Function: Changes the brightness and/or contrast of an image. It converts the brightness and contrast
parameters into slope and intercept and calls a polynomial function to apply to the image.
Notes:
Returns true on success or false on failure.

brightness: the brightness percent (-100 .. 100).
contrast: the contrast percent (-100 .. 100).
ChannelType: The channels to use.

90.20.20  Charcoal(radius as Double, sigma as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Charcoal creates a new image that is a copy of an existing one with the edge highlighted.
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0002
const GreenChannel = & h0001
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff

Notes:

radius: the radius of the pixel neighborhood.
sigma: The standard deviation of the Gaussian, in pixels.

Returns nil on any error.
Sets the last exception property.

90.20.21 Chop(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS

Function: Chop removes a region of an image and collapses the image to occupy the removed portion.
Notes:

Returns nil on any error.
Sets the last exception property.

90.20.22 ClipPath(path as string, inside as boolean) as boolean

Function: Sets the image clip mask based any clipping path information if it exists.
Notes:

Returns true on success and false on any error.
pathname: name of clipping path resource. If name is preceded by #, use clipping path numbered by name.
inside: if true, later operations take effect inside clipping path. Otherwise later operations take effect outside clipping path.

90.20.23 Clone as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of this image object.
Notes: For more details please check the ImageMagick documentation.

90.20.24 CloneImageAttributes(image as IMImageAttributeQ32MBS) as Boolean

Function: CloneImageAttributes() clones one or more image attributes.
Notes: Returns false on any error.

90.20.25 CloneImageProfiles(SourceImage as IMImageQ32MBS) as boolean

Function: Clones one or more image profiles.
Notes: Returns false on any error and true on success.

90.20.26 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The destructor.
Notes:
There is no need to call this method except you want to free all resources used by this object now without waiting for Realbasic to do it for you.
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

90.20.27 ClutImage(clutImage as IMImageQ32MBS) as Boolean

Function: Replaces each color value in the given image, by using it as an index to lookup a replacement
color value in a Color Look UP Table in the form of an image.

Notes:
The values are extracted along a diagonal of the CLUT image so either a horizontal or vertical gradient image can be used.

Typically this is used to either re-color a gray-scale image according to a color gradient in the CLUT image, or to perform a freeform histogram (level) adjustment according to the (typically gray-scale) gradient in the CLUT image.

When the ‘channel’ mask includes the matte/alpha transparency channel but one image has no such channel it is assumed that that image is a simple gray-scale image that will effect the alpha channel values, either for gray-scale coloring (with transparent or semi-transparent colors), or a histogram adjustment of existing alpha channel values. If both images have matte channels, direct and normal indexing is applied, which is rarely used.

ClutImage: the color lookup table image for replacement color values.

Returns true on success or false on failure.

90.20.28 ClutImageChannel(ChannelType as Integer, clutImage as IMImageQ32MBS) as Boolean

 Function: Replaces each color value in the given image, by using it as an index to lookup a replacement color value in a Color Look UP Table in the form of an image.
Notes:
The values are extracted along a diagonal of the CLUT image so either a horizontal or vertical gradient image can be used.

Typically this is used to either re-color a gray-scale image according to a color gradient in the CLUT image, or to perform a freeform histogram (level) adjustment according to the (typically gray-scale) gradient in the CLUT image.

When the ‘channel’ mask includes the matte/alpha transparency channel but one image has no such channel it is assumed that that image is a simple gray-scale image that will effect the alpha channel values, either for gray-scale coloring (with transparent or semi-transparent colors), or a histogram adjustment of existing alpha channel values. If both images have matte channels, direct and normal indexing is applied, which is rarely used.

ClutImage: the color lookup table image for replacement color values.
ChannelType: The channels to use.

Returns true on success or false on failure.

Constants for channel:

```cpp
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff
```

**90.20.29 CoalesceImages as IMImageQ32MBS**

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** CoalesceImages composites a set of images while respecting any page offsets and disposal methods.

**Notes:**

GIF, MIFF, and MNG animation sequences typically start with an image background and each subsequent image varies in size and offset. CoalesceImages() returns a new sequence where each image in the sequence is the same size as the first and composited with the next image in the sequence.

Returns nil on any error.

Sets the last exception property.

**90.20.30 Colorize(opacity as string, PenColorRed as Integer, PenColorGreen as Integer, PenColorBlue as Integer, PenColorOpacity as Integer) as IMImageQ32MBS**

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Method ColorizeImage creates a new image that is a copy of an existing one with the image
pixels colorized.

Notes:
The colorization is controlled with the pen color and the opacity levels.

opacity: A character string indicating the level of opacity as a percentage (0-100).
PencilColorRed, PencolorGreen, PencolorBlue and PencolorOpacity define the pen color used.

Returns nil on any error.
Sets the last exception property.

90.20.31 Combine(channel as Integer) as IMImageQ32MBS

Function: Combines one or more images into a single image.

Notes:
The grayscale value of the pixels of each image in the sequence is assigned in order to the specified channels
of the combined image. The typical ordering would be image 1 => Red, 2 => Green, 3 => Blue, etc.

The lastexception property is set.

90.20.32 CompareImageLayers(ImageLayerMethod as Integer) as IMImageQ32MBS

Function: CompareImageLayers() compares each image with the next in a sequence and returns the
minimum bounding region of all the pixel differences (of the mageLayerMethod specified) it discovers.
Notes:
Images do NOT have to be the same size, though it is best that all the images are 'coalesced' (images are
all the same size, on a flattened canvas, so as to represent exactly how an specific frame should look).

No GIF dispose methods are applied, so GIF animations must be coalesced before applying this image op-
erator to find differences to them.

ImageLayerMethod:
the layers type to compare images with. Must be one of... CompareAnyLayer, CompareClearLayer, Com-
pareOverlayLayer.

Can raise an exception.
90.20.33  Composite(ComposeOperator as Integer, Image as IMImageQ32MBS, x as Integer, y as Integer)

**Function:** Returns the second image composited onto the first at the specified offsets.
**Notes:**
- compose: Specifies an image composite operator.
- Image: The second image.
- x: An integer that specifies the column offset of the composited image.
- y: An integer that specifies the row offset of the composited image.

No error code and exception!

90.20.34  ConsolidateCMYKImages as IMImageQ32MBS

**Function:** Consolidates a sequence of CMYK images.
**Notes:**
- Returns nil on any error.
- Sets the last exception property.

90.20.35  ContrastImage(sharpen as boolean) as Boolean

**Function:** Enhances the intensity differences between the lighter and darker elements of the image.
**Notes:**
- Returns true on success or false on failure.
- Set sharpen to true to increase the image contrast otherwise the contrast is reduced.

90.20.36  CopyPicture as picture

**Function:** Copies the Image Magick Image and returns a Realbasic picture.
**Example:**
```realbasic
dim image as IMImageQ32MBS // your image
Canvas1.Backdrop=image.CopyPicture
```
Notes:
Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
See also:

- 90.20.37 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture

90.20.37 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture

Function: Copies a portion of the Image Magick Image and returns a Realbasic picture.
Example:

dim image as IMImageQ32MBS // your image
Canvas1.Backdrop=image.CopyPicture(0,0,image.Width,image.Height)

Notes:
Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.
See also:

- 90.20.36 CopyPicture as picture

90.20.38 CopyPictureMask as picture

Function: Copies the mask of the Image Magick Image and returns a Realbasic picture.
Example:

dim image as IMImageQ32MBS // your image
Canvas1.Backdrop=image.CopyPictureMask

Notes:
Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
See also:
90.20.39 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture

Function: Copies a portion of the mask of the Image Magick Image and returns a Realbasic picture.
Example:

```realbasic
dim image as IMImageQ32MBS // your image
Canvas1.Backdrop=image.CopyPictureMask(0,0,image.Width,image.Height)
```

Notes:
Set the last exception property.
Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.
See also:

- 90.20.38 CopyPictureMask as picture

90.20.40 CopyPixel(x as Integer, y as Integer) as IMColorQ32MBS

Function: Copies a pixel.
Notes:
Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.

90.20.41 CreateHBITMAP as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Creates a HBITMAP for the image for use with Windows Declares.
Notes: The HBITMAP returned needs to be freed when you are done with it or you risk having a memory leak.
90.20.42  **Crop(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS**

**Function:** Crop extracts a region of the image starting at the offset defined by geometry.
**Notes:**
- Returns nil on any error.
- Sets the last exception property.

90.20.43  **CropImageToTiles(CropGeometry as string) as IMImageQ32MBS**

**Function:** Crops a single image, into a possible list of tiles.
**Notes:** This may include a single sub-region of the image. This basically applies all the normal geometry flags for Crop.

90.20.44  **CycleColormap(displace as Integer) as boolean**

**Function:** Displaces an image's colormap by a given number of positions.
**Notes:**
- If you cycle the colormap a number of times you can produce a psychodelic effect.
- Returns true on success.
- displace: displace the colormap this amount.

90.20.45  **DecipherImage(passkey as string) as boolean**

**Function:** Converts cipher pixels to plain pixels.
**Notes:**
- Passkey: decipher cipher pixels with this passphrase.
- Returns true on success.

90.20.46  **DeconstructImages as IMImageQ32MBS**

**Function:** DeconstructImages() compares each image with the next in a sequence and returns the minimum
bounding region of all differences from the first image.

Notes:
Returns nil on any error.
Sets the last exception property.

90.20.47 DeleteImageAttribute(key as string) as Boolean

Function: DeleteImageAttribute() deletes an attribute from the image.
Notes: Returns false on any error.

90.20.48 Despeckle() as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reduces the speckle noise in an image while preserving the edges of the original image.
Notes:
Sets the last exception property.
For more details please check the ImageMagick documentation.

90.20.49 DestroyImage

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Releases the memory used for this image and sets handle to 0.
Notes:
For more details please check the ImageMagick documentation.
The destructor will call this for you if release=true.

90.20.50 DestroyImageAttributes

Function: Deallocates memory associated with the image attribute list.

90.20.51 DestroyImageList

Function: Destroys the image list and sets the handle to 0.
Notes:
For more details please check the ImageMagick documentation.
The destructor will call this for you if release=true.

90.20.52 DestroyImageProfiles

Function: Releases memory associated with an image profile map.

90.20.53 DistortImage(DistortImageMethod as Integer, values() as Double, best-fit as boolean) as IMImageQ32MBS

Function: DistortImage() distorts an image using various distortion methods, by mapping color lookups of
the source image to a new destination image usually of the same size as the source image, unless 'bestfit' is
set to true.
Notes:
If 'bestfit' is enabled, and distortion allows it, the destination image is adjusted to ensure the whole source
'image' will just fit within the final destination image, which will be sized and offset accordingly. Also in
many cases the virtual offset of the source image will be taken into account in the mapping.

If the '-verbose' control option has been set print to standard error the equivalent '-fx' formula with coeffi-
cients for the function, if practical.

A description of each parameter follows:
self: the image to be distorted.
m: the method of image distortion. ArcDistortion always ignores source image offset, and always 'bestfit' the
destination image with the top left corner offset relative to the polar mapping center. Affine, Perspective,
and Bilinear, do least squares fitting of the distortion when more than the minimum number of control point
pairs are provided. Perspective, and Bilinear, fall back to an Affine distortion when less than 4 control point
pairs are provided. While Affine distortions let you use any number of control point pairs, that is Zero
pairs is a No-Op (viewport only) distortion, one pair is a translation and two pairs of control points do a
scale-rotate-translate, without any shearing.
values: arguments given.
bestfit: Attempt to 'bestfit' the size of the resulting image. This also forces the resulting image to be a
'layered' virtual canvas image. Can be overridden using 'distort:viewport' setting.

Extra Controls from Image meta-data (artifacts)...

- '-verbose' Output to stderr alternatives, internal coefficients, and FX equivalents for the distortion
operation (if feasible). This forms an extra check of the distortion method, and allows users access to
the internal constants IM calculates for the distortion.

- "distort:viewport" Directly set the output image canvas area and offset to use for the resulting image,
rather than use the original images canvas, or a calculated 'bestfit' canvas.

- "distort:scale" Scale the size of the output canvas by this amount to provide a method of Zooming,
and for super-sampling the results.

Other settings that can effect results include

- 'interpolate' For source image lookups (scale enlargements)
- 'filter' Set filter to use for area-resampling (scale shrinking). Set to 'point' to turn off and use 'inter-
polate' lookup instead

See also:

- 90.20.54 DistortImage(DistortImageMethod as Integer, values() as Double, bestfit as boolean) as IM-
ImageQ32MBS

90.20.54 DistortImage(DistortImageMethod as Integer, values() as Double, best-
fit as boolean) as IMImageQ32MBS

Function: DistortImage() distorts an image using various distortion methods, by mapping color lookups of
the source image to a new destination image usually of the same size as the source image, unless 'bestfit' is
set to true.
Notes:

If 'bestfit' is enabled, and distortion allows it, the destination image is adjusted to ensure the whole source
'image' will just fit within the final destination image, which will be sized and offset accordingly. Also in
many cases the virtual offset of the source image will be taken into account in the mapping.

If the '-verbose' control option has been set print to standard error the equicelent '-fx' formula with coeffi-
cients for the function, if practical.

A description of each parameter follows:
self: the image to be distorted.
m: the method of image distortion. ArcDistortion always ignores source image offset, and always 'bestfit' the
destination image with the top left corner offset relative to the polar mapping center. Affine, Perspective,
and Bilinear, do least squares fitting of the distrotion when more than the minimum number of control point
pairs are provided. Perspective, and Bilinear, fall back to a Affine distortion when less than 4 control point
pairs are provided. While Affine distortions let you use any number of control point pairs, that is Zero
pairs is a No-Op (viewport only) distortion, one pair is a translation and two pairs of control points do a
scale-rotate-translate, without any shearing.
values: arguments given.
bestfit: Attempt to 'bestfit' the size of the resulting image. This also forces the resulting image to be a
'layered' virtual canvas image. Can be overridden using 'distort:viewport' setting.

Extra Controls from Image meta-data (artifacts)...

- "verbose" Output to stderr alternatives, internal coefficients, and FX equivalents for the distortion
  operation (if feasible). This forms an extra check of the distortion method, and allows users access to
  the internal constants IM calculates for the distortion.
- "distort:viewport" Directly set the output image canvas area and offest to use for the resulting image,
  rather than use the original images canvas, or a calculated 'bestfit' canvas.
- "distort:scale" Scale the size of the output canvas by this amount to provide a method of Zooming,
  and for super-sampling the results.

Other settings that can effect results include

- 'interpolate' For source image lookups (scale enlargements)
- 'filter' Set filter to use for area-resampling (scale shrinking). Set to 'point' to turn off and use 'inter-
 polate' lookup instead

  ImageQ32MBS

90.20.55 Edge(radius as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Finds edges in an image.
Notes:
Radius defines the radius of the convolution filter. Use a radius of 0 and Edge selects a suitable radius for
you.
Sets the last exception property.

For more details please check the ImageMagick documentation.
90.20.56 Emboss(radius as Double, sigma as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a grayscale image with a three-dimensional effect.
Notes:
We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, radius should be larger than sigma. Use a radius of 0 and Emboss selects a suitable radius for you.
Sets the last exception property.

For more details please check the ImageMagick documentation.

90.20.57 EncipherImage(passkey as string) as boolean

Function: Converts pixels to cipher-pixels.
Notes:
passkey: encipher pixels with this passphrase.
Returns true on success.

90.20.58 EqualizeImage as Boolean

Function: Applies a histogram equalization to the image.
Notes:
Returns true on success or false on failure.

ChannelType: The channels to use.

90.20.59 EqualizeImageChannel(ChannelType as Integer) as Boolean

Function: Applies a histogram equalization to the image.
Notes:
Returns true on success or false on failure.

ChannelType: The channels to use.
### Constants for channel:

- `const UndefinedChannel = 0`
- `const RedChannel = & h0001`
- `const GrayChannel = & h0001`
- `const CyanChannel = & h0001`
- `const GreenChannel = & h0002`
- `const MagentaChannel = & h0002`
- `const BlueChannel = & h0004`
- `const YellowChannel = & h0004`
- `const AlphaChannel = & h0008`
- `const OpacityChannel = & h0008`
- `const BlackChannel = & h0020`
- `const IndexChannel = & h0020`
- `const AllChannels = & h7fffffff`

### 90.20.60 ExcerptImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS

**Function:** Returns a excerpt of the image as defined by the geometry.

**Notes:** Define the region of the image to extend with x, y, width, and height.

### 90.20.61 ExtentImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS

**Function:** Extends the image as defined by the geometry, gravity, and image background color.

**Notes:**
- Define the region of the image to extend with x, y, width, and height.
- Set the (x,y) offset of the geometry to move the original image relative to the extended image.

### 90.20.62 FlattenImages as IMImageQ32MBS

**Function:** Flattens composites all images from the current image pointer to the end of the image list and
returns a single flattened image.

Notes:

Returns nil on any error.
Sets the last exception property.

90.20.63  **Flip as IMImageQ32MBS**

**Function:** Flip creates a vertical mirror image by reflecting the pixels around the central x-axis.

**Notes:**

Returns nil on any error.
Sets the last exception property.

90.20.64  **Flop as IMImageQ32MBS**

**Function:** Flop creates a horizontal mirror image by reflecting the pixels around the central y-axis.

**Notes:**

Returns nil on any error.
Sets the last exception property.

90.20.65  **FrameImage(x as Integer, y as Integer, width as Integer, height as Integer, innerBevel as Integer, OuterBevel as Integer) as IMImageQ32MBS**

**Function:** Adds a simulated three-dimensional border around the image.

**Notes:** The color of the border is defined by the MatteColor of image. Width and height specify the border width of the vertical and horizontal sides of the frame. innerBevel and OuterBevel indicate the width of the inner and outer shadows of the frame.

90.20.66  **FxImage(expression as string) as IMImageQ32MBS**

**Function:** FxImage() applies a mathematical expression to the specified image.

**Notes:** Can raise an exception.
GaussianBlurChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ32MBS

Function: Blurs an image.

Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, the radius should be larger than sigma. Use a radius of 0 and GaussianBlur selects a suitable radius for you.

Sets the last exception property.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
channel: The channel type.
sigma: the standard deviation of the Gaussian, in pixels.

Constants for channel:

const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff

For more details please check the ImageMagick documentation.

GetImageAttribute(key as string) as IMImageAttributeQ32MBS

Function: GetImageAttribute searches the list of image attributes and returns a reference to the attribute if it exists otherwise nil.
90.20.69  **GetImageClippingPathAttribute as IMImageAttributeQ32MBS**

**Function:** GetImageClippingPathAttribute searches the list of image attributes and returns a reference to a clipping path if it exists otherwise nil.

90.20.70  **GetImageProfile(name as string) as string**

**Function:** Gets a profile associated with an image by name.
**Notes:** Returns "" on any error.

90.20.71  **GetNextImageAttribute as IMImageAttributeQ32MBS**

**Function:** GetNextImageAttribute() gets the next image attribute.
**Notes:** Returns nil on any error.

90.20.72  **GetNextImageProfile as string**

**Function:** Gets the next profile name for an image.
**Notes:** Returns "" on any error.

90.20.73  **HandleMemory as memoryblock**

**Function:** The content of the whole Image structure copied into a memoryblock.
**Notes:** Returns nil on any error.

90.20.74  **ImagesToBlob(info as IMImageInfoQ32MBS) as String**

**Function:** ImagesToBlob implements direct to memory image formats.
**Notes:** It returns the image sequence as a string. The magick member of the ImageInfo structure determines the format of the returned blob (GIF, JPEG, PNG, etc.)
Note, some image formats do not permit multiple images to the same image stream (e.g. JPEG). In this instance, just the first image of the sequence is returned as a blob.

Sets the last exception property and returns "" on any error.  For more details please check the ImageMagick documentation.

**90.20.75 ImageToBlob(info as IMImageInfoQ32MBS) as String**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** ImagesToBlob implements direct to memory image formats.  
**Example:**

```vbnet
dim im as ImageMagickQ32MBS // global

Function IMPictureToString(p as picture, magick as string, quality as Integer) As string
    dim image as new IMImageQ32MBS
    dim imageinfo as IMImageInfoQ32MBS
    dim s,data as string
    dim impp as new IMMagickPixelPacketQ32MBS

    // empty string for nil picture
    if p = nil then
        Return ""
    end if

    // create a new picture info
    imageinfo = im.NewImageInfo
    imageinfo.ColorSpace=1
    // only color space is needed. 1 for RGB.

    // background color of image
    impp.red = 0
    impp.Green = 0
    impp.Blue = 0

    // creates a new image object
    if not image.NewImage(imageinfo,p.Width,p.Height,impp) then
        Return ""
    end if

    // copy RB picture into IM Image at position 0/0
    image.ColorSpace = 1
    image.SetPicture(p,0,0)
```

// set compression data
imageinfo.Magick = magick
imageinfo.Quality = quality

// and rendering intent: 2=PerceptualIntent
image.RenderingIntent = 2

// create image data
data = image.ImageToBlob(imageinfo)

// release memory
image.DestroyImage
imageinfo.DestroyImageInfo

// return result
Return data

Exception
// in case of an exception return nothing
Return ""

End Function

Notes:
It returns the image sequence as a string. The magick member of the ImageInfo structure determines the format of the returned blob (GIF, JPEG, PNG, etc.)

Note, some image formats do not permit multiple images to the same image stream (e.g. JPEG). In this instance, just the first image of the sequence is returned as a blob.

Sets the last exception property and returns "" on any error.
For more details please check the ImageMagick documentation.

90.20.76 Implode(factor as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method ImplodeImage creates a new image that is a copy of an existing one with the image pixels "implode" by the specified percentage.
Notes:
factor: A double value that defines the extent of the implosion.
Returns nil on any error.
Sets the last exception property.

90.20.77  **IsBlobExempt as boolean**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Returns true if the blob is exempt.  
**Notes:** For more details please check the ImageMagick documentation.

90.20.78  **IsBlobSeekable as boolean**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Returns true if the blob is seekable.  
**Notes:** For more details please check the ImageMagick documentation.

90.20.79  **IsBlobTemporary as boolean**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Returns true if the blob is temporary.  
**Notes:** For more details please check the ImageMagick documentation.

90.20.80  **Magnify as IMImageQ32MBS**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** A convenience method that scales an image proportionally to twice its size.  
**Notes:** Sets the last exception property.  
For more details please check the ImageMagick documentation.

90.20.81  **MedianFilter(radius as Double) as IMImageQ32MBS**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Applies a digital filter that improves the quality of a noisy image.  
**Notes:**
Each pixel is replaced by the median in a set of neighboring pixels as defined by radius. Sets the last exception property.

For more details please check the ImageMagick documentation.

### 90.20.82 MergeImageLayers(ImageLayerMethod as Integer) as IMImageQ32MBS

**Function:** MergeImageLayers() composes all the image layers from the current given image onward to produce a single image of the merged layers.

**Notes:**

The initial canvas's size depends on the given ImageLayerMethod, and is initialized using the first images background color. The images are then composited onto that image in sequence using the given composition that has been assigned to each individual image.

**ImageLayerMethod:**

- **MergeLayer:** Merge all layers onto a canvas just large enough to hold all the actual images. The virtual canvas of the first image is preserved but otherwise ignored.

- **FlattenLayer:** Use the virtual canvas size of first image. Images which fall outside this canvas is clipped. This can be used to 'fill out' a given virtual canvas.

- **MosaicLayer:** Start with the virtual canvas of the first image, enlarging left and right edges to contain all images. Images with negative offsets will be clipped.

Can raise an exception.

### 90.20.83 Minify as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** A convenience method that scales an image proportionally to half its size.

**Notes:**

Sets the last exception property.

For more details please check the ImageMagick documentation.
90.20.84  MosaicImages as IMImageQ32MBS

**Function:** MosaicImages inlays an image sequence to form a single coherent picture.
**Notes:**
- It returns a single image with each image in the sequence composited at the location defined by the page member of the image structure.
- Returns nil on any error.
- Sets the last exception property.

90.20.85  MotionBlur(radius as Double, sigma as Double, angle as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Simulates motion blur.
**Notes:**
- We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and MotionBlur selects a suitable radius for you. Angle gives the angle of the blurring motion.
- Sets the last exception property.

For more details please check the ImageMagick documentation.

90.20.86  NegateImage(gray as boolean = false) as Boolean

**Function:** Negates the colors in the reference image.
**Notes:**
- Returns true on success or false on failure.
- The grayscale option means that only grayscale values within the image are negated.

gray: If true, only negate grayscale pixels within the image.

90.20.87  NegateImageChannel(ChannelType as Integer, gray as boolean = false) as Boolean

**Function:** Negates the colors in the reference image.
Notes:

Returns true on success or false on failure.
The grayscale option means that only grayscale values within the image are negated.

ChannelType: The channels to use.
gray: If true, only negate grayscale pixels within the image.

Constants for channel:

```plaintext
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff
```

90.20.88 NewImage(info as IMImageInfoQ32MBS, width as Integer, height as Integer, background as IMM MagickPixelPacketQ32MBS) as boolean

Function: Creates a new image.

Example:

```plaintext
dim im as ImageMagickQ32MBS // global
dim p as picture
dim imageinfo as IMImageInfoQ32MBS
dim image as IMImageQ32MBS
dim b as new IMM MagickPixelPacketQ32MBS
b.Blue=65535
b.ColorSpace=1 // RGB
b.Depth=16

imageinfo = im.NewImageInfo
imageinfo.Depth=16
imageinfo.ColorSpace=1
```
//this should read any image IM understands
image = new IMImageQ32MBS
if image.NewImage(imageinfo,500,500,b) then
    p=NewPicture(300,300,32)
p.Graphics.ForeColor=Rgb(255,0,0)
p.Graphics.FillOval 0,0,300,300
    image.SetPicture p,0,0
else
    MsgBox "failed"
end if

**Notes:** Returns false on failure and true on success.

### 90.20.89 NormalizeImage as Boolean

**Function:** Enhances the contrast of a color image by mapping the darkest 2 percent of all pixel to black and the brightest 1 percent to white.
**Notes:** Returns true on success or false on failure.

### 90.20.90 NormalizeImageChannel(ChannelType as Integer) as Boolean

**Function:** Enhances the contrast of a color image by mapping the darkest 2 percent of all pixel to black and the brightest 1 percent to white.
**Notes:**

Returns true on success or false on failure.

ChannelType: The channels to auto-level. If the special 'SyncChannels' flag is set the min/max/mean value of all given channels is used for all given channels, to all channels in the same way.

Constants for channel:

### 90.20.91 OilPaint(radius as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Method OilPaintImage creates a new image that is a copy of an existing one with each pixel component replaced with the color of greatest frequency in a circular neighborhood.
const UndefinedChannel = 0
const RedChannel     = & h0001
const GrayChannel    = & h0001
const CyanChannel    = & h0001
const GreenChannel   = & h0002
const MagentaChannel = & h0002
const BlueChannel    = & h0004
const YellowChannel  = & h0004
const AlphaChannel   = & h0008
const OpacityChannel = & h0008
const BlackChannel   = & h0020
const IndexChannel   = & h0020
const AllChannels    = & h7fffffff

Notes:

radius parameter: radius of the circular neighborhood.
Returns nil on any error.
Sets the last exception property.

90.20.92 OptimizeImageLayers as IMImageQ32MBS

**Function:** OptimizeImageLayers() compares each image the GIF disposed forms of the previous image in the sequence.  
**Notes:**

From this it attempts to select the smallest cropped image to replace each frame, while preserving the results of the GIF animation.

Can raise an exception.

90.20.93 OptimizeImageTransparency

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** OptimizeImageTransparency() takes a frame optimized GIF animation, and compares the overlayed pixels against the disposal image resulting from all the previous frames in the animation. 
**Notes:**

Any pixel that does not change the disposal image (and thus does not effect the outcome of an overlay) is made transparent.
CHAPTER 90. IMAGE MAGICK

WARNING: This modifies the current images directly, rather than generate a new image sequence.

Can raise an exception.

90.20.94 OptimizePlusImageLayers as IMImageQ32MBS

Function: OptimizeImagePlusLayers() is exactly as OptimizeImageLayers(), but may also add or even remove extra frames in the animation, if it improves the total number of pixels in the resulting GIF animation.
Notes: Can raise an exception.

90.20.95 ProfileImage(name as string, ProfileData as string) as boolean

Function: Adds or removes a ICC, IPTC, or generic profile from an image.
Notes:
If the ProfileData is "", it is removed from the image otherwise added. Use a name of '*' and a ProfileData of "" to remove all profiles from the image.

Returns false on any error and true on success.

90.20.96 RadialBlur(angle as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: RadialBlur applies a radial blur to the image.
Notes:
angle: The angle of the radial blur.

Sets the last exception property.
For more details please check the ImageMagick documentation.

90.20.97 RaiseImage(x as Integer, y as Integer, width as Integer, height as Integer, raise as boolean) as boolean

Function: Creates a simulated three-dimensional button-like effect by lightening and darkening the edges
90.20. CLASS IMIMAGEQ32MBS

Notes:

Width and height define the width of the vertical and horizontal edge of the effect.
raise: A value other than zero creates a 3-D raise effect, otherwise it has a lowered effect.

90.20.98 RandomThresholdChannel(channel as Integer, thresholds as string)
as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: Canges the value of individual pixels based on the intensity of each pixel compared to a random threshold.
Notes:
The result is a low-contrast, two color image.

channel: The channel or channels to be thresholded.
thresholds: a geometry string containing low, high thresholds. If the string contains 2x2, 3x3, or 4x4, an ordered dither of order 2, 3, or 4 is performed instead. (ASCII string)

Sets the last exception property.

Constants for channel:

const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff

For more details please check the ImageMagick documentation.
90.20.99 ReduceNoise(radius as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Smooths the contours of an image while still preserving edge information.
**Notes:**
The algorithm works by replacing each pixel with its neighbor closest in value. A neighbor is defined by radius. Use a radius of 0 and ReduceNoise selects a suitable radius for you.

For more details please check the ImageMagick documentation.

90.20.100 RemoveDuplicateLayers

**Function:** Removes any image that is exactly the same as the next image in the given image list.
**Notes:**
Image size and virtual canvas offset must also match, though not the virtual canvas size itself.

No check is made with regards to image disposal setting, though it is the dispose setting of later image that is kept. Also any time delays are also added together. As such coalesced image animations should still produce the same result, though with duplicate frames merged into a single frame.

90.20.101 RemoveFirstImageFromList as IMImageQ32MBS

**Function:** Removes the first image from the image list and returns the image.
**Notes:**
Returns nil on any error.
For more details please check the ImageMagick documentation.

90.20.102 RemoveImageProfile(name as string) as string

**Function:** Removes a profile from the image-map by its name.
90.20.103 RemoveZeroDelayLayers

**Function:** Removes any image that as a zero delay time.
**Notes:**
Such images generally represent intermediate or partial updates in GIF animations used for file optimization. They are not meant to be displayed to users of the animation. Viewable images in an animation should have a time delay of 3 or more centi-seconds (hundredths of a second).

However if all the frames have a zero time delay, then either the animation is as yet incomplete, or it is not a GIF animation. This is a non-sensible situation, so no image will be removed and a 'Zero Time Animation' warning (exception) given.

No warning will be given if no image was removed because all images had an appropriate non-zero time delay set.

Due to the special requirements of GIF disposal handling, GIF animations should be coalesced first, before calling this function, though that is not a requirement.

90.20.104 ResetImageAttributeIterator

**Function:** ResetImageAttributeIterator() resets the image attributes iterator.
**Notes:** Use it in conjunction with GetNextImageAttribute() to iterate over all the values associated with an image.

90.20.105 ResetImageProfileIterator

**Function:** Resets the image profile iterator.
**Notes:** Use it in conjunction with GetNextImageProfile() to iterate over all the profiles associated with an image.

90.20.106 Resize(width as Integer, height as Integer, FilterID as Integer, blur as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Scales an image to the desired dimensions.
**Notes:**
CHAPTER 90. IMAGE MAGICK

Constants for the FilterID:

```
const PointFilter = 1
const BoxFilter = 2
const TriangleFilter = 3
const HermiteFilter = 4
const HanningFilter = 5
const HammingFilter = 6
const BlackmanFilter = 7
const GaussianFilter = 8
const QuadraticFilter = 9
const CubicFilter = 10
const CatromFilter = 11
const MitchellFilter = 12
const LanczosFilter = 13
const BesselFilter = 14
const SincFilter = 15
```

Most of the filters are FIR (finite impulse response), however, Bessel, Gaussian, and Sinc are IIR (infinite impulse response). Bessel and Sinc are windowed (brought down to zero) with the Blackman filter. Sets the last exception property.

90.20.107 RGBTransformImage(Colorspace as Integer) as boolean

Function: Method RGBTransformImage converts the reference image from RGB to an alternate colorspace.

Notes:

The transformation matrices are not the standard ones: the weights are rescaled to normalized the range of the transformed values to be \([0..\text{MaxRGB}]\).

```
colorspace: An integer value that indicates which colorspace to transform the image.
```

Returns false on any error and true on success.

constants:

90.20.108 Roll(x as Integer, y as Integer) as IMImageQ32MBS

Function: Roll offsets an image as defined by \(x\) and \(y\).
90.20. CLASS IMIMAGEQ32MBS

UndefinedColors 0
RGBColors 1
GRAYColors 2
TransparentColor 3
OHTAColors 4
LABColors 5
XYZColors 6
YCbCrColors 7
YCCColors 8
YIQColors 9
YPbPrColors 10
YUVColors 11
CMYKColors 12
sRGBColors 13
HSBColors 14
HSLColors 15
HWBColors 16

Notes:

Returns nil on any error.
Sets the last exception property.

90.20.109 Rotate(degrees as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Rotation of an image.
Notes:

Method RotateImage creates a new image that is a rotated copy of an existing one. Positive angles rotate counter-clockwise (right-hand rule), while negative angles rotate clockwise. Rotated images are usually larger than the originals and have 'empty' triangular corners. X axis. Empty triangles left over from shearing the image are filled with the color specified by the image background color. RotateImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Method RotateImage is based on the paper "A Fast Algorithm for General Raster Rotatation" by Alan W. Paeth. RotateImage is adapted from a similar method based on the Paeth paper written by Michael Halle of the Spatial Imaging Group, MIT Media Lab.

degrees: Specifies the number of degrees to rotate the image.

Sets the last exception property.
Returns nil on low memory.
For more details please check the ImageMagick documentation.

90.20.110  Sample(width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Scales an image to the desired dimensions with pixel sampling. 
**Notes:** Unlike other scaling methods, this method does not introduce any additional color into the scaled image. For more details please check the ImageMagick documentation. Sets the last exception property.

90.20.111  Scale(width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. 
**Function:** Changes the size of an image to the given dimensions. 
**Example:**
```vbnet
dim image as IMImageQ32MBS // your image
image=Image.Scale(100,80)
```

**Notes:** This method was designed by Bob Friesenhahn as a low cost thumbnail generator. 

- columns: The number of columns in the scaled image. 
- rows: The number of rows in the scaled image. 

Sets the last exception property. 
For more details please check the ImageMagick documentation.

90.20.112  SetImageAttribute(key as string, value as string) as boolean

**Function:** SetImageAttribute searches the list of image attributes and replaces the attribute value. 
**Notes:** If it is not found in the list, the attribute name and value is added to the list. If the attribute exists in the list, the value is concatenated to the attribute. SetImageAttribute returns True if the attribute is successfully concatenated or added to the list, otherwise False. If the value is ””, the matching key is deleted from the list.
90.20.113 SetImageColorspspace(Colorspsace as Integer) as boolean

**Function:** Sets the colorspace member of the Image structure.
**Notes:** Returns false on any error and true on success.

90.20.114 SetImageProfile(name as string, ProfileData as string) as boolean

**Function:** Adds a named profile to the image.
**Notes:**
If a profile with the same name already exists, it is replaced. This method differs from the ProfileImage() method in that it does not apply CMS color profiles.

- name: The profile name.
- profiledata: The binary data of the profile.

Returns false on any error and true on success.

90.20.115 SetPicture(pic as picture, x as Integer, y as Integer)

**Function:** Copies the pixels from a given Realbasic picture into the Image Magick Image at the given location.
**Example:**
```java
dim image as IMImageQ32MBS ' // your image
dim p as picture

p=NewPicture(32,32,32)
p.Graphics.ForeColor=rgb(0,255,0)
p.Graphics.FillRect 0,0,32,32

image.SetPicture(p,30,30)
```
**Notes:**
Sets the last exception property.
The method will do nothing on bad bounds.
This method works only for bitmap images.
x and y are zero based.
90.20.116  SetPictureMask(maskpic as picture, x as Integer, y as Integer)

Function: Copies the pixels from a given Realbasic picture into the mask of the Image Magick Image at
the given location.

Example:

```basic
    dim i as IMImageQ32MBS // your image
    dim p as picture

    p=NewPicture(32,32,32)
p.Graphics.ForeColor=rgb(0,255,0)
p.Graphics.FillRect 0,0,32,32

    i.SetPictureMask(p,30,30)
```

Notes:

Sets the last exception property.
The method will do nothing on bad bounds.
This method works only for bitmap images.
x and y are zero based.
You may need to set matte=True after this.

90.20.117  SetPixel(x as Integer, y as Integer, newPixel as IMColorQ32MBS)

Function: Sets a pixel value.

Example:

```basic
    dim image as IMImageQ32MBS // your image
    dim co as IMColorQ32MBS

    co=new IMColorQ32MBS
    co.blue=65535  // max value
    image.SetPixel 50,50,co // Makes Pixel 50/50 blue
```

Notes:

The method will fail silently if the values are out of bounds or the image is not a bitmap image.
This method works only for bitmap images.
x and y are zero based.

**90.20.118 Shade(gray as boolean, azimuth as Double, elevation as Double) as IMImageQ32MBS**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Shines a distant light on an image to create a three-dimensional effect.

**Notes:**

You control the positioning of the light with azimuth and elevation; azimuth is measured in degrees off the x axis and elevation is measured in pixels above the Z axis.

Sets the last exception property.

For more details please check the ImageMagick documentation.

**90.20.119 SharpenChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ32MBS**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Sharpens one or more image channels.

**Notes:**

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and Sharpen selects a suitable radius for you.

channel: The channel type.
radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Laplacian, in pixels.

Constants for channel:

Sets the last exception property.

For more details please check the ImageMagick documentation.

**90.20.120 Shave(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS**

**Function:** Shave shaves pixels from the image edges.
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff

Notes:
It allocates the memory necessary for the new Image structure and returns a pointer to the new image.
Returns nil on any error.
Sets the last exception property.

90.20.121 Shear(Xshear as Double, Yshear as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method ShearImage creates a new image that is a shear image copy of an existing one.
Notes:
Shearing slides one edge of an image along the X or Y axis, creating a parallelogram. An X direction shear slides an edge along the X axis, while a Y direction shear slides an edge along the Y axis. The amount of the shear is controlled by a shear angle. For X direction shears, x_shear is measured relative to the Y axis, and similarly, for Y direction shears y_shear is measured relative to the X axis. Empty triangles left over from shearing the image are filled with the color defined by the pixel at location (0,0). ShearImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Xshear and Yshear specify the number of degrees to shear the image.

Sets the last exception property.
For more details please check the ImageMagick documentation.

90.20.122 Solarize(factor as Double) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method SolarizeImage produces a 'solarization' effect seen when exposing a photographic film
to light during the development process.

**Notes:**

- factor: An double value that defines the extent of the solarization.
- Returns nil on any error.
- Sets the last exception property.

### 90.20.123 Splice(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS

**Function:** Splice splices a solid color into the image as defined by the geometry.

**Notes:**

- Returns nil on any error.
- Sets the last exception property.

### 90.20.124 Spread(radius as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** This is a special effects method that randomly displaces each pixel in a block defined by the radius parameter.

**Notes:**

- radius: Choose a random pixel in a neighborhood of this extent.
- Sets the last exception property.

For more details please check the ImageMagick documentation.

### 90.20.125 Stegano(watermarkImage as IMImageQ32MBS) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Method SteganoImage hides a digital watermark within the image.

**Notes:**

- Returns nil on any error.
- Sets the last exception property.
90.20.126  Stereo(otherImage as IMImageQ32MBS) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method StereoImage combines two images and produces a single image that is the composite of a left and right image of a stereo pair.
Notes: The left image is converted to gray scale and written to the red channel of the stereo image. The right image is converted to gray scale and written to the blue channel of the stereo image. View the composite image with red-blue glasses to create a stereo effect.

left image = self
right image = otherImage parameter

Returns nil on any error.
Sets the last exception property.

90.20.127  Swirl(degrees as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method SwirlImage creates a new image that is a copy of an existing one with the image pixels "swirl" at a specified angle.
Notes: degrees: An double value that defines the tightness of the swirling.

Returns nil on any error.
Sets the last exception property.

90.20.128  Thumbnail(width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the size of an image to the given dimensions.
Notes: Sets the last exception property.
This method was designed by Bob Friesenhahn as a low cost thumbnail generator.
For more details please check the ImageMagick documentation.
90.20.129 TransformImage(CropGeometry as string, ImageGeometry as string) as boolean

Function: TransformImage() is a convenience method that behaves like ResizeImage() or CropImage() but accepts scaling and/or cropping information as a region geometry specification. If the operation fails, the original image handle is left as is.
Notes:
This should only be used for single images.

CropGeometry: A crop geometry string. This geometry defines a subregion of the image to crop.
ImageGeometry: An image geometry string. This geometry defines the final size of the image.

Returns true on success.

90.20.130 TransformImages(CropGeometry as string, ImageGeometry as string) as boolean

Function: TransformImages() calls TransformImage() on each image of a sequence.
Notes:
TransformImage() is a convenience method that behaves like ResizeImage() or CropImage() but accepts scaling and/or cropping information as a region geometry specification. If the operation fails, the original image handle is left as is.

CropGeometry: A crop geometry string. This geometry defines a subregion of the image to crop.
ImageGeometry: An image geometry string. This geometry defines the final size of the image.

Returns true on success.

90.20.131 TransformRGBImage(Colorsaspace as Integer) as boolean

Function: Method TransformRGBImage converts the reference image from an alternate colorspace.
Notes:
The transformation matrices are not the standard ones: the weights are rescaled to normalized the range of the transformed values to be [ 0..MaxRGB ].

colorsaspace: An integer value that indicates the colorspace the image is currently in. On return the image is
in the RGB color space.

Returns false on any error and true on success.

constants:

- UndefinedColorspace 0
- RGBColorspace 1
- GRAYColorspace 2
- TransparentColorspace 3
- OHTAColorspace 4
- LABColorspace 5

90.20.132  TransposeImage as IMImageQ32MBS

**Function:** TransposeImage() creates a horizontal mirror image by reflecting the pixels around the central y-axis while rotating them by 90 degrees.

90.20.133  TransverseImage as IMImageQ32MBS

**Function:** TransverseImage() creates a vertical mirror image by reflecting the pixels around the central x-axis while rotating them by 270 degrees.

90.20.134  Trim as IMImageQ32MBS

**Function:** Trim trims pixels from the image edges.
Notes:

It allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Returns nil on any error.

Sets the last exception property.

90.20.135 UnsharpMaskChannel(channel as Integer, radius as Double, sigma as Double, amount as Double, threshold as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: Sharpens one or more image channels.

Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and UnsharpMask selects a suitable radius for you.

Constants for channel:

```
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7ffffff
```

Sets the last exception property.

For more details please check the ImageMagick documentation.

90.20.136 Wave(amplitude as Double, wavelength as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

Function: Method Wave creates a new image that is a copy of an existing one with the image pixels altered
along a sine wave.

**Notes:**

Parameters are double values that indicates the amplitude and wavelength of the sine wave.
Returns nil on any error.
Sets the last exception property.

### 90.20.137 WhiteThreshold(threshold as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** WhiteThreshold is like Threshold but forces all pixels above the threshold into white while leaving all pixels below the threshold unchanged.
**Notes:**

No exceptions are generated.
threshold: Define the threshold value. (ASCII string)
For more details please check the ImageMagick documentation.

### 90.20.138 WriteImage(info as IMImageInfoQ32MBS) as boolean

**Function:** Method WriteImage writes an image to a file as defined by image.filename.
**Notes:**

You can specify a particular image format by prefixing the file with the image type and a colon (i.e. ps:image) or specify the image type as the filename suffix (i.e. image.ps). The image may be modified to adapt it to the requirements of the image format. For example, DirectClass images must be color-reduced to PseudoClass if the format is GIF.

WriteImage returns True if the image is written. False is returned if there is a memory shortage or if the image file fails to write.

### 90.20.139 Properties

### 90.20.140 BackgroundColor as IMColorQ32MBS

**Function:** Image background color.
**Notes:** (Read and Write property)
90.20.141 Bias as Double

**Function:** An undocumented property.
**Notes:** (Read and Write property)

90.20.142 BlurFactor as Double

**Function:** Blur factor to apply to the image when zooming. Default is 1.0 (no blur).
**Notes:** (Read and Write property)

90.20.143 BorderColor as IMColorQ32MBS

**Function:** Image border color.
**Notes:** (Read and Write property)

90.20.144 Colors as Integer

**Function:** The desired number of colors.
**Notes:**
Used by Quantize().
(Read and Write property)

90.20.145 ColorSpace as Integer

**Function:** Image pixel interpretation.
**Notes:**
If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:
### 90.20.146 Compression as Integer

**Function:** Image compression type.

**Notes:**

useful constants:

<table>
<thead>
<tr>
<th>Constant Name</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>const UndefinedCompression</td>
<td>0</td>
</tr>
<tr>
<td>const NoCompression</td>
<td>1</td>
</tr>
<tr>
<td>const BZipCompression</td>
<td>2</td>
</tr>
<tr>
<td>const FaxCompression</td>
<td>3</td>
</tr>
<tr>
<td>const Group4Compression</td>
<td>4</td>
</tr>
<tr>
<td>const JPEGCompression</td>
<td>5</td>
</tr>
<tr>
<td>const LosslessJPEGCompression</td>
<td>6</td>
</tr>
<tr>
<td>const LZWCompression</td>
<td>7</td>
</tr>
<tr>
<td>const RLECompression</td>
<td>8</td>
</tr>
<tr>
<td>const ZipCompression</td>
<td>9</td>
</tr>
</tbody>
</table>

The default is the compression type of the specified image file.
For more details please check the ImageMagick documentation.
(Read and Write property)
90.20.147  Depth as Integer

**Function:** Image depth (8 or 16).
**Notes:**
QuantumLeap must be defined before a depth of 16 is valid.
(Read and Write property)

90.20.148  Directory as String

**Function:** Tile names from within an image montage.
**Notes:**
Only valid after calling MontageImages() or reading a MIFF file which contains a directory.
(Read and Write property)

90.20.149  Endian as Integer

**Function:** The endian setting to use.
**Notes:**
constants:

<table>
<thead>
<tr>
<th>Constant</th>
<th>Value</th>
<th>Platform</th>
</tr>
</thead>
<tbody>
<tr>
<td>UndefinedEndian</td>
<td>0</td>
<td></td>
</tr>
<tr>
<td>LSBEndian</td>
<td>1</td>
<td>(Windows)</td>
</tr>
<tr>
<td>MSBEndian</td>
<td>2</td>
<td>(Mac)</td>
</tr>
</tbody>
</table>

e.g. tiff files support different endian settings.
(Read and Write property)

90.20.150  Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The file path/name.
**Notes:**
The string must be in the encoding of the library and is limited to 4000 bytes.
For more details please check the ImageMagick documentation.
90.20.151 Filter as Integer

**Function:** Filter to use when resizing image.

**Notes:**

Constants:

```plaintext
const PointFilter = 1
const BoxFilter = 2
const TriangleFilter = 3
const HermiteFilter = 4
const HanningFilter = 5
const HammingFilter = 6
const BlackmanFilter = 7
const GaussianFilter = 8
const QuadraticFilter = 9
const CubicFilter = 10
const CatromFilter = 11
const MitchellFilter = 12
const LanczosFilter = 13
const BesselFilter = 14
const SincFilter = 15
```

The reduction filter employed has a significant effect on the time required to resize an image and the resulting quality. The default filter is Lanczos which has been shown to produce high quality results when reducing most images.

(Read and Write property)

90.20.152 Fuzz as Double

**Function:** Colors within this distance are considered equal.

**Notes:**

A number of algorithms search for a target color. By default the color must be exact. Use this to match colors that are close to the target color in RGB space.

(Read and Write property)
90.20.153  Gamma as Double

**Function:** Gamma level of the image.
**Notes:**
The same color image displayed on two different workstations may look different due to differences in the display monitor. Use gamma correction to adjust for this color difference.
(Read and Write property)

90.20.154  Geometry as String

**Function:** Preferred size of the image when encoding.
**Notes:** (Read and Write property)

90.20.155  Gravity as Integer

**Function:** An undocumented property.
**Notes:** (Read and Write property)

90.20.156  Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The handle used internally by the plugin.
**Notes:**
A pointer to an Image structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

90.20.157  Height as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The height of the image in pixels.
**Notes:**
For more details please check the ImageMagick documentation.
(Read and Write property)
90.20.158  Interlace as Integer

Function: The type of interlacing scheme (default NoInterlace).
Notes:
This option is used to specify the type of interlacing scheme for raw image formats such as RGB or YUV. NoInterlace means do not interlace, LineInterlace uses scanline interlacing, and PlaneInterlace uses plane interlacing. PartitionInterlace is like PlaneInterlace except the different planes are saved to individual files (e.g. image.R, image.G, and image.B). Use LineInterlace or PlaneInterlace to create an interlaced GIF or progressive JPEG image.

constants:

<table>
<thead>
<tr>
<th>Constant</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UndefinedInterlace</td>
<td>0</td>
<td>Unset value.</td>
</tr>
<tr>
<td>NoInterlace</td>
<td>1</td>
<td>Don’t interlace image (RGBRGBRGBRGBRGBRGB...)</td>
</tr>
<tr>
<td>LineInterlace</td>
<td>2</td>
<td>Use scanline interlacing (RRR...GGG...BBB...RRR...GGG...BBB...)</td>
</tr>
<tr>
<td>PlaneInterlace</td>
<td>3</td>
<td>Use plane interlacing (RRRRRR...GGGGGG...BBBBBB...)</td>
</tr>
<tr>
<td>PartitionInterlace</td>
<td>4</td>
<td>Similar to plane interlacing except that the different planes are saved to individual files (e.g. image.R, image.G, and image.B)</td>
</tr>
</tbody>
</table>

(Read and Write property)

90.20.159  LastError as Integer

Function: The last error code reported.
Notes:
If an exception is raised and it is not a warning exception, this exception code is saved in this property.
(Read and Write property)

90.20.160  LastException as IMExceptionQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last exception thrown by the Image Magick library.
Notes:
You should check this value after every call to the library, process the error and set the property to nil.
For more details please check the ImageMagick documentation.
(Read and Write property)
90.20.161  Magick as String

**Function:** Image encoding format (e.g. "GIF").
**Notes:** (Read and Write property)

90.20.162  Matte as Boolean

**Function:** Whether an alpha channel is used/present.
**Notes:**
Set to true to enable masks.
(Read and Write property)

90.20.163  MatteColor as IMColorQ32MBS

**Function:** Image matte (transparent) color.
**Notes:** (Read and Write property)

90.20.164  Montage as String

**Function:** Tile size and offset within an image montage. Only valid for montage images.
**Notes:** (Read and Write property)

90.20.165  Offset as Integer

**Function:** Number of initial bytes to skip over when reading raw image.
**Notes:** (Read and Write property)
90.20.166 Orientation as Integer

Function: The image orientation.

Notes:

constants:

const UndefinedOrientation = 0
const TopLeftOrientation = 1
const TopRightOrientation = 2
const BottomRightOrientation = 3
const BottomLeftOrientation = 4
const LeftTopOrientation = 5
const RightTopOrientation = 6
const RightBottomOrientation = 7
const LeftBottomOrientation = 8

For more details please check the ImageMagick documentation.
(Read and Write property)

90.20.167 Quality as Integer

Function: JPEG/MIFF/PNG compression level.

Example:

```pascal
dim im as ImageMagickQ32MBS // global

Function TestJPEG(f as folderitem) As picture
    // Reads an image, compresses in memory to JPEG, decompresses using JPEGlib and returns the image
    // if quality setting works, you see it in the result.
    // no error checking included!

    // needs: im as ImageMagickQ32MBS ready initialized

    dim image as IMImageQ32MBS
    dim imageinfo as IMImageInfoQ32MBS
    dim s,blob as string
    dim p as Picture
    dim i as Integer

    if f = nil then
        Return nil
    end if
```
imageinfo = im.NewImageInfo

# if TargetWin32 then //do not use shellpath, if spaces, IM doesn’t like escaped paths
imageinfo.Filename = f.AbsolutePath
# else
imageinfo.Filename = f.UnixpathMBS
# endif

//this should read any image IM understands
image = im.ReadImage(imageinfo)
//check for error
if im.lastexception <> nil and im.LastException.Severity >= 400 then
MsgBox s
Return nil
elseif image = nil then
MsgBox ”image=nil”
Return nil
end if

// Now lets convert to jpeg
imageinfo.Filename = ”image.jpg”
imageinfo.Quality = 10 // 100 is max
blob = image.ImageToBlob(imageinfo)

// It may fail
if blob.lenb = 0 then
Return nil
end if
p = JPEGStringToPictureMBS(blob, true)

image.DestroyImage
imageinfo.DestroyImageInfo

Return p
Exception
Return nil
End Function

Notes:
Default value is 75.
(Read and Write property)
90.20.168  Release as Boolean

**Function:** If true, the destructor will release the handle.
**Notes:** (Read and Write property)

90.20.169  RenderingIntent as Integer

**Function:** The rendering intent to use.
**Notes:**

constants:

- UndefinedIntent 0
- SaturationIntent 1
- PerceptualIntent 2
- AbsoluteIntent 3
- RelativeIntent 4

(Read and Write property)

90.20.170  ResolutionUnits as Integer

**Function:** Units of image resolution.
**Notes:**

constants:

- UndefinedResolution 0  Unset value.
- PixelsPerInchResolution 1  Density specifications are specified in units of pixels per inch (english units).
- PixelsPerCentimeterResolution 2  Density specifications are specified in units of pixels per centimeter (metric units).

(Read and Write property)
90.20.171 ResolutionX as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The horizontal resolution of the image.
Notes:
The unit for resolution must be specified.
For more details please check the ImageMagick documentation.
(Read and Write property)

90.20.172 ResolutionY as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The vertical resolution of the image.
Notes:
The unit for resolution must be specified.
For more details please check the ImageMagick documentation.
(Read and Write property)

90.20.173 Scene as Integer

Function: An undocumented property.
Notes: (Read and Write property)

90.20.174 StorageClass as Integer

Function: Image storage class.
Notes:
If DirectClass then the image packets contain valid RGB or CMYK colors. If PseudoClass then the image has a colormap referenced by pixel's index member.

constants:

<table>
<thead>
<tr>
<th>Constant</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UndefinedClass</td>
<td>0</td>
<td>Unset value.</td>
</tr>
<tr>
<td>DirectClass</td>
<td>1</td>
<td>Image is composed of pixels which represent literal color values.</td>
</tr>
<tr>
<td>PseudoClass</td>
<td>2</td>
<td>Image is composed of pixels which specify an index in a color palette.</td>
</tr>
</tbody>
</table>
90.20.175  Taint as Boolean

**Function:** Set to True if the image pixels have been modified.  
**Notes:** (Read and Write property)

90.20.176  Width as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The width of the image in pixels.  
**Notes:**  
For more details please check the ImageMagick documentation.  
(Read and Write property)

90.20.177  Constants

90.20.178  kAffineDistortion = 1

MBS GraphicsMagick Plugin, Plugin Version: 12.5.  
**Function:** One of the distortion effect constants.  
See also:
- 90.20.179 kAffineDistortion = 1

90.21.1 class IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for an Image Magick Image in memory.
Notes:
Can exist with or without pixel data.

For more details please check the ImageMagick documentation.

90.21.2 Methods

90.21.3 AdaptiveThreshold(width as Integer, height as Integer, offset as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: AdaptiveThreshold selects an individual threshold for each pixel based on the range of intensity values in its local neighborhood.
Notes:
This allows for thresholding of an image whose global intensity histogram doesn’t contain distinctive peaks.
Sets the last exception property.

width: The width of the local neighborhood.
height: The height of the local neighborhood.
offset: The mean offset.

For more details please check the ImageMagick documentation.

90.21.4 AddNoise(NoiseType as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds random noise to the image.
Notes:
Constants

For more details please check the ImageMagick documentation.
Sets the last exception property.
CHAPTER 90. IMAGE MAGICK

UndefinedNoise = 0
UniformNoise = 1
GaussianNoise = 2
MultiplicativeGaussianNoise = 3
ImpulseNoise = 4
LaplacianNoise = 5
PoissonNoise = 6

90.21.5 AffineTransformImage(matrix as IMImageAffineMatrixQ8MBS) as IMImageQ8MBS

Function: Transforms an image as dictated by the affine matrix.

90.21.6 AppendImageToList(img as IMImageQ8MBS)

Function: Adds an image to the image list.
Notes: For more details please check the ImageMagick documentation.

90.21.7 AutoGammaImage as Boolean

Function: AutoGammaImage extract the ‘mean’ from the image and adjust the image to try make set its gamma appropriatally.
Notes: Returns true on success or false on failure.

90.21.8 AutoGammaImageChannel(ChannelType as Integer) as Boolean

Function: AutoGammaImage extract the ‘mean’ from the image and adjust the image to try make set its gamma appropriatally.
Notes: Returns true on success or false on failure.
channelType: The channels to auto-level. If the special 'SyncChannels' flag is set all given channels is adjusted in the same way using the mean average of those channels.

Constants for channel:

```plaintext
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff
```

90.21.9 AutoLevelImage as Boolean

**Function:** AutoLevelImage adjusts the levels of a particular image channel by scaling the minimum and maximum values to the full quantum range.
**Notes:** Returns true on success or false on failure.

90.21.10 AutoLevelImageChannel(ChannelType as Integer) as Boolean

**Function:** AutoLevelImage adjusts the levels of a particular image channel by scaling the minimum and maximum values to the full quantum range.
**Notes:**
Returns true on success or false on failure.

ChannelType: The channels to auto-level. If the special 'SyncChannels' flag is set the min/max/mean value of all given channels is used for all given channels, to all channels in the same way.

Constants for channel:
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff

90.21.11  Average as IMImageQ8MBS

Function: The Average() method takes a set of images and averages them together.
Notes:
Each image in the set must have the same width and height. Average() returns a single image with each corresponding pixel component of each image averaged. On failure, a nil image is returned and exception describes the reason for the failure.
Sets the last exception property.

For more details please check the ImageMagick documentation.

90.21.12  BilevelChannel(channel as Integer, threshold as Double) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the value of individual pixels based on the intensity of each pixel channel.
Notes:
The result is a high-contrast image.

channel: The channel type.
threshold: define the threshold values.

Constants for channel:

For more details please check the ImageMagick documentation.
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff

90.21.13  BlackThreshold(threshold as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** BlackThreshold is like Threshold but forces all pixels below the threshold into black while leaving all pixels above the threshold unchanged.
**Notes:**
No exceptions are generated.
threshold: Define the threshold value. (ASCII string)
For more details please check the ImageMagick documentation.

90.21.14  BlobSize as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The expected size for this image written to a file.
**Notes:** For more details please check the ImageMagick documentation.

90.21.15  Blur(radius as Double, sigma as Double) as IMImageQ8MBS

**Function:** Blurs an image.
**Notes:**
We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, the radius should be larger than sigma. Use a radius of 0 and BlurImage selects a suitable radius for you.

radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Gaussian, in pixels.

For more details please check the ImageMagick documentation.

90.21.16 BlurImageChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Blurs an image.

**Notes:**

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, the radius should be larger than sigma. Use a radius of 0 and BlurImageChannel selects a suitable radius for you.

channel: The channel type.

radius: The radius of the Gaussian, in pixels, not counting the center pixel.

sigma: The standard deviation of the Gaussian, in pixels.

Constants for channel:

```plaintext
const UndefinedChannel = 0
const RedChannel     = & h0001
const GrayChannel    = & h0001
const CyanChannel    = & h0001
const GreenChannel   = & h0002
const MagentaChannel = & h0002
const BlueChannel    = & h0004
const YellowChannel  = & h0004
const AlphaChannel   = & h0008
const OpacityChannel = & h0008
const BlackChannel   = & h0020
const IndexChannel   = & h0020
const AllChannels    = & h7fffffff
```

For more details please check the ImageMagick documentation.
90.21.17  BorderImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS

Function: Surrounds the image with a border of the color defined by the bordercolor member of the image.
Notes: The width and height of the border are defined by the corresponding parameters.

90.21.18  BrightnessContrastImage(brightness as Double, contrast as Double) as Boolean

Function: Changes the brightness and/or contrast of an image. It converts the brightness and contrast parameters into slope and intercept and calls a polynomical function to apply to the image.
Notes:
Returns true on success or false on failure.

brightness: the brightness percent (-100 .. 100).
contrast: the contrast percent (-100 .. 100).

90.21.19  BrightnessContrastImageChannel(ChannelType as Integer, brightness as Double, contrast as Double) as Boolean

Function: Changes the brightness and/or contrast of an image. It converts the brightness and contrast parameters into slope and intercept and calls a polynomical function to apply to the image.
Notes:
Returns true on success or false on failure.

brightness: the brightness percent (-100 .. 100).
contrast: the contrast percent (-100 .. 100).
ChannelType: The channels to use.

Constants for channel:

90.21.20  Charcoal(radius as Double, sigma as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Charcoal creates a new image that is a copy of an existing one with the edge highlighted.
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0002
const GreenChannel = & h0001
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff

Notes:

radius: the radius of the pixel neighborhood.
sigma: The standard deviation of the Gaussian, in pixels.

Returns nil on any error.
Sets the last exception property.

90.21.21 Chop(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS

Function: Chop removes a region of an image and collapses the image to occupy the removed portion.
Notes:

Returns nil on any error.
Sets the last exception property.

90.21.22 ClipPath(path as string, inside as boolean) as boolean

Function: Sets the image clip mask based any clipping path information if it exists.
Notes:

Returns true on success and false on any error.
pathname: name of clipping path resource. If name is preceded by #, use clipping path numbered by name.
inside: if true, later operations take effect inside clipping path. Otherwise later operations take effect outside clipping path.

90.21.23 Clone as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of this image object.
Notes: For more details please check the ImageMagick documentation.

90.21.24 CloneImageAttributes(image as IMImageAttributeQ8MBS) as Boolean

Function: CloneImageAttributes() clones one or more image attributes.
Notes: Returns false on any error.

90.21.25 CloneImageProfiles(SourceImage as IMImageQ8MBS) as boolean

Function: Clones one or more image profiles.
Notes: Returns false on any error and true on success.

90.21.26 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The destructor.
Notes:
There is no need to call this method except you want to free all resources used by this object now without waiting for Realbasic to do it for you.
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

90.21.27 ClutImage(clutImage as IMImageQ8MBS) as Boolean

Function: Replaces each color value in the given image, by using it as an index to lookup a replacement
color value in a Color Look UP Table in the form of an image.

Notes:

The values are extracted along a diagonal of the CLUT image so either a horizontal or vertical gradient image can be used.

Typically this is used to either re-color a gray-scale image according to a color gradient in the CLUT image, or to perform a freeform histogram (level) adjustment according to the (typically gray-scale) gradient in the CLUT image.

When the 'channel' mask includes the matte/alpha transparency channel but one image has no such channel it is assumed that that image is a simple gray-scale image that will effect the alpha channel values, either for gray-scale coloring (with transparent or semi-transparent colors), or a histogram adjustment of existing alpha channel values. If both images have matte channels, direct and normal indexing is applied, which is rarely used.

ClutImage: the color lookup table image for replacement color values.

Returns true on success or false on failure.

90.21.28 ClutImageChannel(ChannelType as Integer, clutImage as IMImageQ8MBS) as Boolean

Function: Replaces each color value in the given image, by using it as an index to lookup a replacement color value in a Color Look UP Table in the form of an image.

Notes:

The values are extracted along a diagonal of the CLUT image so either a horizontal or vertical gradient image can be used.

Typically this is used to either re-color a gray-scale image according to a color gradient in the CLUT image, or to perform a freeform histogram (level) adjustment according to the (typically gray-scale) gradient in the CLUT image.

When the 'channel' mask includes the matte/alpha transparency channel but one image has no such channel it is assumed that that image is a simple gray-scale image that will effect the alpha channel values, either for gray-scale coloring (with transparent or semi-transparent colors), or a histogram adjustment of existing alpha channel values. If both images have matte channels, direct and normal indexing is applied, which is rarely used.

ClutImage: the color lookup table image for replacement color values.
ChannelType: The channels to use.

Returns true on success or false on failure.

Constants for channel:

```plaintext
const UndefinedChannel  = 0
const RedChannel        = & h0001
const GrayChannel       = & h0001
const CyanChannel       = & h0001
const GreenChannel      = & h0002
const MagentaChannel    = & h0002
const BlueChannel       = & h0004
const YellowChannel     = & h0004
const AlphaChannel      = & h0008
const OpacityChannel    = & h0008
const BlackChannel      = & h0020
const IndexChannel      = & h0020
const AllChannels       = & h7ffffff
```

### 90.21.29 CoalesceImages as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** CoalesceImages composites a set of images while respecting any page offsets and disposal methods.

**Notes:**

GIF, MIFF, and MNG animation sequences typically start with an image background and each subsequent image varies in size and offset. CoalesceImages() returns a new sequence where each image in the sequence is the same size as the first and composited with the next image in the sequence.

Returns nil on any error.
Sets the last exception property.

### 90.21.30 Colorize(opacity as string, PenColorRed as Integer, PenColorGreen as Integer, PenColorBlue as Integer, PenColorOpacity as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Method ColorizeImage creates a new image that is a copy of an existing one with the image
pixels colorized.

Notes:
The colorization is controlled with the pen color and the opacity levels.

opacity: A character string indicating the level of opacity as a percentage (0-100).
PenColorRed, PenColorGreen, PenColorBlue and PenColorOpacity define the pen color used.

Returns nil on any error.
Sets the last exception property.

90.21.31 Combine(channel as Integer) as IMImageQ8MBS

**Function:** Combines one or more images into a single image.
**Notes:**
The grayscale value of the pixels of each image in the sequence is assigned in order to the specified channels of the combined image. The typical ordering would be image 1 -> Red, 2 -> Green, 3 -> Blue, etc.

The lastexception property is set.

90.21.32 CompareImageLayers(ImageLayerMethod as Integer) as IMImageQ8MBS

**Function:** CompareImageLayers() compares each image with the next in a sequence and returns the minimum bounding region of all the pixel differences (of the imageLayerMethod specified) it discovers.
**Notes:**
Images do NOT have to be the same size, though it is best that all the images are 'coalesced' (images are all the same size, on a flattened canvas, so as to represent exactly how an specific frame should look).

No GIF dispose methods are applied, so GIF animations must be coalesced before applying this image operator to find differences to them.

ImageLayerMethod:
the layers type to compare images with. Must be one of... CompareAnyLayer, CompareClearLayer, CompareOverlayLayer.

Can raise an exception.
90.21.33 Composite(ComposeOperator as Integer, Image as IMImageQ8MBS, x as Integer, y as Integer)

Function: Returns the second image composited onto the first at the specified offsets.
Notes:
compose: Specifies an image composite operator.
Image: The second image.
x: An integer that specifies the column offset of the composited image.
y: An integer that specifies the row offset of the composited image.

No error code and exception!

90.21.34 ConsolidateCMYKImages as IMImageQ8MBS

Function: Consolidates a sequence of CMYK images.
Notes:
Returns nil on any error.
Sets the last exception property.

90.21.35 ContrastImage(sharpen as boolean) as Boolean

Function: Enhances the intensity differences between the lighter and darker elements of the image.
Notes:
Returns true on success or false on failure.
Set sharpen to true to increase the image contrast otherwise the contrast is reduced.

90.21.36 CopyPicture as picture

Function: Copies the Image Magick Image and returns a Realbasic picture.
Example:

dim image as IMImageQ8MBS // your image
Canvas1.Backdrop=image.CopyPicture
CHAPTER 90. IMAGE MAGICK

Notes:
Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
See also:

• 90.21.37 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture

90.21.37 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture

Function: Copies a portion of the Image Magick Image and returns a Realbasic picture.
Example:

dim image as IMImageQ8MBS // your image
Canvas1.Backdrop=image.CopyPicture(0,0,image.Width,image.Height)

Notes:
Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.
See also:

• 90.21.36 CopyPicture as picture

90.21.38 CopyPictureMask as picture

Function: Copies the mask of the Image Magick Image and returns a Realbasic picture.
Example:

dim image as IMImageQ8MBS // your image
Canvas1.Backdrop=image.CopyPictureMask

Notes:
Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
See also:
90.21. **CLASS IMIMAGEQ8MBS**

- 90.21.39 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture

**90.21.39 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture**

**Function:** Copies a portion of the mask of the Image Magick Image and returns a Realbasic picture.

**Example:**

```realbasic
dim image as IMImageQ8MBS // your image
Canvas1.Backdrop=image.CopyPictureMask(0,0,image.Width,image.Height)
```

**Notes:**
Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.
See also:

- 90.21.38 CopyPictureMask as picture

**90.21.40 CopyPixel(x as Integer, y as Integer) as IMColorQ8MBS**

**Function:** Copies a pixel.

**Notes:**
Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.

**90.21.41 CreateHBITMAP as Ptr**

MBS GraphicsMagick Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.

**Function:** Creates a HBITMAP for the image for use with Windows Declares.

**Notes:** The HBITMAP returned needs to be freed when you are done with it or you risk having a memory leak.
90.21.42  **Crop(x as Integer, y as Integer, width as Integer, height as Integer)**
as IMImageQ8MBS

**Function:** Crop extracts a region of the image starting at the offset defined by geometry.
**Notes:**
Returns nil on any error.
Sets the last exception property.

90.21.43  **CropImageToTiles(CropGeometry as string)** as IMImageQ8MBS

**Function:** Crops a single image, into a possible list of tiles.
**Notes:** This may include a single sub-region of the image. This basically applies all the normal geometry flags for Crop.

90.21.44  **CycleColormap(displace as Integer)** as boolean

**Function:** Displaces an image’s colormap by a given number of positions.
**Notes:**
If you cycle the colormap a number of times you can produce a psychodelic effect.
Returns true on success.
displace: displace the colormap this amount.

90.21.45  **DecipherImage(passkey as string)** as boolean

**Function:** Converts cipher pixels to plain pixels.
**Notes:**
Passkey: decipher cipher pixels with this passphrase.
Returns true on success.

90.21.46  **DeconstructImages** as IMImageQ8MBS

**Function:** DeconstructImages() compares each image with the next in a sequence and returns the minimum
bounding region of all differences from the first image.

Notes:
Returns nil on any error.
Sets the last exception property.

90.21.47 DeleteImageAttribute(key as string) as Boolean

Function: DeleteImageAttribute() deletes an attribute from the image.
Notes: Returns false on any error.

90.21.48 Despeckle() as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reduces the speckle noise in an image while preserving the edges of the original image.
Notes:
Sets the last exception property.
For more details please check the ImageMagick documentation.

90.21.49 DestroyImage

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Releases the memory used for this image and sets handle to 0.
Notes:
For more details please check the ImageMagick documentation.
The destructor will call this for you if release=true.

90.21.50 DestroyImageAttributes

Function: Deallocates memory associated with the image attribute list.

90.21.51 DestroyImageList

Function: Destroys the image list and sets the handle to 0.
CHAPTER 90. IMAGE MAGICK

Notes:
For more details please check the ImageMagick documentation.
The destructor will call this for you if release=true.

90.21.52 DestroyImageProfiles

Function: Releases memory associated with an image profile map.

90.21.53 DistortImage(DistortImageMethod as Integer, values() as Double, best-fit as boolean) as IMImageQ8MBS

Function: DistortImage() distorts an image using various distortion methods, by mapping color lookups of
the source image to a new destination image usually of the same size as the source image, unless 'bestfit' is
set to true.
Notes:
If 'bestfit' is enabled, and distortion allows it, the destination image is adjusted to ensure the whole source
'image' will just fit within the final destination image, which will be sized and offset accordingly. Also in
many cases the virtual offset of the source image will be taken into account in the mapping.

If the '-verbose' control option has been set print to standard error the equivalent '-fx' formula with coeffi-
cients for the function, if practical.

A description of each parameter follows:
self: the image to be distorted.
m: the method of image distortion. ArcDistortion always ignores source image offset, and always 'bestfit' the
destination image with the top left corner offset relative to the polar mapping center. Affine, Perspective,
and Bilinear, do least squares fitting of the distortion when more than the minimum number of control point
pairs are provided. Perspective, and Bilinear, fall back to a Affine distortion when less than 4 control point
pairs are provided. While Affine distortions let you use any number of control point pairs, that is Zero
pairs is a No-Op (viewport only) distortion, one pair is a translation and two pairs of control points do a
scale-rotate-translate, without any shearing.
values: arguments given.
bestfit: Attempt to 'bestfit' the size of the resulting image. This also forces the resulting image to be a
'layered' virtual canvas image. Can be overridden using 'distort:viewport' setting.

Extra Controls from Image meta-data (artifacts)...

- "verbose" Output to stderr alternatives, internal coefficients, and FX equivalents for the distortion
operation (if feasible). This forms an extra check of the distortion method, and allows users access to the internal constants IM calculates for the distortion.

- "distort:viewport" Directly set the output image canvas area and offset to use for the resulting image, rather than use the original images canvas, or a calculated 'bestfit' canvas.

- "distort:scale" Scale the size of the output canvas by this amount to provide a method of Zooming, and for super-sampling the results.

Other settings that can effect results include

- 'interpolate' For source image lookups (scale enlargements)
- 'filter' Set filter to use for area-resampling (scale shrinking). Set to 'point' to turn off and use 'interpolate' lookup instead

### 90.21.54 Edge(radius as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Finds edges in an image.  
**Notes:**  
Radius defines the radius of the convolution filter. Use a radius of 0 and Edge selects a suitable radius for you.  
Sets the last exception property.

For more details please check the ImageMagick documentation.

### 90.21.55 Emboss(radius as Double, sigma as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Returns a grayscale image with a three-dimensional effect.  
**Notes:**  
We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and Emboss selects a suitable radius for you.  
Sets the last exception property.

For more details please check the ImageMagick documentation.
90.21.56 EncipherImage(passkey as string) as boolean

Function: Converts pixels to cipher-pixels.
Notes:
  passkey: encipher pixels with this passphrase.
  Returns true on success.

90.21.57 EqualizeImage as Boolean

Function: Applies a histogram equalization to the image.
Notes:
  Returns true on success or false on failure.
  ChannelType: The channels to use.

90.21.58 EqualizeImageChannel(ChannelType as Integer) as Boolean

Function: Applies a histogram equalization to the image.
Notes:
  Returns true on success or false on failure.
  ChannelType: The channels to use.

90.21.59 ExcerptImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS

Function: Returns a excerpt of the image as defined by the geometry.
Notes: Define the region of the image to extend with x, y, width, and height.
90.21. CLASS IMIMAGEQ8MBS

const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & hfffffff

90.21.60 ExtentImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS

**Function:** Extends the image as defined by the geometry, gravity, and image background color.
**Notes:**
Define the region of the image to extend with x, y, width, and height.
Set the (x,y) offset of the geometry to move the original image relative to the extended image.

90.21.61 FlattenImages as IMImageQ8MBS

**Function:** Flatten composites all images from the current image pointer to the end of the image list and returns a single flattened image.
**Notes:**
Returns nil on any error.
Sets the last exception property.

90.21.62 Flip as IMImageQ8MBS

**Function:** Flip creates a vertical mirror image by reflecting the pixels around the central x-axis.
**Notes:**
Returns nil on any error.
Sets the last exception property.
90.21.63  Flop as IMImageQ8MBS

Function: Flop creates a horizontal mirror image by reflecting the pixels around the central y-axis.
Notes: Returns nil on any error.
Sets the last exception property.

90.21.64  FrameImage(x as Integer, y as Integer, width as Integer, height as Integer, innerBevel as Integer, OuterBevel as Integer) as IMImageQ8MBS

Function: Adds a simulated three-dimensional border around the image.
Notes: The color of the border is defined by the MatteColor of image. Width and height specify the border
width of the vertical and horizontal sides of the frame. innerBevel and OuterBevel indicate the width of the
inner and outer shadows of the frame.

90.21.65  FxImage(expression as string) as IMImageQ8MBS

Function: FxImage() applies a mathematical expression to the specified image.
Notes: Can raise an exception.

90.21.66  GaussianBlurChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blurs an image.
Notes:
We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For
reasonable results, the radius should be larger than sigma. Use a radius of 0 and GaussianBlur selects a
suitable radius for you.
Sets the last exception property.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
channel: The channel type.
sigma: the standard deviation of the Gaussian, in pixels.

Constants for channel:

```cpp
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff
```

For more details please check the ImageMagick documentation.

**90.21.67 GetImageAttribute(key as string) as IMImageAttributeQ8MBS**

**Function:** GetImageAttribute searches the list of image attributes and returns a reference to the attribute if it exists otherwise nil.

**90.21.68 GetImageClippingPathAttribute as IMImageAttributeQ8MBS**

**Function:** GetImageClippingPathAttribute searches the list of image attributes and returns a reference to a clipping path if it exists otherwise nil.

**90.21.69 GetImageProfile(name as string) as string**

**Function:** Gets a profile associated with an image by name.  
**Notes:** Returns "" on any error.
CHAPTER 90. IMAGE MAGICK

90.21.70  GetNextImageAttribute as IMImageAttributeQ8MBS

Function: GetNextImageAttribute() gets the next image attribute.
Notes: Returns nil on any error.

90.21.71  GetNextImageProfile as string

Function: Gets the next profile name for an image.
Notes: Returns "" on any error.

90.21.72  HandleMemory as memoryblock

Function: The content of the whole Image structure copied into a memoryblock.
Notes: Returns nil on any error.

90.21.73  ImagesToBlob(info as IMImageInfoQ8MBS) as String

Function: ImagesToBlob implements direct to memory image formats.
Notes:
It returns the image sequence as a string. The magick member of the ImageInfo structure determines the
format of the returned blob ( GIF, JPEG, PNG, etc. )

Note, some image formats do not permit multiple images to the same image stream (e.g. JPEG). in this
instance, just the first image of the sequence is returned as a blob.

Sets the last exception property and returns "" on any error.
For more details please check the ImageMagick documentation.

90.21.74  ImageToBlob(info as IMImageInfoQ8MBS) as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: ImagesToBlob implements direct to memory image formats.
Example:
90.21. CLASS IMIMAGEQ8MBS

```vbs
15087

dim im as ImageMagickQ8MBS // global

Function IMPictureToString(p as picture, magick as string, quality as Integer) As string
    dim image as new IMImageQ8MBS
    dim imageinfo as IMImageInfoQ8MBS
    dim s,data as string
    dim impp as new IMMaggiockPixelPacketQ8MBS

    // empty string for nil picture
    if p = nil then
        Return ""
    end if

    // create a new picture info
    imageinfo = im.NewImageInfo
    imageinfo.ColorSpace=1
    // only color space is needed. 1 for RGB.

    // background color of image
    impp.red = 0
    impp.Green = 0
    impp.Blue = 0

    // creates a new image object
    if not image.NewImage(imageinfo,p.Width,p.Height,impp) then
        Return ""
    end if

    // copy RB picture into IM Image at position 0/0
    image.ColorSpace = 1
    image.SetPicture(p,0,0)

    // set compression data
    imageinfo.Magick = magick
    imageinfo.Quality = quality

    // and rendering intent: 2=PerceptualIntent
    image.RenderingIntent = 2

    // create image data
    data = image.ImageToBlob(imageinfo)

    // release memory
    image.DestroyImage
    imageinfo.DestroyImageInfo

    // return result
    Return data
End Function
```

Return data

Exception
   // in case of an exception return nothing
Return ""

End Function

Notes:

It returns the image sequence as a string. The magick member of the ImageInfo structure determines the format of the returned blob (GIF, JPEG, PNG, etc.).

Note, some image formats do not permit multiple images to the same image stream (e.g. JPEG). In this instance, just the first image of the sequence is returned as a blob.

Sets the last exception property and returns "" on any error.
For more details please check the ImageMagick documentation.

90.21.75 Implode(factor as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method ImplodeImage creates a new image that is a copy of an existing one with the image pixels "implode" by the specified percentage.
Notes:
   factor: A double value that defines the extent of the implosion.

Returns nil on any error.
Sets the last exception property.

90.21.76 IsBlobExempt as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the blob is exempt.
Notes: For more details please check the ImageMagick documentation.
90.21.77  IsBlobSeekable as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the blob is seekable.
Notes: For more details please check the ImageMagick documentation.

90.21.78  IsBlobTemporary as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the blob is temporary.
Notes: For more details please check the ImageMagick documentation.

90.21.79  Magnify as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A convenience method that scales an image proportionally to twice its size.
Notes:
Sets the last exception property.
For more details please check the ImageMagick documentation.

90.21.80  MedianFilter(radius as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies a digital filter that improves the quality of a noisy image.
Notes:
Each pixel is replaced by the median in a set of neighboring pixels as defined by radius.
Sets the last exception property.

For more details please check the ImageMagick documentation.

90.21.81  MergeImageLayers(ImageLayerMethod as Integer) as IMImageQ8MBS

Function: MergeImageLayers() composes all the image layers from the current given image onward to produce a single image of the merged layers.
Notes:
The initial canvas's size depends on the given ImageLayerMethod, and is initialized using the first images
images background color. The images are then composited onto that image in sequence using the given composition that has been assigned to each individual image.

ImageLayerMethod:
the method of selecting the size of the initial canvas.

MergeLayer: Merge all layers onto a canvas just large enough to hold all the actual images. The virtual canvas of the first image is preserved but otherwise ignored.

FlattenLayer: Use the virtual canvas size of first image. Images which fall outside this canvas is clipped. This can be used to 'fill out' a given virtual canvas.

MosaicLayer: Start with the virtual canvas of the first image, enlarging left and right edges to contain all images. Images with negative offsets will be clipped.

Can raise an exception.

90.21.82 Minify as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A convenience method that scales an image proportionally to half its size.
Notes:
Sets the last exception property.
For more details please check the ImageMagick documentation.

90.21.83 MosaicImages as IMImageQ8MBS

Function: MosaicImages inlays an image sequence to form a single coherent picture.
Notes:
It returns a single image with each image in the sequence composited at the location defined by the page member of the image structure.
Returns nil on any error.
Sets the last exception property.
90.21.84 MotionBlur(radius as Double, sigma as Double, angle as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Simulates motion blur.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and MotionBlur selects a suitable radius for you. Angle gives the angle of the blurring motion.
Sets the last exception property.

For more details please check the ImageMagick documentation.

90.21.85 NegateImage(gray as boolean = false) as Boolean

Function: Negates the colors in the reference image.
Notes:

Returns true on success or false on failure.
The grayscale option means that only grayscale values within the image are negated.

gray: If true, only negate grayscale pixels within the image.

90.21.86 NegateImageChannel(ChannelType as Integer, gray as boolean = false) as Boolean

Function: Negates the colors in the reference image.
Notes:

Returns true on success or false on failure.
The grayscale option means that only grayscale values within the image are negated.

ChannelType: The channels to use.
gray: If true, only negate grayscale pixels within the image.

Constants for channel:
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0002
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff

90.21.87 NewImage(info as IMImageInfoQ8MBS, width as Integer, height as Integer, background as IMMagickPixelPacketQ8MBS) as boolean

**Function:** Creates a new image.

**Example:**

```
dim im as ImageMagickQ8MBS // global
dim p as picture
dim imageinfo as IMImageInfoQ8MBS
dim image as IMImageQ8MBS
dim b as new IMMagickPixelPacketQ8MBS
b.Blue=65535
b.ColorSpace=1 // RGB
b.Depth=16

imageinfo = im.NewImageInfo
imageinfo.Depth=16
imageinfo.ColorSpace=1

//this should read any image IM understands
image = new IMImageQ8MBS
if image.NewImage(imageinfo,500,500,b) then
  p=NewPicture(300,300,32)
p.Graphics.ForeColor=Rgb(255,0,0)
p.Graphics.FillOval 0,0,300,300
image.SetPicture p,0,0
else
  MsgBox "failed"
end if
```
90.21. NormalizeImage as Boolean

**Function:** Enhances the contrast of a color image by mapping the darkest 2 percent of all pixel to black and the brightest 1 percent to white.

**Notes:** Returns true on success or false on failure.

90.21.89 NormalizeImageChannel(ChannelType as Integer) as Boolean

**Function:** Enhances the contrast of a color image by mapping the darkest 2 percent of all pixel to black and the brightest 1 percent to white.

**Notes:** Returns true on success or false on failure.

ChannelType: The channels to auto-level. If the special 'SyncChannels' flag is set the min/max/mean value of all given channels is used for all given channels, to all channels in the same way.

Constants for channel:

```plaintext
const UndefinedChannel    = 0
const RedChannel          = & h0001
const GrayChannel         = & h0001
const CyanChannel         = & h0001
const GreenChannel        = & h0002
const MagentaChannel      = & h0002
const BlueChannel         = & h0004
const YellowChannel       = & h0004
const AlphaChannel        = & h0008
const OpacityChannel      = & h0008
const BlackChannel        = & h0020
const IndexChannel        = & h0020
const AllChannels         = & h7fffffff
```
90.21.90 OilPaint(radius as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Method OilPaintImage creates a new image that is a copy of an existing one with each pixel component replaced with the color of greatest frequency in a circular neighborhood.

**Notes:**
- radius parameter: radius of the circular neighborhood.
- Returns nil on any error.
- Sets the last exception property.

90.21.91 OptimizeImageLayers as IMImageQ8MBS

**Function:** OptimizeImageLayers() compares each image the GIF disposed forms of the previous image in the sequence.

**Notes:**
- From this it attempts to select the smallest cropped image to replace each frame, while preserving the results of the GIF animation.

Can raise an exception.

90.21.92 OptimizeImageTransparency

**Function:** OptimizeImageTransparency() takes a frame optimized GIF animation, and compares the overlayed pixels against the disposal image resulting from all the previous frames in the animation.

**Notes:**
- Any pixel that does not change the disposal image (and thus does not effect the outcome of an overlay) is made transparent.

WARNING: This modifies the current images directly, rather than generate a new image sequence.

Can raise an exception.

90.21.93 OptimizePlusImageLayers as IMImageQ8MBS

**Function:** OptimizeImagePlusLayers() is exactly as OptimizeImageLayers(), but may also add or even re-
move extra frames in the animation, if it improves the total number of pixels in the resulting GIF animation.

**Notes:** Can raise an exception.

### 90.21.94 `ProfileImage(name as string, ProfileData as string) as boolean`

**Function:** Adds or removes a ICC, IPTC, or generic profile from an image.

**Notes:**
If the ProfileData is "", it is removed from the image otherwise added. Use a name of "*" and a ProfileData of "" to remove all profiles from the image.

Returns false on any error and true on success.

### 90.21.95 `RadialBlur(angle as Double) as IMImageQ8MBS`

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** RadialBlur applies a radial blur to the image.

**Notes:**
angle: The angle of the radial blur.

Sets the last exception property.
For more details please check the ImageMagick documentation.

### 90.21.96 `RaiseImage(x as Integer, y as Integer, width as Integer, height as Integer, raise as boolean) as boolean`

**Function:** Creates a simulated three-dimensional button-like effect by lightening and darkening the edges of the image.

**Notes:**
Width and height define the width of the vertical and horizontal edge of the effect.
raise: A value other than zero creates a 3-D raise effect, otherwise it has a lowered effect.
90.21.97 RandomThresholdChannel(channel as Integer, thresholds as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Changes the value of individual pixels based on the intensity of each pixel compared to a random threshold.

**Notes:**

The result is a low-contrast, two color image.

channel: The channel or channels to be thresholded.
thresholds: a geometry string containing low, high thresholds. If the string contains 2x2, 3x3, or 4x4, an ordered dither of order 2, 3, or 4 is performed instead. (ASCII string)

Sets the last exception property.

Constants for channel:

```c
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff
```

For more details please check the ImageMagick documentation.

90.21.98 ReduceNoise(radius as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Smooths the contours of an image while still preserving edge information.

**Notes:**

The algorithm works by replacing each pixel with its neighbor closest in value. A neighbor is defined by radius. Use a radius of 0 and ReduceNoise selects a suitable radius for you.
For more details please check the ImageMagick documentation.

### 90.21.99 RemoveDuplicateLayers

**Function:** Removes any image that is exactly the same as the next image in the given image list.

**Notes:**

Image size and virtual canvas offset must also match, though not the virtual canvas size itself.

No check is made with regards to image disposal setting, though it is the dispose setting of later image that is kept. Also any time delays are also added together. As such coalesced image animations should still produce the same result, though with duplicate frames merged into a single frame.

---

### 90.21.100 RemoveFirstImageFromList as IMImageQ8MBS

**Function:** Removes the first image from the image list and returns the image.

**Notes:**

Returns nil on any error.

For more details please check the ImageMagick documentation.

---

### 90.21.101 RemoveImageProfile(name as string) as string

**Function:** Removes a profile from the image-map by its name.

---

### 90.21.102 RemoveZeroDelayLayers

**Function:** Removes any image that as a zero delay time.

**Notes:**

Such images generally represent intermediate or partial updates in GIF animations used for file optimization. They are not ment to be displayed to users of the animation. Viewable images in an animation should have a time delay of 3 or more centi-seconds (hundredths of a second).

However if all the frames have a zero time delay, then either the animation is as yet incomplete, or it is not a GIF animation. This is a non-sensible situation, so no image will be removed and a 'Zero Time Animation'
warning (exception) given.

No warning will be given if no image was removed because all images had an appropriate non-zero time delay set.

Due to the special requirements of GIF disposal handling, GIF animations should be coalesced first, before calling this function, though that is not a requirement.
90.21. **CLASS IMIMAGEQ8MBS**

90.21.103 **ResetImageAttributeIterator**

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** ResetImageAttributeIterator() resets the image attributes iterator. **Notes:** Use it in conjunction with GetNextImageAttribute() to iterate over all the values associated with an image.

90.21.104 **ResetImageProfileIterator**

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Resets the image profile iterator. **Notes:** Use it in conjunction with GetNextImageProfile() to iterate over all the profiles associated with an image.

90.21.105 **Resize(width as Integer, height as Integer, FilterID as Integer, blur as Double) as IMImageQ8MBS**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Scales an image to the desired dimensions. **Notes:**

Constants for the FilterID:

```plaintext
const PointFilter = 1
const BoxFilter = 2
const TriangleFilter = 3
const HermiteFilter = 4
const HanningFilter = 5
const HammingFilter = 6
const BlackmanFilter = 7
const GaussianFilter = 8
const QuadraticFilter = 9
const CubicFilter = 10
const CatromFilter = 11
const MitchellFilter = 12
const LanczosFilter = 13
const BesselFilter = 14
const SincFilter = 15
```

Most of the filters are FIR (finite impulse response), however, Bessel, Gaussian, and Sinc are IIR (infinite impulse response). Bessel and Sinc are windowed (brought down to zero) with the Blackman filter.
Sets the last exception property.

90.21.106  RGBTransformImage(Colorsaspace as Integer) as boolean

Function: Method RGBTransformImage converts the reference image from RGB to an alternate colorspace.

Notes:

The transformation matrices are not the standard ones: the weights are rescaled to normalized the range of the transformed values to be \([0..\text{MaxRGB}]\).

colorsaspace: An integer value that indicates which colorspace to transform the image.

Returns false on any error and true on success.

constants:

- UndefinedColorsaspace 0
- RGBColorsaspace 1
- GRAYColorsaspace 2
- TransparentColorsaspace 3
- OHTAColorsaspace 4
- LABColorsaspace 5
- XYZColorsaspace 6
- YCbCrColorsaspace 7
- YCCColorsaspace 8
- YIQColorsaspace 9
- YPbPrColorsaspace 10
- YUVColorsaspace 11
- CMYKColorsaspace 12
- sRGBColorsaspace 13
- HSBColorsaspace 14
- HSLColorsaspace 15
- HWBColorsaspace 16

90.21.107  Roll(x as Integer, y as Integer) as IMImageQ8MBS

Function: Roll offsets an image as defined by \(x\) and \(y\).

Notes:
Returns nil on any error.
Sets the last exception property.

90.21.108  Rotate(degrees as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Rotation of an image.
Notes:
Method RotateImage creates a new image that is a rotated copy of an existing one. Positive angles rotate counter-clockwise (right-hand rule), while negative angles rotate clockwise. Rotated images are usually larger than the originals and have 'empty' triangular corners. X axis. Empty triangles left over from shearing the image are filled with the color specified by the image background color. RotateImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Method RotateImage is based on the paper "A Fast Algorithm for General Raster Rotatation" by Alan W. Paeth. RotateImage is adapted from a similar method based on the Paeth paper written by Michael Halle of the Spatial Imaging Group, MIT Media Lab.

degrees: Specifies the number of degrees to rotate the image.

Sets the last exception property.
Returns nil on low memory.
For more details please check the ImageMagick documentation.

90.21.109  Sample(width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scales an image to the desired dimensions with pixel sampling.
Notes:
Unlike other scaling methods, this method does not introduce any additional color into the scaled image.
For more details please check the ImageMagick documentation.
Sets the last exception property.

90.21.110  Scale(width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the size of an image to the given dimensions.
Example:
dim image as IMImageQ8MBS // your image
image=Image.Scale(100,80)

**Notes:**
This method was designed by Bob Friesenhahn as a low cost thumbnail generator.

columns: The number of columns in the scaled image.
rows: The number of rows in the scaled image.

Sets the last exception property.
For more details please check the ImageMagick documentation.

### 90.21.111 SetImageAttribute(key as string, value as string) as boolean

**MBS GraphicsMagick Plugin, Plugin Version:** 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** SetImageAttribute searches the list of image attributes and replaces the attribute value.
**Notes:** If it is not found in the list, the attribute name and value is added to the list. If the attribute exists in the list, the value is concatenated to the attribute. SetImageAttribute returns True if the attribute is successfully concatenated or added to the list, otherwise False. If the value is "", the matching key is deleted from the list.

### 90.21.112 SetImageColorspace(Colorspace as Integer) as boolean

**MBS GraphicsMagick Plugin, Plugin Version:** 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Sets the colorspace member of the Image structure.
**Notes:** Returns false on any error and true on success.

### 90.21.113 SetImageProfile(name as string, ProfileData as string) as boolean

**MBS GraphicsMagick Plugin, Plugin Version:** 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Adds a named profile to the image.
**Notes:**
If a profile with the same name already exists, it is replaced. This method differs from the ProfileImage() method in that it does not apply CMS color profiles.

name: The profile name.
profiledata: The binary data of the profile.
Returns false on any error and true on success.

### 90.21.114 SetPicture(pic as picture, x as Integer, y as Integer)

**Function:** Copies the pixels from a given Realbasic picture into the Image Magick Image at the given location.
**Example:**

```xbasic
dim image as IMImageQ8MBS // your image
dim p as picture

p=NewPicture(32,32,32)
p.Graphics.ForeColor=rgb(0,255,0)
p.Graphics.FillRect 0,0,32,32

image.SetPicture(p,30,30)
```

**Notes:**
- Sets the last exception property.
- The method will do nothing on bad bounds.
- This method works only for bitmap images.
- x and y are zero based.

### 90.21.115 SetPictureMask(maskpic as picture, x as Integer, y as Integer)

**Function:** Copies the pixels from a given Realbasic picture into the mask of the Image Magick Image at the given location.
**Example:**

```xbasic
dim i as IMImageQ8MBS // your image
dim p as picture

p=NewPicture(32,32,32)
p.Graphics.ForeColor=rgb(0,255,0)
p.Graphics.FillRect 0,0,32,32

i.SetPictureMask(p,30,30)
```
Notes:
Sets the last exception property.
The method will do nothing on bad bounds.
This method works only for bitmap images.
x and y are zero based.
You may need to set matte=True after this.

90.21.116  SetPixel(x as Integer, y as Integer, newPixel as IMColorQ8MBS)

Function: Sets a pixel value.
Example:

dim image as IMImageQ8MBS // your image
dim co as IMColorQ8MBS

go=New IMColorQ8MBS
co.blue=65535 // max value
image.SetPixel 50,50,co // Makes Pixel 50/50 blue

Notes:
The method will fail silently if the values are out of bounds or the image is not a bitmap image.
This method works only for bitmap images.
x and y are zero based.

90.21.117  Shade(gray as boolean, azimuth as Double, elevation as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Shines a distant light on an image to create a three-dimensional effect.
Notes:
You control the positioning of the light with azimuth and elevation; azimuth is measured in degrees off the
x axis and elevation is measured in pixels above the Z axis.
Sets the last exception property.

For more details please check the ImageMagick documentation.
90.21.118  **SharpenChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ8MBS**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Sharpens one or more image channels.  
**Notes:**
We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and Sharpen selects a suitable radius for you.

channel: The channel type.  
radius: The radius of the Gaussian, in pixels, not counting the center pixel.  
sigma: The standard deviation of the Laplacian, in pixels.

Constants for channel:

```plaintext
const UndefinedChannel  = 0
const RedChannel        = & h0001
const GrayChannel       = & h0001
const CyanChannel       = & h0001
const GreenChannel      = & h0002
const MagentaChannel    = & h0002
const BlueChannel       = & h0004
const YellowChannel     = & h0004
const AlphaChannel      = & h0008
const OpacityChannel    = & h0008
const BlackChannel      = & h0020
const IndexChannel      = & h0020
const AllChannels       = & h7fffffff
```

Sets the last exception property.  
For more details please check the ImageMagick documentation.

90.21.119  **Shave(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS**

**Function:** Shave shaves pixels from the image edges.  
**Notes:**
It allocates the memory necessary for the new Image structure and returns a pointer to the new image.  
Returns nil on any error.
Sets the last exception property.

90.21.120  **Shear(Xshear as Double, Yshear as Double) as IMImageQ8MBS**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Method ShearImage creates a new image that is a shear image copy of an existing one.

**Notes:**

Shearing slides one edge of an image along the X or Y axis, creating a parallelogram. An X direction shear slides an edge along the X axis, while a Y direction shear slides an edge along the Y axis. The amount of the shear is controlled by a shear angle. For X direction shears, x shear is measured relative to the Y axis, and similarly, for Y direction shears y shear is measured relative to the X axis. Empty triangles left over from shearing the image are filled with the color defined by the pixel at location (0,0). ShearImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Xshear and YYshear specify the number of degrees to shear the image.

Sets the last exception property.

For more details please check the ImageMagick documentation.

90.21.121  **Solarize(factor as Double) as boolean**

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Method SolarizeImage produces a 'solarization' effect seen when exposing a photographic film to light during the development process.

**Notes:**

factor: An double value that defines the extent of the solarization.

Returns nil on any error.

Sets the last exception property.

90.21.122  **Splice(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS**

**Function:** Splice splices a solid color into the image as defined by the geometry.

**Notes:**

Returns nil on any error.

Sets the last exception property.
90.21.123  **Spread(radius as Double) as IMImageQ8MBS**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** This is a special effects method that randomly displaces each pixel in a block defined by the radius parameter.

**Notes:**

radius: Choose a random pixel in a neighborhood of this extent.
Sets the last exception property.

For more details please check the ImageMagick documentation.

---

90.21.124  **Stegano(watermarkImage as IMImageQ8MBS) as IMImageQ8MBS**

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Method SteganoImage hides a digital watermark within the image.

**Notes:**

Returns nil on any error.
Sets the last exception property.

---

90.21.125  **Stereo(otherImage as IMImageQ8MBS) as IMImageQ8MBS**

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** Method StereoImage combines two images and produces a single image that is the composite of a left and right image of a stereo pair.

**Notes:**

The left image is converted to gray scale and written to the red channel of the stereo image. The right image is converted to gray scale and written to the blue channel of the stereo image. View the composite image with red-blue glasses to create a stereo effect.

left image = self
right image = otherImage parameter

Returns nil on any error.
Sets the last exception property.
90.21.126  **Swirl(degrees as Double) as IMImageQ8MBS**

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Method SwirlImage creates a new image that is a copy of an existing one with the image pixels "swirl" at a specified angle.
**Notes:**
- degrees: An double value that defines the tightness of the swirling.
- Returns nil on any error.
- Sets the last exception property.

90.21.127  **Thumbnail(width as Integer, height as Integer) as IMImageQ8MBS**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Changes the size of an image to the given dimensions.
**Notes:**
- Sets the last exception property.
- This method was designed by Bob Friesenhahn as a low cost thumbnail generator.
- For more details please check the ImageMagick documentation.

90.21.128  **TransformImage(CropGeometry as string, ImageGeometry as string) as boolean**

**Function:** TransformImage() is a convenience method that behaves like ResizeImage() or CropImage() but accepts scaling and/or cropping information as a region geometry specification. If the operation fails, the original image handle is left as is.
**Notes:**
- This should only be used for single images.
- CropGeometry: A crop geometry string. This geometry defines a subregion of the image to crop.
- ImageGeometry: An image geometry string. This geometry defines the final size of the image.
- Returns true on success.
90.21.129  TransformImages(CropGeometry as string, ImageGeometry as string) as boolean

Function: TransformImages() calls TransformImage() on each image of a sequence.

Notes:

TransformImage() is a convenience method that behaves like ResizeImage() or CropImage() but accepts scaling and/or cropping information as a region geometry specification. If the operation fails, the original image handle is left as is.

CropGeometry: A crop geometry string. This geometry defines a subregion of the image to crop.
ImageGeometry: An image geometry string. This geometry defines the final size of the image.

Returns true on success.

90.21.130  TransformRGBImage(Colorspace as Integer) as boolean

Function: Method TransformRGBImage converts the reference image from an alternate colorspace.

Notes:

The transformation matrices are not the standard ones: the weights are rescaled to normalized the range of the transformed values to be \([0..\text{MaxRGB}]\).

colorspace: An integer value that indicates the colorspace the image is currently in. On return the image is in the RGB color space.

Returns false on any error and true on success.

constants:

90.21.131  TransposeImage as IMImageQ8MBS

Function: TransposeImage() creates a horizontal mirror image by reflecting the pixels around the central y-axis while rotating them by 90 degrees.
CHAPTER 90. IMAGE MAGICK

UndefinedColorspace 0
RGBColorspace 1
GRAYColorspace 2
TransparentColorspace 3
OHTAColorspace 4
LABColorspace 5
XYZColorspace 6
YCbCrColorspace 7
YCCColorspace 8
YIQColorspace 9
YPbPrColorspace 10
YUVColorspace 11
CMYKColorspace 12
sRGBColorspace 13
HSBColorspace 14
HSLColorspace 15
HWBColorspace 16

90.21.132 TransverseImage as IMImageQ8MBS

Function: TransverseImage() creates a vertical mirror image by reflecting the pixels around the central x-axis while rotating them by 270 degrees.

90.21.133 Trim as IMImageQ8MBS

Function: Trim trims pixels from the image edges.
Notes:
It allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Returns nil on any error.
Sets the last exception property.

90.21.134 UnsharpMaskChannel(channel as Integer, radius as Double, sigma as Double, amount as Double, threshold as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sharpens one or more image channels.
Notes:
We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and UnsharpMask selects a suitable radius for you.

Constants for channel:

```plaintext
const UndefinedChannel  = 0
const RedChannel        = & h0001
const GrayChannel       = & h0001
const CyanChannel       = & h0001
const GreenChannel      = & h0002
const MagentaChannel    = & h0002
const BlueChannel       = & h0004
const YellowChannel     = & h0004
const AlphaChannel      = & h0008
const OpacityChannel    = & h0008
const BlackChannel      = & h0020
const IndexChannel      = & h0020
const AllChannels       = & h7fffffff
```

Sets the last exception property.
For more details please check the ImageMagick documentation.

**90.21.135 Wave(amplitude as Double, wavelength as Double) as IMImageQ8MBS**

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Method Wave creates a new image that is a copy of an existing one with the image pixels altered along a sine wave.
**Notes:**
Parameters are double values that indicates the amplitude and wavelength of the sine wave.
Returns nil on any error.
Sets the last exception property.

**90.21.136 WhiteThreshold(threshold as string) as boolean**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** WhiteThreshold is like Threshold but forces all pixels above the threshold into white while leaving all pixels below the threshold unchanged.
**Notes:**
No exceptions are generated.
threshold: Define the threshold value. (ASCII string)
For more details please check the ImageMagick documentation.

90.21.137 WriteImage(info as IMImageInfoQ8MBS) as boolean

Function: Method WriteImage writes an image to a file as defined by image.filename.
Notes:
You can specify a particular image format by prefixing the file with the image type and a colon (i.e. ps:image)
or specify the image type as the filename suffix (i.e. image.ps). The image may be modified to adapt it to the
requirements of the image format. For example, DirectClass images must be color-reduced to PseudoClass
if the format is GIF.

WriteImage returns True if the image is written. False is returned if there is a memory shortage or if the
image file fails to write.

90.21.138 Properties

90.21.139 BackgroundColor as IMColorQ8MBS

Function: Image background color.
Notes: (Read and Write property)

90.21.140 Bias as Double

Function: An undocumented property.
Notes: (Read and Write property)

90.21.141 BlurFactor as Double

Function: Blur factor to apply to the image when zooming. Default is 1.0 (no blur).
Notes: (Read and Write property)
90.21. **CLASS IMIMAGEQ8MBS**

90.21.142 **BorderColor as IMColorQ8MBS**

**Function:** Image border color.
**Notes:** (Read and Write property)

90.21.143 **Colors as Integer**

**Function:** The desired number of colors.
**Notes:**
Used by Quantize().
(Read and Write property)

90.21.144 **ColorSpace as Integer**

**Function:** Image pixel interpretation.
**Notes:**
If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

**constants:**

(Read and Write property)

90.21.145 **Compression as Integer**

**Function:** Image compression type.
**Notes:**
useful constants:

The default is the compression type of the specified image file.
For more details please check the ImageMagick documentation.
(Read and Write property)
UndefinedColorspace 0
RGBColorspace 1
GRAYColorspace 2
TransparentColorspace 3
OHTAColorspace 4
LABColorspace 5
XYZColorspace 6
YCbCrColorspace 7
YCCColorspace 8
YIQColorspace 9
YPbPrColorspace 10
YUVColorspace 11
CMYKColorspace 12
sRGBColorspace 13
HSBColorspace 14
HSLColorspace 15
HWBColorspace 16

const UndefinedCompression = 0
const NoCompression = 1
const BZipCompression = 2
const FaxCompression = 3
const Group4Compression = 4
const JPEGCompression = 5
const LosslessJPEGCompression = 6
const LZWCompression = 7
const RLECompression = 8
const ZipCompression = 9

90.21.146  Depth as Integer

Function: Image depth (8 or 16).
Notes:
QuantumLeap must be defined before a depth of 16 is valid.
(Read and Write property)

90.21.147  Directory as String

Function: Tile names from within an image montage.
Notes:
Only valid after calling MontageImages() or reading a MIFF file which contains a directory.
90.21.148  Endian as Integer

**Function:** The endian setting to use.
**Notes:**

constants:

- UndefinedEndian  0
- LSBEndian        1  (Windows)
- MSBEndian        2  (Mac)

E.g. tiff files support different endian settings.
(Read and Write property)

90.21.149  Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The file path/name.
**Notes:**

The string must be in the encoding of the library and is limited to 4000 bytes.
For more details please check the ImageMagick documentation.
(Read and Write property)

90.21.150  Filter as Integer

**Function:** Filter to use when resizing image.
**Notes:**

Constants:

The reduction filter employed has a significant effect on the time required to resize an image and the resulting quality. The default filter is Lanczos which has been shown to produce high quality results when reducing most images.
(Read and Write property)
const PointFilter = 1
const BoxFilter = 2
const TriangleFilter = 3
const HermiteFilter = 4
const HanningFilter = 5
const HammingFilter = 6
const BlackmanFilter = 7
const GaussianFilter = 8
const QuadraticFilter = 9
const CubicFilter = 10
const CatromFilter = 11
const MitchellFilter = 12
const LanczosFilter = 13
const BesselFilter = 14
const SincFilter = 15

90.21.151  Fuzz as Double

Function: Colors within this distance are considered equal.
Notes:
A number of algorithms search for a target color. By default the color must be exact. Use this to match
colors that are close to the target color in RGB space.
(Read and Write property)

90.21.152  Gamma as Double

Function: Gamma level of the image.
Notes:
The same color image displayed on two different workstations may look different due to differences in the
display monitor. Use gamma correction to adjust for this color difference.
(Read and Write property)

90.21.153  Geometry as String

Function: Preferred size of the image when encoding.
Notes: (Read and Write property)
90.21.154  Gravity as Integer

**Function:** An undocumented property.  
**Notes:** (Read and Write property)

90.21.155  Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The handle used internally by the plugin.  
**Notes:**  
A pointer to an Image structure.  
For more details please check the ImageMagick documentation.  
(Read and Write property)

90.21.156  Height as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The height of the image in pixels.  
**Notes:**  
For more details please check the ImageMagick documentation.  
(Read and Write property)

90.21.157  Interlace as Integer

**Function:** The type of interlacing scheme (default NoInterlace).  
**Notes:**  
This option is used to specify the type of interlacing scheme for raw image formats such as RGB or YUV.  
NoInterlace means do not interlace, LineInterlace uses scanline interlacing, and PlaneInterlace uses plane interlacing.  
PartitionInterlace is like PlaneInterlace except the different planes are saved to individual files (e.g. image.R, image.G, and image.B).  
Use LineInterlace or PlaneInterlace to create an interlaced GIF or progressive JPEG image.  

constants:

(Read and Write property)
UndefinedInterlace 0  Unset value.
NoInterlace 1  Don't interlace image (RGBRGBRGBRGBRGBRGBRGB...
LineInterlace 2  Use scanline interlacing (RRRRGGGGBBBBBBRRRRGGGGBBBBBB...
PlaneInterlace 3  Use plane interlacing (RRRRRRGGGGGGBBBBBB...
PartitionInterlace 4  Similar to plane interlacing except that the different planes are saved to individual files (e.g. image.R, image.G, and image.B)

90.21.158 LastError as Integer

Function: The last error code reported.
Notes:
If an exception is raised and it is not a warning exception, this exception code is saved in this property.
(Read and Write property)

90.21.159 LastException as IMExceptionQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last exception thrown by the Image Magick library.
Notes:
You should check this value after every call to the library, process the error and set the property to nil.
For more details please check the ImageMagick documentation.
(Read and Write property)

90.21.160 Magick as String

Function: Image encoding format (e.g. "GIF").
Notes: (Read and Write property)

90.21.161 Matte as Boolean

Function: Whether an alpha channel is used/present.
Notes:
Set to true to enable masks.
90.21. CLASS IMAGEMBS
(Read and Write property)

90.21.162 MatteColor as IMColorQ8MBS
Function: Image matte (transparent) color.
Notes: (Read and Write property)

90.21.163 Montage as String
Function: Tile size and offset within an image montage. Only valid for montage images.
Notes: (Read and Write property)

90.21.164 Offset as Integer
Function: Number of initial bytes to skip over when reading raw image.
Notes: (Read and Write property)

90.21.165 Orientation as Integer
Function: The image orientation.
Notes:

constants:

const UndefinedOrientation = 0
const TopLeftOrientation = 1
const TopRightOrientation = 2
const BottomRightOrientation = 3
const BottomLeftOrientation = 4
const LeftTopOrientation = 5
const RightTopOrientation = 6
const RightBottomOrientation = 7
const LeftBottomOrientation = 8
For more details please check the ImageMagick documentation. (Read and Write property)

90.21.166 Quality as Integer

Function: JPEG/MIFF/PNG compression level.
Example:

```vba
dim im as ImageMagickQ8MBS // global

Function TestJPEG(f as folderitem) As picture
   // Reads an image, compresses in memory to JPEG, decompresses using JPEGLib and returns the image
   // if quality setting works, you see it in the result.
   // no error checking included!
   // needs: im as ImageMagickQ8MBS ready initialized

dim image as IMImageQ8MBS
dim imageinfo as IMImageInfoQ8MBS
dim s,blob as string
dim p as Picture
dim i as Integer

if f = nil then
   Return nil
end if

imageinfo = im.NewImageInfo

# if TargetWin32 then //do not use shellpath, if spaces, IM doesn't like escaped paths

Exception
Return nil
End Function

Notes:

Default value is 75.
(Read and Write property)

90.21.167  Release as Boolean

Function: If true, the destructor will release the handle.
Notes: (Read and Write property)

90.21.168  RenderingIntent as Integer

Function: The rendering intent to use.
Notes:

constants:

(Read and Write property)
UndefinedIntent  0
SaturationIntent  1
PerceptualIntent  2
AbsoluteIntent   3
RelativeIntent   4

90.21.169  ResolutionUnits as Integer

Function: Units of image resolution.
Notes:

constants:

UndefinedResolution  0  Unset value.
PixelsPerInchResolution  1  Density specifications are specified in units of pixels per inch (English units).
PixelsPerCentimeterResolution  2  Density specifications are specified in units of pixels per centimeter (metric units).

(Read and Write property)

90.21.170  ResolutionX as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The horizontal resolution of the image.
Notes:
The unit for resolution must be specified.
For more details please check the ImageMagick documentation.
(Read and Write property)

90.21.171  ResolutionY as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The vertical resolution of the image.
Notes:
The unit for resolution must be specified.
For more details please check the ImageMagick documentation.
90.21.172  Scene as Integer

Function: An undocumented property.
Notes: (Read and Write property)

90.21.173  StorageClass as Integer

Function: Image storage class.
Notes:
If DirectClass then the image packets contain valid RGB or CMYK colors. If PseudoClass then the image has a colormap referenced by pixel's index member.

constants:

<table>
<thead>
<tr>
<th>Constant</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UndefinedClass</td>
<td>0</td>
<td>Unset value.</td>
</tr>
<tr>
<td>DirectClass</td>
<td>1</td>
<td>Image is composed of pixels which represent literal color values.</td>
</tr>
<tr>
<td>PseudoClass</td>
<td>2</td>
<td>Image is composed of pixels which specify an index in a color palette.</td>
</tr>
</tbody>
</table>

(Read and Write property)

90.21.174  Taint as Boolean

Function: Set to True if the image pixels have been modified.
Notes: (Read and Write property)

90.21.175  Width as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The width of the image in pixels.
Notes:
CHAPTER 90. IMAGE MAGICK

90.22.1 **class IMMagickInfoListQ16MBS**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The class with the list of the image formats supported in Image Magick.
**Notes:** For more details please check the ImageMagick documentation.

90.22.2 **Methods**

90.22.3 **Item(index as Integer) as IMMagickInfoQ16MBS**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The items inside this list.
**Notes:**
Index goes from 0 to count-1.
Returns nil on invalid index.

90.22.4 **Properties**

90.22.5 **Count as Integer**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The number of items.
**Notes:**
Index goes from 0 to count-1.
(Read only property)

90.22.6 **Handle as Integer**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The handle used internally by the plugin.
**Notes:**
A pointer to a MagickInfo list.
For more details please check the ImageMagick documentation.
(Read only property)
90.23 class IMMagickInfoListQ32MBS

90.23.1 class IMMagickInfoListQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class with the list of the image formats supported in Image Magick.
Notes: For more details please check the ImageMagick documentation.

90.23.2 Methods

90.23.3 Item(index as Integer) as IMMagickInfoQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The items inside this list.
Notes:
Index goes from 0 to count-1.
Returns nil on invalid index.

90.23.4 Properties

90.23.5 Count as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The number of items.
Notes:
Index goes from 0 to count-1.
(Read only property)

90.23.6 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The handle used internally by the plugin.
Notes:
A pointer to a MagickInfo list.
For more details please check the ImageMagick documentation.
(Read only property)
90.24. class IMMagickInfoListQ8MBS

90.24.1 class IMMagickInfoListQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The class with the list of the image formats supported in Image Magick.
**Notes:** For more details please check the ImageMagick documentation.

90.24.2 Methods

90.24.3 Item(index as Integer) as IMMagickInfoQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The items inside this list.
**Notes:**
Index goes from 0 to count-1.
Returns nil on invalid index.

90.24.4 Properties

90.24.5 Count as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The number of items.
**Notes:**
Index goes from 0 to count-1.
(Read only property)

90.24.6 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The handle used internally by the plugin.
**Notes:**
A pointer to a MagickInfo list.
For more details please check the ImageMagick documentation.
(Read only property)
**90.25  class IMMagickInfoQ16MBS**

**90.25.1  class IMMagickInfoQ16MBS**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** A class for information about a file import/export format Image Magick can handle.
**Notes:** For more details please check the ImageMagick documentation.

**90.25.2  Methods**

**90.25.3  Close**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The destructor.
**Notes:**
There is no need to call this method except you want to free all resources used by this object now without waiting for Realbasic to do it for you.
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

**90.25.4  Properties**

**90.25.5  Adjoin as Boolean**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** True if this file format supports multi-frame images.
**Notes:**
For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

**90.25.6  BlobSupport as Boolean**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** True if the encoder and decoder for this format supports operating on arbitrary BLOBs (rather than only disk files).
**Notes:**
As currently disc read/write does not work with the 5.1 plugins, we really need that to use the classes.
Returns false for an invalid MagickInfo (handle=0).
90.25. **CLASS IMMAKICKINFOQ16MBS**

For more details please check the ImageMagick documentation.
(Read only property)

### 90.25.7 Description as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Long form image format description (e.g. "CompuServe graphics interchange format").
**Notes:**
For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

### 90.25.8 EndianSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Whether endian support is available.
**Notes:**
For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

### 90.25.9 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** The handle used internally by the plugin.
**Notes:**
A pointer to a MagickInfo structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

### 90.25.10 ModuleName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Name of module (e.g. "GIF") which registered this format.
**Notes:**
Value is "" if format is not registered by a module.
For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

90.25.11 Name as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Magick string (e.g. "GIF") which identifies this format.
Notes:
For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

90.25.12 Note as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Additional notes for this format.
Notes:
e.g. compilation parameters or copyright notices.
Returns "" for an invalid MagickInfo (handle=0).
For more details please check the ImageMagick documentation.
(Read only property)

90.25.13 Raw as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if Image format does not contain size (must be specified in ImageInfo).
Notes:
Returns false for an invalid MagickInfo (handle=0).
For more details please check the ImageMagick documentation.
(Read only property)

90.25.14 SeekableStream as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns True if the magick supports a seekable stream.
Notes:
For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

90.25.15 **Stealth as Boolean**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Unknown.
**Notes:**
For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

90.25.16 **ThreadSupport as Boolean**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** True if threading is supported.
**Notes:**
For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

90.25.17 **Version as String**

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Version string.
**Notes:**
For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)
CHAPTER 90. IMAGE MAGICK

90.26 class IMMagickInfoQ32MBS

90.26.1 class IMMagickInfoQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for information about a file import/export format Image Magick can handle.
Notes: For more details please check the ImageMagick documentation.

90.26.2 Methods

90.26.3 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Realbasic to do it for you.
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

90.26.4 Properties

90.26.5 Adjoin as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if this file format supports multi-frame images.
Notes: For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

90.26.6 BlobSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if the encoder and decoder for this format supports operating on arbitrary BLOBs (rather than only disk files).
Notes: As currently disc read/write does not work with the 5.1 plugins, we really need that to use the classes.
Returns false for an invalid MagickInfo (handle=0).
For more details please check the ImageMagick documentation. (Read only property)

90.26.7 Description as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Long form image format description (e.g. "CompuServe graphics interchange format").
Notes:
For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

90.26.8 EndianSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether endian support is available.
Notes:
For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

90.26.9 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The handle used internally by the plugin.
Notes:
A pointer to a MagickInfo structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

90.26.10 ModuleName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Name of module (e.g. "GIF") which registered this format.
Notes:
Value is "" if format is not registered by a module.
For more details please check the ImageMagick documentation.
90.26.11 Name as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Magick string (e.g. "GIF") which identifies this format.
Notes: For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

90.26.12 Note as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Additional notes for this format.
Notes: e.g. compilation parameters or copyright notices.
Returns "" for an invalid MagickInfo (handle=0).
For more details please check the ImageMagick documentation.
(Read only property)

90.26.13 Raw as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if Image format does not contain size (must be specified in ImageInfo).
Notes: Returns false for an invalid MagickInfo (handle=0).
For more details please check the ImageMagick documentation.
(Read only property)

90.26.14 SeekableStream as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns True if the magick supports a seekable stream.
Notes:
For more details please check the ImageMagick documentation. Returns false for an invalid MagickInfo (handle=0). (Read only property)

### 90.26.15 Stealth as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unknown. **Notes:** For more details please check the ImageMagick documentation. Returns false for an invalid MagickInfo (handle=0). (Read only property)

### 90.26.16 ThreadSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if threading is supported. **Notes:** For more details please check the ImageMagick documentation. Returns false for an invalid MagickInfo (handle=0). (Read only property)

### 90.26.17 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Version string. **Notes:** For more details please check the ImageMagick documentation. Returns "" for an invalid MagickInfo (handle=0). (Read only property)
90.27 class IMMagickInfoQ8MBS

90.27.1 class IMMagickInfoQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** A class for information about a file import/export format Image Magick can handle.

**Notes:** For more details please check the ImageMagick documentation.

90.27.2 Methods

90.27.3 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** The destructor.

**Notes:**

There is no need to call this method except you want to free all resources used by this object now without waiting for Realbasic to do it for you.

(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

90.27.4 Properties

90.27.5 Adjoin as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** True if this file format supports multi-frame images.

**Notes:**

For more details please check the ImageMagick documentation.

Returns false for an invalid MagickInfo (handle=0).

(Read only property)

90.27.6 BlobSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.

**Function:** True if the encoder and decoder for this format supports operating on arbitrary BLOBs (rather than only disk files).

**Notes:**

As currently disc read/write does not work with the 5.1 plugins, we really need that to use the classes.

Returns false for an invalid MagickInfo (handle=0).
For more details please check the ImageMagick documentation.
(Read only property)

90.27.7 Description as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Long form image format description (e.g. ”CompuServe graphics interchange format”).  
**Notes:**  
For more details please check the ImageMagick documentation.  
Returns ”” for an invalid MagickInfo (handle=0).  
(Read only property)

90.27.8 EndianSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Whether endian support is available.  
**Notes:**  
For more details please check the ImageMagick documentation.  
Returns false for an invalid MagickInfo (handle=0).  
(Read only property)

90.27.9 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The handle used internally by the plugin.  
**Notes:**  
A pointer to a MagickInfo structure.  
For more details please check the ImageMagick documentation.  
(Read and Write property)

90.27.10 ModuleName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** Name of module (e.g. ”GIF”) which registered this format.  
**Notes:**  
Value is ”” if format is not registered by a module.  
For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

### 90.27.11 Name as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Magick string (e.g. "GIF") which identifies this format.
**Notes:**
For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

### 90.27.12 Note as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Additional notes for this format.
**Notes:**
e.g. compilation parameters or copyright notices.
Returns "" for an invalid MagickInfo (handle=0).
For more details please check the ImageMagick documentation.
(Read only property)

### 90.27.13 Raw as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** True if Image format does not contain size (must be specified in ImageInfo).
**Notes:**
Returns false for an invalid MagickInfo (handle=0).
For more details please check the ImageMagick documentation.
(Read only property)

### 90.27.14 SeekableStream as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Returns True if the magick supports a seekable stream.
**Notes:**
For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

### 90.27.15 Stealth as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Unknown.
**Notes:**
For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

### 90.27.16 ThreadSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** True if threading is supported.
**Notes:**
For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

### 90.27.17 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Version string.
**Notes:**
For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)
class IMMagickPixelPacketQ16MBS

Function: The class to describe a picture background.
Notes: Needed for IMImageQ16MBS.NewImage function.

Methods

HandleMemory as memoryblock

Function: The content of the whole ImageInfo structure copied into a memoryblock.
Notes: Returns nil on any error.

Properties

Blue as Single

Function: The blue color value.
Notes: (Read and Write property)

ColorSpace as Integer

Function: Image pixel interpretation.
Notes:
If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:
(Read and Write property)
90.28.7  Depth as Integer

Function: Image depth (8 or 16).
Notes: (Read and Write property)

90.28.8  Fuzz as Double

Function: Colors within this distance are considered equal.
Notes:
A number of algorithms search for a target color. By default the color must be exact. Use this to match
colors that are close to the target color in RGB space.
(Read and Write property)

90.28.9  Green as Single

Function: The green color value.
Notes: (Read and Write property)
90.28.10 Handle as Integer

Function: The handle used internally by the plugin.
Notes:
A pointer to an MagickPixelPacket structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

90.28.11 Index as Single

Function: The index color value.
Notes:
Only for indexed color spaces.
(Read and Write property)

90.28.12 Matte as Boolean

Function: Whether an alpha channel is used/present.
Notes:
Set to true to enable masks.
(Read and Write property)

90.28.13 Opacity as Single

Function: The opacity part of the color value.
Notes: (Read and Write property)

90.28.14 Red as Single

Function: The red color value.
Notes: (Read and Write property)
90.29. class IMMagickPixelPacketQ32MBS

90.29.1 class IMMagickPixelPacketQ32MBS

Function: The class to describe a picture background.
Notes: Needed for IMImageQ32MBS.NewImage function.

90.29.2 Methods

90.29.3 HandleMemory as memoryblock

Function: The content of the whole ImageInfo structure copied into a memoryblock.
Notes: Returns nil on any error.

90.29.4 Properties

90.29.5 Blue as Single

Function: The blue color value.
Notes: (Read and Write property)

90.29.6 ColorSpace as Integer

Function: Image pixel interpretation.
Notes:
If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:

(Read and Write property)
UndefinedColorspace  0
RGBColorspace       1
GRAYColorspace      2
TransparentColorspace 3
OHTAColorspace      4
LABColorspace       5
XYZColorspace       6
YCbCrColorspace     7
YCCColorspace       8
YIQColorspace       9
YPbPrColorspace    10
YUVColorspace       11
CMYKColorspace      12
sRGBColorspace      13
HSBColorspace       14
HSLColorspace       15
HWBColorspace       16

90.29.7  Depth as Integer

Function:  Image depth (8 or 16).
Notes:  (Read and Write property)

90.29.8  Fuzz as Double

Function:  Colors within this distance are considered equal.
Notes:
A number of algorithms search for a target color. By default the color must be exact. Use this to match
colors that are close to the target color in RGB space.
(Read and Write property)

90.29.9  Green as Single

Function:  The green color value.
Notes:  (Read and Write property)
90.29. **Handle as Integer**

**Function:** The handle used internally by the plugin.

**Notes:**
A pointer to an MagickPixelPacket structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

90.29.11 **Index as Single**

**Function:** The index color value.

**Notes:**
Only for indexed color spaces.
(Read and Write property)

90.29.12 **Matte as Boolean**

**Function:** Whether an alpha channel is used/present.

**Notes:**
Set to true to enable masks.
(Read and Write property)

90.29.13 **Opacity as Single**

**Function:** The opacity part of the color value.

**Notes:** (Read and Write property)

90.29.14 **Red as Single**

**Function:** The red color value.

**Notes:** (Read and Write property)
90.30  class IMMagickPixelPacketQ8MBS

90.30.1  class IMMagickPixelPacketQ8MBS

Function: The class to describe a picture background.
Notes: Needed for IMImageQ8MBS.NewImage function.

90.30.2  Methods

90.30.3  HandleMemory as memoryblock

Function: The content of the whole ImageInfo structure copied into a memoryblock.
Notes: Returns nil on any error.

90.30.4  Properties

90.30.5  Blue as Single

Function: The blue color value.
Notes: (Read and Write property)

90.30.6  ColorSpace as Integer

Function: Image pixel interpretation.
Notes: If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:

(Read and Write property)
90.30. **CLASS IMAGICKPIXELPACKETQ8MBS**

UndefinedColorspace 0
RGBColorspace 1
GRAYColorspace 2
TransparentColorspace 3
OHTAColorspace 4
LABColorspace 5
XYZColorspace 6
YCbCrColorspace 7
YCCColorspace 8
YIQColorspace 9
YPbPrColorspace 10
YUVColorspace 11
CMYKColorspace 12
sRGBColorspace 13
HSBColorspace 14
HSLColorspace 15
HWBColorspace 16

**90.30.7  Depth as Integer**

**Function:** Image depth (8 or 16).  
**Notes:** (Read and Write property)

**90.30.8  Fuzz as Double**

**Function:** Colors within this distance are considered equal.  
**Notes:**  
A number of algorithms search for a target color. By default the color must be exact. Use this to match colors that are close to the target color in RGB space.  
(Read and Write property)

**90.30.9  Green as Single**

**Function:** The green color value.  
**Notes:** (Read and Write property)
90.30.10  Handle as Integer

**Function:** The handle used internally by the plugin.
**Notes:**
A pointer to an MagickPixelPacket structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

90.30.11  Index as Single

**Function:** The index color value.
**Notes:**
Only for indexed color spaces.
(Read and Write property)

90.30.12  Matte as Boolean

**Function:** Whether an alpha channel is used/present.
**Notes:**
Set to true to enable masks.
(Read and Write property)

90.30.13  Opacity as Single

**Function:** The opacity part of the color value.
**Notes:** (Read and Write property)

90.30.14  Red as Single

**Function:** The red color value.
**Notes:** (Read and Write property)
90.31. class IMMissingFunctionExceptionQ16MBS

90.31.1 class IMMissingFunctionExceptionQ16MBS

Function: A class for an exception in Image Magick.
Notes: This exception is raised on every IM function if the library function behind is not available.
(this can be a plugin bug or a bad compiled library or simply a too old library.) Subclass of the RuntimeException class.
CHAPTER 90. IMAGE MAGICK

90.32 class IMMissingFunctionExceptionQ32MBS

90.32.1 class IMMissingFunctionExceptionQ32MBS

Function: A class for an exception in Image Magick.

Notes:
This exception is raised on every IM function if the library function behind is not available.
(this can be a plugin bug or a bad compiled library or simply a too old library.)
Subclass of the RuntimeException class.
90.33. class IMMissingFunctionExceptionQ8MBS

90.33.1 class IMMissingFunctionExceptionQ8MBS

**Function:** A class for an exception in Image Magick.

**Notes:**
This exception is raised on every IM function if the library function behind is not available. (this can be a plugin bug or a bad compiled library or simply a too old library.)
Subclass of the RuntimeException class.
Chapter 91

ImageKit

91.1 class IKImageBrowserCellMBS

91.1.1 class IKImageBrowserCellMBS

Function: The class for an image browser cell.
Notes:
The IKImageBrowserCell class is used to display a cell conforming to the IKImageBrowserItem Protocol protocol in an IKImageBrowserView.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

91.1.2 Methods

91.1.3 cellState as Integer

Function: Returns the current cell state of the receiver.
Notes:
The IKImageBrowserView creates thumbnails asynchronously. This method returns the current state.
Available in OS X v10.6 and later.

91.1.4 Constructor

Function: The private constructor.
91.1.5 frame as NSRectMBS

Function: Returns the receiver’s frame rectangle, which defines its position in its IKImageBrowserView.
Notes: Available in OS X v10.6 and later.

91.1.6 IKImageBrowserCellBackgroundLayer as string

Function: One of the layer types you can pass to layerForType.
Notes: Layer displayed in the background.
Available in OS X v10.6 and later.

91.1.7 IKImageBrowserCellForegroundLayer as string

Function: One of the layer types you can pass to layerForType.
Notes: Layer displayed in the foreground.
Available in OS X v10.6 and later.

91.1.8 IKImageBrowserCellPlaceHolderLayer as string

Function: One of the layer types you can pass to layerForType.
Notes: Layer displayed as a placeholder when an image is not yet available.
Available in OS X v10.6 and later.

91.1.9 IKImageBrowserCellSelectionLayer as string

Function: One of the layer types you can pass to layerForType.
Notes:
Layer displayed as the selection.
Available in OS X v10.6 and later.

91.1.10 imageAlignment as Integer

Function: Returns the position of the cell’s image in the frame.

91.1.11 imageBrowserView as IKImageBrowserViewMBS

Function: Returns the view the receiver uses to display the cell.
Notes: Available in OS X v10.6 and later.

91.1.12 imageContainerFrame as NSRectMBS

Function: Returns the receiver’s image container frame rectangle, which defines the position of the container
of the thumbnail.
Notes:
The coordinates of image container frame, in the IKImageBrowserView coordinate space.
The image frame is computed automatically from the image container frame by taking in account the image
alignment and the image aspect ratio.
Subclasses can override this method to customize the position of the thumbnail container.
Available in OS X v10.6 and later.

91.1.13 imageFrame as NSRectMBS

Function: Returns the receiver’s image frame rectangle, which defines the position of the thumbnail in its
IKImageBrowserView.
Notes:
Returns the coordinates of the frame, in the IKImageBrowserView coordinate space.
It is the developer’s responsibility to compute the imageFrame such that it lies entirely within the cell’s
frame rectangle.
Subclasses can override this method to customize the position of the thumbnail.
Available in OS X v10.6 and later.
CHAPTER 91. IMAGEKIT

91.1.14 indexOfRepresentedItem as Integer

Function: Returns the index of the receiver’s represented object in the datasource.
Notes: Available in OS X v10.6 and later.

91.1.15 isSelected as boolean

Function: Returns whether the cell is selected.
Notes:
Returns true if the cell is selected, otherwise false.
Subclasses should not override this method.
Available in OS X v10.6 and later.

91.1.16 layerForType(type as string) as CALayerMBS

Function: Returns a layer for the specified position.
Notes:
type: A string representing the layer location. See Cell Layer Positions for possible values.
Return the CALayer to display in the specified position.
Subclasses can override this method to add a Core Animation layer to the cell
Available in OS X v10.6 and later.

91.1.17 opacity as Double

Function: Returns the opacity of the receiver.
Notes:
Possible values are between 0.0 (transparent) and 1.0 (opaque).
Subclasses can override this method to customize the opacity of the cell.
Available in OS X v10.6 and later.

91.1.18 representedItem as Variant

Function: Returns the receiver’s represented object.
91.1. CLASS IKIMAGEBROWSERCELLMBS

Notes:
Subclasses should not override this method. Available in OS X v10.6 and later.

91.1.19 selectionFrame as NSRectMBS

Function: Returns the receiver's selection frame rectangle, which defines the position of the selection rectangle in its IKImageBrowserView.
Notes:
Subclasses can override this method to customize the position of the selection frame. Available in OS X v10.6 and later.

91.1.20 subtitleFrame as NSRectMBS

Function: Returns the receiver's subtitle frame rectangle.
Notes:
The coordinates of the subtitle frame, in the IKImageBrowserView coordinate space.
It is the developer's responsibility to compute the subtitleFrame such that it lies entirely within the cell's frame rectangle. Subclasses can override this method to customize the position of the subtitle. Available in OS X v10.6 and later.

91.1.21 titleFrame as NSRectMBS

Function: Returns the receiver's title frame rectangle.
Notes:
The coordinates of the title frame, in the IKImageBrowserView coordinate space.
It is the developer's responsibility to compute the titleFrame such that it lies entirely within the cell's frame rectangle. Subclasses can override this method to customize the position of the title.
Available in OS X v10.6 and later.

91.1.22 Properties

91.1.23 Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)

91.1.24 Constants

91.1.25 IKImageStateInvalid = 1

MBS AVFoundation Plugin, Plugin Version: 13.1. Function: One of the cell state constants.
Notes:
The thumbnail is invalid. For example, an unsupported image is provided.
Available in OS X v10.6 and later.

91.1.26 IKImageStateNoImage = 0

MBS AVFoundation Plugin, Plugin Version: 13.1. Function: One of the cell state constants.
Notes:
Returned until a thumbnail has been created from the represented object.
Available in OS X v10.6 and later.

91.1.27 IKImageStateReady = 2

MBS AVFoundation Plugin, Plugin Version: 13.1. Function: One of the cell state constants.
Notes:
The receiver’s represented object has been set and the cell is ready to display.
Available in OS X v10.6 and later.
91.2. CLASS IKIMAGEBROWSERITEMMBS

91.2. class IKImageBrowserItemMBS

**Function:** The class for items in image browser.

91.2.2 Methods

91.2.3 Constructor(imageUID as string, imageRepresentationType as string, imageRepresentation as Variant, imageVersion as Integer = 1, imageTitle as string = "", imageSubtitle as string = "", isSelectable as boolean = true)

**Function:** Creates a new item with given values.

91.2.4 ItemWithCGImage(imageUID as string, Image as Variant, imageVersion as Integer = 1, imageTitle as string = "", imageSubtitle as string = "", isSelectable as boolean = true) as IKImageBrowserItemMBS

**Function:** Creates a new item with given image.

91.2.5 ItemWithData(imageUID as string, Data as Memoryblock, imageVersion as Integer = 1, imageTitle as string = "", imageSubtitle as string = "", isSelectable as boolean = true) as IKImageBrowserItemMBS

**Function:** Creates a new item with given data.

91.2.6 ItemWithFile(imageUID as string, file as folderitem, imageVersion as Integer = 1, imageTitle as string = "", imageSubtitle as string = "", isSelectable as boolean = true) as IKImageBrowserItemMBS

**Function:** Creates a new item with given file.
91.2.7  **ItemWithNSImage** (imageUID as string, Image as NSImageMBS, imageVersion as Integer = 1, imageTitle as string = "", imageSubtitle as string = "", isSelectable as boolean = true) as IKImageBrowserItemMBS

**Function:** Creates a new item with given image.

91.2.8  **ItemWithPath** (imageUID as string, path as string, imageVersion as Integer = 1, imageTitle as string = "", imageSubtitle as string = "", isSelectable as boolean = true) as IKImageBrowserItemMBS

**Function:** Creates a new item with given path.

91.2.9  **ItemWithURL** (imageUID as string, URL as string, imageVersion as Integer = 1, imageTitle as string = "", imageSubtitle as string = "", isSelectable as boolean = true) as IKImageBrowserItemMBS

**Function:** Creates a new item with given URL.

91.2.10  **Properties**

91.2.11  **Handle as Integer**

**Function:** The internal object handle.

**Notes:** (Read and Write property)

91.2.12  **imageRepresentation as Variant**

**Function:** Returns the image to display.

**Notes:** (Read and Write computed property)
91.2.13  imageRepresentationType as string

Function: Returns the representation type of the image to display.
Notes: (Read and Write computed property)

91.2.14  imageSubtitle as string

Function: Returns the display subtitle of the image.
Notes: (Read and Write computed property)

91.2.15  imageTitle as string

Function: Returns the display title of the image.
Notes: (Read and Write computed property)

91.2.16  imageUID as string

Function: Returns a unique string that identifies the data source item.
Notes:
The image browser view uses this identifier to associate the data source item and its cache.
(Read and Write computed property)

91.2.17  imageVersion as Integer

Function: Returns the version of the item.
Notes:
The receiver can return a new version to let the image browser know that it should not use its cache for the item.
(Read and Write computed property)
91.2.18 isSelectable as boolean

Function: Returns whether this item is selectable.
Notes:
True if the item is selectable; false otherwise.
(Read and Write computed property)
91.3. CONTROL IKIMAGEBROWSERVIEWCONTROLMBS

91.3 control IKImageBrowserViewControlMBS

91.3.1 control IKImageBrowserViewControlMBS

Function: The control to wrap a IKImageBrowserViewMBS.

91.3.2 Properties

91.3.3 Scrollview as NSScrollViewMBS

Function: The scrollview we embed the image browser view inside.
Notes: (Read only property)

91.3.4 View as IKImageBrowserViewMBS

Function: The image browser view.
Notes: (Read only property)

91.3.5 Events

91.3.6 backgroundWasRightClickedWithEvent(e as NSEventMBS)

Function: Performs custom tasks when the user right-clicks the image browser view background.
Notes:
event: The event that invoked the method.

This method signals that the user either right-clicked the background or left-clicked it with the Alt key pressed. You can implement this method if you want to perform custom tasks at that time. Available in OS X v10.5 and later.
91.3.7 BoundsChanged

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the bounds, but not the frame, changed.

91.3.8 cellWasDoubleClickedAtIndex(index as Integer)

Function: Performs custom tasks when the user double-clicks an item in the image browser view.
Notes:
index: The index of the cell.

This method signals that the user double-clicked an item in the image browser view. You can implement
this method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

91.3.9 cellWasRightClickedAtIndex(index as Integer, e as NSEventMBS)

Function: Performs custom tasks when the user right-clicks an item in the image browser view.
Notes:
index: The index of the cell.
event: The event that invoked the method.

This method signals that the user either right-clicked an item in the browser or left-clicked the item with
the Alt key pressed. You can implement this method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

91.3.10 concludeDragOperation(sender as NSDraggingInfoMBS)

Function: Invoked when the dragging operation is complete, signaling the receiver to perform any necessary
clean-up.
Notes:
sender: The object sending the message; use it to get details about the dragging operation.

For this method to be invoked, the previous performDragOperation must have returned true.
The destination implements this method to perform any tidying up that it needs to do, such as updating its
visual representation now that it has incorporated the dragged data. This message is the last message sent
from sender to the destination during a dragging session.

If the sender object’s animatesToDestination property was set to true in prepareForDragOperation, then the
drag image is still visible. At this point you should draw the final visual representation in the view. When
this method returns, the drag image is removed form the screen. If your final visual representation matches
the visual representation in the drag, this is a seamless transition.

91.3.11 draggingEnded(sender as NSDraggingInfoMBS)

Function: Implement this event to be notified when a drag operation ends in some other destination.
Notes:
sender: The object sending the message; use it to get details about the dragging operation.
This method might be used by a destination doing auto-expansion in order to collapse any auto-expands.

91.3.12 draggingEntered(sender as NSDraggingInfoMBS) as Integer

Function: Invoked when the dragged image enters destination bounds or frame; delegate returns dragging
operation to perform.
Notes:
sender: The object sending the message; use it to get details about the dragging operation.

Return one (and only one) of the dragging operation constants described in NSDragOperation in the NS-
DraggingInfo reference. The default return value (if this method is not implemented by the destination) is
the value returned by the previous draggingEntered: message.

Invoked when a dragged image enters the destination but only if the destination has registered for the paste-
board data type involved in the drag operation. Specifically, this method is invoked when the mouse pointer
enters the destination’s bounds rectangle (if it is a view object) or its frame rectangle (if it is a window object).

This method must return a value that indicates which dragging operation the destination will perform when
the image is released. In deciding which dragging operation to return, the method should evaluate the
overlap between both the dragging operations allowed by the source (obtained from sender with the drag-
gingSourceOperationMask method) and the dragging operations and pasteboard data types the destination
itself supports.

If none of the operations is appropriate, this method should return NSDragOperationNone (this is the default
response if the method is not implemented by the destination). A destination will still receive draggingUpdated: and draggingExited: even if NSDragOperationNone is returned by this method.

91.3.13  draggingExited(sender as NSDraggingInfoMBS)

**Function:** Invoked when the dragged image exits the destination’s bounds rectangle (in the case of a view object) or its frame rectangle (in the case of a window object).
**Notes:** sender: The object sending the message; use it to get details about the dragging operation.

91.3.14  draggingSourceOperationMaskForLocal(flag as boolean) as Integer

**Function:** Returns an integer bit mask indicating the types of dragging operations the source object will allow to be performed on the dragged image’s data.
**Notes:**

(isLocal: True indicates that the candidate destination object (the window or view over which the dragged image is currently poised) is in the same application as the source, while a false value indicates that the destination object is in a different application.

A mask, created by combining the dragging operations listed in the NSDragOperation section of NSDraggingInfo protocol reference using the C bitwise OR operator. If the source does not permit any dragging operations, it should return NSDragOperationNone.

If not implemented, the default value is NSDragOperationCopy | NSDragOperationLink | NSDragOperationGeneric | NSDragOperationPrivate.

Available in OS X v10.0 and later. Deprecated in OS X v10.7.

91.3.15  draggingUpdated(sender as NSDraggingInfoMBS) as Integer

**Function:** Invoked periodically as the image is held within the destination area, allowing modification of the dragging operation or mouse-pointer position.
**Notes:**
sender: The object sending the message; use it to get details about the dragging operation.

Returns one (and only one) of the dragging operation constants described in NSDragOperation in the NS-DraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered: message.

For this to be invoked, the destination must have registered for the pasteboard data type involved in the drag operation. The messages continue until the image is either released or dragged out of the window or view.

This method provides the destination with an opportunity to modify the dragging operation depending on the position of the mouse pointer inside of the destination view or window object. For example, you may have several graphics or areas of text contained within the same view and wish to tailor the dragging operation, or to ignore the drag event completely, depending upon which object is underneath the mouse pointer at the time when the user releases the dragged image and the performDragOperation method is invoked.

You typically examine the contents of the pasteboard in the draggingEntered method, where this examination is performed only once, rather than in the draggingUpdated method, which is invoked multiple times.

Only one destination at a time receives a sequence of draggingUpdated messages. If the mouse pointer is within the bounds of two overlapping views that are both valid destinations, the uppermost view receives these messages until the image is either released or dragged out.

### 91.3.16 EnableMenuItems

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.  
**Function:** The event where you can enable menu items.

### 91.3.17 FrameChanged

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.  
**Function:** The event called when the frame changed.

### 91.3.18 GotFocus

**Function:** The control itself got focus.  
**Notes:** This only fires if the control itself got focus and not a sub control.
91.3.19 groupAtIndex(index as Integer) as Dictionary

Function: Returns the group at the specified index.
Notes:

index: The index of the group you want to retrieve.

Returns a dictionary that defines the group. The keys in this dictionary can be any of the following constants: IKImageBrowserGroupStyle, IKImageBrowserGroupBackgroundColorKey, IKImageBrowserGroupTitleKey, and IKImageBrowserGroupRangeKey. For more information on these constants, see IKImageBrowserView Class Reference.

This method is optional.
Available in OS X v10.5 and later.

91.3.20 itemAtIndex(index as Integer) as IKImageBrowserItemMBS

Function: Returns an object for the item in an image browser view that corresponds to the specified index.
Notes:

index: The index of the item you want to retrieve.

Return an IKImageBrowserItem object.

Your data source must implement this method. The returned object must implement the required methods of the IKImageBrowserItem protocol.
Available in OS X v10.5 and later.

91.3.21 LostFocus

Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

91.3.22 MenuAction(HitItem as MenuItem) As Boolean

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Called when a menuitem is choosen.
91.3. CONTROL IKIMAGEBROWSERVIEWCONTROLMBS

Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

91.3.23 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The mouse button was pressed inside the controls region at the location passed in to x, y.
Notes:
The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

91.3.24 MouseDrag(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:
Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

91.3.25 MouseUp(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.
91.3.26 moveItemsAtIndexes(indexes as NSIndexSetMBS, destinationIndex as Integer) as boolean

**Function:** Signals that the specified items should be moved to the specified destination.
**Notes:**
- indexes: The indexes of the items that should be reordered.
- destinationIndex: The starting index of the destination the items should be moved to.

Returns true if successful; false otherwise.

This method is optional. It is invoked by the image browser view after Image Kit determines that a reordering operation should be applied. The data source should update itself by reordering its elements. Available in OS X v10.5 and later.

91.3.27 numberOfGroups as Integer

**Function:** Returns the number of groups in an image browser view.
**Notes:**
- Return the number of groups.

This method is optional. Available in OS X v10.5 and later.

91.3.28 numberOfItems as Integer

**Function:** Returns the number of records managed by the data source object.
**Notes:**
- Return the number of records managed by the image browser view.

Your data source must implement this method. An IKImageView object uses this method to determine how many cells it should create and display. Available in OS X v10.5 and later.
91.3.29 performDragOperation(sender as NSDraggingInfoMBS) as boolean

**Function:** Invoked after the released image has been removed from the screen, signaling the receiver to import the pasteboard data.

**Notes:**

sender: The object sending the message; use it to get details about the dragging operation.

Returns if the destination accepts the data, it returns true; otherwise it returns false. The default is to return false.

For this method to be invoked, the previous prepareForDragOperation message must have returned true. The destination should implement this method to do the real work of importing the pasteboard data represented by the image.

If the sender object’s animatesToDestination was set to true in prepareForDragOperation, then setup any animation to arrange space for the drag items to animate to. Also at this time, enumerate through the dragging items to set their destination frames and destination images.

91.3.30 prepareForDragOperation(sender as NSDraggingInfoMBS) as boolean

**Function:** Invoked when the image is released, allowing the receiver to agree to or refuse drag operation.

**Notes:**

sender: The object sending the message; use it to get details about the dragging operation.

Return true if the receiver agrees to perform the drag operation and false if not.

This method is invoked only if the most recent draggingEntered or draggingUpdated event returned an acceptable drag-operation value.

If you want the drag items to animate from their current location on screen to their final location in your view, set the sender object’s animatesToDestination property to true in your implementation of this event.

91.3.31 removeItemsAtIndexes(indexes as NSIndexSetMBS)

**Function:** Signals that a remove operation should be applied to the specified items.

**Notes:**
indexes: The indexes of the items that should be removed.

This method is optional. It is invoked by the image browser after Image Kit determines that a remove operation should be applied. In response, the data source should update itself by removing the specified items.
Available in OS X v10.5 and later.

91.3.32 ScaleFactorChanged(NewFactor as Double)

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

91.3.33 selectionDidChange

Function: Performs custom tasks when the selection changes.
Notes:
This method signals that the user changes the selection in the image browser view. You can implement this method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

91.3.34 updateDraggingItemsForDrag(sender as NSDraggingInfoMBS)

Function: Invoked when the dragging images should be changed.
Notes:
sender: The object sending the message; use this object to get details about the dragging operation.

While a destination may change the dragging images at any time, it is recommended to wait until this method is called before updating the dragging images.

This allows the system to delay changing the dragging images until it is likely that the user will drop on this destination. Otherwise, the dragging images will change too often during the drag which would be distracting to the user.

During enumerateDraggingItemsWithOptions you may set non-acceptable drag items images to nil to hide them or use the enumeration option of NSDraggingItemEnumerationClearNonenumeratedImages If there
are items that you hide, then after enumeration, you need to set the numberOfValidItemsForDrop to the
number of non-hidden drag items. However, if the valid item count is 0, then it is better to return NSDrag-
OperationNone from your implementation of draggingEntered and, or draggingUpdated instead of hiding all
drag items during enumeration.
Available in OS X v10.7 and later.

91.3.35  wantsPeriodicDraggingUpdates as boolean

Function:  Asks the destination object whether it wants to receive periodic draggingUpdated events.
Notes:
Returns true if the destination wants to receive periodic draggingUpdated messages, false otherwise.
If the destination returns false, these messages are sent only when the mouse moves or a modifier flag changes.
Otherwise the destination gets the default behavior, where it receives periodic dragging-updated events even
if nothing changes.

91.3.36  writeItemsAtIndexes(indexes as NSIndexSetMBS, pasteboard as NSPaste-
boardMBS) as Integer

Function:  Signals that a drag should begin.
Notes:
itemIndexes: The indexes of the items that should be dragged.
pasteboard: The pasteboard to copy the items to.
Returns the number of items written to the pasteboard.
This method is optional. It is invoked after Image Kit determines that a drag should begin, but before the
drag has been started.
Available in OS X v10.5 and later.
91.4 class IKImageBrowserViewMBS

91.4.1 class IKImageBrowserViewMBS

Function: The IKImageBrowserView class is a view for displaying and browsing a large amount of images and movies efficiently.
Notes:
Available in OS X v10.5 and later.
Subclass of the NSViewMBS class.

91.4.2 Methods

91.4.3 cellForItemAtIndex(index as Integer) as IKImageBrowserCellMBS

Function: Returns the browser cell for the item at the specified index.
Notes:
Subclasses must not override this method.
Available in OS X v10.6 and later.

91.4.4 collapseGroupAtIndex(index as Integer)

Function: Collapses a group at the specified index.
Notes: index: The index of the group you want to collapse.

91.4.5 columnIndexesInRect(rect as NSRectMBS) as NSIndexSetMBS

Function: Returns the column indexes in the specified rectangle.
Notes: rect: The rectangle in the view’s coordinate system.
Returns an index set containing the cell indexes.
Available in OS X v10.6 and later.
91.4. **CLASS IKIMAGEBROWSERVIEWMBS**

### 91.4.6 Constructor

**Function:** Creates a new control with size 100/100 and position 0/0

**Example:**

```vbscript
dim t as new IKImageBrowserViewMBS
```

**Notes:** On success the handle property is not zero.

See also:

- 91.4.7 Constructor(Handle as Integer)
- 91.4.8 Constructor(left as Double, top as Double, width as Double, height as Double)

### 91.4.7 Constructor(Handle as Integer)

**Function:** Creates an object based on the given IKImageBrowserView handle.

**Example:**

```vbscript
dim t as new IKImageBrowserViewMBS(0, 0, 100, 100)
dim v as new IKImageBrowserViewMBS(t.handle)
MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

**Notes:** The handle is casted to a IKImageBrowserView and the plugin retains this handle.

See also:

- 91.4.6 Constructor
- 91.4.8 Constructor(left as Double, top as Double, width as Double, height as Double)

### 91.4.8 Constructor(left as Double, top as Double, width as Double, height as Double)

**Function:** Creates a new control with the given size and position.

**Example:**

```vbscript
dim x as new IKImageBrowserViewMBS(0, 0, 100, 20)
```
**Notes:** On success the handle property is not zero.

