

54.11.2 Methods

54.11.3 Constructor

54.11.4 Properties

54.11.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The internal object reference. Notes: (Read and Write property)

54.11.6 usesCPUOnly as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Set to true to force computation to be on the CPU only. Notes: (Read and Write property)
Chapter 55

CoreText

55.1 class CoreTextMBS

55.1.1 class CoreTextMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The central CoreText class. 
**Notes:** Some global methods, constants and events for CoreText.

55.1.2 Methods

55.1.3 AutoActivationSetting(BundleID as string) as Integer

**Notes:**

bundleID: The bundle identifier used to specify a particular application bundle. If "", the current application bundle is used. If kCTFontManagerBundleIdentifier is specified, sets global auto-activation. 
(Read and Write computed property)

55.1.4 AvailableFontFamilyNames as string()

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array of visible font family names sorted for user interface display.
55.1.5 AvailableFontURLs as string()

55.1.6 AvailablePostScriptNames as string()

55.1.7 CompareFontFamilyNames(name1 as string, name2 as string) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A comparator function to compare font family names and sort them according to Apple guidelines. **Notes:**

family1: The first localized font family name to compare, as a string.
family2: The second localized font family name to compare, as a string.

Returns a CFComparisonResult value indicating the sort order for the two family names. kCFComparisonResultGreaterThan (1) if family1 is greater than family2, kCFComparisonResultLessThan (-1) if family1 is less than family2, and kCFComparisonResultEqualTo (0) if they are equal.

This CFComparatorFunction function compares font family names and sorts them in the Apple preferred order, accounting for foundry prefix. Family names with recognized prefixes are sorted after the unprefixed names in prefix order.

55.1.8 Constructor

55.1.9 CoreTextVersion as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the version of the CoreText framework. **Notes:**

This function returns a number indicating the version of the CoreText framework. Note that framework
55.1. CLASS CORETEXTMBS

version is not always an accurate indicator of feature availability. The recommended way to use this function is first to check that the function pointer is non nil (plugin will do and raise exceptions), followed by calling it and comparing its result to a defined constant (or constants).

Returns the version number. This value is for comparison with the constants beginning with kCTVersion-Number.

55.1.10 CreateFontDescriptorFromData(data as memoryblock) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns a font descriptor representing the font in the supplied data.

Notes:
Note: the font descriptor is not available through font descriptor matching.

data: A memoryblock containing font data.

Returns a font descriptor created from the data, or nil on error.

See also:
- 55.1.11 CreateFontDescriptorFromData(data as string) as CTFontDescriptorMBS

55.1.11 CreateFontDescriptorFromData(data as string) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns a font descriptor representing the font in the supplied data.

Notes:
Note: the font descriptor is not available through font descriptor matching.

data: A string containing font data.

Returns a font descriptor created from the data, or nil on error.

See also:
- 55.1.10 CreateFontDescriptorFromData(data as memoryblock) as CTFontDescriptorMBS

55.1.12 CreateFontDescriptorsFromFile(file as folderitem) as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns an array of font descriptors representing each of the fonts in the specified file.
Example:

dim file as FolderItem = SpecialFolder.Desktop.Child("Didot.ttc")

dim descriptor() as CTFontDescriptorMBS
dim result() as string

descriptor = CoreTextMBS.CreateFontDescriptorsFromFile(file)

for i as Integer = 0 to descriptor.Ubound
result.append descriptor(i).DisplayName
next

MsgBox Join(result, EndOfLine)

Notes: file: A folderitem referencing a valid font file.

55.1.13 CreateFontDescriptorsFromURL(URL as string) as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns an array of font descriptors representing each of the fonts in the specified URL.
**Notes:** URL: A file system URL referencing a valid font file.

55.1.14 Destructor

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The destructor.

55.1.15 EnableFontDescriptors(descriptors() as CTFontDescriptorMBS, enable as boolean)

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Enables or disables the matching font descriptors for font descriptor matching.
**Notes:**
descriptors: Array of font descriptors.
enable: Boolean value indicating whether the fonts matching descriptors should be enabled for font descriptor matching.
55.1.16  GetScopeForFile(file as folderitem) as Integer

Notes: The registration scope of the specified file or kCTFontManagerScopeNone if not currently registered. Available in OS X v10.6 and later.

55.1.17  GetScopeForURL(URL as string) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the registration scope of the specified URL.
Notes: The registration scope of the specified URL or kCTFontManagerScopeNone if not currently registered. Available in OS X v10.6 and later.

55.1.18  IsSupportedFontFile(file as folderitem) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Determines whether the referenced font data is supported on the current platform.
Notes: Returns true if the folderitem refers to a valid font that can be used on the current platform; false otherwise.

55.1.19  IsSupportedFontURL(URL as string) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Determines whether the referenced font data (usually by file URL) is supported on the current platform.
Notes: Returns true if the URL refers to a valid font that can be used on the current platform; false otherwise.

55.1.20  kCTBaselineClassAttributeName as string

Notes: Value must be one of the kCTBaselineClass constants. Normally, glyphs on the line will be assigned baseline classes according to the 'bsln' or 'BASE' table in the font. This attribute may be used to change this
assignment.

see also: kCTBaselineClassRoman, kCTBaselineClassIdeographicCentered, kCTBaselineClassIdeographicLow, kCTBaselineClassIdeographicHigh, kCTBaselineClassHanging, kCTBaselineClassMath.

55.1.21 kCTBaselineInfoAttributeName as string

Notes: Value must be a CFDictionaryRef. Normally, baseline offsets will be assigned based on the 'bsln' or 'BASE' table in the font. This attribute may be used to assign different offsets. Each key in the dictionary is one of the kCTBaselineClass constants and the value is a number of the baseline offset in points. You only need to specify the offsets you wish to change.

55.1.22 kCTBaselineReferenceInfoAttributeName as string

Notes: Value must be a Dictionary. All glyphs in a run are assigned a baseline class and then aligned to the offset for that class in the reference baseline baseline info. See the discussion of kCTBaselineInfoAttributeName for information about the contents of the dictionary. You can also use the kCTBaselineReferenceFont key to specify that the baseline offsets of a particular CTFontMBS should be used as the reference offsets.

55.1.23 kCTCharacterShapeAttributeName as string

Notes: Value must be a number. Default is value is 0 (disabled). A non-zero value is interpreted as an SFNT kCharacterShapeType selector + 1; see SFNTLayoutTypes.h for selectors. For example, an attribute value of 1 corresponds to kTraditionalCharactersSelector.

55.1.24 kCTFontAttributeName as string

Notes: Value must be a CTFontMBS. Default is Helvetica 12.
55.1.25  **kCTFontManagerBundleIdentifier** as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**
CTFontManager bundle identifier.
**Notes:** The CTFontManager bundle identifier to be used with get or set global auto-activation settings.

55.1.26  **kCTFontManagerErrorDomain** as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**
The error domain for CoreText.
**Notes:** CFError objects with this domain have error codes corresponding to one of the CTFontManager-
Error errors listed in "Font Registration Errors" and "Font Unregistration Errors."

55.1.27  **kCTFontManagerErrorFontURLsKey** as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**
User info key to be used with CFError references returned from registration functions.
**Notes:** The value associated with this key in the user info dictionary of a CFError object is a CFArray of
font URLs that failed with the given error.

55.1.28  **kCTFontManagerRegisteredFontsChangedNotification** as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**
Notification name for font registry changes.
**Notes:** This is the string to use as the notification name when subscribing to Core Text Font Manager
notifications. This notification is posted when fonts are added to the font registry. The client is responsible
for registered with the distributed notification center to receive notifications for changes to the session or
user scopes, and with a local notification center for changes to the process scope.

55.1.29  **kCTFontSlantTrait** as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**
Dictionary key to access the slant trait value.
**Notes:** Use this key to access the normalized slant angle from the font traits dictionary. The value returned
is a number representing a float value between -1.0 and 1.0 for normalized slant angle. The value or 0.0 cor-
responds to 0 degree clockwise rotation from the vertical and 1.0 corresponds to 30 degrees clockwise rotation.
55.1.30  **kCTFontSymbolicTrait as string**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Dictionary key to access the symbolic traits value.  
**Notes:** Use this key to access the symbolic traits value from the font traits dictionary. The value is returned as a number.

55.1.31  **kCTFontWeightTrait as string**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Dictionary key to access the weight trait value.  
**Notes:** Use this key to access the normalized weight trait from the font traits dictionary. The value returned is a number representing a float value between -1.0 and 1.0 for normalized weight. The value of 0.0 corresponds to the regular or medium font weight.

55.1.32  **kCTFontWidthTrait as string**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Dictionary key to access the width (condense/expand) trait value.  
**Notes:** Use this key to access the normalized proportion trait from the font traits dictionary. This value corresponds to the relative inter-glyph spacing for a given font. The value returned is a number representing a float between -1.0 and 1.0. The value of 0.0 corresponds to regular glyph spacing while negative values represent condensed glyph spacing.

55.1.33  **kCTForegroundColorAttributeName as string**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The key for the foreground color.  
**Notes:** Value must be a CGColorMBS. Default value is black.

55.1.34  **kCTForegroundColorFromContextAttributeName as string**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for font attributes.  
**Notes:** Never set a foreground color in the CGContext; use what is set as the context’s fill color.  
Value must be a boolean. Default is false. The reason why this exists is because an NSAttributedString
defaults to a black color if no color attribute is set. This forces CoreText to set the color in the context. This will allow developers to sidestep this, making CoreText set nothing but font information in the CGContext. If set, this attribute also determines the color used by kCTUnderlineStyleAttributeName, in which case it overrides the foreground color.

55.1.35  kCTGlyphInfoAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for font attributes.

**Notes:**
Allows the use of unencoded glyphs.
Value must be a CTGlyphInfoMBS. The glyph specified by this CTGlyphInfo object is assigned to the entire attribute range, provided that its contents match the specified base string and that the specified glyph is available in the font specified by kCTFontAttributeName.

55.1.36  kCTKernAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for font attributes.

**Notes:**
A kerning adjustment.
Value must be a float. Default is standard kerning. The kerning attribute indicate how many points the following character should be shifted from its default offset as defined by the current character’s font in points; a positive kern indicates a shift farther along and a negative kern indicates a shift closer to the current character. If this attribute is not present, standard kerning will be used. If this attribute is set to 0.0, no kerning will be done at all.

55.1.37  kCTLanguageAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for font attributes.

**Notes:**
Specifies text language.

Value must be a String containing a locale identifier. Default is unset. When this attribute is set to a valid identifier, it will be used to select localized glyphs (if supported by the font) and locale-specific line breaking rules.
55.1.38  kCTLigatureAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for font attributes.
**Notes:**
Controls ligature formation.

Value must be a number. Default is int value 1. The ligature attribute determines what kinds of ligatures should be used when displaying the string. A value of 0 indicates that only ligatures essential for proper rendering of text should be used, 1 indicates that standard ligatures should be used, and 2 indicates that all available ligatures should be used. Which ligatures are standard depends on the script and possibly the font. Arabic text, for example, requires ligatures for many character sequences, but has a rich set of additional ligatures that combine characters. English text has no essential ligatures, and typically has only two standard ligatures, those for "fi" and "fl" – all others being considered more advanced or fancy.

On iOS releases prior to 6.0 essential ligatures are applied if the font contains glyphs for any of U+FB00 through U+FB04 and the font lacks AAT or OpenType shaping tables, but as of 6.0 shaping tables (or the lack thereof) are treated as definitive. This character-based shaping will still be performed if this attribute is explicitly specified with the default value of 1.

55.1.39  kCTParagraphStyleAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for font attributes.
**Notes:**
A CTParagraphStyle object which is used to specify things like line alignment, tab rulers, writing direction, etc.
Value must be a CTParagraphStyleMBS. Default is an empty CTParagraphStyle object.

55.1.40  kCTRunDelegateAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for font attributes.
**Notes:**
Allows customization of certain aspects of a range of text’s appearance.

Value must be a CTRunDelegateMBS. The values returned by the embedded object for an attribute range apply to each glyph resulting from the text in that range. Because an embedded object is only a display-time modification, care should be taken to avoid applying this attribute to a range of text with complex behavior, such as a change of writing direction, combining marks, etc. Consequently, it is recommended that this
attribute be applied to a range containing the single character U+FFFC.

55.1.41  kCTStrokeColorAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for font attributes.
**Notes:**
The stroke color.
Value must be a CGColorMBS. Default is the foreground color.

55.1.42  kCTStrokeWidthAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for font attributes.
**Notes:**
The stroke width.
Value must be a number. Default value is 0.0, or no stroke. This attribute, interpreted as a percentage of
font point size, controls the text drawing mode: positive values effect drawing with stroke only; negative
values are for stroke and fill. A typical value for outlined text is 3.0.

55.1.43  kCTSuperscriptAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for font attributes.
**Notes:**
Controls vertical text positioning.
Value must be a number. Default is int value 0. If supported by the specified font, a value of 1 enables
superscripting and a value of -1 enables subscripting.

55.1.44  kCTUnderlineColorAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for font attributes.
**Notes:**
The underline color.
Value must be a CGColorMBS. Default is the foreground color.
55.1.45  kCTUnderlineStyleAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for font attributes.

**Notes:**
Allows the setting of an underline to be applied at render time.

Value must be a number. Default is kCTUnderlineStyleNone. Set a value of something other than kCTUnderlineStyleNone to draw an underline. In addition, the CTUnderlineStyleModifiers can be used to modify the look of the underline. The underline color will be determined by the text’s foreground color.

55.1.46  kCTVerticalFormsAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for font attributes.

**Notes:**
Controls glyph orientation.

Value must be a boolean. Default is false. A value of false indicates that horizontal glyph forms are to be used, true indicates that vertical glyph forms are to be used.

55.1.47  kCTWritingDirectionAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for font attributes.

**Notes:**
Specifies a bidirectional override or embedding.

Value must be a CFArray of CFNumberRefs, each of which should have a value of either kCTWritingDirectionLeftToRight or kCTWritingDirectionRightToLeft, plus one of kCTWritingDirectionEmbedding or kCTWritingDirectionOverride. This array represents a sequence of nested bidirectional embeddings or overrides, in order from outermost to innermost, with (kCTWritingDirectionLeftToRight | kCTTextWritingDirectionEmbedding) corresponding to a LRE/PDF pair in plain text or `<span dir=”ltr”></span>` in HTML, (kCTWritingDirectionRightToLeft | kCTTextWritingDirectionEmbedding) corresponding to a RLE/PDF pair in plain text or a `<span dir=”rtl”></span>` in HTML, (kCTWritingDirectionLeftToRight | kCTTextWritingDirectionOverride) corresponding to a LRO/PDF pair in plain text or `<bdo dir=”ltr”></bdo>` in HTML, and (kCTWritingDirectionRightToLeft | kCTTextWritingDirectionOverride) corresponding to a RLO/PDF pair in plain text or `<bdo dir=”rtl”></bdo>` in HTML.
55.1.48 MatchFontDescriptorsWithProgressHandler(descriptors() as CTFontDescriptorMBS, mandatoryAttributes() as string, tag as Variant = nil) as boolean

**Notes:**
This function returns immediately, but can potentially take long time to process. The progress is notified via progress event.

descriptors: An array of descriptors to process.
mandatoryAttributes: some mandatory attributes.
Returns false if it couldn’t start the work.

55.1.49 RegisterFontsForFile(file as folderitem, scope as Integer, byref error as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Registers fonts from the specified font URL with the Font Manager. Registered fonts are discoverable through font descriptor matching.

**Notes:**
fontURL: The font URL.
scope: Scope constant defining the availability and lifetime of the registration. See ”Font Registration Scope” for values to pass for this parameter.
error: a CFError object which, in case of failed registration, contains error information.

Returns true if registration of the fonts was successful, otherwise false.

55.1.50 RegisterFontsForFiles(files() as folderitem, scope as Integer, errors() as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Registers fonts from the specified array of font URLs with the Font Manager. Registered fonts are discoverable through font descriptor matching.

**Notes:**
files: Array of font files.
scope: Scope constant defining the availability and lifetime of the registration. See ”Font Registration Scope” for values to pass for this parameter.
errors: An array of CFError objects which, in case of failed registration, contain error information. Each error contains a CFArray of font URLs corresponding to kCTFontManagerErrorFontURLsKey. These URLs represent the font files that caused the error and were not successfully registered. The array must be released
by the caller. Can be nil.

Returns true if registration of all font URLs was successful, otherwise false.

### 55.1.51 RegisterFontsForURL(URL as string, scope as Integer, byref error as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Registers fonts from the specified font URL with the Font Manager. Registered fonts are discoverable through font descriptor matching.

**Notes:**
- fontURL: The font URL.
- scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
- error: a CFError object which, in case of failed registration, contains error information.

Returns true if registration of the fonts was successful, otherwise false.
See also:
- 55.1.52 RegisterFontsForURL(URLs() as string, scope as Integer, errors() as CFErrorMBS) as boolean

### 55.1.52 RegisterFontsForURL(URLs() as string, scope as Integer, errors() as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Registers fonts from the specified array of font URLs with the Font Manager. Registered fonts are discoverable through font descriptor matching.

**Notes:**
- URLs: Array of font URLs.
- scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
- errors: Array of CFError objects which, in case of failed registration, contain error information. Each error contains a CFArray of font URLs corresponding to `kCTFontManagerErrorFontURlsKey`. These URLs represent the font files that caused the error and were not successfully registered. The array must be released by the caller. Can be nil.

Returns true if registration of all font URLs was successful, otherwise false.
See also:
- 55.1.51 RegisterFontsForURL(URL as string, scope as Integer, byref error as CFErrorMBS) as boolean
### 55.1.53 RegisterGraphicsFont

**Function:**

Registers the specified graphics font with the font manager.

**Notes:**

- **font:** The graphics font to be registered.
- **error:** Returns by indirection an error object in the case of failed registration.

Returns true if registration of the font was successful, otherwise false.

Registered fonts are discoverable through font descriptor matching. Any attempt to register a font that is either already registered or contains the same Postscript of an already registered font will fail. This behavior is useful for fonts that may be embedded in documents or constructed in memory. A graphics font is obtained by calling `CGFontMBS.CreateWithDataProvider`. Fonts that are backed by files should be registered using `CoreTextMBS.RegisterFontsForURL`.

### 55.1.54 UnregisterFontsForFile

**Function:**

Unregisters fonts from the specified font URL with the Font Manager. Unregistered fonts are no longer discoverable through font descriptor matching.

**Notes:**

- **URL:** The font URL.
- **scope:** Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
- **error:** A CFError object which, in case of failed registration, contains error information.

Returns true if unregistration of the fonts was successful, otherwise false.

### 55.1.55 UnregisterFontsForFiles

**Function:**

Unregisters fonts from the specified array of font URLs with the Font Manager. Unregistered fonts are no longer discoverable through font descriptor matching.

**Notes:**

- **files:** Array of font folderitems.
- **scope:** Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope"
for values to pass for this parameter.

errors: An array of CFError objects which, in case of failed registration, contain error information. Each error contains a CFArray of font URLs corresponding to kCTFontManagerErrorFontURLsKey. These URLs represent the font files that caused the error and were not successfully registered. The array must be released by the caller.

Returns true if unregistration of all font URLs was successful, otherwise false.

### 55.1.56 UnregisterFontsForURL(URL as string, scope as Integer, byref error as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Unregisters fonts from the specified font URL with the Font Manager. Unregistered fonts are no longer discoverable through font descriptor matching.

**Notes:**

URL: The font URL.
scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
error: A CFError object which, in case of failed registration, contains error information.

Returns true if unregistration of the fonts was successful, otherwise false.

### 55.1.57 UnregisterFontsForURLs(URLs() as string, scope as Integer, errors() as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Unregisters fonts from the specified array of font URLs with the Font Manager. Unregistered fonts are no longer discoverable through font descriptor matching.

**Notes:**

URLs: Array of font URLs.
scope: Scope constant defining the availability and lifetime of the registration. See "Font Registration Scope" for values to pass for this parameter.
errors: An array of CFError objects which, in case of failed registration, contain error information. Each error contains a CFArray of font URLs corresponding to kCTFontManagerErrorFontURLsKey. These URLs represent the font files that caused the error and were not successfully registered. The array must be released by the caller.

Returns true if unregistration of all font URLs was successful, otherwise false.
55.1.58 UnregisterGraphicsFont(font as CGFontMBS, byref error as CFErrorMBS) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Unregisters the specified graphics font with the font manager.

**Notes:**
- font: The graphics font to be unregistered.
- error: Returns by indirection an error object in the case of failed unregistration.

Returns true if unregistration of the font was successful, otherwise false.

Unregistered fonts are no longer discoverable through font descriptor matching. Fonts that are backed by files should be unregistered using CTFontManagerUnregisterFontsForURL.

55.1.59 Events

55.1.60 FontCollectionSortDescriptors(first as CTFontDescriptorMBS, second as CTFontDescriptorMBS, tag as Variant) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
The event to sort font descriptors.

**Notes:**
- This callback can be specified to obtain the matching font descriptors of a collection in sorted order. Return the appropriate comparison result of first descriptor to second descriptor.

Return -1 if smaller, 0 if equal or 1 if bigger.

55.1.61 Progress(state as Integer, progressParameter as Dictionary, tag as Variant) as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Progress was made for a call to MatchFontDescriptorsWithProgressHandler.

**Notes:**
- Return true to continue, and return false to cancel the process.
55.1.62 Constants

55.1.63 kCTFontClassClarendonSerifs = & H040000000

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the font class constants.
Notes: Clarendon Serifs

55.1.64 kCTFontClassFreeformSerifs = & H070000000

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the font class constants.
Notes: Freeform Serifs

55.1.65 kCTFontClassMaskShift = 28

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the font class constants.
Notes: The font class shift.
This is used to shift the font class to the upper most 4 bits of the symbolic traits.

55.1.66 kCTFontClassModernSerifs = & H030000000

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the font class constants.
Notes: Modern Serifs

55.1.67 kCTFontClassOldStyleSerifs = & H010000000

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the font class constants.
Notes: OldStyleSerifs

55.1.68 kCTFontClassOrnamentals = & H090000000

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the font class constants.
Notes: Ornamentals
55.1.69  kCTFontClassSansSerif = & H080000000

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the font class constants. Notes: Sans Serif

55.1.70  kCTFontClassScripts = & H0A0000000

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the font class constants. Notes: Scripts

55.1.71  kCTFontClassSlabSerifs = & H050000000

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the font class constants. Notes: Slab Serifs

55.1.72  kCTFontClassSymbolic = & H0C0000000

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the font class constants. Notes: Symbolic

55.1.73  kCTFontClassTransitionalSerifs = & H020000000

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the font class constants. Notes: Transitional Serifs

55.1.74  kCTFontClassUnknown = & H000000000

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the font class constants. Notes: Unknown

55.1.75  kCTFontManagerAutoActivationDefault = 0

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the auto-activation constants. Notes: Default auto-activation setting. When specified, the application uses the global setting.
55.1.76  kCTFontManagerAutoActivationDisabled = 1

55.1.77  kCTFontManagerAutoActivationEnabled = 2

55.1.78  kCTFontManagerAutoActivationPromptUser = 3

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the auto-activation constants. Notes: Requires user input for auto-activation. A dialog is presented to the user to confirm auto-activation of the font.

55.1.79  kCTFontManagerErrorAlreadyRegistered = 105

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the activation errors. Notes: The file has already been registered in the specified scope.

55.1.80  kCTFontManagerErrorFileNotFound = 101

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the activation errors. Notes: The file does not exist at the specified URL.

55.1.81  kCTFontManagerErrorInsufficientPermissions = 102

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the activation errors. Notes: Cannot access the file due to insufficient permissions.

55.1.82  kCTFontManagerErrorInUse = 202

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the errors that would prevent unregistration of fonts for a specified font file URL.
55.1.83 kCTFontManagerErrorInvalidFontData = 104

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the activation errors.  
**Notes:** The file contains invalid font data that could cause system problems.

55.1.84 kCTFontManagerErrorNotRegistered = 201

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the errors that would prevent unregistration of fonts for a specified font file URL.  
**Notes:** The file is not registered in the specified scope.

55.1.85 kCTFontManagerErrorSystemRequired = 202

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the errors that would prevent unregistration of fonts for a specified font file URL.  
**Notes:** The file is required by the system and cannot be unregistered.

55.1.86 kCTFontManagerErrorUnrecognizedFormat = 103

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the activation errors.  
**Notes:** The file is not a recognized or supported font file format.

55.1.87 kCTFontManagerScopeNone = 0

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants for font registration scope.  
**Notes:** No scope is defined.

55.1.88 kCTFontManagerScopeProcess = 1

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants for font registration scope.  
**Notes:** The font is available to the current process for the duration of the process unless directly unregistered.
55.1.89  kCTFontManagerScopeSession = 3

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants for font registration scope.  
**Notes:** The font is available to the current user session but will not be available in subsequent sessions.

55.1.90  kCTFontManagerScopeUser = 2

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants for font registration scope.  
**Notes:** The font is available to all processes for the current user session and will be available in subsequent sessions unless unregistered.

55.1.91  kCTFontTraitBold = 2

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants for Symbolic representation of stylistic font attributes.  
**Notes:**

Bold.  
Additional detail available via kCTFontWeightTrait

55.1.92  kCTFontTraitClassMask = 4026531840

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants for Symbolic representation of stylistic font attributes.  
**Notes:** Mask for the font class

55.1.93  kCTFontTraitColorGlyphs = 8192

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants for Symbolic representation of stylistic font attributes.  
**Notes:** Color bitmap glyphs are available.

55.1.94  kCTFontTraitComposite = 16384

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants for Symbolic representation of stylistic font attributes.  
**Notes:**
Composite
The font is a CFR (Composite font reference), a cascade list is expected per font.

55.1.95 kCTFontTraitCondensed = 64

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants for Symbolic representation of stylistic font attributes.

**Notes:**
Condensed
Additional detail available via kCTFontWidthTrait

55.1.96 kCTFontTraitExpanded = 32

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants for Symbolic representation of stylistic font attributes.

**Notes:**
Expanded
Expanded and condensed traits are mutually exclusive

55.1.97 kCTFontTraitItalic = 1

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants for Symbolic representation of stylistic font attributes.

**Notes:**
Italic
Additional detail available via kCTFontSlantTrait

55.1.98 kCTFontTraitMonoSpace = 1024

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants for Symbolic representation of stylistic font attributes.

**Notes:**
MonoSpace
Use fixed-pitch glyphs if available. May have multiple glyph advances (most CJK glyphs may contain two spaces)
55.1.99  kCTFontTraitUIOptimized = 4096

MBS MacCG Plugin, Plugin Version: 14.2.  **Function:** One of the constants for Symbolic representation of stylistic font attributes.
**Notes:**
UI optimized
Synthesize appropriate attributes for UI rendering such as control titles if necessary

55.1.100  kCTFontTraitVertical = 2048

MBS MacCG Plugin, Plugin Version: 14.2.  **Function:** One of the constants for Symbolic representation of stylistic font attributes.
**Notes:**
Vertical
Use vertical glyph variants and metrics.

55.1.101  kCTUnderlinePatternDash = & h0200

MBS MacCG Plugin, Plugin Version: 14.2.  **Function:** One of the underline pattern.
**Notes:** Dash

55.1.102  kCTUnderlinePatternDashDot = & h0300

MBS MacCG Plugin, Plugin Version: 14.2.  **Function:** One of the underline pattern.
**Notes:** Dash Dot

55.1.103  kCTUnderlinePatternDashDotDot = & h0400

MBS MacCG Plugin, Plugin Version: 14.2.  **Function:** One of the underline pattern.
**Notes:** Dash Dot Dot

55.1.104  kCTUnderlinePatternDot = & h0100

MBS MacCG Plugin, Plugin Version: 14.2.  **Function:** One of the underline pattern.
**Notes:** Dot
55.1. CLASS CORETEXTMBS

55.1.105 kCTUnderlinePatternSolid = &h0000

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the underline pattern.  
**Notes:** Solid

55.1.106 kCTUnderlineStyleDouble = 9

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the underline type specifiers.  
**Notes:** Double underlined.

55.1.107 kCTUnderlineStyleNone = 0

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the underline type specifiers.  
**Notes:** Not underlined.

55.1.108 kCTUnderlineStyleSingle = 1

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the underline type specifiers.  
**Notes:** Single underlined.

55.1.109 kCTUnderlineStyleThick = 2

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the underline type specifiers.  
**Notes:** Thick underlined.

55.1.110 kCTVersionNumber10.5 = &h00020000

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the version constants.  
**Notes:** Mac OS X 10.5

55.1.111 kCTVersionNumber10.5.2 = &h00020001

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the version constants.  
**Notes:** Mac OS X 10.5.2
55.1.112  kCTVersionNumber10_5.3 = & h00020002

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the version constants.  
**Notes:** Mac OS X 10.5.3

55.1.113  kCTVersionNumber10_5.5 = & h00020003

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the version constants.  
**Notes:** Mac OS X 10.5.5

55.1.114  kCTVersionNumber10_6 = & h00030000

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the version constants.  
**Notes:** Mac OS X 10.6

55.1.115  kCTVersionNumber10_7 = & h00040000

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the version constants.  
**Notes:** Mac OS X 10.7

55.1.116  kCTVersionNumber10_8 = & h00050000

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the version constants.  
**Notes:** Mac OS X 10.8

55.1.117  kCTVersionNumber10_9 = & h00060000

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the version constants.  
**Notes:** Mac OS X 10.9

55.1.118  kCTWritingDirectionEmbedding = 0

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the values for kCTWritingDirectionAttributeName attribute.
55.1. CLASS CORETEXTMBS

55.1.119 kCTWritingDirectionOverride = 1

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the values for kCTWritingDirectionAttribute-Name attribute.
55.2 class CTFontCollectionMBS

55.2.1 class CTFontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The CTFontCollection opaque type represents a font collection, that is, a group of font descriptors taken together as a single object.

**Notes:**
Font collections provide the capabilities of font enumeration, access to global and custom font collections, and access to the font descriptors comprising the collection.
Subclass of the CFObjectMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

55.2.2 Methods

55.2.3 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this class is available.

**Notes:** Returns true in OS X v10.5 and later.

55.2.4 Constructor

55.2.5 CopyWithFontDescriptors(queryDescriptors() as CTFontDescriptorMBS, options as dictionary) as CTFontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a copy of the original collection augmented with the given new font descriptors.

**Notes:**
queryDescriptors: An array of font descriptors to augment those of the original collection.
options: The options dictionary.

Returns a copy of the original font collection augmented by the new font descriptors and options.

The new font descriptors are merged with the existing descriptors to create a single set.
55.2. CLASS CTFONTCOLLECTIONMBS

Available in OS X v10.5 and later.

55.2.6 CreateCopyWithFontDescriptors(original as CTFontCollectionMBS, query-Descriptors() as CTFontDescriptorMBS, options as dictionary) as CT-FontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a copy of the original collection augmented with the given new font descriptors.

**Notes:**

queryDescriptors: An array of font descriptors to augment those of the original collection.
options: The options dictionary.

Returns a copy of the original font collection augmented by the new font descriptors and options.

The new font descriptors are merged with the existing descriptors to create a single set.
Available in OS X v10.5 and later.

55.2.7 CreateFromAvailableFonts(options as Dictionary) as CTFontCollection-

**Notes:**
options: The options dictionary.

Returns a new collection containing all fonts available to the current application.

55.2.8 CreateWithFontDescriptors(queryDescriptors() as CTFontDescriptorMBS, options as dictionary) as CTFontCollectionMBS

**Notes:**

An array of font descriptors to use for matching.
options: The options dictionary. See constant option keys.

Returns this function creates a new collection based on the provided font descriptors. The contents of this
CHAPTER 55. CORETEXT

collection is defined by matching the provided descriptors against all available font descriptors.

### 55.2.9 ExclusionDescriptors as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the array of descriptors to exclude from the match.

### 55.2.10 FontAttribute(attributeName as string, options as Integer) as Dictionary()

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns an array of font descriptor attribute values.

**Notes:**
- attributeName: The attribute to retrieve for each descriptor in the collection.
- options: Options to alter the return value.

This function returns a retained reference to an array, or nil on error. The caller is responsible for releasing the array. The array contains one value for each descriptor, in the same order as the results from CreateMatchingDescriptors. When the kCTFontCollectionCopyUnique is set, duplicate values will be removed. When kCTFontCollectionCopyStandardSort is set, the values will be sorted in standard UI order.

See also:

- 55.2.11 FontAttribute(attributeNames() as string, options as Integer) as Dictionary()

### 55.2.11 FontAttribute(attributeNames() as string, options as Integer) as Dictionary()

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns an array of dictionaries containing font descriptor attribute values.

**Notes:**
This function returns a retained reference to a array, or nil on error. The caller is responsible for releasing the array. The array contains one value for each descriptor, in the same order as the results from CreateMatchingDescriptors. When the kCTFontCollectionCopyUnique is set, duplicate values will be removed. When kCTFontCollectionCopyStandardSort is set, the values will be sorted in standard UI order.

See also:

- 55.2.10 FontAttribute(attributeName as string, options as Integer) as Dictionary()
55.2.12  **kCTFontCollectionDisallowAutoActivationOption as string**

**Notes:**
Option key to avoid auto-activating fonts.
Specify this option key in the options dictionary with a non-zero value to disallow searches for missing fonts (font descriptors returning no results).

55.2.13  **kCTFontCollectionIncludeDisabledFontsOption as string**

**Notes:** Specify this option key in the options dictionary with a non-zero value to enable matching of disabled fonts. You can pass font descriptors specifying disabled fonts to CTFontManagerEnableFontDescriptors, but you cannot use such a font descriptor to query font attributes from the system database or create a CTFontMBS.

55.2.14  **kCTFontCollectionRemoveDuplicatesOption as string**

**Notes:** Option key to specify filtering of duplicates.

55.2.15  **MatchingFontDescriptors(options as dictionary = nil) as CTFontDescriptorMBS()**

55.2.16  **MatchingFontDescriptorsForFamily(familyName as string, options as dictionary = nil) as CTFontDescriptorMBS()**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array of font descriptors matching the specified family, one descriptor for each style in the collection.
55.2.17 MatchingFontDescriptorsSorted(tag as Variant) as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the array of matching font descriptors sorted with the callback function.

**Notes:**
This function returns an array of font descriptors matching the criteria of the collection and sorted by the results of the sorting callback function.

Calls FontCollectionSortDescriptors in CoreTextMBS class.

55.2.18 MutableCopy as CTMutableFontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a mutable copy of the original collection.

55.2.19 QueryDescriptors as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the array of descriptors to match.

55.2.20 Constants

55.2.21 kCTFontCollectionCopyDefaultOptions = 0

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the Bulk attribute access.
**Notes:**
Passing this option indicates that defaults are to be used.
Available in OS X v10.7 and later.

55.2.22 kCTFontCollectionCopyStandardSort = 2

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the Bulk attribute access.
**Notes:**
Passing this option indicates that the return values should be sorted in standard UI order, suitable for display to the user. This is the same sorting behavior used by NSFontPanel and Font Book.
Available in OS X v10.7 and later.
55.2. CLASS CTFONTCOLLECTIONMBS

55.2.23 kCTFontCollectionCopyUnique = 1

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the Bulk attribute access.
**Notes:**
Passing this option indicates that duplicate values should be removed from the results. Available in OS X v10.7 and later.
55.3 class CTFontDescriptorMBS

55.3.1 class CTFontDescriptorMBS

The CTFontDescriptor opaque type represents a font descriptor, that is, a dictionary of attributes (such as name, point size, and variation) that can completely specify a font.

Notes:
A font descriptor can be an incomplete specification, in which case the system chooses the most appropriate font to match the given attributes.
Subclass of the CFObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

55.3.2 Methods

55.3.3 AttributeValue(key as string) as Variant

Returns the value associated with an arbitrary attribute.

key: The requested attribute.

Returns a attribute value, or nil if the requested attribute is not present.

55.3.4 AttributeValues as Dictionary

Returns the attributes dictionary of the font descriptor.

Notes: The font descriptor attributes dictionary. This dictionary contains the minimum number of attributes to specify fully this particular font descriptor.

55.3.5 Available as boolean

Whether this class is available.

Notes: Returns true in OS X v10.5 and later.
55.3.6 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The private constructor.

55.3.7 CopyWithAttributes(attributeValues as Dictionary) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates a copy of the original font descriptor with new attributes.

**Notes:**

attributes: A dictionary containing arbitrary attributes.

Returns a new copy of the original font descriptor with attributes augmented by those specified. If there are
conflicts between attributes, the new attributes replace existing ones.

55.3.8 CopyWithFamily(family as String) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a new font descriptor in the specified family based on the traits of the original descriptor.

**Notes:**

family: The name of the desired family.

Returns a new font reference with the original traits in the given family, or nil if none found in the system.

55.3.9 CopyWithFeature(featureTypeIdentifier as Integer, featureSelectorIdentifier as Integer) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Copies a font descriptor with new feature settings.

**Notes:**

featureTypeIdentifier: The feature type identifier.
featureSelectorIdentifier: The feature selector identifier.

Returns a copy of the original font descriptor modified with the given feature settings.
This is a convenience method to toggle more easily the state of individual features.
55.3.10 CopyWithSymbolicTraits(symTraitValue as Integer, symTraitMask as Integer) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a new font descriptor based on the original descriptor having the specified symbolic traits.

**Notes:**
symTraitValue: The value of the symbolic traits. This bitfield is used to indicate the desired value for the traits specified by the symTraitMask parameter. Used in conjunction, they can allow for trait removal as well as addition.
symTraitMask: The mask bits of the symbolic traits. This bitfield is used to indicate the traits that should be changed.

Returns a new font descriptor reference in the same family with the given symbolic traits, or nil if none found in the system.

55.3.11 CopyWithVariation(variationIdentifier as Integer, variationValue as Double) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the original font descriptor with a new variation instance.

**Notes:**
variationIdentifier: The variation axis identifier. This is the four-character code of the variation axis as a number.
variationValue: The value corresponding with the variation instance.

Returns a copy of the original font descriptor with a new variation instance. This is a convenience method for easily creating new variation font instances.

55.3.12 CreateCopyWithFamily(orignal as CTFontDescriptorMBS, family as String) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a new font descriptor in the specified family based on the traits of the original descriptor.

**Notes:**
original: The original font descriptor reference.
family: The name of the desired family.

Returns a new font reference with the original traits in the given family, or nil if none found in the system.
55.3.13  CreateCopyWithSymbolicTraits(original as CTFontDescriptorMBS, symTraitValue as Integer, symTraitMask as Integer) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a new font descriptor based on the original descriptor having the specified symbolic traits. **Example:**

```swift
// find PostScript names for a font
cnst nameOfAFont = "Arial"

dim FontName as string
dim FontFamilyName as string
dim FontPostscriptName as string
dim FontPostscriptNameBold as string
dim FontPostscriptNameItalic as string

dim f as CTFontMBS = CTFontMBS.CreateWithName(nameOfAFont, 13)
if f <> nil then
    FontName = f.FullName
    FontFamilyName = f.FamilyName
    FontPostscriptName = f.PostScriptName
    dim d as CTFontDescriptorMBS = f.FontDescriptor
    dim db as CTFontDescriptorMBS = CTFontDescriptorMBS.CreateCopyWithSymbolicTraits(d, CoreTextMBS.kCTFontTraitBold, CoreTextMBS.kCTFontTraitBold)
    dim di as CTFontDescriptorMBS = CTFontDescriptorMBS.CreateCopyWithSymbolicTraits(d, CoreTextMBS.kCTFontTraitItalic, CoreTextMBS.kCTFontTraitItalic)
    dim fb as CTFontMBS = f.CreateCopyWithAttributes(f.Size, nil, db)
    dim fi as CTFontMBS = f.CreateCopyWithAttributes(f.Size, nil, di)

    FontPostscriptNameBold = fb.PostScriptName
    FontPostscriptNameItalic = fi.PostScriptName
end if

Break // read names in debugger
```

**Notes:**

original: The original font descriptor reference.
symTraitValue: The value of the symbolic traits. This bitfield is used to indicate the desired value for the traits specified by the symTraitMask parameter. Used in conjunction, they can allow for trait removal as well as addition.
symTraitMask: The mask bits of the symbolic traits. This bitfield is used to indicate the traits that should be changed.

Returns a new font descriptor reference in the same family with the given symbolic traits, or nil if none found in the system.

Requires Mac OS X 10.9 or newer.

### 55.3.14 CreateWithAttributes(attributeValues as Dictionary) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new font descriptor reference from a dictionary of attributes. **Notes:** The provided attribute dictionary can contain arbitrary attributes that are preserved; however, unrecognized attributes are ignored on font creation and may not be preserved over the round trip from descriptor to font and back to descriptor.

### 55.3.15 CreateWithNameAndSize(Name as string, Size as Double = 0.0) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new font descriptor with the provided PostScript name and size. **Example:**

```no
dim c as CTFontDescriptorMBS = CTFontDescriptorMBS.CreateWithNameAndSize(“Times”, 12)
MsgBox c.AttributeValue(c.kCTFontFamilyNameAttribute)
```

**Notes:**

name: The PostScript name to be used for the font descriptor as a string.
size: The point size. If 0.0, the font size attribute (kCTFontSizeAttribute) is omitted from the returned font descriptor.

Return a new font descriptor reference with the given PostScript name and point size.

### 55.3.16 kCTFontBaselineAdjustAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants keys for accessing font attributes from a font descriptor.
55.3. **CLASS CTFONTDESCRIPTORMBS**

**Notes:** Key to specify or obtain the baseline adjustment for a font reference. This is primarily used when defining font descriptors for a cascade list to keep the baseline of all fonts even. The value associated with this is a float represented as a number.

55.3.17 kCTFontCascadeListAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants keys for accessing font attributes from a font descriptor. **Notes:** Key to specify or obtain the cascade list used for a font reference. The cascade list is a array containing CTFontDescriptorMBS elements. If unspecified, the global cascade list is used.

55.3.18 kCTFontCharacterSetAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants keys for accessing font attributes from a font descriptor. **Notes:** Key to specify or obtain the Unicode character coverage set for a font reference. The value for this key is a CharSetMBS object. If specified, this attribute can be used to restrict the font to a subset of its actual character set. If unspecified, this attribute is ignored and the actual character set is used.

55.3.19 kCTFontDescriptorMatchingCurrentAssetSize as string

55.3.20 kCTFontDescriptorMatchingDescriptors as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for progressParameter dictionary. **Notes:** Array of descriptors to be queried. Valid while downloading or when state is kCTFontDescriptorMatchingWillBeginQuerying.

55.3.21 kCTFontDescriptorMatchingError as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for progressParameter dictionary.
Notes: A CFErrorMBS; Valid when state kCTFontDescriptorMatchingDidFailWithError.

55.3.22 kCTFontDescriptorMatchingPercentage as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for progressParameter dictionary.
**Notes:** A Number; Download progress in 0 - 100. Valid during Downloading state.

55.3.23 kCTFontDescriptorMatchingResult as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for progressParameter dictionary.
**Notes:**
Array of matched font descriptors.
Valid when state is kCTFontDescriptorMatchingDidMatch or CTFontDescriptorMatchingEnd.

55.3.24 kCTFontDescriptorMatchingSourceDescriptor as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for progressParameter dictionary.
**Notes:**
A CTFontDescriptorMBS; The current font descriptor.
Valid when state is kCTFontDescriptorMatchingDidMatch.

55.3.25 kCTFontDescriptorMatchingTotalAssetSize as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for progressParameter dictionary.
**Notes:**
A Number; Total byte size to download.
Always valid, but may be Zero when information is not available.

55.3.26 kCTFontDescriptorMatchingTotalDownloadedSize as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for progressParameter dictionary.
Notes: A Number; Total downloaded byte size. Valid during Downloading state.

55.3.27 kCTFontDisplayNameAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the constants keys for accessing font attributes from a font descriptor. Notes: Key for accessing the name used to display the font. Most commonly this is the full name. The value associated with this key is a string. If the value is unspecified, it defaults to Helvetica, and if that font is unavailable, it falls back to the global font cascade list.

55.3.28 kCTFontDownloadableAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the constants keys for accessing font attributes from a font descriptor. Notes: The font downloadable state. The value associated with this key is a Boolean. If it is true, CoreText attempts to download a font if necessary when matching a descriptor.

55.3.29 kCTFontEnabledAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the constants keys for accessing font attributes from a font descriptor. Notes: Key to obtain the font enabled state. The returned value is an integer represented as a number representing a Boolean value. Unregistered font descriptors return nil, which is equivalent to false. Available in OS X v10.6 and later.

55.3.30 kCTFontFamilyNameAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: One of the constants keys for accessing font attributes from a font descriptor. Notes: Key for accessing the font family name from the font descriptor. The value associated with this key is a string.
55.3.31  kCTFontFeaturesAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the constants keys for accessing font attributes from a font descriptor.
**Notes:**
Key to specify or obtain the font features for a font reference. The value associated with this key is an array containing font feature dictionaries. This feature list contains the feature information from the 'feat' table of the font. For more information, see Features.
Available in OS X v10.5 and later.

55.3.32  kCTFontFeatureSettingsAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the constants keys for accessing font attributes from a font descriptor.
**Notes:**
Key to specify or obtain the font features settings for a font reference. The value associated with this key is a CFArrayRef object containing font feature-setting dictionaries. A feature-setting dictionary contains a tuple of a kCTFontFeatureTypeIdentifierKey key-value pair and a kCTFontFeatureSelectorIdentifierKey key-value pair. Each setting dictionary indicates which setting should be turned on. In the case of duplicate or conflicting setting, the last setting in the list takes precedence. It is the caller’s responsibility to handle exclusive and nonexclusive settings as necessary.
Available in OS X v10.5 and later.

55.3.33  kCTFontFixedAdvanceAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the constants keys for accessing font attributes from a font descriptor.
**Notes:**
Key to specify a fixed advance to be used for a font reference. If present and specified, this attribute is used to specify a constant advance to override any font values. The value associated with this key is a float represented as a number.
Available in OS X v10.5 and later.

55.3.34  kCTFontFormatAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the constants keys for accessing font attributes from a font descriptor.
**Notes:**
Key to specify or obtain the recognized format of the font. The value associated with this key is an integer
55.3. CLASS CTFONTDESCRIPTORMBS

represented as a number containing one of the constants in "Font Format Constants."
Available in OS X v10.6 and later.

55.3.35  kCTFontLanguagesAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the constants keys for accessing font attributes from a font descriptor.
**Notes:**
Key to specify or obtain a list of covered languages for a font reference. The value for this key is an array
containing string elements. If specified, this attribute restricts the search to matching fonts that support
the specified languages. The language identifier string should conform to the RFC 3066bis standard. If
unspecified, this attribute is ignored.
Available in OS X v10.5 and later.

55.3.36  kCTFontMacintoshEncodingsAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the constants keys for accessing font attributes from a font descriptor.
**Notes:**
Key to specify or obtain the Macintosh encodings for a font reference. The value associated with this key is a
number containing a bit field of the Macintosh encodings. This attribute is provided for legacy compatibility.
Available in OS X v10.5 and later.

55.3.37  kCTFontMatrixAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the constants keys for accessing font attributes from a font descriptor.
**Notes:**
Key to specify the font transformation matrix when creating a font. If unspecified it defaults to the
unit matrix. The value for this key is a Memoryblock object containing a CGAffineTransform.

55.3.38  kCTFontNameAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the constants keys for accessing font attributes from a font descriptor.
**Notes:**
Key for accessing the PostScript name from the font descriptor. The value associated with this key
is a string. If the value is unspecified, it defaults to Helvetica, and if that font is unavailable, it falls back to
the global font cascade list.
55.3.39 kCTFontOrientationAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants keys for accessing font attributes from a font descriptor. **Notes:** Key to specify a particular orientation for the glyphs of the font. The value associated with this key is an integer represented as a number containing one of the constants in "Font Orientation Constants." If you want to receive vertical metrics from a font for vertical rendering, specify kCTFontVerticalOrientation. If unspecified, the font uses its native orientation.

55.3.40 kCTFontPriorityAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants keys for accessing font attributes from a font descriptor. **Notes:** Key to specify or obtain the font priority used by font descriptors when resolving duplicates and sorting match results. The value associated with this key is an integer represented as a CFNumberRef object containing one of the values enumerated in "Font Priority Constants." The higher the value, the higher the priority of the font. Only registered fonts have a priority. Unregistered font descriptors return nil. Available in OS X v10.6 and later.

55.3.41 kCTFontRegistrationScopeAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants keys for accessing font attributes from a font descriptor. **Notes:** Key to specify or obtain the font descriptor’s registration scope. The value associated with this key is an integer represented as a number containing one of the CTFontManagerScope enumerated values. A value of nil can be returned for font descriptors that are not registered. Available in OS X v10.6 and later.

55.3.42 kCTFontSizeAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants keys for accessing font attributes from a font descriptor. **Notes:** Key to obtain or specify the font point size. Creating a font with this unspecified will default to a point size of 12.0. The value for this key is represented as a number.
55.3.43 kCTFontStyleNameAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants keys for accessing font attributes from a font descriptor.
**Notes:** Key for accessing the style name of the font. This name represents the designer’s description of the font’s style. The value associated with this key is a string.

55.3.44 kCTFontTraitsAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants keys for accessing font attributes from a font descriptor.
**Notes:** Key for accessing the dictionary of font traits for stylistic information. See "Font Traits" for the list of font traits. The value associated with this key is a dictionary.

55.3.45 kCTFontURLAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants keys for accessing font attributes from a font descriptor.
**Notes:** Key for accessing the font URL from the font descriptor. The value associated with this key is an URL string.
Available in OS X v10.6 and later.

55.3.46 kCTFontVariationAttribute as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants keys for accessing font attributes from a font descriptor.
**Notes:** Key to obtain the font variation dictionary instance as a dictionary object. If specified in a font descriptor, fonts with the specified axes are primary match candidates; if no such fonts exist, this attribute is ignored.

55.3.47 LocalizedAttributeValue(key as string, byref lang as string) as Variant

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a localized value for the requested attribute, if available.
**Notes:**
key: The requested font attribute.
lang: On output, contains a reference to the matched language. The language identifier will conform to the
RFC 3066bis standard.

Returns a localized attribute value based on the global language list.

This function passes back the matched language in language. If localization is not possible for the attribute, the behavior matches the value returned from AttributeValue. Generally, localization of attributes is applicable to name attributes of only a normalized font descriptor.

### 55.3.48 MatchingFontDescriptor(mandatoryAttributes() as String) as CTFontDescriptorMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the single preferred matching font descriptor based on the original descriptor and system precedence. **Notes:**

mandatoryAttributes: A set of attribute keys which must be identically matched in any returned font descriptors.

Returns a normalized font descriptor matching the attributes present in descriptor.

The original descriptor may be returned in normalized form. In the context of font descriptors, normalized infers that the input values were matched up with actual existing fonts, and the descriptors for those existing fonts are the returned normalized descriptors.

### 55.3.49 MatchingFontDescriptors(mandatoryAttributes() as String) as CTFontDescriptorMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array of normalized font descriptors matching the provided descriptor. **Notes:**

mandatoryAttributes: A set of attribute keys that must be identically matched in any returned font descriptors.

Returns an array of normalized font descriptors matching the attributes present in descriptor.

If descriptor itself is normalized, then the array will contain only one item: the original descriptor. In the context of font descriptors, normalized infers that the input values were matched up with actual existing fonts, and the descriptors for those existing fonts are the returned normalized descriptors.
55.3. **CLASS CTFONTDESCRIPTORMBS**

55.3.50  **Properties**

55.3.51  **DisplayName as String**

MBS MacCG Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The display name.

**Example:**

```vbnet
dim f as CTFontMBS = CTFontMBS.CreateWithName("Times")
dim d as CTFontDescriptorMBS = f.FontDescriptor
MsgBox d.DisplayName
```

**Notes:** (Read only property)

55.3.52  **FamilyName as String**

MBS MacCG Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The family name.

**Example:**

```vbnet
dim f as CTFontMBS = CTFontMBS.CreateWithName("Times")
dim d as CTFontDescriptorMBS = f.FontDescriptor
MsgBox d.FamilyName
```

**Notes:** (Read only property)

55.3.53  **File as FolderItem**

MBS MacCG Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The font file.

**Example:**

```vbnet
dim f as CTFontMBS = CTFontMBS.CreateWithName("Times")
dim d as CTFontDescriptorMBS = f.FontDescriptor
MsgBox d.file.NativePath
```

**Notes:** (Read only property)
55.3.54  FontSize as Double

MBS MacCG Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The font size.  
**Example:**
```vbnet
dim f as CTFontMBS = CTFontMBS.CreateWithName("Times")
dim d as CTFontDescriptorMBS = f.FontDescriptor
MsgBox str(d.FontSize)
```

**Notes:**
Can be zero if unknown.  
(Read only property)

55.3.55  Name as String

MBS MacCG Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The PostScript name.  
**Example:**
```vbnet
dim f as CTFontMBS = CTFontMBS.CreateWithName("Times")
dim d as CTFontDescriptorMBS = f.FontDescriptor
MsgBox d.Name
```

**Notes:**
When matching, this is treated more generically: the system first tries to find fonts with this PostScript name. If none is found, the system tries to find fonts with this family name, and, finally, if still nothing, tries to find fonts with this display name.  
(Read only property)

55.3.56  StyleName as String

MBS MacCG Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The style name.  
**Example:**
```vbnet
dim f as CTFontMBS = CTFontMBS.CreateWithName("Times")
dim d as CTFontDescriptorMBS = f.FontDescriptor
MsgBox d.StyleName
```
Notes:
This name represents the designer’s description of the font’s style.
Can be empty if unknown.
(Read only property)

55.3.57 URL as String

MBS MacCG Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The font URL.
**Example:**
```vbnet
dim f as CTFontMBS = CTFontMBS.CreateWithName(“Times”)  
dim d as CTFontDescriptorMBS = f.FontDescriptor  
MsgBox d.URL
```

Notes: (Read only property)

55.3.58 Constants

55.3.59 kCFTFontDescriptorMatchingDidBegin = 0

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font matching states.
**Notes:** called once at the beginning.

55.3.60 kCFTFontDescriptorMatchingDidFailWithError = 8

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font matching states.
**Notes:** called when an error occurred. (may be called multiple times.)

55.3.61 kCFTFontDescriptorMatchingDidFinish = 1

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font matching states.
**Notes:** called once at the end.
55.3.62 kCTFontDescriptorMatchingDidFinishDownloading = 6

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font matching states.  
**Notes:** Finished downloading a descriptor.

55.3.63 kCTFontDescriptorMatchingDidMatch = 7

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font matching states.  
**Notes:** called when font descriptor is matched.

55.3.64 kCTFontDescriptorMatchingDownloading = 5

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font matching states.  
**Notes:** Downloading a descriptor.

55.3.65 kCTFontDescriptorMatchingStalled = 3

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font matching states.  
**Notes:** called when stalled. (e.g. while waiting for server response.)

55.3.66 kCTFontDescriptorMatchingWillBeginDownloading = 4

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font matching states.  
**Notes:**  
Starts downloading a descriptor.  
Downloading part may be skipped if all the assets are already downloaded

55.3.67 kCTFontDescriptorMatchingWillBeginQuerying = 2

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font matching states.  
**Notes:** called once before talking to the server. Skipped if not necessary.
55.3. **CLASS CTFONTDESCRIPTIONMBS**

### 55.3.68 kCTFontFormatBitmap = 5

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font format constants.  **Notes:** The font is a bitmap only format.

### 55.3.69 kCTFontFormatOpenTypePostScript = 1

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font format constants.  **Notes:** The font is an OpenType format containing PostScript data.

### 55.3.70 kCTFontFormatOpenTypeTrueType = 2

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font format constants.  **Notes:** The font is an OpenType format containing TrueType data.

### 55.3.71 kCTFontFormatPostScript = 4

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font format constants.  **Notes:** The font is a recognized PostScript format.

### 55.3.72 kCTFontFormatTrueType = 3

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font format constants.  **Notes:** The font is a recognized TrueType format.

### 55.3.73 kCTFontFormatUnrecognized = 0

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font format constants.  **Notes:** The font is not a recognized format.

### 55.3.74 kCTFontOrientationDefault = 0

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the orientation constants.  **Notes:** Default.
55.3.75  kCTFontOrientationHorizontal = 1

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the orientation constants.  
**Notes:** Horizontal

55.3.76  kCTFontOrientationVertical = 2

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the orientation constants.  
**Notes:** Vertical

55.3.77  kCTFontPriorityComputer = 30000

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font priorities constants.  
**Notes:** Priority of computer local fonts (located in /Library/Fonts).

55.3.78  kCTFontPriorityDynamic = 50000

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font priorities constants.  
**Notes:** Priority of fonts registered dynamically, not located in a standard location (either kCTFontManagerScopeUser, or kCTFontManagerScopeSession).

55.3.79  kCTFontPriorityNetwork = 20000

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font priorities constants.  
**Notes:** Priority of network fonts (located in /Network/Library/Fonts).

55.3.80  kCTFontPriorityProcess = 60000

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font priorities constants.  
**Notes:** Priority of fonts registered for the process (kCTFontManagerScopeProcess).

55.3.81  kCTFontPrioritySystem = 10000

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font priorities constants.  
**Notes:** Priority of system fonts (located in /System/Library/Fonts).
55.3.82  kCTFontPriorityUser = 40000

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font priorities constants.  
**Notes:** Priority of local fonts (located in user’s Library/Fonts).
55.4 class CTFontMBS

55.4.1 class CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The CTFont opaque type represents a Core Text font object.

**Example:**
```
dim c as CTFontMBS = CTFontMBS.CreateWithName("times", 10)
MsgBox c.FullName
```

**Notes:**
Font objects represent fonts to an application, providing access to characteristics of the font, such as point size, transform matrix, and other attributes. Fonts provide assistance in laying out glyphs relative to one another and are used to establish the current font when drawing in a graphics context.

Subclass of the CFObjectMBS class.

This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

55.4.2 Methods

55.4.3 AdvancesForGlyphs(orientation as Integer, glyphs() as Integer) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Calculates the advances for an array of glyphs and returns the summed advance.

**Notes:**
- **font:** The font reference.
- **orientation**
  The intended drawing orientation of the glyphs. Used to determined which glyph metrics to return.
- **glyphs:** An array of count number of glyphs.
- **advances:** An array of count number of CGSizeMBS objects to receive the computed glyph advances. Optional.

Returns the summed glyph advance of an array of glyphs.

Individual glyph advances are passed back via the advances parameter. These are the ideal metrics for each glyph scaled and transformed in font space.

See also:
- 55.4.4 AdvancesForGlyphs(orientation as Integer, glyphs() as Integer, boundingRects() as CGSizeMBS) as Double
55.4. AdvancesForGlyphs(orientation as Integer, glyphs() as Integer, boundingRects() as CGSizeMBS) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Calculates the advances for an array of glyphs and returns the summed advance.

**Notes:**
- font: The font reference.
- orientation: The intended drawing orientation of the glyphs. Used to determine which glyph metrics to return.
- glyphs: An array of count number of glyphs.
- advances: An array of count number of CGSizeMBS objects to receive the computed glyph advances. Optional.

Returns the summed glyph advance of an array of glyphs.

Individual glyph advances are passed back via the advances parameter. These are the ideal metrics for each glyph scaled and transformed in font space.

See also:

- 55.4.3 AdvancesForGlyphs(orientation as Integer, glyphs() as Integer) as Double

55.4.5 AttributeValue(key as string) as Variant

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the value associated with an arbitrary attribute of the given font.

**Notes:**
- key: The requested attribute.

Returns attribute value or nil if the requested attribute is not present.

Available in OS X v10.5 and later.

55.4.6 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this class is available.

**Notes:** Returns true in OS X v10.5 and later.
55.4.7 AvailableTables(options as Integer) as String()

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns an array of font table tags.

**Notes:**
options: The font table options.

Returns an array of Font Table Tag Constants values for the given font and the supplied options.
Available in OS X v10.5 and later.

55.4.8 BoundingRectsForGlyphs(orientation as Integer, glyphs() as Integer) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Calculates the bounding rects for an array of glyphs and returns the overall bounding rectangle for the glyph run.

**Notes:**
font: The font reference.
orientation: The intended drawing orientation of the glyphs. Used to determined which glyph metrics to return.
glyphs: An array of count number of glyphs.
boundingRects: Optional. On output, the computed glyph rectangles in an array of count number of CGRect objects.

Returns the overall bounding rectangle for an array or run of glyphs. Returns CGRectNull on error.

The bounding rectangles of the individual glyphs are returned through the boundingRects parameter. These are the design metrics from the font transformed in font space.
See also:

- 55.4.9 BoundingRectsForGlyphs(orientation as Integer, glyphs() as Integer, boundingRects() as CGRectMBS) as CGRectMBS

55.4.9 BoundingRectsForGlyphs(orientation as Integer, glyphs() as Integer, boundingRects() as CGRectMBS) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Calculates the bounding rects for an array of glyphs and returns the overall bounding rectangle for the glyph run.

**Notes:**
font: The font reference.
orientation: The intended drawing orientation of the glyphs. Used to determined which glyph metrics to return.
glyphs: An array of count number of glyphs.
boundingRects: Optional. On output, the computed glyph rectangles in an array of count number of CGRect objects.

Returns the overall bounding rectangle for an array or run of glyphs. Returns CGRectNull on error.

The bounding rectangles of the individual glyphs are returned through the boundingRects parameter. These are the design metrics from the font transformed in font space.
See also:

- 55.4.8 BoundingRectsForGlyphs(orientation as Integer, glyphs() as Integer) as CGRectMBS

55.4.10 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The private constructor.

55.4.11 CreateCopyWithAttributes(size as Double, Matrix as CGAffineTransformMBS, fontAttributes as CTFontDescriptorMBS) as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns a new font with additional attributes based on the original font.
Example:

```plaintext
// find PostScript names for a font
const nameOfAFont = "Arial"

dim FontName as string
dim FontFamilyName as string
dim FontPostscriptName as string
dim FontPostscriptNameBold as string
dim FontPostscriptNameItalic as string

dim f as CTFontMBS = CTFontMBS.CreateWithName(nameOfAFont, 13)
if f <> nil then
    FontName = f.FullName
    FontFamilyName = f.FamilyName
    FontPostscriptName = f.PostScriptName
    FontPostscriptNameBold = f.PostScriptNameBold
    FontPostscriptNameItalic = f.PostScriptNameItalic

    dim d as CTFontDescriptorMBS = f.FontDescriptor
```
dim db as CTFontDescriptorMBS = CTFontDescriptorMBS.CreateCopyWithSymbolicTraits(d, CoreTextMBS.kCTFontTraitBold, CoreTextMBS.kCTFontTraitBold)
dim di as CTFontDescriptorMBS = CTFontDescriptorMBS.CreateCopyWithSymbolicTraits(d, CoreTextMBS.kCTFontTraitItalic, CoreTextMBS.kCTFontTraitItalic)

dim fb as CTFontMBS = f.CreateCopyWithAttributes(f.Size, nil, db)
dim fi as CTFontMBS = f.CreateCopyWithAttributes(f.Size, nil, di)

FontPostscriptNameBold = fb.PostScriptName
FontPostscriptNameItalic = fi.PostScriptName

end if

Break // read names in debugger

Notes:

size: The point size for the font reference. If 0.0 is specified, the original fonts size is preserved.
matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil is specified, the original font’s matrix is preserved.
fontAttributes: A font descriptor containing additional attributes that the new font should contain.

Returns a new font reference converted from the original with the specified attributes.

This function provides a mechanism to change attributes quickly on a given font reference in response to user actions. For instance, the size can be changed in response to a user manipulating a size slider. Available in OS X v10.5 and later.

55.4.12 CreateForString(text as string, location as Integer, length as Integer) as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a new font reference that can best map the given string range based on the current font.

Notes:

string: A unicode string containing characters that cannot be encoded by the current font.
location and length: The range of the string that needs to be mapped.

Returns the best substitute font from the cascade list of the current font that can encode the specified string range. If the current font is capable of encoding the string range, then it is retained and returned.
55.4.13 CreatePathForGlyph(glyph as Integer, transform as CGAffineTransformMBS) as CGPathMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates a path for the specified glyph.

**Notes:**
glyph: The glyph.
transform: An affine transform applied to the path. Can be nil. If nil, CGAffineTransformIdentity is used.

Returns a CGPath object containing the glyph outlines, nil on error. Must be released by caller.

Creates a path from the outlines of the glyph for the specified font. The path reflects the font point size, matrix, and transform parameter, applied in that order. The transform parameter is most commonly be used to provide a translation to the desired glyph origin.

55.4.14 CreateUIFontForLanguage(Type as Integer, size as Double = 0.0, language as string = "") as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the special user-interface font for the given language and user-interface type.

**Notes:**
Type: A constant specifying the intended user-interface use for the requested font reference. See Enumerations for possible values.
size: The point size for the font reference. If 0.0 is specified, the default size for the requested user-interface type is used.
language: Language specifier string to select a font for a particular localization. If "" is specified, the current system language is used. The format of the language identifier should conform to the RFC 3066bis standard.

Returns the correct font for various user-interface uses.
The only required parameter is the Type selector; the other parameters have default values.

55.4.15 CreateWithFamily(size as Double, Matrix as CGAffineTransformMBS, family as string) as CTFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a new font in the specified family based on the traits of the original font.

**Notes:**
size: The point size for the font reference. If 0.0 is specified, the original fonts size is preserved.
matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil is specified, the original font’s matrix is preserved.
family: The name of the desired family.

Returns a new font reference with the original traits in the given family, or nil if none is found in the system. Available in OS X v10.5 and later.

55.4.16 CreateWithFontDescriptor(descriptor as CTFontDescriptorMBS, size as Double = 0.0, matrix as CGAffineTransformMBS = nil, options as Integer = 0) as CTFontMBS

Notes:

descrriptor: A font descriptor containing attributes that specify the requested font.
size: The point size for the font reference. If 0.0 is specified, the default font size of 12.0 is used. This parameter is optional.
matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil is specified, the identity matrix is used. This parameter is optional.

Returns a CTFontMBS that best matches the attributes provided with the font descriptor.

The size and matrix parameters override any specified in the font descriptor unless they are unspecified (0.0 for size and NULL for matrix). A best match font is always returned, and default values are used for any unspecified parameters.

55.4.17 CreateWithGraphicsFont(graphicsFont as CGFontMBS, size as Double = 0.0, matrix as CGAffineTransformMBS = nil, attributeValues as CTFontDescriptorMBS = nil) as CTFontMBS

Notes:

graphicsFont: A valid Core Graphics font reference.
size: The point size for the font reference. If 0.0 is specified the default font size of 12.0 is used.
matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil, the identity matrix is used. Optional.
attributes: Additional attributes that should be matched. Optional.

Returns a new font reference for an existing CGFontRef object with the specified size, matrix, and additional attributes.
55.4.18  CreateWithName(name as string, size as Double = 0.0, matrix as CGAffineTransformMBS = nil, options as Integer = 0) as CTFontMBS

Example:
```vbnet
dim c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
MsgBox c.FullName
```

Notes:
- name: The font name for which you wish to create a new font reference. A valid PostScript name is preferred, although other font name types are matched in a fallback manner.
- size: The point size for the font reference. If 0.0 is specified, the default font size of 12.0 is used. This parameter is optional.
- matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil is specified, the identity matrix is used. This parameter is optional.

Returns a CTFontRef that best matches the name provided with size and matrix attributes.

The name parameter is the only required parameter, and default values are used for unspecified parameters (0.0 for size and nil for matrix). If all parameters cannot be matched identically, a best match is found.

55.4.19  CreateWithPlatformFont(ATSFontHandle as Integer, size as Double = 0.0, matrix as CGAffineTransformMBS = nil, attributeValues as CTFontDescriptorMBS = nil) as CTFontMBS

Notes:
- ATSFontHandle: A valid ATSFontRef object.
- size: The point size for the font reference. If 0.0 is specified the default font size of 12.0 is used.
- matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil, the identity matrix is used. Optional.
- attributes: A CTFontDescriptorMBS containing additional attributes that should be matched. Optional.

Returns a new font reference for an ATSFontRef with the specified size, matrix, and additional attributes.
55.4.20  CreateWithQuickdrawInstance(name as String, identifier as Integer = 0, Style as Integer = 0, size as Double = 0.0) as CTFontMBS

Returns a font reference for the given QuickDraw instance.

Notes:
- name: The QuickDraw font name. If zero length, identifier must be specified.
- identifier: The QuickDraw font identifier. Can be 0, but if so, name must be specified.
- style: The QuickDraw font style.
- size: The point size for the font reference. If 0.0 is specified, the default size of 12.0 is used.

Returns the best font instance matching the QuickDraw instance information.

This function is provided for compatibility support between Core Text and clients needing to support QuickDraw-style font references. QuickDraw is a deprecated technology in OS X v10.4 and later.

55.4.21  CreateWithSymbolicTraits(size as Double, Matrix as CGAffineTransformMBS, symTraitValue as Integer, symTraitMask as Integer) as CTFontMBS

Returns a new font in the same font family as the original with the specified symbolic traits.

Example:
```
dim helveticaBold as CTFontMBS = CTFontMBS.CreateWithName("Helvetica-Bold", 12)
MsgBox helveticaBold.FullName

// now create similar fonts with

dim Trait as Integer = CoreTextMBS.kCTFontTraitItalic
dim TraitMask as Integer = CoreTextMBS.kCTFontTraitItalic+CoreTextMBS.kCTFontTraitBold

dim helveticaItalic as CTFontMBS = helveticaBold.CreateWithSymbolicTraits(12, nil, Trait, TraitMask)
MsgBox helveticaItalic.FullName
```

Notes:
- size: The point size for the font reference. If 0.0 is specified, the original fonts size is preserved.
- matrix: The transformation matrix for the font. In most cases, set this parameter to be nil. If nil is specified, the original font’s matrix is preserved.
- symTraitValue: The value of the symbolic traits.
- symTraitMask: The mask bits of the symbolic traits.
55.4. **CLASS CTFONTMBS**

Returns a new font reference in the same family with the given symbolic traits. or nil if none is found in the system.

Available in OS X v10.5 and later.

55.4.22  **DefaultCascadeListForLanguages(languagePrefList() as string) as String()**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Return an ordered list of CTFontDescriptorMBS's for font fallback derived from the system default fallback region according to the given language preferences.

**Notes:**
The style of the given is also matched as well as the weight and width of the font is not one of the system UI font, otherwise the UI font fallback is applied.

languagePrefList: The language preference list - ordered array of CFStringRef's of ISO language codes.

The ordered list of fallback fonts - ordered array of CTFontDescriptors.

55.4.23  **Draw(glyphs() as Integer, positions() as CGPointMBS, context as CGContextMBS)**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Renders the given glyphs of a font at the specified positions in the supplied graphics context.

**Notes:**
font: The font with glyphs to render. If the font has a size or matrix attribute, context is set with these values.
glyphs: The glyphs to be rendered. The glyphs should be the result of proper Unicode text layout operations (such as with CTLine). Functions such as CTFontMBS.GetGlyphsForCharacters do not perform any Unicode text layout.
positions: The positions (origins) for each glyph in glyphs. The positions are in user space. The number of positions passed in must match the number of glyphs (in glyphs).
context: The graphics context used to render the glyphs.

This function modifies graphics state including font, text size, and text matrix if these attributes are specified in font. These attributes are not restored.

Available in OS X v10.7 and later.
55.4.24  Features as Dictionary()

**Notes:** Returns an array of font feature dictionaries for the font reference.

55.4.25  FeatureSettings as Dictionary()

**Notes:** Returns a normalized array of font feature-setting dictionaries. The array contains only the non-default settings that should be applied to the font, or nil if the default settings should be used.

A feature-setting dictionary is a tuple of a kCTFontFeatureTypeIdentifierKey key-value pair and a kCTFontFeatureSelectorIdentifierKey key-value pair. Each setting dictionary indicates which setting is enabled. It is the caller’s responsibility to handle exclusive and nonexclusive settings as necessary.

The feature settings are verified against those that the font supports and any that do not apply are removed. Further, feature settings that represent a default setting for the font are also removed.

55.4.26  GlyphsForCharacters(characters() as Integer) as Integer()

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Provides basic Unicode encoding for the given font, returning by reference an array of CGGlyph values corresponding to a given array of Unicode characters for the given font.  
**Notes:** If a glyph could not be encoded, a value of 0 is passed back at the corresponding index in the glyphs array and the function returns False. It is the responsibility of the caller to handle the Unicode properties of the input characters.

55.4.27  GlyphWithName(name as string) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the CGGlyph value for the specified glyph name in the given font.  
**Notes:**  
Name: The glyph name as a CFString object.

Returns the glyph value for the named glyph as a CGGlyph object, or if the glyph name is not recognized, the .notdef glyph index value.
The returned CGGlyph object can be used with any of the subsequent glyph data accessors or directly with Core Graphics.

55.4.28 GraphicsFont(byref fontAttributes as CTFontDescriptorMBS) as CGFontMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a Core Graphics font reference and attributes. **Notes:**

- Attributes: On output, points to a font descriptor containing additional attributes from the font.

Returns a CGFontMBS object for the given font reference.

55.4.29 kCTBaselineClassHanging as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Key to reference the Hanging baseline class. **Notes:** This key can be used with a baseline info dictionary to offset to the Hanging baseline as a float. It can also be used as the value for kCTBaselineClassAttributeName.

55.4.30 kCTBaselineClassIdeographicCentered as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Key to reference the Ideographic Centered baseline class. **Notes:** This key can be used with a baseline info dictionary to offset to the Ideographic Centered baseline as a float. It can also be used as the value for kCTBaselineClassAttributeName.

55.4.31 kCTBaselineClassIdeographicHigh as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Key to reference the Ideographic High baseline class. **Notes:** This key can be used with a baseline info dictionary to offset to the Ideographic High baseline as a float. It can also be used as the value for kCTBaselineClassAttributeName.
55.4.32 kCTBaselineClassIdeographicLow as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Key to reference the Ideographic Low baseline class. **Notes:** This key can be used with a baseline info dictionary to offset to the Ideographic Low baseline as a float. It can also be used as the value for kCTBaselineClassAttributeName.

55.4.33 kCTBaselineClassMath as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Key to reference the Math baseline class. **Notes:** This key can be used with a baseline info dictionary to offset to the Math baseline as a float. It can also be used as the value for kCTBaselineClassAttributeName.

55.4.34 kCTBaselineClassRoman as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Key to reference the Roman baseline class. **Notes:** This key can be used with a baseline info dictionary to offset to the Roman baseline as a float. It can also be used as the value for kCTBaselineClassAttributeName.

55.4.35 kCTBaselineOriginalFont as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Use the original font for setting the reference baseline. **Notes:** This constant can be used as the value for kCTBaselineReferenceFont to specify that the original font should be used for the reference baseline.

55.4.36 kCTBaselineReferenceFont as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Key to reference a font for the reference baseline. **Notes:** This key can be used to specify a font for the reference baseline. The value is a CTFontMBS or the kCTBaselineOriginalFont constant.
55.4.37 kCTFontCopyrightNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the name specifier constants provide access to the different names associated with a font. **Notes:** The name specifier for the copyright name.

55.4.38 kCTFontDescriptionNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the name specifier constants provide access to the different names associated with a font. **Notes:** The name specifier for the description name.

55.4.39 kCTFontDesignerNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the name specifier constants provide access to the different names associated with a font. **Notes:** The name specifier for the designer name.

55.4.40 kCTFontDesignerURLNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the name specifier constants provide access to the different names associated with a font. **Notes:** The name specifier for the vendor URL name.

55.4.41 kCTFontFamilyNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the name specifier constants provide access to the different names associated with a font. **Notes:** The name specifier for the family name.

55.4.42 kCTFontFeatureSelectorDefaultKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys to font feature dictionary values. **Notes:** Key to be used with a selector dictionary to get the default indicator for the selector. This value is a boolean, which if present and true, indicates that this selector is the default setting for the current feature type.
55.4.43  kCTFontFeatureSelectorIdentifierKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
One of the keys to font feature dictionary values.
Notes: Key to be used with a selector dictionary corresponding to a feature type to obtain the selector
identifier value as a number.

55.4.44  kCTFontFeatureSelectorNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
One of the keys to font feature dictionary values.
Notes: Key to be used with a selector dictionary to get the localized name string for the selector as a string.

55.4.45  kCTFontFeatureSelectorSettingKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
One of the keys to font feature dictionary values.
Notes: Key to be used with a selector dictionary to get or specify the current setting for the selector. This
value is a Boolean to indicate whether this selector is on or off. If this key is not present, the default setting
is used.

55.4.46  kCTFontFeatureTypeExclusiveKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
One of the keys to font feature dictionary values.
Notes: Key to get the font feature exclusive setting of the feature as a Boolean. The value associated with
this key indicates whether the feature selectors associated with this type should be mutually exclusive.

55.4.47  kCTFontFeatureTypeIdentifierKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
One of the keys to font feature dictionary values.
Notes: Key to get the font feature type value as a number.

55.4.48  kCTFontFeatureTypeNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
One of the keys to font feature dictionary values.
55.4. **CLASS CTFONTMBS**

**Notes:** Key to get the localized font feature type name as a string.

---

**55.4.49  kCTFontFeatureTypeSelectorsKey as string**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys to font feature dictionary values. **Notes:** Key to get the the array of font feature selectors as an array. This is an array of selector dictionaries that contain the values for the font feature selector keys listed in this group.

---

**55.4.50  kCTFontFullNameKey as string**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the name specifier constants provide access to the different names associated with a font. **Notes:** The name specifier for the full name.

---

**55.4.51  kCTFontLicenseNameKey as string**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the name specifier constants provide access to the different names associated with a font. **Notes:** The name specifier for the license name.

---

**55.4.52  kCTFontLicenseURLNameKey as string**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the name specifier constants provide access to the different names associated with a font. **Notes:** The name specifier for the license URL name.

---

**55.4.53  kCTFontManufacturerNameKey as string**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the name specifier constants provide access to the different names associated with a font. **Notes:** The name specifier for the manufacturer name.
55.4.54 kCTFontPostScriptCIDNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the name specifier constants provide access to the different names associated with a font. **Notes:** The name specifier for the PostScript character identifier (CID) font name.

55.4.55 kCTFontPostScriptNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the name specifier constants provide access to the different names associated with a font. **Notes:** The name specifier for the PostScript name.

55.4.56 kCTFontSampleTextNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the name specifier constants provide access to the different names associated with a font. **Notes:** The name specifier for the sample text name string.

55.4.57 kCTFontStyleNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the name specifier constants provide access to the different names associated with a font. **Notes:** The name specifier for the style name.

55.4.58 kCTFontSubFamilyNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the name specifier constants provide access to the different names associated with a font. **Notes:** The name specifier for the subfamily name.

55.4.59 kCTFontTrademarkNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the name specifier constants provide access to the different names associated with a font. **Notes:** The name specifier for the trademark name.
55.4.60  **kCTFontUniqueNameKey as string**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the name specifier constants provide access to the different names associated with a font. **Notes:** The name specifier for the unique name.

55.4.61  **kCTFontVariationAxisDefaultValueKey as string**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys to font variation axis dictionary. **Notes:** Key to get the variation axis default value as a number.

55.4.62  **kCTFontVariationAxisIdentifierKey as string**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys to font variation axis dictionary. **Notes:** Key to get the variation axis identifier value as a number.

55.4.63  **kCTFontVariationAxisMaximumValueKey as string**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys to font variation axis dictionary. **Notes:** Key to get the variation axis maximum value as a number.

55.4.64  **kCTFontVariationAxisMinimumValueKey as string**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys to font variation axis dictionary. **Notes:** Key to get the variation axis minimum value as a number.

55.4.65  **kCTFontVariationAxisNameKey as string**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys to font variation axis dictionary. **Notes:** Key to get the localized variation axis name string.
55.4.66 kCTFontVendorURLNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the name specifier constants provide access to the different names associated with a font.
**Notes:** The name specifier for the vendor URL name.

55.4.67 kCTFontVersionNameKey as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the name specifier constants provide access to the different names associated with a font.
**Notes:** The name specifier for the version name.

55.4.68 LigatureCaretPositions(glyph as Integer) as Double()

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns caret positions within a glyph.
**Notes:**
glyph: A reference to the glyph.
This function is used to obtain caret positions for a specific glyph. The return value is the maximum number of positions possible, and the function will populate the caller’s positions buffer with available positions if possible. This function might not be able to produce positions if the font does not have the appropriate data, in which case it will return 0.

55.4.69 Name(nameKey as string) as String

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns a reference to the requested name of the given font.
**Example:**
```vbscript
dim c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
MsgBox c.name(CTFontMBS.kCTFont FullNameKey)
```
**Notes:**
nameKey: The name specifier. See Name Specifier Constants for possible values.
Returns The requested name for the font, or "" if the font does not have an entry for the requested name. The Unicode version of the name is preferred, otherwise the first available version is returned.
55.4. **CLASS CTFONTMBS**

See also:

- 55.4.70 Name(nameKey as string, byref language as string) as String

55.4.70  **Name(nameKey as string, byref language as string) as String**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

Returns a reference to a localized name for the given font.

**Example:**

```vba
dim c as CTFontMBS = CTFontMBS.CreateWithName(“Times”, 12)
dim lang as string
MsgBox c.name(CTFontMBS.kCTFontFullNameKey, lang)+EndOfLine+lang
// shows name and “en” as language.
```

**Notes:**

nameKey: The name specifier. See Name Specifier Constants for possible values.
language: On output, points to the language string of the returned name string. The format of the language identifier conforms to the RFC 3066bis standard.

Returns a specific localized name from the font reference or “” if the font does not have an entry for the requested name key.

The name is localized based on the user’s global language preference precedence. That is, the users language preference is a list of languages in order of precedence. So, for example, if the list had Japanese and English, in that order, then a font that did not have Japanese name strings but had English strings would return the English strings.

Available in OS X v10.5 and later.

55.4.71  **OpticalBoundsForGlyphs(glyphs() as Integer, boundingRects() as CGRectMBS, options as Integer = 0) as CGRectMBS**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

Calculates the optical bounding rects for an array of glyphs and returns the overall optical bounding rect for the run.

**Notes:**

Fonts may specify the optical edges of glyphs that can be used to make the edges of lines of text line up in a more visually pleasing way. This function returns bounding rects corresponding to this information if
present in a font, otherwise it returns typographic bounding rects (composed of the font’s ascent and descent and a glyph’s advance width).

font: The font reference.
glyphs: An array of count number of glyphs.
boundingRects: An array of count number of CGRects to receive the computed glyph rects. Can be nil, in which case only the overall bounding rect is calculated.
options: Reserved, set to zero.

This function returns the overall bounding rectangle for an array or run of glyphs. The bounding rects of the individual glyphs are returned through the boundingRects parameter. These are the design metrics from the font transformed in font space.

55.4.72 OpticalBoundsForGlyphs(glyphs() as Integer, options as Integer = 0) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Calculates the optical bounding rects for an array of glyphs and returns the overall optical bounding rect for the run.

**Notes:**
Fonts may specify the optical edges of glyphs that can be used to make the edges of lines of text line up in a more visually pleasing way. This function returns bounding rects corresponding to this information if present in a font, otherwise it returns typographic bounding rects (composed of the font’s ascent and descent and a glyph’s advance width).

font: The font reference.
glyphs: An array of count number of glyphs.
boundingRects: An array of count number of CGRects to receive the computed glyph rects. Can be nil, in which case only the overall bounding rect is calculated.
options: Reserved, set to zero.

This function returns the overall bounding rectangle for an array or run of glyphs. The bounding rects of the individual glyphs are returned through the boundingRects parameter. These are the design metrics from the font transformed in font space.

55.4.73 PlatformFont(byref fontAttributes as CTFontDescriptorMBS) as Integer

55.4.74 SupportedLanguages as String()

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array of languages supported by the font.

**Example:**
```vbnet
dim c as CTFontMBS = CTFontMBS.CreateWithName(”Times”, 12)
MsgBox Join(c.SupportedLanguages,EndOfLine)
```

55.4.75 Table(table as string, options as Integer) as Memoryblock

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a reference to the font table data.

**Notes:**
table: The font table identifier as a Font Table Tag Constants constant. See Font Table Tag Constants for possible values.
options: The font table options.

Returns a retained reference to the font table data as a Memoryblock.

55.4.76 VariationAxes as Dictionary()

**Notes:** An array of variation axes dictionaries. Each variation axis dictionary contains the five variation axis keys listed in Font Variation Axis Dictionary Keys.

55.4.77 VerticalTranslationsForGlyphs(glyphs() as Integer) as CGSizeMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Calculates the offset from the default (horizontal) origin to the vertical origin for an array of glyphs.

**Notes:**
glyphs: An array of count number of glyphs. Returns the computed origin offsets in an array of count number of CGSizeMBS objects.

### 55.4.78 Properties

#### 55.4.79 Ascent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the scaled font-ascent metric of the given font. **Notes:**

The font-ascent metric scaled according to the point size and matrix of the font reference. (Read only property)

#### 55.4.80 BoundingBox as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the scaled bounding box of the given font. **Notes:**

The design bounding box of the font, which is the rectangle defined by xMin, yMin, xMax, and yMax values for the font. Returns CGRectNull on error. (Read only property)

#### 55.4.81 CapHeight as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the font-cap-height metric of the given font. **Notes:**

The font cap-height metric scaled according to the point size and matrix of the font reference. (Read only property)

#### 55.4.82 CharacterSet as Variant

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the Unicode character set of the font. **Notes:**

Value is a CFCharacterSetMBS object. The returned character set covers the nominal referenced by the font’s Unicode ‘cmap table.
55.4.83 Descent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the scaled font-descent metric of the given font.
**Notes:**
The font-descent metric scaled according to the point size and matrix of the font reference.
(Read only property)

55.4.84 DisplayName as String

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the display name of the given font.
**Example:**
```vba
dim c as CTFontMBS = CTFontMBS.CreateWithName(”Times”, 12)
MsgBox c.DisplayName
```
**Notes:** (Read only property)

55.4.85 FamilyName as String

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the family name of the given font.
**Example:**
```vba
dim c as CTFontMBS = CTFontMBS.CreateWithName(”Times”, 12)
MsgBox c.FamilyName
```
**Notes:** (Read only property)

55.4.86 File as FolderItem

MBS MacCG Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The font file.
**Example:**
dim f as CTFontMBS = CTFontMBS.CreateWithName("Times")
MsgBox f.file.NativePath

Notes: (Read only property)

55.4.87 FontDescriptor as CTFontDescriptorMBS

Notes: A normalized font descriptor for a font containing enough information to recreate this font at a later time. (Read only property)

55.4.88 FullName as String

Example:
    dim c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
    MsgBox c.FullName

Notes: (Read only property)

55.4.89 GlyphCount as Integer

Notes: (Read only property)

55.4.90 Leading as Double

Notes:
The font-leading metric scaled according to the point size and matrix of the font reference.
(Read only property)

55.4.91 Matrix as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the transformation matrix of the given font.
**Notes:**
The transformation matrix for the given font reference. This is the matrix that was provided when the font was created.
(Read only property)

55.4.92 PostScriptName as String

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the PostScript name of the given font.
**Example:**
```plaintext
dim c as CTFontMBS = CTFontMBS.CreateWithName("Times", 12)
MsgBox c.PostScriptName
```
**Notes:** (Read only property)

55.4.93 Size as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the point size of the given font.
**Notes:**
This is the point size provided when the font was created.
(Read only property)

55.4.94 SlantAngle as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the slant angle of the given font.
**Notes:**
The transformed slant angle of the font. This is equivalent to the italic or caret angle with any skew from the transformation matrix applied.
(Read only property)

**55.4.95 StringEncoding as UInt32**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the best string encoding for legacy format support.
**Notes:**
The best string encoding for the font.
(Read only property)

**55.4.96 SymbolicTraits as UInt32**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the symbolic traits of the given font.
**Notes:**
The symbolic traits of the font. This is equivalent to the kCTFontSymbolicTrait value of the traits dictionary.
(Read only property)

**55.4.97 Traits as Dictionary**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the traits dictionary of the given font.
**Notes:**
A retained reference to the font traits dictionary. Individual traits can be accessed with the trait key constants.
(Read only property)

**55.4.98 UnderlinePosition as Double**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the scaled underline position of the given font.
**Notes:**
The font underline-position metric scaled according to the point size and matrix of the font reference.
(Read only property)
55.4.99 UnderlineThickness as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the scaled underline-thickness metric of the given font.

**Notes:**
The font underline-thickness metric scaled according to the point size and matrix of the font reference. (Read only property)

55.4.100 UnitsPerEm as UInt64

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the units-per-em metric of the given font.

**Notes:** (Read only property)

55.4.101 URL as String

MBS MacCG Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The font URL.

**Example:**

```dim f as CTFontMBS = CTFontMBS.CreateWithName("Times")
MsgBox f.URL```

**Notes:** (Read only property)

55.4.102 Variation as Dictionary

**Notes:**
The keys for each variation correspond to the variation identifier obtained via kCTFontVariationAxisIdentifierKey, which represents the four-character axis code as a number. (Read only property)
55.4.103  XHeight as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the x-height metric of the given font.

**Notes:**
The font x-height metric scaled according to the point size and matrix of the font reference. (Read only property)
55.4.104  Constants

55.4.105  kCTFontOptionsDefault = 0

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the Font Option Constants.  
**Notes:**  
Default options are used.  
Available in OS X v10.6 and later.

55.4.106  kCTFontOptionsPreferSystemFont = 4

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the Font Option Constants.  
**Notes:**  
Font matching prefers to match Apple system fonts.  
Available in OS X v10.6 and later.

55.4.107  kCTFontOptionsPreventAutoActivation = 1

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the Font Option Constants.  
**Notes:**  
Prevents automatic font activation.  
Available in OS X v10.6 and later.

55.4.108  kCTFontTableAcnt = ”acnt”

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:**  
Font table tag for accent attachment.

55.4.109  kCTFontTableAnkr = ”ankr”

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:**  
Anchor points
55.4.110 \texttt{kCTFontTableAvar = ”avar”}

MBS MacCG Plugin, Plugin Version: 14.2. \textbf{Function:} One of the font table tag constants. 
\textbf{Notes:} Font table tag for axis variation.

55.4.111 \texttt{kCTFontTableBASE = ”BASE”}

MBS MacCG Plugin, Plugin Version: 14.2. \textbf{Function:} One of the font table tag constants. 
\textbf{Notes:} Font table tag for the font baseline.

55.4.112 \texttt{kCTFontTableBdat = ”bdat”}

MBS MacCG Plugin, Plugin Version: 14.2. \textbf{Function:} One of the font table tag constants. 
\textbf{Notes:} Font table tag for bitmap data.

55.4.113 \texttt{kCTFontTableBhed = ”bhed”}

MBS MacCG Plugin, Plugin Version: 14.2. \textbf{Function:} One of the font table tag constants. 
\textbf{Notes:} Font table tag for bitmap font header.

55.4.114 \texttt{kCTFontTableBloc = ”bloc”}

MBS MacCG Plugin, Plugin Version: 14.2. \textbf{Function:} One of the font table tag constants. 
\textbf{Notes:} Font table tag for bitmap location.

55.4.115 \texttt{kCTFontTableBsln = ”bsln”}

MBS MacCG Plugin, Plugin Version: 14.2. \textbf{Function:} One of the font table tag constants. 
\textbf{Notes:} Font table tag for baseline.

55.4.116 \texttt{kCTFontTableCFF = ”CFF ”}

MBS MacCG Plugin, Plugin Version: 14.2. \textbf{Function:} One of the font table tag constants. 
\textbf{Notes:} Font table tag for a PostScript font program.
55.4. CLASS CTFONTMBS

55.4.117 kCTFontTableCmap = "cmap"
MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for character-to-glyph mapping.

55.4.118 kCTFontTableCvar = "cvar"
MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for control value variation, or CVT variation.

55.4.119 kCTFontTableCvt = "cvt"
MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for control value table.

55.4.120 kCTFontTableDSIG = "DSIG"
MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for a digital signature.

55.4.121 kCTFontTableEBDT = "EBDT"
MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for an embedded bitmap.

55.4.122 kCTFontTableEBLC = "EBLC"
MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for the embedded bitmap location.

55.4.123 kCTFontTableEBSC = "EBSC"
MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for embedded bitmap scaling.
55.4.124  kCTFontTableFdesc = "fdsc"

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for font descriptor.

55.4.125  kCTFontTableFeat = "feat"

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for layout feature.

55.4.126  kCTFontTableFmtx = "fmtx"

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for font metrics.

55.4.127  kCTFontTableFpgm = "fpgm"

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for font program.

55.4.128  kCTFontTableFvar = "fvar"

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for font variation.

55.4.129  kCTFontTableGasp = "gasp"

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for grid-fitting/scan-conversion.

55.4.130  kCTFontTableGDEF = "GDEF"

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for glyph definition.
55.4. CLASS CTFONTMBS

55.4.131 kCTFontTableGlyf = ”glyf”
MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants. **Notes:** Font table tag for glyph data.

55.4.132 kCTFontTableGPOS = ”GPOS”
MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants. **Notes:** Font table tag for glyph positioning.

55.4.133 kCTFontTableGSUB = ”GSUB”
MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants. **Notes:** Font table tag for glyph substitution.

55.4.134 kCTFontTableGvar = ”gvar”
MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants. **Notes:** Font table tag for glyph variation.

55.4.135 kCTFontTableHdmx = ”hdmx”
MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants. **Notes:** Font table tag for horizontal device metrics.

55.4.136 kCTFontTableHead = ”head”
MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants. **Notes:** Font table tag for font header.

55.4.137 kCTFontTableHhea = ”hhea”
MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants. **Notes:** Font table tag for horizontal header.
55.4.138 \texttt{kCTFontTableHmtx = "hmtx"}

55.4.139 \texttt{kCTFontTableHsty = "hsty"}

55.4.140 \texttt{kCTFontTableJSTF = "JSTF"}

55.4.141 \texttt{kCTFontTableJust = "just"}

55.4.142 \texttt{kCTFontTableKern = "kern"}

55.4.143 \texttt{kCTFontTableKerx = "kerx"}

55.4.144 \texttt{kCTFontTableLcar = "lcar"}

55.4.145  kCTFontTableLoca = "loca"

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for index to location.

55.4.146  kCTFontTableLtag = "ltag"

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Language tags

55.4.147  kCTFontTableLTSH = "LTSH"

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for linear threshold.

55.4.148  kCTFontTableMaxp = "maxp"

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for maximum profile.

55.4.149  kCTFontTableMort = "mort"

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for morph.

55.4.150  kCTFontTableMorx = "morx"

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for extended morph.

55.4.151  kCTFontTableName = "name"

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants.  
**Notes:** Font table tag for naming table.
55.4.152  \texttt{kCTFontTableOpbd = "opbd"}

MBS MacCG Plugin, Plugin Version: 14.2. \textbf{Function:} One of the font table tag constants. 
\textbf{Notes:} Font table tag for optical bounds.

55.4.153  \texttt{kCTFontTableOptionExcludeSynthetic = 1}

MBS MacCG Plugin, Plugin Version: 14.2. \textbf{Function:} One of the Font Table Option Constants. 
\textbf{Notes:} 
The font table excludes synthetic font data. 
Available in OS X v10.5 and later. 
Deprecated in OS X v10.8.

55.4.154  \texttt{kCTFontTableOptionNoOptions = 0}

MBS MacCG Plugin, Plugin Version: 14.2. \textbf{Function:} One of the Font Table Option Constants. 
\textbf{Notes:} No font table options are specified.

55.4.155  \texttt{kCTFontTableOS2 = "OS/2"}

MBS MacCG Plugin, Plugin Version: 14.2. \textbf{Function:} One of the font table tag constants. 
\textbf{Notes:} Font table tag for OS/2 and Windows-specific metrics.

55.4.156  \texttt{kCTFontTablePCLT = "PCLT"}

MBS MacCG Plugin, Plugin Version: 14.2. \textbf{Function:} One of the font table tag constants. 
\textbf{Notes:} Font table tag for PCL 5 data.

55.4.157  \texttt{kCTFontTablePost = "post"}

MBS MacCG Plugin, Plugin Version: 14.2. \textbf{Function:} One of the font table tag constants. 
\textbf{Notes:} Font table tag for PostScript information.
55.4.158 kCTFontTablePrep = "prep"

55.4.159 kCTFontTableProp = "prop"

55.4.160 kCTFontTableSbit = "sbit"

55.4.161 kCTFontTableSbix = "sbix"

55.4.162 kCTFontTableTrak = "trak"

55.4.163 kCTFontTableVDMX = "VDMX"

55.4.164  kCTFontTableVhea = "vhea"

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants. **Notes:** Font table tag for vertical header.

55.4.165  kCTFontTableVmtx = "vmtx"

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants. **Notes:** Font table tag for vertical metrics.

55.4.166  kCTFontTableVORG = "VORG"

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants. **Notes:** Font table tag for vertical origin.

55.4.167  kCTFontTableZapf = "Zapf"

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the font table tag constants. **Notes:** Font table tag for glyph reference.

55.4.168  kCTFontUIFontAlertHeader = 18

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants **Notes:** The font used for alert headers.

55.4.169  kCTFontUIFontApplication = 9

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants **Notes:** The default font for text documents.

55.4.170  kCTFontUIFontControlContent = 26

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants **Notes:** The font used for contents of user-interface controls.
55.4.171  kCTFontUIFontEmphasizedSystem = 3

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants
**Notes:** The system font used for emphasis in alerts.

55.4.172  kCTFontUIFontEmphasizedSystemDetail = 20

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants
**Notes:** The system font used for emphasis in details.

55.4.173  kCTFontUIFontLabel = 10

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants
**Notes:** The font used for labels and tick marks on full-size sliders.

55.4.174  kCTFontUIFontMenuItem = 12

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants
**Notes:** The font used for menu items.

55.4.175  kCTFontUIFontMenuItemCmdKey = 14

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants
**Notes:** The font used for menu-item command-key equivalents.

55.4.176  kCTFontUIFontMenuItemMark = 13

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants
**Notes:** The font used to draw menu item marks.

55.4.177  kCTFontUIFontMenuTitle = 11

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants
**Notes:** The font used for menu titles.
55.4.178  kCTFontUIFontMessage = 23

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants
**Notes:** The font used for standard interface items, such as button labels, menu items, and so on.

55.4.179  kCTFontUIFontMiniEmphasizedSystem = 7

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants
**Notes:** The small system font used for emphasis.

55.4.180  kCTFontUIFontMiniSystem = 6

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants
**Notes:** The standard small system font used for informative text in alerts, column headings in lists, help
tags, and small controls.

55.4.181  kCTFontUIFontNone = -1

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants
**Notes:** The user-interface font type is not specified.

55.4.182  kCTFontUIFontPalette = 24

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants
**Notes:** The font used in tool palettes.

55.4.183  kCTFontUIFontPushButton = 16

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants
**Notes:** The font used for a push button (a rounded rectangular button with a text label on it).

55.4.184  kCTFontUIFontSmallEmphasizedSystem = 5

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants
**Notes:** The system font used for emphasis in alerts.
55.4.185  kCTFontUIFontSmallSystem = 4

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants  
**Notes:** The standard small system font used for informative text in alerts, column headings in lists, help tags, and small controls.

55.4.186  kCTFontUIFontSmallToolbar = 22

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants  
**Notes:** The small font used for labels of toolbar items.

55.4.187  kCTFontUIFontSystem = 2

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants  
**Notes:** The system font used for standard user-interface items such as button labels, menu items, and so on.

55.4.188  kCTFontUIFontSystemDetail = 19

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants  
**Notes:** The standard system font used for details.

55.4.189  kCTFontUIFontToolbar = 21

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants  
**Notes:** The font used for labels of toolbar items.

55.4.190  kCTFontUIFontToolTip = 25

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants  
**Notes:** The font used for tool tips.

55.4.191  kCTFontUIFontUser = 0

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants  
**Notes:** The font used by default for documents and other text under the users control (that is, text whose
font the user can normally change).

55.4.192  kCTFontUIFontUserFixedPitch = 1

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants  
**Notes:** The font used by default for documents and other text under the users control when that font is fixed-pitch. Available in OS X v10.5 and later.

55.4.193  kCTFontUIFontUtilityWindowTitle = 17

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants  
**Notes:** The font used for utility window titles.

55.4.194  kCTFontUIFontViews = 8

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants  
**Notes:** The view font used as the default font of text in lists and tables.

55.4.195  kCTFontUIFontWindowTitle = 15

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the User Interface Type Constants  
**Notes:** The font used for utility window titles.
55.5. CLASS CTFRAMEMBS

55.5. class CTFrameMBS

55.5.1 class CTFrameMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The CTFrame opaque type represents a frame containing multiple lines of text.

**Example:**