See also:

- 91.4.6 Constructor
- 91.4.7 Constructor(Handle as Integer)

### 91.4.9 Destructor

**Function:** The destructor.

### 91.4.10 dropOperation as Integer

**Function:** Returns the current drop operation.

**Notes:**

Returns IKImageBrowserDropOn if the drop occurs on an item, otherwise IKImageBrowserDropBefore. The returned value is valid when a drop occurred and until next drop.

For example, given a browser with N cells, a cell of N-1 and operation of IKImageBrowserDropOn would specify a drop on the last cell. To specify a drop after the last cell, one would use an index of N and IKImageBrowserDropBefore for the operation.

Available in OS X v10.6 and later.

### 91.4.11 expandGroupAtIndex(index as Integer)

**Function:** Expands a group at the specified index.

**Notes:**

index: The index of the group you want to expand.

Available in OS X v10.5 and later.

### 91.4.12 getValue(name as String) as Variant

**Function:** Queries a value for a given key.
91.4.13 **IKImageBrowserBackgroundColorKey as string**

**Function:** One of the keys for image browser view options.

**Notes:**
A key for the background color of the image browser view. The associated value is a NSColorMBS object.
Available in OS X v10.5 and later.

91.4.14 **IKImageBrowserCellsHighlightedTitleAttributesKey as string**

**Function:** One of the keys for image browser view options.

**Notes:**
A key for the highlighted title attribute for an item in the image browser view. The associated value is a Dictionary.
Available in OS X v10.5 and later.

91.4.15 **IKImageBrowserCellsOutlineColorKey as string**

**Function:** One of the keys for image browser view options.

**Notes:**
A key for the outline color for an item in the image browser view. The associated value is an NSColorMBS object.
Available in OS X v10.5 and later.

91.4.16 **IKImageBrowserCellsSubtitleAttributesKey as string**

**Function:** One of the keys for image browser view options.

**Notes:**
A key for a subtitle attribute for an item in the image browser view. The associated value is a dictionary.
Available in OS X v10.5 and later.
91.4.17 **IKImageBrowserCellsTitleAttributesKey as string**

**Function:** One of the keys for image browser view options.
**Example:**
```plaintext
dim Imagebrowser as IKImageBrowseViewMBS // your control
dim d as new Dictionary
  d.Value(NSAttributedStringMBS.NSForegroundColorAttributeName) = NSColorMBS.redColor
Imagebrowser.setValue Imagebrowser.IKImageBrowserCellsTitleAttributesKey, d
```

**Notes:**
A key for title attribute of an item in the image browser view. The associated value is a dDictionary.
Available in OS X v10.5 and later.

91.4.18 **IKImageBrowserCGImageRepresentationType as string**

**Function:** One of the image representation types.
**Notes:** A CGImageRef object.

91.4.19 **IKImageBrowserCGImageSourceRepresentationType as string**

**Function:** One of the image representation types.
**Notes:** A CGImageSourceRef object.

91.4.20 **IKImageBrowserGroupBackgroundColorKey as string**

**Function:** One of the group attribute keys.
**Notes:**
A key for the background color of a group. The associated value is an NSColor object. This color is used only for the bezel style.
Available in OS X v10.5 and later.
91.4. CLASS IKIMAGEBROWSERVIEWMBS

91.4.21 IKImageBrowserGroupFooterLayer as string

**Function:** One of the group attribute keys.
**Notes:**
A key for the header layer of the group. The associated value is a CALayer.
Available in OS X v10.6 and later.

91.4.22 IKImageBrowserGroupHeaderLayer as string

**Function:** One of the group attribute keys.
**Notes:**
A key for the header layer of the group. The associated value is a CALayer.
Available in OS X v10.6 and later.

91.4.23 IKImageBrowserGroupRangeKey as string

**Function:** One of the group attribute keys.
**Notes:**
A key for the range of a group. The associated value is a NSRangeMBS. This is required if the view uses grouping.
Available in OS X v10.5 and later.

91.4.24 IKImageBrowserGroupStyleKey as string

**Function:** One of the group attribute keys.
**Notes:**
A key for the style of a group. The associated value is one of the constants defined in "Group Style Attributes".
Available in OS X v10.5 and later.
91.4.25  **IKImageBrowserGroupTitleKey as string**

**Function:** One of the group attribute keys.

**Notes:**

A key for the title of a group. The associated value is a string. This string is used for the disclosure style only.
Available in OS X v10.5 and later.

91.4.26  **IKImageBrowserIconRefPathRepresentationType as string**

**Function:** One of the image representation types.

**Notes:** A path to an icon.

91.4.27  **IKImageBrowserIconRefRepresentationType as string**

**Function:** One of the image representation types.

**Notes:** An icon.

91.4.28  **IKImageBrowserNSBitmapImageRepresentationType as string**

**Function:** One of the image representation types.

**Notes:** An NSBitmapImageRep object.

91.4.29  **IKImageBrowserNSDataRepresentationType as string**

**Function:** One of the image representation types.

**Notes:** Value for this key is a memoryblock.

91.4.30  **IKImageBrowserNSImageRepresentationType as string**

**Function:** One of the image representation types.
91.4. CLASS IKIMAGEBROWSERVIEWMBS

Notes: An NSImage object.

91.4.31  IKImageBrowserNSURLRepresentationType as string

Function: One of the image representation types.
Notes: An NSURL object.

91.4.32  IKImageBrowserPathRepresentationType as string

Function: One of the image representation types.
Notes: A path representation (string).

91.4.33  IKImageBrowserPDFPageRepresentationType as string

Function: One of the image representation types.
Notes: A PDFPage instance or a CGPDFPageRef.

91.4.34  IKImageBrowserQCCompositionPathRepresentationType as string

Function: One of the image representation types.
Notes: A path (String) or URL (NSURL) to a Quartz Composer composition.

91.4.35  IKImageBrowserQCCompositionRepresentationType as string

Function: One of the image representation types.
Notes: A QCComposition object.

91.4.36  IKImageBrowserQTMoviePathRepresentationType as string

Function: One of the image representation types.
Notes: A path (string) or URL to a QuickTime movie.

91.4.37  IKImageBrowserQTMovieRepresentationType as string

Function: One of the image representation types.
Notes: A QTMovie object.

91.4.38  IKImageBrowserQuickLookPathRepresentationType as string

Function: One of the image representation types.
Notes: A path (string) or URL (NSURL) to load data using QuickLook.

91.4.39  IKImageBrowserSelectionColorKey as string

Function: One of the keys for image browser view options.
Notes: A key for the color that indicates a selection. The associated value is an NSColorMBS object.
Available in OS X v10.5 and later.

91.4.40  indexAtLocationOfDroppedItem as Integer

Function: Returns the index of the cell where the drop operation occurred.
Notes: Returns the index of the cell where the drop operation occurred.
The returned index is valid until the next drop occurs.
Available in OS X v10.5 and later.

91.4.41  indexOfItemAtPoint(point as NSPointMBS) as Integer

Function: Returns the index of the item at the specified location.
Notes: Returns the index of the item or NSNotFound (-1) if no item at this location.
91.4.42  isGroupExpandedAtIndex(index as Integer) as boolean

Function: Returns whether the group at the provided index is expanded.

Notes: Return true if the group is expanded; false otherwise.

91.4.43  itemFrameAtIndex(index as Integer) as NSRectMBS

Function: Returns the frame rectangle for the item located at the specified index.

Notes:

index: The index of the item whose frame rectangle you want to obtain.
Return the frame rectangle of the item.

91.4.44  newCellForRepresentedItem(item as IKImageBrowserItemMBS) as IKImageBrowserCellMBS

Function: Returns the cell to use for the specified item.

Notes:

Subclasses can override this method to customize the appearance of the cell that will represent anItem.
Available in OS X v10.6 and later.

91.4.45  numberOfColumns as Integer

Function: Returns the current number of columns.

Notes: Available in OS X v10.6 and later.

91.4.46  numberOfRows as Integer

Function: Returns the current number of rows.

Notes: Available in OS X v10.6 and later.
91.4.47 rectOfColumn(columnIndex as Integer) as NSRectMBS

**Function:** Returns the rectangle containing the specified column.
**Notes:**
Return a rectangle containing the column. Specified in the view’s coordinate system.
Available in OS X v10.6 and later.

91.4.48 rectOfRow(rowIndex as Integer) as NSRectMBS

**Function:** Returns the rectangle containing the specified row.
**Notes:**
Returns a rectangle containing the column. Specified in the view’s coordinate system.
Available in OS X v10.6 and later.

91.4.49 reloadData

**Function:** Marks the receiver as needing its data reloaded.

91.4.50 rowIndexesInRect(rect as NSRectMBS) as NSIndexSetMBS

**Function:** Returns the row indexes in the specified rectangle.
**Notes:**
rect: A rectangle in the view’s coordinate system.
Returns an index set containing the item indexes.
Available in OS X v10.6 and later.

91.4.51 scrollIndexToVisible(index as Integer)

**Function:** Scrolls the receiver to the item at the specified index.
91.4.52 selectionIndexes as NSIndexSetMBS

**Function:** Returns the indexes of the selected cells.

91.4.53 setDropIndex(index as Integer, operation as Integer)

**Function:** Allows the class to retarget the drop action.
**Notes:**
- index: The requested drop index.
- operation: The requested drop operation. The possible values are described in IKImageBrowserDropOperation.

For example, To specify a drop on the second item, one would specify index as 1, and operation as IKImageBrowserDropOn. To specify a drop after the last item, one would specify index as the number of items and operation as IKImageBrowserDropBefore.

Passing a value of 1 for index, and IKImageBrowserDropOn as the operation causes the entire browser view to be highlighted rather than a specific item. This is useful if the data displayed by the receiver does not allow the user to drop items at a specific item location.

91.4.54 setSelectionIndexes(indexes as NSIndexSetMBS, extendSelection as boolean = false)

**Function:** Selects cells at the specified indexes.
**Notes:**
- indexes: The indexes of the cells you want to select.
- extendSelection: A boolean value that specifies whether to extend the current selection. Pass true to extends the selection; false replaces the current selection.
  Available in OS X v10.5 and later.

91.4.55 setValue(name as String, value as Variant)

**Function:** Sets a value for a given key.
91.4.56  visibleItemIndexes as NSIndexSetMBS

Function: Returns the indexes of the view's currently visible items.
Notes: Available in OS X v10.6 and later.

91.4.57  Properties

91.4.58  allowsDroppingOnItems as boolean

Function: Whether the user can drop on items.
Notes: True if the user is able to drop on items, otherwise false.
Available in OS X v10.6 and later.
(Read and Write computed property)

91.4.59  allowsEmptySelection as boolean

Function: Whether an empty selection is allowed.
Notes: (Read and Write computed property)

91.4.60  allowsMultipleSelection as boolean

Function: Whether the user can select more than one cell at a time.
Notes: (Read and Write computed property)

91.4.61  allowsReordering as boolean

Function: Whether the user can reorder items.
Notes: (Read and Write computed property)
91.4.62 animates as boolean

**Function:** Whether the receiver animates reordering and changes of the data source.
**Notes:** (Read and Write computed property)

91.4.63 backgroundLayer as CALayerMBS

**Function:** The Core Animation layer used as the view’s background.
**Notes:**
- The background layer can have sublayers. Additionally, the layers can also contain animations.
- The layer is optional.
- Available in OS X v10.6 and later.
(Read and Write computed property)

91.4.64 canControlQuickLookPanel as boolean

**Function:** Whether the view can automatically take control of the QuickLook panel.
**Notes:**
- When the browser view displays the QuickLook panel it sets itself as the QuickLook datasource. If the browser cells returned by the datasource return items that are URLs or paths, then the QuickLook panel will display the image at that location. Otherwise, the browser cell must implement the QLPreviewItem protocol and return the requested URL for the custom cell.
- Available in OS X v10.6 and later.
(Read and Write computed property)

91.4.65 cellSize as NSSizeMBS

**Function:** The cell size.
**Notes:**
- You must use CellSize or ZoomValue, but not both. Setting the zoom value changes the cell size, and vice versa.
- Available in OS X v10.5 and later.
(Read and Write computed property)
91.4.66 cellsStyleMask as Integer

Function: The appearance style of the cells.
Notes: (Read and Write computed property)

91.4.67 constrainsToOriginalSize as boolean

Function: Whether the receiver constrains the cell’s image to its original size.
Notes:
The default value is false.
(Read and Write computed property)

91.4.68 contentResizingMask as Integer

Function: The content resizing mask, which determines how its content is resized while zooming.
Notes:
You specify a mask by combining any of the following options using the bitwise OR operator: NSViewWidthSizable (2), NSViewHeightSizable (16). Other values are ignored.
(Read and Write computed property)

91.4.69 foregroundLayer as CALayerMBS

Function: Returns the foreground Core Animation layer
Notes:
Returns a CALayer instance.
Available in OS X v10.6 and later.
(Read and Write computed property)

91.4.70 intercellSpacing as NSSizeMBS

Function: Returns the spacing between cells in the view.
Notes:
Returns the vertical and horizontal spacing between cells.
Available in OS X v10.6 and later.
(Read and Write computed property)

91.4.71  zoomValue as Double

Function: The zoom value.
Notes:
The zoom value. This value should be greater or equal to zero and less or equal than one. A zoom value of zero corresponds to the minimum size (40x40 pixels). A zoom value of one means images fits the browser bounds. Other values are interpolated.
Discussion
You must use ZoomValue or CellSize, but not both. Setting the zoom value changes the cell size, and vice versa.
Available in OS X v10.5 and later.
(Read and Write computed property)

91.4.72  Events

91.4.73  backgroundWasRightClickedWithEvent(e as NSEventMBS)

Function: Performs custom tasks when the user right-clicks the image browser view background.
Notes:
event: The event that invoked the method.

This method signals that the user either right-clicked the background or left-clicked it with the Alt key pressed. You can implement this method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

91.4.74  cellWasDoubleClickedAtIndex(index as Integer)

Function: Performs custom tasks when the user double-clicks an item in the image browser view.
Notes:
index: The index of the cell.
This method signals that the user double-clicked an item in the image browser view. You can implement this method if you want to perform custom tasks at that time. Available in OS X v10.5 and later.

91.4.75  cellWasRightClickedAtIndex(index as Integer, e as NSEventMBS)

Function: Performs custom tasks when the user right-clicks an item in the image browser view.
Notes:
- index: The index of the cell.
- event: The event that invoked the method.

This method signals that the user either right-clicked an item in the browser or left-clicked the item with the Alt key pressed. You can implement this method if you want to perform custom tasks at that time. Available in OS X v10.5 and later.

91.4.76  concludeDragOperation(sender as NSDraggingInfoMBS)

Function: Invoked when the dragging operation is complete, signaling the receiver to perform any necessary clean-up.
Notes:
- sender: The object sending the message; use it to get details about the dragging operation.

For this method to be invoked, the previous performDragOperation must have returned true.

The destination implements this method to perform any tidying up that it needs to do, such as updating its visual representation now that it has incorporated the dragged data. This message is the last message sent from sender to the destination during a dragging session.

If the sender object’s animatesToDestination property was set to true in prepareForDragOperation, then the drag image is still visible. At this point you should draw the final visual representation in the view. When this method returns, the drag image is removed from the screen. If your final visual representation matches the visual representation in the drag, this is a seamless transition.
91.4. draggingEnded(sender as NSDraggingInfoMBS)

Function: Implement this event to be notified when a drag operation ends in some other destination.
Notes:
sender: The object sending the message; use it to get details about the dragging operation.
This method might be used by a destination doing auto-expansion in order to collapse any auto-expands.

91.4.78 draggingEntered(sender as NSDraggingInfoMBS) as Integer

Function: Invoked when the dragged image enters destination bounds or frame; delegate returns dragging operation to perform.
Notes:
sender: The object sending the message; use it to get details about the dragging operation.

Return one (and only one) of the dragging operation constants described in NSDragOperation in the NS-DraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered: message.

Invoked when a dragged image enters the destination but only if the destination has registered for the pasteboard data type involved in the drag operation. Specifically, this method is invoked when the mouse pointer enters the destination’s bounds rectangle (if it is a view object) or its frame rectangle (if it is a window object).

This method must return a value that indicates which dragging operation the destination will perform when the image is released. In deciding which dragging operation to return, the method should evaluate the overlap between both the dragging operations allowed by the source (obtained from sender with the draggingSourceOperationMask method) and the dragging operations and pasteboard data types the destination itself supports.

If none of the operations is appropriate, this method should return NSDragOperationNone (this is the default response if the method is not implemented by the destination). A destination will still receive draggingUpdated: and draggingExited: even if NSDragOperationNone is returned by this method.

91.4.79 draggingExited(sender as NSDraggingInfoMBS)

Function: Invoked when the dragged image exits the destination’s bounds rectangle (in the case of a view object) or its frame rectangle (in the case of a window object).
Notes: sender: The object sending the message; use it to get details about the dragging operation.
91.4.80 draggingSourceOperationMaskForLocal(flag as boolean) as Integer

**Function:** Returns an integer bit mask indicating the types of dragging operations the source object will allow to be performed on the dragged image’s data.

**Notes:**

(Deprecated in OS X v10.7. This method is informally deprecated. It is only called if the source does not implement the NSDraggingSource protocol methods. This method will be formally deprecated in a future OS release.)

isLocal: True indicates that the candidate destination object (the window or view over which the dragged image is currently poised) is in the same application as the source, while a false value indicates that the destination object is in a different application.

A mask, created by combining the dragging operations listed in the NSDragOperation section of NSDraggingInfo protocol reference using the C bitwise OR operator. If the source does not permit any dragging operations, it should return NSDragOperationNone.

If not implemented, the default value is NSDragOperationCopy | NSDragOperationLink | NSDragOperationGeneric | NSDragOperationPrivate.

Available in OS X v10.0 and later. Deprecated in OS X v10.7.

91.4.81 draggingUpdated(sender as NSDraggingInfoMBS) as Integer

**Function:** Invoked periodically as the image is held within the destination area, allowing modification of the dragging operation or mouse-pointer position.

**Notes:**

sender: The object sending the message; use it to get details about the dragging operation.

Returns one (and only one) of the dragging operation constants described in NSDragOperation in the NSDraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered: message.

For this to be invoked, the destination must have registered for the pasteboard data type involved in the drag operation. The messages continue until the image is either released or dragged out of the window or view.
This method provides the destination with an opportunity to modify the dragging operation depending on the position of the mouse pointer inside of the destination view or window object. For example, you may have several graphics or areas of text contained within the same view and wish to tailor the dragging operation, or to ignore the drag event completely, depending upon which object is underneath the mouse pointer at the time when the user releases the dragged image and the performDragOperation method is invoked.

You typically examine the contents of the pasteboard in the draggingEntered method, where this examination is performed only once, rather than in the draggingUpdated method, which is invoked multiple times.

Only one destination at a time receives a sequence of draggingUpdated messages. If the mouse pointer is within the bounds of two overlapping views that are both valid destinations, the uppermost view receives these messages until the image is either released or dragged out.

### 91.4.82 groupAtIndex(index as Integer) as Dictionary

**Function:** Returns the group at the specified index.

**Notes:**

*index:* The index of the group you want to retrieve.

Returns a dictionary that defines the group. The keys in this dictionary can be any of the following constants: IKImageBrowserGroupStyle, IKImageBrowserGroupBackgroundColorKey, IKImageBrowserGroupTitleKey, and IKImageBrowserGroupRangeKey. For more information on these constants, see IKImageBrowserView Class Reference.

This method is optional.

Available in OS X v10.5 and later.

### 91.4.83 itemAtIndex(index as Integer) as IKImageBrowserItemMBS

**Function:** Returns an object for the item in an image browser view that corresponds to the specified index.

**Notes:**

*index:* The index of the item you want to retrieve.

Return an IKImageBrowserItem object.

Your data source must implement this method. The returned object must implement the required methods of the IKImageBrowserItem protocol.
91.4.84 moveItemsAtIndexes(indexes as NSIndexSetMBS, destinationIndex as Integer) as boolean

Function: Signals that the specified items should be moved to the specified destination.
Notes:
indexes: The indexes of the items that should be reordered.
destinationIndex: The starting index of the destination the items should be moved to.

Returns true if successful; false otherwise.

This method is optional. It is invoked by the image browser view after Image Kit determines that a reordering operation should be applied. The data source should update itself by reordering its elements.
Available in OS X v10.5 and later.

91.4.85 numberOfGroups as Integer

Function: Returns the number of groups in an image browser view.
Notes:
Return the number of groups.

This method is optional.
Available in OS X v10.5 and later.

91.4.86 numberOfItems as Integer

Function: Returns the number of records managed by the data source object.
Notes:
Return the number of records managed by the image browser view.

Your data source must implement this method. An IKImageView object uses this method to determine how many cells it should create and display.
Available in OS X v10.5 and later.
91.4.87  performDragOperation(sender as NSDraggingInfoMBS) as boolean

**Function:** Invoked after the released image has been removed from the screen, signaling the receiver to import the pasteboard data.
**Notes:**

sender: The object sending the message; use it to get details about the dragging operation.

Returns if the destination accepts the data, it returns true; otherwise it returns false. The default is to return false.

For this method to be invoked, the previous prepareForDragOperation message must have returned true. The destination should implement this method to do the real work of importing the pasteboard data represented by the image.

If the sender object’s animatesToDestination was set to true in prepareForDragOperation, then setup any animation to arrange space for the drag items to animate to. Also at this time, enumerate through the dragging items to set their destination frames and destination images.

91.4.88  prepareForDragOperation(sender as NSDraggingInfoMBS) as boolean

**Function:** Invoked when the image is released, allowing the receiver to agree to or refuse drag operation.
**Notes:**

sender: The object sending the message; use it to get details about the dragging operation.

Return true if the receiver agrees to perform the drag operation and false if not.

This method is invoked only if the most recent draggingEntered or draggingUpdated event returned an acceptable drag-operation value.

If you want the drag items to animate from their current location on screen to their final location in your view, set the sender object’s animatesToDestination property to true in your implementation of this event.
91.4.89  removeItemsAtIndexes(indexes as NSIndexSetMBS)

Function: Signals that a remove operation should be applied to the specified items.
Notes:
indexes: The indexes of the items that should be removed.

This method is optional. It is invoked by the image browser after Image Kit determines that a remove
operation should be applied. In response, the data source should update itself by removing the specified
items.
Available in OS X v10.5 and later.

91.4.90  selectionDidChange

Function: Performs custom tasks when the selection changes.
Notes:
This method signals that the user changes the selection in the image browser view. You can implement this
method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

91.4.91  updateDraggingItemsForDrag(sender as NSDraggingInfoMBS)

Function: Invoked when the dragging images should be changed.
Notes:
sender: The object sending the message; use this object to get details about the dragging operation.

While a destination may change the dragging images at any time, it is recommended to wait until this
method is called before updating the dragging images.

This allows the system to delay changing the dragging images until it is likely that the user will drop on
this destination. Otherwise, the dragging images will change too often during the drag which would be
distracting to the user.

During enumerateDraggingItemsWithOptions you may set non-acceptable drag items images to nil to hide
them or use the enumeration option of NSDraggingItemEnumerationClearNonenumeratedImages If there
are items that you hide, then after enumeration, you need to set the numberOfValidItemsForDrop to the
number of non-hidden drag items. However, if the valid item count is 0, then it is better to return NSDrag-
91.4. CLASS IKIMAGEBROWSERVIEWMBS

Operation None from your implementation of draggingEntered and, or draggingUpdated instead of hiding all drag items during enumeration.
Available in OS X v10.7 and later.

91.4.92 wantsPeriodicDraggingUpdates as boolean

Function: Asks the destination object whether it wants to receive periodic draggingUpdated events.
Notes:
Returns true if the destination wants to receive periodic draggingUpdated messages, false otherwise.
If the destination returns false, these messages are sent only when the mouse moves or a modifier flag changes. Otherwise the destination gets the default behavior, where it receives periodic dragging-updated events even if nothing changes.

91.4.93 writeItemsAtIndexes(indexes as NSIndexSetMBS, pasteboard as NSPasteboardMBS) as Integer

Function: Signals that a drag should begin.
Notes:
itemIndexes: The indexes of the items that should be dragged.
pasteboard: The pasteboard to copy the items to.
Returns the number of items written to the pasteboard.
This method is optional. It is invoked after Image Kit determines that a drag should begin, but before the drag has been started.
Available in OS X v10.5 and later.

91.4.94 Constants

91.4.95 IKCellsStyleNone = 0

MBS AVFoundation Plugin, Plugin Version: 13.1. Function: One of the cell style constants.
Notes: No style.
91.4.96  IKCellsStyleOutlined = 2

MBS AVFoundation Plugin, Plugin Version: 13.1. **Function**: One of the cell style constants.  
**Notes**: Cells are outlined.

91.4.97  IKCellsStyleShadowed = 1

MBS AVFoundation Plugin, Plugin Version: 13.1. **Function**: One of the cell style constants.  
**Notes**: Cells use shadows.

91.4.98  IKCellsStyleSubtitled = 8

MBS AVFoundation Plugin, Plugin Version: 13.1. **Function**: One of the cell style constants.  
**Notes**: Cells display a subtitle.

91.4.99  IKCellsStyleTitled = 4

MBS AVFoundation Plugin, Plugin Version: 13.1. **Function**: One of the cell style constants.  
**Notes**: Cells display a title.

91.4.100  IKGroupBezelStyle = 0

MBS AVFoundation Plugin, Plugin Version: 13.1. **Function**: One of the bevel styles.  
**Notes**:  
A bevel style.  
Available in OS X v10.5 and later.

91.4.101  IKGroupDisclosureStyle = 1

MBS AVFoundation Plugin, Plugin Version: 13.1. **Function**: One of the bevel styles.  
**Notes**:  
A disclosure triangle.  
Available in OS X v10.5 and later.
91.4.102  IKImageBrowserDropBefore = 1

MBS AVFoundation Plugin, Plugin Version: 13.1. Function: One of the constants to specify the locations for dropping items onto the browser view.
Notes:
Drop the item before the cell.
Available in OS X v10.6 and later.
Used by the method setDropIndex.

91.4.103  IKImageBrowserDropOn = 0

MBS AVFoundation Plugin, Plugin Version: 13.1. Function: One of the constants to specify the locations for dropping items onto the browser view.
Notes:
Drop the item on the cell.
Available in OS X v10.6 and later.
Used by the method setDropIndex.
91.5 class IKImageEditPanelMBS

91.5.1 class IKImageEditPanelMBS

MBS AVFoundation Plugin, Plugin Version: 8.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The class for the image edit panel from Mac OS X 10.5.
Notes: Subclass of the NSPanelMBS class.

91.5.2 Methods

91.5.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The constructor to create a new image edit panel.

91.5.4 reloadData

MBS AVFoundation Plugin, Plugin Version: 8.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Requests the panel to reload the image.
Notes: Do call this if you have a new image to return in the image event.

91.5.5 Properties

91.5.6 LastImage as Picture

MBS AVFoundation Plugin, Plugin Version: 8.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The last image passed to you or requested from you.
Notes: This property is set with the picture you return with the image event and is set with the image sent to you using the Changed event.
(Read and Write property)
91.5. Events

91.5.8 Changed(picture, CGImageHandle as Integer, metaData as dictionary)

MBS AVFoundation Plugin, Plugin Version: 8.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The image changed and you should update your GUI.
Notes:
pic: The image as a picture.
CGImageHandle: The internal handle to the original CGImage which is used to make the picture.
metaData: additional image data.

91.5.9 hasAdjustMode as Boolean

Function: Returns whether the adjust mode view tab should be displayed.
Notes:
Return true if the tab should be displayed, otherwise false.
Available on Mac OS X 10.6 or newer.

91.5.10 hasDetailsMode as Boolean

Function: Returns whether the details mode view tab should be displayed.
Notes:
True if the tab should be displayed, otherwise false.
Available on Mac OS X 10.6 or newer.

91.5.11 hasEffectsMode as Boolean

Function: Returns whether the effects mode view tab should be displayed.
Notes:
True if the tab should be displayed, otherwise false.
Available on Mac OS X 10.6 or newer.
91.5.12 Image as picture

MBS AVFoundation Plugin, Plugin Version: 8.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
**Function:** The panel needs an image to start with.
**Notes:** Return your image in this event whenever the panel needs it.

91.5.13 imageProperties as Dictionary

**Function:** Returns a dictionary of the image properties associated with the image in the image edit panel.
**Notes:** Available on Mac OS X 10.5 or newer.

91.5.14 thumbnailWithMaximumSize(Width as Double, Height as Double) as picture

**Function:** Returns a thumbnail image whose size is no larger than the specified size.
**Notes:** Available in OS X v 10.5 and later.
91.6. **CLASS IKPICTURETAKERMBS**

91.6. **class IKPictureTakerMBS**

91.6.1. **class IKPictureTakerMBS**

**Function:** An IKPictureTaker object is a panel that allows users to choose and crop an image.  
**Notes:**  
It supports browsing of the file system and includes a recents popup-menu. The IKPictureTaker lets the user to crop a chosen image or to take snapshot from a camera like the built-in iSight.

Requires Mac OS X 10.5.  
Subclass of the NSPanelMBS class.

91.6.2. **Methods**

91.6.3. **Available as boolean**

**Function:** Whether the picture taker is available on that platform or not.  
**Example:**

```vba
dim n as Integer

dim p as new IKPictureTakerMBS

if not p.Available then  
MsgBox "This application requires Mac OS X 10.5 and a Macho Target"  
Return  
end if
```

**Notes:** True on Mac OS X 10.5.

91.6.4. **beginPictureTaker as boolean**

**Function:** Launch the PictureTaker.  
**Example:**

```vba
dim p as IKPictureTakerMBS // your picture taker
```
if not p.beginPictureTaker then
MsgBox "Can’t show picture taker!?
end if

Notes:
You will later receive an event for the case the user clicks on OK or Cancel buttons.
Returns true on success and false on failure.

91.6.5 beginPictureTakerSheet(parent as NSWindowMBS) as boolean

MBS AVFoundation Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Opens a picture taker as a sheet whose parent is the specified window.
Notes:
parent: The parent window of the picture taker sheet.
You will later receive an event for the case the user clicks on OK or Cancel buttons.
Available in Mac OS X v10.5 and later.
See also:

• 91.6.6 beginPictureTakerSheet(parent as window) as boolean

91.6.6 beginPictureTakerSheet(parent as window) as boolean

MBS AVFoundation Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Opens a picture taker as a sheet whose parent is the specified window.
Notes:
parent: The parent window of the picture taker sheet.
You will later receive an event for the case the user clicks on OK or Cancel buttons.
Available in Mac OS X v10.5 and later.
See also:

• 91.6.5 beginPictureTakerSheet(parent as NSWindowMBS) as boolean
91.6.7 Constructor

MBS AVFoundation Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.  
Function: The constructor to create a new picture taker panel.

91.6.8 CropAreaSizeHeight as Double

Function: The height of the crop area.

91.6.9 CropAreaSizeWidth as Double

Function: The width of the crop area.

91.6.10 outputImage as NSImageMBS

Function: Return the edited image.

91.6.11 OutputImageMaxSizeKeyHeight as Double

Function: The maximum height of the output image.

91.6.12 OutputImageMaxSizeKeyWidth as Double

Function: The maximum width of the output image.

91.6.13 popUpRecentsMenuForView(parent as NSViewMBS) as boolean

MBS AVFoundation Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.  
Function: Displays the Open Recent popup menu associated with the picture taker.  
Notes:
You will later receive an event for the case the user clicks on OK or Cancel buttons.

Available in Mac OS X v10.5 and later.

**91.6.14  runModal as Integer**

**Function:** Launches a modal PictureTaker session.

**Example:**

```pascal
dim p as IKPictureTakerMBS // global property
dim n as Integer

p=new IKPictureTakerMBS

if not p.Available then
    MsgBox "This application requires Mac OS X 10.5 and a Macho Target"
    Return
end if

p.AllowsFileChoosing=true
p.AllowsEditing=true
p.AllowsVideoCapture=true
p.ShowEffects=FALSE // disable if you run modal!
p.ShowRecentPicture=true
p.UpdateRecentPicture=true
p.InformationalText="Please take a picture"

n=p.runModal

if n=1 then // ok
    Backdrop=p.outputImage.CopyPictureWithMask
else
    Title=Str(n)
end if
```

**Notes:**

Returns NSOKButton (1) if the user edits or chooses an image and confirm panel, NSCancelButton (0) if the user canceled or didn’t change the image.

You may want to disable effects as they won’t work in Realbasic in a modal picture taker dialog.
91.6.15  SetCropAreaSize(width as Double, height as Double)

Function: Sets the crop area.

91.6.16  SetOutputImageMaxSize(width as Double, height as Double)

Function: Sets the maximum output image size.

91.6.17  Properties

91.6.18  AllowsEditing as boolean

Function: Whether editing is allowed or not.
Notes: (Read and Write computed property)

91.6.19  AllowsFileChoosing as boolean

Function: Whether choosing a file is allowed or not.
Notes: (Read and Write computed property)

91.6.20  AllowsVideoCapture as boolean

Function: Whether video capture is allowed or not.
Notes: (Read and Write computed property)

91.6.21  InformationalText as NSAttributedStringMBS

Function: The information text as a plain string.
Notes:
On getting the value the plugin will check whether the value is a formatted or a plain text. if it is a plain
text, it will return the plain text as a NSAttributedStringMBS.
(Read and Write computed property)
See also:

- 91.6.22 InformationalText as string

91.6.22 InformationalText as string

Function: The information text as a plain string.
Example:

```plaintext
dim p as IKPictureTakerMBS // your picture taker
p.InformationalText="Please take a picture"
```

Notes:
On getting the value the plugin will check whether the value is a formatted or a plain text. if it is a formatted text, it will return the formatted text as plain text.
(Read and Write computed property)
See also:

- 91.6.21 InformationalText as NSAttributedStringMBS

91.6.23 inputImage as NSImageMBS

Function: The input image.
Notes: The input image is never modified by the PictureTaker.
(Read and Write computed property)

91.6.24 mirroring as boolean

Function: True if video mirroring is enabled, false otherwise.
Notes: Controls whether the receiver enable/disable video mirroring durning snapshots (default is true).
(Read and Write computed property)
91.6. CLASS IKPICTURETAKERMBS

91.6.25 RemainOpenAfterValidate as boolean

MBS AVFoundation Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether the picture taker remains open.
Notes: Requires Mac OS X 10.6.
(Read and Write computed property)

91.6.26 ShowAddressBookPicture as boolean

Function: Whether the addressbook picture is shown or not.
Notes: (Read and Write computed property)

91.6.27 ShowEffects as boolean

Function: Whether effects are shown or not.
Notes: (Read and Write computed property)

91.6.28 ShowEmptyPicture as NSImageMBS

Function: The image to use for an empty image.
Notes: (Read and Write computed property)

91.6.29 ShowRecentPicture as boolean

Function: Whether recent pictures should be shown.
Notes: (Read and Write computed property)

91.6.30 UpdateRecentPicture as boolean

Function: Whether recent pictures should be updated.
91.6.31 Events

91.6.32 Finished(returnCode as Integer)

Function: beginPictureTaker has finished work.
Notes: ReturnCode is 1 if the user clicked OK and 0 if the user clicked false.
91.6.33 Screenshots

91.6.34 PictureTaker1.jpg

Function: The picture taker with an image choosed.
91.6.35  PictureTaker2.jpg

Function: The picture taker doing effects on a photo taken with the iSight.
Function: The Quartz filter manager panel.
91.7  class IKSlideshowMBS

91.7.1  class IKSlideshowMBS

Function: The ImageKit class for a slideshow.
Notes:
Requires Mac OS X 10.5.
Slideshows can be only with pictures, with PDF pages or with file references.
Those files can be picture files, pdf files or anything you want.

91.7.2  Methods

91.7.3  addFile(file as folderitem, name as string=””)

MBS AVFoundation Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds a file to the items list.

Example:

dim p as picture
dim n as NSImageMBS
dim s as new IKSlideshowMBS

// get picture to p
n=new NSImageMBS(p)
s.addImageMBS n

91.7.4  addImage(image as NSImageMBS, name as string=””)

MBS AVFoundation Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds an image to the items list.

Example:

dim p as picture
dim n as NSImageMBS
dim s as new IKSlideshowMBS

// get picture to p
n=new NSImageMBS(p)
s.addImageMBS n

91.7.5  addPage(page as Variant, name as string=””)

MBS AVFoundation Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds a PDF page to the items list.
Notes: Page must be a PDFPageMBS object.
91.7. CLASS IKSLIDESHOWMBS

91.7.6 autoPlayDelay as Double

**Function:** The time to wait before the slideshow will start automatically.
**Notes:**
Value is in seconds.
(Read and Write computed property)

91.7.7 Available as boolean

**Function:** Whether the slide show functions are available.
**Example:**
```
if IKSlideshowMBS.Available=False then
    MsgBox "You need Mac OS X 10.5 for this and a MachO application."
    quit
end if
```
**Notes:** Value is true for Mac OS X 10.5.

91.7.8 canExportToApplication(applicationBundleIdentifier as string) as boolean

**Function:** is exporting to a given application possible?
**Notes:** (application installed?, right version?, ...)

91.7.9 exportSlideshowItems(applicationBundleIdentifier as string)

**Function:** Export items to the given application.
**Example:**
```
dim i,c as Integer
dim s as new IKSlideshowMBS

// add items here

if false=IKSlideshowMBS.canExportToApplication(IKSlideshowMBS.iPhotoBundleIdentifier) then
    MsgBox "Can’t export to iPhoto."
```
else

if s.itemcount>0 then

s.exportSlideshowItems IKSlideshowMBS.iPhotoBundleIdentifier

else
MsgBox "no slides?"
end if
end if

91.7.10  indexOfCurrentSlideshowItem as Integer

Function: The index of the current slide.  
Notes: Index is from 0 to count-1.

91.7.11  ItemCount as Integer

MBS AVFoundation Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  
Function: Returns the number of items.

91.7.12  reloadData

Function: Reloads all slides.

91.7.13  reloadSlideshowItemAtIndex(index as Integer)

Function: Reloads the slide show with the given index.

91.7.14  removeItem(index as Integer)

MBS AVFoundation Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  
Function: Removes an item from the item list.
91.7. **CLASS IKSLIDESHOWMBS**

91.7.15  **removeItems**

MBS AVFoundation Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** Removes all items from the item list.

91.7.16  **runSlideshows**

**Function:** Start the slideshow.
**Example:**
```vba
dim s as new IKSlideshowMBS
// add items
s.runSlideshows
```

**Notes:** You may want to set all the properties before.

91.7.17  **setFile(index as Integer, file as folderitem, name as string=””)**

MBS AVFoundation Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** Sets the file in the items list with the given index.

91.7.18  **setImage(index as Integer, image as NSImageMBS, name as string=””)**

MBS AVFoundation Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** Sets the image in the items list with the given index.

91.7.19  **setPage(index as Integer, page as Variant, name as string=””)**

MBS AVFoundation Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** Sets a PDF page in the items list with the given index.
**Notes:** Page must be a PDFPageMBS object.
91.7.20  stopSlideshow

**Function:** Stops the slideshow.

91.7.21  Properties

91.7.22  AudioFile as Folderitem

MBS AVFoundation Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** Optional audio file to play while running slide show.
**Notes:**
Only used for Mac OS X 10.6.
(Read and Write property)

91.7.23  PDFDisplayBox as Integer

**Function:** The PDF display box mode to use.
**Notes:**
Default value is -1 which means that we use the framework default mode.
(Read and Write property)

91.7.24  PDFDisplayMode as Integer

**Function:** The PDF display mode you want.
**Notes:**
Default value is -1 which means that we use the framework default mode.
(Read and Write property)

91.7.25  PDFDisplaysAsBook as Boolean

**Function:** Whether PDF should display as book.
**Notes:**
91.7. **CLASS IKSLIDESHOWMBS**

Default value is false.
(Read and Write property)

### 91.7.26 ScreenIndex as Integer

MBS AVFoundation Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
**Function:** The screen to use.
**Notes:**
Default is main screen.
Only used for Mac OS X 10.6.
(Read and Write property)

### 91.7.27 StartIndex as Integer

**Function:** The index of the first slide to show.
**Notes:**
Index is from 0 to count-1.
Default value is -1 which means that we use the framework default mode.
(Read and Write property)

### 91.7.28 StartPaused as Boolean

**Function:** Whether to start paused.
**Notes:**
Default is false.
(Read and Write property)

### 91.7.29 WrapAround as Boolean

**Function:** Whether to wrap around when the slideshow runs.
**Notes:**
Default is false.
(Read and Write property)
91.7.30 Events

91.7.31 canExportSlideshowItemAtIndex(index as Integer, applicationBundleIdentifier as string) as boolean

Function: Should the export button be enabled for a given item at index?
Notes: This event is optional.

91.7.32 slideshowDidChangeCurrentIndex(newIndex as Integer)

Function: Slideshow did change current item index.

91.7.33 slideshowDidStop

Function: Slideshow did stop
Notes: This event is optional.

91.7.34 slideshowWillStart

Function: Slideshow will start.
Notes: This event is optional.

91.7.35 Constants

91.7.36 iPhotoBundleIdentifier="com.apple.iPhoto"

MBS AVFoundation Plugin, Plugin Version: 7.7. Function: The iPhoto application identifier.
Notes: May be used on the export functions.

91.7.37 kPDFDisplayBoxArtBox=4

MBS AVFoundation Plugin, Plugin Version: 7.7. Function: One of the possible values for the PDFDisplayBox property.
91.7.38  kPDFDisplayBoxBleedBox=2
MBS AVFoundation Plugin, Plugin Version: 7.7. **Function:** One of the possible values for the PDFDisplayBox property.

91.7.39  kPDFDisplayBoxCropBox=1
MBS AVFoundation Plugin, Plugin Version: 7.7. **Function:** One of the possible values for the PDFDisplayBox property.

91.7.40  kPDFDisplayBoxMediaBox=0
MBS AVFoundation Plugin, Plugin Version: 7.7. **Function:** One of the possible values for the PDFDisplayBox property.

91.7.41  kPDFDisplayBoxTrimBox=3
MBS AVFoundation Plugin, Plugin Version: 7.7. **Function:** One of the possible values for the PDFDisplayBox property.

91.7.42  kPDFDisplaySinglePage=0
MBS AVFoundation Plugin, Plugin Version: 7.7. **Function:** One of the PDF display mode constants.

91.7.43  kPDFDisplaySinglePageContinuous=1
MBS AVFoundation Plugin, Plugin Version: 7.7. **Function:** One of the PDF display mode constants.

91.7.44  kPDFDisplayTwoUp=2
MBS AVFoundation Plugin, Plugin Version: 7.7. **Function:** One of the PDF display mode constants.
91.7.45  kPDFDisplayTwoUpContinuous=3

MBS AVFoundation Plugin, Plugin Version: 7.7. **Function**: One of the PDF display mode constants.
Chapter 92

Instant Message

92.1 class IMServiceMBS

92.1.1 class IMServiceMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An IMService object represents a service available to a user through iChat, such as AIM, Jabber, and Bonjour.

**Notes:**

Each IMService object represents one service available through iChat. Class methods such as allServices and serviceWithName will return these objects. Each object acts as the liaison to its single service, allowing you to access the individual user’s global status, the user’s list of acquaintances, and other information which can be integrated into your application.

You may want to subclass the InstantMessageMBS class to get events for changes.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

92.1.2 Methods

92.1.3 imageFileForStatus(status as Integer) as folderitem

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the folderitem of the image corresponding to the IMPersonStatus specified by status.

**Notes:** Convenience function which does the same as InstantMessageMBS.imageFileForStatus.
92.1.4 imageNameForStatus(status as Integer) as string

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the image name for the given status.

**Example:**

MsgBox IMServiceMBS.imageNameForStatus(IMServiceMBS.IMPersonStatusIdle)

**Notes:**

Mac OS X 10.5 only.
On Mac OS X the NSImage class can be used to access system images by name and there you can use this name.

92.1.5 imageURLForStatus(status as Integer) as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the URL of the image corresponding to the IMPersonStatus specified by status.

**Notes:** Convenience function which does the same as InstantMessageMBS.imageURLForStatus.

92.1.6 IMCapabilityAudioConference as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.

92.1.7 IMCapabilityDirectIM as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.

92.1.8 IMCapabilityFileSharing as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.
92.1. CLASS IMSERVICEMBS

92.1.9 IMCapabilityFileTransfer as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.

92.1.10 IMCapabilityText as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.

92.1.11 IMCapabilityVideoConference as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.

92.1.12 IMPersonAVBusyKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries. **Notes:** Used to obtain a person’s busy status. The value is a number set to 0 if the person’s audio/video capabilities are available, or 1 if they are busy.

92.1.13 IMPersonCapabilitiesKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries. **Notes:** Used to obtain a person’s iChat capabilities. The value is an array of capability properties. Check for IMCapability* strings in this array.

92.1.14 IMPersonEmailKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries. **Notes:** Used to obtain a person’s email address. The value is a string containing the person’s email address. This is a key used directly by Bonjour; however, if a person has an Address Book entry associated with a relevant AIM account, this key reflects the first email address of that person.
CHAPTER 92. INSTANT MESSAGE

92.1.15 IMPersonFirstNameKey as string

Notes: Used to obtain a person’s first name. The value is a string containing the person’s first name. This is a key used directly by Bonjour; however, if a person has an Address Book entry associated with a relevant AIM account, this key reflects the first name of that person.

92.1.16 IMPersonIdleSinceKey as string

Notes: Used to obtain a person’s idle status. The value is a date containing the time, in seconds, since the last user activity. Available if the person’s status is idle.

92.1.17 IMPersonLastNameKey as string

Notes: Used to obtain a person’s last name. The value is a string containing the person’s last name. This is a key used directly by Bonjour; however, if a person has an Address Book entry associated with a relevant AIM account, this key reflects the last name of that person.

92.1.18 IMPersonPictureDataKey as string

Notes: Used to obtain a person’s image. The value is a string containing the image for the person’s icon.

92.1.19 IMPersonScreenNameKey as string

Notes: Used to obtain a person’s screen name. The value is a string containing the service-specific identifier for a person. For example, ”User123” or ”steve@mac.com” for AIM, and ”John Doe” for Bonjour.
92.1. **CLASS IMSERVICE MBS**

92.1.20 **IMPersonServiceNameKey as string**

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries. **Notes:** Used to obtain a person’s service name. The value is a string containing the name of the service this person belongs to.

92.1.21 **IMPersonStatusKey as string**

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries. **Notes:** Used to obtain a person’s online status. The value is a number representing the current online status of the person, if known.

92.1.22 **IMPersonStatusMessageKey as string**

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries. **Notes:** Used to obtain a person’s status message. The value is a string containing the person’s current status message.

92.1.23 **infoForAllScreenNames as dictionary()**

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns information about all people and all accounts currently logged in to the service. **Notes:**

If a person is logged in on multiple accounts (determined by the user’s Address Book), this method will return the information for all of the logged-in accounts.

Returns an Array of the dictionaries. Use IMPerson*Key strings for the keys in that dictionary.

92.1.24 **infoForPreferredScreenNames as dictionary()**

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns information about all people and their primary accounts currently logged in to the service. **Notes:**
CHAPTER 92. INSTANT MESSAGE

If a person is logged in on multiple accounts (determined by the user’s Address Book), this method will only return the information for the preferred account. The preferred account is determined by iChat, using a combination of capabilities (video chat capability, audio chat capability, and so on), status (available, idle, away), and other user attributes.

Returns an Array of the dictionaries for all people and is guaranteed to provide only one array entry for any logged-in person. Use IMPerson*Key strings for the keys in that dictionary.

92.1.25 infoForScreenName(name as string) as dictionary

Function: Returns information about the person specified by his/her screenName.
Notes:
screenName: A string containing the screen name identifier of a person.

Returns a dictionary on success and nil on failure. Use IMPerson*Key strings for the keys in that dictionary.

92.1.26 LocalizedName as String

Function: Returns the user-visible localized name of the service.
Example:

dim services() as IMServiceMBS = InstantMessageMBS.allServices
for each service as IMServiceMBS in Services
    MsgBox service.LocalizedName
next
Notes: Returns a String. Will contain the localized service name, such as ”AOL Instant Messenger”, ”Jabber”, or ”Bonjour”, for example. This string will be localized if required.

92.1.27 LocalizedShortName as String

Function: Returns a shorter version, if available, of the user-visible localized name of the service.
Example:
92.1. CLASS IMSERVICEMBS

```vbnet
dim services() as IMServiceMBS = InstantMessageMBS.allServices

for each service as IMServiceMBS in Services
    MsgBox service.LocalizedShortName
next
```

**Notes:** Returns a "" on failure. Will return a localized string if required.

---

92.1.28 Name as String

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the fixed canonical name of the service.

**Example:**

```vbnet
dim services() as IMServiceMBS = InstantMessageMBS.allServices

for each service as IMServiceMBS in Services
    MsgBox service.Name
next
```

**Notes:** Returns a "" on failure. This string is not localized.

---

92.1.29 peopleWithScreenName(screenName as string) as ABPersonMBS()

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the Address Book person objects that correspond to the person with the screenName matched by screenName.

**Notes:**

- screenName: An string containing the screen name identifier of a person or persons.

Returns an array of ABPersonMBS objects that match the screen name matched by screenName. Can return an empty array or an array with one or more items.

Returns empty array on failure.
CHAPTER 92. INSTANT MESSAGE

92.1.30 screenNamesForPerson(person as ABPersonMBS) as string()

Function: Returns a list of valid screen names for any given person.

Example:

// show my screennames on all services

dim AddressBook as new ABAAddressBookMBS
dim owner as ABPersonMBS = AddressBook.owner
dim services() as IMServicesMBS = InstantMessageMBS.allServices

for each service as IMServicesMBS in Services
    MsgBox service.LocalizedName + "::" + EndOfLine + join(service.screenNamesForPerson(owner), EndOfLine)
next

Notes:

person: An Address Book ABPerson object.
Returns an Array of Strings that are valid screen names for the person specified by person. See Address
Book documentation for more information on ABPerson and accessing the user’s address book. Can return
an empty array or an array with one or more items.

Returns an empty array on failure.

92.1.31 Status as Integer

Function: Returns the login status of the service.

Notes: Returns the appropriate IMServicesStatus number.

92.1.32 Properties

92.1.33 Handle as Integer

Function: Handle to the internal used IMServices reference.

Notes: (Read and Write property)
92.1.34  Constants

92.1.35  IMPersonStatusAvailable = 4

MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.

92.1.36  IMPersonStatusAway = 3

MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.

92.1.37  IMPersonStatusIdle = 2

MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.

92.1.38  IMPersonStatusNoStatus = 5

MBS MacCocoa Plugin, Plugin Version: 7.7. **Function:** The status constant for persons where the status is unknown.
**Notes:** Mac OS X 10.5 only.

92.1.39  IMPersonStatusOffline = 1

MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.

92.1.40  IMPersonStatusUnknown = 0

MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.

92.1.41  IMServiceStatusDisconnected = 1

MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.
92.1.42  IMServiceStatusLoggedIn = 4
MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.

92.1.43  IMServiceStatusLoggedOut = 0
MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.

92.1.44  IMServiceStatusLoggingIn = 3
MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.

92.1.45  IMServiceStatusLoggingOut = 2
MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.
92.2. CLASS INSTANTMESSAGEMBS

92.2 class InstantMessageMBS

92.2.1 class InstantMessageMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The class to handle Instant Message support for Mac OS X 10.4 and newer. Notes: This class is based on the Instant Message framework from Apple. It can be used to get the status of iChat.

92.2.2 Methods

92.2.3 allServices as IMServiceMBS()

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the list of services currently available to the user, regardless of their status. Notes: Returns nil on failure. Returns a array with IMServiceMBS objects corresponding to the current available services (AIM, Bonjour, Jabber, and so on.)

92.2.4 Available as boolean

92.2.5 imageFileForStatus(status as Integer) as folderitem

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the folderitem of the image corresponding to the IMPersonStatus specified by status. Notes: This image reflects the status of the user, and is usually reflected by a colored bubble or triangle. Returns nil on failure. This is a convenience function which will call imageFileForStatus and return the folderitem matching the
URL in case it points to a disc file.

For Mac OS X 10.4 all images are stored as TIFF files on hard disc. Use the TiffPictureMBS class to load them (OpenAsPicture will not work because of the masks).

values:

IMPersonStatusUnknown = 0
IMPersonStatusOffline = 1
IMPersonStatusIdle = 2
IMPersonStatusAway = 3
IMPersonStatusAvailable = 4

### 92.2.6 imageNameForStatus(status as Integer) as string

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the image name for the given status.
**Notes:**
Mac OS X 10.5 only.
On Mac OS X the NSImage class can be used to access system images by name and there you can use this name.

### 92.2.7 imageURLForStatus(status as Integer) as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the URL of the image corresponding to the IMPersonStatus specified by status.
**Notes:**
This image reflects the status of the user, and is usually reflected by a colored bubble or triangle.

Returns nil on failure.

values:

### 92.2.8 myIdleTime as Double

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Class method to return the idle time of the active user.
92.2.  CLASS INSTANTMESSAGEMBS

IMPersonStatusUnknown = 0
IMPersonStatusOffline = 1
IMPersonStatusIdle = 2
IMPersonStatusAway = 3
IMPersonStatusAvailable = 4

Notes: Returns in seconds the time since the currently active user went idle.

92.2.9  myStatus as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Class method to return the status of the currently active user.  
**Notes:**  
This status is global across all services.

values:

IMPersonStatusUnknown = 0
IMPersonStatusOffline = 1
IMPersonStatusIdle = 2
IMPersonStatusAway = 3
IMPersonStatusAvailable = 4

92.2.10  notificationCenter as NSNotificationCenterMBS

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns the custom notification center for the service.  
**Notes:**  
A custom notification center that manages IMService notifications.  
Available in Mac OS X v10.4 and later.

92.2.11  serviceWithName(name as string) as IMSERVICEMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Returns only the service specified by a given name.  
**Notes:**
name: A String containing a service name as returned by a previous call to name. Hard-coding the service names internally is not recommended. Returns an IMService object corresponding to the available service specified by name. Returns nil on any failure.

92.2.12 Events

92.2.13 MyStatusChanged

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event is called when the local user changes online status. **Notes:** The client should call myStatus function to get the new status.

92.2.14 PersonInfoChanged(info as dictionary)

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event sent when a screenName changes some aspect of their published information. **Notes:** The user information dictionary will always contain an ScreenName and may contain any of the following values: StatusMessage, IdleSince, FirstName, LastName, IMPersonEmailKey, PictureData, AVAvailable and AVBusy, Capabilities values.

92.2.15 PersonStatusChanged(info as dictionary)

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event sent when a different user (screenName) logs in, logs off, goes away, and so on. **Notes:** The info object knows the ScreenName and the Status of the person.

92.2.16 ServiceStatusChanged

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event sent when the user logs in, logs off, goes away, and so on. **Notes:** Call MyStatus to get the new state.
92.2.17 StatusImagesChangedAppearance

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event sent when the user changes their preferred images for displaying status. **Notes:** Clients that display status information graphically (using the green/yellow/red dots) should call `imageURLForStatus` to get the new image.
Chapter 93

IO Registry

93.1 class DarwinDriveStatisticsMBS

93.1.1 class DarwinDriveStatisticsMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
A class for an iterator over the IORegistry drives.

**Example:**
```
dim d as DarwinDriveStatisticsMBS
dim l as CFDictionaryMBS

d=new DarwinDriveStatisticsMBS
l=d.NextDrive
while l<>Nil
CFShowMBS l
l=d.NextDrive
wend
```

93.1.2 Methods

93.1.3 close

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The destructor.

**Notes:**
There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

93.1.4 kIOBlockStorageDriverStatisticsBytesReadKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary. **Notes:**

Describes the number of bytes read since the block storage driver was instantiated.

This property describes the number of bytes read since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

93.1.5 kIOBlockStorageDriverStatisticsBytesWrittenKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary. **Notes:**

Describes the number of bytes written since the block storage driver was instantiated.

This property describes the number of bytes written since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

93.1.6 kIOBlockStorageDriverStatisticsKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The key value used to get a statistics dictionary from the drive information dictionary.

93.1.7 kIOBlockStorageDriverStatisticsLatentReadTimeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary. **Notes:**

Describes the number of nanoseconds of latency during reads since the block storage driver was instantiated.
This property describes the number of nanoseconds of latency during reads since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

93.1.8 kIOBlockStorageDriverStatisticsLatentWriteTimeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary.

**Notes:**

Describes the number of nanoseconds of latency during writes since the block storage driver was instantiated.

This property describes the number of nanoseconds of latency during writes since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

93.1.9 kIOBlockStorageDriverStatisticsReadErrorsKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary.

**Notes:**

Describes the number of read errors encountered since the block storage driver was instantiated.

This property describes the number of read errors encountered since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

93.1.10 kIOBlockStorageDriverStatisticsReadRetriesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary.

**Notes:**

Describes the number of read retries required since the block storage driver was instantiated.

This property describes the number of read retries required since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.
93.1.11 kIOBlockStorageDriverStatisticsReadsKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for the statistics dictionary.
**Notes:**
Describes the number of read operations processed since the block storage driver was instantiated.

This property describes the number of read operations processed since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

93.1.12 kIOBlockStorageDriverStatisticsTotalReadTimeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for the statistics dictionary.
**Notes:**
Describes the number of nanoseconds spent performing reads since the block storage driver was instantiated.

This property describes the number of nanoseconds spent performing reads since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

93.1.13 kIOBlockStorageDriverStatisticsTotalWriteTimeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for the statistics dictionary.
**Notes:**
Describes the number of nanoseconds spent performing writes since the block storage driver was instantiated.

This property describes the number of nanoseconds spent performing writes since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an OSNumber value.

93.1.14 kIOBlockStorageDriverStatisticsWriteErrorsKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
One of the keys for the statistics dictionary.
**Notes:**
Describes the number of write errors encountered since the block storage driver was instantiated. This property describes the number of write errors encountered since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

**93.1.15  kIOBlockStorageDriverStatisticsWriteRetriesKey as CFStringMBS**

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary. **Notes:**

Describes the number of write retries required since the block storage driver was instantiated.

This property describes the number of write retries required since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an OSNumber value.

**93.1.16  kIOBlockStorageDriverStatisticsWritesKey as CFStringMBS**

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary. **Notes:**

Describes the number of write operations processed since the block storage driver was instantiated.

This property describes the number of write operations processed since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has a CFNumber value.

**93.1.17  NextDrive as CFDictionaryMBS**

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the dictionary describing the next drive in the list.

**93.1.18  Reset**

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Moves you back to the beginning of the list.
93.1.19 Properties

93.1.20 Handle as Integer

MBS MacCF Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference. **Notes:** (Read and Write property)
93.2. MODULE IOREGISTRYMBS

93.2 module IORegistryMBS

93.2.1 module IORegistryMBS

Notes: The IORegistryMBS stores information about the installed hardware.

93.2.2 Methods

93.2.3 AudioRoot as IORegistryNodeMBS

93.2.4 DeviceRoot as IORegistryNodeMBS

93.2.5 FirewireRoot as IORegistryNodeMBS

93.2.6 MatchingServices(servicename as string) as IORegistryNodeMBS()

Example:

// search for Serial devices
dim devices() as IORegistryNodeMBS = IORegistryMBS.MatchingServices("IOSerialBSDClient")
dim names(-1) as string

// check devices and query names
for each dev as IORegistryNodeMBS in devices
dim dic as Dictionary = dev.Properties
names.Append dic.Lookup("IOTTYBaseName","")
93.2.7 PerformanceStatistics as Dictionary

MBS MacCF Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Queries performance statistics for first graphics card on a Mac.

**Example:**

```vbscript
dim d as Dictionary = IORegistryMBS.PerformanceStatistics
if d <> nil then
    dim gpuCoreUse as Int64 = d.Value("GPU Core Utilization")
    dim freeVramCount as Int64 = d.Value("vramFreeBytes")
    dim usedVramCount as Int64 = d.Value("vramUsedBytes")
    dim sum as int64 = (freeVramCount + usedVramCount)
    List.AddRow format(gpuCoreUse/1000000000.0, "0% "), Format(freeVramCount/1024.0/1024.0, "0") + " MB of "+Format(sum/1024.0/1024.0, "0") + " MB", Format(usedVramCount / sum, "0% ")
else
    Break
end if
```

**Notes:**

The dictionary contains details about performance of graphics card.
This includes vramFreeBytes and vramUsedBytes for memory usage as well as "GPU Core Utilization" key with GPU time used.
Returns nil on any error.

93.2.8 PowerRoot as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the root of the Power tree inside the IO Registry.
93.2.9 Present as Boolean

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Is the IORegistryMBS working?
**Notes:** Returns true on Mac OS X and false on other platforms.

93.2.10 Root(plane as string) as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the root of the IORegistry tree with the given plane name.
**Example:**
```vba
// shows names of all USB devices
dim u as IORegistryNodeMBS = IORegistryMBS.Root("IOUSB") // same as USBRoot function

// now loop over all devices with all children (non recursive)
dim names(-1) as string
dim nodes(-1) as IORegistryNodeMBS = array(u)

while UBound(nodes)>=0
    dim p as IORegistryNodeMBS = nodes.pop
    names.Append p.Name
    for each c as IORegistryNodeMBS in p.Children
        nodes.Append c
    next
wend

// and display array with names
MsgBox Join(names,EndOfLine)
```

93.2.11 ServiceRoot as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the root of the Service tree inside the IO Registry.

93.2.12 USBRoot as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the root of the USB tree inside the IO Registry.
**Example:**
/ shows names of all USB devices
dim u as IORegistryNodeMBS = IORegistryMBS.USBRoot

// now loop over all devices with all children (non recursive)
dim names(-1) as string
dim nodes(-1) as IORegistryNodeMBS = array(u)

while UBound(nodes)>0
dim p as IORegistryNodeMBS = nodes.pop

names.Append p.Name
for each c as IORegistryNodeMBS in p.Children
nodes.Append c
next
wend

// and display array with names
MsgBox Join(names,EndOfLine)
93.3. CLASS IORegistryNodeMBS

93.3. class IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for a node inside the IO Registry.

93.3.2 Methods

93.3.3 CFProperties as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a CFDictionary object with all the properties of this note.

93.3.4 Child(index as Integer) as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the IORegistryNodeMBS with the given index. **Notes:** Index from 0 to ChildCount-1.

93.3.5 Children as IORegistryNodeMBS()

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array with all child nodes.

93.3.6 Parents as IORegistryNodeMBS()

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array with all parent nodes.

93.3.7 Properties as Dictionary

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a Real Studio dictionary with all the properties of this note.
CHAPTER 93. IO REGISTRY

93.3.8 Properties

93.3.9 Busy as Integer

**Notes:**
Many activities in IOService are asynchronous. When registration, matching, or termination is in progress on an IOService, its busyState is increased by one. Change in busyState to or from zero also changes the IOService’s provider’s busyState by one, which means that an IOService is marked busy when any of the above activities is occurring on it or any of its clients.
(Read only property)

93.3.10 ChildCount as Integer

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Count of sub nodes.
**Notes:** (Read only property)

93.3.11 DataCount as Integer

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Count of data items.
**Notes:** (Read only property)

93.3.12 IOClass as String

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the IOKit class.
**Notes:** (Read only property)

93.3.13 Name as String

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of this node.
**Notes:** (Read only property)
93.3. **CLASS IOREGISTRYNODEMBS**

93.3.14 **ParentCount as Integer**

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of parent nodes for this node. **Notes:** Typically one. (Read only property)

93.3.15 **Path as String**

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The path of this node. **Notes:** Useful for finding a node again. (Read only property)

93.3.16 **RetainCount as Integer**

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Retain count of this object. **Notes:** (Read only property)
Chapter 94

IO Warrior

94.1 class IOWarriorCarbonDeviceMBS

94.1.1 class IOWarriorCarbonDeviceMBS

MBS USB Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: A class to describe

94.1.2 Properties

94.1.3 InterfaceHandle as Integer

Notes: This value is needed for WriteToInterface and ReadFromInterface calls. (Read and Write property)

94.1.4 InterfaceOpen as Boolean

MBS USB Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Whether this Interface is open or not.
Notes: (Read and Write property)
94.1.5 InterfaceType as Integer

MBS USB Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Type of interface.
**Notes:**
One of the values in the kIOWarrior*Interface* constants.
(Read and Write property)

94.1.6 SerialNumber as String

MBS USB Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The serial number of this device.
**Notes:**
Not available on very old devices.
(Read and Write property)

94.2. CLASS IOWARRIORCARBONMBS

94.2 class IOWarriorCarbonMBS

94.2.1 class IOWarriorCarbonMBS

MBS USB Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: A class to control the IOWarrior Device on Mac OS X.

Notes:
This is the software for the IOWarrior USB Device from codemercs.com. The SDK from May 2003 is used.

http://www.codemercs.com

94.2.2 Methods

94.2.3 CountInterfaces as Integer

Notes: Please email support if you need more functions to handle more than one device.

94.2.4 FirstInterfaceOfType(InterfaceType as Integer) as Integer

Notes:
Returns 0 on any error.
This value is needed for WriteToInterface and ReadFromInterface calls.

94.2.5 Init as Integer

Notes: Return 0 if successfull.

94.2.6 InterfaceAtIndex(index as Integer) as IOWarriorCarbonDeviceMBS

CHAPTER 94. IO WARRIOR

Notes:

Returns nil on any error.
Index is zero based and goes till CountInterfaces-1.

94.2.7 IsPresent as Integer

MBS USB Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Counts the devices found.

94.2.8 ReadFromInterface(InterfaceHandle as Integer, reportID as Integer, size as Integer, data as memoryblock) as Integer

MBS USB Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Writes bytes from the interface.
Notes: Size must match the device’s report size.

94.2.9 ReadInterface0(byref int32 as Integer) as Integer

MBS USB Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Reads a 32bit value from interface 0.

94.2.10 ReadInterface1(reportid as Integer, m as memoryblock) as Integer

MBS USB Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Reads from interface 0.

94.2.11 WriteInterface0(value as Integer) as Integer

MBS USB Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Writes to interface 0.

94.2.12 WriteInterface1(reportid as Integer, m as memoryblock) as Integer

MBS USB Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Writes to interface 1.
94.2.13 WriteToInterface(InterfaceHandle as Integer, size as Integer, data as memoryblock) as Integer

MBS USB Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Writes bytes to the interface.  
**Notes:** Size must match the device’s report size.

94.2.14 Properties

94.2.15 USB24DeviceID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The USB Device ID used for a IOWarrior 24 device.  
**Notes:** (Read and Write property)

94.2.16 USB24PVDeviceID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The USB Device ID used for a IOWarrior 24 PV device.  
**Notes:** (Read and Write property)

94.2.17 USB40DeviceID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The USB Device ID used for a IOWarrior 40 device.  
**Notes:** (Read and Write property)

94.2.18 USB56DeviceID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The USB Device ID used for a IOWarrior 56 device.  
**Notes:** (Read and Write property)
94.2.19 USBVendorID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The USB vendor ID of this device. **Notes:** (Read and Write property)

94.2.20 Constants

94.2.21 kIOWarrior24Interface0 = 2

MBS USB Plugin, Plugin Version: 7.1. **Function:** One of the interface type constants.

94.2.22 kIOWarrior24Interface1 = 3

MBS USB Plugin, Plugin Version: 7.1. **Function:** One of the interface type constants.

94.2.23 kIOWarrior24PVInterface0 = 6

MBS USB Plugin, Plugin Version: 7.1. **Function:** One of the interface type constants.

94.2.24 kIOWarrior24PVInterface1 = 7

MBS USB Plugin, Plugin Version: 7.1. **Function:** One of the interface type constants.

94.2.25 kIOWarrior40Interface0 = 0

MBS USB Plugin, Plugin Version: 7.1. **Function:** One of the interface type constants.

94.2.26 kIOWarrior40Interface1 = 1

MBS USB Plugin, Plugin Version: 7.1. **Function:** One of the interface type constants.
94.2. CLASS IOWARRIORCARBONMBS

94.2.27 kIOWarrior56Interface0 = 4

MBS USB Plugin, Plugin Version: 7.1. **Function:** One of the interface type constants.

94.2.28 kIOWarrior56Interface1 = 5

MBS USB Plugin, Plugin Version: 7.1. **Function:** One of the interface type constants.
94.3  class IOWarriorWindowsMBS

94.3.1  class IOWarriorWindowsMBS

MBS USB Plugin, Plugin Version: 3.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** A class to control the IOWarrior Device on Windows.
**Notes:**
This is the software for the IOWarrior USB Device from codemercs.com. The SDK 1.5 vom 21. September 2006 is used.
http://www.codemercs.com/

To work the stuff needs as a minimum the SetupAPI DLL on Windows which is part of Windows 98 or newer.
The plugin can be changed to simply do nothing on Window 95 or NT4 if someone needs this. (A RB application using this plugin can’t launch on Windows 95 or NT4 because of the missing DLL.)

94.3.2  Methods

94.3.3  CancelIO(Pipe as Integer) as boolean

MBS USB Plugin, Plugin Version: 7.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Cancels current IO processing.
**Notes:**
Returns true for success.

Cancel a read or write operation under way on one of the pipes.
This function is seldom used, because you need several threads in your program to be able to call it at all.
Read() blocks the thread so you need another thread for cancelling. Setting the timeouts is an easier way for handling read or write problems.
The function cancels pending read and write operations simultaneously.

94.3.4  close

MBS USB Plugin, Plugin Version: 3.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Closes the connection to the hardware.
**Notes:**
Close all IO-Warriors.
You must call this function when you are done using IO-Warriors in your program.
If multiple IO-Warriors are present all will be closed by this function.
94.3. **CLASS IOWARRIORWINDOWSMBS**

## 94.3.5 DeviceCount as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns the number of IO-Warrior devices present.

### Notes:

The function has to be called after Open() to return meaningful results.
Plugging or unplugging IO-Warriors after calling IowKitOpenDevice() is not handled. The number DeviceCount() returns stays the same.

## 94.3.6 GetProductID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The product ID of the USB device used.

### Notes:

You can compare this with the values from USB40DeviceID, USB56DeviceID and USB24DeviceID.

Return the Product ID of the IO-Warrior device identified by iowHandle.
The Product ID is a 16-bit Word identifying the specific kind of IO-Warrior.
The value is cached in the dynamic library because access to the device needs some msecs.

## 94.3.7 GetRevision as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Return the revision of the firmware of the current IO-Warrior device.

### Notes:

0 on any error.

## 94.3.8 Open as boolean

MBS USB Plugin, Plugin Version: 3.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Opens a connection to the hardware.

## 94.3.9 Read(pipe as Integer, buffer as memoryblock, bufferSize as Integer) as Integer

MBS USB Plugin, Plugin Version: 3.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Reads bytes from the device into the buffer.

### Notes:
Read data from IO-Warrior.
This function reads length bytes from IO-Warrior and returns the number of bytes read if successful.
Note that you must specify the number of the pipe (see IO-Warrior specs) to read from. numPipe ranges from 0 to IOWKIT_MAX_PIPES-1.
Since the IO-Warriors are HID devices, you can only read the data in chunks called reports. Each report is preceded by a ReportID byte. The "IOWarriorDatasheet.pdf" elaborates about that.
The function returns the number of bytes read, so you should always check if it reads the correct number of bytes, you can use GetLastError() to get error details. Keep in mind that data is always returned in report chunks, so reading 5 bytes from the IO-pins of an IO-Warrior 24 would only return 3 bytes of data because the IO-Warrior 24 has a 3 byte report whereas an IO-Warrior 40 has a 5 byte report.
The Special Mode pipe has a report size of 8 bytes for all IO-Warriors.
Linux does not have a ReportID byte of 0 for pipe 0 (I/O pins). To be completely compatible with Windows libiowkit.so adds that ReportID to the data.
As of dynamic library version 1.4 the function correctly reads several reports at once.

ATTENTION!
This function blocks the current thread until something changes on IO-Warrior (i.e. until user presses a button connected to an input pin, or until IIC data arrives), so if you do not want your program to be blocked you should use a separate thread for reading from IO-Warrior. If you do not want a blocking read use ReadImmediate(). Alternatively you can set the read timeout with SetTimeout() to force Read() to fail when the timeout elapsed.

94.3.10  ReadImmediate(byref value as UInt32) as Integer

MBS USB Plugin, Plugin Version: 3.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. Function:
Returns the last value readed in the parameter.
Notes:
Return last value read from IO-Warrior pipe 0 (I/O pins).
The function returns TRUE (1) if a new value has arrived otherwise it returns FALSE and places the last value read into value.
The function can only read the I/O pins via pipe 0 so it does not need a numPipe parameter. It also abstracts from the number of I/O pins the device has.

Until the first report has been read the function returns -1 because the I/O pins are initially high.

Internally 8 reports are buffered to allow using a timer to call ReadImmediate() without losing fast bursts of reports. Read() also uses the buffered reports so do not mix calls to Read() and ReadImmediate() without careful consideration.
This is not true for the Linux version yet.
There is no non-blocking read for pipe 1 (Special Mode Functions) because pipe 1 has a command interface where you write a command and then read the answer.
94.3.11 ReadNonBlocking(pipe as Integer, buffer as memoryblock, bufferSize as Integer) as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Reads bytes from the device into the buffer in non blocking mode.

94.3.12 SerialNumber as string

MBS USB Plugin, Plugin Version: 7.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The serialnumber of this IOWarrior device.

**Notes:**
Returns an empty string if there is no serial number available.
The serialnumber is an eight byte long string.

94.3.13 SetTimeout(timeout as Integer) as boolean

MBS USB Plugin, Plugin Version: 7.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets the timeout.

**Example:**
```
dim w as IOWarriorWindowsMBS // your instance

if w.SetTimeout(1000) then
  MsgBox "OK. Set one second timeout"
else
  MsgBox "Failed."
end if
```

**Notes:**
Default is infinity.

Set read I/O timeout in milliseconds.
It is possible to lose reports with HID devices. Since reading a HID device is a blocking call it is possible to block your application in that case.
SetTimeout() makes Read() fail if it does not read a report in the allotted time.
If Read() times out, you have to restart any pending transaction (for example, IIC write or read transaction) from the beginning.
It is recommended to use 1 second (1000) or bigger timeout values.

Returns true on success.
94.3.14  SetWriteTimeout(timeout as Integer) as boolean

MBS USB Plugin, Plugin Version: 7.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets the write timeout.

**Notes:**
Default is infinity.

Set write I/O timeout in milliseconds.
SetWriteTimeout() makes Write() fail if it does not write a report in the allotted time.
If Write() times out, you have to restart any pending transaction (for example, IIC write transaction) from the beginning.
Failure of Write() is uncommon. Check your hardware if you encounter write errors.
The Linux library does not implement SetWriteTimeout() yet.
It is recommended to use 1 second (1000) or bigger timeout values.

94.3.15  Version as string

MBS USB Plugin, Plugin Version: 7.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The version of the IOWarrior library used for this class.

**Notes:** returns e.g. "IO-Warrior Kit V1.4".

94.3.16  Write(pipe as Integer, buffer as memoryblock, bufferSize as Integer) as Integer

MBS USB Plugin, Plugin Version: 3.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Writes bytes from the buffer to the device.

**Notes:**
Write length bytes of data to pipe numPipe of IO-Warrior. The return value is the number of bytes written.
Writing something else than a single report of the correct size and a valid report ID for the pipe fails for Windows. The function allows writing to the I/O pins through pipe 0 and Special Mode functions through pipe 1. To be completely compatible with the Windows version libiowkit.so expects a ReportID 0 for pipe 0 (I/O pins) even if Linux does not have a ReportID on pipe 0. The ReportID is stripped from the data sent to the device.
Sample write to pipe 0 of an IO-Warrior 40:
Integer value consists of 32 bits, which correspond to the 32 IO-Warrior 40 I/O pins. Each bit has the following meaning:
When a 1 is written to a pin the output driver of that pin is off and the pin is pulled high by an internal resistor. The pin can now be used as an input or an output with high state.
When a 0 is written to a pin the output driver is switched on pulling the pin to ground. The pin is now a output driving low.

For example, writing 0 (all 32 bits are zero) to IO-Warrior sets all pins as outputs driving low (so if you have LEDs connected to them they will be on).

Reading the status of the pins does always return the logic level on the pins, not the value written to the pin drivers.

Writing -1 (value in hex, all 32 bits set) sets all pins as inputs.

Note that if you want to use a pin as an input, you must first set it up as input, in other words, you must write 1 to it. For connected LEDs this means they go off.

### 94.3.17 Properties

#### 94.3.18 DeviceIndex as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The index of the current used IOWarrior device.

**Notes:**
Index is one based.
You can switch between the IO-Warrior devices by setting this parameter.
(Read and Write property)

#### 94.3.19 Handle as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The handle of the current IOWarrior device.

**Notes:** (Read and Write property)

#### 94.3.20 USB24DeviceID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The USB Device ID used for a IOWarrior 24 device.

**Notes:** (Read and Write property)

#### 94.3.21 USB40DeviceID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:**
The USB Device ID used for a IOWarrior 40 device.

**Notes:** (Read and Write property)
94.3.22 USB56DeviceID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The USB Device ID used for a IOWarrior 56 device. **Notes:** (Read and Write property)

94.3.23 USBVendorID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The USB vendor ID of this device. **Notes:** (Read and Write property)
Chapter 95

iTunes

95.1 class iTunesLibraryAlbumMBS

95.1.1 class iTunesLibraryAlbumMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Represents an album where a given media item (MediaItem) is contained. **Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

95.1.2 Methods

95.1.3 Constructor

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

95.1.4 Properties

95.1.5 AlbumArtist as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The artist associated with this album. **Notes:** (Read only property)
95.1.6 Artist as iTunesLibraryArtistMBS

Function: The artist. 
Notes: 
Deprecated. Will be removed in future versions. 
(Read only property)

95.1.7 Compilation as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Whether this album is a compilation. 
Notes: (Read only property)

95.1.8 DiscCount as Integer

Notes: (Read only property)

95.1.9 DiscNumber as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The index (i.e. 1, 2, 3, etc.) of the disc this album refers to within a compilation. 
Notes: (Read only property)

95.1.10 Gapless as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Whether this track’s album is gapless. 
Notes: (Read only property)

95.1.11 Handle as Integer

95.1. CLASS ITUNESLIBRARYALBUMMBS

Notes: (Read and Write property)

95.1.12 Rating as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The rating of this track’s album. Notes: (Read only property)

95.1.13 RatingComputed as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The rating of this track’s album. Notes: (Read only property)

95.1.14 SortAlbumArtist as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The artist associated with this album. This field should be used when sorting. Notes: (Read only property)

95.1.15 SortTitle as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The name of this that should be used for sorting purposes. Notes: (Read only property)

95.1.16 Title as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The name of this album. Notes: (Read only property)

95.1.17 TrackCount as Integer

Notes: (Read only property)
95.2. **CLASS ITUNESLIBRARYARTISTMBS**

95.2.1 **class iTunesLibraryArtistMBS**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Represents an artist, such as the performer of a song. **Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

95.2.2 **Methods**

95.2.3 **Constructor**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

95.2.4 **Properties**

95.2.5 **Handle as Integer**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object handle. **Notes:** (Read and Write property)

95.2.6 **name as String**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of this artist. **Notes:** (Read only property)

95.2.7 **sortName as String**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of this artist that should be used for sorting purposes. **Notes:** (Read only property)
95.3    class iTunesLibraryArtworkMBS

95.3.1    class iTunesLibraryArtworkMBS

Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

95.3.2    Methods

95.3.3    Constructor

95.3.4    Properties

95.3.5    Handle as Integer

Notes: (Read and Write property)

95.3.6    image as NSImageMBS

Notes: (Read only property)

95.3.7    imageData as Memoryblock

Notes: (Read only property)
95.3. CLASS ITUNESLIBRARYARTWORKMBS

95.3.8 imageDataFormat as Integer

MBS Mac Extras Plugin, Plugin Version: 13.5. Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The format of the data returned by the imageData method. **Notes:** (Read only property)

95.3.9 Constants

95.3.10 ITLibArtworkFormatBitmap = 1

MBS Mac Extras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible formats of the data returned by ITLibArtwork’s imageData method. **Notes:** The image data format is a bitmap.

95.3.11 ITLibArtworkFormatBMP = 6

MBS Mac Extras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible formats of the data returned by ITLibArtwork’s imageData method. **Notes:** The image data corresponds to a BMP image.

95.3.12 ITLibArtworkFormatGIF = 4

MBS Mac Extras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible formats of the data returned by ITLibArtwork’s imageData method. **Notes:** The image data corresponds to a GIF image.

95.3.13 ITLibArtworkFormatJPEG = 2

MBS Mac Extras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible formats of the data returned by ITLibArtwork’s imageData method. **Notes:** The image data corresponds to a JPEG image.

95.3.14 ITLibArtworkFormatJPEG2000 = 3

MBS Mac Extras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible formats of the data returned by ITLibArtwork’s imageData method.
Notes: The image data corresponds to a JPEG2000 image.

95.3.15  ITLibArtworkFormatNone = 0

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible formats of the data returned by ITLibArtwork’s imageData method. **Notes:** The image data format is unknown.

95.3.16  ITLibArtworkFormatPICT = 8

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible formats of the data returned by ITLibArtwork’s imageData method. **Notes:** The image data corresponds to a PICT image.

95.3.17  ITLibArtworkFormatPNG = 5

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible formats of the data returned by ITLibArtwork’s imageData method. **Notes:** The image data corresponds to a PNG image.

95.3.18  ITLibArtworkFormatTIFF = 7

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible formats of the data returned by ITLibArtwork’s imageData method. **Notes:** The image data corresponds to a TIFF image.
95.4. **CLASS ITUNESLIBRARYMBS**

95.4. class iTunesLibraryMBS

95.4.1 class iTunesLibraryMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class representing an iTunes library whose metadata is being queried. **Notes:** Requires iTunes 11 on Mac OS X. And your app must be code signed.

95.4.2 Methods

95.4.3 allMediaItems as iTunesLibraryMediaItemMBS()

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** All media items in the library.

95.4.4 allPlaylists as iTunesLibraryPlaylistMBS()

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** All playlists in the library.

95.4.5 artworkForMediaFile(mediaFile as folderitem) as iTunesLibraryArtworkMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Retrieves the artwork from a media file. **Notes:**

mediaFile: The folderitem of the media file whose artwork should be extracted. Returns a iTunesLibraryArtworkMBS instance represeting the media file artwork, or nil if the artwork was not found or could not be extracted. 

See also:

- 95.4.6 artworkForMediaFile(mediaFileURL as string) as iTunesLibraryArtworkMBS

95.4.6 artworkForMediaFile(mediaFileURL as string) as iTunesLibraryArtworkMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Retrieves the artwork from a media file. **Notes:**

mediaFileURL: The URL of the media file whose artwork should be extracted. Returns a iTunesLibraryArtworkMBS instance represeting the media file artwork, or nil if the artwork was
CHAPTER 95. ITUNES

not found or could not be extracted.

See also:

• 95.4.5 artworkForMediaFile(mediaFile as folderitem) as iTunesLibraryArtworkMBS

95.4.7 Constructor(requestedAPIVersion as string, byref error as NSErrorMBS)

**Function:** Initializes an instance of ITLibrary which can be used to retrieve media entities.

**Notes:**

Upon initialization of the library class, the default iTunes database for the current user will be read and parsed.

At this point all media entities will be cached in memory until the time the object is deallocated.

requestedAPIVersion: The version of the iTunesLibrary API that the application is requesting, provide "1.0" if unknown.

error: A variable that will receive an NSError if this method fails. May be nil if caller does not care about error.

If handle is 0, the initialization failed.

Requires that your app is code signed.

95.4.8 libraryWithAPIVersion(requestedAPIVersion as string, byref error as NSErrorMBS) as iTunesLibraryMBS

**Function:** Initializes an instance of ITLibrary which can be used to retrieve media entities.

**Notes:**

Upon initialization of the library class, the default iTunes database for the current user will be read and parsed.

At this point all media entities will be cached in memory until the time the object is deallocated.

requestedAPIVersion: The version of the iTunesLibrary API that the application is requesting, provide "1.0" if unknown.

error: A variable that will receive an NSError if this method fails. May be nil if caller does not care about error.

Returns a Library instance, or nil if this method fails.

Requires that your app is code signed.
95.4.9 Properties

95.4.10 apiMajorVersion as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The major version number of this API.  
**Notes:** (Read only property)

95.4.11 apiMinorVersion as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minor version number of this API.  
**Notes:** (Read only property)

95.4.12 applicationVersion as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The version of iTunes being accessed.  
**Notes:** (Read only property)

95.4.13 features as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A bitwise OR combination of the features of this library.  
**Notes:** (Read only property)

95.4.14 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object handle.  
**Notes:** (Read and Write property)

95.4.15 musicFolderLocation as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The location of the iTunes music folder.
95.4.16  showContentRating as Boolean

MBS Mac Extras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether to show content rating labels.  
**Notes:** (Read only property)

95.4.17  Constants

95.4.18  ITLibExportFeatureNone = 0

MBS Mac Extras Plugin, Plugin Version: 13.5. **Function:** One of the constants describe the features supported by a given iTunes library.  
**Notes:** No features are supported.
95.5. class iTunesLibraryMediaEntityMBS

95.5.1 class iTunesLibraryMediaEntityMBS

MBS MacExtrnas Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Abstract superclass for MediaItem and Playlist instances. Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

95.5.2 Methods

95.5.3 Constructor

95.5.4 enumerateValuesExceptForProperties(propertyNames() as string) as dictionary

MBS MacExtrnas Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Queries all keys and values for all properties except the given property names.

95.5.5 enumerateValuesForAllProperties as dictionary

95.5.6 enumerateValuesForProperties(propertyNames() as string) as dictionary

95.5.7 ITLibMediaEntityPropertyPersistentID as string

95.5.8 \texttt{valueForProperty(PropertyName as string) as Variant}

\textbf{Function:} Gets the value for a specified media property key.
\textbf{Notes:}

The media property keys you can use with this property are listed in this document and in Media Item Property Keys and Playlist Property Keys.

\textit{property:} The media property key that you want the corresponding value of.
\textit{Returns:} The value for the media property key.

95.5.9 \textbf{Properties}

95.5.10 \textbf{Handle as Integer}

\textbf{Notes:} (Read and Write property)

95.5.11 \textbf{persistentID as Integer}

\textbf{Notes:} (Read only property)
95.6  class iTunesLibraryMediaItemMBS

95.6.1  class iTunesLibraryMediaItemMBS

**Function:** A media item represents a single piece of media (such as a song, a video, a podcast, etc) in the  
iTunes library.  
**Notes:**  
A media item has an overall unique identifier, accessed using the persistentID property. The media item  
metadata may be accessed through its individual properties or via the iTunesLibraryMediaEntityMBS gen-  
eral property accessor methods.  
Subclass of the iTunesLibraryMediaEntityMBS class.  
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

95.6.2  Methods

95.6.3  Constructor

**Function:** The private constructor.

95.6.4  ITLibMediaItemPropertyAddedDate as string

**Function:** One of the constants for properties.

95.6.5  ITLibMediaItemPropertyAlbumArtist as string

**Function:** One of the constants for properties.

95.6.6  ITLibMediaItemPropertyAlbumDiscCount as string

**Function:** One of the constants for properties.
95.6.7 **ITLibMediaItemPropertyAlbumDiscNumber as string**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.8 **ITLibMediaItemPropertyAlbumIsCompilation as string**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.9 **ITLibMediaItemPropertyAlbumIsGapless as string**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.10 **ITLibMediaItemPropertyAlbumRating as string**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.11 **ITLibMediaItemPropertyAlbumRatingComputed as string**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.12 **ITLibMediaItemPropertyAlbumTitle as string**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.13 **ITLibMediaItemPropertyAlbumTrackCount as string**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.
95.6.14  **ITLibMediaItemPropertyArtistName** as string

MBS Mac Extras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.15  **ITLibMediaItemPropertyArtwork** as string

MBS Mac Extras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.16  **ITLibMediaItemPropertyBeatsPerMinute** as string

MBS Mac Extras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.17  **ITLibMediaItemPropertyBitRate** as string

MBS Mac Extras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.18  **ITLibMediaItemPropertyCategory** as string

MBS Mac Extras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.19  **ITLibMediaItemPropertyComments** as string

MBS Mac Extras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.20  **ITLibMediaItemPropertyComposer** as string

MBS Mac Extras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.
95.6.21  ITLibMediaItemPropertyContentRating as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.22  ITLibMediaItemPropertyDescription as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.23  ITLibMediaItemPropertyFileType as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.24  ITLibMediaItemPropertyGenre as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.25  ITLibMediaItemPropertyGrouping as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.26  ITLibMediaItemPropertyHasArtwork as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.27  ITLibMediaItemPropertyIsDRMProtected as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.
95.6.28  ITLibMediaItemPropertyIsPurchased as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.29  ITLibMediaItemPropertyIsUserDisabled as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.30  ITLibMediaItemPropertyIsVideo as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.31  ITLibMediaItemPropertyKind as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.32  ITLibMediaItemPropertyLastPlayDate as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.33  ITLibMediaItemPropertyLocation as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.34  ITLibMediaItemPropertyLocationType as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.
95.6.35  ITLibMediaItemPropertyLyricsContentRating as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.36  ITLibMediaItemPropertyMediaKind as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.37  ITLibMediaItemPropertyModifiedDate as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.38  ITLibMediaItemPropertyPlayCount as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.39  ITLibMediaItemPropertyRating as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.40  ITLibMediaItemPropertyRatingComputed as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.41  ITLibMediaItemPropertyReleaseDate as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.
95.6.42 ITLibMediaItemPropertySampleRate as string

95.6.43 ITLibMediaItemPropertySize as string

95.6.44 ITLibMediaItemPropertySkipDate as string

95.6.45 ITLibMediaItemPropertySortAlbumArtist as string

95.6.46 ITLibMediaItemPropertySortAlbumTitle as string

95.6.47 ITLibMediaItemPropertySortArtistName as string

95.6.48 ITLibMediaItemPropertySortComposer as string

95.6.49 ITLibMediaItemPropertySortTitle as string

MBS Mac Extras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.50 ITLibMediaItemPropertyStartTime as string

MBS Mac Extras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.51 ITLibMediaItemPropertyStopTime as string

MBS Mac Extras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.52 ITLibMediaItemPropertyTitle as string

MBS Mac Extras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.53 ITLibMediaItemPropertyTotalTime as string

MBS Mac Extras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.54 ITLibMediaItemPropertyTrackNumber as string

MBS Mac Extras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

95.6.55 ITLibMediaItemPropertyUserSkipCount as string

MBS Mac Extras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.
95.6.56  ITLibMediaItemPropertyVideoEpisode as string

95.6.57  ITLibMediaItemPropertyVideoEpisodeOrder as string

95.6.58  ITLibMediaItemPropertyVideoHeight as string

95.6.59  ITLibMediaItemPropertyVideoIsHD as string

95.6.60  ITLibMediaItemPropertyVideoSeason as string

95.6.61  ITLibMediaItemPropertyVideoSeries as string

95.6.62  ITLibMediaItemPropertyVideoSortSeries as string

95.6.63  ITLibMediaItemPropertyVideoWidth as string

95.6.64  ITLibMediaItemPropertyVoiceOverLanguage as string

95.6.65  ITLibMediaItemPropertyVolumeAdjustment as string

95.6.66  ITLibMediaItemPropertyVolumeNormalizationEnergy as string

95.6.67  ITLibMediaItemPropertyYear as string

95.6.68  Properties

95.6.69  addedDate as Date

MBS MacExtrus Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The date and media item this media item was added to the iTunes database. Notes: (Read only property)
95.6. **CLASS ITUNESLIBRARYMEDIAITEMMBS**

95.6.70  **album as iTunesLibraryAlbumMBS**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** The album where this media item belongs.
**Notes:** (Read only property)

95.6.71  **artist as iTunesLibraryArtistMBS**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** The artist associated with this media item.
**Notes:** (Read only property)

95.6.72  **artwork as iTunesLibraryArtworkMBS**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Whether this media item has artwork.
**Notes:** (Read only property)

95.6.73  **ArtworkAvailable as Boolean**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** Whether this media item has artwork.
**Notes:** (Read only property)

95.6.74  **beatsPerMinute as Integer**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** The BPM (beats per minute) of this media item.
**Notes:** (Read only property)

95.6.75  **bitrate as Integer**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:** The bitrate of this media item in kbps.
**Notes:** (Read only property)
95.6.76  category as String

MBS Mac Extras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The podcast category of this media item (implies this media item is a podcast).
Notes: (Read only property)

95.6.77  comments as String

Notes: (Read only property)

95.6.78  composer as String

Notes: (Read only property)

95.6.79  contentRating as String

Notes: (Read only property)

95.6.80  description as String

MBS Mac Extras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Any podcast description of with this media item (implies this media item is a podcast).
Notes: (Read only property)

95.6.81  DRMProtected as Boolean

Notes: (Read only property)
95.6.82  **fileType as Integer**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: The type of the file this media item refers to. **Notes**: (Read only property)

95.6.83  **genre as String**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: The genre associated with this media item. **Notes**: (Read only property)

95.6.84  **grouping as String**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: The grouping of this media item. **Notes**: (Read only property)

95.6.85  **kind as String**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: This media item’s file kind (ex. MPEG audio file). **Notes**: (Read only property)

95.6.86  **lastPlayedDate as Date**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: The date and time this media item was last played in iTunes, or nil if this media item has not been played. **Notes**: (Read only property)

95.6.87  **location as String**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: The location of this media item on disk. **Notes**: (Read only property)
95.6.88  locationFile as FolderItem

**Function:** The location of this media item on disk.  
**Notes:** For your convenience we provide this folderitem if location points to a valid file.  
(Read only property)

95.6.89  locationType as Integer

**Function:** The type of this media item with respect to its location.  
**Notes:** (Read only property)

95.6.90  lyricsContentRating as Integer

**Function:** The content rating of this media item’s lyrics.  
**Notes:** (Read only property)

95.6.91  mediaKind as Integer

**Function:** This media item’s media kind.  
**Notes:** (Read only property)

95.6.92  modifiedDate as Date

**Function:** The date and time this media item was last modified.  
**Notes:** (Read only property)

95.6.93  playCount as Integer

**Function:** The number of times this media item has been played in iTunes.
95.6.94  Purchased as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this media item was purchased.  
**Notes:** (Read only property)

95.6.95  rating as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The rating of this media item.  
**Notes:** (Read only property)

95.6.96  RatingComputed as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this media item’s rating is computed.  
**Notes:** (Read only property)

95.6.97  releaseDate as Date

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The date this media item was released.  
**Notes:** (Read only property)

95.6.98  sampleRate as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The sample rate of this media item in samples per second.  
**Notes:** (Read only property)

95.6.99  size as UInt64

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The size in bytes of this media item on disk.
95.6.100  skipCount as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of times this media item has been skipped.
**Notes:** (Read only property)

95.6.101  skipDate as Date

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The date and time when this media item was last skipped.
**Notes:** (Read only property)

95.6.102  sortComposer as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the composer associated with this media item that should be used for sorting purposes.
**Notes:** (Read only property)

95.6.103  sortTitle as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The title of this media item that should be used for sorting purposes.
**Notes:** (Read only property)
95.6.104  **startTime as Integer**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The start time of this media item given that the media item is a podcast. **Notes:** (Read only property)

95.6.105  **stopTime as Integer**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The stop time of this media item given that the media item is a podcast. **Notes:** (Read only property)

95.6.106  **title as String**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The title of this media item. **Notes:** (Read only property)

95.6.107  **totalTime as Integer**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The length of this media item in seconds. **Notes:** (Read only property)

95.6.108  **trackNumber as Integer**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The position of this media item within its album. **Notes:** (Read only property)

95.6.109  **userDisabled as Boolean**

MBS Mac Extras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the user has disabled this media item. **Notes:** (Read only property)
95.6.110  video as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this media item is a video media item (video podcast, movie, etc).
**Notes:** (Read only property)

95.6.111  videoInfo as iTunesLibraryMediaItemVideoInfoMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The video information of this media item (implies this media item is a video media item).
**Notes:** (Read only property)

95.6.112  voiceOverLanguage as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The voice-over language of this media item.
**Notes:** (Read only property)

95.6.113  volumeAdjustment as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The volume adjustment used for this media item if any.
**Notes:** (Read only property)

95.6.114  volumeNormalizationEnergy as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The volume normalization energy applied to this media item.
**Notes:** (Read only property)

95.6.115  year as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The year when this media item was released.
**Notes:** (Read only property)
95.6. Constants

95.6.116  ITLibMediaItemLocationTypeFile = 1

MBS Mac Extras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify possible the type of a media item with respect to its location.
**Notes:** The media item location refers to a local file.

95.6.118  ITLibMediaItemLocationTypeRemote = 3

MBS Mac Extras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify possible the type of a media item with respect to its location.
**Notes:** The media item location refers to a remote file.

95.6.119  ITLibMediaItemLocationTypeUnknown = 0

MBS Mac Extras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify possible the type of a media item with respect to its location.
**Notes:** The media item type is not known.

95.6.120  ITLibMediaItemLocationTypeURL = 2

MBS Mac Extras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify possible the type of a media item with respect to its location.
**Notes:** The media item location refers to a URL (for example, a podcast).

95.6.121  ITLibMediaItemLyricsContentRatingClean = 2

MBS Mac Extras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible ratings of media item lyrics.
**Notes:** The media item lyrics do not contain explicit language.

95.6.122  ITLibMediaItemLyricsContentRatingExplicit = 1

MBS Mac Extras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible ratings of media item lyrics.
Notes: The media item lyrics contain explicit language.

95.6.123 ITLibMediaItemLyricsContentRatingNone = 0

MBS MacExtras Plugin, Plugin Version: 13.5. Function: One of the constants to specify the possible ratings of media item lyrics.
Notes: No rating information for the media item lyrics.

95.6.124 ITLibMediaItemMediaKindAlertTone = 21

MBS MacExtras Plugin, Plugin Version: 13.5. Function: One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is an audio tone on an iOS device which is not a protected ringtone.

95.6.125 ITLibMediaItemMediaKindAudiobook = 5

MBS MacExtras Plugin, Plugin Version: 13.5. Function: One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is an audiobook.

95.6.126 ITLibMediaItemMediaKindBook = 19

MBS MacExtras Plugin, Plugin Version: 13.5. Function: One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is an EPUB or iBooks Author book.

95.6.127 ITLibMediaItemMediaKindDigitalBooklet = 15

MBS MacExtras Plugin, Plugin Version: 13.5. Function: One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is an iTunes Extra or an iTunes LP.

95.6.128 ITLibMediaItemMediaKindHomeVideo = 12

MBS MacExtras Plugin, Plugin Version: 13.5. Function: One of the constants to specify the possible media kinds of a iTunes media item.
95.6. CLASS ITUNESLIBRARYMEDIAITEMMBS

Notes: The media item is a non-iTunes Store movie.

95.6.129  ITLibMediaItemMediaKindInteractiveBooklet = 9

MBS MacExtrar Plugin, Plugin Version: 13.5. Function: One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is a QuickTime movie with embedded flash (deprecated)

95.6.130  ITLibMediaItemMediaKindIOSApplication = 16

MBS MacExtrar Plugin, Plugin Version: 13.5. Function: One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is an iPhone or iPod touch application.

95.6.131  ITLibMediaItemMediaKindiTunesU = 18

MBS MacExtrar Plugin, Plugin Version: 13.5. Function: One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is an iTunesU audio of video file.

95.6.132  ITLibMediaItemMediaKindMovie = 3

MBS MacExtrar Plugin, Plugin Version: 13.5. Function: One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is a movie.

95.6.133  ITLibMediaItemMediaKindMusicVideo = 7

MBS MacExtrar Plugin, Plugin Version: 13.5. Function: One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is a music video.

95.6.134  ITLibMediaItemMediaKindPDFBook = 20

MBS MacExtrar Plugin, Plugin Version: 13.5. Function: One of the constants to specify the possible media kinds of a iTunes media item.
95.6.135  ITLibMediaItemMediaKindPDFBooklet = 6

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
**Notes:** The media item is an unwrapped PDF file that is part of a Music album.

95.6.136  ITLibMediaItemMediaKindPodcast = 4

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
**Notes:** The media item is an audio or video podcast.

95.6.137  ITLibMediaItemMediaKindRingtone = 14

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
**Notes:** The media item is an iOS ringtone.

95.6.138  ITLibMediaItemMediaKindSong = 2

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
**Notes:** The media item is a song.

95.6.139  ITLibMediaItemMediaKindTVShow = 8

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
**Notes:** The media item is a TV show.

95.6.140  ITLibMediaItemMediaKindUnknown = 1

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
95.6. **CLASS ITUNESLIBRARYMEDIAITEMMBS**

**Notes:** The media item kind is unknown.

95.6.141 **ITLibMediaItemMediaKindVoiceMemo = 17**

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.

**Notes:** The media item is a voice memo recorded on iPod/iPhone.
95.7 class iTunesLibraryMediaItemVideoInfoMBS

95.7.1 class iTunesLibraryMediaItemVideoInfoMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Encapsulates the video information of a video media item. **Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

95.7.2 Methods

95.7.3 Constructor

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

95.7.4 Properties

95.7.5 episode as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The TV episode the video is associated with (implies the track is a TV show). **Notes:** (Read only property)

95.7.6 episodeOrder as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The TV episode order the video is associated with (implies the track is a TV show). **Notes:** (Read only property)

95.7.7 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object handle. **Notes:** (Read and Write property)
95.7.8  HD as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Whether the video is high definition. Notes: (Read only property)

95.7.9  season as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The name of TV season the video is associated with (implies the track is a TV show). Notes: (Read only property)

95.7.10 series as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The name of TV series the video is associated with (implies track is a TV show). Notes: (Read only property)

95.7.11 sortSeries as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The name of the TV series the video is associated with that should be used for when sorting (implies the track is a TV show). Notes: (Read only property)

95.7.12 videoHeight as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The height of the video. Notes: (Read only property)

95.7.13 videoWidth as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The width of the video. Notes: (Read only property)
95.8 class iTunesLibraryPlaylistMBS

95.8.1 class iTunesLibraryPlaylistMBS

Function: A playlist is a collection of related media items.
Notes:
(Media items are described in iTunesLibraryMediaItemMBS Class Reference.)
Each playlist has a name, a set of attributes, and a unique identifier that persists across application launches.
Subclass of the iTunesLibraryMediaEntityMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

95.8.2 Methods

95.8.3 Constructor

95.8.4 items as iTunesLibraryMediaItemMBS()

95.8.5 ITLibPlaylistPropertyAllItemsPlaylist as string

95.8.6 ITLibPlaylistPropertyDistinguishedKind as string

95.8.7  **ITLibPlaylistPropertyItems as string**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the playlist property.

95.8.8  **ITLibPlaylistPropertyMaster as string**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the playlist property.

95.8.9  **ITLibPlaylistPropertyName as string**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the playlist property.

95.8.10  **ITLibPlaylistPropertyParentPersistentID as string**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the playlist property.

95.8.11  **ITLibPlaylistPropertyVisible as string**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the playlist property.

95.8.12  **Properties**

95.8.13  **AllItemsPlaylist as Boolean**

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this playlist is an "all items" playlist.

**Notes:**

i.e. marked items in playlist exceeds the total tracks in the playlist so the playlist is a discreet object.

(Read only property)
95.8.14  DistinguishedKind as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The distinguished kind of this playlist.  
**Notes:** (Read only property)

95.8.15  Master as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this playlist is a master playlist.  
**Notes:** (Read only property)

95.8.16  name as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name or title of this playlist.  
**Notes:** (Read only property)

95.8.17  ParentID as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The unique identifier of this playlist’s parent.  
**Notes:** (Read only property)

95.8.18  Visible as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this playlist is visible.  
**Notes:** (Read only property)

95.8.19  Constants

95.8.20  ITLibDistinguishedPlaylistKind90sMusic = 42

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
Notes: The playlist is the default 90’s music iTunes playlist.

95.8.21  ITLibDistinguishedPlaylistKindBooks = 4

MBS MacExtras Plugin, Plugin Version: 13.5. Function: One of the constants to specify the possible kinds of playlists. 
Notes: The playlist contains all the books in the iTunes Library

95.8.22  ITLibDistinguishedPlaylistKindClassicalMusic = 48

MBS MacExtras Plugin, Plugin Version: 13.5. Function: One of the constants to specify the possible kinds of playlists. 
Notes: The playlist is the default Classical Music smart playlist generated by iTunes.

95.8.23  ITLibDistinguishedPlaylistKindHomeVideos = 50

MBS MacExtras Plugin, Plugin Version: 13.5. Function: One of the constants to specify the possible kinds of playlists. 
Notes: The playlist contains all homes videos in the iTunes Library.

95.8.24  ITLibDistinguishedPlaylistKindiTunesU = 26

MBS MacExtras Plugin, Plugin Version: 13.5. Function: One of the constants to specify the possible kinds of playlists. 
Notes: The playlist contains the user’s iTunesU items.

95.8.25  ITLibDistinguishedPlaylistKindLibraryMusicVideos = 49

MBS MacExtras Plugin, Plugin Version: 13.5. Function: One of the constants to specify the possible kinds of playlists. 
Notes: The playlist contains all music videos in the iTunes Library. This is NOT the same as the default Music Videos smart playlist.
95.8.26  ITLibDistinguishedPlaylistKindMovies = 1

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
**Notes:** The playlist contains all the movies in the iTunes Library.

95.8.27  ITLibDistinguishedPlaylistKindMusic = 3

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
**Notes:** The playlist contains all the music items in the iTunes Library.

95.8.28  ITLibDistinguishedPlaylistKindMusicVideos = 47

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
**Notes:** The playlist is the default Music Videos smart playlist generated by iTunes.

95.8.29  ITLibDistinguishedPlaylistKindMyTopRated = 43

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
**Notes:** The playlist is the default Top Rated smart playlist generated by iTunes.

95.8.30  ITLibDistinguishedPlaylistKindNone = 0

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
**Notes:** The playlist is not a distinguished playlist.

95.8.31  ITLibDistinguishedPlaylistKindPodcasts = 7

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
**Notes:** The playlist contains all the podcasts in the iTunes library.
95.8.32 ITLibDistinguishedPlaylistKindPurchases = 16

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
**Notes:** The playlist contains all the user’s purchases in the iTunes Store.

95.8.33 ITLibDistinguishedPlaylistKindRecentlyAdded = 46

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
**Notes:** The playlist is the default Recently Added smart playlist generated by iTunes.

95.8.34 ITLibDistinguishedPlaylistKindRecentlyPlayed = 45

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
**Notes:** The playlist is the default Recently Played smart playlist generated by iTunes.

95.8.35 ITLibDistinguishedPlaylistKindRingtones = 5

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
**Notes:** The playlist contains all the ringtones in the iTunes Library.

95.8.36 ITLibDistinguishedPlaylistKindTop25MostPlayed = 44

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
**Notes:** The playlist is the default 25 Most Played smart playlist generated by iTunes.

95.8.37 ITLibDistinguishedPlaylistKindTVShows = 2

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
**Notes:** The playlists contains all the TV shows in the iTunes Library.
95.8.38 ITLibDistinguishedPlaylistKindVoiceMemos = 14

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.

**Notes:** The playlist contains all voice memos.
Chapter 96

Java

96.1 class JavaArrayMBS

96.1.1 class JavaArrayMBS

Notes: Subclass of the JavaObjectMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

96.1.2 Methods

96.1.3 Constructor

96.1.4 Length as Integer

Notes: Returns 0 on any error.
96.2 class JavaBooleanArrayMBS

96.2.1 class JavaBooleanArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The wrapper class for the java boolean array object.
Notes:
Subclass of the JavaArrayMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

96.2.2 Methods

96.2.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The private constructor.

96.2.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
All the elements in this array as one memoryblock.
Notes: Use memoryblock.byte(index) to access.

96.2.5 Values as Boolean()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Returns a Xojo array with values.

96.2.6 Properties

96.2.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Get or set a region of the array.
Notes:
Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.
96.2. CLASS JAVABOOLEANARRAYMBS

(Read and Write computed property)
96.3 class JavaByteArrayMBS

96.3.1 class JavaByteArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The wrapper class for the java byte array object.
**Notes:**
Subclass of the JavaArrayMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

96.3.2 Methods

96.3.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

96.3.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
All the elements in this array as one memoryblock.
**Notes:** Use memoryblock.Byte(index) to access.

96.3.5 Values as Int8()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a Xojo array with values.

96.3.6 Properties

96.3.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get or set a region of the array.
**Notes:**
Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.
96.3. **CLASS JAVA_BYTEARRAYMBS**

(Read and Write computed property)
96.4 class JavaCharArrayMBS

96.4.1 class JavaCharArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for the java char array object.

**Notes:**
Subclass of the JavaArrayMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

96.4.2 Methods

96.4.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

96.4.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** All the elements in this array as one memoryblock.

**Notes:** Use memoryblock.UShortMBS(index*2) to access.

96.4.5 Values as UInt16()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a Xojo array with values.

96.4.6 Properties

96.4.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set a region of the array.

**Notes:**
Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.
96.4. CLASS JAVACHARARRAYMBS

(Read and Write computed property)
96.5 class JavaClassMBS

96.5.1 class JavaClassMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for a Java class.  
**Notes:**  
Subclass of the JavaObjectMBS class.  
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

96.5.2 Methods

96.5.3 AllocateObject as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Allocates a new Java object without invoking any of the constructors for the object. #  
**Notes:**  
Returns a reference to the object or nil on any error.  
Does not work for array classes.  
Throws InstantiationException if the class is an interface or an abstract class.

96.5.4 CallStaticBooleanMethod(MethodID as JavaMethodMBS, args as memoryblock) as boolean

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a static method with a boolean return value.  
**Notes:**  
This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().  
The method ID must be derived from this class, not from one of its superclasses.  
Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.  
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)
96.5.5  CallStaticByteMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a static method with a byte return value.
**Notes:**
This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

96.5.6  CallStaticCharMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a static method with a char return value.
**Notes:**
This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

96.5.7  CallStaticDoubleMethod(MethodID as JavaMethodMBS, args as memoryblock) as Double

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a static method with a double return value.
**Notes:**
This call invokes a static method on a Java object, according to the specified method ID. The methodID
The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.

In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

### 96.5.8 CallStaticFloatMethod(MethodID as JavaMethodMBS, args as memoryblock) as single

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a static method with a float return value.

**Notes:**
This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.

In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

### 96.5.9 CallStaticIntMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a static method with an integer return value.

**Notes:**
This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.

In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)
96.5.10 CallStaticLongMethod(MethodID as JavaMethodMBS, args as memoryblock) as Int64

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a static method with a long return value.

**Notes:**
This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

96.5.11 CallStaticMain(args() as string)

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a static main method and passes the String array.

96.5.12 CallStaticObjectMethod(MethodID as JavaMethodMBS, args as memoryblock) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a static method with an object return value.

**Example:**

```vmb
    dim m as JavaVMMBS // global

    // Call "public static String getMessage()" and "public static void setMessage(String theMessage)" from class "test".

    dim jclass, sclass as JavaClassMBS    
    dim jmethod as JavaMethodMBS         
    dim jstring as JavaStringMBS         
    dim args as JavaObjectArrayMBS       
    dim m as MemoryBlock
```
dim s as String
dim jfield as JavaFieldMBS

jclass=e.FindClass("test")

if jclass=nil then
    msgbox "Can't find test class"
else
    jmethod = jclass.GetStaticMethod("setMessage", "(Ljava/lang/String;)V")

    if jmethod=nil then
        msgbox "Can't find HelloWorld.setMessage"
    else
        jstring = e.NewStringUTF8("Hello from Realbasic!")
        if jstring=nil then
            msgbox "Out of memory"
        else
            m=NewMemoryBlock(8) // 8 bytes per parameter
            m.long(0)=jstring.Handle
            jclass.CallStaticVoidMethod(jmethod, m)
        end if
    end if
end if
end if

Notes:
This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.
Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

**96.5.13 CallStaticShortMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer**

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a static method with a short return value.
**Notes:**
This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().
The method ID must be derived from this class, not from one of its superclasses.
Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

**96.5.14 CallStaticVoidMethod(MethodID as JavaMethodMBS, args as memoryblock)**

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a static method with no return value.
**Notes:**
This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().
The method ID must be derived from this class, not from one of its superclasses.
Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

96.5.15 Constructor

96.5.16 GetField(name as string, sig as string) as JavaFieldMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the Field with the given Name and Signature. **Notes:** Nil on any error.

The signature is a string derived from the field’s type or method’s arguments and return type, as shown here:

<table>
<thead>
<tr>
<th>Java Type</th>
<th>Signature</th>
</tr>
</thead>
<tbody>
<tr>
<td>boolean</td>
<td>Z</td>
</tr>
<tr>
<td>byte</td>
<td>B</td>
</tr>
<tr>
<td>char</td>
<td>C</td>
</tr>
<tr>
<td>short</td>
<td>S</td>
</tr>
<tr>
<td>int</td>
<td>I</td>
</tr>
<tr>
<td>long</td>
<td>L</td>
</tr>
<tr>
<td>float</td>
<td>F</td>
</tr>
<tr>
<td>double</td>
<td>D</td>
</tr>
<tr>
<td>void</td>
<td>V</td>
</tr>
<tr>
<td>objects</td>
<td>Lfully-qualified-class-name;</td>
</tr>
<tr>
<td>arrays</td>
<td>[ array-type</td>
</tr>
<tr>
<td>methods</td>
<td>(argument-types)return-type</td>
</tr>
</tbody>
</table>

96.5.17 GetMethod(name as string, sig as string) as JavaMethodMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches the method with the given name and signature. **Example:**

dim jclass as JavaClassMBS
dim method as JavaMethodMBS

method=jclass.GetMethod("mymethod", "([Ljava/lang/String;)V")
Notes:

Returns the method ID for an instance (non-static) method of a class or interface. The method may be
defined in one of the the class’s super classes and inherited by the class. The method is determined by its
name and signature.

To obtain the method ID of a constructor, supply `<init>` as the method name and void (V) as the return type.

Nil on any error.

Throws NoSuchMethodError if the specified method cannot be found.

The signature is a string derived from the field’s type or method’s arguments and return type, as shown here:

<table>
<thead>
<tr>
<th>Java Type</th>
<th>Signature</th>
</tr>
</thead>
<tbody>
<tr>
<td>boolean</td>
<td>Z</td>
</tr>
<tr>
<td>byte</td>
<td>B</td>
</tr>
<tr>
<td>char</td>
<td>C</td>
</tr>
<tr>
<td>short</td>
<td>S</td>
</tr>
<tr>
<td>int</td>
<td>I</td>
</tr>
<tr>
<td>long</td>
<td>L</td>
</tr>
<tr>
<td>float</td>
<td>F</td>
</tr>
<tr>
<td>double</td>
<td>D</td>
</tr>
<tr>
<td>void</td>
<td>V</td>
</tr>
<tr>
<td>objects</td>
<td>Lfully-qualified-class-name;</td>
</tr>
<tr>
<td>arrays</td>
<td></td>
</tr>
<tr>
<td>methods</td>
<td>(argument-types) return-type</td>
</tr>
</tbody>
</table>

96.5.18 GetStaticField(name as string, sig as string) as JavaFieldMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Searches the static field with the given name and signature.
**Notes:** Nil on any error.

96.5.19 GetStaticMethod(name as string, sig as string) as JavaMethodMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the method ID for a static method of a class. The method is specified by its name and signature.
**Example:**
dim jclass as JavaClassMBS
dim method as JavaMethodMBS

method=jclass.GetStaticMethod("main", "( [Ljava/lang/String;)V")

Notes:
Nil on any error.
e.g. the signature of the default static main method is "( [Ljava/lang/String;)V" which means return type void at the end and before an array of string.

96.5.20 NewObject(methodID as JavaMethodMBS, args as memoryblock) as JavaObjectMBS

Notes: The method ID indicates which constructor method to invoke. This ID must be obtained by calling GetMethod with <init> as the method name and void (V) as the return type.

Returns nil on any error.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

Throws InstantiationException if the class is an interface or an abstract class.

96.5.21 Superclass as JavaClassMBS

Notes: Nil if no superclass exists.
96.5.22 Properties

96.5.23 StaticBooleanField(TheField as JavaFieldMBS) as boolean

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a static boolean field in this class. **Notes:** (Read and Write computed property)

96.5.24 StaticByteField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a static byte field in this class. **Notes:** (Read and Write computed property)

96.5.25 StaticCharField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a static char field in this class. **Notes:** (Read and Write computed property)

96.5.26 StaticDoubleField(TheField as JavaFieldMBS) as Double

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a static double field in this class. **Notes:** (Read and Write computed property)

96.5.27 StaticFloatField(TheField as JavaFieldMBS) as single

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a static float field in this class. **Notes:** (Read and Write computed property)

96.5.28 StaticIntField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a static integer field in this class. **Example:**
dim f as FolderItem

f = SpecialFolder.Desktop.Child("ojdbc14.jar")

dim j as new JavaVMMBS(f)

dim c as JavaClassMBS = j.FindClass("oracle/jdbc/driver/OracleTypes")

dim field as JavaFieldMBS

// this are all static integer fields in this class:

field = c.GetStaticField("CURSOR","I")
MsgBox str(c_STATICINTFIELD(field))

field = c.GetStaticField("BLOB","I")
MsgBox str(c_STATICINTFIELD(field))

field = c.GetStaticField("DOUBLE","I")
MsgBox str(c_STATICINTFIELD(field))

Notes: (Read and Write computed property)

96.5.29 StaticLongField(TheField as JavaFieldMBS) as Int64

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a static long field in this class.
**Notes:** (Read and Write computed property)

96.5.30 StaticObjectField(TheField as JavaFieldMBS) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a static object field in this class.
**Notes:** (Read and Write computed property)

96.5.31 StaticShortField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a static short field in this class.
**Notes:** (Read and Write computed property)
96.6  class JavaDoubleArrayMBS

96.6.1  class JavaDoubleArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The wrapper class for the java double array object.
**Notes:**
Subclass of the JavaArrayMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

96.6.2  Methods

96.6.3  Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

96.6.4  Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
All the elements in this array as one memoryblock.
**Notes:** Use memoryblock.DoubleValue(index*4) to access.

96.6.5  Values as Double()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a Xojo array with values.

96.6.6  Properties

96.6.7  Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get or set a region of the array.
**Notes:**
Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.
96.6. CLASS JAVADOUBLEARRAYMBS

(Read and Write computed property)
96.7  class JavaFieldMBS

96.7.1  class JavaFieldMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The wrapper class for the java field ID.

**Example:**

```vba
dim f as FolderItem

f=SpecialFolder.Desktop.Child("ojdbc14.jar")

dim j as new JavaVMMBS(f)

dim c as JavaClassMBS = j.FindClass("oracle/jdbc/driver/OracleTypes")

dim field as JavaFieldMBS

// this are all static integer fields in this class:

field = c.GetStaticField("CURSOR","I")
MsgBox str(c.StaticIntField(field))

field = c.GetStaticField("BLOB","I")
MsgBox str(c.StaticIntField(field))

field = c.GetStaticField("DOUBLE","I")
MsgBox str(c.StaticIntField(field))
```

**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

96.7.2  Methods

96.7.3  Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.
96.7.4 Properties

96.7.5 Handle as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The fieldID of this field.
**Notes:** (Read and Write property)
96.8 class JavaFloatArrayMBS

96.8.1 class JavaFloatArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for the java float array object.

**Notes:**
Subclass of the JavaArrayMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

96.8.2 Methods

96.8.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

96.8.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** All the elements in this array as one memoryblock.

**Notes:** Use memoryblock.SingleValue(index*4) to access.

96.8.5 Values as Single()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a Xojo array with values.

96.8.6 Properties

96.8.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set a region of the array.

**Notes:**
Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.
96.8. *CLASS JAVAFLOATARRAYMBS*  
(Read and Write computed property)
96.9 class JavaHandleNilExceptionMBS

96.9.1 class JavaHandleNilExceptionMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The exception which is raised whenever a Java function is operations on an object and there is none. **Notes:** For example if you call a method on the JavaObjectMBS class which requires the handle value being not zero, the exception raises if the handle value is zero. Subclass of the RuntimeException class.
96.10  CLASS JAVAINTARRAYMBS

96.10  class JavaIntArrayMBS

96.10.1  class JavaIntArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The wrapper class for the java int array object.
**Notes:**
Subclass of the JavaArrayMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

96.10.2  Methods

96.10.3  Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

96.10.4  Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
All the elements in this array as one memoryblock.
**Notes:** Use memoryblock.Long(index*4) to access.

96.10.5  Values as Integer()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a Xojo array with values.

96.10.6  Properties

96.10.7  Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get or set a region of the array.
**Notes:**
Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.
(Read and Write computed property)
96.11. CLASS JAVALONGARRAYMBS

96.11.1 class JavaLongArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The wrapper class for the java long array object.
**Notes:**
Subclass of the JavaArrayMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

96.11.2 Methods

96.11.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

96.11.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
All the elements in this array as one memoryblock.
**Notes:** Use memoryblock.Int64DoubleMBS(index*8) to access.

96.11.5 Values as Int64()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a Xojo array with values.

96.11.6 Properties

96.11.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get or set a region of the array.
**Notes:**
Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.
(Read and Write computed property)
96.12. CLASS JAVAMETHODMBS

96.12  class JavaMethodMBS

96.12.1  class JavaMethodMBS

Notes:
In terminal you can use "javap -s <classname>" to display the class with the method names and parameters. This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

96.12.2  Methods

96.12.3  Constructor

96.12.4  Properties

96.12.5  Handle as Integer

Notes: (Read and Write property)
96.13 class JavaNotInitializedExceptionMBS

96.13.1 class JavaNotInitializedExceptionMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The exception which is raised whenever a Java function is called which requires you to initialize the JVM before calling it. **Notes:** Subclass of the RuntimeException class.
96.14. class JavaObjectArrayMBS

96.14.1. class JavaObjectArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The wrapper class for the java object array object.

**Notes:**
Subclass of the JavaArrayMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

96.14.2. Methods

96.14.3. Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

96.14.4. Values as JavaObjectMBS()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a Xojo array with values.

96.14.5. Properties

96.14.6. ArrayElement(index as Integer) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The object at the given index in the array.

**Notes:**
May return nil if the array is empty on the given index or if the index is out of bounds or any other error occurs.

Index is 0 based.

**Throws**
ArrayIndexOutOfBoundsException: if index does not specify a valid index in the array.
ArrayStoreException: if the class of value is not a subclass of the element class of the array.
(Read and Write computed property)
96.15. class JavaObjectMBS

96.15.1 class JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The wrapper class for the java object.
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

96.15.2 Methods

96.15.3 CallBooleanMethod(MethodID as JavaMethodMBS, args as memory-block) as boolean

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a virtual method with a boolean value.
**Notes:**
This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

96.15.4 CallByteMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a virtual method with a byte value.
**Notes:**
This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.
Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

96.15.5 CallCharMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a virtual method with a char value.

**Notes:**
This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

96.15.6 CallDoubleMethod(MethodID as JavaMethodMBS, args as memoryblock) as Double

**Notes:**
This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)
96.15.7 CallFloatMethod(MethodID as JavaMethodMBS, args as memoryblock) as single

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a virtual method with a float value.

**Notes:**
This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

96.15.8 CallIntMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a virtual method with an integer value.

**Notes:**
This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)
96.15.9  **CallLongMethod(MethodID as JavaMethodMBS, args as memoryblock)** as Int64

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a virtual method with a long value.
**Notes:**
This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

96.15.10  **CallNonvirtualBooleanMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock)** as boolean

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a non virtual method with a boolean value.
**Notes:**
This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)
96.15. **CLASS JAVAOBJECTMBS**

**96.15.11 CallNonvirtualByteMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as Integer**

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a non virtual method with a byte value.

**Notes:**
This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

---

**96.15.12 CallNonvirtualCharMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as Integer**

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a non virtual method with a char value.

**Notes:**
This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)
96.15.13  CallNonvirtualDoubleMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as Double

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a non virtual method with a double value.

**Notes:**
This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

96.15.14  CallNonvirtualFloatMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as single

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a non virtual method with a float value.

**Notes:**
This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)
96.15.15 CallNonvirtualIntMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a non virtual method with an integer value.

**Notes:**
This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

96.15.16 CallNonvirtualLongMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as Int64

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a non virtual method with a long value.

**Notes:**
This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)
96.15.17 CallNonvirtualObjectMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a non virtual method with an object value.

**Notes:**
This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

96.15.18 CallNonvirtualShortMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a non virtual method with a short value.

**Notes:**
This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)
96.15.19 CallNonvirtualVoidMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock)

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a non virtual method with no return value.

**Notes:**

This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

96.15.20 CallObjectMethod(MethodID as JavaMethodMBS, args as memoryblock) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a virtual method with an object value.

**Notes:**

This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)
96.15.21  CallShortMethod(MethodID as JavaMethodMBS, args as memory-block) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a virtual method with a short value.

**Notes:**
This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

96.15.22  CallVoidMethod(MethodID as JavaMethodMBS, args as memoryblock)

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calls a virtual method with no return value.

**Notes:**
This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

96.15.23  Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.
96.15.24 GetDirectBufferAddress(directbuffer as JavaObjectMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the address of the memory from a directbuffer object. **Notes:** Returns 0 on any error.

96.15.25 GetDirectBufferCapacity(directbuffer as JavaObjectMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the size of the memory from a directbuffer object. **Notes:** Returns 0 on any error.

96.15.26 IsInstanceOf(TheClass as JavaClassMBS) as boolean

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Tests whether an object is an instance of a class. **Notes:** Returns true if obj can be cast to TheClass; otherwise, returns false. A nil object can be cast to any class.

96.15.27 IsSameObject(obj as JavaObjectMBS) as boolean

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Tests whether two references refer to the same Java object. **Notes:** Returns true if ref1 and ref2 refer to the same Java object, or are both nil; otherwise, returns false. False on any error.

96.15.28 ObjectClass as JavaClassMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the class of an object. **Notes:** Returns nil on any error.
96.15.29 Properties

96.15.30 ClassName as String

MBS Java Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Queries class name of object.
Notes: (Read only property)

96.15.31 Database as Variant

MBS Java Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The reference to the database object.
Notes:
The variant is a JavaDatabaseMBS.
Do not assign new values, please.
This is set for all database classes, so the database isn’t release from memory before you finished using this object.
(Read and Write property)

96.15.32 Handle as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The handle to the jobject.
Notes: (Read and Write property)

96.15.33 Lasterror as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The last error code reported.
Notes: (Read and Write property)

96.15.34 Tag as Variant

MBS Java Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
This is a property you can use for whatever you like.
Notes:
The property value is stored as long as the RB object lives. The Java object may live longer.
(Read and Write property)
96.15.35 VM as JavaVMMBS

MBS Java Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The reference to the virtual machine.

**Notes:**
Please do not assign new value unless you know what you do.
(Read and Write property)

96.15.36 BooleanField(TheField as JavaFieldMBS) as boolean

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a boolean field in this class.

**Notes:**
Do not use for static fields!
(Read and Write computed property)

96.15.37 ByteField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a byte field in this class.

**Notes:**
Do not use for static fields!
(Read and Write computed property)

96.15.38 CharField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a char field in this class.

**Notes:**
Do not use for static fields!
(Read and Write computed property)
96.15.39 DoubleField(TheField as JavaFieldMBS) as Double

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a double field in this class.

**Notes:**
Do not use for static fields!
(Read and Write computed property)

96.15.40 FloatField(TheField as JavaFieldMBS) as single

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a single field in this class.

**Notes:**
Do not use for static fields!
(Read and Write computed property)

96.15.41 IntField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for an integer field in this class.

**Notes:**
Do not use for static fields!
(Read and Write computed property)

96.15.42 LongField(TheField as JavaFieldMBS) as Int64

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a long field in this class.

**Notes:**
Do not use for static fields!
(Read and Write computed property)

96.15.43 ObjectField(TheField as JavaFieldMBS) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for an object field in this class.

**Notes:**
96.15. CLASS JAVAOBJECTMBS

Do not use for static fields!
(Read and Write computed property)

96.15.44 ShortField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get or set the value for a short field in this class.

**Notes:**
Do not use for static fields!
(Read and Write computed property)
96.16  class JavaShortArrayMBS

96.16.1  class JavaShortArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The wrapper class for the java short array object.
**Notes:**
Subclass of the JavaArrayMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

96.16.2  Methods

96.16.3  Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

96.16.4  Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
All the elements in this array as one memoryblock.
**Notes:** Use memoryblock.short(index*2) to access.

96.16.5  Values as Int16()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a Xojo array with values.

96.16.6  Properties

96.16.7  Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get or set a region of the array.
**Notes:**
Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.
96.16. CLASS JAVASHORTARRAYMBS

(Read and Write computed property)
96.17  class JavaStringMBS

96.17.1  class JavaStringMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for the java string class.

**Notes:**

Subclass of the JavaObjectMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

96.17.2  Methods

96.17.3  Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

96.17.4  CopyString as string

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the content of the string into a REALbasic string.

**Notes:** Returns "" on any error. The string returned is marked as being Unicode (16bit).
See also:

- 96.17.5 CopyString(start as Integer, len as Integer) as string

96.17.5  CopyString(start as Integer, len as Integer) as string

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the content of the string into a REALbasic string.

**Example:**

```realbasic
dim s as string
dim js as JavaStringMBS // your java string

s=js.CopyString(0,1) // copies first character
s=js.CopyString(3,6) // copies six characters from starting at the forth
```

**Notes:**
96.17. CLASS JAVASTRINGMBS

Returns "" on any error. The string returned is marked as being Unicode (16bit).
For the first character to be the start use start=0.
For the first character to be the end use len=1 and start=0.
May crash on bad values for start and len.
See also:

- 96.17.4 CopyString as string

96.17.6 CopyStringUTF as string

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Copies the content of the string into a REALbasic string.
**Notes:** Returns "" on any error. The string returned is marked as being UTF8.
See also:

- 96.17.7 CopyStringUTF(start as Integer, len as Integer) as string

96.17.7 CopyStringUTF(start as Integer, len as Integer) as string

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Copies the content of the string into a REALbasic string.
**Notes:**
Returns "" on any error. The string returned is marked as being UTF8.
Start is 0 based.
May crash on bad values for start and len.
See also:

- 96.17.6 CopyStringUTF as string

96.17.8 Length as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The length of this string in unicode characters.
**Notes:** Returns 0 on any error.

96.17.9 UTFLength as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The length of the string in bytes encoded as UTF8.
**Notes:** Returns 0 on any error.
96.18 class JavaThrowableMBS

96.18.1 class JavaThrowableMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for the java throwable object.

**Notes:**

Subclass of the JavaObjectMBS class.
This is a subclass of an abstract class. You can’t create an instance, but you can get one from various plugin functions.
96.19. class JavaVMMBS

96.19.1 class JavaVMMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a java virtual machine.

**Example:**

```vbscript
dim vm as JavaVMMBS // global

const JNI_VERSION_1_1 = & h00010001
const JNI_VERSION_1_2 = & h00010002
const JNI_VERSION_1_4 = & h00010004

if TargetLinux then
    // change path for your linux PC!
    JavaVMMBS.SetLibraryPath("/home/cs/jre1.6.0.05/lib/i386/client/libjvm.so")
end if

dim options(-1) as string

dim f as FolderItem=GetFolderItem("test.jar")

vm=new JavaVMMBS(JNI_VERSION_1_4, options, f, false)

if vm.Handle = 0 then
    MsgBox "Can't create Java VM"
else
    MsgBox "Java Initialized."
end if
```

**Notes:**

Add Linux support plugin version 8.7.

Releasing the java vm (by releasing all java objects), and reinitializing can fail.

Please make sure this Java VM object stays alive until you are done with all your java stuff. So all the java objects go away and this vm object is destroyed on the end. Because if some java code is still running like an background java thread, quitting the VM can lead into crashes.

While the plugin supports to have several instances, it seems like JNI does not support that.
96.19.2 Methods

96.19.3 Constructor(path as folderitem)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Initializes the Java virtual machine.

**Notes:**
This is a convenience function which initializes the java with version=JNI\_VERSION\_1.4 and no options except the specified path.
The path can be a folderitem pointing to a jar file or a folder with class files.

This method raises UnsupportedOperationException with error about missing CreateJavaVM function if there is no Java found. Either because it is not installed or the bit number (32 vs. 64) does not match.

Since version 16.5 the plugin will no longer raise exception if an existing JavaVM was found. In that case we use that JavaVM and return normally. Lasterror will be set to -5 which indicates this. In that case your options and paths are not passed to VM.

See also:

- 96.19.4 Constructor(path as string)
- 96.19.5 Constructor(version as Integer, options() as string, ignoreUnrecognizedOptions as boolean)
- 96.19.6 Constructor(version as Integer, options() as string, path as folderitem, ignoreUnrecognizedOptions as boolean)
- 96.19.7 Constructor(version as Integer, options() as string, path as string, ignoreUnrecognizedOptions as boolean)

96.19.4 Constructor(path as string)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Initializes the Java virtual machine.