```dim longText as string = "Lorem ipsum dolor sit amet..."

dim ct as new CFStringMBS(longText)
dim s as new CFAttributedStringMBS(ct, nil)
```

// layout master
dim framesetter as CTFramesetterMBS = CTFramesetterMBS.CreateWithAttributedString(s)

// a column
dim ColumnPath as new CGMutablePathMBS
dim Rect as new CGRectMBS(0, 0, g.Width, g.Height)
ColumnPath.AddRect nil, Rect

// context
dim CGContextHandle as Integer = g.Handle(g.HandleTypeCGContextRef)
dim CGContext as CGContextMBS = CGContextMBS.contextWithCGContext(CGContextHandle)

CGContext.SaveGState
// reset text matrix
dim a as CGAffineTransformMBS = CGAffineTransformMBS.Identity
CGContext.TextMatrix = a

```dim Frame as CTFrameMBS = framesetter.CreateFrame(0, 0, ColumnPath, nil)
```

// draw
Frame.Draw(CGContext)

// cleanup
CGContext.RestoreGState
CGContext.Flush

**Notes:**
The frame object is the output resulting from the text-framing process performed by a framesetter object.

You can draw the entire text frame directly into the current graphic context. The frame object contains an array of line objects that can be retrieved for individual rendering or to get glyph information. Subclass of the CFObjectMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

### 55.5.2 Methods

#### 55.5.3 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this class is available. **Notes:** Returns true in OS X v10.5 and later.

#### 55.5.4 Constructor

#### 55.5.5 Draw(context as CGContextMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Draws an entire frame into a context. **Notes:** context: The context in which to draw the frame. If both the frame and the context are valid, the frame is drawn in the context. This call can leave the context in any state and does not flush it after the draw operation.

#### 55.5.6 kCTFrameClippingPathsAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the attributes keys. **Notes:** Specifies array of paths to clip frame. The value must be a array containing dictionaries. Each dictionary should have a kCTFramePathClippingPathAttributeName key-value pair, and can have a kCTFramePathFillRuleAttributeName key-value pair and kCTFramePathFillRuleAttributeName key-value pair as optional parameters. Available in OS X v10.7 and later.
55.5. **CLASS CTFRAMEMEMBS**

### 55.5.7  kCTFramePathClippingPathAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the attributes keys. **Notes:**

Specifies clipping path. This attribute is valid only in a dictionary contained in an array specified by kCTFrameClippingPathsAttributeName.

The value must be a CGPathMBS specifying a clipping path. See kCTFrameClippingPathsAttributeName. Available in OS X v10.7 and later.

### 55.5.8  kCTFramePathFillRuleAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

The key used to specify the fill rule for a frame. **Notes:**

The value must be a CFNumberRef object containing a CTFramePathFillRule constant. See CTFramePathFillRule Constants for more information. The default value is kCTFramePathFillEvenOdd. Available in OS X v10.7 and later.

### 55.5.9  kCTFramePathWidthAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

One of the attributes keys. **Notes:**

The key used to specify the frame width. The value must be a number containing a value specifying the frame width. The default width value is zero. Available in OS X v10.7 and later.

### 55.5.10  kCTFrameProgressionAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**

One of the attributes keys. **Notes:**

Specifies progression for a frame. A number containing a CTFrameProgression constant. The default is kCTFrameProgressionTopToBottom. Available in OS X v10.5 and later.
This value determines the line-stacking behavior for a frame and does not affect the appearance of the glyphs within that frame.

55.5.11  LineOrigins(location as Integer, length as Integer) as CGPointMBS()

Function: Copies a range of line origins for a frame.  
Notes:  
location and length: The range of line origins you wish to copy. If the length of the range is 0, then the copy operation continues from the start index of the range to the last line origin.  

Returns array with CGPoints. Empty array in case of errors.  

Special Considerations  
In versions of OS X prior to 10.7 and versions of iOS prior to 4.2, this function may function unpredictably if the frame is not rectangular.  

55.5.12  Lines as CTLineMBS()  

Function: Returns an array of lines stored in the frame.  

55.5.13  Properties  

55.5.14  FrameAttributes as Dictionary  

Function: Returns the frame attributes used to create the frame.  
Notes:  
Returns a reference to a CFDictionary object containing the frame attributes that were used to create the frame, or, if the frame was created without any frame attributes, nil.  

You can create a frame with an attributes dictionary to control various aspects of the framing process. These attributes are different from the ones used to create an attributed string.  
(Read only property)
55.5. **CLASS CTFRAMEMBS**

55.5.15 **Path as CGPathMBS**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the path used to create the frame.
**Notes:** (Read only property)

55.5.16 **StringLengthRange as Integer**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the range of characters originally requested to fill the frame.
**Notes:** (Read only property)

55.5.17 **StringLengthLocation as Integer**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the range of characters originally requested to fill the frame.
**Notes:** (Read only property)

55.5.18 **VisibleStringLengthRange as Integer**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the range of characters that actually fit in the frame.
**Notes:**
This function can be used to cascade frames, because it returns the range of characters that can be seen in the frame. The next frame would start where this frame ends.
(Read only property)

55.5.19 **VisibleStringLengthLocation as Integer**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the range of characters that actually fit in the frame.
**Notes:**
This function can be used to cascade frames, because it returns the range of characters that can be seen in the frame. The next frame would start where this frame ends.
(Read only property)
55.5.20 Constants

55.5.21 kCTFramePathFillEvenOdd = 0

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the constants to specify the fill rule used by a frame.
Notes:
Text is filled in the area that would be painted if the path were given to CGContextMBS.EOFillPath. Available in OS X v10.7 and later.

55.5.22 kCTFramePathFillWindingNumber = 1

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the constants to specify the fill rule used by a frame.
Notes:
Text is fill in the area that would be painted if the path were given to CGContextMBS.FillPath. Available in OS X v10.7 and later.

55.5.23 kCTFrameProgressionLeftToRight = 2

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the constants to specify frame progression types.
Notes:
Lines are stacked left to right for vertical text. The lines of text within a frame may be stacked for either horizontal or vertical text. Values are enumerated for each stacking type supported by CTFrame. Frames created with a progression type specifying vertical text rotate lines 90 degrees counterclockwise when drawing.

55.5.24 kCTFrameProgressionRightToLeft = 1

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the constants to specify frame progression types.
Notes:
Lines are stacked right to left for vertical text. The lines of text within a frame may be stacked for either horizontal or vertical text. Values are enumerated for each stacking type supported by CTFrame. Frames created with a progression type specifying vertical text rotate lines 90 degrees counterclockwise when drawing.
55.5.25  \( \text{kCTFrameProgressionTopToBottom} = 0 \)

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants to specify frame progression types.

**Notes:**

Lines are stacked top to bottom for horizontal text.
The lines of text within a frame may be stacked for either horizontal or vertical text. Values are enumerated for each stacking type supported by CTFrame. Frames created with a progression type specifying vertical text rotate lines 90 degrees counterclockwise when drawing.
55.6 class CTFramesetterMBS

55.6.1 class CTFramesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The CTFramesetter opaque type is used to generate text frames. That is, CTFramesetter is an object factory for CTFrame objects.
**Notes:**
The framesetter takes an attributed string object and a shape descriptor object and calls into the typesetter to create line objects that fill that shape. The output is a frame object containing an array of lines. The frame can then draw itself directly into the current graphic context.
Subclass of the CFObjectMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

55.6.2 Methods

55.6.3 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Whether this class is available.
**Notes:** Returns true in OS X v10.5 and later.

55.6.4 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The private constructor.

55.6.5 CreateFrame(location as Integer, length as Integer, path as CGPathMBS, frameAttributes as dictionary = nil) as CTFrameMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates an immutable frame using a framesetter.
**Notes:**
location and length: The range, of the attributed string that was used to create the framesetter, that is to be typeset in lines fitted into the frame. If the length portion of the range is set to 0, then the framesetter continues to add lines until it runs out of text or space.
path: A CGPath object that specifies the shape of the frame. The path may be non-rectangular in versions of OS X v10.7 or later and versions of iOS 4.2 or later.
frameAttributes: Additional attributes that control the frame filling process can be specified here, or nil if
there are no such attributes.

Returns a reference to a new CTFrame object if the call was successful; otherwise, nil.

This call creates a frame full of glyphs in the shape of the path provided by the path parameter. The framesetter continues to fill the frame until it either runs out of text or it finds that text no longer fits.

Special Considerations
In versions of OS X prior to 10.7 and versions of iOS prior to 4.2, this function returns NULL if the CGPath specified by the path parameter is not rectangular.

55.6.6 CreateWithAttributedString(s as CFAttributedStringMBS) as CTFramesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates an immutable framesetter object from an attributed string.

**Notes:**

s: The attributed string with which to construct the framesetter object.

Returns a reference to a CTFramesetter object if the call was successful; otherwise, NULL. The resultant framesetter object can be used to create and fill text frames with the CreateFrame call.

55.6.7 SuggestFrameSizeWithConstraints(location as Integer, length as Integer, frameAttributes as dictionary, constraints as CGSizeMBS, byref fitRangeLocation as Integer, byref fitRangeLength as Integer) as CGSizeMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determines the frame size needed for a string range.

**Notes:**

location and length: The string range to which the frame size applies. The string range is a range over the string used to create the framesetter. If the length portion of the range is set to 0, then the framesetter continues to add lines until it runs out of text or space.

frameAttributes: Additional attributes that control the frame filling process, or NULL if there are no such attributes.

constraints: The width and height to which the frame size is constrained. A value of CGFLOAT_MAX for either dimension indicates that it should be treated as unconstrained.

fitRange: On return, contains the range of the string that actually fit in the constrained size.
Returns the actual dimensions for the given string range and constraints.

This function can be used to determine how much space is needed to display a string, optionally by con- straining the space along either dimension.
Available in OS X v10.5 and later.

55.6.8 Properties

55.6.9 TypeSetter as CTTypesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns the typesetter object being used by the framesetter.
Notes:
Return sa reference to a CTTypesetter object if the call was successful; otherwise, nil. The framesetter maintains a reference to the returned object, which should not be released by the caller.

Each framesetter uses a typesetter internally to perform line breaking and other contextual analysis based on the characters in a string; this function returns the typesetter being used by a particular framesetter in case the caller would like to perform other operations on that typesetter.

Available in OS X v10.5 and later.
(Read only property)
55.7.  CLASS CTGLYPHINFOMBS

55.7   class CTGlyphInfoMBS

55.7.1   class CTGlyphInfoMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The CTGlyphInfo opaque type enables you to override a font’s specified mapping from Unicode to the glyph ID. **Notes:** Subclass of the CFObjectMBS class. This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

55.7.2   Methods

55.7.3   Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this class is available. **Notes:** Returns true in OS X v10.5 and later.

55.7.4   Constructor

55.7.5   CreateWithCharacterIdentifier(cid as Integer, collection as Integer, baseString as string) as CTGlyphInfoMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates an immutable glyph info object with a character identifier. **Notes:**
cid: A character identifier.
collection: A character collection identifier.
baseString: The part of the string the returned object is intended to override.

Returns a valid reference to an immutable CTGlyphInfoMBS object if glyph info creation was successful; otherwise, nil.

This function creates an immutable glyph info object for a character identifier and a character collection.
55.7.6 CreateWithGlyph(glyph as Integer, font as CTFontMBS, baseString as string) as CTGlyphInfoMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates an immutable glyph info object with a glyph index.  
**Notes:**  
glyph: The index of the glyph.  
font: The font to be associated with the returned CTGlyphInfoMBS object.  
baseString: The part of the string the returned object is intended to override.  

Returns a valid reference to an immutable CTGlyphInfoMBS object, if glyph info creation was successful; otherwise, nil.  

This function creates an immutable glyph info object for a glyph index using a specified font.  
Available in OS X v10.5 and later.

55.7.7 CreateWithGlyphName(glyphName as string, font as CTFontMBS, baseString as string) as CTGlyphInfoMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates an immutable glyph info object with a glyph name.  
**Notes:**  
glyphName: The name of the glyph.  
font: The font to be associated with the returned CTGlyphInfo object.  
baseString: The part of the string the returned object is intended to override.  

Returns a valid reference to an immutable CTGlyphInfo object if glyph info creation was successful; otherwise, nil.  
This function creates an immutable glyph info object for a glyph name such as copyright using a specified font.  
Available in OS X v10.5 and later.
55.7. **CLASS CTGLYPHINFOMBS**

55.7.8 **Properties**

55.7.9 **CharacterCollection as Integer**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Gets the character collection for a glyph info object.

**Notes:**
If the glyph info object was created with a glyph name or a glyph index, its character collection is kCTIdentityMappingCharacterCollection.
(Read only property)

55.7.10 **CharacterIdentifier as Integer**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Gets the character identifier for a glyph info object.

**Notes:** (Read only property)

55.7.11 **GlyphName as String**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Gets the glyph name for a glyph info object if that object exists.

**Notes:** (Read only property)

55.7.12 **Constants**

55.7.13 **kCTAdobeCNS1CharacterCollection = 1**

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants to specify character collections.

**Notes:** The Adobe-CNS1 mapping.

55.7.14 **kCTAdobeGB1CharacterCollection = 2**

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants to specify character collections.

**Notes:** The Adobe-GB1 mapping.
55.7.15  \textbf{kCTAdobeJapan1CharacterCollection} = 3

55.7.16  \textbf{kCTAdobeJapan2CharacterCollection} = 4

55.7.17  \textbf{kCTAdobeKorea1CharacterCollection} = 5

MBS MacCG Plugin, Plugin Version: 14.2. \textbf{Function:} One of the constants to specify character collections. \textbf{Notes:} The Adobe-Korea1 mapping.

55.7.18  \textbf{kCTCharacterCollectionAdobeCNS1} = 1

55.7.19  \textbf{kCTCharacterCollectionAdobeGB1} = 2

55.7.20  \textbf{kCTCharacterCollectionAdobeJapan1} = 3

55.7.21  \textbf{kCTCharacterCollectionAdobeJapan2} = 4

55.7.22 kCTCharacterCollectionAdobeKorea1 = 5

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants to specify character collections. **Notes:** The Adobe-Korea1 mapping.

55.7.23 kCTCharacterCollectionIdentityMapping = 0

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants to specify character collections. **Notes:** The character identifier is equal to the CGGlyph glyph index.

55.7.24 kCTIdentityMappingCharacterCollection = 0

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants to specify character collections. **Notes:** The character identifier is equal to the CGGlyph glyph index.
55.8 class CTLineMBS

55.8.1 class CTLineMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
The CTLine opaque type represents a line of text.

Example:

Sub Paint(g As Graphics)
    // inside paint event of a Canvas
    // create a font, quasi systemFontWithSize:24.0
    dim sysUIFont as CTFontMBS = CTFontMBS.CreateUIFontForLanguage(CTFontMBS.kCTFontUIFontSystem, 24.0)
    // create a naked string
    dim text as string = "Some Text."
    // blue
    dim cgColor as CGColorMBS = CGColorMBS.CreateGenericRGB(0.0, 0.0, 1.0)
    // single underline
    dim underline as Integer = CoreTextMBS.kCTUnderlineStyleSingle
    // pack it into attributes dictionary
    dim attributesDict as new Dictionary
    attributesDict.Value(CoreTextMBS.kCTFontAttributeName) = sysUIFont
    attributesDict.Value(CoreTextMBS.kCTForegroundColorAttributeName) = cgColor
    attributesDict.Value(CoreTextMBS.kCTUnderlineStyleAttributeName) = underline
    // make the attributed string
    dim cfDic as new CFDictionaryMBS(attributesDict)
    dim cfStr as new CFStringMBS(text)
    dim stringToDraw as CFAttributedStringMBS = CFAttributedStringMBS.Create(cfStr, cfDic)
    // now for the actual drawing
    dim CGContextHandle as Integer = g.Handle(g.HandleTypeCGContextRef)
    dim CGContext as CGContextMBS = CGContextMBS.contextWithCGContext(CGContextHandle)
    CGContext.SaveGState
    // reset text matrix
    dim a as CGAffineTransformMBS = CGAffineTransformMBS.Identity
    CGContext.TextMatrix = a
    // draw
    dim line as CTLineMBS = CTLineMBS.CreateWithAttributedString(stringToDraw)
55.8. CLASS CTLINEMBS

```csharp
dim x as Integer = 10
dim y as Integer = 10

// plus text height
y = y + 24

// swap y
y = g.Height - y

CGContext.TextPosition = new CGPointMBS(x, y)
line.Draw(CGContext)

CGContext.RestoreGState
CGContext.Flush
End Sub
```

**Notes:**
A CTLLine object contains an array of glyph runs. Line objects are created by the typesetter during a frame-setting operation and can draw themselves directly into a graphics context. Subclass of the CFObjectMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

### 55.8.2 Methods

### 55.8.3 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Whether this class is available.
**Notes:** Returns true in OS X v10.5 and later.

### 55.8.4 Bounds(options as Integer = 0) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Queries bounds.
55.8.5 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The private constructor.

55.8.6 CreateJustifiedLine(justificationFactor as Double, justificationWidth as Double) as CTLineMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates a justified line from an existing line.
**Notes:**
- line: The line from which to create a justified line.
- justificationFactor: Full or partial justification. When set to 1.0 or greater, full justification is performed. If this parameter is set to less than 1.0, varying degrees of partial justification are performed. If it is set to 0 or less, no justification is performed.
- justificationWidth: The width to which the resultant line is justified. If justificationWidth is less than the actual width of the line, then negative justification is performed (that is, glyphs are squeezed together).

Returns a reference to a justified CTLine object if the call was successful; otherwise, nil.
Available in OS X v10.5 and later.

55.8.7 CreateTruncatedLine(width as Double, truncationType as Integer, truncationToken as CTLineMBS = nil) as CTLineMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates a truncated line from an existing line.
**Notes:**
- line: The line from which to create a truncated line.
- width: The width at which truncation begins. The line is truncated if its width is greater than the width passed in this parameter.
- truncationType: The type of truncation to perform if needed. See constants for possible values.
- truncationToken: This token is added at the point where truncation took place, to indicate that the line was truncated. Usually, the truncation token is the ellipsis character (U+2026). If this parameter is set to nil, then no truncation token is used and the line is simply cut off.

Returns a reference to a truncated CTLine object if the call was successful; otherwise, NULL.

The line specified in truncationToken should have a width less than the width specified by the width parameter. If the width of the line specified in truncationToken is greater than width and truncation is needed, the function returns nil.
Available in OS X v10.5 and later.

55.8.8 CreateWithAttributedString(s as CFAttributedStringMBS) as CTLineMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a single immutable line object directly from an attributed string.

**Notes:**
- `s`: The string from which the line is created.

Returns a reference to a CTLine object if the call was successful; otherwise, nil.

This function allows clients who need very simple line generation to create a line without creating a typesetter object. The typesetting is done under the hood. Without a typesetter object, the line cannot be properly broken. However, for simple things like text labels, line breaking is not an issue.

Available in OS X v10.5 and later.

55.8.9 Draw(context as CGContextMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Draws a complete line.

**Notes:**
- `context`: The context into which the line is drawn.

This is a convenience function because the line could be drawn run-by-run by getting the glyph runs, getting the glyphs out of them, and calling a function such as CGContextMBS.ShowGlyphsAtPositions. This call can leave the graphics context in any state and does not flush the context after the draw operation.

Available in OS X v10.5 and later.

55.8.10 GlyphRuns as CTRunMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the array of glyph runs that make up the line object.

**Notes:**
- Returns an array containing the CTRunMBS objects that make up the line.

Available in OS X v10.5 and later.
55.8.11 *ImageBounds(context as CGContextMBS) as CGRectMBS*

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Calculates the image bounds for a line.

**Notes:**

context: The context for which the image bounds are calculated. This is required because the context could have settings in it that would cause changes in the image bounds.

Returns a rectangle that tightly encloses the paths of the line’s glyphs, or, if the line or context is invalid, CGRectNull.
Available in OS X v10.5 and later.

55.8.12 *OffsetForStringIndex(charIndex as Integer, byref secondaryOffset as Double) as Double*

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determines the graphical offset or offsets for a string index.

**Notes:**

charIndex: The string index corresponding to the desired position.
secondaryOffset: On output, the secondary offset along the baseline for charIndex. When a single caret is sufficient for a string index, this value will be the same as the primary offset, which is the return value of this function. May be NULL.

Returns the primary offset along the baseline for charIndex, or 0.0 if the line does not support string access.

This function returns the graphical offset or offsets corresponding to a string index, suitable for movement between adjacent lines or for drawing a custom caret. For moving between adjacent lines, the primary offset can be adjusted for any relative indentation of the two lines; a CGPoint constructed with the adjusted offset for its x value and 0.0 for its y value is suitable for passing to CTLineGetStringIndexForPosition. For drawing a custom caret, the returned primary offset corresponds to the portion of the caret that represents the visual insertion location for a character whose direction matches the line’s writing direction.

Available in OS X v10.5 and later.
55.8.13 PenOffsetForFlush(flushFactor as Double, flushWidth as Double) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the pen offset required to draw flush text.

**Notes:**
- flushFactor: Determines the type of flushness. A flushFactor of 0 or less indicates left flush. A flushFactor of 1.0 or more indicates right flush. Flush factors between 0 and 1.0 indicate varying degrees of center flush, with a value of 0.5 being totally center flush.
- flushWidth: Specifies the width to which the flushness operation should apply.

Returns the offset from the current pen position for the flush operation.
Available in OS X v10.5 and later.

55.8.14 StringIndexForPosition(position as CGPointMBS) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Performs hit testing.

**Notes:**
- position: The location of the mouse click relative to the line’s origin.

Returns the string index for the position, or if the line does not support string access, kCFNotFound. Relative to the line’s string range, this value can be no less than the first string index and no greater than the last string index plus 1.

This function can be used to determine the string index for a mouse click or other event. This string index corresponds to the character before which the next character should be inserted. This determination is made by analyzing the string from which a typesetter was created and the corresponding glyphs as embodied by a particular line.
Available in OS X v10.5 and later.

55.8.15 TypographicBounds(byref ascent as Double, byref descent as Double, byref leading as Double) as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Calculates the typographic bounds of a line.

**Notes:**
- ascent: On output, the ascent of the line.
- descent: On output, the descent of the line.
- leading: On output, the leading of the line.
Returns the typographic width of the line. If the line is invalid, this function returns 0.

55.8.16 Properties

55.8.17 GlyphCount as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the total glyph count for the line object.

**Notes:**
The total glyph count is equal to the sum of all of the glyphs in the glyph runs forming the line. (Read only property)

55.8.18 StringRangeLength as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Gets the range of characters that originally spawned the glyphs in the line.

**Notes:** (Read only property)

55.8.19 StringRangeLocation as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Gets the range of characters that originally spawned the glyphs in the line.

**Notes:** (Read only property)

55.8.20 TrailingWhitespaceWidth as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the trailing whitespace width for a line.

**Notes:**
The width of the line’s trailing whitespace. If the line is invalid, this function will always return zero.

Creating a line for a width can result in a line that is actually longer than the desired width due to trailing whitespace. Although this is typically not an issue due to whitespace being invisible, this function can be used to determine what amount of a line’s width is due to trailing whitespace. Available in OS X v10.5 and later.
55.8. Constants

55.8.21 kCTLineBoundsExcludeTypographicLeading = 1

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the line bounds constants. **Notes:** Pass this option to exclude typographic leading.

55.8.22 kCTLineBoundsExcludeTypographicShifts = 2

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the line bounds constants. **Notes:** Pass this option to ignore cross-stream shifts due to positioning (such as kerning or baseline alignment).

55.8.23 kCTLineBoundsUseGlyphPathBounds = 8

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the line bounds constants. **Notes:** Pass this option to use glyph path bounds rather than the default typographic bounds.

55.8.24 kCTLineBoundsUseHangingPunctuation = 4

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the line bounds constants. **Notes:** Normally line bounds include all glyphs; pass this option to treat standard punctuation hanging off either end of the line as fully hanging.

55.8.25 kCTLineBoundsUseOpticalBounds = 16

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the line bounds constants. **Notes:** Pass this option to use optical bounds. This option overrides kCTLineBoundsUseGlyphPathBounds.

55.8.26 kCTLineTruncationEnd = 1

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the values to tell the truncation engine which type of truncation is being requested.
Notes: Truncate the end of the line, leaving the start portion visible.

55.8.28  \texttt{kCTLineTruncationMiddle} = 2

MBS MacCG Plugin, Plugin Version: 14.2. \textbf{Function}: One of the values to tell the truncation engine which type of truncation is being requested.
\textbf{Notes}: Truncate the middle of the line, leaving both the start and the end portions visible.

55.8.29  \texttt{kCTLineTruncationStart} = 0

MBS MacCG Plugin, Plugin Version: 14.2. \textbf{Function}: One of the values to tell the truncation engine which type of truncation is being requested.
\textbf{Notes}: Truncate the beginning of the line, leaving the end portion visible.
55.9. class CTMutableFontCollectionMBS

55.9.1 class CTMutableFontCollectionMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The mutable font collection class.

**Notes:**
Subclass of the CTFontCollectionMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

55.9.2 Methods

55.9.3 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The private constructor.

55.9.4 SetExclusionDescriptors(descriptors() as CTFontDescriptorMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Replaces the array of descriptors to exclude from the match.

55.9.5 SetQueryDescriptors(descriptors() as CTFontDescriptorMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Replaces the array of descriptors to match.
55.10 class CTParagraphStyleMBS

55.10.1 class CTParagraphStyleMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The CTParagraphStyle opaque type represents paragraph or ruler attributes in an attributed string.
**Notes:**
A paragraph style object represents a complex attribute value in an attributed string, storing a number of
subattributes that affect paragraph layout for the characters of the string. Among these subattributes are
alignment, tab stops, writing direction, line-breaking mode, and indentation settings.
Subclass of the CFObjectMBS class.

55.10.2 Methods

55.10.3 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Whether this class is available.
**Notes:** Returns true in OS X v10.5 and later.

55.10.4 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates an immutable paragraph style.
**Notes:**
Returns a valid reference to an immutable CTParagraphStyle object, If the paragraph style creation was
successful; otherwise, nil.

Using this function is the easiest and most efficient way to create a paragraph style. Paragraph styles should
be kept immutable for totally lock-free operation. If an invalid paragraph style setting specifier is passed into
the settings parameter, nothing bad will happen, but you will be unable to query for this value. The rea-
son is to allow backward compatibility with style setting specifiers that may be introduced in future versions.

Available in OS X v10.5 and later.
55.10. CLASS CTParagraphStyleMBS

55.10.5 Create as CTParagraphStyleMBS

**Notes:**
Returns a valid reference to an immutable CTParagraphStyle object, if the paragraph style creation was successful; otherwise, nil.

Using this function is the easiest and most efficient way to create a paragraph style. Paragraph styles should be kept immutable for totally lock-free operation. If an invalid paragraph style setting specifier is passed into the settings parameter, nothing bad will happen, but you will be unable to query for this value. The reason is to allow backward compatibility with style setting specifiers that may be introduced in future versions.

Available in OS X v10.5 and later.

See also:
- 55.10.6 Create(settings() as CTParagraphStyleSettingMBS) as CTParagraphStyleMBS

55.10.6 Create(settings() as CTParagraphStyleSettingMBS) as CTParagraphStyleMBS

**Notes:**
- settings: The settings with which to preload the paragraph style.

Returns a valid reference to an immutable CTParagraphStyle object, if the paragraph style creation was successful; otherwise, nil.

Using this function is the easiest and most efficient way to create a paragraph style. Paragraph styles should be kept immutable for totally lock-free operation. If an invalid paragraph style setting specifier is passed into the settings parameter, nothing bad will happen, but you will be unable to query for this value. The reason is to allow backward compatibility with style setting specifiers that may be introduced in future versions.

Available in OS X v10.5 and later.

See also:
- 55.10.5 Create as CTParagraphStyleMBS
55.10.7  CreateCopy as CTParagraphStyleMBS

**Notes:** A valid reference to an immutable CTParagraphStyle object that is a copy of the one passed into paragraphStyle, If the paragraphStyle reference is valid; otherwise nil, if any error occurred, including being supplied with an invalid reference.

55.10.8  CreateWithAlignment(Alignment as Integer) as CTParagraphStyleMBS

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates an immutable paragraph style.  
**Example:**

```vba
Dim a As Integer
Dim t As CTParagraphStyleMBS
a = CTParagraphStyleMBS.kCTTextAlignmentRight
t = CTParagraphStyleMBS.CreateWithAlignment(a)
MsgBox str(T.Alignment) // shows 1
```

55.10.9  Tab Stops as CTTextTabMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The CTTextTab objects, sorted by location, that define the tab stops for the paragraph style.  
**Notes:** Type: Array of CTTextTabMBS. Default: 12 left-aligned tabs, spaced by 28.0 points. Application: CTFramesetter, CTTypesetter.

55.10.10  Properties

55.10.11  Alignment as Integer

**Notes:** Natural text alignment is realized as left or right alignment, depending on the line sweep direction of the first script contained in the paragraph. Type: CTTextAlignment. Default: kCTNaturalTextAlignment. Application: CTFramesetter.
55.10.12 BaseWritingDirection as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The base writing direction of the lines.
**Notes:**
(Read only property)

55.10.13 DefaultTabInterval as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The documentwide default tab interval.
**Notes:**
Tabs after the last specified by kCTParagraphStyleSpecifierTabStops are placed at integer multiples of this
distance (if positive). Type: CGFloat. Default: 0.0. Application: CTFramesetter, CTTypesetter.
(Read only property)

55.10.14 FirstLineHeadIndent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The distance, in points, from the leading margin of a frame to the beginning of the paragraph’s first line.
**Notes:**
This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

55.10.15 HeadIndent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The distance, in points, from the leading margin of a text container to the beginning of lines other than the first.
**Notes:**
This value is always nonnegative. Type: CGFloat Default: 0.0 Application: CTFramesetter
(Read only property)
55.10.16 LineBoundsOptions as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The options controlling the alignment of the line edges with the leading and trailing margins.

**Notes:**

Type: CTLineBoundsOptions
Default: 0 (no options)
Application: CTTypesetter
(Read only property)

55.10.17 LineBreakMode as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The mode that should be used to break lines when laying out the paragraph’s text.

**Notes:**

Type: CTLineBreakMode. Default: kCTLineBreakByWordWrapping. Application: CTFramesetter
(Read only property)

55.10.18 LineHeightMultiple as Double

**Notes:**

The natural line height of the receiver is multiplied by this factor (if positive) before being constrained by minimum and maximum line height. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

55.10.19 LineSpacingAdjustment as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The space in points added between lines within the paragraph (commonly known as leading).

**Notes:**

Available in OS X v10.7 and later.
(Read only property)
55.10.20 MaximumLineHeight as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum height that any line in the frame will occupy, regardless of the font size or size of any attached graphic.

**Notes:**
Glyphs and graphics exceeding this height will overlap neighboring lines. A maximum height of 0 implies no line height limit. This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

55.10.21 MaximumLineSpacing as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum space in points between lines within the paragraph (commonly known as leading).

**Notes:**
This value is always nonnegative. Available in OS X v10.7 and later.
(Read only property)

55.10.22 MinimumLineHeight as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minimum height that any line in the frame will occupy, regardless of the font size or size of any attached graphic.

**Notes:**
This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.
(Read only property)

55.10.23 MinimumLineSpacing as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minimum space in points between lines within the paragraph (commonly known as leading).

**Notes:**
This value is always nonnegative. Available in OS X v10.7 and later.
(Read only property)
55.10.24  ParagraphSpacing as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The space added at the end of the paragraph to separate it from the following paragraph. **Notes:** This value is always nonnegative and is determined by adding the previous paragraph's kCTParagraphStyleSpecifierParagraphSpacing setting and the current paragraph's kCTParagraphStyleSpecifierParagraphSpacingBefore setting. Type:CGFloat. Default: 0.0. Application: CTFramesetter. (Read only property)

55.10.25  ParagraphSpacingBefore as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The distance between the paragraph's top and the beginning of its text content. **Notes:** Type: CGFloat. Default: 0.0. Application: CTFramesetter. (Read only property)

55.10.26  TailIndent as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The distance, in points, from the margin of a frame to the end of lines. **Notes:** If positive, this value is the distance from the leading margin (for example, the left margin in left-to-right text). If 0 or negative, it’s the distance from the trailing margin. Type: CGFloat. Default: 0.0. Application: CTFramesetter. (Read only property)

55.10.27  Constants

55.10.28  kCTLineBreakByCharWrapping = 1

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants to specify what happens when a line is too long for its frame. **Notes:** Wrapping occurs before the first character that doesn’t fit.
55.10.29  kCTLineBreakByClipping = 2

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the constants to specify what happens when a line is too long for its frame. 
Notes: Lines are simply not drawn past the edge of the frame.

55.10.30  kCTLineBreakByTruncatingHead = 3

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the constants to specify what happens when a line is too long for its frame. 
Notes: Each line is displayed so that the end fits in the frame and the missing text is indicated by an ellipsis glyph.

55.10.31  kCTLineBreakByTruncatingMiddle = 5

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the constants to specify what happens when a line is too long for its frame. 
Notes: Each line is displayed so that the beginning and end fit in the container and the missing text is indicated by an ellipsis glyph in the middle.

55.10.32  kCTLineBreakByTruncatingTail = 4

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the constants to specify what happens when a line is too long for its frame. 
Notes: Each line is displayed so that the beginning fits in the container and the missing text is indicated by an ellipsis glyph.

55.10.33  kCTLineBreakByWordWrapping = 0

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the constants to specify what happens when a line is too long for its frame. 
Notes: Wrapping occurs at word boundaries unless the word itself doesn’t fit on a single line.

55.10.34  kCTParagraphStyleSpecifierAlignment = 0

MBS MacCG Plugin, Plugin Version: 14.2. Function: One of the constants used to query and modify the CTParagraphStyle object. 
Notes:
The text alignment. Natural text alignment is realized as left or right alignment, depending on the line sweep direction of the first script contained in the paragraph. Type: CTTextAlignment. Default: kCTNaturalTextAlignment. Application: CTFramesetter. Available in OS X v10.5 and later.

### 55.10.35 kCTParagraphStyleSpecifierBaseWritingDirection = 13

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants used to query and modify the CTParagraphStyle object. **Notes:** The base writing direction of the lines. Type: CTWritingDirection. Default: kCTWritingDirection-Natural. Application: CTFramesetter, CTTypesetter.

### 55.10.36 kCTParagraphStyleSpecifierDefaultTabInterval = 5

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants used to query and modify the CTParagraphStyle object. **Notes:** The documentwide default tab interval. Tabs after the last specified by kCTParagraphStyleSpecifierTabStops are placed at integer multiples of this distance (if positive). Type: CGFloat. Default: 0.0. Application: CTFramesetter, CTTypesetter.

### 55.10.37 kCTParagraphStyleSpecifierFirstLineHeadIndent = 1

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants used to query and modify the CTParagraphStyle object. **Notes:** The distance, in points, from the leading margin of a frame to the beginning of the paragraph’s first line. This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

### 55.10.38 kCTParagraphStyleSpecifierHeadIndent = 2

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants used to query and modify the CTParagraphStyle object. **Notes:** The distance, in points, from the leading margin of a text container to the beginning of lines other than the first. This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

### 55.10.39 kCTParagraphStyleSpecifierLineBoundsOptions = 17

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants used to query and modify the CTParagraphStyle object.
55.10. **CLASS CTPARAGRAPHSTYLEMBS**

**Notes:**

The options controlling the alignment of the line edges with the leading and trailing margins.

Type: CTLineBoundsOptions  
Default: 0 (no options)  
Application: CTTypesetter

55.10.40 **kCTParagraphStyleSpecifierLineBreakMode = 6**

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants used to query and modify the CTParagraphStyle object.  
**Notes:** The mode that should be used to break lines when laying out the paragraph’s text. Type: CTLineBreakMode. Default: kCTLineBreakByWordWrapping. Application: CTFramesetter

55.10.41 **kCTParagraphStyleSpecifierLineHeightMultiple = 7**

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants used to query and modify the CTParagraphStyle object.  
**Notes:** The line height multiple. The natural line height of the receiver is multiplied by this factor (if positive) before being constrained by minimum and maximum line height. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

55.10.42 **kCTParagraphStyleSpecifierLineSpacing = 10**

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants used to query and modify the CTParagraphStyle object.  
**Notes:** Deprecated. Use kCTParagraphStyleSpecifierMaximumLineSpacing, kCTParagraphStyleSpecifierMinimumLineSpacing, and kCTParagraphStyleSpecifierLineSpaceAdjustment to control space between lines. The space in points added between lines within the paragraph (commonly known as leading). This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

55.10.43 **kCTParagraphStyleSpecifierLineSpacingAdjustment = 16**

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants used to query and modify the CTParagraphStyle object.  
**Notes:**

The space in points added between lines within the paragraph (commonly known as leading). Available in OS X v10.7 and later.
55.10.44  kCTParagraphStyleSpecifierMaximumLineHeight = 8

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants used to query and modify the CTParagraphStyle object.
**Notes:** The maximum height that any line in the frame will occupy, regardless of the font size or size of any attached graphic. Glyphs and graphics exceeding this height will overlap neighboring lines. A maximum height of 0 implies no line height limit. This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

55.10.45  kCTParagraphStyleSpecifierMaximumLineSpacing = 14

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants used to query and modify the CTParagraphStyle object.
**Notes:**
The maximum space in points between lines within the paragraph (commonly known as leading). This value is always nonnegative.
Available in OS X v10.7 and later.

55.10.46  kCTParagraphStyleSpecifierMinimumLineHeight = 9

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants used to query and modify the CTParagraphStyle object.
**Notes:** The minimum height that any line in the frame will occupy, regardless of the font size or size of any attached graphic. This value is always nonnegative. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

55.10.47  kCTParagraphStyleSpecifierMinimumLineSpacing = 15

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants used to query and modify the CTParagraphStyle object.
**Notes:**
The minimum space in points between lines within the paragraph (commonly known as leading). This value is always nonnegative.
Available in OS X v10.7 and later.
### 55.10.48 kCTParagraphStyleSpecifierParagraphSpacing = 11

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants used to query and modify the CTParagraphStyle object.  
**Notes:** The space added at the end of the paragraph to separate it from the following paragraph. This value is always nonnegative and is determined by adding the previous paragraph’s kCTParagraphStyleSpecifierParagraphSpacing setting and the current paragraph’s kCTParagraphStyleSpecifierParagraphSpacingBefore setting. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

### 55.10.49 kCTParagraphStyleSpecifierParagraphSpacingBefore = 12

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants used to query and modify the CTParagraphStyle object.  
**Notes:** The distance between the paragraph’s top and the beginning of its text content. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

### 55.10.50 kCTParagraphStyleSpecifierTabStops = 4

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants used to query and modify the CTParagraphStyle object.  
**Notes:** The CTTextTab objects, sorted by location, that define the tab stops for the paragraph style. Type: CFArray of CTTextTabRef. Default: 12 left-aligned tabs, spaced by 28.0 points. Application: CTFramesetter, CTTypesetter.

### 55.10.51 kCTParagraphStyleSpecifierTailIndent = 3

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants used to query and modify the CTParagraphStyle object.  
**Notes:** The distance, in points, from the margin of a frame to the end of lines. If positive, this value is the distance from the leading margin (for example, the left margin in left-to-right text). If 0 or negative, it’s the distance from the trailing margin. Type: CGFloat. Default: 0.0. Application: CTFramesetter.

### 55.10.52 kCTTextAlignmentCenter = 2

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants to specify text alignment.  
**Notes:** Text is visually center aligned.
55.10.53  kCTTextAlignmentJustified = 3

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants to specify text alignment. **Notes:** Text is fully justified. The last line in a paragraph is naturally aligned.

55.10.54  kCTTextAlignmentLeft = 0

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants to specify text alignment. **Notes:** Text is visually left aligned.

55.10.55  kCTTextAlignmentNatural = 4

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants to specify text alignment. **Notes:** Text uses the natural alignment of the text’s script.

55.10.56  kCTTextAlignmentRight = 1

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants to specify text alignment. **Notes:** Text is visually right aligned.

55.10.57  kCTWritingDirectionLeftToRight = 0

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants to specify the writing direction. **Notes:** The writing direction is left to right.

55.10.58  kCTWritingDirectionNatural = -1

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants to specify the writing direction. **Notes:** The writing direction is algorithmically determined using the Unicode Bidirectional Algorithm rules P2 and P3.

55.10.59  kCTWritingDirectionRightToLeft = 1

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the constants to specify the writing direction. **Notes:** The writing direction is right to left.
55.11. CLASS CTPARAGRAPHSTYLESETTINGMBS

55.11 class CTParagraphStyleSettingMBS

55.11.1 class CTParagraphStyleSettingMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
This class is used to alter the paragraph style.

55.11.2 Methods

55.11.3 SetTextTabs(textTabs() as CTTextTabMBS)

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Sets the array of text tabs.
**Notes:** for use with kCTParagraphStyleSpecifierTabStops.

55.11.4 Properties

55.11.5 doubleValue as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The double value.
**Notes:** (Read and Write property)

55.11.6 intValue as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The integer value.
**Notes:**
Also used for enumerations.
(Read and Write property)

55.11.7 Spec as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The specifier of the setting.
**Notes:**
See CTParagraphStyleMBS for possible values.
(Read and Write property)
55.12. CLASS CTRUNDELEGATEMBS

55.12 class CTRunDelegateMBS

55.12.1 class CTRunDelegateMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The class to get events for CTRun runs.
**Notes:**
The CTRunDelegate opaque type represents a run delegate, which is assigned to a run (attribute range) to control typographic traits such as glyph ascent, glyph descent, and glyph width.

The events defined for CTRunDelegate are used to modify glyph metrics during layout. The values returned by the delegate are applied to each glyph in the run or runs corresponding to the attribute with that delegate. Subclass of the CFObjectMBS class.

55.12.2 Methods

55.12.3 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Whether this class is available.
**Notes:** Returns true in OS X v10.5 and later.

55.12.4 Close

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Shuts down the delegate.
**Notes:** Please call this to explicitly end the delegate and avoid memory leaks.
See also:
* 55.12.7 Close

55.12.5 Constructor

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates an immutable instance of a run delegate.
**Notes:** The run-delegate object can be used for reserving space in a line or for eliding the glyphs for a range of text altogether.
55.12.6 Events

55.12.7 Close

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event called when item closes.

See also:

- 55.12.4 Close

55.12.8 GetAscent as Double

**Notes:** Returns the typographic ascent of glyphs in the run associated with the run delegate.

55.12.9 GetDescent as Double

**Notes:** Returns the typographic descent of glyphs in the run associated with the run delegate.

55.12.10 GetWidth as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event that determines the typographic width of glyphs in the run.

**Notes:** Returns the typographic width of glyphs in the run associated with the run delegate. A value of 0.0 indicates that the glyphs should not be drawn.
55.13.1 class CTRunMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The CTRun opaque type represents a glyph run, which is a set of consecutive glyphs sharing the same attributes and direction.  
**Notes:** The typesetter creates glyph runs as it produces lines from character strings, attributes, and font objects. That is, a line is constructed of one or more glyph runs. Glyph runs can draw themselves into a graphic context, if desired, although most users have no need to interact directly with glyph runs.  
Subclass of the CFObjectMBS class.  
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

55.13.2 Methods

55.13.3 Advances as CGSizeMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Copies a range of glyph advances into an array.

55.13.4 Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this class is available.  
**Notes:** Returns true in OS X v10.5 and later.

55.13.5 Constructor

55.13.6 Draw(context as CGContextMBS, location as Integer, length as Integer = 0)

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Draws a complete run or part of one.  
**Notes:**
context: The context into which to draw the run.
range: The portion of the run to draw. If the length of the range is set to 0, then the draw operation continues from the start index of the range to the end of the run.

This is a convenience call, because the run could be drawn by accessing the glyphs. This call can leave the graphics context in any state and does not flush the context after the draw operation.

Available in OS X v10.5 and later.

55.13.7 Glyphs as Integer()

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Copies a range of glyphs into an array.

55.13.8 ImageBounds(context as CGContextMBS, location as Integer, length as Integer) as CGRectMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Calculates the image bounds for a glyph range.

**Notes:**
context: The context for the image bounds being calculated. This is required because the context could have settings in it that would cause changes in the image bounds.
range: The portion of the run to measure. If the length of the range is set to 0, then the measure operation continues from the start index of the range to the end of the run.

Returns a rectangle that tightly encloses the paths of the run’s glyphs, or, if run, context, or range is invalid, CGRectNull.
Available in OS X v10.5 and later.

55.13.9 Positions as CGPointMBS()

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Copies a range of glyph positions into an array.
55.13.10 **StringIndices as Integer()**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Copies a range of string indices into an array. **Notes:** The indices are the character indices that originally spawned the glyphs that make up the run. They can be used to map the glyphs in the run back to the characters in the backing store.

55.13.11 **TypographicBounds(location as Integer, length as Integer, byref ascent as Double, byref descent as Double, byref leading as Double) as Double**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Gets the typographic bounds of the run. **Notes:**

- range: The portion of the run to measure. If the length of the range is set to 0, then the measure operation continues from the range’s start index to the end of the run.
- ascent: On output, the ascent of the run.
- descent: On output, the descent of the run.
- leading: On output, the leading of the run.

Returns the typographic width of the run, or if run or range is invalid, 0. Available in OS X v10.5 and later.

55.13.12 **Properties**

55.13.13 **AttributeValues as Dictionary**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the attribute dictionary that was used to create the glyph run. **Notes:**

Return a valid Dictionary or nil on error or if the run has no attributes.

The dictionary returned is either the same one that was set as an attribute dictionary on the original attribute string or a dictionary that has been manufactured by the layout engine. Attribute dictionaries can be manufactured in the case of font substitution or if the run is missing critical attributes. *(Read only property)*
55.13.14 GlyphCount as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the glyph count for the run.

**Notes:**
run: The run for which to return the glyph count.

Returns the number of glyphs that the run contains, or if there are no glyphs in this run, a value of 0.
Available in OS X v10.5 and later.
(Read only property)

55.13.15 Status as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the run’s status.

**Notes:**
Runs have status that can be used to expedite certain operations. Knowing the direction and ordering of a run’s glyphs can aid in string index analysis, whereas knowing whether the positions reference the identity text matrix can avoid expensive comparisons. This status is provided as a convenience, because this information is not strictly necessary but can be helpful in some circumstances.
(Read only property)

55.13.16 StringRangeLength as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the range of characters that originally spawned the glyphs in the run.

**Notes:**
The range of characters that originally spawned the glyphs, of if run is invalid, an empty range.
(Read only property)

55.13.17 StringRangeLocation as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Gets the range of characters that originally spawned the glyphs in the run.

**Notes:**
The range of characters that originally spawned the glyphs, of if run is invalid, an empty range.
(Read only property)
55.13.18  TextMatrix as CGAffineTransformMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the text matrix needed to draw this run.

**Notes:**
To properly draw the glyphs in a run, the fields tx and ty of the CGAffineTransform returned by this function should be set to the current text position.
(Read only property)

55.13.19  Constants

55.13.20  kCTRunStatusHasNonIdentityMatrix = 4

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the possible values for the status bitfield.

**Notes:**
The run requires a specific text matrix to be set in the current Core Graphics context for proper drawing.
Use BitwiseAnd() to check if the status has a given value.

55.13.21  kCTRunStatusNonMonotonic = 2

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the possible values for the status bitfield.

**Notes:**
The run has been reordered in some way such that the string indices associated with the glyphs are no longer strictly increasing (for left-to-right runs) or decreasing (for right-to-left runs).
Use BitwiseAnd() to check if the status has a given value.

55.13.22  kCTRunStatusNoStatus = 0

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the possible values for the status bitfield.

**Notes:** The run has no special attributes.

55.13.23  kCTRunStatusRightToLeft = 1

MBS MacCG Plugin, Plugin Version: 14.2. **Function:** One of the possible values for the status bitfield.

**Notes:**
The run proceeds from right to left.
Use BitwiseAnd() to check if the status has a given value.
55.14. **CLASS CTTEXTTABMBS**

**55.14 class CTTextTabMBS**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The CTTextTab opaque type represents a tab in a paragraph style, storing an alignment type and location. **Notes:**
Core Text supports four alignment types: left, center, right, and decimal. These alignment types are absolute, not based on the line sweep direction of text. For example, tabbed text is always positioned to the left of a right-aligned tab, whether the line sweep direction is left to right or right to left. A tab’s location, on the other hand, is relative to the back margin. A tab set at 1.5 inches, for example, is at 1.5 inches from the right in right-to-left text.
Subclass of the CFOObjectMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

**55.14.2 Methods**

**55.14.3 Available as boolean**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Whether this class is available. **Notes:** Returns true in OS X v10.5 and later.

**55.14.4 Constructor**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The private constructor.

**55.14.5 Create(alignment as Integer, location as Double, options as Dictionary = nil) as CTTextTabMBS**

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates and initializes a new text tab object. **Notes:**
alignment: The tab’s alignment. This is used to determine the position of text inside the tab column. This parameter must be set to a valid CTTextAlignment value or this function returns nil.
location: The tab’s ruler location, relative to the back margin.
options: Options to pass in when the tab is created. Currently, the only option available is kCTTabColumnTerminatorsAttributeName. This parameter is optional and can be set to nil if not needed.
Return a reference to a CTTextTab object if the call was successful; otherwise, nil.
Available in OS X v10.5 and later.

55.14.6 kCTTabColumnTerminatorsAttributeName as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
One of the options keys.
Notes:
Specifies the terminating character for a tab column.

The value associated with this attribute is a CFCharacterSet object. The character set is used to determine
the terminating character for a tab column. The tab and newline characters are implied even if they don’t
exist in the character set. This attribute can be used to implement decimal tabs, for instance. This attribute
is optional.

55.14.7 Properties

55.14.8 Alignment as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns the text alignment of the tab.
Notes: (Read only property)

55.14.9 Location as Double

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns the tab’s ruler location.
Notes:
The tab’s ruler location relative to the back margin.
(Read only property)

55.14.10 Options as Dictionary

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Returns the dictionary of attributes associated with the tab.
Notes:
The dictionary of attributes associated with the tab, or if no dictionary is present, nil.
(Read only property)
55.15  class CTTypesetterMBS

55.15.1  class CTTypesetterMBS

Notes: Line layout includes word wrapping, hyphenation, and line breaking in either vertical or horizontal rectangles. A typesetter object takes as input an attributed string and produces a line of typeset glyphs (composed into glyph runs) in a CTLine object. The typesetter performs character-to-glyph encoding, glyph ordering, and positional operations, such as kerning, tracking, and baseline adjustments. If multiline layout is needed, it is performed by a framesetter object, which calls into the typesetter to generate the typeset lines to fill the frame.

A framesetter encapsulates a typesetter and provides a reference to it as a convenience, but a caller may also choose to create a freestanding typesetter.
Subclass of the CFOBJECTMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

55.15.2  Methods

55.15.3  Available as boolean

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Whether this class is available.
Notes: Returns true in OS X v10.5 and later.

55.15.4  Constructor

55.15.5  CreateLine(location as Integer, length as Integer, offset as Double = 0.0) as CTLineMBS

Notes:
location and length: The string range on which the line is based. If the length portion of range is set to 0, then the typesetter continues to add glyphs to the line until it runs out of characters in the string. The location and length of the range must be within the bounds of the string, or the call will fail.

offset: The line position offset.

Returns a reference to a CTLine object if the call was successful; otherwise, nil.
The resultant line consists of glyphs in the correct visual order, ready to draw.
Available in OS X v10.6 and later.

55.15.6  CreateWithAttributedString(s as CFAttributedStringMBS) as CTType-setterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Creates an immutable typesetter object using an attributed string.
Notes:
s: The attributed string to typeset. This parameter must be filled in with a valid CFAttributedString object.

Returns a reference to a CTTypesetter object if the call was successful; otherwise, nil.
The resultant typesetter can be used to create lines, perform line breaking, and do other contextual analysis based on the characters in the string.

Available in OS X v10.5 and later.
See also:

- 55.15.7 CreateWithAttributedString(s as CFAttributedStringMBS, options as dictionary) as CTType-setterMBS

55.15.7  CreateWithAttributedString(s as CFAttributedStringMBS, options as dictionary) as CTTypesetterMBS

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Creates an immutable typesetter object using an attributed string and a dictionary of options.
Notes:
s: The attributed string to typeset. This parameter must be filled in with a valid CFAttributedString object.
options: A dictionary of typesetter options, or nil if there are none.

Returns a reference to a CTTypesetter object if the call was successful; otherwise, nil.
The resultant typesetter can be used to create lines, perform line breaking, and do other contextual analysis
based on the characters in the string.
Available in OS X v10.5 and later.
See also:

- 55.15.6 CreateWithAttributedString(s as CFAttributedStringMBS) as CTTypesetterMBS

55.15.8 kCTTypesetterOptionDisableBidiProcessing as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the constants to control aspects of the typesetters bidirectional text processing.
**Notes:**
Disables bidirectional processing. Value must be a CFBoolean object. Default value is false. Normally,
typesetting applies the Unicode Bidirectional Algorithm as described in Unicode Standard Annex # 9. If a
typesetter is created with this option set to true, no directional reordering is performed, and any directional
c Control characters are ignored.
Available in OS X v10.5 and later.
Deprecated in OS X v10.8.

55.15.9 kCTTypesetterOptionForcedEmbeddingLevel as string

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the constants to control aspects of the typesetters bidirectional text processing.
**Notes:**
Specifies the embedding level. Value must be a CFNumberRef object. Default is unset. Normally,
typesetting applies the Unicode Bidirectional Algorithm as described in Unicode Standard Annex # 9. If present,
this option specifies the embedding level, and any directional control characters are ignored.
Available in OS X v10.5 and later.

55.15.10 SuggestClusterBreak(startIndex as Integer, width as Double) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Suggests a cluster line breakpoint based on the width provided.
**Notes:**
startIndex: The starting point for the typographic cluster-break calculations. The break calculations include
the character starting at startIndex.
width: The requested typographic cluster-break width.

Return a count of the characters from startIndex that would cause the cluster break. The value returned
can be used to construct a character range for CTTypesetterCreateLine.
This cluster break is similar to a character break, except that it does not break apart linguistic clusters.
No other contextual analysis is done. This can be used by the caller to implement a different line-breaking
scheme, such as hyphenation. A typographic cluster break can also be triggered by a hard-break character
in the stream. This function is equivalent to SuggestClusterBreakWithOffset with an offset of 0.0.

Available in OS X v10.5 and later.
See also:

- 55.15.11 SuggestClusterBreak(startIndex as Integer, width as Double, offset as Double) as Integer

55.15.11 SuggestClusterBreak(startIndex as Integer, width as Double, offset as Double) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Suggests a cluster line breakpoint based on the specified width and line offset.
**Notes:**

startIndex: The starting point for the typographic cluster-break calculations. The break calculations include
the character starting at startIndex.
width: The requested typographic cluster-break width.
offset: The line offset position.

Returns a count of the characters from startIndex that would cause the cluster break. The value returned
can be used to construct a character range for CreateLine.

This cluster break is similar to a character break, except that it does not break apart linguistic clusters.
No other contextual analysis is done. This can be used by the caller to implement a different line-breaking
scheme, such as hyphenation. A typographic cluster break can also be triggered by a hard-break character
in the stream.

Available in OS X v10.6 and later.
See also:

- 55.15.10 SuggestClusterBreak(startIndex as Integer, width as Double) as Integer

55.15.12 SuggestLineBreak(startIndex as Integer, width as Double) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Suggests a contextual line breakpoint based on the width provided.
**Notes:**

startIndex: The starting point for the line-break calculations. The break calculations include the character
starting at startIndex.
width: The requested line-break width.

Returns a count of the characters from startIndex that would cause the line break. The value returned can be used to construct a character range for CreateLine.

The line break can be triggered either by a hard-break character in the stream or by filling the specified width with characters. This function is equivalent to SuggestLineBreakWithOffset with an offset of 0.0.

Available in OS X v10.5 and later.

See also:

- 55.15.13 SuggestLineBreak(startIndex as Integer, width as Double, offset as Double) as Integer

55.15.13 SuggestLineBreak(startIndex as Integer, width as Double, offset as Double) as Integer

MBS MacCG Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Suggests a contextual line breakpoint based on the width provided and the specified offset.

**Notes:**

startIndex: The starting point for the line-break calculations. The break calculations include the character starting at startIndex.
width: The requested line-break width.
offset: The line position offset.

Returns a count of the characters from startIndex and offset that would cause the line break. The value returned can be used to construct a character range for CreateLine.

The line break can be triggered either by a hard-break character in the stream or by filling the specified width with characters.

Available in OS X v10.6 and later.

See also:

- 55.15.12 SuggestLineBreak(startIndex as Integer, width as Double) as Integer
Chapter 56

CPUInfo

56.1 class CPUIDMBS

56.1.1 class CPUIDMBS

MBS Util Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A class around the CPUID command of x86 CPUs.
**Example:**

```vba
dim c as new CPUIDMBS
MsgBox c.BrandString
```

**Notes:**
This class works only on x86 CPUs.
Values returned in the properties have very CPU vendor specific values.
So Intel and AMD use different meanings for a lot of values.

56.1.2 Methods

56.1.3 BrandString as String

MBS Util Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The brand string.
**Notes:** contains the brand string, e.g. "Intel(R) Xeon(TM) CPU 2.40GHz"
See also:

- 56.1.23 BrandString as String
56.1.4 CodeName as String

MBS Util Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The brief and human-friendly CPU codename, which was recognized.

56.1.5 CPUID(Selector as Integer) as boolean

MBS Util Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls CPUID for the given selector.

**Example:**

```vba
dim c as new CPUIDMBS
if c.CPUID(0) then MsgBox hex(c.EDX)
end if
```

**Notes:**

Returns true on success and false on failure.
(always true on x86 CPUs and always false on PowerPC CPUs.)
Result values are stored in the four properties EAX, EBX, ECX and EDX.

56.1.6 ExtFamily as Integer

56.1.7 ExtModel as Integer

56.1.8 Family as Integer

See also:
56.1. **CLASS CPUIDMBS**

- 56.1.28 Family as Integer

56.1.9 **FeatureName(index as Integer) as String**

**Notes:**
A constant string like "fpu", "tsc", "sse2", etc.
See kFeature* constants.

56.1.10 **Flags(index as Integer) as Boolean**

MBS Util Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries whether a given feature is available.

**Example:**

```vbnet
dim c as new CPUIDMBS

if c.Flags(CPUIDMBS.kFeatureLM) then
    MsgBox "64-bit CPU"
else
    MsgBox "32-bit CPU"
end if
```

**Notes:** See kFeature* constants.

56.1.11 **L1DataCache as Integer**

MBS Util Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** L1 data cache size in KB.

**Notes:**
Could be zero, if the CPU lacks cache.
If the size cannot be determined, it will be -1.

56.1.12 **L1InstructionCache as Integer**

MBS Util Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** L1 instruction cache size in KB.
Notes:
Could be zero, if the CPU lacks cache. If the size cannot be determined, it will be -1.
On some Intel CPUs, whose instruction cache is in fact a trace cache, the size will be expressed in K uOps.

56.1.13 L2Cache as Integer

Notes:
Could be zero, if the CPU lacks L2 cache.
If the size of the cache could not be determined, it will be -1

56.1.14 L3Cache as Integer

Notes: Zero on most systems.

56.1.15 Model as Integer

See also:
- 56.1.29 Model as Integer

56.1.16 NumCores as Integer

56.1.17 NumLogicalCPUs as Integer

Notes: Could be more than the number of physical cores, e.g. when the processor has HyperThreading.
56.1. **CLASS CPUIDMBS**

### 56.1.18 Stepping as Integer

See also:

- 56.1.31 Stepping as Integer

### 56.1.19 TotalLogicalCPUs as Integer

MBS Util Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The total number of logical processors.

**Notes:**

This is num\_logical\_cpus * { total physical processors in the system }

If you're writing a multithreaded program and you want to run it on all CPUs, this is the number of threads you need.

### 56.1.20 Vendor as Integer

**Notes:** See kVendor constants.

### 56.1.21 VendorName as String

**Notes:** contains the CPU vendor string, e.g. "GenuineIntel"

### 56.1.22 Properties

#### 56.1.23 BrandString as String

MBS Util Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string (47 characters maximum) with the brand name of the CPU.

**Example:**

```vbs
dim c as new CPUIDMBS
MsgBox c.BrandString
```
CHAPTER 56. CPUINFO

Notes:
Is "" if not supported.
(Read and Write property)
See also:

• 56.1.3 BrandString as String

56.1.24 EAX as Integer

MBS Util Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The EAX register value after a CPUID function call.
**Example:**

```vba
dim c as new CPUIDMBS
MsgBox str(c.EAX)
```

Notes: (Read and Write property)

56.1.25 EBX as Integer

MBS Util Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The EBX register value after a CPUID function call.
**Example:**

```vba
dim c as new CPUIDMBS
MsgBox str(c.EBX)
```

Notes: (Read and Write property)

56.1.26 ECX as Integer

MBS Util Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The ECX register value after a CPUID function call.
**Example:**

```vba
dim c as new CPUIDMBS
MsgBox str(c.ECX)
```
Notes: (Read and Write property)

56.1.27 **EDX as Integer**

MBS Util Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The EDX register value after a CPUID function call.

**Example:**

```
dim c as new CPUIDMBS
MsgBox str(c.EDX)
```

Notes: (Read and Write property)

56.1.28 **Family as Integer**

MBS Util Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Family ID of the CPU.

**Example:**

```
dim c as new CPUIDMBS
MsgBox str(c.Family)
```

Notes: e.g. Family 6, Model 14 can be an Intel Core Duo CPU.
(Read and Write property)
See also:

- 56.1.8 Family as Integer

56.1.29 **Model as Integer**

MBS Util Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Model ID of the CPU.

**Example:**

```
dim c as new CPUIDMBS
MsgBox str(c.Model)
```
Notes:
Every CPU Family has several Models.
e.g. Family 6, Model 14 can be an Intel Core Duo CPU.
(Read and Write property)
See also:

- 56.1.15 Model as Integer

56.1.30 ProcessorVendor as String

MBS Util Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The Name of the Processor Vendor.
Example:

```vbnet
dim c as new CPUIDMBS
MsgBox c.ProcessorVendor
```

Notes:
Possible values:

- CPUID_VID_INTEL "GenuineIntel"
- CPUID_VID_UMC "UMC UMC UMC "
- CPUID_VID_AMD "AuthenticAMD"
- CPUID_VID_CYRIX "CyrixInstead"
- CPUID_VID_NEXGEN "NexGenDriven"
- CPUID_VID_CENTAUR "CentaurHauls"
- CPUID_VID_RISE "RiseRiseRise"
- CPUID_VID_SIS "SiS SiS SiS "
- CPUID_VID_TRANSMETA "GenuineTMx86"
- CPUID_VID_NSC "Geode by NSC"

(Read and Write property)

56.1.31 Stepping as Integer

MBS Util Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The stepping ID of the CPU.
Example:
56.1. CLASS CPUIDMBS

dim c as new CPUIDMBS
MsgBox str(c.Stepping)

Notes:
Can be seen as a revision number of the processor.
(Read and Write property)
See also:

• 56.1.18 Stepping as Integer

56.1.32 Constants

56.1.33 kFeature100MHzSteps = 80
Notes: 100 MHz multiplier control

56.1.34 kFeature3DNOW = 56
Notes: AMD 3DNow! instructions supported

56.1.35 kFeature3DNOWEXT = 57
Notes: AMD 3DNow! extended instructions supported

56.1.36 kFeature3DNOWPrefetch = 68
Notes: PREFETCH/PREFETCHW support

56.1.37 kFeatureABM = 65
Notes: LZCNT instruction support
56.1.38  kFeature ACPI = 20

MBS Util Plugin, Plugin Version: 14.3. **Function**: One of the feature constants.
**Notes**: ACPI support (power states)

56.1.39  kFeature AES = 51

MBS Util Plugin, Plugin Version: 14.3. **Function**: One of the feature constants.
**Notes**: AES* instructions supported

56.1.40  kFeature APERFMPERF = 91

MBS Util Plugin, Plugin Version: 14.3. **Function**: One of the feature constants.
**Notes**: MPERF/APERF MSRs support

56.1.41  kFeature APIC = 9

MBS Util Plugin, Plugin Version: 14.3. **Function**: One of the feature constants.
**Notes**: APIC support

56.1.42  kFeature AVX = 54

MBS Util Plugin, Plugin Version: 14.3. **Function**: One of the feature constants.
**Notes**: Advanced vector extensions supported

56.1.43  kFeature CID = 40

MBS Util Plugin, Plugin Version: 14.3. **Function**: One of the feature constants.
**Notes**: Context ID supported
56.1.44 kFeatureCLFLUSH = 18
MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants. **Notes:** CLFLUSH instruction supported

56.1.45 kFeatureCMOV = 14
MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants. **Notes:** CMOVxx instructions supported

56.1.46 kFeatureCMP_LEGACY = 63
MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants. **Notes:** core multi-processing legacy mode

56.1.47 kFeatureConstantTSC = 82
MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants. **Notes:** TSC ticks at constant rate

56.1.48 kFeatureCPB = 90
MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants. **Notes:** Core performance boost

56.1.49 kFeatureCX16 = 41
MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants. **Notes:** CMPXCHG16B instruction supported

56.1.50 kFeatureCX8 = 8
MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants. **Notes:** CMPXCHG8B instruction supported
56.1.51  kFeatureDCA = 44

MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants.  
**Notes:** Direct cache access supported

56.1.52  kFeatureDE = 2

MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants.  
**Notes:** Debugging extension

56.1.53  kFeatureDS_CPL = 34

MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants.  
**Notes:** CPL Qualified Debug Store

56.1.54  kFeatureDTS = 19

MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants.  
**Notes:** Debug store supported

56.1.55  kFeatureDTS64 = 32

MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants.  
**Notes:** 64-bit Debug store supported

56.1.56  kFeatureEST = 37

MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants.  
**Notes:** Enhanced SpeedStep

56.1.57  kFeatureF16C = 87

MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants.  
**Notes:** 16-bit FP convert instruction support
56.1. **CLASS CPUIDMBS**

### 56.1.58 kFeatureFID = 75

MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants.  
**Notes:** Frequency ID control

### 56.1.59 kFeatureFMA3 = 84

MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants.  
**Notes:** The FMA3 instruction set

### 56.1.60 kFeatureFMA4 = 85

MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants.  
**Notes:** The FMA4 instruction set

### 56.1.61 kFeatureFPU = 0

MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants.  
**Notes:** Floating point unit

### 56.1.62 kFeatureFXSR = 22

MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants.  
**Notes:** FXSAVE / FXRSTOR supported

### 56.1.63 kFeatureFXSR_OPT = 59

MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants.  
**Notes:** FFXSR: FXSAVE and FXRSTOR optimizations

### 56.1.64 kFeatureHT = 26

MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants.  
**Notes:** Hyper-threading supported (but might be disabled)
56.1.65  \textit{kFeatureHWPState} = 81

\textbf{Notes}: Hardware P-state control

56.1.66  \textit{kFeatureIA64} = 28

\textbf{Notes}: IA64 supported (Itanium only)

56.1.67  \textit{kFeatureIBS} = 70

\textbf{Notes}: Instruction-based sampling

56.1.68  \textit{kFeatureLAHF\_LM} = 62

\textbf{Notes}: LAHF/SAHF supported in 64-bit mode

56.1.69  \textit{kFeatureLM} = 61

\textbf{Example}:

\begin{verbatim}
dim c as new CPUIDMBS

if c.Flags(CPUIDMBS.kFeatureLM) then
    MsgBox "64-bit CPU"
else
    MsgBox "32-bit CPU"
end if
\end{verbatim}

\textbf{Notes}: Long mode (x86_64/EM64T) supported
56.1. CLASS CPUIDMBS

56.1.70  kFeatureMCA = 13

MBS Util Plugin, Plugin Version: 14.3. **Function:** One of the feature constants.  
**Notes:** Machine check architecture

56.1.71  kFeatureMCE = 7

MBS Util Plugin, Plugin Version: 14.3. \textbf{Function}: One of the vendor constants.
\textbf{Notes}: \text{Unknown}
Chapter 57

CUPS

57.1  class CUPSDestinationMBS

57.1.1  class CUPSDestinationMBS

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** The class for a CUPS destination.

**Example:**

```vbs
dim lines(-1) as string
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
    lines.append c.Name
next

MsgBox Join(lines, EndOfLine)
```

57.1.2  Methods

57.1.3  Options as CUPSOPTIONMBS()
57.1.4 Properties

57.1.5 Instance as String

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Local instance name or "".
**Notes:** (Read and Write property)

57.1.6 isDefault as Boolean

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Is this printer the default?
**Example:**
```vbnet
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
if c.isDefault then
    MsgBox c.Name
end if
next
```

**Notes:** (Read and Write property)

57.1.7 Name as String

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
The name of the printer.
**Example:**
```vbnet
dim lines(-1) as string
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
    lines.append c.Name
next
MsgBox Join(lines,EndOfLine)
```

**Notes:** (Read and Write property)
57.2. class CUPSErrorExceptionMBS

57.2.1 class CUPSErrorExceptionMBS

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
The error exception raised by some CUPS functions.
**Notes:** Subclass of the RuntimeException class.
57.3  class CUPSJobMBS

57.3.1  class CUPSJobMBS

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
The class for job details.

**Example:**

```vbscript
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", true, CUPSMBS.kWhichJobsActive)

if UBound(jobs) < 0 then
    MsgBox "no job"
else
    dim j as CUPSJobMBS = jobs(0)
    dim lines(-1) as string

    lines.Append "Title: "+j.Title
    lines.Append "User: "+j.User
    lines.Append "Format: "+j.Format
    lines.Append "Dest: "+j.Dest
    lines.Append "ID: "+str(j.ID)

```
57.3.2 Properties

57.3.3 CompletedTime as Date

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Time the job was completed.

**Example:**
```vba
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsComplete)
if UBound(jobs)<0 then
    MsgBox "no job"
else
    dim j as CUPSJobMBS = jobs(0)
    MsgBox j.Title+" completed at "+j.CompletedTime.AbbreviatedDate+" "+j.CompletedTime.longtime
end if
```

**Notes:**
Value is nil if the value is not set.
(Read and Write property)

57.3.4 CreationTime as Date

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Time the job was created.

**Example:**
```vba
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsComplete)
if UBound(jobs)<0 then
    MsgBox "no job"
else
    dim j as CUPSJobMBS = jobs(0)
    MsgBox j.Title+" completed at "+j.CreationTime.AbbreviatedDate+" "+j.CreationTime.longtime
end if
```

**Notes:**
Value is nil if the value is not set.
(Read and Write property)

57.3.5 Dest as String

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Printer or class name.
**Example:**
```vbscript
dim jobs() as CUPSMBSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim lines(-1) as string

for each j as CUPSMBSJobMBS in jobs
    lines.Append j.Dest
next

MsgBox Join(lines, EndOfLine)
```

**Notes:** (Read and Write property)

57.3.6 Format as String

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Document format.
**Example:**
```vbscript
dim jobs() as CUPSMBSJobMBS = CUPSMBS.GetJobs("", true, CUPSMBS.kWhichJobsAll)
dim lines(-1) as string

for each j as CUPSMBSJobMBS in jobs
    lines.Append j.Format
next

MsgBox Join(lines, EndOfLine)
```

**Notes:** (Read and Write property)
57.3. **CLASS CUPSJOBMBS**

### 57.3.7 ID as Integer

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** The job ID.

**Example:**

```vbscript
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
MsgBox jobs(0).Title + " has ID " + str(jobs(0).ID)
```

**Notes:** (Read and Write property)

### 57.3.8 Priority as Integer

**Example:**

```vbscript
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
MsgBox jobs(0).Title + " has priority " + str(jobs(0).Priority)
```

**Notes:** (Read and Write property)

### 57.3.9 ProcessingTime as Date

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Time the job was processed.

**Example:**

```vbscript
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsComplete)
if UBound(jobs) < 0 then
    MsgBox "no job"
else
    dim j as CUPSJobMBS = jobs(0)
    MsgBox j.Title + " completed at " + j.ProcessingTime.AbbreviatedDate + " + " + j.ProcessingTime.longtime
end if
```

**Notes:**
Value is nil if the value is not set.
(Read and Write property)

### 57.3.10 Size as Integer

**Example:**

```vba
dim sum as Integer
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)

if UBound(jobs)<0 then
    MsgBox "no job"
else
    for each j as CUPSJobMBS in jobs
        sum=sum+j.Size
    next

    MsgBox "Total size of all print jobs: " +str(sum)+" KB"
end if
```

**Notes:** (Read and Write property)

### 57.3.11 State as Integer

**Example:**

```vba
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"

Select case state
    case CUPSMBS.kJobAborted
        s = "Aborted"
    case CUPSMBS.kJobCanceled
        s = "Canceled"
    case CUPSMBS.kJobCompleted
        s = "Completed"
    case CUPSMBS.kJobHeld
        s = "Held"
    case else
        s = "?"
end Select
```

**Notes:**
57.3. **CLASS CUPSJOBMBS**

```vba
case CUPSMBS.kJobStopped
    s = "Stopped"
case CUPSMBS.kJobPending
    s = "Pending"
case CUPSMBS.kJobProcessing
    s = "Processing"
end Select

MsgBox str(State) + ": " + s
```

**Notes:** (Read and Write property)

### 57.3.12 Title as String

**Example:**

```vba
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim lines(-1) as string

for each j as CUPSJobMBS in jobs
    lines.Append j.Title
next

MsgBox Join(lines, EndOfLine)
```

**Notes:** (Read and Write property)

### 57.3.13 User as String

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** User the submitted the job.

**Example:**

```vba
dim jobs() as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim lines(-1) as string

for each j as CUPSJobMBS in jobs
    lines.Append j.User
next
```
MsgBox Join(lines, EndOfLine)

**Notes:** (Read and Write property)
57.4. module CUPSMBS

57.4.1 module CUPSMBS

57.4.2 Methods

57.4.3 CancelJob(name as string, job as Int32)

Notes:
name: Name of printer or class
job: Job ID, kJobIDCurrent for the current job, or kJobIDAll for all jobs

Pass kJobIDAll to cancel all jobs or kJobIDCurrent to cancel the current job on the named destination.

Raises exception on error.

57.4.4 GetDefault as string

Example:
MsgBox CUPSMBS.GetDefault

57.4.5 GetDestinations as CUPSDestinationMBS()

Example:

dim lines(-1) as string
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
lines.append c.Name
next
MsgBox Join(lines, EndOfLine)

**Notes:** Starting with CUPS 1.2, the returned list of destinations include the printer-info, printer-is-accepting-jobs, printer-is-shared, printer-make-and-model, printer-state, printer-state-change-time, printer-state-reasons, and printer-type attributes as options. CUPS 1.4 adds the marker-change-time, marker-colors, marker-high-levels, marker-levels, marker-low-levels, marker-message, marker-names, marker-types, and printer-commands attributes as well.

### 57.4.6 GetJobs(name as string, OnlyMyJobs as boolean, whichjobs as Integer) as CUPSJobMBS()

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Get the jobs from the default server.

**Notes:**
- name: "" = all destinations, otherwise show jobs for named destination
- OnlyMyJobs: false = all users, true = mine
- whichjobs: kWhichJobsAll, kWhichJobsActive, or kWhichJobsComplete

A "whichjobs" value of kWhichJobsAll returns all jobs regardless of state, while kWhichJobsActive returns jobs that are pending, processing, or held and kWhichJobsComplete returns jobs that are stopped, canceled, aborted, or completed.

### 57.4.7 GetPassword(prompt as string) as string

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Get a password from the user.

**Notes:** Returns "" if the user does not provide a password.

### 57.4.8 GetPPD(name as string) as string

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Get the PPD file for a printer on the default server.

**Example:**

```vbscript
for each c as CUPSDestinationMBS in CUPSMBS.GetDestinations
if c.isDefault then
  MsgBox cupsmb.GetPPD(c.Name)
end if
```
57.4. MODULE CUPSMBS

Notes:
Returns Filename for PPD file.

For classes, cupsGetPPD returns the PPD file for the first printer in the class.

The returned filename is stored in a static buffer and is overwritten with each call to cupsGetPPD or cupsGetPPD2. The caller "owns" the file that is created and must unlink the returned filename.

57.4.9 LastError as Integer

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Return the last IPP status code.

57.4.10 LastErrorMessage as string

**Example:**

MsgBox CUPSMBS.LastErrorMessage

**Notes:** Returns status-message text from last request.

57.4.11 PrintData(name as string, Data as String, Title as string) as Integer

MBS Tools Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Print a file to a printer or class on the default server.

**Notes:**
Name: Destination name
Data: Data to print
Title: Title of job

Returns Job ID or 0 on error
57.4.12 PrintFile(name as string, file as folderitem, title as string) as Integer

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Print a file to a printer or class on the default server.

**Example:**

```vba
// Print file on default printer...
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.ps")

For Each c As CUPSDestinationMBS In CUPSMBS.GetDestinations
    If c.isDefault Then
        Call CUPSMBS.PrintFile(c.Name, f, f.Name)
    End If
Next
```

**Notes:**
- name: Destination name
- filename: File to print
- title: Title of job

Returns Job ID or 0 on error

See also:

- 57.4.13 PrintFile(name as string, file as folderitem, title as string, options() as CUPSOptionMBS) as Integer

57.4.13 PrintFile(name as string, file as folderitem, title as string, options() as CUPSOptionMBS) as Integer

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Print a file to a printer or class on the default server.

**Notes:**
- name: Destination name
- filename: File to print
- title: Title of job
- options: Options

Returns Job ID or 0 on error

See also:

- 57.4.12 PrintFile(name as string, file as folderitem, title as string) as Integer
57.4. MODULE CUPSMBS

57.4.14 PrintFiles(name as string, files() as folderitem, title as string) as Integer

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Print files to a printer or class on the default server.

**Notes:**
- name: Destination name
- filename: Files to print
- title: Title of job

Returns Job ID or 0 on error

See also:
- 57.4.15 PrintFiles(name as string, files() as folderitem, title as string, options() as CUPSOptionMBS) as Integer

57.4.15 PrintFiles(name as string, files() as folderitem, title as string, options() as CUPSOptionMBS) as Integer

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Print files to a printer or class on the default server.

**Notes:**
- name: Destination name
- files: Files to print
- title: Title of job
- options: Options

Returns Job ID or 0 on error

See also:
- 57.4.14 PrintFiles(name as string, files() as folderitem, title as string) as Integer

57.4.16 Server as string

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:**
Return the hostname/address of the default server.

**Example:**
MsgBox CUPSMBS.Server

**Notes:** The returned value can be a fully-qualified hostname, a numeric IPv4 or IPv6 address, or a domain socket pathname.
57.4.17  SetDefaultPrinter(printer as string)

MBS Tools Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Sets the default printer. **Notes:** Name must be one of CUPSDestinationMBS’s name.

57.4.18  SetServer(server as string)

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Set the default server name. **Notes:**

server: Server name

The ”server” string can be a fully-qualified hostname, a numeric IPv4 or IPv6 address, or a domain socket pathname. Pass ”” to restore the default server name.

57.4.19  SetUser(user as string)

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Set the default user name. **Notes:**

user: User name

Pass ”” to restore the default user name.

57.4.20  User as string

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Return the current user’s name. **Example:**

MsgBox CUPSMBS.User
57.4.21 Constants

57.4.22 kJobAborted = 8

MBS Tools Plugin, Plugin Version: 9.7. **Function:** One of the constants for the job state. **Example:**

```vbs
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"
Select case state
case CUPSMBS.kJobAborted
s = "Aborted"
case CUPSMBS.kJobCanceled
s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
end Select
MsgBox str(State) + ": " + s
```

**Notes:** Job was aborted.

57.4.23 kJobCanceled = 7

MBS Tools Plugin, Plugin Version: 9.7. **Function:** One of the constants for the job state. **Example:**

```vbs
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"
Select case state
case CUPSMBS.kJobAborted
s = "Aborted"
case CUPSMBS.kJobCanceled
s = "Canceled"
```

```vbs
case CUPSMBS.kJobCanceled
s = "Canceled"
```
CHAPTER 57. CUPS

s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
end Select

MsgBox str(State) + ": " + s

Notes: Job was canceled.

57.4.24 kJobCompleted = 9

MBS Tools Plugin, Plugin Version: 9.7. Function: One of the constants for the job state.
Example:

dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"

Select case state
case CUPSMBS.kJobAborted
s = "Aborted"
case CUPSMBS.kJobCanceled
s = "Canceled"
case CUPSMBS.kJobCompleted
s = "Completed"
case CUPSMBS.kJobHeld
s = "Held"
case CUPSMBS.kJobStopped
s = "Stopped"
case CUPSMBS.kJobPending
s = "Pending"
case CUPSMBS.kJobProcessing
s = "Processing"
end Select

MsgBox str(State) + ": " + s
Notes: Job was completed.

57.4.25  kJobHeld = 4

MBS Tools Plugin, Plugin Version: 9.7. Function: One of the constants for the job state.
Example:

```vba
Dim jobs(-1) As CUPSJobMBS = CUPSMBS.GetJobs("", False, CUPSMBS.kWhichJobsAll)
Dim state As Integer = jobs(0).State 'check state of first job
Dim s As String = "?
Select Case state
Case CUPSMBS.kJobAborted
    s = "Aborted"
Case CUPSMBS.kJobCanceled
    s = "Canceled"
Case CUPSMBS.kJobCompleted
    s = "Completed"
Case CUPSMBS.kJobHeld
    s = "Held"
Case CUPSMBS.kJobStopped
    s = "Stopped"
Case CUPSMBS.kJobPending
    s = "Pending"
Case CUPSMBS.kJobProcessing
    s = "Processing"
End Select
MsgBox str(State) & " : " & s
```

Notes: Job is held.

57.4.26  kJobIDAll = -1

### 57.4.27  kJobIDCurrent = 0

MBS Tools Plugin, Plugin Version: 9.7. **Function:** A job constant for the current job.

### 57.4.28  kJobPending = 3

MBS Tools Plugin, Plugin Version: 9.7. **Function:** One of the constants for the job state.  
**Example:**

```vbnet
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"
Select case state
    case CUPSMBS.kJobAborted
        s = "Aborted"
    case CUPSMBS.kJobCanceled
        s = "Canceled"
    case CUPSMBS.kJobCompleted
        s = "Completed"
    case CUPSMBS.kJobHeld
        s = "Held"
    case CUPSMBS.kJobStopped
        s = "Stopped"
    case CUPSMBS.kJobPending
        s = "Pending"
    case CUPSMBS.kJobProcessing
        s = "Processing"
end Select
MsgBox str(State)+": " +s
```

**Notes:** Job is pending

### 57.4.29  kJobProcessing = 5

MBS Tools Plugin, Plugin Version: 9.7. **Function:** One of the constants for the job state.  
**Example:**

```vbnet
dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?"
```
Select case state
case CUPSMBS.kJobAborted
  s = "Aborted"
case CUPSMBS.kJobCanceled
  s = "Canceled"
case CUPSMBS.kJobCompleted
  s = "Completed"
case CUPSMBS.kJobHeld
  s = "Held"
case CUPSMBS.kJobStopped
  s = "Stopped"
case CUPSMBS.kJobPending
  s = "Pending"
case CUPSMBS.kJobProcessing
  s = "Processing"
end Select

MsgBox str(State) + ": " + s

Notes: Job is processing.

57.4.30 kJobStopped = 6

MBS Tools Plugin, Plugin Version: 9.7. Function: One of the constants for the job state.
Example:

dim jobs(-1) as CUPSJobMBS = CUPSMBS.GetJobs("", false, CUPSMBS.kWhichJobsAll)
dim state as Integer = jobs(0).State // check state of first job
dim s as string = "?

Select case state
case CUPSMBS.kJobAborted
  s = "Aborted"
case CUPSMBS.kJobCanceled
  s = "Canceled"
case CUPSMBS.kJobCompleted
  s = "Completed"
case CUPSMBS.kJobHeld
  s = "Held"
case CUPSMBS.kJobStopped
  s = "Stopped"
case CUPSMBS.kJobPending
  s = "Pending"
case CUPSMBS.kJobProcessing
  s = "Processing"
CHAPTER 57. CUPS

end Select

MsgBox str(State)+"": "+s

Notes: Job is stopped.

57.4.31 kPrinterAUTHENTICATED = & h400000

MBS Tools Plugin, Plugin Version: 9.7. **Function**: One of the printer type/capability bit constants. 
**Notes**: Printer requires authentication

57.4.32 kPrinterBIND = & h0400

MBS Tools Plugin, Plugin Version: 9.7. **Function**: One of the printer type/capability bit constants. 
**Notes**: Can bind output

57.4.33 kPrinterBW = & h0004

MBS Tools Plugin, Plugin Version: 9.7. **Function**: One of the printer type/capability bit constants. 
**Example**:

dim lines(-1) as string

57.5.1 class CUPSMissingFunctionExceptionMBS

MBS Tools Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** The exception raised if a CUPS function is not found. **Notes:**
On Windows this method is raised for each function you call.
Subclass of the RuntimeException class.
57.6 class CUPSOptionMBS

57.6.1 class CUPSOptionMBS

The class for the options in CUPS.

Example:

```vbscript
dim options() as CUPSOptionMBS

dim o1 as new CUPSOptionMBS
o1.Name = "media"
o1.Value = "A4"
options.Append o1

dim o2 as new CUPSOptionMBS
o2.Name = "scaling"
o2.Value = "75"
options.Append o2

dim o3 as new CUPSOptionMBS
o3.Name = "Collate"
o3.Value = "True"
options.Append o3

dim o4 as new CUPSOptionMBS
o4.Name = "sides"
o4.Value = "two-sided-long-edge"
options.Append o4
```

57.6.2 Properties

57.6.3 Name as String

Name of option.

Notes: (Read and Write property)

57.6.4 Value as String

Value of option.

Chapter 58

CURL

58.1 class CURLEmailMBS

58.1.1 class CURLEmailMBS

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Our plugin class to help building and sending emails.

**Example:**

```vbnet
dim e as new CURLEmailMBS

e.SetFrom "test@test.test", "christian Mller"
e.Subject = "Hello World 
"e.SMTPPassword = "xxx"
e.SMTPUsername = "xxx"
e.SetServer "smtp.test.test", true
e.AddTo "test@test.test", "Test Mller"
e.PlainText = "Hello World," + EndOfLine + "Smilies: 
"

dim c as new CURLSMBS

if c.SetupEmail(e) then

dim er as Integer = c.Perform
if er = 0 then
MsgBox "Email sent"
end if
end if
```

9907
58.1.2 Methods

58.1.3 AddAttachment(data as MemoryBlock, name as string, type as string = "", InlineID as string = "")

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds an attachment to the email.

**Notes:**

name: The name for the attachment.
type: Optional, the mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".
data: The data to include.

For best results use attachment sizes below 50 MB.
The plugin will encode your data as Base64. If you want to attach a picture, you can use PictureToPNGStringMBS (mime type "image/png") or PictureToJPEGStringMBS (mime type "image/jpeg") to encode a picture.

Version 15.0 of MBS Plugin can encode file name for preserving non AScII characters. Still for compatibility it is recommended to use simply AScII names.

If InlineID is set, we include the attachment for inlining. Please pass content ID (cID).
Empty text or no parameter gives regular attachment.
You can use AddAttachment several times to add several attachments.
See also:

- 58.1.4 AddAttachment(data as string, name as string, type as string = "", InlineID as string = "")
  9908
- 58.1.5 AddAttachment(file as FolderItem, name as string = "", type as string = "", InlineID as string = ")
  9909

58.1.4 AddAttachment(data as string, name as string, type as string = "", InlineID as string = "")

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds an attachment to the email.

**Notes:**

name: The name for the attachment.
type: Optional, the mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".
data: The data to include.
58.1. CLASS CURLEMAILMBS

For best results use attachment sizes below 50 MB.
The plugin will encode your data as Base64. If you want to attach a picture, you can use PictureToPNGStringMBS (mime type "image/png") or PictureToJPEGStringMBS (mime type "image/jpeg") to encode a picture.

Version 15.0 of MBS Plugin can encode file name for preserving non ASCII characters. Still for compatibility it is recommended to use simply ASCII names.

If InlineID is set, we include the attachment for inlining. Please pass content ID (cID).
Empty text or no parameter gives regular attachment.
You can use AddAttachment several times to add several attachments.
See also:

- 58.1.3 AddAttachment(data as MemoryBlock, name as string, type as string = "", InlineID as string = "")
- 58.1.5 AddAttachment(file as FolderItem, name as string = "", type as string = "", InlineID as string = "")

58.1.5 AddAttachment(file as FolderItem, name as string = "", type as string = "", InlineID as string = "")

MBS CURL Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds an attachment to the email.

**Notes:**

name: The name for the attachment. If empty, version 16.2 uses file name from folderitem.
type: Optional, the mime type to use. e.g. "application/pdf" for PDF files. If missing, we use "application/octet-stream".
file: The file to use. This file is read and content used for attachment.

For best results use attachment sizes below 50 MB.
The plugin will encode your data as Base64. If you want to attach a picture, you can use PictureToPNGStringMBS (mime type "image/png") or PictureToJPEGStringMBS (mime type "image/jpeg") to encode a picture.

Version 15.0 of MBS Plugin can encode file name for preserving non ASCII characters. Still for compatibility it is recommended to use simply ASCII names.

If InlineID is set, we include the attachment for inlining. Please pass content ID (cID).
Empty text or no parameter gives regular attachment.
You can use AddAttachment several times to add several attachments.
See also:

- 58.1.3 AddAttachment(data as MemoryBlock, name as string, type as string = "", InlineID as string = "")
58.1.4 AddAttachment(data as string, name as string, type as string = "", InlineID as string = "")

58.1.6 AddBcc(email as string, name as string)

**Example:**
```vba
dim e as new CURLEmailMBS

e.AddBcc "test@monkeybreadsoftware.test", "Test Miller"

dim Bccs() as string = e.Bccs
MsgBox Bccs(0)
```

**Notes:**
Please pass email and optionally name of recipient.
If this name contains special characters, it will be automatically encoded with UTF-8.

58.1.7 Addcc(email as string, name as string)

**Example:**
```vba
dim e as new CURLEmailMBS

e.Addcc "test@monkeybreadsoftware.test", "Test Miller"

dim ccs() as string = e.ccs
MsgBox ccs(0)
```

**Notes:**
Please pass email and optionally name of recipient.
If this name contains special characters, it will be automatically encoded with UTF-8.
### 58.1.8 AddHeader(header as string)

**Example:**

```vba
dim e as new CURLEmailMBS

e.AddHeader "X-company: My company, Inc."

dim Headers() as string = e.Headers
MsgBox Headers(0)
```

**Notes:**

This header is passed as is and not preprocessed. You can use this function to pass custom headers for "X-Universally-Unique-Identifier:“, "Date:“, "X-Mailer:“, "Message-Id:“ and "Mime-Version:“. If you pass header without text following ":“, the header is not included.

### 58.1.9 AddReplyTo(email as string, name as string)

**Example:**