**Notes:**
This is a convenience function which initializes the java engine with version=JNI\_VERSION\_1.4 and no options except the specified path.
The path can be a path pointing to a jar file or a folder with class files. If you use more than one path, you need to separate them with ";". Seems like on Mac OS X and Linux the separator is ":".

This method raises UnsupportedOperationException with error about missing CreateJavaVM function if there is no Java found. Either because it is not installed or the bit number (32 vs. 64) does not match.
Since version 16.5 the plugin will no longer raise exception if an existing JavaVM was found. In that case we use that JavaVM and return normally. Lasterror will be set to -5 which indicates this. In that case your options and paths are not passed to VM.

See also:

- 96.19.3 Constructor(path as folderitem)
- 96.19.5 Constructor(version as Integer, options() as string, ignoreUnrecognizedOptions as boolean)
- 96.19.6 Constructor(version as Integer, options() as string, path as folderitem, ignoreUnrecognizedOptions as boolean)
- 96.19.7 Constructor(version as Integer, options() as string, path as string, ignoreUnrecognizedOptions as boolean)

96.19.5 Constructor(version as Integer, options() as string, ignoreUnrecognizedOptions as boolean)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Initializes the java virtual machine.

**Notes:**
Only one VM can run at a time with this plugin.
You can specify whatever command line options you need in the options array.
Version must be one of the JNI\_VERSION\_1\_x constants.

A note for Mac OS X and Java versions:

To specify the current preferred JDK in a family of JVM's, say the 1.5.x family, applications should set the environment variable JAVA\_JVM\_VERSION to 1.5, and then pass JNI\_VERSION\_1\_4 into JNI\_CreateJavaVM as the vm\_args.version. To get a specific Java 1.5 JVM, say Java 1.5.0, set the environment variable JAVA\_JVM\_VERSION to 1.5.0. For Java 1.6 it will be the same in that applications will need to set the environment variable JAVA\_JVM\_VERSION to 1.6.0 to specify the current preferred 1.6 Java VM, and to get a specific Java 1.6 JVM, say Java 1.6.1, set the environment variable JAVA\_JVM\_VERSION to 1.6.1.

To make this sample bring up the current preferred 1.5 JVM, set the environment variable JAVA\_JVM\_VERSION to 1.5 before calling JNI\_CreateJavaVM as shown below. Applications must currently check for availability of JDK 1.5 before requesting it. If your application requires JDK 1.5 and it is not found, it is your responsibility to report an error to the user. To verify if a JVM is installed, check to see if the symlink, or directory exists for the JVM in /System/Library/Frameworks/JavaVM.framework/Versions/ before setting the environment variable JAVA\_JVM\_VERSION.

If the environment variable JAVA\_JVM\_VERSION is not set, and JNI\_VERSION\_1\_4 is passed into JNI\_CreateJavaVM as the vm\_args.version, JNI\_CreateJavaVM will return the current preferred JDK. Java 1.4.2 is the preferred
JDK as of the release of this sample and the release of Mac OS X 10.4.

Useful option strings:

"-verbose:jni" show debug output on the console
"-Xms256M" initial memory
"-Xmx512M" maximum memory

This method raises UnsupportedOperationException with error about missing CreateJavaVM function if there is no Java found. Either because it is not installed or the bit number (32 vs. 64) does not match.

Since version 16.5 the plugin will no longer raise exception if an existing JavaVM was found. In that case we use that JavaVM and return normally. Lasterror will be set to -5 which indicates this. In that case your options and paths are not passed to VM.

- 96.19.7 Constructor(version as Integer, options() as string, path as string, ignoreUnrecognizedOptions as boolean) 15377

### 96.19.6 Constructor(version as Integer, options() as string, path as folderitem, ignoreUnrecognizedOptions as boolean)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes the Java virtual machine.

**Example:**

```vba
dim JarPath as folderitem = specialfolder.desktop.child("test.jar")
dim options() as string
options.append "-Xms256M"
options.append "-Xmx512M"
dim v as new JavaVMMBS(JavaVMMBS.JNI_VERSION_1_4, options, JarPath, false)
```

**Notes:**
This is a convenience function which initializes the java engine with adding the given path to the options.

Only one VM can run at a time with this plugin.
You can specify whatever command line options you need in the options array.
Version must be one of the JNI\_VERSION\_1\_x constants.
The path can be a folderitem pointing to a jar file or a folder with class files.

Useful option strings:

"-verbose:jni" show debug output on the console
"-Xms256M" initial memory
"-Xmx512M" maximum memory

This method raises UnsupportedOperationException with error about missing CreateJavaVM function if there is no Java found. Either because it is not installed or the bit number (32 vs. 64) does not match.

Since version 16.5 the plugin will no longer raise exception if an existing JavaVM was found. In that case we use that JavaVM and return normally. Lasterror will be set to -5 which indicates this. In that case your options and paths are not passed to VM.

- 96.19.5 Constructor(version as Integer, options() as string, ignoreUnrecognizedOptions as boolean)
- 96.19.7 Constructor(version as Integer, options() as string, path as string, ignoreUnrecognizedOptions as boolean)

**96.19.7 Constructor(version as Integer, options() as string, path as string, ignoreUnrecognizedOptions as boolean)**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Initializes the java virtual machine.

**Notes:**
This is a convenience function which initializes the java engine with adding the given path to the options.

Only one VM can run at a time with this plugin.
You can specify whatever command line options you need in the options array.
Version must be one of the JNI\_VERSION\_1\_x constants.
The path can be a path pointing to a jar file or a folder with class files. If you use more than one path, you need to separate them with ";". Seems like on Mac OS X and Linux the separator is ":".

Useful option strings:

"-verbose:jni" show debug output on the console
"-Xms256M" initial memory
"-Xmx512M" maximum memory

This method raises UnsupportedOperationException with error about missing CreateJavaVM function if there is no Java found. Either because it is not installed or the bit number (32 vs. 64) does not match.

Since version 16.5 the plugin will no longer raise exception if an existing JavaVM was found. In that case we use that JavaVM and return normally. Lasterror will be set to -5 which indicates this. In that case your options and paths are not passed to VM.

- 96.19.6 Constructor(version as Integer, options() as string, path as folderitem, ignoreUnrecognizedOptions as boolean)

### 96.19.8 FindClass(name as string) as JavaClassMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches a class based on the name.

**Example:**

```vbnet
dim e as JavaVMMBS ' global
dim c as JavaClassMBS

```

**Notes:**

This function loads a locally defined class. It searches the directories and zip files specified by the CLASSPATH environment variable for the class with the specified name.
name: a fully qualified class name (that is, a package name, delimited by "/", followed by the class name). If the name begins with "[ " (the array signature character), it returns an array class.

Returns nil on any error.

If your class is not found, it may be possible that it can’t be loaded as the jar archive has dependencies to other jar archives.

96.19.9 FreeCurrentThread

MBS Java Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Releases the thread in Java.

**Example:**
```
Dim w As JavaVMMBS // your vm object
w.FreeCurrentThread
```

**Notes:** The plugin is written to detect if you use it in a thread. But when the thread ends you need to deregister it with the Java runtime.

96.19.10 FromReflectedField(field as JavaObjectMBS) as JavaFieldMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches the field which matches the reflected field object.

96.19.11 FromReflectedMethod(method as JavaObjectMBS) as JavaMethodMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches the method which matches the reflected method object.

96.19.12 IsAssignableFrom(TheSubClass as JavaClassMBS, TheSuperClass as JavaClassMBS) as boolean

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if the class is assignable from the other class.

**Notes:** That means that the sub class is somewhere down the class tree from the super class.
96.19.13  **MonitorEnter(obj as JavaObjectMBS) as Integer**

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Enteres the monitor associated with the underlying Java object referred to by obj. **Notes:**
Returns zero on success; otherwise, returns a negative value on failure.

Each Java object has a monitor associated with it. If the current thread already owns the monitor associated with ref, it increments a counter in the monitor indicating the number of times this thread has entered the monitor. If the monitor associated with ref is not owned by any thread, the current thread becomes the owner of the monitor, setting the entry count of this monitor to 1. If another thread already owns the monitor associated with ref, the current thread waits until the monitor is released, then tries again to gain ownership.

96.19.14  **MonitorExit(obj as JavaObjectMBS) as Integer**

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Releases the monitor. **Notes:**
The current thread must be the owner of the monitor associated with the underlying Java object referred to by ref. The thread decrements the counter indicating the number of times it has entered this monitor. If as a result the value of the counter becomes zero, the current thread releases the monitor.

Returns zero on success; otherwise, returns a negative value on failure.

96.19.15  **NewBooleanArray(ref as JavaObjectMBS) as JavaBooleanArrayMBS**

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new array object based on the given java object. **Notes:** This function is a convenience function to convert a java object array reference to a java array object in REALbasic. It can crash if the java object used is not the array of the requested type. See also:

- 96.19.16 NewBooleanArray(size as Integer) as JavaBooleanArrayMBS

96.19.16  **NewBooleanArray(size as Integer) as JavaBooleanArrayMBS**

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new array for booleans with the given size.
96.19. **CLASS JAVAVMMBS**

**Notes:** Returns nil on any error.

See also:

- 96.19.15 NewBooleanArray(ref as JavaObjectMBS) as JavaBooleanArrayMBS

96.19.17 **NewByteArray(ref as JavaObjectMBS) as JavaByteArrayMBS**

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array object based on the given java object. **Notes:** This function is a convenience function to convert a java object array reference to a java array object in REALbasic. It can crash if the java object used is not the array of the requested type.

See also:

- 96.19.18 NewByteArray(size as Integer) as JavaByteArrayMBS

96.19.18 **NewByteArray(size as Integer) as JavaByteArrayMBS**

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array for bytes with the given size. **Notes:** Returns nil on any error.

See also:

- 96.19.17 NewByteArray(ref as JavaObjectMBS) as JavaByteArrayMBS

96.19.19 **NewCharArray(ref as JavaObjectMBS) as JavaCharArrayMBS**

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array object based on the given java object. **Notes:** This function is a convenience function to convert a java object array reference to a java array object in REALbasic. It can crash if the java object used is not the array of the requested type.

See also:

- 96.19.20 NewCharArray(size as Integer) as JavaCharArrayMBS

96.19.20 **NewCharArray(size as Integer) as JavaCharArrayMBS**

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array for chars (16bit) with the given size. **Notes:** Returns nil on any error.

See also:

96.19.30  NewLongArray(size as Integer) as JavaLongArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array for 64 bit integers with the given size. **Notes:** Returns nil on any error. See also:

- 96.19.29 NewLongArray(ref as JavaObjectMBS) as JavaLongArrayMBS

96.19.31  NewObjectArray(ref as JavaObjectMBS) as JavaObjectArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array object based on the given java object. **Notes:** This function is a convenience function to convert a java object array reference to a java array object in REALbasic. It can crash if the java object used is not the array of the requested type. See also:

- 96.19.32 NewObjectArray(size as Integer, TheClass as JavaClassMBS, InitialValue as JavaObjectMBS) as JavaObjectArrayMBS

96.19.32  NewObjectArray(size as Integer, TheClass as JavaClassMBS, InitialValue as JavaObjectMBS) as JavaObjectArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Constructs a new array holding objects in class elementClass. **Notes:** All elements are initially set to initialElement. Returns nil on any error. See also:

- 96.19.31 NewObjectArray(ref as JavaObjectMBS) as JavaObjectArrayMBS

96.19.33  NewShortArray(ref as JavaObjectMBS) as JavaShortArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array object based on the given java object. **Notes:** This function is a convenience function to convert a java object array reference to a java array object in REALbasic. It can crash if the java object used is not the array of the requested type. See also:

- 96.19.34 NewShortArray(size as Integer) as JavaShortArrayMBS
96.19.34 NewShortArray(size as Integer) as JavaShortArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array for shorts with the given size. **Notes:** Returns nil on any error. See also:

- 96.19.33 NewShortArray(ref as JavaObjectMBS) as JavaShortArrayMBS

96.19.35 NewStringUnicode(s as string) as JavaStringMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new string. **Notes:** Preferes an Unicode encoded string.

96.19.36 NewStringUTF8(s as string) as JavaStringMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new string. **Example:**

```
// init Java
dim options() as string
dim javaVm as new JavaVMMBS(JavaVMMBS.JNI_VERSION_1_4, options, true)

// Get system class
Dim system As JavaClassMBS = javaVm.FindClass("java/lang/System")
If system <> Nil Then

    // query method
    dim transformerGetPropertyId as JavaMethodMBS = system.GetStaticMethod("getProperty", "(Ljava/lang/String;)Ljava/lang/String;")
    If transformerGetPropertyId <> Nil Then

        // make parameters
        Dim keyString As JavaStringMBS = javaVm.NewStringUTF8("os.version")
        dim m as New MemoryBlock(8)
        m.long(0)=keyString.Handle

        // run it
        dim r as JavaObjectMBS = system.CallStaticObjectMethod(transfomerGetPropertyId, m)
        if r <> Nil then

            // show result
            dim s as JavaStringMBS = JavaStringMBS(r)
```
CHAPTER 96. JAVA

MsgBox s.CopyStringUTF
end if
End If
End If

Notes: Preferes an UTF8 encoded string.

96.19.37  Runtime as JavaRuntimeMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Returns the runtime object for the current VM so you can query the memory statistics.

96.19.38  SetLibraryPath(path as folderitem)

MBS Java Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Defines the path where to find the java library.
Notes:
Must be called before you use the constructor.
This value is ignored on Mac OS X and on Windows if not set the registry is searched for this path.
See also:
• 96.19.39 SetLibraryPath(path as string)

96.19.39  SetLibraryPath(path as string)

MBS Java Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Defines the path where to find the java library.
Example:
if TargetLinux then
// change path for your linux PC!
JavaVMMBS.SetLibraryPath(“/home/cs/jre1.6.0_05/lib/i386/client/libjvm.so”)
end if

Notes:
Must be called before you use the constructor.
This value is ignored on Mac OS X and on Windows if not set the registry is searched for this path.

- 96.19.38 SetLibraryPath(path as folderitem)

96.19.40  ToReflectedField(TheClass as JavaClassMBS, fieldID as JavaFieldMBS, isStatic as boolean) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new reflected field object for the given field.

96.19.41  ToReflectedMethod(TheClass as JavaClassMBS, methodID as JavaMethodMBS, isStatic as boolean) as JavaObjectMBS

96.19.42  Version as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the version of the java engine.

**Notes:**
Currently the plugin always uses version 1.4.

Returns the major version number in the higher 16 bits and the minor version number in the lower 16 bits.

In JDK1.1, GetVersion() returns 0x00010001.

96.19.43  Properties

96.19.44  Handle as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The handle of the JavaVM.

**Notes:** (Read only property)
96.19.45  Lasterror as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code reported. 
**Notes:** (Read and Write property)

96.19.46  Constants

96.19.47  JNI\_VERSION\_1\_1 = & h00010001

MBS Java Plugin, Plugin Version: 8.5. **Function:** One of the constants to specify the JNI version in the constructor.

96.19.48  JNI\_VERSION\_1\_2 = & h00010002

MBS Java Plugin, Plugin Version: 8.5. **Function:** One of the constants to specify the JNI version in the constructor.

96.19.49  JNI\_VERSION\_1\_4 = & h00010004

MBS Java Plugin, Plugin Version: 8.5. **Function:** One of the constants to specify the JNI version in the constructor.

96.19.50  JNI\_VERSION\_1\_6 = & h00010006

MBS Java Plugin, Plugin Version: 16.5. **Function:** One of the constants to specify the JNI version in the constructor.
Chapter 97

Java Database

97.1 class JavaBlobMBS

97.1.1 class JavaBlobMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The java class for a binary large object.
**Notes:**
Subclass of the JavaObjectMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

97.1.2 Methods

97.1.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

97.1.4 getBytes(Position as Int64, Length as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves all or part of the BLOB value that this Blob object represents, as an array of bytes.
**Notes:**
This byte array contains up to length consecutive bytes starting at position pos.
pos: the ordinal position of the first byte in the BLOB value to be extracted; the first byte is at position 1
length: the number of consecutive bytes to be copied

Returns a byte array (as string) containing up to length consecutive bytes from the BLOB value designated by this Blob object, starting with the byte at position pos

97.1.5 length as int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the number of bytes in the BLOB value designated by this Blob object.

97.1.6 position(SearchString as JavaBlobMBS, Position as Int64) as Int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the byte position in the BLOB value designated by this Blob object at which pattern begins. The search begins at position start.
**Notes:**
pattern: the Blob object designating the BLOB value for which to search
start: the position in the BLOB value at which to begin searching; the first position is 1

Returns the position at which the pattern begins, else -1
See also:
- 97.1.7 position(SearchString as String, Position as Int64) as Int64

97.1.7 position(SearchString as String, Position as Int64) as Int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the byte position at which the specified byte array pattern begins within the BLOB value that this Blob object represents.
**Notes:**
The search for pattern begins at position start.

pattern: the byte array for which to search
start: the position at which to begin searching; the first position is 1

Returns the position at which the pattern appears, else -1
See also:
97.1.8  setBytes(Position as Int64, Value as String) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes the given array of bytes to the BLOB value that this Blob object represents, starting at position pos, and returns the number of bytes written.

**Notes:**

pos: the position in the BLOB object at which to start writing
bytes: the array of bytes to be written to the BLOB value that this Blob object represents

Returns the number of bytes written

See also:

- 97.1.9 setBytes(Position as Int64, Value as String, Offset as Integer, Length as Integer) as Integer

97.1.9  setBytes(Position as Int64, Value as String, Offset as Integer, Length as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes all or part of the given byte array to the BLOB value that this Blob object represents and returns the number of bytes written.

**Notes:**

Writing starts at position pos in the BLOB value; len bytes from the given byte array are written.

pos: the position in the BLOB object at which to start writing
bytes: the array of bytes to be written to this BLOB object
offset: the offset into the array bytes at which to start reading the bytes to be set
len: the number of bytes to be written to the BLOB value from the array of bytes

Returns the number of bytes written

See also:

- 97.1.8 setBytes(Position as Int64, Value as String) as Integer

97.1.10  truncate(len as int64)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Truncates the BLOB value that this Blob object represents to be len bytes in length.

**Notes:** len: the length, in bytes, to which the BLOB value that this Blob object represents should be
truncated
97.2. class JavaCallableStatementMBS

97.2.1 class JavaCallableStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The REALbasic class to handle a CallableStatement in Java.

**Notes:**
The interface used to execute SQL stored procedures. The JDBC API provides a stored procedure SQL escape syntax that allows stored procedures to be called in a standard way for all RDBMSs. This escape syntax has one form that includes a result parameter and one that does not. If used, the result parameter must be registered as an OUT parameter. The other parameters can be used for input, output or both. Parameters are referred to sequentially, by number, with the first parameter being 1.

```sql
{ ?= call <procedure-name>[ <arg1>,<arg2>, ... ] }
{ call <procedure-name>[ <arg1>,<arg2>, ... ] }
```

IN parameter values are set using the set methods inherited from PreparedStatement. The type of all OUT parameters must be registered prior to executing the stored procedure; their values are retrieved after execution via the get methods provided here.

A CallableStatement can return one ResultSet object or multiple ResultSet objects. Multiple ResultSet objects are handled using operations inherited from Statement.

For maximum portability, a call’s ResultSet objects and update counts should be processed prior to getting the values of output parameters.

Subclass of the JavaStatementMBS class.

This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

97.2.2 Methods

97.2.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

97.2.4 getBlob(parameterIndex as Integer) as JavaBlobMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the value of the designated JDBC BLOB parameter as a Blob object in the Java programming
language.

Notes:

Parameters:
i - the first parameter is 1, the second is 2, and so on

Returns:
the parameter value as a Blob object in the Java programming language. If the value was SQL NULL, the value null is returned.

See also:

- 97.2.5 getBlob(parameterName as string) as JavaBlobMBS

97.2.5 getBlob(parameterName as string) as JavaBlobMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves the value of a JDBC BLOB parameter as a Blob object in the Java programming language.

Notes:

Parameters:
parameterName - the name of the parameter

Returns:
the parameter value as a Blob object in the Java programming language. If the value was SQL NULL, the value null is returned.

See also:

- 97.2.4 getBlob(parameterIndex as Integer) as JavaBlobMBS

97.2.6 getBoolean(parameterIndex as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves the value of the designated JDBC BIT parameter as a boolean in the Java programming language.

Notes:

Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on

Returns:
the parameter value. If the value is SQL NULL, the result is false.

See also:

- 97.2.7 getBoolean(parameterName as string) as boolean

97.2.7 getBoolean(parameterName as string) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves the value of a JDBC BIT parameter as a boolean in the Java programming language.

Notes:
97.2. CLASS JAVACALLABLESTATEMENTMBS

Parameters:
parameterName - the name of the parameter

Returns:
the parameter value. If the value is SQL NULL, the result is false.

See also:

- 97.2.6 getBoolean(parameterIndex as Integer) as boolean

97.2.8 getByte(parameterIndex as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves the value of the designated JDBC TINYINT parameter as a byte in the Java programming language.

Notes:

Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on

Returns:
the parameter value. If the value is SQL NULL, the result is 0.

See also:

- 97.2.9 getByte(parameterName as string) as Integer

97.2.9 getByte(parameterName as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves the value of a JDBC TINYINT parameter as a byte in the Java programming language.

Notes:

Parameters:
parameterName - the name of the parameter

Returns:
the parameter value. If the value is SQL NULL, the result is 0.

See also:

- 97.2.8 getByte(parameterIndex as Integer) as Integer

97.2.10 getClob(parameterIndex as Integer) as JavaClobMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves the value of the designated JDBC CLOB parameter as a Clob object in the Java programming language.

Notes:

Parameters:
i - the first parameter is 1, the second is 2, and so on
CHAPTER 97. JAVA DATABASE

Returns:
the parameter value as a Clob object in the Java programming language. If the value was SQL NULL, the
value null is returned.
See also:

- 97.2.11 getClob(parameterName as string) as JavaClobMBS

97.2.11  getClob(parameterName as string) as JavaClobMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the value of a JDBC CLOB parameter as a Clob object in the Java programming language.
**Notes:**

Parameters:
- parameterName - the name of the parameter

Returns:
the parameter value as a Clob object in the Java programming language. If the value was SQL NULL, the
value null is returned.
See also:

- 97.2.10 getClob(parameterIndex as Integer) as JavaClobMBS

97.2.12  getDouble(parameterIndex as Integer) as Double

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the value of the designated JDBC DOUBLE parameter as a double in the Java programming
language.
**Notes:**

Parameters:
- parameterIndex - the first parameter is 1, the second is 2, and so on

Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 97.2.13 getDouble(parameterName as string) as Double

97.2.13  getDouble(parameterName as string) as Double

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the value of a JDBC DOUBLE parameter as a double in the Java programming language.
**Notes:**

Parameters:
- parameterName - the name of the parameter
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 97.2.12 getDouble(parameterIndex as Integer) as Double

**97.2.14 getFloat(parameterIndex as Integer) as single**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated JDBC FLOAT parameter as a float in the Java programming language. **Notes:**

Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 97.2.15 getFloat(parameterName as string) as single

**97.2.15 getFloat(parameterName as string) as single**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of a JDBC FLOAT parameter as a float in the Java programming language. **Notes:**

Parameters:
parameterName - the name of the parameter
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 97.2.14 getFloat(parameterIndex as Integer) as single

**97.2.16 getInt(parameterIndex as Integer) as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated JDBC INTEGER parameter as an int in the Java programming language. **Notes:**

Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:
97.2.17  getInt(parameterName as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of a JDBC INTEGER parameter as an int in the Java programming language.

**Notes:**

Parameters:
- parameterName - the name of the parameter

Returns:
- the parameter value. If the value is SQL NULL, the result is 0.

See also:

- 97.2.16 getInt(parameterIndex as Integer) as Integer

97.2.18  getLong(parameterIndex as Integer) as Int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated JDBC BIGINT parameter as a long in the Java programming language.

**Notes:**

Parameters:
- parameterIndex - the first parameter is 1, the second is 2, and so on

Returns:
- the parameter value. If the value is SQL NULL, the result is 0.

See also:

- 97.2.19 getLong(parameterName as string) as Int64

97.2.19  getLong(parameterName as string) as Int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of a JDBC BIGINT parameter as a long in the Java programming language.

**Notes:**

Parameters:
- parameterName - the name of the parameter

Returns:
- the parameter value. If the value is SQL NULL, the result is 0.

See also:

- 97.2.18 getLong(parameterIndex as Integer) as Int64
97.2. CLASS JAVACALLABLESTATEMENTMBS

97.2.20  getShort(parameterIndex as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated JDBC SMALLINT parameter as a short in the Java programming language.

**Notes:**

Parameters:
- parameterIndex - the first parameter is 1, the second is 2, and so on

Returns:
- the parameter value. If the value is SQL NULL, the result is 0.

See also:

- 97.2.21 getShort(parameterName as string) as Integer

97.2.21  getShort(parameterName as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of a JDBC SMALLINT parameter as a short in the Java programming language.

**Notes:**

Parameters:
- parameterName - the name of the parameter

Returns:
- the parameter value. If the value is SQL NULL, the result is 0.

See also:

- 97.2.20 getShort(parameterIndex as Integer) as Integer

97.2.22  getString(parameterIndex as Integer) as String

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated JDBC CHAR, VARCHAR, or LONGVARCHAR parameter as a String in the Java programming language.

**Notes:**

For the fixed-length type JDBC CHAR, the String object returned has exactly the same value the JDBC CHAR value had in the database, including any padding added by the database.

Parameters:
- parameterIndex - the first parameter is 1, the second is 2, and so on

Returns:
- the parameter value. If the value is SQL NULL, the result is null.

See also:

- 97.2.23 getString(parameterName as string) as String
97.2.23  getString(parameterName as string) as String

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of a JDBC CHAR, VARCHAR, or LONGVARCHAR parameter as a String in the Java programming language.

**Notes:**
For the fixed-length type JDBC CHAR, the String object returned has exactly the same value the JDBC CHAR value had in the database, including any padding added by the database.

Parameters:
parameterName - the name of the parameter

Returns:
the parameter value. If the value is SQL NULL, the result is null.

See also:

- 97.2.22 getString(parameterIndex as Integer) as String

97.2.24  registerOutParameter(parameterIndex as Integer, sqlType as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Registers the OUT parameter in ordinal position parameterIndex to the JDBC type sqlType.

**Notes:**
All OUT parameters must be registered before a stored procedure is executed.
The JDBC type specified by sqlType for an OUT parameter determines the Java type that must be used in the get method to read the value of that parameter.

If the JDBC type expected to be returned to this output parameter is specific to this particular database, sqlType should be java.sql.Types.OTHER. The method getObject(int) retrieves the value.

parameterIndex - the first parameter is 1, the second is 2, and so on
sqlType - the JDBC type code defined by java.sql.Types. If the parameter is of JDBC type NUMERIC or DECIMAL, the version of registerOutParameter that accepts a scale value should be used.

See also:

- 97.2.25 registerOutParameter(parameterIndex as Integer, sqlType as Integer, scale as Integer)
- 97.2.26 registerOutParameter(parameterIndex as Integer, sqlType as Integer, typeName as string)
- 97.2.27 registerOutParameter(parameterName as string, sqlType as Integer)
- 97.2.28 registerOutParameter(parameterName as string, sqlType as Integer, scale as Integer)
- 97.2.29 registerOutParameter(parameterName as string, sqlType as Integer, typeName as string)
97.2.25 registerOutParameter(parameterIndex as Integer, sqlType as Integer, scale as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Registers the parameter in ordinal position parameterIndex to be of JDBC type sqlType.

**Notes:**
This method must be called before a stored procedure is executed.
The JDBC type specified by sqlType for an OUT parameter determines the Java type that must be used in the get method to read the value of that parameter.

This version of registerOutParameter should be used when the parameter is of JDBC type NUMERIC or DECIMAL.

d parameterIndex - the first parameter is 1, the second is 2, and so on
sqlType - the SQL type code defined by java.sql.Types.
scale - the desired number of digits to the right of the decimal point. It must be greater than or equal to zero.

See also:
- 97.2.24 registerOutParameter(parameterIndex as Integer, sqlType as Integer) 15400
- 97.2.26 registerOutParameter(parameterIndex as Integer, sqlType as Integer, typeName as string) 15401
- 97.2.27 registerOutParameter(parameterName as string, sqlType as Integer) 15402
- 97.2.28 registerOutParameter(parameterName as string, sqlType as Integer, scale as Integer) 15403
- 97.2.29 registerOutParameter(parameterName as string, sqlType as Integer, typeName as string) 15403

97.2.26 registerOutParameter(parameterIndex as Integer, sqlType as Integer, typeName as string)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Registers the designated output parameter.

**Notes:**
This version of the method registerOutParameter should be used for a user-defined or REF output parameter. Examples of user-defined types include: STRUCT, DISTINCT, JAVA_OBJECT, and named array types. Before executing a stored procedure call, you must explicitly call registerOutParameter to register the type from java.sql.Types for each OUT parameter. For a user-defined parameter, the fully-qualified SQL type name of the parameter should also be given, while a REF parameter requires that the fully-qualified type name of the referenced type be given. A JDBC driver that does not need the type code and type name information may ignore it. To be portable, however, applications should always provide these values for user-defined and REF parameters. Although it is intended for user-defined and REF parameters, this method may be used to register a parameter of any JDBC type. If the parameter does not have a user-defined or
CHAPTER 97. JAVA DATABASE

REF type, the typeName parameter is ignored.
Note: When reading the value of an out parameter, you must use the getter method whose Java type corresponds to the parameter’s registered SQL type.

Parameters:
paramIndex - the first parameter is 1, the second is 2,...
sqlType - a value from Types
typeName - the fully-qualified name of an SQL structured type
See also:

- 97.2.24 registerOutParameter(parameterIndex as Integer, sqlType as Integer) 15400
- 97.2.25 registerOutParameter(parameterIndex as Integer, sqlType as Integer, scale as Integer) 15401
- 97.2.27 registerOutParameter(parameterName as string, sqlType as Integer) 15402
- 97.2.28 registerOutParameter(parameterName as string, sqlType as Integer, scale as Integer) 15403
- 97.2.29 registerOutParameter(parameterName as string, sqlType as Integer, typeName as string) 15403

97.2.27  registerOutParameter(parameterName as string, sqlType as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Registers the OUT parameter named parameterName to the JDBC type sqlType.
**Notes:**
Registers the OUT parameter named parameterName to the JDBC type sqlType. All OUT parameters must be registered before a stored procedure is executed.
The JDBC type specified by sqlType for an OUT parameter determines the Java type that must be used in the get method to read the value of that parameter.

If the JDBC type expected to be returned to this output parameter is specific to this particular database, sqlType should be java.sql.Types.OTHER. The method getObject(int) retrieves the value.

Parameters:
parameterName - the name of the parameter
sqlType - the JDBC type code defined by java.sql.Types. If the parameter is of JDBC type NUMERIC or DECIMAL, the version of registerOutParameter that accepts a scale value should be used.
See also:

- 97.2.24 registerOutParameter(parameterIndex as Integer, sqlType as Integer) 15400
- 97.2.25 registerOutParameter(parameterIndex as Integer, sqlType as Integer, scale as Integer) 15401
- 97.2.26 registerOutParameter(parameterIndex as Integer, sqlType as Integer, typeName as string) 15402
- 97.2.28 registerOutParameter(parameterName as string, sqlType as Integer, scale as Integer) 15403
- 97.2.29 registerOutParameter(parameterName as string, sqlType as Integer, typeName as string) 15403
97.2.28  registerOutParameter(parameterName as string, sqlType as Integer, scale as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Registers the parameter named parameterName to be of JDBC type sqlType. **Notes:**

This method must be called before a stored procedure is executed. The JDBC type specified by sqlType for an OUT parameter determines the Java type that must be used in the get method to read the value of that parameter.

This version of registerOutParameter should be used when the parameter is of JDBC type NUMERIC or DECIMAL.

Parameters:
- parameterName - the name of the parameter
- sqlType - SQL type code defined by java.sql.Types.
- scale - the desired number of digits to the right of the decimal point. It must be greater than or equal to zero.

See also:
- 97.2.24 registerOutParameter(parameterIndex as Integer, sqlType as Integer) 15400
- 97.2.25 registerOutParameter(parameterIndex as Integer, sqlType as Integer, scale as Integer) 15401
- 97.2.26 registerOutParameter(parameterIndex as Integer, sqlType as Integer, typeName as string) 15401
- 97.2.27 registerOutParameter(parameterName as string, sqlType as Integer) 15402
- 97.2.29 registerOutParameter(parameterName as string, sqlType as Integer, typeName as string) 15403

97.2.29  registerOutParameter(parameterName as string, sqlType as Integer, typeName as string)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Registers the designated output parameter. **Notes:**

This version of the method registerOutParameter should be used for a user-named or REF output parameter. Examples of user-named types include: STRUCT, DISTINCT, JAVA_OBJECT, and named array types. Before executing a stored procedure call, you must explicitly call registerOutParameter to register the type from java.sql.Types for each OUT parameter. For a user-named parameter the fully-qualified SQL type name of the parameter should also be given, while a REF parameter requires that the fully-qualified type name of the referenced type be given. A JDBC driver that does not need the type code and type name information may ignore it. To be portable, however, applications should always provide these values for user-named and REF parameters. Although it is intended for user-named and REF parameters, this method...
may be used to register a parameter of any JDBC type. If the parameter does not have a user-named or
REF type, the typeName parameter is ignored.
Note: When reading the value of an out parameter, you must use the getXXX method whose Java type
XXX corresponds to the parameter’s registered SQL type.

Parameters:
parameterName - the name of the parameter
sqlType - a value from Types
typeName - the fully-qualified name of an SQL structured type
See also:

- 97.2.24 registerOutParameter(parameterIndex as Integer, sqlType as Integer) 15400
- 97.2.25 registerOutParameter(parameterIndex as Integer, sqlType as Integer, scale as Integer) 15401
- 97.2.26 registerOutParameter(parameterIndex as Integer, sqlType as Integer, typeName as string) 15401
- 97.2.27 registerOutParameter(parameterName as string, sqlType as Integer) 15402
- 97.2.28 registerOutParameter(parameterName as string, sqlType as Integer, scale as Integer) 15403

97.2.30 setBoolean(parameterName as string, x as boolean)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Sets the designated parameter to the given Java boolean value.
Notes:
The driver converts this to an SQL BIT value when it sends it to the database.
Parameters:
parameterName - the name of the parameter
x - the parameter value

97.2.31 setByte(parameterName as string, x as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Sets the designated parameter to the given Java byte value.
Notes:
The driver converts this to an SQL TINYINT value when it sends it to the database.
Parameters:
parameterName - the name of the parameter
x - the parameter value
97.2.32 setDouble(parameterName as string, x as Double)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the designated parameter to the given Java double value.
**Notes:**
The driver converts this to an SQL DOUBLE value when it sends it to the database.
**Parameters:**
- parameterName - the name of the parameter
- x - the parameter value

97.2.33 setFloat(parameterName as string, x as single)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the designated parameter to the given Java float value.
**Notes:**
The driver converts this to an SQL FLOAT value when it sends it to the database.
**Parameters:**
- parameterName - the name of the parameter
- x - the parameter value

97.2.34 setInt(parameterName as string, x as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the designated parameter to the given Java int value.
**Notes:**
The driver converts this to an SQL INTEGER value when it sends it to the database.
**Parameters:**
- parameterName - the name of the parameter
- x - the parameter value

97.2.35 setLong(parameterName as string, x as int64)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the designated parameter to the given Java long value.
**Notes:**
The driver converts this to an SQL BIGINT value when it sends it to the database.
**Parameters:**
- parameterName - the name of the parameter
97.2.36  `setNull(parameterName as string, sqlType as Integer)`

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the designated parameter to SQL NULL.
**Notes:**
Note: You must specify the parameter’s SQL type.

Parameters:
- `parameterName` - the name of the parameter
- `sqlType` - the SQL type code defined in `java.sql.Types`

See also:
- 97.2.37 `setNull(parameterName as string, sqlType as Integer, typeName as string)`

97.2.37  `setNull(parameterName as string, sqlType as Integer, typeName as string)`

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the designated parameter to SQL NULL.
**Notes:**
This version of the method `setNull` should be used for user-defined types and REF type parameters. Examples of user-defined types include: STRUCT, DISTINCT, JAVA_OBJECT, and named array types.
Note: To be portable, applications must give the SQL type code and the fully-qualified SQL type name when specifying a NULL user-defined or REF parameter. In the case of a user-defined type the name is the type name of the parameter itself. For a REF parameter, the name is the type name of the referenced type. If a JDBC driver does not need the type code or type name information, it may ignore it. Although it is intended for user-defined and Ref parameters, this method may be used to set a null parameter of any JDBC type. If the parameter does not have a user-defined or REF type, the given `typeName` is ignored.

Parameters:
- `parameterName` - the name of the parameter
- `sqlType` - a value from `java.sql.Types`
- `typeName` - the fully-qualified name of an SQL user-defined type; ignored if the parameter is not a user-defined type or SQL REF value

See also:
- 97.2.36 `setNull(parameterName as string, sqlType as Integer)`
97.2.38  setShort(parameterName as string, x as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java short value.  
**Notes:**  
The driver converts this to an SQL SMALLINT value when it sends it to the database.  
**Parameters:**  
- parameterName - the name of the parameter  
- x - the parameter value

97.2.39  setString(parameterName as string, x as string)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java String value.  
**Notes:**  
The driver converts this to an SQL VARCHAR or LONGVARCHAR value (depending on the argument's size relative to the driver's limits on VARCHAR values) when it sends it to the database.  
**Parameters:**  
- parameterName - the name of the parameter  
- x - the parameter value

97.2.40  wasNull as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether the last OUT parameter read had the value of SQL NULL.  
**Notes:**  
Note that this method should be called only after calling a getter method; otherwise, there is no value to use in determining whether it is null or not.  
**Returns:**  
true if the last parameter read was SQL NULL; false otherwise
97.3  class JavaClobMBS

97.3.1  class JavaClobMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The java class for large character objects.
**Notes:**
Subclass of the JavaObjectMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

97.3.2  Methods

97.3.3  Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

97.3.4  getSubString(Position as int64, Length as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves a copy of the specified substring in the CLOB value designated by this Clob object.
**Notes:**
The substring begins at position pos and has up to length consecutive characters.

Parameters:
pos: the first character of the substring to be extracted. The first character is at position 1.
length: the number of consecutive characters to be copied

Returns a String that is the specified substring in the CLOB value designated by this Clob object

97.3.5  length as int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the number of characters in the CLOB value designated by this Clob object.
**Notes:** Returns length of the CLOB in characters.
97.3. CLASS JAVACLOBMBS

97.3.6  position(SearchString as JavaClobMBS, Start as Int64) as Int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the character position at which the specified Clob object searchstr appears in this Clob object.

**Notes:**
The search begins at position start.

SearchString: the Clob object for which to search
start: the position at which to begin searching; the first position is 1

Returns the position at which the Clob object appears or -1 if it is not present; the first position is 1
See also:

- 97.3.7 position(SearchString as String, Start as Int64) as Int64

97.3.7  position(SearchString as String, Start as Int64) as Int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the character position at which the specified substring searchstr appears in the SQL CLOB value represented by this Clob object.

**Notes:**
The search begins at position start.

searchstr: the substring for which to search
start: the position at which to begin searching; the first position is 1

Returns the position at which the substring appears or -1 if it is not present; the first position is 1
See also:

- 97.3.6 position(SearchString as JavaClobMBS, Start as Int64) as Int64

97.3.8  setString(Position as Int64, Value as String) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Writes the given Java String to the CLOB value that this Clob object designates at the position pos.

**Notes:**
Position: the position at which to start writing to the CLOB value that this Clob object represents
Value: the string to be written to the CLOB value that this Clob designates

Returns the number of characters written
See also:
97.3.9 setString(Position as Int64, Value as String, Offset as Integer, Length as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
 Writes Length characters of Value, starting at character offset, to the CLOB value that this Clob represents.
**Notes:**
Position: the position at which to start writing to this CLOB object
Value: the string to be written to the CLOB value that this Clob object represents
Offset: the offset into str to start reading the characters to be written
Length: the number of characters to be written

Returns the number of characters written
See also:

- 97.3.8 setString(Position as Int64, Value as String) as Integer

97.3.10 truncate(len as int64)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Truncates the CLOB value that this Clob designates to have a length of len characters.
**Notes:** len: the length, in bytes, to which the CLOB value should be truncated
97.4. class JavaConnectionMBS

97.4.1 class JavaConnectionMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a java connection.

**Notes:**
Subclass of the JavaObjectMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

97.4.2 Methods

97.4.3 clearWarnings

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears all warnings reported for this Connection object.

**Notes:** After a call to this method, the method getWarnings returns null until a new warning is reported for this Connection object.

97.4.4 close

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Releases this Connection object’s database and JDBC resources immediately instead of waiting for them to be automatically released.

97.4.5 CLOSE_CURSORS_AT_COMMIT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that ResultSet objects should be closed when the method Connection.commit is called.

97.4.6 commit

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Makes all changes made since the previous commit/rollback permanent and releases any database locks currently held by the Connection.

**Notes:** See the java documentation for details on java.sql.Connection.Commit.
97.4.7 CONCUR_READ_ONLY as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant indicating the concurrency mode for a ResultSet object that may NOT be updated.

97.4.8 CONCUR_UPDATABLE as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant indicating the concurrency mode for a ResultSet object that may be updated.

97.4.9 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

97.4.10 createBlob as JavaBlobMBS

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Constructs an object that implements the Blob interface. 
**Notes:** The object returned initially contains no data. The setBinaryStream and setBytes methods of the Blob interface may be used to add data to the Blob.

97.4.11 createClob as JavaClobMBS

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Constructs an object that implements the Clob interface. 
**Notes:** The object returned initially contains no data. The setAsciiStream, setCharacterStream and set-String methods of the Clob interface may be used to add data to the Clob.

97.4.12 createStatement as JavaStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a Statement object for sending SQL statements to the database. 
**Notes:**
SQL statements without parameters are normally executed using Statement objects. If the same SQL statement is executed many times, it may be more efficient to use a PreparedStatement object. Result sets created using the returned Statement object will by default be type TYPE_FORWARD_ONLY
and have a concurrency level of CONCUR_READ_ONLY.

Returns:
a new default Statement object
See also:

- 97.4.13 createStatement(resultSetType as Integer, resultSetConcurrency as Integer) as JavaStatementMBS
- 97.4.14 createStatement(resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaStatementMBS

97.4.13 createStatement(resultSetType as Integer, resultSetConcurrency as Integer) as JavaStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a Statement object that will generate ResultSet objects with the given type and concurrency.

**Notes:**
This method is the same as the createStatement method above, but it allows the default result set type and concurrency to be overridden.

**Parameters:**
- resultSetType - a result set type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE
- resultSetConcurrency - a concurrency type; one of ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE

**Returns:**
a new Statement object that will generate ResultSet objects with the given type and concurrency

See also:

- 97.4.12 createStatement as JavaStatementMBS
- 97.4.14 createStatement(resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaStatementMBS

97.4.14 createStatement(resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a Statement object that will generate ResultSet objects with the given type, concurrency, and holdability.

**Notes:**
This method is the same as the createStatement method above, but it allows the default result set type, concurrency, and holdability to be overridden.

**Parameters:**
resultSetType - one of the following ResultSet constants: ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE
resultSetConcurrency - one of the following ResultSet constants: ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE
resultSetHoldability - one of the following ResultSet constants: ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT

Returns:
   a new Statement object that will generate ResultSet objects with the given type, concurrency, and holdability

See also:
   • 97.4.12 createStatement as JavaStatementMBS
   • 97.4.13 createStatement(resultSetType as Integer, resultSetConcurrency as Integer) as JavaStatementMBS

97.4.15 FETCH_FORWARD as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The constant indicating that the rows in a result set will be processed in a forward direction; first-to-last.
Notes: This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

97.4.16 FETCH_REVERSE as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The constant indicating that the rows in a result set will be processed in a reverse direction; last-to-first.
Notes: This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

97.4.17 FETCH_UNKNOWN as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The constant indicating that the order in which rows in a result set will be processed is unknown.
Notes: This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

97.4.18 getMetaData as JavaDatabaseMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves a DatabaseMetaData object that contains metadata about the database to which this Connection
object represents a connection.

Notes:
The metadata includes information about the database’s tables, its supported SQL grammar, its stored procedures, the capabilities of this connection, and so on.

Returns:
a DatabaseMetaData object for this Connection object

97.4.19  HOLD_CURSORS_OVER_COMMIT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant indicating that ResultSet objects should not be closed when the method Connection.commit is called.

97.4.20  isClosed as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves whether this Connection object has been closed.

Notes:
A connection is closed if the method close has been called on it or if certain fatal errors have occurred. This method is guaranteed to return true only when it is called after the method Connection.close has been called. This method generally cannot be called to determine whether a connection to a database is valid or invalid. A typical client can determine that a connection is invalid by catching any exceptions that might be thrown when an operation is attempted.

Returns:
true if this Connection object is closed; false if it is still open

97.4.21  nativeSQL(sql as string) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Converts the given SQL statement into the system’s native SQL grammar.

Notes:
A driver may convert the JDBC SQL grammar into its system’s native SQL grammar prior to sending it. This method returns the native form of the statement that the driver would have sent.

Parameters:
sql - an SQL statement that may contain one or more ’?’ parameter placeholders

Returns:
the native form of this statement
CHAPTER 97. JAVA DATABASE

97.4.22 prepareCall(sql as string) as JavaCallableStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a CallableStatement object for calling database stored procedures.

**Notes:**

The CallableStatement object provides methods for setting up its IN and OUT parameters, and methods for executing the call to a stored procedure.

Note: This method is optimized for handling stored procedure call statements. Some drivers may send the call statement to the database when the method prepareCall is done; others may wait until the CallableStatement object is executed. This has no direct effect on users; however, it does affect which method throws certain SQLExceptions.

Result sets created using the returned CallableStatement object will by default be type TYPE_FORWARD_ONLY and have a concurrency level of CONCUR_READ_ONLY.

**Parameters:**
sql - an SQL statement that may contain one or more '?' parameter placeholders. Typically this statement is a JDBC function call escape string.

**Returns:**
a new default CallableStatement object containing the pre-compiled SQL statement

See also:

- 97.4.23 prepareCall(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaCallableStatementMBS
- 97.4.24 prepareCall(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaCallableStatementMBS

97.4.23 prepareCall(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaCallableStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a CallableStatement object that will generate ResultSet objects with the given type and concurrency.

**Notes:**

This method is the same as the prepareCall method above, but it allows the default result set type and concurrency to be overridden.

**Parameters:**
sql - a String object that is the SQL statement to be sent to the database; may contain one or more ? parameters
resultSetType - a result set type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE
resultSetConcurrency - a concurrency type; one of ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE

**Returns:**
97.4. CLASS JAVA CONNECTION MBS

a new CallableStatement object containing the pre-compiled SQL statement that will produce ResultSet objects with the given type and concurrency

See also:

- 97.4.22 prepareCall(sql as string) as JavaCallableStatementMBS
- 97.4.24 prepareCall(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaCallableStatementMBS

97.4.24 prepareCall(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaCallableStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a CallableStatement object that will generate ResultSet objects with the given type and concurrency.

**Notes:**
This method is the same as the prepareCall method above, but it allows the default result set type, result set concurrency type and holdability to be overridden.

**Parameters:**
- `sql` - a String object that is the SQL statement to be sent to the database; may contain on or more ? parameters
- `resultSetType` - one of the following ResultSet constants: ResultSet.TYPE_FORWARDONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE
- `resultSetConcurrency` - one of the following ResultSet constants: ResultSet.CONCUR_READONLY or ResultSet.CONCUR_UPDATABLE
- `resultSetHoldability` - one of the following ResultSet constants: ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT

**Returns:**
a new CallableStatement object, containing the pre-compiled SQL statement, that will generate ResultSet objects with the given type, concurrency, and holdability

See also:

- 97.4.22 prepareCall(sql as string) as JavaCallableStatementMBS
- 97.4.23 prepareCall(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaCallableStatementMBS

97.4.25 prepareStatement(sql as string) as JavaPreparedStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a PreparedStatement object for sending parameterized SQL statements to the database.

**Notes:**
A SQL statement with or without IN parameters can be pre-compiled and stored in a PreparedStatement object. This object can then be used to efficiently execute this statement multiple times.
CHAPTER 97. JAVA DATABASE

Note: This method is optimized for handling parametric SQL statements that benefit from precompilation. If the driver supports precompilation, the method prepareStatement will send the statement to the database for precompilation. Some drivers may not support precompilation. In this case, the statement may not be sent to the database until the PreparedStatement object is executed. This has no direct effect on users; however, it does affect which methods throw certain SQLException objects.

Result sets created using the returned PreparedStatement object will by default be type TYPE_FORWARD_ONLY and have a concurrency level of CONCUR_READ_ONLY.

Parameters:
- sql - an SQL statement that may contain one or more '?' IN parameter placeholders

See also:
- 97.4.26 prepareStatement(sql as string, autoGeneratedKeys as Integer) as JavaPreparedStatementMBS
- 97.4.27 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaPreparedStatementMBS
- 97.4.28 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaPreparedStatementMBS

97.4.26 prepareStatement(sql as string, autoGeneratedKeys as Integer) as JavaPreparedStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Creates a default PreparedStatement object that has the capability to retrieve auto-generated keys.

Notes:
The given constant tells the driver whether it should make auto-generated keys available for retrieval. This parameter is ignored if the SQL statement is not an INSERT statement.
Note: This method is optimized for handling parametric SQL statements that benefit from precompilation. If the driver supports precompilation, the method prepareStatement will send the statement to the database for precompilation. Some drivers may not support precompilation. In this case, the statement may not be sent to the database until the PreparedStatement object is executed. This has no direct effect on users; however, it does affect which methods throw certain SQLExceptions.

Result sets created using the returned PreparedStatement object will by default be type TYPE_FORWARD_ONLY and have a concurrency level of CONCUR_READ_ONLY.

Parameters:
- sql - an SQL statement that may contain one or more '?' IN parameter placeholders
- autoGeneratedKeys - a flag indicating whether auto-generated keys should be returned; one of Statement.RETURN_GENERATED_KEYS or Statement.NO_GENERATED_KEYS

Returns:
a new PreparedStatement object, containing the pre-compiled SQL statement, that will have the capability of returning auto-generated keys
See also:

- 97.4.25 prepareStatement(sql as string) as JavaPreparedStatementMBS
- 97.4.27 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaPreparedStatementMBS
- 97.4.28 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaPreparedStatementMBS

97.4.27 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaPreparedStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a PreparedStatement object that will generate ResultSet objects with the given type and concurrency. **Notes:**
This method is the same as the prepareStatement method above, but it allows the default result set type and concurrency to be overridden.
**Parameters:**
sql - a String object that is the SQL statement to be sent to the database; may contain one or more ? IN parameters
resultSetType - a result set type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE
resultSetConcurrency - a concurrency type; one of ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE
**Returns:**
a new PreparedStatement object containing the pre-compiled SQL statement that will produce ResultSet objects with the given type and concurrency
See also:

- 97.4.25 prepareStatement(sql as string) as JavaPreparedStatementMBS
- 97.4.26 prepareStatement(sql as string, autoGeneratedKeys as Integer) as JavaPreparedStatementMBS
- 97.4.28 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaPreparedStatementMBS

97.4.28 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaPreparedStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a PreparedStatement object that will generate ResultSet objects with the given type, concurrency,
and holdability.

Notes:

This method is the same as the prepareStatement method above, but it allows the default result set type, concurrency, and holdability to be overridden.

Parameters:
sql - a String object that is the SQL statement to be sent to the database; may contain one or more ? IN parameters
resultSetType - one of the following ResultSet constants: ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE
resultSetConcurrency - one of the following ResultSet constants: ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE
resultSetHoldability - one of the following ResultSet constants: ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT

Returns:
a new PreparedStatement object, containing the pre-compiled SQL statement, that will generate ResultSet objects with the given type, concurrency, and holdability

See also:

- 97.4.25 prepareStatement(sql as string) as JavaPreparedStatementMBS
- 97.4.26 prepareStatement(sql as string, autoGeneratedKeys as Integer) as JavaPreparedStatementMBS
- 97.4.27 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaPreparedStatementMBS

97.4.29 releaseSavepoint(safepoint as JavaSavepointMBS)

Notes:
Any reference to the savepoint after it have been removed will cause an SQLException to be thrown.

savepoint: the Savepoint object to be removed

97.4.30 rollback

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Drops all changes made since the previous commit/rollback and releases any database locks currently held by this Connection.

Notes:
97.4. CLASS JAVACONNECTIONMBS

This method should be used only when auto-commit has been disabled.

See the java documentation for details on java.sql.Connection.Rollback.
See also:

- 97.4.31 rollback(safepoint as JavaSavepointMBS)

97.4.31 rollback(safepoint as JavaSavepointMBS)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Undoes all changes made after the given Savepoint object was set.
**Notes:**
This method should be used only when auto-commit has been disabled.

savepoint: the Savepoint object to roll back to
See also:

- 97.4.30 rollback

97.4.32 setSavepoint as JavaSavepointMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates an unnamed savepoint in the current transaction and returns the new Savepoint object that represents it.
See also:

- 97.4.33 setSavepoint(name as string) as JavaSavepointMBS

97.4.33 setSavepoint(name as string) as JavaSavepointMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a savepoint with the given name in the current transaction and returns the new Savepoint object that represents it.
**Notes:**
name: a String containing the name of the savepoint
returns the new Savepoint object
See also:

- 97.4.32 setSavepoint as JavaSavepointMBS
97.4.34 TRANSACTION_NONE as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A constant indicating that transactions are not supported.

97.4.35 TRANSACTION_READ_COMMITTED as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A constant indicating that dirty reads are prevented; non-repeatable reads and phantom reads can occur. **Notes:** This level only prohibits a transaction from reading a row with uncommitted changes in it.

97.4.36 TRANSACTION_READ_UNCOMMITTED as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A constant indicating that dirty reads, non-repeatable reads and phantom reads can occur. **Notes:** This level allows a row changed by one transaction to be read by another transaction before any changes in that row have been committed (a "dirty read"). If any of the changes are rolled back, the second transaction will have retrieved an invalid row.

97.4.37 TRANSACTION_REPEATABLE_READ as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A constant indicating that dirty reads and non-repeatable reads are prevented; phantom reads can occur. **Notes:** This level prohibits a transaction from reading a row with uncommitted changes in it, and it also prohibits the situation where one transaction reads a row, a second transaction alters the row, and the first transaction rereads the row, getting different values the second time (a "non-repeatable read").

97.4.38 TRANSACTION_SERIALIZABLE as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A constant indicating that dirty reads, non-repeatable reads and phantom reads are prevented. **Notes:** This level includes the prohibitions in TRANSACTION_REPEATABLE_READ and further prohibits the situation where one transaction reads all rows that satisfy a WHERE condition, a second transaction inserts a row that satisfies that WHERE condition, and the first transaction rereads for the same condition, retrieving the additional "phantom" row in the second read.
97.4.39  typeARRAY as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type ARRAY.

97.4.40  typeBIGINT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type BIGINT.  
**Example:**
```
dim d as JavaConnectionMBS
MsgBox str(d.typeBIGINT)
```

97.4.41  typeBINARY as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type BINARY.

97.4.42  typeBIT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type BIT.

97.4.43  typeBLOB as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type BLOB.
97.4.44  **typeCHAR as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type CHAR.

97.4.45  **typeCLOB as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type CLOB.

97.4.46  **typeDATE as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type DATE.

97.4.47  **typeDECIMAL as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type DECIMAL.

97.4.48  **typeDISTINCT as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type DISTINCT.

97.4.49  **typeDOUBLE as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type DOUBLE.
97.4.50  **typeFLOAT as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant in the Java programming language, sometimes referred to as a type code, that identifies the
generic SQL type FLOAT.

97.4.51  **typeINTEGER as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant in the Java programming language, sometimes referred to as a type code, that identifies the
generic SQL type INTEGER.

97.4.52  **typeJAVA_OBJECT as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant in the Java programming language, sometimes referred to as a type code, that identifies the
generic SQL type JAVA_OBJECT.

97.4.53  **typeLONGVARBINARY as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant in the Java programming language, sometimes referred to as a type code, that identifies the
generic SQL type LONGVARBINARY.

97.4.54  **typeLONGVARCHAR as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant in the Java programming language, sometimes referred to as a type code, that identifies the
generic SQL type LONGVARCHAR.

97.4.55  **typeNULL as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant in the Java programming language, sometimes referred to as a type code, that identifies the
generic SQL type NULL.
97.4.56 typeNUMERIC as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type NUMERIC.

97.4.57 typeOTHER as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language that indicates that the SQL type is database-specific and gets mapped to a Java object that can be accessed via the methods getObject and setObject.

97.4.58 typeREAL as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type REAL.

97.4.59 typeREF as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type REF.

97.4.60 typeSMALLINT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type SMALLINT.

97.4.61 typeSTRUCT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type STRUCT.
97.4. CLASS JAVACONNECTIONMBS

97.4.62 typeTIME as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type TIME.

97.4.63 typeTIMESTAMP as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type TIMESTAMP.

97.4.64 typeTINYINT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type TINYINT.

97.4.65 typeVARBINARY as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type VARBINARY.

97.4.66 typeVARCHAR as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type VARCHAR.

97.4.67 TYPE_FORWARD_ONLY as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating the type for a ResultSet object whose cursor may move only forward.
97.4.68  **TYPE_SCROLL_INSENSITIVE** as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating the type for a ResultSet object that is scrollable but generally not sensitive to changes made by others.

97.4.69  **TYPE_SCROLL_SENSITIVE** as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating the type for a ResultSet object that is scrollable and generally sensitive to changes made by others.

97.4.70  **Properties**

97.4.71  **AutoCommit** as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The current auto-commit state. **Notes:** See the java documentation for details on java.sql.Connection.setAutoCommit. (Read and Write computed property)

97.4.72  **Catalog** as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets or gets the given catalog name in order to select a subspace of this Connection object’s database in which to work. **Notes:** If the driver does not support catalogs, it will silently ignore this request. (Read and Write computed property)

97.4.73  **Holdability** as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes or retrieves the holdability of ResultSet objects created using this Connection object to the given holdability. **Notes:**
97.4. CLASS JAVACONNECTIONMBS

Parameters:
holdability - a ResultSet holdability constant; one of ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT
(Read and Write computed property)

97.4.74 ReadOnly as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Whether this connection in read-only mode as a hint to enable database optimizations.
Notes: See the java documentation for details on java.sql.Connection.setReadOnly.
(Read and Write computed property)

97.4.75 TransactionIsolation as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Attempts to change the transaction isolation level for this Connection object to the one given.
Notes: The constants defined in the interface Connection are the possible transaction isolation levels.
Note: If this method is called during a transaction, the result is implementation-defined.

Parameters:
level - one of the following Connection constants: Connection.TRANSACTION_READ_UNCOMMITTED, Connection.TRANSACTION_READ_COMMITTED, Connection.TRANSACTION_REPEATABLE_READ, or Connection.TRANSACTION_SERIALIZABLE. (Note that Connection.TRANSACTION_NONE cannot be used because it specifies that transactions are not supported.)
(Read and Write computed property)
97.5  class JavaDatabaseMBS

97.5.1  class JavaDatabaseMBS

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class to handle database access using JDBC drivers.

**Notes:**
This class is not a subclass of RB’s database class, so you can use it with Real Studio Standard Edition.

Nearly all methods on this class can raise java exceptions which you can get using the error property. (and errorstring and errorcode)

Add Linux support plugin version 8.7.

Please make sure this Java VM object stays alive until you are done with all your java stuff. So all the java objects go away and this vm object is destroyed on the end. Because if some java code is still running like an background java thread, quitting the VM can lead into crashes.

Subclass of the JavaObjectMBS class.

97.5.2  Methods

97.5.3  connect(url as string) as JavaConnectionMBS

MBS Java Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Connects directly to the database calling the Drivers's connect method.

**Notes:**
While getConnection calls DriverManager, this calls directly the driver.

Attempts to make a database connection to the given URL. The driver should return "null" if it realizes it is the wrong kind of driver to connect to the given URL. This will be common, as when the JDBC driver manager is asked to connect to a given URL it passes the URL to each loaded driver in turn.
The driver should throw an SQLException if it is the right driver to connect to the given URL but has trouble connecting to the database.

The java.util.Properties argument can be used to pass arbitrary string tag/value pairs as connection arguments. Normally at least "user" and "password" properties should be included in the Properties object. (the plugin passes empty Properties object)

url - the URL of the database to which to connect
97.5.   CLASS JAVADATABASEMBS

Returns a Connection object that represents a connection to the URL
Throws SQLException - if a database access error occurs

97.5.4 Constructor(vm as JavaVMMBS, driverclass as string)

Example:

```vbnet
dim vm as JavaVMMBS // your VM
dim db as JavaDatabaseMBS

db=new JavaDatabaseMBS(vm,"com.mysql.jdbc.Driver")
```

Notes: The driverclass is the name of the main class of the jdbc driver.

97.5.5 getConnection(url as string) as JavaConnectionMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Attempts to establish a connection to the given database URL.
Example:

```vbnet
dim d as JavaDatabaseMBS
dim c as JavaConnectionMBS

// get database

// connect to Oracle database using service name:
c=d.getConnection("jdbc:oracle:thin:@//192.168.10.20:1521/adbprod","user","pw")

// connect with SID:
c=d.getConnection("jdbc:oracle:thin:@192.168.10.20:1521:adbprod","user","pw")
```

Notes:
The DriverManager attempts to select an appropriate driver from the set of registered JDBC drivers.

Parameters:
url - a database url of the form jdbc:subprotocol:subname

Returns:
a connection to the URL
97.5.6 getConnection(url as string, username as string, password as string) as JavaConnectionMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Attempts to establish a connection to the given database URL.

**Example:**

```java
dim d as JavaDatabaseMBS
dim c as JavaConnectionMBS

// get database

// connect to Oracle database using service name:
c=d.getConnection("jdbc:oracle:thin:@//192.168.10.20:1521/adbprod","user","pw")

// connect with SID:
c=d.getConnection("jdbc:oracle:thin:@192.168.10.20:1521:adbprod","user","pw")
```

**Notes:**

The DriverManager attempts to select an appropriate driver from the set of registered JDBC drivers.

**Parameters:**
- url - a database url of the form jdbc:subprotocol:subname
- user - the database user on whose behalf the connection is being made
- password - the user's password

**Returns:**
a connection to the URL

See also:

- 97.5.5 getConnection(url as string) as JavaConnectionMBS

97.5.7 IsDriverLoaded as Boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether a driver has been loaded.
97.5.8 println(message as string)

MBS Java Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Prints a message to the current JDBC log stream.

97.5.9 Properties

97.5.10 LoginTimeout as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximum time in seconds that a driver will wait while attempting to connect to a database. **Notes:**

The login time limit in seconds.
(Read and Write computed property)
97.6  class JavaDatabaseMetaDataMBS

97.6.1  class JavaDatabaseMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Comprehensive information about the database as a whole.

**Notes:**

This interface is implemented by driver vendors to let users know the capabilities of a Database Management System (DBMS) in combination with the driver based on JDBC technology (“JDBC driver”) that is used with it. Different relational DBMSs often support different features, implement features in different ways, and use different data types. In addition, a driver may implement a feature on top of what the DBMS offers. Information returned by methods in this interface applies to the capabilities of a particular driver and a particular DBMS working together. Note that as used in this documentation, the term “database” is used generically to refer to both the driver and DBMS.

A user for this interface is commonly a tool that needs to discover how to deal with the underlying DBMS. This is especially true for applications that are intended to be used with more than one DBMS. For example, a tool might use the method getTypeInfo to find out what data types can be used in a CREATE TABLE statement. Or a user might call the method supportsCorrelatedSubqueries to see if it is possible to use a correlated subquery or supportsBatchUpdates to see if it is possible to use batch updates.

Some DatabaseMetaData methods return lists of information in the form of ResultSet objects. Regular ResultSet methods, such as getString and getInt, can be used to retrieve the data from these ResultSet objects. If a given form of metadata is not available, the ResultSet getter methods throw an SQLException.

Some DatabaseMetaData methods take arguments that are String patterns. These arguments all have names such as fooPattern. Within a pattern String, “% ” means match any substring of 0 or more characters, and ”_” means match any one character. Only metadata entries matching the search pattern are returned. If a search pattern argument is set to null, that argument’s criterion will be dropped from the search.

A method that gets information about a feature that the driver does not support will throw an SQLException. In the case of methods that return a ResultSet object, either a ResultSet object (which may be empty) is returned or an SQLException is thrown.

Subclass of the JavaObjectMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

97.6.2  Methods

97.6.3  allProceduresAreCallable as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether the current user can call all the procedures returned by the method getProcedures.
97.6.4 allTablesAreSelectable as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves whether the current user can use all the tables returned by the method getTables in a SELECT statement.
**Notes:** Returns true if so; false otherwise

97.6.5 attributeNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Indicates that NULL values might not be allowed.
**Notes:** A possible value for the column NULLABLE in the ResultSet object returned by the method getAttributes.

97.6.6 attributeNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Indicates that NULL values are definitely allowed.
**Notes:** A possible value for the column NULLABLE in the ResultSet object returned by the method getAttributes.

97.6.7 attributeNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Indicates that whether NULL values are allowed is not known.
**Notes:** A possible value for the column NULLABLE in the ResultSet object returned by the method getAttributes.

97.6.8 bestRowNotPseudo as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Indicates that the best row identifier is NOT a pseudo column.
**Notes:** A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getBestRowIdentifier.
97.6.9  bestRowPseudo as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the best row identifier is a pseudo column. **Notes:** A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getBestRowIdentifier.

97.6.10  bestRowSession as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the scope of the best row identifier is the remainder of the current session. **Notes:** A possible value for the column SCOPE in the ResultSet object returned by the method getBestRowIdentifier.

97.6.11  bestRowTemporary as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the scope of the best row identifier is very temporary, lasting only while the row is being used. **Notes:** A possible value for the column SCOPE in the ResultSet object returned by the method getBestRowIdentifier.

97.6.12  bestRowTransaction as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the scope of the best row identifier is the remainder of the current transaction. **Notes:** A possible value for the column SCOPE in the ResultSet object returned by the method getBestRowIdentifier.

97.6.13  bestRowUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the best row identifier may or may not be a pseudo column. **Notes:** A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getBestRowIdentifier.
97.6.14 columnNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the column might not allow NULL values. **Notes:** A possible value for the column NULLABLE in the ResultSet returned by the method getColumns.

97.6.15 columnNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the column definitely allows NULL values. **Notes:** A possible value for the column NULLABLE in the ResultSet returned by the method getColumns.

97.6.16 columnNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the nullability of columns is unknown. **Notes:** A possible value for the column NULLABLE in the ResultSet returned by the method getColumns.

97.6.17 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

97.6.18 dataDefinitionCausesTransactionCommit as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a data definition statement within a transaction forces the transaction to commit.

97.6.19 dataDefinitionIgnoredInTransactions as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database ignores a data definition statement within a transaction.
97.6.20 deletesAreDetected(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves whether or not a visible row delete can be detected by calling the method ResultSet.rowDeleted.
**Notes:**
If the method deletesAreDetected returns false, it means that deleted rows are removed from the result set.

**Parameters:**
- type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

**Returns:**
- true if deletes are detected by the given result set type; false otherwise

97.6.21 doesMaxRowSizeIncludeBlobs as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves whether the return value for the method getMaxRowSize includes the SQL data types LONGVARCHAR and LONGVARBINARY.
**Notes:** Returns true if so; false otherwise.

97.6.22 getAttributes(catalog as string, schemaPattern as string, typeNamePattern as string, attributeNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves a description of the given attribute of the given type for a user-defined type (UDT) that is available in the given schema and catalog.
**Notes:**
Descriptions are returned only for attributes of UDTs matching the catalog, schema, type, and attribute name criteria. They are ordered by TYPE_SCHEM, TYPE_NAME and ORDINAL_POSITION. This description does not contain inherited attributes.

The ResultSet object that is returned has the following columns:

- TYPE_CAT String => type catalog (may be null)
- TYPE_SCHEM String => type schema (may be null)
- TYPE_NAME String => type name
- ATTR_NAME String => attribute name
- DATA_TYPE int => attribute type SQL type from java.sql.Types
- ATTR_TYPE_NAME String => Data source dependent type name. For a UDT, the type name is fully
qualified. For a REF, the type name is fully qualified and represents the target type of the reference type.

ATTR_SIZE int =>column size. For char or date types this is the maximum number of characters; for numeric or decimal types this is precision.

DECIMAL_DIGITS int =>the number of fractional digits

NUM_PREC_RADIX int =>Radix (typically either 10 or 2)

NULLABLE int =>whether NULL is allowed

attributeNoNulls - might not allow NULL values

attributeNullable - definitely allows NULL values

attributeNullableUnknown - nullability unknown

REMARKS String =>comment describing column (may be null)

ATTR_DEF String =>default value (may be null)

SQL_DATA_TYPE int =>unused

SQL_DATETIME_SUB int =>unused

CHAR_OCTET_LENGTH int =>for char types the maximum number of bytes in the column

ORDINAL_POSITION int =>index of column in table (starting at 1)

IS_NULLABLE String ="false" means column definitely does not allow NULL values; "true" means the column might allow NULL values. An empty string means unknown.

SCOPE_CATALOG String =>catalog of table that is the scope of a reference attribute (null if DATA_TYPE isn’t REF)

SCOPE_SCHEMA String =>schema of table that is the scope of a reference attribute (null if DATA_TYPE isn’t REF)

SCOPE_TABLE String =>table name that is the scope of a reference attribute (null if the DATA_TYPE isn’t REF)

SOURCE_DATA_TYPE short =>source type of a distinct type or user-generated Ref type.SQL type from java.sql.Types (null if DATA_TYPE isn’t DISTINCT or user-generated REF)

Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search

schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
typeNamePattern - a type name pattern; must match the type name as it is stored in the database

attributeNamePattern - an attribute name pattern; must match the attribute name as it is declared in the database

Returns:
a ResultSet object in which each row is an attribute description

Throws:
SQLException - if a database access error occurs
97.6.23 getCatalogs as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the catalog names available in this database. The results are ordered by catalog name.

**Notes:**

The catalog column is:

```
TABLE_CAT String => catalog name
```

Returns:

a ResultSet object in which each row has a single String column that is a catalog name

**Throws:**

SQLException - if a database access error occurs

97.6.24 getCatalogSeparator as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the String that this database uses as the separator between a catalog and table name.

97.6.25 getCatalogTerm as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the database vendor’s preferred term for "catalog".

97.6.26 getColumnPrivileges(catalog as string, schema as string, table as string,
columnNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves a description of the access rights for a table's columns.

**Notes:**

Only privileges matching the column name criteria are returned. They are ordered by COLUMN_NAME
and PRIVILEGE.

Each privilege description has the following columns:

```
TABLE_CAT String => table catalog (may be null)
```
TABLE_SCHEM String => table schema (may be null)
TABLE_NAME String => table name
COLUMN_NAME String => column name
GRANTOR => grantor of access (may be null)
GRANTEE String => grantee of access
PRIVILEGE String => name of access (SELECT, INSERT, UPDATE, REFERENCES, ...)
IS_GRANTABLE String => "true" if grantee is permitted to grant to others; "false" if not; null if unknown

Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
table - a table name; must match the table name as it is stored in the database
columnNamePattern - a column name pattern; must match the column name as it is stored in the database

Returns:
ResultSet - each row is a column privilege description

Throws:
SQLException - if a database access error occurs

97.6.27 getColumns(catalog as string, schemaPattern as string, tableNamePattern as string, columnNamePattern as string) as JavaResultSetMBS

Notes:
Only column descriptions matching the catalog, schema, table and column name criteria are returned. They are ordered by TABLE_SCHEM, TABLE_NAME, and ORDINAL_POSITION.

Each column description has the following columns:

TABLE_CAT String => table catalog (may be null)
TABLE_SCHEM String => table schema (may be null)
TABLE_NAME String => table name
COLUMN_NAME String => column name
DATA_TYPE int => SQL type from java.sql.Types
TYPE_NAME String => Data source dependent type name, for a UDT the type name is fully qualified
COLUMN_SIZE int => column size. For char or date types this is the maximum number of characters, for numeric or decimal types this is precision.
BUFFER_LENGTH is not used.
DECIMAL_DIGITS int => the number of fractional digits
NUM_PREC_RADIX int => Radix (typically either 10 or 2)
CHAPTER 97. JAVA DATABASE

NULLABLE int => is NULL allowed.
columnNoNulls - might not allow NULL values
columnNullable - definitely allows NULL values
columnNullableUnknown - nullability unknown
REMARKS String => comment describing column (may be null)
COLUMN_DEF String => default value (may be null)
SQL_DATA_TYPE int => unused
SQL_DATETIME_SUB int => unused
CHAR_OCTET_LENGTH int => for char types the maximum number of bytes in the column

ORDINAL_POSITION int => index of column in table (starting at 1)

IS_NULLABLE String => "false" means column definitely does not allow NULL values; "true" means the
column might allow NULL values. An empty string means nobody knows.
SCOPE_CATLOG String => catalog of table that is the scope of a reference attribute (null if DATA_TYPE
isn’t REF)
SCOPE_SCHEMA String => schema of table that is the scope of a reference attribute (null if the DATA_TYPE
isn’t REF)
SCOPE_TABLE String => table name that this the scope of a reference attribute (null if the DATA_TYPE isn’t REF)
SOURCE_DATA_TYPE short => source type of a distinct type or user-generated Ref type, SQL type from
java.sql.Types (null if DATA_TYPE isn’t DISTINCT or user-generated REF)

Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those
without a catalog; null means that the catalog name should not be used to narrow the search
schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" 
retrieves those without a schema; null means that the schema name should not be used to narrow the search
tableNamePattern - a table name pattern; must match the table name as it is stored in the database
columnNamePattern - a column name pattern; must match the column name as it is stored in the database

Returns:
ResultSet - each row is a column description

Throws:
SQLException - if a database access error occurs

97.6.28 getConnection as JavaConnectionMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves the connection that produced this metadata object.
97.6.29 getCrossReference(primaryCatalog as string, primarySchema as string, primaryTable as string, foreignCatalog as string, foreignSchema as string, foreignTable as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves a description of the foreign key columns in the given foreign key table that reference the primary key columns of the given primary key table (describe how one table imports another's key).

**Notes:**
This should normally return a single foreign key/primary key pair because most tables import a foreign key from a table only once. They are ordered by FKTABLE_CAT, FKTABLE_SCHEM, FKTABLE_NAME, and KEY_SEQ.

Each foreign key column description has the following columns:

- **PKTABLE_CAT** String => primary key table catalog (may be null)
- **PKTABLE_SCHEM** String => primary key table schema (may be null)
- **PKCOLUMN_NAME** String => primary key column name
- **FKTABLE_CAT** String => foreign key table catalog (may be null) being exported (may be null)
- **FKTABLE_SCHEM** String => foreign key table schema (may be null) being exported (may be null)
- **FKTABLE_NAME** String => foreign key table name being exported
- **FKCOLUMN_NAME** String => foreign key column name being exported
- **KEY_SEQ** short => sequence number within foreign key
- **UPDATE_RULE** short => What happens to foreign key when primary is updated:
  - importedNoAction - do not allow update of primary key if it has been imported
  - importedKeyCascade - change imported key to agree with primary key update
  - importedKeySetNull - change imported key to NULL if its primary key has been updated
  - importedKeySetDefault - change imported key to default values if its primary key has been updated
  - importedKeyRestrict - same as importedKeyNoAction (for ODBC 2.x compatibility)
- **DELETE_RULE** short => What happens to the foreign key when primary is deleted:
  - importedKeyNoAction - do not allow delete of primary key if it has been imported
  - importedKeyCascade - delete rows that import a deleted key
  - importedKeySetNull - change imported key to NULL if its primary key has been deleted
  - importedKeyRestrict - same as importedKeyNoAction (for ODBC 2.x compatibility)
  - importedKeySetDefault - change imported key to default if its primary key has been deleted
- **FK_NAME** String => foreign key name (may be null)
- **PK_NAME** String => primary key name (may be null)
- **DEFERRABILITY** short => can the evaluation of foreign key constraints be deferred until commit
  - importedKeyInitiallyDeferred - see SQL92 for definition
  - importedKeyInitiallyImmediate - see SQL92 for definition
  - importedKeyNotDeferrable - see SQL92 for definition

**Parameters:**
- primaryCatalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means drop catalog name from the selection criteria
- primarySchema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means drop schema name from the selection criteria
- primaryTable - the name of the table that exports the key; must match the table name as it is stored in the
database
foreignCatalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means drop catalog name from the selection criteria
foreignSchema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means drop schema name from the selection criteria
foreignTable - the name of the table that imports the key; must match the table name as it is stored in the database
Returns:
ResultSet - each row is a foreign key column description
Throws:
SQLException - if a database access error occurs

97.6.30 **getDatabaseMajorVersion as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the major version number of the underlying database.

97.6.31 **getDatabaseMinorVersion as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the minor version number of the underlying database.

97.6.32 **getDatabaseProductName as string**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the name of this database product.

97.6.33 **getDatabaseProductVersion as string**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the version number of this database product.

97.6.34 **getDefaultTransactionIsolation as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves this database’s default transaction isolation level.
**Notes:** The possible values are defined in java.sql.Connection.
97.6.35  getDriverMajorVersion as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves this JDBC driver’s major version number.

97.6.36  getDriverMinorVersion as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves this JDBC driver’s minor version number.

97.6.37  getDriverName as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the name of this JDBC driver.

97.6.38  getDriverVersion as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the version number of this JDBC driver as a String.

97.6.39  getExportedKeys(catalog as string, schema as string, table as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of the foreign key columns that reference the given table’s primary key columns (the foreign keys exported by a table).

**Notes:**
They are ordered by FKTABLE_CAT, FKTABLE_SCHEM, FKTABLE_NAME, and KEY_SEQ.
Each foreign key column description has the following columns:

- **PKTABLE_CAT** String => primary key table catalog (may be null)
- **PKTABLE_SCHEM** String => primary key table schema (may be null)
- **PKTABLE_NAME** String => primary key table name
- **PKCOLUMN_NAME** String => primary key column name
- **FKTABLE_CAT** String => foreign key table catalog (may be null) being exported (may be null)
- **FKTABLE_SCHEM** String => foreign key table schema (may be null) being exported (may be null)
- **FKTABLE_NAME** String => foreign key table name being exported
- **FKCOLUMN_NAME** String => foreign key column name being exported
KEY_SEQ short => sequence number within foreign key
UPDATE_RULE short => What happens to foreign key when primary is updated:
importedNoAction - do not allow update of primary key if it has been imported
importedKeyCascade - change imported key to agree with primary key update
importedKeySetNull - change imported key to NULL if its primary key has been updated
importedKeySetDefault - change imported key to default values if its primary key has been updated
importedKeyRestrict - same as importedKeyNoAction (for ODBC 2.x compatibility)
DELETE_RULE short => What happens to the foreign key when primary is deleted.
importedKeyNoAction - do not allow delete of primary key if it has been imported
importedKeyCascade - delete rows that import a deleted key
importedKeySetNull - change imported key to NULL if its primary key has been deleted
importedKeyRestrict - same as importedKeyNoAction (for ODBC 2.x compatibility)
importedKeySetDefault - change imported key to default if its primary key has been deleted
FK_NAME String => foreign key name (may be null)
PK_NAME String => primary key name (may be null)
DEFERRABILITY short => can the evaluation of foreign key constraints be deferred until commit
importedKeyInitiallyDeferred - see SQL92 for definition
importedKeyInitiallyImmediate - see SQL92 for definition
importedKeyNotDeferrable - see SQL92 for definition

Parameters:
catalog - a catalog name; must match the catalog name as it is stored in this database; "" retrieves those
without a catalog; null means that the catalog name should not be used to narrow the search
schema - a schema name; must match the schema name as it is stored in the database; "" retrieves those
without a schema; null means that the schema name should not be used to narrow the search
table - a table name; must match the table name as it is stored in this database

Returns:
a ResultSet object in which each row is a foreign key column description

Throws:
SQLException - if a database access error occurs

97.6.40 getExtraNameCharacters as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves all the "extra" characters that can be used in unquoted identifier names (those beyond a-z, A-Z,
0-9 and _).
97.6. CLASS JAVADATABASEMETADATAMBS

97.6.41 getIdentifierQuoteString as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the string used to quote SQL identifiers. This method returns a space " " if identifier quoting is not supported.

97.6.42 getImportedKeys(catalog as string, schema as string, table as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves a description of the primary key columns that are referenced by a table’s foreign key columns (the primary keys imported by a table).
**Notes:**
They are ordered by PKTABLE_CAT, PKTABLE_SCHEMA, PKTABLE_NAME, and KEY_SEQ.
Each primary key column description has the following columns:

- **PKTABLE_CAT** String = primary key table catalog being imported (may be null)
- **PKTABLE_SCHEMA** String = primary key table schema being imported (may be null)
- **PKTABLE_NAME** String = primary key table name being imported
- **PKCOLUMN_NAME** String = primary key column name being imported
- **FKTABLE_CAT** String = foreign key table catalog (may be null)
- **FKTABLE_SCHEMA** String = foreign key table schema (may be null)
- **FKTABLE_NAME** String = foreign key table name
- **FKCOLUMN_NAME** String = foreign key column name
- **KEY_SEQ** short = sequence number within a foreign key
- **UPDATE_RULE** short = What happens to a foreign key when the primary key is updated:
  - importedNoAction - do not allow update of primary key if it has been imported
  - importedKeyCascade - change imported key to agree with primary key update
  - importedKeySetNull - change imported key to NULL if its primary key has been updated
  - importedKeySetDefault - change imported key to default values if its primary key has been updated
  - importedKeyRestrict - same as importedKeyNoAction (for ODBC 2.x compatibility)
- **DELETE_RULE** short = What happens to the foreign key when primary is deleted:
  - importedKeyNoAction - do not allow delete of primary key if it has been imported
  - importedKeyCascade - delete rows that import a deleted key
  - importedKeySetNull - change imported key to NULL if its primary key has been deleted
  - importedKeyRestrict - same as importedKeyNoAction (for ODBC 2.x compatibility)
- **FK_NAME** String = foreign key name (may be null)
- **PK_NAME** String = primary key name (may be null)
- **DEFERRABILITY** short = can the evaluation of foreign key constraints be deferred until commit
  - importedKeyInitiallyDeferred - see SQL92 for definition
  - importedKeyInitiallyImmediate - see SQL92 for definition
  - importedKeyNotDeferrable - see SQL92 for definition

Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search

schema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search

table - a table name; must match the table name as it is stored in the database

Returns:
ResultSet - each row is a primary key column description

Throws:
SQLException - if a database access error occurs

97.6.43 getJDBCMajorVersion as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves the major JDBC version number for this driver.

97.6.44 getJDBCMinorVersion as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves the minor JDBC version number for this driver.

97.6.45 getMaxBinaryLiteralLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves the maximum number of hex characters this database allows in an inline binary literal.
Notes: Returns the maximum length (in hex characters) for a binary literal; a result of zero means that there is no limit or the limit is not known

97.6.46 getMaxCatalogNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves the maximum number of characters that this database allows in a catalog name.
Notes: Returns the maximum number of characters allowed in a catalog name; a result of zero means that there is no limit or the limit is not known
97.6.47  getMaxCharLiteralLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of characters this database allows for a character literal.
**Notes:** Returns the maximum number of characters allowed for a character literal; a result of zero means that there is no limit or the limit is not known

97.6.48  getMaxColumnNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of characters this database allows for a column name.
**Notes:** Returns the maximum number of characters allowed for a column name; a result of zero means that there is no limit or the limit is not known

97.6.49  getMaxColumnsInGroupBy as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of columns this database allows in a GROUP BY clause.
**Notes:** Returns the maximum number of columns allowed; a result of zero means that there is no limit or the limit is not known

97.6.50  getMaxColumnsInIndex as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of columns this database allows in an index.
**Notes:** Returns the maximum number of columns allowed; a result of zero means that there is no limit or the limit is not known

97.6.51  getMaxColumnsInOrderBy as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of columns this database allows in an ORDER BY clause.
**Notes:** Returns the maximum number of columns allowed; a result of zero means that there is no limit or the limit is not known
97.6.52 getMaxColumnsInSelect as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of columns this database allows in a SELECT list.  
**Notes:** Returns the maximum number of columns allowed; a result of zero means that there is no limit or the limit is not known

97.6.53 getMaxColumnsInTable as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of columns this database allows in a table.  
**Notes:** Returns the maximum number of columns allowed; a result of zero means that there is no limit or the limit is not known

97.6.54 getMaxConnections as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of concurrent connections to this database that are possible.  
**Notes:** Returns the maximum number of active connections possible at one time; a result of zero means that there is no limit or the limit is not known

97.6.55 getMaxCursorNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of characters that this database allows in a cursor name.  
**Notes:** Returns the maximum number of characters allowed in a cursor name; a result of zero means that there is no limit or the limit is not known

97.6.56 getMaxIndexLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of bytes this database allows for an index, including all of the parts of the index.  
**Notes:** Returns the maximum number of bytes allowed; this limit includes the composite of all the constituent parts of the index; a result of zero means that there is no limit or the limit is not known
97.6.57  getMaxProcedureNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of characters that this database allows in a procedure name. **Notes:** Returns the maximum number of characters allowed in a procedure name; a result of zero means that there is no limit or the limit is not known

97.6.58  getMaxRowSize as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of bytes this database allows in a single row. **Notes:** Returns the maximum number of bytes allowed for a row; a result of zero means that there is no limit or the limit is not known

97.6.59  getMaxSchemaNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of characters that this database allows in a schema name. **Notes:** Returns the maximum number of characters allowed in a schema name; a result of zero means that there is no limit or the limit is not known

97.6.60  getMaxStatementLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of characters this database allows in an SQL statement. **Notes:** Returns the maximum number of characters allowed for an SQL statement; a result of zero means that there is no limit or the limit is not known

97.6.61  getMaxStatements as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of active statements to this database that can be open at the same time. **Notes:** Returns the maximum number of statements that can be open at one time; a result of zero means that there is no limit or the limit is not known
97.6.62  getMaxTableNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of characters this database allows in a table name. **Notes:** Returns the maximum number of characters allowed for a table name; a result of zero means that there is no limit or the limit is not known.

97.6.63  getMaxTablesInSelect as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of tables this database allows in a SELECT statement. **Notes:** Returns the maximum number of tables allowed in a SELECT statement; a result of zero means that there is no limit or the limit is not known.

97.6.64  getMaxUserNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of characters this database allows in a user name. **Notes:** Returns the maximum number of characters allowed for a user name; a result of zero means that there is no limit or the limit is not known.

97.6.65  getNumericFunctions as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a comma-separated list of math functions available with this database. **Notes:** These are the Open /Open CLI math function names used in the JDBC function escape clause.

97.6.66  getPrimaryKeys(catalog as string, schema as string, table as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of the given table’s primary key columns. They are ordered by COLUMN_NAME. **Notes:**

Each primary key column description has the following columns:

- TABLE_CAT String => table catalog (may be null)
- TABLE_SCHEM String => table schema (may be null)
- TABLE_NAME String => table name
97.6. CLASS JAVADATABASEMETADATAMBS

COLUMN_NAME String => column name
KEY_SEQ short => sequence number within primary key
PK_NAME String => primary key name (may be null)

Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
table - a table name; must match the table name as it is stored in the database

Returns:
ResultSet - each row is a primary key column description

97.6.67 getProcedureColumns(catalog as string, schemaPattern as string, procedureNamePattern as string, columnNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves a description of the given catalog’s stored procedure parameter and result columns.

**Notes:**
Only descriptions matching the schema, procedure and parameter name criteria are returned. They are ordered by PROCEDURE_SCHEM and PROCEDURE_NAME. Within this, the return value, if any, is first. Next are the parameter descriptions in call order. The column descriptions follow in column number order.

Each row in the ResultSet is a parameter description or column description with the following fields:

PROCEDURE_CAT String => procedure catalog (may be null)
PROCEDURE_SCHEM String => procedure schema (may be null)
PROCEDURE_NAME String => procedure name
COLUMN_NAME String => column/parameter name
COLUMN_TYPE Short => kind of column/parameter:
procedureColumnUnknown - nobody knows
procedureColumnIn - IN parameter
procedureColumnInOut - INOUT parameter
procedureColumnOut - OUT parameter
procedureColumnReturn - procedure return value
procedureColumnResult - result column in ResultSet
DATA_TYPE int => SQL type from java.sql.Types
TYPE_NAME String => SQL type name, for a UDT type the type name is fully qualified
PRECISION int => precision
LENGTH int => length in bytes of data
SCALE short => scale
RADIX short => radix
NULLABLE short => can it contain NULL.
procedureNoNulls - does not allow NULL values
procedureNullable - allows NULL values
procedureNullableUnknown - nullability unknown
REMARKS String => comment describing parameter/column
Note: Some databases may not return the column descriptions for a procedure. Additional columns beyond REMARKS can be defined by the database.

Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
procedureNamePattern - a procedure name pattern; must match the procedure name as it is stored in the database
columnNamePattern - a column name pattern; must match the column name as it is stored in the database

Returns:
ResultSet - each row describes a stored procedure parameter or column

Throws:
SQLException - if a database access error occurs

97.6.68 getProcedures(catalog as string, schemaPattern as string, procedure-NamePattern as string) as JavaResultSetMBS

Notes:
Only procedure descriptions matching the schema and procedure name criteria are returned. They are ordered by PROCEDURE_SCHEM and PROCEDURE_NAME.

Each procedure description has the the following columns:

PROCEDURE_CAT String => procedure catalog (may be null)
PROCEDURE_SCHEM String => procedure schema (may be null)
PROCEDURE_NAME String => procedure name
reserved for future use
reserved for future use
reserved for future use
REMARKS String => explanatory comment on the procedure
PROCEDURE_TYPE short => kind of procedure:
procedureResultUnknown - May return a result
procedureNoResult - Does not return a result
procedureReturnsResult - Returns a result
Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
procedureNamePattern - a procedure name pattern; must match the procedure name as it is stored in the database

Returns:
ResultSet - each row is a procedure description

Throws:
SQLException - if a database access error occurs

97.6.69 getProcedureTerm as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the database vendor’s preferred term for "procedure".

97.6.70 getResultSetHoldability as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the default holdability of this ResultSet object.
**Notes:**
Returns:
the default holdability; either ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT

97.6.71 getSchemas as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the schema names available in this database.
**Notes:**
The results are ordered by schema name.

The schema column is:

TABLE_SCHEM String => schema name
TABLE_CATALOG String => catalog name (may be null)
Returns:
a ResultSet object in which each row is a schema description

Throws:
SQLException - if a database access error occurs

97.6.72 getSchemaTerm as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the database vendor’s preferred term for “schema”.

97.6.73 getSearchStringEscape as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the string that can be used to escape wildcard characters. **Notes:**
This is the string that can be used to escape ’*’ or ’%’ in the catalog search parameters that are a pattern (and therefore use one of the wildcard characters).
The ’*’ character represents any single character; the ’%’ character represents any sequence of zero or more characters.

97.6.74 getSQLKeywords as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a comma-separated list of all of this database’s SQL keywords that are NOT also SQL92 keywords.

97.6.75 getSQLStateType as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether the SQLSTATE returned by SQLException.getSQLState is X/Open (now known as Open Group) SQL CLI or SQL99. **Notes:**
Returns:
the type of SQLSTATE; one of: sqlStateXOpen or sqlStateSQL99
97.6.76  getStringFunctions as string

Function: Retrieves a comma-separated list of string functions available with this database.  
Notes: These are the Open Group CLI string function names used in the JDBC function escape clause.

97.6.77  getSuperTables(catalog as string, schemaPattern as string, tableNamePattern as string) as JavaResultSetMBS

Function: Retrieves a description of the table hierarchies defined in a particular schema in this database.  
Notes: Only supertable information for tables matching the catalog, schema and table name are returned. The table name parameter may be a fully-qualified name, in which case, the catalog and schemaPattern parameters are ignored. If a table does not have a super table, it is not listed here. Supertables have to be defined in the same catalog and schema as the sub tables. Therefore, the type description does not need to include this information for the supertable.

Each type description has the following columns:

- TABLE_CAT String => the type’s catalog (may be null)
- TABLE_SCHEM String => type’s schema (may be null)
- TABLE_NAME String => type name
- SUPERTABLE_NAME String => the direct super type’s name
Note: If the driver does not support type hierarchies, an empty result set is returned.

Parameters:
- catalog - a catalog name: ”” retrieves those without a catalog; null means drop catalog name from the selection criteria
- schemaPattern - a schema name pattern; ”” retrieves those without a schema
- tableNamePattern - a table name pattern; may be a fully-qualified name

Returns:
a ResultSet object in which each row is a type description

Throws:
SQLException - if a database access error occurs
97.6.78  getSuperTypes(catalog as string, schemaPattern as string, typeNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves a description of the user-defined type (UDT) hierarchies defined in a particular schema in this
database.

**Notes:**
Only the immediate super type/ sub type relationship is modeled.
Only supertype information for UDTs matching the catalog, schema, and type name is returned. The type
name parameter may be a fully-qualified name. When the UDT name supplied is a fully-qualified name, the
catalog and schemaPattern parameters are ignored.

If a UDT does not have a direct super type, it is not listed here. A row of the ResultSet object returned by
this method describes the designated UDT and a direct supertype. A row has the following columns:

- **TYPE_CAT** String => the UDT’s catalog (may be null)
- **TYPE_SCHEMA** String => UDT’s schema (may be null)
- **TYPE_NAME** String => name of the UDT
- **SUPERTYPE_CAT** String => the direct super type’s catalog (may be null)
- **SUPERTYPE_SCHEMA** String => the direct super type’s schema (may be null)
- **SUPERTYPE_NAME** String => the direct super type’s name

Note: If the driver does not support type hierarchies, an empty result set is returned.

**Parameters:**
catalog - a catalog name; "" retrieves those without a catalog; null means drop catalog name from the
selection criteria
schemaPattern - a schema name pattern; "" retrieves those without a schema
typeNamePattern - a UDT name pattern; may be a fully-qualified name

**Returns:**
a ResultSet object in which a row gives information about the designated UDT

**Throws:**
SQLException - if a database access error occurs

97.6.79  getSystemFunctions as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves a comma-separated list of system functions available with this database.

**Notes:** These are the Open Group CLI system function names used in the JDBC function escape clause.
97.6.80 getTablePrivileges(catalog as string, schemaPattern as string, tableNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of the access rights for each table available in a catalog.

**Notes:**

Note that a table privilege applies to one or more columns in the table. It would be wrong to assume that this privilege applies to all columns (this may be true for some systems but is not true for all.) Only privileges matching the schema and table name criteria are returned. They are ordered by TABLE_SCHEM, TABLE_NAME, and PRIVILEGE.

Each privilege description has the following columns:

- **TABLE_CAT** String => table catalog (may be null)
- **TABLE_SCHEMA** String => table schema (may be null)
- **TABLE_NAME** String => table name
- **GRANTOR** => grantor of access (may be null)
- **GRANTEE** String => grantee of access
- **PRIVILEGE** String => name of access (SELECT, INSERT, UPDATE, REFERENCES, ...)
- **IS_GRANTABLE** String => "true" if grantee is permitted to grant to others; "false" if not; null if unknown

Parameters:
- catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
- schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
- tableNamePattern - a table name pattern; must match the table name as it is stored in the database

**Returns:**
- ResultSet - each row is a table privilege description

**Throws:**
- SQLException - if a database access error occurs

97.6.81 getTables(catalog as string, schemaPattern as string, tableNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of the tables available in the given catalog.

**Notes:**

Only table descriptions matching the catalog, schema, table name and type criteria are returned. They are ordered by TABLE_TYPE, TABLE_SCHEMA and TABLE_NAME.

Each table description has the following columns:
TABLE_CAT String => table catalog (may be null)
TABLE_SCHEMA String => table schema (may be null)
TABLE_NAME String => table name

TABLE_TYPE String => table type. Typical types are "TABLE", "VIEW", "SYSTEM TABLE", "GLOBAL TEMPORARY", "LOCAL TEMPORARY", "ALIAS", "SYNONYM".

REMARKS String => explanatory comment on the table
TYPE_CAT String => the types catalog (may be null)
TYPE_SCHEMA String => the types schema (may be null)
TYPE_NAME String => type name (may be null)
SELF_REFERENCING_COLUMN_NAME String => name of the designated "identifier" column of a typed table (may be null)
REF_GENERATION String => specifies how values in SELF_REFERENCING_COLUMN_NAME are created. Values are "SYSTEM", "USER", "DERIVED". (may be null)

Note: Some databases may not return information for all tables.

Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
tableNamePattern - a table name pattern; must match the table name as it is stored in the database

types - a list of table types to include (optionally)

Returns:
ResultSet - each row is a table description

Throws:
SQLException - if a database access error occurs

See also:
- 97.6.82 getTables(catalog as string, schemaPattern as string, tableNamePattern as string, types() as string) as JavaResultSetMBS

97.6.82 getTables(catalog as string, schemaPattern as string, tableNamePattern as string, types() as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves a description of the tables available in the given catalog.

Notes:
Only table descriptions matching the catalog, schema, table name and type criteria are returned. They are
ordered by TABLE_TYPE, TABLE_SCHEM and TABLE_NAME.
Each table description has the following columns:

TABLE_CAT String => table catalog (may be null)
TABLE_SCHEM String => table schema (may be null)
TABLE_NAME String => table name

TABLE_TYPE String => table type. Typical types are "TABLE", "VIEW", "SYSTEM TABLE", "GLOBAL TEMPORARY", "LOCAL TEMPORARY", "ALIAS", "SYNONYM".

REMARKS String => explanatory comment on the table
TYPE_CAT String => the types catalog (may be null)
TYPE_SCHEM String => the types schema (may be null)
TYPE_NAME String => type name (may be null)
SELF_REFERENCING_COL_NAME String => name of the designated "identifier" column of a typed table (may be null)
REF_GENERATION String => specifies how values in SELF_REFERENCING_COL_NAME are created. Values are "SYSTEM", "USER", "DERIVED". (may be null)
Note: Some databases may not return information for all tables.

Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
tableNamePattern - a table name pattern; must match the table name as it is stored in the database
types - a list of table types to include (optionally)

Returns:
ResultSet - each row is a table description

Throws:
SQLException - if a database access error occurs
See also:

- 97.6.81 getTables(catalog as string, schemaPattern as string, tableNamePattern as string) as JavaResultSetMBS

97.6.83 getTableTypes as JavaResultSetMBS

Notes:
The table type is:

```
TABLE_TYPE String -> table type. Typical types are "TABLE", "VIEW", "SYSTEM TABLE", "GLOBAL TEMPORARY", "LOCAL TEMPORARY", "ALIAS", "SYNONYM".
```

Returns:
a ResultSet object in which each row has a single String column that is a table type

Throws:
SQLException - if a database access error occurs

97.6.84  getTimeDateFunctions as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a comma-separated list of the time and date functions available with this database.

97.6.85  getTypeInfos as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of all the standard SQL types supported by this database.

**Notes:**
They are ordered by DATA_TYPE and then by how closely the data type maps to the corresponding JDBC SQL type.

Each type description has the following columns:

```
TYPE_NAME String -> Type name
DATA_TYPE int -> SQL data type from java.sql.Types
PRECISION int -> maximum precision
LITERAL_PREFIX String -> prefix used to quote a literal (may be null)
LITERAL_SUFFIX String -> suffix used to quote a literal (may be null)
CREATE_PARAMS String -> parameters used in creating the type (may be null)
NULLABLE short -> can you use NULL for this type.
typeNoNulls - does not allow NULL values
typeNullable - allows NULL values
typeNullableUnknown - nullability unknown
CASE_SENSITIVE boolean -> is it case sensitive.
SEARCHABLE short -> can you use "WHERE" based on this type:
typePredNone - No support
typePredChar - Only supported with WHERE .. LIKE
typePredBasic - Supported except for WHERE .. LIKE
```
typeSearchable - Supported for all WHERE ..
UNSIGNED_ATTRIBUTE boolean => is it unsigned.
FIXED_PREC_SCALE boolean => can it be a money value.
AUTO_INCREMENT boolean => can it be used for an auto-increment value.
LOCAL_TYPE_NAME String => localized version of type name (may be null)
MINIMUM_SCALE short => minimum scale supported
MAXIMUM_SCALE short => maximum scale supported
SQL_DATA_TYPE int => unused
SQL_DATETIME_SUB int => unused
NUM_PREC_RADIX int => usually 2 or 10

Returns:
a ResultSet object in which each row is an SQL type description

Throws:
SQLException - if a database access error occurs

This method is named getTypeInfo in Java and getTypeInfos in this plugin because REALbasic has a global method and sees a conflict.

97.6.86 getURL as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the URL for this DBMS. **Notes:** Returns the URL for this DBMS or "" if it cannot be generated.

97.6.87 getUserName as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the user name as known to this database.

97.6.88 getVersionColumns(catalog as string, schema as string, table as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of a table's columns that are automatically updated when any value in a row is updated. They are unordered. **Notes:** Each column description has the following columns:
SCOPE short => is not used
COLUMN_NAME String => column name
DATA_TYPE int => SQL data type from java.sql.Types
TYPE_NAME String => Data source-dependent type name
COLUMN_SIZE int => precision
BUFFER_LENGTH int => length of column value in bytes

DECIMAL_DIGITS short => scale

PSEUDO_COLUMN short => whether this is pseudo column like an Oracle ROWID
versionColumnUnknown - may or may not be pseudo column
versionColumnNotPseudo - is NOT a pseudo column
versionColumnPseudo - is a pseudo column

Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
table - a table name; must match the table name as it is stored in the database

Returns:
a ResultSet object in which each row is a column description

97.6.89 importedKeyCascade as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
For the column UPDATE_RULE, indicates that when the primary key is updated, the foreign key (imported key) is changed to agree with it.
**Notes:**
For the column DELETE_RULE, it indicates that when the primary key is deleted, rows that imported that key are deleted.
A possible value for the columns UPDATE_RULE and DELETE_RULE in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

97.6.90 importedKeyInitiallyDeferred as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Indicates deferrability. See SQL-92 for a definition.
**Notes:** A possible value for the column DEFERRABILITY in the ResultSet objects returned by the meth-
ods getImportedKeys, getExportedKeys, and getCrossReference.

97.6.91 importedKeyInitiallyImmediate as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates deferrability. See SQL-92 for a definition. **Notes:** A possible value for the column DEFERRABILITY in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

97.6.92 importedKeyNoAction as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** For the columns UPDATE_RULE and DELETE_RULE, indicates that if the primary key has been imported, it cannot be updated or deleted. **Notes:** A possible value for the columns UPDATE_RULE and DELETE_RULE in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

97.6.93 importedKeyNotDeferrable as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates deferrability. See SQL-92 for a definition. **Notes:** A possible value for the column DEFERRABILITY in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

97.6.94 importedKeyRestrict as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** For the column UPDATE_RULE, indicates that a primary key may not be updated if it has been imported by another table as a foreign key. **Notes:** For the column DELETE_RULE, indicates that a primary key may not be deleted if it has been imported by another table as a foreign key. A possible value for the columns UPDATE_RULE and DELETE_RULE in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.
97.6.95 importedKeySetDefault as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
For the columns UPDATE_RULE and DELETE_RULE, indicates that if the primary key is updated or deleted, the foreign key (imported key) is set to the default value.
**Notes:** A possible value for the columns UPDATE_RULE and DELETE_RULE in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

97.6.96 importedKeySetNull as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
For the columns UPDATE_RULE and DELETE_RULE, indicates that when the primary key is updated or deleted, the foreign key (imported key) is changed to NULL.
**Notes:** A possible value for the columns UPDATE_RULE and DELETE_RULE in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

97.6.97 insertsAreDetected(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves whether or not a visible row insert can be detected by calling the method ResultSet.rowInserted.
**Notes:**
Parameters:
type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns:
true if changes are detected by the specified result set type; false otherwise

97.6.98 isCatalogAtStart as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves whether a catalog appears at the start of a fully qualified table name. If not, the catalog appears at the end.

97.6.99 isReadOnly as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves whether this database is in read-only mode.
97.6.100  locatorsUpdateCopy as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether updates made to a LOB are made on a copy or directly to the LOB.

**Notes:**

Returns:
true if updates are made to a copy of the LOB; false if updates are made directly to the LOB

97.6.101  nullPlusNonNullIsNull as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports concatenations between NULL and non-NULL values being NULL.

97.6.102  nullsAreSortedAtEnd as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether NULL values are sorted at the end regardless of sort order.
97.6.103 nullsAreSortedAtStart as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether NULL values are sorted at the start regardless of sort order.

97.6.104 nullsAreSortedHigh as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether NULL values are sorted high. **Notes:** Sorted high means that NULL values sort higher than any other value in a domain. In an ascending order, if this method returns true, NULL values will appear at the end. By contrast, the method nullsAreSortedAtStart indicates whether NULL values are sorted at the start regardless of sort order.

97.6.105 nullsAreSortedLow as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether NULL values are sorted low. **Notes:** Sorted low means that NULL values sort lower than any other value in a domain. In an ascending order, if this method returns true, NULL values will appear at the beginning. By contrast, the method nullsAreSortedAtStart indicates whether NULL values are sorted at the beginning regardless of sort order.

97.6.106 othersDeletesAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether deletes made by others are visible. **Notes:**

Parameters:
- type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns:
- true if deletes made by others are visible for the given result set type; false otherwise

97.6.107 othersInsertsAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether inserts made by others are visible. **Notes:**
Parameters:
type - the ResultSet type; one of ResultSet.TYP\_FORWARD\_ONLY, ResultSet.TYP\_SCROLL\_INSENSITIVE, or ResultSet.TYP\_SCROLL\_SENSITIVE

Returns:
true if inserts made by others are visible for the given result set type; false otherwise

97.6.108  **othersUpdatesAreVisible**(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves whether updates made by others are visible.

**Notes:**
Parameters:
type - the ResultSet type; one of ResultSet.TYP\_FORWARD\_ONLY, ResultSet.TYP\_SCROLL\_INSENSITIVE, or ResultSet.TYP\_SCROLL\_SENSITIVE

Returns:
true if updates made by others are visible for the given result set type; false otherwise

97.6.109  **ownDeletesAreVisible**(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves whether a result set’s own deletes are visible.

**Notes:**
type - the ResultSet type; one of ResultSet.TYP\_FORWARD\_ONLY, ResultSet.TYP\_SCROLL\_INSENSITIVE, or ResultSet.TYP\_SCROLL\_SENSITIVE

Returns true if deletes are visible for the given result set type; false otherwise

97.6.110  **ownInsertsAreVisible**(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves whether a result set’s own inserts are visible.

**Notes:**
type - the ResultSet type; one of ResultSet.TYP\_FORWARD\_ONLY, ResultSet.TYP\_SCROLL\_INSENSITIVE, or ResultSet.TYP\_SCROLL\_SENSITIVE
Returns true if inserts are visible for the given result set type; false otherwise.

97.6.111 ownUpdatesAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether for the given type of ResultSet object, the result set’s own updates are visible. **Notes:** type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

97.6.112 procedureColumnIn as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the column stores IN parameters. **Notes:** A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.

97.6.113 procedureColumnInOut as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the column stores INOUT parameters. **Notes:** A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.

97.6.114 procedureColumnOut as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the column stores OUT parameters. **Notes:** A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.

97.6.115 procedureColumnResult as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the column stores results. **Notes:** A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.
97.6.116 procedureColumnReturn as Integer

97.6.117 procedureColumnUnknown as Integer

97.6.118 procedureNoNulls as Integer

97.6.119 procedureNoResult as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Indicates that the procedure does not return a result. Notes: A possible value for column PROCEDURE_TYPE in the ResultSet object returned by the method getProcedures.

97.6.120 procedureNullable as Integer

97.6.121  procedureNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that whether NULL values are allowed is unknown.  
**Notes:** A possible value for the column NULLABLE in the ResultSet object returned by the method getProcedureColumns.

97.6.122  procedureResultUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that it is not known whether the procedure returns a result.  
**Notes:** A possible value for column PROCEDURE_TYPE in the ResultSet object returned by the method getProcedures.

97.6.123  procedureReturnsResult as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the procedure returns a result.  
**Notes:** A possible value for column PROCEDURE_TYPE in the ResultSet object returned by the method getProcedures.

97.6.124  sqlStateSQL99 as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the value is an SQL99 SQLSTATE value.  
**Notes:** A possible return value for the method SQLException.getSQLState.

97.6.125  sqlStateXOpen as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the value is an X/Open (now know as Open Group) SQL CLI SQLSTATE value.  
**Notes:** A possible return value for the method SQLException.getSQLState.

97.6.126  storesLowerCaseIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database treats mixed case unquoted SQL identifiers as case insensitive and stores
them in lower case.

97.6.127 storesLowerCaseQuotedIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database treats mixed case quoted SQL identifiers as case insensitive and stores them in lower case.

97.6.128 storesMixedCaseIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database treats mixed case unquoted SQL identifiers as case insensitive and stores them in mixed case.

97.6.129 storesMixedCaseQuotedIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database treats mixed case quoted SQL identifiers as case sensitive and as a result stores them in mixed case.

97.6.130 storesUpperCaseIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database treats mixed case unquoted SQL identifiers as case insensitive and stores them in upper case.

97.6.131 storesUpperCaseQuotedIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database treats mixed case quoted SQL identifiers as case insensitive and stores them in upper case.

97.6.132 supportsAlterTableWithAddColumn as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports ALTER TABLE with add column.
97.6.133  supportsAlterTableWithDropColumn as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports ALTER TABLE with drop column.

97.6.134  supportsANSI92EntryLevelSQL as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the ANSI92 entry level SQL grammar.

97.6.135  supportsANSI92FullSQL as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the ANSI92 full SQL grammar supported.

97.6.136  supportsANSI92IntermediateSQL as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the ANSI92 intermediate SQL grammar supported.

97.6.137  supportsBatchUpdates as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports batch updates.
**Notes:**
Returns:
true if this database supports batch updates; false otherwise

97.6.138  supportsCatalogsInDataManipulation as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a catalog name can be used in a data manipulation statement.
97.6.139 supportsCatalogsInIndexDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a catalog name can be used in an index definition statement.

97.6.140 supportsCatalogsInPrivilegeDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a catalog name can be used in an index definition statement.

97.6.141 supportsCatalogsInProcedureCalls as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a catalog name can be used in a procedure call statement.

97.6.142 supportsCatalogsInTableDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a catalog name can be used in a table definition statement.

97.6.143 supportsColumnAliasing as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports column aliasing. **Notes:** If so, the SQL AS clause can be used to provide names for computed columns or to provide alias names for columns as required.

97.6.144 supportsConvert as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the CONVERT function between SQL types. **See also:**

- 97.6.145 supportsConvert(fromType as Integer, toType as Integer) as boolean
**97.6.145 supportsConvert(fromType as Integer, toType as Integer) as boolean**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the CONVERT for two given SQL types. **Notes:**

Parameters:
fromType - the type to convert from; one of the type codes from the class JavaDatabaseMBS
toType - the type to convert to; one of the type codes from the class JavaDatabaseMBS

Returns:
ture if so; false otherwise
See also:

- 97.6.144 supportsConvert as boolean

---

**97.6.146 supportsCoreSQLGrammar as boolean**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the ODBC Core SQL grammar.

---

**97.6.147 supportsCorrelatedSubqueries as boolean**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports correlated subqueries.

---

**97.6.148 supportsDataDefinitionAndDataManipulationTransactions as boolean**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports both data definition and data manipulation statements within a transaction.

---

**97.6.149 supportsDataManipulationTransactionsOnly as boolean**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports only data manipulation statements within a transaction.
97.6.150 supportsDifferentTableCorrelationNames as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether, when table correlation names are supported, they are restricted to being different from the names of the tables.

97.6.151 supportsExpressionsInOrderBy as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports expressions in ORDER BY lists.

97.6.152 supportsExtendedSQLGrammar as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the ODBC Extended SQL grammar.

97.6.153 supportsFullOuterJoins as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports full nested outer joins.

97.6.154 supportsGetGeneratedKeys as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether auto-generated keys can be retrieved after a statement has been executed. **Notes:**

Returns:
true if auto-generated keys can be retrieved after a statement has executed; false otherwise

97.6.155 supportsGroupBy as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports some form of GROUP BY clause.
97.6.156 supportsGroupByBeyondSelect as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports using columns not included in the SELECT statement in a GROUP BY clause provided that all of the columns in the SELECT statement are included in the GROUP BY clause.

97.6.157 supportsGroupByUnrelated as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports using a column that is not in the SELECT statement in a GROUP BY clause.

97.6.158 supportsIntegrityEnhancementFacility as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the SQL Integrity Enhancement Facility.

97.6.159 supportsLikeEscapeClause as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports specifying a LIKE escape clause.

97.6.160 supportsLimitedOuterJoins as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database provides limited support for outer joins. **Notes:** (This will be true if the method supportsFullOuterJoins returns true).

97.6.161 supportsMinimumSQLGrammar as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the ODBC Minimum SQL grammar.
97.6.162 supportsMixedCaseIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database treats mixed case unquoted SQL identifiers as case sensitive and as a result stores them in mixed case.

97.6.163 supportsMixedCaseQuotedIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database treats mixed case quoted SQL identifiers as case sensitive and as a result stores them in mixed case.

97.6.164 supportsMultipleOpenResults as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether it is possible to have multiple ResultSet objects returned from a CallableStatement object simultaneously.

**Notes:**

Returns:
ture if a CallableStatement object can return multiple ResultSet objects simultaneously; false otherwise.

97.6.165 supportsMultipleResultSets as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports getting multiple ResultSet objects from a single call to the method execute.

97.6.166 supportsMultipleTransactions as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database allows having multiple transactions open at once (on different connections).

97.6.167 supportsNamedParameters as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports named parameters to callable statements.

**Notes:**
Returns:
true if named parameters are supported; false otherwise

97.6.168 supportsNonNullColumns as boolean
MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves whether columns in this database may be defined as non-nullable.

97.6.169 supportsOpenCursorsAcrossCommit as boolean
MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves whether this database supports keeping cursors open across commits.

97.6.170 supportsOpenCursorsAcrossRollback as boolean
MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves whether this database supports keeping cursors open across rollbacks.

97.6.171 supportsOpenStatementsAcrossCommit as boolean
MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves whether this database supports keeping statements open across commits.

97.6.172 supportsOpenStatementsAcrossRollback as boolean
MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves whether this database supports keeping statements open across rollbacks.

97.6.173 supportsOrderByUnrelated as boolean
MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Retrieves whether this database supports using a column that is not in the SELECT statement in an ORDER BY clause.
97.6.174 supportsOuterJoins as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports some form of outer join.

97.6.175 supportsPositionedDelete as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a catalog name can be used in an index definition statement.

97.6.176 supportsPositionedUpdate as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports positioned UPDATE statements.

97.6.177 supportsResultSetConcurrency(type as Integer, concurrency as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the given concurrency type in combination with the given result set type.

97.6.178 supportsResultSetHoldability(holdability as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the given result set holdability. **Notes:**

Parameters:
holdability - one of the following constants: ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT

Returns:
true if so; false otherwise

97.6.179 supportsResultSetType(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the given result set type.
97.6.180  supportsSavepoints as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports savepoints. **Notes:** Returns: true if savepoints are supported; false otherwise

97.6.181  supportsSchemasInDataManipulation as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a schema name can be used in a data manipulation statement.

97.6.182  supportsSchemasInIndexDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a schema name can be used in an index definition statement.

97.6.183  supportsSchemasInPrivilegeDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a schema name can be used in a privilege definition statement.

97.6.184  supportsSchemasInProcedureCalls as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a schema name can be used in a procedure call statement.

97.6.185  supportsSchemasInTableDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a schema name can be used in a table definition statement.
97.6.186  supportsSelectForUpdate as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports SELECT FOR UPDATE statements.

97.6.187  supportsStatementPooling as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports statement pooling.
**Notes:**
Returns:
true if so; false otherwise

97.6.188  supportsStoredProcedures as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports stored procedure calls that use the stored procedure escape syntax.

97.6.189  supportsSubqueriesInComparisons as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports subqueries in comparison expressions.

97.6.190  supportsSubqueriesInExists as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports subqueries in EXISTS expressions.

97.6.191  supportsSubqueriesInIns as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports subqueries in IN statements.
97.6.192 supportsSubqueriesInQuantifieds as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves whether this database supports subqueries in quantified expressions.

97.6.193 supportsTableCorrelationNames as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves whether this database supports table correlation names.

97.6.194 supportsTransactionIsolationLevel(level as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves whether this database supports the given transaction isolation level.
**Notes:**
Parameters:
level - one of the transaction isolation levels defined in javaConnectionMBS

Returns:
true if so; false otherwise

97.6.195 supportsTransactions as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves whether this database supports transactions.
**Notes:** If not, invoking the method commit is a noop, and the isolation level is TRANSACTION_NONE.

97.6.196 supportsUnion as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves whether this database supports SQL UNION.

97.6.197 supportsUnionAll as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves whether this database supports SQL UNION ALL.
97.6.198  tableIndexClustered as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that this table index is a clustered index.  
**Notes:** A possible value for column TYPE in the ResultSet object returned by the method getIndexInfo.

97.6.199  tableIndexHashed as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that this table index is a hashed index.  
**Notes:** A possible value for column TYPE in the ResultSet object returned by the method getIndexInfo.

97.6.200  tableIndexOther as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that this table index is not a clustered index, a hashed index, or table statistics; it is something other than these.  
**Notes:** A possible value for column TYPE in the ResultSet object returned by the method getIndexInfo.

97.6.201  tableIndexStatistic as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that this column contains table statistics that are returned in conjunction with a table’s index descriptions.  
**Notes:** A possible value for column TYPE in the ResultSet object returned by the method getIndexInfo.

97.6.202  typeNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that a NULL value is NOT allowed for this data type.  
**Notes:** A possible value for column NULLABLE in the ResultSet object returned by the method getTypeInfo.
97.6.203  typeNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Indicates that a NULL value is allowed for this data type.
**Notes:** A possible value for column NULLABLE in the ResultSet object returned by the method getType-
Info.

97.6.204  typeNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Indicates that it is not known whether a NULL value is allowed for this data type.
**Notes:** A possible value for column NULLABLE in the ResultSet object returned by the method getType-
Info.

97.6.205  typePredBasic as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Indicates that one can base all WHERE search clauses except WHERE . . . LIKE on this data type.
**Notes:** A possible value for column SEARCHABLE in the ResultSet object returned by the method getType-
Info.

97.6.206  typePredChar as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Indicates that the only WHERE search clause that can be based on this type is WHERE . . . LIKE.
**Notes:** A possible value for column SEARCHABLE in the ResultSet object returned by the method getType-
Info.

97.6.207  typePredNone as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Indicates that WHERE search clauses are not supported for this type.
**Notes:** A possible value for column SEARCHABLE in the ResultSet object returned by the method getType-
Info.
97.6.208  typeSearchable as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that all WHERE search clauses can be based on this type. **Notes:** A possible value for column SEARCHABLE in the ResultSet object returned by the method get-TypeInfo.

97.6.209  updatesAreDetected(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether or not a visible row update can be detected by calling the method ResultSet.rowUpdated. **Notes:**

Parameters:
type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns:
true if changes are detected by the result set type; false otherwise

97.6.210  usesLocalFilePerTable as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database uses a file for each table.

97.6.211  usesLocalFiles as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database stores tables in a local file.

97.6.212  versionColumnNotPseudo as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that this version column is NOT a pseudo column. **Notes:** A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getVersionColumns.
**97.6.213 versionColumnPseudo as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that this version column is a pseudo column. **Notes:** A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getVersionColumns.

**97.6.214 versionColumnUnknown as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that this version column may or may not be a pseudo column. **Notes:** A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getVersionColumns.
97.7. CLASS JAVAEXCEPTIONMBS

97.7 class JavaExceptionMBS

97.7.1 class JavaExceptionMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The exception class used to report java exception.
**Notes:**
For SQLExceptions the ErrorNumber property will be filled.
For all java exceptions the message property is filled.
Subclass of the RuntimeException class.

97.7.2 Methods

97.7.3 RaiseJavaException(message as string)

MBS Java Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A method to test exception handling.
**Example:**
JavaExceptionMBS.RaiseJavaException "Just a test!"

**Notes:** This method raises a new JavaExceptionMBS with the given message.
97.8  class JavaInputStreamMBS

97.8.1  class JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The plugin class for an input stream.

**Example:**

```java
// your result set
Dim r As JavaResultSetMBS

// get binary data for BLOB column named 'data'
Dim myInputStream As JavaInputStreamMBS = r.getBinaryStream( "data" )
If myInputStream <> nil Then

// read byte for byte in a loop
// better use other read() method with buffer
Dim data As String
Do
Dim c As Integer = myInputStream.read
If c = -1 then exit

data = data + chrb(c)
Loop

Dim myPicture As Picture = Picture.FromData(data)

// work with picture here
End If
```

**Notes:**

This abstract class in Java is the superclass of all classes representing an input stream of bytes.
Subclass of the JavaObjectMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

97.8.2  Methods

97.8.3  available as Integer

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an estimate of the number of bytes that can be read (or skipped over) from this input stream without blocking by the next invocation of a method for this input stream.
Notes:

The next invocation might be the same thread or another thread. A single read or skip of this many bytes will not block, but may read or skip fewer bytes.
Note that while some implementations of InputStream will return the total number of bytes in the stream, many will not. It is never correct to use the return value of this method to allocate a buffer intended to hold all data in this stream.

A subclass' implementation of this method may choose to throw an IOException if this input stream has been closed by invoking the close() method.

The available method for class InputStream always returns 0.

This method should be overridden by subclasses.

Returns an estimate of the number of bytes that can be read (or skipped over) from this input stream without blocking or 0 when it reaches the end of the input stream.

Throws:
IOException - if an I/O error occurs.

97.8.4 close

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Closes this input stream and releases any system resources associated with the stream.

97.8.5 Constructor

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
The private constructor.

97.8.6 mark(readlimit as Integer)

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Marks the current position in this input stream.
Notes:
A subsequent call to the reset method repositions this stream at the last marked position so that subsequent reads re-read the same bytes.
The readlimit arguments tells this input stream to allow that many bytes to be read before the mark position
The general contract of mark is that, if the method markSupported returns true, the stream somehow remembers all the bytes read after the call to mark and stands ready to supply those same bytes again if and whenever the method reset is called. However, the stream is not required to remember any data at all if more than readlimit bytes are read from the stream before reset is called.

Marking a closed stream should not have any effect on the stream.

The mark method of InputStream does nothing.

Parameters:
readlimit - the maximum limit of bytes that can be read before the mark position becomes invalid.

97.8.7 markSupported as boolean

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Tests if this input stream supports the mark and reset methods.

**Notes:**
Whether or not mark and reset are supported is an invariant property of a particular input stream instance. The markSupported method of InputStream returns false.

Returns true if this stream instance supports the mark and reset methods; false otherwise.

97.8.8 read as Integer

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the next byte of data from the input stream.

**Notes:**
The value byte is returned as an int in the range 0 to 255. If no byte is available because the end of the stream has been reached, the value -1 is returned. This method blocks until input data is available, the end of the stream is detected, or an exception is thrown.
A subclass must provide an implementation of this method.

Returns the next byte of data, or -1 if the end of the stream is reached.

**Throws:**
IOException - if an I/O error occurs.
97.8. **CLASS JAVAINPUTSTREAMMBS**

- 97.8.9 read(bytes as JavaByteArrayMBS) as Integer
- 97.8.10 read(bytes as JavaByteArrayMBS, Offset as Integer, Length as Integer) as Integer

### 97.8.9 read(bytes as JavaByteArrayMBS) as Integer

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Reads some number of bytes from the input stream and stores them into the buffer array bytes.

**Notes:**
The number of bytes actually read is returned as an integer. This method blocks until input data is available, end of file is detected, or an exception is thrown.
If the length of bytes is zero, then no bytes are read and 0 is returned; otherwise, there is an attempt to read at least one byte. If no byte is available because the stream is at the end of the file, the value -1 is returned; otherwise, at least one byte is read and stored into bytes.

The first byte read is stored into element bytes [ 0 ], the next one into bytes [ 1 ], and so on. The number of bytes read is, at most, equal to the length of bytes. Let k be the number of bytes actually read; these bytes will be stored in elements bytes [ 0 ] through bytes [ k-1 ], leaving elements bytes [ k ] through bytes [ bytes.length-1 ] unaffected.

The read(bytes) method for class InputStream has the same effect as:

```
read(bytes, 0, bytes.length)
```

**Parameters:**
bytes: the buffer into which the data is read.

Returns the total number of bytes read into the buffer, or -1 is there is no more data because the end of the stream has been reached.

**Throws:**
IOException - If the first byte cannot be read for any reason other than the end of the file, if the input stream has been closed, or if some other I/O error occurs.
NullPointerException - if bytes is null.

See also:

- 97.8.8 read as Integer
- 97.8.10 read(bytes as JavaByteArrayMBS, Offset as Integer, Length as Integer) as Integer
97.8.10  read(bytes as JavaByteArrayMBS, Offset as Integer, Length as Integer) as Integer

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads up to Length bytes of data from the input stream into an array of bytes.

**Notes:**
An attempt is made to read as many as Length bytes, but a smaller number may be read. The number of bytes actually read is returned as an integer.
This method blocks until input data is available, end of file is detected, or an exception is thrown.

If Length is zero, then no bytes are read and 0 is returned; otherwise, there is an attempt to read at least one byte. If no byte is available because the stream is at end of file, the value -1 is returned; otherwise, at least one byte is read and stored into bytes.

The first byte read is stored into element bytes [ Offset ] , the next one into bytes [ Offset+1 ] , and so on. The number of bytes read is, at most, equal to Length. Let k be the number of bytes actually read; these bytes will be stored in elements bytes [ Offset ] through bytes [ Offset+k-1 ] , leaving elements bytes [ Offset+k ] through bytes [ Offset+Length-1 ] unaffected.

In every case, elements bytes [ 0 ] through bytes [ Offset ] and elements bytes [ Offset+Length ] through bytes [ bytes.length-1 ] are unaffected.

The read(bytes, Offset, Length) method for class InputStream simply calls the method read() repeatedly. If the first such call results in an IOException, that exception is returned from the call to the read(bytes, Offset, Length) method. If any subsequent call to read() results in a IOException, the exception is caught and treated as if it were end of file; the bytes read up to that point are stored into bytes and the number of bytes read before the exception occurred is returned. The default implementation of this method blocks until the requested amount of input data len has been read, end of file is detected, or an exception is thrown. Subclasses are encouraged to provide a more efficient implementation of this method.

**Parameters:**
- bytes: the buffer into which the data is read.
- Offset: the start offset in array bytes at which the data is written.
- Length: the maximum number of bytes to read.

**Returns:**
- the total number of bytes read into the buffer, or -1 if there is no more data because the end of the stream has been reached.

**Throws:**
- IOException - If the first byte cannot be read for any reason other than end of file, or if the input stream has been closed, or if some other I/O error occurs.
- NullPointerException - If bytes is null.
- IndexOutOfBoundsException - If Offset is negative, Length is negative, or Length is greater than bytes.length.
97.8. **CLASS JAVAINPUTSTREAMMBS**

- Offset

See also:

- 97.8.8 read as Integer
  
- 97.8.9 read(bytes as JavaByteArrayMBS) as Integer

### 97.8.11 reset

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Repositions this stream to the position at the time the mark method was last called on this input stream.

**Notes:**

The general contract of reset is:

- If the method markSupported returns true, then:
  - If the method mark has not been called since the stream was created, or the number of bytes read from the stream since mark was last called is larger than the argument to mark at that last call, then an IOException might be thrown.
  - If such an IOException is not thrown, then the stream is reset to a state such that all the bytes read since the most recent call to mark (or since the start of the file, if mark has not been called) will be resupplied to subsequent callers of the read method, followed by any bytes that otherwise would have been the next input data as of the time of the call to reset.

- If the method markSupported returns false, then:
  - The call to reset may throw an IOException.
  - If an IOException is not thrown, then the stream is reset to a fixed state that depends on the particular type of the input stream and how it was created. The bytes that will be supplied to subsequent callers of the read method depend on the particular type of the input stream.

The method reset for class InputStream does nothing except throw an IOException.

**Throws:**

IOException - if this stream has not been marked or if the mark has been invalidated.

### 97.8.12 skip(count as Int64) as Int64

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Skips over and discards count bytes of data from this input stream.

**Notes:**
CHAPTER 97. JAVA DATABASE

The skip method may, for a variety of reasons, end up skipping over some smaller number of bytes, possibly 0. This may result from any of a number of conditions; reaching end of file before count bytes have been skipped is only one possibility. The actual number of bytes skipped is returned. If count is negative, no bytes are skipped.

The skip method of this class creates a byte array and then repeatedly reads into it until count bytes have been read or the end of the stream has been reached. Subclasses are encouraged to provide a more efficient implementation of this method. For instance, the implementation may depend on the ability to seek.

Parameters:

count: the number of bytes to be skipped.

Returns the actual number of bytes skipped.

Throws:

IOException - if the stream does not support seek, or if some other I/O error occurs.
97.9.  CLASS JAVAPARAMETERMETADATAMBS

97.9  class JavaParameterMetaDataMBS

Function:  
An object that can be used to get information about the types and properties of the parameters in a  
PreparedStatement object.  
Notes:  
Subclass of the JavaObjectMBS class.  
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

97.9.2  Methods

97.9.3  Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  
Function:  
The private constructor.

97.9.4  getParameterClassName(param as Integer) as string

Function:  
Retrieves the fully-qualified name of the Java class whose instances should be passed to the method Pre-  
paredStatement.setObject.  
Notes:  
Parameters:  
param - the first parameter is 1, the second is 2, ...  
Returns:  
the fully-qualified name of the class in the Java programming language that would be used by the method  
PreparedStatement.setObject to set the value in the specified parameter. This is the class name used for  
custom mapping.

97.9.5  getParameterCount as Integer

Function:  
Retrieves the number of parameters in the PreparedStatement object for which this ParameterMetaData  
does not contain information.  
Notes:  
Returns:  
the number of parameters
97.9.6 getParameterMode(param as Integer) as Integer

Notes:

Parameters:
param - the first parameter is 1, the second is 2, ...

Returns:
mode of the parameter; one of ParameterMetaData.parameterModeIn, ParameterMetaData.parameterModeOut, or ParameterMetaData.parameterModeInOut ParameterMetaData.parameterModeUnknown.

97.9.7 getParameterType(param as Integer) as Integer

Notes:

Parameters:
param - the first parameter is 1, the second is 2, ...

Returns:
SQL type from java.sql.Types

97.9.8 getParameterTypeName(param as Integer) as string

Notes:

Parameters:
param - the first parameter is 1, the second is 2, ...

Returns:
type the name used by the database. If the parameter type is a user-defined type, then a fully-qualified type name is returned.

97.9.9 getPrecision(param as Integer) as Integer

Notes:
Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
precision

### 97.9.10 `getScale(param as Integer) as Integer`

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the designated parameter’s number of digits to right of the decimal point.
**Notes:**
Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
scale

### 97.9.11 `isNullible(param as Integer) as Integer`

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves whether null values are allowed in the designated parameter.
**Notes:**
Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
the nullability status of the given parameter; one of `ParameterMetaData.parameterNoNulls`, `ParameterMetaData.parameterNullable`, or `ParameterMetaData.parameterNullableUnknown`

### 97.9.12 `isSigned(param as Integer) as boolean`

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves whether values for the designated parameter can be signed numbers.
**Notes:**
Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
true if so; false otherwise
97.9.13  parameterModeIn as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant indicating that the parameter’s mode is IN.

97.9.14  parameterModeInOut as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant indicating that the parameter’s mode is INOUT.

97.9.15  parameterModeOut as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant indicating that the parameter’s mode is OUT.

97.9.16  parameterModeUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant indicating that the mode of the parameter is unknown.

97.9.17  parameterNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant indicating that a parameter will not allow NULL values.

97.9.18  parameterNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant indicating that a parameter will allow NULL values.

97.9.19  parameterNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant indicating that the nullability of a parameter is unknown.
97.10. **CLASS JAVA PREPARED STATEMENT MBS**

97.10. **class JavaPreparedStatementMBS**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An object that represents a precompiled SQL statement.

**Notes:**
A SQL statement is precompiled and stored in a PreparedStatement object. This object can then be used to efficiently execute this statement multiple times.

Note: The setter methods (setShort, setString, and so on) for setting IN parameter values must specify types that are compatible with the defined SQL type of the input parameter. For instance, if the IN parameter has SQL type INTEGER, then the method setInt should be used.

If arbitrary parameter type conversions are required, the method setObject should be used with a target SQL type.

In the following example of setting a parameter, con represents an active connection:

```java
PreparedStatement pstmt = con.prepareStatement("UPDATE EMPLOYEES SET SALARY = ? WHERE ID = ");
pstmt.setBigDecimal(1, 153833.00)
pstmt.setInt(2, 110592)
```

Subclass of the JavaStatementMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

97.10.2 **Methods**

97.10.3 **addBatch**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a set of parameters to this PreparedStatement object’s batch of commands.

97.10.4 **clearParameters**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears the current parameter values immediately.

**Notes:** In general, parameter values remain in force for repeated use of a statement. Setting a parameter value automatically clears its previous value. However, in some cases it is useful to immediately release the
resources used by the current parameter values; this can be done by calling the method clearParameters.

97.10.5 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

97.10.6 execute as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes the SQL statement in this PreparedStatement object, which may be any kind of SQL statement. **Notes:** Some prepared statements return multiple results; the execute method handles these complex statements as well as the simpler form of statements handled by the methods executeQuery and executeUpdate. The execute method returns a boolean to indicate the form of the first result. You must call either the method getResultSet or getUpdateCount to retrieve the result; you must call getMoreResults to move to any subsequent result(s).

Returns:
true if the first result is a ResultSet object; false if the first result is an update count or there is no result

97.10.7 executeQuery as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes the SQL query in this PreparedStatement object and returns the ResultSet object generated by the query. **Notes:**

Returns:
a ResultSet object that contains the data produced by the query; never null

97.10.8 executeUpdate as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes the SQL statement in this PreparedStatement object, which must be an SQL INSERT, UPDATE or DELETE statement; or an SQL statement that returns nothing, such as a DDL statement. **Notes:**

Returns:
either (1) the row count for INSERT, UPDATE, or DELETE statements or (2) 0 for SQL statements that return nothing.

97.10.9 getMetaData as JavaResultSetMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a ResultSetMetaData object that contains information about the columns of the ResultSet object that will be returned when this PreparedStatement object is executed.

**Notes:**

Because a PreparedStatement object is precompiled, it is possible to know about the ResultSet object that it will return without having to execute it. Consequently, it is possible to invoke the method getMetaData on a PreparedStatement object rather than waiting to execute it and then invoking the ResultSet.getMetaData method on the ResultSet object that is returned.

**NOTE:** Using this method may be expensive for some drivers due to the lack of underlying DBMS support.

**Returns:**

the description of a ResultSet object’s columns or null if the driver cannot return a ResultSetMetaData object

97.10.10 getParameterMetaData as JavaParameterMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the number, types and properties of this PreparedStatement object’s parameters.

**Notes:**

Returns:

a ParameterMetaData object that contains information about the number, types and properties of this PreparedStatement object’s parameters

97.10.11 setBlob(parameterIndex as Integer, x as JavaBlobMBS)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Blob object.

**Notes:**

The driver converts this to an SQL BLOB value when it sends it to the database.

**Parameters:**

i - the first parameter is 1, the second is 2, ...

x - a Blob object that maps an SQL BLOB value
97.10.12  \texttt{setBoolean(parameterIndex as Integer, x as boolean)}

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. \textbf{Function:} Sets the designated parameter to the given Java boolean value.  
\textbf{Notes:}  
The driver converts this to an SQL BIT value when it sends it to the database.

\textbf{Parameters:}
- parameterIndex - the first parameter is 1, the second is 2, ...
- x - the parameter value

97.10.13  \texttt{setByte(parameterIndex as Integer, x as Integer)}

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. \textbf{Function:} Sets the designated parameter to the given Java byte value.  
\textbf{Notes:}  
The driver converts this to an SQL TINYINT value when it sends it to the database.

\textbf{Parameters:}
- parameterIndex - the first parameter is 1, the second is 2, ...
- x - the parameter value

97.10.14  \texttt{setBytes(parameterIndex as Integer, Value as String)}

\textbf{Notes:}  
The driver converts this to an SQL VARBINARY or LONGVARBINARY (depending on the argument’s size relative to the driver’s limits on VARBINARY values) when it sends it to the database.

\textbf{Parameters:}
- parameterIndex: the first parameter is 1, the second is 2, ...
- Value: the parameter value as a string.
97.10.15  setClob(parameterIndex as Integer, x as JavaClobMBS)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Clob object.

**Notes:**
The driver converts this to an SQL CLOB value when it sends it to the database.

Parameters:
i - the first parameter is 1, the second is 2, ...
x - a Clob object that maps an SQL CLOB value

97.10.16  setDouble(parameterIndex as Integer, x as Double)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java double value.

**Notes:**
The driver converts this to an SQL DOUBLE value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
x - the parameter value

97.10.17  setFloat(parameterIndex as Integer, x as single)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java float value.

**Notes:**
The driver converts this to an SQL FLOAT value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
x - the parameter value

97.10.18  setInt(parameterIndex as Integer, x as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java int value.

**Notes:**
The driver converts this to an SQL INTEGER value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
x - the parameter value

97.10.19  setLong(parameterIndex as Integer, x as Int64)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Sets the designated parameter to the given Java long value.
Notes:
The driver converts this to an SQL BIGINT value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
x - the parameter value

97.10.20  setNull(parameterIndex as Integer, sqlType as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Sets the designated parameter to SQL NULL.
Notes:
You must specify the parameter’s SQL type.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
sqlType - the SQL type code defined in java.sql.Types

97.10.21  setShort(parameterIndex as Integer, x as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Sets the designated parameter to the given Java short value.
Notes:
The driver converts this to an SQL SMALLINT value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
97.10. **CLASS JAVAPREPAREDSTATEMENTMBS**

x - the parameter value

97.10.22  **setString(parameterIndex as Integer, x as string)**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java String value.

**Notes:**

The driver converts this to an SQL VARCHAR or LONGVARCHAR value (depending on the argument’s size relative to the driver’s limits on VARCHAR values) when it sends it to the database.

**Parameters:**

- parameterIndex - the first parameter is 1, the second is 2, ...
- x - the parameter value
97.11 class JavaResultSetMBS

97.11.1 class JavaResultSetMBS

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a recordset in Java.

**Notes:**
- Nearly all methods on this class can raise java exceptions which you can get using the error property. (and errorstring and errorcode)
- Subclass of the JavaObjectMBS class.
- This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

97.11.2 Methods

97.11.3 absolute(row as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor to the given row number in this ResultSet object.

**Example:**
```vbnet
dim db as JavaConnectionMBS 'your database
dim r as JavaResultSetMBS
dim s as JavaStatementMBS

// check second row
s=db.createStatement
r=s.executeQuery("SELECT * from myTable")
if r<>Nil then
    if r.absolute(2) then
        MsgBox str(R.getInt("test_id")+" " +r.getString("test_val")
    end if
end if
```

**Notes:** See the java documentation for details on java.sql.ResultSet.absolute.

97.11.4 afterLast

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor to the end of this ResultSet object, just after the last row.

**Notes:** See the java documentation for details on java.sql.ResultSet.afterLast.
97.11.5 beforeFirst

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor to the front of this ResultSet object, just before the first row.  
**Notes:** See the java documentation for details on java.sql.ResultSet.beforeFirst.

97.11.6 cancelRowUpdates

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Cancels the updates made to the current row in this ResultSet object.  
**Notes:**  
This method may be called after calling an updater method(s) and before calling the method updateRow to roll back the updates made to a row. If no updates have been made or updateRow has already been called, this method has no effect.  

See the java documentation for details on java.sql.ResultSet.cancelRowUpdates.

97.11.7 clearWarnings

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears all warnings reported on this ResultSet object.  
**Notes:** See the java documentation for details on java.sql.ResultSet.clearWarnings.

97.11.8 CLOSE_CURSORS_AT_COMMIT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that ResultSet objects should be closed when the method Connection.commit is called.

97.11.9 CONCUR_READ_ONLY as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating the concurrency mode for a ResultSet object that may NOT be updated.
97.11.10 CONCUR_UPDATABLE as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating the concurrency mode for a ResultSet object that may be updated.

97.11.11 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

97.11.12 deleteRow

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Deletes the current row from this ResultSet object and from the underlying database. **Notes:** See the java documentation for details on java.sql.ResultSet.deleteRow.

97.11.13 FETCH_FORWARD as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that the rows in a result set will be processed in a forward direction; first-to-last. **Notes:** This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

97.11.14 FETCH.Reverse as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that the rows in a result set will be processed in a reverse direction; last-to-first. **Notes:** This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

97.11.15 FETCH_UNKNOWN as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that the order in which rows in a result set will be processed is unknown. **Notes:** This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.
**97.11.16  findColumn(column as string) as Integer**

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Maps the given ResultSet column name to its ResultSet column index.

**Example:**

```vbs
dim r as JavaResultSetMBS // your result set
MsgBox str(r.findColumn("test_id")) + " " + str(r.findColumn("test_val"))
```

**Notes:**
Returns 0 on any error.  
See the java documentation for details on java.sql.ResultSet.findColumn.

---

**97.11.17  first as boolean**

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Moves the cursor to the first row in this ResultSet object.  
**Notes:** See the java documentation for details on java.sql.ResultSet.first.

---

**97.11.18  getAsciiStream(column as Integer) as JavaInputStreamMBS**

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the value of the designated column in the current row of this ResultSet object as a stream of ASCII characters.  
**Notes:**
Retrieves the value of the designated column in the current row of this ResultSet object as a stream of ASCII characters. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARCHAR values. The JDBC driver will do any necessary conversion from the database format into ASCII.  
Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method InputStream.available is called whether there is data available or not.

**Parameters:**
column: the first column is 1, the second is 2, ...

**Returns:**
A Java input stream that delivers the database column value as a stream of one-byte ASCII characters; if the value is SQL NULL, the value returned is null.
CHAPTER 97. JAVA DATABASE

Throws:
SQLException - if the columnIndex is not valid; if a database access error occurs or this method is called on a closed result set.
See also:

• 97.11.19 getAsciiStream(column as string) as JavaInputStreamMBS

97.11.19  getAsciiStream(column as string) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as an Array object in the Java programming language.