```vba
dim e as new CURLEmailMBS

e.AddReplyTo "test@monkeybreadsoftware.test", "Test Mller"

dim ReplyTos() as string = e.ReplyTOs
MsgBox ReplyTos(0)
```

**Notes:**

Please pass email and optionally name of recipient. If this name contains special characters, it will be automatically encoded with UTF-8.

### 58.1.10 AddTo(email as string, name as string)

Example:

```vba
dim e as new CURLEmailMBS

e.AddTo "test@monkeybreadsoftware.test", "Test Miller"

dim TOs() as string = e.TOs
MsgBox TOs(0)
```

Notes:
Please pass email and optionally name of recipient.
If this name contains special characters, it will be automatically encoded with UTF-8.

### 58.1.11 Bccs as String()

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries list of Bcc recipients.

**Example:**

```vba
dim e as new CURLEmailMBS

e.AddBcc "test@monkeybreadsoftware.test", "Test Miller"

dim Bccs() as string = e.Bccs
MsgBox Bccs(0)
```

Notes: Entries may be encoded if necessary.

### 58.1.12 ccs as String()

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries list of cc recipients.

**Example:**

```vba
dim e as new CURLEmailMBS

e.Addcc "test@monkeybreadsoftware.test", "Test Miller"

dim ccs() as string = e.ccs
MsgBox ccs(0)
```
Notes: Entries may be encoded if necessary.

58.1.13 clearAttachments

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears all attachments from this email. 
**Notes:** Useful in case you want to send same email with different attachments to another recipient.

58.1.14 ClearHeaders

MBS CURL Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears all headers from this email. 
**Notes:** Useful in case you want to send same email with different headers to another recipient.

58.1.15 clearRecipients

**Notes:** Removes all TO, cc, Bcc and ReplyTO entries. Useful in case you want to send same email to another recipient.

58.1.16 constructor(Encoding as string = ”UTF-8”)

MBS CURL Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.  
**Notes:** Normally, ignore parameter and use UTF-8. But alternative you can pass: UTF-8, AScII, MacRoman, Latin1 or Windows.

58.1.17 EmailSource as string

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the source code for the email.
Notes: This is more for debugging, than for real use.

58.1.18 Headers as String()

**Example:**
```vbs
dim e as new CURLEmailMBS
e.AddHeader "X-company: My company, Inc."

dim Headers() as string = e.Headers
MsgBox Headers(0)
```

58.1.19 ReplyTOs as String()

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries list of ReplyTo recipients.
**Example:**
```vbs
dim e as new CURLEmailMBS
e.AddReplyTo "test@monkeybreadsoftware.test", "Test Mller"

dim ReplyTos() as string = e.ReplyTOs
MsgBox ReplyTos(0)
```

Notes: Entries may be encoded if necessary.

58.1.20 SetFrom(email as string, name as string)

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the email from address.
**Example:**
```vbs
dim e as new CURLEmailMBS
e.SetFrom "test@test.test", "christian Mller"
```
58.1. CLASS CURLEMAILMBS

Notes: Please pass email and name of the recipient. If this name contains special characters, it will be automatically encoded with UTF-8.

58.1.21 SetServer(server as string, UseSSL as boolean)

Example:

```vbs
    dim e as new CURLEmailMBS
    e.SMTPPassword = "rGc3_promyjR% k"
    e.SMTPUsername = "sammler@monkeybreadsoftware.de"
    e.SetServer "smtprelaypool.ispgateway.de", true
```

Notes:
Sets which SMTP server to use.
There are a few combinations possible.
First you can use SetServer with SSL and pass true for UseURL parameter.
Or you pass false for no SSL. Still you can use CURL's OptionFTPSSL set to 3 to allow TLS for an upgrade of the unencrypted connection to SSL later.
Some servers don’t support unencrypted, SSL or TLS, so only one may work.
And ports can be difficult, too. You can use CURL OptionPort to set a port explicit or include it in the server with double colon on the end. common ports are 25, 587 or 465.

58.1.22 TOs as String()

Example:

```vbs
    dim e as new CURLEmailMBS
    e.AddTo "test@monkeybreadsoftware.test", "Test Miller"
    dim TOs() as string = e.TOs
    MsgBox TOs(0)
```

Notes: Entries may be encoded if necessary.
58.1.23 Properties

58.1.24 Attachmentcount as Integer

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns number of attachments. **Notes:** (Read only property)

58.1.25 BoundaryName as String

MBS CURL Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Optional name to use in boundaries for MIME parts. **Notes:**
by default MBS Plugin.
(Read and Write property)

58.1.26 HTMLText as String

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The HTML text of the email. **Notes:**
This text is encoded as quoted printable UTF-8 text.
(Read and Write property)

58.1.27 InReplyTo as String

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The in reply to message ID. **Notes:**
Here you can define the message ID of the email you reply to.
(Read and Write property)
58.1. CLASS CURLEMAILMBS

58.1.28 MessageID as String

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets a custom message ID. **Notes:** The plugin normally creates one by default when setting from address. (Read and Write property)

58.1.29 PlainText as String

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The plain text of the email. **Example:**

```plaintext
dim e as new CURLEmailMBS
e.PlainText = "Hello World," + EndOfLine + "Smilies: "
```

**Notes:** This text is encoded as quoted printable UTF-8 text. (Read and Write property)

58.1.30 RichText as String

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The enriched text of the email. **Notes:** This text is encoded as quoted printable UTF-8 text. This is not to be confused with RTF file format. Enriched text is described here: http://en.wikipedia.org/wiki/Enriched_text Please note that most email clients do not support this nowadays. (Read and Write property)

58.1.31 Server as String

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The effective server URL used. **Notes:** Only for debugging.
58.1.32  SMTPPassword as String

**Example:**

```vba
dim e as new CURLEmailMBS

e.SMTPPassword = "rGc3_mdYjR% k"
e.SMTPUsername = "sammler@monkeybreadsoftware.de"
e.SetServer "smtprelaypool.ispgateway.de", true
```

**Notes:** (Read and Write property)

58.1.33  SMTPServer as String

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The domain name of the SMTP Server to use.

**Example:**

```vba
dim e as new CURLEmailMBS

e.SMTPPassword = "rGc3_mdYjR% k"
e.SMTPUsername = "sammler@monkeybreadsoftware.de"
e.SMTPServer = "smtprelaypool.ispgateway.de"
e.UseSSL = true
```

**Notes:** (Read and Write property)

58.1.34  SMTPUsername as String

**Example:**

```vba
dim e as new CURLEmailMBS

e.SMTPPassword = "rGc3_mdYjR% k"
```
58.1. **CLASS CURLEMAILMBS**

e.SMTPUsername = "sammler@monkeybreadsoftware.de"
e.SetServer "smtprelaypool.ispgateway.de", true

**Notes:** (Read and Write property)

### 58.1.35 Subject as String

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The subject line.

**Example:**

```vbnet
dim e as new CURLEmailMBS

e.Subject = "Hello World 
```

**Notes:**

If subject lines contains special characters, it is automatically encoded as UTF-8.
(Read and Write property)

### 58.1.36 UseSSL as Boolean

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether to use SSL or not.

**Example:**

```vbnet
dim e as new CURLEmailMBS

e.SMTPPassword = "rGc3_mdyjR% k"
e.SMTPUsername = "sammler@monkeybreadsoftware.de"
e.SMTPServer = "smtprelaypool.ispgateway.de"
e.UseSSL = true
```

**Notes:**

When using SSL right, please also check cAInfo, cAPath, OptionSSLVerifyHost and OptionSSLVerifyPeer properties on the CURLSMBS class.

Pass false for TLS and later configure CURL for TLS.
(Read and Write property)
58.2. CLASS CURLFILEINFOMBS

58.2 class CURLFileInfoMBS

58.2.1 class CURLFileInfoMBS

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for file information.
**Notes:** Content of this structure depends on information which is known and is achievable (e.g. by FTP LIST parsing).

58.2.2 Properties

58.2.3 Date as Date

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The timestamp as a date object.
**Notes:**
As of plugin version 15.2 the CURL library does not parse the timestamp.
So for some timestamp formats we have code in our plugin to do the parsing from the TimeString property.
But this is limited. No seconds and the year is a guess. Files newer in the year than today are from last year and other files from current year. The server doesn’t provide year details.
(Read only property)

58.2.4 FileName as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The file name.
**Notes:** (Read only property)

58.2.5 FileType as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The file type.
**Notes:** (Read only property)

58.2.6 Flags as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The flags.
Notes:
Flags define which fields are set.
Also you can just use the Has properties for same information.
(Read only property)

58.2.7 GID as Integer

Notes: (Read only property)

58.2.8 GroupString as String

Notes: (Read only property)

58.2.9 HardLinks as Integer

Notes: (Read only property)

58.2.10 HasFileName as Boolean

Notes: (Read only property)

58.2.11 HasFileType as Boolean

Notes: (Read only property)
58.2.12 HasGID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if GID property is valid. 
**Notes:** (Read only property)

58.2.13 HasHardLinks as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if hardlinks property is valid. 
**Notes:** (Read only property)

58.2.14 HasPermissions as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if permissions property is valid. 
**Notes:** (Read only property)

58.2.15 HasSize as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if size property is valid. 
**Notes:** (Read only property)

58.2.16 HasTime as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if time and date properties have values. 
**Notes:** (Read only property)

58.2.17 HasUID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if UID field has a value. 
**Notes:** (Read only property)
58.2.18 IsDirectory as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if entry is a directory. 
**Notes:**
Same as FileType = FileTypeDirectory.
(Read only property)

58.2.19 IsFile as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if entry is a regular file. 
**Notes:**
Same as FileType = FileTypeFile.
(Read only property)

58.2.20 Permissions as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The permission value. 
**Notes:** (Read only property)

58.2.21 PermissionString as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The permission string. 
**Notes:** (Read only property)

58.2.22 Size as Int64

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The file size. 
**Notes:** (Read only property)
58.2. CLASS CURLFILEINFOMBS

58.2.23 Target as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The target for a symlink.
**Notes:** (Read only property)

58.2.24 Time as Int64

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The time value.
**Notes:** (Read only property)

58.2.25TimeString as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The time string parsed.
**Notes:** (Read only property)

58.2.26 UID as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The user ID.
**Notes:** (Read only property)

58.2.27 UserString as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The user ID as text.
**Notes:** (Read only property)

58.2.28 Constants

58.2.29 FileTypeDeviceBlock = 3

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the file type constants.
**Notes:** Block Device
58.2.30 FileTypeDeviceChar = 4

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the file type constants.  
**Notes:** Character Device

58.2.31 FileTypeDirectory = 1

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the file type constants.  
**Notes:** Directory

58.2.32 FileTypeDoor = 7

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the file type constants.  
**Notes:** Door, is possible only on Sun Solaris now.

58.2.33 FileTypeFile = 0

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the file type constants.  
**Notes:** Regular file

58.2.34 FileTypeNamedPipe = 5

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the file type constants.  
**Notes:** Named Pipe

58.2.35 FileTypeSocket = 6

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the file type constants.  
**Notes:** Socket

58.2.36 FileTypeSymlink = 2

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the file type constants.  
**Notes:** Symbolic links
58.2.37  **FileTypeUnknown = 8**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the file type constants. 
**Notes:** Unknown file type. Should never occur.

58.2.38  **FlagKnownFileName = 1**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants. 
**Notes:** Filename Known

58.2.39  **FlagKnownFileType = 2**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants. 
**Notes:** File Type Known

58.2.40  **FlagKnownGID = 32**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants. 
**Notes:** GID Known

58.2.41  **FlagKnownHardLinks = 128**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants. 
**Notes:** Hardlink Count Known

58.2.42  **FlagKnownPermissions = 8**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants. 
**Notes:** Permissions Known

58.2.43  **FlagKnownSize = 64**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants. 
**Notes:** Size Known
58.2.44 FlagKnownTime = 4

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants.  
**Notes:** Time Known

58.2.45 FlagKnownUID = 16

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants.  
**Notes:** UID Known
58.3. CLASS CURLListMBS

58.3  class CURLListMBS

58.3.1  class CURLListMBS

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class to hold a list of strings from the CURL library. **Notes:** Data is copied for this list, so you can just keep it around.

58.3.2  Methods

58.3.3  Item(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the item with the given index. **Notes:** Index is zero based.

58.3.4  List as String()

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts list to a string array.

58.3.5  Operator Convert as String()

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts list to a string array.

58.3.6  Properties

58.3.7  Count as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of items in this list. **Notes:** (Read only property)
58.4 class CURLMBS

58.4.1 class CURLMBS

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class to wrap libCURL.

**Notes:**

We have two variants:

CURLS* classes include a static CURL library with SSL and SSH.
CURLN* classes include a static CURL library with native SSL on Mac and Windows.
CURL* classes without S need you to supply your own CURL library.

All variants can load a custom CURL library or use the one from the system on Mac and Linux. If no library is loaded or included, the plugin will try to load the system one in constructor.

from the website libCURL website:
http://CURL.haxx.se/libCURL/

libCURL is a free and easy-to-use client-side URL transfer library, supporting FTP, FTPS, HTTP, HTTPS, SCP, SFTP, TFTP, TELNET, DICT, FILE and LDAP. libCURL supports SSL certificates, HTTP POST, HTTP PUT, FTP uploading, HTTP form based upload, proxies, cookies, user+password authentication (Basic, Digest, NTLM, Negotiate, Kerberos4), file transfer resume, http proxy tunneling and more!

libCURL is highly portable, it builds and works identically on numerous platforms, including Solaris, NetBSD, FreeBSD, OpenBSD, Darwin, HPUX, IRIX, AIX, Tru64, Linux, UnixWare, HURD, Windows, Amiga, OS/2, BeOs, Mac OS X, Ultrix, QNX, OpenVMS, RISC OS, Novell NetWare, DOS and more...

libCURL is free, thread-safe, IPv6 compatible, feature rich, well supported, fast, thoroughly documented and is already used by many known, big and successful companies and numerous applications.

On Linux you may need to install libraries like ldap: apt-get install libldap-2.4.2:i386

58.4.2 Methods

58.4.3 AddMimePart as CURLMimePartMBS

**Notes:** Returns mime object, so you can set properties.
58.4.4  ClearData

MBS CURL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears data properties.  
**Notes:** Resets OutputData, DebugData and HeaderData.

58.4.5  CloseMTDebugOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes the debug output file for PerformMT.  
**Notes:**
Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

58.4.6  CloseMTHeaderOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes the header output file for PerformMT.  
**Notes:**
Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

58.4.7  CloseMTInputFile

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes the input file for PerformMT.  
**Notes:**
Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

58.4.8  CloseMTOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes the output file for PerformMT.  
**Notes:**
Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

58.4.9 CreateMTDebugOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a file where debug data is written to.
**Notes:**
Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

58.4.10 CreateMTHeaderOutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a file where header data is written to.
**Notes:**
Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

58.4.11 CreateMTOoutputFile(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a file where output data is written to.
**Notes:**
Returns true on success and false on failure (e.g. permission error).
With 15.2 version of plugin, this also works with Perform.

58.4.12 FileInfos as CURLFileInfoMBS()

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries array with file information.
**Notes:** If you use OptionWildcard, you find after the transfer all CURLFileInfoMBS objects for all the files/folders found.
58.4. **CLASS CURLMBS**

### 58.4.13 FinishMime

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finishes mime data.

**Example:**

```vbnet
dim c as new CURLMBS

// add mime
dim p as CURLMimePartMBS = c.AddMimePart

p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"

c.FinishMime

// now you can send...
```

**Notes:** Please call AddMimePart for each part you like to add and than finally FinishMime before calling perform.

### 58.4.14 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, FormOptions() as Integer, Texts() as string)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Add a section to a multipart/formdata HTTP POST.

**Example:**

```vbnet
dim c as new CURLMBS
dim file1 as string = "my-face.jpg"
dim file2 as string = "your-face.jpg"
dim formOptions(-1) as Integer
dim formValues(-1) as string

const CURLFORM_COPYNAME = 1
const CURLFORM_ARRAY = 8
const CURLFORM_FILE = 10

'/* Add two file section using CURLFORM_ARRAY */
formOptions.Append CURLFORM_FILE
formValues.append file1
formOptions.Append CURLFORM_FILE
formValues.append file2
```
```
/* no option needed for the end marker */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues
```

**Notes:**

Lasterror is set.
See other FormAdd methods for details.

58.4.20 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string, FormOption4 as Integer, Number4 as Integer)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Add a section to a multipart/formdata HTTP POST.

**Notes:**
Several FormAdd methods are there. Send a request to support if you need another parameter combination.

LastError is set.

FormAdd() is used to append sections when building a multipart/formdata HTTP POST (sometimes referred to as rfc1867-style posts). Append one section at a time until you’ve added all the sections you want included and then you call FormFinish.

Using POST with HTTP 1.1 implies the use of a ”Expect: 100-continue” header. You can disable this header with CURLOPT_HTTPHEADER as usual.

First, there are some basics you need to understand about multipart/formdata posts. Each part consists of at least a NAME and a CONTENTS part. If the part is made for file upload, there are also a stored CONTENT-TYPE and a FILENAME. Below, we’ll discuss what options you use to set these properties in the parts you want to add to your post.

The options listed first are for making normal parts. The options from CURLOPT_FILE through CURLOPT_BUFFERLENGTH are for file upload parts.

CURLFORM_COPYNAME:
followed by a string which provides the name of this part. libCURL copies the string so your application doesn’t need to keep it around after this function call. If the name isn’t null terminated, or if you’d like it to contain zero bytes, you must set its length with CURLOPT_NAMELENGTH.

CURLFORM_PTRNAME:
followed by a string which provides the name of this part. libCURL will use the string and refer to the data in your application, so you must make sure it remains until CURL no longer needs it. If the name isn’t null terminated, or if you’d like it to contain zero bytes, you must set its length with CURLOPT_NAMELENGTH.

CURLFORM_COPYCONTENTS:
followed by a string to the contents of this part, the actual data to send away. libCURL copies the provided data, so your application doesn’t need to keep it around after this function call. If the data isn’t null terminated, or if you’d like it to contain zero bytes, you must set the length of the name with CURLOPT_CONTENTSLENGTH.
58.4. CLASS CURLMBS

CURLFORM_PTRCONTENTS:
followed by a string to the contents of this part, the actual data to send away. libCURL will use the string
and refer to the data in your application, so you must make sure it remains until CURL no longer needs
it. If the data isn’t null terminated, or if you’d like it to contain zero bytes, you must set its length with
CURLFORM_CONTENTSLENGTH.

CURLFORM_CONTENTSLENGTH:
followed by a long giving the length of the contents.

CURLFORM_FILECONTENT:
followed by a filename, causes that file to be read and its contents used as data in this part. This part does
not automatically become a file upload part simply because its data was read from a file.

CURLFORM_FILE:
followed by a filename, makes this part a file upload part. It sets the filename field to the basename of the
provided filename, it reads the contents of the file and passes them as data and sets the content-type if the
given file match one of the internally known file extensions. For CURLFORM_FILE the user may send one
or more files in one part by providing multiple CURLFORM_FILE arguments each followed by the filename
(and each CURLFORM_FILE is allowed to have a CURLFORM_CONTENTTYPE).

CURLFORM_CONTENTTYPE:
is used in combination with CURLFORM_FILE. Followed a string which provides the content-type for this
part, possibly instead of an internally chosen one.

CURLFORM_FILENAME:
is used in combination with CURLFORM_FILE. Followed a string, it tells libCURL to use the given string
as the filename in the file upload part instead of the actual file name.

CURLFORM_BUFFER:
is used for custom file upload parts without use of CURLFORM_FILE. It tells libCURL that the file contents
are already present in a buffer. The parameter is a string which provides the filename field in the content
header.

CURLFORM_BUFFERPTR:
is used in combination with CURLFORM_BUFFER. The parameter is the string to be uploaded. You must
also use CURLFORM_BUFFERLENGTH to set the number of bytes in the buffer. Keep the buffer variable
alive till the upload is finished.

CURLFORM_BUFFERLENGTH:
is used in combination with CURLFORM_BUFFER. The parameter is a long which gives the length of the
buffer.
CHAPTER 58. CURL

CURLFORM_ARRAY:
Another possibility to send options to CURL_formadd() is the CURLFORM_ARRAY option, that passes an Integer Array and a String Array defining its value. Each element in the form is constructed using the option from the integer array and the value from the string array. All available options can be used in an array, except the CURLFORM_ARRAY option itself!

CURLFORMCONTENTHEADER:
specifies extra headers for the form POST section. This takes a CURL_slist prepared in the usual way using CURL_slist_append and appends the list of headers to those libCURL automatically generates. The list must exist while the POST occurs, if you free it before the post completes you may experience problems.

PS: CURLFORM_FILE does not work in all CURL versions on all platforms due to a bug with integer numbers.

58.4.21 FormAdd(FormOption1 as integer, Text1 as string, FormOption2 as integer, Text2 as string, FormOption3 as integer, Text3 as string, FormOption4 as integer, Number4 as integer, FormOption5 as integer, Text5 as string)

MBS CURL Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Add a section to a multipart/formdata HTTP POST.
Notes:
Lasterror is set.
See other FormAdd methods for details.
See also:
58.4. **CLASS CURLMBS**

- 58.4.14 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, FormOptions() as Integer, Texts() as string) 9933
- 58.4.15 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string) 9934
- 58.4.16 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Number3 as Integer) 9935
- 58.4.17 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Number3 as Integer, FormOption4 as Integer, Number4 as Integer) 9936
- 58.4.18 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Number3 as Integer, FormOption4 as Integer, Text4 as string) 9936

- 58.4.20 FormAdd(FormOption1 as Integer, Text1 as string, FormOption2 as Integer, Text2 as string, FormOption3 as Integer, Text3 as string, FormOption4 as Integer, Number4 as Integer) 9938

58.4.22  **FormAddField**

function Name: FormAddField

- **fieldName** as String
- **fieldValue** as String
- **ContentType** as String = ""

MBS CURL Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Add a section to a multipart/formdata HTTP POST.

**Example:**

```java
dim d as new CURLMBS
d.FormAddField("company", "Test, Inc.")
```

**Notes:**

For **fieldName** and **ContentType**, we use UTF8 always. For **fieldValue**, we pass through whatever is in the string, so please make sure encoding is working.
**ContentType** is optional.

58.4.23  **FormAddFile**

function Name: FormAddFile

- **fieldName** as String
- **fileName** as String
- **fileContent** as string
- **ContentType** as String = ""

MBS CURL Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Add a section to a multipart/formdata HTTP POST.

**Example:**

```java
dim d as new CURLMBS
d.FormAddFile("FileAttachment", "test.txt", "just a form test", "text/plain")
```
Notes:
For fieldName, fileName and ContentType, we use UTF8 always. For fieldValue, we pass through whatever is in the string, so please make sure encoding is working.

Filename is ignored, if empty.
ContentType is optional.

58.4.24 FormData as String

MBS CURL Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Queries current form data. Notes: This is more for debugging as it builds form data as if we would send it.

58.4.25 FormFinish

Example:

```
dim c as new CURLMBS
dim namebuffer as string = "name buffer"
dim namelength as Integer = lenb(namebuffer)
dim buffer as string = "test buffer"
dim htmlbuffer as string = "<HTML>test buffer</HTML>"
dim htmlbufferlength as Integer = lenb(htmlbuffer)
dim file1 as string = "my-face.jpg"
dim file2 as string = "your-face.jpg"
dim formOptions(-1) as Integer
  dim formValues(-1) as string
  dim recordbuffer as string = "record buffer"
dim recordlength as Integer = lenb(recordbuffer)

const CURLFORM NOTHING = 0
const CURLFORM COPYNAME = 1
const CURLFORM PTRNAME = 2
const CURLFORM NAMELENGTH = 3
const CURLFORM COPYCONTENTS = 4
const CURLFORM PTRCONTENTS = 5
const CURLFORM CONTENTSLENGTH = 6
const CURLFORM FILECONTENT = 7
```
const CURLFORM_ARRAY = 8
const CURLFORM_FILE = 10
const CURLFORM_BUFFER = 11
const CURLFORM_BUFFERPTR = 12
const CURLFORM_BUFFERLENGTH = 13
const CURLFORM_CONTENTTYPE = 14
const CURLFORM_CONTENTHEADER = 15
const CURLFORM_FILENAME = 16

'/* Add simple name/content section */
c.FormAdd CURLFORM_COPYNAME, "name", CURLFORM_COPYCONTENTS, "content"

'/* Add simple name/content/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "htmlcode", CURLFORM_COPYCONTENTS, "<HTML></HTML>", CURLFORM_CONTENTTYPE, "text/html"

'/* Add name/ptrcontent section */
c.FormAdd CURLFORM_PTRNAME, "name_for_ptrcontent", CURLFORM_PTRCONTENTS, buffer

'/* Add ptrname/ptrcontent section */
c.FormAdd CURLFORM_PTRNAME, namebuffer, CURLFORM_PTRCONTENTS, buffer, CURLFORM_NAMELENGTH, namelength

'/* Add name/ptrcontent/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "html_code_with_hole", CURLFORM_PTRCONTENTS, htmlbuffer, CURLFORM_CONTENTSLENGTH, htmlbufferlength, CURLFORM_CONTENTTYPE, "text/html"

'/* Add simple file section */
c.FormAdd CURLFORM_COPYNAME, "picture", CURLFORM_FILE, "my-face.jpg"

'/* Add file/contenttype section */
c.FormAdd CURLFORM_COPYNAME, "picture", CURLFORM_FILE, "my-face.jpg", CURLFORM_CONTENTTYPE, "image/jpeg"

'/* Add two file section */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_FILE, "my-face.jpg", CURLFORM_FILE, "your-face.jpg"

'/* Add two file section using CURLFORM_ARRAY */
formOptions.Append CURLFORM_FILE
formValues.append file1
formOptions.Append CURLFORM_FILE
formValues.append file2
'/* Add a buffer to upload */
c.FormAdd CURLFORM_COPYNAME, "name", CURLFORM_BUFFER, "data", CURLFORM_BUFFERPTR, recordbuffer, CURLFORM_BUFFERLENGTH, recordlength

'/* no option needed for the end marker */
c.FormAdd CURLFORM_COPYNAME, "pictures", CURLFORM_ARRAY, formOptions, formValues

'/* Add the content of a file as a normal post text value */
c.FormAdd CURLFORM_COPYNAME, "filecontent", CURLFORM_FILECONTENT, "bashrc"

'/* Set the form info */

c.FormFinish

Notes:
Lasterror is set.
The form is assigned to the HTTPPost property.

58.4.26 GetInfoActiveSocket as integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Receive the active socket used by this curl session.
**Notes:**
If the socket is no longer valid, -1 is returned. When you finish working with the socket, the Destructor closes the socket and cleanup other resources associated with the handle. This is typically used in combination with OptionConnectOnly.

This option was added as a replacement for GetInfoLastSocket since that one isn’t working on all platforms.

58.4.27 GetInfoAppConnectTime as Double

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The time stamp when app connected.

58.4.28 GetInfoCertInfo as CURLListMBS()

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries information on the certificate chain.
**Example:**
58.4.  CLASS CURLMBS

dim c as new CURLMBS

    // do some transfer
    c.OptionURL = "https://www.mbsplugins.de/"
    dim e as Integer = c.perform

    // query certificate info
    dim lists() as CURLListMBS = c.GetInfoCertInfo

    for each l as CURLListMBS in lists
        MsgBox Join(l, EndOfLine)
    next

    MsgBox c.DebugData

58.4.29  GetInfoConditionUnmet as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Return if the time condition prevented the document to get transferred.

58.4.30  GetInfoConnectTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The time, in seconds, it took from the start until the connect to the remote host (or proxy) was completed.
**Notes:** The Lasterror property is set. 0 for success.

58.4.31  GetInfoContentLengthDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The content-length of the download.
**Notes:**
The Lasterror property is set. 0 for success.
This is the value read from the Content-Length: field.

58.4.32  GetInfoContentLengthUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The specified size of the upload.
Chapter 58. CURL

Notes: The Lasterror property is set. 0 for success.

58.4.33 GetInfoContentType as string

Notes:
The Lasterror property is set. 0 for success.
This is the value read from the Content-Type: field. If you get "", it means that the server didn’t send a valid Content-Type header or that the protocol used doesn’t support this.

58.4.34 GetInfoCookieList as CURLListMBS

Notes:
The Lasterror property is set. 0 for success.
If there are no cookies (cookies for the handle have not been enabled or simply none have been received) the result is nil.

58.4.35 GetInfoEffectiveURL as string

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The last used effective URL.
Notes: The Lasterror property is set. 0 for success.

58.4.36 GetInfoFileTime as Integer

Example:

```
// init CURL with options
dim d as new CURLMBS
d.OptionFileTime = true
d.OptionURL = "http://www.monkeybreadsoftware.de/images/mbs.jpg"

// run query
```
58.4. **CLASS CURLMBS**

dim e as Integer = d.Perform

// calculate date object
dim da as new date(1970,1,1,0,0,0)

// show date
ResultText.text=str(d.GetInfoFileTime)+" "+da.ShortDate+" "+da.ShortTime

Notes:
The Lasterror property is set. 0 for success.
If you get -1, it can be because of many reasons (unknown, the server hides it or the server doesn’t support
the command that tells document time etc) and the time of the document is unknown. Note that you must
tell the server to collect this information before the transfer is made, by using the OptionFileTime option or
you will unconditionally get a -1 back. (Added in 7.5)

58.4.37 **GetInfoFTPEntryPath as string**

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a string holding the path of the entry path.
**Notes:**
That is the initial path libCURL ended up in when logging on to the remote FTP server.
Empty string if unknown.

58.4.38 **GetInfoHeaderSize as Integer**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The total size of all the headers received.
**Notes:** The Lasterror property is set. 0 for success.

58.4.39 **GetInfoHTTPAuthAvail as Integer**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A bitmask indicating the authentication method(s) available.
**Notes:**
The Lasterror property is set. 0 for success.
The meaning of the bits is explained in the HTTPAuth option.
58.4.40 GetInfoHTTPConnectCode as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last received proxy response code to a CONNECT request.

**Notes:**
The Lasterror property is set. 0 for success.

none

58.4.41 GetInfoHTTPVersion as integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get the http version used in the connection.

**Notes:** The returned value will be kHTTP_VERSION_1_0, kHTTP_VERSION_1_1, or kHTTP_VERSION_2_0, or 0 if the version can’t be determined.

58.4.42 GetInfoLastSocket as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Receive the last socket used by this CURL session.

**Notes:** If the socket is no longer valid, -1 is returned. When you finish working with the socket, the destructor will free the handle as usual and let libCURL close the socket and cleanup other resources associated with the handle. This is typically used in combination with OptionConnectOnly. (Added in 7.15.2)

NOTE: this API is not really working on win64, since the SOCKET type on win64 is 64 bit large while its 'long' is only 32 bits.

58.4.43 GetInfoLocalIP as string

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries local IP.

**Example:**

```vba
dim c as new CURLMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/

dim e as Integer = c.perform

// now check local IP
```
58.4. CLASS CURLMBS

MsgBox c.GetInfoLocalIP

58.4.44 GetInfoLocalPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Return the local port of the most recent (primary) connection.

**Example:**

```vba
dim c as new CURLMBS

// do some transfer
c.OptionURL = "http://www.mbsplugins.de/"
dim e as Integer = c.perform

// now check local IP and port
MsgBox c.GetInfoLocalIP + ":" + str(c.GetInfoLocalPort)
```

58.4.45 GetInfoNameLookupTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The time, in seconds, it took from the start until the name resolving was completed.

**Notes:** The Lasterror property is set. 0 for success.

58.4.46 GetInfoNumConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** How many new connections libCURL had to create to achieve the previous transfer.

**Notes:**
The Lasterror property is set. 0 for success.
(only the successful connects are counted)
Combined with RedirectCount you are able to know how many times libCURL successfully reused existing connection(s) or not. See the Connection Options to see how libCURL tries to make persistent connections to save time.

58.4.47 GetInfoOSErrno as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The errno variable from a connect failure.
58.4.48  GetInfoPreTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The time, in seconds, it took from the start until the file transfer is just about to begin.
**Notes:**
The Lasterror property is set. 0 for success.
This includes all pre-transfer commands and negotiations that are specific to the particular protocol(s) involved.

58.4.49  GetInfoPrimaryIP as string

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Return the ip address of the most recent (primary) connection.
**Example:**
```vbs
dim c as new CURLMBS
// do some transfer
c.OptionURL = "http://www.mbsplugins.de/")
dim e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryport)
```

58.4.50  GetInfoPrimaryPort as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Return the (remote) port of the most recent (primary) connection.
**Example:**
```vbs
dim c as new CURLMBS
// do some transfer
c.OptionURL = "http://www.mbsplugins.de/")
dim e as Integer = c.perform

// now check primary IP and port
MsgBox c.GetInfoPrimaryIP+":"+str(c.GetInfoPrimaryport)
```
58.4.51 GetInfoProtocol as integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get the protocol used in the connection.
**Notes:** See kProtocol* constants.

58.4.52 GetInfoProxyAuthAvail as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A bitmask indicating the authentication method(s) available for your proxy authentication.
**Notes:** The Lasterror property is set. 0 for success.

58.4.53 GetInfoProxySSLSVerifyResult as integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get the result of the proxy certificate verification.
**Notes:** receive the result of the certificate verification that was requested (using the OptionProxySSLSVerifyPeer option. This is only used for HTTPS proxies.

58.4.54 GetInfoRedirectCount as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The total number of redirections that were actually followed.
**Notes:** The Lasterror property is set. 0 for success.

58.4.55 GetInfoRedirectTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
the total time, in seconds, it took for all redirection steps include name lookup, connect, pretransfer and transfer before final transaction was started.
**Notes:**
The Lasterror property is set. 0 for success.
RedirectTime contains the complete execution time for multiple redirections. (Added in 7.9.7)
58.4.56  GetInfoRedirectURL as string

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The redirection URL.

58.4.57  GetInfoRequestSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The total size of the issued requests.

**Notes:**
The Lasterror property is set. 0 for success.
This is so far only for HTTP requests. Note that this may be more than one request if FOLLOWLOCATION is true.

58.4.58  GetInfoResponseCode as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last received HTTP or FTP code.

**Notes:**
The Lasterror property is set. 0 for success.
This will be zero if no server response code has been received. Note that a proxy’s CONNECT response should be read with GetInfoHTTPConnectCode and not this.

With HTTP transfer, a successful transfer reports 200 here. If the page is not found, you get 404. Or any other HTTP Response code.

58.4.59  GetInfoRTSPClientCSEQ as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Query RTSP Client sequence counter.

58.4.60  GetInfoRTSPCSEQRecv as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Query RTSP sequence counter received.
58.4. CLASS CURLMBS

58.4.61 GetInfoRTSPServerCSEQ as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Query RTSP Server sequence counter.

58.4.62 GetInfoRTSPSessionID as string

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Query RTSP session ID.

58.4.63 GetInfoScheme as string

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get the URL scheme (sometimes called protocol) used in the connection.

58.4.64 GetInfoSizeDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The total amount of bytes that were downloaded.

**Notes:**
- The Lasterror property is set. 0 for success.
- The amount is only for the latest transfer and will be reset again for each new transfer.

58.4.65 GetInfoSizeUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The total amount of bytes that were uploaded.

**Notes:** The Lasterror property is set. 0 for success.

58.4.66 GetInfoSpeedDownload as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The average download speed that CURL measured for the complete download.

**Notes:** The Lasterror property is set. 0 for success.
58.4.67  GetInfoSpeedUpload as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The average upload speed that CURL measured for the complete upload.
**Notes:** The Lasterror property is set. 0 for success.

58.4.68  GetInfoSSLEngines as CURLListMBS

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Receive a linked-list of OpenSSL crypto-engines supported.
**Notes:**
The Lasterror property is set. 0 for success.
Note that engines are normally implemented in separate dynamic libraries. Hence not all the returned engines may be available at run-time.

58.4.69  GetInfoSSLVerifyResult as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
the result of the certification verification that was requested (using the SSLVerifyPeer option).
**Notes:** The Lasterror property is set. 0 for success.

58.4.70  GetInfoStartTransferTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
the time, in seconds, it took from the start until the first byte is just about to be transferred.
**Notes:**
The Lasterror property is set. 0 for success.
This includes the pretransfer time and also the time the server needs to calculate the result.

58.4.71  GetInfoTotalTime as Double

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The total time in seconds for the previous transfer, including name resolving, TCP connect etc.
**Notes:** The Lasterror property is set. 0 for success.
58.4. **CLASS CURLMBS**

### 58.4.72 LoadAPI

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Loads the default CURL library.

**Notes:**
This method is called by the constructor. So you don’t need this except you want to test explicit with APILoaded whether the loading worked before you use the CURLMBS class.

Loads the “libCURL.dll” Windows library (with SSL support this one max require OpenSSL).

Loads on Mac OS X and Linux the libCURL file in /usr/lib.

### 58.4.73 LoadErrorString as string

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The last error string from the LoadLibrary function.

### 58.4.74 LoadLibrary(file as folderitem) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Loads the CURL library from the given path.

**Notes:**
You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.

Returns true on success.

See also:
- **58.4.75 LoadLibrary(path as string) as boolean**

### 58.4.75 LoadLibrary(path as string) as boolean

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Loads the CURL library from the given path.

**Notes:**
You only need to use this function if you have your own CURL Library.

Loads a Windows DLL, a Linux shared library or a Mac OS X shared library from the given path.
CHAPTER 58. CURL

Returns true on success.
See also:

- 58.4.74 LoadLibrary(file as folderitem) as boolean

58.4.76 OpenMTInputFile(file as folderitem, Offset as Integer = 0) as boolean

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Opens input file for reading data while PerformMT runs.
Notes:
The read event is not called with PerformMT.
Offset is helpful for HTTP PUT requests with range, so you can start with an offset.
With 15.2 version of plugin, this also works with Perform.

58.4.77 Perform as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Perform a file transfer
Notes:
This function is called after all the options are set, and will perform the transfer as described in the options.

You can do any amount of calls to Perform. If you intend to transfer more than one file, you are even encouraged to do so. libCURL will then attempt to re-use the same connection for the following transfers, thus making the operations faster, less CPU intense and using less network resources. Just note that you will have to use the option properties between the invokes to set options for the following Perform.

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination,
60 for missing SSL settings, 1 for an unsupported protocol.

Possible values for the return value:

The error value -1 is used from the plugin to report that something is missing like OpenSSL dlls on Windows.

With SFTP, you can get logged error "Upload failed: Operation failed (4/-31)" when upload uses path to folder instead of file in URL.
58.4.78 PerformMT as Integer

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Perform a file transfer with preemptive multithreading.

**Notes:**
Same as Perform, but with additional multithreading.
Must be called inside a Xojo (Real Studio) thread so time yields to main thread and you can keep the GUI running.

As the actual transfer runs on a preemptive thread, the events Debug, Write, Header and Progress are called asynchronously and run a few milliseconds later. You can return true in Progress event to stop transfer, but you will get more events before the transfer is stopped.

You can call CreateMTDebugOutputFile, CreateMTHHeaderOutputFile and CreateMTOOutputFile before PerformMT to have output data be written into files. Call OpenMTInputFile to let the plugin read input data (form post or upload) from an input file.

Do not call other CURL functions on this CURLMBS instance while PerformMT is running!

Typical error codes are 6 for a wrong domain name in the URL, 67 for wrong name/password combination, 60 for missing SSL settings, 1 for an unsupported protocol.

To avoid trouble with app hanging on quit of application, be sure to set cancel property to true in window close event to cancel any pending transfer.

58.4.79 ReceiveData(byref data as Memoryblock, BytesToRead as Int64) as Int64

MBS CURL Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Receives raw data on a connection.

**Notes:**
This function receives raw data from the established connection. You may use it together with SendData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

The data memoryblock is a reference to your variable that will get the received data. BytesToRead is the maximum amount of data you can get in that buffer. The function returns the number of received bytes.

To establish the connection, set OptionConnectOnly = true before calling Perform. Note that ReceiveData does not work on connections that were created without this option.
The call will return kError_AGAIN if there is no data to read - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, wait for data to arrive.

Wait on the socket only if ReceiveData returns kError_AGAIN. The reason for this is libcurl or the SSL library may internally cache some data, therefore you should call ReceiveData until all data is read which would include any cached data.

Furthermore if you wait on the socket and it tells you there is data to read, ReceiveData may return CURLE_AGAIN if the only data that was read was for internal SSL processing, and no other data is available.

On success, sets lasterror to kError_OK (0), stores the received data into memory block, and returns the number of bytes it actually read.

On failure, returns zero and lasterror is set to the appropriate error code.

The function may return kError_AGAIN. In this case, use your operating system facilities to wait until data can be read, and retry.

Reading exactly 0 bytes indicates a closed connection.

If there’s no socket available to use from the previous transfer, this function returns kError_UNSUPPORTED_PROTOCOL.

58.4.80 Reset

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Re-initializes all options previously set on a specified CURL handle to the default values. **Notes:** It does not change the following information kept in the handle: live connections, the Session ID cache, the DNS cache, the cookies and shares.

58.4.81 SendData(data as Memoryblock) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sends raw data over a connection. **Notes:** This function sends arbitrary data over the established connection. You may use it together with ReceiveData to implement custom protocols using libcurl. This functionality can be particularly useful if you use
58.4. CLASS CURLMBS

proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

Provide the data to send via parameter. We return the number of bytes sent.

To establish the connection, set OptionConnectOnly = true option before calling Perform methods. Note that SendData will not work on connections that were created without this option.

The call will return kError_AGAIN if it’s not possible to send data right now - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, please wait.

Furthermore if you wait on the socket and it tells you it’s writable, SendData may return kError_AGAIN if the only data that was sent was for internal SSL processing, and no other data could be sent.

See also:

• 58.4.82 SendData(data as string) as Integer

58.4.82 SendData(data as string) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Sends raw data over a connection.

**Notes:**

This function sends arbitrary data over the established connection. You may use it together with ReceiveData to implement custom protocols using libcurl. This functionality can be particularly useful if you use proxies and/or SSL encryption: libcurl will take care of proxy negotiation and connection set-up.

Provide the data to send via parameter. We return the number of bytes sent.

To establish the connection, set OptionConnectOnly = true option before calling Perform methods. Note that SendData will not work on connections that were created without this option.

The call will return kError_AGAIN if it’s not possible to send data right now - the socket is used in non-blocking mode internally. When kError_AGAIN is returned, please wait.

Furthermore if you wait on the socket and it tells you it’s writable, SendData may return kError_AGAIN if the only data that was sent was for internal SSL processing, and no other data could be sent.

See also:

• 58.4.81 SendData(data as Memoryblock) as Integer
58.4.83  **SetInputData(data as MemoryBlock)**

MBS CURL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the input data.

**Notes:**

If you set input data, you do not need to use Read, RestartRead or Seek events. The plugin will use the provided data for the upload. Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.

See also:

- 58.4.84 SetInputData(data as string)

58.4.84  **SetInputData(data as string)**

MBS CURL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the input data.

**Notes:**

If you set input data, you do not need to use Read, RestartRead or Seek events. The plugin will use the provided data for the upload. Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).

Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.

See also:

- 58.4.83 SetInputData(data as MemoryBlock)

58.4.85  **SetOptionConnectTo(list() as string)**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set list of host:port:connect-to-host:connect-to-port, overrides the URL’s host:port (only for the network layer)

58.4.86  **SetOptionEmptyPassword**

MBS CURL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets an empty password.

**Notes:**
Normally you have no password unless you set it. But if you set a password with empty string, the plugin sets CURL to use no password. This method is to use an empty password.

58.4.87 SetOptionHTTP200Aliases(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: A linked list of aliases to be treated as valid HTTP 200 responses.
Notes:
Some servers respond with a custom header response line. For example, IceCast servers respond with "ICY 200 OK". By including this string in your list of aliases, the response will be treated as a valid HTTP header line such as "HTTP/1.0 200 OK".

The alias itself is not parsed for any version strings. So if your alias is "MYHTTP/9.9", LibCURL will not treat the server as responding with HTTP version 9.9. Instead LibCURL will use the value set by option HTTPVersion.

The Lasterror property is set. 0 for success.

58.4.88 SetOptionHTTPHeader(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: A linked list of HTTP headers to pass to the server in your HTTP request.
Example:
```pascal
dim c as new CURLMBS
c.SetOptionHTTPHeader array("Expect:", "Content-Type: text/xml", "SOAPAction: ""login""")
```
Notes:
If you add a header that is otherwise generated and used by libCURL internally, your added one will be used instead. If you add a header with no contents as in 'Accept:' (no data on the right side of the colon), the internally used header will get disabled. Thus, using this option you can add new headers, replace internal headers and remove internal headers. To add a header with no contents, make the contents be two quotes: "". The headers included in the linked list must not be CRLF-terminated, because CURL adds CRLF after each header item. Failure to comply with this will result in strange bugs because the server will most likely ignore part of the headers you specified.

The first line in a request (containing the method, usually a GET or POST) is not a header and cannot be replaced using this option. Only the lines following the request-line are headers. Adding this method line in
this list of headers will only cause your request to send an invalid header.

Pass an empty array to this to reset back to no custom headers.

The Lasterror property is set. 0 for success.

58.4.89 SetOptionMailRecipients(list() as string)

MBS CURL Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the array of email recipient addresses.

58.4.90 SetOptionPostQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Pass an array to a list of FTP commands to pass to the server after your ftp transfer request.
**Example:**

```vbnet
dim d as CURLMBS // your CURL object

dim ws() As String
ws.Append "RNFR Temp.txt"
ws.append "RNTO MyFile.txt"
d.SetOptionPostQuote(ws)
```

**Notes:**
Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.
If you want to do a ftp operation instead of download/upload/directory listing, please use SetOptionQuote.

58.4.91 SetOptionPreQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Pass an array to a list of FTP commands to pass to the server after the transfer type is set.
**Notes:**
Disable this operation again by using an empty array for this option. Before version 7.15.6, if you also set Nobody to true, this option didn’t work.
The Lasterror property is set. 0 for success.

58.4.92 SetOptionProxyHeader(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set list of headers used for proxy requests only.

58.4.93 SetOptionQuote(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Pass an array or a list of FTP commands to pass to the server prior to your ftp request.  
**Example:**
```
dim curl as new CURLMBS
curl.SetOptionQuote array("DELE filename.txt")
```

**Notes:**
This will be done before any other FTP commands are issued (even before the CWD command).

Disable this operation again by using an empty array for this option.

The Lasterror property is set. 0 for success.

58.4.94 SetOptionResolve(list() as string)

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Send linked-list of name:port:address sets.

58.4.95 SetOptionTelnetOptions(list() as string)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Provide an array of variables to pass to the telnet negotiations.  
**Notes:**
The variables should be in the format `<option=value>`. libCURL supports the options 'TTYPE', 'XDISPLOC' and 'NEW_ENV'. See the TELNET standard for details.
The Lasterror property is set. 0 for success.

58.4.96  SetPathCAInfo(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A path holding one or more certificates to verify the peer with.

**Example:**

```plaintext
dim cacert as FolderItem // your cacert.pem file
dim CURL as new CURLMBS
CURL.OptionSSLVerifyHost = 2 // verify server
CURL.OptionSSLVerifyPeer = 1 // proofs certificate is authentic
CURL.SetPathCAInfo cacert
```

**Notes:**

This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL’s cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

58.4.97  SetPathCAPath(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A path to the directory holding multiple CA certificates to verify the peer with.

**Notes:**

The certificate directory must be prepared using the openssl c_rehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
58.4.98 SetPathCRLFile(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the path with the concatenation of CRL (in PEM format) to use in the certificate validation that occurs during the SSL exchange.

**Notes:**

When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help in the verification process. When libCURL is built with OpenSSL support, `X509_V_FLAG_CRL_CHECK` and `X509_V_FLAG_CRL_CHECK_ALL` are both set, requiring CRL check against all the elements of the certificate chain if a CRL file is passed.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)

58.4.99 SetPathIssuerCert(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the path to a CA certificate in PEM format.

**Notes:**

If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (OptionSSLVerifyPeer has to be set too for the check to fail). (Added in 7.19.0)

58.4.100 SetPathNetRCFile(path as folderitem)

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the path to the file you want libCURL to use as .netrc file.

**Notes:**

If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the .netrc file in the
current user’s home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

58.4.101 SetupEmail(email as Variant) as boolean

MBS CURL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets up an existing CURL session for an email transfer.

**Example:**

```vbscript
dim e as new CURLEmailMBS

e.SetFrom "test@test.test", "Christian Mller"
e.Subject = "Hello World 
"e.SMTPPassword = "xxx"
e.SMTPUsername = "xxx"
e.SetServer "smtp.test.test", true
e.AddTo "test@test.test", "Test Mller"
e.PlainText = "Hello World," + EndOfLine + "Smilies: 
"

dim c as new CURLMBS

if c.SetupEmail(e) then

  dim er as Integer = c.Perform
  if er = 0 then
    MsgBox "Email sent"
  end if
end if
```

**Notes:**

You can set your own settings like proxy after this function call.
If you like you can reuse the email and CURL objects after you sent an email, change values and send another email.
Returns true on success or false on failure.
58.4.102 Properties

58.4.103 APILoaded as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the CURL library was loaded.

**Notes:**
The CURLMBS constructor loads the library if it was not loaded before.
(Read only property)

58.4.104  Cancel as Boolean

MBS CURL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Tells CURL instance to cancel transfer as soon as possible. **Notes:**

Especially when using PerformMT, you may see your app hang if user tries to quit application. To prevent the hang, please set Cancel = true in window close event. So when app quits and windows get destroyed, the PerformMT will see the Cancel being true and returns soon.

(Read and Write property)

58.4.105  CollectDebugData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to collect debug message data. **Notes:**

If you set this property to true, you can grab the data from the transfer in the DebugData Property instead of collecting the pieces yourself in the DebugMessage event. Of course this is optional and you can still process data in DebugMessage event.

Due to memory limitation, collecting data will not work right if your app is running low on memory.

(Read and Write property)

58.4.106  CollectHeaderData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to collect header data. **Notes:**

If you set this property to true, you can grab the data from the transfer in the headerData Property instead of collecting the pieces yourself in the header event. Of course this is optional and you can still process data in header event.

Due to memory limitation, collecting data will not work right if your app is running low on memory.

(Read and Write property)

58.4.107  CollectOutputData as Boolean

MBS CURL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to collect output data. **Notes:**

If you set this property to true, you can grab the data from the transfer in the OutputData Property instead of collecting the pieces yourself in the write event. Of course this is optional and you can still process data
in write event.
Due to memory limitation, collecting data will not work right if your app is running low on memory.
(Read and Write property)

58.4.108 DebugData as String

MBS CURL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The debug data from CURL.
**Notes:**
If CollectDebugData property is true, the plugin puts the data received in debugMessage event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object. (Read only property)

58.4.109 Handle as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The internal handle of the CURL object.
**Notes:** (Read and Write property)

58.4.110 HeaderData as String

MBS CURL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The header data from CURL.
**Notes:**
If CollectHeaderData property is true, the plugin puts the data received in header event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object. (Read only property)

58.4.111 InputData as String

MBS CURL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The input data.
**Notes:**
If you set input data, you do not need to use Read, RestartRead or Seek events. The plugin will use the provided data for the upload. Setting input data size, will also set the input file size (OptionInFileSizeLarge and OptionInFileSize).
Alternatively you can provide data in Read event or use OpenMTInputFile method to open a file on disk to upload.  
(Read and Write property)

58.4.112 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**  
The lasterror from the library.  
**Notes:**  
Set in the constructor while doing initialization.  
Check the kError* constants.  
(Read and Write property)

58.4.113 LasterrorMessage as String

MBS CURL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**  
The last error message.  
**Notes:**  
(Read only property)

58.4.114 LasterrorText as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**  
The text for the lasterror code.  
**Notes:**  
Static string matched to the error code, so you have an idea what’s wrong.  
(Read and Write property)

58.4.115 LibraryUsed as String

MBS CURL Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**  
Which library is in use.  
**Notes:**  
This is for debugging only to see which library is in use.  
(Read only property)
58.4.116 LibVersion as string

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a human readable string with the version number of libCURL and some of its important components (like OpenSSL version).
**Notes:** (Read only property)

58.4.117 OptionAbstractUnixSocket as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Path to an abstract Unix domain socket.
**Notes:** (Read and Write property)
See also ABSTRACT_UNIX_SOCKET option in CURL manual.

58.4.118 OptionAcceptEncoding as String

MBS CURL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the contents of the Accept-Encoding: header sent in a HTTP request, and enables decoding of a response when a Content-Encoding: header is received.
**Example:**
```vbscript
dim c as new CURLMBS
C.OptionAcceptEncoding = "deflate"
```

**Notes:**
Three encodings are supported: identity, which does nothing, deflate which requests the server to compress its response using the zlib algorithm, and gzip which requests the gzip algorithm. If a zero-length string is set, then an Accept-Encoding: header containing all supported encodings is sent.

This is a request, not an order; the server may or may not do it. This option must be set (to any non-NULL value) or else any unsolicited encoding done by the server is ignored. See the special file README.encoding for details (included with CURL source code).
(Read and Write property)
See also ACCEPT_ENCODING option in CURL manual.

58.4.119 OptionAcceptTimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Time-out accept operations (currently for FTP only) after this amount of milliseconds.
58.4. CLASS CURLMBS

Notes: (Read and Write property)
See also ACCEPTTIMEOUT_MS option in CURL manual.

58.4.120 OptionAddressScope as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Pass an integer specifying the scope_id value to use when connecting to IPv6 link-local or site-local addresses.
Notes:
(Added in CURL 7.19.0)
(Read and Write property)
See also ADDRESS_SCOPE option in CURL manual.

58.4.121 OptionAppend as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
True tells the library to append to the remote file instead of overwrite it.
Notes:
This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also APPEND option in CURL manual.

58.4.122 OptionAutoReferer as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
When enabled, libCURL will automatically set the Referer: field in requests where it follows a Location: redirect.
Notes:
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also AUTOREFERER option in CURL manual.
58.4.123 OptionBufferSize as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Your preferred size (in bytes) for the receive buffer in libCURL.
**Notes:**
The main point of this would be that the write callback gets called more often and with smaller chunks. This is just treated as a request, not an order. You cannot be guaranteed to actually get the given size. (Added in 7.10)

This size is by default set as big as possible (OptionMaxWriteSize), so it only makes sense to use this option if you want it smaller.

The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value. (Read and Write property)
See also **BUFFERSIZE** option in CURL manual.

58.4.124 OptionCAInfo as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A string naming a file holding one or more certificates to verify the peer with.
**Notes:**
This makes sense only when used in combination with the OptionSSLVerifyPeer option. If OptionSSLVerifyPeer is false, OptionCAINFO need not even indicate an accessible file.

Note that option is by default set to the system path where libCURL's cacert bundle is assumed to be stored, as established at build time.

The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you. (Read and Write property)
See also **CAINFO** option in CURL manual.
58.4. OptionCAPath as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string naming a directory holding multiple CA certificates to verify the peer with. **Notes:**

The certificate directory must be prepared using the openssl c_rehash utility. This makes sense only when used in combination with the CURLOPT_SSL_VERIFYPEER option. If OptionSSLVerifyPeer is zero, OptionCAPath need not even indicate an accessible path. The OptionCAPath function apparently does not work in Windows due to some limitation in openssl. This option is OpenSSL-specific and does nothing if libCURL is built to use GnuTLS.

The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you. 

(Read and Write property)

See also CAPATH option in CURL manual.

58.4. OptionCertInfo as boolean

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set to true to enable libCURL’s certificate chain info gatherer. **Notes:**

With this enabled, libCURL (if built with OpenSSL) will extract lots of information and data about the certificates in the certificate chain used in the SSL connection. This data is then possible to extract after a transfer using GetInfoCertInfo. (Added in 7.19.1)

(Read and Write property)

See also CERTINFO option in CURL manual.

58.4. OptionConnectionTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximum time in seconds that you allow the connection to the server to take. **Notes:**

This only limits the connection phase, once it has connected, this option is of no more use. Set to zero to disable connection timeout (it will then only timeout on the system’s internal timeouts). See also the OptionTimeout option. 

(Read and Write property)

See also CONNECTTIMEOUT option in CURL manual.
58.4.128  OptionConnectionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The maximum time in milli seconds that you allow the connection to the server to take.
**Notes:**
This only limits the connection phase, once it has connected, this option is of no more use. Set to zero
to disable connection timeout (it will then only timeout on the system’s internal timeouts). See also the
OptionTimeout option.
(Read and Write property)

58.4.129  OptionConnectOnly as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A true tells the library to perform any required proxy authentication and connection setup, but no data
transfer.
**Notes:**
This option is useful with the CURLMBS.GetInfoLastSocket function. The library can set up the connec-
tion and then the application can obtain the most recently used socket for special data transfers. (Added in
7.15.2)
(Read and Write property)
See also CONNECT ONLY option in CURL manual.

58.4.130  OptionCookie as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
It will be used to set a cookie in the http request.
**Notes:**
The format of the string should be NAME=CONTENTS, where NAME is the cookie name and CONTENTS
is what the cookie should contain.

If you need to set multiple cookies, you need to set them all using a single option and thus you need to
concatenate them all in one single string. Set multiple cookies in one string like this: "name1=content1;
name2=content2;" etc.

Using this option multiple times will only make the latest string override the previously ones.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIE option in CURL manual.
58.4.131 OptionCookieFile as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The cookie file content.

**Notes:**
It should contain the name of your file holding cookie data to read. The cookie data may be in Netscape / Mozilla cookie data format or just regular HTTP-style headers dumped to a file.

Given an empty or non-existing file or by passing the empty string (""), this option will enable cookies for this CURL handle, making it understand and parse received cookies and then use matching cookies in future request.

If you use this option multiple times, you just add more files to read. Subsequent files will add more cookies.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also COOKIEFILE option in CURL manual.

58.4.132 OptionCookieJar as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
File path where to write the cookies to.

**Notes:**
This will make libCURL write all internally known cookies to the specified file, when the object is destroyed.
If no cookies are known, no file will be created. Specify ".-" to instead have the cookies written to stdout.
Using this option also enables cookies for this session, so if you for example follow a location it will make matching cookies get sent accordingly.

If the cookie jar file can’t be created or written to, libCURL will not and cannot report an error for this. Using OptionVerbose or DebugFunction event will get a warning to display, but that is the only visible feedback you get about this possibly lethal situation.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.

(Read and Write property)
See also COOKIEJAR option in CURL manual.

58.4.133 OptionCookieList as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The cookie string.

**Notes:**
Cookie can be either in Netscape / Mozilla format or just regular HTTP-style header (Set-Cookie: ...) format. If CURL cookie engine was not enabled it will enable its cookie engine. Passing a magic string "ALL" will erase all cookies known by CURL. (Added in 7.14.1) Passing the special string "SESS" will only erase all session cookies known by CURL. (Added in 7.15.4)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIELIST option in CURL manual.

58.4.134 OptionCookieSession as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set to true to mark this as a new cookie "session".

**Notes:**
It will force libCURL to ignore all cookies it is about to load that are "session cookies" from the previous session. By default, libCURL always stores and loads all cookies, independent if they are session cookies are not. Session cookies are cookies without expiry date and they are meant to be alive and existing for this "session" only.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COOKIESSESSION option in CURL manual.
58.4. CLASS CURLMBS

58.4.135 OptionCRLF as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert Unix newlines to CRLF newlines on transfers.

**Notes:**

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.

(Read and Write property)

See also CRLF option in CURL manual.

58.4.136 OptionCRLFile as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string naming a file with the concatenation of CRL (in PEM format) to use in the certificate validation that occurs during the SSL exchange.

**Notes:**

When CURL is built to use NSS or GnuTLS, there is no way to influence the use of CRL passed to help in the verification process. When libCURL is built with OpenSSL support, X509_V_FLAG_CRL_CHECK and X509_V_FLAG_CRL_CHECK_ALL are both set, requiring CRL check against all the elements of the certificate chain if a CRL file is passed.

This option makes sense only when used in combination with the OptionSSLVerifyPeer option.

A specific error code (CURLE_SSL_CRL_BADFILE) is defined with the option. It is returned when the SSL exchange fails because the CRL file cannot be loaded. Note that a failure in certificate verification due to a revocation information found in the CRL does not trigger this specific error. (Added in 7.19.0)

(Read and Write property)

See also CRLFILE option in CURL manual.

58.4.137 OptionCustomRequest as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** It will be user instead of GET or HEAD when doing an HTTP request, or instead of LIST or NLST when doing an ftp directory listing.

**Example:**

```dim c as CURLMBS // your CURL instance```
```c.URL = "ftp://..."
c.customRequest = "MLSD" // ftp advanced directory listing```
Notes:
This is useful for doing DELETE or other more or less obscure HTTP requests. Don’t do this at will, make sure your server supports the command first.

Restore to the internal default by setting this to "".

Many people have wrongly used this option to replace the entire request with their own, including multiple headers and POST contents. While that might work in many cases, it will cause libCURL to send invalid requests and it could possibly confuse the remote server badly. Use CURLOPT_POST and OptionPostFields to set POST data. Use OptionHTTPHeader to replace or extend the set of headers sent by libCURL. Use OptionHTTPVersion to change HTTP version.

The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value. (Read and Write property)
See also CUSTOMREQUEST option in CURL manual.

58.4.138 OptionDefaultProtocol as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Set the protocol used when curl is given a URL without a protocol.
Notes: (Read and Write property)
See also DEFAULT_PROTOCOL option in CURL manual.

58.4.139 OptionDirListOnly as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: For FTP and SFTP based URLs a parameter set to true tells the library to list the names of files in a directory, rather than performing a full directory listing that would normally include file sizes, dates etc.
Notes:
For POP3 a parameter of true tells the library to list the email message or messages on the POP3 server. This can be used to change the default behaviour of libCURL, when combined with a URL that contains a message ID, to perform a “scan listing” which can then be used to determine the size of an email.

Note: For FTP this causes a NLST command to be sent to the FTP server. Beware that some FTP servers list only files in their response to NLST; they might not include subdirectories and symbolic links.

Setting this option to true also implies a directory listing even if the URL doesn’t end with a slash, which otherwise is necessary.
Do NOT use this option if you also use OptionWildCardMatch as it will effectively break that feature then. 
(Read and Write property)
See also **DIRLISTONLY** option in CURL manual.

### 58.4.140 OptionDNSCacheTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The timeout in seconds.  
**Notes:**
Name resolves will be kept in memory for this number of seconds. Set to zero (0) to completely disable caching, or set to -1 to make the cached entries remain forever. By default, libCURL caches this info for 60 seconds.

The Lasterror property is set. 0 for success.  
You can set this value and later you can read it, but you cannot read the default value.  
(Read and Write property)  
See also **DNS_CACHE_TIMEOUT** option in CURL manual.

### 58.4.141 OptionDNSInterface as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set the name of the network interface that the DNS resolver should bind to.  
**Notes:**
This must be an interface name (not an address). Set this option to "" to use the default setting (don’t bind to a specific interface).  
(Read and Write property)  
See also **DNS_INTERFACE** option in CURL manual.

### 58.4.142 OptionDNSLocalIPv4 as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set the local IPv4 address that the resolver should bind to.  
**Notes:**
The argument should be of string and contain a single numerical IPv4 address as a string.
Set this option to "" to use the default setting (don’t bind to a specific IP address).  
(Read and Write property)  
See also **DNS_LOCAL_IPV4** option in CURL manual.
58.4.143 OptionDNSLocalIPv6 as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set the local IPv6 address that the resolver should bind to.

**Notes:**
The argument should be of type string and contain a single IPv6 address as a string.
Set this option to "" to use the default setting (don’t bind to a specific IP address).
(Read and Write property)
See also DNS_LOCAL_IPV6 option in CURL manual.

58.4.144 OptionDNSServers as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set the name servers to use for DNS resolution.

**Notes:** (Read and Write property)
See also DNS_SERVERS option in CURL manual.

58.4.145 OptionDNSShuffleAddresses as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether to shuffle DNS addresses.

**Notes:**
When a name is resolved and more than one IP address is returned, shuffle the order of all returned addresses so that they will be used in a random order. This is similar to the ordering behavior of gethostbyname which is no longer used on most platforms.

Addresses will not be reshuffled if a name resolution is completed using the DNS cache. DNSCacheTimeout property can be used together with this option to reduce DNS cache timeout or disable caching entirely if frequent reshuffling is needed.

Since the addresses returned will be reordered randomly, their order will not be in accordance with RFC 3484 or any other deterministic order that may be generated by the system’s name resolution implementation. This may have performance impacts and may cause IPv4 to be used before IPv6 or vice versa.
Default is false.
(Read and Write property)
See also DNS_SHUFFLE_ADDRESSES option in CURL manual.
58.4.146  OptionEGDSocket as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The path name to the Entropy Gathering Daemon socket.

**Notes:**
It will be used to seed the random engine for SSL.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also EGDSOCKET option in CURL manual.

58.4.147  OptionExpect100TimeoutMS as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets Expect 100 timeout.

**Notes:**
Time to wait in milliseconds for a response to a HTTP request containing an Expect: 100-continue header before sending the data anyway.
(Read and Write property)
See also EXPECT_100_TIMEOUT_MS option in CURL manual.

58.4.148  OptionFailOnError as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True tells the library to fail silently if the HTTP code returned is equal to or larger than 400. The default action would be to return the page normally, ignoring that code.

**Notes:**
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

This method is not fail-safe and there are occasions where non-succesful response codes will slip through, especially when authentication is involved (response codes 401 and 407).

You might get some amounts of headers transferred before this situation is detected, like for when a ”100-continue” is received as a response to a POST/PUT and a 401 or 407 is received immediately afterwards.
(Read and Write property)
See also FAILONERROR option in CURL manual.
58.4.149 OptionFileTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether filetime should be queried.

**Example:**

```vbnet
// init CURL with options
dim d as new CURLMBS
d.OptionFileTime = true
d.OptionURL = ”http://www.monkeybreadsoftware.de/images/mbs.jpg”

// run query
dim e as Integer = d.Perform

// calculate date object
dim da as new date(1970,1,1,0,0,0)

// show date
ResultText.text=str(d.GetInfoFileTime)+” ”+da.ShortDate+” ”+da.ShortTime
```

**Notes:**

If it is true, libCURL will attempt to get the modification date of the remote document in this operation. This requires that the remote server sends the time or replies to a time querying command.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value. (Read and Write property)
See also FILETIME option in CURL manual.

58.4.150 OptionFollowLocation as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A boolean parameter tells the library to follow any Location: header that the server sends as part of an HTTP header.

**Example:**

```vbnet
dim c as new CURLMBS
c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
```
58.4. **CLASS CURLMBS**

**Notes:**

This means that the library will re-send the same request on the new location and follow new Location: headers all the way until no more such headers are returned. OptionMaxRedirs can be used to limit the number of redirects libCURL will follow.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FOLLOWLOCATION option in CURL manual.

### 58.4.151 OptionForbitReuse as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set to true to make the next transfer explicitly close the connection when done.

**Notes:**

Normally, libCURL keep all connections alive when done with one transfer in case there comes a succeeding one that can re-use them. This option should be used with caution and only if you understand what it does. Set to false to have libCURL keep the connection open for possibly later re-use (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

### 58.4.152 OptionFreshConnect as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set to true to make the next transfer use a new (fresh) connection by force.

**Example:**

```vbs
dim c as new CURLMBS

c.OptionFreshConnect=True
```

**Notes:**

If the connection cache is full before this connection, one of the existing connections will be closed as according to the selected or default policy. This option should be used with caution and only if you understand what it does. Set this to 0 to have libCURL attempt re-using an existing connection (default behavior).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FRESH_CONNECT option in CURL manual.

58.4.153 OptionFTPAccount as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The FTP account name to use.
**Notes:**
When an FTP server asks for "account data" after user name and password has been provided, this data is
sent off using the ACCT command.
(Read and Write property)
See also FTP_ACCOUNT option in CURL manual.

58.4.154 OptionFTPAlternativeToUser as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The alternative username.
**Notes:**
Pass a string as parameter, pointing to a string which will be used to authenticate if the usual FTP "USER
user" and "PASS password" negotiation fails. This is currently only known to be required when connecting
to Tumbleweed’s Secure Transport FTPS server using client certificates for authentication. (Added in 7.15.5)
(Read and Write property)
See also FTP_ALTERNATIVE_TO_USER option in CURL manual.

58.4.155 OptionFTPAppend as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True tells the library to append to the remote file instead of overwrite it.
**Deprecated:** This item is deprecated and should no longer be used. You can use OptionAppend instead.
**Notes:**
This is only useful when uploading to an ftp site.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
58.4. CLASS CURLMBS

58.4.156 OptionFTPCreateMissingDirs as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
If the value is 1, CURL will attempt to create any remote directory that it fails to CWD into.

**Notes:**
CWD is the command that changes working directory. (Added in 7.10.7)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
Newer CURL Library versions allow a value of 2 to do a CWD after the directory was created, so this
property changed from boolean to integer.
(Read and Write property)
See also FTP_CREATE_MISSING_DIRS option in CURL manual.

58.4.157 OptionFTPFileMethod as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Pass an integer that should have one of the following values.

**Notes:**
This option controls what method libCURL should use to reach a file on a FTP(S) server. The argument
should be one of the following alternatives:

URLFTPMETHOD_MULTICWD = 1

libCURL does a single CWD operation for each path part in the given URL. For deep hierarchies this means
very many commands. This is how RFC1738 says it should be done. This is the default but the slowest
behavior.

CURLFTPMETHOD_NOCWD = 2

libCURL does no CWD at all. libCURL will do SIZE, RETR, STOR etc and give a full path to the server
for all these commands. This is the fastest behavior.

CURLFTPMETHOD_SINGLECWD = 3

libCURL does one CWD with the full target directory and then operates on the file ”normally” (like in the
multicwd case). This is somewhat more standards compliant than ’nocwd’ but without the full penalty of
’multicwd’.
(Read and Write property)
See also FTP_FILEMETHOD option in CURL manual.
58.4.158 OptionFTPListOnly as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True tells the library to just list the names of an ftp directory, instead of doing a full directory listing that would include file sizes, dates etc.
**Deprecated:** This item is deprecated and should no longer be used. You can use OptionDirListOnly instead. **Notes:**
This causes an FTP NLST command to be sent. Beware that some FTP servers list only files in their response to NLST; they might not include subdirectories and symbolic links.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

58.4.159 OptionFTPPort as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The port to use for ftp.
**Notes:**
It will be used to get the IP address to use for the ftp PORT instruction. The PORT instruction tells the remote server to connect to our specified IP address. The string may be a plain IP address, a host name, an network interface name (under Unix) or just a '-' letter to let the library use your systems default IP address. Default FTP operations are passive, and thus won’t use PORT.

You disable PORT again and go back to using the passive version by setting this option to "".

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTPPORT option in CURL manual.

58.4.160 OptionFTPPResponseTimeout as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Causes CURL to set a timeout period (in seconds) on the amount of time that the server is allowed to take in order to generate a response message for a command before the session is considered hung.
**Notes:**
While CURL is waiting for a response, this value overrides OptionTimeout. It is recommended that if used in conjunction with OptionTimeout, you set OptionFTPResponseTimeout to a value smaller than OptionTimeout. (Added in 7.10.8)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP RESPONSE TIMEOUT option in CURL manual.

58.4.161 OptionFTPSkipPasvIP as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
If set to a non-zero value, it instructs libCURL to not use the IP address the server suggests in its 227-response to libCURL’s PASV command when libCURL connects the data connection.

**Notes:**
Instead libCURL will re-use the same IP address it already uses for the control connection. But it will use the port number from the 227-response. (Added in 7.14.2)

This option has no effect if PORT, EPRT or EPSV is used instead of PASV.
(Read and Write property)
See also FTP_SKIP_PASV_IP option in CURL manual.

58.4.162 OptionFTPSSL as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Request using SSL / TLS for the transfer.

**Example:**

```vba
dim c as CURLMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

**Deprecated:** This item is deprecated and should no longer be used. You can use OptionUseSSL instead.

**Notes:**
Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the transfer.
These are all protocols that start out plain text and get ”upgraded” to SSL using the STARTTLS command.
This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

(Read and Write property)
CURLUSESSL_NONE 0 Don’t attempt to use SSL.
CURLUSESSL_TRY 1 Try using SSL, proceed as normal otherwise.
CURLUSESSL_CONTROL 2 Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED.
CURLUSESSL_ALL 3 Require SSL for all communication or fail with CURLE_USE_SSL_FAILED.

58.4.163 OptionFTPSSLAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: What kind of SSL authentication to use for FTP. Notes: Pass an integer using one of the values from below, to alter how libCURL issues "AUTH TLS" or "AUTH SSL" when FTP over SSL is activated (see CURLOPT_FTP_SSL). (Added in 7.12.2)

kFTPAUTH_DEFAULT = 0

Allow libCURL to decide

kFTPAUTH_SSL = 1

Try "AUTH SSL" first, and only if that fails try "AUTH TLS"

kFTPAUTH_TLS = 2

Try "AUTH TLS" first, and only if that fails try "AUTH SSL"

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value. (Read and Write property)
See also FTPSSLAUTH option in CURL manual.

58.4.164 OptionFTPSSLCCC as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: If enabled, this option makes libCURL use CCC (Clear Command Channel). Notes: It shuts down the SSL/TLS layer after authenticating. The rest of the control channel communication will
be unencrypted. This allows NAT routers to follow the FTP transaction. Pass a long using one of the values below. (Added in 7.16.1)

- CURLFTPSSL_CCC_NONE 0: Don’t attempt to use CCC.
- CURLFTPSSL_CCC_PASSIVE 1: Do not initiate the shutdown, but wait for the server to do it. Do not send a reply.
- CURLFTPSSL_CCC_ACTIVE 2: Initiate the shutdown and wait for a reply.

(Read and Write property)
See also FTP_SSL_CCC option in CURL manual.

### 58.4.165 OptionFTPUseEPRT as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If the value is true, it tells CURL to use the EPRT (and LPRT) command when doing active FTP downloads (which is enabled by CURLOPT_FTPPORT).

**Notes:**
Using EPRT means that it will first attempt to use EPRT and then LPRT before using PORT, but if you pass FALSE (zero) to this option, it will not try using EPRT or LPRT, only plain PORT. (Added in 7.10.5)

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_USE_EPRT option in CURL manual.

### 58.4.166 OptionFTPUseEPSV as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If the value is true, it tells CURL to use the EPSV command when doing passive FTP downloads (which it always does by default).

**Notes:**
Using EPSV means that it will first attempt to use EPSV before using PASV, but if you pass FALSE (zero) to this option, it will not try using EPSV, only plain PASV.

If the server is an IPv6 host, this option will have no effect as of 7.12.3.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also FTP_USE_EPSV option in CURL manual.

58.4.167 OptionFTPusePret as Boolean

MBS CURL Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: If the value is true, it tells CURL to send a PRET command before PASV (and EPSV). Certain FTP servers, mainly drftpd, require this non-standard command for directory listings as well as up and downloads in PASV mode.
Notes: Has no effect when using the active FTP transfers mode. (Added in 7.20.0)
(Read and Write property)
See also FTP_USE_PRET option in CURL manual.

58.4.168 OptionGet as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: If the true, this forces the HTTP request to get back to GET.
Notes: usable if a POST, HEAD, PUT or a custom request have been used previously using the same CURL handle.

When setting OptionGet to a true value, it will automatically set OptionNoBody to true (since 7.14.1).

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

58.4.169 OptionGSSAPIDelegation as Integer

Notes: (Read and Write property)
See also GSSAPI_DELEGATION option in CURL manual.
58.4. Class CURLMBS

58.4.170 OptionHappyEyeballsTimeOutMS as Integer

**Notes:**
Head start in milliseconds to give happy eyeballs.
(Read and Write property)
See also HAPPY_EYEBALLS_TIMEOUT_MS option in CURL manual.

58.4.171 OptionHAProxyProtocol as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Wether to send an HAProxy PROXY protocol header.

**Notes:**
Set to true to tell the library to send an HAProxy PROXY protocol header at beginning of the connection.
The default action is not to send this header.
This option is primarily useful when sending test requests to a service that expects this header.
Most applications do not need this option.
Default false, do not send HAProxy PROXY protocol header.
(Read and Write property)
See also HAPROXYPROTOCOL option in CURL manual.

58.4.172 OptionHeader as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True tells the library to include the header in the body output.

**Notes:**
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

This is only relevant for protocols that actually have headers preceding the data (like HTTP).
(Read and Write property)
See also HEADER option in CURL manual.

58.4.173 OptionHeaderOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Pass in a bitmask of "header options".

**Notes:** (Read and Write property)
See also **HEADEROPT** option in CURL manual.

### 58.4.174 OptionHTTPAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Which http authentication to use.  
**Notes:**  
Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you want it to use. The available bits are listed below. If more than one bit is set, libCURL will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the UserPassword option. (Added in 7.10.6)

- **kAuthBASIC = 1**  
  HTTP Basic authentication. This is the default choice, and the only method that is in wide-spread use and supported virtually everywhere. This is sending the user name and password over the network in plain text, easily captured by others.

- **kAuthDIGEST = 2**  
  HTTP Digest authentication. Digest authentication is defined in RFC2617 and is a more secure way to do authentication over public networks than the regular old-fashioned Basic method.

- **kAuthGSSNEGOTIATE = 4**  
  HTTP GSS-Negotiate authentication. The GSS-Negotiate (also known as plain ”Negotiate”) method was designed by Microsoft and is used in their web applications. It is primarily meant as a support for Kerberos5 authentication but may be also used along with another authentication methods. For more information see IETF draft draft-brezak-spnego-http-04.txt.

  You need to build libCURL with a suitable GSS-API library for this to work.

- **kAuthNTLM = 8**  
  HTTP NTLM authentication. A proprietary protocol invented and used by Microsoft. It uses a challenge-response and hash concept similar to Digest, to prevent the password from being eavesdropped.

  You need to build libCURL with OpenSSL support for this option to work, or build libCURL on Windows.
kAuthANY = & hFFFFFFFF

This is a convenience macro that sets all bits and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

kAuthANYSAFE = & hFFFFFFFE

This is a convenience macro that sets all bits except Basic and thus makes libCURL pick any it finds suitable. libCURL will automatically select the one it finds most secure.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTPAUTH option in CURL manual.

58.4.175 OptionHTTPContentDecoding as Integer

Notes:
If set to zero, content decoding will be disabled. If set to 1 it is enabled. Note however that libCURL has no default content decoding but requires you to use OptionEncoding for that. (added in 7.16.2)
(Read and Write property)
See also HTTP_CONTENT_DECODING option in CURL manual.

58.4.176 OptionHTTPProxyTunnel as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Set the parameter to true to get the library to tunnel all operations through a given HTTP proxy.
Notes:
There is a big difference between using a proxy and to tunnel through it. If you don’t know what this means, you probably don’t want this tunneling option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also HTTP_PROXYTUNNEL option in CURL manual.
58.4.177 OptionHTTPTransferDecoding as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Pass an integer to tell libCURL how to act on transfer decoding. **Notes:**

If set to zero, transfer decoding will be disabled, if set to 1 it is enabled (default). libCURL does chunked transfer decoding by default unless this option is set to zero. (added in 7.16.2)

(Read and Write property)

See also HTTP_TRANSFER_DECODING option in CURL manual.

58.4.178 OptionHTTPVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set to one of the values described below. **Notes:**

They force libCURL to use the specific HTTP versions. This is not sensible to do unless you have a good reason.

kHTTP_VERSION_NONE = 0

We don’t care about what version the library uses. libCURL will use whatever it thinks fit.

kHTTP_VERSION_1_0 = 1

Enforce HTTP 1.0 requests.

kHTTP_VERSION_1_1 = 2

Enforce HTTP 1.1 requests.

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value. (Read and Write property)

See also HTTP_VERSION option in CURL manual.
58.4. **CLASS CURLMBS**

### 58.4.179 OptionIgnoreContentLength as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to ignore the Content-Length header.

**Notes:**
This is useful for Apache 1.x (and similar servers) which will report incorrect content length for files over 2 gigabytes. If this option is used, CURL will not be able to accurately report progress, and will simply stop the download when the server ends the connection. (added in 7.14.1)

(Read and Write property)
See also **IGNORE_CONTENT_LENGTH** option in CURL manual.

### 58.4.180 OptionInFileSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** When uploading a file to a remote site, this option should be used to tell libCURL what the expected size of the infile is.

**Notes:**
Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read callback returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also **INFILESIZE** option in CURL manual.

### 58.4.181 OptionInFileSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** When uploading a file to a remote site, this option should be used to tell libCURL what the expected size of the infile is.

**Deprecated:** This item is deprecated and should no longer be used. You can use OptionInFileSize instead.

**Notes:**
This value should be passed as a CURL_off.t. (Added in 7.11.0)

Note that this option does not limit how much data libCURL will actually send, as that is controlled entirely by what the read callback returns.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
58.4.182 OptionInterface as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This set the interface name to use as outgoing network interface.
**Notes:**
The name can be an interface name, an IP address or a host name.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also INTERFACE option in CURL manual.

58.4.183 OptionIPResolve as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Allows an application to select what kind of IP addresses to use when resolving host names.
**Example:**
```vba
dim c as new CURLMBS
C.OptionIPResolve = c.kIPRESOLVE_V4
```
**Notes:**
This is only interesting when using host names that resolve addresses using more than one version of IP.
The allowed values are:

- `kIPRESOLVE_WHATEVER = 0`
  Default, resolves addresses to all IP versions that your system allows.

- `kIPRESOLVE_V4 = 1`
  Resolve to ipv4 addresses.

- `kIPRESOLVE_V6 = 2`
  Resolve to ipv6 addresses.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also **IPRESOLVE** option in CURL manual.

### 58.4.184 OptionIssuerCert as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A string naming a file holding a CA certificate in PEM format.
**Notes:**
If the option is set, an additional check against the peer certificate is performed to verify the issuer is indeed the one associated with the certificate provided by the option. This additional check is useful in multi-level PKI where one needs to enforce that the peer certificate is from a specific branch of the tree.

This option makes sense only when used in combination with the **OptionSSLLVerifyPeer** option. Otherwise, the result of the check is not considered as failure.

A specific error code (CURLE_SSL_ISSUER_ERROR) is defined with the option, which is returned if the setup of the SSL/TLS session has failed due to a mismatch with the issuer of peer certificate (**OptionSSLLVerifyPeer** has to be set too for the check to fail). (Added in 7.19.0)

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also **ISSUERCERT** option in CURL manual.

### 58.4.185 OptionKeepSendingOnError as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Wether to keep sending on error.
**Notes:**
Continue to send data if the server responds early with an HTTP status code $\geq$ 300
(Read and Write property)
See also **KEEP_SENDING_ON_ERROR** option in CURL manual.
10000

58.4.186

CHAPTER 58. CURL

OptionKeyPassword as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Set passphrase to private key.
Notes:
It will be used as the password required to use the OptionSSLKey or OptionSSHPrivateKeyfile private key.
You never needed a pass phrase to load a certificate but you need one to load your private key.
(Read and Write property)
See also KEYPASSWD option in CURL manual.

58.4.187

OptionKRB4Level as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Set the krb4 security level, this also enables krb4 awareness.
Deprecated: This item is deprecated and should no longer be used. You can use OptionKRBLevel instead.
Notes:
This is a string, ’clear’, ’safe’, ’confidential’ or ’private’. If the string is set but doesn’t match one of these,
’private’ will be used. Set the string to ”” to disable kerberos4. The kerberos support only works for FTP.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

58.4.188

OptionKRBLevel as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
FTP kerberos security level.
Notes:
Set the kerberos security level for FTP; this also enables kerberos awareness. This is a string that should
match one of the following: ’clear’, ’safe’, ’confidential’ or ’private’. If the string is set but doesn’t match
one of these, ’private’ will be used. Set the string to NULL to disable kerberos support for FTP.
(Read and Write property)
See also KRBLEVEL option in CURL manual.

58.4.189

OptionLocalPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
This sets the local port number of the socket used for connection.
Notes:


This can be used in combination with OptionInterface and you are recommended to use OptionLocalPortRange as well when this is set. Note that port numbers are only valid 1 - 65535. (Added in 7.15.2)  
(Read and Write property)  
See also LOCALPORT option in CURL manual.

58.4.190  OptionLocalPortRange as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:  
This is the number of attempts libCURL should do to find a working local port number.  
Notes:  
It starts with the given OptionLocalPort and adds one to the number for each retry. Setting this value to 1 or below will make libCURL do only one try for exact port number. Note that port numbers by nature is a scarce resource that will be busy at times so setting this value to something too low might cause unnecessary connection setup failures. (Added in 7.15.2)  
(Read and Write property)  
See also LOCALPORTRANGE option in CURL manual.

58.4.191  OptionLoginOptions as String

MBS CURL Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:  
Login options string to use for the transfer.  
Notes:  
For more information about the login options please see RFC 2384, RFC5092 and IETF draft draft-earhart-url-smtp-00.txt  
CURLOPT_LOGIN_OPTIONS can be used to set protocol specific login options, such as the preferred authentication mechanism via "AUTH=NTLM" or "AUTH=*", and should be used in conjunction with the OptionUserName option.  
Only IMAP, POP3 and SMTP support login options.  
(Read and Write property)  
See also LOGIN_OPTIONS option in CURL manual.

58.4.192  OptionLowSpeedLimit as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:  
This property contains the transfer speed in bytes per second that the transfer should be below during OptionLowSpeedTime seconds for the library to consider it too slow and abort.  
Notes:  
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also LOW_SPEED_LIMIT option in CURL manual.

58.4.193 OptionLowSpeedTime as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This property contains the time in seconds that the transfer should be below the OptionLowSpeedLimit for
the library to consider it too slow and abort.
**Notes:**
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also LOW_SPEED_TIME option in CURL manual.

58.4.194 OptionMailAuth as String

MBS CURL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This string will be used to specify the authentication address (identity) of a submitted message that is being
relayed to another server.
**Notes:**
This optional parameter allows co-operating agents in a trusted environment to communicate the authen-
tication of individual messages and should only be used by the application program, using libCURL, if the
application is itself a mail server acting in such an environment. If the application is operating as such and
the AUTH address is not known or is invalid, then an empty string should be used for this parameter.
Unlike OptionMailFrom and SetOptionMailRecipients, the address should not be specified within a pair of
angled brackets (<>). However, if an empty string is used then a pair of brackets will be sent by libCURL
as required by RFC 2554.
(Read and Write property)
See also MAIL_AUTH option in CURL manual.

58.4.195 OptionMailFrom as String

MBS CURL Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A string that will be used to specify the sender address in a mail when sending an SMTP mail with libCURL.
**Notes:** (Read and Write property)
See also MAIL_FROM option in CURL manual.
58.4.196 OptionMaxConnects as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The set number will be the persistent connection cache size.

**Notes:**
The set amount will be the maximum amount of simultaneously open connections that libCURL may cache.
Default is 5, and there isn’t much point in changing this value unless you are perfectly aware of how this work and changes libCURL’s behaviour. This concerns connection using any of the protocols that support persistent connections.

When reaching the maximum limit, CURL closes the oldest one in the cache to prevent the number of open connections to increase.

If you already have performed transfers with this CURL handle, setting a smaller MAXCONNECTS than before may cause open connections to get closed unnecessarily.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXCONNECTS option in CURL manual.

58.4.197 OptionMaxFileSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This allows you to specify the maximum size (in bytes) of a file to download.

**Notes:**
If the file requested is larger than this value, the transfer will not start and kError_FILESIZE_EXCEEDED will be returned.

The file size is not always known prior to download, and for such files this option has no effect even if the file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXFILESIZE option in CURL manual.
58.4.198  OptionMaxFileSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This allows you to specify the maximum size (in bytes) of a file to download.

**Deprecated:** This item is deprecated and should no longer be used. You can use OptionMaxFileSize instead.

**Notes:**
If the file requested is larger than this value, the transfer will not start and kError_FILESIZE_EXCEEDED will be returned. (Added in 7.11.0)

The file size is not always known prior to download, and for such files this option has no effect even if the file transfer ends up being larger than this given limit. This concerns both FTP and HTTP transfers.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

58.4.199  OptionMaxRecvSpeed as Int64

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Defines the maximum download speed.

**Notes:**
If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
(Read and Write property)
See also MAX_RECV_SPEED option in CURL manual.

58.4.200  OptionMaxRecvSpeedLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Defines the maximum download speed.

**Deprecated:** This item is deprecated and should no longer be used. You can use OptionMaxRecvSpeed instead.

**Notes:**
If a download exceeds this speed (counted in bytes per second) on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
(Read and Write property)
58.4. **CLASS CURLMBS**

### 58.4.201 OptionMaxRedirs as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The set number will be the redirection limit.

**Example:**

```plaintext
dim c as new CURLMBS

c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
```

**Notes:**
If that many redirections have been followed, the next redirect will cause an error (kError_TOO_MANY_REDIRECTS).
This option only makes sense if the CURLOPT_FOLLOWLOCATION is used at the same time. Added in 7.15.1: Setting the limit to 0 will make libCURL refuse any redirect. Set it to -1 for an infinite number of redirects (which is the default)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also MAXREDIRS option in CURL manual.

### 58.4.202 OptionMaxSendSpeed as Int64

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Defines the maximum upload speed.

**Notes:**
If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5)
Value is in bytes per second.
Useful if you have a limited pipe and you’d like your transfer not to use your entire bandwidth.
Slowing down the transfer speed is also useful for lowering CPU consumption during transfers.
(Read and Write property)
See also MAX_SEND_SPEED option in CURL manual.

### 58.4.203 OptionMaxSendSpeedLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Defines the maximum upload speed.

**Deprecated:** This item is deprecated and should no longer be used. You can use OptionMaxSendSpeed instead. **Notes:**
If an upload exceeds this speed on cumulative average during the transfer, the transfer will pause to keep the average rate less than or equal to the parameter value. Defaults to unlimited speed. (Added in 7.15.5) Value is in bytes per second. Useful if you have a limited pipe and you’d like your transfer not to use your entire bandwidth. Slowing down the transfer speed is also useful for lowering CPU consumption during transfers. (Read and Write property)

58.4.204 OptionNetRC as Integer

Notes: This parameter controls the preference of libCURL between using user names and passwords from your textasciitilde /.netrc file, relative to user names and passwords in the URL supplied with OptionURL.

libCURL uses a user name (and supplied or prompted password) supplied with OptionUsername and OptionPassword in preference to any of the options controlled by this parameter.

An integer, set to one of the values described below.

kNETRC_OPTIONAL = 1

The use of your textasciitilde /.netrc file is optional, and information in the URL is to be preferred. The file will be scanned with the host and user name (to find the password only) or with the host only, to find the first user name and password after that machine, which ever information is not specified in the URL.

Undefined values of the option will have this effect.

kNETRC_IGNORED = 0

The library will ignore the file and use only the information in the URL.

This is the default.

kNETRC_REQUIRED = 2

This value tells the library that use of the file is required, to ignore the information in the URL, and to search the file with the host only.
Only machine name, user name and password are taken into account (init macros and similar things aren’t supported).

libCURL does not verify that the file has the correct properties set (as the standard Unix ftp client does). It should only be readable by user.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also NETRC option in CURL manual.

58.4.205 OptionNetRCFFile as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: A string containing the full path name to the file you want libCURL to use as .netrc file.
Notes:
If this option is omitted, and OptionNETRC is set, libCURL will attempt to find the a .netrc file in the current user’s home directory. (Added in 7.10.9)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also NETRC_FILE option in CURL manual.

58.4.206 OptionNewDirectoryPerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: An integer, containing the value of the permissions that will be assigned to newly created directories on the remote server.
Notes:
The default value is 0755, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file://. (Added in 7.16.4)
Value must be octal, so use & o prefix for number.
(Read and Write property)
See also NEW_DIRECTORY_PERMS option in CURL manual.
58.4.207 OptionNewFilePerms as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An integer, containing the value of the permissions that will be assigned to newly created files on the remote server.

**Notes:**

The default value is & o0644, but any valid value can be used. The only protocols that can use this are sftp://, scp://, and file://. (Added in 7.16.4)

Be aware that you normally specify this in octal values. So use the & o prefix in Real Studio.

(Read and Write property)

See also NEW_FILE_PERMS option in CURL manual.

58.4.208 OptionNoBody as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True tells the library to not include the body-part in the output.

**Notes:**

This is only relevant for protocols that have separate header and body parts. On HTTP(S) servers, this will make libCURL do a HEAD request.

To change request to GET, you should use OptionGet. Change request to POST with OptionPost etc.

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.

(Read and Write property)

See also NOBODY option in CURL manual.

58.4.209 OptionNoProxy as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string with a comma- separated list of hosts which do not use a proxy, if one is specified.

**Notes:**

The only wildcard is a single * character, which matches all hosts, and effectively disables the proxy. Each name in this list is matched as either a domain which contains the hostname, or the hostname itself. For example, local.com would match local.com, local.com:80, and www.local.com, but not www.notlocal.com.

(Added in 7.19.4)

(Read and Write property)

See also NOPROXY option in CURL manual.
58.4. **CLASS CURLMBS**

### 58.4.210 OptionNoSignal as Integer

MBS CURL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to not use signals.

**Notes:**
If it is true, libCURL will not use any functions that install signal handlers or any functions that cause signals to be sent to the process. This option is mainly here to allow multi-threaded unix applications to still set/use all timeout options etc, without risking getting signals. (Added in 7.10)

If this option is set and libCURL has been built with the standard name resolver, timeouts will not occur while the name resolve takes place. Consider building libCURL with c-ares support to enable asynchronous DNS lookups, which enables nice timeouts for name resolves without signals.

Setting OptionNoSignal to true makes libCURL NOT ask the system to ignore SIGPIPE signals, which otherwise are sent by the system when trying to send data to a socket which is closed in the other end. libCURL makes an effort to never cause such SIGPIPEs to trigger, but some operating systems have no way to avoid them and even on those that have there are some corner cases when they may still happen, contrary to our desire. In addition, using CURLAUTH_NTLM_WB authentication could cause a SIGCHLD signal to be raised.

(Read and Write property)
See also **NOSIGNAL** option in CURL manual.

### 58.4.211 OptionPassword as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The password to use for the transfer.

**Notes:**
The OptionPassword option should be used in conjunction with the OptionUsername option.

(Read and Write property)
See also **PASSWORD** option in CURL manual.

### 58.4.212 OptionPathAsIs as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Pass path as it is and do not resolve dots.

**Notes:**
Do not squash dot-dot sequences.

(Read and Write property)
See also **PATH_AS_IS** option in CURL manual.
CHAPTER 58. CURL

58.4.213 OptionPinnedPublicKey as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The public key in DER form used to validate the peer public key. **Notes:** Native path to key file. This option is used only if SSLVerifyPeer is true. (Read and Write property) See also PINNEDPUBLICKEY option in CURL manual.

58.4.214 OptionPipeWait as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Wait/don’t wait for pipe/mutex to clarify. **Notes:** (Read and Write property) See also PIPEWAIT option in CURL manual.

58.4.215 OptionPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The remote port number to connect to, instead of the one specified in the URL or the default port for the used protocol. **Notes:** The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value. (Read and Write property) See also PORT option in CURL manual.

58.4.216 OptionPost as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A boolean parameter tells the library to do a regular HTTP post. **Notes:** This will also make the library use the a ’Content-Type: application/x-www-form-urlencoded’ header. (This is by far the most commonly used POST method). Use the OptionPostFields option to specify what data to post.

Optionally, you can provide data to POST using the Read event but then you must make sure to not set
OptionPostFields to anything but "". When providing data with an event, you must transmit it using chunked transfer-encoding.

You can override the default POST Content-Type: header by setting your own with OptionHTTPHeader.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with OptionHTTPHeader as usual.

If you use POST to a HTTP 1.1 server, you can send data without knowing the size before starting the POST if you use chunked encoding. You enable this by adding a header like "Transfer-Encoding: chunked" with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size in the request.

When setting CURLOPT_POST to a non-zero value, it will automatically set OptionNoBody to 0 (since 7.14.1).

If you issue a POST request and then want to make a HEAD or GET using the same re-used handle, you must explictly set the new request type using OptionNoBody or OptionGet or similar.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also POST option in CURL manual.