**Notes:**
Retrieves the value of the designated column in the current row of this ResultSet object as a stream of ASCII characters. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARCHAR values. The JDBC driver will do any necessary conversion from the database format into ASCII.
Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method available is called whether there is data available or not.

Parameters:
column: the label for the column specified with the SQL AS clause. If the SQL AS clause was not specified, then the label is the name of the column

Returns a Java input stream that delivers the database column value as a stream of one-byte ASCII characters. If the value is SQL NULL, the value returned is null.

Throws:
SQLException - if the columnLabel is not valid; if a database access error occurs or this method is called on a closed result set
See also:

• 97.11.18 getAsciiStream(column as Integer) as JavaInputStreamMBS

97.11.20  getBinaryStream(column as Integer) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a stream of uninterpreted bytes.

**Notes:**
Retrieves the value of the designated column in the current row of this ResultSet object as a stream of uninterpreted bytes. The value can then be read in chunks from the stream. This method is particularly
suitable for retrieving large LONGVARBINARY values.

Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method InputStream.available is called whether there is data available or not.

Parameters:

- column: the first column is 1, the second is 2, ...

Returns a Java input stream that delivers the database column value as a stream of uninterpreted bytes; if the value is SQL NULL, the value returned is null.

Throws:

SQLException - if the columnIndex is not valid; if a database access error occurs or this method is called on a closed result set

See also:

- 97.11.21 getBinaryStream(column as string) as JavaInputStreamMBS

97.11.21 getBinaryStream(column as string) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Retrieves the value of the designated column in the current row of this ResultSet object as a stream of uninterpreted bytes.

**Notes:**

Retrieves the value of the designated column in the current row of this ResultSet object as a stream of uninterpreted bytes. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARBINARY values.

Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method available is called whether there is data available or not.

Parameters:

- column: the label for the column specified with the SQL AS clause. If the SQL AS clause was not specified, then the label is the name of the column

Returns a Java input stream that delivers the database column value as a stream of uninterpreted bytes; if the value is SQL NULL, the result is null.

Throws SQLException - if the columnLabel is not valid; if a database access error occurs or this method is called on a closed result set

See also:

- 97.11.20 getBinaryStream(column as Integer) as JavaInputStreamMBS
97.11.22 `getBlob(column as Integer) as JavaBlobMBS`

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a Blob object in the Java programming language.

**Notes:**
Column: the first column is 1, the second is 2, ...

Returns a Blob object representing the SQL BLOB value in the specified column
See also:

- 97.11.23 `getBlob(column as string) as JavaBlobMBS`

97.11.23 `getBlob(column as string) as JavaBlobMBS`

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a Blob object in the Java programming language.

**Notes:**
column: the name of the column from which to retrieve the value
Returns a Blob object representing the SQL BLOB value in the specified column
See also:

- 97.11.22 `getBlob(column as Integer) as JavaBlobMBS`

97.11.24 `getBoolean(column as Integer) as boolean`

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of the designated column in the current row of this ResultSet object as a boolean.

**Notes:** See the java documentation for details on java.sql.ResultSet.getBoolean.
See also:

- 97.11.25 `getBoolean(column as string) as boolean`

97.11.25 `getBoolean(column as string) as boolean`

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of the designated column in the current row of this ResultSet object as a boolean.

**Notes:** See the java documentation for details on java.sql.ResultSet.getBoolean.
See also:

- 97.11.24 `getBoolean(column as Integer) as boolean`
97.11. **CLASS JAVARESULTSETMBS**

### 97.11.26 `getByte(column as Integer) as Integer`

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a byte in the Java programming language.

**Notes:**

Parameters:
columnIndex - the first column is 1, the second is 2, ...

Returns:
the column value; if the value is SQL NULL, the value returned is 0

See also:

- 97.11.27 `getByte(column as string) as Integer`

### 97.11.27 `getByte(column as string) as Integer`

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a byte in the Java programming language.

**Notes:**

Parameters:
columnName - the SQL name of the column

Returns:
the column value; if the value is SQL NULL, the value returned is 0

See also:

- 97.11.26 `getByte(column as Integer) as Integer`

### 97.11.28 `getBytes(column as Integer) as string`

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a byte array in the Java programming language.

**Notes:**

column: the first column is 1, the second is 2, ...
the plugin gives you the bytes as a string with no encoding.

See also:

- 97.11.29 `getBytes(column as string) as string`
97.11.29 getBytes(column as string) as string

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a byte array in the Java programming language.

**Notes:** the plugin gives you the bytes as a string with no encoding.
See also:

- 97.11.28 getBytes(column as Integer) as string

97.11.30 getClob(column as Integer) as JavaClobMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a Clob object in the Java programming language.

**Notes:**
Column: the first column is 1, the second is 2, ...
Returns a Clob object representing the SQL CLOB value in the specified column
See also:

- 97.11.31 getClob(column as string) as JavaClobMBS

97.11.31 getClob(column as string) as JavaClobMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a Clob object in the Java programming language.

**Notes:**
Column: the name of the column from which to retrieve the value
Returns a Clob object representing the SQL CLOB value in the specified column
See also:

- 97.11.30 getClob(column as Integer) as JavaClobMBS

97.11.32 getConcurrency as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the concurrency mode of this ResultSet object.

**Notes:**
The concurrency used is determined by the Statement object that created the result set.
Returns:
the concurrency type, either ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE
97.11.33 getCursorName as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the name of the SQL cursor used by this ResultSet object.

**Notes:**

In SQL, a result table is retrieved through a cursor that is named. The current row of a result set can be updated or deleted using a positioned update/delete statement that references the cursor name. To insure that the cursor has the proper isolation level to support update, the cursor's SELECT statement should be of the form `SELECT FOR UPDATE`. If `FOR UPDATE` is omitted, the positioned updates may fail.

The JDBC API supports this SQL feature by providing the name of the SQL cursor used by a ResultSet object. The current row of a ResultSet object is also the current row of this SQL cursor.

**Note:** If positioned update is not supported, a SQLException is thrown.

**Returns:**
the SQL name for this ResultSet object’s cursor

97.11.34 getDouble(column as Integer) as Double

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of the designated column in the current row of this ResultSet object as a double.

**Notes:** See the java documentation for details on `java.sql.ResultSet.getDouble`. See also:

- 97.11.35 getDouble(column as string) as Double

97.11.35 getDouble(column as string) as Double

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of the designated column in the current row of this ResultSet object as a double.

**Notes:** See the java documentation for details on `java.sql.ResultSet.getDouble`. See also:

- 97.11.34 getDouble(column as Integer) as Double

97.11.36 getFloat(column as Integer) as single

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a float in the
Java programming language.

Notes:

Parameters:
columnIndex - the first column is 1, the second is 2, ...

Returns:
the column value; if the value is SQL NULL, the value returned is 0

See also:

• 97.11.37 getFloat(column as string) as single

97.11.37 getFloat(column as string) as single

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a float in the Java programming language.

Notes:

Parameters:
columnName - the SQL name of the column

Returns:
the column value; if the value is SQL NULL, the value returned is 0

See also:

• 97.11.36 getFloat(column as Integer) as single

97.11.38 getInt(column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of the designated column in the current row of this ResultSet object as an int.

Notes:

Parameters:
columnIndex - the first column is 1, the second is 2, ...

Returns:
the column value; if the value is SQL NULL, the value returned is 0

See the java documentation for details on java.sql.ResultSet.getInt.

See also:

• 97.11.39 getInt(column as string) as Integer

97.11.39 getInt(column as string) as Integer

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of the designated column in the current row of this ResultSet object as an int.
Example:

```basic
dim r as JavaResultSetMBS // your result set
MsgBox str(R.getInt("test_id"))+" "+r.getString("test_val")
```

Notes: See the java documentation for details on java.sql.ResultSet.getInt.
See also:

- 97.11.38 getInt(column as Integer) as Integer

97.11.40 getLong(column as Integer) as int64

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of the designated column in the current row of this ResultSet object as an int64.

Notes: See the java documentation for details on java.sql.ResultSet.getLong.
See also:

- 97.11.41 getLong(column as string) as int64

97.11.41 getLong(column as string) as int64

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of the designated column in the current row of this ResultSet object as an int64.

Notes: See the java documentation for details on java.sql.ResultSet.getLong.
See also:

- 97.11.40 getLong(column as Integer) as int64

97.11.42 getMetaData as JavaResultSetMetaDataMBS

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Retrieves the number, types and properties of this ResultSet object’s columns.

Notes:

Returns:
the description of this ResultSet object’s columns

97.11.43 getRow as Integer

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Retrieves the current row number.
Notes: See the java documentation for details on java.sql.ResultSet.getRow.

97.11.44  getShort(column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Retrieves the value of the designated column in the current row of this ResultSet object as a short in the Java programming language.
Notes:
Parameters:
columnIndex - the first column is 1, the second is 2, ...
Returns:
the column value; if the value is SQL NULL, the value returned is 0.
See also:

- 97.11.45 getShort(column as string) as Integer

97.11.45  getShort(column as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Retrieves the value of the designated column in the current row of this ResultSet object as a short in the Java programming language.
Notes:
Parameters:
columnName - the SQL name of the column
Returns:
the column value; if the value is SQL NULL, the value returned is 0
See also:

- 97.11.44 getShort(column as Integer) as Integer

97.11.46  getString(column as Integer) as string

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Gets the value of the designated column in the current row of this ResultSet object as a String.
Notes: See the java documentation for details on java.sql.ResultSet.getString.
See also:

- 97.11.47 getString(column as string) as string
97.11. **CLASS JAVARESULTSETMBS**

97.11.47  **getString(column as string) as string**

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of the designated column in the current row of this ResultSet object as a String.

**Example:**

```dim r as JavaResultSetMBS // your result set
MsgBox str(R.getInt("test_id")+" "+r.getString("test_val")```

**Notes:** See the java documentation for details on java.sql.ResultSet.getString. See also:

- 97.11.46 getString(column as Integer) as string

97.11.48  **getType as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the type of this ResultSet object.

**Notes:**

The type is determined by the Statement object that created the result set.

**Returns:**

ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

97.11.49  **getUnicodeStream(column as Integer) as JavaInputStreamMBS**

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Deprecated. use getCharacterStream in place of getUnicodeStream

**Notes:**

Retrieves the value of the designated column in the current row of this ResultSet object as a stream of two-byte 3 characters. The first byte is the high byte; the second byte is the low byte. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARCHAR values. The JDBC driver will do any necessary conversion from the database format into Unicode.

Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method InputStream.available is called, whether there is data available or not.

**Parameters:**

- column: the first column is 1, the second is 2, ...

**Returns:**

A Java input stream that delivers the database column value as a stream of two-byte Unicode characters; if the value is SQL NULL, the value returned is null
CHAPTER 97. JAVA DATABASE

97.11.50 getUnicodeStream(column as string) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Deprecated. use getCharacterStream instead

**Notes:**
Retrieves the value of the designated column in the current row of this ResultSet object as a stream of
two-byte Unicode characters. The first byte is the high byte; the second byte is the low byte. The value can
then be read in chunks from the stream. This method is particularly suitable for retrieving large LONG-
VARCHAR values. The JDBC technology-enabled driver will do any necessary conversion from the database
format into Unicode.

Note: All the data in the returned stream must be read prior to getting the value of any other column. The
next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method
InputStream.available is called, whether there is data available or not.

**Parameters:**
column: the label for the column specified with the SQL AS clause. If the SQL AS clause was not specified,
then the label is the name of the column

Returns a Java input stream that delivers the database column value as a stream of two-byte Unicode char-
acters. If the value is SQL NULL, the value returned is null.

**Throws:**
SQLException - if the columnLabel is not valid; if a database access error occurs or this method is called on
a closed result set
SQLFeatureNotSupportedException - if the JDBC driver does not support this method

See also:

- 97.11.49 getUnicodeStream(column as Integer) as JavaInputStreamMBS

97.11.51 HOLD_CURSORS_OVER_COMMIT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant indicating that ResultSet objects should not be closed when the method Connection.commit
is called.

97.11.52 insertRow

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Inserts the contents of the insert row into this ResultSet object and into the database. **Notes:** See the java documentation for details on java.sql.ResultSet.insertRow.

97.11.53 isAfterLast as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether the cursor is after the last row in this ResultSet object. **Notes:** See the java documentation for details on java.sql.ResultSet.isAfterLast.

97.11.54 isBeforeFirst as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether the cursor is before the first row in this ResultSet object. **Notes:**

Returns:
true if the cursor is before the first row; false if the cursor is at any other position or the result set contains no rows

See the java documentation for details on java.sql.ResultSet.isBeforeFirst.

97.11.55 isFirst as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether the cursor is on the first row of this ResultSet object. **Notes:** See the java documentation for details on java.sql.ResultSet.isFirst.

97.11.56 isLast as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether the cursor is on the last row of this ResultSet object. **Notes:** See the java documentation for details on java.sql.ResultSet.isLast.
97.11.57 last as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor to the last row in this ResultSet object. **Notes:** See the java documentation for details on java.sql.ResultSet.last.

97.11.58 moveToCurrentRow

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor to the remembered cursor position, usually the current row. **Notes:** This method has no effect if the cursor is not on the insert row.

See the java documentation for details on java.sql.ResultSet.moveToCurrentRow.

97.11.59 moveToInsertRow

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor to the insert row. **Notes:** The current cursor position is remembered while the cursor is positioned on the insert row. The insert row is a special row associated with an updatable result set. It is essentially a buffer where a new row may be constructed by calling the updater methods prior to inserting the row into the result set. Only the updater, getter, and insertRow methods may be called when the cursor is on the insert row. All of the columns in a result set must be given a value each time this method is called before calling insertRow. An updater method must be called before a getter method can be called on a column value.

See the java documentation for details on java.sql.ResultSet.moveToInsertRow.

97.11.60 NextRecord as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor down one row from its current position. **Notes:** See the java documentation for details on java.sql.ResultSet.next.
97.11.61 previousRecord as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor to the previous row in this ResultSet object.  
**Notes:** See the java documentation for details on java.sql.ResultSet.previous.

97.11.62 refreshRow

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Refreshes the current row with its most recent value in the database.  
**Notes:**  
This method cannot be called when the cursor is on the insert row.  
The refreshRow method provides a way for an application to explicitly tell the JDBC driver to refetch a row(s) from the database. An application may want to call refreshRow when caching or prefetching is being done by the JDBC driver to fetch the latest value of a row from the database. The JDBC driver may actually refresh multiple rows at once if the fetch size is greater than one.  

All values are refetched subject to the transaction isolation level and cursor sensitivity. If refreshRow is called after calling an updater method, but before calling the method updateRow, then the updates made to the row are lost. Calling the method refreshRow frequently will likely slow performance.

97.11.63 relative(row as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor a relative number of rows, either positive or negative.  
**Notes:** See the java documentation for details on java.sql.ResultSet.relative.

97.11.64 rowDeleted as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a row has been deleted.  
**Notes:**  
A deleted row may leave a visible ”hole” in a result set. This method can be used to detect holes in a result set. The value returned depends on whether or not this ResultSet object can detect deletions.  
**Returns:**  
true if a row was deleted and deletions are detected; false otherwise
97.11.65  rowInserted as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether the current row has had an insertion.

**Notes:**
The value returned depends on whether or not this ResultSet object can detect visible inserts.

**Returns:**
true if a row has had an insertion and insertions are detected; false otherwise

97.11.66  rowUpdated as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether the current row has been updated.

**Notes:**
The value returned depends on whether or not the result set can detect updates.

**Returns:**
true if both (1) the row has been visibly updated by the owner or another and (2) updates are detected

97.11.67  TYPE_FORWARD_ONLY as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating the type for a ResultSet object whose cursor may move only forward.

97.11.68  TYPE_SCROLL_INSENSITIVE as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating the type for a ResultSet object that is scrollable but generally not sensitive to changes made by others.

97.11.69  TYPE_SCROLL_SENSITIVE as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating the type for a ResultSet object that is scrollable and generally sensitive to changes made by others.
97.11. CLASS JAVARESULTSETMBS

97.11.70  updateBlob(column as Integer, value as JavaBlobMBS)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a java.sql.Blob value.

**Notes:**
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

column: the first column is 1, the second is 2, ...
value: the new column value
See also:

- 97.11.71 updateBlob(column as string, value as JavaBlobMBS)

97.11.71  updateBlob(column as string, value as JavaBlobMBS)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a java.sql.Blob value.

**Notes:**
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

column: the name of the column
value: the new column value
See also:

- 97.11.70 updateBlob(column as Integer, value as JavaBlobMBS)

97.11.72  updateBoolean(column as Integer, value as boolean)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a boolean value.

**Notes:**
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:
97.11.73 updateBoolean(column as string, value as boolean)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a boolean value.

**Notes:**
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

**Parameters:**
columnName - the name of the column
x - the new column value

See also:
- 97.11.72 updateBoolean(column as Integer, value as boolean)

97.11.74 updateByte(column as Integer, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a byte value.

**Notes:**
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

**Parameters:**
columnIndex - the first column is 1, the second is 2, ...
x - the new column value

See also:
- 97.11.75 updateByte(column as string, value as Integer)

97.11.75 updateByte(column as string, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a byte value.

**Notes:**
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
97.11. CLASS JAVARESULTSETMBS

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 97.11.74 updateByte(column as Integer, value as Integer)

97.11.76 updateBytes(column as Integer, Value as String)

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a byte array value.

**Notes:**
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
column: column index starting at 1.
Value: The new byte array as a string.
See also:

- 97.11.77 updateBytes(column as string, Value as String)

97.11.77 updateBytes(column as string, Value as String)

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a byte array value.

**Notes:**
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
column: The column name.
Value: The new byte array as a string.
See also:

- 97.11.76 updateBytes(column as Integer, Value as String)

97.11.78 updateClob(column as Integer, value as JavaClobMBS)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a java.sql.Clob value.

**Notes:**
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called
to update the database.

column: the first column is 1, the second is 2, ...
value: the new column value
See also:

- 97.11.79 updateClob(column as string, value as JavaClobMBS)

97.11.79  updateClob(column as string, value as JavaClobMBS)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Updates the designated column with a java.sql.Clob value.
**Notes:**
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

column: the name of the column
value: the new column value
See also:

- 97.11.78 updateClob(column as Integer, value as JavaClobMBS)

97.11.80  updateDouble(column as Integer, value as Double)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Updates the designated column with a double value.
**Notes:**
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 97.11.81 updateDouble(column as string, value as Double)

97.11.81  updateDouble(column as string, value as Double)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Updates the designated column with a double value.
**Notes:**
97.11. **CLASS JAVARESULTSETMBS**

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:

- **columnName** - the name of the column
- **x** - the new column value

See also:

- 97.11.80 `updateDouble(column as Integer, value as Double)`

### 97.11.82 `updateFloat(column as Integer, value as single)`

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a float value.

**Notes:**

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:

- **columnIndex** - the first column is 1, the second is 2, ...
- **x** - the new column value

See also:

- 97.11.83 `updateFloat(column as string, value as single)`

### 97.11.83 `updateFloat(column as string, value as single)`

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a float value.

**Notes:**

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:

- **columnName** - the name of the column
- **x** - the new column value

See also:

- 97.11.82 `updateFloat(column as Integer, value as single)`
97.11.84  updateInt(column as Integer, value as Integer)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with an int value.

**Notes:**
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

**Parameters:**
- columnIndex - the first column is 1, the second is 2, ...
- x - the new column value

**See also:**
- 97.11.85 updateInt(column as string, value as Integer)

97.11.85  updateInt(column as string, value as Integer)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with an int value.

**Notes:**
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

**Parameters:**
- columnName - the name of the column
- x - the new column value

**See also:**
- 97.11.84 updateInt(column as Integer, value as Integer)

97.11.86  updateLong(column as Integer, value as int64)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a long value.

**Notes:**
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

**Parameters:**
- columnIndex - the first column is 1, the second is 2, ...
- x - the new column value

**See also:**
97.11. **CLASS JAVARESULTSETMBS**

- 97.11.87 updateLong(column as string, value as int64)

### 97.11.87 updateLong(column as string, value as int64)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a long value.  
**Notes:**  
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

**Parameters:**
- columnName - the name of the column
- x - the new column value

See also:
- 97.11.86 updateLong(column as Integer, value as int64)

### 97.11.88 updateNull(column as Integer)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gives a nullable column a null value.  
**Notes:**  
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

**Parameters:**
- columnIndex - the first column is 1, the second is 2, ...

See also:
- 97.11.89 updateNull(column as string)

### 97.11.89 updateNull(column as string)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a null value.  
**Notes:**  
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnName - the name of the column
See also:

- 97.11.88 updateNull(column as Integer)

97.11.90 \textbf{updateRow}

Updates the underlying database with the new contents of the current row of this ResultSet object.

\textbf{Example:}
\begin{verbatim}
dim r as JavaResultSetMBS
dim db as JavaConnectionMBS // your database
dim s as JavaStatementMBS

s=db.createStatement
r=s.executeQuery("SELECT test_id from myTable")

if r<>Nil then
  while r.NextRecord
    r.updateInt("test_id",10+r.getInt("test_id"))
    r.updateRow
  wend
end if
\end{verbatim}

\textbf{Notes:}
This method cannot be called when the cursor is on the insert row.

See the java documentation for details on java.sql.ResultSet.updateRow.

97.11.91 \textbf{updateShort}(column as Integer, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. \textbf{Function:}
Updates the designated column with a short value.

\textbf{Notes:}
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

\textbf{Parameters:}
columnIndex - the first column is 1, the second is 2, ...
97.11. CLASS JAVARESULTSETMBS
x - the new column value
See also:

• 97.11.92 updateShort(column as string, value as Integer)

97.11.92 updateShort(column as string, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a short value.

**Notes:**
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

• 97.11.91 updateShort(column as Integer, value as Integer)

97.11.93 updateString(column as Integer, value as string)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a String value.

**Notes:**
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

• 97.11.94 updateString(column as string, value as string)

97.11.94 updateString(column as string, value as string)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a String value.

**Notes:**
The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
- columnName - the name of the column
- x - the new column value

See also:
- 97.11.93 updateString(column as Integer, value as string)

97.11.95 wasNull as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reports whether the last column read had a value of SQL NULL.

**Notes:** See the java documentation for details on java.sql.ResultSet.wasNull.

97.11.96 Properties

97.11.97 FetchDirection as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gives a hint as to the direction in which the rows in this ResultSet object will be processed.

**Notes:**
- The initial value is determined by the Statement object that produced this ResultSet object. The fetch direction may be changed at any time.

**Parameters:**
- direction - an int specifying the suggested fetch direction; one of ResultSet.FETCH_FORWARD, ResultSet.FETCH_REVERSE, or ResultSet.FETCH_UNKNOWN

(Read and Write computed property)

97.11.98 FetchSize as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gives the JDBC driver a hint as to the number of rows that should be fetched from the database when more rows are needed for this ResultSet object.

**Notes:**
- If the fetch size specified is zero, the JDBC driver ignores the value and is free to make its own best guess as to what the fetch size should be. The default value is set by the Statement object that created the result set. The fetch size may be changed at any time.
97.11. CLASS JAVARESULTSETMBS

Parameters:
rows - the number of rows to fetch
(Read and Write computed property)
97.12 class JavaResultSetMetaDataMBS

97.12.1 class JavaResultSetMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An object that can be used to get information about the types and properties of the columns in a ResultSet object.

**Notes:**
Subclass of the JavaObjectMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

97.12.2 Methods

97.12.3 columnNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that a column does not allow NULL values.

97.12.4 columnNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that a column allows NULL values.

97.12.5 columnNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that the nullability of a column’s values is unknown.

97.12.6 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.
97.12.7  **getCatalogName(Column as Integer) as string**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Gets the designated column’s table’s catalog name.

**Notes:**
- Parameters:
  - column - the first column is 1, the second is 2, ...
- Returns:
  - the name of the catalog for the table in which the given column appears or "" if not applicable

97.12.8  **getColumnClassName(Column as Integer) as string**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the fully-qualified name of the Java class whose instances are manufactured if the method ResultSet.getObject is called to retrieve a value from the column.

**Notes:**
- ResultSet.getObject may return a subclass of the class returned by this method.
- Parameters:
  - column - the first column is 1, the second is 2, ...
- Returns:
  - the fully-qualified name of the class in the Java programming language that would be used by the method ResultSet.getObject to retrieve the value in the specified column. This is the class name used for custom mapping.

97.12.9  **getColumnCount as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the number of columns in this ResultSet object.

97.12.10  **getColumnDisplaySize(Column as Integer) as Integer**

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Indicates the designated column’s normal maximum width in characters.

**Notes:**
- Parameters:
  - column - the first column is 1, the second is 2, ...
- Returns:
the normal maximum number of characters allowed as the width of the designated column

### 97.12.11 getColumnLabel(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Gets the designated column’s suggested title for use in printouts and displays.

**Notes:**

Parameters:
column - the first column is 1, the second is 2, ...

Returns:
the suggested column title

### 97.12.12 getColumnName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get the designated column’s name.

**Notes:**

Parameters:
column - the first column is 1, the second is 2, ...

Returns:
column name

### 97.12.13 getColumnType(Column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the designated column’s SQL type.

**Notes:**

Parameters:
column - the first column is 1, the second is 2, ...

Returns:
SQL type from java.sql.Types

### 97.12.14 getColumnTypeName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Retrieves the designated column’s database-specific type name.

**Notes:**
Parameters:
column - the first column is 1, the second is 2, ...
Returns:
type name used by the database. If the column type is a user-defined type, then a fully-qualified type name is returned.

97.12.15 getPrecision(Column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get the designated column’s number of decimal digits.
**Notes:**
Parameters:
column - the first column is 1, the second is 2, ...
Returns:
precision

97.12.16 getScale(Column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Gets the designated column’s number of digits to right of the decimal point.
**Notes:**
Parameters:
column - the first column is 1, the second is 2, ...
Returns:
scale

97.12.17 getSchemaName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get the designated column’s table’s schema.
**Notes:**
Parameters:
column - the first column is 1, the second is 2, ...
Returns:
schema name or "" if not applicable
97.12.18 getTableName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the designated column’s table name.

**Notes:**

Parameters:
column - the first column is 1, the second is 2, ...

Returns:
table name or "" if not applicable

97.12.19 isAutoIncrement(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether the designated column is automatically numbered, thus read-only.

**Notes:**

Parameters:
column - the first column is 1, the second is 2, ...

Returns:
true if so; false otherwise

97.12.20 isCaseSensitive(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether a column’s case matters.

**Notes:**

Parameters:
column - the first column is 1, the second is 2, ...

Returns:
true if so; false otherwise

97.12.21 isCurrency(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether the designated column is a cash value

**Notes:**

Parameters:
column - the first column is 1, the second is 2, ...

Returns:
97.12. CLASS JAVARESULTSETMETADATAMBS

true if so; false otherwise

97.12.22 isDefinitelyWritable(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether a write on the designated column will definitely succeed. **Notes:**

Parameters:
column - the first column is 1, the second is 2, ...

Returns:
true if so; false otherwise

97.12.23 isNullable(Column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates the nullability of values in the designated column. **Notes:**

Parameters:
column - the first column is 1, the second is 2, ...

Returns:
the nullability status of the given column; one of columnNoNulls, columnNullable or columnNullableUnknown

97.12.24 isReadOnly(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether the designated column is definitely not writable. **Notes:**

Parameters:
column - the first column is 1, the second is 2, ...

Returns:
true if so; false otherwise

97.12.25 isSearchable(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether the designated column can be used in a where clause. **Notes:**
97.12.26  isSigned(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether values in the designated column are signed numbers.

**Notes:**

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

97.12.27  isWritable(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether it is possible for a write on the designated column to succeed.

**Notes:**

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise
97.13  CLASS JAVARUNTIMEMBS

97.13  class JavaRuntimeMBS

97.13.1  class JavaRuntimeMBS

Notes:
Subclass of the JavaObjectMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

97.13.2  Methods

97.13.3  availableProcessors as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns the number of processors available to the Java virtual machine.
Notes: This value may change during a particular invocation of the virtual machine. Applications that are sensitive to the number of available processors should therefore occasionally poll this property and adjust their resource usage appropriately.

97.13.4  Constructor

97.13.5  freeMemory as Int64

Notes: Calling the gc method may result in increasing the value returned by freeMemory.

97.13.6  gc

Notes: Calls "System.gc" in Java.
97.13.7  maxMemory as Int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the maximum amount of memory that the Java virtual machine will attempt to use.
**Notes:** If there is no inherent limit then the value Long.MAX_VALUE will be returned.

97.13.8  totalMemory as Int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the total amount of memory in the Java virtual machine.
**Notes:**
The value returned by this method may vary over time, depending on the host environment.
Note that the amount of memory required to hold an object of any given type may be implementation-dependent.
97.14. **class JavaSavepointMBS**

### 97.14.1 class JavaSavepointMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The representation of a savepoint, which is a point within the current transaction that can be referenced from the Connection.rollback method. When a transaction is rolled back to a savepoint all changes made after that savepoint are undone.

**Notes:**

- Savepoints can be either named or unnamed. Unnamed savepoints are identified by an ID generated by the underlying data source.
- Subclass of the JavaObjectMBS class.
- This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

### 97.14.2 Methods

#### 97.14.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

#### 97.14.4 getSavepointId as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the generated ID for the savepoint that this Savepoint object represents.

#### 97.14.5 getSavepointName as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the name of the savepoint that this Savepoint object represents.
97.15 class JavaStatementMBS

97.15.1 class JavaStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The object used for executing a static SQL statement and returning the results it produces.
**Notes:**
By default, only one ResultSet object per Statement object can be open at the same time. Therefore, if the
reading of one ResultSet object is interleaved with the reading of another, each must have been generated by
different Statement objects. All execution methods in the Statement interface implicitly close a statement’s
current ResultSet object if an open one exists.
Subclass of the JavaObjectMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

97.15.2 Methods

97.15.3 addBatch(sql as string)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Adds the given SQL command to the current list of commands for this Statement object.
**Notes:**
The commands in this list can be executed as a batch by calling the method executeBatch.

NOTE: This method is optional.

Parameters:
sql - typically this is a static SQL INSERT or UPDATE statement

97.15.4 cancel

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Cancels this Statement object if both the DBMS and driver support aborting an SQL statement.
**Notes:** This method can be used by one thread to cancel a statement that is being executed by another
thread.
97.15.5  clearBatch

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Empties this Statement object’s current list of SQL commands. **Notes:** NOTE: This method is optional.

97.15.6  clearWarnings

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears all the warnings reported on this Statement object. **Notes:** After a call to this method, the method getWarnings will return null until a new warning is reported for this Statement object.

97.15.7  close

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Releases this Statement object’s database and JDBC resources immediately instead of waiting for this to happen when it is automatically closed. **Notes:**

It is generally good practice to release resources as soon as you are finished with them to avoid tying up database resources. Calling the method close on a Statement object that is already closed has no effect.

Note: A Statement object is automatically closed when it is garbage collected. When a Statement object is closed, its current ResultSet object, if one exists, is also closed.

97.15.8  CLOSE_ALL_RESULTS as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that all ResultSet objects that have previously been kept open should be closed when calling getMoreResults.

97.15.9  CLOSE_CURRENT_RESULT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that the current ResultSet object should be closed when calling getMoreResults.
97.15.10 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

97.15.11 execute(sql as string) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Executes the given SQL statement, which may return multiple results.
**Notes:**
In some (uncommon) situations, a single SQL statement may return multiple result sets and/or update counts. Normally you can ignore this unless you are (1) executing a stored procedure that you know may return multiple results or (2) you are dynamically executing an unknown SQL string.
The execute method executes an SQL statement and indicates the form of the first result. You must then use the methods getResultSet or getUpdateCount to retrieve the result, and getMoreResults to move to any subsequent result(s).

Parameters:
sql - any SQL statement

Returns:
true if the first result is a ResultSet object; false if it is an update count or there are no results

See also:
• 97.15.12 execute(sql as string, autoGeneratedKeys as Integer) as boolean

97.15.12 execute(sql as string, autoGeneratedKeys as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Executes the given SQL statement, which may return multiple results, and signals the driver that any auto-generated keys should be made available for retrieval.
**Notes:**
The driver will ignore this signal if the SQL statement is not an INSERT statement.
In some (uncommon) situations, a single SQL statement may return multiple result sets and/or update counts. Normally you can ignore this unless you are (1) executing a stored procedure that you know may return multiple results or (2) you are dynamically executing an unknown SQL string.
The execute method executes an SQL statement and indicates the form of the first result. You must then use the methods getResultSet or getUpdateCount to retrieve the result, and getMoreResults to move to any subsequent result(s).
Parameters:
sql - any SQL statement
autoGeneratedKeys - a constant indicating whether auto-generated keys should be made available for retrieval using the method getGeneratedKeys; one of the following constants: Statement.RETURN_GENERATED_KEYS or Statement.NO_GENERATED_KEYS

Returns:
true if the first result is a ResultSet object; false if it is an update count or there are no results

See also:

* 97.15.11 execute(sql as string) as boolean

97.15.13 executeBatch as Integer()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Submits a batch of commands to the database for execution and if all commands execute successfully, returns an array of update counts.

97.15.14 executeQuery(sql as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes the given SQL statement, which returns a single ResultSet object.

**Notes:**

Parameters:
sql - an SQL statement to be sent to the database, typically a static SQL SELECT statement

Returns:
a ResultSet object that contains the data produced by the given query; never null

97.15.15 executeUpdate(Sql as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes the given SQL statement, which may be an INSERT, UPDATE, or DELETE statement or an SQL statement that returns nothing, such as an SQL DDL statement.

**Notes:**

Parameters:
sql - an SQL INSERT, UPDATE or DELETE statement or an SQL statement that returns nothing

Returns:
either the row count for INSERT, UPDATE or DELETE statements, or 0 for SQL statements that return nothing

See also:

* 97.15.16 executeUpdate(Sql as string, autoGeneratedKeys as Integer) as Integer
97.15.16 executeUpdate(Sql as string, autoGeneratedKeys as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes the given SQL statement and signals the driver with the given flag about whether the auto-generated keys produced by this Statement object should be made available for retrieval.

**Notes:**

**Parameters:**
- sql - must be an SQL INSERT, UPDATE or DELETE statement or an SQL statement that returns nothing
- autoGeneratedKeys - a flag indicating whether auto-generated keys should be made available for retrieval; one of the following constants: Statement.RETURN_GENERATED_KEYS, Statement.NO_GENERATED_KEYS

**Returns:**
either the row count for INSERT, UPDATE or DELETE statements, or 0 for SQL statements that return nothing

See also:
- 97.15.15 executeUpdate(Sql as string) as Integer

97.15.17 EXECUTE_FAILED as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that an error occurred while executing a batch statement.

97.15.18 getGeneratedKeys as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves any auto-generated keys created as a result of executing this Statement object.

**Notes:**
If this Statement object did not generate any keys, an empty ResultSet object is returned.

**Returns:**
a ResultSet object containing the auto-generated key(s) generated by the execution of this Statement object

97.15.19 getMoreResults as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves to this Statement object’s next result, returns true if it is a ResultSet object, and implicitly closes any current ResultSet object(s) obtained with the method getResultSet.

**Notes:**
There are no more results when the following is true:

```java
// stmt is a Statement object
((stmt.getMoreResults() == false) && (stmt.getUpdateCount() == -1))
```

Returns:
true if the next result is a ResultSet object; false if it is an update count or there are no more results

See also:
- 97.15.20 `getMoreResults(current as Integer) as boolean`

### 97.15.20 `getMoreResults(current as Integer) as boolean`

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves to this Statement object’s next result, deals with any current ResultSet object(s) according to the instructions specified by the given flag, and returns true if the next result is a ResultSet object.

**Notes:**
There are no more results when the following is true:

```java
// stmt is a Statement object
((stmt.getMoreResults() == false) && (stmt.getUpdateCount() == -1))
```

**Parameters:**
current - one of the following Statement constants indicating what should happen to current ResultSet objects obtained using the method `getResultSet`: `Statement.CLOSE_CURRENT_RESULT`, `Statement.KEEP_CURRENT_RESULT`, or `Statement.CLOSE_ALL_RESULTS`

**Returns:**
true if the next result is a ResultSet object; false if it is an update count or there are no more results

See also:
- 97.15.19 `getMoreResults as boolean`

### 97.15.21 `getResultSet as JavaResultSetMBS`

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the current result as a ResultSet object.

**Notes:**
This method should be called only once per result.

**Returns:**
the current result as a ResultSet object or null if the result is an update count or there are no more results
97.15.22 getResultSetConcurrency as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the result set concurrency for ResultSet objects generated by this Statement object. **Notes:**

Returns:
either ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE

97.15.23 getResultSetHoldability as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the result set holdability for ResultSet objects generated by this Statement object. **Notes:**

Returns:
either ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT

97.15.24 getResultSetType as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the result set type for ResultSet objects generated by this Statement object. **Notes:**

Returns:
one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

97.15.25 getUpdateCount as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the current result as an update count; if the result is a ResultSet object or there are no more results, -1 is returned. **Notes:**

This method should be called only once per result.

Returns:
the current result as an update count; -1 if the current result is a ResultSet object or there are no more results
97.15.26 KEEP_CURRENT_RESULT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant indicating that the current ResultSet object should not be closed when calling getMoreResults.

97.15.27 NO_GENERATED_KEYS as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant indicating that generated keys should not be made available for retrieval.

97.15.28 RETURN_GENERATED_KEYS as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant indicating that generated keys should be made available for retrieval.

97.15.29 setCursorName(name as string)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets the SQL cursor name to the given String, which will be used by subsequent Statement object execute methods.
**Notes:**
This name can then be used in SQL positioned update or delete statements to identify the current row in the ResultSet object generated by this statement. If the database does not support positioned update/delete, this method is a noop. To insure that a cursor has the proper isolation level to support updates, the cursor’s SELECT statement should have the form SELECT FOR UPDATE. If FOR UPDATE is not present, positioned updates may fail.
Note: By definition, the execution of positioned updates and deletes must be done by a different Statement object than the one that generated the ResultSet object being used for positioning. Also, cursor names must be unique within a connection.

Parameters:
name - the new cursor name, which must be unique within a connection

97.15.30 SUCCESS_NO_INFO as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constant indicating that a batch statement executed successfully but that no count of the number of
97.15.31 Properties

97.15.32 EscapeProcessing as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether escape processing is on or off.

**Notes:**
If escape scanning is on (the default), the driver will do escape substitution before sending the SQL statement to the database. Note: Since prepared statements have usually been parsed prior to making this call, disabling escape processing for PreparedStatements objects will have no effect.
Parameters:
enable - true to enable escape processing; false to disable it
(Read and Write computed property)

97.15.33 FetchDirection as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The fetch direction.

**Notes:**
Gives the driver a hint as to the direction in which rows will be processed in ResultSet objects created using this Statement object. The default value is ResultSet.FETCH_FORWARD.
Note that this method sets the default fetch direction for result sets generated by this Statement object. Each result set has its own methods for getting and setting its own fetch direction.

Parameters:
direction - the initial direction for processing rows
(Read and Write computed property)

97.15.34 FetchSize as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gives the JDBC driver a hint as to the number of rows that should be fetched from the database when more rows are needed.

**Notes:**
The number of rows specified affects only result sets created using this statement. If the value specified is zero, then the hint is ignored. The default value is zero.
Parameters:
97.15.35  MaxFieldSize as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The maximum number of bytes that can be returned for character and binary column values in a ResultSet object produced by this Statement object.
**Notes:**
This limit applies only to BINARY, VARBINARY, LONGVARBINARY, CHAR, VARCHAR, and LONGVARCHAR columns. If the limit is exceeded, the excess data is silently discarded.
(Read and Write computed property)

97.15.36  MaxRows as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The maximum number of rows that a ResultSet object produced by this Statement object can contain.
**Notes:**
If this limit is exceeded, the excess rows are silently dropped.
(Read and Write computed property)

97.15.37  QueryTimeout as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The number of seconds the driver will wait for a Statement object to execute. If the limit is exceeded, a SQLException is thrown.
**Notes:**
Returns:
the current query timeout limit in seconds; zero means there is no limit
(Read and Write computed property)
Chapter 98

JavaScript

98.1 class JSClassMBS

98.1.1 class JSClassMBS

Function: The class for a class in javascript.
Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

98.1.2 Methods

98.1.3 Constructor

Function: The private constructor.

98.1.4 NewObject as JSObjectMBS

Function: Creates a JavaScript object for current class.
98.1.5 Properties

98.1.6 context as JSContextMBS

Function: The context for this class.
Notes: (Read only property)

98.1.7 Handle as Integer

Function: The handle for the class object.
Notes: (Read and Write property)

98.1.8 Tag as Variant

Function: The tag value.
Notes: You can store anything here and as long as the JSClass object exists, this value is kept referenced.
(Read and Write property)
98.2. class JSContextMBS

98.2.1 class JSContextMBS

**Function:** The class for a javascript execution context.

**Example:**

```vba
dim c as new JSContextMBS
dim e as JSValueMBS
dim v as JSValueMBS = c.EvaluateScript("1+2", ",", nil, e)

if e <> nil then
    // show error
    MsgBox e.StringValue
else
    // show result
    MsgBox str(v.doubleValue)
end if
```

98.2.2 Methods

98.2.3 CheckScriptSyntax(script as string, sourceURL as String, startingLineNumber as Integer = 1, byref JSException as JSValueMBS) as Boolean

**Function:** Checks for syntax errors in a string of JavaScript.

**Example:**

```vba
dim c as new JSContextMBS
dim e as JSValueMBS
if c.CheckScriptSyntax("1+", ",", e) then
    MsgBox "OK"
else
    // show error
    MsgBox e.StringValue
end if
```

**Notes:**

Script: A string containing the script to check for syntax errors.
sourceURL: A string containing a URL for the script’s source file. This is only used when reporting excep-
98.2.4 Constructor

Function: The constructor.
Notes: Creates a global JavaScript execution context.

98.2.5 EvaluateScript(script as string, sourceURL as String, thisObject as JSValueMBS, startingLineNumber as Integer = 1, byref JSException as JSValueMBS) as JSValueMBS

Function: Evaluates a string of JavaScript.
Example:

```vba
dim c as new JSContextMBS
dim e as JSValueMBS
dim v as JSValueMBS = c.EvaluateScript("1+", ",", nil, e)

if e <> nil then
    // show error
    MsgBox e.StringValue
else
    // show result
    MsgBox str(v.doubleValue)
end if
```

Notes:

script: A string containing the script to evaluate.
thisObject: The object to use as "this," or nil to use the global object as "this."
sourceURL: A string containing a URL for the script’s source file. This is used by debuggers and when reporting exceptions. Pass "" if you do not care to include source file information.
startingLineNumber: An integer value specifying the script’s starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.
and invalid values are clamped to 1.

exception: A JSValueMBS in which to store an exception, if any.

Returns the JSValue that results from evaluating script, or nil if an exception is thrown.

### 98.2.6 GarbageCollect

**Function:** Performs a JavaScript garbage collection.

**Notes:**

JavaScript values that are on the machine stack, in a register, protected by JSValueProtect, set as the global object of an execution context, or reachable from any such value will not be collected.

During JavaScript execution, you are not required to call this function; the JavaScript engine will garbage collect as needed. JavaScript values created within a context group are automatically destroyed when the last reference to the context group is released.

### 98.2.7 NewArray(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSObjectMBS

**Function:** Creates a JavaScript Array object.

**Example:**

```vba
dim c as new JSContextMBS
dim e as JSValueMBS
dim v as JSObjectMBS = c.NewArray(nil, e)
v SetPropertyAtIndex(0, c.valueWithString("Hello"), e)
v SetPropertyAtIndex(1, c.valueWithString("World"), e)
MsgBox v.JSONString
```

**Notes:**

arguments: A JSValue array of data to populate the Array with.

JSException: A JSValueMBS in which to store an exception, if any.

Returns a JSObject that is an Array.

The behavior of this function does not exactly match the behavior of the built-in Array constructor. Specifically, if one argument is supplied, this function returns an array with one element.

Requires Mac OS X 10.6 or newer.
98.2.8 NewDate(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSObjectMBS

**Function:** Creates a JavaScript Date object, as if by invoking the built-in Date constructor.

**Example:**

```vbnet
dim c as new JSContextMBS

dim year as JSValueMBS = c.valueWithDouble(2015)
dim month as JSValueMBS = c.valueWithDouble(5)
dim day as JSValueMBS = c.valueWithDouble(12)

dim e as JSValueMBS ' exception
dim d as JSValueMBS = c.NewDate(array(year, month, day), e)

MsgBox d.JSONString
```

**Notes:**

- arguments: A JSValue array of arguments to pass to the Date Constructor.
- JSException: A JSValueMBS in which to store an exception, if any.
- Returns a JSObject that is a Date.
- Requires Mac OS X 10.6 or newer.

98.2.9 NewError(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSObjectMBS

**Function:** Creates a JavaScript Error object, as if by invoking the built-in Error constructor.

**Example:**

```vbnet
dim c as new JSContextMBS

dim parameters() as JSValueMBS
Parameters.Append c.valueWithString("Hello")

dim ex as JSValueMBS
dim e as JSValueMBS = c.NewError(Parameters, ex)
MsgBox e.StringValue
```

**Notes:**

- arguments: A JSValue array of arguments to pass to the Error Constructor.
98.2. CLASS JSCONTEXTMBS

JSException: A JSValueMBS in which to store an exception, if any.

Returns a JSObject that is a Error.
Requires Mac OS X 10.6 or newer.

98.2.10 NewFunction(name as string) as JSObjectMBS

Function: Convenience method for creating a JavaScript function which raises FunctionCalled event on invocation.
Notes:
name: A string containing the function’s name. This will be used when converting the function to string.
Pass NULL to create an anonymous function.
Returns a JSObject that is a function. The object’s prototype will be the default function prototype.
See also:
- 98.2.11 NewFunction(name as string, parameterNames() as string, Body as String, SourceURL as string = ””, startingLineNumber as Integer = 0, byref JSException as JSValueMBS) as JSValueMBS

98.2.11 NewFunction(name as string, parameterNames() as string, Body as String, SourceURL as string = ””, startingLineNumber as Integer = 0, byref JSException as JSValueMBS) as JSValueMBS

Function: Creates a function with a given script as its body.
Example:

```vbscript
dim c as new JSContextMBS

// create a function
dim parameterNames() as string = array(”value”)  
dim body as string = ”return value*value;”
dim name as string = ”test”

dim e as JSValueMBS
dim v as JSValueMBS = c.NewFunction(name, parameterNames, body, e )

MsgBox v.StringValue

// put it in global memory
C.globalObject.SetProperty ”test”, v, e

// and call it
```
dim r as JSValueMBS = c.EvaluateScript("test(5)", "", nil, e)
MsgBox r.StringValue

Notes:

name: A string containing the function’s name. This will be used when converting the function to string. Pass "" to create an anonymous function.

parameterNames: A string array containing the names of the function’s parameters.

body: A string containing the script to use as the function’s body.

sourceURL: A string containing a URL for the script’s source file. This is only used when reporting exceptions. Pass "" if you do not care to include source file information in exceptions.

startingLineNumber: An integer value specifying the script’s starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.

exception: A JSValueMBS in which to store a syntax error exception, if any. Pass nil if you do not care to store a syntax error exception.

A JSObject that is a function, or nil if either body or parameterNames contains a syntax error. The object’s prototype will be the default function prototype.

Use this method when you want to execute a script repeatedly, to avoid the cost of re-parsing the script before each execution.

See also:

• 98.2.10 NewFunction(name as string) as JSObjectMBS

98.2.12 NewObject as JSObjectMBS

Function: Creates a new object.

98.2.13 NewRegExp(arguments() as JSValueMBS, byref JSExtension as JSValueMBS) as JSObjectMBS

Function: Creates a JavaScript RegExp object, as if by invoking the built-in RegExp constructor.

Notes:

arguments: A JSValue array of arguments to pass to the RegExp Constructor.

JSExtension: A JSValueMBS in which to store an exception, if any.

Returns a JSObject that is a RegExp.

Requires Mac OS X 10.6 or newer.
98.2.14 valueWithBool(value as boolean) as JSValueMBS

**Function:** Creates a JavaScript value of the boolean type.
**Example:**
```vbnet
dim c as new JSContextMBS
dim v as JSValueMBS = c.valueWithBool(true)
MsgBox v.toJSONString
```

98.2.15 valueWithDouble(value as Double) as JSValueMBS

**Function:** Creates a JavaScript value of the number type.
**Example:**
```vbnet
dim c as new JSContextMBS

dim v as JSValueMBS = c.valueWithDouble(5.6)
MsgBox v.StringValue
```

98.2.16 valueWithJSON(JSON as string) as JSValueMBS

**Function:** Creates a JavaScript value from a JSON formatted string.
**Example:**
```vbnet
dim c as new JSContextMBS

dim v as JSValueMBS = c.valueWithJSON("[1,2,3]")
dim o as JSObjectMBS = JSObjectMBS(v) // arrays are objects

dim e as JSValueMBS
dim p as JSValueMBS = o.getProperty("length", e)

MsgBox p.StringValue // shows 3
```

**Notes:**
Returns a JSValue containing the parsed value, or nil if the input is invalid.
Available on Mac OS X 10.7 and newer
98.2.17 valueWithNull as JSValueMBS

Function: Creates a JavaScript value of the null type.
Example:

```vba
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithNull
if j.Type = JSValueMBS.kJSTypeNull then
    MsgBox "null"
end if
```

98.2.18 valueWithString(value as string) as JSValueMBS

Function: Creates a JavaScript value of the string type.
Example:

```vba
dim c as new JSContextMBS

dim v as JSValueMBS = c.valueWithString("Hello")
MsgBox v.StringValue
```

98.2.19 valueWithUndefined as JSValueMBS

Function: Creates a JavaScript value of the undefined type.
Example:

```vba
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithUndefined
if j.Type = JSValueMBS.kJSTypeUndefined then
    MsgBox "undefined"
end if
```
98.2.20 Properties

98.2.21 globalObject as JSObjectMBS

Function: Gets the global object of a JavaScript execution context.
Example:
```vba
dim c as new JSContextMBS

dim v as JSObjectMBS = c.globalObject
dim e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e

MsgBox c.globalObject.JSONString
```

Notes: (Read only property)

98.2.22 Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)

98.2.23 Name as String

Function: The name.
Example:
```vba
dim c as new JSContextMBS

c.Name = "Hello"
MsgBox c.Name
```

Notes:
Requires Mac OS X 10.10 and newer.
(Read and Write property)
98.2.24 Tag as Variant

Function: The tag value.
Notes:
You can store anything here and as long as the JSContext object exists, this value is kept referenced.
(Read and Write property)

98.2.25 Events

98.2.26 FunctionCalled(functionObject as JSObjectMBS, thisObject as JSObjectMBS, arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when your custom function is called.
Notes: Please return a value and in case of error set exception.
98.3. class JSObjectMBS

Function: The class for a Javascript Object.
Notes:
Subclass of the JSValueMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

98.3.2 Methods

98.3.3 CallAsConstructor(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSValueMBS

Function: Calls an object as a constructor.
Notes:
self: The JSObject to call as a constructor.
arguments: A JSValueMBS array of arguments to pass to the constructor.
JSException: A pointer to a JSValueMBS in which to store an exception, if any.
Returns the JSObject that results from calling object as a constructor, or nil if an exception is thrown or object is not a constructor.

98.3.4 CallAsFunction(thisObject as JSValueMBS, arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSValueMBS

Function: Calls an object as a function.
Notes:
self: The JSObject to call as a function.
thisObject: The object to use as "this," or nil to use the global object as "this."
arguments: A JSValueMBS array of arguments to pass to the function.
JSException: A JSValueMBS in which to store an exception, if any.

Returns the JSValue that results from calling object as a function, or nil if an exception is thrown or object is not a function.
98.3.5 Constructor

**Function:** The private constructor.

---

98.3.6 DeleteProperty(name as string, byref JSException as JSValueMBS) as boolean

**Function:** Deletes a property from an object.

**Example:**
```
dim c as new JSContextMBS

dim v as JSObjectMBS = c.globalObject

dim e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e

MsgBox v.JSONString
call v.DeleteProperty "Hello", e

MsgBox v.JSONString
```

**Notes:**

Name: A string containing the property's name.
JSException: A JSValueMBS in which to store an exception, if any.
Returns true if the delete operation succeeds, otherwise false (for example, if the property has the kJSPropertyAttributeDontDelete attribute set).

---

98.3.7 GetProperty(name as string, byref JSException as JSValueMBS) as JSValueMBS

**Function:** Gets a property from an object.

**Example:**
```
dim c as new JSContextMBS

dim v as JSObjectMBS = c.globalObject
```
98.3. **CLASS JSOBJECTMBS**

dim e as JSValueMBS

v SetProperty ”Hello”, c.valueWithString(”World”), e

MsgBox v.GetProperty(”Hello”, e).StringValue

**Notes:**

object: The JSObject whose property you want to get.
Name: A string containing the property’s name.
JSException: A JSValueMBS in which to store an exception, if any.
Returns the property’s value if object has the property, otherwise the undefined value.

98.3.8 **GetPropertyAtIndex(propertyIndex as Integer, byref JSException as JSValueMBS) as JSValueMBS**

**Function:** Gets a property from an object by numeric index.
**Example:**

dim c as new JSContextMBS

dim v as JSValueMBS = c.valueWithJSON(” [ 1,2,3 ] ”)
dim o as JSObjectMBS = JSObjectMBS(v) // arrays are objects

dim e as JSValueMBS
dim p as JSValueMBS = o.GetProperty(”length”, e)

MsgBox ”Length: ”+p.StringValue

dim n as JSValueMBS = o.GetPropertyAtIndex(2, e)
MsgBox ”3rd value in array: ”+n.StringValue

**Notes:**

The JSObject whose property you want to get.
propertyIndex: An integer value that is the property’s name.
JSException: A JSValueMBS in which to store an exception, if any.

Returns the property’s value if object has the property, otherwise the undefined value.

Calling GetPropertyAtIndex is equivalent to calling GetProperty with a string containing propertyIndex,
but GetPropertyAtIndex provides optimized access to numeric properties.

98.3.9  HasProperty(name as string) as boolean

Function: Tests whether an object has a given property.
Example:

dim c as new JSContextMBS

dim e as JSValueMBS
dim v as JSObjectMBS = c.NewArray(nil, e)
MsgBox str(v.HasProperty("length"))

Notes:

name: A string containing the property’s name.
Returns true if the object has a property whose name matches propertyName, otherwise false.

98.3.10  PropertyNames as String()

Function: Gets the names of an object’s enumerable properties.
Example:

dim c as new JSContextMBS

dim v as JSObjectMBS = c.globalObject
dim e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e
MsgBox Join(v.PropertyNames, EndOfLine)

98.3.11  SetProperty(name as string, value as JSValueMBS, byref JSException as JSValueMBS)

Function: Sets a property on an object.
Example:

```vbnet
dim c as new JSContextMBS

dim v as JSObjectMBS = c.globalObject
dim e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e
```

Notes:

Name: A string containing the property's name.
Value: A JSValue to use as the property's value.
JSException A pointer to a JSValueRef in which to store an exception, if any.

98.3.12 SetPropertyAtIndex(propertyIndex as Integer, value as JSValueMBS, byref JSException as JSValueMBS)

Function: Sets a property on an object by numeric index.
Notes:

propertyIndex: The property’s name as a number.
value: A JSValue to use as the property's value.
exception: A JSValueMBS in which to store an exception, if any.

Calling SetPropertyAtIndex is equivalent to calling SetProperty with a string containing propertyIndex, but SetPropertyAtIndex provides optimized access to numeric properties.

98.3.13 Properties

98.3.14 isConstructor as Boolean

Function: Tests whether an object can be called as a constructor.
Notes:

Returns true if the object can be called as a constructor, otherwise false.
(Read only property)
98.3.15  **isFunction as Boolean**

**Function:** Tests whether an object can be called as a function.

**Example:**
```
dim c as new JSContextMBS
dim f as JSObjectMBS = c.NewFunction("Hello")
```

MsgBox str(f.isFunction)

**Notes:**
Returns true if the object can be called as a function, otherwise false.
(Read only property)

---

98.3.16  **Prototype as JSValueMBS**

**Function:** An object’s prototype.

**Example:**
```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithJSON(" {"tag": 1 } ")
dim o as JSObjectMBS = JSObjectMBS(j)
MsgBox "object prototyp: "+o.Prototype.StringValue
```

**Notes:** (Read and Write property)
98.4. CLASS JSVALUEMBS

98.4 class JSValueMBS

98.4.1 class JSValueMBS

Function: The class for a Javascript value.
Example:

dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithDouble(1)
MsgBox j.StringValue

Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

98.4.2 Methods

98.4.3 Constructor

Function: The private constructor.

98.4.4 DoubleValue(byref JSException as JSValueMBS) as Double

Function: Converts a JavaScript value to number and returns the resulting number.
Notes: Returns the numeric result of conversion, or NaN if an exception is thrown.
See also:

• 98.4.15 doubleValue as Double

98.4.5 IsEqual(OtherValue as JSValueMBS, byref JSException as JSValueMBS) as boolean

Function: Tests whether two JavaScript values are equal, as compared by the JS == operator.
Example:

dim c as new JSContextMBS
dim s1 as JSValueMBS = c.valueWithJSON("""Hello""")
dim s2 as JSValueMBS = c.valueWithJSON("""Hello""")
dim e as JSValueMBS
MsgBox str(s1.IsEqual(s2, e))

Notes:
OtherValue The second value to test.
exception: A JSValueMBS in which to store an exception, if any.
Returns true if the two values are equal, false if they are not equal or an exception is thrown.

98.4.6 IsInstanceOfConstructor(ConstructorFunction as JSObjectMBS, byref JSException as JSValueMBS) as boolean

Function: Tests whether a JavaScript value is an object constructed by a given constructor, as compared by the JS instanceof operator.
Notes:
ConstructorFunction: The constructor to test against.
JSException: A JSValueMBS in which to store an exception, if any.
Returns true if value is an object constructed by constructor, as compared by the JS instanceof operator, otherwise false.

98.4.7 IsObjectOfClass(ClassObject as JSValueMBS) as boolean

Function: Tests whether a JavaScript value is an object with a given class in its class chain.
Notes:
ClassObject The JSClass to test against.
Returns true if value is an object and has jsClass in its class chain, otherwise false.

98.4.8 IsStrictEqual(OtherValue as JSValueMBS) as boolean

Function: Tests whether two JavaScript values are strict equal, as compared by the JS === operator.
Example:
dim c as new JSContextMBS
dim j1 as JSValueMBS = c.valueWithDouble(1)
dim j2 as JSValueMBS = c.valueWithDouble(2)
MsgBox str(j1.IsStrictEqual(j2)) // false
MsgBox str(j1.IsStrictEqual(j1))  // true

Notes:
OtherValue: The second value to test.
Returns true if the two values are strict equal, otherwise false.

98.4.9  JSONString(indent as Integer = 0, byref JSExtension as JSValueMBS)  as string

Function: Creates a JavaScript string containing the JSON serialized representation of a JS value.
Example:
  dim c as new JSContextMBS
  dim j as JSValueMBS = c.valueWithJSON(" { ""tag"":"Hello"", ""value"":1 } ")
  dim e as JSValueMBS
  MsgBox j.JSONString(5, e)

Notes:
Requires Mac OS X 10.7 and newer.

The number of spaces to indent when nesting. If 0, the resulting JSON will not contains newlines. The size
of the indent is clamped to 10 spaces.
JSExtension: A JSValueMBS in which to store an exception, if any.
Returns a JSString with the result of serialization, or nil if an exception is thrown.
See also:

• 98.4.25 JSONString as string

98.4.10  ObjectValue(byref JSExtension as JSValueMBS) as JSValueMBS

Function: Converts a JavaScript value to object and returns the resulting object.
Notes:
JSExtension: A JSValueMBS in which to store an exception, if any.
Returns the JObject result of conversion, or nil if an exception is thrown.
98.4.11 **StringValue(byref JSException as JSValueMBS) as string**

**Function:** Converts a JavaScript value to string and copies the result into a JavaScript string.
**Notes:**
JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSString with the result of conversion, or nil if an exception is thrown.
See also:
- 98.4.26 StringValue as String

98.4.12 **Properties**

98.4.13 **booleanValue as Boolean**

**Function:** Converts a JavaScript value to boolean and returns the resulting boolean.
**Example:**
```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithBool(true)
MsgBox str(j.booleanValue)
```
**Notes:** (Read only property)

98.4.14 **context as JSContextMBS**

**Function:** The context for this value.
**Notes:** (Read only property)

98.4.15 **doubleValue as Double**

**Function:** Converts a JavaScript value to number and returns the resulting number.
**Example:**
```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithDouble(5.3)
MsgBox str(j.doubleValue)
```
Notes:

Returns the numeric result of conversion, or NaN if an exception is thrown.
(Read only property)

See also:

- 98.4.4 DoubleValue(byref JSException as JSValueMBS) as Double

98.4.16 Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)

98.4.17 isArray as Boolean

Function: Tests whether a JavaScript value is an array.
Example:

dim c as new JSContextMBS

dim e as JSValueMBS
dim v as JSValueMBS = c.NewArray(nil, e)

MsgBox str(v.isArray)

Notes:

Returns true if value is an array, otherwise false.
Requires OS X 10.11 or newer.
(Read only property)

98.4.18 isBoolean as Boolean

Function: Tests whether a JavaScript value’s type is the boolean type.
Example:
```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithBool(true)
MsgBox str(j.isBoolean)
```

Notes:
Returns true if value’s type is the boolean type, otherwise false.
(Read only property)

### 98.4.19 isDate as Boolean

**Function:** Tests whether a JavaScript value is a date.
**Example:**
```
dim c as new JSContextMBS

dim year as JSValueMBS = c.valueWithDouble(2015)
dim month as JSValueMBS = c.valueWithDouble(5)
dim day as JSValueMBS = c.valueWithDouble(12)

dim e as JSValueMBS // exception
dim d as JSValueMBS = c.NewDate(array(year, month, day), e)
```

MsgBox str(d.isDate)

Notes:
Returns true if value is a date, otherwise false.
Requires OS X 10.11 or newer.
(Read only property)

### 98.4.20 isNull as Boolean

**Function:** Tests whether a JavaScript value’s type is the null type.
**Example:**
```
dim c as new JSContextMBS
dim n as JSValueMBS = c.valueWithNull
```

MsgBox str(n.isNull)
Notes:
Returns true if value’s type is the null type, otherwise false.  
(Read only property)

**98.4.21 isNumber as Boolean**

**Function:** Tests whether a JavaScript value’s type is the number type.  
**Example:**
```
dim c as new JSContextMBS

dim j as JSValueMBS = c.valueWithDouble(5)  
MsgBox str(j.isNumber)
```

Notes:
Returns true if value’s type is the number type, otherwise false.  
(Read only property)

**98.4.22 isObject as Boolean**

**Function:** Tests whether a JavaScript value’s type is the object type.  
**Example:**
```
dim c as new JSContextMBS

dim e as JSValueMBS  
dim v as JSValueMBS = c.NewArray(nil, e)  
MsgBox str(v.isObject)
```

Notes:
Returns true if value’s type is the object type, otherwise false.  
(Read only property)
98.4.23  **isString as Boolean**

**Function:** Tests whether a JavaScript value’s type is the string type.

**Example:**

```vba
dim c as new JSContextMBS
dim s as JSValueMBS = c.valueWithJSON("""Hello""")
MsgBox str(s.isString)
```

**Notes:**

Returns true if value’s type is the string type, otherwise false.

(Read only property)

98.4.24  **isUndefined as Boolean**

**Function:** Tests whether a JavaScript value’s type is the undefined type.

**Example:**

```vba
dim c as new JSContextMBS

dim j as JSValueMBS = c.valueWithUndefined
MsgBox str(j.isUndefined)
```

**Notes:**

Returns true if value’s type is the undefined type, otherwise false.

(Read only property)

98.4.25  **JSONString as string**

**Function:** Creates a JavaScript string containing the JSON serialized representation of a JS value.

**Example:**

```vba
dim c as new JSContextMBS

dim v as JSValueMBS = c.valueWithString("Hello")
MsgBox v.toJSONString
```
Notes:
Requires Mac OS X 10.7 and newer.
(Read only property)
See also:

- 98.4.9 JSONString(indent as Integer = 0, byref JSException as JSValueMBS) as string

98.4.26 StringValue as String

Function: Converts a JavaScript value to string and copies the result into a JavaScript string.
Example:

dim c as new JSContextMBS

dim v as JSValueMBS = c.valueWithString(“Hello”)
MsgBox v.StringValue

Notes:
Returns a JSString with the result of conversion, or NULL if an exception is thrown.
(Read only property)
See also:

- 98.4.11 StringValue(byref JSException as JSValueMBS) as string

98.4.27 Tag as Variant

Function: The tag value.
Notes:
You can store anything here and as long as the JSValue object exists, this value is kept referenced.
(Read and Write property)

98.4.28 Type as Integer

Function: Returns a JavaScript value’s type.
Example:
dim c as new JSContextMBS
dim j as JSValueMBS

j = c.valueWithDouble(1) // double
'j = c.valueWithNull // null
'j = c.valueWithUndefined // undefined
'j = c.valueWithString("Hello") // string
'j = c.valueWithJSON("
{ 
"tag": 1
}"") // object
'j = c.valueWithBool(true)

Select case j.Type
  case JSValueMBS.kJSTypeUndefined
    MsgBox "undefined"
  case JSValueMBS.kJSTypeNull
    MsgBox "null"
  case JSValueMBS.kJSTypeBoolean
    MsgBox "boolean " + str(j.booleanValue)
  case JSValueMBS.kJSTypeNumber
    MsgBox "number " + str(j.doubleValue)
  case JSValueMBS.kJSTypeString
    MsgBox "string " + j.StringValue
  case JSValueMBS.kJSTypeObject
    MsgBox "object " + j.JSONString
  else
    Break
end Select

Notes: (Read only property)

98.4.29 Constants

98.4.30 kJSTypeBoolean = 2

MBS MacFrameworks Plugin, Plugin Version: 15.4. **Function:** One of the type constant identifying the
type of a JSValue.

**Example:**

dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithBool(true)

if j.Type = JSValueMBS.kJSTypeBoolean then
  MsgBox "boolean " + str(j.booleanValue)
end if
Notes: A primitive boolean value, one of true or false.

98.4.31 kJSTypeNull = 1

MBS MacFrameworks Plugin, Plugin Version: 15.4. **Function:** One of the type constant identifying the type of a JSValue.
**Example:**

dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithNull

if j.Type = JSValueMBS.kJSTypeNull then
    MsgBox "null"
end if

Notes: The unique null value.

98.4.32 kJSTypeNumber = 3

MBS MacFrameworks Plugin, Plugin Version: 15.4. **Function:** One of the type constant identifying the type of a JSValue.
**Example:**

dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithDouble(1) // double

if j.Type = JSValueMBS.kJSTypeNumber then
    MsgBox "number " + str(j.doubleValue)
end if

Notes: A primitive number value.

98.4.33 kJSTypeObject = 5

MBS MacFrameworks Plugin, Plugin Version: 15.4. **Function:** One of the type constant identifying the type of a JSValue.
**Example:**
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithJSON(" { ""tag"": 1 } ")

if j.Type = JSValueMBS.kJSTypeBoolean then
    MsgBox "object "+j.JSONString
end if

Notes: An object value (meaning that this JSValueMBS is a JSObjectMBS).

98.4.34 kJSTypeString = 4

MBS MacFrameworks Plugin, Plugin Version: 15.4. **Function:** One of the type constant identifying the type of a JSValue.

**Example:**

dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithString("Hello")

if j.Type = JSValueMBS.kJSTypeString then
    MsgBox "string "+j.StringValue
end if

Notes: A primitive string value.

98.4.35 kJSTypeUndefined = 0

MBS MacFrameworks Plugin, Plugin Version: 15.4. **Function:** One of the type constant identifying the type of a JSValue.

**Example:**

dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithUndefined

if j.Type = JSValueMBS.kJSTypeUndefined then
    MsgBox "undefined"
end if

Notes: The unique undefined value.
Chapter 99

JavaScript Object Notation

99.1  class JSONMBS

99.1.1  class JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for JSON object parsing and creating.  
**Example:**

```vbnet
dim o as JSONMBS = JSONMBS.NewObjectNode

o.AddItemToObject "Hello", JSONMBS.NewNumberNode(1)
o.AddItemToObject "World", JSONMBS.NewNumberNode(2)

MsgBox o.toString
```

99.1.2  Methods

99.1.3  AddItemToArray(item as JSONMBS)

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds an item to an array.  
**Notes:**

If you add item from new nodes created with plugin, we add them to the tree.  
If you add items from existing node from other JSON tree, we add references.
99.1.4 AddItemToObject(label as string, value as JSONMBS)

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds an item to an object with given label. 
**Notes:**
If you add item from new nodes created with plugin, we add them to the tree.  
If you add items from existing node from other JSON tree, we add references.

99.1.5 ArrayItem(index as Integer) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries array item with given index.

99.1.6 Child(label as string) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the Child node for the node with the given label. 
**Example:**
```
    dim jv as JSONMBS = JSONMBS.NewStringNode(“value”)
    dim jo as JSONMBS = JSONMBS.NewObjectNode
    jo.AddItemToObject(“key”, jv)
    // shows { ”key” : ”value” }
    MsgBox jo.toString
    MsgBox jo.Child(“key”).ValueString
```

**Notes:** Similar to JSONItem.Child()

99.1.7 Clone as JSONMBS

MBS Util Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clones the JSON tree.
99.1.8 Close

MBS Util Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Frees node.
**Notes:**
No need to call this as destructor does the same.
But this call allows you to release circular references.

99.1.9 Constructor

**Notes:** Lasterror is set.
See also:
- 99.1.10 Constructor(text as string)

99.1.10 Constructor(text as string)

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses the given JSON String into the tree where this node is the root.
**Example:**
```
dim o as new JSONMBS(" { "text":"Hello World" } ")
MsgBox o.toString
```
**Notes:**
Lasterror is set.
Text should be UTF-8.
Starting with version 15.0, you may see a ParseError and still have all the content which was parsed until that error.
See also:
- 99.1.9 Constructor

99.1.11 hasChild(label as string) as Boolean

MBS Util Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if a child node for the node with the given label exists.
**Example:**
dim jv as JSONMBS = JSONMBS.NewStringNode("value")
dim jo as JSONMBS = JSONMBS.NewObjectNode

jo.AddItemToObject("key", jv)

// shows { "key": "value" }
MsgBox jo.toString
MsgBox str(jo.hasChild("key"))

Notes: Similar to JSONMBS.Child(), but without returning the actual object.

### 99.1.12 JSONObjectCount as Integer

MBS Util Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** For debugging, the plugin counts how many JSONMBS objects we have.

### 99.1.13 NewArrayNode as JSONMBS

**Example:**

dim n as JSONMBS = JSONMBS.NewArrayNode
MsgBox str(n.Type)+" = "+str(n.kTypeArray)

### 99.1.14 NewBoolNode(value as boolean) as JSONMBS

**Example:**

dim j as JSONMBS = JSONMBS.NewBoolNode(true)
MsgBox j.toString
99.1.15  **NewDoubleArray(values() as Double) as JSONMBS**

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a json array object with the given values.

**Example:**

```vbnet
dim n() as Double = array(1.0,2,3)
dim j as JSONMBS = JSONMBS.NewDoubleArray(n)
MsgBox j.toString
```

**Notes:**

This is a convenience method to quickly create an array.

Version 17.0 and newer return empty JSON array node in case of empty string array. Older versions returned nil.

99.1.16  **NewFalseNode as JSONMBS**

**Example:**

```vbnet
dim n as JSONMBS = JSONMBS.NewFalseNode
MsgBox str(n.Type)+" = " +str(n.kTypeFalse)
```

**Notes:** This is a node which represents a boolean false value.

99.1.17  **NewInt64Node(value as Int64) as JSONMBS**

MBS Util Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new node based on Int64 value.

**Example:**

```vbnet
dim x as int64 = 92233720368547758
dim n as JSONMBS = JSONMBS.NewInt64Node(x)
MsgBox "String: " +n.ValueString+EndOfLine+"ToString: " +n.toString+EndOfLine+"Double: " +str(n.ValueDouble,"-0")+EndOfLine+"Int64: " +str(n.ValueInteger,"-0")
```
99.1.18 NewIntegerArray(values() as Integer) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a json array object with the given values.  
**Example:**
```
dim n() as Integer = array(1,2,3)  
dim j as JSONMBS = JSONMBS.NewIntegerArray(n)  
MsgBox j.toString  
```

**Notes:**
This is a convenience method to quickly create an array.

Version 17.0 and newer return empty JSON array node in case of empty string array. Older versions returned nil.

99.1.19 NewNullNode as JSONMBS

**Example:**
```
dim n as JSONMBS = JSONMBS.NewNullNode  
MsgBox str(n.Type)+" = "+str(n.kTypeNull)  
```

**Notes:** This is a node which represents a nil value.

99.1.20 NewNumberNode(value as Double) as JSONMBS

**Example:**
```
dim n as JSONMBS = JSONMBS.NewNumberNode(123)  
MsgBox str(n.Type)+" = "+str(n.kTypeNumber)  
```

See also:

- 99.1.21 NewNumberNode(value as string) as JSONMBS
99.1. CLASS JSONMBS

99.1.21 NewNumberNode(value as string) as JSONMBS

MBS Util Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new number node with given number as text.

**Example:**

```vbnet
dim n as JSONMBS = JSONMBS.NewNumberNode("92233720368547758")
```

MsgBox "String: "+n.ValueString+EndOfLine+"ToString: "+n.toString+EndOfLine+"Double: "+str(n.ValueDouble,"-0")+EndOfLine+"Int64: "+str(n.ValueInteger,"-0")

**Notes:** This allows you to control formatting of large integer and floating point values.

See also:

- 99.1.20 NewNumberNode(value as Double) as JSONMBS

99.1.22 NewObjectNode as JSONMBS

**Example:**

```vbnet
dim n as JSONMBS = JSONMBS.NewObjectNode
```

MsgBox str(n.Type)+" = "+str(n.kTypeObject)

99.1.23 NewStringArray(values() as string) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a json array object with the given values.

**Example:**

```vbnet
dim n() as string = array("Hello", "World")
dim j as JSONMBS = JSONMBS.NewStringArray(n)
```

MsgBox j.toString

**Notes:**

This is a convenience method to quickly create an array.

Version 17.0 and newer return empty JSON array node in case of empty string array. Older versions returned nil.
99.1.24  NewStringNode(value as string) as JSONMBS

**Example:**

```vba
// some string with single/double quote and EndOfLine
dim s as string = "Hello'World"+EndOfLine+"this is "" a test."

// make string node
dim j as JSONMBS = JSONMBS.NewStringNode(s)

// get as JSON
dim d as string = j.toString
// show
MsgBox d

// parse again
j = new JSONMBS(d)

MsgBox j.ValueString
```

99.1.25  NewTrueNode as JSONMBS

**Example:**

```vba
dim n as JSONMBS = JSONMBS.NewTrueNode
MsgBox str(n.Type)+" = "+str(n.kTypeTrue)
```

**Notes:** This is a node which represents a boolean true value.

99.1.26  SuffixObject(nextItem as JSONMBS) as JSONMBS

MBS Util Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Appends an array item on a previous item in the same array.

**Example:**

```vba
// test code for SuffixObject:
const UseFastMode = true
```
99.1. **CLASS JSONMBS**

```vba
dim o as JSONMBS = JSONMBS.NewArrayNode

dim startTime as Double = Microseconds
dim last as JSONMBS
for i as Integer = 0 to 10000

dim j as JSONMBS = JSONMBS.NewStringNode("test" + str(i))

# if UseFastMode = False
// slow
o.AddItemToArray(j)

# else
// 10 times faster
if last = nil then
  o.AddItemToArray(j)
  last = o.ChildNode
else
  last = last.SuffixObject(j)
end if
# endif
next

dim endTime as Double = Microseconds

MsgBox (str(endTime - startTime))
```

**Notes:**

This method is an optimization for AddItemToArray.
You can call SuffixObject only on the last item of an array to add another one.
Only add new nodes there.
Any other use could lead into crashes or memory leaks.

Returns in version 16.0 and newer the new reference node.

---

99.1.27 **ToHTML(NoHeader as boolean = false, CSS as string = ") as String**

MBS Util Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts JSON to HTML.

**Notes:**

We build for you a HTML with tables for each array and object. We include values and tag rows with
even/odd CSS classes.
If NoHeader is true, you get just the raw table without header/footer.
Anything in CSS parameter is inserted before the table.
Returns HTML, which can be loaded in htmlviewer.

Example for CSS to do even/odd line backgrounds:

```html
/* CSS style to include */
"<style>
  td
  {
    vertical-align:top;
  }
  .odd
    {
      background-color: white;
    }
  .even
    {
      background-color: # DDD;
    }
</style>"
```

99.1.28 toString(formatted as boolean) as string

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Produces a JSON markup text document from a document tree.

**Example:**

```vbs
dim o as JSONMBS = JSONMBS.NewObjectNode
o.AddItemToObject "text", JSONMBS.NewStringNode("Hello World")
MsgBox o.toJSONString // shows " { "text":"Hello World" } "
```

**Notes:** Returns "" on any error. Lasterror is set.
See also:

- 99.1.39 toString as String
99.1.29 Properties

99.1.30 ArraySize as Integer

**Notes:** (Read only property)

99.1.31 ChildNode as JSONMBS

**Example:**

```realbasic
dim o as JSONMBS = JSONMBS.NewArrayNode
  o.AddItemToArray JSONMBS.NewNumberNode(1)
  o.AddItemToArray JSONMBS.NewNumberNode(2)
  o.AddItemToArray JSONMBS.NewNumberNode(3)
  o.AddItemToArray JSONMBS.NewNumberNode(4)

dim n as JSONMBS = o.ChildNode // first child
MsgBox n.ValueString // shows 1
```

**Notes:** (Read only property)

99.1.32 Handle as Integer

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal handle to the JSON object.  
**Notes:**  
It is possible to have two REALbasic objects with the same handle pointing to the same JSON node.  
(Read only property)

99.1.33 LastChildNode as JSONMBS

**Example:**
dim o as JSONMBS = JSONMBS.NewArrayNode
o.AddItemToArray JSONMBS.NewNumberNode(1)
o.AddItemToArray JSONMBS.NewNumberNode(2)
o.AddItemToArray JSONMBS.NewNumberNode(3)
o.AddItemToArray JSONMBS.NewNumberNode(4)

dim k as JSONMBS = o.LastChildNode
MsgBox k.ValueString // shows 4

Notes: (Read only property)

99.1.34 Name as String

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The name of this node.
Notes: (Read only property)

99.1.35 NextNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The next node on the same level.
**Example:**
dim o as JSONMBS = JSONMBS.NewArrayNode
o.AddItemToArray JSONMBS.NewNumberNode(1)
o.AddItemToArray JSONMBS.NewNumberNode(2)
o.AddItemToArray JSONMBS.NewNumberNode(3)
o.AddItemToArray JSONMBS.NewNumberNode(4)

dim k as JSONMBS = o.ChildNode
while k<>nil
MsgBox k.ValueString // shows 1, 2, 3, 4
k=k.NextNode
wend

Notes: (Read only property)
99.1. CLASS JSONMBS

99.1.36 ParseError as String

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parse error string.
**Notes:**
When parsing fails, this may be an useful message so you know what went wrong.
(Read only property)

99.1.37 PreviousNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The previous node on the same level.
**Example:**
```vbscript
dim o as JSONMBS = JSONMBS.NewArrayNode
o.AddItemToArray JSONMBS.NewNumberNode(1)
o.AddItemToArray JSONMBS.NewNumberNode(2)
o.AddItemToArray JSONMBS.NewNumberNode(3)
o.AddItemToArray JSONMBS NewNumberNode(4)
dim k as JSONMBS = o.LastChildNode
while k<>nil
    MsgBox k.valuestring // shows 4, 3, 2, 1
    k=k.PreviousNode
wend
```
**Notes:** (Read only property)

99.1.38 Root as JSONMBS

**Notes:**
The root node owns the references to all children.
(Read only property)
99.1.39  **toString as String**

**Example:**

```vbs
Dim o As JSONMBS = JSONMBS.NewObjectNode

o.AddItemToObject "text", JSONMBS.NewStringNode("Hello World")

MsgBox o.toString // shows "{"text":"Hello World"}
```

**Notes:**

Returns "" on any error. Lasterror is set.
(Read only property)
See also:
- 99.1.28 `toString(formatted as boolean)` as string

---

99.1.40  **Type as Integer**

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The type of the node.

**Example:**

```vbs
Dim n As JSONMBS = JSONMBS.NewNullNode

MsgBox n.Type
```

**Notes:** (Read only property)

---

99.1.41  **TypeName as String**

MBS Util Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Shows type of this node as string.

**Example:**

```vbs
Dim o As JSONMBS = JSONMBS.NewArrayNode

MsgBox o.TypeName
```

**Notes:**
This property was added for debugging so you can see type in debugger.
(Read only property)

99.1.42 Valid as Boolean

MBS Util Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks whether node is valid.
**Notes:**
The handle is not zero and there are no error nodes in JSON tree.
Returns true if valid, else false.
(Read only property)

99.1.43 ValueBoolean as Boolean

MBS Util Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The boolean value of this json node.
**Notes:**
Returns true if type is kTypeTrue, false if kTypeFalse or true if ValueInteger <>0.
(Read only property)

99.1.44 ValueDouble as Double

**Notes:** (Read only property)

99.1.45 ValueInteger as Int64

**Notes:** (Read only property)

99.1.46 ValueString as String

99.1.47 Constants

99.1.48 kTypeArray = 6

MBS Util Plugin, Plugin Version: 13.3. **Function**: One of the node type constants. **Notes**: For an array node.

99.1.49 kTypeError = 0

MBS Util Plugin, Plugin Version: 13.3. **Function**: One of the node type constants. **Notes**: The parse failed and you got an invalid node.

99.1.50 kTypeFalse = 1

MBS Util Plugin, Plugin Version: 13.3. **Function**: One of the node type constants. **Notes**: For a false node.

99.1.51 kTypeNull = 3

MBS Util Plugin, Plugin Version: 13.3. **Function**: One of the node type constants. **Notes**: For a null node.

99.1.52 kTypeNumber = 4

MBS Util Plugin, Plugin Version: 13.3. **Function**: One of the node type constants. **Notes**: For a number node.

99.1.53 kTypeObject = 7

MBS Util Plugin, Plugin Version: 13.3. **Function**: One of the node type constants. **Notes**: For an object node.
99.1. **CLASS JSONMBS**

**99.1.54**  `kTypeString = 5`

MBS Util Plugin, Plugin Version: 13.3. **Function:** One of the node type constants. **Notes:** For a string node.

**99.1.55**  `kTypeTrue = 2`

MBS Util Plugin, Plugin Version: 13.3. **Function:** One of the node type constants. **Notes:** For a true node.
Chapter 100

JPEG

100.1  class JPEG2000MBS

100.1.1  class JPEG2000MBS

MBS Images Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for compress/decompress of JPEG 2000 images.

**Example:**

```vbnet
dim file as FolderItem = GetFolderItem("test.jp2")
dim stream as BinaryStream = BinaryStream.Open(file)
dim data as string = stream.Read(stream.Length)

dim jp2 as new JPEG2000MBS
if jp2.InitDecompress(data) then
    MsgBox str(jp2.Width)+" x "+str(jp2.Height)
end if
```

**Notes:**
Currently only supports RGB, RGBA and Grayscale images.

Please note that Jasper library used here is not very memory efficient and may run out of memory with huge images.
100.1.2 Methods

100.1.3 Close

MBS Images Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs cleanup.

**Notes:**
Called automatically by destructor for you.
You can call it after you are done to free memory now.

100.1.4 Compress as Boolean

MBS Images Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compresses image.

**Notes:**
Please use first InitCompress, than loop over rows and use SetRow to fill in data.
This method will compress image and set ImageData property.
Returns true on success and false on failure.

100.1.5 Decode(Data as MemoryBlock) as Picture

MBS Images Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Decodes a JPEG 2000 images.

**Example:**
```
    dim p as Picture = LogoMBS(200)
    
    dim j80 as MemoryBlock = JPEG2000MBS.Encode(p, 80)
    dim p80 as Picture = JPEG2000MBS.Decode(j80)
    
    window1.Backdrop = p80
```

**Notes:**
Returns on success the picture object.
Can raise exception if data is invalid.
See also:

- 100.1.6 Decode(Data as string) as Picture
100.1.6 Decode(Data as string) as Picture

Notes:
Returns on success the picture object.
Can raise exception if data is invalid.
See also:
- 100.1.5 Decode(Data as MemoryBlock) as Picture

100.1.7 Encode(pic as picture, Quality as Integer = 80) as MemoryBlock

Example:
```vbscript
dim p as Picture = LogoMBS(200)

dim j80 as MemoryBlock = JPEG2000MBS.Encode(p, 80)
dim p80 as Picture = JPEG2000MBS.Decode(j80)

window1.Backdrop = p80
```
Notes: Returns image data on success or nil on failure.

100.1.8 GetRow(Index as Integer, Row as MemoryBlock = nil) as MemoryBlock

Notes:
If you pass in a memoryblock, we use it, else we create a new one.
So you can pass in memoryblock from last call to GetRow.
Returns nil in case of error.
100.1.9 InitCompress(Width as Integer, Height as Integer, BytesPerPixel as Integer, BytesPerRow as Integer = 0) as Boolean

MBS Images Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes the compression for a new image.

**Example:**
```vba
dim p as Picture = LogoMBS(200)
dim pp as new PictureMBS(p)

// compress RGB in PictureMBS
dim je as new JPEG2000MBS
if je.InitCompress(pp.Width, pp.Height, 3, pp.RowSize) then
    dim h as Integer = pp.Height - 1
    for i as Integer = 0 to h
        dim rowData as MemoryBlock = pp.RowInFormat(i, pp.ImageFormatRGB)
        if not je.SetRow(i, rowData) then
            Break
        end if
    next
    if je.Compress then
        dim ImageData as MemoryBlock = je.ImageData
        if ImageData <> nil then
            // and decode to show
            dim pic as Picture = JPEG2000MBS.Decode(ImageData)
            window1Backdrop = pic
        end if
    end if
end if
```

**Notes:**

Returns true on success or false on failure.
If BytesPerRow is zero, we calculate it based on BytesPerPixel and Width.
BytesPerPixel can be 1 for gray, 3 for RGB and 4 for RGBA.

100.1.10 InitDecompress(ImageData as MemoryBlock) as Boolean

MBS Images Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes the decompression for given image data.

**Example:**
```vba
```
100.1. **CLASS JPEG2000MBS**

```vbnet
dim p as Picture = LogoMBS(200)

dim j80 as MemoryBlock = JPEG2000MBS.Encode(p, 80)

// decompress to PictureMBS
dim jd as new JPEG2000MBS

if jd.InitDecompress(j80) then

dim pi as new PictureMBS(jd.Width, jd.Height, PictureMBS.ImageFormatRGB)

dim h as Integer = pi.Height-1

dim r as MemoryBlock

for i as Integer = 0 to h

// get row. Recycle MemoryBlock, so we don't create new one each row.
r = jd.getRow(i, r)
pi.RowInFormat(i, pi.ImageFormatRGB) = r

next

// get picture
window1.Backdrop = pi.CopyPicture
end if
```

**Notes:**

Returns true on success or false on failure.
BytesPerPixel is set to 1 for gray, 3 for RGB and 4 for RGBA.

---

**100.1.11 SetRow(Index as Integer, Row as MemoryBlock) as Boolean**

MBS Images Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets data for a row. **Notes:** Returns true on success.

---

**100.1.12 Properties**

**100.1.13 BytesPerPixel as Integer**

MBS Images Plugin, Plugin Version: 15.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of bytes per pixel. **Notes:**

One for gray, 3 for RGB and 4 for RGBA.
Set by InitCompress or InitDecompress.
100.1.14 **BytesPerRow** as Integer

MBS Images Plugin, Plugin Version: 15.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The bytes per row.  
**Notes:**  
Only used to create memoryblock or check memoryblock size.  
Set by InitCompress or InitDecompress.  
(Read only property)

100.1.15 **Height** as Integer

MBS Images Plugin, Plugin Version: 15.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The height of the image.  
**Notes:**  
Set by InitCompress or InitDecompress.  
(Read only property)

100.1.16 **ImageData** as MemoryBlock

MBS Images Plugin, Plugin Version: 15.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The image data.  
**Notes:**  
Set by Compress method on success.  
(Read only property)

100.1.17 **Options** as String

MBS Images Plugin, Plugin Version: 15.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Options to pass to Jasper library for compression.  
**Notes:**  
e.g. "rate=80"  
(Read and Write property)
100.1.18   Width as Integer

MBS Images Plugin, Plugin Version: 15.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The width of the image.
**Notes:**
Set by InitCompress or InitDecompress.
(Read only property)
100.2 class JPEGExporterMBS

100.2.1 class JPEGExporterMBS

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for JPEG Exporting.

**Example:**

```vbscript
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock

// this code copies a JPG: CMYK or RGB

// import it
g=SpecialFolder.Desktop.Child("PICT1533.JPG")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.CMYK=true // if it is cmyk
if ji.InitJPEG then
    do
    loop until ji.LoopJPEG<>0
ji.FinishJPEG
end if

// export it
f=SpecialFolder.Desktop.child("PICT1533 copy.JPG")
je=new JPEGExporterMBS
je.File=f
je.Quality=75

if ji.CMYK then
    m=ji.PictureData
    je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
else
    je.Picture=ji.Picture
    je.Export
end if
```

**Notes:**

This class is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!
100.2. `CLASS JPEGEXPORTERMBS`

(REALbasic’s SaveAsJPEG depends on QuickTime)

Bases on libjpeg.

### 100.2.2 Methods

### 100.2.3 Export

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Exports the picture.  
**Example:**

```vbnet
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock

// this code copies a JPG: CMYK or RGB

// import it
  g=SpecialFolder.Desktop.Child("PICT1533.JPG")
  ji=new JPEGImporterMBS
  ji.File=g
  ji.AllowDamaged=true
  ji.CMYK=true // if it is cmyk
  if ji.InitJPEG then
    do
      loop until ji.LoopJPEG<>0
    ji.FinishJPEG
  end if

// export it
  f=SpecialFolder.Desktop.child("PICT1533 copy.JPG")
  je=new JPEGExporterMBS
  je.File=f
  je.Quality=75

  if ji.CMYK then
    m=ji.PictureData
    je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
  else
    je.Picture=ji.Picture
    je.Export
  end if
```
**Notes:**

This method saves 32-bit pictures to a file using JPEG Compression. Using the properties of the class you can specify the quality in range between 0 and 100%.

This method is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!

(REALbasic’s SaveAsJPEG depends on QuickTime)

You may use the function picture.bitmap to make sure that the picture is a bitmap, because this function works only for bitmap pictures.

This method uses the YieldTicks property and may yield time to other threads.

### 100.2.4 `ExportCMYK(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32)`

MBS Images Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Exports a picture from CMYK data in a memoryblock.

**Example:**

```plaintext
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock

// import it
g=getOpenFolderItem("image/jpeg")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.ImportCMYK

m=ji.PictureData

// export it
f=SpecialFolder.Desktop.child("test.jpg")
je=new JPEGExporterMBS
je.HorizontalResolution=300
je.VerticalResolution=300
je.ResolutionUnit=1
je.File=f
```
100.2. CLASS JPEGEXPORTERMBS

je.Quality=75
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4

Notes:

This method saves 32 bit CMYK pictures to a file using JPEG Compression. Using the properties of the class you can specify the quality in range between 0 and 100%

This method is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big! (REALbasic’s SaveAsJPEG depends on QuickTime)

The picture must be in the format that one byte is used for each channel and the channels are ordered in memory in Cyan, Magenta, Yellow and Black.
If rowbytes is 0, the plugin uses width*4 for rowbytes.

This method uses the YieldTicks property and may yield time to other threads.

100.2.5 ExportGray

Notes: Same as Export, but writes grayscale picture. The picture from picture property is converted to grayscale internally for this.
See also:

- 100.2.6 ExportGray(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32) 15617

100.2.6 ExportGray(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32)

Notes:
Same as Export, but writes grayscale picture using data in memoryblock.
If rowbytes is 0, the plugin uses width for rowbytes.
This method uses the YieldTicks property and may yield time to other threads.
See also:

- 100.2.5 ExportGray 15617
100.2.7 ExportRGB(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32)

MBS Images Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Exports a picture from RGB data in a memoryblock.

**Example:**

```vba
dim f as FolderItem
dim ji as new JPEGImporterMBS
dim je as new JPEGExporterMBS
dim m as MemoryBlock
dim i,c as Integer

// read jpeg
f=SpecialFolder.Desktop.Child("input.jpg")

ji.Mode=ji.ModeRGB // read RGB to memoryblock
ji.File=f
ji.Import

m=ji.PictureData

// add red
c=m.Size-1
for i=0 to c step 3
    m.Byte(i)=255
next

// write jpeg
f=SpecialFolder.Desktop.Child("test.jpg")

je.File=f
je.ExportRGB(m,ji.Width, ji.Height, ji.Width*3)
```

**Notes:** The memoryblock data must be in the format with bytes in the order RGB.

100.2.8 ExportRGBwithRowDataEvent(width as UInt32, height as UInt32, rowbytes as UInt32)

MBS Images Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Exports a picture from RGB data in memoryblocks from the GetRowData event.

**Notes:**
You need to implement the GetRowData event by subclassing this class.
The memoryblock data must be in the format with bytes in the order RGB.
100.2.9 GetJPEGVersion as String

100.2.10 Properties

100.2.11 data as string

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The destination string. Notes: If file is nil, the compressed data is saved in this property. The returned string has the encoding set to MacRoman. If you want to concat the string with another you should change the encoding, so both strings have the same encoding. If you don’t handle that RB may convert the JPEG data to UTF8 (Unicode) which will destroy it. (Read and Write property)

100.2.12 DCTMethod as Integer

MBS Images Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Which DCT/IDCT algorithm to use. Notes: Possible values:

-1 Plugin does not change setting
0 slow but accurate integer algorithm (default)
1 faster, less accurate integer method
2 floating-point: accurate, fast on fast Hardware

Default is Integer slow. (Read and Write property)
100.2.13 **ErrorCode as Integer**

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The error code from the Export method.

**Example:**

```vba
dim j as new JPEGExporterMBS

// do something

MsgBox str(j.ErrorCode)+" "+j.ErrorMessage
```

**Notes:**

- The last function was successful if ErrorCode is 0.
- If the parameters are not valid, the value is set to -1.
- Other values are Mac OS error codes.

(Read and Write property)

100.2.14 **ErrorMessage as string**

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error message reported.

**Example:**

```vba
dim j as new JPEGExporterMBS

// do something

MsgBox j.ErrorMessage
```

**Notes:** (Read and Write property)

100.2.15 **EXIFData as String**

MBS Images Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The EXIF data for this file.

**Example:**

```vba
// Read a picture file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim ji as new JPEGImporterMBS
```
// Write a new picture file
dim o as FolderItem = SpecialFolder.Desktop.Child("out.jpg")
dim je as new JPEGExporterMBS

je.File = o
je.EXIFData = ji.ExifData
je.Picture = ji.Picture
je.Export

Notes:
The export methods use this property.
(Read and Write property)

100.2.16 file as folderitem

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destination file.
**Example:**

dim p as Picture = LogoMBS(500)

'Save the scan
dim je as new JPEGExporterMBS
je.file = SpecialFolder.Desktop.Child("just a test.jpg")
je.quality = 75
je.picture = p
je.VerticalResolution = 72
je.HorizontalResolution = 72
je.ResolutionUnit = 1
je.export

Notes:
If file is nil, the destination is the data property.
(Read and Write property)
100.2.17  **HorizontalResolution as Integer**

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The horizontal resolution.  
**Example:**
```vbnet
dim j as new JPEGExporterMBS

// setup 300 dpi  
j.VerticalResolution = 300  
j.HorizontalResolution = 300  
j.ResolutionUnit = 1
```

**Notes:** (Read and Write property)

100.2.18  **OptimizeCoding as Boolean**

MBS Images Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the plugin should ask the compressor to optimize the huffman coding tables.  
**Example:**
```vbnet
dim j as new JPEGExporterMBS  
j.OptimizeCoding = true
```

**Notes:**
This usually provides a small percentage decrease in file size.  
(Read and Write property)

100.2.19  **Picture as Picture**

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The picture to use.  
**Example:**
```vbnet
dim MyPic as Picture = LogoMBS(500)  
dim j as JPEGExporterMBS // your exporter  
j.picture=MyPic
```

**Notes:**
Should be a bitmap picture without alpha channel or mask.
100.2.20 ProfileData as String

Example:

```vbs
Dim f As FolderItem
Dim j As JPEGImporterMBS
Dim p As LCMS2ProfileMBS
Dim e As JPEGExporterMBS

f = SpecialFolder.Desktop.Child(“test2.jpg”)
j = New JPEGImporterMBS
j.ReadMarkers = True '// else no metadata is read at all
j.ReadProfileData = True '// needed to fill ProfileData property
j.File = f

j.Import

If j.ProfileData = “” Then
    MsgBox “no profile”
    Return
End If

p = LCMS2ProfileMBS.CreatesRGBProfile

f = SpecialFolder.Desktop.Child(“test3.jpg”)
e = New JPEGExporterMBS
e.File = f
e.Picture = j.Picture
e.ProfileData = p.SaveProfileToString
e.Quality = 75
e.Export
```

Notes:

the string must contain the binary data of the profile. For example SaveProfileToString of the CMProfileMBS class returns such a string.
If the string is empty, no profile is written.
(Read and Write property)
100.2.21 Progressive as Boolean

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** whether to make a progressive compressed image.

**Example:**
```vba
dim j as new JPEGExporterMBS
j.Progressive = true
```

**Notes:**
Default is true.
(Read and Write property)

100.2.22 Quality as Integer

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The quality to use.

**Example:**
```vba
dim je as new JPEGExporterMBS
je.quality = 75
```

**Notes:**
Range from 0 to 100. Default is 75.
(Read and Write property)

100.2.23 ResolutionUnit as Integer

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The unit of the resolution properties.

**Example:**
```vba
dim j as new JPEGExporterMBS

// setup 300 dpi
j.VerticalResolution = 300
j.HorizontalResolution = 300
j.ResolutionUnit = 1
```

**Notes:**
Values:

0  unknown
1  dots per inch
2  dots per cm

(Read and Write property)

100.2.24  **VerticalResolution as Integer**

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The vertical resolution.

**Example:**
```vbnet
dim j as new JPEGExporterMBS

// setup 300 dpi
j.VerticalResolution = 300
j.HorizontalResolution = 300
j.ResolutionUnit = 1
```

**Notes:** (Read and Write property)

100.2.25  **WarningMessage as String**

MBS Images Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The last warning message reported.

**Example:**
```vbnet
dim j as new JPEGExporterMBS

// do something
MsgBox j.WarningMessage
```

**Notes:** (Read and Write property)
100.2.26 XMPData as String

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The XMP data for this file.
**Notes:**
The export methods use this property.
(Read and Write property)

100.2.27 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
How much time is given back to REALbasic for other ticks.
**Example:**
```vbnet
dim j as JPEGExporterMBS // your exporter
j.YieldTicks=6 // only use 1/10th of a second
```
**Notes:**
If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let REALbasic redraw a progressbar.
(Read and Write property)

100.2.28 Markers(Index as Integer) as string

MBS Images Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Additional markers.
**Example:**
```vbnet
dim j as new JPEGExporterMBS
j.Picture = LogoMBS(500)
j.Markers(5) = "Hello World"
j.File = SpecialFolder.Desktop.Child("test.jpg")
j.Export
```
// now open jpeg file in text editor and you see hello world near beginning
Notes:
Index from 0 to 15.
Index zero is used for JFIF header.
Index one is normally used for EXIF or XMP.
Index 13 is often used for Photoshop.

see also
http://www.ozhiker.com/electronics/pjmt/jpeg_info/app_segments.html

You can use this markers to embed a given string in the file. You can encrypt data and store it next to the image as you like.
Of course this will not survive if image is loaded and saved again. But can work as a container to hide data and user sees only image.
(Read and Write computed property)

100.2.29 Events

100.2.30 Error(message as string, ErrorCode as Integer)
MBS Images Plugin, Plugin Version: 8.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This events reports all error messages from the jpeg library.

100.2.31 GetRowData(index as Integer) as memoryblock
MBS Images Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The event called to query for the next data block.
**Notes:**
The memoryblock data must be in the format with bytes in the order RGB.
Index is from 0 to height-1.
Returning nil will result in an error on the JPEG compression.

100.2.32 Info(message as string, msglevel as Integer, ErrorCode as Integer)
MBS Images Plugin, Plugin Version: 8.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This events reports all information messages from the jpeg library.
**Notes:**
msglevel is one of:
-1: recoverable corrupt-data warning, may want to abort.
0: important advisory messages (always display to user).
1: first level of tracing detail.
2,3,...: successively more detailed tracing messages.

100.2.33 Warning(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: This events reports all warning messages from the jpeg library.
100.3. class JPEGImporterMarkerMBS

100.3.1 class JPEGImporterMarkerMBS

100.3.2 Properties

100.3.3 Data as String

MBS Images Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The actual data read as a binary string.

**Example:**

```vba
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child(”test.jpg”)
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import

dim data as string = j.MarkerItem(0).Data

// work with data
```

**Notes:** (Read and Write property)

100.3.4 DataLength as Integer

MBS Images Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The data length in bytes of the data string.

**Example:**

```vba
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child(”test.jpg”)
j=new JPEGImporterMBS
```
j.ReadMarkers=true // needed to fill ExifData property

// do the import
MsgBox str(j.MarkerItem(0).DataLength)

// work with data

Notes: (Read and Write property)

100.3.5 Marker as Integer

MBS Images Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The type of this datablock. **Example:**

dim j as JPEGImporterMBS
dim f as folderitem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import
MsgBox str(j.MarkerItem(0).Marker)

// work with data

Notes:
For example &hE0 for the first user defined block. (Read and Write property)

100.3.6 OriginalLength as Integer

MBS Images Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The original data length in the file. **Example:**
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true  // needed to fill ExifData property

// do the import

MsgBox str(j.MarkerItem(0).OriginalLength)

// work with data

Notes:
Maybe smaller than data length because of compression. (Read and Write property)
100.4  class JPEGImporterMBS

100.4.1  class JPEGImporterMBS

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for JPEG Importing.

**Example:**

```vba
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock

// this code copies a JPG: CMYK or RGB

// import it
g=SpecialFolder.Desktop.Child("PICT1533.JPG")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.CMYK=true // if it is cmyk
if ji.InitJPEG then
do
loop until ji.LoopJPEG<>0
ji.FinishJPEG
end if

// export it
f=SpecialFolder.Desktop.child("PICT1533_copy.JPG")
je=new JPEGExporterMBS
je.File=f
je.Quality=75
if ji.CMYK then
m=ji.PictureData
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
else
je.Picture=ji.Picture
je.Export
end if
```

**Notes:**

This class is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!
100.4. CLASS JPEGIMPORTERMBSS

(REALbasic’s OpenAsPicture depends on QuickTime)

Bases on libjpeg.

100.4.2 Methods

100.4.3 BlueTestPicture as picture

MBS Images Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a 100x100 pixel big picture filled with RGB(0,0,255).
**Notes:** Just for testing how well the plugin picture code works.

100.4.4 CleanMarkers

MBS Images Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears the marker list.

100.4.5 FinishJPEG

MBS Images Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Releases all memory buffers needed for the JPEG decompression.
**Notes:** This must be called if you used InitJPEG!
Else you have a memory leak.

100.4.6 GetJPEGVersion as String

**Notes:** Currently reporting 9.1 for version 9b.

100.4.7 GreenTestPicture as picture

MBS Images Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a 100x100 pixel big picture filled with RGB(0,255,0).
100.4.8 Import

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Imports the picture. **Example:**

```vba
dim f as FolderItem
dim ji as new JPEGImporterMBS
dim je as new JPEGExporterMBS
dim m as MemoryBlock
dim i,c as Integer

// read jpeg
f=SpecialFolder.Desktop.Child("input.jpg")
ji.Mode=ji.ModeRGB // read RGB to memory block
ji.File=f
ji.Import

m=ji.PictureData

// add red
c=m.Size-1
for i=0 to c step 3
  m.Byte(i)=255
next

// write jpeg
f=SpecialFolder.Desktop.Child("test.jpg")
je.File=f
je.ExportRGB(m,ji.Width, ji.Height, ji.Width*3)
```

**Notes:** The memoryblock data must be in the format with bytes in the order RGB.

100.4.9 ImportCMYK

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Imports a CMYK picture. **Example:**
100.4. CLASS JPEGIMPORTERMBS

```vbnet
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock

// import it
g=getOpenFolderItem("image/jpeg")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.ImportCMYK

m=ji.PictureData

// export it
f=SpecialFolder.Desktop.child("test.jpg")
je=new JPEGExporterMBS
je.HorizontalResolution=300
je.VerticalResolution=300
je.ResolutionUnit=1
je.File=f
je.Quality=75
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
```

**Notes:**

This method should read all JPEG files you can get, but I've only tested it for 32 bit color and 8 bit grayscale.

The read CMYK values are stored in the pictureData property.

This method uses the YieldTicks property and may yield time to other threads.

**100.4.10 InitJPEG as boolean**

MBS Images Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes the JPEG decompressor for use with LoopJPEG.

**Example:**

```vbnet
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock
```
// this code copies a JPG: CMYK or RGB

// import it
g=SpecialFolder.Desktop.Child("PICT1533.JPG")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.CMYK=true // if it is cmyk
if ji.InitJPEG then
do
loop until ji.LoopJPEG<>0
ji.FinishJPEG
end if

// export it
f=SpecialFolder.Desktop.child("PICT1533 copy.JPG")
je=new JPEGExporterMBS
je.File=f
je.Quality=75
if ji.CMYK then
m=ji.PictureData
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
else
je.Picture=ji.Picture
je.Export
end if

Notes:
Call FinishJPEG even if this failes.
Returns true if you can loop using LoopJPEG.

100.4.11 LoopJPEG as Integer

MBS Images Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Decompresses one line of the picture.
Example:
dim j as new JPEGImporterMBS
// fill properties...
if j.initJPEG then
do
100.4. CLASS JPEGIMPORTERMBS

loop until j.LoopJPEG<>0
end if
j.FinishJPEG

backdrop=j.Picture // nil if failed

Notes:
Return values:

0  Decompression was okay
1  Finished decompression
2  if there was an error.
3  Not initialized
4  Header only was requested

100.4.12 MarkerCount as Integer

MBS Images Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of markers found in the JPEG data stream.

**Example:**

dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // else no metadata is read at all

// do the import
MsgBox str(j.MarkerCount)

**Notes:** Only available if ReadMarkers was true on reading the JPEG data.
### MarkerItem(index as Integer) as JPEGImporterMarkerMBS

MBS Images Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the marker with the given index.

**Example:**

```vba
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import

dim data as string = j.MarkerItem(0).Data

// work with data
```

**Notes:** Only available if ReadMarkers was true on reading the JPEG data.

### ReadHeader as boolean

MBS Images Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Read the header of the JPEG data in a file or a memoryblock.

**Example:**

```vba
dim f as FolderItem
dim j as JPEGImporterMBS

f=SpecialFolder.Desktop.Child("Jaguar1600.jpg")
j=new JPEGImporterMBS
j.file=f
if j.ReadHeader then
    MsgBox str(j.Width)+" x "+str(j.Height)
else
    MsgBox "no JPEG"
end if
```

**Notes:**

You can use this function to see if the file is a JPEG image and which dimension it has. This function calls InitJPEG and FinishJPEG, so we get all the metadata, but no picture.
100.4.15 RedTestPicture as picture

MBS Images Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a 100x100 pixel big picture files with RGB(255,0,0).
**Notes:** Just for testing how well the plugin picture code works.

100.4.16 Properties

100.4.17 AllowDamaged as boolean

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** whether you want damaged pictures to be returned.
**Notes:**
- If AllowDamaged is false, nil will be returned if the picture is damaged.
- Default value is false.
  *(Read and Write property)*

100.4.18 BlockSmoothing as Boolean

MBS Images Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to do interblock smoothing.
**Notes:**
- Default value is true.

This setting is relevant only when decoding a progressive JPEG image. During the first DC-only scan, block smoothing provides a very "fuzzy" look instead of the very "blocky" look seen without it; which is better seems a matter of personal taste. But block smoothing is nearly always a win during later stages, especially when decoding a successive-approximation image: smoothing helps to hide the slight blockiness that otherwise shows up on smooth gradients until the lowest coefficient bits are sent.
  *(Read and Write property)*

100.4.19 CMYK as Boolean

MBS Images Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the decompressor has imported the picture as a CMYK image into a memoryblock.
**Example:**
```
dim g as FolderItem
dim ji as JPEGImporterMBS

g=getFolderItem("a.auf")
ji=new JPEGImporterMBS
ji.File=g
if ji.InitJPEG then
if ji.CMYK then
MsgBox "CMYK"
else
MsgBox "not"
end if
end if
```

**Notes:**
This property sets the Mode property to ModeCMYK.  
(Read and Write property)

### 100.4.20 ColorComponentCount as Integer

MBS Images Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of color components.  
**Notes:**

1. Grayscale  
3. RGB  
4. CMYK

(Read and Write property)

### 100.4.21 ColorSpace as Integer

MBS Images Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The color space of the image.  
**Example:**

```
dim j as new JPEGImporterMBS

j.File = SpecialFolder.Desktop.Child("cmyk.jpg")
```
if j.InitJPEG then

Select case j.ColorSpace
case j.ColorSpaceCMYK, j.ColorSpaceYCCK
MsgBox "CMYK"
case j.ColorSpaceRGB, j.ColorSpaceYCbCr
MsgBox "RGB"
case j.ColorSpaceGrayScale
MsgBox "Gray"
else
MsgBox "unknown? " + str(j.ColorSpace)
end Select

j.FinishJPEG
end if

Notes:
See also the Colorspace constants.
(Read and Write property)

100.4.22 CurrentDepth as Integer

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The depth of the picture property.

Notes:
In the current implementation always 32bit.
0 if the loading of the picture failed.
(Read and Write property)

100.4.23 data as string

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The source string.

Notes:
If file is nil, the compressed data is taken from this property.
(Read and Write property)
100.4.24  Error Message as string

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error message reported. **Notes:** (Read and Write property)

100.4.25  Exif Data as String

MBS Images Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The exif data stored in the file. **Example:**

dim j as JPEGImporterMBS
dim f as FolderItem
f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS
j.ReadStringExifData=true // needed to fill ExifData property

// do the import
dim data as string = j.ExifData

// work with data

**Notes:**
Only used when ReadExifData is set to true before you import the image. The string contains the binary content of an exif data on disc. Value is "" if no data was found. (Read and Write property)

100.4.26  Fancy Upsampling as Boolean

MBS Images Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to do fancy upsampling. **Notes:**
Default value is true.

If true, use direct DCT scaling with DCT size >8 for downsampling of chroma components. If false, use only DCT size <= 8 and simple separate downsampling. Default is true. For better image stability in multiple
generation compression cycles it is preferable that this value matches the corresponding FancyUpsampling value in decompression.
(Read and Write property)

100.4.27  file as folderitem

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destination file.
**Notes:**
If file is nil, the source is taken from the data property.
(Read and Write property)

100.4.28  FileOffset as Integer

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The offset inside the file.
**Notes:** (Read and Write property)

100.4.29  Height as Integer

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The height of the picture.
**Notes:**
0 if the loading of the picture failed.
(Read and Write property)

100.4.30  HorizontalResolution as Integer

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The horizontal resolution.
**Notes:** (Read and Write property)

100.4.31  Mode as Integer

MBS Images Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The operation mode.
**Notes:**
Can be either ModePicture (Default), ModeRGB or ModeCMYK.
(Read and Write property)

### 100.4.32 OriginalDepth as Integer

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The original depth of the picture.

**Notes:**
Value maybe 8 for grayscale pictures and 24 or 32 for colored pictures.
0 if the loading of the picture failed.
(Read and Write property)

### 100.4.33 Picture as Picture

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The picture as the result.

**Notes:**
Set to nil on any error.
(Read and Write property)

### 100.4.34 PictureData as MemoryBlock

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The cmyk picture data after importing.

**Example:**

```vba
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock

// import it
    g=getFolderItem("CMYK Example.jpg")
    ji=new JPEGImporterMBS
    ji.File=g
    ji-AllowDamaged=true
    ji.ImportCMYK
    m=ji.PictureData
    msgBox g.name
```
// export it
f=SpecialFolder.Desktop.child("CMYK Example2.jpg")
je=new JPEGExporterMBS
je.File=f
je.Quality=75
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4

Notes:
Basicly a memoryblock with one byte for each channel.
For ReadByRow methods this property contains memoryblock for a row of the image.
(Read and Write property)

100.4.35 ProfileData as String

Example:

```vbc
dim f as FolderItem
dim j as JPEGImporterMBS
dim p as LCMS2ProfileMBS
f=SpecialFolder.Desktop.Child("test2.jpg")
j=new JPEGImporterMBS
j.ReadMarkers=true // else no metadata is read at all
j.ReadProfileData=true // needed to fill ProfileData property
j.file=f

j.Import
if j.ProfileData="" then
    MsgBox "no profile"
    Return
end if

p=LCMS2ProfileMBS.OpenProfileFromString(j.ProfileData)
MsgBox p.Name
```

Notes:
Only used when ReadProfileData is set to true before you import the image.
The string contains the binary content of a profile file on disc. So you can pass it to the CMOpenProfile-
100.4.36 ProgressiveMode as Boolean

MBS Images Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a progressive jpeg file. **Notes:** Loading progressive files needs more memory. (Read and Write property)

100.4.37 ReadExifData as Boolean

MBS Images Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the plugin should read in the exif data. **Example:**

```vbnet
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadExifData=true // needed to fill ExifData property

// do the import

dim data as string = j.ExifData

// work with data
```

**Notes:** If there is exif data, it will be stored in the ExifData property. Setting this value to true will set ReadMarkers to true, too. The data is stored in one or more markers, so it is needed to read them before extracting the data. (Read and Write property)
100.4.38 ReadMarkers as Boolean

MBS Images Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether importer should read markers.  
**Example:**
```
    dim j as JPEGImporterMBS
    dim f as FolderItem
    f=SpecialFolder/Desktop.Child("test.jpg")
    j=new JPEGImporterMBS
    j.ReadMarkers=true // else no metadata is read at all
    // do the import
    MsgBox str(j.MarkerCount)
```

**Notes:** (Read and Write property)

100.4.39 ReadProfileData as Boolean

MBS Images Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the plugin should read in the icc profile.  
**Example:**
```
    dim j as JPEGImporterMBS
    dim f as FolderItem
    f=SpecialFolder/Desktop.Child("test.jpg")
    j=new JPEGImporterMBS
    j.ReadProfileData=true // needed to fill ProfileData property
    // do the import
    dim Profile as string = j.ProfileData
    // work with profile data
```

**Notes:**  
If there is a profile, it will be stored in the ProfileData property. Setting this value to true will set ReadMarkers to true, too.
A profile is stored in one or more markers, so it is needed to read them before extracting the profile. (Read and Write property)

100.4.40 ReadXMPData as Boolean

MBS Images Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the plugin should read in the xmp data.

**Notes:**
If there is xmp data, it will be stored in the XMPData property.
Setting this value to true will set ReadMarkers to true, too.
The data is stored in one or more markers, so it is needed to read them before extracting the data. (Read and Write property)

100.4.41 ResolutionUnit as Integer

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The unit of the resolution properties.

**Notes:**
Values:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>unknown</td>
</tr>
<tr>
<td>1</td>
<td>dots per inch</td>
</tr>
<tr>
<td>2</td>
<td>dots per cm</td>
</tr>
</tbody>
</table>

(Read and Write property)

100.4.42 ScaleFactor as Integer

MBS Images Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The JPEG Library can scale down the picture on the fly.

**Notes:**
Allowed values: 0, 1, 2, 4, 8
0 and 1 disable scaling.
Default value is 0 for no scaling. (Read and Write property)
100.4.43  **VerticalResolution as Integer**

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The vertical resolution.  **Notes:** (Read and Write property)

100.4.44  **WarningMessage as String**

MBS Images Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last warning message reported. **Notes:** (Read and Write property)

100.4.45  **Width as Integer**

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The width of the picture.  **Notes:**

0 if the loading of the picture failed.  
(Read and Write property)

100.4.46  **XMPData as String**

MBS Images Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The XMP Data stored in the file.  **Notes:**

Only used when ReadXMPData is set to true before you import the image.
The string contains the binary content of a xmp data on disc.
Value is "" if no data was found.  
(Read and Write property)

100.4.47  **YieldTicks as Integer**

MBS Images Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** How much time is given back to REALbasic for other ticks.  **Example:**

```plaintext
dim j as JPEGImporterMBS // your importer
j.YieldTicks=6 // only use 1/10th of a second
```
Notes:
If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let REALbasic redraw a progressbar.
(Read and Write property)

100.4.48 Events

100.4.49 Error(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function:
This events reports all error messages from the jpeg library.

100.4.50 HeadersRead as boolean

MBS Images Plugin, Plugin Version: 15.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function:
Event called when headers are read.
Notes:
This allows you to set Mode, ScaleFactor, FancyUpsampling, BlockSmoothing properties.
Return true to cancel Import/InitJPEG methods early.

100.4.51 Info(message as string, msglevel as Integer, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function:
This events reports all information messages from the jpeg library.
Notes:
msglevel is one of:

-1: recoverable corrupt-data warning, may want to abort.
  0: important advisory messages (always display to user).
  1: first level of tracing detail.
  2,3,...: successively more detailed tracing messages.
100.4.52 **Warning**(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event reports all warning messages from the jpeg library.

100.4.53 **Constants**

100.4.54 **ColorSpaceCMYK = 4**

MBS Images Plugin, Plugin Version: 13.4. **Function:** One of the color spaces. **Example:**

```vbscript
dim j as new JPEGImporterMBS
j.File = SpecialFolder.Desktop.Child("cmyk.jpg")
if j.InitJPEG then
  Select case j.ColorSpace
  case j.ColorSpaceCMYK, j.ColorSpaceYCCK
    MsgBox "CMYK"
  case j.ColorSpaceRGB, j.ColorSpaceYCbCr
    MsgBox "RGB"
  case j.ColorSpaceGrayScale
    MsgBox "Gray"
  else
    MsgBox "unknown? " + str(j.ColorSpace)
  end Select
j.FinishJPEG
end if
```

**Notes:** C/M/Y/K

100.4.55 **ColorSpaceGrayScale = 1**

MBS Images Plugin, Plugin Version: 13.4. **Function:** One of the color spaces. **Notes:** Gray
100.4.56 **ColorSpaceRGB = 2**

MBS Images Plugin, Plugin Version: 13.4. **Function:** One of the color spaces.  
**Notes:** red/green/blue

100.4.57 **ColorSpaceUnknown = 0**

MBS Images Plugin, Plugin Version: 13.4. **Function:** One of the color spaces.  
**Notes:** Not set.

100.4.58 **ColorSpaceYCbCr = 3**

MBS Images Plugin, Plugin Version: 13.4. **Function:** One of the color spaces.  
**Notes:** Y/Cb/Cr (also known as YUV)

100.4.59 **ColorSpaceYCCK = 5**

MBS Images Plugin, Plugin Version: 13.4. **Function:** One of the color spaces.  
**Notes:** Y/Cb/Cr/K

100.4.60 **ModeAuto = 30**

MBS Images Plugin, Plugin Version: 15.2. **Function:** One of the mode constants.  
**Example:**

```javascript
    dim j as new JPEGImporterMBS
    j.File = SpecialFolder.Desktop.Child("test.jpg")
    j.Mode = j.ModeAuto
    j.Import
    // check Mode after to see if we got ModeRGB, ModeGray or ModeCMYK here.
```

**Notes:**

Load the image into the picturedata property.  
Switches on import to RGB, Gray or CMYK depending on color space of JPEG file.
100.4.61  **ModeAutoByRow = 31**

MBS Images Plugin, Plugin Version: 15.2. **Function:** One of the mode constants.  
**Example:**

```vbnet
dim j as new JPEGImporterMBS
j.File = SpecialFolder.Desktop.Child("test.jpg")
j.Mode = j.ModeAutoByRow
j.Import
// check Mode after to see if we got ModeRGBbyRow, ModeGraybyRow or ModeCMYKbyRow here.
```

**Notes:**
- Load the image into the picturedata property.
- Switches on import to RGB, Gray or CMYK depending on color space of JPEG file.

100.4.62  **ModeCMYK = 2**

MBS Images Plugin, Plugin Version: 8.4. **Function:** One of the mode constants.  
**Notes:**
- Load the image into the picturedata property.
- The PictureData Memoryblock uses 4 bytes per pixel.

100.4.63  **ModeCMYKbyRow = 12**

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the mode constants.  
**Notes:**
- Same as ModeCMYK, but PictureData contains only the current row
- The PictureData Memoryblock uses 4 bytes per pixel.

100.4.64  **ModeGray = 3**

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the mode constants.  
**Example:**

```vbnet
dim j as new JPEGImporterMBS
j.Mode = j.ModeGray
j.File = SpecialFolder.Desktop.Child("testGray.JPG")
j.Import
```

**Notes:**
- Load the image into the picturedata property.
MsgBox str(j.Width) + " x " + str(j.Height)

Notes:
Load the image into the picturedata property.
The PictureData Memoryblock uses one byte per pixel.

100.4.65 ModeGraybyRow = 13

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the mode constants.
**Notes:**
Same as ModeGray, but PictureData contains only the current row
The PictureData Memoryblock uses one byte per pixel.

100.4.66 ModePicture = 0

MBS Images Plugin, Plugin Version: 8.4. **Function:** One of the mode constants.
**Notes:** Load the image into the picture property.

100.4.67 ModeRaw = 20

MBS Images Plugin, Plugin Version: 13.4. **Function:** One of the mode constants.
**Notes:**
Load the image into the picturedata property.
The PictureData Memoryblock uses 1 to 4 bytes per pixel.

Check the colorspace property to know which color space is used.

100.4.68 ModeRGB = 1

MBS Images Plugin, Plugin Version: 8.4. **Function:** One of the mode constants.
**Example:**
```dim j as new JPEGImporterMBS
j.Mode=j.ModeRGB```

```
100.4.  CLASS JPEGIMPORTERMBS

j.File=SpecialFolder.Desktop.Child("testRGB.JPG")
j.Import

MsgBox str(j.Width)+” x ”+str(j.Height)

Notes:
Load the image into the picturedata property.
The PictureData Memoryblock uses 3 bytes per pixel.

100.4.69  ModeRGBbyRow = 11

Notes:
Same as ModeRGB, but PictureData contains only the current row
The PictureData Memoryblock uses 3 bytes per pixel.
**100.5  class JPEGMovieMBS**

**100.5.1  class JPEGMovieMBS**

MBS Images Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class to write a movie with JPEGs.

**Example:**

```vba
// get a picture
dim p as Picture = LogoMBS(500)

// start movie building
dim m as new JPEGMovieMBS

m.Width = 500
m.Height = 500
m.SecondsPerFrame = 0.5

// add frames where we count up
for i = 1 to 20
    dim c as new Picture(500, 500)
    dim g as Graphics = c.Graphics
    g.ForeColor = & c000000
    g.TextSize = 50
    g.DrawPicture p, 0, 0
    g.DrawString str(i), 20, 50
    dim j as string = c.GetData(c.FormatJPEG)
    m.AddFrame j
next

// generate movie
dim MovieData as string = m.BuildMovie

// and write to file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.mov")
dim b as BinaryStream = BinaryStream.Create(f, true)
b.Write MovieData
```

**Notes:**

This is a self written class to create a QuickTime Movie with one video track using JPEG images. You can use this to quickly write a slideshow video if needed.

Does play in Quicktime player and VLC, but not Windows Media Player.
100.5.2 Methods

100.5.3 AddFrame(Image as MemoryBlock)

**Notes:** Image must be a JPEG compressed image.
See also:

- 100.5.4 AddFrame(Image as String)

100.5.4 AddFrame(Image as String)

**Notes:** Image must be a JPEG compressed image.
See also:

- 100.5.3 AddFrame(Image as MemoryBlock)

100.5.5 BuildMovie as String

**Notes:** Either you get an exception or you get a movie which you can write to a file on disk.

100.5.6 Properties

100.5.7 Duration as Double

MBS Images Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The duration of the video.
**Notes:**
In Seconds.
(Read only property)
100.5.8 FrameCount as Integer

MBS Images Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of frames.  
**Notes:** (Read only property)

100.5.9 Height as Integer

**Notes:** Must match the JPEGs you use.  
(Read and Write property)

100.5.10 SecondsPerFrame as Double

MBS Images Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The seconds to show a frame.  
**Notes:** Default 1 second.  
(Read and Write property)

100.5.11 TimeScale as Integer

MBS Images Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The time scale to use.  
**Notes:** Defines how fine granular you can define time. Default is 600 units per second.  
(Read and Write property)

100.5.12 Width as Integer

MBS Images Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The target width of the video.  
**Notes:** Must match the JPEGs you use.
100.5. CLASS JPEGMVIEMB5

(Read and Write property)
100.6  class JPEGTransformationMBS

100.6.1  class JPEGTransformationMBS

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
A class to wrap the jpegtran utility.

**Notes:**
Although rotating and flipping data expressed as DCT coefficients is not hard, there is an asymmetry in
the JPEG format specification for images whose dimensions aren’t multiples of the iMCU size. The right
and bottom image edges are padded out to the next iMCU boundary with junk data; but no padding is
possible at the top and left edges. If we were to flip the whole image including the pad data, then pad
garbage would become visible at the top and/or left, and real pixels would disappear into the pad margins
— perhaps permanently, since encoders & decoders may not bother to preserve DCT blocks that appear to
be completely outside the nominal image area. So, we have to exclude any partial iMCUs from the basic
transformation.

Transpose is the only transformation that can handle partial iMCUs at the right and bottom edges com-
pletely cleanly. Mirror horizontal can flip partial iMCUs at the bottom, but leaves any partial iMCUs at
the right edge untouched. Similarly mirror vertical leaves any partial iMCUs at the bottom edge untouched.
The other transforms are defined as combinations of these basic transforms and process edge blocks in a way
that preserves the equivalence.

The ”trim” option causes untransformable partial iMCUs to be dropped; this is not strictly lossless, but it
usually gives the best-looking result for odd-size images. Note that when this option is active, the expected
mathematical equivalences between the transforms may not hold. (For example, -rot 270 -trim trims only
the bottom edge, but -rot 90 -trim followed by -rot 180 -trim trims both edges.)

We also offer a ”force to grayscale” option, which simply discards the chrominance channels of a YCbCr
image. This is lossless in the sense that the luminance channel is preserved exactly. It’s not the same kind
of thing as the rotate/flip transformations, but it’s convenient to handle it as part of this package, mainly
because the transformation routines have to be aware of the option to know how many components to work
on.

Bases on libjpeg.

100.6.2  Methods

100.6.3  close
There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you. (e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

### 100.6.4 Transform as boolean

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Runs the transformation.

**Notes:**
Outputfile and Inputfile should never be identical, because this will corrupt the file.

Returns only false if the file specifications are invalid. So after true is returned you still need to check the errorcode property.

### 100.6.5 Properties

#### 100.6.6 CopyOption as Integer

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
What to copy from the meta information.

**Notes:**
Values:

| JCOPYOPT_NONE | 0 | copy no optional markers |
| JCOPYOPT_COMMENTS | 1 | copy only comment (COM) markers |
| JCOPYOPT_ALL | 2 | copy all optional markers |

(Read and Write property)

#### 100.6.7 DebugLevel as Integer

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The debug level for the jpeg library.

**Notes:** (Read and Write property)
100.6.8  ErrorCode as Integer

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The last error code reported.
**Notes:** (Read and Write property)

100.6.9  ErrorMessage as String

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The last error message reported.
**Notes:** (Read and Write property)

100.6.10  Grayscale as Boolean

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
whether to reduce to grayscale (omit color data).
**Notes:**
If true the a color image is converted to grayscale.
(Read and Write property)

100.6.11  InputFile as Folderitem

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The input file.
**Notes:**
Outputfile and Inputfile should never be identical, because this will corrupt the file.
(Read and Write property)

100.6.12  MaxMemoryToUse as Integer

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Maximum memory to use.
**Notes:**
Unit is bytes.
(Read and Write property)
100.6. CLASS JPEGTRANSFORMATIONMBS

100.6.13 MirrorHorizontal as Boolean

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: whether to use the left-right mirror transformation.
Notes: Only one transformation can be used.
(Read and Write property)

100.6.14 MirrorVertical as Boolean

Notes: Only one transformation can be used.
(Read and Write property)

100.6.15 OptimizeCoding as Boolean

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Optimize Huffman table (smaller file, but slow compression)
Notes: (Read and Write property)

100.6.16 OutputFile as Folderitem

Notes: On Mac OS X, this function uses the short file name (31 characters). So you may consider to save to a temporary file and rename it after the transformation was successfull.

Outputfile and Inputfile should never be identical, because this will corrupt the file.
(Read and Write property)

100.6.17 Progressive as Boolean

CHAPTER 100. JPEG

Notes: (Read and Write property)

100.6.18  **Rotate180 as Boolean**

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
whether to use the 180 clockwise rotation transformation.

**Notes:**
Only one transformation can be used.
(Read and Write property)

100.6.19  **Rotate270 as Boolean**

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
whether to use the 270 clockwise rotation transformation.

**Notes:**
Only one transformation can be used.
(Read and Write property)

100.6.20  **Rotate90 as Boolean**

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
whether to use the 90 clockwise rotation transformation.

**Notes:**
Only one transformation can be used.
(Read and Write property)

100.6.21  **Transpose as Boolean**

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
whether to transpose the image across UR-to-LL axis.

**Notes:**
Only one transformation can be used.
(Read and Write property)
100.6.22 **Transverse as Boolean**

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** whether to transpose the image across UL-to-LR axis. **Notes:** Only one transformation can be used. (Read and Write property)

100.6.23 **Trim as Boolean**

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** whether to drop non-transformable edge blocks. **Notes:** if true, trim partial MCUs as needed. (Read and Write property)

100.6.24 **WarningMessage as String**

MBS Images Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last warning message reported. **Notes:** (Read and Write property)

100.6.25 **Events**

100.6.26 **Error(message as string, ErrorCode as Integer)**

MBS Images Plugin, Plugin Version: 8.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This events reports all error messages from the jpeg library.

100.6.27 **Info(message as string, msglevel as Integer, ErrorCode as Integer)**

MBS Images Plugin, Plugin Version: 8.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This events reports all information messages from the jpeg library. **Notes:** msglevel is one of:
-1: recoverable corrupt-data warning, may want to abort.
0: important advisory messages (always display to user).
1: first level of tracing detail.
2,3,...: successively more detailed tracing messages.

100.6.28 Warning(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This events reports all warning messages from the jpeg library.
100.7. Globals

100.7.1 JPEGStringToPictureMBS(buf as string) as picture

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a picture from a JPEG file.

**Example:**

```vba
dim s as string
dim h as new HTTPSocket
s=h.Get("http://www.monkeybreadsoftware.de/realbasic/images/rbplugin.jpg",90)
Backdrop=JPEGStringToPictureMBS(s)
```

**Notes:** Short version of the "JPEGStringToPicture(buf as string, allowdamaged as Boolean) as picture" method. allowdamaged is set to false.

See also:

- 100.7.2 JPEGStringToPictureMBS(buf as string, allowdamaged as Boolean) as picture

100.7.2 JPEGStringToPictureMBS(buf as string, allowdamaged as Boolean) as picture

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a picture from a JPEG file.

**Example:**

```vba
dim p as Picture = LogoMBS(500)
dim s as string = PictureToJPEGStringMBS(p, 80)
s = leftb(s, lenb(s)-1000) // remove last 1000 bytes
dim q as Picture = JPEGStringToPictureMBS(s, true)
Backdrop = q
```

**Notes:**

This method should read all JPEG file data you can get, but I've only tested it for 32 bit color and 8 bit grayscale.

This method is not depending on any library! It works without QuickTime even on System 7, but as it
contains everything needed this method is around 120 KB big!
(REALbasic’s OpenAsPicture depends on QuickTime)

I wrote it mainly because Realbasic’s built in OpenAsJPEG code crashes badly if your picture is not full
downloaded. For example if you have a webbrowser you can now show JPEGs while you download them.
Normally you can see a good picture already with 50% of the data.

REALbasic’s OpenAsPicture in contrast crashes if the picture is not 100% downloaded or instead of a crash
you get a white picture.

See the "JPEGToString example", "jpeg load crushtest” and "SaveJPEG without QuickTime” examples.
See also:

• 100.7.1 JPEGStringToPictureMBS(buf as string) as picture

100.7.3 PictureToJPEGStringMBS(pic as picture, quality as Integer = 80) as string

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves a picture
into a string using JPEG compression.
**Example:**

```basic
dim p as Picture = LogoMBS(500)
dim s as string = PictureToJPEGStringMBS(p, 80)
dim q as Picture = JPEGStringToPictureMBS(s)
Backdrop = q
```

**Notes:**

This methods saves 32bit pictures to a file using JPEG Compression. Using the parameter you can specify
the quality in range between 25 and 100%

This method is not depending on any library! It works without QuickTime even on System 7, but as it
contains everything needed this method is around 100 KB big!
(REALbasic’s SaveAsJPEG depends on QuickTime)

The picture should be a bitmap picture without alpha channel or mask.
Use the JPEGExporterMBS class for more options.

The returned string has the encoding set to binary (no encoding). If you want to concat the string with
another you should change the encoding, so both strings have the same encoding. If you don’t handle that
RB may convert the JPEG data to UTF8 (Unicode) which will destroy it.

The picture is always encoded with 72 dpi. If you want to set a different dpi value, please use the JPEGExporterMBS class.
Chapter 101

Keychain

101.1 class KeychainItemMBS

101.1.1 class KeychainItemMBS

Function: The class for a keychain item.
Example:

Const kDomain = ”koingosw.com”
Const kUsername = ”koingosoftware”
Const kPath = ””
Const kProtocol = ”http”

Dim xPassword As MemoryBlock = ”testpassword”
Dim xAdded As KeychainItemMBS

Dim dQuery as new Dictionary
dQuery.Value(KeychainManagerMBS.kSecAttrAuthenticationType) = KeychainManagerMBS.kSecAttrAuthenticationTypeHTMLForm
dQuery.Value(KeychainManagerMBS.kSecClass) = KeychainManagerMBS.kSecClassInternetPassword
If Len(kDomain) <> 0 Then dQuery.Value(KeychainManagerMBS.kSecAttrServer) = kDomain
If Len(kUsername) <> 0 Then dQuery.Value(KeychainManagerMBS.kSecAttrAccount) = kUsername
If Len(kProtocol) <> 0 Then dQuery.Value(KeychainManagerMBS.kSecAttrProtocol) = kProtocol
dQuery.Value(KeychainManagerMBS.kSecAttrComment) = ”default”
dQuery.Value(KeychainManagerMBS.kSecAttrDescription) = ”Web form password”
dQuery.Value(KeychainManagerMBS.kSecAttrLabel) = kDomain + ” (” + kUsername + ”)”
dQuery.Value(KeychainManagerMBS.kSecValueData) = xPassword

If Not KeychainManagerMBS.AddItem(KeychainManagerMBS.Default,dQuery) Then
Break

15671
101.1.2 Methods

101.1.3 Delete

101.1.4 ItemClass as string

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Queries the item class for this item. Example:

```vbs
    dim ServiceName as string = "mytest"
    dim Username as string = "myusername"
    dim keychain as KeychainMBS = nil // use default

    dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)
    MsgBox item.itemclass // shows genp for generic password
```

Notes: Lasterror is set.

101.1.5 Keychain as KeychainMBS

101.1.6 PersistentReference as Memoryblock

Unlike normal references, a persistent reference may be stored on disk or passed between processes. You can convert a persistent reference into an ordinary keychain item reference (KeychainItemMBS) by calling the KeychainManagerMBS.ItemFromPersistentReference function. Lasterror is set.

### 101.1.7 Properties

#### 101.1.8 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference. **Notes:** (Read and Write property)

#### 101.1.9 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The last error code returned by one of the methods. **Notes:**

You can use KeychainManagerMBS.ErrorMessageString function to get a text message. The error code -1 is set by plugin if function is missing or parameters are wrong. (Read and Write property)

#### 101.1.10 Account as string

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Convenience property to get/set the account attribute as UTF-8 text. **Example:**

```vbs
Dim ServiceName as String = "mytest"
Dim Username as String = "myusername"
Dim keychain as KeychainMBS = nil ' use default

Dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)
```

MsgBox "Label: " + item.label + vbCrLf
"Comment: " + item.comment + vbCrLf
"Account: " + item.Account

**Notes:**
101.1.11 AttributeData(attributeName as string) as memoryblock

Function: Get or set an attribute as raw data (memoryblock).
Example:

```vbs
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

dim data as MemoryBlock = item.AttributeData(item.kSecCreationDateItemAttr)
dim text as string = DefineEncoding(data, encodings.UTF8)
MsgBox text
```

Notes:
Lasterror is set.
(Read and Write computed property)

101.1.12 AttributeText(attributeName as string) as string

Function: Get or set an attribute as an UTF-8 text.
Example:

```vbs
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

dim text as string = item.AttributeText(item.kSecCreationDateItemAttr)
MsgBox text
```

Notes:
Lasterror is set.
(Read and Write computed property)
101.1. CLASS KEYCHAINITEMMBS

Lasterror is set.
(Read and Write computed property)

101.1.13  Comment as string

Function: Convenience property to get/set the comment attribute as UTF-8 text.
Example:

```vbs
' Example:
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil ' use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

MsgBox "Label: " + item.label + EndOfLine + _
"Comment: " + item.comment + EndOfLine + _
"Account: " + item.Account
```

Notes:
Lasterror is set.
(Read and Write computed property)

101.1.14  Description as string

Function: Convenience property to get/set the description attribute as UTF-8 text.
Example:

```vbs
' Example:
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil ' use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

MsgBox item.Description
```

Notes:
Lasterror is set.
CHAPTER 101. KEYCHAIN

101.1.15  Label as string

**Function:** Convenience property to get/set the label attribute as UTF-8 text.

**Example:**

```vbs
dim items() as KeychainItemMBS = KeychainManagerMBS.AllItems(nil, KeychainManagerMBS.kSecGenericPasswordItemClass)
dim labels() as string

for each item as KeychainItemMBS in items
    labels.append item.label
next

break // see array of labels
```

**Notes:**

Lasterror is set.

(Read and Write computed property)

101.1.16  Password as memoryblock

**Function:** Queries the password or sets a new one.

**Example:**

```vbs
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

dim passwordData as MemoryBlock = item.Password
dim password as string = DefineEncoding(passwordData, encodings.UTF8)
MsgBox Password
```

**Notes:**

(Read and Write computed property)
101.1. **CLASS KEYCHAINITEMMBS**

Lasterror is set.
(Read and Write computed property)

101.1.17 **Service as string**

**Function:** Convenience property to get/set the service attribute as UTF-8 text.

**Example:**

```vba
    dim ServiceName as string = "mytest"
    dim Username as string = "myusername"
    dim keychain as KeychainMBS = nil // use default
    dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)
    MsgBox item.Service
```

**Notes:**

Lasterror is set.
(Read and Write computed property)

101.1.18 **Constants**

101.1.19 **kSecAccountItemAttr = ”acct”**

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.

**Notes:**

Identifies the account attribute.
You use this tag to set or get a string that represents the user account. It also applies to generic, Internet, and AppleShare password items. Keychain strings should use UTF-8 encoding.

101.1.20 **kSecAddressItemAttr = ”addr”**

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.

**Notes:**

Identifies the address attribute.
You use this tag to set or get a value of type string that represents the AppleTalk zone name, or the IP or domain name that represents the server address. This is unique to AppleShare password attributes. Key-
chain strings should use UTF-8 encoding.

101.1.21  kSecAlias = ”alis”

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.  
**Notes:** Indicates an alias.

101.1.22  kSecAuthenticationTypeItemAttr = ”atyp”

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.  
**Notes:** Indicates an alias.  
Identifies the authentication type attribute.  
You use this tag to set or get a value of type SecAuthenticationType that represents the Internet authentication scheme. For possible authentication values, see ”Keychain Authentication Type Constants.” This is unique to Internet password attributes.

101.1.23  kSecCertificateEncoding = ”cenc”

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.  
**Notes:** Indicates a CSSM_CERT_ENCODING type.

101.1.24  kSecCertificateType = ”ctyp”

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.  
**Notes:** Indicates a CSSM_CERT_TYPE type.

101.1.25  kSecCommentItemAttr = ”icmt”

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.  
**Notes:**  
Identifies the comment attribute.  
You use this tag to set or get a string value that represents a user-editable string containing comments for this item. Keychain strings should use UTF-8 encoding.
101.1.26  kSecCreationDateItemAttr = "cdat"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.  
**Notes:**
Identifies the creation date attribute. 
You use this tag to get a string value that represents the date the item was created, expressed in Zulu Time format ("YYYYMMDDhhmmssZ"). This is the native format for stored time values in the CDSA specification (defined as CSSM_DB_ATTRIBUTE_FORMAT_TIME_DATE in the CSSM_DB_ATTRIBUTE_FORMAT enumeration, Section 17.2.6.). When specifying the creation date as input to a function (for example, SecKeychainSearchCreateFromAttributes), you may alternatively provide a numeric value of type UInt32 or SInt64, expressed as seconds since 01 January 1904.

101.1.27  kSecCreatorItemAttr = "crtr"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.  
**Notes:**
Identifies the creator attribute.  
You use this tag to set or get a value of type FourCharCode that represents the item’s creator.

101.1.28  kSecCrlEncoding = "crnc"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.  
**Notes:** Indicates a CSSM_CRL_ENCODING type.

101.1.29  kSecCrlType = "crtp"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.  
**Notes:** Indicates a CSSM_CRL_TYPE type.

101.1.30  kSecCustomIconItemAttr = "cusi"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.  
**Notes:**
Identifies the custom icon attribute.  
Use of this attribute is deprecated. Custom icons for keychains are not supported in OS X.
101.1.31 kSecDescriptionItemAttr = "desc"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.  
***Notes:***  
Identifies the description attribute.  
You use this tag to set or get a string value that represents a user-visible string describing this particular kind of item, for example "disk image password". Keychain strings should use UTF-8 encoding.

101.1.32 kSecGenericItemAttr = "gena"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.  
***Notes:***  
Identifies the generic attribute.  
You use this tag to set or get a value of untyped bytes that represents a user-defined attribute. This is unique to generic password attributes.

101.1.33 kSecInvisibleItemAttr = "invi"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.  
***Notes:***  
Identifies the invisible attribute.  
You use this tag to set or get a value of type Boolean that indicates whether the item is invisible (that is, should not be displayed).

101.1.34 kSecLabelItemAttr = "labl"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.  
***Notes:***  
Identifies the label attribute.  
You use this tag to set or get a string value that represents a user-editable string containing the label for this item. Keychain strings should use UTF-8 encoding.

101.1.35 kSecModDateItemAttr = "mdat"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.  
***Notes:***
Identifies the modification date attribute. You use this tag to get a string value that represents the date the item was created, expressed in Zulu Time format ("YYYYMMDDhhmmssZ"). This is the native format for stored time values in the CDSA specification (defined as CSSM_DB_ATTRIBUTE_FORMAT_TIME_DATE in the CSSM_DB_ATTRIBUTE_FORMAT enumeration, Section 17.2.6.). When specifying the creation date as input to a function (for example, SecKeychainSearchCreateFromAttributes), you may alternatively provide a numeric value of type UInt32 or SInt64, expressed as seconds since 01 January 1904.

101.1.36  \textbf{kSecNegativeItemAttr = "nega"}

\textbf{Notes:}
Identifies the negative attribute. You use this tag to set or get a value of type Boolean that indicates whether there is a valid password associated with this keychain item. This is useful if your application doesn’t want a password for some particular service to be stored in the keychain, but prefers that it always be entered by the user. The item, which is typically invisible and with zero-length data, acts as a placeholder.

101.1.37  \textbf{kSecPathItemAttr = "path"}

\textbf{Notes:}
Identifies the path attribute. You use this tag to set or get a string value that represents the path. This is unique to Internet password attributes. Keychain strings should use UTF-8 encoding.

101.1.38  \textbf{kSecPortItemAttr = "port"}

\textbf{Notes:}
Identifies the port attribute. You use this tag to set or get a value of type UInt32 that represents the Internet port number. This is unique to Internet password attributes.

101.1.39  \textbf{kSecProtocolItemAttr = "ptcl"}

\textbf{Notes:}
Identifies the protocol attribute.
You use this tag to set or get a value of type SecProtocolType that represents the Internet protocol. For possible protocol type values, see "Keychain Protocol Type Constants." This is unique to AppleShare and Internet password attributes.

101.1.40 kSecScriptCodeItemAttr =”scrp”

Notes:
Identifies the script code attribute.
You use this tag to set or get a value of type ScriptCode that represents the script code for all strings. Use of this attribute is deprecated; string attributes should always be stored in UTF-8 encoding.

101.1.41 kSecSecurityDomainItemAttr =”sdmn”

Notes:
Identifies the security domain attribute.
You use this tag to set or get a value that represents the Internet security domain. This is unique to Internet password attributes.

101.1.42 kSecServerItemAttr =”srvr”

Notes:
Identifies the server attribute.
You use this tag to set or get a string that represents the Internet server’s domain name or IP address. This is unique to Internet password attributes. Keychain strings should use UTF-8 encoding.

101.1.43 kSecServiceItemAttr =”svce”

Notes:
Identifies the service attribute.
You use this tag to set or get a string that represents the service associated with this item, for example, ”iTools”. This is unique to generic password attributes. Keychain strings should use UTF-8 encoding.
101.1.44 kSecSignatureItemAttr = ”ssig”

Notes:  
Identifies the server signature attribute.  
You use this tag to set or get a value of type SecAFPServerSignature that represents the server signature block. This is unique to AppleShare password attributes.

101.1.45 kSecTypeItemAttr = ”type”

Notes:  
Identifies the type attribute.  
You use this tag to set or get a value of type FourCharCode that represents the item’s type.

101.1.46 kSecVolumeItemAttr = ”vlme”

Notes:  
Identifies the volume attribute.  
You use this tag to set or get a string value that represents the AppleShare volume. This is unique to AppleShare password attributes. Keychain strings should use UTF-8 encoding.
101.2 module KeychainManagerMBS

101.2.1 module KeychainManagerMBS

Function: The module for global keychain functions.
Example:

```vbscript
// build query
dim query as new Dictionary

dim domain as string = "test.test"
dim username as string = "testuser"

query.value( KeychainManagerMBS.kSecAttrServer ) = Domain
query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassInternetPassword
query.Value( KeychainManagerMBS.kSecMatchLimit ) = KeychainManagerMBS.kSecMatchLimitOne

// Build Dictionary with new values
dim newValues as new Dictionary
newValues.value( KeychainManagerMBS.kSecAttrComment ) = "Just a test"

// and update
if KeychainManagerMBS.UpdateItem(query, newValues) then
    MsgBox "OK"
else
    MsgBox "Failed."
end if
```

101.2.2 Methods

101.2.3 AddGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, password as memoryblock) as KeychainItemMBS

Function: Adds a new generic password to a keychain.
Example:

```vbscript
// add password with password in MemoryBlock
dim Password as string = "mysecret"
dim PasswordData as MemoryBlock = ConvertEncoding(Password, encodings.UTF8)
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
```
dim keychain as KeychainMBS = nil ' use default

call KeychainManagerMBS.AddGenericPassword(keychain, ServiceName, Username, PasswordData)

dim e as Integer = KeychainManagerMBS.LastError
MsgBox str(e) + ": " + KeychainManagerMBS.ErrorMessageString(e)

Notes:

keychain: A reference to the keychain in which to store a generic password. Pass nil to specify the default keychain.
serviceName: The service name.
accountName: The account name.
password: A buffer containing the password data to be stored in the keychain.

Returns the new keychain item.
LastError is set.

The result code errSecNoDefaultKeychain indicates that no default keychain could be found. The result code errSecDuplicateItem indicates that you tried to add a password that already exists in the keychain. The result code errSecDataTooLarge indicates that you tried to add more data than is allowed for a structure of this type. Call ErrorMessageString function to get a human-readable string explaining the result.

This function adds a new generic password to the specified keychain. Required parameters to identify the password are serviceName and accountName, which are application-defined strings.

You can use this function to add passwords for accounts other than the Internet. For example, you might add AppleShare passwords, or passwords for your database or scheduling programs.

This function sets the initial access rights for the new keychain item so that the application creating the item is given trusted access.

This function automatically calls the function Unlock to display the Unlock Keychain dialog box if the keychain is currently locked.
Available in OS X v10.2 and later.
See also:

• 101.2.4 AddGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, password as string) as KeychainItemMBS
101.2.4 AddGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, password as string) as KeychainItemMBS

Function: Adds a new generic password to a keychain.

Example:

```vbs
// add password with password in string
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim Password as string = "mysecret"
dim keychain as KeychainMBS = nil // use default
call KeychainManagerMBS.AddGenericPassword(keychain, ServiceName, Username, Password)
dim e as Integer = KeychainManagerMBS.LastError
MsgBox str(e)+": " +KeychainManagerMBS.ErrorMessageString(e)
```

Notes: Takes UTF-8 text from password string for the password. Else the same as AddGenericPassword with memoryblock.

See also:

- 101.2.3 AddGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, password as memoryblock) as KeychainItemMBS

101.2.5 AddInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as memoryblock) as KeychainItemMBS

Function: Adds a new Internet password to a keychain.

Notes:

keychain: A reference to the keychain in which to store an Internet password. Pass nil to specify the user's default keychain.

serverName: The server name.

securityDomain: The security domain. This parameter is optional. Pass "" if the protocol does not require it.

accountName: The account name.

path: The character string representing the path.

port: The TCP/IP port number. If no specific port number is associated with this password, pass 0.

protocol: The protocol associated with this password. See Protocol Type Constants for a description of possible values.

authenticationType: The authentication scheme used. See Keychain Authentication Type Constants for
a description of possible values. Pass the constant kSecAuthenticationTypeDefault, to specify the default authentication scheme.

password: A buffer containing the password data to be stored in the keychain.

Returns the new keychain item.
LastError is set.

This function adds a new Internet server password to the specified keychain. Required parameters to identify the password are serverName and accountName (you cannot pass "" for both parameters). In addition, some protocols may require an optional securityDomain when authentication is requested. This function optionally returns a reference to the newly added item.

This function sets the initial access rights for the new keychain item so that the application creating the item is given trusted access.

This function automatically calls the function Unlock to display the Unlock Keychain dialog box if the keychain is currently locked.
Available in OS X v10.2 and later.
See also:

- 101.2.6 AddInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as string) as KeychainItemMBS

101.2.6 AddInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as string) as KeychainItemMBS

**Function:** Adds a new Internet password to a keychain.

**Example:**

```vbs
// add password with password in string
dim serverName as string = "mytest.com"
dim Password as string = "mysecret"
dim PasswordData as MemoryBlock = ConvertEncoding(Password, encodings.UTF8)
dim keychain as KeychainMBS = nil // use default
dim securityDomain as string = "ftp://mytest.com"
dim accountName as string = "myusername"
dim path as string = "/test"
dim port as Integer = 22
dim protocol as string = KeychainManagerMBS.kSecAttrProtocolFTP
dim authenticationType as string = KeychainManagerMBS.kSecAttrAuthenticationTypeDefault
```
call KeychainManagerMBS.AddInternetPassword(keychain, serverName, securityDomain, accountName, path, port, protocol, authenticationType, PasswordData)

dim e as Integer = KeychainManagerMBS.LastError
MsgBox str(e)+" : " + KeychainManagerMBS.ErrorMessageString(e)

Notes:
See KeychainManagerMBS.AddInternetPassword for details.
The password is stored as data with UTF-8 encoding.
See also:

- 101.2.5 AddInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as memoryblock) as KeychainItemMBS

101.2.7 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary) as boolean

Function: Adds one or more items to a keychain.
Example:

dim a as new Dictionary

dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim Password as string = "mysecret"
dim PasswordData as MemoryBlock = ConvertEncoding(Password, encodings.UTF8)

a.value( KeychainManagerMBS.kSecAttrAccount ) = Username
a.value( KeychainManagerMBS.kSecAttrService ) = ServiceName
a.value( KeychainManagerMBS.kSecValueData ) = PasswordData
a.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword

if KeychainManagerMBS.AddItem(nil, a) then
    MsgBox "OK"
else
    MsgBox "Failed."
end if

Notes: See other method variant for details.
See also:
101.2. MODULE KEYCHAINMANAGERMBS

- 101.2.8 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary, byref result as Variant) as boolean

101.2.8 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary, byref result as Variant) as boolean

**Function:** Adds one or more items to a keychain.

**Example:**

```vbscript
dim a as new Dictionary

dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim Password as string = "mysecret"
dim PasswordData as MemoryBlock = ConvertEncoding(Password, encodings.UTF8)

a.value( KeychainManagerMBS.kSecAttrAccount ) = Username
a.value( KeychainManagerMBS.kSecAttrService ) = ServiceName
a.value( KeychainManagerMBS.kSecAttrService ) = PasswordData
a.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword

dim r as Variant
if KeychainManagerMBS.AddItem(nil, a, r) then
    dim item as KeychainItemMBS = r
    MsgBox "OK"
else
    MsgBox "Failed."
end if
```

**Notes:**

- attributesDictionary: A dictionary containing an item class key-value pair ("Keychain Item Class Keys and Values") and optional attribute key-value pairs ("Attribute Item Keys and Values") specifying the item’s attribute values.
- result: Optional. On return, a reference to the newly added items. The exact type of the result is based on the values supplied in attributes, as discussed below.
- Lasterror is set.

You specify attributes defining an item by adding key-value pairs to the attributes dictionary. To add multiple items to a keychain at once use the kSecUseItemList key (see section "Item List Key") with an array of items as its value. This is currently only supported for non-password items.
If you want the new keychain item to be shared among multiple applications, include the kSecAttrAccessGroup key in the attributes dictionary. The value of this key must be the name of a keychain access group to which all of the programs that will share this item belong.

When you use Xcode to create an application, Xcode adds an application-identifier entitlement to the application bundle. Keychain Services uses this entitlement to grant the application access to its own keychain items. You can also add a keychain-access-groups entitlement to the application and, in the entitlement property list file, specify an array of keychain access groups to which the application belongs. The property list file can have any name you like (for example, keychain-access-groups.plist). The Xcode build variable CODESIGN_ENTITLEMENTS should contain the SRCROOT relative path to the entitlement property list file. The property list file itself should be a dictionary with a top-level key called keychain-access-groups whose value is an array of strings. If you add such a property-list file to the application bundle, then the access group corresponding to the application-identifier entitlement is treated as the last element in the access groups array. If you do not include the kSecAttrAccessGroup key in the attributes dictionary when you call the AddItem function to add an item to the keychain, the function uses the first access group in the array by default. If there is no kSecAttrAccessGroup key in the attributes dictionary and there is no keychain-access-groups entitlement in the application bundle, then the access group of a newly created item is the value of the application-identifier entitlement.

For example, a development group in Apple might have the ID:

659823F3DC53.com.apple

and the application identifiers of their two applications might be:

659823F3DC53.com.apple.oneappleapp and

659823F3DC53.com.apple.twoappleapp

If both applications add a keychain-access-groups entitlement with one value in the array of access groups:

659823F3DC53.com.apple.netaccount

then both applications would add new keychain items to the 659823F3DC53.com.apple.netaccount access group by default and both applications would have access to keychain items in that group. In addition, each application would still have access to its own private keychain items: OneAppleApp would have access to items in keychain access group 659823F3DC53.com.apple.oneappleapp and TwoAppleApp would have access to items in 659823F3DC53.com.apple.twoappleapp.

Return types ("Search Results Constants") are specified as follows:
To obtain the data of the added item as an object of type Memoryblock, specify the return type key kSecReturnData with a value of true.
To obtain all the attributes of the added item as objects of type Dictionary, specify kSecReturnAttributes with a value of true.
To obtain a reference to the added item of type KeychainItemMBS, SecKeyRef, SecCertificateRef, or SecIdentityRef), specify kSecReturnRef with a value of True. This is the default behavior if a return type is not explicitly specified.
To obtain a persistent reference to the added item (an object of type Memoryblock), specify kSecReturnPersistentRef with a value of True. Note that unlike normal references, a persistent reference may be stored on disk or passed between processes.
If more than one of these return types is specified, the result is returned as an object of type Dictionary containing all the requested data.

Available in OS X v10.6 and later.

See also:

- 101.2.7 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary) as boolean

101.2.9 AllItems(keychain as KeychainMBS, itemClass as string) as KeychainItemMBS()

Function: Queries all items.
Notes:
Keychain: If not nil, searches only this keychain.
ItemClass: The item class to find. For example kSecGenericPasswordItemClass.
Lasterror is set.
Returns array of keychain items.

101.2.10 CopyMatching(Query as dictionary, byref result as Variant) as boolean

Function: Returns one or more keychain items that match a search query, or copies attributes of specific keychain items.
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"

// Build query
dim query as new Dictionary
query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword
query.Value( KeychainManagerMBS.kSecReturnAttributes ) = true
query.Value( KeychainManagerMBS.kSecMatchLimit ) = KeychainManagerMBS.kSecMatchLimitOne
```
CHAPTER 101. KEYCHAIN

query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecAttrService ) = ServiceName

// search the item and show values from attribute dictionary
dim r as Variant
if KeychainManagerMBS.CopyMatching(query, r) then
    if r isa Dictionary then
        dim d as Dictionary = r
        // show values
        MsgBox "Creation Date: " + d.value(KeychainManagerMBS.kSecAttrCreationDate).dateValue.shortdate
        MsgBox "Modification Date: " + d.value(KeychainManagerMBS.kSecAttrModificationDate).dateValue.shortdate
    end if
end if

Notes:

query: A dictionary containing an item class specification and optional attributes for controlling the search. See
result: On return, a reference to the found items. The exact type of the result is based on the search attributes supplied in the query, as discussed below.

Lasterror is set.

You specify attributes defining a search by adding key-value pairs to the query dictionary.

A typical query consists of:

- The class key ("Item Class Key Constant") and a class value constant ("Item Class Value Constants"), which specifies the class of items for which to search.
- One or more attribute key-value pairs ("Attribute Item Keys and Values"), which specify the attribute data to be matched.
- One or more search key-value pairs ("Search Keys"), which specify values that further refine the search.
- A return-type key-value pair ("Search Results Constants"), specifying the type of results you desire.

Return types ("Search Results Constants") are specified as follows:

- To obtain a reference (of type Memoryblock) to the data of a matching item, specify kSecReturnData with a value of true.
• To obtain a dictionary (of type Dictionary) containing the attributes of a matching item, specify kSecReturnAttributes with a value of true.

• To obtain a reference (of type KeychainItemMBS, SecKeyRef, SecCertificateRef, or SecIdentityRef) to a matching item, specify kSecReturnRef with a value of true.

• To obtain a persistent reference (of type Memoryblock) to a matching item, specify kSecReturnPersistentRef with a value of true. Note that unlike normal references, a persistent reference may be stored on disk or passed between processes.

• If more than one return type is specified (for example, kSecReturnRef and kSecReturnAttributes), the results are returned as a dictionary (that is, an object of type Dictionary) containing all the requested data.

By default, this function returns only the first match found. To obtain more than one matching item at a time, specify the search key kSecMatchLimit with a value greater than 1. The result will be an object of type Array containing up to that number of matching items.

Note: You cannot combine the kSecReturnData and kSecMatchLimitAll options when copying password items (items of class kSecInternetPasswordItemClass or kSecGenericPasswordItemClass), because copying each password item could require additional authentication. Instead, request a reference or persistent reference to the items, then request the data for only the specific passwords that you actually require.

By default, this function searches for items in the keychain. To instead provide your own set of items to be filtered by this search query, specify the search key kSecMatchItemList and provide as its value a Array containing items of type SecKeychainItemRef, SecKeyRef, SecCertificateRef, or SecIdentityRef. The objects in the provided array must all be of the same type.

To convert from persistent item references to normal item references, specify the search key kSecMatchItemList with a value that consists of an object of type array referencing an array containing one or more elements of type Memoryblock (the persistent references), and a return-type key of kSecReturnRef whose value is true. The objects in the provided array must all be of the same type.

When you use Xcode to create an application, Xcode adds an application-identifier entitlement to the application bundle. Keychain Services uses this entitlement to grant the application access to its own keychain items. You can also add a keychain-access-groups entitlement to the application and, in the entitlement property list file, specify an array of keychain access groups to which the application belongs. The property list file can have any name you like (for example, keychain-access-groups.plist). The Xcode build variable CODESIGN_ENTITLEMENTS should contain the SRCROOT relative path to the entitlement property list file. The property list file itself should be a dictionary with a top-level key called keychain-access-groups whose value is an array of strings. When you call the SecItemAdd function to add an item to the keychain, you can specify the access group to which that item should belong. By default, the SecItemCopyMatching function searches all the access groups to which the application belongs. However, you can add the kSecAttrAccessGroup key to the search dictionary to specify which access group to search for keychain items.

Availability
Available in OS X v10.6 and later.
101.2.11 CopyMatchingDictionaries(Query as dictionary) as Dictionary()

**Function:** Returns one or more keychain items that match a search query, or copies attributes of specific keychain items.  
**Example:**

```vbnet
// Build query
dim query as new Dictionary
query.value(KeychainManagerMBS.kSecClass) = KeychainManagerMBS.kSecClassGenericPassword
query.Value(KeychainManagerMBS.kSecReturnAttributes) = true
query.Value(KeychainManagerMBS.kSecMatchLimit) = KeychainManagerMBS.kSecMatchLimitAll

// search all items
dim dics() as Dictionary = KeychainManagerMBS.CopyMatchingDictionaries(query)

// pick first
dim dic as Dictionary = dics(0)

// and display
MsgBox "Service: " + dic.Value(KeychainManagerMBS.kSecAttrService) + vbCrLf + "Account: " + dic.Value(KeychainManagerMBS.kSecAttrAccount)
```

**Notes:** This is a variant of CopyMatching which uses kSecReturnAttributes to query array of dictionaries.

101.2.12 CopyMatchingItems(Query as dictionary) as KeychainItemMBS()

**Function:** Returns one or more keychain items that match a search query, or copies attributes of specific keychain items.  
**Example:**

```vbnet
// Build query
dim query as new Dictionary
query.value(KeychainManagerMBS.kSecClass) = KeychainManagerMBS.kSecClassGenericPassword
query.Value(KeychainManagerMBS.kSecMatchLimit) = KeychainManagerMBS.kSecMatchLimitAll
query.Value(KeychainManagerMBS.kSecAttrAccount) = "myusername"

// search all items
dim items() as KeychainItemMBS = KeychainManagerMBS.CopyMatchingItems(query)

if UBound(items) = -1 then
    MsgBox "nothing found."
```
101.2. MODULE KEYCHAINMANAGERMBS

else

    // pick first
    dim item as KeychainItemMBS = items(0)

    // and display
    MsgBox "Service: " +item.Service+EndOfLine+"Account: " +item.Account

end if

Notes: This is a variant of CopyMatching which uses kSecReturnRef to query array of KeychainItemMBS.

101.2.13 Default as KeychainMBS

Function: Retrieves the default keychain.
Example:
MsgBox KeychainManagerMBS.Default.Path

Notes: Lasterror is set.

101.2.14 DeleteItem(Query as Dictionary) as boolean

Function: Deletes items that match a search query.
Example:
dim ServiceName as string = "mytest"
dim Username as string = "myusername"

    // Build query
    dim query as new Dictionary

    query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword
    query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
    query.value( KeychainManagerMBS.kSecAttrService ) = ServiceName

    // search the item and delete it

    if KeychainManagerMBS.DeleteItem(query) then
        MsgBox "Deleted"
    end if
else
MsgBox "Failed."
end if

Notes:

query: A dictionary containing an item class specification and optional attributes for controlling the search. Lasterror is set.

See the discussion section of the CopyMatching function for information about how to construct a search dictionary.

By default, this function deletes all items matching the specified query. You can change this behavior by specifying a key, as follows:

- To delete an item identified by a transient reference, specify the kSecMatchItemList search key with a reference returned by using the kSecReturnRef return type key in a previous call to the SecItemCopyMatching or SecItemAdd functions.
- To delete an item identified by a persistent reference, specify the kSecMatchItemList search key with a persistent reference returned by using the kSecReturnPersistentRef return type key to the SecItemCopyMatching or SecItemAdd functions.
- If more than one of these return keys is specified, the behavior is undefined.

Available in OS X v10.6 and later.

101.2.15 DomainDefault(domain as Integer) as KeychainMBS

Function: Retrieves the default keychain from a specified preference domain.
Example:
dim SystemKeychain as KeychainMBS = KeychainManagerMBS.DomainDefault(KeychainManagerMBS.kSecPreferencesDomainSystem)
msgbox SystemKeychain.name

Notes:

domain: The preference domain from which you wish to retrieve the default keychain. See Preference Domain Constants for possible domain values.
Returns the keychain object of the default keychain in the specified preference domain. Lasterror is set.

A preference domain is a set of security-related preferences, such as the default keychain and the current keychain search list. Use this function if you want to retrieve the default keychain for a specific preference domain. Use the KeychainManagerMBS.Default function if you want the default keychain for the current preference domain. See the PreferenceDomain function for a discussion of current and default preference domains. Available in OS X v10.3 and later.

101.2.16 DomainSearchList(domain as Integer) as KeychainMBS()

Function: Retrieves the keychain search list for a specified preference domain.
Example:

```vbnet
dim SearchList() as KeychainMBS = KeychainManagerMBS.DomainSearchList(KeychainManagerMBS.kSecPreferencesDomainUser)
dim names() as String
for each k as KeychainMBS in SearchList
    names.Append k.Name
next
MsgBox Join(names, EndOfLine)
```

Notes:

domain: The preference domain from which you wish to retrieve the keychain search list. See Preference Domain Constants for possible domain values.

Returns the keychain search list of the specified preference domain. Lasterror is set.

A preference domain is a set of security-related preferences, such as the default keychain and the current keychain search list. Use this function if you want to retrieve the keychain search list for a specific preference domain. Use the SearchList function if you want the keychain search list for the current preference domain. See the PreferenceDomain function for a discussion of current and default preference domains. Available in OS X v10.3 and later.
CHAPTER 101. KEYCHAIN

101.2.17  ErrorMessageString(error as Integer) as string

Function: Returns a string explaining the meaning of a security result code.
Notes:
status: A result code of type OSStatus or CSSM_RETURN, returned by a security or CSSM function.

Returns a human-readable string describing the result, or empty string if no string is available for the specified result code.
Available in OS X v10.5 and later.

101.2.18  FindGenericItem(keychain as KeychainMBS, serviceName as string, accountName as string) as KeychainItemMBS

Function: Finds the first generic keychain item based on the attributes passed.
Example:
  dim ServiceName as string = "mytest"
  dim Username as string = "myusername"
  dim keychain as KeychainMBS = nil // use default

  dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)
  MsgBox "Label: " + item.label + EndOfLine +
  "Comment: " + item.comment + EndOfLine +
  "Account: " + item.Account

Notes: Same as KeychainManagerMBS.FindGenericPassword, but returns item instead of password.

101.2.19  FindGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, byref password as memoryblock) as KeychainItemMBS

Function: Finds the first generic password based on the attributes passed.
Notes:
keychain: A reference to a single keychain, or nil to search the user’s default keychain search list.
serviceName: The service name.
accountName: The account name.
password: A memoryblock that holds the password data.

Returns the item object of the generic password.
LastError is set.

This function finds the first generic password item that matches the attributes you provide. Most attributes are optional; you should pass only as many as you need to narrow the search sufficiently for your application's intended use. This function optionally returns a reference to the found item.

This function decrypts the password before returning it to you. If the calling application is not in the list of trusted applications, the user is prompted before access is allowed. If the access controls for this item do not allow decryption, the function returns the errSecAuthFailed result code.

This function automatically calls the function Unlock to display the Unlock Keychain dialog box if the keychain is currently locked.

101.2.20 FindInternetItem(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string) as KeychainItemMBS

**Function:** Finds the first Internet password item based on the attributes passed.
**Notes:** See KeychainManagerMBS.FindInternetPassword for details.

101.2.21 FindInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, byref password as memoryblock) as KeychainItemMBS

**Function:** Finds the first Internet password based on the attributes passed.

**Notes:**
keychain: A single keychain or nil to search the user's default keychain search list.
serverName: The server name.
securityDomain: The security domain. This parameter is optional, as not all protocols require it. Pass "" if it is not required.
accountName: The account name.
path: The string representing the path.
port: The TCP/IP port number. Pass 0 to ignore the port number.
protocol: The protocol associated with this password. See Keychain Protocol Type Constants for a description of possible values.
authenticationType: The authentication scheme used. See Keychain Authentication Type Constants for a description of possible values. Pass the constant kSecAuthenticationTypeDefault, to specify the default authentication scheme.
password: On return, a memoryblock containing the password data.

Returns the item object of the Internet password.
LastError is set.

This function finds the first Internet password item that matches the attributes you provide. This function optionally returns a reference to the found item.

This function decrypts the password before returning it to you. If the calling application is not in the list of trusted applications, the user is prompted before access is allowed. If the access controls for this item do not allow decryption, the function returns the errSecAuthFailed result code.

This function automatically calls the function Unlock to display the Unlock Keychain dialog box if the keychain is currently locked.
Available in OS X v10.2 and later.

### 101.2.22 GetPassword(Query as dictionary, byref result as Memoryblock) as boolean

**Function:** Returns one keychain item that match a search query.
**Example:**

```vbs
// build query
dim query as new Dictionary
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecAttrService ) = ServiceName
query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword

// query password
dim passwordData as MemoryBlock
if KeychainManagerMBS.GetPassword(query, passwordData) then
    // and show it
    dim password as string = DefineEncoding(passwordData, Encodings.utf8)
```
MsgBox "OK: " + password
else
    MsgBox "Failed."
end if

Notes:
This is a variant of CopyMatching which uses kSecReturnData to query the data of one keychain item. Returns password of first item found in result parameter. If you expect text, be sure to use DefineEncoding to define as encodings.UTF8.

101.2.23 ItemFromPersistentReference(data as memoryblock) as KeychainItemMBS

Function: Provides a keychain item reference, given a persistent reference.
Notes:
Returns a keychain item reference for the item for which you provided a persistent reference. Available in OS X v10.6 and later.

101.2.24 kSecAttrAccess as string

Function: One of the keychain item attribute keys.
Notes:
A SecAccessRef object describing the access control settings for this item. Available in OS X v10.7 and later.

101.2.25 kSecAttrAccessControl as string

Function: Specifies a dictionary key whose value is SecAccessControl instance which contains access control conditions for item.
Notes:
Available on Mac OS X 10.10 and newer.
IMPORTANT: This attribute is mutually exclusive with kSecAttrAccess attribute.
101.2.26 kSecAttrAccessGroup as string

Function: Specifies a dictionary key whose value is a CFStringRef indicating which access group an item is in.
Notes: Available on Mac OS X 10.9 and newer.
The access groups that a particular application has membership in are determined by two entitlements for that application. The application-identifier entitlement contains the application’s single access group, unless there is a keychain-access-groups entitlement present. The latter has as its value a list of access groups; the first item in this list is the default access group. Unless a specific access group is provided as the value of kSecAttrAccessGroup when SecItemAdd is called, new items are created in the application’s default access group. Specifying this attribute in SecItemCopyMatching, SecItemUpdate, or SecItemDelete calls limits the search to the specified access group (of which the calling application must be a member to obtain matching results.) To share keychain items between multiple applications, each application must have a common group listed in its keychain-access-groups entitlement, and each must specify this shared access group name as the value for the kSecAttrAccessGroup key in the dictionary passed to SecItem functions.

101.2.27 kSecAttrAccessible as string

Function: Specifies a dictionary key whose value indicates when your application needs access to an item’s data.
Notes: You should choose the most restrictive option that meets your application’s needs to allow the system to protect that item in the best way possible. See the kSecAttrAccessible* methods for a list of values which can be specified.
IMPORTANT: This attribute is currently not supported for OS X keychain items, unless the kSecAttrSynchronized attribute is also present. If both attributes are specified on either OS X or iOS, the value for the kSecAttrAccessible key may only be one whose name does not end with ”ThisDeviceOnly”, as those cannot sync to another device.

101.2.28 kSecAttrAccessibleAfterFirstUnlock as string

Function: One of the values for kSecAttrAccessible key.
Notes: Item data can only be accessed once the device has been unlocked after a restart. This is recommended for items that need to be accessible by background applications. Items with this attribute will migrate to a new device when using encrypted backups.
101.2.29  kSecAttrAccessibleAfterFirstUnlockThisDeviceOnly as string

**Function:** One of the values for kSecAttrAccessible key.  
**Notes:**  
Item data can only be accessed once the device has been unlocked after a restart.  
This is recommended for items that need to be accessible by background applications. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device these items will be missing.  
Available on Mac OS X 10.9 and newer.

101.2.30  kSecAttrAccessibleAlways as string

**Function:** One of the values for kSecAttrAccessible key.  
**Notes:**  
Item data can always be accessed regardless of the lock state of the device. This is not recommended for anything except system use. Items with this attribute will migrate to a new device when using encrypted backups.  
Available on Mac OS X 10.9 and newer.

101.2.31  kSecAttrAccessibleAlwaysThisDeviceOnly as string

**Function:** One of the values for kSecAttrAccessible key.  
**Notes:**  
Item data can always be accessed regardless of the lock state of the device. This option is not recommended for anything except system use. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing.  
Available on Mac OS X 10.9 and newer.

101.2.32  kSecAttrAccessibleWhenPasscodeSetThisDeviceOnly as string

**Function:** One of the values for kSecAttrAccessible key.  
**Notes:**  
Item data can only be accessed while the device is unlocked. This is recommended for items that only need to be accessible while the application is in the foreground and requires a passcode to be set on the device. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device,
these items will be missing. This attribute will not be available on devices without a passcode. Disabling
the device passcode will cause all previously protected items to be deleted.
Available on Mac OS X 10.9 and newer.

101.2.33 kSecAttrAccessibleWhenUnlocked as string

Function: One of the values for kSecAttrAccessible key.
Notes:
Item data can only be accessed while the device is unlocked. This is recommended for items that only need
be accessible while the application is in the foreground. Items with this attribute will migrate to a new device
when using encrypted backups.
Available on Mac OS X 10.9 and newer.

101.2.34 kSecAttrAccessibleWhenUnlockedThisDeviceOnly as string

Function: One of the values for kSecAttrAccessible key.
Notes:
Item data can only be accessed while the device is unlocked. This is recommended for items that only need
be accessible while the application is in the foreground. Items with this attribute will never migrate to a new
device, so after a backup is restored to a new device, these items will be missing.
Available on Mac OS X 10.9 and newer.

101.2.35 kSecAttrAccount as string

Function: One of the keychain item attribute keys.
Notes:
Account attribute key.
The corresponding value is of type String and contains an account name. Items of class kSecClassGeneric-
Password and kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.

101.2.36 kSecAttrApplicationLabel as string

Function: One of the keychain item attribute keys.
Notes:

Application label attribute key.
The corresponding value is of type String and contains a label for this item. This attribute is different from
the kSecAttrLabel attribute, which is intended to be human-readable. This attribute is used to look up a
key programmatically; in particular, for keys of class kSecAttrKeyClassPublic and kSecAttrKeyClassPrivate,
the value of this attribute is the hash of the public key.
Available in OS X v10.6 and later.

101.2.37  kSecAttrApplicationTag as string

Function: One of the keychain item attribute keys.
Notes:

Private tag attribute key.
The corresponding value is of type Memoryblock and contains private tag data.
Available in OS X v10.6 and later.

101.2.38  kSecAttrAuthenticationType as string

Function: One of the keychain item attribute keys.
Notes:

Authentication type attribute key.
The corresponding value is of type integer and denotes the authentication scheme for this item (see "Au-
thentication Type Values").
Available in OS X v10.6 and later.

101.2.39  kSecAttrAuthenticationTypeDefault as string

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes:

The default authentication type.
Available in OS X v10.6 and later.
101.2.40  kSecAttrAuthenticationTypeDPA as string

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes: Distributed Password authentication.
Available in OS X v10.6 and later.

101.2.41  kSecAttrAuthenticationTypeHTMLForm as string

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes: HTML form based authentication.
Available in OS X v10.6 and later.

101.2.42  kSecAttrAuthenticationTypeHTTPBasic as string

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes: HTTP Basic authentication.
Available in OS X v10.6 and later.

101.2.43  kSecAttrAuthenticationTypeHTTPDigest as string

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes: HTTP Digest Access authentication.
Available in OS X v10.6 and later.

101.2.44  kSecAttrAuthenticationTypeMSN as string

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes:
Microsoft Network default authentication.
Available in OS X v10.6 and later.

101.2.45  kSecAttrAuthenticationTypeNTLM as string

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes:
Windows NT LAN Manager authentication.
Available in OS X v10.6 and later.

101.2.46  kSecAttrAuthenticationTypeRPA as string

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes:
Remote Password authentication.
Available in OS X v10.6 and later.

101.2.47  kSecAttrCanDecrypt as string

Function: One of the keychain item attribute keys.
Notes:
Decryption attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to decrypt data.
Available in OS X v10.6 and later.

101.2.48  kSecAttrCanDerive as string

Function: One of the keychain item attribute keys.
Notes:
Derivation attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to derive another key.
CHAPTER 101. KEYCHAIN

Available in OS X v10.6 and later.

101.2.49 kSecAttrCanEncrypt as string

Function: One of the keychain item attribute keys.
Notes:
Encryption attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to encrypt data.
Available in OS X v10.6 and later.

101.2.50 kSecAttrCanSign as string

Function: One of the keychain item attribute keys.
Notes:
Signature attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to create a digital signature.
Available in OS X v10.6 and later.

101.2.51 kSecAttrCanUnwrap as string

Function: One of the keychain item attribute keys.
Notes:
Unwrap attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to unwrap another key.
Available in OS X v10.6 and later.

101.2.52 kSecAttrCanVerify as string

Function: One of the keychain item attribute keys.
Notes:
Signature verification attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to verify a digital signature.
Available in OS X v10.6 and later.

101.2.53  kSecAttrCanWrap as string

Function: One of the keychain item attribute keys.
Notes:
Wrap attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to wrap another key.
Available in OS X v10.6 and later.

101.2.54  kSecAttrCertificateEncoding as string

Function: One of the keychain item attribute keys.
Notes:
Certificate encoding attribute key.
The corresponding value is of type integer and denotes the certificate encoding (see the CSSM_CERT_ENCODING enumeration in cssmtype.h). Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

101.2.55  kSecAttrCertificateType as string

Function: One of the keychain item attribute keys.
Notes:
Certificate type attribute key.
The corresponding value is of type integer and denotes the certificate type (see the CSSM_CERT_TYPE enumeration in cssmtype.h). Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.
101.2.56 kSecAttrComment as string

Function: One of the keychain item attribute keys.
Notes:
Comment attribute key.
The corresponding value is of type string and contains the user-editable comment for this item.
available in OS X v10.6 and later.

101.2.57 kSecAttrCreationDate as string

Function: One of the keychain item attribute keys.
Notes:
Creation date key.
The corresponding value is of type date and represents the date the item was created. Read only.
available in OS X v10.6 and later.

101.2.58 kSecAttrCreator as string

Function: One of the keychain item attribute keys.
Notes:
Creator attribute key.
The corresponding value is of type integer and represents the item’s creator. This number is the unsigned
integer representation of a four-character code (for example, ‘aCrt’).
available in OS X v10.6 and later.

101.2.59 kSecAttrDescription as string

Function: One of the keychain item attribute keys.
Notes:
Description attribute key.
The corresponding value is of type String and specifies a user-visible string describing this kind of item (for example, "Disk image password").
available in OS X v10.6 and later.
101.2. MODULE KEYCHAINMANAGERMBS

101.2.60 kSecAttrEffectiveKeySize as string

Function: One of the keychain item attribute keys.
Notes:
Effective number of bits attribute key.
The corresponding value is of type Integer and indicates the effective number of bits in this cryptographic key. For example, a DES key has a kSecAttrKeySizeInBits of 64, but a kSecAttrEffectiveKeySize of 56 bits. Available in OS X v10.6 and later.

101.2.61 kSecAttrGeneric as string

Function: One of the keychain item attribute keys.
Notes:
Generic attribute key.
The corresponding value is of type Memoryblock and contains a user-defined attribute. Items of class kSecClassGenericPassword have this attribute. Available in OS X v10.6 and later.

101.2.62 kSecAttrIsInvisible as string

Function: One of the keychain item attribute keys.
Notes:
Invisible attribute key.
The corresponding value is of type boolean and is true if the item is invisible (that is, should not be displayed). Available in OS X v10.6 and later.

101.2.63 kSecAttrIsNegative as string

Function: One of the keychain item attribute keys.
Notes:
Negative attribute key.
The corresponding value is of type Boolean and indicates whether there is a valid password associated with this keychain item. This is useful if your application doesn’t want a password for some particular service to be stored in the keychain, but prefers that it always be entered by the user.
101.2.64 kSecAttrIsPermanent as string

Function: One of the keychain item attribute keys.
Notes:
Permanence attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key is to be stored permanently.
Available in OS X v10.6 and later.

101.2.65 kSecAttrIssuer as string

Function: One of the keychain item attribute keys.
Notes:
Issuer attribute key.
The corresponding value is of type Date and contains the X.500 issuer name of a certificate. Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

101.2.66 kSecAttrKeyClass as string

Function: One of the keychain item attribute keys.
Notes:
Key class attribute key.
The corresponding value is of type CFStringRef and specifies a type of cryptographic key. Possible values are listed in "Key Class Values." Read only.
Available in OS X v10.6 and later.

101.2.67 kSecAttrKeyClassPrivate as string

Function: Values that can be used with the kSecAttrKeyClass attribute key.
Notes:
101.2. **MODULE KEYCHAINMANAGERMBS**

A private key of a public-private pair.
Available in OS X v10.6 and later.

101.2.68  **kSecAttrKeyClassPublic as string**

**Function:** Values that can be used with the kSecAttrKeyClass attribute key.
**Notes:**
A public key of a public-private pair.
Available in OS X v10.6 and later.

101.2.69  **kSecAttrKeyClassSymmetric as string**

**Function:** Values that can be used with the kSecAttrKeyClass attribute key.
**Notes:**
A private key used for symmetric-key encryption and decryption.
Available in OS X v10.6 and later.

101.2.70  **kSecAttrKeySizeInBits as string**

**Function:** One of the keychain item attribute keys.
**Notes:**
Number of bits attribute key.
The corresponding value is of type Integer and indicates the total number of bits in this cryptographic key.
Compare with kSecAttrEffectiveKeySize.
Available in OS X v10.6 and later.

101.2.71  **kSecAttrKeyType as string**

**Function:** One of the keychain item attribute keys.
**Notes:**
Algorithm attribute key.
The corresponding value is of type integer and indicates the algorithm associated with this cryptographic key (see the CSSM_ALGORITHMS enumeration in cssmtype.h and "Key Type Values").
101.2.72 kSecAttrKeyType3DES as string

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Values that can be used with the kSecAttrKeyType attribute key.

Notes:
DES algorithm.
Available in OS X v10.7 and later.

101.2.73 kSecAttrKeyTypeAES as string

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Values that can be used with the kSecAttrKeyType attribute key.

Notes:
AES algorithm.
Available in OS X v10.7 and later.

101.2.74 kSecAttrKeyTypeCAST as string

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Values that can be used with the kSecAttrKeyType attribute key.

Notes:
CAST algorithm.
Available in OS X v10.7 and later.

101.2.75 kSecAttrKeyTypeDES as string

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Values that can be used with the kSecAttrKeyType attribute key.

Notes:
DES algorithm.
Available in OS X v10.7 and later.

101.2.76 kSecAttrKeyTypeDSA as string

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Values that can be used with the kSecAttrKeyType attribute key.

Notes:
101.2. MODULE KEYCHAINMANAGERMBS

DSA algorithm.
Available in OS X v10.7 and later.

101.2.77 kSecAttrKeyTypeEC as string

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes:
Elliptic curve algorithm.
Available in OS X v10.9 and later.

101.2.78 kSecAttrKeyTypeECDSA as string

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes:
Elliptic curve DSA algorithm.
Available in OS X v10.7 and later.

101.2.79 kSecAttrKeyTypeRC2 as string

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes:
RC2 algorithm.
Available in OS X v10.7 and later.

101.2.80 kSecAttrKeyTypeRC4 as string

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes:
RC4 algorithm.
Available in OS X v10.7 and later.
101.2.81 kSecAttrKeyTypeRSA as string

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes:
RSA algorithm.
Available in OS X v10.6 and later.

101.2.82 kSecAttrLabel as string

Function: One of the keychain item attribute keys.
Notes:
Label attribute key.
The corresponding value is of type String and contains the user-visible label for this item.
Available in OS X v10.6 and later.

101.2.83 kSecAttrModificationDate as string

Function: One of the keychain item attribute keys.
Notes:
Modification date key.
The corresponding value is of type date and represents the last time the item was updated. Read only.
Available in OS X v10.6 and later.

101.2.84 kSecAttrPath as string

Function: One of the keychain item attribute keys.
Notes:
Path attribute key.
The corresponding value is of type String and represents a path, typically the path component of the URL.
Items of class kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.
101.2.85 kSecAttrPort as string

Function: One of the keychain item attribute keys.
Notes:
Port attribute key.
The corresponding value is of type integer and represents an Internet port number. Items of class kSecClass-
InternetPassword have this attribute.
Available in OS X v10.6 and later.

101.2.86 kSecAttrPRF as string

Function: One of the keychain item attribute keys.
Notes:
Pseudorandom function attribute. Possible values are described in "kSecAttrPRF Value Constants."
Available in OS X v10.7 and later.

101.2.87 kSecAttrPRFHmacAlgSHA1 as string

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDerive-
FromPassword.
Notes:
Use the SHA1 algorithm.
Available in OS X v10.7 and later.

101.2.88 kSecAttrPRFHmacAlgSHA224 as string

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDerive-
FromPassword.
Notes:
Use the SHA224 algorithm.
Available in OS X v10.7 and later.
101.2.89 kSecAttrPRFHmacAlgSHA256 as string

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDerive-FromPassword.
Notes:
Use the SHA256 algorithm.
Available in OS X v10.7 and later.

101.2.90 kSecAttrPRFHmacAlgSHA384 as string

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDerive-FromPassword.
Notes:
Use the SHA384 algorithm.
Available in OS X v10.7 and later.

101.2.91 kSecAttrPRFHmacAlgSHA512 as string

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDerive-FromPassword.
Notes:
Use the SHA512 algorithm.
Available in OS X v10.7 and later.

101.2.92 kSecAttrProtocol as string

Function: One of the keychain item attribute keys.
Notes:
Protocol attribute key.
The corresponding value is of type integer and denotes the protocol for this item (see "Protocol Values").
Items of class kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.
101.2.93  kSecAttrProtocolAFP as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
AFP over TCP.
Available in OS X v10.6 and later.

101.2.94  kSecAttrProtocolAppleTalk as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
AFP over AppleTalk.
Available in OS X v10.6 and later.

101.2.95  kSecAttrProtocolDAAP as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
DAAP protocol.
Available in OS X v10.6 and later.

101.2.96  kSecAttrProtocolEPPC as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
Remote Apple Events.
Available in OS X v10.6 and later.

101.2.97  kSecAttrProtocolFTP as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
FTP protocol.
Available in OS X v10.6 and later.

101.2.98 kSecAttrProtocolFTPAccount as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
A client side FTP account.
Available in OS X v10.6 and later.

101.2.99 kSecAttrProtocolFTPProxy as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
FTP proxy.
Available in OS X v10.6 and later.

101.2.100 kSecAttrProtocolFTPS as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
FTP over TLS/SSL.
Available in OS X v10.6 and later.

101.2.101 kSecAttrProtocolHTTP as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
HTTP protocol.
Available in OS X v10.6 and later.
101.2. MODULE KEYCHAINMANAGERMBS

101.2.102 kSecAttrProtocolHTTPProxy as string

**Function:** Values that can be used with the kSecAttrProtocol attribute key.
**Notes:**

HTTP proxy.
Available in OS X v10.6 and later.
101.2.103  kSecAttrProtocolHTTPS as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
HTTP over TLS/SSL.
Available in OS X v10.6 and later.

101.2.104  kSecAttrProtocolHTTPSProxy as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
HTTPS proxy.
Available in OS X v10.6 and later.

101.2.105  kSecAttrProtocolIMAP as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
IMAP protocol.
Available in OS X v10.6 and later.

101.2.106  kSecAttrProtocolIMAPS as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
IMAP over TLS/SSL.
Available in OS X v10.6 and later.

101.2.107  kSecAttrProtocolIPP as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
IPP protocol.
Available in OS X v10.6 and later.

101.2.108  kSecAttrProtocolIRC as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
IRC protocol.
Available in OS X v10.6 and later.

101.2.109  kSecAttrProtocolIRCS as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
IRC over TLS/SSL.
Available in OS X v10.6 and later.

101.2.110  kSecAttrProtocolLDAP as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
LDAP protocol.
Available in OS X v10.6 and later.

101.2.111  kSecAttrProtocolLDAPS as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
LDAP over TLS/SSL.
Available in OS X v10.6 and later.
101.2.112  kSecAttrProtocolNNTP as string

**Function:** Values that can be used with the kSecAttrProtocol attribute key.

**Notes:**

NNTP protocol.
Available in OS X v10.6 and later.

101.2.113  kSecAttrProtocolNNTPS as string

**Function:** Values that can be used with the kSecAttrProtocol attribute key.

**Notes:**

NNTP over TLS/SSL.
Available in OS X v10.6 and later.

101.2.114  kSecAttrProtocolPOP3 as string

**Function:** Values that can be used with the kSecAttrProtocol attribute key.

**Notes:**

POP3 protocol.
Available in OS X v10.6 and later.

101.2.115  kSecAttrProtocolPOP3S as string

**Function:** Values that can be used with the kSecAttrProtocol attribute key.

**Notes:**

POP3 over TLS/SSL.
Available in OS X v10.6 and later.

101.2.116  kSecAttrProtocolRTSP as string

**Function:** Values that can be used with the kSecAttrProtocol attribute key.

**Notes:**
RTSP protocol.
Available in OS X v10.6 and later.

101.2.117  kSecAttrProtocolRTSPProxy as string

**Function:** Values that can be used with the kSecAttrProtocol attribute key.
**Notes:**
RTSP proxy.
Available in OS X v10.6 and later.

101.2.118  kSecAttrProtocolSMB as string

**Function:** Values that can be used with the kSecAttrProtocol attribute key.
**Notes:**
SMB protocol.
Available in OS X v10.6 and later.

101.2.119  kSecAttrProtocolSMTP as string

**Function:** Values that can be used with the kSecAttrProtocol attribute key.
**Notes:**
SMTP protocol.
Available in OS X v10.6 and later.

101.2.120  kSecAttrProtocolSOCKS as string

**Function:** Values that can be used with the kSecAttrProtocol attribute key.
**Notes:**
SOCKS protocol.
Available in OS X v10.6 and later.
101.2.121 kSecAttrProtocolSSH as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
SSH protocol.
Available in OS X v10.6 and later.

101.2.122 kSecAttrProtocolTelnet as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
Telnet protocol.
Available in OS X v10.6 and later.

101.2.123 kSecAttrProtocolTelnetS as string

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:
Telnet over TLS/SSL.
Available in OS X v10.6 and later.

101.2.124 kSecAttrPublicKeyHash as string

Function: One of the keychain item attribute keys.
Notes:
Public key hash attribute key.
The corresponding value is of type memoryblock and contains the hash of a certificate’s public key. Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.
101.2.125  kSecAttrRounds as string

**Function:** One of the keychain item attribute keys.
**Notes:**
The number of rounds for the pseudorandom function specified by kSecAttrPRF.
Available in OS X v10.7 and later.

101.2.126  kSecAttrSalt as string

**Function:** One of the keychain item attribute keys.
**Notes:**
A memoryblock object containing the salt to use for this key.
Available in OS X v10.7 and later.

101.2.127  kSecAttrSecurityDomain as string

**Function:** One of the keychain item attribute keys.
**Notes:**
Security domain attribute key.
The corresponding value is of type String and represents the Internet security domain. Items of class kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.

101.2.128  kSecAttrSerialNumber as string

**Function:** One of the keychain item attribute keys.
**Notes:**
Serial number attribute key.
The corresponding value is of type Date and contains the serial number data of a certificate. Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.
101.2.129  kSecAttrServer as string

Function: One of the keychain item attribute keys.
Notes:
Server attribute key.
The corresponding value is of type String and contains the server's domain name or IP address. Items of
class kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.

101.2.130  kSecAttrService as string

Function: One of the keychain item attribute keys.
Notes:
Service attribute key.
The corresponding value is a string of type String that represents the service associated with this item. Items
of class kSecClassGenericPassword have this attribute.
Available in OS X v10.6 and later.

101.2.131  kSecAttrSubject as string

Function: One of the keychain item attribute keys.
Notes:
Subject attribute key.
The corresponding value is of type CFDataRef and contains the X.500 subject name of a certificate. Items
of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

101.2.132  kSecAttrSubjectKeyID as string

Function: One of the keychain item attribute keys.
Notes:
Subject key ID attribute key.
The corresponding value is of type date and contains the subject key ID of a certificate. Items of class
kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

101.2.133 kSecAttrSynchronizable as string

Function: Specifies a dictionary key whose value is a Boolean indicating whether the item in question can be synchronized.

Notes:

To add a new item which can be synced to other devices, or to obtain synchronizable results from a query, supply this key with a value of true. If the key is not supplied, or has a value of false, then no synchronizable items will be added or returned. A predefined value, kSecAttrSynchronizableAny, may be provided instead of true if both synchronizable and non-synchronizable results are desired.

IMPORTANT: Specifying the kSecAttrSynchronizable key has several caveats:

- Updating or deleting items using the kSecAttrSynchronizable key will affect all copies of the item, not just the one on your local device. Be sure that it makes sense to use the same password on all devices before deciding to make a password synchronizable.

- Only password items can currently be synchronized. Keychain syncing is not supported for certificates or cryptographic keys.

- Items stored or obtained using the kSecAttrSynchronizable key cannot specify SecAccessRef-based access control with kSecAttrAccess. If a password is intended to be shared between multiple applications, the kSecAttrAccessGroup key must be specified, and each application using this password must have a 'keychain-access-groups' entitlement with the specified access group value.

- Items stored or obtained using the kSecAttrSynchronizable key may not also specify a kSecAttrAccessible value which is incompatible with syncing (namely, those whose names end with "ThisDeviceOnly").

- Items stored or obtained using the kSecAttrSynchronizable key cannot be specified by reference. You must pass kSecReturnAttributes and/or kSecReturnData to retrieve results; kSecReturnRef is currently not supported for synchronizable items.

- Persistent references to synchronizable items should be avoided; while they may work locally, they cannot be moved between devices, and may not resolve if the item is modified on some other device.

- When specifying a query that uses the kSecAttrSynchronizable key, search keys are limited to the item’s class and attributes. The only search constant which may be used is kSecMatchLimit; other constants using the kSecMatch prefix are not supported at this time.

Available on Mac OS X 10.9 and newer.
101.2.134 kSecAttrSynchronizableAny as string

**Function:** Specifies that both synchronizable and non-synchronizable results should be returned from this query.
**Notes:**
This may be used as a value for the kSecAttrSynchronizable dictionary key in a call to SecItemCopyMatching, SecItemUpdate, or SecItemDelete.
Available on Mac OS X 10.9 and newer.

101.2.135 kSecAttrType as string

**Function:** One of the keychain item attribute keys.
**Notes:**
Type attribute key.
The corresponding value is of type integer and represents the item's type. This number is the unsigned integer representation of a four-character code (for example, 'aTyp').
Available in OS X v10.6 and later.

101.2.136 kSecClass as string

**Function:** Key constant used to set the item class value in a search dictionary.
**Notes:**
Dictionary key whose value is the item's class code.
Possible values for this key are listed in Item Class Value Constants.
Available in OS X v10.6 and later.

101.2.137 kSecClassCertificate as string

**Function:** One of the values used with the kSecClass key in a search dictionary.
**Notes:**
Certificate item.
The following attribute types ("Attribute Item Keys and Values") can be used with an item of this type:
kSecAttrAccessible
kSecAttrAccessGroup
101.2. MODULE KEYCHAINMANAGERMBS

kSecAttrCertificateType
kSecAttrCertificateEncoding
kSecAttrLabel
kSecAttrSubject
kSecAttrIssuer
kSecAttrSerialNumber
kSecAttrSubjectKeyID
kSecAttrPublicKeyHash

Available in OS X v10.7 and later.

101.2.138 kSecClassGenericPassword as string

**Function:** One of the values used with the kSecClass key in a search dictionary.

**Notes:**
Generic password item.

The following attribute types ("Attribute Item Keys and Values") can be used with an item of this type:

kSecAttrAccessible
kSecAttrAccessGroup
kSecAttrCreationDate
kSecAttrModificationDate
kSecAttrDescription
kSecAttrComment
kSecAttrCreator
kSecAttrType
kSecAttrLabel
kSecAttrIsInvisible
kSecAttrIsNegative
kSecAttrAccount
kSecAttrService
kSecAttrGeneric

Available in OS X v10.7 and later.

101.2.139 kSecClassIdentity as string

**Function:** One of the values used with the kSecClass key in a search dictionary.
Notes:

Identity item.

An identity is a certificate together with its associated private key. Because an identity is the combination of a private key and a certificate, this class shares attributes of both kSecClassKey and kSecClassCertificate.

Available in OS X v10.7 and later.

101.2.140 kSecClassInternetPassword as string

Function: One of the values used with the kSecClass key in a search dictionary.
Notes:

Internet password item.
The following attribute types (“Attribute Item Keys and Values”) can be used with an item of this type:

kSecAttrAccessible
kSecAttrAccessGroup
kSecAttrCreationDate
kSecAttrModificationDate
kSecAttrDescription
kSecAttrComment
kSecAttrCreator
kSecAttrType
kSecAttrLabel
kSecAttrIsInvisible
kSecAttrIsNegative
kSecAttrAccount
kSecAttrSecurityDomain
kSecAttrServer
kSecAttrProtocol
kSecAttrAuthenticationType
kSecAttrPort
kSecAttrPath

Available in OS X v10.6 and later.
101.2.141 kSecClassKey as string

Function: One of the values used with the kSecClass key in a search dictionary.
Notes:
Cryptographic key item.
The following attribute types (“Attribute Item Keys and Values”) can be used with an item of this type:

kSecAttrAccessible
kSecAttrAccessGroup
kSecAttrKeyClass
kSecAttrLabel
kSecAttrApplicationLabel
kSecAttrIsPermanent
kSecAttrApplicationTag
kSecAttrKeyType
kSecAttrKeySizeInBits
kSecAttrEffectiveKeySize
kSecAttrCanEncrypt
kSecAttrCanDecrypt
kSecAttrCanDerive
kSecAttrCanSign
kSecAttrCanVerify
kSecAttrCanWrap
kSecAttrCanUnwrap

Available in OS X v10.7 and later.

101.2.142 kSecMatchCaseInsensitive as string

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:
Case sensitivity attribute key.
The corresponding value is of type Boolean. If this value is False, or if this attribute is not provided, then case-sensitive string matching is performed.
Available in OS X v10.6 and later.
101.2.143  kSecMatchDiacriticInsensitive as string

**Function:** Keys used to set search attributes in a keychain search dictionary.
**Notes:**
Case sensitivity attribute key.
The corresponding value is of type Boolean. If this value is False, or if this attribute is not provided, then
diacritic-sensitive string matching is performed.
Available in OS X v10.7 and later.

101.2.144  kSecMatchEmailAddressIfPresent as string

**Function:** Keys used to set search attributes in a keychain search dictionary.
**Notes:**
Email address attribute key.
The corresponding value is of type string and contains an RFC822 email address. If provided, returned
certificates or identities are limited to those that either contain the address or do not contain any email
address.
Available in OS X v10.6 and later.

101.2.145  kSecMatchIssuers as string

**Function:** Keys used to set search attributes in a keychain search dictionary.
**Notes:**
Issuers attribute key.
The corresponding value is of type array, where the array consists of X.500 names of type Memoryblock. If
provided, returned certificates or identities are limited to those whose certificate chain contains one of the
issuers provided in this list.
Available in OS X v10.6 and later.

101.2.146  kSecMatchItemList as string

**Function:** Keys used to set search attributes in a keychain search dictionary.
**Notes:**
Item list attribute key.
To provide your own set of items to be filtered by a search query rather than searching the keychain, specify
this search key in a call to the SecItemCopyMatching function with a value that consists of an object of type array where the array contains either KeychainItemMBS, SecKeyRef, SecCertificateRef, SecIdentityRef, or memoryblock items. The objects in the provided array must all be of the same type.

To convert from persistent item references to normal item references, specify this search key in a call to the CopyMatching function with a value of type array where the array contains one or more CFDataRef elements (the persistent references), and a return-type key of kSecReturnRef whose value is True.

To delete an item identified by a transient reference, specify the kSecMatchItemList search key in a call to the SecItemDelete function with a reference returned by using the kSecReturnRef return type key in a previous call to the CopyMatching or SecItemAdd functions.

To delete an item identified by a persistent reference, specify the kSecMatchItemList search key in a call to the SecItemDelete function with a persistent reference returned by using the kSecReturnPersistentRef return type key to the CopyMatching or SecItemAdd functions.

Available in OS X v10.6 and later.

101.2.147 kSecMatchLimit as string

Function: Keys used to set search attributes in a keychain search dictionary.

Notes:

Match limit attribute key.
The corresponding value is of type Integer. If provided, this value specifies the maximum number of results to return or otherwise act upon. For a single item, specify kSecMatchLimitOne. To specify all matching items, specify kSecMatchLimitAll. The default behavior is function-dependent.

Available in OS X v10.6 and later.

101.2.148 kSecMatchLimitAll as string

Function: Keys used to set search attributes in a keychain search dictionary.

Notes:

An unlimited number of results may be returned; used as a value for the kSecMatchLimit attribute key.

Available in OS X v10.6 and later.

101.2.149 kSecMatchLimitOne as string

Function: Keys used to set search attributes in a keychain search dictionary.

Notes:

Results are limited to the first item found; used as a value for the kSecMatchLimit attribute key.

Available in OS X v10.6 and later.
101.2.150 kSecMatchPolicy as string

**Function:** Keys used to set search attributes in a keychain search dictionary.
**Notes:**
Match policy attribute key.
The corresponding value is of type SecPolicyRef. If provided, returned certificates or identities must verify
with this policy.
Available in OS X v10.6 and later.

101.2.151 kSecMatchSearchList as string

**Function:** Keys used to set search attributes in a keychain search dictionary.
**Example:**
```vba
// We pass a keychain for searching only in this keychain
dim keychains() as KeychainMBS = KeychainManagerMBS.SearchList
dim keychain as KeychainMBS = keychains(1) // we pick second keychain
dim keychainname as string = keychain.name

// Build query
dim query as new Dictionary
query.value(KeychainManagerMBS.kSecClass) = KeychainManagerMBS.kSecClassGenericPassword
query.Value(KeychainManagerMBS.kSecReturnAttributes) = true
query.Value(KeychainManagerMBS.kSecMatchLimit) = KeychainManagerMBS.kSecMatchLimitAll
query.Value(KeychainManagerMBS.kSecMatchSearchList) = array(keychain)

// search all items
dim dics() as Dictionary = KeychainManagerMBS.CopyMatchingDictionaries(query)

// pick first
dim dic as Dictionary = dics(0)

// and display
MsgBox "Service: " + dic.Value(KeychainManagerMBS.kSecAttrService) + EndOfLine + "Account: " + dic.Value(KeychainManagerMBS.kSecAttrAccount)
```

**Notes:** Available in OS X v10.6 and later.
101.2.152  kSecMatchSubjectContains as string

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:
Subject attribute key.
The corresponding value is of type string. If provided, returned certificates or identities are limited to those
whose subject contains this string.
Available in OS X v10.6 and later.

101.2.153  kSecMatchSubjectEndsWith as string

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:
Subject attribute key.
The corresponding value is of type String. If provided, returned certificates or identities are limited to those
whose subject ends with this string.
Available in OS X v10.7 and later.

101.2.154  kSecMatchSubjectStartsWith as string

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:
Subject attribute key.
The corresponding value is of type String. If provided, returned certificates or identities are limited to those
whose subject starts with this string.
Available in OS X v10.7 and later.

101.2.155  kSecMatchSubjectWholeString as string

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:
Subject attribute key.
The corresponding value is of type String. If provided, returned certificates or identities are limited to those
whose subject is exactly equal to this string.
Available in OS X v10.7 and later.

101.2.156  kSecMatchTrustedOnly as string

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:
Trusted anchor attribute key.
The corresponding value is of type Boolean. If this attribute is provided with a value of True, only certificates that can be verified back to a trusted anchor are returned. If this value is False or the attribute is not provided, then both trusted and untrusted certificates may be returned.
Available in OS X v10.6 and later.

101.2.157  kSecMatchValidOnDate as string

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:
Valid-on-date attribute key.
The corresponding value is of type Date. If provided, returned keys, certificates or identities are limited to those that are valid for the given date. Pass a value of nil to indicate the current date.
Available in OS X v10.6 and later.

101.2.158  kSecMatchWidthInsensitive as string

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:
Case sensitivity attribute key.
The corresponding value is of type Boolean. If this value is False, or if this attribute is not provided, then width-sensitive string matching is performed (for example, the ASCII character a does not match the UTF-8 full-width letter a (U+FF41).
Available in OS X v10.7 and later.

101.2.159  kSecReturnAttributes as string

Function: Keys used to specify the type of results that should be returned by the CopyMatching or
AddItem function.

Notes:

Return attributes attribute key.
The corresponding value is of type Boolean. A value of True indicates that a dictionary of the (unencrypted) attributes of an item should be returned in the form of a Dictionary.
Available in OS X v10.6 and later.

101.2.160 kSecReturnData as string

Function: Keys used to specify the type of results that should be returned by the CopyMatching or AddItem function.
Notes:

Return data attribute key.
The corresponding value is of type Boolean. A value of True indicates that the data of an item should be returned in the form of a Memoryblock. For keys and password items, data is secret (encrypted) and may require the user to enter a password for access.
Available in OS X v10.6 and later.

101.2.161 kSecReturnPersistentRef as string

Function: Keys used to specify the type of results that should be returned by the CopyMatching or AddItem function.
Notes:

Return persistent reference attribute key. A persistent reference to a credential can be stored on disk for later use or passed to other processes.
The corresponding value is of type Boolean. A value of True indicates that a persistent reference to an item (Memoryblock) should be returned.
Available in OS X v10.6 and later.

101.2.162 kSecReturnRef as string

Function: Keys used to specify the type of results that should be returned by the CopyMatching or AddItem function.
Notes:

Return reference attribute key.
The corresponding value is of type Boolean. A value of True indicates that a reference should be returned.
Depending on the item class requested, the returned references may be of type KeychainItemMBS, SecKeyRef, SecCertificateRef, SecIdentityRef, or Memoryblock. Available in OS X v10.6 and later.

101.2.163  

**kSecUseItemList as string**

**Function:** Key used to specify a list of items to search or add.  
**Notes:**  
Item list key.  
The corresponding value is of type CFArrayRef, where the array contains either KeychainItemMBS, SecKeyRef, SecCertificateRef, SecIdentityRef, or (for persistent item references) Memoryblock items. If provided, this array is treated as the set of all possible items to search (or to add if the function being called is AddItem). The items in the array must all be of the same type. Available in OS X v10.6 and later.

101.2.164  

**kSecUseKeychain as string**

**Function:** Key used to specify a list of items to search or add.  
**Notes:**  
Keychain reference key.  
Specifies a SecKeychainRef object that references the keychain to which AddItem should add the provided items. Available in OS X v10.7 and later.

101.2.165  

**kSecValueData as string**

**Function:** Keys used in the results dictionary for CopyMatching or AddItem, indicating the type of values returned.  
**Notes:**  
Data attribute key. A persistent reference to a credential can be stored on disk for later use or passed to other processes. The corresponding value is of type memoryblock. For keys and password items, the data is secret (encrypted) and may require the user to enter a password for access. Available in OS X v10.6 and later.  
You can specify zero or more of these types depending on the function you are calling.
101.2.166 kSecValuePersistentRef as string

Function: Keys used in the results dictionary for CopyMatching or AddItem, indicating the type of values returned.
Notes:
Persistent reference attribute key.
The corresponding value is of type CFDataRef. The bytes in this memory block can be stored by the caller and used on a subsequent invocation of the application (or even a different application) to retrieve the item referenced by it.
Available in OS X v10.6 and later.
You can specify zero or more of these types depending on the function you are calling.

101.2.167 kSecValueRef as string

Function: Keys used in the results dictionary for CopyMatching or AddItem, indicating the type of values returned.
Notes:
Reference attribute key.
The corresponding value, depending on the item class requested, is of type KeychainItemMBS, SecKeyRef, SecCertificateRef, or SecIdentityRef.
Available in OS X v10.6 and later.
You can specify zero or more of these types depending on the function you are calling.

101.2.168 LockAll

Function: Locks all keychains belonging to the current user.
Notes:
Your application should not call this function unless you are responding to a user’s request to lock a keychain. In general, you should leave the keychain unlocked so that the user does not have to unlock it again in another application.
LastError is set.

101.2.169 Open(file as folderitem) as KeychainMBS

Function: Opens a keychain.
Example:
dim file as FolderItem = SpecialFolder.Desktop.Child("test.keychain")
dim k as KeychainMBS = KeychainManagerMBS.Open(file)

MsgBox k.Name

Notes:
You may use this function to retrieve a pointer to a keychain object given the path of the keychain. You do not need to close the keychain, but you should release the memory that the pointer occupies when you are finished with it. Lasterror is set.
See also:

- 101.2.170 Open(path as string) as KeychainMBS

101.2.170 Open(path as string) as KeychainMBS

Function: Opens a keychain.
Example:

dim file as FolderItem = SpecialFolder.Desktop.Child("test.keychain")
dim k as KeychainMBS = KeychainManagerMBS.Open(file.UnixpathMBS)

MsgBox k.Name

Notes:
You may use this function to retrieve a pointer to a keychain object given the path of the keychain. You do not need to close the keychain, but you should release the memory that the pointer occupies when you are finished with it. Lasterror is set.
See also:

- 101.2.169 Open(file as folderitem) as KeychainMBS

101.2.171 PreferenceDomain as Integer

Function: Gets or sets the current keychain preference domain.
Example:

dim n as Integer = KeychainManagerMBS.PreferenceDomain
Select case n
case KeychainManagerMBS.kSecPreferencesDomainCommon
    MsgBox "common"
end Select

case KeychainManagerMBS.kSecPreferencesDomainDynamic
    MsgBox "dynamic"
end Select

case KeychainManagerMBS.kSecPreferencesDomainSystem
    MsgBox "system"
end Select

case KeychainManagerMBS.kSecPreferencesDomainUser
    MsgBox "user"
end Select
else
    MsgBox "unknown"
end Select

Notes:

A preference domain is a set of security-related preferences, such as the default keychain and the current keychain search list. The default preference domain for system daemons (that is, for daemons running in the root session) is the system domain. The default preference domain for all other programs is the user domain. Use the PreferenceDomain function to change the preference domain.

This function changes the preference domain for all subsequent function calls; for example, if you change from the system domain to the user domain and then call Lock specifying nil for the keychain, the function locks the default system keychain rather than the default user keychain. You might want to use this function, for example, when launching a system daemon from a user session so that the daemon uses system preferences rather than user (Read and Write computed property)

101.2.172 SearchCreateFromAttributes(keychain as KeychainMBS, itemClass as string, AttributeKeys() as string, AttributeValues() as string) as KeychainSearchMBS

Example:

dim AttributeKeys() as string
dim AttributeValues() as string
dim keychain as KeychainMBS = nil // default

dim search as KeychainSearchMBS = KeychainManagerMBS.SearchCreateFromAttributes(keychain, "genp", AttributeKeys, AttributeValues)
dim items() as KeychainItemMBS

dim item as KeychainItemMBS = search.NextItem
while item<>Nil
items.Append item
item = search.NextItem
wend

MsgBox str(UBound(items) + 1) + ” items found.”

Notes:

keychains: An array of keychains to search, a single keychain, or nil to search the user’s current keychain search list. Use the function SearchList to retrieve the user’s default search list.
itemClass: The keychain item class. See ”Keychain Item Class Constants” for valid constants.
AttributeKeys: List of zero or more keychain attribute keys to match.
AttributeValues: List of zero or more keychain attribute values to match.

Returns the current search object.
Lasterror is set.

Each item stored in the keychain contains data (such as a certificate), which is indexed by the item’s attributes. You look up an item in a keychain by its attributes. If you find a match, you can then retrieve the item’s data. Use the search object created by this function as input to the SecKeychainSearchCopyNext function to find a a keychain item.

To find and obtain data from a password keychain item, use the FindInternetPassword or FindGenericPassword function.
See also:

- 101.2.173 SearchCreateFromAttributes(keychains() as KeychainMBS, itemClass as string, AttributeKeys() as string, AttributeValues() as string) as KeychainSearchMBS

101.2.173 SearchCreateFromAttributes(keychains() as KeychainMBS, itemClass as string, AttributeKeys() as string, AttributeValues() as string) as KeychainSearchMBS

Function: Creates a search object matching a list of zero or more attributes.
Example:

dim AttributeKeys() as string
dim AttributeValues() as string

dim keychains() as KeychainMBS

AttributeKeys.Append KeychainManagerMBS.kSecAttrAccount
AttributeValues.Append ”myusername”
keychains = KeychainManagerMBS.DomainSearchList(KeychainManagerMBS.kSecPreferencesDomainUser)

dim search as KeychainSearchMBS = KeychainManagerMBS.SearchCreateFromAttributes(keychains, "genp", AttributeKeys, AttributeValues)
dim items() as KeychainItemMBS

dim item as KeychainItemMBS = search.NextItem
while item<>Nil
    items.Append item
    item = search.NextItem
wend

MsgBox str(UBound(items)+1)+" items found."

Notes:

keychains: An array of keychains to search, a single keychain, or nil to search the user's current keychain search list. Use the function SearchList to retrieve the user's default search list.
itemClass: The keychain item class. See "Keychain Item Class Constants" for valid constants.
AttributeKeys: List of zero or more keychain attribute keys to match.
AttributeValues: List of zero or more keychain attribute values to match.

Returns the current search object.
Lasterror is set.

Each item stored in the keychain contains data (such as a certificate), which is indexed by the item's attributes. You look up an item in a keychain by its attributes. If you find a match, you can then retrieve the item's data. Use the search object created by this function as input to the SecKeychainSearchCopyNext function to find a a keychain item.

To find and obtain data from a password keychain item, use the FindInternetPassword or FindGenericPassword function.
See also:

• 101.2.172 SearchCreateFromAttributes(keychain as KeychainMBS, itemClass as string, AttributeKeys() as string, AttributeValues() as string) as KeychainSearchMBS

101.2.174 SearchList as KeychainMBS()

Function: Retrieves a keychain search list.
Example:
dim SearchList() as KeychainMBS = KeychainManagerMBS.SearchList
dim names() as String

for each k as KeychainMBS in SearchList
    names.Append k.Name
next

MsgBox Join(names, EndOfLine)

Notes:
Returns keychain search list.
Lasterror is set.

101.2.175  SetDomainDefault(domain as Integer, keychain as KeychainMBS)

Function: Sets the default keychain for a specified preference domain.
Notes:
domain: The preference domain for which you wish to set the default keychain.
keychain: A reference to the keychain you wish to set as default in the specified preference domain.

Lasterror is set.
A preference domain is a set of security-related preferences, such as the default keychain and the current
keychain search list. Use this function if you want to set the default keychain for a specific preference domain.
Use the SetDefault function if you want to set the default keychain for the current preference domain. See
the PreferenceDomain function for a discussion of current and default preference domains.

101.2.176  SetDomainSearchList(domain as Integer, list() as KeychainMBS)

Function: Sets the keychain search list for a specified preference domain.
Notes:
domain: The preference domain for which you wish to set the default keychain search list. See "Keychain
Preference Domain Constants" for possible domain values.
searchList: A keychain search list to set in the preference domain.

Lasterror is set.
A preference domain is a set of security-related preferences, such as the default keychain and the current
keychain search list. Use this function if you want to set the keychain search list for a specific preference
domain. Use the SetSearchList function if you want to set the keychain search list for the current preference domain. See the PreferenceDomain function for a discussion of current and default preference domains.

## 101.2.177 SetSearchList(list() as KeychainMBS)

**Function:** Specifies the list of keychains to use in the default keychain search list.

**Notes:**
- searchList: An array of keychain references specifying the list of keychains to use in the default keychain search list. Passing an empty array clears the search list.
- Lasterror is set.

The default keychain search list is used by several functions; see for example SearchCreateFromAttributes, FindInternetPassword, or FindGenericPassword. To obtain the current default keychain search list, use the SearchList function.

The default keychain search list is displayed as the keychain list in the Keychain Access utility. If you use SetSearchList to change the keychain search list, the list displayed in Keychain Access changes accordingly.

## 101.2.178 UpdateItem(Query as Dictionary, attributesToUpdate as dictionary) as boolean

**Function:** Modifies items that match a search query.

**Example:**
```vbscript
// build query
dim query as new Dictionary
dim ServiceName as string = "mytest"
dim Username as string = "myusername"

query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecAttrService ) = ServiceName
query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword

// Build Dictionary with new values
dim newValues as new Dictionary
newValues.value( KeychainManagerMBS.kSecAttrComment ) = "Just a test"

// and update
if KeychainManagerMBS.UpdateItem(query, newValues) then
```
MsgBox "OK"
else
MsgBox "Failed."
end if

Notes:
query: A dictionary containing an item class specification and optional attributes for controlling the search. Specify the items whose values you wish to change. See "Search Keys" for a description of currently defined search attributes.
attributesToUpdate: A dictionary containing the attributes whose values should be changed, along with the new values. Only real keychain attributes are permitted in this dictionary (no "meta" attributes are allowed.) See "Attribute Item Keys and Values" for a description of currently defined value attributes.

Lasterror is set.
See the discussion section of the CopyMatching function for information about how to construct a search dictionary.

Available in OS X v10.6 and later.

101.2.179   UserInteractionAllowed as boolean

Function: Indicates whether Keychain Services functions that normally display a user interaction are allowed to do so.
Example:
MsgBox str(KeychainManagerMBS.UserInteractionAllowed)
KeychainManagerMBS.UserInteractionAllowed = false
MsgBox str(KeychainManagerMBS.UserInteractionAllowed)

Notes:
Lasterror is set.
A Boolean value indicating whether user interaction is permitted. If true, user interaction is allowed, and Keychain Services functions that display a user interface can do so as appropriate.
(Read and Write computed property)
101.2. MODULE KEYCHAINMANAGERMBS

101.2.180  Version as Integer

**Function:** Determines the version of Keychain Services installed on the user's system.
**Example:**
```
MsgBox str(KeychainManagerMBS.Version)
```

**Notes:**
Your application can call the Version function to find out which version of Keychain Services is installed on
the user's system.
Lasterror is set.

101.2.181  Properties

101.2.182  LastError as Integer

**Function:** The last error code returned by one of the methods.
**Notes:**
You can use KeychainManagerMBS.ErrorMessageString function to get a text message.
The error code -1 is set by plugin if function is missing or parameters are wrong.
(Read only property)

101.2.183  Constants

101.2.184  ErrorAuthorizationFailed = -25293

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the error codes.
**Notes:** The user name or passphrase you entered is not correct.

101.2.185  ErrorDuplicatedItem = -25299

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the error codes.
**Notes:** The specified item already exists in the keychain.
101.2.186  **ErrorFailedToAllocated = -108**

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the error codes.  
**Notes:** Failed to allocate memory.

101.2.187  **ErrorFailedToDecode = -26275**

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the error codes.  
**Notes:** Unable to decode the provided data.

101.2.188  **ErrorInteractionNotAllowed = -25308**

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the error codes.  
**Notes:** User interaction is not allowed.

101.2.189  **ErrorInvalidParameter = -50**

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the error codes.  
**Notes:** Invalid Parameters.

101.2.190  **ErrorNone = 0**

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the error codes.  
**Notes:** No error.

101.2.191  **ErrorNotAvailable = -25291**

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the error codes.  
**Notes:** No keychain is available. You may need to restart your computer.

101.2.192  **ErrorNotFound = -25300**

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the error codes.  
**Notes:** The specified item could not be found in the keychain.
101.2.193 kSecAppleSharePasswordItemClass = "ashp"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** Specifies a keychain item’s class code. **Notes:** Indicates that the item is an AppleShare password.

101.2.194 kSecGenericPasswordItemClass = "genp"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** Specifies a keychain item’s class code. **Notes:** Indicates that the item is a generic password.

101.2.195 kSecInternetPasswordItemClass = "inet"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** Specifies a keychain item’s class code. **Notes:** Indicates that the item is an Internet password.

101.2.196 kSecPreferencesDomainCommon = 2

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** Defines constants for the keychain preference domains. **Notes:** Indicates the preferences are common to everyone. Available in OS X v10.3 and later.

101.2.197 kSecPreferencesDomainDynamic = 3

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** Defines constants for the keychain preference domains. **Notes:** Indicates a dynamic search list (typically provided by removable keychains such as smart cards). Available in OS X v10.4 and later.

101.2.198 kSecPreferencesDomainSystem = 1

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** Defines constants for the keychain preference domains. **Notes:**
Indicates the system or daemon preference domain preferences. Available in OS X v10.3 and later.

101.2.199  kSecPreferencesDomainUser = 0

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** Defines constants for the keychain preference domains. **Notes:**

Indicates the user preference domain preferences. Available in OS X v10.3 and later.
101.3. CLASS KEYCHAINMBS

101.3 class KeychainMBS

101.3.1 class KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a keychain.

101.3.2 Methods

101.3.3 AddGenericPassword(serviceName as string, accountName as string, password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Adds a new generic password to a keychain. **Notes:** See AddGenericPassword in KeychainManagerMBS for details. See also:

- 101.3.4 AddGenericPassword(serviceName as string, accountName as string, password as string) as KeychainItemMBS

101.3.4 AddGenericPassword(serviceName as string, accountName as string, password as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Adds a new generic password to a keychain. **Notes:** See AddGenericPassword in KeychainManagerMBS for details. See also:

- 101.3.3 AddGenericPassword(serviceName as string, accountName as string, password as memoryblock) as KeychainItemMBS

101.3.5 AddInternetPassword(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Adds a new Internet password to a keychain. **Notes:** See KeychainManagerMBS.AddInternetPassword for details. See also:
101.3.6  AddInternetPassword(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as string) as KeychainItemMBS

**Function:** Adds a new Internet password to a keychain.

**Notes:** See KeychainManagerMBS.AddInternetPassword for details.

See also:

- 101.3.5 AddInternetPassword(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as memory-block) as KeychainItemMBS

101.3.7  AllItems(itemClass as string) as KeychainItemMBS()

**Function:** Queries all items.

**Notes:**

Keychain: If not nil, searches only this keychain.

ItemClass: The item class to find. For example kSecGenericPasswordItemClass.

Lasterror is set.

Returns array of keychain items.

101.3.8  Delete

**Function:** Deletes one or more keychains from the default keychain search list, and removes the keychain itself if it is a file.

**Notes:**

Lasterror is set.

The keychain may be a file stored locally, a smart card, or retrieved from a network server using non-file-based database protocols. This function deletes the keychain only if it is a local file.
101.3.9  **FindGenericItem** *(serviceName as string, accountName as string)* as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Finds the first generic keychain item based on the attributes passed. **Notes:** See KeychainManagerMBS.FindGenericItem for details.

101.3.10  **FindGenericPassword** *(serviceName as string, accountName as string, byref password as memoryblock)* as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Finds the first generic password based on the attributes passed. **Notes:** See KeychainManagerMBS.FindGenericPassword for details.

101.3.11  **FindInternetItem** *(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string)* as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Finds the first Internet password item based on the attributes passed. **Notes:** See KeychainManagerMBS.FindInternetPassword for details.

101.3.12  **FindInternetPassword** *(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, byref password as memoryblock)* as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Finds the first Internet password based on the attributes passed. **Notes:** See KeychainManagerMBS.FindInternetPassword for details.

101.3.13  **IsUnlocked** as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if keychain is unlocked. **Example:**

MsgBox str(KeychainManagerMBS.Default.IsUnlocked)
Notes: Lasterror is set.

101.3.14 Lock

Function: Locks a keychain.
Notes:
Your application should not call this function unless you are responding to a user's request to lock a keychain. In general, you should leave the keychain unlocked so that the user does not have to unlock it again in another application. Lasterror is set.

101.3.15 Name as string

Function: Determines the file name of a keychain.
Example:
MsgBox KeychainManagerMBS.Default.Name
Notes:
Similar to path, but name without file extension only. Lasterror is set.

101.3.16 Path as string

Function: Determines the path of a keychain.
Example:
MsgBox KeychainManagerMBS.Default.Path
Notes:
Returns POSIX path of the keychain as a UTF-8 encoded string. Lasterror is set.
101.3. **CLASS KEYCHAINMBS**

101.3.17 **SetDefault**

**Function:** Sets the default keychain.  
**Notes:**

Lasterror is set.

In most cases, your application should not need to set the default keychain, because this is a choice normally made by the user. You may call this function to change where a password or other keychain items are added, but since this is a user choice, you should set the default keychain back to the user specified keychain when you are done.

101.3.18 **Status as Integer**

**Function:** Retrieves status information of a keychain.  
**Example:**

```vbscript
dim values() as string

dim DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default

dim status as Integer = DefaultKeychain.status

if BitwiseAnd(status, KeychainMBS.StatusUnlocked) = KeychainMBS.StatusUnlocked then
    values.Append "unlocked"
else
    values.Append "locked"
end if

if BitwiseAnd(status, KeychainMBS.StatusReadable) = KeychainMBS.StatusReadable then
    values.Append "readable"
else
    values.Append "not readable"
end if

if BitwiseAnd(status, KeychainMBS.StatusWritable) = KeychainMBS.StatusWritable then
    values.Append "writable"
else
    values.Append "not writable"
end if

MsgBox Join(values, ", ")
```

**Notes:**

Lasterror is set.
CHAPTER 101. KEYCHAIN

This function retrieves the status of a specified keychain. You can use this function to determine if the keychain is unlocked, readable, or writable. Note that the lock status of a keychain can change at any time due to user or system activity. Because the system automatically prompts the user to unlock a keychain when necessary, you do not usually have to worry about the lock status of a keychain.

101.3.19 Unlock

Function: Unlocks a keychain.
Notes:
In most cases, your application does not need to call this function directly, since most Keychain Services functions that require an unlocked keychain do so for you. If your application needs to verify that a keychain is unlocked, call the function GetStatus.
Lasterror is set.
See also:

  • 101.3.20 Unlock(password as string)

101.3.20 Unlock(password as string)

Function: Unlocks a keychain.
Notes:
password: The password to use.
In most cases, your application does not need to call this function directly, since most Keychain Services functions that require an unlocked keychain do so for you. If your application needs to verify that a keychain is unlocked, call the function GetStatus.
Lasterror is set.
See also:

  • 101.3.19 Unlock

101.3.21 Properties

101.3.22 Handle as Integer

Notes: (Read and Write property)
101.3. CLASS KEYCHAINMBS

101.3.23 Lasterror as Integer

**Function:** The last error code returned by one of the methods.  
**Notes:**
You can use KeychainManagerMBS.ErrorMessageString function to get a text message.  
The error code -1 is set by plugin if function is missing or parameters are wrong.  
(Read and Write property)

101.3.24 Settings as KeychainSettingsMBS

**Function:** Obtains or sets a keychain's settings.  
**Example:**
```vbscript
dim DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default  
dim settings as KeychainSettingsMBS = DefaultKeychain.Settings  
MsgBox str(settings.useLockInterval)
```

**Notes:**  
Lasterror is set.  
(Read and Write computed property)

101.3.25 Constants

101.3.26 StatusReadable = 2

**Function:** One of the status constants.  
**Notes:** Indicates the keychain is readable.

101.3.27 StatusUnlocked = 1

**Function:** One of the status constants.  
**Notes:** Indicates the keychain is unlocked.
101.3.28 StatusWritable = 4

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the status constants. **Notes:** Indicates the keychain is writable.
101.4  class KeychainSearchMBS

101.4.1  class KeychainSearchMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a running keychain search.

101.4.2  Methods

101.4.3  NextItem as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Finds the next keychain item matching the given search criteria.  
**Notes:**  
Returns object of the next matching keychain item, if any.

Each item stored in the keychain contains data (such as a certificate), which is indexed by the item’s attributes. Use the SearchCreateFromAttributes function to specify attributes to search for. If the NextItem function finds a match, you can use the methods and properties on the item.

To find and obtain data from a password keychain item, use the FindInternetPassword or FindGenericPassword function.  
LastError is set.

101.4.4  Properties

101.4.5  Handle as Integer

**Notes:** (Read and Write property)

101.4.6  LastError as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The last error code returned by one of the methods.  
**Notes:**  
You can use KeychainManagerMBS.ErrorMessageString function to get a text message.
The error code -1 is set by plugin if function is missing or parameters are wrong.
(Read and Write property)
101.5  class KeychainSettingsMBS

101.5.1  class KeychainSettingsMBS

**Function:** The class for information about keychain settings.

**Example:**
```vbs
dim DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
dim settings as KeychainSettingsMBS = DefaultKeychain.Settings
MsgBox str(settings.useLockInterval)
```

101.5.2  Properties

101.5.3  lockInterval as Integer

**Function:** An unsigned 32-bit integer representing the number of seconds before the keychain locks. If you set useLockInterval to false, set lockInterval to INT_MAX to indicate that the keychain never locks.

**Example:**
```vbs
dim SystemKeychain as KeychainMBS = KeychainManagerMBS.DomainDefault(KeychainManagerMBS.kSecPreferencesDomainSystem)
dim settings as KeychainSettingsMBS = SystemKeychain.Settings
MsgBox str(settings.lockInterval)
```

**Notes:** (Read and Write property)

101.5.4  lockOnSleep as Boolean

**Function:** A Boolean value indicating whether the keychain locks when the system sleeps.

**Example:**
```vbs
dim DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
dim settings as KeychainSettingsMBS = DefaultKeychain.Settings
MsgBox str(settings.lockOnSleep)
```

**Notes:** (Read and Write property)
101.5.5  **useLockInterval as Boolean**

**Function:** A Boolean value indicating whether the keychain automatically locks after a certain period of time.
**Example:**
```vba
dim DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
dim settings as KeychainSettingsMBS = DefaultKeychain.Settings
MsgBox str(settings.useLockInterval)
```

**Notes:** (Read and Write property)

101.5.6  **version as Integer**

**Function:** An unsigned 32-bit integer representing the keychain version.
**Example:**
```vba
dim DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
dim settings as KeychainSettingsMBS = DefaultKeychain.Settings
MsgBox str(settings.version)
```

**Notes:**
- Is always 1.
  (Read and Write property)
Chapter 102

Large Picture

102.1 class PictureFactoryMBS

102.1.1 class PictureFactoryMBS

Notes:
This class gives you a global event where you can provide your own pictures.
Whenever the plugin needs a new PictureMBS object for the result of a function or for temporary storage, you can provide one.

This is mainly for the case where you use virtual memory or you want to reuse pictures.

102.1.2 Methods

102.1.3 SetFactory(factory as PictureFactoryMBS)

Notes: You can set to nil to delete the existing factory.
102.1.4 Events

102.1.5 NewPictureMBS(Width as Integer, Height as Integer, ImageFormat as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The factory event.

**Example:**

```pascal
function NewPictureMBS(Width as Integer, Height as Integer, ImageFormat as Integer) as PictureMBS

return new PictureMBS(width, height, ImageFormat)

end function
```

**Notes:**

This event is called whenever a picture is requested. Return an picture you created. The plugin will check the Valid property for this picture and use it only if Valid is true.
102.2. CLASS PICTUREMBS

102.2 class PictureMBS

102.2.1 class PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The MBS picture class for really large pictures.

**Example:**

```vba
dim fSource as FolderItem = SpecialFolder.Desktop.Child("test.png") // some png with alpha
dim oPNGInput as new PNGReaderMBS

If oPNGInput.OpenFile(fSource) Then
    If oPNGInput.ApplyOptions(0) Then
        dim imgSource as New PictureMBS(oPNGInput.Width, oPNGInput.Height, PictureMBS.ImageFormatRGBA)
        ' Read row by row the file and puts it in a PictureMBS instance
        dim nMax as Integer = oPNGInput.Height - 1
        For nInd as Integer = 0 To nMax
            imgSource.RowInFormat(nInd, PictureMBS.ImageFormatRGBA, true) = oPNGInput.ReadRow()
        Next
        ' show only alpha/mask channel
        Backdrop=imgSource.AlphaChannel.CopyPicture
        ' show Picture without mask
        Backdrop=imgSource.CopyPicture
        ' show picture with mask
        Backdrop=imgSource.CopyPictureWithMask
    End If
End If
```

**Notes:**
Using virtual memory you are only limited to hard disc space for swapping.

The REALbasic picture class is limited to 2 GB and to width/height being in platform specific ranges. This class works with pictures up to 100 million pixels width and 2 billion pixels height.
102.2.2 Methods

102.2.3 AlphaChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The alpha channel as a new PictureMBS object. **Example:**

```plaintext
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
dim r as PictureMBS = p.AlphaChannel
r.fillrect(100) // fill only alpha channel
```

**Notes:**

Returns nil if this channel does not exist.

No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.

Use this function to access the pixels of the channel directly.

The resulting PictureMBS object is a grayscale picture.

102.2.4 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies a 5x5 matrix to the picture. **Example:**

```plaintext
dim matrix(24) as Integer
dim x,y as Integer
dim value as Integer

for y=0 to 4
    for x=0 to 4
        matrix(x+y*5)=value // fill matrix
    next
next

dim s,d as PictureMBS // make source and dest somewhere

d=s.ApplyMatrix(d, 5, matrix)
```

**Notes:**

MatrixDimension: Size of the matrix: 1 to 50. This is the width and height of the matrix.

Matrix: The matrix array must contain exactly MatrixDimension*MatrixDimension values. (ubound(mat-
102.2. CLASS PICTUREMBS

trix) = MatrixDimension*MatrixDimension-1)
delta: Optional value. Default is 0.
ScaleFactor: Optional value. Default is 1.0.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For each pixel in the dest image the following operation is done:

- Make sum of all source pixels multiplied with their matrix entry.
- add to the sum the delta value
- multiply the sum by ScaleFactor

See the example project for several example matrices.

A matrix value of 255 or more leaves the dest pixel away from the sum.

Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 102.2.5 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer) as PictureMBS
- 102.2.6 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer, ScaleFactor as Double) as PictureMBS

102.2.5 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies a 5x5 matrix to the picture.

**Example:**

```plaintext
dim matrix(24) as Integer
dim x,y as Integer
dim value as Integer

for y=0 to 4
  for x=0 to 4
    matrix(x+y*5)=value // fill matrix
  next
next```

```plaintext
```
dim s,d as PictureMBS // make source and dest somewhere

d=s.ApplyMatrix(d, 5, matrix, 5)

Notes:
MatrixDimension: Size of the matrix: 1 to 50. This is the width and height of the matrix.
matrix: The matrix array must contain exactly MatrixDimension*MatrixDimension values. (ubound(matrix)=MatrixDimension*MatrixDimension-1)
delta: Optional value. Default is 0.
ScaleFactor: Optional value. Default is 1.0.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For each pixel in the dest image the following operation is done:

- Make sum of all source pixels multiplied with their matrix entry.
- add to the sum the delta value
- multiply the sum by ScaleFactor

See the example project for several example matrices.

A matrix value of 255 or more leaves the dest pixel away from the sum.

Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 102.2.4 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer) as PictureMBS
- 102.2.6 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer, ScaleFactor as Double) as PictureMBS

102.2.6 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer, ScaleFactor as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Applies a 5x5 matrix to the picture.
102.2. CLASS PICTUREMBS

Example:

```vbnet
dim matrix(24) as Integer
dim x,y as Integer
dim value as Integer

for y=0 to 4
for x=0 to 4
matrix(x+y*5)=1 // fill matrix
next
next

dim s,d as PictureMBS // make source and dest somewhere
s = new PictureMBS(LogoMBS(500))
d = new PictureMBS(500, 500, PictureMBS.ImageFormatRGB)

// Blur with 5x5 Matrix
d=s.ApplyMatrix(d, 5, matrix, 1, 1.0/25.0)
Backdrop = d.CopyPicture
```

Notes:

MatrixDimension: Size of the matrix: 1 to 50. This is the width and height of the matrix.
matrix: The matrix array must contain exactly MatrixDimension*MatrixDimension values. (ubound(matrix)=MatrixDimension*MatrixDimension-1)
delta: Optional value. Default is 0.
ScaleFactor: Optional value. Default is 1.0.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For each pixel in the dest image the following operation is done:

- Make sum of all source pixels multiplied with their matrix entry.
- add to the sum the delta value
- multiply the sum by ScaleFactor

See the example project for several example matrices.

A matrix value of 255 or more leaves the dest pixel away from the sum.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 102.2.4 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer) as PictureMBS
- 102.2.5 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer) as PictureMBS

102.2.7 AutoLevel as boolean

MBS Images Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies auto levels on the picture.
**Example:**
```pascal
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
call p.AutoLevel
window1.Backdrop = p.CopyPicture
```

**Notes:**
The histogram is built, white and back points are searched and all pixels adjusted. Returns true on success and false on any error.

Works only with RGB pictures.
See also:

- 102.2.8 AutoLevel(x as Integer, y as Integer, w as Integer, h as Integer) as boolean

102.2.8 AutoLevel(x as Integer, y as Integer, w as Integer, h as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies auto levels on the picture.
**Example:**
```pascal
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
call p.AutoLevel(0,0,50,50)
window1.Backdrop = p.CopyPicture
```
102.2. CLASS PICTUREMBS

Notes:
The histogram is built, white and back points are searched and all pixels adjusted. Returns true on success and false on any error.

Works only with RGB pictures.
See also:

• 102.2.7 AutoLevel as boolean

102.2.9 BlackChannel as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The black channel of a CMYK picture as a new PictureMBS object.

Notes:
Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

102.2.10 BlendPicturesWithMaskWithBackground(SourceImage as PictureMBS, DestImage as PictureMBS, Mask as PictureMBS, Result as PictureMBS, BackgroundColour as Color) as Boolean

MBS Images Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Blend picture with mask and background.

Notes:
Works for gray and RGB pictures, not for CMYK.
Returns true on success and false on failure.
Blends source and dest image into result image.
If mask is nil, we just copy pictures.
If mask is not nil, we blend using either DestImage (if non nil) or background color.
Alpha channels are not used.
See also:

• 102.2.11 BlendPicturesWithMaskWithBackground(SourceImage as PictureMBS, DestImage as PictureMBS, Mask as PictureMBS, Result as PictureMBS, BackgroundColour as Color, X As Integer, Y As Integer, Width As Integer, Height As Integer) as Boolean
**102.2.11 BlendPicturesWithMaskWithBackground**

```
BlendPicturesWithMaskWithBackground(SourceImage as PictureMBS, DestImage as PictureMBS, Mask as PictureMBS, Result as PictureMBS, BackgroundColour as Color, X As Integer, Y As Integer, Width As Integer, Height As Integer) as Boolean
```

MBS Images Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Blend picture with mask and background. **Notes:**

Works for gray and RGB pictures, not for CMYK. Returns true on success and false on failure. Blends source and dest image into result image. If mask is nil, we just copy pictures. If mask is not nil, we blend using either DestImage (if non nil) or background color. Alpha channels are not used. See also:

- 102.2.10 BlendPicturesWithMaskWithBackground(SourceImage as PictureMBS, DestImage as PictureMBS, Mask as PictureMBS, Result as PictureMBS, BackgroundColour as Color) as Boolean

**102.2.12 BlueChannel as PictureMBS**

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
dim r as PictureMBS = p.BlueChannel
r.fillrect(100) // fill only blue channel
```

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The blue channel as a new PictureMBS object. **Example:**

**Notes:**

Returns nil if this channel does not exist. No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture. Use this function to access the pixels of the channel directly. The resulting PictureMBS object is a grayscale picture.

**102.2.13 BoxBlurFilter**

```
BoxBlurFilter(dest as PictureMBS, Radius as Double, Iterations as Integer, Vertical as boolean = true, Horizontal as boolean = true) as PictureMBS
```

MBS Images Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The box blur filter. **Example:**
102.2. CLASS PICTUREMBS

Dim boxPic, tempObj As PictureMBS
dim logo as Picture = LogoMBS(500)
dim pictureObj as new PictureMBS(logo)

tempObj = New PictureMBS(pictureObj.Width, pictureObj.Height, pictureObj.ImageFormat)
boxPic = pictureObj.BoxBlurFilter(tempObj, 3.0, 3)

Backdrop = boxPic.CopyPicture

Notes:

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Vertical and Horizontal define whether effect is applied horizontal and/or vertical.

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

• 102.2.14 BoxBlurFilter(dest as PictureMBS, Radius as Double, Vertical as boolean = true, Horizontal as boolean = true) as PictureMBS

102.2.14 BoxBlurFilter(dest as PictureMBS, Radius as Double, Vertical as boolean = true, Horizontal as boolean = true) as PictureMBS

Notes:

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Vertical and Horizontal define whether effect is applied horizontal and/or vertical.

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

• 102.2.13 BoxBlurFilter(dest as PictureMBS, Radius as Double, Iterations as Integer, Vertical as boolean = true, Horizontal as boolean = true) as PictureMBS
102.2.15 **BoxBlurFractionalFilter(dest as PictureMBS, Radius as Double) as PictureMBS**

MBS Images Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The box blur filter for the radius fraction.
**Notes:**
If you call BoxBlurFilter and BoxBlurFractionalFilter with a radius of 3.5 the BoxBlurFilter does the 3.0 and BoxBlurFractionalFilter does the 0.5.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.

102.2.16 **CalculateMemory(width as Integer, height as Integer, theImageFormat as Integer) as Int64**

MBS Images Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Calculates the memory needed for allocating the image.
**Example:**
```vba
dim n as int64 = PictureMBS.CalculateMemory(1000, 1000, PictureMBS.ImageFormatRGB)
MsgBox str(n)
```
**Notes:** Returns number of bytes needed.

102.2.17 **CanAllocateImage(width as Integer, height as Integer, theImageFormat as Integer) as boolean**

MBS Images Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Can the image with this size be allocated?
**Example:**
```vba
dim n as Boolean = PictureMBS.CanAllocateImage(1000, 1000, PictureMBS.ImageFormatRGB)
MsgBox str(n)
dim x as Boolean = PictureMBS.CanAllocateImage(100000, 100000, PictureMBS.ImageFormatRGB)
MsgBox str(x)
```
102.2. CLASS PICTUREMBS

Notes:
Returns true if possible and false if the size is too big.
To figure out if allocation will work, we simply allocate and release memory and see if that worked.

102.2.18 Channel(index as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the channel with the given index as a new picture object.
**Example:**
```vba
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
dim r as PictureMBS = p.Channel(0)
r.fillrect(100) // fill only red channel
```

Notes:
Returns nil on any error. May raise an out of bounds exception on invalid index. Index is zero based.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.
See also:

- 102.2.146 Channel as String

102.2.19 Channels as String()

MBS Images Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The name of the channels of an image.
**Example:**
```vba
dim p as new Picture(100,100,32)
dim q as new PictureMBS(p)
dim channels() as string = q.Channels

dim cr as PictureMBS = q.RedChannel
dim cg as PictureMBS = q.GreenChannel
dim cb as PictureMBS = q.BlueChannel
dim c0 as PictureMBS = q.Channel(0)
dim c1 as PictureMBS = q.Channel(1)
dim c2 as PictureMBS = q.Channel(2)

dim crn as string = cg.Channel

dim cgn as string = cg.Channel
```
102.2.20  ClearCache

MBS Images Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears picture cache.

**Notes:**
If target of this PictureMBS is a Xojo picture, this method clears the Xojo cache for the picture to make sure it recognizes changes.
Does nothing if there is no target picture or there is no cache.

102.2.21  ClearRect

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears all pixels.

**Example:**
```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p.ClearRect
window1.Backdrop = p.CopyPicture
```

**Notes:**
Writes zeros over all pixels and all channels.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 102.2.22 ClearRect(x as Integer, y as Integer, width as Integer, height as Integer)

102.2.22  ClearRect(x as Integer, y as Integer, width as Integer, height as Integer)

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears all pixels in the given area.
Example:

dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p.ClearRect(0,0,100,100)
window1.Backdrop = p.CopyPicture

Notes:

Writes zeros over all pixels and all channels.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 102.2.21 ClearRect

102.2.23  ClipImage as PictureMBS

MBS Images Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Creates a new PictureMBS object for the same picture content.
Notes: This may be useful if you need a second PictureMBS object. For example if two threads work on
different rows.
See also:

- 102.2.24 ClipImage(x as Integer, y as Integer, width as Integer, height as Integer) as PictureMBS

102.2.24  ClipImage(x as Integer, y as Integer, width as Integer, height as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Creates a new PictureMBS object which draws only into a portion of the existing image.
Example:

dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)

// clip it
dim c as PictureMBS = p.ClipImage(100, 100, 300, 300)

// clone it
dim q as PictureMBS = c.Clone

// and see result in debugger
dim pic as Picture = q.CopyPicture

Break
Notes: This may be useful to apply an effect only on a portion of an existing image. See also:

- 102.2.23 ClipImage as PictureMBS

102.2.25 Clone as PictureMBS

Example:

```vbscript
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)

// clip it
dim c as PictureMBS = p.ClipImage(100, 100, 300, 300)

// clone it
dim q as PictureMBS = c.Clone

// and see result in debugger
dim pic as Picture = q.CopyPicture
```

Notes:

Does not work for pictures using virtual memory.
(Fails if IsMapping=True)
Copies the whole picture even if you clone just one channel.

Returns nil on low memory.

102.2.26 Close

Notes: This calls the destructor internally.
102.2. CLASS PICTUREMBS

102.2.27 CMYKChannels as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The CMYK channels as a new PictureMBS object.  
**Notes:**

Returns nil if the image is not a CMYK picture.  
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.  
Use this function to access the CMYK pixels directly without modifying an alpha channel  
The resulting PictureMBS object is a CMYK picture.

102.2.28 Combine(Image As PictureMBS, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean) as boolean

MBS Images Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies pixels from one picture into another picture with some options.  
**Example:**

```vbscript
dim DestImage As PictureMBS
dim Image As PictureMBS
dim Mask As PictureMBS
dim DestX as Integer=100
dim DestY as Integer=100
dim SourceX as Integer=0
dim SourceY as Integer=0
dim Width as Integer=500
dim Height as Integer=500

image=new PictureMBS(LogoMBS(500))
Mask=nil
DestImage=new PictureMBS(700,700,PictureMBS.ImageFormatRGB)

// this will only copy the pixels  
if DestImage.Combine(image,Mask,DestX,DestY,SourceX,SourceY,Width,Height,false) then  
    window1.Backdrop=DestImage.CopyPicture  
end if
```

**Notes:**

Returns true on success and false on failure.  
This function has 4 behaviors depending on the parameters:
1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
- Image: the source picture, must not be nil.
- PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
- Mask: the mask picture, can be nil.
- DestX: destination position
- DestY: destination position
- SourceX: source position
- SourceY: source position
- Width: width of the area to copy
- Height: height of the area to copy
- UseColours: whether to use the mask colour.
- ForeColour: the fore colour, optional, can be integer or color
- MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The images you use can be Gray, RGB with or without alpha channels. But most variants here ignore alpha channels. To make sure the alpha channel is not touched, use the PictureMBS.RGBChannels function and pass that new PictureMBS.

- 102.2.31 Combine(Image As PictureMBS, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, DestY as Integer)
- 102.2.32 Combine(Image As PictureMBS, Mask As PictureMBS, DestX as Integer, DestY as Integer,
102.2. **CLASS PICTUREMBS**

SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean

- 102.2.33 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean) as boolean

- 102.2.35 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color, MaskColour As color) as boolean

- 102.2.36 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer) as boolean

- 102.2.37 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean

- 102.2.38 Combine(Mask As PictureMBS, X as Integer, Y as Integer, Width as Integer, Height as Integer, BackColour As color) as boolean

102.2.35 **Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color, MaskColour As color) as boolean**

MBS Images Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies pixels from one picture into another picture with some options. **Notes:**

Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.
Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The images you use can be Gray, RGB with or without alpha channels. But most variants here ignore alpha channels. To make sure the alpha channel is not touched, use the PictureMBS.RGBChannels function and pass that new PictureMBS.

- 102.2.32 Combine(Image As PictureMBS, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean

- 102.2.33 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean) as boolean

- 102.2.34 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color) as boolean
102.2.35 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color, MaskColour As color) as boolean

102.2.36 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer) as boolean

102.2.37 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean

102.2.39 CompareImages(other as PictureMBS) as Int64

Example:

dim p as new PictureMBS(1000,1000, PictureMBS.imageFormatRGB)

// fill random
p.FillRectRandom

dim q as new PictureMBS(1000,1000, PictureMBS.imageFormatRGB)

// copy pixels
call q.CopyPixels(p, 0, 0, 1000, 1000, 0, 0)
q.FillRect(0,0,10,10,0) // fill 100 pixels

// show image
Backdrop = q.CopyPicture

// and compare
Title = str(p.CompareImages(q)) // shows 100

Notes:
Returns -1 if both pictures are not from the same structure. (e.g. compare gray with RGB)
Else returns the number of different pixels.

102.2.40 Constructor(Buf as MemoryBlock, width as Integer, height as Integer, ImageFormat as Integer, RowSize as Integer)

102.2. **CLASS PICTUREMBS**

See also:

- 102.2.41 Constructor(pic as picture, UseAlpha as boolean=false)  
  MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a PictureMBS which shares memory with the given picture.
  **Example:**
  ```vba
  // Create a picture with mask:
  dim p as Picture = LogoMBS(200)
  dim g as Graphics = p.mask.Graphics

  g.ForeColor = & c FFFFFF
  g.FillRect 0,0,g.Width,g.Height

  g.ForeColor = & c 000000
  g.Filloval 0,0,g.Width,g.Height

  canvas1.Backdrop = p

  // create PictureMBS
  dim pic as new PictureMBS(p, true)
  dim mask as new PictureMBS(p.mask)

  // draw mask into alpha channel
  call pic.AlphaChannel.CopyPixels(mask,0,0,mask.Width,mask.Height,0,0)

  // and copy back to REALbasic picture
  canvas2.Backdrop = pic.CopyPictureWithMask
  ```

**Notes:**

All drawings in the Picture and in the PictureMBS object will be visible in both objects. This function works on Mac OS and Windows with both 24 bit and 32 bit pictures. On Mac this function can fail if the picture is not a GWorld (Bitmap) picture.

The Valid property is set to true on success.
If you set UseAlpha=True, the 4th channel in a 32 bit picture is available for you as an alpha channel. REALbasic does not use the 4th channel in the picture data and 24 bit pictures do not have one. So you can use 32 bit pictures, copy the pictures mask in the alpha channel (using PictureMBS.AlphaChannel, inverting may be needed), perform some operations and later make a copy of the of the image to a picture and extract the alpha channel back into the picture’s mask.

Added support for Console/Web targets in 12.2 plugins. Please be aware that alpha channel of pictures with alpha channel has only a range from 0 to 127 for the values.

See also:

- 102.2.40 Constructor(Buf as MemoryBlock, width as Integer, height as Integer, ImageFormat as Integer, RowSize as Integer) 15802
- 102.2.42 Constructor(width as Integer, height as Integer, ImageFormat as Integer) 15804
- 102.2.43 Constructor(width as Integer, height as Integer, ImageFormat as Integer, BlockSize as Int64, FilePath as folderitem) 15804

102.2.42 Constructor(width as Integer, height as Integer, ImageFormat as Integer)

Notes:

ImageFormat must be one of the ImageFormat constants.
The Valid property is set to true on success.

The constructor allocated address space for the image.
Physical memory is allocated based on write access to pixels.
See also:

- 102.2.40 Constructor(Buf as MemoryBlock, width as Integer, height as Integer, ImageFormat as Integer, RowSize as Integer) 15802
- 102.2.41 Constructor(pic as picture, UseAlpha as boolean=false) 15803
- 102.2.43 Constructor(width as Integer, height as Integer, ImageFormat as Integer, BlockSize as Int64, FilePath as folderitem) 15804

102.2.43 Constructor(width as Integer, height as Integer, ImageFormat as Integer, BlockSize as Int64, FilePath as folderitem)

Example:
102.2. CLASS PICTUREMBS

```vbnet
dim mm as int64 = Picturembs.CalculateMemory(7000, 150000, PictureMBS.ImageFormatRGB)
// shows that this size needs 3 GB in memory

// create image
dim blocksize as Integer = 100*1024*1024
dim file as FolderItem = GetTemporaryFolderItem
dim pic as new PictureMBS(7000, 150000, PictureMBS.ImageFormatRGB, blocksize, file)

// draw dots on it
for x as Integer = 0 to pic.Width step 500
for y as Integer = 0 to pic.Height step 500
pic.FillRect(x, y, 100, 100, 175)
ext
next

// write to tiff
dim f as FolderItem = SpecialFolder.Desktop.Child("test.tif")
dim t as TiffPictureMBS
if pic <> nil then
t = new TiffPictureMBS
if t.Create(F) then
const PLANARCONFIG_CONTIG = 1
const PHOTOMETRIC_RGB = 2
const FILLORDER_MSB2LSB = 1
const RESUNIT_INCH = 2
const ORIENTATION_TOLEFT = 1
const COMPRESSION_LZW = 5

t.Height = pic.Height
t.Width = pic.Width
t.RowsPerStrip = 1
t.PlanarConfig = PLANARCONFIG_CONTIG
t.Photometric = PHOTOMETRIC_RGB
t.BitsPerSample = 8
t.SamplesPerPixel = 3
t.FillOrder = FILLORDER_MSB2LSB
t.Orientation = ORIENTATION_TOLEFT
t.ResolutionUnit = RESUNIT_INCH
t.VerticalResolution = 72.0
t.HorizontalResolution = 72.0
t.Compression = COMPRESSION_LZW

for i as Integer = 0 to t.Height - 1
dim m as MemoryBlock = pic.RowInFormat(i, PictureMBS.ImageFormatRGB)
```
t.Scanline(i) = m

next

t.Close
end if
else

end if

// cleanup
pic = nil
file.delete

Notes:
The size of this image is limited to available hard disc space. The
system will cache this data in memory to avoid writing it to disc. Using picture
sizes bigger than physical memory can result into slow processing.

FilePath points to the location where the file is created.
On Windows the FilePath can be nil in which space in the system swapfile is used.
On Mac/Linux with nil FilePath, we use automatically a temp file path.

BlockSize specifies how many bytes of memory should be used in application
memory space. A typical value may be 100 mega bytes.

The Valid property is set to true on success.
File is deleted in destructor and folderItem is than invalid.

102.2.44 CopyGWorld as Variant

MBS Images Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Creates a GWorld with a copy of the picture data.
Example:
102.2. CLASS PICTUREMBS

// get a PictureMBS object somewhere
dim pic as Picture = LogoMBS(500)
dim p as Picturembs = new PictureMBS(pic)

// make a gworld from it.
dim g as GWorldMBS = p.CopyGWorld

// for debugging show content
Backdrop = g.CopyPicture

// Export to TIFF with Quicktime Graphics Exporter
dim q as new QTGraphicsExporterMBS
q.OpenExporter("TIFF")
q.InputGWorldHandle = g.Handle
q.CompressionQuality = & h400
q.OutputFile = SpecialFolder.Desktop.Child("test.tif")
if q.Export>0 then
MsgBox "OK"
end if

Notes: Works with 8 bit gray and with RGB data.

102.2.45 CopyMask as picture

Notes:
Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).
Works for all pictures with alpha channel.
See also:

• 102.2.46 CopyMask(x as Integer, y as Integer, w as Integer, h as Integer) as picture

102.2.46 CopyMask(x as Integer, y as Integer, w as Integer, h as Integer) as picture

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Copies the given area of the alpha channel into a mask picture.
Notes:
Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work. Returns nil on any error (e.g. out of memory). Works for all pictures with alpha channel. See also:

- 102.2.45 CopyMask as picture

102.2.47 CopyPicture as picture

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Copies the RGB channels or the gray channel into a picture. Example:

```vba
// get some picture
dim logo as Picture = LogoMBS(500)

// create PictureMBS
dim rgb as new PictureMBS/logo)

// Create a gray picture and copy RGB to gray
dim g as new PictureMBS(500, 500, PictureMBS.ImageFormatG)
call g.CopyPixels(rgb)

// Create CMYK and fill cyan channel with grayscale image
dim cmyk as new PictureMBS(500, 500, PictureMBS.ImageFormatCMYK)
call cmyk.MagentaChannel.CopyPixels(g)

// display it
Backdrop = cmyk.CopyPicture
```

Notes:

Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work. Returns nil on any error (e.g. out of memory).

Works with Gray, RGB and CMYK pictures and supports alpha channel. For CMYK we have some simply conversion to RGB to give you a preview. For a real world application, use Color Conversion like our LCMS plugin. See also:

MBS Images Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies picture with alpha.  
**Notes:** Returns a picture with HasAlphaChannel = true.  
See also:

- **102.2.50 CopyPictureWithAlpha(x as integer, y as integer, w as integer, h as integer) as picture**

### 102.2.50 CopyPictureWithAlpha(x as integer, y as integer, w as integer, h as integer) as picture

MBS Images Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies picture in rectangle with alpha.  
**Notes:** Returns a picture with HasAlphaChannel = true.  
See also:

- **102.2.49 CopyPictureWithAlpha as picture**

### 102.2.51 CopyPictureWithMask as picture

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the picture with mask.  
**Notes:**  
Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).

Works with Gray, RGB and CMYK pictures and supports alpha channel. For CMYK we have some simply conversion to RGB to give you a preview. For a real world application, use Color Conversion like our LCMS plugin.

See also:

- 102.2.52 CopyPictureWithMask(x as Integer, y as Integer, w as Integer, h as Integer) as picture

102.2.52 CopyPictureWithMask(x as Integer, y as Integer, w as Integer, h as Integer) as picture

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the picture with mask in the given area.

**Notes:**

Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.

Returns nil on any error (e.g. out of memory).

Works with Gray, RGB and CMYK pictures and supports alpha channel. For CMYK we have some simply conversion to RGB to give you a preview. For a real world application, use Color Conversion like our LCMS plugin.

See also:

- 102.2.51 CopyPictureWithMask as picture

102.2.53 CopyPixels(source as PictureMBS) as boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies all pixels from the source picture to the current picture.

**Example:**

```lisp
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
  // create new picture:
  // can be any image format: ImageFormatRGB, ImageFormatG, ImageFormatBGR, etc.
dim d as new PictureMBS(l.Width, l.Height, PictureMBS.ImageFormatRGB)

if d.CopyPixels(p) then
  Backdrop = d.CopyPicture
else
  MsgBox "Failed."
end if
```
Notes:
This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
- CMYK to CMYK
- CMYK to Gray, copies from black channel
- Gray to CMYK, copies to black channel
If an alpha channel exists in both images, it is copied.

See also:

- 102.2.54 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) as boolean
- 102.2.55 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) as boolean

### 102.2.54 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies pixels from the source picture to the current picture.

**Example:**

```plaintext
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS()
dim d as new PictureMBS(700, 700, PictureMBS.ImageFormatRGB)

if d.CopyPixels(p,100,100,500,500) then
    Backdrop = d.CopyPicture
else
    MsgBox "Failed."
end if
```

Notes:

DestWidth and DestHeight specify how many pixels are copied.
DestX/DestY specify the destination position in the current picture.

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
- CMYK to Gray, copies from black channel
- Gray to CMYK, copies to black channel
If an alpha channel exists in both images, it is copied.

See also:

- 102.2.53 CopyPixels(source as PictureMBS) as boolean
- 102.2.55 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) as boolean

102.2.55 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies pixels from the source picture to the current picture.

**Example:**

```vbnet
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
dim d as new PictureMBS(700, 700, PictureMBS.ImageFormatRGB)

if d.CopyPixels(p,100,100,500,500,0,0) then
    Backdrop = d.CopyPicture
else
    MsgBox "Failed."
end if
```

**Notes:**

SourceX/SourceY is the position in the source picture.
DestWidth/DestHeight specify how many pixels are copied.
DestX/DestY specify the destination position in the current picture.

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
- CMYK to Gray, copies from black channel
- Gray to CMYK, copies to black channel
If an alpha channel exists in both images, it is copied.

102.2. CLASS PICTUREMBS

- 102.2.53 CopyPixels(source as PictureMBS) as boolean
- 102.2.54 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) as boolean

102.2.56 CreatePictureMBS(width as Integer, height as Integer, ImageFormat as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new PictureMBS object. **Notes:** Returns nil if no factory can create a valid picture.

First the Factory on the current ImageMBS object (self) is asked to create the picture. Second the global Factory object is asked. Third the normal PictureMBS constructor is used. See also:

- 102.2.57 CreatePictureMBS(width as Integer, height as Integer, theImageFormat as Integer) as PictureMBS

102.2.57 CreatePictureMBS(width as Integer, height as Integer, theImageFormat as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new PictureMBS object. **Notes:** Returns nil if no factory can create a valid picture.

First the global factory object is asked to create the picture. Second the normal PictureMBS constructor is used. See also:

- 102.2.56 CreatePictureMBS(width as Integer, height as Integer, ImageFormat as Integer) as PictureMBS

102.2.58 CyanChannel as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The cyan channel of a CMYK picture as a new PictureMBS object. **Notes:**
Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

102.2.59  DiffuseFilter(dest as PictureMBS, level as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Applies a diffuse filter to the image.
**Notes:**
if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
Level must be between 0 and min(width,height).

102.2.60  DitherFilter(dest as PictureMBS, matrix as Integer, levels as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Applies the dither filter to the picture.
**Notes:**
Use for the matrix parameter one of the Dither* constants.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Levels is a number between 2 and 256 and specifies how many color levels are in the final picture.

Returns nil on any error.
102.2.61 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Draws a picture into this PictureMBS object.

**Notes:**
This method applys the pixel values from the Red, Green and Blue channel of the picture with calculating in the mask of the picture.

This is the calculation:

Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 102.2.62 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False) 15815
- 102.2.63 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, InvertMask as boolean=False) 15816
- 102.2.64 DrawMaskedPictureApplyMaskRGB(pic as picture, InvertMask as boolean=False) 15816

102.2.62 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Draws a picture into this PictureMBS object.

**Notes:**
This method applys the pixel values from the Red, Green and Blue channel of the picture with calculating in the mask of the picture.

This is the calculation:
CHAPTER 102. LARGE PICTURE

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 102.2.61 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False) 15815

- 102.2.62 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False) 15815
- 102.2.64 DrawMaskedPictureApplyMaskRGB(pic as picture, InvertMask as boolean=False) 15816

102.2.64 DrawMaskedPictureApplyMaskRGB(pic as picture, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draws a picture into this PictureMBS object.

**Notes:**
102.2. CLASS PICTUREMBS

This method applies the pixel values from the Red, Green and Blue channel of the picture with calculating in the mask of the picture.

This is the calculation:

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 102.2.61 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False) 15815
- 102.2.62 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False) 15815
- 102.2.63 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, InvertMask as boolean=False) 15816

102.2.65 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draws a picture into this PictureMBS object.

**Notes:**
This method copies the pixel values from the Red, Green and Blue channel of the picture and the pixel value of the picture’s mask to the PictureMBS replacing old values.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue
Pixel.Alpha = PicturePixel.Mask

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 102.2.66 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False) 15818
102.2.66 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draws a picture into this PictureMBS object.

**Notes:**
This method copies the pixel values from the Red, Green and Blue channel of the picture and the pixel value of the picture’s mask to the PictureMBS replacing old values.

This is the calculation:
Pixel.Red = PicturePixel.Red  
Pixel.Green = PicturePixel.Green  
Pixel.Blue = PicturePixel.Blue  
Pixel.Alpha = PicturePixel.Mask

Works only if the PictureMBS has Red, Green and Blue channels.  
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 102.2.65 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False) 15817

- 102.2.68 DrawMaskedPictureRGB(pic as picture, InvertMask as boolean=False) 15819

102.2.67 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draws a picture into this PictureMBS object.

**Notes:**
This method copies the pixel values from the Red, Green and Blue channel of the picture and the pixel value of the picture’s mask to the PictureMBS replacing old values.

This is the calculation:
Pixel.Red = PicturePixel.Red
102.2. CLASS PICTUREMBS

Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue
Pixel.Alpha = PicturePixel.Mask

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 102.2.65 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False) 15817
- 102.2.66 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False) 15818
- 102.2.67 DrawMaskedPictureRGB(pic as picture, InvertMask as boolean=False) 15818

102.2.68 DrawMaskedPictureRGB(pic as picture, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draws a picture into this PictureMBS object.

**Notes:**
This method copies the pixel values from the Red, Green and Blue channel of the picture and the pixel value of the picture’s mask to the PictureMBS replacing old values.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue
Pixel.Alpha = PicturePixel.Mask

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 102.2.65 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False) 15817
- 102.2.66 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False) 15818
- 102.2.67 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, InvertMask as boolean=False) 15818
102.2.69 **DrawPictureBlueToGrayChannel**(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draws the blue channel of a picture object into the gray channel of this picture.

**Notes:**

If you want to copy the blue channel of the picture into the blue channel of the PictureMBS, then first get a PictureMBS object for the blue channel and use this method on this object.

If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

See also:

- 102.2.70 **DrawPictureBlueToGrayChannel**(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

102.2.70 **DrawPictureBlueToGrayChannel**(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draws the blue channel of a picture object into the gray channel of this picture.

**Notes:**

If you want to copy the blue channel of the picture into the blue channel of the PictureMBS, then first get a PictureMBS object for the blue channel and use this method on this object.

If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

See also:

- 102.2.69 **DrawPictureBlueToGrayChannel**(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

102.2.71 **DrawPictureGreenToGrayChannel**(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draws the green channel of a picture object into the gray channel of this picture.

**Notes:**

If you want to copy the green channel of the picture into the green channel of the PictureMBS, then first get a PictureMBS object for the green channel and use this method on this object.

If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

See also:

- 102.2.72 **DrawPictureGreenToGrayChannel**(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)
102.2.72 DrawPictureGreenToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draws the green channel of a picture object into the gray channel of this picture. **Notes:**

If you want to copy the green channel of the picture into the green channel of the PictureMBS, then first get a PictureMBS object for the green channel and use this method on this object.

If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

See also:

- 102.2.71 DrawPictureGreenToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

102.2.73 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draws the red channel of a picture object into the gray channel of this picture. **Notes:**

If you want to copy the red channel of the picture into the red channel of the PictureMBS, then first get a PictureMBS object for the red channel and use this method on this object.

If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

See also:

- 102.2.74 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

102.2.74 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draws the red channel of a picture object into the gray channel of this picture. **Notes:**

If you want to copy the red channel of the picture into the red channel of the PictureMBS, then first get a PictureMBS object for the red channel and use this method on this object.

If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

See also:

- 102.2.73 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)
102.2.75 **DrawPictureRGB(pic as picture)**

MBS Images Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draws a picture into this PictureMBS object.

**Notes:**
Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue

This method does ignore a mask in the given picture and does not change set the alpha channel.
See also:
- 102.2.75 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer)
- 102.2.77 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)
- 102.2.78 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

102.2.76 **DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer)**

MBS Images Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draws a picture into this PictureMBS object.

**Notes:**
Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue

This method does ignore a mask in the given picture and does not change set the alpha channel.
See also:
- 102.2.75 DrawPictureRGB(pic as picture)
- 102.2.77 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)
102.2.77 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draws a picture into this PictureMBS object.

**Notes:**
Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue

This method does ignore a mask in the given picture and does not change set the alpha channel.

See also:

- 102.2.75 DrawPictureRGB(pic as picture)
- 102.2.76 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer)
- 102.2.78 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)
CHAPTER 102. LARGE PICTURE

This method does ignore a mask in the given picture and does not change set the alpha channel.
See also:

- 102.2.75 DrawPictureRGB(pic as picture) 15822
- 102.2.76 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer) 15822
- 102.2.77 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) 15823

102.2.79 EngraveFilter(dest as PictureMBS, level as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies an engrave filter to the image. **Notes:**

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Level must be between 0 and min(width,height).

Returns nil on any error.

102.2.80 FillRect(value as Integer)

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fills the picture with the given color. **Example:**

```vbnet
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p.FillRect(200)
window1.Backdrop = p.CopyPicture
```

**Notes:**

All channels are filled with the given value.
The range of value is 0 to 255.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 102.2.81 FillRect(Value as integer, Alpha as Integer) 15825
102.2. CLASS PICTUREMBS

- 102.2.81 FillRect(Value as integer, Alpha as Integer) 15825
- 102.2.82 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer) 15825
- 102.2.83 FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer) 15826

102.2.81 FillRect(Value as integer, Alpha as Integer)

MBS Images Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fills the given area of the picture with the given color.

**Notes:**
All channels are filled with the given value and alpha channel (if exists) with the alpha value. The range of value is 0 to 255. Works with Gray, RGB and CMYK pictures and supports alpha channel.

See also:
- 102.2.80 FillRect(value as Integer) 15824
- 102.2.82 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer) 15825
- 102.2.83 FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer) 15826

102.2.82 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer)

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fills the given area of the picture with the given color.

**Example:**
```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p.FillRect(10, 10, 20, 20, 200)
window1.Backdrop = p.CopyPicture
```

**Notes:**
All channels are filled with the given value. The range of value is 0 to 255. Works with Gray, RGB and CMYK pictures and supports alpha channel.

See also:
- 102.2.80 FillRect(value as Integer) 15824
- 102.2.81 FillRect(Value as integer, Alpha as Integer) 15825
- 102.2.83 FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer) 15826
102.2.83 **FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer)**

MBS Images Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fills the given area of the picture with the given color.

**Notes:**
All channels are filled with the given value and alpha channel (if exists) with the alpha value. The range of value is 0 to 255. Works with Gray, RGB and CMYK pictures and supports alpha channel.

See also:
- 102.2.80 FillRect(value as Integer)
- 102.2.81 FillRect(Value as integer, Alpha as Integer)
- 102.2.82 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer)

102.2.84 **FillRectApply(FillColor as color, alpha as Integer) as boolean**

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fills the picture with the given color with using alpha.

**Example:**
```pascal
dim p as new PictureMBS(300, 300, PictureMBS.ImageFormatRGB)
p.FillRectRGB & c FF0000
call p.FillRectApply 0, 0, 50, 100, & c 00FF00, 0
call p.FillRectApply 50, 0, 50, 100, & c00FF00, 255*1/5
call p.FillRectApply 100, 0, 50, 100, & c0FF00, 255*2/5
call p.FillRectApply 150, 0, 50, 100, & c0FF00, 255*3/5
call p.FillRectApply 200, 0, 50, 100, & c0FF00, 255*4/5
call p.FillRectApply 250, 0, 50, 100, & c0FF00, 255*5/5
```

**Notes:**
Works with gray and RGB pictures.
The range of value is 0 to 255.
The alpha channel is ignored of the picture.
This function combines the RGB/Gray channels with the new fill color and the alpha value.

See also:
- 102.2.85 FillRectApply(red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean
102.2. FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) as boolean

102.2.85 FillRectApply(red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fills the picture with the given color with using alpha.

**Notes:**
Works with gray and RGB pictures.
The range of value is 0 to 255.
The alpha channel is ignored of the picture.
This function combines the RGB/Gray channels with the new fill color and the alpha value.

FillRectRandom

MBS Images Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fills the pixels with random values. **Example:**

```vbnet
dim p as new PictureMBS(1000,1000, PictureMBS.imageFormatRGB)
p.FillRectRandom
```

**Notes:** Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 102.2.89 FillRectRandom(x as Integer, y as Integer, width as Integer, height as Integer)

FillRectRandom(x as Integer, y as Integer, width as Integer, height as Integer)

MBS Images Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fills the pixels with random values. **Example:**

```vbnet
dim p as new PictureMBS(1000,1000, PictureMBS.imageFormatRGB)
p.FillRectRandom(0,0,100,100)
```
102.2. CLASS PICTUREMBS

Backdrop = p.CopyPicture

Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 102.2.88 FillRectRandom

102.2.90 FillRectRGB(FillColor as color)

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Fills the picture with the given color.
Example:

dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p.FillRectRGB(& cFF0000)
window1.Backdrop = p.CopyPicture

Notes: Works only if the picture has RGB channels.
See also:

- 102.2.91 FillRectRGB(FillColor as color, alpha as Integer)
- 102.2.92 FillRectRGB(red as Integer, green as Integer, blue as Integer)
- 102.2.93 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer)
- 102.2.94 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color)
- 102.2.95 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer)
- 102.2.96 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer)
- 102.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer)

102.2.91 FillRectRGB(FillColor as color, alpha as Integer)

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Fills the picture with the given color.
Example:
\texttt{dim\ l\ as\ Picture\ =\ LogoMBS(500)}
\texttt{dim\ p\ as\ new\ PictureMBS(l)}
\texttt{p.FillRectRGB(CFF0000,\ 0)}
\texttt{window1.Backdrop\ =\ p.CopyPicture}

\textbf{Notes:}

Works only if the picture has RGB channels.
Alpha is ignored if the picture does not have an alpha channel.
The range of a laho is 0 to 255.
See also:

- \texttt{102.2.90\ FillRectRGB(FillColor as color)}
- \texttt{102.2.92\ FillRectRGB(red as Integer,\ green as Integer,\ blue as Integer)}

- 102.2.90 FillRectRGB(FillColor as color)
102.2.97  **FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer)**

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fills the given area of the picture with the given color.

**Example:**

```vbnet
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p.FillRectRGB(10, 10, 20, 20, 255, 0, 0, 0)
window1.Backdrop = p.CopyPicture
```

**Notes:**

Works only if the picture has RGB channels.

Alpha is ignored if the picture does not have an alpha channel.

See also:
102.2.98 GainFilter(dest as PictureMBS, gain as Double, bias as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies the gain filter to the picture.

**Notes:**
- If dest is nil, the picture factory is used to create a new picture.
- On success dest or the new picture is returned.
- If dest is not nil, it must match the size of the original picture.

Returns nil on any error.

102.2.99 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the gamma value of the picture.

**Notes:**
- If dest is nil, the picture factory is used to create a new picture.
- On success dest or the new picture is returned.
- If dest is not nil, it must match the size of the original picture.

Returns nil on any error.

See also:
- 102.2.100 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS
- 102.2.101 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS
- 102.2.102 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS

102.2.100 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the gamma value of the picture.

**Notes:**
- If dest is nil, the picture factory is used to create a new picture.
- On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.

See also:

- 102.2.99 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS
- 102.2.101 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS
- 102.2.102 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS

102.2.101 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the gamma value of the picture.

**Notes:**

If dest is nil, the picture factory is used to create a new picture.

On success dest or the new picture is returned.

If dest is not nil, it must match the size of the original picture.

For grayscale pictures the gray color is calculated from red, green and blue value.

Returns nil on any error.

See also:

- 102.2.99 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS
- 102.2.100 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS
- 102.2.102 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS

102.2.102 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the gamma value of the picture.
102.2. **CLASS PICTUREMBS**

**Notes:**

If dest is nil, the picture factory is used to create a new picture. On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For grayscale pictures the gray color is calculated from red, green and blue value.
If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.

See also:

- 102.2.99 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS
- 102.2.100 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS
- 102.2.101 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS
102.2.103  GrayChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The gray channel as a new PictureMBS object.  
**Example:**
```plaintext
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)  
dim r as PictureMBS = p.GrayChannel  
r.fillrect(100) // fill only gray channel
```

**Notes:**
Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

102.2.104  GreenChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The green channel as a new PictureMBS object.  
**Example:**
```plaintext
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)  
dim r as PictureMBS = p.GreenChannel  
r.fillrect(100) // fill only green channel
```

**Notes:**
Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

102.2.105  HMirror

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Mirrors the image content horizontally (flip).  
**Example:**
```plaintext
// get some picture  
dim l as Picture = LogoMBS(500)
```
102.2. **CLASS PICTUREMBS**

```plaintext
// create new image
dim p as new PictureMBS()
// mirror
p.HMirror
// show in window
window1Backdrop = p.CopyPicture
```

**Notes:** Works with Gray, RGB and CMYK pictures and supports alpha channel.

### 102.2.106 Invert

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Inverts the image data.
**Notes:** Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:
- 102.2.107 Invert(x as Integer, y as Integer, w as Integer, h as Integer)

### 102.2.107 Invert(x as Integer, y as Integer, w as Integer, h as Integer)

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Inverts the image data in the given area.
**Notes:** Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:
- 102.2.106 Invert

### 102.2.108 MagentaChannel as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The magenta channel of a CMYK picture as a new PictureMBS object.
**Notes:**
Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.
102.2.109 MapInRows(FirstRow as Integer, LastRow as Integer) as boolean

**Notes:**
This function does nothing if given rows are already mapped in.

Fails if range is invalid, image is invalid or mapping is not possible.
Returns true if not a mapped image.

Will resize memory buffer size to be big enough for those rows.

102.2.110 MirroredView as PictureMBS

MBS Images Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new PictureMBS object which draws into the existing one, but has all rows vertically mirrored.

**Notes:** So if the new picture draws into the first row, the change will be in the last row of the original picture.

102.2.111 Multiply

MBS Images Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Multiplies alpha channel of whole picture.

**Notes:** Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.
See also:

- 102.2.112 Multiply(x as integer, y as integer, width as integer, height as integer)

102.2.112 Multiply(x as integer, y as integer, width as integer, height as integer)

MBS Images Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Multiplies alpha channel of a rectangle of the picture.

**Notes:** Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.
See also:

- 102.2.111 Multiply
102.2. **CLASS PICTUREMBS**

102.2.113 **NeonFilter**(dest as PictureMBS) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Applies a neon filter to the image.

**Example:**

```plaintext
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p = p.NeonFilter(nil)
window1.Backdrop = p.CopyPicture
```

**Notes:**
if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

102.2.114 **OilFilter**(dest as PictureMBS, levels as Integer, range as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Applies a oil filter to the image.

**Example:**

```plaintext
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p = p.OilFilter(nil,5,5)
window1.Backdrop = p.CopyPicture
```

**Notes:**
if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Levels must be between 0 and 256.
Range must be between 0 and min(width,height).

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

102.2.115  RawRow(index as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a memoryblock with the data of this row. **Example:**

```vbs
// create new image
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
dim m as MemoryBlock = p.RawRow(10)
// modify directly
m.FillBytesMBS(10,100,200)
// show in window
window1.Backdrop = p.CopyPicture
```

**Notes:**
This memoryblock is pointing to the original data, so any modification is applied to the picture. Returns nil on any error.
May raise OutOfBoundsException for invalid index.

For pictures using virtual memory, this memoryblock can become invalid for the next call to any PictureMBS method!

102.2.116  RawRowPtr(index as Integer) as Ptr

MBS Images Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a Ptr pointing to the data of this row. **Notes:**
This ptr is pointing to the original data, so any modification is applied to the picture. Returns nil on any error.
May raise OutOfBoundsException for invalid index.

For pictures using virtual memory, this ptr can become invalid for the next call to any PictureMBS method!
102.2. CLASS PICTUREMBS

102.2.117 RedChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The red channel as a new PictureMBS object. **Example:**

```vba
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
dim r as PictureMBS = p.RedChannel
r.fillRect(100) // fill only red channel
```

**Notes:**

Returns nil if this channel does not exist. No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture. Use this function to access the pixels of the channel directly. The resulting PictureMBS object is a grayscale picture.

102.2.118 RGBChannels as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The RGB channels as a new PictureMBS object. **Example:**

```vba
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGBA)
dim r as PictureMBS = p.RGBChannels
r.fillRect(100) // fill only color channels
```

**Notes:**

Returns nil if the image is not a RGB picture. No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture. Use this function to access the RGB pixels directly without modifying an alpha channel. The resulting PictureMBS object is a RGB picture.

102.2.119 RGBToGray(mode as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Turns picture into grayscale. **Notes:**

Only for RGB pictures and picture stays RGB, but all channels have same color. Returns true on success and false on failure.
Modes:

0  \[ y = 0.33 \times R + 0.5 \times G + 0.16 \times B \]  Faster version of 3
1  \[ y = 0.375 \times R + 0.5 \times G + 0.125 \times B \]  Faster version of 3
2  \[ y = 0.2126 \times R + 0.7152 \times G + 0.0722 \times B \]  Photometric/digital ITU-R
3  \[ y = 0.299 \times R + 0.587 \times G + 0.114 \times B \]  Digital CCIR601
4  \[ y = 0.300 \times R + 0.588 \times G + 0.112 \times B \]  Faster version of 3

Mode 2 and 3 uses doubles and mode 0, 4 and 1 use integers so they should be faster.
Still Mode 0 and 1 are just approximation formulas which trade accuracy for performance.

e.g. a red pixel (FF0000) will turn to 555555 in Mode 0, 5F5F5F in Mode 1, 363636 in Mode 2 and 4C4C4C in Mode 3 and 4.

102.2.120 Rotate(angle as Double, Red as Integer = 0, Green as Integer = 0, Blue as Integer = 0, Alpha as Integer = 0, Gray as Integer = 0, Cyan as Integer = 0, Magenta as Integer = 0, Yellow as Integer = 0, Black as Integer = 0) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Rotates the picture by the given degree.

**Example:**

```pascal
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
window1Backdrop = p.CopyPicture
```

**Notes:**

With Red, Blue, Green, Alpha and Gray specify the color of the fill color.

If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

102.2.121 Rotate180

MBS Images Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Rotates the picture by 180 degree.
102.2. CLASS PICTUREMBS

Example:

dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p.Rotate180
window1.Backdrop = p.CopyPicture

Notes:

Same as HMirror and VMirror together.

There are two Rotate180 methods. One makes a copy and one not. This one does not make a copy.

Works with Gray, RGB and CMYK pictures and supports alpha channel.

See also:

• 102.2.122 Rotate180(dest as PictureMBS=nil) as PictureMBS

102.2.122 Rotate180(dest as PictureMBS=nil) as PictureMBS

Example:

dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p = p.Rotate180
window1.Backdrop = p.CopyPicture

Notes:

If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture.

Same as HMirror and VMirror together.

There are two Rotate180 methods. One makes a copy and one not. This one does make a copy.

Works with Gray, RGB and CMYK pictures and supports alpha channel.

See also:

• 102.2.121 Rotate180
102.2.123  **Rotate270(dest as PictureMBS=nil) as PictureMBS**

MBS Images Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Rotates the picture by 270 degree.

**Example:**
```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p = p.Rotate270
window1.Backdrop = p.CopyPicture
```

**Notes:**
If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture. Works with Gray, RGB and CMYK pictures and supports alpha channel.

102.2.124  **Rotate270slow(dest as PictureMBS=nil) as PictureMBS**

**Example:**
```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p = p.Rotate270slow
window1.Backdrop = p.CopyPicture
```

**Notes:**
If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture. Works with Gray, RGB and CMYK pictures and supports alpha channel.

102.2.125  **Rotate90(dest as PictureMBS=nil) as PictureMBS**

MBS Images Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Rotates the picture by 90 degree.

**Example:**
```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p = p.Rotate90
window1.Backdrop = p.CopyPicture
```
Notes:
If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture. Works with Gray, RGB and CMYK pictures and supports alpha channel.

102.2.126 Rotate90slow(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Rotates the picture by 90 degree. **Example:**
```plaintext
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p = p.Rotate90slow
window1.Backdrop = p.CopyPicture
```

Notes:
If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture. Works with Gray, RGB and CMYK pictures and supports alpha channel.

102.2.127 Scale(source as PictureMBS, temp as PictureMBS, mode as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Scales the picture to the given size. **Notes:** The final image is stored in the PictureMBS object you call this method on. On low memory this function can fail or the image may look bad. (e.g. all black)

The size of the temporary picture must have the size of the destination width and the source height. Use ImageFormatScaling when you create the temp image to give it the correct size.

For scaling with the same size as the picture already has, the scaling is still performed.

Returns true on success and false on any error. (e.g. width=0)

Use the constants for the mod:
102.2.128  ScaleFast(source as PictureMBS, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
Scales the picture to the new size fast.

**Notes:**
The final image is stored in the PictureMBS object you call this method on.
Returns true on success and false on failure.

This is a low quality algorithm, but it is fast.

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
If an alpha channel exists in both images, it is copied.
102.2. CLASS PICTUREMBS

102.2.129  ScaleMT(threads as Integer, source as PictureMBS, temp as PictureMBS, mode as Integer, width as Integer, height as Integer) as boolean

Notes:
Same as Scale, but with additional multithreading.
Must be called inside a Xojo (Real Studio) thread so time yields to main thread and you can keep the GUI running.
Work is split into several threads for greater speed.

Threads parameter specifies how many threads you want to use:
A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

If one of the pictures used has IsMapping = true, the plugin calls Scale() function.

102.2.130  SolarizeFilter(dest as PictureMBS) as PictureMBS

Example:

// get some picture
dim l as Picture = LogoMBS(500)
// create new image
dim p as new PictureMBS(l)
// add filter
p = p.SolarizeFilter(nil)
// show in window
window1.Backdrop = p.CopyPicture

Notes:
if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
102.2.131 StampFilter(dest as PictureMBS, radius as Double, threshold as Double, softness as Double, Black as Color, White as Color) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies the stamp filter to the picture. **Notes:** if dest is nil, the picture factory is used to create a new picture. On success dest or the new picture is returned. If dest is not nil, it must match the size of the original picture. Returns nil on any error. Works with Gray and RGB pictures and supports alpha channel.