**58.4.217 OptionPostFields as String**

A string which should be the full data to post in an HTTP POST operation.

**Example:**

```vba
dim xml as string // XML or JSON to send as payload
dim c as new CURLMBS

c.OptionFollowLocation = true
c.OptionMaxRedirs = 3
c.OptionPostFields = xml
c.OptionUserAgent = "Test App"
c.OptionPost = true

// for SOAP use right content type
c.SetOptionHTTPHeader array("Content-Type: application/soap+xml; charset=utf-8")
```
Notes:

You must make sure that the data is formatted the way you want the server to receive it. libCURL will not convert or encode it for you. Most web servers will assume this data to be url-encoded. Take note.

This POST is a normal application/x-www-form-urlencoded kind (and libCURL will set that Content-Type by default when this option is used), which is the most commonly used one by HTML forms. See also the OptionPost. Using OptionPostFields implies OptionPost.

Using POST with HTTP 1.1 implies the use of a "Expect: 100-continue" header. You can disable this header with CURLOPT_HTTPHEADER as usual.

To make multipart/formdata posts (aka rfc1867-posts), check out the OptionPost option.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also COPYPOSTFIELDS option in CURL manual.

58.4.218 OptionPostFieldSize as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The size of the post data.

**Notes:**
Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.

If you specify a size and no postfield string, the Read event will request data.
(Read and Write property)
See also POSTFIELDSIZE option in CURL manual.

58.4.219 OptionPostFieldSizeLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The size of the post data. (64 bit version)
**Deprecated:** This item is deprecated and should no longer be used. You can use OptionPostFieldSize instead.

**Notes:**
Optional you can set the size of your post data.
If you specify a postfield string, this size will be set automatically.
If you specify a size and no postfield string, the Read event will request data.
(Read and Write property)

### 58.4.220 OptionPostRedir as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A bitmask to control how libCURL acts on redirects after POSTs that get a 301 or 302 response back.
**Notes:**
A parameter with bit 0 set (value CURL_REDIR_POST_301=1) tells the library to respect RFC 2616/10.3.2 and not convert POST requests into GET requests when following a 301 redirection. Setting bit 1 (value CURL_REDIR_POST_302=2) makes libCURL maintain the request method after a 302 redirect. CURL_REDIR_POST_ALL is a convenience define that sets both bits.

The non-RFC behaviour is ubiquitous in web browsers, so the library does the conversion by default to maintain consistency. However, a server may require a POST to remain a POST after such a redirection. This option is meaningful only when setting OptionFollowLocation. (Added in 7.17.1) (This option was known as CURLOPT_POST301 up to 7.19.0 as it only supported the 301 way before then)
(Read and Write property)
See also POSTREDIR option in CURL manual.

### 58.4.221 OptionPreProxy as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Name of pre proxy to use.
**Notes:** (Read and Write property)
See also PRE_PROXY option in CURL manual.

### 58.4.222 OptionProtocols as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A bitmask of kProtocol* constants.
**Notes:**
If used, this bitmask limits what protocols libCURL may use in the transfer. This allows you to have a libCURL built to support a wide range of protocols but still limit specific transfers to only be allowed to use a subset of them. By default libCURL will accept all protocols it supports. See also OptionRedirProtocols.
(Added in 7.19.4)
(Read and Write property)
See also PROTOCOLS option in CURL manual.
58.4.223  OptionProxy as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set HTTP proxy to use.

**Example:**

```plaintext
dim c as CURLMBS // your CURL object
dim psAddress as string // your proxy address
dim psPort as Integer // your proxy port

c.OptionProxy=psAddress
c.OptionProxyPort=psPort
c.OptionProxyType=c.kPROXY_HTTP
```

**Notes:**
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

The parameter should be a string holding the host name or dotted IP address. To specify port number in this string, append : [ port ] to the end of the host name. The proxy string may be prefixed with [ protocol ] :// since any such prefix will be ignored. The proxy’s port number may optionally be specified with the separate option ProxyHost.

When you tell the library to use an HTTP proxy, libCURL will transparently convert operations to HTTP even if you specify an FTP URL etc. This may have an impact on what other features of the library you can use, such as CURLOPT_QUOTE and similar FTP specifics that don’t work unless you tunnel through the HTTP proxy. Such tunneling is activated with HTTPProxyTunnel.

libCURL respects the environment variables http_proxy, ftp_proxy, all_proxy etc, if any of those is set. The Proxy option does however override any possibly set environment variables.

Starting with 7.14.1, the proxy host string given in environment variables can be specified the exact same way as the proxy can be set with Proxy, include protocol prefix (http://) and embedded user + password.

You can use WinHTTPClientMBS class on Windows or CFProxyMBS on Mac to discover system proxy settings.
(Read and Write property)
See also PROXY option in CURL manual.
58.4. CLASS CURLMBS

58.4.224 OptionProxyAuth as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Which proxy authentication to use.

**Notes:**
Pass an integer as parameter, which is set to a bitmask, to tell libCURL what authentication method(s) you want it to use for your proxy authentication. If more than one bit is set, libCURL will first query the site to see what authentication methods it supports and then pick the best one you allow it to use. For some methods, this will induce an extra network round-trip. Set the actual name and password with the ProxyUserPassword option. The bitmask can be constructed by or’ing together the bits listed above for the HTTPAuth option. As of this writing, only Basic, Digest and NTLM work. (Added in 7.10.7)

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PROXYAUTH option in CURL manual.

58.4.225 OptionProxyCAInfo as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The CApath or CAfile used to validate the proxy certificate.

**Notes:**
Pass native file path.
This option is used only if CURLMBS.OptionProxySSLVerifyPeer is true
(Read and Write property)
See also PROXY_CAINFO option in CURL manual.

58.4.226 OptionProxyCAPath as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The CApath directory used to validate the proxy certificate.

**Notes:**
Pass native file path.
This option is used only if CURLMBS.OptionProxySSLVerifyPeer is true
(Read and Write property)
See also PROXY_CAPATH option in CURL manual.
58.4.227 OptionProxyCRLFile as String

**Notes:**  
Pass native file path.  
(Read and Write property)  
See also PROXY_CRLFILE option in CURL manual.

58.4.228 OptionProxyKeyPassword as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Password for the SSL private key for proxy.  
**Notes:** (Read and Write property)  
See also PROXY_KEYPASSWD option in CURL manual.

58.4.229 OptionProxyPassword as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string which should be pointing to the password to use for the transfer while connecting to Proxy.  
**Notes:**  
The OptionProxyPassword option should be used in conjunction with the OptionProxyUsername option. (Added in 7.19.1)  
(Read and Write property)  
See also PROXYPASSWORD option in CURL manual.

58.4.230 OptionProxyPinnedPublicKey as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The public key in DER form used to validate the proxy public key.  
**Notes:**  
This option is used only if CURLMBS.OptionProxySSLVerifyPeer is true.  
Please path native file path to key file.  
(Read and Write property)  
See also PROXY_PINNEDPUBLICKEY option in CURL manual.
58.4. CLASS CURLMBS

58.4.231 OptionProxyPort as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The proxy port to connect to unless it is specified in the proxy string OptionProxy.
**Notes:**
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
You can use OptionProxy with port, e.g. "12.34.56.78:8080" or pass port here and proxy without port.
For some users it seems like the option with OptionProxy including port works better.
(Read and Write property)
See also PROXYPORT option in CURL manual.

58.4.232 OptionProxyServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Proxy Service Name.
**Notes:** (Read and Write property)
See also PROXY_SERVICE_NAME option in CURL manual.

58.4.233 OptionProxySSLCert as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Name of the file keeping your private SSL-certificate for proxy.
**Notes:** (Read and Write property)
See also PROXY_SSLCERT option in CURL manual.

58.4.234 OptionProxySSLCertType as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Type of the file keeping your SSL-certificate for proxy.
**Notes:**
Value can be "DER", "PEM" or "ENG".
(Read and Write property)
See also PROXY_SSLCERTTYPE option in CURL manual.
58.4.235 OptionProxySSLCipherList as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specify which SSL ciphers to use for proxy. **Notes:** (Read and Write property) See also PROXY_SSL_CIPHER_LIST option in CURL manual.

58.4.236 OptionProxySSLKey as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Name of the file keeping your private SSL-key for proxy. **Notes:** Pass native file path. (Read and Write property) See also PROXY_SSLKEY option in CURL manual.

58.4.237 OptionProxySSLKeyType as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets type of the file keeping your private SSL-key for proxy. **Notes:** Value is DER, PEM or ENG. (Read and Write property) See also PROXY_SSLKEYTYPE option in CURL manual.

58.4.238 OptionProxySSLOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable/disable specific SSL features with a bitmask for proxy. **Notes:** (Read and Write property) See also PROXY_SSL_OPTIONS option in CURL manual.

58.4.239 OptionProxySSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable SSL Host verification. **Notes:**
58.4. CLASS CURLMBS

Set if we should verify the Common name from the proxy certificate in ssl handshake, set 1 to check existence, 2 to ensure that it matches the provided hostname.
(Read and Write property)
See also PROXY_SSL_VERIFYHOST option in CURL manual.

58.4.240 OptionProxySSLSVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Set if we should verify the proxy in ssl handshake.
Notes:
set 1 to verify.
(Read and Write property)
See also PROXY_SSL_VERIFYPEER option in CURL manual.

58.4.241 OptionProxySSLVersion as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
What version to specifically try to use for proxy.
Notes:
The available options are:

Default 0 The default action. This will attempt to figure out the remote SSL protocol version, i.e. either SSLv3 or TLSv1 (but not SSLv2, which became disabled by default with 7.18.1).
TLSv1 1 Force TLSv1.x
SSLv2 2 Force SSLv2
SSLv3 3 Force SSLv3
TLSv1.0 4 Force TLSv1.0
TLSv1.1 5 Force TLSv1.1
TLSv1.2 6 Force TLSv1.2
TLSv1.3 7 Force TLSv1.3

(Read and Write property)
See also PROXY_SSLVERSION option in CURL manual.
58.4.242 OptionProxyTLSAuthPassword as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Password for authenticated TLS for proxy. **Notes:** (Read and Write property) See also PROXY_TLSAUTH_PASSWORD option in CURL manual.

58.4.243 OptionProxyTLSAuthType as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set authentication type for authenticated TLS for proxy. **Notes:** (Read and Write property) See also PROXY_TLSAUTH_TYPE option in CURL manual.

58.4.244 OptionProxyTLSAuthUsername as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set a username for authenticated TLS for proxy. **Notes:** (Read and Write property) See also PROXY_TLSAUTH_USERNAME option in CURL manual.

58.4.245 OptionProxyTransferMode as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If this integer value is set to 1 (one), it tells libCURL to set the transfer mode (binary or ASCII) for FTP transfers done via an HTTP proxy, by appending ;type=a or ;type=i to the URL. **Notes:** Without this setting, or it being set to 0 (zero, the default), OptionTransferText has no effect when doing FTP via a proxy. Beware that not all proxies support this feature. (Added in 7.18.0) **(Read and Write property)** See also PROXY_TRANSFER_MODE option in CURL manual.

58.4.246 OptionProxyType as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option is to set type of the proxy. **Notes:** The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Available options for this are kPROXY_HTTP, kPROXY_SOCKS4 (added in 7.15.2) kPROXY_SOCKS5. The HTTP type is default.
(Read and Write property)
See also PROXYTYPE option in CURL manual.

58.4.247 OptionProxyUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string, which should be pointing to the user name to use for the transfer while connecting to Proxy.

Notes:
In order to specify the password to be used in conjunction with the user name use the OptionProxyPassword option.
(Read and Write property)
See also PROXYUSERNAME option in CURL manual.

58.4.248 OptionPut as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A non-zero parameter tells the library to use HTTP PUT to transfer data.

Notes:
The data should be set with OptionInFileSize.

This option is deprecated and starting with version 7.12.1 you should instead use OptionUpload.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also PUT option in CURL manual.

58.4.249 OptionRandomFile as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A file name for the random file.

Notes:
The file will be used to read from to seed the random engine for SSL. The more random the specified file is, the more secure the SSL connection will become.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.
(Read and Write property)
See also RANDOM_FILE option in CURL manual.

58.4.250 OptionRange as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
A string which should contain the specified range you want.
Notes:
It should be in the format ”X-Y”, where X or Y may be left out. HTTP transfers also support several intervals, separated with commas as in ”X-Y,N-M”. Using this kind of multiple intervals will cause the HTTP server to send the response document in pieces (using standard MIME separation techniques). Pass a NULL to this option to disable the use of ranges.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also RANGE option in CURL manual.

58.4.251 OptionRedirProtocols as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
An integer that holds a bitmask of kProtocol* constants.
Notes:
If used, this bitmask limits what protocols libCURL may use in a transfer that it follows to in a redirect when OptionFollowLocation is enabled. This allows you to limit specific transfers to only be allowed to use a subset of protocols in redirections. By default libCURL will allow all protocols except for FILE and SCP. This is a difference compared to pre-7.19.4 versions which unconditionally would follow to all protocols supported. (Added in 7.19.4)
(Read and Write property)
See also REDIR_PROTOCOLS option in CURL manual.
58.4.252 OptionReferer as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The referer to pass to the server.

**Notes:**

It will be used to set the Referer: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.

(Read and Write property)

See also REFERER option in CURL manual.

58.4.253 OptionRequestTarget as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The request target, instead of extracted from the URL.

**Notes:** (Read and Write property)

See also REQUEST_TARGET option in CURL manual.

58.4.254 OptionResumeFrom as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** It contains the offset in number of bytes that you want the transfer to start from.

**Notes:**

Set this option to 0 to make the transfer start from the beginning (effectively disabling resume). For FTP, set this option to -1 to make the transfer start from the end of the target file (useful to continue an interrupted upload).

The Lasterror property is set. 0 for success.

You can set this value and later you can read it, but you cannot read the default value.

(Read and Write property)

See also RESUME_FROM option in CURL manual.

58.4.255 OptionResumeFromLarge as Int64

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** It contains the offset in number of bytes that you want the transfer to start from.
Deprecated: This item is deprecated and should no longer be used. You can use OptionResumeFrom instead. Notes:
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)

58.4.256 OptionRTSPClientCSEQ as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Manually initialize the client RTSP CSeq for this handle.
Notes: (Read and Write property)
See also RTSP_CLIENT_CSEQ option in CURL manual.

58.4.257 OptionRTSPRequest as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
RTSP request method (OPTIONS, SETUP, PLAY, etc...).
Notes: (Read and Write property)
See also RTSP_REQUEST option in CURL manual.

58.4.258 OptionRTSPServerCSEQ as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Manually initialize the server RTSP CSeq for this handle.
Notes: (Read and Write property)
See also RTSP_SERVER_CSEQ option in CURL manual.

58.4.259 OptionRTSPSessionID as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The RTSP session identifier.
Notes: (Read and Write property)
See also RTSP_SESSION_ID option in CURL manual.
58.4. CLASS CURLMBS

58.4.260 OptionRTSPStreamURI as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The RTSP stream URI.  
**Notes:** (Read and Write property)  
See also RTSP_STREAM_URI option in CURL manual.

58.4.261 OptionRTSPTransport as String

**Notes:** (Read and Write property)  
See also RTSP_TRANSPORT option in CURL manual.

58.4.262 OptionSASLIR as Integer

**Notes:** (Read and Write property)  
See also SASL_IR option in CURL manual.

58.4.263 OptionServiceName as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Service Name.  
**Notes:** (Read and Write property)  
See also SERVICE_NAME option in CURL manual.

58.4.264 OptionSocks5Auth as Integer

**Notes:** (Read and Write property)  
See also SOCKS5_AUTH option in CURL manual.
**58.4.265 OptionSocks5GSSAPINEC as Boolean**

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to protect SOCKS5 connection is protected.

**Notes:**
Set to true to enable or false to disable. As part of the gssapi negotiation a protection mode is negotiated. The rfc1961 says in section 4.3/4.4 it should be protected, but the NEC reference implementation does not. If enabled, this option allows the unprotected exchange of the protection mode negotiation. (Added in 7.19.4).

(Read and Write property)
See also `SOCKS5_GSSAPI_NEC` option in CURL manual.

**58.4.266 OptionSocks5GSSAPIService as String**

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string holding the name of the service.

**Notes:**
The default service name for a SOCKS5 server is rcmd/server-fqdn. This option allows you to change it. (Added in 7.19.4)
(Read and Write property)
See also `SOCKS5_GSSAPI_SERVICE` option in CURL manual.

**58.4.267 OptionSSHAuthTypes as Integer**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Define the SSH authorization types.

**Notes:**
Pass a long set to a bitmask consisting of one or more of CURLSSH_AUTH_PUBLICKEY, CURLSSH_AUTH_PASSWORD, CURLSSH_AUTH_HOST, CURLSSH_AUTH_KEYBOARD. Set CURLSSH_AUTH_ANY to let libCURL pick one. (Added in 7.16.1)

constants:
CURLSSH_AUTH_ANY = & hFFFFFFFF
CURLSSH_AUTH_NONE = 0
CURLSSH_AUTH_PUBLICKEY = 1
CURLSSH_AUTH_PASSWORD = 2
CURLSSH_AUTH_HOST = 4
CURLSSH_AUTH_KEYBOARD = 8
CURLSSH_AUTH_DEFAULT = CURLSSH_AUTH_ANY
(Read and Write property)
See also `SSH_AUTH_TYPES` option in CURL manual.
58.4. CLASS CURLMBS

58.4.268 OptionSSHCompression as Boolean

**Notes:** (Read and Write property)  
See also **SSH_COMPRESSION** option in CURL manual.

58.4.269 OptionSSHHostPublicKeyMD5 as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string containing 32 hexadecimal digits with the 128 bit MD5 checksum of the remote host’s public key.  
**Notes:**  
libCURL will reject the connection to the host unless the md5sums match. This option is only for SCP and SFTP transfers. (Added in 7.17.1)  
(Read and Write property)  
See also **SSH_HOST_PUBLIC_KEY_MD5** option in CURL manual.

58.4.270 OptionSSHKnownhosts as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string holding the file name of the known_host file to use.  
**Notes:**  
The known_hosts file should use the OpenSSH file format as supported by libssh2. If this file is specified, libCURL will only accept connections with hosts that are known and present in that file, with a matching public key. (Added in 7.19.6)  
(Read and Write property)  
See also **SSH_KNOWNHOSTS** option in CURL manual.

58.4.271 OptionSSHPrivateKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Pass a path pointing to a file name for your private key.  
**Notes:**  
If not used, libCURL defaults to using `textasciitilde/.ssh/id_dsa`. If the file is password-protected, set the password with OptionSSLKeyPassword. (Added in 7.16.1)  
For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.
Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.

See also **SSH_PRIVATE_KEYFILE** option in CURL manual.

### 58.4.272 OptionSSHPublicKeyfile as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Pass a path pointing to a file name for your public key.

**Notes:**
If not used, libCURL defaults to using
```
textasciitilde/.ssh/id_dsa.pub. (Added in 7.16.1)
```

For a SFTP transfer (= file transfer over SSH), you would tell the plugin your public and private keys, so the plugin can login.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.

See also **SSH_PUBLIC_KEYFILE** option in CURL manual.

### 58.4.273 OptionSSLCert as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The string should be the file name of your certificate.

**Notes:**
The default format is "PEM" and can be changed with OptionSSLCERTTYPE.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you.

See also **SSLCERT** option in CURL manual.
58.4.274 OptionSSLCertPassword as String

MBS CURL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The certificate password.  
**Deprecation:** This item is deprecated and should no longer be used. You can use OptionKeyPassword instead. **Notes:** (Read and Write property)

58.4.275 OptionSSLCertType as String

**Function:** The string should be the format of your certificate.  
**Notes:** Supported formats are "PEM" and "DER". (Added in 7.9.3)

The Lasterror property is set. 0 for success.  
You can set this value and later you can read it, but you cannot read the default value.  
(Read and Write property)  
See also SSLCERTTYPE option in CURL manual.

58.4.276 OptionSSLCipherList as String

**Function:** A string holding the list of ciphers to use for the SSL connection.  
**Notes:**  
The list must be syntactically correct, it consists of one or more cipher strings separated by colons. Commas or spaces are also acceptable separators but colons are normally used, !, - and + can be used as operators.  
Valid examples of cipher lists include 'RC4-SHA', 'SHA1+DES', 'TLSv1' and 'DEFAULT'. The default list is normally set when you compile OpenSSL.  

You'll find more details about cipher lists on this URL:  

http://www.openssl.org/docs/apps/ciphers.html

The Lasterror property is set. 0 for success.  
You can set this value and later you can read it, but you cannot read the default value.  
(Read and Write property)  
See also SSL_CIPHER_LIST option in CURL manual.
58.4.277 OptionSSLEnableALPN as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable/disable TLS ALPN extension (http2 over ssl might fail without).
**Notes:** (Read and Write property)
See also SSL_ENABLE_ALPN option in CURL manual.

58.4.278 OptionSSLEnableNPN as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable/disable TLS NPN extension (http2 over ssl might fail without)
**Notes:** (Read and Write property)
See also SSL_ENABLE_NPN option in CURL manual.

58.4.279 OptionSSLEngine as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** It will be used as the identifier for the crypto engine you want to use for your private key.
**Notes:**
If the crypto device cannot be loaded, kError_SSL_ENGINE_NOTFOUND is returned.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLENGINE option in CURL manual.

58.4.280 OptionSSLEngineDefault as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the actual crypto engine as the default for (asymmetric) crypto operations.
**Notes:**
If the crypto device cannot be set, kError_SSL_ENGINE_SETFAILED is returned.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLENGINE_DEFAULT option in CURL manual.
58.4. **CLASS CURLMBS**

58.4.281 **OptionSSLFalseStart as Integer**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set if we should enable TLS false start. **Notes:** (Read and Write property) See also SSL_FALSESTART option in CURL manual.

58.4.282 **OptionSSLKey as String**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The string should be the file name of your private key. **Notes:** The default format is "PEM" and can be changed with OptionSSLKEYTYPE.

The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value.

Starting with version 18.0 the plugin will always use UTF-8 encoding for file path on Linux and macOS. For macOS we also do the unicode character normalization for file names for you. **(Read and Write property)** See also SSLKEY option in CURL manual.

58.4.283 **OptionSSLKeyPassword as String**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The password required to use the OptionSSLKEY private key. **Deprecated:** This item is deprecated and should no longer be used. You can use OptionKeyPassword instead. **Notes:** The Lasterror property is set. 0 for success. You can set this value and later you can read it, but you cannot read the default value. **(Read and Write property)**

58.4.284 **OptionSSLKeyType as String**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The string should be the format of your private key. **Notes:** Supported formats are "PEM", "DER" and "ENG".
The format "ENG" enables you to load the private key from a crypto engine. In this case OptionSSLKEY is used as an identifier passed to the engine. You have to set the crypto engine with OptionSSLENGINE. "DER" format key file currently does not work because of a bug in OpenSSL.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLKEYTYPE option in CURL manual.

58.4.285  OptionSSLOptions as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Enable/disable specific SSL features with a bitmask.
Notes: (Read and Write property)
See also SSL_OPTIONS option in CURL manual.

58.4.286  OptionSSLSessionIDCache as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Whether to use the SSL session ID cache.
Notes:
Pass false to disable libCURL's use of SSL session-ID caching. Set this to true to enable it. By default all transfers are done using the cache. Note that while nothing ever should get hurt by attempting to reuse SSL session-IDs, there seem to be broken SSL implementations in the wild that may require you to disable this in order for you to succeed. (Added in 7.16.0)
(Read and Write property)
See also SSL_SESSIONID_CACHE option in CURL manual.

58.4.287  OptionSSLVerifyHost as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
This option determines whether libCURL verifies that the server cert is for the server it is known as.
Notes:
When negotiating an SSL connection, the server sends a certificate indicating its identity.

When OptionSSLVerifyHost is 2, that certificate must indicate that the server is the server to which you meant to connect, or the connection fails.

CURL considers the server the intended one when the Common Name field or a Subject Alternate Name
field in the certificate matches the host name in the URL to which you told CURL to connect.

When the value is 1, the certificate must contain a Common Name field, but it doesn’t matter what name it says. (This is not ordinarily a useful setting).

When the value is 0, the connection succeeds regardless of the names in the certificate.

The default, since 7.10, is 2.

The checking this option controls is of the identity that the server claims. The server could be lying. To control lying, see OptionSSLVerifyPeer.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSL_VERIFYHOST option in CURL manual.

58.4.288 OptionSSLVerifyPeer as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Configure whether this CURL instance will verify the SSL peer certificate.

**Notes:**
This option determines whether CURL verifies the authenticity of the peer’s certificate. A value of 1 means CURL verifies; zero means it doesn’t. The default is nonzero, but before 7.10, it was zero.

When negotiating an SSL connection, the server sends a certificate indicating its identity. CURL verifies whether the certificate is authentic, i.e. that you can trust that the server is who the certificate says it is. This trust is based on a chain of digital signatures, rooted in certification authority (CA) certificates you supply. As of 7.10, CURL installs a default bundle of CA certificates and you can specify alternate certificates with the OptionCAINFO option or the OptionCAPATH option.

When OptionSSLVerifyPeer is nonzero, and the verification fails to prove that the certificate is authentic, the connection fails. When the option is zero, the connection succeeds regardless.

Authenticating the certificate is not by itself very useful. You typically want to ensure that the server, as authentically identified by its certificate, is the server you mean to be talking to. Use OptionSSLVerifyHost to control that.
(Read and Write property)
See also SSL_VERIFYPEER option in CURL manual.
58.4.289 OptionSSLVerifyStatus as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set if we should verify the certificate status.
**Notes:** (Read and Write property)
See also `SSL_VERIFYSTATUS` option in CURL manual.

58.4.290 OptionSSLVersion as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
What version of SSL/TLS to attempt to use.
**Example:**
```vba
dim c as CURLMBS
c.OptionUseSSL = c.kFTPSSL_ALL
c.OptionSSLVersion = c.kSSLVersionTLSv12
```

**Notes:**
The available options are:

- `kSSLVERSION_DEFAULT = 0`
  The default action. When libCURL built with OpenSSL, this will attempt to figure out the remote SSL protocol version. Unfortunately there are a lot of ancient and broken servers in use which cannot handle this technique and will fail to connect. When libCURL is built with GnuTLS, this will mean SSLv3.

- `kSSLVERSION_TLSv1 = 1`
  Force TLSv1

- `kSSLVERSION_SSLv2 = 2`
  Force SSLv2

- `kSSLVERSION_SSLv3 = 3`
  Force SSLv3
The lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also SSLVERSION option in CURL manual.

58.4.291  OptionStreamDepends as CURLMBS

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Set stream dependency on another CURL handle.
Notes: (Read and Write property)
See also STREAM_DEPENDS option in CURL manual.

58.4.292  OptionStreamDependsE as CURLMBS

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Set E-xclusive stream dependency on another CURL handle.
Notes: (Read and Write property)
See also STREAM_DEPENDS_E option in CURL manual.

58.4.293  OptionStreamWeight as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Set stream weight, 1 - 256.
Notes:
Default is 16.
(Read and Write property)
See also STREAM_WEIGHT option in CURL manual.

58.4.294  OptionSuppressConnectHeaders as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Suppress proxy CONNECT response headers from user callbacks.
Notes: (Read and Write property)
See also SUPPRESS_CONNECT_HEADERS option in CURL manual.
58.4.295 OptionTCPFastOpen as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Set TCP Fast Open.
**Notes:** (Read and Write property)
See also TCP_FASTOPEN option in CURL manual.

58.4.296 OptionTCPKeepAlive as Boolean

MBS CURL Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
If set to true, TCP keepalive probes will be sent.
**Notes:**
The delay and frequency of these probes can be controlled by the OptionTCPKeepIdle and OptionTCPKeep-
Interval options, provided the operating system supports them. Set to false (default behavior) to disable
keepalive probes (Added in 7.25.0).
(Read and Write property)
See also TCP_KEEPALIVE option in CURL manual.

58.4.297 OptionTCPKeepIdle as Integer

MBS CURL Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the delay, in seconds, that the operating system will wait while the connection is idle before sending
keepalive probes.
**Notes:**
Not all operating systems support this option. (Added in 7.25.0)
(Read and Write property)
See also TCP_KEEPIDLE option in CURL manual.

58.4.298 OptionTCPKeepInterval as Integer

MBS CURL Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the interval, in seconds, that the operating system will wait between sending keepalive probes.
**Notes:**
Not all operating systems support this option. (Added in 7.25.0)
(Read and Write property)
See also TCP_KEEPINTVL option in CURL manual.
58.4. **CLASS CURLMBS**

### 58.4.299 **OptionTCPNoDelay as Boolean**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An integer specifying whether the TCP_NODELAY option should be set or cleared (true = set, false = clear).

**Notes:**
The option is cleared by default. This will have no effect after the connection has been established.

Setting this option will disable TCP’s Nagle algorithm. The purpose of this algorithm is to try to minimize the number of small packets on the network (where ”small packets” means TCP segments less than the Maximum Segment Size (MSS) for the network).

Maximizing the amount of data sent per TCP segment is good because it amortizes the overhead of the send. However, in some cases (most notably telnet or rlogin) small segments may need to be sent without delay. This is less efficient than sending larger amounts of data at a time, and can contribute to congestion on the network if overdone.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TCP_NODELAY option in CURL manual.

### 58.4.300 **OptionTFTPBlockSize as Integer**

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specify block size to use for TFTP data transmission.

**Notes:**
Valid range as per RFC 2348 is 8-65544 bytes. The default of 512 bytes will be used if this option is not specified. The specified block size will only be used pending support by the remote server. If the server does not return an option acknowledgement or returns an option acknowledgement with no blksize, the default of 512 bytes will be used. (added in 7.19.4)
(Read and Write property)
See also TFTP_BLKSIZE option in CURL manual.

### 58.4.301 **OptionTFTPNoOptions as Integer**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether not send any tftp option requests to the server.

**Notes:** (Read and Write property)
See also TFTP_NO_OPTIONS option in CURL manual.
58.4.302 OptionTimeCondition as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The Time condition option. **Notes:**
This defines how the OptionTimeValue time value is treated. You can set this parameter to kTimeConditionIfModifiedSince (1) or kTimeConditionIfUnModifiedSince (2). This feature applies to HTTP and FTP.
The last modification time of a file is not always known and in such instances this feature will have no effect even if the given time condition would have not been met.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMECONDITION option in CURL manual.

58.4.303 OptionTimeOut as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The maximum time in seconds that you allow the libCURL transfer operation to take. **Notes:**
Normally, name lookups can take a considerable time and limiting operations to less than a few minutes risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable time-outing system calls.
In unix-like systems, this might cause signals to be used unless CURLOPT_NOSIGNAL is set.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMEOUT option in CURL manual.

58.4.304 OptionTimeOutMS as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Pass a long as parameter containing the maximum time in milli seconds that you allow the libCURL transfer operation to take. **Notes:**
Normally, name lookups can take a considerable time and limiting operations to less than a few minutes
risk aborting perfectly normal operations. This option will cause CURL to use the SIGALRM to enable
time-outing system calls.
(Read and Write property)
See also TIMEOUT_MS option in CURL manual.

58.4.305 OptionTimeValue as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
This should be the time in seconds since 1 jan 1970, and the time will be used in a condition as specified
with OptionTimeCondition.
Notes:
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TIMEVALUE option in CURL manual.

58.4.306 OptionTLSAuthPassword as String

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Sets the TSL authentication password.
Notes:
Please also set OptionTLSAuthType.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_PASSWORD option in CURL manual.

58.4.307 OptionTLSAuthType as String

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Sets the TLS authentication type.
Notes:
You can set this to "SRP" to use Secure Remote Password authentication.
Please also set username and password.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_TYPE option in CURL manual.
58.4.308 OptionTLSAuthUsername as String

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the TSL authentication user name.

**Notes:**
Please also set OptionTLSAuthType.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also TLSAUTH_USERNAME option in CURL manual.

58.4.309 OptionTransferEncoding as Boolean

MBS CURL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Adds a request for compressed Transfer Encoding in the outgoing HTTP request.

**Notes:**
If the server supports this and so desires, it can respond with the HTTP response sent using a compressed
Transfer-Encoding that will be automatically uncompressed by libCURL on reception.

Transfer-Encoding differs slightly from the Content-Encoding you ask for with OptionAcceptEncoding in
that a Transfer-Encoding is strictly meant to be for the transfer and thus MUST be decoded before the
data arrives in the client. Traditionally, Transfer-Encoding has been much less used and supported by both
HTTP clients and HTTP servers.
(Read and Write property)
See also TRANSFER_ENCODING option in CURL manual.

58.4.310 OptionTransferText as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True tells the library to use ASCII mode for ftp transfers, instead of the default binary transfer.

**Notes:**
For win32 systems it does not set the stdout to binary mode. This option can be usable when transferring
text data between systems with different views on certain characters, such as newlines or similar.

libCURL does not do a complete ASCII conversion when doing ASCII transfers over FTP. This is a known
limitation/flaw that nobody has rectified. libCURL simply sets the mode to ascii and performs a standard
transfer.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
58.4. **CLASS CURLMBS**

(Read and Write property)
See also **TRANSFERTEXT** option in CURL manual.

### 58.4.311 **OptionUnixSocketPath as String**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Path to Unix domain socket.  
**Notes:** (Read and Write property)  
See also **UNIX_SOCKET_PATH** option in CURL manual.

### 58.4.312 **OptionUnrestrictedAuth as Boolean**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A boolean parameter tells the library it can continue to send authentication (user+password) when following locations, even when hostname changed.  
**Notes:**  
This option is meaningful only when setting FollowOption.

The Lasterror property is set. 0 for success. 
You can set this value and later you can read it, but you cannot read the default value.  
(Read and Write property)  
See also **UNRESTRICTED_AUTH** option in CURL manual.

### 58.4.313 **OptionUpload as Boolean**

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True tells the library to prepare for an upload.  
**Notes:**  
The OptionInFileSize or OptionInFileSizeLarge options are also interesting for uploads. If the protocol is HTTP, uploading means using the PUT request unless you tell libCURL otherwise.

Using PUT with HTTP 1.1 implies the use of a ”Expect: 100-continue” header. You can disable this header with OptionHTTPHeader as usual.

If you use PUT to a HTTP 1.1 server, you can upload data without knowing the size before starting the transfer if you use chunked encoding. You enable this by adding a header like ”Transfer-Encoding: chunked” with OptionHTTPHeader. With HTTP 1.0 or without chunked transfer, you must specify the size.
The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also UPLOAD option in CURL manual.

58.4.314 OptionURL as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The actual URL to deal with.
**Notes:**
If you need to pass username or password, please consider using the OptionUsername and OptionPassword properties. If your username or password contains characters like @ or :, you must use those properties.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.

The parameter should be a char * to a zero terminated string. The string must remain present until CURL no longer needs it, as it doesn’t copy the string.

If the given URL lacks the protocol part ("http://" or "ftp://" etc), it will attempt to guess which protocol to use based on the given host name. If the given protocol of the set URL is not supported, libCURL will return on error (kError_UNSUPPORTED_PROTOCOL) when you call Perform. Use VersionInfo for detailed info on which protocols that are supported.

The string given to CURLOPT_URL must be url-encoded and following the RFC 2396:
http://CURL.haxx.se/rfc/rfc2396.txt

CURLOPT_URL is the only option that must be set before Perform is called.
For file uploads or downloads, please include the file name in the URL.

Please do never include username and passwords in URLs, as those get often written to log files and would reveal your credentials!
Instead use OptionUsername and OptionPassword.
(Read and Write property)
See also URL option in CURL manual.

58.4.315 OptionUserAgent as String

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The user agent string to pass to the server.
Notes:
It will be used to set the User-Agent: header in the http request sent to the remote server. This can be used to fool servers or scripts. You can also set any custom header with OptionHTTPHeader.

The Lasterror property is set. 0 for success.
You can set this value and later you can read it, but you cannot read the default value.
(Read and Write property)
See also USERAGENT option in CURL manual.

58.4.316 OptionUsername as String

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The user name to be used in protocol authentication
Notes:
In order to specify the password to be used in conjunction with the user name use the OptionPassword option
(Read and Write property)
See also USERNAME option in CURL manual.

58.4.317 OptionUseSSL as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Request using SSL / TLS for the transfer.
Notes:
Set to an integer using one of the values from below, to make libCURL use your desired level of SSL for the transfer.
These are all protocols that start out plain text and get "upgraded" to SSL using the STARTTLS command. This is for enabling SSL/TLS when you use FTP, SMTP, POP3, IMAP etc.

| CURLUSESSL_NONE | 0 | Don’t attempt to use SSL. |
| CURLUSESSL_TRY  | 1 | Try using SSL, proceed as normal otherwise. |
| CURLUSESSL_CONTROL | 2 | Require SSL for the control connection or fail with CURLE_USE_SSL_FAILED. |
| CURLUSESSL_ALL   | 3 | Require SSL for all communication or fail with CURLE_USE_SSL_FAILED. |

(Read and Write property)
See also USE_SSL option in CURL manual.
58.4.318  OptionVerbose as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether debug messages are sent to the DebugMessage event.  
**Notes:**
- Default is false.
- You need to subclass the CURLMBS class to add code in the DebugMessage event.
- Or you set CollectDebugData = true and later query DebugData property.
- Or you use CreateMTDebugOutputFile to stream them to a file.

(Read and Write property)

See also **VERBOSE** option in CURL manual.

58.4.319  OptionWildCardMatch as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable wildcard matching.  
**Notes:**
- Set onoff to true if you want to transfer multiple files according to a file name pattern. The pattern can be specified as part of the OptionURL option, using an fnmatch-like pattern (Shell Pattern Matching) in the last part of URL (file name).

By default, libCURL uses its internal wildcard matching implementation. You can provide your own matching function by the CURLMBS.FileNameMatch event.

A brief introduction of its syntax follows:

- **- ASTERISK**

  ftp://example.com/some/path/*.txt (for all txt’s from the root directory)

- **? - QUESTION MARK**

  Question mark matches any (exactly one) character.

  ftp://example.com/some/path/photo?.jpeg

- **[ - BRACKET EXPRESSION**

  The left bracket opens a bracket expression. The question mark and asterisk have no special meaning in a
58.4. **CLASS CURLMBS**

bracket expression. Each bracket expression ends by the right bracket and matches exactly one character. Some examples follow:

\[
[\text{a-zA-Z0-9}] \text{ or } [\text{f-gF-G}] - \text{character interval} \\
[\text{abc}] - \text{character enumeration} \\
[\text{\textasciitilde abc}] \text{ or } [\text{!abc}] - \text{negation} \\
[\text{[:name:]}] - \text{class expression. Supported classes are alnum,lower, space, alpha, digit, print, upper, blank, graph, xdigit.} \\
[\text{[]-!\textasciitilde}] - \text{special case - matches only ‘-’, ‘’} \\
[\text{\textbackslash \textbackslash \textbackslash}] - \text{escape syntax. Matches ‘‘ ‘’} \\
\]

Using the rules above, a file name pattern can be constructed:

ftp://example.com/some/path/ [\text{a-z [:upper:]} \text{\textbackslash \textbackslash}] .jpeg

This feature is only supported for FTP download. Not for SFTP or HTTP. (Read and Write property)
See also **WILDCARDMATCH** option in CURL manual.

### 58.4.320 OptionXOAuth2Bearer as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The XOAUTH2 bearer token. **Notes:** (Read and Write property) See also **XOAUTH2, BEARER** option in CURL manual.

### 58.4.321 OutputData as String

MBS CURL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The output data from CURL. **Notes:**
If CollectOutputData property is true, the plugin puts the data received in write event also into this property, so you can grab it after the transfer. Use ClearData method to clear when reusing CURL object. (Read only property)

### 58.4.322 Paused as Boolean

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether transfer is paused.
Notes:
You can set it to true while transfer runs to pause it.
(Read and Write property)

58.4.323 ProgressDownloadCurrent as Int64

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Bytes downloaded so far.
**Notes:** (Read only property)

58.4.324 ProgressDownloadTotal as Int64

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Bytes to download in total.
**Notes:** (Read only property)

58.4.325 ProgressPercent as Double

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Current download/upload progress in percent.
**Notes:**
Range from 0 to 100.
(Read only property)

58.4.326 ProgressUploadCurrent as Int64

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Bytes uploaded so far.
**Notes:** (Read only property)

58.4.327 ProgressUploadTotal as Int64

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Bytes to upload in total.
**Notes:** (Read only property)
58.4. CLASS CURLMBS

58.4.328 Version as CURLVersionMBS

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a version object to a filled with information about various run-time features in libCURL. **Notes:** (Read only property)

58.4.329 YieldTime as Boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether plugin should yield time. **Notes:** If set the plugin will yield time to Realbasic back so threads and timers work while you download. Seems like in RB 2009 this property only has effect if you run CURL in a thread. (Read and Write property)

58.4.330 Events

58.4.331 ChunkBegin(FileInfo as CURLFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called on begin of a new chunk. **Notes:** If splitting of data transfer is enabled, this callback is called before download of an individual chunk started. Note that parameter "remains" works only for FTP wildcard downloading (for now), otherwise is not used.

58.4.332 ChunkEnd(FileInfo as CURLFileInfoMBS, Remains as Integer) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Download of a chunk ended. **Notes:** If splitting of data transfer is enabled this callback is called after download of an individual chunk finished. This event is called for skipped or downloaded files.
58.4.333  DebugMessage(infotype as Integer, data as string, dataSize as Integer)

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A debug event to get data of ongoing process.

**Notes:**
You may need to set OptionVerbose to true.

infotype constants:

<table>
<thead>
<tr>
<th>Constant</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>kInfo_TEXT</td>
<td>The data is informational text.</td>
</tr>
<tr>
<td>kInfo_HEADER_IN</td>
<td>The data is header (or header-like) data received from the peer.</td>
</tr>
<tr>
<td>kInfo_HEADER_OUT</td>
<td>The data is header (or header-like) data sent to the peer.</td>
</tr>
<tr>
<td>kInfo_DATA_IN</td>
<td>The data is protocol data received from the peer.</td>
</tr>
<tr>
<td>kInfo_DATA_OUT</td>
<td>The data is protocol data sent to the peer.</td>
</tr>
<tr>
<td>kInfo_SSL_DATA_IN</td>
<td>The data is protocol data received from the peer.</td>
</tr>
<tr>
<td>kInfo_SSL_DATA_OUT</td>
<td>The data is protocol data sent to the peer.</td>
</tr>
</tbody>
</table>

If you set CollectDebugData, the plugin will collect the messages and provide them via the DebugData property. You can still use this event to write your own log instead of in addition.

58.4.334  FileNameMatch(Pattern as String, Name as String) as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Match a file against a pattern.

**Notes:**
If you don’t implement this event, you get the default implementation from CURL.
Return kFileNameMatchNoMatch, kFileNameMatchIsMatch or kFileNameMatchFailed.

58.4.335  Finished(Result as Integer)

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The event called when transfer has finished.

**Notes:**
For Perform and PerformMT it is called before Perform function returns, so in PerformMT this is called on the thread.
For use with CURLMultiMBS, it is called after TransferFinished event and before TransfersFinished event.
If you want to modify GUI and use PeformMT, you may need to start a timer to do so.
58.4.336 Header(data as string, dataSize as Integer) as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
New Header data was received.

**Notes:**
You can get error 23 if you don’t return lenb(data) in this event.
Or just leave it empty so RB will not include it in your application the plugin will return lenb(data) itself.

If you set CollectHeaderData to true, the plugin will collect the messages and provide them via the Header-
Data property. You can still use this event to write your own log instead of in addition.

58.4.337 Progress(dltotal as Int64, dlnow as Int64, ultotal as Int64, ulnow as
Int64, percent as Double) as boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
An event to report progress of ongoing transfers.

**Notes:**
This function gets called by libCURL with a frequent interval during operation (roughly once per second)
no matter if data is being transferred or not. Unknown/unused argument values passed to the callback will
be set to zero (like if you only download data, the upload size will remain 0).
Returning a true from this event will cause libCURL to abort the transfer and return kError_ABORTED_BY_CALLBACK.

You can run CURL from a thread to download several things at the same time or keep the GUI more
responsive. For better GUI, you can even call a method like app.DoEvents to get the GUI updated more
often.

When sending email, ultotal may be zero. In that case use OptionInFileSize to know size of email to upload.

58.4.338 Read(count as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This event gets called by libCURL as soon as it needs to read data in order to send it to the peer.

**Notes:**
Return the number of bytes requested. Never return a string with lenb(string) > count. You can return 0 to
inform about end of file.

If you stop the current transfer by returning 0 "pre-maturely" (i.e before the server expected it, like when
you’ve told you will upload N bytes and you upload less than N bytes), you may experience that the server
"hangs" waiting for the rest of the data that won’t come.
The read event may return CURL_READFUNC_ABORT (& h10000000) to stop the current operation immediately, resulting in a kError_ABORTED_BY_CALLBACK error code from the transfer (Added in 7.12.1)

This event is not called when using PerformMT.

If you provide Input data via SetInputData or OpenMTInputFile method, this event is not called and data is taken from the data you provided.

58.4.339 RestartRead() as boolean

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function:
An event to inform you that reading on the file needs to start at the beginning again.
Notes:
Return true on success.
If you use a binarystream for reading you will have to set position to 0 in this event.

This event is not called when using PerformMT.

58.4.340 Seek(pos as Int64, whence as Integer) as Integer

MBS CURL Plugin, Plugin Version: 12.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function:
Called when CURL needs to perform a seek.
Notes:
Normally only needed if you resume a download (Seek forward) or upload is reset (seek back).
Whence is kSeekOriginCurrent, kSeekOriginEnd or kSeekOriginSet.
Please return one of this constants: kSeekReturnCantSeek, kSeekReturnFail or kSeekReturnOk.

58.4.341 SSHKey(KnownKey as string, KnownKeyLength as Integer, KnownKeyType as Integer, FoundKey as string, FoundKeyLength as Integer, FoundKeyType as Integer, MatchStatus as Integer) as Integer

MBS CURL Plugin, Plugin Version: 10.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function:
The event for known hosts callback for SFTP and SCP.
Notes:
KnownKey: The known key as string encoded with base64 if KnownKeyLength is zero, otherwise the "raw" data.
KnownKeyLength: The length of the key. Zero for base64 encoded key.
KnownKeyType: The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
FoundKey: The found key as string encoded with base64 if FoundKeyLength is zero, otherwise the "raw" data.
FoundKeyLength: The length of the key. Zero for base64 encoded key.
FoundKeyType: The type of the key. (0 = Unknown, 1 = RSA1, 2 = RSA, 3 = DSS)
MatchStatus: The status CURL found. (0 = OK, 1 = Mismatch, 2 = Missing)

Return one of the following values:

<table>
<thead>
<tr>
<th>CURLKHSTAT</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CURLKHSTAT_FINE_ADD_TO_FILE</td>
<td>0  Fine and add to file</td>
</tr>
<tr>
<td>CURLKHSTAT_FINE</td>
<td>1  Fine</td>
</tr>
<tr>
<td>CURLKHSTAT_REJECT</td>
<td>2  reject the connection, return an error</td>
</tr>
<tr>
<td>CURLKHSTAT_DEFER</td>
<td>3  do not accept it, but we can’t answer right now so this causes a CURLE_DEFER error but otherwise the connection will be left intact etc</td>
</tr>
</tbody>
</table>

### 58.4.342 Write(data as string, dataSize as Integer) as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event gets called by libCURL as soon as there is data received that needs to be saved. **Notes:** Return the number of bytes actually taken care of. If that amount differs from the amount passed to your function, it'll signal an error to the library and it will abort the transfer and return kError_WRITE_ERROR.

This function may be called with zero bytes data if the transfered file is empty.

The event function will be passed as much data as possible in all invokes, but you cannot possibly make any assumptions. It may be one byte, it may be thousands. The maximum amount of data that can be passed to the write callback is defined in the CURL.h header file: CURL_MAX_WRITE_SIZE (16384).

If you set CollectOutputData to true, the plugin will automatically collect the data and provide it to you after the transfer with the OutputData property. This collecting feature will only work right, if there is enough free memory. You can of course still process data yourself in this event instead of in addition.