102.2.132 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Transfers a picture to another picture by looking up each pixel value in the given array. **Example:**
```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)

dim gray(256) as Integer

for i as Integer = 0 to 255
gray(i)=255-i // invert
next

// inverts the picture
dim d as PictureMBS = p.TransferFilter(nil,gray)

Backdrop = d.CopyPicture
```

**Notes:** if dest is nil, the picture factory is used to create a new picture. On success dest or the new picture is returned. If dest is not nil, it must match the size of the original picture.

The array for gray must have 256 entries starting with index 0. For RGB pictures the gray array is used for all three channels.
Returns nil on any error.

See also:

- 102.2.133 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS
- 102.2.134 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS
- 102.2.135 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS

### 102.2.133 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Transfers a picture to another picture by looking up each pixel value in the given arrays.

**Notes:**

- If dest is nil, the picture factory is used to create a new picture.
- On success dest or the new picture is returned.
- If dest is not nil, it must match the size of the original picture.

The arrays for gray and alpha must have 256 entries starting with index 0.

For RGB pictures the gray array is used for all three channels.

If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.

See also:

- 102.2.132 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS
- 102.2.134 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS
- 102.2.135 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS

### 102.2.134 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Transfers a picture to another picture by looking up each pixel value in the given arrays.

**Example:**

```lisp
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
```
dim red(256) as Integer
dim green(256) as Integer
dim blue(256) as Integer

for i as Integer = 0 to 255
  red(i)=i
  green(i)=i
  blue(i)=255-i // invert blue
next

dim d as PictureMBS = p.TransferFilter(nil,red,green,blue)

Backdrop = d.CopyPicture

Notes:

If dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

The arrays for red, green and blue must have 256 entries starting with index 0.
For grayscale pictures the green array is used for the gray channel.

Returns nil on any error.
See also:

- 102.2.132 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS 15850
- 102.2.133 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS 15851
- 102.2.135 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS 15852

102.2.135 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Transfers a picture to another picture by looking up each pixel value in the given arrays.

**Notes:**

If dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.
102.2.  **CLASS PICTUREMBS**

The arrays for red, green, blue and alpha must have 256 entries starting with index 0.
For grayscale pictures the green array is used for the gray channel.
If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.

See also:

- 102.2.132 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS
- 102.2.133 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS
- 102.2.134 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS

**102.2.136  Unmultiply**

MBS Images Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Un-multiplies alpha channel for whole picture.
**Notes:** Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.

See also:

- 102.2.137 Unmultiply(x as integer, y as integer, width as integer, height as integer)

**102.2.137  Unmultiply(x as integer, y as integer, width as integer, height as integer)**

MBS Images Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Un-multiplies alpha channel for given rectangle in picture.
**Notes:** Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.

See also:

- 102.2.136 Unmultiply

**102.2.138  UnsharpFilter(origpixels as PictureMBS, Amount as Double, Threshold as Integer) as boolean**

**Notes:**
You may want to run the BoxBlur filter first before using the unsharp filter.
if dest is nil, the picture factory is used to create a new picture. On success dest or the new picture is returned. If dest is not nil, it must match the size of the original picture.

Returns nil on any error.

Works with Gray, RGB and CMYK pictures and supports alpha channel.

102.2.139 VMirror

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Mirrors the image content vertically. **Example:**
```vbnet
// get some picture
dim l as Picture = LogoMBS(500)
// create new image
dim p as new PictureMBS(l)
// mirror
p.VMirror
// show in window
window1.Backdrop = p.CopyPicture
```

**Notes:** Works with Gray, RGB and CMYK pictures and supports alpha channel.

102.2.140 YellowChannel as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The yellow channel of a CMYK picture as a new PictureMBS object. **Notes:**

Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture. Use this function to access the pixels of the channel directly. The resulting PictureMBS object is a grayscale picture.
102.2.141 Properties

102.2.142 AlphaOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal offset for pixels in the alpha channel.

**Example:**
```vba
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MsgBox str(p.AlphaOffset)
```

**Notes:** (Read and Write property)

102.2.143 BitsPerComponent as Integer

MBS Images Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of bits per component.

**Notes:**
Value is 8 for most pictures except those with format ImageFormatGray16 which use 16.
(Read only property)

102.2.144 BlackOffset as Integer

MBS Images Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal offset for pixels in the black channel.

**Example:**
```vba
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.BlackOffset)
```

**Notes:** (Read only property)

102.2.145 BlueOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal offset for pixels in the blue channel.

**Example:**
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.BlueOffset)

Notes: (Read and Write property)

102.2.146 Channel as String

MBS Images Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The name of the channel.

**Example:**

```vbs```
dim p as new Picture(100,100,32)
dim q as new PictureMBS(p)

dim channels() as string = q.Channels

dim cr as PictureMBS = q.RedChannel
dim cg as PictureMBS = q.GreenChannel
dim cb as PictureMBS = q.BlueChannel
dim c0 as pictureMBS = q.Channel(0)
dim c1 as pictureMBS = q.Channel(1)
dim c2 as pictureMBS = q.Channel(2)

dim crn as string = cg.Channel
dim cgn as string = cg.Channel
dim cbn as string = cg.Channel
dim c0n as string = c0.Channel
dim c1n as string = c1.Channel
dim c2n as string = c2.Channel
```

Break // check in debugger

Notes:

For pictures which represent a channel of a bigger picture.
(Read only property)

See also:

- 102.2.18 Channel(index as Integer) as PictureMBS
102.2. **CLASS PICTUREMBS**

102.2.147 **ChannelCount as Integer**

MBS Images Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The number of channels in this picture.
**Notes:**
1 for gray, 2 for gray+alpha, 3 for RGB, 4 for RGB+alpha or CMYK and 5 for CMYK+alpha.
(Read only property)

102.2.148 **CyanOffset as Integer**

MBS Images Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The internal offset for pixels in the cyan channel.
**Example:**
```vbs
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.CyanOffset)
```
**Notes:** (Read only property)

102.2.149 **DebugPicture as Picture**

MBS Images Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The picture content to view in the debugger.
**Notes:**
If DebugPictureEnabled is set to true in your code you can use the DebugPicture property to watch the picture content in the debugger. For speed reasons the size of the debug picture is limited to 512 by 512 pixels. (that could be increased)
(Read only property)

102.2.150 **DebugPictureEnabled as Boolean**

MBS Images Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether you want to use the DebugPicture property.
**Notes:**
If DebugPictureEnabled is set to true in your code you can use the DebugPicture property to watch the picture content in the debugger. For speed reasons the size of the debug picture is limited to 512 by 512 pixels. (that could be increased)
(Read and Write property)
102.2.151 Factory as PictureFactoryMBS

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The local factory to be used for pictures created in this picture.  
**Notes:**  
If one of the functions in this PictureMBS instance needs a new PictureMBS object, this factory is asked first.  
(Read and Write property)

102.2.152 GrayOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal offset for pixels in the gray channel.  
**Example:**
```vbs
    dim p as new PictureMBS(100,100,PictureBox.MBS.ImageFormatAG)  
    MsgBox str(p.GrayOffset)
```

**Notes:** (Read and Write property)

102.2.153 GreenOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal offset for pixels in the green channel.  
**Example:**
```vbs
    dim l as Picture = LogoMBS(500)  
    dim p as new PictureMBS(l)  
    MsgBox str(p.GreenOffset)
```

**Notes:** (Read and Write property)

102.2.154 HasAlpha as Boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the picture has an alpha channel.  
**Example:**
102.2. CLASS PICTUREMBS

```vbscript
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MsgBox str(p.HasAlpha)
```

**Notes:** (Read only property)

102.2.155 HasBlack as Boolean

MBS Images Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the picture has a blue channel. 
**Example:**
```vbscript
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.HasBlack)
```

**Notes:** (Read only property)

102.2.156 HasBlue as Boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the picture has a blue channel. 
**Example:**
```vbscript
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.HasBlue)
```

**Notes:** (Read only property)

102.2.157 HasCyan as Boolean

MBS Images Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the picture has a blue channel. 
**Example:**
```vbscript
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.HasCyan)
```
Notes: (Read only property)

102.2.158 HasGray as Boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the picture has a gray channel. **Example:**

```vbs
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MsgBox str(p.HasGray)
```

Notes: (Read only property)

102.2.159 HasGreen as Boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the picture has a green channel. **Example:**

```vbs
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.HasGreen)
```

Notes: (Read only property)

102.2.160 HasMagenta as Boolean

MBS Images Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the picture has a blue channel. **Example:**

```vbs
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.HasMagenta)
```
102.2.161  HasRed as Boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the picture has a channel.

**Example:**

```vba
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.HasRed)
```

**Notes:** (Read only property)

102.2.162  HasYellow as Boolean

MBS Images Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the picture has a blue channel.

**Example:**

```vba
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.HasYellow)
```

**Notes:** (Read only property)

102.2.163  Height as Integer

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The height of the picture in pixels.

**Example:**

```vba
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.Height)
```

**Notes:** (Read only property)
102.2.164  ImageFormat as Integer

Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.ImageFormat)
```

Notes:

See the ImageFormat* constants.  
(Read only property)

102.2.165  ImageFormatString as String

Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox p.ImageFormatString
```

Notes:

Returns for example ”RGB” for ImageFormatRGB.  
(Read only property)

102.2.166  IsCMYK as Boolean

MBS Images Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Whether the picture is a CMYK picture.

Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.IsCMYK)
```

Notes:
102.2. CLASS PICTUREMBS

HasCyan, HasMagenta, HasYellow and HasBlack are true if IsRGB is true.
(Read only property)

102.2.167  IsGray as Boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this picture is a grayscale picture.
**Example:**
```vbs
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MsgBox str(p.IsGray)
```

**Notes:**
HasGray is true if IsGray is true.
(Read only property)

102.2.168  IsMapping as Boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this picture uses virtual memory.
**Notes:**
If IsMapping is true you should not use the Memory property or the Clone function.
(Read only property)

102.2.169  IsRGB as Boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the picture is a RGB picture.
**Example:**
```vbs
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.IsRGB)
```

**Notes:**
HasRed, HasBlue and HasGreen are true if IsRGB is true.
(Read only property)
102.2.170  MagentaOffset as Integer

MBS Images Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal offset for pixels in the magenta channel.  
**Example:**
```vba
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.MagentaOffset)
```

**Notes:** (Read only property)

---

102.2.171  MappingBlockSize as Int64

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The block size for a picture using virtual memory.  
**Notes:** (Read and Write property)

---

102.2.172  MappingFirstRow as Integer

**Notes:**
- Only for mapped images.
- Value is -1 if no data is mapped in.  
  (Read only property)

---

102.2.173  MappingLastRow as Integer

MBS Images Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Last row mapped in memory.  
**Notes:**
- Only for mapped images.
- Value is -1 if no data is mapped in.  
  (Read only property)
102.2.174  MappingRows as Integer

MBS Images Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Number of rows for mapping.
**Notes:**
For a mapped image how many rows fit in the mapping buffer.
(Read only property)

102.2.175  Memory as Memoryblock

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns a memoryblock without size pointing to the current pixel buffer.
**Notes:**
Use only if IsMapping is false.
If size is -1, it's a memoryblock referencing the pixel data.
If size is >0, you got the original memoryblock used to allocate the memory.
(Read only property)

102.2.176  MemoryTarget as Memoryblock

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
If this picture stores its pixels in a memoryblock, you can access the memory block using this property.
**Notes:** (Read only property)

102.2.177  Parent as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The parent PictureMBS object.
**Notes:**
One PictureMBS can reference the pixels of another PictureMBS. The parent is referenced in this property so it is not released.
(Read only property)

102.2.178  PixelSize as Integer

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The size of a pixel in bytes.
**Example:**
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.PixelSize)

Notes:
For example:
1 for Gray
2 for Gray with Alpha
3 for RGB
4 for RGB with Alpha
(Read only property)

102.2.179 RedOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal offset for pixels in the red channel.

**Example:**

dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.RedOffset)

Notes: (Read and Write property)

102.2.180 RowOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal row offset.

**Example:**

dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
dim q as PictureMBS = p.ClipImage(10,10,80,80)
MsgBox str(q.width)+” x ”+str(q.height)+” with row offset: ”+str(q.RowOffset)

Notes:
Only used with clipping images.
(Read only property)
**102.2.181 RowSize as Integer**

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The size of one row in bytes.
**Example:**
```vba
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.RowSize)
```

**Notes:**
Additional bytes may be needed per row for better alignment of the data.
Also using virtual memory functions requires alignment.
(Read only property)

**102.2.182 Target as Picture**

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The target picture.
**Example:**
```vba
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)

window1.Backdrop = p.Target
```

**Notes:**
if this PictureMBS references the pixels of a REALbasic picture, this property keeps a reference to this target picture.
(Read only property)

**102.2.183 TotalSize as Int64**

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The total size of this picture in bytes.
**Example:**
```vba
```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.TotalSize)

Notes:
The result is Height*RowSize.
(Read only property)

102.2.184 UnclippedHeight as Integer

MBS Images Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The height of the picture in pixels.
**Notes:**
Without clipping, the full height of the image.
(Read only property)

102.2.185 Valid as Boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Whether this instance is a valid picture.
**Example:**

dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.Valid)

Notes:
Valid is false if the constructor failed to create a picture.
(Read only property)

102.2.186 Width as Integer

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The width of the picture in pixels.
**Example:**

102.2. CLASS PICTUREMBS

```vbs
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.Width)
```

**Notes:** (Read only property)

---

102.2.187 YellowOffset as Integer

**Function:**
The internal offset for pixels in the yellow channel.
**Example:**
```vbs
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.YellowOffset)
```

**Notes:** (Read only property)

---

102.2.188 YieldTicks as Integer

**Function:**
How much time is given back to REALbasic for other ticks.
**Example:**
```vbs
dim p as PictureMBS // your picture

p.YieldTicks=6 // only use 1/10th of a second
```

**Notes:**
If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let REALbasic redraw a progressbar.
(Read and Write property)
102.2.189  **DataStringInFormat(ImageFormat as Integer) as string**

MBS Images Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The data of this picture as a string.

**Notes:**

Strings are limit to 2 GB, but the actual limit is certainly smaller.

You can get and set the image data with this method in the native format.
If you set the data, use a string with at least RowSize bytes.
If you query the data, you will get a copy of the data bytes in a string.
Returns "" on any error.
May raise OutOfBoundsException for invalid index.

Version 18.1 or later will raise an out of memory exception for 32-bit applications if the memory needed will exceed 2 GB in memory. Allocating that many memory will be impossible.
(Read and Write computed property)

102.2.190  **Row(index as Integer) as memoryblock**

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A memoryblock with the data of this row.

**Example:**

```vbnet
// create new image
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
dim m as MemoryBlock = p.Row(10)
// modify
m.FillBytesMBS(10,100,200)
// copy back
p.row(10)=m
// show in window
window1.Backdrop = p.CopyPicture
```

**Notes:**

You can get and set a row with this method in the native format.
If you set the row, use a memoryblock with at least RowSize bytes.
If you query the row, you will get a copy of the row bytes in a new memoryblock.
Returns "" on any error.
May raise OutOfBoundsException for invalid index.
(Read and Write computed property)
102.2. CLASS PICTUREMBS

102.2.191 RowInFormat(index as Integer, ImageFormat as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A memoryblock with the data of this row in the format you request.

**Example:**

```vbs
// create new image
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
dim m as MemoryBlock = p.RowInFormat(10, p.ImageFormatRGB)
// modify
m.FillBytesMBS(10,80,200)
// copy back
p.RowInFormat(10, p.ImageFormatRGB)=m
// show in window
window1.Backdrop = p.CopyPicture
```

**Notes:**

You can get and set a row with this method in the given format.
If you set the row, use a memoryblock with at least Width*PixelSize bytes. PixelSize is the format dependent size in bytes for one pixel.
If you query the row, you will get a copy of the row bytes in a new memoryblock.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.
(Read and Write computed property)
See also:

- 102.2.192 RowInFormat(index as Integer, ImageFormat as Integer, InvertAlpha as boolean) as memoryblock

102.2.192 RowInFormat(index as Integer, ImageFormat as Integer, InvertAlpha as boolean) as memoryblock

MBS Images Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A memoryblock with the data of this row in the format you request.

**Example:**

```vbs
// create new image
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
dim m as MemoryBlock = p.RowInFormat(10, p.ImageFormatRGB, true)
// modify
m.FillBytesMBS(10,80,200)
// copy back
```
p.RowInFormat(10, p.ImageFormatRGB, true) = m
// show in window
window1.Backdrop = p.CopyPicture

Notes:
You can get and set a row with this method in the given format.
If you set the row, use a memoryblock with at least Width*PixelSize bytes. PixelSize is the format dependent
size in bytes for one pixel.
If you query the row, you will get a copy of the row bytes in a new memoryblock.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.
If InvertAlpha is true, the alpha values are inverted by using A=255-A.
(Read and Write computed property)
See also:

102.2.191 RowInFormat(index as Integer, ImageFormat as Integer) as memoryblock

102.2.193 RowStringInFormat(index as Integer, ImageFormat as Integer) as string

The row as a string.
Notes:
You can get and set a row with this method in the native format.
If you set the row, use a memoryblock with at least RowSize bytes.
If you query the row, you will get a copy of the row bytes in a string.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.
(Read and Write computed property)

102.2.194 Constants

102.2.195 Dither90Halftone6x6Matrix = 5

102.2.196 DitherCluster3Matrix = 8

102.2.197  DitherCluster4Matrix = 9

MBS Images Plugin, Plugin Version: 9.3. **Function:** One of the dither modes for the DitherFilter method.

102.2.198  DitherCluster8Matrix = & h0000000A

MBS Images Plugin, Plugin Version: 9.3. **Function:** One of the dither modes for the DitherFilter method.

102.2.199  DitherLines4x4Matrix = 4

MBS Images Plugin, Plugin Version: 9.3. **Function:** One of the dither modes for the DitherFilter method.

102.2.200  DitherMagic2x2Matrix = 1

MBS Images Plugin, Plugin Version: 9.3. **Function:** One of the dither modes for the DitherFilter method.

102.2.201  DitherMagic4x4Matrix = 2

MBS Images Plugin, Plugin Version: 9.3. **Function:** One of the dither modes for the DitherFilter method.

102.2.202  DitherOrdered4x4Matrix = 3

MBS Images Plugin, Plugin Version: 9.3. **Function:** One of the dither modes for the DitherFilter method.

102.2.203  DitherOrdered6x6Matrix = 6

MBS Images Plugin, Plugin Version: 9.3. **Function:** One of the dither modes for the DitherFilter method.

102.2.204  DitherOrdered8x8Matrix = 7

MBS Images Plugin, Plugin Version: 9.3. **Function:** One of the dither modes for the DitherFilter method.
102.2.205  ImageFormat1of3 = & h0000000F

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.  
**Notes:**  
This is the image format to use if you target only a gray channel in a RGB picture in memory.  
Targets the first byte with pixelsize=3.

102.2.206  ImageFormat1of4 = & h00000012

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.  
**Notes:**  
This is the image format to use if you target only a gray channel in a RGB picture in memory.  
Targets the first byte with pixelsize=4.

102.2.207  ImageFormat2of3 = & h00000010

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.  
**Notes:**  
This is the image format to use if you target only a gray channel in a RGB picture in memory.  
Targets the second byte with pixelsize=3.

102.2.208  ImageFormat2of4 = & h00000013

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.  
**Notes:**  
This is the image format to use if you target only a gray channel in a RGB picture in memory.  
Targets the second byte with pixelsize=4.

102.2.209  ImageFormat3of3 = & h00000011

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.  
**Notes:**  
This is the image format to use if you target only a gray channel in a RGB picture in memory.  
Targets the third byte with pixelsize=3.
102.2.210  ImageFormat3of4 = & h00000014

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.  
**Notes:**  
This is the imageformat to use if you target only a gray channel in a RGB picture in memory.  
Targets the third byte with pixelsize=4.

102.2.211  ImageFormat4of4 = & h00000015

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.  
**Notes:**  
This is the imageformat to use if you target only a gray channel in a RGB picture in memory.  
Targets the forth byte with pixelsize=4.

102.2.212  ImageFormatABGR = 9

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the possible image formats.

102.2.213  ImageFormatACMYK = & h00000019

MBS Images Plugin, Plugin Version: 11.0. **Function:** One of the possible image formats.  
**Example:**  
```plaintext
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatACMYK)
```

102.2.214  ImageFormatAG = & h0000000D

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the possible image formats.  
**Example:**  
```plaintext
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatAG)
```
102.2.215  **ImageFormatAKYMC = & h0000001E**

MBS Images Plugin, Plugin Version: 11.0. **Function:** One of the possible image formats.  
**Example:**
```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatAKYMC)
```

102.2.216  **ImageFormatAofABGR = & h00000012**

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.  
**Example:**
```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatAofABGR)
```

**Notes:** This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

102.2.217  **ImageFormatAofARGB = & h00000012**

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.  
**Example:**
```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatAofARGB)
```

**Notes:** This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

102.2.218  **ImageFormatAofBGRA = & h00000015**

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.  
**Example:**
```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatAofBGRA)
```

**Notes:** This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
102.2. **CLASS PICTUREMBS**

### 102.2.219 ImageFormatAofRGBA = & h00000015

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats. **Example:**

```vba
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatAofRGBA)
```

**Notes:** This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

### 102.2.220 ImageFormatARGB = 4

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the possible image formats. **Example:**

```vba
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatARGB)
```

### 102.2.221 ImageFormatBGR = 6

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the possible image formats. **Example:**

```vba
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatBGR)
```

### 102.2.222 ImageFormatBGRA = 7

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the possible image formats. **Example:**

```vba
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatBGRA)
```

### 102.2.223 ImageFormatBGRX = 8

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the possible image formats. **Example:**

```vba
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatBGRX)
```
102.2.224  ImageFormatBofABGR = & h00000013

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.  
**Example:**
```vbs
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatBofABGR)
```

**Notes:** This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

102.2.225  ImageFormatBofARGB = & h00000015

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.  
**Example:**
```vbs
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatBofARGB)
```

**Notes:** This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

102.2.226  ImageFormatBofBGR = & h0000000F

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.  
**Example:**
```vbs
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatBofBGR)
```

**Notes:** This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

102.2.227  ImageFormatBofBGRA = & h00000012

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.  
**Example:**
```vbs
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatBofBGRA)
```
102.2. CLASS PICTUREMBS

Notes: This is the image format to use if you target only a gray channel in a RGB picture in memory.

102.2.228 ImageFormatBofRGB = & h00000011

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.  
**Example:**

```vba
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatBofRGB)
```

Notes: This is the image format to use if you target only a gray channel in a RGB picture in memory.

102.2.229 ImageFormatBofRGBA = & h00000014

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.  
**Example:**

```vba
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatBofRGBA)
```

Notes: This is the image format to use if you target only a gray channel in a RGB picture in memory.

102.2.230 ImageFormatBuffer = & h00000016

MBS Images Plugin, Plugin Version: 10.3. **Function:** The image format for picture objects which are used for data storage.  
**Notes:** This format is for PixelSize = 1 and no channels.

102.2.231 ImageFormatCMYK = & h00000017

MBS Images Plugin, Plugin Version: 11.0. **Function:** One of the possible image formats.  
**Example:**

```vba
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
```
102.2.232 ImageFormatCMYKA = &h00000018

MBS Images Plugin, Plugin Version: 11.0. **Function:** One of the possible image formats. **Example:**

dim p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYKA)

102.2.233 ImageFormatCMYKX = &h0000001A

MBS Images Plugin, Plugin Version: 11.0. **Function:** One of the possible image formats. **Example:**

dim p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYKX)

102.2.234 ImageFormatG = &h0000000B

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the possible image formats. **Example:**

dim p as new PictureMBS(100,100,PictureMBS.ImageFormatG)

102.2.235 ImageFormatGA = &h0000000C

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the possible image formats. **Example:**

dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)

102.2.236 ImageFormatGofABGR = &h00000014

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats. **Example:**

dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGofABGR)
102.2. CLASS PICTUREMBS

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

102.2.237  ImageFormatGofARGB = & h00000014

Example:

// create a grayscale picture with 4 bytes per pixel
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGofARGB)

// fill top left pixels white
p.FillRect(0,0,10,10,255)

Backdrop=p.CopyPicture
Title=str(p.PixelSize)

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

102.2.238  ImageFormatGofBGR = & h00000010

Example:

dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGofBGR)

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

102.2.239  ImageFormatGofBGRA = & h00000013

Example:

dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGofBGRA)

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
102.2.240  **ImageFormatGofRGB = & h00000010**

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.  
**Example:**

```plaintext
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGofRGB)
```

**Notes:** This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

102.2.241  **ImageFormatGofRGBA = & h00000013**

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.  
**Example:**

```plaintext
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGofRGBA)
```

**Notes:** This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

102.2.242  **ImageFormatGray16 = & h00000029**

MBS Images Plugin, Plugin Version: 14.0. **Function:** One of the possible image formats.  
**Example:**

```plaintext
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGray16)
```

**Notes:**  
Support for 16bit Grayscale pictures is very limited.

With 14.0 plugins, we support for this format:

- constructor to create empty new picture
- Copy pixels from one gray to other gray image
- Invert
- Scale Gray16 to Gray16
- RawRow and Row functions
102.2. CLASS PICTUREMBS

- Clip
- Channel access
- Clear
- Clone
- Copy picture

Everything else will probably not work or crash.

102.2.243  ImageFormatKYMC = & h0000001C

MBS Images Plugin, Plugin Version: 11.0. **Function:** One of the possible image formats. **Example:**
```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatKYMC)
```

102.2.244  ImageFormatKYMCA = & h0000001D

MBS Images Plugin, Plugin Version: 11.0. **Function:** One of the possible image formats. **Example:**
```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatKYMCA)
```

102.2.245  ImageFormatKYMCX = & h0000001F

MBS Images Plugin, Plugin Version: 11.0. **Function:** One of the possible image formats. **Example:**
```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatKYMCX)
```

102.2.246  ImageFormatRGB = 1

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the possible image formats. **Example:**
102.2.247 ImageFormatRGBA = 2

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the possible image formats.

**Example:**

```vba
dim fSource as FolderItem = SpecialFolder.Desktop.Child("test.png") // some png with alpha
dim oPNGInput as new PNGReaderMBS
If oPNGInput.OpenFile(fSource) Then
If oPNGInput.ApplyOptions(0) Then

dim imgSource as New PictureMBS(oPNGInput.Width, oPNGInput.Height, PictureMBS.ImageFormatRGBA)

' Read row by row the file and puts it in a PictureMBS instance

dim nMax as Integer = oPNGInput.Height - 1
For nInd as Integer = 0 To nMax
    imgSource.RowInFormat(nInd, PictureMBS.ImageFormatRGBA, true) = oPNGInput.ReadRow()
Next

' show only alpha/mask channel
Backdrop=imgSource.AlphaChannel.CopyPicture

' show Picture without mask
Backdrop=imgSource.CopyPicture

' show picture with mask
Backdrop=imgSource.CopyPictureWithMask

End If
End If
```

102.2.248 ImageFormatRGBX = 3

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the possible image formats.

**Example:**

```vba
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
```
102.2. CLASS PICTURES

102.2.249  **ImageFormatRofABGR = \& h00000015**

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.
**Example:**
```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRofABGR)
```

**Notes:** This is the image format to use if you target only a gray channel in a RGB picture in memory.

102.2.250  **ImageFormatRofARGB = \& h00000013**

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.
**Example:**
```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRofARGB)
```

**Notes:** This is the image format to use if you target only a gray channel in a RGB picture in memory.

102.2.251  **ImageFormatRofBGR = \& h00000011**

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.
**Example:**
```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRofBGR)
```

**Notes:** This is the image format to use if you target only a gray channel in a RGB picture in memory.

102.2.252  **ImageFormatRofBGRA = \& h00000014**

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the possible image formats.
**Example:**
```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRofBGRA)
```

**Notes:** This is the image format to use if you target only a gray channel in a RGB picture in memory.
102.2.253  ImageFormatRofRGB = & h0000000F

MBS Images Plugin, Plugin Version: 9.1.  **Function:** One of the possible image formats.  
**Example:**

dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRofRGB)

**Notes:** This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

102.2.254  ImageFormatRofRGBA = & h00000012

MBS Images Plugin, Plugin Version: 9.1.  **Function:** One of the possible image formats.  
**Example:**

dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRofRGBA)

**Notes:** This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

102.2.255  ImageFormatScaling1 = & h00000021

MBS Images Plugin, Plugin Version: 11.3.  **Function:** One of the scaling image formats.  
**Notes:**

Used for the temporary picture while scaling.  
One Byte per Pixel.

102.2.256  ImageFormatScaling2 = & h00000022

MBS Images Plugin, Plugin Version: 11.3.  **Function:** One of the scaling image formats.  
**Notes:**

Used for the temporary picture while scaling.  
2 Bytes per Pixel.

102.2.257  ImageFormatScaling3 = & h00000023

MBS Images Plugin, Plugin Version: 11.3.  **Function:** One of the scaling image formats.  
**Notes:**
102.2. CLASS PICTUREMBS

Used for the temporary picture while scaling.
3 Bytes per Pixel.

102.2.258 ImageFormatScaling4 = & h00000024

MBS Images Plugin, Plugin Version: 11.3. **Function:** One of the scaling image formats. **Notes:**
Used for the temporary picture while scaling.
4 Bytes per Pixel.

102.2.259 ImageFormatScaling5 = & h00000025

MBS Images Plugin, Plugin Version: 11.3. **Function:** One of the scaling image formats. **Notes:**
Used for the temporary picture while scaling.
5 Bytes per Pixel.

102.2.260 ImageFormatScaling6 = & h00000026

MBS Images Plugin, Plugin Version: 11.3. **Function:** One of the scaling image formats. **Notes:**
Used for the temporary picture while scaling.
6 Bytes per Pixel.

102.2.261 ImageFormatScaling7 = & h00000027

MBS Images Plugin, Plugin Version: 11.3. **Function:** One of the scaling image formats. **Notes:**
Used for the temporary picture while scaling.
7 Bytes per Pixel.

102.2.262 ImageFormatScaling8 = & h00000028

MBS Images Plugin, Plugin Version: 11.3. **Function:** One of the scaling image formats. **Notes:**
102.2.263  ImageFormatUnknown = 0

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the possible image formats.

102.2.264  ImageFormatXBGR = &h0000000A

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the possible image formats.  
**Example:**

```cpp
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatXBGR)
```

102.2.265  ImageFormatXCMYK = &h0000001B

MBS Images Plugin, Plugin Version: 11.0. **Function:** One of the possible image formats.  
**Example:**

```cpp
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatXCMYK)
```

102.2.266  ImageFormatXKYM = &h00000020

MBS Images Plugin, Plugin Version: 11.0. **Function:** One of the possible image formats.  
**Example:**

```cpp
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatXKYM)
```

102.2.267  ImageFormatXRGB = 5

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the possible image formats.  
**Example:**

```cpp
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatXRGB)
```
102.2. ScaleBox = 2

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the scale modes for the Scale function.

102.2 ScaleCubic = 7

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the scale modes for the Scale function.

102.2 ScaleLanczos3 = 3

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the scale modes for the Scale function.

102.2 ScaleLanczos8 = 4

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the scale modes for the Scale function.

102.2 ScaleMitchell = 5

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the scale modes for the Scale function.

102.2 ScalePoly3 = 6

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the scale modes for the Scale function.

102.2 ScaleTriangle = 1

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the scale modes for the Scale function.
Chapter 103

Launch Services

103.1 class LaunchServicesApplicationListMBS

103.1.1 class LaunchServicesApplicationListMBS

Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

103.1.2 Methods

103.1.3 Constructor

103.1.4 Item(index as Integer) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns an item of this list. 
Notes: Index goes from 0 to count-1.
103.1.5 Properties

103.1.6 Count as Integer

MBS MacOSX Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of items inside this list. **Notes:** (Read and Write property)
103.2 class LaunchServicesItemInfoMBS

103.2.1 class LaunchServicesItemInfoMBS

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class to represent several details about an application folderitem.

103.2.2 Methods

103.2.3 close

MBS MacOSX Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.  
**Notes:** There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.  
(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

103.2.4 Properties

103.2.5 AppIsScriptable as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the application can be scripted.  
**Notes:** (Read only property)

103.2.6 AppPrefersClassic as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Item is an application that can run either natively or in the Classic emulation environment, but prefers to be launched in the Classic environment.  
**Notes:** This flag is valid only when kLSItemInfoIsNativeApp is set.  
(Read only property)
103.2.7 AppPrefersNative as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Item is an application that can run either natively or in the Classic emulation environment, but prefers to be launched natively.
Notes: This flag is valid only when kLSItemInfoIsNativeApp is set.
(Read only property)

103.2.8 Extension as String

Notes: You need to specify the kLSRequestExtension flag to get this information.
(Read only property)

103.2.9 ExtensionIsHidden as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: whether the folderitem has a hidden extension.
Notes: (Read only property)

103.2.10 IconFilename as String

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: The optional filename string for the icon of this application.
Notes: This property is not be used on 64bit Mac targets.
(Read only property)

103.2.11 IsAliasFile as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Whether the folderitem is an alias file (includes sym links)
Notes: (Read only property)
103.2.12 **IsApplication as Boolean**

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The folderitem is a Single-file or packaged application.

**Example:**
```
dim l as LaunchServicesItemInfoMBS
dim f as FolderItem

f=ApplicationsFolderMBS(0).Child("Mail.app")
l=f.LaunchServicesItemInfoMBS(-1)

if l.IsApplication then
MsgBox "Is an application!"
end if
```

**Notes:**
This property is filled when kLSRequestBasicFlagsOnly is requested. (Read only property)

103.2.13 **IsClassicApp as Boolean**

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The folderitem is a CFM Classic application.

**Notes:** (Read only property)

103.2.14 **IsContainer as Boolean**

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The folderitem is a directory (includes packages) or a volume.

**Notes:** (Read only property)

103.2.15 **IsInvisible as Boolean**

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The folderitem is invisible.

**Notes:**
Does not include ‘.’ files or ‘.hidden’ entries.
This property is filled when kLSRequestBasicFlagsOnly is requested.
103.2.16  **IsNativeApp as Boolean**

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The application is a Carbon or Cocoa native application. **Notes:** (Read only property)

103.2.17  **IsPackage as Boolean**

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** whether the folderitem is an Application, document, or bundle package. **Example:**
```
dim l as LaunchServicesItemInfoMBS
dim f as FolderItem

f=SpecialFolder.Applications.Child("Mail.app")
l=f.LaunchServicesItemInfoMBS(-1)

if l.IsPackage then
    MsgBox "Is a package!"
end if
```

**Notes:**
The item is a packaged directory.
This property is filled when kLSRequestBasicFlagsOnly is requested. (Read only property)

103.2.18  **IsPlainFile as Boolean**

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** None of the other attributes is true. **Notes:**
The item is not a directory, volume, or symlink. This property is filled when kLSRequestBasicFlagsOnly is requested. (Read only property)
103.2.19  IsSymlink as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The folderitem is only an UNIX symbolic link.  
**Notes:** (Read only property)

103.2.20  IsVolume as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The folderitem is a volume.  
**Notes:** (Read only property)

103.2.21  KindID as Integer

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The kind ID of this folderitem.  
**Notes:**  
This property is not be used on 64bit Mac targets.  
(Read only property)

103.2.22  MacCreator as String

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Mac OS creator code.  
**Example:**

```vba
dim f as FolderItem = SpecialFolder.Applications.Child("Firefox.app")

dim l As LaunchServicesItemInfoMBS = f.LaunchServicesItemInfoMBS(& h02)

if l <> nil Then
    MsgBox l.MacCreator  // shows "MOZB"
end
```

**Notes:**  
You need to specify the kLSRequestTypeCreator flag to get this information.  
(Read only property)
103.2.23 MacType as String

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The Mac OS type code.

**Notes:**
You need to specify the kLSRequestTypeCreator flag to get this information.
(Read only property)
103.3. CLASS LAUNCHSERVICESLAUNCHPARAMETERMBS

103.3 class LaunchServicesLaunchParameterMBS

103.3.1 class LaunchServicesLaunchParameterMBS

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for parameters which can be used to launch an application.

**Example:**

```vbscript
    dim f(0) as FolderItem
    dim a as FolderItem
    dim p as LaunchServicesLaunchParameterMBS

    p=new LaunchServicesLaunchParameterMBS
    p.Defaults=true
    p.Hide=true

    a=LaunchServicesOpenXMBS(f,p)

    MsgBox a.Name
```

103.3.2 Methods

103.3.3 close

MBS MacOSX Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

**Notes:**

There is no need to call this method except you want to free all resources of this object now without waiting for Realbasic to do it for you.

(e.g. some Realbasic versions crash on Windows if there are plugin objects not closed.)

103.3.4 Properties

103.3.5 Application as FolderItem

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The application to use to open documents.

**Notes:** (Read and Write property)
103.3.6 Defaults as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Default settings should be used. **Notes:** default means: open, async, use Info.plist, start Classic. (Read and Write property)

103.3.7 DontAddToRecents as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Do not add application or documents to recents menus. **Notes:** (Read and Write property)

103.3.8 DontSwitch as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Don’t bring new app to the foreground. **Example:**

```vbscript
Dim l as New LaunchServicesLaunchParameterMBS
l.DontSwitch=true
Dim files(0) as FolderItem
files(0)=GetFolderItem("/Applications/iTunes.app", FolderItem.PathTypeShell)
Call LaunchServicesOpenXMBS(files,l)
```

**Notes:** (Read and Write property)

103.3.9 Hide as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Send child a "hide" request as soon as it checks in. **Notes:** (Read and Write property)
103.3.10 HideOthers as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Hide all other apps when child checks in.
Notes: (Read and Write property)

103.3.11 InClassic as Boolean

Notes: (Read and Write property)

103.3.12 InhibitBGOnly as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Causes launch to fail if target is background-only.
Notes: (Read and Write property)

103.3.13 LastError as Integer

Notes:
Values for errors:

kLSUnknownErr = -10810
kLSNotAnApplicationErr = -10811
kLSNotInitializedErr = -10812
kLSDataUnavailableErr = -10813 e.g. no kind string
kLSApplicationNotFoundErr = -10814 e.g. no application claims the file
kLSUnknownTypeErr = -10815
kLSDataTooOldErr = -10816
kLSDataErr = -10817
kLSLaunchInProgressErr = -10818 e.g. opening an already opening application
kLSNotRegisteredErr = -10819
kLSAppDoesNotClaimTypeErr = -10820
kLSAppDoesNotSupportSchemeWarning = -10821 not an error, just a warning
kLSServerCommunicationErr = -10822 cannot set recent items
kLSCannotSetInfoErr = -10823 you may not set item info for this item

(Read and Write property)
103.3.14  NewInstance as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Instantiate app even if it is already running.
**Notes:** (Read and Write property)

103.3.15  NoParams as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Use Info.plist to determine launch parameters.
**Notes:** (Read and Write property)

103.3.16  Print as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Print items instead of opening them.
**Notes:** (Read and Write property)

103.3.17  StartClassic as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Start up Classic environment if required for this application.
**Notes:** (Read and Write property)
103.4  class LaunchServicesStringListMBS

103.4.1  class LaunchServicesStringListMBS

MBS MacOSX Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**  A class for a list of strings.

103.4.2  Methods

103.4.3  Item(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**  Returns an item of this list.  
**Notes:** Index goes from 0 to count-1.

103.4.4  Properties

103.4.5  Count as Integer

MBS MacOSX Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  **Function:**  The number of items inside this list.  
**Notes:** (Read and Write property)
103.5  Globals

103.5.1  LaunchServicesAllHandlersForURLSchemeMBS(URLScheme as string) as LaunchServicesStringListMBS

MBS MacOSX Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array of application bundle identifiers for applications capable of handling the specified URL scheme.

**Example:**

```vbs
dim l as LaunchServicesStringListMBS
dim s(-1) as string
dim i,c as Integer

l=LaunchServicesAllHandlersForURLSchemeMBS("http")
if l<>nil then
    c=l.Count-1
    for i=0 to c
        s.Append l.Item(i)
    next

    MsgBox Join(s,", ")
end if
```

**Notes:**

URL handling capability is determined according to the kCFBundleURLTypes listed in an application’s Info.plist). Returns nil if no handlers are available.

Example output from the code above:

```
```

Requires Mac OS X 10.4 to work correct. Returns always nil on older systems.

103.5.2  LaunchServicesAllRoleHandlersForContentTypeMBS(ContentType as string, role as Integer) as LaunchServicesStringListMBS

MBS MacOSX Plugin, Plugin Version: 6.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array of application bundle identifiers for applications capable of handling the specified content type (UTI) with the specified role(s).

**Example:**
dim l as LaunchServicesStringListMBS
dim s(-1) as string
dim i,c as Integer

c = -1
const kLSRolesAll = -1

c = l.Count - 1
for i = 0 to c
    s.Append l.Item(i)
next

MsgBox Join(s, " , ")

Notes:
Application content handling capabilities are determined according to the kCFBundleDocumentTypes listed in an application’s Info.plist). For any role, specify kLSRolesAll. Returns nil if no handlers are available. Requires Mac OS X 10.4.

Constants you can use for the role parameter:

kLSRolesNone = 1 no claim is made about support for this type/scheme
kLSRolesViewer = 2 claim to be able to view this type/scheme
kLSRolesEditor = 4 claim to be able to edit this type/scheme
kLSRolesAll = -1 claim to do it all

Example output for code above is:

103.5.3 LaunchServicesApplicationForInfoMBS(type as string, creator as string, extension as string, role as Integer) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Return the application used to open items with particular data.
Example:
MsgBox LaunchServicesApplicationForInfoMBS("", "R*ch", "txt", -1).name
MsgBox LaunchServicesApplicationForInfoMBS("TEXT", "", "", -1).name
MsgBox LaunchServicesApplicationForInfoMBS("", "", "txt", -1).name
Notes:
Consults the binding tables to return the application that would be used to open items with type, creator, and/or extension as provided if they were double-clicked in the Finder. This application will be the default for items like this if one has been set. If no application is known to LaunchServices suitable for opening such items, nil (kLSApplicationNotFoundErr) will be returned. Not all three input parameters can be "" at the same time nor can both output parameters be "" at the same time.

Constants you can use for the role parameter:

<table>
<thead>
<tr>
<th>Constant</th>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>kLSRolesNone</td>
<td>1</td>
<td>no claim is made about support for this type/scheme</td>
</tr>
<tr>
<td>kLSRolesViewer</td>
<td>2</td>
<td>claim to be able to view this type/scheme</td>
</tr>
<tr>
<td>kLSRolesEditor</td>
<td>4</td>
<td>claim to be able to edit this type/scheme</td>
</tr>
<tr>
<td>kLSRolesAll</td>
<td>-1</td>
<td>claim to do it all</td>
</tr>
</tbody>
</table>

103.5.4 LaunchServicesApplicationForItemMBS(file as folderitem, role as Integer) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Return the application used to open an item.
**Example:**
```vb
dim file, appf as FolderItem

file = SpecialFolder.Desktop.Child("d.rb") // some Realbasic file
appf = LaunchServicesApplicationForItemMBS(file, 0)

MsgBox appf.AbsolutePath
```

Notes:
Consults the binding tables to return the application that would be used to open the folderitem if it were double-clicked in the Finder. This application will be the user-specified override if appropriate or the default otherwise. If no application is known to LaunchServices suitable for opening this item, nil (kLSApplicationNotFoundErr) will be returned.

Constants you can use for the role parameter:
103.5  GLOBALS

kLSRolesNone  = 1  no claim is made about support for this type/scheme
kLSRolesViewer = 2  claim to be able to view this type/scheme
kLSRolesEditor  = 4  claim to be able to edit this type/scheme
kLSRolesAll    = -1 claim to do it all

103.5.5  LaunchServicesCanApplicationAcceptItemMBS(item as folderitem, targetapp as folderitem, role as Integer, flags as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determine whether an item can accept another item. **Notes:**

Returns whether TargetApp can accept this folderitem as in a drag and drop operation. If role is other than kLSRolesAll then make sure TargetApp claims to fulfill the requested role.

Constants you can use for the role parameter:

kLSRolesNone  = 1  no claim is made about support for this type/scheme
kLSRolesViewer = 2  claim to be able to view this type/scheme
kLSRolesEditor  = 4  claim to be able to edit this type/scheme
kLSRolesAll    = -1 claim to do it all

Values for the flags:

kLSAcceptDefault  = 1
kLSAcceptAllowLoginUI = 2  show UI to log in if necessary

103.5.6  LaunchServicesDefaultHandlerForURLSchemeMBS(URLScheme as string) as string

MBS MacOSX Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the bundle identifier of the default handler for the specified URL scheme. **Example:**

MsgBox LaunchServicesDefaultHandlerForURLSchemeMBS(“http”) // shows here: com.apple.safari

**Notes:**

Returns "" if no handler is available.
Requires Mac OS X 10.4 to work correct. Returns always "" on older systems.
103.5.7 LaunchServicesDefaultRoleHandlerForContentTypeMBS(ContentType as string, role as Integer) as string

MBS MacOSX Plugin, Plugin Version: 6.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the application bundle identifier of the default handler for the specified content type (UTI), in the specified role(s).

**Example:**

```math
const type="com.adobe.pdf"
msgbox LaunchServicesDefaultRoleHandlerForContentTypeMBS(type,-1)
```

**Notes:**

For any role, specify kLSRolesAll. Returns "" if no handler is available.
Requires Mac OS X 10.4.

Constants you can use for the role parameter:

- kLSRolesNone = 1 no claim is made about support for this type/scheme
- kLSRolesViewer = 2 claim to be able to view this type/scheme
- kLSRolesEditor = 4 claim to be able to edit this type/scheme
- kLSRolesAll = -1 claim to do it all

103.5.8 LaunchServicesDisplayNameForCFURLMBS(cfurlhandle as Integer) as string

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get the display name for an url handle.

**Notes:**

Return a copy of the display name for an url handle. Takes into consideration whether this item has a hidden extension or not.

Cfurlhandle should be the non 0 value from a CFURL object handle property.
103.5.9  LaunchServicesFindApplicationForInfoMBS(creator as string, bundleID as string, name as string) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Locate a specific application.

**Example:**

MsgBox LaunchServicesFindApplicationForInfoMBS(“prvw”,””,”).Name
MsgBox LaunchServicesFindApplicationForInfoMBS(“”,”com.apple.iTunes”,””).Name
MsgBox LaunchServicesFindApplicationForInfoMBS(“”,””,”Safari.app”).Name

**Notes:**

Returns the application with the corresponding input information. The registry of applications is consulted first in order of bundleID, then creator, then name. All comparisons are case insensitive and 'ties' are decided first by version, then by native vs. Classic.

Parameters can be ””. The name of the application must be the name with the extension.

103.5.10  LaunchServicesItemInfoForCFURLMBS(cfurlhandle as Integer, WhichInfo as Integer) as LaunchServicesItemInfoMBS

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Return information about an item.

**Notes:**

Returns as much or as little information as requested about the url. Some information is available in a thread-safe manner, some is not.

Cfurlhandle should be the non 0 value from a CFURL object handle property.

Possible values you can combine for the WhichInfo parameter:

103.5.11  LaunchServicesKindStringForCFURLMBS(cfurlhandle as Integer) as string

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get the kind string for an item.

**Notes:**

Returns the kind string as used in the Finder and elsewhere for the given folderitem.
103.5.12 LaunchServicesOpenMBS(item as folderitem) as folderitem

Notes:
Opens applications, documents, and folders. Applications are opened via an 'oapp' or 'rapp' event. Documents are opened in their user-overridden or default applications as appropriate. Folders are opened in the Finder. Use the more specific LaunchServicesOpenXMBS for more control over launching.

Returns a folderitem to the application which was launched.

103.5.13 LaunchServicesOpenXMBS(documents() as folderitem, parameter as LaunchServicesLaunchParameterMBS) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Opens an application or one or more documents or folders.

Example:

// Open a file in Preview (Mac OS X).
Sub OpenWithPreview(f as folderitem)
    dim p as FolderItem
    dim d(0) as FolderItem
    dim r as FolderItem
    dim param as LaunchServicesLaunchParameterMBS

    // Find preview
    p=LaunchServicesFindApplicationForInfoMBS("prvw","com.apple.Preview","Preview.app")
if p<>Nil then
d(0)=f

param=new LaunchServicesLaunchParameterMBS
param.Application=p
param.Defaults=true  // just default settings

r=LaunchServicesOpenXMBS(d, param)
if r<>nil then
    Return  //Success
end if

// On failure, just launch normally:
f.Launch true
End Sub

Notes:
Opens applications, documents, and folders. Applications are opened via an ‘oapp’ or ‘rapp’ event. Documents are opened in their user-overridden or default applications as appropriate. Folders are opened in the Finder.

Returns a folderitem to the application which was launched.
Currently this function is not available to RB versions before 3.5.
Note that the documents parameter is an array of folderitem and not just one.

103.5.14  LaunchServicesSetDefaultHandlerForURLSchemeMBS(URLScheme as string, BundleID as string) as Integer

MBS MacOSX Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.  Function:
Sets the user’s preferred handler for the specified URL scheme.
Example:

dim e as Integer
dim old as string

old=LaunchServicesDefaultHandlerForURLSchemeMBS("http")
MsgBox "Before: "+old

e=LaunchServicesSetDefaultHandlerForURLSchemeMBS("http","com.microsoft.explorer")
MsgBox "LaunchServicesSetDefaultHandlerForURLSchemeMBS: "+str(e)
MsgBox "Between: " + LaunchServicesDefaultHandlerForURLSchemeMBS("http")

e = LaunchServicesSetDefaultHandlerForURLSchemeMBS("http", old)

MsgBox "LaunchServicesSetDefaultHandlerForURLSchemeMBS: " + str(e)

MsgBox "After: " + LaunchServicesDefaultHandlerForURLSchemeMBS("http")

Notes:
Returns Mac OS error code with 0 for success.
The handler is specified as an application bundle identifier.
Requires Mac OS X 10.4 to work correct. Returns always -1 on older systems.

103.5.15 LaunchServicesSetDefaultRoleHandlerForContentTypeMBS(ContentType as string, role as Integer, BundleID as string) as Integer

MBS MacOSX Plugin, Plugin Version: 6.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Sets the user’s preferred handler for the specified content type (UTI) in the specified role(s).
Example:
dim e as Integer

// makes Acrobat the default pdf reader
e = LaunchServicesSetDefaultRoleHandlerForContentTypeMBS("com.adobe.pdf", -1, "com.adobe.Reader")

// makes preview the default pdf reader
e = LaunchServicesSetDefaultRoleHandlerForContentTypeMBS("com.adobe.pdf", -1, "com.apple.preview")

msgbox str(e)

Notes:
For all roles, specify kLSRolesAll. The handler is specified as an application bundle identifier.
Returns a Mac OS error code or -1 if the function is not available.
Requires Mac OS X 10.4.

Constants you can use for the role parameter:
kLSRolesNone    = 1   no claim is made about support for this type/scheme
kLSRolesViewer = 2   claim to be able to view this type/scheme
kLSRolesEditor = 4   claim to be able to edit this type/scheme
kLSRolesAll     = -1  claim to do it all

103.6 module UTTypeMBS

103.6.1 module UTTypeMBS

Notes: See this webpage for a list of all the predefined types:

103.6.2 Methods

103.6.3 ConformsTo(UTI as string, ConformsToUTI as string) as boolean

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Checks whether a type is a subtype of the second type.
Example:

if UTTypeMBS.ConformsTo(“public.jpeg”, ”public.image”) then
    MsgBox ”ConformsTo"
else
    MsgBox ”not ConformsTo"
end if

103.6.4 CreateAllIdentifiersForTag(inTagClass as string, inTag as string, inConformingToUTI as string) as string()

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Creates an array of all uniform type identifiers indicated by the specified tag.
Example:

MsgBox join(UTTypeMBS.CreateAllIdentifiersForTag(UTTypeMBS.kUTTagClassFilenameExtension, ”txt”, ””))
// shows ”public.plain-text”
MsgBox join(UTTypeMBS.CreateAllIdentifiersForTag(UTTypeMBS.kUTTagClassFilenameExtension, "xml", ")
// shows "public.xml com.apple.dashcode.xml"

Notes: An overloaded tag (e.g., an extension used by several applications for different file formats) may indicate multiple types. If no declared type identifiers have the specified tag, then a single dynamic type identifier will be created for the tag. Optionally, the returned type identifiers must conform to the identified "conforming-to" type argument. This is a hint to the implementation to constrain the search to a particular tree of types. For example, the client may want to know the type indicated by a particular extension tag. If the client knows that the extension is associated with a directory (rather than a file), the client may specify "public.directory" for the conforming-to argument. This will allow the implementation to ignore all types associated with byte data formats (public.data base type).

103.6.5 CreatePreferredIdentifierForTag(inTagClass as string, inTag as string, inConformingToUTI as string) as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Creates a uniform type identifier for the type indicated by the specified tag.
Example:

MsgBox UTTypeMBS.CreatePreferredIdentifierForTag(UTTypeMBS.kUTTagClassFilenameExtension, "jpg", ")
// shows "public.jpeg"
MsgBox UTTypeMBS.CreatePreferredIdentifierForTag(UTTypeMBS.kUTTagClassOSType, "TIFF", "public.image")
// shows "public.tiff"

Notes: This is the primary function to use for going from tag (extension/MIMEType/OSType) to uniform type identifier. Optionally, the returned type identifiers must conform to the identified "conforming-to" type argument. This is a hint to the implementation to constrain the search to a particular tree of types. For example, the client may want to know the type indicated by a particular extension tag. If the client knows that the extension is associated with a directory (rather than a file), the client may specify "public.directory" for the conforming-to argument. This will allow the implementation to ignore all types associated with byte data formats (public.data base type). If more than one type is indicated, preference is given to a public type over a non-public type on the theory that instances of public types are more common, and therefore more likely to be correct. When there a choice must be made between multiple public types or multiple non-public types, the selection rules are undefined. Clients needing finer control should use CreateAllIdentifiersWithTag. If no declared type is indicated, a dynamic type identifier is generated which satisfies the parameters.
103.6. MODULE UTTYPEMBS

103.6.6 DeclaringBundleURL(UTI as string) as folderitem

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the folderitem of the bundle containing the type declaration of the identified type.

**Example:**

MsgBox UTTypeMBS.DeclaringBundleURL("public.jpeg").AbsolutePath

103.6.7 Description(UTI as string) as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the localized, user-readable type description string.

**Example:**

MsgBox UTTypeMBS.Description("public.jpeg") // "JPEG-Bild" in German

103.6.8 Equal(UTI as string, SecondUTI as string) as boolean

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Checks whether two types are equal.

**Example:**

if UTTypeMBS.Equal("public.jpeg","public.jpeg") then
    MsgBox "equal"
else
    MsgBox "not equal"
end if

**Notes:** Returns true if both UTIs are equal.

103.6.9 kUTExportedTypeDeclarationsKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys used in type declarations.

**Example:**

MsgBox UTTypeMBS.kUTExportedTypeDeclarationsKey /* UTExportedTypeDeclarations"
103.6.10 kUTImportedTypeDeclarationsKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys used in type declarations.  
**Example:**

MsgBox UTTypeMBS.kUTImportedTypeDeclarationsKey // "UTImportedTypeDeclarations"

103.6.11 kUTTagClassFilenameExtension as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.  
**Example:**

MsgBox UTTypeMBS.kUTTagClassFilenameExtension // "public.filename-extension"

103.6.12 kUTTagClassMIMEType as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.  
**Example:**

MsgBox UTTypeMBS.kUTTagClassMIMEType // "public.mime-type"

103.6.13 kUTTagClassNSPboardType as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.  
**Example:**

MsgBox UTTypeMBS.kUTTagClassNSPboardType // "com.apple.nsboard-type"
103.6.14  kUTTagClassOSType as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.

**Example:**

MsgBox UTTypeMBS.kUTTagClassOSType // "com.apple.ostype"

103.6.15  kUTTypeAliasFile as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.16  kUTTypeAliasRecord as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.17  kUTTypeAppleICNS as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.18  kUTTypeAppleProtectedMPEG4Audio as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.19  kUTTypeApplication as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.
103.6.20  kUTTypeApplicationBundle as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.21  kUTTypeApplicationFile as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.22  kUTTypeArchive as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.23  kUTTypeAudio as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.24  kUTTypeAudiovisualContent as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.25  kUTTypeBMP as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.26  kUTTypeBundle as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.
103.6.27  **kUTTypeCHeader as string**

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.28  **kUTTypeCompositeContent as string**

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.29  **kUTTypeConformsToKey as string**

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys used in type declarations.  
**Example:**

MsgBox UTTypeMBS.kUTTypeConformsToKey // "UTTypeConformsTo"

103.6.30  **kUTTypeContact as string**

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.31  **kUTTypeContent as string**

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.32  **kUTTypeCPlusPlusHeader as string**

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.
103.6.33 kUTTypeCPlusPlusSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.34 kUTTypeCSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.35 kUTTypeData as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.36 kUTTypeDescriptionKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys used in type declarations. **Example:**

MsgBox UTTypeMBS.kUTTypeDescriptionKey // "UTTypeDescription"

103.6.37 kUTTypeDirectory as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.38 kUTTypeDiskImage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.
103.6.39  kUTTypeFileURL as string
MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: One of the predefined type constants.

103.6.40  kUTTypeFlatRTFD as string
MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: One of the predefined type constants.

103.6.41  kUTTypeFolder as string
MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: One of the predefined type constants.

103.6.42  kUTTypeFramework as string
MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: One of the predefined type constants.

103.6.43  kUTTypeGIF as string
MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: One of the predefined type constants.

103.6.44  kUTTypeHTML as string
MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: One of the predefined type constants.

103.6.45  kUTTypeICO as string
MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: One of the predefined type constants.
103.6.46 kUTTypeIconFileKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys used in type declarations. **Example:**

```plaintext
MsgBox UTTypeMBS.kUTTypeIconFileKey // "UTTypeIconFile"
```

103.6.47 kUTTypeIdentifierKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys used in type declarations. **Example:**

```plaintext
MsgBox UTTypeMBS.kUTTypeIdentifierKey // "UTTypeIdentifier"
```

103.6.48 kUTTypeImage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.49 kUTTypeInkText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.50 kUTTypeItem as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.51 kUTTypeJavaSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.
103.6.52  kUTTypeJPEG as string

**Function:** One of the predefined type constants.

103.6.53  kUTTypeJPEG2000 as string

**Function:** One of the predefined type constants.

103.6.54  kUTTypeMessage as string

**Function:** One of the predefined type constants.

103.6.55  kUTTypeMountPoint as string

**Function:** One of the predefined type constants.

103.6.56  kUTTypeMovie as string

**Function:** One of the predefined type constants. 
**Example:**
```
    dim f as FolderItem = SpecialFolder.Desktop.Child("test.avi")
    dim u as string = UTTypeMBS.UTI(f)

    if UTTypeMBS.ConformsTo(u, UTTypeMBS.kUTTypeMovie) then
        MsgBox u + " is movie"
    else
        MsgBox u + " is not movie."
    end if
```
103.6.57 kUTTypeMP3 as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.58 kUTTypeMPEG as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.59 kUTTypeMPEG4 as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.60 kUTTypeMPEG4Audio as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.61 kUTTypeObjectiveCPlusPlusSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.62 kUTTypeObjectiveCSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.63 kUTTypePackage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.
103.6. **MODULE UTTYPEMBS**

103.6.64  **kUTTypePDF as string**

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.65  **kUTTypePICT as string**

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.66  **kUTTypePlainText as string**

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.67  **kUTTypePNG as string**

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.68  **kUTTypeQuickTimeImage as string**

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.69  **kUTTypeQuickTimeMovie as string**

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.70  **kUTTypeReferenceURLKey as string**

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys used in type declarations.

**Example:**
103.6.71  kUTTypeResolvable as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.72  kUTTypeRTF as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.73  kUTTypeRTFD as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.74  kUTTypeSourceCode as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.75  kUTTypeSymLink as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.76  kUTTypeTagSpecificationKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys used in type declarations.  

**Example:**

MsgBox UTTypeMBS.kUTTypeReferenceURLKey // "UTTypeReferenceURL"
103.6.77 kUTTypeText as string

103.6.78 kUTTypeTIFF as string

103.6.79 kUTTypeTXNTextAndMultimediaData as string

103.6.80 kUTTypeURL as string

103.6.81 kUTTypeUTF16ExternalPlainText as string

103.6.82 kUTTypeUTF16PlainText as string

103.6.83  kUTTypeUTF8PlainText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.84  kUTTypeVCard as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.85  kUTTypeVersionKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys used in type declarations.  
**Example:**

MsgBox UTTypeMBS.kUTTypeVersionKey // "UTTypeVersion"

103.6.86  kUTTypeVideo as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.87  kUTTypeVolume as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.

103.6.88  kUTTypeWebArchive as string

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the predefined type constants.
103.6. MODULE UTTYPEMBS  

103.6.89  kUTTypeXML as string  

103.6.90  PreferredTagWithClass(inUTI as string, inTagClass as string) as string  

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the identified type’s preferred tag with the specified tag class as a String. Example:

MsgBox UTTypeMBS.PreferredTagWithClass("public.jpeg",UTTypeMBS.kUTTagClassMIMEType)  // shows "image/jpeg"
MsgBox UTTypeMBS.PreferredTagWithClass("public.jpeg",UTTypeMBS.kUTTagClassFilenameExtension)  // shows "jpeg"

Notes: This is the primary function to use for going from uniform type identifier to tag. If the type declaration included more than one tag with the specified class, the first tag in the declared tag array is the preferred tag.

103.6.91  UTI(file as folderitem) as string  

MBS MacOSX Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Queries the UTI for a given file. Notes: Returns "" if no UTI is available.
Chapter 104

LCMS2

104.1 class LCMS2BitmapMBS

104.1.1 class LCMS2BitmapMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for a bitmap.

**Notes:**
You can pass bitmap data as raw memoryblock or fill it using a Real Studio picture.
In our LCMS 1.x plugin, the bitmap was always 16 bit. This plugin also can also use 8 bit or 32 bit.

104.1.2 Methods

104.1.3 Constructor

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates an empty bitmap object.

See also:

- 104.1.4 Constructor(p as picture, bits as Integer = 8) 15932
- 104.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 15932
- 104.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer) 15933
- 104.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 15933

15931
104.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock)

104.1.4 Constructor(p as picture, bits as Integer = 8)

**Example:**

```
// convert picture to bitmap
dim b as new LCMS2BitmapMBS(pic)
// convert to picture
Backdrop = b.Picture
```

**Notes:** Bits can be 8, 16 or 32 bit integers.

See also:

- 104.1.3 Constructor
- 104.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8)
- 104.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer)
- 104.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer)
- 104.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock)

104.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8)

**Example:**

```
// convert small part of picture to bitmap
dim b as new LCMS2BitmapMBS(pic, 50, 50, 100, 100)
// convert to picture
Backdrop = b.Picture
```

**Notes:**
Picks only the provided area from the source picture. Bits can be 8, 16 or 32 bit integers.

See also:

- 104.1.3 Constructor
- 104.1.4 Constructor(p as picture, bits as Integer = 8)
- 104.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer)
- 104.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer)
- 104.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock)

### 104.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer)

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Creates a bitmap object with given size and color space.

**Notes:**

Colorspace Type should be one of the color space signatures like kcmsSigRgbData. Raises exception if colorspace is invalid.

See also:

- 104.1.3 Constructor
- 104.1.4 Constructor(p as picture, bits as Integer = 8)
- 104.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8)
- 104.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer)
- 104.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock)

### 104.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer)

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Creates a bitmap object with given size and color space.

**Notes:**

Colorspace Type should be one of the colorspace signatures like kcmsSigRgbData. Raises exception if colorspace is invalid.

See also:
104.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock)

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a bitmap object with given size and color space.

**Notes:**
In this variant, you pass the memoryblock with right size. Passing memoryblock of wrong size can lead into crashes. Raises exception if colorspace is invalid.

See also:
- 104.1.3 Constructor
- 104.1.4 Constructor(p as picture, bits as Integer = 8)
- 104.1.5 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8)
- 104.1.6 Constructor(width as Integer, height as Integer, colorspace as Integer)
- 104.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer)

**Example:**
// convert small part of picture to bitmap
dim b as new LCMS2BitmapMBS(pic)

// create destination picture
dim pic as new Picture(500, 500, 32)
// copy pixels and show
if b.CopyToPicture(pic, 50, 50) then

Backdrop = pic
end if

Notes:
This may be more efficient for you if you process a lot of image data as you can avoid creating new picture objects with using Picture method in this class.
May not work for all pictures, especially may fail on Linux.
Returns true on success.

104.1.10 Invert

Notes: Requires correct settings for rowbytes, height and data properties.

104.1.11 Picture(HasAlpha as Boolean = false) as picture

Example:

// get some picture
dim logo as Picture = LogoMBS(500)

// let us convert it to a 16 bit memory block
dim l as new LCMS2BitmapMBS(logo, 16)

// check bit depth
Title = str(l.Bits)

// convert back
dim p as Picture = l.Picture

// and display
Backdrop = p

Notes: This method works with 8, 16 and 32 bit integer pictures. Make sure bits property is set.
104.1.12 Properties

104.1.13 Bits as Integer

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of bits.  
**Notes:**  
Can be 8, 16 or 32 and is used for conversion to and from Real Studio picture objects.  
(Read and Write property)

104.1.14 ColorSpaceType as Integer

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The color space type.  
**Notes:**  
Only used to let Picture function know what format the data is.  
Typically kcmsSigRgbData.  
(Read and Write property)

104.1.15 Data as MemoryBlock

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The memoryblock with the actual image data.  
**Notes:**  
Data can be stored in 8, 16 or 32 bit Integers or 32bit Floats.  
(Read and Write property)

104.1.16 Height as Integer

**Notes:** (Read and Write property)
104.1.17 RowBytes as Integer

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of bytes per row.

**Notes:**

Normally: rowbytes=pixelsize*width+padding
Where padding is some extra bytes.
(Read and Write property)

104.1.18 Width as Integer

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The width of the Bitmap in Pixels.

**Notes:** (Read and Write property)
104.2 class LCMS2CIECAM02MBS

104.2.1 class LCMS2CIECAM02MBS

Notes: Viewing conditions. Please note those are CAM model viewing conditions, and not the ICC tag viewing conditions, which I'm naming LCMS2ICCViewingConditionsMBS to make differences evident. Unfortunately, the tag cannot deal with surround La, Yb and D value so is basically useless to store CAM02 viewing conditions.

104.2.2 Methods

104.2.3 Constructor(context as LCMS2ContextMBS, VC as LCMS2ViewingConditionsMBS)

Notes: Such object may be used as a color appearance model and evaluated in forward and reverse directions. Viewing conditions is defined by LCMS2ViewingConditionsMBS class. The surround member has to be one of this values: kAVG_SURROUND, kDIM_SURROUND, kDARK_SURROUND or kCUTSHEET_SURROUND. Degree of chromatic adaptation (d), can be specified in 0...1.0 range, or the model can be instructed to calculate it by using D_CALCULATE constant (-1).

Context: user-defined context cargo.
VC: A structure holding viewing conditions.

104.2.4 Forward(value as LCMS2CIEXYZMBS) as LCMS2JChMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Evaluates the CAM02 model in the forward direction: XYZ to JCh
Notes: value: the input XYZ value.
Returns the output JCh value.
104.2. CLASS LCMS2CIECAM02MBS

104.2.5 Reverse(value as LCMS2JChMBS) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Evaluates the CAM02 model in the reverse direction: JCh to XYZ

**Notes:**

Values: The input JCh value.
Returns the output XYZ value

104.2.6 Properties

104.2.7 Handle as Integer

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal handle to the conversion engine.

**Notes:** (Read and Write property)
104.3 class LCMS2CIELabMBS

104.3.1 class LCMS2CIELabMBS

104.3.2 Methods

104.3.3 BFDdeltaE(Other as LCMS2CIELabMBS) as Double

104.3.4 CIE2000DeltaE(Other as LCMS2CIELabMBS, Kl as Double = 1.0, Kc as Double = 1.0, Kh as Double = 1.0) as Double

Notes:

Delta-E 2000 is the first major revision of the dE94 equation. Unlike dE94, which assumes that L* correctly reflects the perceived differences in lightness, dE2000 varies the weighting of L* depending on where in the lightness range the color falls. dE2000 is still under consideration and does not seem to be widely supported in graphics arts applications.

The weightings KL, KC and KH can be modified to reflect the relative importance of lightness, chroma and hue in different industrial applications.

104.3.5 CIE94DeltaE(Other as LCMS2CIELabMBS) as Double

Notes:

A technical committee of the CIE (TC1-29) published an equation in 1995 called CIE94. The equation is similar to CMC but the weighting functions are largely based on RIT/DuPont tolerance data derived from automotive paint experiments where sample surfaces are smooth. It also has ratios, labeled KL (lightness) and Kc (chroma) and the commercial factor (cf) but these tend to be preset in software and are not often exposed for the user (as it is the case in Little CMS).
104.3. **CLASS LCMS2CIELABMBS**

**104.3.6  Clone as LCMS2CIELabMBS**

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a copy of the color object.  
**Example:**
```vbnet
dim l as new LCMS2CIELabMBS(0.1, 0.2, 0.3)
dim k as LCMS2CIELabMBS = l.Clone
MsgBox str(k.L)+""+str(k.a)+""+str(k.b)
```

**104.3.7  CMCdeltaE(Other as LCMS2CIELabMBS, l as Double, c as Double) as Double**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates the CMC delta E.  
**Notes:**
In 1984 the CMC (Colour Measurement Committee of the Society of Dyes and Colourists of Great Britain) developed and adopted an equation based on LCH numbers. Intended for the textiles industry, CMC l:c allows the setting of lightness (l) and chroma (c) factors. As the eye is more sensitive to chroma, the default ratio for l:c is 2:1 allowing for 2x the difference in lightness than chroma (numbers). There is also a 'commercial factor' (cf) which allows an overall varying of the size of the tolerance region according to accuracy requirements. A cf=1.0 means that a delta-E CMC value <1.0 is acceptable.  
CMC l:c is designed to be used with D65 and the CIE Supplementary Observer. Commonly-used values for l:c are 2:1 for acceptability and 1:1 for the threshold of imperceptibility.

**104.3.8  Constructor(L as Double=0.0, a as Double=0.0, b as Double=0.0)**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new Lab color with the given values.  
See also:
- 104.3.9  Constructor(other as LCMS2CIELabMBS)

**104.3.9  Constructor(other as LCMS2CIELabMBS)**

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of the color value.  
See also:
- 104.3.8  Constructor(L as Double=0.0, a as Double=0.0, b as Double=0.0)

104.3.10 DeltaE(Other as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates delta E.

**Notes:**

You don’t have to spend too long in the color management world before you come across the term Delta-E. As with many things color, it seems simple to understand at first, yet the closer you look, the more elusive it gets. Delta-E (dE) is a single number that represents the 'distance' between two colors. The idea is that a dE of 1.0 is the smallest color difference the human eye can see. So any dE less than 1.0 is imperceptible and it stands to reason that any dE greater than 1.0 is noticeable. Unfortunately it’s not that simple. Some color differences greater than 1 are perfectly acceptable, maybe even unnoticeable. Also, the same dE color difference between two yellows and two blues may not look like the same difference to the eye and there are other places where it can fall down. It’s perfectly understandable that we would want to have a system to show errors. After all, we’ve spent the money on the instruments; shouldn’t we get numbers from them? Delta-E numbers can be used for:

- how far off is a print or proof from the original
- how much has a device drifted
- how effective is a particular profile for printing or proofing
- removes subjectivity (as much as possible)

These functions does compute the difference between two Lab colors, using several difference spaces.

The L*a*b* color space was devised in 1976 and, at the same time delta-E 1976 (dE76) came into being. If you can imagine attaching a string to a color point in 3D Lab space, dE76 describes the sphere that is described by all the possible directions you could pull the string. If you hear people speak of just plain ‘delta-E’ they are probably referring to dE76. It is also known as dE-Lab and dE- ab. One problem with dE76 is that Lab itself is not 'perceptually uniform' as its creators had intended. So different amounts of visual color shift in different color areas of Lab might have the same dE76 number. Conversely, the same amount of color shift might result in different dE76 values. Another issue is that the eye is most sensitive to hue differences, then chroma and finally lightness and dE76 does not take this into account.

104.3.11 DesaturateLab(amax as Double, amin as Double, bmax as Double, bmin as Double) as Boolean

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Does poor man’s gamut mapping.

**Notes:** See also cmsDesaturateLab in LCMS manual.
104.3. CLASS LCMS2CIELABMBS

104.3.12  XYZ(whitePoint as LCMS2CIEXYZMBS=nil) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts color to XYZ value. **Notes:** Setting WhitePoint to NULL forces D50 as white point.

104.3.13  Properties

104.3.14  A as Double

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The a value. **Notes:** (Read and Write property)

104.3.15  B as Double

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The b value. **Notes:** (Read and Write property)

104.3.16  L as Double

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The L value. **Notes:** (Read and Write property)

104.3.17  LCh as LCMS2CIELChMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts color to LCh value. **Notes:** (Read only property)
104.4 class LCMS2CIELChMBS

104.4.1 class LCMS2CIELChMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The plugin class for CIE LCh values.

**Example:**

```vbnet
dim c as new LCMS2CIELChMBS(1,2,3)
MsgBox str(c.L)+” ”+str(c.C)+” ”+str(c.h)
```

104.4.2 Methods

104.4.3 Clone as LCMS2CIELChMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a copy of the color object.

104.4.4 Constructor(L as Double=0.0, C as Double=0.0, h as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new object with the given values.

See also:

- 104.4.5 Constructor(other as LCMS2CIELChMBS)

104.4.5 Constructor(other as LCMS2CIELChMBS)

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes object with values from other object.

See also:

- 104.4.4 Constructor(L as Double=0.0, C as Double=0.0, h as Double=0.0)

104.4.6 Properties

104.4.7 C as Double

104.4. CLASS LCMS2CIELCHMBS

Notes: (Read and Write property)

104.4.8  h as Double

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The h value. Notes: (Read and Write property)

104.4.9  L as Double

104.4.10  Lab as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Converts the LCh value to a Lab value. Example:

dim c as new LCMS2CIELChMBS(0.1, 0.2, 0.3)
dim lab as LCMS2CIELabMBS = c.Lab
MsgBox str(lab.L) + " " + str(lab.a) + " " + str(lab.b)

Notes: (Read only property)
104.5  class LCMS2CIExyYMBS

104.5.1  class LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a CIE xyY value.

**Example:**

```vbnet
dim c as new LCMS2CIExyYMBS(1, 2, 3)
MsgBox str(c.x) + " " + str(c.y) + " " + str(c.yy)
```

**Notes:** As Real Studio is case insensitive, we have to name the big Y as YY.

104.5.2  Methods

104.5.3  Clone as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a copy of the color.

104.5.4  Constructor(other as LCMS2CIExyYMBS)

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes the object with values from other object.

See also:

- 104.5.5 Constructor(X as Double=0.0, Y as Double=0.0, YY as Double=0.0)

104.5.5  Constructor(X as Double=0.0, Y as Double=0.0, YY as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new xyY object with the given values.

See also:

- 104.5.4 Constructor(other as LCMS2CIExyYMBS)

104.5.6  TempFromWhitePoint as Double

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates the temperature from using this xyY point as the white point.
104.5.7 Properties

104.5.8 x as Double

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The x value. Notes: (Read and Write property)

104.5.9 XYZ as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Converts the xyY value to XYZ. Example:

```vba
dim c as new LCMS2CIExyYMBS(1,2,3)
dim n as LCMS2CIEXYZMBS = c.XYZ
MsgBox str(n.x) + " " + str(n.y) + " " + str(n.z)
dim x as LCMS2CIExyYMBS = n.xyY
MsgBox str(x.x) + " " + str(x.y) + " " + str(x.yy)
```

Notes: (Read only property)

104.5.10 y as Double

104.5.11 YY as Double

As Real Studio is case insensitive, we have to name the big Y as YY.
(Read and Write property)
104.6  class LCMS2CIExyYTripleMBS

104.6.1  class LCMS2CIExyYTripleMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a xyY color triple.

104.6.2  Methods

104.6.3  Clone as LCMS2CIExyYTripleMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a copy of the xyY triple.

104.6.4  Constructor

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes a xyY triple with zero values. See also:

- 104.6.5 Constructor(other as LCMS2CIExyYTripleMBS)
- 104.6.6 Constructor(Red as LCMS2CIExyYMBS, Green as LCMS2CIExyYMBS, Blue as LCMS2CIExyYMBS)

104.6.5  Constructor(other as LCMS2CIExyYTripleMBS)

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes a xyY triple with values from other object. See also:

- 104.6.4 Constructor
- 104.6.6 Constructor(Red as LCMS2CIExyYMBS, Green as LCMS2CIExyYMBS, Blue as LCMS2CIExyYMBS)

104.6.6  Constructor(Red as LCMS2CIExyYMBS, Green as LCMS2CIExyYMBS, Blue as LCMS2CIExyYMBS)

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes a xyY triple with given values. See also:
104.6.7 Properties

104.6.8 Blue as LCMS2CIExyYMBS

**Notes:** (Read and Write property)

104.6.9 Green as LCMS2CIExyYMBS

**Notes:** (Read and Write property)

104.6.10 Red as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The red color.
**Notes:** (Read and Write property)
104.7   class LCMS2CIEXYZMBS

104.7.1   class LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a CIE XYZ values.

**Example:**
```
dim n as new LCMS2CIEXYZMBS(0.1, 0.2, 0.3)
MsgBox str(n.x)+" "+str(n.y)+" "+str(n.z)
```

104.7.2   Methods

104.7.3   Constructor(x as Double=0.0, y as Double=0.0, z as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new object with the given values.

104.7.4   Lab(whitePoint as LCMS2CIEXYZMBS=nil) as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts the XYZ value to a lab value using the given whitepoint.

**Notes:** Setting WhitePoint to nil forces D50 as white point.

104.7.5   Properties

104.7.6   x as Double

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The x value.

**Notes:** (Read and Write property)

104.7.7   xyY as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts the XYZ value to a xyY value.

**Example:**
dim n as new LCMS2CIEXYZMBS(0.1, 0.2, 0.3)
dim l as LCMS2CIExyYMBS = n.xyY
MsgBox str(l.x) + ” ” + str(l.y) + ” ” + str(l.yy)

Notes: (Read only property)

104.7.8 y as Double

Notes: (Read and Write property)

104.7.9 z as Double

Notes: (Read and Write property)
104.8 class LCMS2CIEXYZTripleMBS

104.8.1 class LCMS2CIEXYZTripleMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a XYZ color triple.

104.8.2 Methods

104.8.3 Clone as LCMS2CIEXYZTripleMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a copy of the XYZ triple.

104.8.4 Constructor

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes a XYZ triple with zero values.

See also:

- 104.8.5 Constructor(other as LCMS2CIEXYZTripleMBS)
- 104.8.6 Constructor(Red as LCMS2CIEXYZMBS, Green as LCMS2CIEXYZMBS, Blue as LCMS2CIEXYZMBS)

104.8.5 Constructor(other as LCMS2CIEXYZTripleMBS)

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes a XYZ triple with values from other object.

See also:

- 104.8.4 Constructor
- 104.8.6 Constructor(Red as LCMS2CIEXYZMBS, Green as LCMS2CIEXYZMBS, Blue as LCMS2CIEXYZMBS)

104.8.6 Constructor(Red as LCMS2CIEXYZMBS, Green as LCMS2CIEXYZMBS, Blue as LCMS2CIEXYZMBS)

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes a XYZ triple with given values.

See also:
104.8.7 Properties

104.8.8 Blue as LCMS2CIEXYZMBS

**Notes:** (Read and Write property)

104.8.9 Green as LCMS2CIEXYZMBS

**Notes:** (Read and Write property)

104.8.10 Red as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The red color. 
**Notes:** (Read and Write property)
104.9. CLASS LCMS2CONTEXTMBS

104.9 class LCMS2ContextMBS

104.9.1 class LCMS2ContextMBS

104.9.2 Methods

104.9.3 Clone as LCMS2ContextMBS

104.9.4 Constructor(other as LCMS2ContextMBS)

MBS Images Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Creates a new context object with a copy of the existing one. See also:

- 104.9.5 Constructor(tag as Variant = nil)

104.9.5 Constructor(tag as Variant = nil)

MBS Images Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Creates a new context object with given tag. See also:

- 104.9.4 Constructor(other as LCMS2ContextMBS)

104.9.6 Properties

104.9.7 Handle as Integer

MBS Images Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The internal handle value. Notes: (Read and Write property)
104.9.8 Tag as Variant

MBS Images Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tag value. **Notes:** (Read and Write property)
104.10 class LCMS2CurveSegmentMBS

104.10.1 class LCMS2CurveSegmentMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for a curve segment.  
**Notes:** Segmented curves are formed by several segments.

104.10.2 Methods

104.10.3 Constructor(nGridPoints as Integer = 0)

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new object and allocates sample points.  
**Notes:** Pass number of sample points you want to fill.

104.10.4 Properties

104.10.5 nGridPoints as UInt32

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of grid points if Type = 0.  
**Notes:** (Read only property)

104.10.6 Type as Integer

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The type of curve segment.  
**Notes:**  
Parametric type, Type = 0 means sampled segment.  
Negative values are reserved.  
(Read and Write property)

104.10.7 x0 as Single

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The x0 value of the domain.  
**Notes:**
Domain; for $x_0 < x \leq x_1$
(Read and Write property)

### 104.10.8 x1 as Single

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The x1 value of the domain.
**Notes:**
Domain; for $x_0 < x \leq x_1$
(Read and Write property)

### 104.10.9 Params(index as Integer) as Double

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Parameters if Type != 0.
**Notes:**
Index from 0 to 9.
(Read and Write computed property)

### 104.10.10 SampledPoints(index as Integer) as Single

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Array of floats if Type = 0.
**Notes:**
Index from 0 to nGridPoints-1.
(Read and Write computed property)
104.11. CLASS LCMS2DATEMBS

104.11 class LCMS2DateMBS

104.11.1 class LCMS2DateMBS

104.11.2 Methods

104.11.3 date as date

104.11.4 Properties

104.11.5 Day as Integer

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The day value. Notes: (Read only property)

104.11.6 Daylight as Integer

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Whether it is daylight saving time. Notes: (Read only property)

104.11.7 DayOfWeek as Integer

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The day of the week. Notes: (Read only property)
104.11.8  **DayOfYear as Integer**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The day of the year. **Notes:** (Read only property)

104.11.9  **Hour as Integer**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The hour value. **Notes:** (Read only property)

104.11.10  **Minute as Integer**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minute value. **Notes:** (Read only property)

104.11.11  **Month as Integer**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The month value. **Notes:** (Read only property)

104.11.12  **Second as Integer**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The second value. **Notes:** (Read only property)

104.11.13  **Year as Integer**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The year value. **Notes:** (Read only property)
104.12. CLASS LCMS2DICTIONARYENTRYMBS

104.12 class LCMS2DictionaryEntryMBS

104.12.1 class LCMS2DictionaryEntryMBS

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for an entry of the dictionary.

**Example:**

```vbnet
// create new dictionary
dim d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
dim e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name + " " + e.Value
```

**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

104.12.2 Methods

104.12.3 Constructor

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

104.12.4 NextEntry as LCMS2DictionaryEntryMBS

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the next element in linked list.

104.12.5 Properties

104.12.6 DisplayName as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The display name multi language unicode string.
104.12.7 DisplayValue as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The display value multi language unicode string. **Notes:** (Read only property)

104.12.8 Handle as Integer

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference. **Notes:** (Read only property)

104.12.9 Name as String

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name string. **Example:**
```
// create new dictionary
dim d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
dim e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name + " " + e.Value
```

**Notes:** (Read only property)

104.12.10 Parent as LCMS2DictionaryMBS

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The reference to the parent dictionary. **Notes:** (Read only property)
104.12.11 Value as String

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The value string.

**Example:**

```plaintext
// create new dictionary
dim d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
dim e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name + " " + e.Value
```

**Notes:** (Read only property)
104.13 class LCMS2DictionaryMBS

104.13.1 class LCMS2DictionaryMBS

Example:

```vbscript
// create new dictionary
dim d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
dim e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name+" " + e.Value
```

Notes: This is a simple linked list used to store pairs NameValue for the dictionary metatag, as described in http://www.color.org/ICCSpecRevision_250210_dictType.pdf

104.13.2 Methods

104.13.3 AddEntry(Name as String, Value as String, DisplayName as LCMS2MLUMBS, DisplayValue as LCMS2MLUMBS) as boolean

Notes:

No check for duplicity is made. Dictionary and Name parameters a required, rest is optional and nil may be used.

Name, Value: Strings. Value may be empty.
DisplayName, Display Value: Multilocalized Unicode objects. May be nil.
Returns true on success.

104.13.4 Constructor(context as LCMS2ContextMBS = nil)

104.13.5  EntryList as LCMS2DictionaryEntryMBS

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns first element in linked list.

**Example:**

```vbnet
// create new dictionary
dim d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
dim e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name + " " + e.Value
```

104.13.6  Properties

104.13.7  context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The context for this profile.

**Notes:**

Error handling uses it, so you can see which part of your application failed.
(Read and Write property)

104.13.8  Handle as Integer

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.

**Notes:** (Read and Write property)
104.14 class LCMS2GamutBoundaryDescriptionMBS

104.14.1 class LCMS2GamutBoundaryDescriptionMBS

MBS Images Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This class allows you to create gamut boundary, add points, compute and check points.

**Example:**

```vbscript
dim n1,n2 as Integer
dim h as new LCMS2GamutBoundaryDescriptionMBS

// Fill all Lab gamut as valid
for L as Integer = 0 to 100 step 10
    for a as Integer = -128 to 128 step 5
        for b as Integer = -128 to 128 step 5

            dim lab as new LCMS2CIELabMBS(l, a, b)
            if h.AddPoint(lab) then
                n1 = n1 + 1
            else
                break
                MsgBox "Point not in boundary!"
            end if
        next
    next
next

// Complete boundaries
call h.Compute

// All points should be inside gamut
for L as Integer = 10 to 90 step 25
    for a as Integer = -120 to 120 step 25
        for b as Integer = -120 to 120 step 25

            dim lab as new LCMS2CIELabMBS(l, a, b)
            if h.CheckPoint(lab) then
                n2 = n2 + 1
            else
                break
                MsgBox "Point not in boundary!"
            end if
        next
    next
next
```
104.14. CLASS LCMS2GAMUTBOUNDARYDESCRIPTIONMBS

MsgBox str(n1)+" points added and "+str(n2)+" other points found."

Notes: Please check LittleCMS API and tutorial documentation for more details.

104.14.2 Methods

104.14.3 AddPoint(Lab as LCMS2CIELabMBS) as Boolean

Notes:
This function can be called as many times as known points. No memory or other resources are wasted by adding new points. The gamut boundary descriptor cannot be checked until Compute() is called.

Lab: Lab value.
Returns true on success, false on error.

104.14.4 CheckPoint(Lab as LCMS2CIELabMBS) as Boolean

MBS Images Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Checks whatever a Lab value is inside a given gamut boundary descriptor.
Notes:
Lab: Lab value.
Returns: True if point is inside gamut, false otherwise.

104.14.5 Compute(options as UInt32 = 0) as Boolean

MBS Images Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Computes the gamut boundary descriptor using all known points and interpolating any missing sector(s).
Notes:
Call this function after adding all known points with AddPoint() and before using CheckPoint().
Flags: reserved (unused). Set it to 0.
Returns true on success, false on error.
104.14.6 Constructor(context as LCMS2ContextMBS = nil)

MBS Images Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new object.

104.14.7 Properties

104.14.8 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The context for this profile. **Notes:** Error handling uses it, so you can see which part of your application failed. (Read and Write property)

104.14.9 Handle as Integer

MBS Images Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference. **Notes:** (Read only property)
104.15 class LCMS2ICCDatambs

104.15.1 class LCMS2ICCDatambs

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for ICC data. **Notes:** This is used for some tags where no dedicated class is available. This way you can modify the data directly in the memoryblock.

104.15.2 Properties

104.15.3 Data as Memoryblock

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The memoryblock with the data. **Notes:** (Read only property)

104.15.4 Flags as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The flags. **Notes:** (Read and Write property)

104.15.5 Size as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The size of the data. **Notes:** (Read and Write property)
104.16 class LCMS2ICCMasurementConditionsMBS

104.16.1 class LCMS2ICCMasurementConditionsMBS

104.16.2 Methods

104.16.3 Constructor(Observer as UInt32 = 0, Backing as LCMS2CIEXYZMBS = nil, Geometry as UInt32 = 0, Flare as Double = 0.0, IlluminantType as UInt32 = 0)

104.16.4 Properties

104.16.5 Backing as LCMS2CIEXYZMBS

104.16.6 Flare as Double

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The flare value. Notes: Range 0..1.0. (Read and Write property)

104.16.7 Geometry as UInt32

104.16. **CLASS LCMS2ICCMEASUREMENTCONDITIONS MBS**

0=unknown, 1=45/0, 0/45 2=0d, d/0.
(Read and Write property)

**104.16.8 IlluminantType as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The illuminant type. **Notes:** (Read and Write property)

**104.16.9 Observer as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The observer value. **Notes:**

0 = unknown, 1=CIE 1931, 2=CIE 1964
(Read and Write property)
104.17 class LCMS2ICCViewingConditionsMBS

104.17.1 class LCMS2ICCViewingConditionsMBS

104.17.2 Methods

104.17.3 Constructor(IlluminantXYZ as LCMS2CIEXYZMBS = nil, Backing as LCMS2CIEXYZMBS = nil, IlluminantType as UInt32 = 0)

104.17.4 Properties

104.17.5 IlluminantType as UInt32

104.17.6 IlluminantXYZ as LCMS2CIEXYZMBS

104.17.7 SurroundXYZ as LCMS2CIEXYZMBS

104.18. class LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for IT8 handling.

**Notes:**
ANSI CGATS.17 is THE standard text file format for exchanging color measurement data. This standard text format (the ASCII version is by far the most common) is the format accepted by most color measurement and profiling applications.

It consists of a Preamble section containing originator information, keyword definitions, etc and then one or more data sections, each consisting of header and data subsections. The header subsection is where the BEGIN_DATA_FORMAT and END_DATA_FORMAT delimiters define the actual data types / units contained in the following tables. The data subsection contains the BEGIN_DATA and END_DATA delimiters which contain the actual color information in tabular form.

CGATS.17 text files can contain device (RGB, CMYK, etc), colorimetric (Lab, XYZ, etc), densitometric, spectral, naming and other information so it is a fairly comprehensive storage and exchange format.

104.18.2 Methods

104.18.3 Constructor(context as LCMS2ContextMBS = nil)

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Allocates an empty CGATS.17 object.

104.18.4 DefineDblFormat(Formatter as string)

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the format string for float numbers.
**Notes:** It uses the "C" sprintf convention. The default format string is "$ .10g$ .

104.18.5 EnumDataFormat as string()

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an array with pointers to the column names in current table.
**Notes:** Return the column names in table.
104.18.6  **EnumProperties as string()**

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enumerates all properties in current table. **Notes:** Returns array of property name string.

104.18.7  **EnumPropertyMulti(Prop as string) as string()**

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enumerates all the identifiers found in a multivalue property in current table. **Notes:**

Prop: A string holding property name
Returns an array with property names.

104.18.8  **FindDataFormat(Sample as string) as Integer**

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the position (column) of a given data sample name in current table. **Notes:**

First column is 0 (SAMPLE_ID). Returns column number if found, 1 if not found.

104.18.9  **GetData(Patch as string, Sample as string) as string**

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets a cell [ Patch, Sample ] as a literal string (uncooked string) in current table. **Notes:**

Patch: The intended patch name (row)
Sample: The intended sample name (column)

Returns the data for the intended cell on success, "" on error.

104.18.10  **GetDataAsDouble(Patch as string, Sample as string) as Double**

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets a cell [ Patch, Sample ] as a double in current table. **Notes:**
104.18.11  **GetDataRowCol(Row as Integer, Col as Integer) as string**

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
Gets a cell [ row, col ] as a literal string in current table.
**Notes:**
This function is fast since it has not to search columns or rows by name.

row, col: The position of the cell.

Returns the data for the intended cell on success, ”” on error.

104.18.12  **GetDataRowColAsDouble(Row as Integer, Col as Integer) as Double**

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
Gets a cell [ row, col ] as a double in current table.
**Notes:**
This function is fast since it has not to search columns or rows by name.
row, col: The position of the cell.

Returns the data for the intended cell interpreted as Double on success, 0 on error.

104.18.13  **GetPatchByName(Patch as string) as Integer**

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
Lookups patch index by name.

104.18.14  **GetPatchName(nPatch as Integer) as string**

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:**
Fills buffer with the contents of SAMPLE_ID column for the set given in nPatch.
**Notes:**
That usually corresponds to patch name. Buffer may be NULL to get the internal memory block used by the CGATS.17 object. If specified, buffer gets a copy of such block. In this case it should have space for at least 1024 characters.

nPatch: set number to retrieve name

Returns the patch name. "" if error.

104.18.15 GetProperty(Prop as string) as string

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Gets a property as a literal string in current table.
**Notes:**

Prop: A string holding property name.

Returns the data for the intended property on success, "" on error.

104.18.16 GetPropertyAsDouble(Prop as string) as Double

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Gets a property as a double in current table.
**Notes:**

Prop: A string holding property name.

Returns the data for the intended property interpreted as Double on success, 0 on error.

104.18.17 GetPropertyMulti(Key as string, SubKey as string) as string

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries property.

104.18.18 GetSheetType as string

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This function returns the type of the IT8 object.
104.18.19  HeaderIsDictionary(HeaderName as string) as boolean

MBS Images Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if a header entry has subkeys, so it has a dictionary with keys and values. **Notes:** This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

104.18.20  HeaderList as string()

MBS Images Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns list of header properties. **Notes:** This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

104.18.21  HeadersAsDictionary as dictionary

MBS Images Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the header keys and values as dictionary. **Notes:**
This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update. Returns nil on any error.

104.18.22  HeaderSubDictionary(HeaderName as string) as dictionary

MBS Images Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the dictionary with subkeys for a given header entry. **Notes:**
This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update. Returns nil on any error.

104.18.23  HeaderValue(HeaderName as string) as string

MBS Images Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the header value for the given header. **Notes:**
This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.
104.18.24  LoadFromFile(context as LCMS2ContextMBS, file as folderitem) as LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This function allocates a CGATS.17 object and fills it with the contents of file.
**Notes:**
Used for reading existing CGATS files.

Context: The context value.
File: The CGATS.17 file name to read/parse

Returns a CGATS.17 object on success, nil on error.

104.18.25  LoadFromMemory(context as LCMS2ContextMBS, data as Memoryblock) as LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Same as LoadFromFile, but the IT8/CGATS.13 stream is read from a memory block.
**Notes:** Returns nil on failure.

104.18.26  LoadFromString(context as LCMS2ContextMBS, data as string) as LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Same as LoadFromFile, but the IT8/CGATS.13 stream is read from a string.
**Notes:** Returns nil on failure.

104.18.27  SaveToFile(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This function saves a CGATS.17 object to a file.
**Notes:**
File: Destination file. Existing file will be overwritten if possible.

Returns true on success, false on error.
104.18.28  **SaveToMemory as Memoryblock**

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function saves a CGATS.17 object to a contiguous memory block.

104.18.29  **SaveToString as string**

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function saves a CGATS.17 object to a contiguous memory block.

104.18.30  **SetComment(comment as string) as boolean**

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function is intended to provide a way automated IT8 creators can embed comments into the file. **Notes:** Comments have no effect, and its only purpose is to document any of the file meaning. On this function the calling order is important; as successive calls to SetComment do embed comments in the same order the function is being called.

Comment: The comment to inserted

Returns true on success, false on error.

104.18.31  **SetData(Patch as string, Sample as string, Val as string) as boolean**

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets a cell [Patch, Sample] as a literal string (uncooked string) in current table. **Notes:** Patch: The intended patch name (row) Sample: The intended sample name (column) Val: The value to be set, as a literal

Returns true on success, false on error.
104.18.32  SetDataAsDouble(Patch as string, Sample as string, Val as Double) as boolean

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets a cell [Patch, Sample] as a double in current table.

**Notes:**
Patch: The intended patch name (row)
Sample: The intended sample name (column)
Val: The value to be set, as a cmsFloat64Number

Returns true on success, false on error.

104.18.33  SetDataFormat(n as Integer, Sample as String) as boolean

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets column names in current table.

**Notes:**
First column is 0 (SAMPLE_ID). Special property NUMBER_OF_FIELDS must be set before calling this function.

n: Column to set name
Sample: Name of data

Returns true on success, false on error.

104.18.34  SetDataRowCol(Row as Integer, Col as Integer, Val as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Sets a cell [row, col] as a literal string in current table.

**Notes:**
This function is fast since it has not to search columns or rows by name.

row, col: The position of the cell.
Val: The value to be set, as a literal string.

Returns true on success, false on error.
104.18.35 SetDataRowColAsDouble(Row as Integer, Col as Integer, Val as Double) as boolean

**Notes:**
This function is fast since it has not to search columns or rows by name.

row, col: The position of the cell.
Val: The value to be set, as a cmsFloat64Number

Returns true on success, false on error.

104.18.36 SetIndexColumn(Sample as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the index column.

104.18.37 SetPropertyDouble(Prop as string, Value as Double) as boolean

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets a property as a double in current table.

**Notes:**
Prop: A string holding property name.
Value: The data for the intended property as Double.

Returns true on success, false on error.

104.18.38 SetPropertyHex(Prop as string, Value as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets a property as an hexadecimal constant (appends $0x$) in current table.

**Notes:**
Prop: A string holding property name.
Value: The value to be set (32 bits max)

Returns true on success, false on error.
104.18.39  SetPropertyMulti(Key as string, SubKey as string, Value as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a new subproperty to the property Key.

**Notes:**
Value of buffer is interpreted literally.

Key: A string holding property name.
SubKey: A string holding the subproperty name.
Buffer: A string holding the uncooked value of subproperty.

Returns true on success, false on error.

104.18.40  SetPropertyString(Prop as string, Value as String) as boolean

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets a property as a literal string in current table.

**Notes:**
The string is enclosed in quotes "".
Returns true on success, false on error.

104.18.41  SetPropertyUncooked(Prop as string, Value as Memoryblock) as boolean

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets a property with no interpretation in current table.

**Notes:**
No quotes "" are added. No checking is performed, and it is up to the programmer to make sure the string is valid.
Special prefixes:
0b: Binary
0x: Hexadecimal

Parameters:
cProp: A string holding property name.
Buffer: A string holding the uncooked value to place in the CGATS file.

Returns true on success, false on error.

### 104.18.42 SetSheetType(type as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function sets the type of a CGATS.17 object to the new type. **Notes:** Returns true on success, false on error.

### 104.18.43 SetTable(nTable as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function positions the IT8 object in a given table, identified by its position. **Notes:** Setting nTable to Table Count + 1 does allocate a new empty table. Returns the current table number on success, 1 on error.

### 104.18.44 SetTableByLabel(Set as string, Field as string, ExpectedType as string) as Integer

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets table by label.

### 104.18.45 TableCount as UInt32

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function returns the number of tables found in the current CGATS object. **Notes:** Returns the number of tables on success, 0 on error.

### 104.18.46 ValidKeywords as string()

MBS Images Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns list of valid keywords. **Notes:** This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an
104.18.47 ValidSampleIDs as string()

MBS Images Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns list of valid sample IDs. Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

104.18.48 Properties

104.18.49 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The context for this profile. Notes: Error handling uses it, so you can see which part of your application failed. (Read and Write property)

104.18.50 Handle as Integer

104.19. **CLASS LCMS2JCHMBS**

104.19   class LCMS2JChMBS

104.19.1   class LCMS2JChMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a JCh value.

104.19.2   Methods

104.19.3   Clone as LCMS2JChMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a copy of this object.

104.19.4   Constructor(J as Double=0.0, C as Double=0.0, h as Double=0.0)

See also:

- 104.19.5 Constructor(other as LCMS2JChMBS)  

104.19.5   Constructor(other as LCMS2JChMBS)

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes new JCh color object with values from existing object.

See also:

- 104.19.4 Constructor(J as Double=0.0, C as Double=0.0, h as Double=0.0)  

104.19.6   Properties

104.19.7   C as Double

**Notes:** (Read and Write property)
104.19.8  h as Double

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The h value.  
**Notes:** (Read and Write property)

104.19.9  J as Double

**Notes:** (Read and Write property)
104.20. CLASS LCMS2MAT3MBS

104.20  class LCMS2Mat3MBS

104.20.1  class LCMS2Mat3MBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for a 3 by 3 matrix.

104.20.2  Methods

104.20.3  Clone as LCMS2Mat3MBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a copy of the matrix.

104.20.4  Constructor

See also:

- 104.20.5 Constructor(other as LCMS2Mat3MBS)
- 104.20.6 Constructor(v0 as LCMS2Vec3MBS, v1 as LCMS2Vec3MBS, v2 as LCMS2Vec3MBS)

104.20.5  Constructor(other as LCMS2Mat3MBS)

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of the given matrix.

See also:

- 104.20.4 Constructor
- 104.20.6 Constructor(v0 as LCMS2Vec3MBS, v1 as LCMS2Vec3MBS, v2 as LCMS2Vec3MBS)

104.20.6  Constructor(v0 as LCMS2Vec3MBS, v1 as LCMS2Vec3MBS, v2 as LCMS2Vec3MBS)

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new matrix with the given three vectors.

See also:
104.20.4 Constructor

104.20.5 Constructor(other as LCMS2Mat3MBS)

104.20.7 Properties

104.20.8 V0 as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Property for first vector.
**Notes:** (Read and Write property)

104.20.9 V1 as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Property for second vector.
**Notes:** (Read and Write property)

104.20.10 V2 as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Property for third vector.
**Notes:** (Read and Write property)

104.20.11 value(index as UInt32) as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the vector by index.
**Notes:**
Index from 0 to 2.
(Read and Write computed property)
104.21 module LCMS2MBS

104.21.1 module LCMS2MBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The central LCMS module with all the global methods and constants.

104.21.2 Methods

104.21.3 AdaptationMatrix(ConeMatrix as LCMS2Mat3MBS, FromIlluminant as LCMS2CIEXYZMBS, ToIlluminant as LCMS2CIEXYZMBS) as LCMS2Mat3MBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates adaptation matrix. **Notes:**

Calculates adaptation matrix.

Returns the final chromatic adaptation from illuminant FromIlluminant to Illuminant ToIlluminant. The cone matrix can be specified in ConeMatrix. If nil, Bradford is assumed.

ConeMatrix: the cone matrix.
FromIlluminant: Source illuminant.
ToIlluminant: Destination illuminant.

Returns matrix on success or nil on failure.

104.21.4 AdaptToIlluminant(SourceWhitePoint as LCMS2CIEXYZMBS, Illuminant as LCMS2CIEXYZMBS, Value as LCMS2CIEXYZMBS) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Chromatic adaptation. **Notes:**

Adapts a color to a given illuminant. Original color is expected to have a SourceWhitePoint white point.

104.21.5 BFDdeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Computes the dE between two Lab values.
104.21.6 **BuildRGB2XYZtransferMatrix(WhitePoint as LCMS2CIExyYMBS, Primaries as LCMS2CIExyYTripleMBS) as LCMS2Mat3MBS**

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Builds RGB to XYZ transfer matrix.

**Notes:**
Build a White point, primary chromas transfer matrix from RGB to CIE XYZ. This is just an approximation, I am not handling all the non-linear aspects of the RGB to XYZ process, and assuming that the gamma correction has transitive property in the transformation chain.

The algorithm:

- First I build the absolute conversion matrix using primaries in XYZ. This matrix is next inverted
- Then I eval the source white point across this matrix obtaining the coefficients of the transformation
- Then, I apply these coefficients to the original matrix

**WhitePoint:** The white point.
**Primaries:** The primaries.
**Returns matrix on success or nil on failure.**

104.21.7 **BYTES_SH(n as UInt32) as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Shifts the value so you can bitwise or it with other values to get a pixel format.

**Notes:** bytes per sample

104.21.8 **ChannelsOf(ColorSpaceSignature as Integer) as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of channels in a color space signature.

**Example:**

```
MsgBox "RGB has " +str(LCMS2MBS.ChannelsOf(LCMS2MBS.kcmsSigRgbData))+" channels"
```

104.21.9 **CHANNELS_SH(n as UInt32) as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Shifts the value so you can bitwise or it with other values to get a pixel format.
104.21.10  CIE2000DeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS, Kl as Double = 1.0, Kc as Double = 1.0, Kh as Double = 1.0) as Double

**Notes:**
Delta-E 2000 is the first major revision of the dE94 equation. Unlike dE94, which assumes that L* correctly reflects the perceived differences in lightness, dE2000 varies the weighting of L* depending on where in the lightness range the color falls. dE2000 is still under consideration and does not seem to be widely supported in graphics arts applications.

The weightings KL, KC and KH can be modified to reflect the relative importance of lightness, chroma and hue in different industrial applications.

104.21.11  CIE94DeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates the CIE 94 delta e value.

**Notes:**
A technical committee of the CIE (TC1-29) published an equation in 1995 called CIE94. The equation is similar to CMC but the weighting functions are largely based on RIT/DuPont tolerance data derived from automotive paint experiments where sample surfaces are smooth.
It also has ratios, labeled kL (lightness) and Kc (chroma) and the commercial factor (cf) but these tend to be preset in software and are not often exposed for the user (as it is the case in Little CMS).

104.21.12  CMCdeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS, l as Double, c as Double) as Double

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates the CMC delta E.

**Notes:**
In 1984 the CMC (Colour Measurement Committee of the Society of Dyes and Colourists of Great Britain) developed and adopted an equation based on LCH numbers. Intended for the textiles industry, CMC l:c allows the setting of lightness (l) and chroma (c) factors. As the eye is more sensitive to chroma, the default
ratio for L:c is 2:1 allowing for 2x the difference in lightness than chroma (numbers). There is also a ‘commercial factor’ (cf) which allows an overall varying of the size of the tolerance region according to accuracy requirements. A cf=1.0 means that a delta-E CMC value <1.0 is acceptable. CMC L:c is designed to be used with D65 and the CIE Supplementary Observer. Commonly-used values for L:c are 2:1 for acceptability and 1:1 for the threshold of imperceptibility.

104.21.13  ColorSpaceICCtoLCMS(ICCColorSpace as Integer) as Integer

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts from ICC color space notation to Little CMS color space notation.

104.21.14  ColorSpaceLCMStoICC(LCMSColorSpace as Integer) as Integer

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts from Little CMS color space notation to ICC color space notation.

104.21.15  COLORSPACE_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Shifts the value so you can bitwise or it with other values to get a pixel format. **Notes:** Pixeltype.

104.21.16  CreateBitmapFromPicture(p as picture, bits as Integer = 8) as LCMS2BitmapMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new bitmap based on the pictures. **Notes:** Bits can be 8, 16 or 32 bit integers.

104.21.17  D50_xyY as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns D50 white point as xyY color.
104.21. MODULE LCMS2MBS

104.21.18 D50_XYZ as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns D50 white point as XYZ color.

104.21.19 DeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates delta E.

**Notes:**

You don’t have to spend too long in the color management world before you come across the term Delta-E. As with many things color, it seems simple to understand at first, yet the closer you look, the more elusive it gets. Delta-E (dE) is a single number that represents the 'distance' between two colors. The idea is that a dE of 1.0 is the smallest color difference the human eye can see. So any dE less than 1.0 is imperceptible and it stands to reason that any dE greater than 1.0 is noticeable. Unfortunately it’s not that simple. Some color differences greater than 1 are perfectly acceptable, maybe even unnoticeable. Also, the same dE color difference between two yellows and two blues may not look like the same difference to the eye and there are other places where it can fall down. It’s perfectly understandable that we would want to have a system to show errors. After all, we’ve spent the money on the instruments; shouldn’t we get numbers from them? Delta-E numbers can be used for:

- how far off is a print or proof from the original
- how much has a device drifted
- how effective is a particular profile for printing or proofing
- removes subjectivity (as much as possible)

These functions does compute the difference between two Lab colors, using several difference spaces.

The L*a*b* color space was devised in 1976 and, at the same time delta-E 1976 (dE76) came into being. If you can imagine attaching a string to a color point in 3D Lab space, dE76 describes the sphere that is described by all the possible directions you could pull the string. If you hear people speak of just plain 'delta-E' they are probably referring to dE76. It is also known as dE-Lab and dE- ab. One problem with dE76 is that Lab itself is not 'perceptually uniform' as its creators had intended. So different amounts of visual color shift in different color areas of Lab might have the same dE76 number. Conversely, the same amount of color shift might result in different dE76 values. Another issue is that the eye is most sensitive to hue differences, then chroma and finally lightness and dE76 does not take this into account.
104.21.20 DOSWAP_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Shifts the value so you can bitwise or it with other values to get a pixel format. Notes: Do swap? ie, BGR, KYMC

104.21.21 EncodedCMMversion as Integer

MBS Images Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Queries version of LCMS library. Example:
```
dim e as Integer = LCMS2MBS.EncodedCMMversion
MsgBox str(e \1000)+"."+str((e\10) mod 100)+"."+str(e mod 10)
```

Notes: Returns 2070 for version 2.7.

104.21.22 ENDIAN16_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Shifts the value so you can bitwise or it with other values to get a pixel format. Notes: swap 16 bps endianess?

104.21.23 EXTRA_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Shifts the value so you can bitwise or it with other values to get a pixel format. Notes: Extra samples

104.21.24 FLAVOR_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Shifts the value so you can bitwise or it with other values to get a pixel format. Notes: Flavor 0=MinIsBlack(Chocolate) 1=MinIsWhite(Vanilla).
104.21. MODULE LCMS2MBS

104.21.25  Float2LabEncoded(c as LCMS2CIELabMBS) as Integer()

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Encodes a Lab value. **Notes:** Returns array of 3 encoded UInt16 values.

104.21.26  Float2LabEncodedV2(c as LCMS2CIELabMBS) as Integer()

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Encodes a Lab value to ICC v2 convention. **Notes:** Returns array of 3 encoded UInt16 values.

104.21.27  Float2XYZEncoded(c as LCMS2CIEXYZMBS) as Integer()

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Encodes a XYZ value to ICC convention. **Notes:** Returns three UInt16 values as Integer array.

104.21.28  FLOAT_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Shifts the value so you can bitwise or it with other values to get a pixel format. **Notes:** Floating point – With this flag we can differentiate 16 bits as float and as int.

104.21.29  GetAlarmCodes as Integer()

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current global codes used to mark out-out-gamut on Proofing transforms. **Notes:** Values are meant to be encoded in 16 bits. Returns array with 16 integer values. See also:

- 104.21.30 GetAlarmCodes(context as LCMS2ContextMBS) as Integer()
104.21.30  GetAlarmCodes(context as LCMS2ContextMBS) as Integer()

MBS Images Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current global codes used to mark out-of-gamut on Proofing transforms. **Notes:**

Values are meant to be encoded in 16 bits.
Returns array with 16 integer values.
See also:

- 104.21.29 GetAlarmCodes as Integer()

104.21.31  GetSupportedIntentCodes as UInt32()

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fills an array with idnumbers for all supported intents.

**Example:**

```vba
dim names() as string = LCMS2MBS.GetSupportedIntentDescriptions
dim codes() as UInt32 = LCMS2MBS.GetSupportedIntentCodes

dim u as Integer = UBound(names)
for i as Integer = 0 to u
    MsgBox str(codes(i)) + ": " + names(i)
next
```

**Notes:** Little CMS plugin architecture allows to implement user-defined intents; use this function to get info about such extended functionality.
See also:

- 104.21.32 GetSupportedIntentCodes(context as LCMS2ContextMBS) as UInt32()
**Notes:** Little CMS plugin architecture allows to implement userdefined intents; use this function to get info about such extended functionality.

See also:

- 104.21.31 GetSupportedIntentCodes as UInt32()

**104.21.33 GetSupportedIntentDescriptions as string()**

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fills an array with descriptions for all supported intents.

**Example:**

MsgBox Join(LCMS2MBS.GetSupportedIntentDescriptions, EndOfLine)

**Notes:** Little CMS plugin architecture allows to implement userdefined intents; use this function to get info about such extended functionality.

**104.21.34 GridPoints(n as Integer) as Integer**

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates grid points.

**Example:**

MsgBox str(LCMS2MBS.GridPoints(2))

**104.21.35 kcmsD50X as Double**

MBS Images Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** X value of D50 XYZ normalized to Y=1.0.

**104.21.36 kcmsD50Y as Double**

MBS Images Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Y value of D50 XYZ normalized to Y=1.0.
104.21.37  kcmsD50Z as Double

104.21.38  kcmsPERCEPTUAL_BLACK_X as Double

MBS Images Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** X of V4 perceptual black.

104.21.39  kcmsPERCEPTUAL_BLACK_Y as Double

MBS Images Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Y of V4 perceptual black.

104.21.40  kcmsPERCEPTUAL_BLACK_Z as Double

104.21.41  Lab2LCh(p as LCMS2CIELabMBS) as LCMS2CIELChMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts lab color to LCh value.

104.21.42  Lab2XYZ(p as LCMS2CIELabMBS, whitepoint as LCMS2CIEXYZMBS = nil) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts color to XYZ value. **Notes:** Setting WhitePoint to NULL forces D50 as white point.
104.21.43 LabEncoded2Float(w0 as UInt16, w1 as UInt16, w2 as UInt16) as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Decodes a Lab value, encoded on ICC v4 convention to a lab value. **Notes:** w0, w1 and w2: Array of 3 UInt16 holding the encoded values. Returns lab color.

104.21.44 LabEncoded2FloatV2(w0 as UInt16, w1 as UInt16, w2 as UInt16) as LCMS2CIELLabMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Decodes a Lab value, encoded on ICC v2 convention to a Lab value. **Notes:** w0, w1 and w2: 3 UInt16 numbers holding the encoded values.

104.21.45 LCh2Lab(p as LCMS2CIELChMBS) as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Colorimetric space conversion from LCh to Lab.

104.21.46 NewBitmap(width as Integer, height as Integer, colorspace as Integer) as LCMS2BitmapMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a bitmap object with given size and color space. **See also:**

- 104.21.47 NewBitmap(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) as LCMS2BitmapMBS
- 104.21.48 NewBitmap(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) as LCMS2BitmapMBS

104.21.47 NewBitmap(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) as LCMS2BitmapMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a bitmap object with given size and color space. **See also:**
104.21.48 NewBitmap(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) as LCMS2BitmapMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a bitmap object with given size and color space.

**Notes:**
In this variant, you pass the memoryblock with right size. Passing memoryblock of wrong size can lead into crashes.
See also:

- 104.21.46 NewBitmap(width as Integer, height as Integer, colorspace as Integer) as LCMS2BitmapMBS
- 104.21.47 NewBitmap(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) as LCMS2BitmapMBS

104.21.49 OPTIMIZED_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Shifts the value so you can bitwise or it with other values to get a pixel format.

**Notes:** Optimized – previous optimization already returns the final 8-bit value.

104.21.50 PixelFormat(FloatingPoint as boolean, Optimized as boolean, ColorSpace as UInt32, MinIsWhite as boolean, Planar as boolean, EndianSwap as boolean, DoSwap as boolean, ExtraSamples as UInt32, Channels as UInt32, BytesPerSample as UInt32, SwapFirst as boolean) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Utility function to create a pixel format.

**Notes:**
Format of pixel is defined by one UInt32, using bit fields as follows

A O TTTTT U Y F P X S EEE CCCC BBB
104.21. MODULE LCMS2MBS

FloatingPoint: With this flag we can differentiate 16 bits as float and as int
Optimized: Previous optimization already returns the final 8-bit value
ColorSpace: Pixeltype
MinIsWhite: Flavor 0=MinIsBlack(Chocolate) 1=MinIsWhite(Vanilla)
Planar: Planar? 0=Chunky, 1=Planar
EndianSwap: swap 16 bps endianess?
DoSwap: Do swap? ie, BGR, KYMC
ExtraSamples: Extra samples
Channels: Channels (Samples per pixel)
BytesPerSample: bytes per sample
SwapFirst: Swap first - changes ABGR to BGRA and KCMY to CMYK

104.21.51 PLANAR_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Planar? 0=Chunky, 1=Planar

104.21.52 SetAdaptationState(context as LCMS2ContextMBS, d as Double) as Double

Notes:
Little CMS can handle incomplete adaptation states.

d: Degree on adaptation 0=Not adapted, 1=Complete adaptation, in-between=Partial adaptation. Use negative values to return the global state without changing it.

Returns previous global adaptation state.
See also:
• 104.21.53 SetAdaptationState(d as Double) as Double

104.21.53 SetAdaptationState(d as Double) as Double

Notes:
Little CMS can handle incomplete adaptation states.

d: Degree on adaptation 0=Not adapted, 1=Complete adaptation, in-between=Partial adaptation. Use negative values to return the global state without changing it.

Returns previous global adaptation state.
See also:

- 104.21.52 SetAdaptationState(context as LCMS2ContextMBS, d as Double) as Double

104.21.54 SetAlarmCodes(context as LCMS2ContextMBS, values() as Integer)

MBS Images Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the global codes used to mark out-out-gamut on Proofing transforms.

Notes:
Values are meant to be encoded in 16 bits.
AlarmCodes: Array of 16 codes. All 16 values must be specified, set to zero for unused channels.
See also:

- 104.21.55 SetAlarmCodes(values() as Integer)

104.21.55 SetAlarmCodes(values() as Integer)

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the global codes used to mark out-out-gamut on Proofing transforms.

Notes:
Values are meant to be encoded in 16 bits.
AlarmCodes: Array of 16 codes. All 16 values must be specified, set to zero for unused channels.
See also:

- 104.21.54 SetAlarmCodes(context as LCMS2ContextMBS, values() as Integer)

104.21.56 SetLogErrorHandler(Context as LCMS2ContextMBS, handler as LCMS2ErrorHandlerMBS)

MBS Images Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Allows user to set any specific logger.

Notes:
Each time this function is called, the previous logger is replaced. Calling this function with NULL as parameter, does reset the logger to the default Little CMS logger. The default Little CMS logger does nothing.
LCMS2ErrorHandlerMBS is an Interface. You add it to the interface of your window/thread/class. Than you get a method "Error(context as LCMS2ContextMBS, ErrorCode as UInt32, Text as string)" which is called to log error messages. The context parameter is the object you pass for reference in the various context parameters to LCMS2 functions.

See also:

- 104.21.57 SetLogErrorHandler(handler as LCMS2ErrorHandlerMBS)

### 104.21.57 SetLogErrorHandler(handler as LCMS2ErrorHandlerMBS)

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Allows user to set any specific logger.

**Notes:**
Each time this function is called, the previous logger is replaced. Calling this function with NULL as parameter, does reset the logger to the default Little CMS logger. The default Little CMS logger does nothing.

LCMS2ErrorHandlerMBS is an Interface. You add it to the interface of your window/thread/class. Than you get a method "Error(context as LCMS2ContextMBS, ErrorCode as UInt32, Text as string)" which is called to log error messages. The context parameter is the object you pass for reference in the various context parameters to LCMS2 functions.

See also:

- 104.21.56 SetLogErrorHandler(Context as LCMS2ContextMBS, handler as LCMS2ErrorHandlerMBS)

### 104.21.58 SWAPFIRST_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Shifts the value so you can bitwise or it with other values to get a pixel format.

**Notes:** Swap first - changes ABGR to BGRA and KCMY to CMYK

### 104.21.59 TagInteger(tag as string) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts tag integer to string.

**Example:**

MsgBox hex(LCMS2MBS.TagInteger("devs")) + " " + LCMS2MBS.TagString(& h64657673)
104.21.60  TagString(tag as UInt32) as string

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts tag string to integer.

**Example:**

MsgBox hex(LCMS2MBS.TagInteger("devs")) + " " + LCMS2MBS.TagString(& h64657673)

104.21.61  TempFromWhitePoint(TempK as LCMS2CIExyYMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Correlates a black body temperature in K from given chromaticity.

**Example:**

```vbnet
dim c as new LCMS2CIExyYMBS

c.x = 0.32
c.y = 0.32
c.YY = 1.0

MsgBox str(LCMS2MBS.TempFromWhitePoint(c))
```

**Notes:** Returns temperature. Or zero on any error.

104.21.62  T_BYTES(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unpacks a value from a bitwise pixel format.

**Notes:** bytes per sample

104.21.63  T_CHANNELS(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unpacks a value from a bitwise pixel format.

**Notes:** Channels (Samples per pixel)
**104.21.64**  **T_COLORSPACE(n as UInt32) as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unpacks a value from a bitwise pixel format.  
**Notes:** Pixeltype

**104.21.65**  **T_DOSWAP(n as UInt32) as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unpacks a value from a bitwise pixel format.  
**Notes:** Do swap? ie, BGR, KYMC

**104.21.66**  **T_ENDIAN16(n as UInt32) as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unpacks a value from a bitwise pixel format.  
**Notes:** swap 16 bps endianess?

**104.21.67**  **T_EXTRA(n as UInt32) as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unpacks a value from a bitwise pixel format.  
**Notes:** Extra samples

**104.21.68**  **T_FLAVOR(n as UInt32) as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unpacks a value from a bitwise pixel format.  
**Notes:** Flavor 0=MinIsBlack(Chocolate) 1=MinIsWhite(Vanilla)

**104.21.69**  **T_FLOAT(n as UInt32) as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unpacks a value from a bitwise pixel format.  
**Notes:** Floating point – With this flag we can differentiate 16 bits as float and as int
104.21.70  T_OPTIMIZED(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unpacks a value from a bitwise pixel format.  
**Notes:** Optimized – previous optimization already returns the final 8-bit value

104.21.71  T_PLANAR(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unpacks a value from a bitwise pixel format.  
**Notes:** Planar? 0=Chunky, 1=Planar

104.21.72  T_SWAPFIRST(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unpacks a value from a bitwise pixel format.  
**Notes:** Swap first - changes ABGR to BGRA and KCMY to CMYK.

104.21.73  Version as string

**Example:**  
```
MsgBox LCMS2MBS.Version
```

104.21.74  WhitePointFromTemp(TempK as Double) as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Correlates a black body chromaticity from given temperature in K.  
**Example:**  
```
dim c as LCMS2CIExyYMBS = LCMS2MBS.WhitePointFromTemp(6500)
MsgBox str(c.x)+" "+str(c.y)+" "+str(c.yy)
```

**Notes:**
104.21. MODULE LCMS2MBS

104.21.75  \textit{xyY2XYZ}(p \text{ as } \text{ LCMS2CIELxyYMBS}) \text{ as } \text{ LCMS2CIELxyYMBS}

\text{MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Colorimetric space conversion from \textit{xyY} to \textit{XYZ}.}

104.21.76  \textit{XYZ2Lab}(p \text{ as } \text{ LCMS2CIELxyYMBS}, \text{ whiepoint} \text{ as } \text{ LCMS2CIELxyYMBS} = \text{ nil}) \text{ as } \text{ LCMS2CIELabMBS}

\text{MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Converts \textit{XYZ} color to \textit{Lab}. Notes: Setting \text{ WhitePoint} to \text{ nil} forces D50 as white point.}

104.21.77  \textit{XYZ2xyY}(p \text{ as } \text{ LCMS2CIELxyYMBS}) \text{ as } \text{ LCMS2CIELxyYMBS}

\text{MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Colorimetric space conversion from \textit{XYZ} to \textit{xyY}.}

104.21.78  \textit{XYZEncoded2Float}(w0 \text{ as } \text{ UInt16}, w1 \text{ as } \text{ UInt16}, w2 \text{ as } \text{ UInt16}) \text{ as } \text{ LCMS2CIELxyYMBS}

\text{MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Decodes a \textit{XYZ} value, encoded on ICC convention to a \text{ LCMS2CIELxyYMBS} value. Notes: w0,w1 and w2: Array of 3 \text{ UInt16} values holding the encoded values. Returns \textit{XYZ} color on success or \text{ nil} on failure.}

104.21.79  \textbf{Constants}

104.21.80  \textit{kAVG\_SURROUND} = 1

\text{MBS Images Plugin, Plugin Version: 11.3. Function: One of the surround constants for viewing conditions.}
104.21.81  kcmsEmbeddedProfileFalse = 0

MBS Images Plugin, Plugin Version: 11.3. **Function:** One of the header flag constants.

104.21.82  kcmsEmbeddedProfileTrue = 1

MBS Images Plugin, Plugin Version: 11.3. **Function:** One of the header flag constants.

104.21.83  kcmsERROR_ALREADY_DEFINED = & h0000000A

MBS Images Plugin, Plugin Version: 11.3. **Function:** One of the error constants.

104.22 class LCMS2MLUMBS

104.22.1 class LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a multi localized unicode string.

**Notes:**
MLU functions are the low-level interface to access the localization features of V4 ICC profiles. Little CMS does offer a high-level interface for easy operation. You may want, however, handle those objects by yourself.

Obtaining localized info from profiles
In versions prior to 4.0, the ICC format defined a required tag 'desc' which stored ASCII, Unicode, and Script Code versions of the profile description for display purposes. However, this structure allowed the profile to be localized for one language only through Unicode or Script Code. Profile vendors had to ship many localized versions to different countries. It also created problems when a document with localized profiles embedded in it was shipped to a system using a different language. With the adoption of V4 spec as basis, Little CMS solves all those issues honoring a new tag type: mluc' and multi localized Unicode. There is a full part of the API to deal with this stuff, but if you don’t care about the details and all you want is to display the right string, Little CMS provides a simplified interface for that purpose.

Note that ASCII is strictly 7 bits, so you need to use wide chars if you want to preserve the information in the profile. The localization trick is done by using the language and country codes, which you are supposed to supply. Those are two or three ASCII letters. A list of codes may be found here:

Language Code:

Country Codes:

In practice, "en" for "english" and "US" for "united states" are implemented in most profiles. It is Ok to set a language and a country even if the profile does not implement such specific language and country. Little CMS will search for a proper match.

If you don’t care and want just to take the first string in the profile, you can use:

For the language:
kcmsNoLanguage

For the country:
kcmsNoCountry

This will force to get the very first string, without any searching. A note of warning on that: you will get an string, but the language would be any, and probably that is not what you want. It is better to specify
104.22. CLASS LCMS2MLUMBS

a default for language, and let LittleCMS to choose any other country (or language!) if what you ask for is not available.

104.22.2 Methods

104.22.3 Constructor(context as LCMS2ContextMBS, items as UInt32)

**Example:**

```vbnet
dim c as new LCMS2MLUMBS(nil, 3)
call c.setASCII("en", "US", "Hello")
call c.setASCII("de", "DE", "Hallo")
```

104.22.4 getASCII(LanguageCode as string, CountryCode as string) as string

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets an ASCII (7 bit) entry for the given Language and country.

**Example:**

```vbnet
dim c as new LCMS2MLUMBS(nil, 3)
call c.setASCII("en", "US", "Hello")
call c.setASCII("de", "DE", "Hallo")
MsgBox "en: " +c.getASCII("en", "US") + EndOfLine + "de: " +c.getASCII("de", "DE") + EndOfLine + "any: " +c.getASCII("", ")
```

**Notes:**
Language Code: 3 chars describing the language.
CountryCode: 3 chars describing the country.

Returns the string.
104.22.5  getTranslation(LanguageCode as string, CountryCode as string, byref ObtainedLanguageCode as string, byref ObtainedCountryCode as string) as boolean

**Notes:**

Language Code: 3 chars describing the language.
CountryCode: 3 chars describing the country
ObtainedLanguage: 3 chars to get the language translation.
ObtainedCode: 3 chars to get the country translation.

Returns true on success, false on error

104.22.6  getUnicode(LanguageCode as string, CountryCode as string) as string

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets an unicode (16 bit) entry for the given Language and country.

**Notes:**

Language Code: 3 chars describing the language
CountryCode: 3 chars describing the country

Returns the string value.

104.22.7  setASCII(LanguageCode as string, CountryCode as string, ASCIIString as string) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fills an ASCII (7 bit) entry for the given Language and country.

**Example:**

```vbnet
dim c as new LCMS2MLUMBS(nil, 3)

call c.setASCII("en", "US", "Hello")
call c.setASCII("de", "DE", "Hallo")

MsgBox "en: "+c.getASCII("en", "US") + EndOfLine + "de: "+c.getASCII("de", "DE") + EndOfLine + "any: "+c.getASCII("", "")
```

**Notes:**
104.22. **CLASS LCMS2MLUMBS**

Language Code: 3 chars describing the language  
CountryCode: 3 chars describing the country  
ASCIIString: String to add.

Returns true on success, false on error.

104.22.8  **setUnicode(LanguageCode as string, CountryCode as string, UnicodeString as string) as Boolean**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**  
Fills a UNICODE wide char (16 bit) entry for the given Language and country.  
**Example:**

```vba
dim c as new LCMS2MLUMBS(nil, 3)  
call c.setUnicode("de", "DE", "Ktzchen")  
dim u as string = c.getUnicode("de", "DE")  
MsgBox u
```

**Notes:**

Language Code: 3 chars describing the language  
CountryCode: 3 chars describing the country  
WideString: String to add.

Returns true on success, false on error.

104.22.9  **translationsCodes(index as Integer, byref LanguageCode as string, byref CountryCode as string) as boolean**

MBS Images Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**  
Queries language and country code for the given index.  
**Example:**