### 58.4.343 Constants

#### 58.4.344 kAUTH_ANY = & hFFFFFFFEF

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the authentication constants for the Option-HTTPAuth property.
CHAPTER 58. CURL

Notes: all types set

58.4.345  kAUTH_ANYSAFE = & hFFFFFFFFE

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the authentication constants for the Option-HTTPAuth property.

58.4.346  kAUTH_BASIC = 1

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the authentication constants for the Option-HTTPAuth property.
Notes: Basic (default)

58.4.347  kAUTH_DIGEST = 2

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the authentication constants for the Option-HTTPAuth property.
Notes: Digest

58.4.348  kAUTH_DIGEST_IE = 16

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the authentication constants for the Option-HTTPAuth property.
Notes: HTTP Digest authentication with an IE flavor. Digest authentication is defined in RFC 2617 and is a more secure way to do authentication over public networks than the regular old-fashioned Basic method. The IE flavor is simply that libCURL will use a special "quirk" that IE is known to have used before version 7 and that some servers require the client to use.

58.4.349  kAUTH_GSSNEGOTIATE = 4

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the authentication constants for the Option-HTTPAuth property.
Notes: GSS-Negotiate
Please check SupportsGSSNEGOTIATE property in CURLVersionMBS class whether this is supported/implemented by your copy of the CURL library.

58.4.350 kAUTH_NEGOTIATE = 4

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the authentication constants for the Option-HTTPAuth property.

**Notes:**

HTTP Negotiate (SPNEGO) authentication. Negotiate authentication is defined in RFC 4559 and is the most secure way to perform authentication over HTTP.

You need to build libCURL with a suitable GSS-API library or SSPI on Windows for this to work.

58.4.351 kAUTH_NONE = 0

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the authentication constants for the Option-HTTPAuth property.

58.4.352 kAUTH_NTLM = 8

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the authentication constants for the Option-HTTPAuth property.

58.4.353 kAUTH_NTLM_WB = 32

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the authentication constants for the Option-HTTPAuth property.

**Notes:**

NTLM delegating to winbind helper. Authentication is performed by a separate binary application that is executed when needed. The name of the application is specified at compile time but is typically /usr/bin/ntlm_auth

Note that libCURL will fork when necessary to run the winbind application and kill it when complete, calling waitpid() to await its exit when done. On POSIX operating systems, killing the process will cause a SIGCHLD signal to be raised (regardless of whether OptionNoSignal is set), which must be handled intelligently by the application. In particular, the application must not unconditionally call wait() in its SIGCHLD signal handler to avoid being subject to a race condition. This behavior is subject to change in future versions of libCURL.
58.4.354  kAUTH_Only = & h80000000

MBS CURL Plugin, Plugin Version: 15.2. Function: One of the authentication constants for the Option-HTTPAuth property.
Notes: This is a meta symbol. OR this value together with a single specific auth value to force libCURL to probe for un-restricted auth and if not, only that single auth algorithm is acceptable.

58.4.355  kChunkBeginFailed = 1

MBS CURL Plugin, Plugin Version: 15.2. Function: One of the result values for the ChunkBegin event.
Notes: Failed, so we exit downloads.

58.4.356  kChunkBeginOK = 0

MBS CURL Plugin, Plugin Version: 15.2. Function: One of the result values for the ChunkBegin event.
Notes: OK, download this file.

58.4.357  kChunkBeginSkip = 2

MBS CURL Plugin, Plugin Version: 15.2. Function: One of the result values for the ChunkBegin event.
Notes: Skip the file.

58.4.358  kChunkEndFailed = 1

MBS CURL Plugin, Plugin Version: 15.2. Function: One of the result values for the ChunkEnd event.
Notes: Failed, so we exit downloads.

58.4.359  kChunkEndOK = 0

MBS CURL Plugin, Plugin Version: 15.2. Function: One of the result values for the ChunkEnd event.
Notes: Download success.
58.4.360 kError_ABORTED_BY_CALLBACK = 42

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.4.361 kErrorAGAIN = 81

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** socket is not ready for send/recv, wait till it’s ready and try again (Added in CURL 7.18.2)

58.4.362 kError_BAD_CONTENT_ENCODING = 61

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** Unrecognized transfer encoding

58.4.363 kError_BAD_DOWNLOAD_RESUME = 36

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** couldn’t resume download

58.4.364 kError_BAD_FUNCTION_ARGUMENT = 43

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.4.365 kError_CHUNK_FAILED = 88

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Chunk callback reported error.

58.4.366 kError_CONV_FAILED = 75

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Conversion failed.
58.4.367  kError_CONV_REQD = 76

MBS CURL Plugin, Plugin Version: 11.2. Function: One of the error constants for the Error event. Notes: Not used with plugin.

58.4.368  kError_COULDNT_CONNECT = 7

58.4.369  kError_COULDNT_RESOLVE_HOST = 6

58.4.370  kError_COULDNT_RESOLVE_PROXY = 5

58.4.371  kError_FAILED_INIT = 2

58.4.372  kError_FILESIZE_EXCEEDED = 63

MBS CURL Plugin, Plugin Version: 9.8. Function: One of the error constants for the Error event. Notes: Maximum file size exceeded

58.4.373  kError_FILE_COULDNT_READ_FILE = 37

58.4.374  kError_FTP_ACCEPT_FAILED = 10

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the error constants for the Error event.  
**Notes:** While waiting for the server to connect back when an active FTP session is used, an error code was sent over the control connection or similar.

58.4.375  kError_FTP_ACCEPT_TIMEOUT = 12

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the error constants for the Error event.  
**Notes:** During an active FTP session while waiting for the server to connect, the OptionAcceptTimeoutMS (or the internal default) timeout expired.

58.4.376  kError_FTP_BAD_FILE_LIST = 87

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.  
**Notes:** Unable to parse FTP file list.

58.4.377  kError_FTP_CANT_GET_HOST = 15

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.4.378  kError_FTP_COULDNT_RETR_FILE = 19

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.4.379  kError_FTP_COULDNT_SET_TYPE = 17

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.

58.4.380  kError_FTP_COULDNT_USE_REST = 31

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.  
**Notes:** the REST command failed
58.4.381  kError_FTP_PORT_FAILED = 30

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.
**Notes:** FTP PORT operation failed

58.4.382  kError_FTP_PRET_FAILED = 84

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.
**Notes:** a PRET command failed

58.4.383  kError_FTP_WEIRD_227_FORMAT = 14

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.4.384  kError_FTP_WEIRD_PASS_REPLY = 11

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.4.385  kError_FTP_WEIRD_PASV_REPLY = 13

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.4.386  kError_FTP_WEIRD_SERVER_REPLY = 8

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.4.387  kError_FUNCTION_NOT_FOUND = 41

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.4.388  kError_GOT_NOTHING = 52

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.
**Notes:** when this is a specific error
58.4.389  kError_HTTP2 = 16

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the error constants for the Error event.  
**Notes:** A problem was detected in the HTTP2 framing layer. This is somewhat generic and can be one out of several problems, see the error buffer for details.

58.4.390  kError_HTTP2_STREAM = 92

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the error constants for the Error event.  
**Notes:** stream error in HTTP/2 framing layer

58.4.391  kError_HTTP_POST_ERROR = 34

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.4.392  kError_HTTP_RETURNED_ERROR = 22

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.4.393  kError_INTERFACE_FAILED = 45

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.4.394  kError_LDAP_CANNOT_BIND = 38

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.4.395  kError_LDAP_INVALID_URL = 62

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.  
**Notes:** Invalid LDAP URL
58.4.396 kError_LDAP_SEARCH_FAILED = 39

58.4.397 kError_LOGIN_DENIED = 67

MBS CURL Plugin, Plugin Version: 9.8. Function: One of the error constants for the Error event. Notes: user, password or similar was not accepted and we failed to login

58.4.398 kError_NOT_BUILT_IN = 4

MBS CURL Plugin, Plugin Version: 15.2. Function: One of the error constants for the Error event. Notes: A requested feature, protocol or option was not found built-in in this libCURL due to a build-time decision. This means that a feature or option was not enabled or explicitly disabled when libCURL was built and in order to get it to function you have to get a rebuilt libCURL.

58.4.399 kError_NO_CONNECTION_AVAILABLE = 89

MBS CURL Plugin, Plugin Version: 15.2. Function: One of the error constants for the Error event. Notes: For internal use only, will never be returned by libCURL. No connection available, the session will be queued. (added in 7.30.0)

58.4.400 kError_OK = 0

58.4.401 kError_OPERATION_TIMEDOUT = 28

MBS CURL Plugin, Plugin Version: 11.2. Function: One of the error constants for the Error event.

58.4.402 kError_OUT_OF_MEMORY = 27

58.4.403 kError_PARTIAL_FILE = 18
MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.4.404 kError_PEER_FAILED_VERIFICATION = 51
MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.

58.4.405 kErrorQUOTE_ERROR = 21
MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.

58.4.406 kError_RANGE_ERROR = 33
MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.

58.4.407 kError_READ_ERROR = 26
MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** could open/read from file

58.4.408 kError_RECURSIVE_API_CALL = 93
MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the error constants for the Error event. **Notes:** an api function was called from inside a callback/event.

58.4.409 kError_RECV_ERROR = 56
MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** failure in receiving network data
58.4.410 kError_REMOTE_ACCESS_DENIED = 9

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.

58.4.411 kError_REMOTE_DISK_FULL = 70

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. 
**Notes:** Out of disk space on server.

58.4.412 kError_REMOTE_FILE_EXISTS = 73

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. 
**Notes:** File already exists.

58.4.413 kError_REMOTE_FILE_NOT_FOUND = 78

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. 
**Notes:** Remote file not found.

58.4.414 kError_RTSP_CSEQ_ERROR = 85

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. 
**Notes:** Mismatch of RTSP CSeq numbers.

58.4.415 kError_RTSP_SESSION_ERROR = 86

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. 
**Notes:** mismatch of RTSP Session Identifiers

58.4.416 kError_SEND_ERROR = 55

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. 
**Notes:** failed sending network data
58.4. **CLASS CURLMBS**

58.4.417  **kError_SEND_FAIL_REWIND = 65**

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** Sending the data requires a rewind that failed

58.4.418  **kError_SSL = 79**

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Error from the SSH layer, somewhat generic so the error message will be of interest when this has happened.

58.4.419  **kError_SSL_CACERT = 60**

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:**

problem with the CA cert (path?)

You can often workaround by setting OptionSSLVerifyPeer = 0 and OptionSSLVerifyHost = 0. But that reduces security.

58.4.420  **kError_SSL_CACERT_BADFILE = 77**

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Could not load CACERT file, missing or wrong format.

58.4.421  **kError_SSL_CERTPROBLEM = 58**

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** problem with the local certificate

58.4.422  **kError_SSL_CIPHER = 59**

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event. **Notes:** couldn’t use specified cipher
58.4.423  kError_SSL_CONNECT_ERROR = 35

MBS CURL Plugin, Plugin Version: 9.8.  **Function:** One of the error constants for the Error event.  
**Notes:** wrong when connecting with SSL

58.4.424  kError_SSL_CRL_BADFILE = 82

MBS CURL Plugin, Plugin Version: 11.2.  **Function:** One of the error constants for the Error event.  
**Notes:** Could not load CRL file, missing or wrong format (Added in 7.19.0)

58.4.425  kError_SSL_ENGINE_INITFAILED = 66

MBS CURL Plugin, Plugin Version: 9.8.  **Function:** One of the error constants for the Error event.  
**Notes:** failed to initialise ENGINE

58.4.426  kError_SSL_ENGINE_NOTFOUND = 53

MBS CURL Plugin, Plugin Version: 9.8.  **Function:** One of the error constants for the Error event.  
**Notes:** SSL crypto engine not found

58.4.427  kError_SSL_ENGINE_SETFAILED = 54

MBS CURL Plugin, Plugin Version: 9.8.  **Function:** One of the error constants for the Error event.  
**Notes:** can not set SSL crypto engine as default

58.4.428  kError_SSL_INVALIDCERTSTATUS = 91

MBS CURL Plugin, Plugin Version: 18.2.  **Function:** One of the error constants for the Error event.  
**Notes:** invalid certificate status

58.4.429  kError_SSL_ISSUER_ERROR = 83

MBS CURL Plugin, Plugin Version: 11.2.  **Function:** One of the error constants for the Error event.  
**Notes:** Issuer check failed. (Added in CURL 7.19.0)
58.4. **CLASS CURLMBS**

### 58.4.430 kError_SSL_PINNEDPUBKEYNOTMATCH = 90

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the error constants for the Error event.  
**Notes:** specified pinned public key did not match.

---

### 58.4.431 kError_SSL_SHUTDOWN_FAILED = 80

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.  
**Notes:** Failed to shut down the SSL connection.

---

### 58.4.432 kError_TELNET_OPTION_SYNTAX = 49

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.  
**Notes:** Malformed telnet option  
See also:

- 58.4.433 kError_TELNET_OPTION_SYNTAX = 49

---

### 58.4.433 kError_TELNET_OPTION_SYNTAX = 49

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.  
See also:

- 58.4.432 kError_TELNET_OPTION_SYNTAX = 49

---

### 58.4.434 kError_TFTP_ILLEGAL = 71

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.  
**Notes:** Illegal TFTP operation.

---

### 58.4.435 kError_TFTP_NOSUCHUSER = 74

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event.  
**Notes:** No such user.
58.4.436  \texttt{kError\_TFTP\_NOTFOUND} = 68

MBS CURL Plugin, Plugin Version: 11.2. \textbf{Function}: One of the error constants for the Error event. 
\textbf{Notes}: File not found on server.

58.4.437  \texttt{kError\_TFTP\_PERM} = 69

MBS CURL Plugin, Plugin Version: 11.2. \textbf{Function}: One of the error constants for the Error event. 
\textbf{Notes}: Permission problem on server.

58.4.438  \texttt{kError\_TFTP\_UNKNOWNID} = 72

MBS CURL Plugin, Plugin Version: 11.2. \textbf{Function}: One of the error constants for the Error event. 
\textbf{Notes}: Unknown transfer ID.

58.4.439  \texttt{kError\_TOO\_MANY\_REDIRECTS} = 47

MBS CURL Plugin, Plugin Version: 9.8. \textbf{Function}: One of the error constants for the Error event. 
\textbf{Notes}: catch endless re-direct loops

58.4.440  \texttt{kError\_UNKNOWN\_TELNET\_OPTION} = 48

MBS CURL Plugin, Plugin Version: 9.8. \textbf{Function}: One of the error constants for the Error event. 
\textbf{Notes}: User specified an unknown option

58.4.441  \texttt{kError\_UNSUPPORTED\_PROTOCOL} = 1

MBS CURL Plugin, Plugin Version: 9.8. \textbf{Function}: One of the error constants for the Error event.

58.4.442  \texttt{kError\_UPLOAD\_FAILED} = 25

MBS CURL Plugin, Plugin Version: 11.2. \textbf{Function}: One of the error constants for the Error event.
58.4.443  kError_URL_MALFORMAT = 3

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.4.444  kError_USE_SSL_FAILED = 64

MBS CURL Plugin, Plugin Version: 11.2. **Function:** One of the error constants for the Error event. **Notes:** Requested FTP SSL level failed

58.4.445  kError_WRITE_ERROR = 23

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the error constants for the Error event.

58.4.446  kFileNameMatchFailed = 2

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the possible return values for FileNameMatch event. **Notes:** Failed.

58.4.447  kFileNameMatchIsMatch = 0

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the possible return values for FileNameMatch event. **Notes:** Is Match.

58.4.448  kFileNameMatchNoMatch = 1

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the possible return values for FileNameMatch event. **Notes:** No match.

58.4.449  kFormArray = 8

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.
58.4.450  kFormBuffer = 11

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.4.451  kFormBufferLength = 13

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.4.452  kFormBufferPtr = 12

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.4.453  kFormContentHeader = 15

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.4.454  kFormContentsLength = 6

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.4.455  kFormContentType = 14

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.4.456  kFormCopyContents = 4

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.4.457  kFormCopyName = 1

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.
58.4.458 kFormEnd = 17

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.4.459 kFormFile = 10

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.4.460 kFormFileContent = 7

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.4.461 kFormFilename = 16

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.4.462 kFormNameLength = 3

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.4.463 kFormPtrContents = 5

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.4.464 kFormPtrName = 2

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the form constants.

58.4.465 kFTPAUTH_DEFAULT=0

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the FTP Authentication constants for the OptionFTPPSSLAuth property.
**Notes:** Allow libCURL to decide
58.4.466 kFTPAUTH_SSL=1

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the FTP Authentication constants for the OptionFTPSSLAuth property.
**Notes:** Try "AUTH SSL" first, and only if that fails try "AUTH TLS"

58.4.467 kFTPAUTH_TLS=2

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the FTP Authentication constants for the OptionFTPSSLAuth property.
**Notes:** Try "AUTH TLS" first, and only if that fails try "AUTH SSL"

58.4.468 kFTPMethodDefault = 0

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the FTP CWD method.
**Notes:** let libcurl pick

58.4.469 kFTPMethodMultiCWD = 1

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the FTP CWD method.
**Notes:** single CWD operation for each path part

58.4.470 kFTPMethodNoCWD = 2

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the FTP CWD method.
**Notes:** no CWD at all

58.4.471 kFTPMethodSingleCWD = 3

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the FTP CWD method.
**Notes:** one CWD to full dir, then work on file

58.4.472 kFTPSSL_ALL=3

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the FTP SSL constants for the OptionFTPSSL property.
58.4.473 kFTPSSL_CONTROL=2

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the FTP SSL constants for the OptionFTPSSL property.
**Notes:** Require SSL for the control connection or fail with kError_FTP_SSL_FAILED.

58.4.474 kFTPSSL_NONE=0

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the FTP SSL constants for the OptionFTPSSL property.
**Notes:** Don’t attempt to use SSL.

58.4.475 kFTPSSL_TRY=1

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the FTP SSL constants for the OptionFTPSSL property.
**Notes:** Try using SSL, proceed as normal otherwise.

58.4.476 kGSSAPIDelegationFlag = 2

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the GSS API delegation modes.
**Notes:** delegate always

58.4.477 kGSSAPIDelegationNone = 0

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the GSS API delegation modes.
**Notes:** no delegation (default)

58.4.478 kGSSAPIDelegationPolicyFlag = 1

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the GSS API delegation modes.
**Notes:** if permitted by policy
58.4.479  kHTTP_VERSION_1_0 = 1

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the HTTP Version constants for the Option-HTTPVersion property.  
**Notes:** Enforce HTTP 1.0 requests.

58.4.480  kHTTP_VERSION_1_1 = 2

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the HTTP Version constants for the Option-HTTPVersion property.  
**Notes:** Enforce HTTP 1.1 requests.

58.4.481  kHTTP_VERSION_2TLS = 4

MBS CURL Plugin, Plugin Version: 17.2. **Function:** One of the HTTP Version constants for the Option-HTTPVersion property.  
**Notes:** use version 2 for HTTPS, version 1.1 for HTTP

58.4.482  kHTTP_VERSION_2_0 = 3

MBS CURL Plugin, Plugin Version: 17.2. **Function:** One of the HTTP Version constants for the Option-HTTPVersion property.  
**Notes:** please use HTTP 2 in the request

58.4.483  kHTTP_VERSION_2_PRIOR_KNOWLEDGE = 5

MBS CURL Plugin, Plugin Version: 17.2. **Function:** One of the HTTP Version constants for the Option-HTTPVersion property.  
**Notes:** please use HTTP 2 without HTTP/1.1 Upgrade

58.4.484  kHTTP_VERSION_NONE = 0

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the HTTP Version constants for the Option-HTTPVersion property.  
**Notes:** We don’t care about what version the library uses. libCURL will use whatever it thinks fit.
58.4. CLASS CURLMBS

58.4.485  kINFO_DATA_IN = 3

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the info constants for the DebugMessage event. **Notes:** The data is protocol data received from the peer.

58.4.486  kINFO_DATA_OUT = 4

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the info constants for the DebugMessage event. **Notes:** The data is protocol data sent to the peer.

58.4.487  kINFO_HEADER_IN = 1

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the info constants for the DebugMessage event. **Notes:** The data is header (or header-like) data received from the peer.

58.4.488  kINFO_HEADER_OUT = 2

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the info constants for the DebugMessage event. **Notes:** The data is header (or header-like) data sent to the peer.

58.4.489  kINFO_SSL_DATA_IN = 5

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the info constants for the DebugMessage event. **Notes:** The data is protocol data received from the peer.

58.4.490  kINFO_SSL_DATA_OUT = 6

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the info constants for the DebugMessage event. **Notes:** The data is protocol data sent to the peer.

58.4.491  kINFO_TEXT = 0

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the info constants for the DebugMessage event. **Notes:** The data is informational text.
58.4.492 \textbf{kIPRESOLVE\_V4} = 1

MBS CURL Plugin, Plugin Version: 9.8. \textbf{Function:} One of the IP Resolve constants for the OptionIPResolve property.
\textbf{Example:}

```plaintext
dim c as new CURLMBS
c.OptionIPResolve = c.kIPRESOLVE\_V4
```

58.4.493 \textbf{kIPRESOLVE\_V6} = 2

MBS CURL Plugin, Plugin Version: 9.8. \textbf{Function:} One of the IP Resolve constants for the OptionIPResolve property.
\textbf{Example:}

```plaintext
dim c as new CURLMBS
c.OptionIPResolve = c.kIPRESOLVE\_V6
```

58.4.494 \textbf{kIPRESOLVE\_WHATEVER} = 0

MBS CURL Plugin, Plugin Version: 9.8. \textbf{Function:} One of the IP Resolve constants for the OptionIPResolve property.
\textbf{Example:}

```plaintext
dim c as new CURLMBS
c.OptionIPResolve = c.kIPRESOLVE\_WHATEVER
```

58.4.495 \textbf{kNETRC\_IGNORED} = 0

\textbf{Notes:}

The .netrc will never be read.
This is the default.
58.4. **CLASS CURLMBS**

58.4.496 kNETRC_OPTIONAL=1

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the NetRC constants for the OptionNetRC property.  
**Notes:** A user:password in the URL will be preferred to one in the .netrc.

58.4.497 kNETRC_REQUIRED=2

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the NetRC constants for the OptionNetRC property.  
**Notes:** A user:password in the URL will be ignored. Unless one is set programmatically, the .netrc will be queried.

58.4.498 kProtocolAll = -1

MBS CURL Plugin, Plugin Version: 10.0. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.  
**Notes:** Enable all protocols.

58.4.499 kProtocolDICT = & h200

MBS CURL Plugin, Plugin Version: 10.0. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.  
**Notes:** DICT

58.4.500 kProtocolFILE = & h400

MBS CURL Plugin, Plugin Version: 10.0. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.  
**Notes:** File

58.4.501 kProtocolFTP = 4

MBS CURL Plugin, Plugin Version: 10.0. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.  
**Notes:** FTP
58.4.502  kProtocolFTPS = 8

MBS CURL Plugin, Plugin Version: 10.0. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** FTPS

58.4.503  kProtocolGopher = & h2000000

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** Gopher

58.4.504  kProtocolHTTP = 1

MBS CURL Plugin, Plugin Version: 10.0. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** HTTP

58.4.505  kProtocolHTTPS = 2

MBS CURL Plugin, Plugin Version: 10.0. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** HTTPS

58.4.506  kProtocolIMAP = & h1000

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** IMAP

58.4.507  kProtocolIMAPS = & h2000

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** IMAPS
58.4.508 kProtocolLDAP = & h80

MBS CURL Plugin, Plugin Version: 10.0. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** LDAP

58.4.509 kProtocolLDAPS = & h100

MBS CURL Plugin, Plugin Version: 10.0. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** LDAPS

58.4.510 kProtocolPOP3 = & h4000

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** POP3

58.4.511 kProtocolPOP3S = & h8000

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** POP3S

58.4.512 kProtocolRTMP = & h80000

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** RTMP

58.4.513 kProtocolRTMPE = & h200000

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** RTMPE
58.4.514  kProtocolRTMPS = & h800000

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** RTMPS

58.4.515  kProtocolRTMPT = & h100000

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** RTMPT

58.4.516  kProtocolRTMPTE = & h400000

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** RTMPTE

58.4.517  kProtocolRTMPTS = & h1000000

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** RTMPTS

58.4.518  kProtocolRTSP = & h40000

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** RTSP

58.4.519  kProtocolSCP = & h10

MBS CURL Plugin, Plugin Version: 10.0. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** SCP
58.4.520  \( \text{kProtocolSFTP} = \& h20 \)

MBS CURL Plugin, Plugin Version: 10.0. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** SFTP

58.4.521  \( \text{kProtocolSMB} = \& h4000000 \)

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** SMB

58.4.522  \( \text{kProtocolSMBS} = \& h8000000 \)

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** SMBS

58.4.523  \( \text{kProtocolSMTP} = \& h10000 \)

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** SMTP

58.4.524  \( \text{kProtocolSMTPS} = \& h20000 \)

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** SMTPS

58.4.525  \( \text{kProtocolTelnet} = \& h40 \)

MBS CURL Plugin, Plugin Version: 10.0. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** Telnet
58.4.526  kProtocolTFTP = & h800

MBS CURL Plugin, Plugin Version: 10.0. **Function:** One of the constants for the OptionRedirProtocols and the OptionProtocols properties.
**Notes:** TFTP

58.4.527  kPROXY_HTTP = 0

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the proxy constants for the OptionProxyType property.

58.4.528  kPROXY_HTTP10 = 1

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the proxy constants for the OptionProxyType property.
**Notes:** Force to use CONNECT HTTP/1.0.

58.4.529  kPROXY_HTTP11 = 0

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the proxy constants for the OptionProxyType property.
**Notes:** Connect using HTTP/1.1.

58.4.530  kPROXY_SOCKS4 = 4

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the proxy constants for the OptionProxyType property.

58.4.531  kPROXY_SOCKS4A = 6

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the proxy constants for the OptionProxyType property.
**Notes:** Using SOCKS 4A.
58.4.532 kPROXY_SOCKS5 = 5

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the proxy constants for the OptionProxyType property.

58.4.533 kPROXY_SOCKS5_Hostname = 7

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the proxy constants for the OptionProxyType property.  
**Notes:** Use the SOCKS5 protocol but pass along the host name rather than the IP address. added in 7.18.0

58.4.534 kSeekOriginCurrent = 1

MBS CURL Plugin, Plugin Version: 12.2. **Function:** One of the origin values for seek event. 
**Notes:** Seek relative to current file position.

58.4.535 kSeekOriginEnd = 2

MBS CURL Plugin, Plugin Version: 12.2. **Function:** One of the origin values for seek event. 
**Notes:** Seek relative to end of file.

58.4.536 kSeekOriginSet = 0

MBS CURL Plugin, Plugin Version: 12.2. **Function:** One of the origin values for seek event. 
**Notes:** Seek relative to start of file.

58.4.537 kSeekReturnCantSeek = 3

MBS CURL Plugin, Plugin Version: 12.2. **Function:** One of the result values for the Seek Event. 
**Notes:** Return this value if you can’t seek as you are not using a file, but for example a stream.

58.4.538 kSeekReturnFail = 2

MBS CURL Plugin, Plugin Version: 12.2. **Function:** One of the result values for the Seek Event. 
**Notes:** Returns this value if your seek operation failed.
58.4.539 $k\text{SeekReturnOk} = 1$

MBS CURL Plugin, Plugin Version: 12.2. **Function:** One of the result values for the Seek Event.
**Notes:** Returns this value if your seek operation succeeded.

58.4.540 $k\text{SSHAuthAgent} = 16$

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSH Authentication modes.
**Notes:** agent (ssh-agent, pageant...)

58.4.541 $k\text{SSHAuthAny} = -1$

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSH Authentication modes.
**Notes:** Any allowed

58.4.542 $k\text{SSHAuthDefault} = -1$

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSH Authentication modes.
**Notes:** Default: Any

58.4.543 $k\text{SSHAuthGSSAPI} = 32$

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSH Authentication modes.
**Notes:** gssapi (kerberos, ...)

58.4.544 $k\text{SSHAuthHost} = 4$

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSH Authentication modes.
**Notes:** host key files

58.4.545 $k\text{SSHAuthKeyboard} = 8$

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSH Authentication modes.
**Notes:** keyboard interactive
58.4. CLASS CURLMBS

58.4.546  kSSHAuthNone = 0

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSH Authentication modes. **Notes:** none allowed, silly but complete

58.4.547  kSSHAuthPassword = 2

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSH Authentication modes. **Notes:** password

58.4.548  kSSHAuthPublicKey = 1

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSH Authentication modes. **Notes:** public/private key files

58.4.549  kSSLVersionDefault = 0

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the SSL Version constants for the OptionSSLVersion property.

58.4.550  kSSLVersionSSLv2 = 2

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the SSL Version constants for the OptionSSLVersion property.

58.4.551  kSSLVersionSSLv3 = 3

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the SSL Version constants for the OptionSSLVersion property.

58.4.552  kSSLVersionTLSv1 = 1

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the SSL Version constants for the OptionSSLVersion property.
58.4.553 \( \text{kSSLVersionTLSv10} = 4 \)

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the SSL Version constants for the OptionSSLVersion property.
**Notes:** TLSv1.0 (Added in 7.34.0)

58.4.554 \( \text{kSSLVersionTLSv11} = 5 \)

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the SSL Version constants for the OptionSSLVersion property.
**Notes:** TLSv1.1 (Added in 7.34.0)

58.4.555 \( \text{kSSLVersionTLSv12} = 6 \)

MBS CURL Plugin, Plugin Version: 14.3. **Function:** One of the SSL Version constants for the OptionSSLVersion property.
**Notes:** TLSv1.2 (Added in 7.34.0)

58.4.556 \( \text{kSSLVersionTLSv13} = 7 \)

MBS CURL Plugin, Plugin Version: 17.2. **Function:** One of the SSL Version constants for the OptionSSLVersion property.
**Notes:** TLSv1.3

58.4.557 \( \text{kTimeConditionIfModifiedSince} = 1 \)

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the time condition constants for the OptionTimeCondition property.

58.4.558 \( \text{kTimeConditionIfUnModifiedSince} = 2 \)

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the time condition constants for the OptionTimeCondition property.
58.4. CLASS CURLMBS

58.4.559 kTimeConditionNone = 0

MBS CURL Plugin, Plugin Version: 9.8. **Function:** One of the time condition constants for the OptionTimeCondition property.
**Notes:** No condition.

58.4.560 kUseSSLall = 3

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL constants for the OptionFTPSSL property.
**Notes:** Require SSL for all communication or fail with kError_FTP_SSL_FAILED.

58.4.561 kUseSSLcontrol = 2

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL constants for the OptionFTPSSL property.
**Notes:** Require SSL for the control connection or fail with kError_FTP_SSL_FAILED.

58.4.562 kUseSSLnone = 0

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL constants for the OptionFTPSSL property.
**Notes:** Don’t attempt to use SSL.

58.4.563 kUseSSLtry = 1

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the SSL constants for the OptionFTPSSL property.
**Notes:** Try using SSL, proceed as normal otherwise.
58.5 class CURLMimePartMBS

58.5.1 class CURLMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for mime parts.

**Notes:**
You can provide data via file path, folderitem, data in memoryblock or string.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

58.5.2 Methods

58.5.3 Constructor

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

58.5.4 Headers as String()

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries header.

58.5.5 SetHeaders(headers() as String)

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets header.

58.5.6 Properties

58.5.7 DataMemory as Memoryblock

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The mime part data source from memory data.
**Notes:** (Read and Write property)
58.5.8 **DataString as String**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mime part data source from memory data.

**Example:**

```vbscript
dim c as new CURLMBS

// add mime
dim p as CURLMimePartMBS = c.AddMimePart

p.name = "Text"
p.FileName = "test.txt"
p.MimeType = "text/plain"
p.DataString = "Hello World"

C.FinishMime

// now you can send...
```

**Notes:** (Read and Write property)

---

58.5.9 **Encoding as String**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mime data transfer encoder.

**Notes:**

If set to binary, 8bit, 7bit, base64 or quoted-printable, the matching encoding is applied.
(Read and Write property)

---

58.5.10 **File as Folderitem**

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The file to stream.

**Notes:**

When you set property, the plugin will open file and may raise IOException on failure.
(Read and Write property)
58.5.11 FileName as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mime part remote file name.  
**Notes:** 
If mime type is not set, we pick extension from file name. 
This includes gif, jpg, jpeg, png, svg, txt, htm, html, pdf and xml file extensions.  
(Read and Write property)

58.5.12 FilePath as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mime part data source from named file.  
**Notes:** (Read and Write property)

58.5.13 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code.  
**Notes:** (Read and Write property)

58.5.14 MimeType as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mime part type.  
**Notes:** (Read and Write property)

58.5.15 Name as String

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mime/form part name.  
**Notes:** (Read and Write property)

58.5.16 Parent as Variant

58.5.17 Constants

58.5.18 kEncoding7bit = ”7bit”

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the encoding modes. **Notes:** 7bit

58.5.19 kEncoding8bit = ”8bit”

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the encoding modes. **Notes:** 8bit

58.5.20 kEncodingBase64 = ”base64”

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the encoding modes. **Notes:** Base64

58.5.21 kEncodingBinary = ”binary”

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the encoding modes. **Notes:** Binary mode

58.5.22 kEncodingNone = ””

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the encoding modes. **Notes:** No mode, so data is passed through and header has no encoding defined.

58.5.23 kEncodingQuotedPrintable = ”quoted-printable”

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the encoding modes. **Notes:** Quoted printable
58.5.24  kMimeTypeGIF = "image/gif"

MBS CURL Plugin, Plugin Version: 18.2. Function: One of the mime types. Notes: GIF

58.5.25  kMimeTypeHTML = "text/html"

MBS CURL Plugin, Plugin Version: 18.2. Function: One of the mime types. Notes: HTML

58.5.26  kMimeTypeJPEG = "image/jpeg"

MBS CURL Plugin, Plugin Version: 18.2. Function: One of the mime types. Notes: JPEG

58.5.27  kMimeTypePDF = "application/pdf"

MBS CURL Plugin, Plugin Version: 18.2. Function: One of the mime types. Notes: PDF

58.5.28  kMimeTypePNG = "image/png"

MBS CURL Plugin, Plugin Version: 18.2. Function: One of the mime types. Notes: PNG

58.5.29  kMimeTypeSVG = "image/svg+xml"

MBS CURL Plugin, Plugin Version: 18.2. Function: One of the mime types. Notes: SVG

58.5.30  kMimeTypeText = "text/plain"

MBS CURL Plugin, Plugin Version: 18.2. Function: One of the mime types. Notes: Text
58.5.31 kMimeTypeXML = "application/xml"

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the mime types. **Notes:** XML.
58.6 class CURLMissingFunctionExceptionMBS

58.6.1 class CURLMissingFunctionExceptionMBS

MBS CURL Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An exception raised if a CURL library function is not loaded. **Notes:** If you call load library before you use the CURLMBS Constructor, you should never see this. Subclass of the RuntimeException class.
58.7  class CURLMultiMBS

58.7.1  class CURLMultiMBS

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for multiple CURL transfers running in parallel.

58.7.2  Methods

58.7.3  AddCURL(CURL as CURLMBS) as boolean

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Add a standard CURL handle to the multi stack.
**Notes:** Lasterror is set.

58.7.4  CURLs as CURLMBS()

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries list of current CURL instances.

58.7.5  ErrorString(ErrorCode as Integer) as String

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries text message for a given error code.

58.7.6  Perform

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Checks for things to see.
**Notes:**
When the app thinks there’s data available for CURL it calls this function to read/write whatever there is right now. This returns as soon as the reads and writes are done. This function does not require that there actually is data available for reading or that data can be written, it can be called just in case.

Lasterror is set. This only provides errors etc regarding the whole multi stack. There might still have occurred problems on invidual transfers even when this returns OK.
Sets RunningTransfers property.

58.7.7 RemoveCURL(CURL as CURLMBS) as boolean

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes a CURL handle from the multi stack again. **Notes:**

Lasterror is set.
Plugin calls this automatically when TransferFinished event was called.

58.7.8 Properties

58.7.9 ChunkLengthPenaltySize as Int64

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A connection with a chunk length longer than this will not be considered for pipelining. **Notes:** (Read and Write property)

58.7.10 ContentLengthPenaltySize as Int64

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A connection with a content-length longer than this will not be considered for pipelining. **Notes:** (Read and Write property)

58.7.11 Handle as Integer

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference. **Notes:** (Read only property)

58.7.12 Lasterror as Integer

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code. **Notes:** (Read and Write property)
58.7. **CLASS CURLMULTIMBS**

### 58.7.13 MaxConnects as Integer

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maximum number of entries in the connection cache. **Notes:** (Read and Write property)

### 58.7.14 MaxHostConnections as Integer

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maximum number of (pipelining) connections to one host. **Notes:** (Read and Write property)

### 58.7.15 MaxPipelineLength as Integer

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maximum number of requests in a pipeline. **Notes:** (Read and Write property)

### 58.7.16 MaxTotalConnections as Integer

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maximum number of open connections in total. **Notes:** (Read and Write property)

### 58.7.17 Pipelining as Integer

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set to 1 to enable pipelining for this multi handle. **Notes:**
- Only for HTTP protocol.
- Used to be a boolean property for 15.0 to 18.1, but changed to integer for 18.2.
  (Read and Write property)

### 58.7.18 RunningTransfers as Integer

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of running transfers.
CHAPTER 58. CURL

Notes:
Set by Perform method.
(Read only property)

58.7.19 Events

58.7.20 TransferFinished(CURL as CURLMBS, result as Integer, RemainingFinishedTransfers as Integer)

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
One transfer finished.
**Notes:**
Query CURL object for details.
Result is the result of the transfer as returned by Perform method of CURL object.
RemainingFinishedTransfers is how many transfers are also finished and will be called right after this event.

This event fires always when the queue is empty.
You may want to turn off the timer calling Perform method when this event fires.
Later you can start timer again if you call Add method.

58.7.21 TransfersFinished

MBS CURL Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
All pending transfers finished.

58.7.22 Constants

58.7.23 kErrorAddedAlready = 7

MBS CURL Plugin, Plugin Version: 15.0. **Function:** One of the multi interface error codes.
**Notes:** An easy handle already added to a multi handle was attempted to get added - again.

58.7.24 kErrorBadEadyHandle = 2

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the multi interface error codes.
**Notes:** An easy handle was not good/valid.
58.7.25 \texttt{kErrorBadHandle} = 1

MBS CURL Plugin, Plugin Version: 15.0. \textbf{Function}: One of the multi interface error codes. \textbf{Notes}: The passed-in handle is not a valid CURLM handle.

58.7.26 \texttt{kErrorBadSocket} = 5

MBS CURL Plugin, Plugin Version: 15.0. \textbf{Function}: One of the multi interface error codes. \textbf{Notes}: The passed in socket argument did not match.

58.7.27 \texttt{kErrorCallPerform} = -1

MBS CURL Plugin, Plugin Version: 15.0. \textbf{Function}: One of the multi interface error codes. \textbf{Notes}: Please call Perform soon to do some tasks.

58.7.28 \texttt{kErrorInternalError} = 4

MBS CURL Plugin, Plugin Version: 15.0. \textbf{Function}: One of the multi interface error codes. \textbf{Notes}: This is a libCURL bug.

58.7.29 \texttt{kErrorOK} = 0

MBS CURL Plugin, Plugin Version: 15.0. \textbf{Function}: One of the multi interface error codes. \textbf{Notes}: Everything OK.

58.7.30 \texttt{kErrorOutOfMemory} = 3

MBS CURL Plugin, Plugin Version: 15.0. \textbf{Function}: One of the multi interface error codes. \textbf{Notes}: Running low on memory.

58.7.31 \texttt{kErrorRecursiveAPICall} = 8

MBS CURL Plugin, Plugin Version: 18.2. \textbf{Function}: One of the multi interface error codes. \textbf{Notes}: An api function was called from inside an event.
58.7.32  kErrorUnknownOption = 6

MBS CURL Plugin, Plugin Version: 15.0. **Function:** One of the multi interface error codes.  
**Notes:** Tried to set unsupported option.

58.7.33  kPipeHTTP1 = 1

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the pipeline modes.  
**Notes:** Pipe with HTTP/1.1.

58.7.34  kPipeMultiPlex = 2

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the pipeline modes.  
**Notes:** Pipe with multiplex.

58.7.35  kPipeNothing = 0

MBS CURL Plugin, Plugin Version: 18.2. **Function:** One of the pipeline modes.  
**Notes:** No piping.
58.8. CLASS CURLNFILEINFOMBS

58.8 class CURLNFileInfoMBS

58.8.1 class CURLNFileInfoMBS

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for file information.
**Notes:** Content of this structure depends on information which is known and is achievable (e.g. by FTP LIST parsing).

58.8.2 Properties

58.8.3 Date as Date

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The timestamp as a date object.
**Notes:**
As of plugin version 15.2 the CURL library does not parse the timestamp.
So for some timestamp formats we have code in our plugin to do the parsing from the TimeString property.
But this is limited. No seconds and the year is a guess. Files newer in the year than today are from last year and other files from current year. The server doesn’t provide year details.
(Read only property)

58.8.4 FileName as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The file name.
**Notes:** (Read only property)

58.8.5 FileType as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The file type.
**Notes:** (Read only property)

58.8.6 Flags as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The flags.
Notes:
Flags define which fields are set.
Also you can just use the Has properties for same information.
(Read only property)

58.8.7  GID as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The group ID.
**Notes:** (Read only property)

58.8.8  GroupString as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The group string.
**Notes:** (Read only property)

58.8.9  HardLinks as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The hard link count.
**Notes:** (Read only property)

58.8.10  HasFileName as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True if filename property is valid.
**Notes:** (Read only property)

58.8.11  HasFileType as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True if filetype property is valid.
**Notes:** (Read only property)
58.8.12 HasGID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if GID property is valid. 
**Notes:** (Read only property)

58.8.13 HasHardLinks as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if hardlinks property is valid. 
**Notes:** (Read only property)

58.8.14 HasPermissions as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if permissions property is valid. 
**Notes:** (Read only property)

58.8.15 HasSize as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if size property is valid. 
**Notes:** (Read only property)

58.8.16 HasTime as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if time and date properties have values. 
**Notes:** (Read only property)

58.8.17 HasUID as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if UID field has a value. 
**Notes:** (Read only property)
58.8.18  IsDirectory as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True if entry is a directory.
**Notes:**
Same as FileType = FileTypeDirectory.
(Read only property)

58.8.19  IsFile as Boolean

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
True if entry is a regular file.
**Notes:**
Same as FileType = FileTypeFile.
(Read only property)

58.8.20  Permissions as Integer

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The permission value.
**Notes:** (Read only property)

58.8.21  PermissionString as String

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The permission string.
**Notes:** (Read only property)

58.8.22  Size as Int64

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The file size.
**Notes:** (Read only property)
58.8. **Target as String**

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The target for a symlink. **Notes:** (Read only property)

58.8. **Time as Int64**

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The time value. **Notes:** (Read only property)

58.8. **TimeString as String**

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The time string parsed. **Notes:** (Read only property)

58.8. **UID as Integer**

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The user ID. **Notes:** (Read only property)

58.8. **UserString as String**

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The user ID as text. **Notes:** (Read only property)

58.8. **Constants**

58.8. **FileTypeDeviceBlock = 3**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the file type constants. **Notes:** Block Device
58.8.30  FileTypeDeviceChar = 4

MBS CURL Plugin, Plugin Version: 15.2. Function: One of the file type constants.
Notes: Character Device

58.8.31  FileTypeDirectory = 1

MBS CURL Plugin, Plugin Version: 15.2. Function: One of the file type constants.
Notes: Directory

58.8.32  FileTypeDoor = 7

MBS CURL Plugin, Plugin Version: 15.2. Function: One of the file type constants.
Notes: Door, is possible only on Sun Solaris now.

58.8.33  FileTypeFile = 0

MBS CURL Plugin, Plugin Version: 15.2. Function: One of the file type constants.
Notes: Regular file

58.8.34  FileTypeNamedPipe = 5

MBS CURL Plugin, Plugin Version: 15.2. Function: One of the file type constants.
Notes: Named Pipe

58.8.35  FileTypeSocket = 6

MBS CURL Plugin, Plugin Version: 15.2. Function: One of the file type constants.
Notes: Socket

58.8.36  FileTypeSymlink = 2

MBS CURL Plugin, Plugin Version: 15.2. Function: One of the file type constants.
Notes: Symbolic links
58.8.37  **FileTypeUnknown = 8**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the file type constants.  
**Notes:** Unknown file type. Should never occur.

58.8.38  **FlagKnownFileName = 1**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants.  
**Notes:** Filename Known

58.8.39  **FlagKnownFileType = 2**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants.  
**Notes:** File Type Known

58.8.40  **FlagKnownGID = 32**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants.  
**Notes:** GID Known

58.8.41  **FlagKnownHardLinks = 128**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants.  
**Notes:** Hardlink Count Known

58.8.42  **FlagKnownPermissions = 8**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants.  
**Notes:** Permissions Known

58.8.43  **FlagKnownSize = 64**

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants.  
**Notes:** Size Known
58.8.44 FlagKnownTime = 4

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants.  
**Notes:** Time Known

58.8.45 FlagKnownUID = 16

MBS CURL Plugin, Plugin Version: 15.2. **Function:** One of the flag constants.  
**Notes:** UID Known
58.9. **CLASS CURLNLISTMBS**

58.9  class CURLNListMBS

58.9.1 class CURLNListMBS

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A class to hold a list of strings from the CURL library.
**Notes:** Data is copied for this list, so you can just keep it around.

58.9.2 Methods

58.9.3 Item(index as Integer) as string

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the item with the given index.
**Notes:** Index is zero based.

58.9.4 List as String()

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Converts list to a string array.

58.9.5 Operator Convert as String()

MBS CURL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Converts list to a string array.

58.9.6 Properties

58.9.7 Count as Integer

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Number of items in this list.
**Notes:** (Read only property)
58.10  class CURLNMBS

58.10.1  class CURLNMBS

MBS CURL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A class to wrap libCURL.

**Notes:**
We have two variants:

CURLS* classes include a static CURL library with SSL and SSH.
CURLN* classes include a static CURL library with native SSL on Mac and Windows.
CURL* classes without S need you to supply your own CURL library.

All variants can load a custom CURL library or use the one from the system on Mac and Linux.
If no library is loaded or included, the plugin will try to load the system one in constructor.

from the website libCURL website:
http://CURL.haxx.se/libCURL/

libCURL is a free and easy-to-use client-side URL transfer library, supporting FTP, FTPS, HTTP, HTTPS,
SCP, SFTP, TFTP, TELNET, DICT, FILE and LDAP. libCURL supports SSL certificates, HTTP POST,
HTTP PUT, FTP uploading, HTTP form based upload, proxies, cookies, user+password authentication
(Basic, Digest, NTLM, Negotiate, Kerberos4), file transfer resume, http proxy tunneling and more!

libCURL is highly portable, it builds and works identically on numerous platforms, including Solaris,
NetBSD, FreeBSD, OpenBSD, Darwin, HPUX, IRIX, AIX, Tru64, Linux, UnixWare, HURD, Windows,
Amiga, OS/2, BeOs, Mac OS X, Ultrix, QNX, OpenVMS, RISC OS, Novell NetWare, DOS and more...

libCURL is free, thread-safe, IPv6 compatible, feature rich, well supported, fast, thoroughly documented
and is already used by many known, big and successful companies and numerous applications.

On Linux you may need to install libraries like ldap: apt-get install libldap-2.4.2:i386

58.10.2  Methods

58.10.3  AddMimePart as CURLNMimePartMBS

MBS CURL Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Adds a new blank mime part.

**Notes:** Returns mime object, so you can set properties.
58.10.4 ClearData

MBS CURL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Cleans data properties.
**Notes:** Resets OutputData, DebugData and HeaderData.

58.10.5 CloseMTDebugOutputFile

MBS CURL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Closes the debug output file for PerformMT.
**Notes:**
Call after PerformMT finished.
With 15.2 version of plugin, this also works with Perform.

58.10.6 CloseMTHeaderOutputFile