```vba
dim c as new LCMS2MLUMBS(nil, 3)  
call c.setASCII("en", "US", "Hello")  
call c.setASCII("de", "DE", "Hallo")

dim u as Integer = c.TranslationsCount-1  
for i as Integer = 0 to u  
dim LanguageCode as string  
dim CountryCode as string
```
if c.translationsCodes(i, LanguageCode, CountryCode) then
MsgBox LanguageCode + " " + CountryCode
end if
next

Notes: Index is from 0 to TranslationsCount-1.

104.22.10 Properties

104.22.11 Handle as Integer

104.22.12 TranslationsCount as Integer

dim c as new LCMS2MLUMBS(nil, 3)
call c.setASCII("en", "US", "Hello")
call c.setASCII("de", "DE", "Hallo")
MsgBox str(c.TranslationsCount) + " translations"

Notes: (Read only property)

104.22.13 Constants

104.22.14 kNoCountry = ""

MBS Images Plugin, Plugin Version: 11.3. **Function:** One of the possible language constants. **Notes:** Any language.
104.23 class LCMS2NamedColorListMBS

104.23.1 class LCMS2NamedColorListMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specialized dictionaries for dealing with named color profiles.

104.23.2 Methods

104.23.3 Append(name as string) as Boolean

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a new spot color to the list.

**Notes:**
If the number of elements in the list exceeds the initial storage, the list is realloc’ed to accommodate things.

Name: The spot color name without any prefix or suffix specified in Constructor.
PCS: Optionally, Encoded PCS coordinates as three integers.
Colorant: Optionally, Encoded values for device colorant. (up to 16 entries)

Returns true on success and false on failure.
See also:

- 104.23.4 Append(name as string, PCS() as Integer) as Boolean
- 104.23.5 Append(name as string, PCS() as Integer, Colorant() as Integer) as Boolean

104.23.4 Append(name as string, PCS() as Integer) as Boolean

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a new spot color to the list.

**Notes:**
If the number of elements in the list exceeds the initial storage, the list is realloc’ed to accommodate things.

Name: The spot color name without any prefix or suffix specified in Constructor.
PCS: Optionally, Encoded PCS coordinates as three integers.
Colorant: Optionally, Encoded values for device colorant. (up to 16 entries)

Returns true on success and false on failure.
See also:
104.23. **CLASS LCMS2NAMEDCOLORLISTMBS**

- 104.23.3 Append(name as string) as Boolean
- 104.23.5 Append(name as string, PCS() as Integer, Colorant() as Integer) as Boolean

### 104.23.5 Append(name as string, PCS() as Integer, Colorant() as Integer) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a new spot color to the list.  
**Notes:**  
If the number of elements in the list exceeds the initial storage, the list is realloc’ed to accommodate things.

Name: The spot color name without any prefix or suffix specified in Constructor.  
PCS: Optionally, Encoded PCS coordinates as three integers.  
Colorant: Optionally, Encoded values for device colorant. (up to 16 entries)

Returns true on success and false on failure.  
See also:

- 104.23.3 Append(name as string) as Boolean
- 104.23.4 Append(name as string, PCS() as Integer) as Boolean

### 104.23.6 Colorant(nColor as UInt32) as Integer()

**Notes:** Array has 16 entries, but not all may be in use.

### 104.23.7 ColorIndex(name as string) as Integer

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a look-up in the dictionary and returns an index on the given color name.  
**Notes:** Returns index on name, or -1 if the spot color is not found.

### 104.23.8 Constructor(context as LCMS2ContextMBS, n as UInt32, Colorant-Count as UInt32, Prefix as string = "", Suffix as string = "")

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new named color list.  
**Notes:**
Allocates an empty named color dictionary.

Context: The user-defined context cargo.
N: Initial number of spot colors in the list
Colorant count: Number of channels of device space (i.e, 3 for RGB, 4 for CMYK, etc.)
Prefix, Suffix: fixed strings for all spot color names, e.g., ”coated”, ”system”, ...

On success handle is not zero.

### 104.23.9 Name(nColor as UInt32) as string

### 104.23.10 PCS(nColor as UInt32) as Integer()

**Notes:** Array has 3 entries.

### 104.23.11 Prefix(nColor as UInt32) as string

### 104.23.12 Suffix(nColor as UInt32) as string

### 104.23.13 Properties

#### 104.23.14 Count as Integer

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of spot colors in a named color list.
Notes:
Returns the number of spot colors on success, 0 on error.
(Read only property)

104.23.15 Handle as Integer

class LCMS2PipelineMBS

class LCMS2PipelineMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a pipeline. **Notes:** Pipelines are a convenient way to model complex operations on image data. Each pipeline may contain an arbitrary number of stages. Each stage performs a single operation. Pipelines may be optimized to be executed on a certain format (8 bits, for example) and can be saved as LUTs in ICC profiles.

### 104.24.2 Methods

#### 104.24.3 Append(p as LCMS2PipelineMBS) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Appends pipeline l2 at the end of pipeline l1. **Notes:** Channel count must match. Returns true on success and false on failure.

#### 104.24.4 Constructor(context as LCMS2ContextMBS, InputChannels as UInt32, OutputChannels as UInt32)

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Allocates an empty pipeline. **Notes:** Final Input and output channels must be specified at creation time.

context: A user-defined context cargo. InputChannels, OutputChannels: Number of channels on input and output.

#### 104.24.5 Eval16(In as Ptr, Out as Ptr)

For in and out you can use memoryblocks with UInt16 values. We use Ptr for maximum performance. Please make sure the memoryblocks have right size. An UInt16 value has 2 bytes.

**104.24.6 EvalFloat(In as Ptr, Out as Ptr)**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Evaluates a pipeline using floating point numbers. **Notes:**

In: Input values.
Out: Output values.

For in and out you can use memoryblocks with single values. We use Ptr for maximum performance. Please make sure the memoryblocks have right size. A single value has 4 bytes.

**104.24.7 EvalReverseFloat(Target as Ptr, Result as Ptr, Hint as Ptr)**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Evaluates a pipeline in the reverse direction, using Newton’s method. **Notes:**

Target: Input values.
Result: Output values.
Hint: Where begin the search.

For target, result and hint you can use memoryblocks with single values. We use Ptr for maximum performance. Please make sure the memoryblocks have right size. A single value has 4 bytes.

Returns true on success, false on error.

**104.24.8 InsertStage(where as Integer, stage as LCMS2StageMBS) as boolean**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Inserts a stage on either the head or the tail of a given pipeline. **Notes:**
where: enumerated constant, either kAtBegin or kAtEnd.
stage: Pointer to a stage object

104.24.9 SetSaveAs8bitsFlag(save8bit as boolean) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Sets an internal flag that marks the pipeline to be saved in 8 bit precision.
Notes:
By default all pipelines are saved on 16 bits precision on AtoB/BToA tags and in floating point precision on DToB/BToD tags.

save8bit: State of the flag, true=Save as 8 bits, false=Save as 16 bits

Returns true on success, false on error

104.24.10 Stages as LCMS2StageMBS()

104.24.11 UnlinkStage(where as Integer) as LCMS2StageMBS

Notes:
Returns the removed stage object.
where can be kAtBegin or kAtEnd values.

104.24.12 Properties

104.24.13 context as LCMS2ContextMBS

Notes: (Read and Write property)
104.24. **CLASS LCMS2PIPELINEMBS**

104.24.14 **FirstStage as LCMS2StageMBS**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get a the first stage in the pipeline, or nil if pipeline is empty.

**Notes:**
Intended for iterators.
(Read only property)

104.24.15 **Handle as Integer**

**Notes:** (Read and Write property)

104.24.16 **InputChannels as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of input channels of a given pipeline.

**Notes:**
Number of channels on success, 0 on error.
(Read only property)

104.24.17 **LastStage as LCMS2StageMBS**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get a the last stage in the pipeline, or nil if pipeline is empty.

**Notes:**
Intended for iterators.
(Read only property)

104.24.18 **OutputChannels as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns number of output channels of a given pipeline.

**Notes:**
Number of channels on success, 0 on error.
(Read only property)
104.24.19 StageCount as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns number of stages of a given pipeline. Notes: (Read only property)

104.24.20 Constants

104.24.21 kAtBegin = 0

MBS Images Plugin, Plugin Version: 11.3. Function: One of the constants for UnlinkStage. Notes: At the beginning.

104.24.22 kAtEnd = 1

MBS Images Plugin, Plugin Version: 11.3. Function: One of the constants for UnlinkStage. Notes: At the end.
104.25. **CLASS LCMS2PROFILEMBS**

104.25  **class LCMS2ProfileMBS**

104.25.1  **class LCMS2ProfileMBS**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a LCMS2 profile.

104.25.2  **Methods**

104.25.3  **Constructor(context as LCMS2ContextMBS = nil)**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new empty profile. **Notes:** On success the handle property is not zero. See also:

- 104.25.4 Constructor(file as folderitem, write as boolean = false)

104.25.4  **Constructor(file as folderitem, write as boolean = false)**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates profile by reading in an existing profile or creating a new profile at the given location. **Notes:**

- file: file location.
- write: Whether to create new profile.

On success the handle property is not zero. See also:

- 104.25.3 Constructor(context as LCMS2ContextMBS = nil)

104.25.5  **CreateBCHSWabstractProfile(context as LCMS2ContextMBS, nLUT-Points as UInt32, Bright as double, Contrast as double, Hue as double, Saturation as double, TempSrc as UInt32, TempDest as UInt32) as LCMS2ProfileMBS**

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates an abstract devicelink operating in Lab for Bright/Contrast/Hue/Saturation and white point translation. **Notes:**
White points are specified as temperatures degree of Kelvin.

context: optional context object.
nLUTPoints: Resulting colormap resolution
Bright: Bright increment. May be negative
Contrast: Contrast increment. May be negative.
Hue: Hue displacement in degree.
Saturation: Saturation increment. May be negative
TempSrc: Source white point temperature
TempDest: Destination white point temperature.

Returns an ICC profile object on success, nil on error.

104.25.6 CreateGrayProfile(context as LCMS2ContextMBS, WhitePoint as LCMS2CIExyYMBS, TransferFunction as LCMS2ToneCurveMBS) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
This function creates a gray profile based on White point and transfer function.
Notes:
It populates following tags; this conform a standard gray display profile:

1 cmsSigProfileDescriptionTag
2 cmsSigMediaWhitePointTag
3 cmsSigGrayTRCTag

Context: Optional context object.
WhitePoint: The white point of the gray device or space.
TransferFunction: tone curve describing the device or space gamma.

Returns an ICC profile object on success, NULL on error.

104.25.7 CreateInkLimitingDeviceLink(context as LCMS2ContextMBS, ColorSpaceSignature as UInt32, Limit as Double) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
This is a devicelink operating in CMYK for ink-limiting.
Notes:
Space: any color space signature. Currently only kcmsSigCmykData is supported.
Limit: Amount of ink limiting in \( \% \) (0..400\%)

Returns new profile or nil on error.

104.25.8 CreateLab2Profile(context as LCMS2ContextMBS = nil, point as LCMS2CIExyYMBS = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a Lab to Lab identity, marking it as v2 ICC profile.
**Notes:**
Adjustments for accommodating PCS ending shall be done by Little CMS when using this profile.

Context: The optional context object.
WhitePoint: Lab reference white. nil for D50.

Returns a handle to an ICC profile object on success, nil on error.

104.25.9 CreateLab4Profile(context as LCMS2ContextMBS = nil, point as LCMS2CIExyYMBS = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a Lab to Lab identity, marking it as v4 ICC profile.
**Notes:**
Context: The optional context object.
WhitePoint: Lab reference white. nil for D50.

Returns a handle to an ICC profile object on success, nil on error.

104.25.10 CreateLinearizationDeviceLink(context as LCMS2ContextMBS, ColorSpaceSignature as UInt32, TransferFunction() as LCMS2ToneCurveMBS) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This is a devicelink operating in the target colorspace with as many transfer functions as components.
**Notes:**
Space: The desired color space signature. Like & h52474220 for RGB.
TransferFunction: tone curves describing the device or space linearization.
Please make sure you pass right number of transfer functions matching number of channels of color space.

A handle to an ICC profile object on success, NULL on error.

**104.25.11 CreateNULLProfile**

(context as LCMS2ContextMBS = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Creates a fake NULL profile.

**Notes:**

This profile return 1 channel as always 0. Is useful only for gamut checking tricks.

Returns an ICC profile object on success, nil on error.

**104.25.12 CreateProfilePlaceholder**

(context as LCMS2ContextMBS = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Creates an empty profile object, to be populated by the programmer.

**Notes:**

WARNING: The profile without adding any information is not directly useable.

Context: The context object.

Returns an ICC profile object on success, nil on error.

**104.25.13 CreateRGBProfile**

(context as LCMS2ContextMBS, WhitePoint as LCMS2CIExyYMBS, Primaries as LCMS2CIExyYTripleMBS, TransferFunction() as LCMS2ToneCurveMBS) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

This function creates a RGB profile based on White point, primaries and transfer functions.

**Notes:**

It populates following tags; this conform a standard RGB Display Profile, and then I add (As per addendum II) chromaticity tag.

Context: Optional context object.

WhitePoint: The white point of the RGB device or space.
Primaries: The primaries in xyY of the device or space.
TransferFunction: 3 tone curves describing the device or space gamma. (if you pass just one, the plugin uses it for all three channels)

Returns the new ICC profile object or nil on any error.

104.25.14 CreateSRGBProfile(context as LCMS2ContextMBS = nil) as LCMS2ProfileMBS

Notes:
sRGB is a standard RGB color space created cooperatively by HP and Microsoft in 1996 for use on monitors, printers, and the Internet.

sRGB white point is D65.
xyY 0.3127, 0.3291, 1.0

Primaries are ITU-R BT.709-5 (xYy)

R  0.400, 0.3300, 1.0
G  0.3000, 0.6000, 1.0
B  0.1500, 0.0600, 1.0
Predefined virtual profiles sRGB transfer functions are defined by:

\[
\begin{align*}
\text{If } R^{\text{sRGB}}, G^{\text{sRGB}}, B^{\text{sRGB}} &< 0.04045 \\
R &= \frac{R^{\text{sRGB}}}{12.92} \\
G &= \frac{G^{\text{sRGB}}}{12.92} \\
B &= \frac{B^{\text{sRGB}}}{12.92} \\
\text{elseif } R^{\text{sRGB}}, G^{\text{sRGB}}, B^{\text{sRGB}} &\geq 0.04045 \\
R &= \left(\frac{R^{\text{sRGB}} + 0.055}{1.055}\right)^{2.4} \\
G &= \left(\frac{G^{\text{sRGB}} + 0.055}{1.055}\right)^{2.4} \\
B &= \left(\frac{B^{\text{sRGB}} + 0.055}{1.055}\right)^{2.4} \\
\end{align*}
\]

end if

Context: Optional context object.
Returns an ICC profile object on success, nil on error.

104.25.15  \texttt{CreateXYZProfile(context as \texttt{LCMS2ContextMBS} = nil) as \texttt{LCMS2ProfileMBS}}

\textbf{Notes:}
WhitePoint used in Absolute colorimetric intent is D50.
Returns the new profile on success or nil on failure.

104.25.16  \texttt{DetectBlackPoint(Intent as Integer, Flags as Integer) as \texttt{LCMS2CIELABMBS}}

104.25.17  \texttt{DetectDestinationBlackPoint(Intent as Integer, Flags as Integer) as \texttt{LCMS2CIELABMBS}}

\textbf{Notes:} This algorithm comes from the Adobe paper disclosing its black point compensation method.
104.25.18  DetectTAC as Double

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Detects total area coverage.

**Notes:**

When several colors are printed on top of each other, there is a limit to the amount of ink that can be put on paper. This maximum total dot percentage is referred to as either TIC (Total Ink Coverage) or TAC (Total Area Coverage). This function does estimate total area coverage for a given profile in %. Only works on output profiles. On RGB profiles, 400% is returned. TAC is detected by subsampling Lab color space on 6x74x74 points.

Returns estimated area coverage in % on success, 0 on error.

104.25.19  FormatterForBitmap(BitCount as Integer = 8) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Build a suitable formatter for the colorspace of this profile.

**Notes:**

This is a convenience function which prepares you a pixel format for use with LCMS2BitmapMBS class. Formatters are used to describe how bitmap buffers are organized.

104.25.20  FormatterForColorspace(nBytes as UInt32, IsFloat as boolean = false) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Build a suitable formatter for the colorspace of this profile.

**Notes:** Formatters are used to describe how bitmap buffers are organized.

104.25.21  FormatterForPCS(nBytes as UInt32, IsFloat as boolean = false) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Build a suitable formatter for the colorspace of this profile.

**Notes:** Formatters are used to describe how bitmap buffers are organized.
104.25.22 GetProfileInfo(Info as Integer, LanguageCode as string, CountryCode as string) as string

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets several information strings from the profile, dealing with localization. **Notes:** Info: A selector of which info to return. (kInfoCopyright, kInfoDescription, kInfoManufacturer or kInfoModel) Language Code: first name language code from ISO-639/2. Country Code: first name region code from ISO-3166. Returns the string. (empty string on error)

104.25.23 IsCLUT(Intent as UInt32, UsedDirection as UInt32) as boolean

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns whatever a CLUT is present in the profile for the given intent and direction. **Notes:** Intent: The intent code. UsedDirection: UsedAsInput = 0, UsedAsOutput = 1, UsedAsProof = 2. Returns true CLUT is present for given intent and direction, false otherwise.

104.25.24 IsIntentSupported(Intent as UInt32, UsedDirection as UInt32) as boolean

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the requested intent is implemented in the given direction. **Notes:** Little CMS has a fallback strategy that allows to specify any rendering intent when creating the transform, but the intent really being used may be another if the requested intent is not implemented. UsedDirection: UsedAsInput = 0, UsedAsOutput = 1, UsedAsProof = 2. Returns true if the intent is implemented, false otherwise.

104.25.25 IsTag(TagSignature as Integer) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if a tag with signature sig is found on the profile.
104.25. CLASS LCMS2PROFILEMBS

Notes:
Useful to check if a profile contains a given tag.
Returns true if the tag is found or false otherwise.

104.25.26 LinkTag(sig as Integer, dest as Integer) as boolean

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Creates a directory entry on tag sig that points to same location as tag dest.
Notes:
Using this function you can collapse several tag entries to the same block in the profile.

sig: Signature of linking tag.
dest: Signature of linked tag.

Returns true on success, false on error

104.25.27 MD5computeID as boolean

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Computes a MD5 checksum and stores it as Profile ID in the profile header.
Notes: Returns true on success or false on failure.

104.25.28 OpenProfileFromFile(context as LCMS2ContextMBS, file as folderitem, write as boolean = false) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Opens a profile from a file or creates a new profile file there.
Notes:
context: Optional context object.
file: The folderitem for the file location.
write: If true, a new profile is created. If false an existing profile is opened.

Returns a new ICC Profile object on success or nil on failure.
See also:

• 104.25.29 OpenProfileFromFile(file as folderitem, write as boolean = false) as LCMS2ProfileMBS
104.25.29 OpenProfileFromFile(file as folderitem, write as boolean = false) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a profile from a file or creates a new profile file there. 

**Notes:**
context: Optional context object.
file: The folderitem for the file location.
write: If true, a new profile is created. If false an existing profile is opened.

Returns a new ICC Profile object on success or nil on failure.
See also:
- 104.25.28 OpenProfileFromFile(context as LCMS2ContextMBS, file as folderitem, write as boolean = false) as LCMS2ProfileMBS

104.25.30 OpenProfileFromMemory(context as LCMS2ContextMBS, data as Memoryblock) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens an ICC profile which is entirely contained in a memory block.

**Notes:**
Context: Optional, the context object.
Data: The profile data.

Useful for accessing embedded profiles. This buffer must hold a full profile image. Memory must be contiguous.
Returns an ICC profile object on success, nil on error.
See also:
- 104.25.31 OpenProfileFromMemory(data as Memoryblock) as LCMS2ProfileMBS

104.25.31 OpenProfileFromMemory(data as Memoryblock) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens an ICC profile which is entirely contained in a memory block.

**Notes:**
Context: Optional, the context object.
Data: The profile data.

Useful for accessing embedded profiles. This buffer must hold a full profile image. Memory must be contiguous.
104.25. CLASS LCMS2PROFILEMBS

Returns an ICC profile object on success, nil on error.
See also:

- 104.25.30 OpenProfileFromMemory(context as LCMS2ContextMBS, data as Memoryblock) as LCMS2ProfileMBS

104.25.32 OpenProfileFromString(context as LCMS2ContextMBS, data as string) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Opens an ICC profile which is entirely contained in a string.
**Notes:**
Context: Optional, the context object.
Data: The profile data.
Useful for accessing embedded profiles. This buffer must hold a full profile image. Memory must be contiguous.
Returns an ICC profile object on success, nil on error.
See also:

- 104.25.33 OpenProfileFromString(data as string) as LCMS2ProfileMBS

104.25.33 OpenProfileFromString(data as string) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Opens an ICC profile which is entirely contained in a string.
**Notes:**
Context: Optional, the context object.
Data: The profile data.
Useful for accessing embedded profiles. This buffer must hold a full profile image. Memory must be contiguous.
Returns an ICC profile object on success, nil on error.
See also:

- 104.25.32 OpenProfileFromString(context as LCMS2ContextMBS, data as string) as LCMS2ProfileMBS
104.25.34  PostScriptCRD(context as LCMS2ContextMBS, intent as UInt32, flags as UInt32 = 0) as string

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A wrapper on cmsGetPostScriptColorResource to simplify CRD generation. **Notes:**

- context: Optional a user-defined context cargo.
- Intent: The intent code, as described in Intents constants.
- Flags: A combination of bit-field kcmsFLAGS* constants.

Returns: The resource as string or an empty string on error.

104.25.35  PostScriptCSA(context as LCMS2ContextMBS, intent as UInt32, flags as UInt32 = 0) as string

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A wrapper on cmsGetPostScriptColorResource to simplify CSA generation. **Notes:**

- context: Optional a user-defined context cargo.
- Intent: The intent code, as described in Intents constants.
- Flags: A combination of bit-field kcmsFLAGS* constants.

Returns: The resource as string or an empty string on error.

104.25.36  ReadChromaticAdaptation as LCMS2CIEXYZMBS()

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a chromatic adaptation. **Notes:** On success returns an array of 3 XYZ values.

104.25.37  ReadChromaticity as LCMS2CIExyYTripleMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads chromaticity tag. **Notes:**

For kcmsSigChromaticityTag.

Returns nil on error.
104.25.38 ReadCIEXYZ(tag as Integer) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Reads tag as CIE XYZ value.
**Notes:**
Works with kcmsSigBlueColorantTag, kcmsSigBlueMatrixColumnTag, kcmsSigGreenColorantTag, kcmsSigGreenMatrixColumnTag, kcmsSigLuminanceTag, kcmsSigMediaBlackPointTag, kcmsSigMediaWhitePointTag, kcmsSigRedColorantTag and kcmsSigRedMatrixColumnTag.
Returns nil on any error.

104.25.39 ReadColorantOrder as Memoryblock

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Reads colorant order.
**Notes:**
For kcmsSigColorantOrderTag.
Returns nil on any error.

104.25.40 ReadDate(tag as Integer) as LCMS2DateMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Reads tag as date.
**Notes:**
Works with kcmsSigCalibrationDateTimeTag and kcmsSigDateTimeTag.
Returns nil on any error.

104.25.41 ReadDict(tag as Integer) as LCMS2DictionaryMBS

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Reads tag as Dictionary value.
**Notes:**
Works with kcmsSigMetaTag.
Returns nil on any error.
104.25.42 ReadICCData(tag as Integer) as LCMS2ICCDataMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads tag as ICC Data. **Notes:** Works with kcmsSigDataTag, kcmsSigPs2CRD0Tag, kcmsSigPs2CRD1Tag, kcmsSigPs2CRD2Tag, kcmsSigPs2CRD3Tag, kcmsSigPs2CSATag and kcmsSigPs2RenderingIntentTag. Returns nil on any error.

104.25.43 ReadICCMeasurementConditions as LCMS2ICCMeasurementConditionsMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads IIC measurement conditions. **Notes:** for kcmsSigMeasurementTag. Returns nil on any error.

104.25.44 ReadICCViewingConditions as LCMS2ICCViewingConditionsMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads tag as ICCViewingConditions value. **Notes:** Works with kcmsSigViewingConditionsTag.

104.25.45 ReadMLU(tag as Integer) as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads tag as MLU. **Notes:** Works with kcmsSigCharTargetTag, kcmsSigCopyrightTag, kcmsSigDeviceMfgDescTag, kcmsSigDeviceModelDescTag, kcmsSigProfileDescriptionTag, kcmsSigScreeningDescTag and kcmsSigViewingCondDescTag. Returns nil on any error.

104.25.46 ReadNamedColorList(tag as Integer) as LCMS2NamedColorListMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads tag as named color list. **Notes:**
Works with `kcmsSigColorantTableTag`, `kcmsSigColorantTableOutTag`, `kcmsSigCrdInfoTag` and `kcmsSigNamedColor2Tag`. Returns nil on any error.

### 104.25.47 ReadPipeline(tag as Integer) as LCMS2PipelineMBS

**Notes:**

Works with `kcmsSigAToB0Tag`, `kcmsSigAToB1Tag`, `kcmsSigAToB2Tag`, `kcmsSigBToA0Tag`, `kcmsSigBToA1Tag`, `kcmsSigBToA2Tag`, `kcmsSigDToB0Tag`, `kcmsSigDToB1Tag`, `kcmsSigDToB2Tag`, `kcmsSigDToB3Tag`, `kcmsSigBToD0Tag`, `kcmsSigBToD1Tag`, `kcmsSigBToD2Tag`, `kcmsSigBToD3Tag`, `kcmsSigGamutTag`, `kcmsSigPreview0Tag`, `kcmsSigPreview1Tag` and `kcmsSigPreview2Tag`. Returns nil on any error.

### 104.25.48 ReadRawTag(sig as Integer) as Memoryblock

**Notes:**

Similar to ReadTag*, but different in two important aspects. The important point is, this is raw data. No processing is performed, so you can effectively read wrong or broken profiles with this function. Obviously, then you have to interpret all those bytes!

**sig:** Signature of tag to be read

Returns memoryblock with data or nil on any error.

Those functions allows to read/write directly to the ICC profile any data, without checking anything. As a rule, mixing Raw with cooked doesn’t work, so writing a tag as raw and then reading it as cooked without serializing does result into an error. If that is what you want, you will need to dump the profile to memory or disk and then reopen it.

Returns nil on any error.
104.25.49  **ReadScreening as LCMS2ScreeningMBS**

**Notes:**  
Works with kcmsSigScreeningTag.  
Returns nil on any error.

104.25.50  **ReadSequence(tag as Integer) as LCMS2SequenceMBS**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads tag as sequence.  
**Notes:**  
Only for kcmsSigProfileSequenceDescTag and kcmsSigProfileSequenceIdTag.  
Returns nil on any error.

104.25.51  **ReadSignature(tag as Integer) as UInt32**

**Notes:** Works with kcmsSigColorimetricIntentImageStateTag, kcmsSigPerceptualRenderingIntentGamutTag, kcmsSigSaturationRenderingIntentGamutTag or kcmsSigTechnologyTag.

104.25.52  **ReadTag(tag as Integer) as Variant**

**Notes:**  
This is a convenience function which gives you the tag in whatever class the plugin thing is suitable. Check with isa what class you get.  
Returns nil on any error.

104.25.53  **ReadToneCurve(tag as Integer) as LCMS2ToneCurveMBS**

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads tag as ToneCurve.  
**Notes:** Works with kcmsSigBlueTRCTag, kcmsSigGrayTRCTag, kcmsSigGreenTRCTag and kcmsSigRedTRC-
104.25. CLASS LCMS2PROFILEMBS

Tag.

104.25.54   ReadUcrBg as LCMS2UcrBgMBS

104.25.55   SaveProfileToFile(file as folderitem) as boolean

104.25.56   SaveProfileToMemory as Memoryblock

104.25.57   SaveProfileToString as string

104.25.58   TagLinkedTo(sig as Integer) as Integer

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns the tag linked to sig, in the case two tags are sharing same resource, or nil if the tag is not linked to any other tag. Notes: sig: Signature of linking tag.

Returns signature of linked tag, or 0 if no tag is linked.
104.25.59  TagSignature(index as Integer) as Integer

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the signature of a tag located in n position being n a 0-based index: i.e., first tag is indexed with n=0.
**Notes:**
index: index to a tag position (0-based)

Returns the tag signature on success, 0 on error.

104.25.60  WriteChromaticAdaptation(value as LCMS2Mat3MBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Writes chromatic adaptation.
**Notes:** Variant of the function which takes matrix of values.
See also:
- 104.25.61 WriteChromaticAdaptation(values() as LCMS2CIEXYZMBS) as boolean

104.25.61  WriteChromaticAdaptation(values() as LCMS2CIEXYZMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Writes chromatic adaptation.
**Notes:**
Pass array with 3 XYZ colors.
Returns true on success.
See also:
- 104.25.60 WriteChromaticAdaptation(value as LCMS2Mat3MBS) as boolean

104.25.62  WriteChromaticity(o as LCMS2CIExyYTripleMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Writes chromaticity tag.
**Notes:**
For kcmsSigChromaticityTag.
Returns true on success and false on error.
104.25.63 WriteCIEXYZ(tag as Integer, o as LCMS2CIEXY zachMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes CIE XYZ tag. **Notes:** Works with kcmsSigBlueColorantTag, kcmsSigBlueMatrixColumnTag, kcmsSigGreenColorantTag, kcmsSigGreenMatrixColumnTag, kcmsSigLuminanceTag, kcmsSigMediaBlackPointTag, kcmsSigMediaWhitePointTag, kcmsSigRedColorantTag and kcmsSigRedMatrixColumnTag.

104.25.64 WriteColorantOrder(data as Memoryblock) as boolean

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes colorant order. **Notes:** For kcmsSigColorantOrderTag. Data should be 16 byte long. Returns true on success or false on failure.

104.25.65 WriteDate(tag as Integer, o as LCMS2DateMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes date tag. **Notes:** Works with kcmsSigCalibrationDateTimeTag and kcmsSigDateTimeTag.

104.25.66 WriteDict(tag as Integer, o as LCMS2DictionaryMBS) as boolean

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes Dictionary tag. **Notes:** Works with kcmsSigMetaTag.

104.25.67 WriteICCData(tag as Integer, o as LCMS2ICCDataMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes ICC Data tag. **Notes:** Works with kcmsSigDataTag, kcmsSigPs2CRD0Tag, kcmsSigPs2CRD1Tag, kcmsSigPs2CRD2Tag, kcmsSigPs2CRD3Tag, kcmsSigPs2CSATag and kcmsSigPs2RenderingIntentTag.
104.25.68 WriteICCMeasurementConditions(value as LCMS2ICCMeasurementConditionsMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes ICC measurement conditions.

**Notes:**

for kcmsSigMeasurementTag.
Writes data and returns true on success or false on failure.

104.25.69 WriteICCViewingConditions(o as LCMS2ICCViewingConditionsMBS) as boolean

**Notes:** Works with kcmsSigViewingConditionsTag.

104.25.70 WriteMLU(tag as Integer, o as LCMS2MLUMBS) as boolean

**Notes:** Works with kcmsSigCharTargetTag, kcmsSigCopyrightTag, kcmsSigDeviceMfgDescTag, kcmsSigDeviceModelDescTag, kcmsSigProfileDescriptionTag, kcmsSigScreeningDescTag and kcmsSigViewingCondDescTag.

104.25.71 WriteNamedColorList(tag as Integer, o as LCMS2NamedColorListMBS) as boolean

**Notes:** Works with kcmsSigColorantTableTag, kcmsSigColorantTableOutTag, kcmsSigCrdInfoTag and kcmsSigNamedColor2Tag.

104.25.72 WritePipeline(tag as Integer, o as LCMS2PipelineMBS) as boolean

**Notes:** Works with kcmsSigAToB0Tag, kcmsSigAToB1Tag, kcmsSigAToB2Tag, kcmsSigBToA0Tag, kcmsSigBToA1Tag, kcmsSigBToA2Tag, kcmsSigDToB0Tag, kcmsSigDToB1Tag, kcmsSigDToB2Tag, kcmsSigDToB3Tag,
104.25. **CLASS LCMS2PROFILEMBS**

kcmsSigBToD0Tag, kcapsSigBToD1Tag, kcapsSigBToD2Tag, kcapsSigBToD3Tag, kcapsSigGamutTag, kcapsSigPreview0Tag, kcapsSigPreview1Tag and kcapsSigPreview2Tag.

104.25.73 **WriteRawTag(sig as Integer, data as Memoryblock) as boolean**

**Notes:**

The RAW version does the same as WriteTag* but without any interpretation of the data. Please note it is fair easy to deal with ”cooked” structures, since there are primitives for allocating, deleting and modifying data. For RAW data you are responsible of everything. If you want to deal with a private tag, you may want to write a plug-in instead of messing up with raw data.

- **sig:** Signature of tag to be written
- **data:** memory block holding the data.

Returns true on success, false on error

Those functions allows to read/write directly to the ICC profile any data, without checking anything. As a rule, mixing Raw with cooked doesn’t work, so writting a tag as raw and then reading it as cooked without serializing does result into an error. If that is wha you want, you will need to dump the profile to memory or disk and then reopen it.

104.25.74 **WriteScreening(o as LCMS2ScreeningMBS) as boolean**

**Notes:** Works with kcapsSigScreeningTag.

104.25.75 **WriteSequence(tag as Integer, o as LCMS2SequenceMBS) as boolean**

**Notes:** Only for kcapsSigProfileSequenceDescTag and kcapsSigProfileSequenceIdTag.
104.25.76 WriteSignature(tag as Integer, o as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes a signature tag with the given values. **Notes:** Works with kcmsSigColorimetricIntentImageStateTag, kcmsSigPerceptualRenderingIntentGamutTag, kcmsSigSaturationRenderingIntentGamutTag or kcmsSigTechnologyTag.

104.25.77 WriteToneCurve(tag as Integer, o as LCMS2ToneCurveMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes tone curve tag. **Example:**

```vba
// read a profile
dim f as FolderItem = SpecialFolder.Desktop.Child(“myprofile.icc”)  
dim p as LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromFile(f)

// find gray level tone curve
dim t as LCMS2ToneCurveMBS = p.ReadToneCurve(LCMS2MBS.kcmsSigGrayTRCTag)
if t<>nil then

// let’s make a new one with half of old values
dim values(1000) as single
for i as Integer = 0 to 1000
    values(i) = t.EvalToneCurveFloat(i/1000.0) * 0.5
next

// build new curve with that values
dim n as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildTabulatedToneCurve(nil, values)

// write back
if not p.WriteToneCurve(LCMS2MBS.kcmsSigGrayTRCTag, n) then
    MsgBox ”failed to write tone curve”
end if

// write profile
f = SpecialFolder.Desktop.Child(”test.icc”)  
call p.SaveProfileToFile(f)
```

**Notes:** Works with kcmsSigBlueTRCTag, kcmsSigGrayTRCTag, kcmsSigGreenTRCTag and kcmsSigRedTRCTag.
104.25.78 WriteUcrBg(o as LCMS2UcrBgMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes UcrBg tag.

104.25.79 Properties

104.25.80 ChannelCount as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of channels used for the colorspace of this profile.  
**Example:**
```vba
dim p as LCMS2ProfileMBS = LCMS2ProfileMBS.CreateSRGBProfile
MsgBox str(p.ChannelCount)
```

**Notes:** (Read only property)

104.25.81 ColorSpaceType as Integer

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets/Sets the color space used by the given profile, using the ICC convention.  
**Notes:** (Read and Write property)

104.25.82 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The context for this profile.  
**Notes:**  
Error handling uses it, so you can see which part of your application failed.  
(Read only property)

104.25.83 DeviceClass as Integer

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets/sets the device class signature from profile header.  
**Notes:**
Device Classes:

kcmsSigInputClass & h73636E72 scnr
kcmsSigDisplayClass & h6D6E7472 mntr
kcmsSigOutputClass & h70727472 prtr
kcmsSigLinkClass & h6C696E6B link
kcmsSigAbstractClass & h61627374 abst
kcmsSigColorSpaceClass & h73706163 spac
kcmsSigNamedColorClass & h6e6d636c nmcl

(Read and Write property)

**104.25.84 File as Folderitem**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The file reference. **Notes:** Only set for file based profiles, so you can later know what file you used to create the profile object. (Read and Write property)

**104.25.85 Handle as Integer**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Internal object reference. **Notes:** (Read and Write property)

**104.25.86 HeaderAttributes as UInt64**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get/set header attribute flags. **Notes:** Flags can be a combination of kcmsReflective,kcmsTransparency,kcmsGlossy or kcmsMatte. (Read and Write property)
104.25.87  **HeaderCreationDateTime as LCMS2DateMBS**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the date and time when profile was created.

**Notes:**
This is a field stored in profile header.
Returns nil on any error.
(Read only property)

104.25.88  **HeaderCreator as UInt32**

MBS Images Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get/set the creator signature as described in the header.

**Notes:** (Read only property)

104.25.89  **HeaderFlags as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set header flags of given ICC profile object.

**Notes:**
The profile flags field does contain flags to indicate various hints for the CMM such as distributed processing and caching options. The least-significant 16 bits are reserved for the ICC. Flags in bit positions 0 and 1 shall be used as indicated below.

<table>
<thead>
<tr>
<th>Position</th>
<th>Field Length (bits)</th>
<th>Field Contents</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>1</td>
<td>Embedded Profile (kcmsEmbeddedProfileFalse if not embedded, kcmsEmbeddedProfileTrue if embedded in file)</td>
</tr>
<tr>
<td>1</td>
<td>1</td>
<td>Profile cannot be used independently from the embedded color data (set to kcmsUseWithEmbeddedDataOnly if true, kcmsUseAnywhere if false)</td>
</tr>
</tbody>
</table>

(Read and Write property)

104.25.90  **HeaderManufacturer as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get/set the manufacturer signature as described in the header.

**Notes:**
This functionality is widely superseded by the manufacturer tag. Of use only in elder profiles.
104.25.91  **HeaderView as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get/set the model signature as described in the header.
**Notes:**
This functionality is widely superseded by the model tag. Of use only in elder profiles.
(Read and Write property)

104.25.92  **HeaderProfileID as string**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Get/set header profile ID.
**Notes:**
Profile ID must be a 16 byte long string.
(Read and Write property)

104.25.93  **IsMatrixShaper as Boolean**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns whatever a matrix-shaper is present in the profile.
**Notes:**
Note that a profile may hold matrix-shaper and CLUT as well.
Returns true if the profile holds a matrix-shaper, false otherwise.
(Read only property)

104.25.94  **Name as string**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the profile name.
**Notes:**
This is a convenience function. The plugin builds this name from manufacturer, model and description strings.
(Read only property)
104.25. **CLASS LCMS2PROFILEMBS**

### 104.25.95 PCS as Integer

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets/Sets the profile connection space used by the given profile, using the ICC convention. **Notes:** (Read and Write property)

### 104.25.96 ProfileICCversion as Integer

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get/set the profile ICC version in the same format as it is stored in the header. **Notes:** (Read and Write property)

### 104.25.97 ProfileVersion as Double

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets/Sets the ICC version in profile header. **Notes:** The version given as to this function as a float n.m is properly encoded. (Read and Write property)

### 104.25.98 RenderingIntent as Integer

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets/Sets the profile header rendering intent. **Notes:** From the ICC spec: "The rendering intent field shall specify the rendering intent which should be used (or, in the case of a Devicelink profile, was used) when this profile is (was) combined with another profile. In a sequence of more than two profiles, it applies to the combination of this profile and the next profile in the sequence and not to the entire sequence. Typically, the user or application will set the rendering intent dynamically at runtime or embedding time. Therefore, this flag may not have any meaning until the profile is used in some context, e.g. in a Devicelink or an embedded source profile." (Read and Write property)

### 104.25.99 TagCount as Integer

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns number of tags of a given profile. **Notes:**
Returns number of tags on success, -1 on error.
(Read only property)

104.25.100  Constants

104.25.101  kInfoCopyright = 3

MBS Images Plugin, Plugin Version: 11.3. **Function:** One of the info selectors for GetProfileInfo.
**Notes:** The copyright string.

104.25.102  kInfoDescription = 0

MBS Images Plugin, Plugin Version: 11.3. **Function:** One of the info selectors for GetProfileInfo.
**Notes:** The description string.

104.25.103  kInfoManufacturer = 1

MBS Images Plugin, Plugin Version: 11.3. **Function:** One of the info selectors for GetProfileInfo.
**Notes:** The manufacturer string.

104.25.104  kInfoModel = 2

MBS Images Plugin, Plugin Version: 11.3. **Function:** One of the info selectors for GetProfileInfo.
**Notes:** The model string.
104.26. CLASS LCMS2SCREENINGCHANNELMBS

104.26 class LCMS2ScreeningChannelMBS

104.26.1 class LCMS2ScreeningChannelMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The screening information for one channel.

104.26.2 Methods

104.26.3 Clone as LCMS2ScreeningChannelMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a copy of the screening channel object.

104.26.4 Constructor(Frequency as Double = 0.0, ScreenAngle as Double = 0.0, SpotShape as UInt32 = 0)

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.

**See also:**
- 104.26.5 Constructor(other as LCMS2ScreeningChannelMBS)

104.26.5 Constructor(other as LCMS2ScreeningChannelMBS)

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes object with values from other object.

**See also:**
- 104.26.4 Constructor(Frequency as Double = 0.0, ScreenAngle as Double = 0.0, SpotShape as UInt32 = 0)

104.26.6 Properties

104.26.7 Frequency as Double

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The frequency.

**Notes:** (Read and Write property)
104.26.8 ScreenAngle as Double

**Notes:** (Read and Write property)

104.26.9 SpotShape as UInt32

**Notes:**  
See kcmsSpot* constants.

104.27. class LCMS2ScreeningMBS

104.27.1. class LCMS2ScreeningMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for screening parameters.

104.27.2. Properties

104.27.3. Channels as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of channels. **Notes:** (Read and Write property)

104.27.4. Flag as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The flags for screening. **Notes:** See flags kcmsPRINTER_DEFAULT_SCREENS, kcmsFREQUENCE_UNITS_LINES_CM and kcmsFREQUENCE_UNITS_LINES_INCH. (Read and Write property)

104.27.5. Channel(index as Integer) as LCMS2ScreeningChannelMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The screening information for each channel. **Notes:** Index from 0 to 15. (Read and Write computed property)
104.28  class LCMS2SequenceDescriptionMBS

104.28.1  class LCMS2SequenceDescriptionMBS

104.28.2  Properties

104.28.3  AttributeFlags as UInt64

**Notes**: (Read and Write property)

104.28.4  Description as LCMS2MLUMBS

**Notes**: (Read only property)

104.28.5  DeviceMfg as UInt32

**Notes**: (Read and Write property)

104.28.6  DeviceModel as UInt32

**Notes**: (Read and Write property)

104.28.7  Manufacturer as LCMS2MLUMBS

104.28. **Model as LCMS2MLUMBS**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The model string.  
**Notes:** (Read only property)

104.28.9 **ProfileID as Memoryblock**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The profile ID. 
**Notes:**  
16 bytes and typically the result of a MD5.  
(Read only property)

104.28.10 **Technology as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The technology value. 
**Notes:**  
Use one of the following constants: kcmsSigDigitalCamera, kcmsSigFilmScanner, kcmsSigReflectiveScanner, kcmsSigInkJetPrinter, kcmsSigThermalWaxPrinter, kcmsSigElectrophotographicPrinter, kcmsSigElectrostaticPrinter, kcmsSigDyeSublimationPrinter, kcmsSigPhotographicPaperPrinter, kcmsSigFilmWriter, kcmsSigVideoMonitor, kcmsSigVideoCamera, kcmsSigProjectionTelevision, kcmsSigCRTDisplay, kcmsSigPMDisplay, kcmsSigAMDisplay, kcmsSigPhotoCD, kcmsSigPhotoImageSetter, kcmsSigGravure, kcmsSigOffsetLithography, kcmsSigSilkscreen, kcmsSigFlexography, kcmsSigMotionPictureFilmScanner, kcmsSigMotionPictureFilmRecorder, kcmsSigDigitalMotionPictureCamera or kcmsSigDigitalCinemaProjector.  
(Read and Write property)
104.29 class LCMS2SequenceMBS

104.29.1 class LCMS2SequenceMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Profile sequence descriptors.  
**Notes:** Profile sequence can be read/written by using cmsReadTag and cmsWriteTag functions.

104.29.2 Methods

104.29.3 Constructor(context as LCMS2ContextMBS, Count as UInt32)

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new sequence with the given number of entries.  
**Example:**
```
dim d as new LCMS2SequenceMBS(nil, 5)
MsgBox str(d.Count)
```

**Notes:** On success the handle property is not zero.

104.29.4 Properties

104.29.5 Count as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of sequence descriptions used in this class.  
**Notes:** (Read only property)

104.29.6 Handle as Integer

**Notes:** (Read and Write property)
104.29.7 Description(index as Integer) as LCMS2SequenceDescriptionMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The sequence descriptions.
**Notes:**
Index from 0 to count-1.
(Read and Write computed property)
104.30  class LCMS2StageMBS

104.30.1  class LCMS2StageMBS

**Notes:** Stages are single-step operations that can be chained to create pipelines. Actual stage types does include matrices, tone curves, Look-up interpolation and user-defined. There are functions to create new stage types and a plug-in type to allow stages to be saved in multi profile elements tag types. See the plug-in API for further details.

104.30.2  Methods

104.30.3  CLutFloatValues as Double()

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns CLut floating point values.  
**Notes:** Only if stage is from type kcmsSigCLutElemType and CLutHasFloatValues = true.

104.30.4  CLutUInt16Values as UInt16()

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns CLut integer values.  
**Notes:** Only if stage is from type kcmsSigCLutElemType and CLutHasFloatValues = false.

104.30.5  CreateStageWithCLut16bit(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a stage that contains a 16 bits multidimensional lookup table (CLUT).  
**Notes:**  
Each dimension has same resolution.

- Context: Pointer to a user-defined context cargo.  
- GridPoints: the number of nodes (same for each component).  
- inputChan: Number of input channels.  
- outputChan: Number of output channels.
Returns a pipeline stage on success, nil on error.

See also:

- 104.30.6 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16 as Memoryblock) as LCMS2StageMBS

- 104.30.7 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as UInt16) as LCMS2StageMBS

104.30.6 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16 as Memoryblock) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a stage that contains a 16 bits multidimensional lookup table (CLUT).

**Notes:**

Each dimension has same resolution. The CLUT can be initialized by specifying values in Table parameter. The recommended way is to set Table to nil and use StageSampleCLut16bit with a event, because this way the implementation is independent of the selected number of grid points.

Context: Pointer to a user-defined context cargo.

GridPoints: the number of nodes (same for each component).

inputChan: Number of input channels.

outputChan: Number of output channels.

Table: Memoryblock with a table of UInt16, holding initial values for nodes. If nil the CLUT is initialized to zero.

Returns a pipeline stage on success, nil on error.

Raises exception if table memoryblock is not empty/nil, but has wrong size.

See also:

- 104.30.5 CreateStageWithCLut16bit(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS

- 104.30.7 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as UInt16) as LCMS2StageMBS

104.30.7 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as UInt16) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a stage that contains a 16 bits multidimensional lookup table (CLUT).

**Example:**
// creates CLUT with 17 grid points, 3 input channels RGB and 4 output channels CMYK

dim data() as UInt16

// fill all the data into the table upfront, RGB to CMYK

dim c,m,y,k as Double

for Grid0 as Integer = 0 to 16 // 17 grid, 1st input
dim r as Double = Grid0 / 16
for Grid1 as Integer = 0 to 16 // 17 grid, 2nd input
dim g as Double = Grid0 / 16
for Grid2 as Integer = 0 to 16 // 17 grid, 3rd input
dim b as Double = Grid0 / 16

// some bad conversion

c = r
m = g
y = b
k = 0

// fill array with values
data.Append 65535 * c
data.Append 65535 * m
data.Append 65535 * y
data.Append 65535 * k

next
next
next

dim CLUT as LCMS2StageMBS = LCMS2StageMBS.CreateStageWithCLut16bit(nil, 17, 3, 4, data)
break

Notes:

Each dimension has same resolution. The CLUT can be initialized by specifying values in Table parameter.

Context: Pointer to a user-defined context cargo.
GridPoints: the number of nodes (same for each component).
inputChan: Number of input channels.
outputChan: Number of output channels.
values: array of U1Int16, holding initial values for nodes.
Returns a pipeline stage on success, nil on error. Raises exception if values array is not empty/nil, but has wrong size.

- 104.30.6 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16 as Memoryblock) as LCMS2StageMBS 16123

104.30.8 CreateStageWithCLut16bitGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Similar to CreateStageWithCLut16bit, but it allows different granularity on each CLUT dimension.

**Notes:**

- Context: user-defined context cargo.
- clutPoints: Memoryblock with array [ inputChan ] of UInt32 holding the number of nodes for each component.
- inputChan: Number of input channels,
- outputChan: Number of output channels.

Returns a pipeline stage on success, nil on error.

See also:

- 104.30.9 CreateStageWithCLut16bitGranular(context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16 as Memoryblock) as LCMS2StageMBS 16125
- 104.30.10 CreateStageWithCLut16bitGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16() as UInt16) as LCMS2StageMBS 16126

104.30.9 CreateStageWithCLut16bitGranular(context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16 as Memoryblock) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Similar to CreateStageWithCLut16bit, but it allows different granularity on each CLUT dimension.

**Notes:**

- Context: user-defined context cargo.
- clutPoints: Memoryblock with array [ inputChan ] of UInt32 holding the number of nodes for each component.
- inputChan: Number of input channels,
outputChan: Number of output channels.
Table: Memoryblock with table of UInt16, holding initial values for nodes. If nil the CLUT is initialized to zero.

Returns a pipeline stage on success, nil on error.
Raises exception if table memoryblock is not empty,nil, but has wrong size.
See also:

inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS
- 104.30.10 CreateStageWithCLut16bitGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, 
inputChan as UInt32, outputChan as UInt32, TableUInt16() as UInt16) as LCMS2StageMBS

104.30.10  CreateStageWithCLut16bitGranular(Context as LCMS2ContextMBS, 
clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, 
TableUInt16() as UInt16) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Similar to CreateStageWithCLut16bit, but it allows different granularity on each CLUT dimension.

**Example:**

```csharp
// create CLUT with 15 grid points for 1st channel, 16 for 2nd channel and 17 for 3rd channel
dim ChannelGridPoints(2) as UInt32
ChannelGridPoints(0) = 15
ChannelGridPoints(1) = 16
ChannelGridPoints(2) = 17

dim noData() as UInt16 = nil

dim CLUT as LCMS2StageMBS = LCMS2StageMBS.CreateStageWithCLut16bitGranular(nil, Channel-
GridPoints, 3, 4, noData)
```

**Notes:**

Context: user-defined context cargo.
clutPoints: Array [ inputChan ] of UInt32 holding the number of nodes for each component.
inputChan: Number of input channels.
outputChan: Number of output channels.
Table: Table of UInt16, holding initial values for nodes. If nil/empty the CLUT is initialized to zero.

Returns a pipeline stage on success, nil on error.
Raises exception if values array is not empty/nil, but has wrong size.

104.30.14  CreateStageWithCLutFloat(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as single) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a stage that contains a float multidimensional lookup table (CLUT).

**Example:**

```
// creates CLUT with 17 grid points, 3 input channels RGB and 4 output channels CMYK

dim data() as Single

// fill all the data into the table upfront, RGB to CMYK

dim c,m,y,k as Double

for Grid0 as Integer = 0 to 16 // 17 grid, 1st input
    dim r as Double = Grid0 / 16
for Grid1 as Integer = 0 to 16 // 17 grid, 2nd input
    dim g as Double = Grid0 / 16
for Grid2 as Integer = 0 to 16 // 17 grid, 3rd input
    dim b as Double = Grid0 / 16

    // some bad conversion
    c = r
    m = g
    y = b
    k = 0

    // fill array with values
    data.Append c
    data.Append m
    data.Append y
    data.Append k
```
dim CLUT as LCMS2StageMBS = LCMS2StageMBS.CreateStageWithCLutFloat(nil, 17, 3, 4, data)
break

Notes:
Each dimension has same resolution. The CLUT can be initialized by specifying values in Table parameter.

Context: user-defined context cargo.
GridPoints: the number of nodes (same for each component).
inputChan: Number of input channels.
outputChan: Number of output channels.
values: Array of single (Float32) values, holding initial values for nodes.

Returns a pipeline stage on success, nil on error.
Raises exception if values array is not empty/nil, but has wrong size.

104.30.17 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle() as Single) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Similar to CreateStageWithCLutFloat, but it allows different granularity on each CLUT dimension.

**Example:**

```csharp
// create CLUT with 15 grid points for 1st channel, 16 for 2nd channel and 17 for 3rd channel
dim ChannelGridPoints(2) as UInt32
ChannelGridPoints(0) = 15
ChannelGridPoints(1) = 16
```
ChannelGridPoints(2) = 17

dim noData() as Single = nil
dim CLUT as LCMS2StageMBS = LCMS2StageMBS.CreateStageWithCLutFloatGranular(nil, ChannelGridPoints, 3, 4, noData)

Notes:

Context: user-defined context cargo.
clutPoints: Array of UInt32 [inputChan] holding the number of nodes for each component.
inputChan: Number of input channels.
outputChan: Number of output channels.
Table: a table of Singles (Float32), holding initial values for nodes.

Returns a pipeline stage on success, nil on error.

Raises exception if values array is not empty/nil, but has wrong size.

See also:

• 104.30.15 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS

• 104.30.16 CreateStageWithCLutFloatGranular(context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle as Memoryblock) as LCMS2StageMBS

104.30.18 CreateStageWithIdentity(context as LCMS2ContextMBS, Channels as UInt32) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:

Creates an empty (identity) stage that does no operation.

Notes:

May be needed in order to save the pipeline as AToB/BToA tags in ICC profiles.

Context: user-defined context cargo.
Channels: Number of channels

Returns a pipeline stage on success, nil on error.
104.30.19 CreateStageWithMatrix\(\) (context as LCMS2ContextMBS, Rows as UInt32, Cols as UInt32, Matrix as Memoryblock, Offset as Memoryblock = nil) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Creates a stage that contains a matrix plus an optional offset.

**Notes:**

Note that Matrix is specified in double precision, whilst CLUT has only float precision. That is because an ICC profile can encode matrices with far more precision that CLUTS.

Context: user-defined context cargo.
Rows, Cols: Dimensions of matrix
Matrix: Memoryblock with a matrix of \([\text{Rows}, \text{Cols}]\) (double values, 8 byte per value)
Offset: Memoryblock with a vector of \([\text{Cols}]\), nil if no offset is to be applied.

Returns a pipeline stage on success, nil on error.

104.30.20 CreateStageWithToneCurves\(\) (context as LCMS2ContextMBS, ChannelCount as Integer) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Creates a stage that contains \(n\) channels tone curves, one per channel.

**Notes:**

Setting Curves to nil forces identity (1:1) curves to be used. The stage keeps and owns a private copy of the tone curve objects.

Context: user-defined context cargo.
Curves: Optionally, an array of tone curves objects, one per channel.

Returns a pipeline stage on success, nil on error.

See also:

- 104.30.21 CreateStageWithToneCurves\(\) (context as LCMS2ContextMBS, Channels() as LCMS2ToneCurveMBS) as LCMS2StageMBS

104.30.21 CreateStageWithToneCurves\(\) (context as LCMS2ContextMBS, Channels() as LCMS2ToneCurveMBS) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Creates a stage that contains \(n\) channels tone curves, one per channel.
Notes:

Setting Curves to nil forces identity (1:1) curves to be used. The stage keeps and owns a private copy of the tone curve objects.

Context: user-defined context cargo.
Curvess: Optionally, an array of tone curves objects, one per channel.

Returns a pipeline stage on success, nil on error.

See also:

- 104.30.20 CreateStageWithToneCurves(context as LCMS2ContextMBS, ChannelCount as Integer) as LCMS2StageMBS

104.30.22 CubeSize(clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32 = 1) as UInt32

MBS Images Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Calculates the number of values needed for a CLUT with given dimensions. Notes: This is a helper function, so you can know how big the table for CreateStageWithCLut16bitGranular or CreateStageWithCLutFloatGranular must be.

See also:

- 104.30.23 CubeSize(GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32 = 1) as UInt32

104.30.23 CubeSize(GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32 = 1) as UInt32

MBS Images Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Calculates the number of values needed for a CLUT with given dimensions. Notes: This is a helper function, so you can know how big the table for CreateStageWithCLut16bit or CreateStageWithCLutFloat must be.

See also:

- 104.30.22 CubeSize(clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32 = 1) as UInt32

104.30.24 MatrixOffsets as Double()

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Returns array with matrix offsets. Notes: Only if stage is from type kcmsSigMatrixElemType and.
104.30.25 MatrixValues as Double()

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns array with matrix values. **Notes:** Only if stage is from type kcmsSigMatrixElemType and.

104.30.26 SampleCLut16bit(sampler as LCMS2StageSamplerMBS, Flags as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Iterate on all nodes of a given CLUT stage, calling a 16-bit sampler on each node. **Notes:** Those functions (SampleCLut16bit and SampleCLutFloat) are provided to populate CLUT stages in a way that is independent of the number of nodes. The programmer has to provide an object with event that will be invoked on each CLUT node. LittleCMS does fill the In parameter with the coordinates that addresses the node. It also fills the Out parameter with CLUT contents on the node, so this can be used also to get CLUT contents after reading it from an ICC profile. In this case, a special flag can be specified to make sure the CLUT is being accessed as read-only and not modified (kSamplerInspect). Works only with CLut stage objects and returns false if the object is not a Clut.

**Sampler:** The object to receive events.

**Flags:** Bit-field flags for different options. Only kSamplerInspect is currently supported.

Returns true on success, false on error.

104.30.27 SampleCLutFloat(sampler as LCMS2StageSamplerMBS, Flags as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Iterate on all nodes of a given CLUT stage, calling a float sampler on each node. **Notes:** Those functions (SampleCLut16bit and SampleCLutFloat) are provided to populate CLUT stages in a way that is independent of the number of nodes. The programmer has to provide an object with event that will be invoked on each CLUT node. LittleCMS does fill the In parameter with the coordinates that addresses the node. It also fills the Out parameter with CLUT contents on the node, so this can be used also to get CLUT contents after reading it from an ICC profile. In this case, a special flag can be specified to make sure the CLUT is being accessed as read-only and not modified (kSamplerInspect).

Works only with CLut stage objects and returns false if the object is not a Clut.
Sampler: The object to receive events.
Flags: Bit-field flags for different options. Only kSamplerInspect is currently supported.

Returns true on success, false on error.

104.30.28 ToneCurves as LCMS2ToneCurveMBS()

Notes: Only if stage is from type kcmsSigCurveSetElemType and.

104.30.29 Properties

104.30.30 CLutEntries as Integer

Notes: Only if stage is from type kcmsSigCLutElemType. (Read only property)

104.30.31 CLutHasFloatValues as Boolean

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Whether this CLut has floating point values.
Notes: Only if stage is from type kcmsSigCLutElemType. (Read only property)

104.30.32 Data as Ptr

Notes: (Read only property)
104.30. **CLASS LCMS2STAGEMBS**

104.30.33 **Handle as Integer**

**Notes:** (Read and Write property)

104.30.34 **InputChannels as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of input channels of a given stage object.  
**Notes:** (Read only property)

104.30.35 **NextItem as LCMS2StageMBS**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns next stage in pipeline list, or nil if end of list.  
**Notes:**
Intended for iterators.  
(Read only property)

104.30.36 **OutputChannels as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of output channels of a this stage object.  
**Notes:** (Read only property)

104.30.37 **Type as UInt32**

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the type of a given stage object.  
**Notes:**
Use this type constants: kcmsSigCurveSetElemType, kcmsSigMatrixElemType, kcmsSigCLutElemType, kcmsSigBAcElemType, kcmsSigEAcsElemType, kcmsSigXYZ2LabElemType, kcmsSigLab2XYZElemType, kcmsSigNamedColorElemType, kcmsSigLabV2toV4, kcmsSigLabV4toV2, kcmsSigIdentityElemType.  
(Read only property)
104.30.38  Constants

104.30.39  kSamplerInspect = & h01000000

MBS Images Plugin, Plugin Version: 12.1. **Function:** One of the flags for Sampling. **Notes:** Use this flag to prevent changes being written to destination when using SampleCLutFloat or SampleCLut16bit.
104.31  class LCMS2StageSamplerMBS

104.31.2  Methods

104.31.3  SliceSpaceFloat(Inputs as UInt32, values() as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Slices target space executing a floating point callback of type cmsSAMPLERFLOAT.
Notes:
Parameters:
Inputs: Number of components in target space.
clutPoints: Array [ nInputs ] holding the division slices for each component.
Calls Floating point sample event to execute on each slice.

Returns true on success, false on error.

104.31.4  SliceSpaceInteger(Inputs as UInt32, values() as UInt32) as boolean

Notes:
Parameters:
Inputs: Number of components in target space.
values: Array [ nInputs ] holding the division slices for each component.

Calls 16 bit Sample event to execute on each slice.

Returns true on success, false on error.
104.31.5 Events

104.31.6 SamplerFloat(InValues as Ptr, OutValues as Ptr, InputChannels as Integer, OutputChannels as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sampler event called by SampleCLutFloat.

**Notes:**

In and Out point to 32 bit float values, so please use Single property to access.
InputChannels and OutputChannels are the number of channels.

104.31.7 SamplerInteger(InValues as Ptr, OutValues as Ptr, InputChannels as Integer, OutputChannels as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sampler event called by SampleCLut16bit.

**Notes:**

In and Out point to 16 bit unsigned integer values, so please use UInt16 property to access.
InputChannels and OutputChannels are the number of channels.
104.32. **CLASS LCMS2TONECURVEMBS**

104.32 **class LCMS2ToneCurveMBS**

104.32.1 **class LCMS2ToneCurveMBS**

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a tone curve or gamma.

104.32.2 **Methods**

104.32.3 **BuildGamma(context as LCMS2ContextMBS, gamma as Double) as LCMS2ToneCurveMBS**

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Simplified wrapper to BuildParametricToneCurve.

**Example:**

```vbnet
dim t as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 2.2)
MsgBox str(t.EstimateGamma)
```

**Notes:**

Builds a parametric curve of type 1.

Context: user-defined context object.
Gamma: Value of gamma exponent

Returns a newly created tone curve object on success, nil on error.

104.32.4 **BuildParametricToneCurve(context as LCMS2ContextMBS, Type as Integer, params() as Double) as LCMS2ToneCurveMBS**

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Builds a parametric tone curve.

**Notes:**

Parameters:
context: user-defined context object.
Type: Number of parametric tone curve. (see LCMS2 manual)
Params: Array of tone curve parameters.
Returns a newly created tone curve object on success, nil on error.

104.32.5  BuildSegmentedToneCurve(context as LCMS2ContextMBS, Segments() as LCMS2CurveSegmentMBS) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Builds a tone curve from given segment information.

**Notes:**
context: Puser-defined context object
Segments: Array of segments

Returns a newly created tone curve object on success, nil on error.

104.32.6  BuildTabulatedToneCurve(context as LCMS2ContextMBS, values() as Single) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Builds a tone curve based on a table of floating point values.

**Example:**
```vbs
dim values(-1) as Single
for i as Integer = 0 to 9
    values.Append 0.5 + i*0.02
next

dim t as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildTabulatedToneCurve(nil, values)

dim items(-1) as string
for i as Integer = 0 to 10
    dim v as Single = t.EvalToneCurveFloat(i/10.0)
    items.Append str(i/10.0)+" ->"+str(v)
next

MsgBox Join(items,EndOfLine)
```

**Notes:**
Tone curves built with this function are not restricted to 0...1.0 domain.

context: user-defined context object.
values: Array of samples. Domain of samples is 0...1.0

Returns a newly created tone curve object on success, nil on error.
See also:

- 104.32.7 BuildTabulatedToneCurve(context as LCMS2ContextMBS, values() as UInt16) as LCMS2ToneCurveMBS

104.32.7 BuildTabulatedToneCurve(context as LCMS2ContextMBS, values() as UInt16) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Builds a tone curve based on a table of 16-bit values. Tone curves built with this function are restricted to 0...1.0 domain.

**Notes:**

custom: user-defined context object.
values: Array of samples. Domain is 0...65535 (UInt32).

Returns a newly created tone curve object on success, nil on error.
See also:

- 104.32.6 BuildTabulatedToneCurve(context as LCMS2ContextMBS, values() as Single) as LCMS2ToneCurveMBS

104.32.8 EstimatedTable as UInt16()

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Tone curves do maintain a shadow lowresolution tabulated representation of the curve. This function returns an array with this table.

104.32.9 EstimatedTableEntries as UInt32

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Tone curves do maintain a shadow lowresolution tabulated representation of the curve. This function returns the number of entries such table has.

104.32.10 EstimateGamma(Precision as Double = 0.01) as Double

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Estimates the apparent gamma of the tone curve by using least squares fitting to a pure exponential
expression in the f() = .

Example:

```vbnet
dim t as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 2.2)
MsgBox str(t.EstimateGamma)
```

Notes:

Precision: The maximum standard deviation allowed on the residuals, 0.01 is a fair value, set it to a big number to fit any curve, no matter how good is the fit.

Returns the estimated gamma at given precision, or -1.0 if the fitting has less precision.

104.32.11 EvalToneCurve16(value as UInt16) as UInt16

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Evaluates the given 16-bit number across the given tone curve.

Notes:

This function is significantly faster than EvalToneCurveFloat, since it uses a pre-computed 16-bit lookup table.

Value: 16 bit Number to evaluate

Returns operation result

104.32.12 EvalToneCurveFloat(value as Single) as Single

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Evaluates the given floating-point number across the given tone curve.

Example:

```vbnet
dim t1 as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 1.0)
dim t2 as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 2.0)
dim t3 as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 3.0)

dim v1 as Double = t1.EvalToneCurveFloat(0.5)
dim v2 as Double = t2.EvalToneCurveFloat(0.5)
dim v3 as Double = t3.EvalToneCurveFloat(0.5)

MsgBox str(v1)+” ”+str(v2)+” ”+str(v3)
```

Notes:
104.32. CLASS LCMS2TONECURVEMBS

Value: floating point number to evaluate
Returns the result.

104.32.13  IsDescending as Boolean

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if \( f(0) > f(1) \), false otherwise.
**Notes:** Does not take unbounded parts into account.

104.32.14  IsLinear as Boolean

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an estimation of curve being an identity (1:1) in the \([0..1]\) domain.
**Notes:** Does not take unbounded parts into account. This is just a coarse approximation, with no mathematical validity.

104.32.15  IsMonotonic as Boolean

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an estimation of monotonicity of curve in the \([0..1]\) domain.
**Example:**
```vba
dim t as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 2.2)
MsgBox "IsMonotonic: " + str(t.IsMonotonic)
```
**Notes:** Does not take unbounded parts into account. This is just a coarse approximation, with no mathematical validity.

104.32.16  IsMultisegment as Boolean

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the tone curve contains more than one segment, false if it has only one segment.
104.32.17 JoinToneCurve(context as LCMS2ContextMBS, X as LCMS2ToneCurveMBS, Y as LCMS2ToneCurveMBS, nPoints as UInt32) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Composites two tone curves in the form $1/(f)$.  
**Notes:**
context: user-defined context object.
X, Y : Tone curve objects.
nPoints: Sample rate for resulting tone curve.

Returns a newly created tone curve object on success, nil on error.

104.32.18 ParametricType as Integer

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Returns the parametric type.

104.32.19 Reverse as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a tone curve that is the inverse $f^{-1}$ of given tone curve.  
**Notes:** Returns a newly created tone curve object on success, nil on error.  
See also:

- 104.32.20 Reverse(nResultSamples as Integer) as LCMS2ToneCurveMBS

104.32.20 Reverse(nResultSamples as Integer) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a tone curve that is the inverse $f^{-1}$ of given tone curve.  
**Notes:**
In the case it couldn’t be analytically reversed, a tabulatated curve of nResultSamples is created.
nResultSamples: Number of samples to use in the case origin tone curve couldn’t be analytically reversed.  
Returns a newly created tone curve object on success, nil on error.  
See also:

- 104.32.19 Reverse as LCMS2ToneCurveMBS
104.32.21 **Smooth(lambda as Double) as Boolean**

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Smoothes tone curve according to the lambda parameter. **Notes:**

Lambda: degree of smoothing.
Returns true on success, false on error.

104.32.22 **Properties**

104.32.23 **Handle as Integer**

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference. **Notes:** (Read and Write property)
104.33 class LCMS2TransformMBS

104.33.1 class LCMS2TransformMBS

104.33.2 Methods

104.33.3 ChangeBuffersFormat(InputFormat as UInt32, OutputFormat as UInt32) as boolean

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function does change the encoding of buffers in a yet-existing transform. Notes: Not all transforms can be changed, cmsChangeBuffersFormat only works on transforms created originally with at least 16 bits of precision. This function is provided for backwards compatibility and should be avoided whenever possible, as it prevents transform optimization.

InputFormat: A bit-field format specifier as described in Formatters section. OutputFormat: A bit-field format specifier as described in Formatters section.

Returns true on success and false on failure.

104.33.4 CreateExtendedTransform(context as LCMS2ContextMBS, Profiles() as LCMS2ProfileMBS, BPC() as boolean, Intents() as UInt32, AdaptationStates() as Double, GamutProfile as LCMS2ProfileMBS, GamutPCSposition as UInt32, InputFormat as UInt32, OutputFormat as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: Extended form of multiprofile color transform creation, exposing all parameters for each profile in the chain. Notes: All other transform creation functions are wrappers to this call.

Parameters:
context: Pointer to a user-defined context cargo.
Profiles: Array of handles to open profile objects.
BPC: Array of black point compensation states
GamutProfile: A profile holding gamut information for gamut check. Only used if cmsFLAGS_GAMUTCHECK specified. Set to nil for no gamut check.
GamutPCSPosition: Position in the chain of Lab/XYZ PCS to check against gamut profile. Only used if cmsFLAGS_GAMUTCHECK specified.
InputFormat: Input format.
OutputFormat: Output format.
Intents: An array holding the intent codes.
Flags: Some flags to control it.

Returns a transform object on success, NULL on error.
See also cmsCreateExtendedTransform in the LCMS2 manual.

104.33.5 CreateMultiprofileTransform(context as LCMS2ContextMBS, Profiles() as LCMS2ProfileMBS, InputFormat as UInt32, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

Notes:
User passes in an array of handles to open profiles. The returned color transform does "smelt" all profiles in a single device link. Color spaces must be paired with the exception of Lab/XYZ, which can be interchanged.

context: Optional context object.
Profiles: Array of open profile objects.
InputFormat: A bit-field format specifier as described in Formatters section.
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code, as described in Intents section.
Flags: A combination of bit-field of kcmsFLAGS_* constants.

Returns a transform object on success, nil on error.
See also:

- 104.33.6 CreateMultiprofileTransform(Profiles() as LCMS2ProfileMBS, InputFormat as UInt32, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

104.33.6 CreateMultiprofileTransform(Profiles() as LCMS2ProfileMBS, InputFormat as UInt32, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

Notes:
User passes in an array of handles to open profiles. The returned color transform do "smelt" all profiles in a single devicelink. Color spaces must be paired with the exception of Lab/XYZ, which can be interchanged.

context: Optional context object.
Profiles: Array of open profile objects.
InputFormat: A bit-field format specifier as described in Formatters section.
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code, as described in Intents section.
Flags: A combination of bit-field of kcmsFLAGS_* constants.

Returns a transform object on success, nil on error.
See also:

- 104.33.5 CreateMultiprofileTransform(context as LCMS2ContextMBS, Profiles() as LCMS2ProfileMBS,
InputFormat as UInt32, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

104.33.7 CreateProofingTransform(context as LCMS2ContextMBS, InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Proofing as LCMS2ProfileMBS, Intent as UInt32, ProofingIntent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
Same as CreateTransform(), but including soft-proofing.
Notes:

A proofing transform does emulate the colors that would appear as the image were rendered on a specific device. That is, for example, with a proofing transform I can see how will look a photo of my little daughter if rendered on my HP printer. Since most printer profiles does include some sort of gamut-remapping, it is likely colors will not look as the original. Using a proofing transform, it can be done by using the appropriate function. Note that this is an important feature for final users, it is worth of all color-management stuff if the final media is not cheap.

The obtained transform emulates the device described by the "Proofing" profile. Useful to preview final result without rendering to the physical medium. To enable proofing and gamut check you need to include following flags:

cmsFLAGS_GAMUTCHECK: Color out of gamut are flagged to a fixed color defined by the function kcmsg-SetAlarmCodes
cmsFLAGS_SOFTPROOFING: does emulate the Proofing device.

context: Optional context object.
InputProfile: A profile object capable to work in input direction
InputFormat: A bit-field format specifier as described in Formatters section.
OutputProfile: A profile object capable to work in output direction
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code.
ProofingIntent: The intent code.
Flags: A combination of bit-field constants described in Table 42.

Returns transform object on success, nil on error.

See also:
- 104.33.8 CreateProofingTransform(InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Proofing as LCMS2ProfileMBS, Intent as UInt32, ProofingIntent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

104.33.8 CreateProofingTransform(InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Proofing as LCMS2ProfileMBS, Intent as UInt32, ProofingIntent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Same as CreateTransform(), but including soft-proofing.

**Notes:**
A proofing transform does emulate the colors that would appear as the image were rendered on a specific device. That is, for example, with a proofing transform I can see how will look a photo of my little daughter if rendered on my HP printer. Since most printer profiles does include some sort of gamut-remapping, it is likely colors will not look as the original. Using a proofing transform, it can be done by using the appropriate function. Note that this is an important feature for final users, it is worth of all color-management stuff if the final media is not cheap.

The obtained transform emulates the device described by the "Proofing" profile. Useful to preview final result without rendering to the physical medium. To enable proofing and gamut check you need to include following flags:

cmsFLAGS_GAMUTCHECK: Color out of gamut are flagged to a fixed color defined by the function kcmsgSetAlarmCodes
cmsFLAGS_SOFTPROOFING: does emulate the Proofing device.

corext: Optional context object.
InputProfile: A profile object capable to work in input direction
InputFormat: A bit-field format specifier as described in Formatters section.
OutputProfile: A profile object capable to work in output direction
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code.
ProofingIntent: The intent code.
Flags: A combination of bit-field constants described in Table 42.

Returns transform object on success, nil on error.
See also:

- 104.33.7 CreateProofingTransform(context as LCMS2ContextMBS, InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Proofing as LCMS2ProfileMBS, Intent as UInt32, ProofingIntent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

104.33.9 CreateTransform(context as LCMS2ContextMBS, InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

Notes:

context: Optional, the context object.
InputProfile: A profile object capable to work in input direction
InputFormat: A bit-field format specifier as described in Formatters section.
OutputProfile: A profile object capable to work in output direction
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code, as described in Intents section.
Flags: A combination of bit-field kcmsFLAGS_"*" constants.

Returns a transform object on success, NULL on error.
See also:

- 104.33.10 CreateTransform(InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

104.33.10 CreateTransform(InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

Notes:
104.33. CLASS LCMS2TRANSFORMMBS

context: Optional, the context object.
InputProfile: A profile object capable to work in input direction
InputFormat: A bit-field format specifier as described in Formatters section.
OutputProfile: A profile object capable to work in output direction
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code, as described in Intents section.
Flags: A combination of bit-field kcmsFLAGS.* constants.

Returns a transform object on success, NULL on error.
See also:

- 104.33.9 CreateTransform(context as LCMS2ContextMBS, InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

104.33.11ToDeviceLink(Version as Double, Flags as UInt32) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Generates a device-link profile from a given color transform.

**Notes:**
This profile can then be used by any other function accepting profile handle. Depending on the specified version number, the implementation of the devicelink may vary. Accepted versions are in range 1.0...4.3

Version: The target devicelink version number.
Flags: A combination of bit-field constants kcmsFLAGS.*.

Returns an ICC profile object on success, nil on error.

104.33.12 Transform(bitmap as LCMS2BitmapMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function translates bitmaps according of parameters setup when creating the color transform.

**Notes:**
bitmap: the input and output bitmap.

Returns true on success.
Size of input and output bitmaps must match.
Please make sure RowBytes is either zero for both (block mode) or is correct (row by row mode).
Please make sure input and output color space types of transform match the one in the bitmap.
See also:
104.33.13 Transform\(\text{inBitmap as LCMS2BitmapMBS, outBitmap as LCMS2BitmapMBS}\) as boolean

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This function translates bitmaps according of parameters setup when creating the color transform.

**Notes:**
- inBitmap: the input bitmap.
- outBitmap: the output bitmap.

Returns true on success.

Size of input and output bitmaps must match.
Please make sure RowBytes is either zero for both (block mode) or is correct (row by row mode).
Please make sure input and output color space types of transform match the those in the bitmaps.

See also:

- 104.33.12 Transform\(\text{bitmap as LCMS2BitmapMBS}\) as boolean
- 104.33.14 Transform\(\text{InputBuffer as Ptr, OutputBuffer as Ptr, Size as UInt32}\) as boolean

104.33.14 Transform\(\text{InputBuffer as Ptr, OutputBuffer as Ptr, Size as UInt32}\) as boolean

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This function translates bitmaps according of parameters setup when creating the color transform.

**Notes:**
- InputBuffer: A pointer to the input bitmap.
- OutputBuffer: A pointer to the output bitmap.
- Size: the number of PIXELS to be transformed.

Returns true on success.

See also:

- 104.33.12 Transform\(\text{bitmap as LCMS2BitmapMBS}\) as boolean
- 104.33.13 Transform\(\text{inBitmap as LCMS2BitmapMBS, outBitmap as LCMS2BitmapMBS}\) as boolean
104.33.15  TransformLineStride(inBitmap as Ptr, outBitmap as Ptr, PixelsPerLine as UInt32, LineCount as UInt32, BytesPerLineIn as UInt32, BytesPerLineOut as UInt32, BytesPerPlaneIn as UInt32, BytesPerPlaneOut as UInt32) as boolean

MBS Images Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This function translates bitmaps with complex organization.

**Notes:**
Each bitmap may contain several lines, and every may have padding. The distance from one line to the next one is BytesPerLine \{ In/Out \} . In planar formats, each line may hold several planes, each plane may have padding. Padding of lines and planes should be same across all bitmap. I.e. all lines in same bitmap have to be padded in same way. This function may be more efficient that repeated calls to Transform(), especially when customized plug-ins are being used.

**Parameters:**
- InputBuffer: A pointer to the input bitmap
- OutputBuffer: A pointer to the output bitmap.
- PixelsPerLine: The number of pixels for line, which is same on input and in output.
- LineCount: The number of lines, which is same on input and output
- BytesPerLine \{ In,Out \} : The distance in bytes from one line to the next one.
- BytesPerPlaneIn \{ In,Out \} : The distance in bytes from one plane to the next one inside a line. Only applies in planar formats.

Returns true on success.

104.33.16  TransformRGB(c as color) as color

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convenience function to convert one RGB color.

**Notes:** Works for input/output data with Float (4 or 8 byte) or Integer (1, 2 or 4 bytes).

104.33.17  TransformStride(inBitmap as Ptr, outBitmap as Ptr, size as UInt32, Stride as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This function translates bitmaps according of parameters setup when creating the color transform.

**Notes:**
On planar-organized buffers, the parameter stride specifies the separation between planes, which may be different of the number of pixels to transform. The main application of this function is when several threads are transforming pixels from different zones of same planar buffer. Otherwise it is identical to other Transform functions.
InputBuffer: A pointer to the input bitmap.
OutputBuffer: A pointer to the output bitmap.
Size: the number of PIXELS to be transformed.
Stride: Plane separation on planar formats

Returns true on success.

104.33.18 Properties

104.33.19 AdaptationState as Double

MBS Images Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The adaptation state. **Notes:** (Read only property)

104.33.20 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The context object. **Notes:** (Read and Write property)

104.33.21 EntryColorSpace as Integer

MBS Images Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The entry colorspace. **Notes:** (Read only property)

104.33.22 EntryWhitePoint as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The entry white points. **Notes:** Only for information, so plugin may return a copy of the data. (Read only property)
104.33.23  ExitColorSpace as Integer

MBS Images Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The exit colorspace. **Notes:** (Read only property)

104.33.24  ExitWhitePoint as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The exit white points. **Notes:** Only for information, so plugin may return a copy of the data. (Read only property)

104.33.25  GamutCheck as LCMS2PipelineMBS

MBS Images Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A Pipeline holding the gamut check. It goes from the input space to bilevel. **Notes:** Only for information, so plugin may return a copy of the data. (Read only property)

104.33.26  Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference. **Notes:** (Read and Write property)

104.33.27  InputColorant as LCMS2NamedColorListMBS

MBS Images Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Input Colorant table. **Notes:** Only for information, so plugin may return a copy of the data. (Read only property)
104.33.28 **InputFormat as UInt32**
MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the input format associated with a given transform. **Notes:** (Read only property)

104.33.29 **Lut as LCMS2PipelineMBS**
MBS Images Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A Pipeline holding the full (optimized) transform. **Notes:** Only for information, so plugin may return a copy of the data. (Read only property)

104.33.30 **NamedColorList as LCMS2NamedColorListMBS**
MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieve a named color list from a given color transform. **Notes:** Returns named color list dictionary on success, nil on error. Only for information, so plugin may return a copy of the data. (Read only property)

104.33.31 **OriginalFlags as UInt32**
MBS Images Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The original flags used to create transform. **Notes:** (Read only property)

104.33.32 **OutputColorant as LCMS2NamedColorListMBS**
MBS Images Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Output Colorant table (for n chans >CMYK) **Notes:** Only for information, so plugin may return a copy of the data. (Read only property)
104.33.33 OutputFormat as UInt32

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the output format associated with a given transform.  
**Notes:** (Read only property)

104.33.34 RenderingIntent as UInt32

MBS Images Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The intent of this transform. That is usually the last intent in the profile chain, but may differ.  
**Notes:** (Read only property)

104.33.35 Sequence as LCMS2SequenceMBS

MBS Images Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The profiles used to create the transform.  
**Notes:**  
Only for information, so plugin may return a copy of the data.  
(Read only property)
104.34 class LCMS2UcrBgMBS

104.34.1 class LCMS2UcrBgMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for the cmsSigUcrBgType tag. **Notes:** This is for Undercolorremoval and black generation.

104.34.2 Methods

104.34.3 Constructor(Ucr as LCMS2ToneCurveMBS = nil, Bg as LCMS2ToneCurveMBS = nil, Desc as LCMS2MLUMBS = nil)

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new object with given values.

104.34.4 Properties

104.34.5 Bg as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The black generation value. **Notes:** (Read and Write property)

104.34.6 Desc as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The description. **Notes:** (Read and Write property)

104.34.7 Ucr as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The undercolor removal setting. **Notes:** (Read and Write property)
104.35 class LCMS2Vec3MBS

104.35.1 class LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for a three dimension vector.

**Example:**
```v
    dim v as new LCMS2Vec3MBS(1,2,3)
    MsgBox str(v.X)+" "+str(v.y)+" "+str(v.z)
```

104.35.2 Methods

104.35.3 Clone as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of the vector.

104.35.4 Constructor(other as LCMS2Vec3MBS)

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The copy constructor.

**Example:**
```v
    // make a vector
    dim v as new LCMS2Vec3MBS(1,2,3)

    // create a copy
    dim w as new LCMS2Vec3MBS(v)

    // show values
    MsgBox str(w.X)+" "+str(w.y)+" "+str(w.z)
```

See also:

- 104.35.5 Constructor(v1 as Double = 0.0, v2 as Double = 0.0, v3 as Double = 0.0)
104.35.5 Constructor(v1 as Double = 0.0, v2 as Double = 0.0, v3 as Double = 0.0)

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The constructor to initialize the object with the given values.

**Example:**

```vba
dim v as new LCMS2Vec3MBS(1,2,3)
MsgBox str(v.X)+” ”+str(v.y)+” ”+str(v.z)
```

See also:

- 104.35.4 Constructor(other as LCMS2Vec3MBS)

104.35.6 Properties

104.35.7 X as Double

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first value.

**Notes:** (Read and Write property)

104.35.8 Y as Double

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The second value.

**Notes:** (Read and Write property)

104.35.9 Z as Double

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The third value.

**Notes:** (Read and Write property)

104.35.10 value(index as UInt32) as Double

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The values by index.

**Notes:**
104.35. CLASS LCMS2VEC3MBS

Index from 0 to 2.
(Read and Write computed property)
104.36 class LCMS2ViewingConditionsMBS

104.36.1 class LCMS2ViewingConditionsMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Viewing conditions. **Notes:** From LCMS documentation: Please note those are CAM model viewing conditions, and not the ICC tag viewing conditions, which I’m naming cmsICCViewingConditions to make differences evident. Unfortunately, the tag cannot deal with surround La, Yb and D value so is basically useless to store CAM02 viewing conditions.

104.36.2 Methods

104.36.3 Clone as LCMS2ViewingConditionsMBS

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a copy of the object.

104.36.4 Constructor(other as LCMS2ViewingConditionsMBS)

MBS Images Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes object with values from other object. **See also:**

- 104.36.5 Constructor(whitePoint as LCMS2CIEXYZMBS = nil, Yb as Double = 0.0, La as Double = 0.0, surround as Integer = 0, D_value as Double = 0.0)

104.36.5 Constructor(whitePoint as LCMS2CIEXYZMBS = nil, Yb as Double = 0.0, La as Double = 0.0, surround as Integer = 0, D_value as Double = 0.0)

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new viewing conditions object. **See also:**

- 104.36.4 Constructor(other as LCMS2ViewingConditionsMBS)
104.36.6 Properties

104.36.7 D_value as Double

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The D value value. Notes: (Read and Write property)

104.36.8 La as Double

104.36.9 Surround as Integer

Use this constants:
kAVG_SURROUND = 1
kDIM_SURROUND = 2
kDARK_SURROUND = 3
kCUTSHEET_SURROUND = 4
(Read and Write property)

104.36.10 whitePoint as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: The white point. Notes: (Read and Write property)

104.36.11 Yb as Double

Chapter 105

LDAP

105.1 class LDAPMBS

105.1.1 class LDAPMBS

Function: The class for LDAP connection.
Example:

// Get a handle to an LDAP connection and set any session preferences.
dim l as new LDAPMBS("localhost", 389)

// Use the ProtocolVersion session preference to specify that the client is an LDAPv3 client.
l.ProtocolVersion = 3
if l.Lasterror <> 0 then
dim error as string = l.ErrorString(l.Lasterror)
Break
end if

// Bind to the server.
// In this example, the client binds anonymously to the server
// (no DN or credentials are specified).

l.SimpleBind("", ")
if l.Lasterror <> 0 then
dim error as string = l.ErrorString(l.Lasterror)
Break
end if

const BASEDN = "dc=example,dc=com"
const SCOPE = l.kScopeSubtree
const FILTER = "(sn=Jensen)"

dim results() as Dictionary = l.Search(BASEDN, SCOPE, FILTER)

for each dic as Dictionary in results
  Break // look in debugger
next

Notes:
On Windows we use Microsoft’s WinLDAP Library.
For Mac OS X and Linux we link to OpenLDAP, so be sure to have the right package installed on Linux.

105.1.2 Methods

105.1.3 Add(distinguishedName as string, attrs() as LDAPModMBS)

Function: Adds attributes.
Example:
  // add like this

dim m1 as new LDAPModMBS
dim m2 as new LDAPModMBS

m1.Operation = m1.kOperationAdd
m1.Type = "sn"
m1.addValue "yyy"

m2.Operation = m1.kOperationAdd
m2.Type = "cn"
m2.addValue "xxx"

dim attr() as LDAPModMBS
attr.Append m1
attr.Append m2

l.Add("test", attr)

Notes:
The Add function initiates a synchronous add operation that adds an entry to a tree. The parent of the entry being added must already exist or the parent must be empty (equal to the root distinguished name)
for an add operation to succeed.

Before calling Add, you must create an entry by specifying its attributes in LDAPModMBS objects. Set the Operator member of each structure to kOperationAdd, and set the Type and Value members as appropriate for your entry.

### 105.1.4 Bind(Who as String, Cred as String, AuthMethod as Integer, Domain as String = "")

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Binds to a server with given credentials and authorization method. **Notes:** Synchronously authenticates a client to the LDAP server. Added domain parameter in plugin version 17.1, Windows only.

### 105.1.5 Connect(TimeOutSeconds as Double = 1.0)

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Connects to server. **Notes:** On Mac does nothing.

### 105.1.6 Constructor

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Default constructor. **Notes:** Creates a new connection without connecting. See also:

- 105.1.7 Constructor(IP as string, Port as Integer, Open as Boolean = false, Secure as Boolean = false) 16169
- 105.1.8 Constructor(URL as string) 16170

### 105.1.7 Constructor(IP as string, Port as Integer, Open as Boolean = false, Secure as Boolean = false)

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a connection to a LDAP server.
Example:

// connect with SSL
dim ldap as LDAPMBS

# if TargetWin32 then
ldap = new LDAPMBS("192.168.1.123", 636, false, true)
# else
ldap = new LDAPMBS("ldaps://192.168.1.123")
# endif

Notes:

If open is true, we connect directly to server.
Secure: For Windows Vista and newer. Set to true for a secure connection with SSL. (only for open=false)

For connecting via SSL, please use on Mac OS X the Constructor taking the URL and specify ldaps protocol.
For Windows use this constructor with secure parameter set to true.

Changed with 16.0 to work on Mac with secure = true. For Windows we switch to Open = false if secure is true.
See also:

• 105.1.6 Constructor
• 105.1.8 Constructor(URL as string)

105.1.8 Constructor(URL as string)

Function: Creates a connection to a LDAP server.
Example:

// connect with SSL
dim ldap as LDAPMBS

# if TargetWin32 then
ldap = new LDAPMBS("192.168.1.123", 636, false, true)
# else
ldap = new LDAPMBS("ldaps://192.168.1.123")
# endif

Notes: Added Windows support in 16.0 plugins.
See also:
105.1. CLASS LDAPMBS

- 105.1.6 Constructor
- 105.1.7 Constructor(IP as string, Port as Integer, Open as Boolean = false, Secure as Boolean = false)

105.1.9 Delete(distinguishedName as string)

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Deletes an entry.

105.1.10 ErrorString(error as Integer) as string

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries an error message for an error code.

105.1.11 Modify(distinguishedName as string, attrs() as LDAPModMBS)

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Modifies an entry.

**Notes:**

Please pass one LDAPModMBS for each attribute to change.

The Modify function initiates a synchronous operation to modify an existing entry. If values are being added to or replaced in the entry, the function creates the attribute, if necessary. If values are being deleted, the function removes the attribute if no values remain. All modifications are performed in the order in which they are listed.

When connecting to an LDAP 2 server, the application must perform a bind operation (by calling one of the Bind or SimpleBind routines) before attempting any other operations.

105.1.12 Rename(distinguishedName as string, NewDistinguishedName as String, DeleteOldRdn as Boolean)

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Renames an item.

**See also:**

- 105.1.13 Rename(distinguishedName as string, NewRDN as String, NewParent as String, DeleteOldRdn as Boolean)
105.1.13 Rename(distinguishedName as string, NewRDN as String, NewParent as String, DeleteOldRdn as Boolean)

**Function:** Renames an item and can move it to other parent.

See also:
- 105.1.12 Rename(distinguishedName as string, NewDistinguishedName as String, DeleteOldRdn as Boolean)

105.1.14 Search(distinguishedName as string, Scope as Integer, Filter as String, Attrs() as String = nil, AttributesOnly as boolean = false, timeout as Double = 1.0, SizeLimit as Integer = 0) as Dictionary()

**Function:** Search for something.

**Example:**

```vbnet
// Get a handle to an LDAP connection and set any session preferences.
dim l as new LDAPMBS("localhost", 389)

// Use the ProtocolVersion session preference to specify that the client is an LDAPv3 client.
l.ProtocolVersion = 3
if l.Lasterror <> 0 then
    dim error as string = l.ErrorString(l.Lasterror)
    Break
end if

// Bind to the server.
// In this example, the client binds anonymously to the server
// (no DN or credentials are specified).
l.SimpleBind("", "")
if l.Lasterror <> 0 then
    dim error as string = l.ErrorString(l.Lasterror)
    Break
end if

const BASEDN = "dc=example,dc=com"
const SCOPE = l.kScopeSubtree
const FILTER = "(sn=Jensen)"

dim results() as Dictionary = l.Search(BASEDN, SCOPE, FILTER)
for each dic as Dictionary in results
    Break // look in debugger
next
```
**Notes:** The plugin will return result as array of Dictionaries, one for each item. Dictionary contains attributes with their values. A special entry has key = nil and as value the distinguish name of the item.

### 105.1.15 SimpleBind(Who as String, Cred as String)

**Function:** Simple bind call.  
**Example:**

```plaintext
// Get a handle to an LDAP connection and set any session preferences.
dim l as new LDAPMBS("localhost", 389)

// Use the ProtocolVersion session preference to specify that the client is an LDAPv3 client.
l.ProtocolVersion = 3
if l.Lasterror <> 0 then
    dim error as string = l.ErrorString(l.Lasterror)
    Break
end if

// Bind to the server.
// In this example, the client binds anonymously to the server
// (no DN or credentials are specified).

l.SimpleBind("", ")
if l.Lasterror <> 0 then
    dim error as string = l.ErrorString(l.Lasterror)
    Break
end if

const BASEDN = "dc=example,dc=com"
const SCOPE = l.kScopeSubtree
const FILTER = "(sn=Jensen)"

dim results() as Dictionary = l.Search(BASEDN, SCOPE, FILTER)

for each dic as Dictionary in results
    Break // look in debugger
next
```
105.1.16  **Properties**

105.1.17  **Handle as Integer**

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference. **Notes:** (Read and Write property)

105.1.18  **Lasterror as Integer**

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code. **Notes:** (Read and Write property)

105.1.19  **NetworkTimeOut as Integer**

MBS Network Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** The network timeout. **Notes:** (Read and Write property)

105.1.20  **ProtocolVersion as Integer**

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the protocol version to use. **Notes:** (Read and Write property)

105.1.21  **Referrals as Integer**

MBS Network Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specifies whether to automatically follow referrals returned by the LDAP server. **Notes:** (Read and Write property)

105.1.22  **TimeOut as Integer**

MBS Network Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** The default timeout.

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the auth mode constants.  
**Notes:** Only for Windows.

105.1.34 \( \text{kAuthNegotiateWin} = \& \text{h0486} \)

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the auth mode constants.  
**Notes:** Only for Windows.

105.1.35 \( \text{kAuthNone} = 0 \)

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the auth mode constants.  
**Notes:** No auth.

105.1.36 \( \text{kAuthNTLM} = \& \text{h1086} \)

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the auth mode constants.  
**Notes:** Only for Windows.
105.1.  CLASS LDAPMBS

105.1.37  kAuthSASL = & hA3

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the auth mode constants. **Notes:** Only for Mac OS X and Linux.

105.1.38  kAuthSASLWin = & h83

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the auth mode constants. **Notes:** Only for Windows.

105.1.39  kAuthSicily = & h0286

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the auth mode constants. **Notes:** Only for Windows.

105.1.40  kAuthSimple = & h80

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the auth mode constants. **Notes:** Simple authentication.

105.1.41  kAuthSSPI = & h4FF

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the auth mode constants. **Notes:** Only for Windows.

105.1.42  kScopeBase = 0

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the scopes constants.

105.1.43  kScopeDefault = -1

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the scopes constants.
105.1.44  kScopeOneLevel = 1

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the scopes constants.

105.1.45  kScopeSubordinate = 3

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the scopes constants.

105.1.46  kScopeSubtree = 2

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the scopes constants.

105.1.47  kVersion1 = 1

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the version constants.

105.1.48  kVersion2 = 2

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the version constants.

105.1.49  kVersion3 = 3

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the version constants.
105.2. CLS LDAPMODMBS

105.2 class LDAPModMBS

105.2.1 class LDAPModMBS

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class to hold values being added/modified.

**Example:**

```vbnet
dim m1 as new LDAPModMBS
m1.Operation = m1.kOperationAdd
m1.Type = "sn"
m1.addValue "yyy"
```

105.2.2 Methods

105.2.3 addValue(value as String)

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a value.

**Notes:** An item may have one value or several, so the plugin manages an array for you.

105.2.4 clearValues

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears all values.

105.2.5 Constructor

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.

105.2.6 setValues(values() as String)

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the values array to be the one passed.

**Notes:** Does not make a copy of the array, but references it.
105.2.7 Values as String()

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the array with values. **Notes:** Returns not a copy, but the array used to store values.

105.2.8 Properties

105.2.9 Operation as Integer

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The operation to perform. **Notes:** Can be kOperationAdd, kOperationDelete or kOperationReplace. (Read and Write property)

105.2.10 Type as String

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** String that specifies the name of the attribute to modify. **Notes:** (Read and Write property)

105.2.11 Value as String

MBS Network Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns first value. **Notes:** Some items only have one value, so this is the value. (Read only property)

105.2.12 Constants

105.2.13 kOperationAdd = 0

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the operation modes. **Notes:** Adds a value to the entry. The supplied values are appended to the existing values in the attribute.
105.2. CLASS LDAPMODMBS

105.2.14  kOperationDelete = 1

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the operation modes.
**Notes:** Deletes a value in the entry. The supplied values are deleted from the current attribute values.

105.2.15  kOperationReplace = 2

MBS Network Plugin, Plugin Version: 15.0. **Function:** One of the operation modes.
**Notes:** Replaces a value in the entry. The supplied values replace the existing attribute values.
Chapter 106

Licenses

106.1 Licenses

106.1.1 bzip2

Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The bzip2 1.0.5 license

**Notes:**

This program, "bzip2", the associated library "libbzip2", and all documentation, are copyright (C) 1996-2007 Julian R Seward. All rights reserved.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

1. Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.

2. The origin of this software must not be misrepresented; you must not claim that you wrote the original software. If you use this software in a product, an acknowledgment in the product documentation would be appreciated but is not required.

3. Altered source versions must be plainly marked as such, and must not be misrepresented as being the original software.

4. The name of the author may not be used to endorse or promote products derived from this software without specific prior written permission.

THIS SOFTWARE IS PROVIDED BY THE AUTHOR "AS IS" AND ANY EXPRESS OR IMPLIED
WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MER-
CHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN false EVENT
SHALL THE AUTHOR BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEM-
PLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT
OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS IN-
TERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY,
WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTH-
ERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF
THE POSSIBILITY OF SUCH DAMAGE.

Julian Seward, jseward@bzip.org bzip2/libbzip2 version 1.0.5 of 10 December 2007

106.1.2 ChartDirector

Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The ChartDirector 5.0 license

**Notes:**

Please note: The license for the ChartDirector is included when you purchase the plugin as we pay royalties. So you do not need to buy an additional license from Advanced Software Engineering Limited.

The original license for the C library:

ChartDirector Version 5.0
Copyright (C) 2008 Advanced Software Engineering Limited
All Rights Reserved

*************** LICENSE AGREEMENT ***************

You should carefully read the following terms and conditions before using the ChartDirector software. Your use of the ChartDirector software indicates your acceptance of this license agreement. Do not use the Chart-
Director software if you do not agree with the license agreement.

Disclaimer of Warranty

The ChartDirector software and the accompanying files are distributed and licensed “as is”. Advanced Soft-
ware Engineering Limited disclaims all warranties, either express or implied, including, but not limited to
implied warranties of merchantability and fitness for a particular purpose. Should the ChartDirector software
prove defective, the licensee assumes the risk of paying the entire cost of all necessary servicing, repair, or
correction and any incidental or consequential damages. In no event will Advanced Software Engineering
Limited be liable for any damages whatsoever (including without limitation damages for loss of business
profits, business interruption, loss of business information and the like) arising out of the use or the inability
to use the ChartDirector software even if Advanced Software Engineering Limited has been advised of the
possibility of such damages.

Intellectual Property

The ChartDirector software is protected by copyright laws and international copyright treaties, as well as other intellectual property laws and treaties. The ChartDirector software is licensed, not sold. Title to the ChartDirector software shall at all times remain with Advanced Software Engineering Limited.

You agree not to modify, decompile, reverse engineer, disassemble or otherwise attempt to derive source code from the ChartDirector software.

Trial Version

The trial version of the ChartDirector software will produce yellow banner messages at the bottom of the chart images generated by it. You agree to not remove, obscure, or alter this message.

Subjected to the conditions in this license agreement:

- You may use the unmodified trial version of the ChartDirector software without charge.

- You may redistribute the unmodified trial version of the ChartDirector software, provided you do not charge for it.

- You may embed the unmodified trial version of the ChartDirector software (or part of it), in a product and distribute the product, provided you do not charge for the product.

If you do not want the yellow banner messages appearing in the charts, or you want to embed the ChartDirector software (or part of it) in a product that is not free, you must purchase a commercial license to use the ChartDirector software from Advanced Software Engineering Limited. Please refer to Advanced Software Engineering’s web site at www.advsofteng.com for details.

Credits

The ASP/COM/VB, PHP, Perl, Python, Ruby and C++ editions of ChartDirector contains code from the Independent JPEG Group and the FreeType team. Any software that is derived from these editions of ChartDirector must include the following text in its documentation. This applies to both the trial version as well as to the commercial licensed version of ChartDirector.

- This software is based in part on the work of the Independent JPEG Group
This software is based in part of the work of the FreeType Team

106.1.3 CUPS

Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: The CUPS 1.4.4 license

Notes:

CUPS License Agreement

Copyright 2007-2009 by Apple Inc.
1 Infinite Loop
Cupertino, CA 95014 USA

WWW: http://www.cups.org/

INTRODUCTION

CUPS(tm) is provided under the GNU General Public License ("GPL")
and GNU Library General Public License ("LGPL"), Version 2, with
exceptions for Apple operating systems and the OpenSSL toolkit. A
copy of the exceptions and licenses follow this introduction.

The GNU LGPL applies to the CUPS and CUPS Imaging libraries
located in the "cups" and "filter" subdirectories of the CUPS
source distribution and in the "cups" include directory and
library files in the binary distributions. The GNU GPL applies to
the remainder of the CUPS distribution, including the "pdftops"
filter which is based upon Xpdf.

For those not familiar with the GNU GPL, the license basically
allows you to:

- Use the CUPS software at no charge.
- Distribute verbatim copies of the software in source or
  binary form.
- Sell verbatim copies of the software for a media fee, or
  sell support for the software.

What this license *does not* allow you to do is make changes or
add features to CUPS and then sell a binary distribution without
source code. You must provide source for any changes or additions
to the software, and all code must be provided under the GPL or LGPL as appropriate. The only exceptions to this are the portions of the CUPS software covered by the Apple operating system license exceptions outlined later in this license agreement.

The GNU LGPL relaxes the "link-to" restriction, allowing you to develop applications that use the CUPS and CUPS Imaging libraries under other licenses and/or conditions as appropriate for your application, driver, or filter.

LICENSE EXCEPTIONS

In addition, as the copyright holder of CUPS, Apple Inc. grants the following special exceptions:

1. Apple Operating System Development License Exception:

   a. Software that is developed by any person or entity for an Apple Operating System ("Apple OS-Developed Software"), including but not limited to Apple and third party printer drivers, filters, and backends for an Apple Operating System, that is linked to the CUPS imaging library or based on any sample filters or backends provided with CUPS shall not be considered to be a derivative work or collective work based on the CUPS program and is exempt from the mandatory source code release clauses of the GNU GPL. You may therefore distribute linked combinations of the CUPS imaging library with Apple OS-Developed Software without releasing the source code of the Apple OS-Developed Software. You may also use sample filters and backends provided with CUPS to develop Apple OS-Developed Software without releasing the source code of the Apple OS-Developed Software.

   b. An Apple Operating System means any operating system software developed and/or marketed by Apple Computer, Inc., including but not limited to all existing releases and versions of Apple's Darwin, Mac OS X, and Mac OS X Server products and all follow-on releases and future versions thereof.

   c. This exception is only available for Apple OS-Developed Software and does not apply to software
that is distributed for use on other operating systems.

d. All CUPS software that falls under this license exception have the following text at the top of each source file:

This file is subject to the Apple OS-Developed Software exception.

2. OpenSSL Toolkit License Exception;

a. Apple Inc. explicitly allows the compilation and distribution of the CUPS software with the OpenSSL Toolkit.

No developer is required to provide these exceptions in a derived work.

KERBEROS SUPPORT CODE

The Kerberos support code ("KSC") is copyright 2006 by Jelmer Vernooij and is provided 'as-is', without any express or implied warranty. In no event will the author or Apple Inc. be held liable for any damages arising from the use of the KSC.

Sources files containing KSC have the following text at the top of each source file:

This file contains Kerberos support code, copyright 2006 by Jelmer Vernooij.

The KSC copyright and license apply only to Kerberos-related feature code in CUPS. Such code is typically conditionally compiled based on the present of the HAVE_GSSAPI preprocessor definition.

Permission is granted to anyone to use the KSC for any purpose, including commercial applications, and to alter it and redistribute it freely, subject to the following restrictions:
1. The origin of the KSC must not be misrepresented; you must not claim that you wrote the original software. If you use the KSC in a product, an acknowledgment in the product documentation would be appreciated but is not required.

2. Altered source versions must be plainly marked as such, and must not be misrepresented as being the original software.

3. This notice may not be removed or altered from any source distribution.

TRADEMARKS

CUPS and the CUPS logo (the "CUPS Marks") are trademarks of Apple Inc. Apple grants you a non-exclusive and non-transferable right to use the CUPS Marks in any direct port or binary distribution incorporating CUPS software and in any promotional material therefor. You agree that your products will meet the highest levels of quality and integrity for similar goods, not be unlawful, and be developed, manufactured, and distributed in compliance with this license. You will not interfere with Apple’s rights in the CUPS Marks, and all use of the CUPS Marks shall inure to the benefit of Apple. This license does not apply to use of the CUPS Marks in a derivative products, which requires prior written permission from Apple Inc.

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.
59 Temple Place, Suite 330, Boston, MA 02111-1307 USA
Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software–to make sure the software is free for all its users. This General Public License applies to most of the Free Software
Foundation’s software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author’s protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors’ reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone’s free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.
GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.
c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium
c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the
original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients’ exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.
9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

false WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS false WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN false EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.
Appendix: How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the program’s name and a brief idea of what it does.>
Copyright (C) 19yy <name of author>

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 675 Mass Ave, Cambridge, MA 02139, USA.

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) 19yy name of author
Gnomovision comes with ABSOLUTELY false WARRANTY; for details type 'show w'.
This is free software, and you are welcome to redistribute it under certain conditions; type 'show c' for details.

The hypothetical commands 'show w' and 'show c' should show the appropriate
parts of the General Public License. Of course, the commands you use may
be called something other than 'show w' and 'show c'; they could even be
mouse-clicks or menu items—whatever suits your program.

You should also get your employer (if you work as a programmer) or your
school, if any, to sign a "copyright disclaimer" for the program, if
necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program
'Gnomovision' (which makes passes at compilers) written by James Hacker.

<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice

This General Public License does not permit incorporating your program into
proprietary programs. If your program is a subroutine library, you may
consider it more useful to permit linking proprietary applications with the
library. If this is what you want to do, use the GNU Library General
Public License instead of this License.

GNU LIBRARY GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1991 Free Software Foundation, Inc.
59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

[ This is the first released version of the library GPL. It is
numbered 2 because it goes with version 2 of the ordinary GPL. ]

Preamble

The licenses for most software are designed to take away your
freedom to share and change it. By contrast, the GNU General Public
Licenses are intended to guarantee your freedom to share and change
free software—to make sure the software is free for all its users.

This license, the Library General Public License, applies to some
specially designated Free Software Foundation software, and to any
other libraries whose authors decide to use it. You can use it for your libraries, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library, or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link a program with the library, you must provide complete object files to the recipients so that they can relink them with the library, after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

Our method of protecting your rights has two steps: (1) copyright the library, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the library.

Also, for each distributor’s protection, we want to make certain that everyone understands that there is no warranty for this free library. If the library is modified by someone else and passed on, we want its recipients to know that what they have is not the original version, so that any problems introduced by others will not reflect on the original authors’ reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that companies distributing free software will individually obtain patent licenses, thus in effect transforming the program into proprietary software. To prevent this, we have made it clear that any patent must be licensed for everyone’s free use or not licensed at all.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License, which was designed for utility programs. This license, the GNU Library General Public License, applies to certain
designated libraries. This license is quite different from the ordinary one; be sure to read it in full, and don’t assume that anything in it is the same as in the ordinary license.

The reason we have a separate public license for some libraries is that they blur the distinction we usually make between modifying or adding to a program and simply using it. Linking a program with a library, without changing the library, is in some sense simply using the library, and is analogous to running a utility program or application program. However, in a textual and legal sense, the linked executable is a combined work, a derivative of the original library, and the ordinary General Public License treats it as such.

Because of this blurred distinction, using the ordinary General Public License for libraries did not effectively promote software sharing, because most developers did not use the libraries. We concluded that weaker conditions might promote sharing better.

However, unrestricted linking of non-free programs would deprive the users of those programs of all benefit from the free status of the libraries themselves. This Library General Public License is intended to permit developers of non-free programs to use free libraries, while preserving your freedom as a user of such programs to change the free libraries that are incorporated in them. (We have not seen how to achieve this as regards changes in header files, but we have achieved it as regards changes in the actual functions of the Library.) The hope is that this will lead to faster development of free libraries.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the library" and a "work that uses the library". The former contains code derived from the library, while the latter only works together with the library.

Note that it is possible for a library to be covered by the ordinary General Public License rather than by this special one.

GNU LIBRARY GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Library General Public License (also called "this License"). Each licensee is
addressed as "you".

A "library" means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The "Library", below, refers to any such software library or work which has been distributed under these terms. A "work based on the Library" means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term "modification".)

"Source code" for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library's complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:
a) The modified work must itself be a software library.

b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.

c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.

d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under
3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.
When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

6. As an exception to the Sections above, you may also compile or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

a) Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)
b) Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.

c) If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified materials from the same place.

d) Verify that the user has already received a copy of these materials or that you have already sent this user a copy.

For an executable, the required form of the "work that uses the Library" must include any data and utility programs needed for reproducing the executable from it. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.

7. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:

a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.

b) Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.
8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients’ exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any
patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

13. The Free Software Foundation may publish revised and/or new versions of the Library General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

false WARRANTY
15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS false WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. IN false EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

Appendix: How to Apply These Terms to Your New Libraries

If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the library’s name and a brief idea of what it does.>
Copyright (C) <year><name of author>

This library is free software; you can redistribute it and/or modify it under the terms of the GNU Library General Public License as published by the Free Software Foundation; either
version 2 of the License, or (at your option) any later version.

This library is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU Library General Public License for more details.

You should have received a copy of the GNU Library General Public License along with this library; if not, write to the Free Software Foundation, Inc., 675 Mass Ave, Cambridge, MA 02139, USA.

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the library, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the library 'Frob' (a library for tweaking knobs) written by James Random Hacker.

<s:signature of Ty Coon>, 1 April 1990
Ty Coon, President of Vice

That's all there is to it!

106.1.4 CURL

Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The CURL 7.20.0 license

**Notes:**

CURL links to libssl, libcrypto, libssh2 and other libraries.

**COPYRIGHT AND PERMISSION NOTICE**

Copyright (c) 1996 - 2009, Daniel Stenberg, <daniel@haxx.se>.

All rights reserved.

Permission to use, copy, modify, and distribute this software for any purpose with or without fee is hereby granted, provided that the above copyright notice and this permission notice appear in all copies.
THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT OF THIRD PARTY RIGHTS. IN EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

Except as contained in this notice, the name of a copyright holder shall not be used in advertising or otherwise to promote the sale, use or other dealings in this Software without prior written authorization of the copyright holder.

106.1.5 expat

Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The expat 2.0.1 license

**Notes:**

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

106.1.6 FreeType

Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The FreeType 2.3.9 license

**Notes:**
The FreeType 2 font engine is copyrighted work and cannot be used legally without a software license. In order to make this project usable to a vast majority of developers, we distribute it under two mutually exclusive open-source licenses.

This means that *you* must choose *one* of the two licenses described below, then obey all its terms and conditions when using FreeType 2 in any of your projects or products.

- The FreeType License, found in the file 'FTL.TXT', which is similar to the original BSD license *with* an advertising clause that forces you to explicitly cite the FreeType project in your product’s documentation. All details are in the license file. This license is suited to products which don’t use the GNU General Public License.

- The GNU General Public License version 2, found in 'GPL.TXT' (any later version can be used also), for programs which already use the GPL. Note that the FTL is incompatible with the GPL due to its advertisement clause.

The contributed PCF driver comes with a license similar to that of the X Window System. It is compatible to the above two licenses (see file src/pcf/readme).

— end of LICENSE.TXT —

The FreeType Project LICENSE

2006-Jan-27

Copyright 1996-2002, 2006 by
David Turner, Robert Wilhelm, and Werner Lemberg

Introduction

The FreeType Project is distributed in several archive packages; some of them may contain, in addition to the FreeType font engine, various tools and contributions which rely on, or relate to, the FreeType Project.
This license applies to all files found in such packages, and which do not fall under their own explicit license. The license affects thus the FreeType font engine, the test programs, documentation and makefiles, at the very least.

This license was inspired by the BSD, Artistic, and IJG (Independent JPEG Group) licenses, which all encourage inclusion and use of free software in commercial and freeware products alike. As a consequence, its main points are that:

- We don’t promise that this software works. However, we will be interested in any kind of bug reports. (‘as is’ distribution)

- You can use this software for whatever you want, in parts or full form, without having to pay us. (‘royalty-free’ usage)

- You may not pretend that you wrote this software. If you use it, or only parts of it, in a program, you must acknowledge somewhere in your documentation that you have used the FreeType code. (‘credits’)

We specifically permit and encourage the inclusion of this software, with or without modifications, in commercial products. We disclaim all warranties covering The FreeType Project and assume no liability related to The FreeType Project.

Finally, many people asked us for a preferred form for a credit/disclaimer to use in compliance with this license. We thus encourage you to use the following text:

"""
Portions of this software are copyright <year> The FreeType Project (www.freetype.org). All rights reserved.
"""

Please replace <year> with the value from the FreeType version you actually use.

Legal Terms

==========
0. Definitions

Throughout this license, the terms 'package', 'FreeType Project', and 'FreeType archive' refer to the set of files originally distributed by the authors (David Turner, Robert Wilhelm, and Werner Lemberg) as the 'FreeType Project', be they named as alpha, beta or final release.

'You' refers to the licensee, or person using the project, where 'using' is a generic term including compiling the project's source code as well as linking it to form a 'program' or 'executable'. This program is referred to as 'a program using the FreeType engine'.

This license applies to all files distributed in the original FreeType Project, including all source code, binaries and documentation, unless otherwise stated in the file in its original, unmodified form as distributed in the original archive. If you are unsure whether or not a particular file is covered by this license, you must contact us to verify this.

The FreeType Project is copyright (C) 1996-2000 by David Turner, Robert Wilhelm, and Werner Lemberg. All rights reserved except as specified below.

1. No Warranty

THE FREETYPE PROJECT IS PROVIDED 'AS IS' WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. IN NO EVENT WILL ANY OF THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY DAMAGES CAUSED BY THE USE OR THE INABILITY TO USE, OF THE FREETYPE PROJECT.

2. Redistribution

This license grants a worldwide, royalty-free, perpetual and irrevocable right and license to use, execute, perform, compile, display, copy, create derivative works of, distribute and sublicense the FreeType Project (in both source and object code
forms) and derivative works thereof for any purpose; and to authorize others to exercise some or all of the rights granted herein, subject to the following conditions:

- Redistribution of source code must retain this license file ("FTL.TXT") unaltered; any additions, deletions or changes to the original files must be clearly indicated in accompanying documentation. The copyright notices of the unaltered, original files must be preserved in all copies of source files.

- Redistribution in binary form must provide a disclaimer that states that the software is based in part of the work of the FreeType Team, in the distribution documentation. We also encourage you to put an URL to the FreeType web page in your documentation, though this isn’t mandatory.

These conditions apply to any software derived from or based on the FreeType Project, not just the unmodified files. If you use our work, you must acknowledge us. However, no fee need be paid to us.

3. Advertising

Neither the FreeType authors and contributors nor you shall use the name of the other for commercial, advertising, or promotional purposes without specific prior written permission.

We suggest, but do not require, that you use one or more of the following phrases to refer to this software in your documentation or advertising materials: 'FreeType Project', 'FreeType Engine', 'FreeType library', or 'FreeType Distribution'.

As you have not signed this license, you are not required to accept it. However, as the FreeType Project is copyrighted material, only this license, or another one contracted with the authors, grants you the right to use, distribute, and modify it. Therefore, by using, distributing, or modifying the FreeType Project, you indicate that you understand and accept all the terms of this license.

4. Contacts
There are two mailing lists related to FreeType:

* freetype@nongnu.org

Discusses general use and applications of FreeType, as well as future and wanted additions to the library and distribution. If you are looking for support, start in this list if you haven’t found anything to help you in the documentation.

* freetype-devel@nongnu.org

Discusses bugs, as well as engine internals, design issues, specific licenses, porting, etc.

Our home page can be found at

http://www.freetype.org

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.
51 Franklin St, Fifth Floor, Boston, MA 02110-1301 USA
Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software—to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation’s software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.
When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author’s protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors’ reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone’s free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION
0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification"). Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an
announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer
to distribute corresponding source code. (This alternative is
allowed only for noncommercial distribution and only if you
received the program in object code or executable form with such
an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for
making modifications to it. For an executable work, complete source
code means all the source code for all modules it contains, plus any
associated interface definition files, plus the scripts used to
control compilation and installation of the executable. However, as a
special exception, the source code distributed need not include
anything that is normally distributed (in either source or binary
form) with the major components (compiler, kernel, and so on) of the
operating system on which the executable runs, unless that component
itself accompanies the executable.

If distribution of executable or object code is made by offering
access to copy from a designated place, then offering equivalent
access to copy the source code from the same place counts as
distribution of the source code, even though third parties are not
compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program
except as expressly provided under this License. Any attempt
otherwise to copy, modify, sublicense or distribute the Program is
void, and will automatically terminate your rights under this License.
However, parties who have received copies, or rights, from you under
this License will not have their licenses terminated so long as such
parties remain in full compliance.

5. You are not required to accept this License, since you have not
signed it. However, nothing else grants you permission to modify or
distribute the Program or its derivative works. These actions are
prohibited by law if you do not accept this License. Therefore, by
modifying or distributing the Program (or any work based on the
Program), you indicate your acceptance of this License to do so, and
all its terms and conditions for copying, distributing or modifying
the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the
Program), the recipient automatically receives a license from the
original licensor to copy, distribute or modify the Program subject to
these terms and conditions. You may not impose any further
restrictions on the recipients’ exercise of the rights granted herein.
You are not responsible for enforcing compliance by third parties to
7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will
be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

false WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS false WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN false EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs
If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the program’s name and a brief idea of what it does.>
Copyright (C) <year><name of author>

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 51 Franklin St, Fifth Floor, Boston, MA 02110-1301 USA

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) year name of author
Gnomovision comes with ABSOLUTELY false WARRANTY; for details type 'show w'.
This is free software, and you are welcome to redistribute it under certain conditions; type 'show c' for details.

The hypothetical commands 'show w' and 'show c' should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than 'show w' and 'show c'; they could even be mouse-clicks or menu items–whatever suits your program.
You should also get your employer (if you work as a programmer) or your
school, if any, to sign a "copyright disclaimer" for the program, if
necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program
'Gnomovision' (which makes passes at compilers) written by James Hacker.

signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice

This General Public License does not permit incorporating your program into
proprietary programs. If your program is a subroutine library, you may
consider it more useful to permit linking proprietary applications with the
library. If this is what you want to do, use the GNU Library General
Public License instead of this License.

106.1.7 GraphicsMagick

Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The GraphicsMagick license

**Notes:**

GraphicsMagick links to Tiff, zlib, LCMS, JPEG, FreeType, XML, iconv and PNG.

.. This text is in reStructuredText format, so it may look a bit odd.

=================================================================
GraphicsMagick Copyrights and Licenses
=================================================================

This file is part of the GraphicsMagick software distributed by the
GraphicsMagick Group.

[ *Please note that the legal community considers 15 or more
total lines of code or text (not necessarily contiguous) to
be significant for the purposes of copyright. Repeated
changes such as renaming a symbol has similar significance
to changing one line of code.* ]

The licenses which components of this software fall under are as follows.
1) In November 2002, the GraphicsMagick Group created GraphicsMagick from ImageMagick Studio’s ImageMagick and applied the “MIT” style license:

Copyright (C) 2002 - 2010 GraphicsMagick Group

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN NO EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

2) In October 1999, ImageMagick Studio assumed the responsibility for the development of ImageMagick (forking from the distribution by E. I. du Pont de Nemours and Company) and applied a new license:

Copyright (C) 2002 ImageMagick Studio, a non-profit organization dedicated to making software imaging solutions freely available.

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files ("ImageMagick"), to deal in ImageMagick without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of ImageMagick, and to permit persons to whom the ImageMagick is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in
all copies or substantial portions of ImageMagick.

The software is provided "as is", without warranty of any kind, express or implied, including but not limited to the warranties of merchantability, fitness for a particular purpose and noninfringement. In no event shall ImageMagick Studio be liable for any claim, damages or other liability, whether in an action of contract, tort or otherwise, arising from, out of or in connection with ImageMagick or the use or other dealings in ImageMagick.

Except as contained in this notice, the name of the ImageMagick Studio shall not be used in advertising or otherwise to promote the sale, use or other dealings in ImageMagick without prior written authorization from the ImageMagick Studio.

3) From 1991 to October 1999 (through ImageMagick 4.2.9), ImageMagick was developed and distributed by E. I. du Pont de Nemours and Company:

Copyright 1999 E. I. du Pont de Nemours and Company

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files ("ImageMagick"), to deal in ImageMagick without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of ImageMagick, and to permit persons to whom the ImageMagick is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of ImageMagick.

The software is provided "as is", without warranty of any kind, express or implied, including but not limited to the warranties of merchantability, fitness for a particular purpose and noninfringement. In no event shall E. I. du Pont de Nemours and Company be liable for any claim, damages or other liability, whether in an action of contract, tort or otherwise, arising from, out of or in connection with ImageMagick or the use or other dealings in ImageMagick.

Except as contained in this notice, the name of the E. I. du Pont de Nemours and Company shall not be used in advertising or otherwise to
promote the sale, use or other dealings in ImageMagick without prior written authorization from the E. I. du Pont de Nemours and Company.

4) The GraphicsMagick Base64Decode() and Base64Encode() functions are based on source code obtained from OpenSSH. This source code is distributed under the following license:

Copyright (c) 2000 Markus Friedl. All rights reserved.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

1. Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.

2. Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.

THIS SOFTWARE IS PROVIDED BY THE AUTHOR "AS IS" AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN NO EVENT SHALL THE AUTHOR BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

5) Many of the pattern images in coders/logo.c are derived from XFig, which is distributed under the following license:

| FIG : Facility for Interactive Generation of figures
| Copyright (c) 1985-1988 by Supoj Sutanthavibul
| Parts Copyright (c) 1989-2000 by Brian V. Smith
| Parts Copyright (c) 1991 by Paul King

Any party obtaining a copy of these files is granted, free of charge, a
full and unrestricted irrevocable, world-wide, paid up, royalty-free, nonexclusive right and license to deal in this software and documentation files (the "Software"), including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons who receive copies from any such party to do so, with the only requirement being that this copyright notice remain intact.

6) The documentation for the composition operators is copied from the rlecomp manual page, which is authored by Rod Bogart and John W. Peterson. Rlecomp is part of the Utah Raster Toolkit distributed by the University of Michigan and the University of Utah. The copyright for this manual page is as follows:

Copyright (c) 1986, University of Utah

This software is copyrighted as noted below. It may be freely copied, modified, and redistributed, provided that the copyright notice is preserved on all copies.

There is no warranty or other guarantee of fitness for this software, it is provided solely "as is". Bug reports or fixes may be sent to the author, who may or may not act on them as he desires.

You may not include this software in a program or other software product without supplying the source, or without informing the end-user that the source is available for no extra charge.

If you modify this software, you should include a notice giving the name of the person performing the modification, the date of modification, and the reason for such modification.

7) The source code comprising swab.c is originally derived from libtiff which has the following license:

| Copyright (c) 1988-1997 Sam Leffler
| Copyright (c) 1991-1997 Silicon Graphics, Inc.

Permission to use, copy, modify, distribute, and sell this software and its documentation for any purpose is hereby granted without fee, provided that (i) the above copyright notices and this permission notice appear in all copies of the software and related documentation, and (ii) the names of Sam Leffler and Silicon Graphics may not be used in any advertising or
publicity relating to the software without the specific, prior written permission of Sam Leffler and Silicon Graphics.

THE SOFTWARE IS PROVIDED "AS-IS" AND WITHOUT WARRANTY OF ANY KIND, EXPRESS, IMPLIED OR OTHERWISE, INCLUDING WITHOUT LIMITATION, ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

IN NO EVENT SHALL SAM LEFFLER OR SILICON GRAPHICS BE LIABLE FOR ANY SPECIAL, INCIDENTAL, INDIRECT OR CONSEQUENTIAL DAMAGES OF ANY KIND, OR ANY DAMAGES WHATSOEVER RESULTING FROM LOSS OF USE, DATA OR PROFITS, WHETHER OR NOT ADVISED OF THE POSSIBILITY OF DAMAGE, AND ON ANY THEORY OF LIABILITY, ARISING OUT OF OR IN CONNECTION WITH THE USE OR PERFORMANCE OF THIS SOFTWARE.

8) The C++ API known as "Magick++", and which resides in the Magick++ directory, is distributed under the following license:

Copyright 1999 - 2003 Bob Friesenhahn <bfiesen@simple.dallas.tx.us>

Permission is hereby granted, free of charge, to any person obtaining a copy of the source files and associated documentation files ("Magick++"), to deal in Magick++ without restriction, including without limitation of the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of Magick++, and to permit persons to whom the Magick++ is furnished to do so, subject to the following conditions:

This copyright notice shall be included in all copies or substantial portions of Magick++. The copyright to Magick++ is retained by its author and shall not be subsumed or replaced by any other copyright.

The software is provided "as is", without warranty of any kind, express or implied, including but not limited to the warranties of merchantability, fitness for a particular purpose and noninfringement. In no event shall Bob Friesenhahn be liable for any claim, damages or other liability, whether in an action of contract, tort or otherwise, arising from, out of or in connection with Magick++ or the use or other dealings in Magick++.

9) The GraphicsMagick HaldClutImagePixels() function in magick/hclut.c is based on source code from the HaldCLUT package by Eskil Steenberg
Copyright (c) 2005 Eskil Steenberg. All rights reserved.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

1. Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.

2. Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.

THIS SOFTWARE IS PROVIDED BY THE AUTHOR "AS IS" AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN NO EVENT SHALL THE AUTHOR BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

GraphicsMagick makes use of third-party "delegate" libraries to support certain optional features. These libraries bear their own copyrights and licenses, which may be more or less restrictive than the GraphicsMagick license. For convenience, when GraphicsMagick is bundled with (or compiled with) "delegate" libraries, a copy of the licenses for these libraries is provided in a "licenses" directory.
106.1.8 HASP

console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The HASP license

**Notes:**

Aladdin Knowledge Systems Ltd. (c) 1985 - 2005. All rights reserved.

Exact license details are available with the HASP SDKs.

106.1.9 ImageMagick

Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The ImageMagick license

**Notes:**

Before we get to the text of the license lets just review what the license says in simple terms:

It allows you to:

* freely download and use ImageMagick software, in whole or in part, for personal, company internal, or commercial purposes;
* use ImageMagick software in packages or distributions that you create.

It forbids you to:

* redistribute any piece of ImageMagick-originated software without proper attribution;
* use any marks owned by ImageMagick Studio LLC in any way that might state or imply that ImageMagick Studio LLC endorses your distribution;
* use any marks owned by ImageMagick Studio LLC in any way that might state or imply that you created the ImageMagick software in question.

It requires you to:

* include a copy of the license in any redistribution you may make that includes ImageMagick software;
* provide clear attribution to ImageMagick Studio LLC for any distributions that include ImageMagick software.

It does not require you to:
* include the source of the ImageMagick software itself, or of any modifications you may have made to it, in any redistribution you may assemble that includes it;
* submit changes that you make to the software back to the ImageMagick Studio LLC (though such feedback is encouraged).

A few other clarifications include:
* ImageMagick is freely available without charge;
* you may include ImageMagick on a CD-ROM as long as you comply with the terms of the license;
* you can give modified code away for free or sell it under the terms of the ImageMagick license or distribute the result under a different license, but you need to acknowledge the use of the ImageMagick software;
* the license is compatible with the GPL.

The legally binding and authoritative terms and conditions for use, reproduction, and distribution of ImageMagick follow:

Copyright 1999-2007 ImageMagick Studio LLC, a non-profit organization dedicated to making software imaging solutions freely available.

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.
"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.
"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.
"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.
"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.
"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.
"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).
"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.
"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication intentionally sent to the Licensor by its copyright holder or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."
"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:
   a. You must give any other recipients of the Work or Derivative Works a copy of this License; and
   b. You must cause any modified files to carry prominent notices stating that You changed the files; and
   c. You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
   d. If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License. You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks,
or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

106.1.10 iMedia Browser

Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: The iMedia Browser license

Notes:

iMedia Browser <http://karelia.com/imedia/>
Copyright (c) 2005-2007 by Karelia Software et al.
iMedia Browser is based on code originally developed by Jason Terhorst, further developed for Sandvox by Greg Hulands, Dan Wood, and Terrence Talbot. Contributions have also been made by Matt Gough, Martin Wennerberg and others as indicated in source files.
iMedia Browser is licensed under the following terms:
Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in all or substantial portions of the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:
Redistributions of source code must retain the original terms stated here, including this list of conditions, the disclaimer noted below, and the following copyright notice: Copyright (c) 2005-2007 by Karelia Software et al.
Redistributions in binary form must include, in an end-user-visible manner, e.g., About window, Acknowledgments window, or similar, either a) the original terms stated here, including this list of conditions, the disclaimer noted below, and the aforementioned copyright notice, or b) the aforementioned copyright notice and a link to karelia.com/imedia.
Neither the name of Karelia Software, nor Sandvox, nor the names of contributors to iMedia Browser may be used to endorse or promote products derived from the Software without prior and express written permission from Karelia Software or individual contributors, as appropriate.

106.1.12 libjpeg

Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The libjpeg license

**Notes:**

In plain English:

1. We don’t promise that this software works. (But if you find any bugs, please let us know!)
2. You can use this software for whatever you want. You don’t have to pay us.
3. You may not pretend that you wrote this software. If you use it in a
program, you must acknowledge somewhere in your documentation that you’ve used the IJG code.

In legalese:

The authors make false WARRANTY or representation, either express or implied, with respect to this software, its quality, accuracy, merchantability, or fitness for a particular purpose. This software is provided "AS IS", and you, its user, assume the entire risk as to its quality and accuracy.

This software is copyright (C) 1991-2010, Thomas G. Lane, Guido Vollbeding. All Rights Reserved except as specified below.

Permission is hereby granted to use, copy, modify, and distribute this software (or portions thereof) for any purpose, without fee, subject to these conditions:
(1) If any part of the source code for this software is distributed, then this README file must be included, with this copyright and no-warranty notice unaltered; and any additions, deletions, or changes to the original files must be clearly indicated in accompanying documentation.
(2) If only executable code is distributed, then the accompanying documentation must state that "this software is based in part on the work of the Independent JPEG Group".
(3) Permission for use of this software is granted only if the user accepts full responsibility for any undesirable consequences; the authors accept false LIABILITY for damages of any kind.

These conditions apply to any software derived from or based on the IJG code, not just to the unmodified library. If you use our work, you ought to acknowledge us.

Permission is NOT granted for the use of any IJG author’s name or company name in advertising or publicity relating to this software or products derived from it. This software may be referred to only as "the Independent JPEG Group's software".

We specifically permit and encourage the use of this software as the basis of commercial products, provided that all warranty or liability claims are assumed by the product vendor.

ansi2knr.c is included in this distribution by permission of L. Peter Deutsch, sole proprietor of its copyright holder, Aladdin Enterprises of Menlo Park, CA. ansi2knr.c is NOT covered by the above copyright and conditions, but instead
by the usual distribution terms of the Free Software Foundation; principally, 
that you must include source code if you redistribute it. (See the file 
ansi2knr.c for full details.) However, since ansi2knr.c is not needed as part 
of any program generated from the IJG code, this does not limit you more than 
the foregoing paragraphs do.

The Unix configuration script "configure" was produced with GNU Autoconf. 
It is copyright by the Free Software Foundation but is freely distributable. 
The same holds for its supporting scripts (config.guess, config.sub, 
ltmain.sh). Another support script, install-sh, is copyright by X Consortium 
but is also freely distributable.

The IJG distribution formerly included code to read and write GIF files. 
To avoid entanglement with the Unisys LZW patent, GIF reading support has 
been removed altogether, and the GIF writer has been simplified to produce 
"uncompressed GIFs". This technique does not use the LZW algorithm; the 
resulting GIF files are larger than usual, but are readable by all standard 
GIF decoders.

We are required to state that
"The Graphics Interchange Format(c) is the Copyright property of 
CompuServe Incorporated. GIF(sm) is a Service Mark property of 
CompuServe Incorporated."

106.1.13  libpng

libpng versions 1.0.7, July 1, 2000, through 1.2.5 - October 3, 2002, are Copyright (c) 2000-2002 Glenn Randers-Pehrson, and are distributed according to the same disclaimer and license as libpng-1.0.6 with the following individuals added to the list of Contributing Authors

Simon-Pierre Cadieux
Eric S. Raymond
Gilles Vollant

and with the following additions to the disclaimer:

There is no warranty against interference with your enjoyment of the library or against infringement. There is no warranty that our efforts or the library will fulfill any of your particular purposes or needs. This library is provided with all faults, and the entire risk of satisfactory quality, performance, accuracy, and effort is with the user.

libpng versions 0.97, January 1998, through 1.0.6, March 20, 2000, are Copyright (c) 1998, 1999 Glenn Randers-Pehrson, and are distributed according to the same disclaimer and license as libpng-0.96, with the following individuals added to the list of Contributing Authors:

Tom Lane
Glenn Randers-Pehrson
Willem van Schaik

libpng versions 0.89, June 1996, through 0.96, May 1997, are Copyright (c) 1996, 1997 Andreas Dilger Distributed according to the same disclaimer and license as libpng-0.88, with the following individuals added to the list of Contributing Authors:

John Bowler
Kevin Bracey
Sam Bushell
Magnus Holmgren
Greg Roelofs
Tom Tanner

libpng versions 0.5, May 1995, through 0.88, January 1996, are Copyright (c) 1995, 1996 Guy Eric Schalnat, Group 42, Inc.

For the purposes of this copyright and license, "Contributing Authors"
is defined as the following set of individuals:

Andreas Dilger
Dave Martindale
Guy Eric Schalnat
Paul Schmidt
Tim Wegner

The PNG Reference Library is supplied "AS IS". The Contributing Authors and Group 42, Inc. disclaim all warranties, expressed or implied, including, without limitation, the warranties of merchantability and of fitness for any purpose. The Contributing Authors and Group 42, Inc. assume no liability for direct, indirect, incidental, special, exemplary, or consequential damages, which may result from the use of the PNG Reference Library, even if advised of the possibility of such damage.

Permission is hereby granted to use, copy, modify, and distribute this source code, or portions hereof, for any purpose, without fee, subject to the following restrictions:

1. The origin of this source code must not be misrepresented.
2. Altered versions must be plainly marked as such and must not be misrepresented as being the original source.
3. This Copyright notice may not be removed or altered from any source or altered source distribution.

The Contributing Authors and Group 42, Inc. specifically permit, without fee, and encourage the use of this source code as a component to supporting the PNG file format in commercial products. If you use this source code in a product, acknowledgment is not required but would be appreciated.

A "png_get_copyright" function is available, for convenient use in "about" boxes and the like:

printf("% s",png_get_copyright(NULL));

Also, the PNG logo (in PNG format, of course) is supplied in the files "pngbar.png" and "pngbar.jpg (88x31) and "pngnow.png" (98x31).

Libpng is OSI Certified Open Source Software. OSI Certified Open Source is a certification mark of the Open Source Initiative.

CHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

IN EVENT SHALL SAM LEFFLER OR SILICON GRAPHICS BE LIABLE FOR ANY SPECIAL,
INCIDENTAL, INDIRECT OR CONSEQUENTIAL DAMAGES OF ANY KIND, OR ANY DAMAGES
WHATSOEVER RESULTING FROM LOSS OF USE, DATA OR PROFITS, WHETHER OR NOT AD-
VISED OF THE POSSIBILITY OF DAMAGE, AND ON ANY THEORY OF LIABILITY, ARISING OUT
OF OR IN CONNECTION WITH THE USE OR PERFORMANCE OF THIS SOFTWARE.

106.1.17 libunimotion

Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: The libunimotion 0.4.1 license
Notes: The plugin loads the unimotion library. So the library is LGPL and your commercial app can load it.

GNU LESSER GENERAL PUBLIC LICENSE
Version 2.1, February 1999

Copyright (C) 1991, 1999 Free Software Foundation, Inc.
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

[ This is the first released version of the Lesser GPL. It also counts
as the successor of the GNU Library Public License, version 2, hence
the version number 2.1. ]

Preamble

The licenses for most software are designed to take away your
freedom to share and change it. By contrast, the GNU General Public
Licenses are intended to guarantee your freedom to share and change
free software–to make sure the software is free for all its users.

This license, the Lesser General Public License, applies to some
specially designated software packages–typically libraries–of the
Free Software Foundation and other authors who decide to use it. You
can use it too, but we suggest you first think carefully about whether this license or the ordinary General Public License is the better strategy to use in any particular case, based on the explanations below.

When we speak of free software, we are referring to freedom of use, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish); that you receive source code or can get it if you want it; that you can change the software and use pieces of it in new free programs; and that you are informed that you can do these things.

To protect your rights, we need to make restrictions that forbid distributors to deny you these rights or to ask you to surrender these rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link other code with the library, you must provide complete object files to the recipients, so that they can relink them with the library after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal permission to copy, distribute and/or modify the library.

To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author’s reputation will not be affected by problems that might be introduced by others.

Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license obtained for a version of the library must be consistent with the full freedom of use specified in this license.

Most GNU software, including some libraries, is covered by the
ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use this license for certain libraries in order to permit linking those libraries into non-free programs.

When a program is linked with a library, whether statically or using a shared library, the combination of the two is legally speaking a combined work, a derivative of the original library. The ordinary General Public License therefore permits such linking only if the entire combination fits its criteria of freedom. The Lesser General Public License permits more lax criteria for linking other code with the library.

We call this license the "Lesser" General Public License because it does less to protect the user's freedom than the ordinary General Public License. It also provides other free software developers less of an advantage over competing non-free programs. These disadvantages are the reason we use the ordinary General Public License for many libraries. However, the Lesser license provides advantages in certain special circumstances.

For example, on rare occasions, there may be a special need to encourage the widest possible use of a certain library, so that it becomes a de-facto standard. To achieve this, non-free programs must be allowed to use the library. A more frequent case is that a free library does the same job as widely used non-free libraries. In this case, there is little to gain by limiting the free library to free software only, so we use the Lesser General Public License.

In other cases, permission to use a particular library in non-free programs enables a greater number of people to use a large body of free software. For example, permission to use the GNU C Library in non-free programs enables many more people to use the whole GNU operating system, as well as its variant, the GNU/Linux operating system.

Although the Lesser General Public License is less protective of the users' freedom, it does ensure that the user of a program that is linked with the Library has the freedom and the wherewithal to run that program using a modified version of the Library.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a
"work based on the library" and a "work that uses the library". The former contains code derived from the library, whereas the latter must be combined with the library in order to run.

GNU LESSER GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library or other program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called "this License"). Each licensee is addressed as "you".

A "library" means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The "Library", below, refers to any such software library or work which has been distributed under these terms. A "work based on the Library" means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term "modification".)

"Source code" for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library’s complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any
warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) The modified work must itself be a software library.

b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.

c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.

d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the
entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the
Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

6. As an exception to the Sections above, you may also combine or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:
a) Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)

b) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (1) uses at run time a copy of the library already present on the user’s computer system, rather than copying library functions into the executable, and (2) will operate properly with a modified version of the library, if the user installs one, as long as the modified version is interface-compatible with the version that the work was made with.

c) Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.

d) If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified materials from the same place.

e) Verify that the user has already received a copy of these materials or that you have already sent this user a copy.

For an executable, the required form of the "work that uses the Library" must include any data and utility programs needed for reproducing the executable from it. However, as a special exception, the materials to be distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally
accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.

7. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:

a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.

b) Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients’ exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties with this License.
11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

13. The Free Software Foundation may publish revised and/or new versions of the Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.
Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

false WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS false WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. IN false EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Libraries
If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the library’s name and a brief idea of what it does.>
Copyright (C) <year><name of author>

This library is free software; you can redistribute it and/or modify it under the terms of the GNU Lesser General Public License as published by the Free Software Foundation; either version 2.1 of the License, or (at your option) any later version.

This library is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU Lesser General Public License for more details.

You should have received a copy of the GNU Lesser General Public License along with this library; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the library, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the library 'Frob' (a library for tweaking knobs) written by James Random Hacker.

<signature of Ty Coon>, 1 April 1990
Ty Coon, President of Vice

That’s all there is to it!

106.1.18 libunzip

Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The libunzip 1.01e license
**Notes:**

unzip.h – IO for uncompress .zip files using zlib
Version 1.01e, February 12th, 2005

Copyright (C) 1998-2005 Gilles Vollant

This unzip package allow extract file from .ZIP file, compatible with PKZip 2.04g
WinZip, InfoZip tools and compatible.

Multi volume ZipFile (span) are not supported.
Encryption compatible with pkzip 2.04g only supported
Old compressions used by old PKZip 1.x are not supported

I WAIT FEEDBACK at mail info@winimage.com
Visit also http://www.winimage.com/zLibDll/unzip.htm for evolution

Condition of use and distribution are the same than zlib :

This software is provided 'as-is', without any express or implied warranty. In no event will the authors be held liable for any damages arising from the use of this software.

Permission is granted to anyone to use this software for any purpose, including commercial applications, and to alter it and redistribute it freely, subject to the following restrictions:

1. The origin of this software must not be misrepresented; you must not claim that you wrote the original software. If you use this software in a product, an acknowledgment in the product documentation would be appreciated but is not required.
2. Altered source versions must be plainly marked as such, and must not be misrepresented as being the original software.
3. This notice may not be removed or altered from any source distribution.

for more info about .ZIP format, see
106.1.19  libxml

Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The libxml license  
**Notes:**

Except where otherwise noted in the source code (e.g. the files hash.c, list.c and the trio files, which are covered by a similar licence but with different Copyright notices) all the files are:

Copyright (C) 1998-2003 Daniel Veillard. All Rights Reserved.

106.1.24 PCRE

Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: The PCRE 8.0.1 license (RegEx)
Notes:

PCRE LICENCE

PCRE is a library of functions to support regular expressions whose syntax
and semantics are as close as possible to those of the Perl 5 language.

Release 8 of PCRE is distributed under the terms of the "BSD" licence, as
specified below. The documentation for PCRE, supplied in the "doc"
directory, is distributed under the same terms as the software itself.

The basic library functions are written in C and are freestanding. Also included in the distribution is a set of C++ wrapper functions.

THE BASIC LIBRARY FUNCTIONS

106.1.28 SecureDongle X

Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. Function: The SecureDongle X license

Notes:

All Products of SecureMetric Technology Sdn. Bhd. (SecureMetric) including, but not limited to, evaluation copies, diskettes, CD-ROMs, hardware and documentation, and all future orders, are subject to the terms of this Agreement. If developers do not agree with the terms herein, please return the evaluation package to us, postage and insurance prepaid, within seven days of their receipt, and we will reimburse developers the cost of the Product, less freight and reasonable handling charges.

1. Allowable Use - Developers may merge and link the Software with other programs for the sole purpose of protecting those programs in accordance with the usage described in the Developer’s Guide. Developers may make archival copies of the Software.

2. Prohibited Use - The Software or hardware or any other part of the Product may not be copied, reengineered, disassembled, decompiled, revised, enhanced or otherwise modified, except as specifically allowed in item 1. Developers may not reverse engineer the Software or any part of the product or attempt to discover the Software’s source code. Developers may not use the magnetic or optical media included with the Product
for the purposes of transferring or storing data that was not either an original part of the Product, or a SecureMetric provided enhancement or upgrade to the Product.

3. Warranty - SecureMetric warrants that the hardware and Software storage media are substantially free from significant defects of workmanship or materials for a time period of twelve (12) months from the date of delivery of the Product to developers.

4. Breach of Warranty - In the event of breach of this warranty, SecureMetric’s sole obligation is to replace or repair, at the discretion of SecureMetric, any Product free of charge. Any replaced Product becomes the property of SecureMetric. Warranty claims must be made in writing to SecureMetric during the warranty period and within fourteen (14) days after the observation of the defect. All warranty claims must be accompanied by evidence of the defect that is deemed satisfactory by SecureMetric. Any Products that developers return to SecureMetric, or a SecureMetric authorized distributor, must be sent with freight and insurance prepaid.
EXCEPT AS STATED ABOVE, THERE IS false OTHER WARRANTY OR REPRESENTATION OF THE PRODUCT, EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

5. Limitation of SecureMetric’s Liability - SecureMetric’s entire liability to developers or any other party for any cause whatsoever, whether in contract or in tort, including negligence, shall not exceed the price developers paid for the unit of the Product that caused the damages or are the subject of, or indirectly related to the cause of action. In no event shall SecureMetric be liable for any damages caused by developers failure to meet developer’s obligations, nor for any loss of data, profit or savings, or any other consequential and incidental damages, even if SecureMetric has been advised of the possibility of damages, or for any claim by developers based on any third-party claim.

6. Termination - This Agreement shall terminate if developers fail to comply with the terms herein. Items 2, 3, 4 and 5 shall survive any termination of this Agreement.

### 106.1.29 SQLAPI

Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The SQLAPI 3.7.33 license **Notes:**

Note: Once you buy a SQL Plugin license, you get automatically a SQLAPI license from use with our plugin. No extra license fee required.

*************************************************************************
SQLAPI++ Library - LICENSE AGREEMENT and WARRANTY
*************************************************************************

You should carefully read the following terms and conditions before using this software. Your use of this software
indicates your acceptance of this license agreement and warranty.

LICENSE AGREEMENT:
==================================
You have the non-exclusive right to use the Library. The Company retains all title and ownership of the Library.

EVALUATION:
==================================
The SQLAPI++ Library is distributed as shareware. You can use the Library for evaluation purposes without charge for unlimited period. The evaluation version has no limits or functional differences from registered version, but it will display registration messages occasionally. While in evaluation you MAY NOT distribute your applications written with trial version of SQLAPI++ library.

REGISTERED VERSIONS:
==================================
You have to purchase SQLAPI++ Personal license for every developer, or one Site license for up to 10 developers in your company or one Site+ license for unlimited number of developers in your company. You MAY distribute applications written with SQLAPI++ (including SQLAPI++ run-time) without any additional charge. You MAY NOT distribute SQLAPI++ source codes (original or modified).

REGISTERED VERSION (Personal license):
One registered copy of SQLAPI++ Library may be used by a single person who uses it personally on one or more computers. You may access the registered version of SQLAPI++ Library through a network, provided that you have obtained individual licenses for the software covering all developers that will access the software through the network.

REGISTERED VERSION (Site license):
One registered copy of SQLAPI++ may be used by up to 10 developers WORKING IN ONE COMPANY on one or more computers.

REGISTERED VERSION (Site+ license):
One registered copy of SQLAPI++ may be used by any number of developers WORKING IN ONE COMPANY on one or more computers.

WARRANTY AND LIMITATION OF LIABILITY
==================================
We warrant that you will receive life-time FREE e-mail support, FREE bugs fixing
106.1. LICENSES

and FREE new version updates.

106.1.30 TCMPortMapper

Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The TCMPortMapper 1.3.1 license

**Notes:**

TCMPortMapper
Establishes port mapping via upnp or natpmp

106.1.34 zlib

Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The zlib 1.2.3 license

**Notes:**

(C) 1995-2004 Jean-loup Gailly and Mark Adler

This software is provided 'as-is', without any express or implied warranty. In no event will the authors be held liable for any damages arising from the use of this software.

Permission is granted to anyone to use this software for any purpose, including commercial applications, and to alter it and redistribute it freely, subject to the following restrictions:

1. The origin of this software must not be misrepresented; you must not claim that you wrote the original software. If you use this software in a product, an acknowledgment in the product documentation would be appreciated but is not required.
2. Altered source versions must be plainly marked as such, and must not be misrepresented as being the original software.
3. This notice may not be removed or altered from any source distribution.

Jean-loup Gailly Mark Adler
jloup@gzip.org madler@alumni.caltech.edu

If you use the zlib library in a product, we would appreciate *not* receiving lengthy legal documents to sign. The sources are provided for free but without warranty of any kind. The library has been entirely written by Jean-loup Gailly and Mark Adler; it does not include third-party code.

If you redistribute modified sources, we would appreciate that you include in the file ChangeLog history information documenting your changes. Please read the FAQ for more information on the distribution of modified source versions.
Chapter 107

Linguistic

107.1 class NSLinguisticTaggerMBS

107.1.1 class NSLinguisticTaggerMBS

Function: Analyze natural language to tag part of speech and lexical class, identify proper names, perform lemmatization, and determine the language and script (orthography) of text.

Example:

```vbnet
dim TagScheme as string = NSLinguisticTaggerMBS.NSLinguisticTagSchemeLanguage
dim TagSchemes() as string = array(TagScheme)
dim t as new NSLinguisticTaggerMBS(TagSchemes)
t.Text = "Hallo Leute"

dim tokenRange as NSRangeMBS
dim sentenceRange as NSRangeMBS
dim tag as string = t.tagAtIndex(0, TagScheme, tokenRange, sentenceRange)

MsgBox "Language: " + tag // should be "de" for German
```

Notes:

The NSLinguisticTaggerMBS class provides a uniform interface to a variety of natural language processing functionality with support for many different languages and scripts. You can use NSLinguisticTaggerMBS to segment natural language text into paragraphs, sentences, or words, and tag information about those tokens, such as part of speech, lexical class, lemma, script, and language.

When you create a linguistic tagger, you specify what kind of information you’re interested in by passing one or more
NSLinguisticTagScheme values. Set the string property to the natural language text you want to analyze, and the linguistic tagger processes it according to the specified tag schemes. You can then enumerate over the tags in a specified range, using the methods described in Enumerating Linguistic Tags, to get the information requested for a given scheme and unit.

107.1.2 Methods

107.1.3 availableTagSchemesForLanguage(Language as String) as String()

Returns the available tag schemes. For possible values, see NSLinguisticTagScheme.

This is a convenience method for calling the availableTagSchemesForUnit, passing NSLinguisticTaggerUnit-Word as the linguistic unit.

107.1.4 availableTagSchemesForUnit(unit as Integer, Language as String) as String()

MBS MacFrameworks Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the tag schemes available for a particular unit and language on the current device. Notes: unit: The linguistic unit. For possible values, see NSLinguisticTaggerUnit. language: A BCP-47 tag identifying the language. For example, "en" for English or "zh-Hans" for Chinese written using the Simplified Chinese script.

Returns the supported tag schemes. For possible values, see NSLinguisticTagScheme.

Available in macOS 10.13 and newer.

107.1.5 Constructor(tagSchemes() as String, options as integer = 0)

107.1.6  dominantLanguageForString(text as String) as String

**Function:** Returns the dominant language for the specified string.
**Notes:**

string: The string for which the dominant language is determined.

Returns the BCP-47 tag identifying the dominant language of the string, or the tag "und" if a specific language cannot be determined.

This is a convenience method for creating a new linguistic tagger, setting the string property, and getting the dominantLanguage property. If you analyze the same string more than once, you should create a linguistic tagger object instead of calling this method.

Available in macOS 10.13 and newer.

107.1.7  NSLinguisticTagAdjective as String

**Function:** One of the lexical classes.
**Notes:** This token is an adjective.

107.1.8  NSLinguisticTagAdverb as String

**Function:** One of the lexical classes.
**Notes:** This token is an adverb.

107.1.9  NSLinguisticTagClassifier as String

**Function:** One of the lexical classes.
CHAPTER 107. LINGUISTIC

Notes: This token is a classifier.

107.1.10  NSLinguisticTagCloseParenthesis as String

**Function:** One of the lexical classes.
**Notes:** This token is a close parenthesis.

107.1.11  NSLinguisticTagCloseQuote as String

**Function:** One of the lexical classes.
**Notes:** This token is a close quote.

107.1.12  NSLinguisticTagConjunction as String

**Function:** One of the lexical classes.
**Notes:** This token is a conjunction.

107.1.13  NSLinguisticTagDash as String

**Function:** One of the lexical classes.
**Notes:** This token is a dash.

107.1.14  NSLinguisticTagDeterminer as String

**Function:** One of the lexical classes.
**Notes:** This token is a determiner.

107.1.15  NSLinguisticTagIdiom as String

**Function:** One of the lexical classes.
107.1. CLASS NSLINGUISTICTAGGERMBS

Notes: This token is an idiom.

107.1.16 NSLinguisticTagInterjection as String

Function: One of the lexical classes.
Notes: This token is an interjection.

107.1.17 NSLinguisticTagNoun as String

Function: One of the lexical classes.
Notes: The token is a noun.

107.1.18 NSLinguisticTagNumber as String

Function: One of the lexical classes.
Notes: This token is a number.

107.1.19 NSLinguisticTagOpenParenthesis as String

Function: One of the lexical classes.
Notes: This token is an open parenthesis.

107.1.20 NSLinguisticTagOpenQuote as String

Function: One of the lexical classes.
Notes: This token is an open quote.

107.1.21 NSLinguisticTagOrganizationName as String

Function: One of the Name Types.
107.1.22  **NSLinguisticTagOther as String**

**Function:** One of the token types.  
**Notes:** The token indicates a non-linguistic item, such as a symbol.

107.1.23  **NSLinguisticTagOtherPunctuation as String**

**Function:** One of the lexical classes.  
**Notes:** This token is punctuation other than a kind described by other lexical classes (sentence terminator, open or close quote, open or close parenthesis, word joiner, and dash).

107.1.24  **NSLinguisticTagOtherWhitespace as String**

**Function:** One of the lexical classes.  
**Notes:** This token is whitespace other than a kind described by other lexical classes (paragraph break).

107.1.25  **NSLinguisticTagOtherWord as String**

**Function:** One of the lexical classes.  
**Notes:** This token is a word other than a kind described by other lexical classes (noun, verb, adjective, adverb, pronoun, determiner, particle, preposition, number, conjunction, interjection, classifier, and idiom).

107.1.26  **NSLinguisticTagParagraphBreak as String**

**Function:** One of the lexical classes.  
**Notes:** This token is a paragraph break.
107.1.27  NSLinguisticTagParticle as String

Function: One of the lexical classes.
Notes: This token is a particle.

107.1.28  NSLinguisticTagPersonalName as String

Function: One of the Name Types.
Notes: This token is a personal name.

107.1.29  NSLinguisticTagPlaceName as String

Function: One of the Name Types.
Notes: This token is a place name.

107.1.30  NSLinguisticTagPreposition as String

Function: One of the lexical classes.
Notes: This token is a preposition.

107.1.31  NSLinguisticTagPronoun as String

Function: One of the lexical classes.
Notes: This token is a pronoun.

107.1.32  NSLinguisticTagPunctuation as String

Function: One of the token types.
Notes: The token indicates punctuation.
107.1.33  **NSLinguisticTagSchemeLanguage as String**

**Function:** Supplies a BCP-47 language identifier for a token.
**Notes:**
For example, the language identifier for English is "en" and the identifier for Chinese written using the Simplified Chinese script is "zh-Hans". The identifier "und" is used if a specific language cannot be determined. The tagger generally attempts to determine the language of text at the level of an entire sentence, paragraph, or document, rather than word by word.

107.1.34  **NSLinguisticTagSchemeLemma as String**

**Function:** Supplies a stem form of a word token, if known.

107.1.35  **NSLinguisticTagSchemeLexicalClass as String**

**Function:** Classifies tokens according to class: part of speech for words, type of punctuation, or whitespace.

107.1.36  **NSLinguisticTagSchemeNameType as String**

**Function:** Classifies tokens according to whether they are part of a named entity.

107.1.37  **NSLinguisticTagSchemeNameTypeOrLexicalClass as String**

**Function:** Classifies tokens corresponding to names according to NSLinguisticTagSchemeNameType and tokens all other tokens according to NSLinguisticTagSchemeLexicalClass.

107.1.38  **NSLinguisticTagSchemeScript as String**

**Function:** Supplies an ISO 15924 script identifier for a token.
**Notes:** For example, the identifier for Latin script is "Latn" and the identifier for Simplified Chinese script
is "Hans". The identifier "Zyyy" is used if a specific script cannot be determined.

107.1.39 **NSLinguisticTagSchemeTokenType as String**

**Function:** Classifies tokens according to their broad type: word, punctuation, or whitespace.  
**Notes:**  
To classify tokens by a more specific type, for example, distinguishing words between nouns and verbs, use the NSLinguisticTagSchemeLexicalClass scheme.

107.1.40 **NSLinguisticTagSentenceTerminator as String**

**Function:** One of the lexical classes.  
**Notes:** This token is a sentence terminator.

107.1.41 **NSLinguisticTagVerb as String**

**Function:** One of the lexical classes.  
**Notes:** This token is a verb.

107.1.42 **NSLinguisticTagWhitespace as String**

**Function:** One of the token types.  
**Notes:** The token indicates white space of any sort.

107.1.43 **NSLinguisticTagWord as String**

**Function:** One of the token types.  
**Notes:** The token indicates a word.
107.1.44 NSLinguisticTagWordJoiner as String

**Function:** One of the lexical classes.
**Notes:** This token is a word joiner.

107.1.45 orthographyAtIndex(charIndex as integer, byref effectiveRange as NSRangeMBS) as NSOrthographyMBS

**Function:** Returns the orthography at the index and also returns the effective range.
**Example:**
```
Dim TagScheme As String = NSLinguisticTaggerMBS.NSLinguisticTagSchemeLanguage
Dim TagSchemes() As String = Array(TagScheme)
Dim t As New NSLinguisticTaggerMBS(TagSchemes)

T.Text = "Hallo Leute"

Dim tokenRange As NSRangeMBS
Dim sentenceRange As NSRangeMBS
Dim tag As String = t.tagAtIndex(0, TagScheme, tokenRange, sentenceRange)

Dim effectiveRange As NSRangeMBS
Dim o As NSOrthographyMBS = t.orthographyAtIndex(0, effectiveRange)

MsgBox o.dominantLanguage + " " + o.dominantScript
```
**Notes:**
- charIndex: The character index to begin examination.
- effectiveRange: An NSRangeMBS that, upon completion, contains the range of the orthography containing charIndex.

Returns the orthography for the location.

107.1.46 sentenceRangeForRange(range as NSRangeMBS) as NSRangeMBS

**Function:** Returns the range of a sentence containing the specified range.
**Notes:**
- charRange: The character range.
Returns the range of the sentence.

This is a convenience method for calling `tokenRangeAtIndex`, passing the `NSLinguisticTaggerUnitSentence` unit and the first position of the provided range.

### 107.1.47 `setOrthography(orthography as NSOrthographyMBS, range as NSRangeMBS)`

**Function:** Sets the orthography for the specified range.

**Notes:**
- `orthography`: The orthography.
- `charRange`: The range.

If the orthography of the linguistic tagger is not set, it will determine it automatically from the contents of the text. You should call this method only if you know the orthography of the text by some other means.

### 107.1.48 `tagAtIndex(charIndex as Integer, Scheme as String, byref tokenRange as NSRangeMBS, byref sentenceRange as NSRangeMBS) as String`

**Function:** Returns a tag for a single scheme at the specified character position.

**Notes:**
- `charIndex`: The position of the initial character.
- `tagScheme`: The tag scheme. See `NSLinguisticTagScheme` for the possible values.
- `tokenRange`: The token range for output.
- `sentenceRange`: The range of the sentence for output.

Returns the tag for the requested tag scheme, or nil. If a tag is returned, this function returns by reference the range of the token to `tokenRange`, and the range of the enclosing sentence to `sentenceRange`, if applicable.

This is a convenience method for calling `tagAtIndex` and passing `NSLinguisticTaggerUnitWord` as the linguistic unit.

Available in macOS 10.7 and newer.

See also:

- 107.1.49 `tagAtIndex(charIndex as Integer, unit as Integer, Scheme as String, byref tokenRange as NSRangeMBS) as String`
107.1.49  tagAtIndex(charIndex as Integer, unit as Integer, Scheme as String, byref tokenRange as NSRangeMBS) as String

Function: Returns a tag for a single scheme for a given linguistic unit at the specified character position.  
Notes:  
charIndex: The position of the initial character.  
unit: The linguistic unit. See NSLinguisticTaggerUnit for possible values.  
tagScheme: The tag scheme. See NSLinguisticTagScheme for possible values.  
tokenRange: The token range for output.  

Returns the tag for the requested tag scheme and linguistic unit, or nil. If a tag is returned, this function returns by reference the range of the token to tokenRange.  

Available in macOS 10.13 and newer.  
See also:  

• 107.1.48 tagAtIndex(charIndex as Integer, Scheme as String, byref tokenRange as NSRangeMBS, byref sentenceRange as NSRangeMBS) as String

107.1.50  tagForString(text as string, charIndex as Integer, unit as Integer, Scheme as String, orthography as NSOrthographyMBS, byref tokenRange as NSRangeMBS) as String

Function: Returns a tag for a single scheme for a given linguistic unit at the specified character position in a string.  
Notes:  
charIndex: The position of the initial character.  
unit: The linguistic unit. See NSLinguisticTaggerUnit for possible values.  
tagScheme: The tag scheme. See NSLinguisticTagScheme for possible values.  
tokenRange: The token range for output.  

Returns the tag for the requested tag scheme and linguistic unit, or nil. If a tag is returned, this function returns by reference the range of the token to tokenRange.  

This is a convenience method for initializing a linguistic tagger, setting the string property, and calling the tagForString method. If you analyze the same string more than once, you should create a linguistic tagger object instead of calling this method.
107.1.51 tagSchemes as String()

**Function:** Returns the tag schemes configured for this linguistic tagger.
**Notes:** For possible values, see NSLinguisticTagScheme.

107.1.52 TagsForString(text as string, range as NSRangeMBS, unit as Integer, Scheme as String, options as Integer, orthography as NSOrthographyMBS) as NSLinguisticValueMBS()

**Function:** Returns an array of linguistic tags and token ranges.
**Notes:**
- range: The range from which to return tags.
- unit: The linguistic unit. See NSLinguisticTaggerUnit for possible values.
- tagScheme: The tag scheme. See NSLinguisticTagScheme for possible values.
- options: The linguistic tagger options to use. See NSLinguisticTaggerOptions for possible values.

An array of the values in the requested range (tag and tokenRange set).

When the returned array contains an entry that doesn’t have a corresponding tag scheme, that entry is an empty string ("").
This is a convenience method for initializing a linguistic tagger, setting the string property, and calling the tagsInRange method. If you analyze the same string more than once, you should create a linguistic tagger object instead of calling this method.

Available in macOS 10.13 and newer.

107.1.53 tagsInRange(range as NSRangeMBS, Scheme as String, options as Integer) as NSLinguisticValueMBS()

**Function:** Returns an array of linguistic tags and token ranges.
**Notes:**
- range: The range to analyze.
- tagScheme: The tag scheme. For possible values, see NSLinguisticTagScheme.
- options: The linguistic tagger options to use. See NSLinguisticTaggerOptions for possible values.

Available in macOS 10.7 and newer.
See also:
CHAPTER 107. LINGUISTIC

107.1.54  tagsInRange(range as NSRangeMBS, unit as Integer, Scheme as String, options as Integer) as NSLinguisticValueMBS()

107.1.54  tagsInRange(range as NSRangeMBS, unit as Integer, Scheme as String, options as Integer) as NSLinguisticValueMBS()

Function: Returns an array of linguistic tags and token ranges.
Notes:
range: The range to analyze.
unit: The linguistic unit. For possible values, see NSLinguisticTaggerUnit.
tagScheme: The tag scheme. For possible values, see NSLinguisticTagScheme.
options: The linguistic tagger options to use. See NSLinguisticTaggerOptions for possible values.
Available in macOS 10.13 and newer.

Returns all tokens intersecting a given range, supplying tags and ranges. The tagger segments the string
into sentences and tokens as necessary, and return those ranges along with a tag for any scheme in its array
of tag schemes. For example, if the tag scheme is NSLinguisticTagSchemeLexicalClass, the tags specify the
part of speech (for word tokens) or the type of whitespace or punctuation (for whitespace or punctuation
tokens). If the tag scheme is NSLinguisticTagSchemeLemma, the tags specify the stem form of the word (if
known) for each word token.
See also:

• 107.1.53 tagsInRange(range as NSRangeMBS, Scheme as String, options as Integer) as NSLinguisticValueMBS()

107.1.55  tokenRangeAtIndex(charIndex as Integer, Unit as Integer) as NSRangeMBS

Function: Returns the range of the linguistic unit containing the specified character index.
Notes:
charIndex: The character index to begin examination.
unit: The linguistic unit. For possible values, see NSLinguisticTaggerUnit.

Returns the range of the substring for the linguistic unit.
Available in macOS 10.13 and newer.
107.1.56 Properties

107.1.57 dominantLanguage as String

Function: Returns the dominant language of the string set for the linguistic tagger.
Notes:
The BCP-47 tag identifying the dominant language of the string, or the tag "und" if a specific language cannot be determined.
Available in macOS 10.13 and newer.
(Read only property)

107.1.58 Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)

107.1.59 Text as String

Function: The string being analyzed by the linguistic tagger.
Notes: (Read and Write property)

107.1.60 Constants

107.1.61 NSLinguisticTaggerJoinNames = 16

MBS MacFrameworks Plugin, Plugin Version: 17.3. Function: One of the option constants.
Notes: Typically, multiple-word names will be returned as multiple tokens, following the standard tokenization practice of the tagger. If this option is set, then multiple-word names will be joined together and returned as a single token.

107.1.62 NSLinguisticTaggerOmitOther = 8

MBS MacFrameworks Plugin, Plugin Version: 17.3. Function: One of the option constants.
Notes: Omit tokens of type NSLinguisticTagOther (non-linguistic items, such as symbols).
107.1.63 \textbf{NSLinguisticTaggerOmitPunctuation} = 2

MBS MacFrameworks Plugin, Plugin Version: 17.3. \textbf{Function}: One of the option constants. \textbf{Notes}: Omit tokens of type \textit{NSLinguisticTagPunctuation} (all punctuation).

107.1.64 \textbf{NSLinguisticTaggerOmitWhitespace} = 4

MBS MacFrameworks Plugin, Plugin Version: 17.3. \textbf{Function}: One of the option constants. \textbf{Notes}: Omit tokens of type \textit{NSLinguisticTagWhitespace} (whitespace of all sorts).

107.1.65 \textbf{NSLinguisticTaggerOmitWords} = 1

MBS MacFrameworks Plugin, Plugin Version: 17.3. \textbf{Function}: One of the option constants. \textbf{Notes}: Omit tokens of type \textit{NSLinguisticTagWord} (items considered to be words).

107.1.66 \textbf{NSLinguisticTaggerUnitDocument} = 3

MBS MacFrameworks Plugin, Plugin Version: 17.3. \textbf{Function}: One of the constants for a tagger unit. \textbf{Notes}: The document in its entirety.

107.1.67 \textbf{NSLinguisticTaggerUnitParagraph} = 2

MBS MacFrameworks Plugin, Plugin Version: 17.3. \textbf{Function}: One of the constants for a tagger unit. \textbf{Notes}: An individual paragraph.

107.1.68 \textbf{NSLinguisticTaggerUnitSentence} = 1

MBS MacFrameworks Plugin, Plugin Version: 17.3. \textbf{Function}: One of the constants for a tagger unit. \textbf{Notes}: An individual sentence.

107.1.69 \textbf{NSLinguisticTaggerUnitWord} = 0

MBS MacFrameworks Plugin, Plugin Version: 17.3. \textbf{Function}: One of the constants for a tagger unit. \textbf{Notes}: An individual word.
class NSLinguisticValueMBS

Function: The class for linguistic tokens.
Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

Methods

Constructor

Properties

sentenceRange as NSRangeMBS

Function: The sentence range.
Notes: Only filled by tagAtIndex when used without unit.
(Read and Write property)

Tag as String

Function: The linguistic tag.
Notes: (Read and Write property)

Text as String

Function: The text for the token.
Notes: (Read and Write property)
107.2.8  **tokenRange as NSRangeMBS**

**Function:** The token range.

**Notes:** (Read and Write property)
107.3. **CLASS NSORTHOGRAPHYMB**S

### 107.3 class NSOrthographyMBS

**107.3.1 class NSOrthographyMBS**

**Function:** A description of the linguistic content of a piece of text typically used for spelling and grammar checking.  
**Notes:**

An NSOrthography instance describes:

- Which scripts the text contains.
- A dominant language and possibly other languages for each of these scripts.
- A dominant script and language for the text as a whole.

Scripts are uniformly described by standard four-letter tags (Latn, Grek, Cyrl, etc.) with the supertags Jpan and Kore typically used for Japanese and Korean text, Hans and Hant for Chinese text; the tag Zyyy is used if a specific script cannot be identified. See Internationalization and Localization Guide for more information on internationalization.

Languages are uniformly described by BCP-47 tags, preferably in canonical form; the tag und is used if a specific language cannot be determined.

### 107.3.2 Methods

**107.3.3 allLanguages as String()**

**Function:** Returns an array containing all the languages appearing in the values of the language map.  
**Notes:** Available in macOS 10.6 and newer.

**107.3.4 allScripts as String()**

**Function:** Returns an array containing all the scripts appearing as keys in the language map.  
**Notes:** Available in macOS 10.6 and newer.
107.3.5  Constructor(script as string, map as dictionary)

Function: Creates and returns an orthography instance with the specified dominant script and language map.
Notes:
script: The dominant script.
map: A dictionary containing the language map.

Returns an initialized orthography object for the specified script and language map.

107.3.6  copy as NSOrthographyMBS

Function: Create a copy of the object.

107.3.7  defaultOrthographyForLanguage(language as string) as NSOrthographyMBS

Function: Queries default orthography for a language.
Notes: Available in macOS 10.13 and newer.

107.3.8  dominantLanguageForScript(script as string) as String

Function: Returns the dominant language for the specified script.
Notes: Available in macOS 10.6 and newer.

107.3.9  languagesForScript(script as string) as String()

Function: Returns the list of languages for the specified script.
Notes: Available in macOS 10.6 and newer.
107.3. CLASS NSORTOGRAPHYMBS

107.3.10 orthographyWithDominantScript(script as string, map as dictionary) as NSOrthographyMBS

Function: Creates and returns an orthography instance with the specified dominant script and language map.
Notes:
script: The dominant script.
map: A dictionary containing the language map.

Returns an initialized orthography object for the specified script and language map.

107.3.11 Properties

107.3.12 dominantLanguage as String

Function: Returns the first language in the list of languages for the dominant script.
Notes:
Available in macOS 10.6 and newer.
(Read only property)

107.3.13 dominantScript as String

Function: The dominant script for the text.
Notes:
The dominant script should be a script tag, such as Latn, Cyrl, etc.
Available in macOS 10.6 and newer.
(Read only property)

107.3.14 Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)
107.3.15 languageMap as Dictionary

**Function:** A dictionary that map script tags to arrays of language tags.

**Notes:**

The dictionarys keys are script tags (such as Latn, Cyrl, and so forth) and whose values are arrays of language tags (such as en, fr, de, etc.)

(Read only property)
Chapter 108

Linux

108.1 class LinuxProcessMBS

108.1.1 class LinuxProcessMBS

MBS Linux Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
The class for querying linux process details.

**Example:**

```vbnet
// show the path of current process
dim myPID as Integer = LinuxProcessMBS.PID
dim myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)

MsgBox myProcess.path
```

**Notes:**
If your app has not enough permission to read info about other app, values may be missing.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

108.1.2 Methods

108.1.3 Constructor

MBS Linux Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
The private constructor.
108.1.4 PID as Integer

MBS Linux Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The Process ID of the current process (your app).

**Example:**

```vba
dim myPID as Integer = LinuxProcessMBS.PID
MsgBox "my process ID is: " + Str(myPID)
```

108.1.5 ProcessByPID(ProcessID as Integer) as LinuxProcessMBS

MBS Linux Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Queries the information for a process with given ID.

**Example:**

```vba
// show the name of current process
dim myPID as Integer = LinuxProcessMBS.PID
dim myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)

MsgBox myProcess.name
```

**Notes:** Returns nil on error.

108.1.6 Processes as LinuxProcessMBS()

MBS Linux Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Returns array with all processes.

**Example:**

```vba
// shows all process names in listbox
dim Processes() as LinuxProcessMBS = LinuxProcessMBS.Processes

for each p as LinuxProcessMBS in Processes
    listbox1.addrow p.name
next
```
108.1. CLASS LINUXPROCESSMBS

108.1.7 Properties

108.1.8 CommandLine as String

MBS Linux Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The command line used to create this process.

**Example:**

```vba
' show the command line of current process
Dim myPID as Integer = LinuxProcessMBS.PID
Dim myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)
MsgBox myProcess.CommandLine
```

**Notes:** (Read only property)

108.1.9 CurrentWorkingDirectory as String

MBS Linux Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The current working directory.

**Example:**

```vba
' show the current working directory of current process
Dim myPID as Integer = LinuxProcessMBS.PID
Dim myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)
MsgBox myProcess.CurrentWorkingDirectory
```

**Notes:** (Read only property)

108.1.10 Environment as Dictionary

MBS Linux Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The environment variables.

**Notes:** (Read only property)

108.1.11 Name as String

MBS Linux Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The name of the process.
Example:

```vbnet
// shows all process names in listbox
dim Processes() as LinuxProcessMBS = LinuxProcessMBS.Processes

for each p as LinuxProcessMBS in Processes
    listbox1.addrow p.name
next
```

Notes: (Read only property)

### 108.1.12 NumberOfThreads as Integer

MBS Linux Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
The number of threads used by this process.
**Notes:** (Read only property)

### 108.1.13 OpenFiles as Dictionary

MBS Linux Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
Queries details about open files.
**Example:**

```vbnet
// show the paths of open files of current process in listbox
dim myPID as Integer = LinuxProcessMBS.PID
dim myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)
dim OpenFiles as Dictionary = myProcess.OpenFiles

for each key as Variant in OpenFiles.keys
    listbox1.addrow OpenFiles.Value(key).StringValue
next
```

**Notes:**
This dictionary contains the file descriptor number as key and the path to the file as text.
(Read only property)
108.1. **CLASS LINUXPROCESSMBS**

108.1.14 **ParentProcessID as Integer**

MBS Linux Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The parent process ID.  
**Notes:** (Read only property)

108.1.15 **Path as String**

MBS Linux Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The path for this process.  
**Example:**
```vbscript
// show the path of current process
dim myPID as Integer = LinuxProcessMBS.PID
dim myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)
MsgBox myProcess.Path
```

**Notes:** (Read only property)

108.1.16 **ProcessID as Integer**

MBS Linux Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The process ID.  
**Notes:** (Read only property)

108.1.17 **StartTime as Date**

MBS Linux Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The start time of the process.  
**Example:**
```vbscript
// show the start time of current process
dim myPID as Integer = LinuxProcessMBS.PID
dim myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)
dim d as date = myProcess.StartTime
MsgBox d.LongDate+" "+d.LongTime
```

**Notes:** (Read only property)
108.1.18  State as String

MBS Linux Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The state of the process.

**Notes:**

Can be Running, Sleeping, Disk Sleep, Zombie, Trace or Writing pages. (Read only property)
108.2. **CLASS LINUXSUMBS**

### 108.2 class LinuxSuMBS

#### 108.2.1 class LinuxSuMBS

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The class to run stuff with sudo.

**Example:**

```vba
dim s as new LinuxSuMBS
s.Command = "/usr/bin/whoami"
s.User = "root"
s.Alert = "Please Root?"
s.Message "Can I install something for you?"
if s.ExecuteSudo then
  MsgBox "OK"
else
  MsgBox s.LastErrorMessage
end if
```

**Notes:** Uses the gksu library.

#### 108.2.2 Methods

##### 108.2.3 AskPassword(prompt as String) as String

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Asks for the password.

**Notes:**

- Returns password.
- Stores error in LastError and LastErrorMessage properties.

See also:

- 108.2.24 AskPassword(prompt as String, byref ErrorCode as Integer, byref ErrorMessage as String) as string

##### 108.2.4 Available as boolean

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Whether the gksu library was found and loaded.

**Notes:**

### 108.2.4 Available as boolean

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Whether the gksu library was found and loaded.

**Notes:**
CHAPTER 108. LINUX

Should return true on linux.
If missing, install the libgksu2-0 library.

108.2.5 ExecuteRun as boolean

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
Runs the command.

**Notes:**
Returns true on success.
Stores error in LastError and LastErrorMessage properties.

108.2.6 ExecuteSu as boolean

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
Runs the command with su.

**Notes:**
Returns true on success.
Stores error in LastError and LastErrorMessage properties.

108.2.7 ExecuteSudo as boolean

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
Runs the command with sudo.

**Example:**

```vba
dim s as new LinuxSuMBS
s.Command = "/usr/bin/whoami"
s.User = "root"
s.Alert = "Please Root?"
s.Message "Can I install something for you?"

if s.ExecuteSudo then
    MsgBox "OK"
else
    MsgBox s.LastErrorMessage
end if
```

**Notes:**
Returns true on success.
Stores error in LastError and LastErrorMessage properties.

### 108.2.8 Properties

#### 108.2.9 Alert as String

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
The alert message.  
**Notes:** (Read and Write property)

#### 108.2.10 AlwaysAskPassword as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
Whether to always ask for a password.  
**Notes:** (Read and Write property)

#### 108.2.11 Command as String

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
The command will run with the target user.  
**Notes:** (Read and Write property)

#### 108.2.12 Debug as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
Whether debugging information should be printed.  
**Notes:** (Read and Write property)

#### 108.2.13 Description as String

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:**
The description text.  
**Notes:** (Read and Write property)
108.2.14 ExitCode as Integer

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The exit code of the last command run.  
**Notes:** (Read and Write property)

108.2.15 Grab as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Grab?  
**Notes:** (Read and Write property)

108.2.16 Handle as Integer

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The internal object reference.  
**Notes:** (Read and Write property)

108.2.17 KeepEnvironment as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Should the environment be kept as it is?  
**Notes:**  
Defaults to true. Notice that setting this to false may cause the X authorization stuff to fail.  
(Read and Write property)

108.2.18 LastError as Integer

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The last error code.  
**Notes:** (Read and Write property)

108.2.19 LastErrorMessage as String

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The last error message.
108.2.20 LoginShell as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The shell in which the command will be run be a login shell?

**Notes:**
Finds out if the shell created by the underlying su process will be a login shell.
(Read and Write property)

108.2.21 Message as String

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The message text.

**Notes:** (Read and Write property)

108.2.22 User as String

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** What user the command will be run as.

**Notes:**
The default is root, but you can run the command as any user.
(Read and Write property)

108.2.23 Events

108.2.24 AskPassword(prompt as String, byref ErrorCode as Integer, byref ErrorMessage as String) as string

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The event to ask for password.

**Notes:**
If you prefer your own dialog.
Return password or set error parameters.
See also:
- 108.2.3 AskPassword(prompt as String) as String
108.2.25 PasswordNoNeeded

MBS Linux Plugin, Plugin Version: 16.1, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** No password is needed.

108.2.26 Constants

108.2.27 ErrorCanceled = 11

MBS Linux Plugin, Plugin Version: 16.1. **Function:** One of the error codes. **Notes:** The user cancelled.

108.2.28 ErrorChildFailed = 9

MBS Linux Plugin, Plugin Version: 16.1. **Function:** One of the error codes. **Notes:** Child failed.

108.2.29 ErrorExec = 5

MBS Linux Plugin, Plugin Version: 16.1. **Function:** One of the error codes. **Notes:** Execution failed.

108.2.30 ErrorFork = 4

MBS Linux Plugin, Plugin Version: 16.1. **Function:** One of the error codes. **Notes:** Forking failed.

108.2.31 ErrorHelper = 1

MBS Linux Plugin, Plugin Version: 16.1. **Function:** One of the error codes. **Notes:** The helper tool failed.
108.2.32  **ErrorNoCommand = 2**

MBS Linux Plugin, Plugin Version: 16.1. **Function:** One of the error codes. **Notes:** Missing command.

108.2.33  **ErrorNoPassword = 3**

MBS Linux Plugin, Plugin Version: 16.1. **Function:** One of the error codes. **Notes:** Missing password.

108.2.34  **ErrorNotAllowed = 10**

MBS Linux Plugin, Plugin Version: 16.1. **Function:** One of the error codes. **Notes:** Not allowed.

108.2.35  **ErrorPipe = 6**

MBS Linux Plugin, Plugin Version: 16.1. **Function:** One of the error codes. **Notes:** Pipe failed.

108.2.36  **ErrorPiperead = 7**

MBS Linux Plugin, Plugin Version: 16.1. **Function:** One of the error codes. **Notes:** Pipe read error.

108.2.37  **ErrorWrongAutoPass = 12**

MBS Linux Plugin, Plugin Version: 16.1. **Function:** One of the error codes. **Notes:** Wrong auto Password.

108.2.38  **ErrorWrongPass = 8**

MBS Linux Plugin, Plugin Version: 16.1. **Function:** One of the error codes. **Notes:** Wrong Password
108.2.39  **ErrorXauth = 0**

MBS Linux Plugin, Plugin Version: 16.1. **Function:** One of the error codes.  
**Notes:** XAuth failed.
Chapter 109

Login Items

109.1 class LoginItemsMBS

109.1.1 class LoginItemsMBS

MBS MacOSX Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class to handle login items on Mac OS X.

**Notes:**

After creating a new object, the constructor may fail sometimes while updating the list. lasterror is -609 in that case. This happens most likely just after login when the system events process is not yet ready. In that case, let your app wait a few seconds and try again.

For newer Mac OS X versions, please use LSSharedFileListMBS class instead.

109.1.2 Methods

109.1.3 AddFile(file as FolderItem, hidden as boolean=false) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Adds a file to the login items.

**Notes:**

Returns true on success.

For newer Mac OS X versions, please use LSSharedFileListMBS class instead.
109.1.4 AddURL(url as string, hidden as boolean=false) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Adds an url to the item list.

**Notes:**
Returns true on success.

For newer Mac OS X versions, please use LSSharedFileListMBS class instead.

109.1.5 DisplayName(index as Integer) as String

MBS MacOSX Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The display name of the item with the given index.

**Example:**
```pascal
dim l as LoginItemsMBS
l=new LoginItemsMBS
MsgBox l.displayName(0) // shows name of first item
```

**Notes:** The display name may be localized.

109.1.6 File(index as Integer) as FolderItem

MBS MacOSX Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The file reference of the item with the given index.

**Notes:** Index is from 0 to count-1.

109.1.7 IsHidden(index as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the item with the given index should be hidden after launch.

**Notes:**
Index is from 0 to count-1.

This value does not work in Mac OS X 10.4, but works in 10.5.
109.1. CLASS LOGINITEMSMBS

109.1.8 Name(index as Integer) as String

MBS MacOSX Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the item with the given index.

**Example:**
```vbnet
dim l as LoginItemsMBS
l=new LoginItemsMBS
MsgBox l.Name(0) // shows name of first item
```

**Notes:** This is the file name. To get the name for display, use displayname.

109.1.9 OldAddLoginItem(file as folderitem,hide as boolean,allusers as boolean) as boolean

MBS MacOSX Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Adds a file to the loginitems list.

**Example:**
```vbnet
dim f as folderItem
dim r as new LoginItemsMBS

f=app.applicationFileMBS
if r.OldAddLoginItem(f,false,false) then
  MsgBox f.displayName+" has been added to the login items!"
else
  MsgBox "Something went wrong."
end if
```

**Notes:**
This is the old method which edits the preferences file directly.
Do not use it unless you really need to. The new functions in this class handle login items using a system service and will be safer for future releases of Mac OS X.

hide matches the checkbox in the loginitems list.
allusers decides whether to set it for all user or the current one.

This function will add a LoginItem to the list of LoginItems when called. The properties given to the new LoginItem are passed when calling the function. Note that *no* check is made when adding the LoginItem to ensure that the path points to a valid application. Note that the LoginItem Is always added to the *end*
CHAPTER 109. LOGIN ITEMS

of the list of LoginItems.

First Parameter (appfile):
The absolute path of the application to be launched expressed as a Realbasic folderitem.

Second Parameter (hide):
A value representing if you want your application to be hidden at login time. True if you want the application to be hidden after it is launched. If you want the application to show up normally use be hidden use false.

Third Parameter (allusers):
A constant which represents which users preferences we want to change. In this case there are two alternatives: False which changes the preferences of the current user. The second alternative is True. The kAllUsers LoginItems are launched for all users on the system. You must be root or admin to use the kAllUsers option.

Function Returns:
This function returns a boolean value representing if the function was successful. The function returns true if the LoginItem was successfully added. False if otherwise. No additional error codes are returned.

Other Notes:
This code doesn’t work properly if more than one application is attempting to write to the LoginItems preference at once. Also no check is made to ensure that what you are adding to the LoginItem list isn’t a duplicate. If there is a duplicate however only one instance of the application is launched.

109.1.10 OldCountOfLoginItems(allusers as boolean) as Integer

MBS MacOSX Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: This function will return the number of LoginItems for the user requested.

Example:

// Add this code for synchronization:

dim cf as CFPrefsMBS

dim b as Boolean

cf=new CFPrefsMBS

b=cf.AppSynchronize(cf.kCFPreferencesCurrentApplication)

// Count items

dim r as new LoginItemsMBS
msgbox str(r.OldCountOfLoginItems(false))

Notes:
This is the old method which edits the preferences file directly.
Do not use it unless you really need to. The new functions in this class handle login items using a system service and will be safer for future releases of Mac OS X.

This function returns the number of LoginItems for the user requested as a signed integer.

109.1.11 OldLoginItemPropertyAtIndex(what as Integer, index as Integer, allusers as boolean) as string

Example:

```vbs
dim i as Integer
dim c as Integer
dim l as Integer
dim path,name,hide as string
dim r as new LoginItemsMBS

c=r.OldCountOfLoginItems(false)
MsgBox str(c)+" Login items found for this user."

c=c-1
for i=0 to c
name=r.OldLoginItemPropertyAtIndex(2,i,false)
hide=r.OldLoginItemPropertyAtIndex(3,i,false)
path=r.OldLoginItemPropertyAtIndex(1,i,false)
list.addrow name
l=list.lastIndex
list.cell(l,1)=hide
list.cell(l,2)=path
list.cell(l,3)=str(i)
next
```

Notes:
This is the old method which edits the preferences file directly.
Do not use it unless you really need to. The new functions in this class handle login items using a system service and will be safer for future releases of Mac OS X.

Index is from 0 to count-1.
What can be 1 for the absolute path of the LoginItem, 2 for the LoginItem name or 3 for a string with "false" or "true" for the hiding option.

Returns "" on any error.

109.1.12 OldRemoveLoginItem(file as folderitem, allusers as boolean) as boolean

Example:

dim f as folderItem
dim r as new LoginItemsMBS

f=app.applicationFileMBS
if r.OldRemoveLoginItem(f,false) then
msgBox f.displayName+" has been added to the login items!"
else
msgBox "Something went wrong."
end if

Notes:
This is the old method which edits the preferences file directly.
Do not use it unless you really need to. The new functions in this class handle login items using a system service and will be safer for future releases of Mac OS X.

The items are compared by path.
Returns true if item was found and the new list is written correctly to disk.
allusers decides whether to set it for all user or the current one.

109.1.13 OldRemoveLoginItemAtIndex(index as Integer, allusers as boolean) as boolean

Notes:
109.1. CLASS LOGINITEMSMBS

This is the old method which edits the preferences file directly.
Do not use it unless you really need to. The new functions in this class handle login items using a system
service and will be safer for future releases of Mac OS X.

Index is from 0 to count-1.

109.1.14 Remove(index as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Removes the item from the login items list.
Notes:
Index is from 0 to count-1.
The count property is updated.

109.1.15 RemoveFile(file as FolderItem) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Removes the items matching this file reference from the list.
Notes:
Returns true on success.
Count is updated.

109.1.16 RemoveURL(url as string) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Removes the item matching the given URL.
Notes: Returns true on success.

109.1.17 Update

MBS MacOSX Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:
Reloads the list of items.
Notes:
Update is done after each modification method and in the constructor.
You should never need to call this method.
109.1.18  **URL(index as Integer) as String**

MBS MacOSX Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The URL of the item with the given index.  
**Notes:** Index is from 0 to count-1.

109.1.19  **Properties**

109.1.20  **Count as Integer**

MBS MacOSX Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of items in the list currently.  
**Notes:** (Read and Write property)

109.1.21  **Handle as Integer**

MBS MacOSX Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The handle to the NSArray Reference used internally for the item list.  
**Notes:** (Read and Write property)

109.1.22  **Lasterror as Integer**

MBS MacOSX Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The last error code.  
**Notes:**  
Value can be 0 for success or -1 for a parameter error in the plugins or some other Mac OS X error code. (Read and Write property)
109.2. CLASS LSSHAREDFILELISTITEMMBS

109.2 class LSSharedFileListItemMBS

109.2.1 class LSSharedFileListItemMBS

Function: The class for a list item.
Notes: Requires Mac OS X 10.5.

109.2.2 Methods

109.2.3 DisplayName as string

Function: Obtain item’s display name.
Example:

dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kRecentDocumentItems)

if l.Handle=0 then
  MsgBox "Failed to get list."
else
  dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
  dim lines(-1) as string

  for each x as LSSharedFileListItemMBS in a
    lines.append x.DisplayName
  next

  MsgBox Join(lines, EndOfLine)
end if

109.2.4 Icon as Variant

Function: Obtain item’s icon.
Notes: Returns an IconMBS object.
### 109.2.5 ID as UInt32

**Function:** Obtain unique item id.

**Example:**

```vbnet
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

if l.Handle=0 then
    MsgBox "Failed to get list."
else
    dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
    dim lines(-1) as string

    for each x as LSSharedFileListItemMBS in a
        lines.append x.DisplayName+" : " + str(x.ID)
    next

    MsgBox Join(lines, EndOfLine)
end if
```

### 109.2.6 Resolve(flags as UInt32) as folderitem

**Function:** Resolve item and return its folderitem.

**Example:**

```vbnet
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kRecentDocumentItems)

if l.Handle=0 then
    MsgBox "Failed to get list."
else
    dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
    dim lines(-1) as string

    for each x as LSSharedFileListItemMBS in a
        lines.append x.Resolve(0).AbsolutePath
    next

    MsgBox Join(lines, EndOfLine)
end if
```

**Notes:** Pass values like 0, kNoUserInteraction, kDoNotMountVolumes or kDoNotMountVolumes+kNoUser-Interaction.
109.2.7 ResolveURL(flags as UInt32) as string

Function: Resolve item and return its URL.
Example:

```vbscript
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kRecentDocumentItems)
if l.Handle=0 then
    MsgBox "Failed to get list."
else
    dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
    dim lines(-1) as string
    for each x as LSSharedFileListItemMBS in a
        lines.append x.ResolveURL(x.kNoUserInteraction)
    next
    MsgBox Join(lines, EndOfLine)
end if
```

Notes: Pass values like 0, kNoUserInteraction, kDoNotMountVolumes or kDoNotMountVolumes+kNoUser-Interaction.

109.2.8 Properties

109.2.9 Handle as Integer

Function: The internal reference to the item.
Notes: (Read and Write property)

109.2.10 Lasterror as Integer

Function: The last error code.
Notes: (Read and Write property)
109.2.11 **ItemHidden as boolean**

**Function:** Is item hidden in UI?

**Example:**

```vba
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)
if l.Handle=0 then
    MsgBox "Failed to get list."
else
    dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
    dim lines(-1) as string
    for each x as LSSharedFileListItemMBS in a
        lines.append x.DisplayName+": "+str(x.ItemHidden)
    next
    MsgBox Join(lines, EndOfLine)
end if
```

**Notes:** (Read and Write computed property)

---

109.2.12 **LoginItemHidden as boolean**

**Function:** Should UI hide login item's window?

**Example:**

```vba
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)
if l.Handle=0 then
    MsgBox "Failed to get list."
else
    dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
    dim lines(-1) as string
    for each x as LSSharedFileListItemMBS in a
        lines.append x.DisplayName+": "+str(x.LoginItemHidden)
    next
    MsgBox Join(lines, EndOfLine)
end if
```
Notes:
Requires Mac OS X 10.6.
(Read and Write computed property)

109.2.13 Constants

109.2.14 kDoNotMountVolumes = 2

MBS MacFrameworks Plugin, Plugin Version: 9.8. Function: One of the flags for resolve. Notes: do not mount volumes during resolution

109.2.15 kNoUserInteraction = 1

MBS MacFrameworks Plugin, Plugin Version: 9.8. Function: One of the flags for resolve. Notes: no user interaction during resolution
109.3 class LS\texttt{SharedFileListMBS}

109.3.1 class LS\texttt{SharedFileListMBS}

Function: The shared list class.

Notes:
The shared file list API is for sharing and storing list of references to file system objects. The shared file
list is a persistent list of objects, where each item has assigned display name, icon, and url as well as other
optional properties.
Each list can also have various properties attached.

Requires Mac OS X 10.5.

109.3.2 Methods

109.3.3 Constructor(type as Integer)

Function: Creates shared file list reference to be used for changing list and reading its various properties.

Notes: type: A constant indicating list type to create. See the constants in this class.

109.3.4 GetSeedValue as UInt32

Function: Returns seed value of the shared list.

109.3.5 InsertFile(AfterItem as LS\texttt{SharedFileListItemMBS}, DisplayName as string, Icon as object, file as folderitem) as LS\texttt{SharedFileListItemMBS}

Function: Insert item into shared list.

Example:

```plaintext
// Add iPhoto to launch items

// pick app
dim app as FolderItem = SpecialFolder.Applications.Child("iPhoto.app")

// get list object
```
109.3. CLASS LSSHAREDFILELISTMBS

```vbnet
derm l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

    // insert file
dim item as LSSharedFileListItemMBS = l.InsertFile(l.kLSSharedFileListItemBeforeFirst, "Launch iPhoto", nil, app)

    // check error
    if l.Lasterror = 0 then
        MsgBox "OK"
    else
        MsgBox "Failed: "+str(l.Lasterror)
    end if
```

**Notes:**

Inserts item into shared list at specified location. If the item already exists in the list it will be moved and its icon, display name and properties will be updated.

**AfterItem:** Item after which new item has to be inserted. To insert at the beginning of the list use kLSSharedFileListItemBeforeFirst or to insert at the end of the list use kLSSharedFileListItemLast.

**DisplayName:** Display name of the new item. Can be NULL.

**Icon:** IconMBS of the new item. Can be nil.

**File:** FolderItem of the new item.

---

109.3.6 InsertURL(AfterItem as LSSharedFileListItemMBS, DisplayName as string, Icon as object, URL as string) as LSSharedFileListItemMBS

**MBS MacFrameworks Plugin, Plugin Version:** 9.8, **Console & Web:** Yes, **Mac:** Yes, **Win:** No, **Linux:** No.

**Function:** Insert item into shared list.

**Notes:**

Inserts item into shared list at specified location. If the item already exists in the list it will be moved and its icon, display name and properties will be updated.

**AfterItem:** Item after which new item has to be inserted. To insert at the beginning of the list use kLSSharedFileListItemBeforeFirst or to insert at the end of the list use kLSSharedFileListItemLast.

**DisplayName:** Display name of the new item. Can be "".

**Icon:** IconMBS object for the icon. Can be nil.

**URL:** URL of the new item.
109.3.7 \textbf{kLSSharedFileListItemBeforeFirst} as \textbf{LSSharedFileListItemMBS}

\textbf{Function:} A virtual item reference for inserting new item at beginning of the list.
\textbf{Example:}

```vbs
dim n as LSSharedFileListItemMBS = LSSharedFileListMBS.kLSSharedFileListItemBeforeFirst
MsgBox str(n.Handle) // a special handle value for this virtual item: 1
```

109.3.8 \textbf{kLSSharedFileListItemLast} as \textbf{LSSharedFileListItemMBS}

\textbf{Function:} A virtual item reference for inserting new item at end of the list.
\textbf{Example:}

```vbs
dim n as LSSharedFileListItemMBS = LSSharedFileListMBS.kLSSharedFileListItemLast
MsgBox str(n.Handle) // a special handle value for this virtual item: 2
```

109.3.9 \textbf{Move(item} as \textbf{LSSharedFileListItemMBS, MoveAfterItem} as \textbf{LSSharedFileListItemMBS)}

\textbf{Function:} Moves item at specified location.
\textbf{Notes:}

- \textbf{item}: Item to move.
- \textbf{MoveAfterItem}: New icon of the new item. Use \textbf{kLSSharedFileListItemBeforeFirst} and \textbf{kLSSharedFileListItemLast} to move at the beginning or the end of the shared list.

109.3.10 \textbf{Remove(item} as \textbf{LSSharedFileListItemMBS)}

\textbf{Function:} Remove item from shared list.
\textbf{Example:}

```vbs
// Remove iPhoto from launch items

// get list object
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

// get items
```
109.3. CLASS LSSHAREDFILELISTMBS

\[ \text{dim items(-1) as LSSharedFileListItemMBS = l.Snapshot} \]

\[ \text{// check all items} \]
\[ \text{for each item as LSSharedFileListItemMBS in items} \]
\[ \text{dim file as FolderItem = item.Resolve(LSSharedFileListItemMBS.kNoUserInteraction)} \]

\[ \text{if file<>nil then} \]
\[ \text{if file.Name = "iPhoto.app" then} \]
\[ \text{l.Remove item} \]

\[ \text{if l.Lasterror = 0 then} \]
\[ \text{MsgBox "OK"} \]
\[ \text{else} \]
\[ \text{MsgBox "Error: "+str(l.Lasterror)} \]
\[ \text{end if} \]
\[ \text{Return} \]
\[ \text{end if} \]
\[ \text{end if} \]

\[ \text{next} \]

109.3.11 RemoveAllItems

**Function:** Remove all items from shared list.

109.3.12 SetAuthorization(handle as Integer)

**Function:** Set authorization reference for the shared list.
**Notes:** Before attempting to perform a privileged operation on the shared list caller must authorize appropriate rights. For example, modifying kGlobalLoginItems list requires "system.global-login-items." right authorized.

109.3.13 Snapshot as LSSharedFileListItemMBS()

**Function:** Creates snapshot array, which is list of all items at the moment this method was called.
See also:
- 109.3.14 Snapshot(byref seed as UInt32) as LSSharedFileListItemMBS()
109.3.14  **Snapshot(byref seed as UInt32) as LSSharedFileListItemMBS()**

**Function:** Creates snapshot array, which is list of all items at the moment this method was called.
**Notes:** seed: Returned seed value at which snapshot was taken.
See also:

- 109.3.13 Snapshot as LSSharedFileListItemMBS()

109.3.15  **Properties**

109.3.16  **Handle as Integer**

**Function:** The internal reference to the list.
**Notes:** (Read and Write property)

109.3.17  **Lasterror as Integer**

**Function:** The last error code.
**Notes:** (Read and Write property)

109.3.18  **RecentItemsMaxAmount as Integer**

**Function:** Maximum amount of items in the list.
**Notes:** (Read and Write computed property)

109.3.19  **VolumesComputerVisible as boolean**

**Function:** Is Computer item visible in favorite volumes list?
**Notes:** (Read and Write computed property)
109.3. **CLASS LSSHAREDFILELISTMBS**

109.3.20 **VolumesIDiskVisible as boolean**

**Function:** Is iDisk item visible in favorite volumes list.  
**Notes:** (Read and Write computed property)

109.3.21 **VolumesNetworkVisible as boolean**

**Function:** Is Network item visible in favorite volumes list?  
**Notes:** (Read and Write computed property)

109.3.22 **Events**

109.3.23 **Changed**

**Function:** The event called whenever the list is changed by an application.

109.3.24 **Constants**

109.3.25 **kFavoriteItems = 2**

**Function:** One of the list type constants.  
**Example:**

```vbnet
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kFavoriteItems)
if l.Handle=0 then
    MsgBox "Failed to get list."
else
    dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
    dim lines(-1) as string
    for each x as LSSharedFileListItemMBS in a
        lines.append x.DisplayName
    next
    MsgBox Join(lines, EndOfLine)
end if
```
109.3.26  \( \textit{kFavoriteVolumes} = 1 \)

MBS MacFrameworks Plugin, Plugin Version: 9.8. **Function:** One of the list type constants.

**Example:**

```vbscript
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kFavoriteVolumes)
if l.Handle=0 then
    MsgBox "Failed to get list."
else
    dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
    dim lines(-1) as string

    for each x as LSSharedFileListItemMBS in a
        lines.append x.DisplayName
    next

    MsgBox Join(lines, EndOfLine)
end if
```

109.3.27  \( \textit{kGlobalLoginItems} = 7 \)

MBS MacFrameworks Plugin, Plugin Version: 9.8. **Function:** One of the list type constants.

**Example:**

```vbscript
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kGlobalLoginItems)
if l.Handle=0 then
    MsgBox "Failed to get list."
else
    dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
    dim lines(-1) as string

    for each x as LSSharedFileListItemMBS in a
        lines.append x.DisplayName
    next

    MsgBox Join(lines, EndOfLine)
end if
```
109.3. CLASS LSSHAREDFILELISTMBS

109.3.28  kRecentApplicationItems = 3

MBS MacFrameworks Plugin, Plugin Version: 9.8. **Function:** One of the list type constants. **Example:**

dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kRecentApplicationItems)

if l.Handle=0 then
    MsgBox "Failed to get list."
else
    dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
    dim lines(-1) as string

    for each x as LSSharedFileListItemMBS in a
        lines.append x.DisplayName
    next

    MsgBox Join(lines, EndOfLine)
end if

109.3.29  kRecentDocumentItems = 4

MBS MacFrameworks Plugin, Plugin Version: 9.8. **Function:** One of the list type constants. **Example:**

dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kRecentDocumentItems)

if l.Handle=0 then
    MsgBox "Failed to get list."
else
    dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
    dim lines(-1) as string

    for each x as LSSharedFileListItemMBS in a
        lines.append x.DisplayName
    next

    MsgBox Join(lines, EndOfLine)
end if
CHAPTER 109. LOGIN ITEMS

109.3.30  \textbf{kRecentServerItems} = 5

MBS MacFrameworks Plugin, Plugin Version: 9.8. \textbf{Function:} One of the list type constants.
\textbf{Example:}

dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kRecentServerItems)

if l.Handle=0 then
    MsgBox "Failed to get list."
else
    dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
    dim lines(-1) as string

    for each x as LSSharedFileListItemMBS in a
    lines.append x.DisplayName
    next

    MsgBox Join(lines, EndOfLine)
end if

109.3.31  \textbf{kSessionLoginItems} = 6

MBS MacFrameworks Plugin, Plugin Version: 9.8. \textbf{Function:} One of the list type constants.
\textbf{Example:}

dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

if l.Handle=0 then
    MsgBox "Failed to get list."
else
    dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
    dim lines(-1) as string

    for each x as LSSharedFileListItemMBS in a
    lines.append x.DisplayName
    next

    MsgBox Join(lines, EndOfLine)
end if
109.4 module ServiceManagementModuleMBS

109.4.1 module ServiceManagementModuleMBS

MBS MacCF Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
The module with function to add helper to login items. **Notes:** This API seems to be sandbox safe and working with Mac App Store.

109.4.2 Methods

109.4.3 AllJobDictionaries(domain as string) as Dictionary()

MBS MacCF Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Returns the job description dictionaries for all jobs in the given domain. **Notes:**
domain: The desired domain (e.g. kSMDomainSystemLaunchd).

Returns a new array containing all job dictionaries, or empty array if an error occurred. Must be released by the caller. Available in OS X v10.6 and later.

109.4.4 CreateAuthorization as AuthorizationMBS

MBS MacCF Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Creates an authorization for Job operations. **Notes:**
Creates an authorization with kSMRightBlessPrivilegedHelper and flags InteractionAllowed, PreAuthorize and ExtendRights.

109.4.5 JobBless(domain as string, executableLabel as string, auth as AuthorizationMBS, byref error as Variant) as boolean

MBS MacCF Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Submits the executable for the given label as a launchd job. **Notes:**
domain: The job’s domain. Only kSMDomainSystemLaunchd is supported. executableLabel: The label of the privileged executable to install. This label must be one of the keys found in the SMPrivilegedExecutables dictionary in the application’s Info.plist. auth: An authorization reference containing the kSMRightBlessPrivilegedHelper right. Error: An output reference to a CFErrorMBS describing the specific error encountered while submitting the
executable tool, or nil if successful. It is the responsibility of the application to release the error reference.

Returns true if the job was successfully submitted, otherwise false.

JobBless submits the executable for the given label as a launchd job. This function obviates the need for a setuid helper invoked via AuthorizationExecuteWithPrivileges in order to install a launchd plist.

If the job is already installed, success is returned.

In order to use this function the following requirements must be met:

- The calling application and target executable tool must both be signed.
- The calling application’s Info.plist must include a "SMPrivilegedExecutables" dictionary of strings. Each string is a textual representation of a code signing requirement used to determine whether the application owns the privileged tool once installed (i.e. in order for subsequent versions to update the installed version).

Each key of SMPrivilegedExecutables is a reverse-DNS label for the helper tool (must be globally unique).

- The helper tool must have an embedded Info.plist containing an "SMAuthorizedClients" array of strings. Each string is a textual representation of a code signing requirement describing a client which is allowed to add and remove the tool.
- The helper tool must have an embedded launchd plist. The only required key in this plist is the Label key. When the launchd plist is extracted and written to disk, the key for ProgramArguments will be set to an array of 1 element pointing to a standard location. You cannot specify your own program arguments, so do not rely on custom command line arguments being passed to your tool. Pass any parameters via IPC.
- The helper tool must reside in the Contents/Library/LaunchServices directory inside the application bundle, and its name must be its launchd job label. So if your launchd job label is "com.apple.Mail.helper", this must be the name of the tool in your application bundle.

Available in OS X v10.6 and later.

109.4.6 JobDictionary(domain as string, jobLabel as string) as Dictionary

**Notes:**
domain: The job's domain (e.g. kSMDomainSystemLaunchd).
jobLabel: The label identifier for the job to copy.

Return a new dictionary describing the job, or nil if the job could not be found.
Available in OS X v10.6 and later.

109.4.7 JobRemove(domain as string, jobLabel as string, auth as AuthorizationMBS, wait as boolean, byref error as CFErrorMBS) as boolean

Notes:

domain: The job’s domain (e.g. kSMDomainSystemLaunchd).
jobLabel: The label for the job to remove.
auth: An AuthorizationRef containing the kSMRightModifySystemDaemons right if the given domain is kSMDomainSystemLaunchd.
wait: Pass true to block until the process for the given job has exited.
Error: An output reference to a CFErrorMBS describing the specific error encountered while submitting the job dictionary, or nil if no error occurred. It is the responsibility of the application to release the error reference.

Returns true if the job was removed successfully, otherwise false.

JobSubmit removes the job specified by label from the domain. If the job is currently running, it will conditionally block until the running process has exited.
Available in OS X v10.6 and later.

109.4.8 JobSubmit(domain as string, job as Dictionary, auth as AuthorizationMBS, byref error as CFErrorMBS) as boolean

Notes:

domain: The job’s domain (e.g. kSMDomainSystemLaunchd).
job: A dictionary describing a job.
auth: An AuthorizationRef containing the kSMRightModifySystemDaemons right if the given domain is kSMDomainSystemLaunchd.
Error: An output reference to a CFErrorMBS describing the specific error encountered while submitting the job dictionary, or NULL if no error occurred. It is the responsibility of the application to release the error reference.
Returns true if the job was submitted successfully, otherwise false.

JobSubmit submits the given job to the specified domain.
Available in OS X v10.6 and later.

### 109.4.9 kSMDomainSystemLaunchd as string

MBS MacCF Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
System-level launchd domain.

### 109.4.10 kSMDomainUserLaunchd as string

MBS MacCF Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
User-level launchd domain.

### 109.4.11 kSMInfoKeyAuthorizedClients as string

MBS MacCF Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Authorized clients property list key.

### 109.4.12 kSMInfoKeyPrivilegedExecutables as string

MBS MacCF Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Privileged executables property list key.

### 109.4.13 LoginItemRunning(identifier as string) as boolean

MBS MacCF Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Checks whether a login item is running.
**Notes:** Actually checks if there is a record for your helper, so if it crashed, this returns still true.
109.4.14  **LoginItemSetEnabled** *(identifier as string, enabled as boolean) as boolean*

MBS MacCF Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Enable a helper application located in the main application bundle’s Contents/Library/LoginItems directory.

**Notes:**
- **identifier:** The bundle identifier of the helper application bundle.
- **enabled:** The Boolean enabled state of the helper application. This value is effective only for the currently logged in user. If true, the helper application will be started immediately (and upon subsequent logins) and kept running. If false, the helper application will no longer be kept running.

Returns true if the requested change has taken effect.

109.4.15  **RegisterHelperApp** *(name as string, Update as boolean = false) as boolean*

MBS MacCF Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:**
Registers a helper application in the Launch Services database.

**Notes:**
- The app must exist with given name inside the bundle in Library/LoginItems folder.

- **Update:** A Boolean value specifying whether Launch Services should update existing information registered for the application, if any. If this parameter is false, the application will not be registered if it has already been registered previously and its current modification date has not changed from when it was last registered; if the parameter is true, the application’s registered information will be updated even if its modification date has not changed.

Returns true on success and false on failure.
Chapter 110

Mac

110.1 Globals

110.1.1 CurrentAppearanceThemeMBS as string

MBS MacOSX Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns which theme is used on your computer.

**Example:**

```
msgbox "You are using this theme: " + CurrentAppearanceThemeMBS
```

**Notes:**

Possible values:
- com.apple.theme.appearance.platinum
- com.apple.theme.appearance.aqua
- com.apple.theme.appearance.aqua.blue
- com.apple.theme.appearance.aqua.graphite

Returns "" on any error.

Available in CarbonLib 1.4 and later. Available in Mac OS X 10.1 and later.

On Windows or Linux an empty string is returned.

110.1.2 DisableAquaPrefMenuMBS

MBS MacOSX Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Disables the preference menu item.

**Example:**

```
16337
```
DisjaeAquaPenMenMBS

Notes: In RB 4.5 use the PrefMenuItem instead of this function.

110.1.3 EnableAquaPrefMenuMBS

MBS MacOSX Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Enables the preference menu item.

Example:

EnableAquaPrefMenuMBS

Notes:

In RB 4.5 use the PrefMenuItem instead of this function.

Use some code like this in the Applications HandleEventHandler:

# if targetcarbon // Doesn’t make sense else

// Check if it is the preferences call

if eventClass == "aevt" and eventID == "pref" then

prefdialog.showmodal 'do your stuff here

return true // We handled that Apple Event

end if

# endif

110.1.4 SetDesktopPictureMBS(file as folderitem) as Integer

Notes:

File must be a valid folderitem for an existing file to define a new desktop picture.

Returns a Mac OS or Windows error code or -1 if the function is not available.
You can use file=nil to remove the desktop wallpaper on Windows.

110.2 class SummaryMBS

110.2.1 class SummaryMBS

*Example:*

```vbnet
dim s as new SummaryMBS("Hello World. This is just a test.")
MsgBox s.SentenceSummaryString(1)
```

110.2.2 Methods

110.2.3 Constructor(text as string)

*Example:*

```vbnet
dim s as new SummaryMBS("Hello World. This is just a test.")
MsgBox s.SentenceSummaryString(1)
```

*Notes:*

text: The text string that you want to summarize.
On success the handle property is not zero.

The constructor creates a summarization object that pre-analyzes a text string to support fast summarization.
Available in Mac OS X v10.4 and later.
110.2.4ParagraphAtIndex(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: Gets a specified paragraph from the text in a summarization object.  
**Example:**

```vba
dim s as new SummaryMBS("Hello World. This is just a test.")
MsgBox s.ParagraphAtIndex(0)
```

**Notes:**

index: The ordinal number of the paragraph in the original text, with the first paragraph designated by zero (this function uses zero-based indexing).

Return a string containing the specified paragraph, or "" on failure.

Available in Mac OS X v10.4 and later.

110.2.5ParagraphIndexOfParagraphs as Integer()

MBS MacOSX Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: Returns the array containing the ordinal number for each paragraph in the original text.

110.2.6ParagraphIndexOfSentences as Integer()

MBS MacOSX Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: Returns an array of indexes to map a sentence index to it's paragraph index.

110.2.7ParagraphSummaryString(numParagraphs as Integer) as string

MBS MacOSX Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function**: Gets a text string consisting of a summary with, at most, the requested number of paragraphs.  
**Notes:**

numParagraphs: The maximum number of paragraphs you want in the summary.  
Returns a string containing the requested summary.  
Available in Mac OS X v10.4 and later.
110.2. **CLASS SUMMARYMBS**

110.2.8 **RankOrderOfParagraphs as Integer()**

MBS MacOSX Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array with the summarization relevance rank of each paragraph in the original text.

110.2.9 **RankOrderOfSentences as Integer()**

MBS MacOSX Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array with the summarization relevance rank of each sentence in the original text.

110.2.10 **SentenceAtIndex(index as Integer) as string**

MBS MacOSX Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Gets a specified sentence from the text in a summarization object.

**Example:**

```vbscript
dim s as new SummaryMBS("Hello World. This is just a test.")
MsgBox s.SentenceAtIndex(0)
```

**Notes:**

- **index:** The ordinal number of the sentence in the original text, with the first sentence designated by zero (this function uses zero-based indexing).
- Returns a string containing the specified sentence, or NULL on failure.
- Available in Mac OS X v10.4 and later.

110.2.11 **SentenceIndexOfSentences as Integer()**

MBS MacOSX Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array of the ordinal number for each sentence in the original text.

110.2.12 **SentenceSummaryString(numSentences as Integer) as string**

MBS MacOSX Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Gets a text string consisting of a summary with, at most, the requested number of sentences.

**Example:**

```vbscript
dim s as new SummaryMBS("Hello World. This is just a test.")
```
numSentences: The maximum number of sentences you want in the summary. Returns a string containing the requested summary. Available in Mac OS X v10.4 and later.

110.2.13 Properties

110.2.14 Handle as Integer

Example:

dim s as new SummaryMBS("Hello World. This is just a test.")
MsgBox str(s.handle)

Notes: (Read and Write property)

110.2.15 ParagraphCount as Integer

Example:

dim s as new SummaryMBS("Hello World. This is just a test.")
MsgBox str(s.ParagraphCount)

Notes: (Read only property)

110.2.16 SentenceCount as Integer

Example:
110.2. CLASS SUMMARYMBS

```vbnet
dim s as new SummaryMBS("Hello World. This is just a test.")
MsgBox str(s.SentenceCount)
```

**Notes:** (Read only property)
110.3 class TextInputSourceMBS

110.3.1 class TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for text input source on Mac OS X.

**Notes:**

Text input sources fall into three general categories:

- Keyboard input sources, including keyboard layouts, keyboard input methods and input modes
- Palette input sources, including the character palette, keyboard viewer, and private dictionary panels
- Ink input sources

Palette input sources and ink input source are categorized as non-keyboard input sources. However, palette input sources might still involve some keyboard interaction. Keyboard input methods can be mode-enabled (for instance, Kotoeri). Hence, they are potentially the parent of several input modes directly selectable in the user interface (for instance, hiragana, katakana, and romaji). With mode-enabled input methods, the parent input method is not directly selectable. Non-mode-enabled input methods are directly selectable.

Some input sources are provided and installed with OS X. Other input sources can be installed as third party products themselves or as part of the installation of certain applications. International Preferences displays a list of all visible installed input sources. You can use International Preferences to enable or disable most input sources that are intended to be visible in the user interface. Setup Assistant also enables some input sources. A separate user interface provides a way to enable ink input sources.

You can use some of the functions in Text Input Source Services to enable or disable input sources programmatically in your application. One keyboard input source must be enabled. Only one ink input source may be enabled. Multiple instances of other input source types may be enabled.

Some enabled input sources are invisible but programmatically selectable, such as ink. Some are visible but not programmatically selectable, such as mode-savvy parent input methods (these must be visible so that International Preferences can display the parent input method for a group of input modes).

Input modes can only be changed from disabled to enabled if their parent input method is enabled. Input modes can only be selected if they and their parent input method are enabled.

Exactly one keyboard input source is selected at any time: the current keyboard input source. Selecting a new keyboard input source deselects the previous keyboard input source. Multiple palette input sources may be selected. For instance, there may be one or more character palettes and one or more keyboard viewers selected in addition to the selected keyboard input source. Selecting or deselecting a palette (or ink) input source does not affect any other input source. Input methods that provide associated input palettes may...
programmatically deselect the palette when the input method is deselected, for example.

Text Input Source Source Services specifies modern, non-Script-Manager-based programming interfaces for operating on text input sources and performs the following functions:

- Finds information about text input sources
- Selects, enables, and disables text input sources
- Receives notifications about relevant changes in text input sources.

Available in OS X v10.5 and later.

see also

110.3.2 Methods

110.3.3 BundleID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The reverse DNS BundleID associated with the input source.

**Example:**

MsgBox TextInputSourceMBS.CurrentKeyboardInputSource.BundleID

110.3.4 Category as string

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The category of this input source.

**Example:**

MsgBox TextInputSourceMBS.CurrentKeyboardInputSource.Category

**Notes:** Can be kTISCategoryKeyboardInputSource, kTISCategoryPaletteInputSource, and kTISCategoryInkInputSource.
110.3.5  CreateASCIIcapableInputSourceList as TextInputSourceMBS()

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a list of ASCII-capable keyboard input sources. **Notes:** This list represents a snapshot of ASCII-capable keyboard input sources enabled when the call was made. Successive calls to CreateASCIIcapableInputSourceList may return different results because, for example, in between the calls the user may enable or disable an input source in the International Preferences pane. When a keyboard input source is enabled or disabled, by the user or programmatically, the distributed CF notification kTISNotifyEnabledKeyboardInputSourcesChanged is posted.

110.3.6  CreateInputSourceList(properties as dictionary, includeAllInstalled as boolean) as TextInputSourceMBS()

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a list of input sources that match specified properties. **Notes:**

- properties: A dictionary of property keys and corresponding values to filter the input source list. May be nil, in which case no filtering is performed.
- includeAllInstalled: Typically, set to false so that only enabled input sources are included; set to true to include all installed input sources that match the filter.

Returns an array for a list of text input source references that match the specified properties.

This list represents a snapshot of input sources that matched the properties specified when you made the call. If you want to include input sources that are installed but not currently enabled, set the includeAllInstalled parameter to true. Typically, you do this to obtain a text input source reference for a newly installed input source. In this case, the properties parameter would include very specific criteria limiting the matching input sources.

Important: Calling this function with the includeAllInstalled parameter set to true can have significant memory impact on the calling application if the properties parameter is nil (match all) or if it specifies criteria that might match many installed input sources. This setting might force caching of data for all matching input sources and result in an allocation of up to 120K.

If you are calling CreateInputSourceList to find a specific input source or sources from among the sources included in the list, first call CreateInputSourceList with includeAllInstalled set to false and check whether the returned array includes the desired input source(s). If this is not the case, call CreateInputSourceList again with the includeAllInstalled parameter set to true.

none
110.3.7  CurrentASCIICapableKeyboardInputSource as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a text input source reference for the most recently used ASCII-capable keyboard input source.  

**Example:**

```vbnet
dim t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentASCIICapableKeyboardInputSource
MsgBox t.LocalizedName
```

**Notes:**

Returns text input source reference for the most recently used ASCII-capable keyboard input source.

If no ASCII-capable keyboard input source has been used yet, the function returns the default ASCII-capable keyboard layout chosen by Setup Assistant.

110.3.8  CurrentASCIICapableKeyboardLayoutInputSource as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a text input source reference for the most recently used ASCII-capable keyboard layout.  

**Example:**

```vbnet
dim t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentASCIICapableKeyboardLayoutInputSource
MsgBox t.LocalizedName
```

**Notes:**

Returns text input source reference for the most recently used ASCII-capable keyboard layout.

If no ASCII-capable keyboard input source has been used yet, the function returns the default ASCII-capable keyboard layout chosen by Setup Assistant.

This function is used by input methods to get the keyboard layout used for key translation if no specific keyboard layout override exists. The CurrentASCIICapableKeyboardInputSource can return input sources that are not keyboard layouts.
110.3.9 **CurrentKeyboardInputSource** as **TextInputSourceMBS**

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a text input source reference for the currently selected keyboard input source. **Example:**

```vbnet
dim t as TextInputSourceMBS
  t = TextInputSourceMBS.CurrentKeyboardInputSource
  MsgBox t.LocalizedName
```

110.3.10 **CurrentKeyboardLayoutInputSource** as **TextInputSourceMBS**

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a text input source reference for the keyboard layout currently in use. **Example:**

```vbnet
dim t as TextInputSourceMBS
  t = TextInputSourceMBS.CurrentKeyboardLayoutInputSource
  MsgBox t.LocalizedName
```

**Notes:** If the currently selected keyboard input source is a keyboard layout, the text input source reference refers to that layout. If the currently selected keyboard input source is an input method or mode, the text input source reference refers to the keyboard layout used by that input method or mode.

110.3.11 **Deselect**

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Deselects the specified input source. **Notes:**

`inputSource`: The input source you want to deselect.

LastError is set.

Deselect is for use with palette or ink input sources only. It has no effect on other input sources. When palette input sources are disabled, the palette disappears. Ink input sources are usually deselected and disabled at the same time.
110.3.12 Disable

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Disables the specified input source.  
**Notes:**
Sets lasterror. Lasterror is paramErr (-50) if the input source cannot be disabled. Otherwise, lasterror is noErr (0).

Disable is primarily intended for input methods, or for applications that supply their own input sources (for example, applications that provide keyboard layouts or palette input methods, and keyboard input methods that provide their own keyboard layouts and input modes). It makes the specified input source unavailable for selection and removes it from the user interface.

110.3.13 Enable

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Enables the specified input source.  
**Notes:**
Lasterror is set. Lasterror is paramErr (-50) if the input source cannot be enabled. Otherwise, it is noErr (0).

Enable is primarily for input methods or for applications that supply their own input sources (for example, applications that provide keyboard layouts or palette input methods, and keyboard input methods that provide their own keyboard layouts and input modes). It makes the specified input source available in the user interface for selection.

For Enable to succeed, the input source must be capable of being enabled (that is, kTISPropertyInputSourceIsEnableCapable is set to true). Furthermore, if the input source is an input mode, its parent must already be enabled for the mode to become enabled.

110.3.14 Icon as Variant

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries IconMBS object for this input source.  
**Notes:** Icon references are the typical icon format for keyboard layouts and input methods. If an icon reference is not available for the specified input source, the value is nil.
110.3.15 IconImageFile as folderitem

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The file containing the image (typically TIFF) to be used as the input source icon. **Notes:** If an image file URL is not available for the specified input source, the value is nil. Note that other image formats (for example, JPEG, PNG) may also be used in the future.

110.3.16 IconImageURL as string

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The URL to the file containing the image (typically TIFF) to be used as the input source icon. **Notes:** If an image file URL is not available for the specified input source, the value is nil. Note that other image formats (for example, JPEG, PNG) may also be used in the future.

110.3.17 InputMethodKeyboardLayoutOverride as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a text input source reference for the currently selected input method’s keyboard layout override. **Example:**

```vbs
dim t as TextInputSourceMBS
t = TextInputSourceMBS.InputMethodKeyboardLayoutOverride
if t = nil then
    MsgBox "Nil"
else
    MsgBox t.LocalizedName
end if
```

**Notes:** If the current keyboard input source is an input method or mode that has a keyboard layout override, a text input source reference for that keyboard layout is returned. Otherwise, the function returns nil.

110.3.18 InputModeID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A reverse DNS string that identifies a particular usage class for input modes. **Example:**

```
MsgBox TextInputSourceMBS.CurrentKeyboardInputSource.InputModeID
```
For example, com.apple.inputmethod.Japanese.Katakana identifies a standard Katakana-input usage class that may be associated with input modes from several different input methods. You can attach this input mode to a TSMDocument using the TSMSetDocumentProperty function with the tag kTSMDocumentInputModePropertyTag, to control the input mode usage class that should be used with that TSM document.

**110.3.19 InputSourceForLanguage**(language as string) as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a text input source reference for the input source that should be used to input the specified language. **Notes:**

language: A BCP 47 language code (in the same form returned by the Core Foundation function CFLocaleCreateCanonicalLanguageIdentifierFromString function) that represents the language an input source should be returned for.

Returns an enabled input source that can input the specified language. If more than one such input source exists and at least one has been used, the most recently used input source is chosen. If none has been used, one is chosen based on the intended languages of the input sources. If no enabled input source exists that can input the specified language, the function returns nil.

If a text field is expected to have input in a particular language, an application can call InputSourceForLanguage and then SelectIt to select an input source appropriate for that language. This function is a replacement for the deprecated KeyScript programming interface's capability to select the default input source associated with a particular script code.

**110.3.20 IsASCIICapable as boolean**

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the input source is intended to be capable of ASCII input.

**110.3.21 IsEnableCapable as boolean**

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the input source can ever be programmatically enabled using Enable. **Notes:**

You can enable most input sources programmatically at any time. IsEnableCapable is set to true for these input sources.
Some input sources can never be programmatically enabled. These are mainly input method private keyboard layouts used by the input method via the function SetInputMethodKeyboardLayoutOverride. You cannot directly enable these layouts, nor use them as keyboard layout input sources. IsEnableCapable is set to false for these.

Some input sources can be programmatically enabled only under the correct conditions. These are mainly input modes, which can be changed from disabled to enabled only if their parent input method is enabled. However, they can already be in the enabled state, but not currently selectable if their parent input method is disabled. IsEnableCapable is true for these.

### 110.3.22 IsEnabled as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the input source is currently enabled.  
**Example:**  
MsgBox str(TextInputSourceMBS.CurrentKeyboardInputSource.IsEnabled)

### 110.3.23 IsSelectCapable as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the input source can ever be programmatically selected using Select.  
**Notes:**  
This static property of an input source does not depend on any current state. For input sources that can be programmatically selected if they are enabled, IsSelectCapable is set to true.  
For input sources that can never be programmatically selected even if they are enabled, IsSelectCapable is set to false. Such sources are mainly input methods that have modes (parent input methods); only their modes can be selected.  
For input sources that are enabled and can only be programmatically selected under the correct conditions, IsSelectCapable is set to true. Such input sources are mainly input modes, which can only be selected if both they and their parent input method are enabled.  
For input sources that can never be enabled or selected, IsSelectCapable is set to false.

### 110.3.24 IsSelected as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the input source is currently selected.  
**Example:**  
MsgBox str(TextInputSourceMBS.CurrentKeyboardInputSource.IsSelected)
**110.3.25 kTISCCategoryInkInputSource as string**

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the category identifiers. **Notes:** You can install or select 0 or 1 ink input source.

**110.3.26 kTISCCategoryKeyboardInputSource as string**

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the category identifiers. **Notes:** This category includes keyboard layouts, keyboard input methods (both with modes and without), and keyboard input modes. At least one input source in this category is installed. Of all input sources in this category, exactly one is selected; selecting a new one deselects the previous one.

**110.3.27 kTISCCategoryPaletteInputSource as string**

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the category identifiers. **Notes:** This category includes character palettes and keyboard viewers. You can select 0 or more categories.

**110.3.28 kTISNotifyEnabledKeyboardInputSourcesChanged as string**

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the CF distributed notification for a change to the set of enabled keyboard input sources. **Notes:** Available in OS X v10.5 and later.

**110.3.29 kTISNotifySelectedKeyboardInputSourceChanged as string**

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the CF distributed notification for a change to the selected keyboard input source. **Notes:** Available in OS X v10.5 and later.

**110.3.30 kTISPropertyBundleID as string**

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the property keys. **Notes:** This property key designates a property value, which is a string for the reverse DNS BundleID
associated with the input source.

110.3.31 kTISPropertyIconImageURL as string

Notes:
This property key designates a property value, which is a CFURLRef indicating the file containing the image (typically TIFF) to be used as the input source icon.
If an image file URL is not available for the specified input source, the value is nil. Note that other image formats (for example, JPEG, PNG) may also be used in the future.
Note: You may not use this key (and its corresponding value) used in the filter dictionary passed to the CreateInputSourceList function.

110.3.32 kTISPropertyIconRef as string

Notes:
This property key designates a property value, which is an IconRef value for the input source icon.
Icon references are the typical icon format for keyboard layouts and input methods. If an icon reference is not available for the specified input source, the value is nil.
Note: You may not use this key (and its corresponding value) used in the filter dictionary passed to the CreateInputSourceList function.

110.3.33 kTISPropertyInputModeID as string

Notes:
This property key designates a property value, which is a CFStringRef for a reverse DNS string that identifies a particular usage class for input modes.
For example, com.apple.inputmethod.Japanese.Katakana identifies a standard Katakana-input usage class that may be associated with input modes from several different input methods.
You can attach this input mode to a TSMDocument using the TSMSetDocumentProperty function with the tag kTSMDocumentInputModePropertyTag, to control the input mode usage class that should be used with that TSM document.
110.3.34  kTISPropertyInputSourceCategory as string

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the property keys.

**Notes:**
This property key designates a property value, which is a string indicating the category of an input source. Possible values are specified by the following property value constants: kTISCCategoryKeyboardInputSource, kTISCCategoryPaletteInputSource, and kTISCCategoryInkInputSource.

110.3.35  kTISPropertyInputSourceID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the property keys.

**Notes:**
This property key designates a property value, which is a CFStringRef for the unique reverse DNS name associated with the input source.

- For keyboard input methods and for palette or ink input sources, typically, the bundle ID, for instance, com.apple.Kotoeri.
- For keyboard input modes, typically, the bundle ID of the parent input method plus a suffix that uniquely identifies the input mode, for instance, com.apple.Kotoeri.Katakana. It is not the generic input mode name used across input methods, for instance, com.apple.inputmethod.Japanese.Katakana.
- For keyboard layouts, a new identification mechanism typically structured as com.company.keyboard-layout.name, for instance, com.apple.keyboardlayout.US.

110.3.36  kTISPropertyInputSourceIsASCIICapable as string

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the property keys.

**Notes:** This property key designates a property value, which is a boolean indicating whether the input source is intended to be capable of ASCII input.

110.3.37  kTISPropertyInputSourceIsEnableCapable as string

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the property keys.

**Notes:** This property key designates a property value which is a boolean indicating whether the input source can ever be programmatically enabled using TISEnableInputSource.
You can enable most input sources programmatically at any time. `kTISPropertyInputSourceIsEnableCapable` is set to true for these input sources.

Some input sources can never be programmatically enabled. These are mainly input method private keyboard layouts used by the input method via the function `TISSetInputMethodKeyboardLayoutOverride`. You cannot directly enable these layouts, nor use them as keyboard layout input sources. `kTISPropertyInputSourceIsEnableCapable` is set to false for these.

Some input sources can be programmatically enabled only under the correct conditions. These are mainly input modes, which can be changed from disabled to enabled only if their parent input method is enabled. However, they can already be in the enabled state, but not currently selectable if their parent input method is disabled. `kTISPropertyInputSourceIsEnableCapable` is true for these.

**110.3.38 kTISPropertyInputSourceIsEnabled as string**

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the property keys. **Notes:** This property key designates a property value, which is a boolean indicating whether the input source is currently enabled.

**110.3.39 kTISPropertyInputSourceIsSelectCapable as string**

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the property keys. **Notes:**

This property key designates a property value, which is a boolean indicating whether the input source can ever be programmatically selected using `TISSelectInputSource`.

This static property of an input source does not depend on any current state. For input sources that can be programmatically selected if they are enabled, `kTISPropertyInputSourceIsSelectCapable` is set to true. For input sources that can never be programmatically selected even if they are enabled, `kTISPropertyInputSourceIsSelectCapable` is set to false. Such sources are mainly input methods that have modes (parent input methods); only their modes can be selected.

For input sources that are enabled and can only be programmatically selected under the correct conditions, `kTISPropertyInputSourceIsSelectCapable` is set to true. Such input sources are mainly input modes, which can only be selected if both they and their parent input method are enabled.

For input sources that can never be enabled or selected, `kTISPropertyInputSourceIsSelectCapable` is set to false.

**110.3.40 kTISPropertyInputSourceIsSelected as string**

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the property keys. **Notes:** This property key designates a property value, which is a Boolean indicating whether the input
source is currently selected.

110.3.41 kTISPropertyInputSourceLanguages as string

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the property keys. **Notes:**

This property key designates a property value, which is a CFArrayRef for an array of CFStringRefs, where each string is the language code for a language that can be input using the input source. You can use this constant with the PropertyValue function, but you may not use it in the filter dictionary passed to the CreateInputSourceList function. Languages codes are in the same BCP 47 form returned by the CFLocaleCreateCanonicalLanguageIdentifierFromstring function. The first language code in the array is the language the input source is intended for. If no such language exists (for example, for the Unicode Hex Input keyboard layout), the first language code is an empty string.

110.3.42 kTISPropertyInputSourceType as string

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the property keys. **Notes:**

This property key designates a property value, which is a string indicating the specific type of an input source. Possible values are specified by the following property value constants: kTISTypeKeyboardLayout, kTISTypeKeyboardInputMethodWithoutModes, kTISTypeKeyboardInputMethodModeEnabled, kTISTypeKeyboardInputMode, kTISTypeCharacterPalette, kTISTypeKeyboardViewer, and kTISTypeInk.

110.3.43 kTISPropertyLocalizedName as string

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the property keys. **Example:**

```dim t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentKeyboardInputSource
MsgBox t.PropertyValue(t.kTISPropertyLocalizedName)
```

**Notes:**

This property key designates a property value, which is a string for the input source's localized name as intended for user interface use.
Uses the best match (determined by CFBundle) between the localization used by the caller and the available localizations of the input source name. In some cases, this might be an unlocalized name.

110.3.44 kTISPropertyUnicodeKeyLayoutData as string

Notes: This property key designates a property value, which is a Memoryblock that refers to the 'uchr' keyboard layout data for a keyboard layout input source. The 'uchr' data is in native-endian order. If the input source is not a keyboard layout, or is a keyboard layout for which only 'KCHR data' is available, the value is nil. Note: You may not use this key (and its corresponding value) used in the filter dictionary passed to the CreateInputSourceList function.

110.3.45 kTISTypeCharacterPalette as string

Notes: This type belongs to the category kTISCategoryPaletteInputSource.

110.3.46 kTISTypeInk as string

Notes: This type belongs to the category kTISCategoryInkInputSource. Even though it is the only type in that category, a type is provided so that clients who don’t need category information can just check input source type.

110.3.47 kTISTypeKeyboardInputMethodModeEnabled as string

Notes: This type belongs to the category kTISCategoryKeyboardInputSource.
110.3. CLASS TEXTINPUTSOURCEMBS

110.3.48 kTISTypeKeyboardInputMethodWithoutModes as string

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the possible type values. **Notes:** This type belongs to the category kTISCategoryKeyboardInputSource.

110.3.49 kTISTypeKeyboardInputMode as string

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the possible type values. **Notes:** This type belongs to the category kTISCategoryKeyboardInputSource.

110.3.50 kTISTypeKeyboardLayout as string

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the possible type values. **Notes:** This type belongs to the category kTISCategoryKeyboardInputSource.

110.3.51 kTISTypeKeyboardViewer as string

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the possible type values. **Notes:** This type belongs to the category kTISCategoryPaletteInputSource.

110.3.52 LocalizedName as string

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The input source’s localized name as intended for user interface use. **Example:**

MsgBox TextInputSourceMBS.CurrentKeyboardInputSource.LocalizedName

**Notes:** Uses the best match (determined by CFBundle) between the localization used by the caller and the available localizations of the input source name. In some cases, this might be an unlocalized name.
110.3.53 **PropertyValue(key as string) as Variant**

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Gets the value of a specified property for a specified input source.

**Example:**

```vbs
dim t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentKeyboardInputSource
MsgBox t.PropertyValue(t.kTISPropertyLocalizedizedName)
```

**Notes:**

Key: The property key constant specifying the desired property value.

Returns a variant associated with the property key. The value type is specified for each key. Can be a string a boolean, a number, an array or an IconMBS. The function might return nil if the specified property is missing or invalid for the specified input source.

110.3.54 **RegisterInputSource(file as folderitem) as Integer**

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Registers any new input sources in a file or bundle so a text input source reference can be obtained immediately for each new input source.

**Notes:**

location: The location of the input sources in a file or bundle.

Returns a result code. The function returns paramErr (-50) if location is invalid or the input sources in the specified location cannot be registered. Otherwise, it returns noErr (0).

This function enables an installer for an input method bundle or a keyboard layout file or bundle to notify the system to register these new input sources. The system can then locate the specified file or bundle and perform any necessary cache rebuilds so that the installer can immediately call TISCreateInputSourceList with appropriate properties (for example, a bundle ID or input source ID) to get text input source references for one or more of the newly registered input sources.

You can only use this function to register the following:

Keyboard layout files or bundles in the /Library/Keyboard Layouts/ or textasciidate /Library/Keyboard Layouts/ directory (available to all users or to the current user, respectively). Such keyboard layouts, once enabled, are selectable.

Input method bundles in the new Library/Input Methods/ or
110.3. CLASS TEXTINPUTSOURCEMBS

textasciitilde /Library/Input Methods/ directories (available to all users or to the current user, respectively).

Note: Input method bundles can include private non-selectable keyboard layouts for use with SetInputMethodKeyboardLayoutOverride. These are registered automatically when the input method is registered, and do not need to be separately registered. They are not registered using TISRegisterInputSource.

Security: Any code that calls RegisterInputSource is part of an application or service that has already been validated in some way (for instance, by the user).

See also:

• 110.3.55 RegisterInputSource(URL as string) as Integer

110.3.55 RegisterInputSource(URL as string) as Integer

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function:

Registers any new input sources in a file or bundle so a text input source reference can be obtained immediately for each new input source.

Notes:

location: The location of the input sources in a file or bundle.

Returns a result code. The function returns paramErr (-50) if location is invalid or the input sources in the specified location cannot be registered. Otherwise, it returns noErr (0).

This function enables an installer for an input method bundle or a keyboard layout file or bundle to notify the system to register these new input sources. The system can then locate the specified file or bundle and perform any necessary cache rebuilds so that the installer can immediately call TISCreateInputSourceList with appropriate properties (for example, a bundle ID or input source ID) to get text input source references for one or more of the newly registered input sources.

You can only use this function to register the following:

Keyboard layout files or bundles in the /Library/Keyboard Layouts/ or textasciitilde /Library/Keyboard Layouts/ directory (available to all users or to the current user, respectively). Such keyboard layouts, once enabled, are selectable.

Input method bundles in the new Library/Input Methods/ or textasciitilde /Library/Input Methods/ directories (available to all users or to the current user, respectively).

Note: Input method bundles can include private non-selectable keyboard layouts for use with SetInputMethodKeyboardLayoutOverride. These are registered automatically when the input method is registered, and do not need to be separately registered. They are not registered using TISRegisterInputSource.

Security: Any code that calls RegisterInputSource is part of an application or service that has already been validated in some way (for instance, by the user).

See also:

• 110.3.54 RegisterInputSource(file as folderitem) as Integer
110.3.56 SelectIt

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Selects the specified input source.

**Notes:**

Lasterror is set. Lasterror is paramErr (-50) if the input source is not selectable. Otherwise, it is noErr (0).

When the input source is a selectable keyboard, the specified input source becomes the new current keyboard input source, and the previous input source is deselected. When the input source is a palette, that palette is displayed and made available for input. Ink input sources are typically enabled and selected at the same time. When you call SelectInputSource for a palette or ink input source, there is no effect on other input sources. When you call SelectInputSource for an already selected input source, there is, similarly, no effect.

For SelectInputSource to succeed, the input source must be selectable (that is, kTISPropertyInputSourceIsSelectCapable is set to true) and the input source must be enabled (that is, kTISPropertyInputSourceIsEnabled is set to true). Furthermore, if the input source is an input mode, its parent must be enabled for it to be selected.

We named the function SelectIt as Select is a reserved word in Real Studio.

110.3.57 SetInputMethodKeyboardLayoutOverride

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the keyboard layout override for an input method or mode.

**Notes:**

self: The input source for the keyboard layout that should be used until the current input method is deactivated (if it should be something other than the most recently used ASCII-capable keyboard layout).

Lasterror is set. Value is paramErr (-50) if the current keyboard input source is not an input method or mode or if keyboardLayout does not designate a keyboard layout. Otherwise, it is noErr (0).

When an input method or mode is the selected input source, the most recently used ASCII-capable keyboard layout to translate key events is used. This keyboard layout is also the one that appears in Keyboard Viewer. An input source for this keyboard layout is returned by the function CurrentASCIICapableKeyboardLayoutInputSource. If a different keyboard layout should be used for a particular input method or mode, the activated input method or mode should call SetInputMethodKeyboardLayoutOverride to specify the desired keyboard layout.

For example, when a Kotoeri user selects kana layout for kana input, Kotoeri should call SetInputMethodKeyboardLayoutOverride to set the kana keyboard as the override for the appropriate input modes.
The keyboard layout set in this way is used for the final stage of key translation in the Window Server, the connection, or application-specific key translation.

The override setting is lost when the input method that set it is deactivated.

The keyboard layout used for overriding need not be enabled or explicitly selectable. It can be a non-selectable layout included in an input method bundle and automatically registered.

The default behavior is new with OS X v10.5, and eliminates the necessity that input methods have a user interface for setting the ASCII-capable keyboard for phonetic input based on Latin characters.

110.3.58 SourceID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The unique reverse DNS name associated with the input source.

**Notes:**

- For keyboard input methods and for palette or ink input sources, typically, the bundle ID, for instance, com.apple.Kotoeri.

- For keyboard input modes, typically, the bundle ID of the parent input method plus a suffix that uniquely identifies the input mode, for instance, com.apple.Kotoeri.Katakana. It is not the generic input mode name used across input methods, for instance, com.apple.inputmethod.Japanese.Katakana.

- For keyboard layouts, a new identification mechanism typically structured as com.company.keyboard-layout.name, for instance, com.apple.keyboardlayout.US.

110.3.59 SourceLanguages as string()

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The array of string, where each string is the language code for a language that can be input using the input source.

**Notes:** Languages codes are in the same BCP 47 form returned by the CFLocaleCreateCanonicalLanguageIdentifierFromString function. The first language code in the array is the language the input source is intended for. If no such language exists (for example, for the Unicode Hex Input keyboard layout), the first language code is an empty string.

110.3.60 Type as string

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the type of an input source.

**Example:**
MsgBox TextInputSourceMBS.CurrentKeyboardInputSource.Type

**Notes:** Value can be kTISTypeKeyboardLayout, kTISTypeKeyboardInputMethodWithoutModes, kTISTypeKeyboardInputMethodModeEnabled, kTISTypeKeyboardInputMode, kTISTypeCharacterPalette, kTISTypeKeyboardViewer, and kTISTypeInk.

### 110.3.61 Properties

#### 110.3.62 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference. **Notes:** (Read and Write property)

#### 110.3.63 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The last error code. **Notes:** (Read and Write property)
110.4. module ValidationMBS

110.4.1 module ValidationMBS

MBS Encryption Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This module has helper functions for App Store Validation. **Deprecated:** This item is deprecated and should no longer be used. You can use CTFontMBS instead. **Notes:** Please use AppReceiptMBS and AppReceiptVerifierMBS classes instead.

110.4.2 Methods

110.4.3 AppStoreReceipt(file as folderitem) as dictionary

MBS Encryption Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Reads the app store receipt. **Example:**

```vbnet
// read a receipt file
dim file as FolderItem = SpecialFolder.Desktop.Child("receipt")

// query values
dim dic as Dictionary = ValidationMBS.AppStoreReceipt(file)

// show identifier
MsgBox dic.Value(ValidationMBS.kReceiptBundleIdentifier)
```

**Notes:**
You can use this to get details from your receipt.
Returns nil on any error.
Please pass folderitem to receipt file.

110.4.4 ExitApp(code as Integer = 173)

MBS Encryption Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Quits the application directly. **Example:**

ValidationMBS.ExitApp 173

**Notes:**
This does not call the destructors and CancelClose events. The app is quit right away.
If you use code 173 the Finder will show error message that app needs to be downloaded again from Mac App Store.

110.4.5 GUID as string

Function: Reads the GUID of the Mac.
Example:

```vba
dim g as String = ValidationMBS.GUID
MsgBox EncodeHex(g)
```

Notes: This is normally build from the MAC ID of the ethernet card.

110.4.6 locateAppStoreReceipt as folderitem

Function: Locates the App Store Receipt in the application bundle.
Example:

```vba
dim f as FolderItem = ValidationMBS.locateAppStoreReceipt
MsgBox f.UnixpathMBS
```

Notes: Please check result if folderitem is not nil and exists before processing.

110.4.7 Validate(file as folderitem) as boolean

Function: Validates the receipt.
Example:

```vba
dim file as FolderItem = ValidationMBS.locateAppStoreReceipt
if ValidationMBS.Validate(file) = false then
    ValidationMBS.ExitApp 173
else
    // ok
end if
```
110.4.8 Constants

110.4.9 kReceiptBundleIdentifier = "BundleIdentifier"

MBS Encryption Plugin, Plugin Version: 13.4. **Function:** One of the keys for the receipt dictionary. **Example:**

```vba
// read a receipt file
dim file as FolderItem = SpecialFolder.Desktop.Child("receipt")

// query values
dim dic as Dictionary = ValidationMBS.AppStoreReceipt(file)

// show identifier
MsgBox dic.Value(ValidationMBS.kReceiptBundleIdentifier)
```

**Notes:** The bundle identifier.

110.4.10 kReceiptBundleIdentifierData = "BundleIdentifierData"

MBS Encryption Plugin, Plugin Version: 13.4. **Function:** One of the keys for the receipt dictionary. **Notes:** The bundle identifier data.

110.4.11 kReceiptHash = "Hash"

MBS Encryption Plugin, Plugin Version: 13.4. **Function:** One of the keys for the receipt dictionary. **Notes:** The hash for the receipt.

110.4.12 kReceiptOpaqueValue = "OpaqueValue"

MBS Encryption Plugin, Plugin Version: 13.4. **Function:** One of the keys for the receipt dictionary. **Notes:** The opaque value used for hashing.
110.4.13  kReceiptVersion = ”Version”

MBS Encryption Plugin, Plugin Version: 13.4. **Function:** One of the keys for the receipt dictionary.  
**Example:**

```vbnet
// read a receipt file
dim file as FolderItem = SpecialFolder.Desktop.Child(”receipt”)

// query values
dim dic as Dictionary = ValidationMBS.AppStoreReceipt(file)

// show version
MsgBox dic.Value(ValidationMBS.kReceiptVersion)
```

**Notes:** The version string.
Chapter 111

MapKit

111.1 control MapKitViewControlMBS

111.1.1 control MapKitViewControlMBS

Function: The control for showing a map in Xojo.

Notes:
This control is designed for Xojo, but may work also in Cocoa target in Real Studio.

As Xojo provides some events for us automatically like for context menu or mouse wheel, it does not mean that those events do work. The webview used in the map view seems to consume them before the plugin gets them.

111.1.2 Methods

111.1.3 showAddress(address as string)

Function: Convenience method to run an address geocoding and shows position on map.
CHAPTER 111. MAPKIT

111.1.4 Properties

111.1.5 View as MKMapViewMBS

**Function:** The map view used for this control.
**Notes:**
The plugin creates it automatically when the constructor runs.
(Read only property)

111.1.6 Events

111.1.7 annotationViewDidChangeDragState(mapView as MKMapViewMBS, annotationView as MKAnnotationViewMBS, newState as Integer, oldState as Integer)

**Function:** Tells the control that the drag state of one of its annotation views changed.
**Notes:**
mapView: The map view containing the annotation view.
annotationView: The annotation view whose drag state changed.
newState: The new drag state of the annotation view.
oldState: The previous drag state of the annotation view.

The drag state typically changes in response to user interactions with the annotation view. However, the annotation view itself is responsible for changing that state as well.

111.1.8 beginGestureWithEvent(e as NSEventMBS) as boolean

**Function:** Informs the receiver that the user has begun a touch gesture.
**Notes:**
e: An event object representing the gesture beginning.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.
111.1.9  BoundsChanged

Function: The event called when the bounds, but not the frame, changed.

111.1.10  contextMenuItemsForAnnotationView(mapView as MKMapViewMBS, view as MKAnnotationViewMBS) as NSMenuItemMBS()

Function: Your control can provide menuitems to show a contextual menu on an annotation view.

111.1.11  didAddAnnotationViews(mapView as MKMapViewMBS, AnnotationViews() as MKAnnotationViewMBS)

Function: Tells the control that one or more annotation views were added to the map.
Notes:
mapView: The map view that added the annotation views.
views: An array of MKAnnotationView objects representing the views that were added.

By the time this method is called, the specified views are already added to the map.

111.1.12  didAddOverlayViews(mapView as MKMapViewMBS, overlayViews() as MKOverlayViewMBS)

Function: Tells the control that one or more overlay views were added to the map.
Notes:
mapView: The map view that added the overlay views.
overlayViews: An array of MKOverlayView objects representing the views that were added.

By the time this method is called, the specified views are already added to the map.
111.1.13 **didDeselectAnnotationView** (mapView as MKMapViewMBS, view as MKAnnotationViewMBS)

**Function:** Tells the control that one of its annotation views was deselected.
**Notes:**
mapView: The map view containing the annotation view.
view: The annotation view that was deselected.

You can use this method to track changes in the selection state of annotation views.

111.1.14 **didFailLoadingMap** (mapView as MKMapViewMBS, error as NSErrorMBS)

**Function:** Tells the control that the specified view was unable to load the map data.
**Notes:**
mapView: The map view that started the load operation.
error: The reason that the map data could not be loaded.

This method might be called in situations where the device does not have access to the network or is unable to load the map data for some reason. It may also be called if a request for additional map tiles comes in while a previous request for tiles is still pending. You can use this message to notify the user that the map data is unavailable.

111.1.15 **didFailToLocateUserWithError** (mapView as MKMapViewMBS, error as NSErrorMBS)

**Function:** Tells the control that an attempt to locate the user’s position failed.
**Notes:**
mapView: The map view that is tracking the user’s location.
error: An error object containing the reason why location tracking failed.

111.1.16 **didFinishLoadingMap** (mapView as MKMapViewMBS)

**Function:** Tells the control that the specified map view successfully loaded the needed map data.
111.1. CONTROL MAPKITVIEWCONTROLMBS

Notes:

mapView: The map view that started the load operation.

This method is called when the map tiles associated with the current request have been loaded. Map tiles are requested when a new visible area is scrolled into view and tiles are not already available. Map tiles may also be requested for portions of the map that are not currently visible. For example, the map view may load tiles immediately surrounding the currently visible area as needed to handle small pans by the user.

111.1.17 didSelectAnnotationView(mapView as MKMapViewMBS, view as MKAnnotationViewMBS)

Function: Tells the control that one of its annotation views was selected.
Notes:

mapView: The map view containing the annotation view.
view: The annotation view that was selected.

You can use this method to track changes in the selection state of annotation views.

111.1.18 didStopLocatingUser(mapView as MKMapViewMBS)

Function: Tells the control that the map view stopped tracking the user’s location.
Notes:

mapView: The map view that stopped tracking the user’s location.

This method is called when the value of the showsUserLocation property changes to false.

111.1.19 didUpdateUserLocation(mapView as MKMapViewMBS, userLocation as MKUserLocationMBS)

Function: Tells the control that the location of the user was updated.
Notes:

mapView: The map view that is tracking the user’s location.
userLocation: The location object representing the user’s latest location. This property may be nil.
While the showsUserLocation property is set to true, this method is called whenever a new location update is received by the map view. This method is also called if the map view’s user tracking mode is set to MKUserTrackingModeFollowWithHeading and the heading changes.

This method is not called if the application is currently running in the background. If you want to receive location updates while running in the background, you must use the Core Location framework.

111.1.20 EnableMenuItems

Function: The event where you can enable menu items.

111.1.21 endGestureWithEvent(e as NSEventMBS) as boolean

Function: Informs the receiver that the user has ended a touch gesture.
Notes:
e: An event object representing the gesture end.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

111.1.22 FrameChanged

Function: The event called when the frame changed.

111.1.23 geocoderDidFailWithError(geocoder as MKGeocoderMBS, error as NSErrorMBS)

Function: The geocoder failed to map address to coordinate.
111.1. CONTROL MAPKITVIEWCONTROLMBS

111.1.24 geocoderDidFindCoordinate(geocoder as MKGeocoderMBS, coordinate as CLLocationCoordinate2DMBS, Latitude as Double, Longitude as Double)

Function: The geocoder did find a coordinate.

111.1.25 GotFocus

Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

111.1.26 LostFocus

Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

111.1.27 magnifyWithEvent(e as NSEventMBS) as boolean

Function: Informs the receiver that the user has begun a pinch gesture.
Notes:
e: An event object representing the magnify gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

111.1.28 MenuAction(HitItem as MenuItem) As Boolean

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.
111.29 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

**Function:** The mouse button was pressed inside the controls region at the location passed in to x, y.
**Notes:**
The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

111.30 MouseDrag(x as Integer, y as Integer)

**Function:** This event fires continuously after the mouse button was pressed inside the Control.
**Notes:**
Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

111.31 MouseUp(x as Integer, y as Integer)

**Function:** The mouse button was released.
**Notes:** Use the x and y parameters to determine if the mouse button was released within the control’s boundaries.

111.32 pressureChange(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.
**Function:** Informs the current object that a pressure change occurred on a system that supports pressure sensitivity.
**Notes:**
This method is invoked automatically in response to user actions. event is the event that initiated the change in pressure.
regionDidChangeAnimated(mapView as MKMapViewMBS, animated as boolean)

Function: Tells the control that the region displayed by the map view just changed.

Notes:
mapView: The map view whose visible region changed.
aminated: If true, the change to the new region was animated.

This method is called whenever the currently displayed map region changes. During scrolling, this method may be called many times to report updates to the map position. Therefore, your implementation of this method should be as lightweight as possible to avoid affecting scrolling performance.

regionWillChangeAnimated(mapView as MKMapViewMBS, animated as boolean)

Function: Tells the control that the region displayed by the map view is about to change.

Notes:
mapView: The map view whose visible region is about to change.
aminated: If true, the change to the new region will be animated. If NO, the change will be made immediately.

This method is called whenever the currently displayed map region changes. During scrolling, this method may be called many times to report updates to the map position. Therefore, your implementation of this method should be as lightweight as possible to avoid affecting scrolling performance.

reverseGeocoderDidFailWithError(geocoder as MKReverseGeocoderMBS, error as NSErrorMBS)

Function: The reverse geocoder failed with an error.
111.1.36 reverseGeocoderDidFindPlacemark(geocoder as MKReverseGeocoderMBS, placemark as MKPlacemarkMBS)

**Function:** The reverse geocoder did find a placemark.

111.1.37 rotateWithEvent(e as NSEventMBS) as boolean

**Function:** Informs the receiver that the user has begun a rotation gesture.
**Notes:**
e: An event object representing the rotate gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

111.1.38 ScaleFactorChanged(NewFactor as Double)

**Function:** The backing store scale factor has changed.
**Notes:** Please invalidate any cached bitmaps or other relevant state.

111.1.39 swipeWithEvent(e as NSEventMBS) as boolean

**Function:** Informs the receiver that the user has begun a swipe gesture.
**Notes:**
e: An event object representing the swipe gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

111.1.40 userDidClickAndHoldAtCoordinate(mapView as MKMapViewMBS, coordinate as CLLocationCoordinate2DMBS, Latitude as Double, Longitude as Double)

**Function:** The user did click and hold the mouse button down.
111.1. CONTROL MAPKITVIEWCONTROLMBS

**Notes:** Provides coordinate and you can do something there, like adding a pin.

### 111.1.41 viewForAnnotation(mapView as MKMapViewMBS, annotation as Variant) as MKAnnotationViewMBS

**MBS MacFrameworks Plugin, Plugin Version:** 14.1, **Console & Web:** No, **Mac:** Yes, **Win:** No, **Linux:** No.

**Function:** Returns the view associated with the specified annotation object.

**Notes:**

- **mapView:** The map view that requested the annotation view.
- **annotation:** The object representing the annotation that is about to be displayed. In addition to your custom annotations, this object could be an MKUserLocation object representing the user’s current location.

Returns the annotation view to display for the specified annotation or nil if you want to display a standard annotation view.

Rather than create a new view each time this method is called, you should use the `dequeueReusableAnnotationViewWithIdentifier` method of the MKMapView class to see if an existing annotation view of the desired type already exists. If one does exist, you should update the view to reflect the attributes of the specified annotation and return it. If a view of the appropriate type does not exist, you should create one, configure it with the needed annotation data, and return it.

If the object in the annotation parameter is an instance of the MKUserLocation class, you can provide a custom view to denote the user’s location. To display the user’s location using the default system view, return nil.

If you do not implement this method, or if you return nil from your implementation for annotations other than the user location annotation, the map view uses a standard pin annotation view.

### 111.1.42 viewForOverlay(mapView as MKMapViewMBS, overlay as Variant) as MKOverlayViewMBS

**MBS MacFrameworks Plugin, Plugin Version:** 14.1, **Console & Web:** No, **Mac:** Yes, **Win:** No, **Linux:** No.

**Function:** Asks the control for the overlay view to use when displaying the specified overlay object.

**Notes:**

- **mapView:** The map view that requested the overlay view.
- **overlay:** The object representing the overlay that is about to be displayed.

Returns the view to use when presenting the specified overlay on the map. If you return nil, no view is displayed for the specified overlay object.
111.1.43 willStartLoadingMap(mapView as MKMapViewMBS)

Function: Tells the control that the specified map view is about to retrieve some map data.

Notes:

mapView: The map view that began loading the data.

This method is called whenever a new group of map tiles need to be downloaded from the server. This typically occurs whenever you expose portions of the map by panning or zooming the content. You can use this method to mark the time that it takes for the map view to load the data.

111.1.44 willStartLocatingUser(mapView as MKMapViewMBS)

Function: Tells the control that the map view will start tracking the user’s position.

Notes:

mapView: The map view that is tracking the user’s location.

This method is called when the value of the showsUserLocation property changes to true.
111.2. class MKAnnotationMBS

111.2.1 class MKAnnotationMBS

Function: The class for annotation protocol in the MapKit framework.
Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

111.2.2 Methods

111.2.3 Constructor

Function: The private constructor.

111.2.4 Properties

111.2.5 className as string

Function: The name of this MKAnnotation class.
Notes: (Read only property)

111.2.6 classPath as string

Function: The path of this annotation class.
Notes: Useful for debugging to know what super classes the annotation has.
(Read only property)

111.2.7 coordinate as CLLocationCoordinate2D

Function: The center point (specified as a map coordinate) of the annotation.
Notes: (Read only property)
111.2.8 Handle as Integer

**Function:** The internal object reference.
**Notes:** (Read and Write property)

111.2.9 latitude as Double

**Function:** The center point (specified as a map coordinate) of the annotation.
**Notes:** (Read only property)

111.2.10 longitude as Double

**Function:** The center point (specified as a map coordinate) of the annotation.
**Notes:** (Read only property)

111.2.11 subtitle as String

**Function:** The string containing the annotation’s subtitle.
**Notes:**
This string is displayed in the callout for the associated annotation view.
(Read and Write property)

111.2.12 title as String

**Function:** The string containing the annotation’s title.
**Notes:**
Although this property is optional, if you support the selection of annotations in your map view, you are expected to provide this property. This string is displayed in the callout for the associated annotation view.
(Read and Write property)
111.3  class MKAnnotationViewMBS

111.3.1  class MKAnnotationViewMBS

Function:  The MKAnnotationView class is responsible for presenting annotations visually in a map view.
Notes:
Annotation views are loosely coupled to a corresponding annotation object, which is an object that corre-
sponds to the MKAnnotation protocol. When an annotation’s coordinate point is in the visible region, the
map view asks its delegate to provide a corresponding annotation view. Annotation views may be recycled
later and put into a reuse queue that is maintained by the map view.

see also
Subclass of the MKViewMBS class.

111.3.2  Methods

111.3.3  Constructor(annotation as Variant, reuseIdentifier as string = "")

Function:  Initializes and returns a new annotation view.
Notes:
annotation:  The annotation object to associate with the new view.
reuseIdentifier:  If you plan to reuse the annotation view for similar types of annotations, pass a string to
identify it. Although you can pass nil if you do not intend to reuse the view, reusing annotation views is
generally recommended.

Returns the initialized annotation view or nil if there was a problem initializing the object.

The reuse identifier provides a way for you to improve performance by recycling annotation views as they are
scrolled on and off of the map. As views are no longer needed, they are moved to a reuse queue by the map
view. When a new annotation becomes visible, your application can request a view for that annotation by
passing the appropriate reuse identifier string to the dequeueReusableAnnotationViewWithIdentifier method
of MKMapView.

111.3.4  setCalloutOffset(x as Double, y as Double)

Function:  The offset (in pixels) at which to place the callout bubble.
Notes: This property determines the additional distance by which to move the callout bubble. When this property is set to (0, 0), the anchor point of the callout bubble is placed on the top-center point of the annotation view’s frame. Specifying positive offset values moves the callout bubble down and to the right, while specifying negative values moves it up and to the left.

111.3.5 setCenterOffset(x as Double, y as Double)

Function: The offset (in pixels) at which to display the view.
Notes: By default, the center point of an annotation view is placed at the coordinate point of the associated annotation. You can use this property to reposition the annotation view as needed. This x and y offset values are measured in pixels. Positive offset values move the annotation view down and to the right, while negative values move it up and to the left.

111.3.6 setSelected(selected as boolean, animated as boolean)

Function: Sets the selection state of the annotation view.
Notes:
selected: Contains the value true if the view should display itself as selected.
animated: Set to true if the change in selection state is animated.

You should not call this method directly. An MKMapView object calls this method in response to user interactions with the annotation.

111.3.7 Properties

111.3.8 annotation as Variant

Function: The annotation object currently associated with the view.
Notes:
You should not change the value of this property directly. This property contains a non-nil value only while the annotation view is visible on the map. If the view is queued and waiting to be reused, the value is nil (Read and Write property)
### 111.3.9 calloutOffsetX as Double

**MBS MacFrameworks Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.**

**Function:** The offset (in pixels) at which to place the callout bubble.

**Notes:**
This property determines the additional distance by which to move the callout bubble. When this property is set to (0, 0), the anchor point of the callout bubble is placed on the top-center point of the annotation view’s frame. Specifying positive offset values moves the callout bubble down and to the right, while specifying negative values moves it up and to the left.

(Read and Write property)

### 111.3.10 calloutOffsetY as Double

**MBS MacFrameworks Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.**

**Function:** The offset (in pixels) at which to place the callout bubble.

**Notes:**
This property determines the additional distance by which to move the callout bubble. When this property is set to (0, 0), the anchor point of the callout bubble is placed on the top-center point of the annotation view’s frame. Specifying positive offset values moves the callout bubble down and to the right, while specifying negative values moves it up and to the left.

(Read and Write property)

### 111.3.11 canShowCallout as Boolean

**MBS MacFrameworks Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.**

**Function:** A Boolean value indicating whether the annotation view is able to display extra information in a callout bubble.

**Notes:**
If the value of this property is true, a standard callout bubble is shown when the user taps a selected annotation view. The callout uses the title and subtitle text from the associated annotation object. If there is no title text, though, the annotation view is treated as if its enabled property is set to false. The callout also displays any custom callout views stored in the leftCalloutAccessoryView and rightCalloutAccessoryView properties.

If the value of this property is NO, the value of the title and subtitle strings are ignored and the annotation view remains enabled by default. You can still disable the view explicitly using the enabled property.

(Read and Write property)
111.3.12 centerOffsetX as Double

Function: The offset (in pixels) at which to display the view.

Notes:
By default, the center point of an annotation view is placed at the coordinate point of the associated annotation. You can use this property to reposition the annotation view as needed. This x and y offset values are measured in pixels. Positive offset values move the annotation view down and to the right, while negative values move it up and to the left.

(Read and Write property)

111.3.13 centerOffsetY as Double

Function: The offset (in pixels) at which to display the view.

Notes:
By default, the center point of an annotation view is placed at the coordinate point of the associated annotation. You can use this property to reposition the annotation view as needed. This x and y offset values are measured in pixels. Positive offset values move the annotation view down and to the right, while negative values move it up and to the left.

(Read and Write property)

111.3.14 draggable as Boolean

Function: A Boolean indicating whether the annotation view is draggable.

Notes:
Setting this property to true makes an annotation draggable by the user. If true, the associated annotation object must also implement the setCoordinate method. The default value of this property is false.

Setting this property to true, lets the map view know that the annotation is always draggable. In other words, you cannot conditionalize drag operations by attempting to stop an operation that has already been initiated; doing so can lead to undefined behavior. Once begun, the drag operation should always continue to completion.

(Read and Write property)
111.3. CLASS MKANNOTATIONVIEWMBS

111.3.15 dragState as Integer

Function: The current drag state of the annotation view.
Notes: (Read and Write property)

111.3.16 enabled as Boolean

Function: A Boolean value indicating whether the annotation is enabled.
Notes:
The default value of this property is true. If the value of this property is false, the annotation view ignores touch events and cannot be selected. Subclasses may also display the annotation contents differently depending on the value of this property.
(Read and Write property)

111.3.17 highlighted as Boolean

Function: A Boolean value indicating whether the annotation view is highlighted.
Notes:
You should not set the value of this property directly. The map view sets it in response to touch events entering or exiting the annotation view’s bounds.
(Read and Write property)

111.3.18 imageURL as String

Function: The URL for the image to be displayed by the annotation view.
Notes: (Read and Write property)

111.3.19 reuseIdentifier as String

Function: The string that identifies that this annotation view is reusable.
Notes:
You specify the reuse identifier when you create the view. You use this type later to retrieve an annotation view that was created previously but which is currently unused because its annotation is not on screen.
If you define distinctly different types of annotations (with distinctly different annotation views to go with them), you can differentiate between the annotation types by specifying different reuse identifiers for each one.
(Read only property)

### 111.3.20 selected as Boolean

**Function:** A Boolean value indicating whether the annotation view is currently selected.
**Notes:**
You should not set the value of this property directly. If the property contains YES, the annotation view is displaying a callout bubble.
(Read and Write property)

### 111.3.21 Constants

#### 111.3.22 DragStateCanceling = 3

MBS MacFrameworks Plugin, Plugin Version: 14.1. **Function:** One of the constants indicating the current drag state of an annotation view
**Notes:** An action occurred that indicated the view should cancel the drag operation. You can put an annotation view into this state to abort the operation.

#### 111.3.23 DragStateDragging = 2

MBS MacFrameworks Plugin, Plugin Version: 14.1. **Function:** One of the constants indicating the current drag state of an annotation view
**Notes:** The view is in the middle of a drag operation and is tracking progress.

#### 111.3.24 DragStateEnding = 4

MBS MacFrameworks Plugin, Plugin Version: 14.1. **Function:** One of the constants indicating the current drag state of an annotation view
**Notes:** An action occurred that indicated the view was dropped by the user. The map view automatically moves annotation views to this state in response to appropriate user actions.
111.3.25 DragStateNone = 0

MBS MacFrameworks Plugin, Plugin Version: 14.1. **Function:** One of the constants indicating the current drag state of an annotation view  
**Notes:** The view is not involved in a drag operation. The annotation view is responsible for returning itself to this state when a drag ends or is canceled.

111.3.26 DragStateStarting = 1

MBS MacFrameworks Plugin, Plugin Version: 14.1. **Function:** One of the constants indicating the current drag state of an annotation view  
**Notes:** An action occurred that indicated the view should begin dragging. The map view automatically moves annotation views to this state in response to appropriate user actions.
111.4 class MKCircleMBS

111.4.1 class MKCircleMBS

Function: The MKCircle class is a concrete overlay object representing a circular area on a map.
Notes:
This class manages the data that defines the area and is typically used in conjunction with an MKCircleView object, which handles the drawing of the circular area on a map.
Subclass of the MKShapeMBS class.

111.4.2 Methods

111.4.3 circleWithCenterCoordinate(coord as CLLocationCoordinate2DMBS, radius as Double) as MKCircleMBS

Function: Creates and returns an MKCircle object using the specified coordinate and radius.
Example:

```swift
dim mapview as MKMapViewMBS // your map view
dim centerCoordinate as CLLocationCoordinate2DMBS = mapview.centerCoordinate
dim radius as Integer = 300 // 300 meter

dim circle as MKCircleMBS = MKCircleMBS.circleWithCenterCoordinate(centerCoordinate, radius)
mapview.addOverlay circle
```

Notes:
coord: The center point of the circle, specified as a latitude and longitude value.
radius: The radius of the circle, measured in meters from the center point.
See also:
- 111.4.4 circleWithCenterCoordinate(Latitude as Double, Longitude as Double, radius as Double) as MKCircleMBS

111.4.4 circleWithCenterCoordinate(Latitude as Double, Longitude as Double, radius as Double) as MKCircleMBS

Function: Creates and returns an MKCircle object using the specified coordinate and radius.
Notes:
111.4. CLASS MKCIRCLEMBS

Latitude and Longitude: The center point of the circle, specified as a latitude and longitude value.
radius: The radius of the circle, measured in meters from the center point.

See also:

- 111.4.3 circleWithCenterCoordinate(coord as CLLocationCoordinate2DMBS, radius as Double) as MKCircleMBS

111.4.5 Constructor(coord as CLLocationCoordinate2DMBS, radius as Double)

Function: Creates and returns an MKCircle object using the specified coordinate and radius.
Notes:
coord: The center point of the circle, specified as a latitude and longitude value.
radius: The radius of the circle, measured in meters from the center point.
See also:

- 111.4.6 Constructor(Latitude as Double, Longitude as Double, radius as Double)

111.4.6 Constructor(Latitude as Double, Longitude as Double, radius as Double)

Function: Creates and returns an MKCircle object using the specified coordinate and radius.
Notes:
Latitude and Longitude: The center point of the circle, specified as a latitude and longitude value.
radius: The radius of the circle, measured in meters from the center point.
See also:

- 111.4.5 Constructor(coord as CLLocationCoordinate2DMBS, radius as Double)

111.4.7 Operator_Convert as MKAnnotationMBS

Function: Creates an annotation object referencing this circle.
111.4.8 Properties

111.4.9 coordinate as CLLocationCoordinate2DMBS

Function: The center point of the circular area, specified as a latitude and longitude.
Notes: (Read only property)

111.4.10 latitude as Double

Function: The center point of the circular area, specified as a latitude.
Notes: (Read only property)

111.4.11 longitude as Double

Function: The center point of the circular area, specified as a longitude.
Notes: (Read only property)

111.4.12 radius as Double

Function: The radius of the circular area, measured in meters.
Notes: (Read only property)

111.4.13 region as MKCoordinateRegionMBS

Function: The region linked to this circle.
Notes: (Read only property)

111.4.14 subtitle as String

Function: The subtitle of this circle.
111.4. CLASS MKCIRCLEMBS

Notes: (Read only property)

111.4.15 title as String

Function: The title of this circle.
Notes: (Read only property)
111.5 class MKCircleViewMBS

111.5.1 class MKCircleViewMBS

**Function:** The MKCircleView class provides the visual representation for an MKCircle annotation object.
**Notes:**
This view fills and strokes the circle represented by the annotation. You can change the color and other drawing attributes of the circle by modifying the properties inherited from the MKOverlayPathView class. This class is typically used as is and not subclassed. Subclass of the MKOverlayPathViewMBS class.

111.5.2 Methods

111.5.3 Constructor(circle as Variant)

**Function:** Initializes and returns a new overlay view using the specified circle overlay object.
**Notes:** circle must be a MKCircleMBS object.

111.5.4 Properties

111.5.5 circle as MKCircleMBS

**Function:** The circle overlay object that contains the information used to draw the overlay.
**Notes:** (Read only property)
111.6  class MKCoordinateRegionMBS

111.6.1  class MKCoordinateRegionMBS

**Function:** A structure that defines which portion of the map to display.

111.6.2  Methods

111.6.3  Constructor(center as CLLocationCoordinate2DMBS, span as MKCoordinateSpanMBS)

**Function:** The constructor to initialize an object of this class.

111.6.4  Properties

111.6.5  center as CLLocationCoordinate2DMBS

**Function:** The center point of the region.  
**Notes:** (Read and Write property)

111.6.6  span as MKCoordinateSpanMBS

**Function:** The horizontal and vertical span representing the amount of map to display.  
**Notes:** The span also defines the current zoom level used by the map view object.  
(Read and Write property)
111.7 class MKCoordinateSpanMBS

111.7.1 class MKCoordinateSpanMBS

Function: A structure that defines the area spanned by a map region.
Notes: You use the delta values in this structure to indicate the desired zoom level of the map, with smaller delta values corresponding to a higher zoom level.

111.7.2 Methods

111.7.3 Constructor(latitudeDelta as Double, longitudeDelta as Double)

Function: The constructor to initialize this class.

111.7.4 Properties

111.7.5 latitudeDelta as Double

Function: The amount of north-to-south distance (measured in degrees) to display on the map.
Notes: Unlike longitudinal distances, which vary based on the latitude, one degree of latitude is always approximately 111 kilometers (69 miles).
(Read and Write property)

111.7.6 longitudeDelta as Double

Function: The amount of east-to-west distance (measured in degrees) to display for the map region.
Notes: The number of kilometers spanned by a longitude range varies based on the current latitude. For example, one degree of longitude spans a distance of approximately 111 kilometers (69 miles) at the equator but shrinks to 0 kilometers at the poles.
(Read and Write property)
111.8. CLASS MKGEOCODERMBS

111.8 class MKGeocoderMBS

111.8.1 class MKGeocoderMBS

Function: The class to lookup geo coordinates for an address.

111.8.2 Methods

111.8.3 cancel

Function: Cancels the query.

111.8.4 Constructor

Function: The private constructor.
See also:

- 111.8.5 Constructor(parent as MapKitViewControlMBS, anAddress as string) 16397
- 111.8.6 Constructor(parent as MapKitViewControlMBS, anAddress as string, Coordinate as CLLoca-
  tionCoordinate2DMBS) 16398
- 111.8.7 Constructor(parent as MapKitViewControlMBS, anAddress as string, NearLatitude as Double,
  NearLongitude as Double) 16398

111.8.5 Constructor(parent as MapKitViewControlMBS, anAddress as string)

Function: Submits a forward-geocoding request using the specified address dictionary.
Notes:

address: The address to lookup.

This method submits the specified location data to the geocoding server asynchronously and returns.

Later the events geocoderDidFailWithError or geocoderDidFindCoordinate from MapKitViewControlMBS class are called.
See also:
111.8.4 Constructor

111.8.6 Constructor (parent as MapKitViewControlMBS, anAddress as string, Coordinate as CLLocationCoordinate2DMBS)

111.8.7 Constructor (parent as MapKitViewControlMBS, anAddress as string, NearLatitude as Double, NearLongitude as Double)

111.8.6 Constructor (parent as MapKitViewControlMBS, anAddress as string, Coordinate as CLLocationCoordinate2DMBS)

Function: Submits a forward-geocoding request using the specified address dictionary.
Notes:
address: The address to lookup.
Coordinate: Specifies the region where to search nearby.

This method submits the specified location data to the geocoding server asynchronously and returns.

Later the events geocoderDidFailWithError or geocoderDidFindCoordinate from MapKitViewControlMBS class are called.
See also:

111.8.4 Constructor

111.8.5 Constructor (parent as MapKitViewControlMBS, anAddress as string)

111.8.7 Constructor (parent as MapKitViewControlMBS, anAddress as string, NearLatitude as Double, NearLongitude as Double)

111.8.7 Constructor (parent as MapKitViewControlMBS, anAddress as string, NearLatitude as Double, NearLongitude as Double)

Function: Submits a forward-geocoding request using the specified address dictionary.
Notes:
address: The address to lookup.
Coordinate: Specifies the region where to search nearby.

This method submits the specified location data to the geocoding server asynchronously and returns.

Later the events geocoderDidFailWithError or geocoderDidFindCoordinate from MapKitViewControlMBS class are called.
See also:
111.8. CLASS MKGEOCODERMBS

- 111.8.4 Constructor
- 111.8.5 Constructor(parent as MapKitViewControlMBS, anAddress as string)
- 111.8.6 Constructor(parent as MapKitViewControlMBS, anAddress as string, Coordinate as CLLocationCoordinate2DMBS)

111.8.8 Destructor

Function: The destructor.

111.8.9 start

Function: Starts the geocoder.

111.8.10 Properties

111.8.11 Address as String

Function: The address looking up.
Notes: (Read only property)

111.8.12 coordinate as CLLocationCoordinate2DMBS

Function: The coordinate found.
Notes: (Read only property)

111.8.13 Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)
111.8.14 latitude as Double

Function: The latitude of the coordinate.
Notes: (Read only property)

111.8.15 longitude as Double

Function: The longitude of the coordinate.
Notes: (Read only property)

111.8.16 Querying as Boolean

Function: Whether this geocoder is querying currently.
Notes: (Read only property)
111.9  class MKMapViewMBS

111.9.1  class MKMapViewMBS

Function: An MKMapView object provides an embeddable map interface, similar to the one provided by the Maps application.
Notes:
You use this class as-is to display map information and to manipulate the map contents from your application. You can center the map on a given coordinate, specify the size of the area you want to display, and annotate the map with custom information.
Subclass of the NSViewMBS class.

111.9.2  Methods

111.9.3  addAnnotation(annotation as Variant)

Function: Adds the specified annotation to the map view.
Example:

    dim mapview as MKMapViewMBS // your map view

    // new pin
    dim pin as new MKPointAnnotationMBS

    pin.coordinate = mapView.centerCoordinate
    pin.title = "Hello"

    // show on map
    mapView.addAnnotation pin

111.9.4  addAnnotations(annotations() as Variant)

Function: Adds an array of annotation objects to the map view.
111.9.5  **addJavascriptTag(urlString as string)**

**Function:** Adds additional javascript.

111.9.6  **addOverlay(overlay as Variant)**

**Function:** Adds a single overlay object to the map.
**Example:**
```
    dim mapview as MKMapViewMBS // your map view
    dim centerCoordinate as CLLocationCoordinate2DMBS = mapview.centerCoordinate
    dim radius as Integer = 300 // 300 meter

    dim circle as MKCircleMBS = MKCircleMBS.circleWithCenterCoordinate(centerCoordinate, radius)
    mapview.addOverlay circle
```

**Notes:**

- **overlay:** The overlay object to add. This object must conform to the MKOverlay protocol.

The specified object is added to the group of overlay objects in the MKOverlayLevelAboveLabels level. Adding an overlay causes the map view to begin monitoring the area represented by that overlay. As soon as the bounding rectangle of an overlay intersects the visible portion of the map, the map view adds a corresponding overlay view to the map. The overlay view is provided by the mapViewViewForOverlay event.

To remove an overlay from a map, use the removeOverlay method.

111.9.7  **addOverlays(overlays() as Variant)**

**Function:** Adds an array of overlay objects to the map.
**Notes:**

- **overlays:** An array of objects, each of which must conform to the MKOverlay protocol.

The specified objects are added to the group of overlay objects in the MKOverlayLevelAboveLabels level. Adding an overlay causes the map view to begin monitoring the area represented by that overlay. As soon as the bounding rectangle of the overlay intersects the visible portion of the map, the map view tries to draw the overlay. As soon as the bounding rectangle of an overlay intersects the visible portion of the
map, the map view adds a corresponding overlay view to the map. The overlay view is provided by the mapViewViewForOverlay method of the map view’s delegate object.

To remove multiple overlays from a map, use the removeOverlays method.

111.9.8  addStylesheetTag(urlString as string)

Function: Adds additional style sheet.

111.9.9  annotations as Variant()

Function: The complete list of annotations associated with the receiver.
Notes: If no annotations are associated with the map view, the value of this property is empty.

111.9.10 Constructor

Function: Creates a new box view with size 100/100 and position 0/0
Example:

\[
\text{dim } x \text{ as new MKMapViewMBS}
\]

Notes: On success the handle property is not zero.
See also:

- 111.9.11 Constructor(Handle as Integer) 16403
- 111.9.12 Constructor(left as Double, top as Double, width as Double, height as Double) 16404

111.9.11 Constructor(Handle as Integer)

Function: Creates an object based on the given NSView handle.
Example:

\[
\text{dim } t \text{ as new MKMapViewMBS}(0, 0, 100, 100) \\
\text{dim } v \text{ as new MKMapViewMBS}(t.\text{handle})
\]
MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)

Notes: The handle is casted to a MKMapView and the plugin retains this handle.
See also:

- 111.9.10 Constructor  
- 111.9.12 Constructor(left as Double, top as Double, width as Double, height as Double)  

111.9.12 Constructor(left as Double, top as Double, width as Double, height as Double)

Function: Creates a new control with the given size and position.
Example:

```vbs
dim left,top,width,height as Integer
// define rectangle
dim x as new MKMapViewMBS(left, top, width, height)
```

Notes: On success the handle property is not zero.
See also:

- 111.9.10 Constructor  
- 111.9.11 Constructor(Handle as Integer)  

111.9.13 convertCoordinateToPointToView(coordinate as CLLocationCoordinate2DMBS, view as NSViewMBS) as NSPointMBS

Function: Converts a map coordinate to a point in the specified view.
Notes:

coordinate: The map coordinate for which you want to find the corresponding point.
view: The view in whose coordinate system you want to locate the specified map coordinate. If this parameter is nil, the returned point is specified in the window’s coordinate system. If view is not nil, it must belong to the same window as the map view.

Returns the point (in the appropriate view or window coordinate system) corresponding to the specified latitude and longitude value.
111.9.14  convertPointToCoordinateFromView(point as NSPointMBS, view as NSViewMBS) as CLLocationCoordinate2DMBS

Function: Converts a point in the specified view’s coordinate system to a map coordinate.
Notes:
point: The point you want to convert.
view: The view that serves as the reference coordinate system for the point parameter.

Returns the map coordinate at the specified point.

111.9.15  convertRectToRegionFromView(rect as NSRectMBS, view as NSViewMBS) as MKCoordinateRegionMBS

Function: Converts a rectangle in the specified view’s coordinate system to a map region.
Notes:
rect: The rectangle you want to convert.
view: The view that serves as the reference coordinate system for the rect parameter.

Returns the map region corresponding to the specified view rectangle.

111.9.16  convertRegionToRectToView(region as MKCoordinateRegionMBS, view as NSViewMBS) as NSRectMBS

Function: Converts a map region to a rectangle in the specified view.
Notes:
region: The map region for which you want to find the corresponding view rectangle.
view: The view in whose coordinate system you want to locate the specified map region. If this parameter is
nil, the returned rectangle is specified in the window’s coordinate system. If view is not nil, it must belong
to the same window as the map view.

Returns the rectangle corresponding to the specified map region.
111.9.17 dequeueReusableAnnotationViewWithIdentifier(identifier as string) as MKAnnotationViewMBS

Function: Returns a reusable annotation view located by its identifier.
Notes:
identifier: A string identifying the annotation view to be reused. This string is the same one you specify when initializing the annotation view using the Constructor method.

Returns an annotation view with the specified identifier, or nil if no such object exists in the reuse queue.

For performance reasons, you should generally reuse MKAnnotationView objects in your map views. As annotation views move offscreen, the map view moves them to an internally managed reuse queue. As new annotations move onscreen, and your code is prompted to provide a corresponding annotation view, you should always attempt to dequeue an existing view before creating a new one. Dequeueing saves time and memory during performance-critical operations such as scrolling.

111.9.18 deselectAnnotation(annotation as Variant, animated as boolean)

Function: Deselects the specified annotation and hides its callout view.
Notes:
annotation: The annotation object to deselect.
animated: If true, the callout view is animated offscreen.

111.9.19 Destructor

Function: The destructor.

111.9.20 exchangeOverlay(index1 as Integer, index2 as Integer)

Function: Exchanges the positions of the two overlay objects.
Notes:
index1: The index of an overlay in the MKOverlayLevelAboveLabels map level.
index2: The index of another overlay in the MKOverlayLevelAboveLabels map level.
If you need to exchange overlays in other map levels, use the exchangeOverlay method.

### 111.9.21 InitMapKit as boolean

**Function:** Loads the MapKit framework from Apple.  
**Notes:**

- 64-bit only. And you need to sign app with entitlement for MapKit usage.
- As the plugin can use both frameworks (opensource and Apple), some methods may only be available in one framework.
- You need to load the framework once before you want to use the Map Kit classes.

### 111.9.22 insertOverlayAboveOverlay(overlay as Variant, aboveOverlay as Variant)

**Function:** Inserts one overlay object on top of another.  
**Notes:**

- overlay: The overlay object to insert.
- sibling: An existing object in the overlays array. This object must exist in the array and must not be nil.

This method inserts the overlay into the MKOverlayLevelAboveLabels level and positions it relative to the specified sibling. When displayed, this leads to the overlay’s contents being displayed above that of its sibling. If sibling is not in the same map level, this method appends the overlay to the end of the list of overlays at the indicated level.

### 111.9.23 insertOverlayAtIndex(overlay as Variant, index as Integer)

**Function:** Inserts an overlay object into the list associated with the map.  
**Notes:**

- overlay: The overlay object to insert.
- index: The index at which to insert the overlay object. If this value is greater than the number of objects in the overlays property, this method appends the object to the end of the array.

This method inserts the overlay into the MKOverlayLevelAboveLabels level.
111.9.24  insertOverlayBelowOverlay(overlay as Variant, belowOverlay as Variant)

Function: Inserts one overlay object below another.
Notes:
overlay: The overlay object to insert.
sibling: An existing object in the overlays array. This object must exist in the array and must not be nil.

This method inserts the overlay into the MKOverlayLevelAboveLabels level and positions it relative to the specified sibling. When displayed, this leads to the overlay’s contents being displayed beneath that of its sibling. If sibling is not in the same map level, this method appends the overlay to the end of the list of overlays at the indicated level.

111.9.25  IsFrameworkLoaded as boolean

Function: Whether the MapKit framework was loaded successfully.

111.9.26  LoadFramework(path as folderitem) as boolean

Function: Loads the OpenSource MapKit framework.
Example:
    dim f as FolderItem = getfolderitem("MapKit.framework")

    if MKMapViewMBS.LoadFramework(f) then
        // ok
    else
        MsgBox "Failed to load framework."
        quit
    end if

Notes:
You need to load the framework once before you want to use the Map Kit classes.
Please make sure you have 32/64bit library to match application bit number.
111.9.27 overlays as Variant()

Function: The overlay objects currently associated with the map view.

Notes:
This property contains the union of all overlays at the different levels of the map. The objects in this array must adopt the MKOverlay protocol. If no overlays are associated with the map view, the value of this property is an empty array.

The order of the objects in this array does not necessarily reflect their visual order on the map.

111.9.28 removeAnnotation(annotation as Variant)

Function: Removes the specified annotation object from the map view.

Notes:
annotation: The annotation object to remove. This object must conform to the MKAnnotation protocol.

If the annotation is currently associated with an annotation view, and that view has a reuse identifier, this method removes the annotation view and queues it internally for later reuse. You can retrieve queued annotation views (and associate them with new annotations) using the dequeueReusableAnnotationViewWithIdentifier method.

Removing an annotation object disassociates it from the map view entirely, preventing it from being displayed on the map. Thus, you would typically call this method only when you want to hide or delete a given annotation.

111.9.29 removeAnnotations(annotations() as Variant)

Function: Removes an array of annotation objects from the map view.

Notes:
annotations: The array of annotations to remove. Objects in the array must conform to the MKAnnotation protocol.

If any annotation object in the array has an associated annotation view, and if that view has a reuse identifier, this method removes the annotation view and queues it internally for later reuse. You can retrieve queued annotation views (and associate them with new annotations) using the dequeueReusableAnnotationViewWithIdentifier method.
Removing annotation objects disassociates them from the map view entirely, preventing them from being displayed on the map. Thus, you would typically call this method only when you want to hide or delete the specified annotations.

111.9.30  removeOverlay(overlay as Variant)

Function: Removes a single overlay object from the map.
Notes:
overlay: The overlay object to remove.

This method removes the overlay regardless of the level that it is in. Removing an overlay also removes its corresponding renderer, if one is in use. If the specified overlay is not currently associated with the map view, this method does nothing.

111.9.31  removeOverlays(overlays() as Variant)

Function: Removes one or more overlay objects from the map.
Notes:
overlays: An array of objects, each of which conforms to the MKOverlay protocol.

This method removes the specified overlays regardless of which level each one is in. Removing an overlay also removes its corresponding renderer, if one is in use. If a given overlay object is not associated with the map view, it is ignored.

111.9.32  selectAnnotation(annotation as Variant, animated as boolean)

Function: Selects the specified annotation and displays a callout view for it.
Notes:
annotation: The annotation object to select.
animated: If true, the callout view is animated into position.

If the specified annotation is not onscreen, and therefore does not have an associated annotation view, this method has no effect.
111.9.33 selectedAnnotations as Variant()

**Function:** The annotations that are currently selected.
**Notes:** Assigning a new array to this property selects only the first annotation in the array.

111.9.34 setCenterCoordinate(Latitude as Double, Longitude as Double, Animated as boolean = true)

**Function:** Changes the center coordinate of the map and optionally animates the change.
**Notes:**
Latitude and Longitude: The new center coordinate for the map.
animated: Specify true if you want the map view to scroll to the new location or false if you want the map to display the new location immediately.

Changing the center coordinate centers the map on the new coordinate without changing the current zoom level. It also updates the value in the region property to reflect the new center coordinate and the new span values needed to maintain the current zoom level.

111.9.35 setRegion(c as CLLocationCoordinate2DMBS, animated as boolean = false)

**Function:** Changes the currently visible region and optionally animates the change.
**Notes:** Same as SetRegion with MKCoordinateRegionMBS but reuses current coordinate span.
See also:
- 111.9.36 setRegion(region as MKCoordinateRegionMBS, animated as boolean = false)

111.9.36 setRegion(region as MKCoordinateRegionMBS, animated as boolean = false)

**Function:** Changes the currently visible region and optionally animates the change.
**Example:**
```plaintext
dim mapview as MKMapViewMBS // your mapview

// get current region
dim r as MKCoordinateRegionMBS = mapview.region
```
// make new span with double deltas
dim s as new MKCoordinateSpanMBS(r.span.latitudeDelta*2, r.span.longitudeDelta*2)

// make new region
dim n as new MKCoordinateRegionMBS(r.center, s)

// and zoom there
mapview.setRegion n, true

Notes:

region: The new region to display in the map view.
animated: Specify true if you want the map view to animate the transition to the new region or false if you want the map to center on the specified region immediately.

Changing just the center coordinate of the region can still cause the span values to change implicitly. The span values might change because that the distances represented by a span change at different latitudes and longitudes and the map view may need to adjust the span to account for the new location. If you want to change the center coordinate without changing the zoom level, use the setCenterCoordinate instead.

When setting a new region, the map may adjust the value in the region parameter so that it fits the visible area of the map precisely. This adjustment is normal and is done to ensure that the value in the region property always reflects the visible portion of the map. However, it does mean that if you get the value of that property right after calling this method, the returned value may not match the value you set. (You can use the regionThatFits method to determine the region that will actually be set by the map.)

See also:

• 111.9.35 setRegion(c as CLLocationCoordinate2DMBS, animated as boolean = false)

111.9.37 showAddress(address as string)

Function: Convenience method to run an address geocoding and shows position on map.

Example:

dim mapView as MKMapViewMBS // your map view
mapView.showAddress "Markt 15, Andernach, Deutschland"
111.9.38 viewForAnnotation((annotation as Variant) as MKAnnotationViewMBS)

**Function:** Returns the annotation view associated with the specified annotation object, if any.

**Example:**

```vbnet
Function viewForAnnotation(mapView as MKMapViewMBS, annotation as Variant) As MKAnnotation-
ViewMBS
    // make a new view for this annotation
dim view as new MKPinAnnotationViewMBS(annotation, "id")

    // allow user to drag
    view.draggable = true

    // maybe save it somewhere for later?
    views.Append view

    // and return
    Return view
End Function
```

**Notes:**

- **annotation:** The annotation object whose view you want.

Returns the annotation view or nil if the view has not yet been created. This method may also return nil if the annotation is not in the visible map region and therefore does not have an associated annotation view.

---

111.9.39 viewForOverlay(overlay as MKPolylineMBS) as MKOverlayViewMBS

**Function:** Returns the view associated with the overlay object if any.

**Notes:**

- **overlay:** The overlay object whose view you want.

Returns the view associated with the overlay object or nil if the overlay is not onscreen.
111.9.40 Properties

111.9.41 centerCoordinate as CLLocationCoordinate2DMBS

**Function:** The map coordinate at the center of the map view.

**Example:**

```dim mapview as MKMapViewMBS // your map view
dim centerCoordinate as CLLocationCoordinate2DMBS = mapview.centerCoordinate

// show center
MsgBox str(centerCoordinate.latitude)+” ”+str(centerCoordinate.longitude)```

**Notes:**

Changing the value in this property centers the map on the new coordinate without changing the current zoom level. It also updates the values in the region property to reflect the new center coordinate and the new span values needed to maintain the current zoom level.

Changing the value of this property updates the map view immediately. If you want to animate the change, use the setCenterCoordinate method instead.

(Read only property)

111.9.42 centerCoordinateLatitude as Double

**Function:** The map coordinate at the center of the map view.

**Notes:**

Changing the value in this property centers the map on the new coordinate without changing the current zoom level. It also updates the values in the region property to reflect the new center coordinate and the new span values needed to maintain the current zoom level.

Changing the value of this property updates the map view immediately. If you want to animate the change, use the setCenterCoordinate method instead.

(Read only property)

111.9.43 centerCoordinateLongitude as Double

**Function:** The map coordinate at the center of the map view.
111.9. CLASS MKMAPVIEWMBS

Notes:
Changing the value in this property centers the map on the new coordinate without changing the current zoom level. It also updates the values in the region property to reflect the new center coordinate and the new span values needed to maintain the current zoom level.

Changing the value of this property updates the map view immediately. If you want to animate the change, use the setCenterCoordinate method instead.
(Read only property)

111.9.44 mapType as Integer

Function: The type of data displayed by the map view.
Example:

```dim mapview as MKMapViewMBS // your map view
mapView.mapType = mapView.MKMapTypeHybrid```

Notes:
Changing the value in this property may cause the receiver to begin loading new map content. For example, changing from MKMapTypeStandard to MKMapTypeSatellite might cause it to begin loading the satellite imagery needed for the map. If new data is needed, however, it is loaded asynchronously and appropriate messages are sent to the receiver’s delegate indicating the status of the operation.
(Read and Write property)

111.9.45 region as MKCoordinateRegionMBS

Function: The area currently displayed by the map view.
Notes:
The region encompasses both the latitude and longitude point on which the map is centered and the span of coordinates to display. The span values provide an implicit zoom value for the map. The larger the displayed area, the lower the amount of zoom. Similarly, the smaller the displayed area, the greater the amount of zoom.

Changing only the center coordinate of the region can still cause the span to change implicitly. The span might change because the distances represented by a span change at different latitudes and longitudes and the map view may need to adjust the span to account for the new location. If you want to change the center coordinate without changing the zoom level, use the centerCoordinate instead.
Changing the value of this property updates the map view immediately. When setting this property, the map may adjust the new region value so that it fits the visible area of the map precisely. This is normal and is done to ensure that the value in this property always reflects the visible portion of the map. However, it does mean that if you get the value of this property right after setting it, the returned value may not match the value you set. (You can use the regionThatFits method to determine the region that will actually be set by the map.)

If you want to animate the change in region, use the setRegion method instead.
(Read and Write property)

111.9.46 scrollEnabled as Boolean

Function: A Boolean value that determines whether the user may scroll around the map.

Notes:
This property controls only user interactions with the map. If you set the value of this property to NO, you may still change the map location programmatically by changing the value in the region property.

The default value of this property is true.
(Read and Write property)

111.9.47 showsUserLocation as Boolean

Function: A Boolean value indicating whether the map should try to display the user’s location.

Notes:
This property does not indicate whether the user’s position is actually visible on the map, only whether the map view should try to display it. Setting this property to true causes the map view to use the Core Location framework to find the current location and try to display it on the map. As long as this property is true, the map view continues to track the user’s location and update it periodically. The default value of this property is false.

Showing the user’s location does not guarantee that the location is visible on the map. The user might have scrolled the map to a different point, causing the current location to be offscreen. To determine whether the user’s current location is currently displayed on the map, use the userLocationVisible property.
(Read and Write property)
111.9. **CLASS MKMAPVIEWMBS**

111.9.48 **userLocation as MKUserLocationMBS**

**Function:** The annotation object representing the user’s current location.
**Notes:** (Read only property)

111.9.49 **userLocationVisible as Boolean**

**Function:** A Boolean value indicating whether the device’s current location is visible in the map view.
**Notes:**
This property tells you whether the icon used to represent the user’s current location is visible in the map view. When determining whether the current location is visible, this property factors in the horizontal accuracy of the location data. Specifically, if the rectangle represented by the user’s current location plus or minus minus the horizontal accuracy of that location intersects the map’s visible rectangle, this property contains the value true. If that location rectangle does not intersect the map’s visible rectangle, this property contains the value false.

If the user’s location cannot be determined, this property contains the value false.
(Read only property)

111.9.50 **webview as Variant**

**Function:** The webview used for the map.
**Notes:**
Value is a WebViewMBS object.
(Read only property)

111.9.51 **zoomEnabled as Boolean**

**Function:** A Boolean value that determines whether the user may use pinch gestures to zoom in and out of the map.
**Notes:**
This property controls only user interactions with the map. If you set the value of this property to NO, you may still change the zoom level programmatically by changing the value in the region property.

The default value of this property is true.
111.9.52  Constants

111.9.53  MKMapTypeHybrid = 2

MBS MacFrameworks Plugin, Plugin Version: 14.1.  **Function:** One of the map types.  
**Notes:** Displays a satellite image of the area with road and road name information layered on top.

111.9.54  MKMapTypeSatellite = 1

MBS MacFrameworks Plugin, Plugin Version: 14.1.  **Function:** One of the map types.  
**Notes:** Displays satellite imagery of the area.

111.9.55  MKMapTypeStandard = 0

MBS MacFrameworks Plugin, Plugin Version: 14.1.  **Function:** One of the map types.  
**Notes:** Displays a street map that shows the position of all roads and some road names.
111.10. CLASS MKMULTIPOINTMBS

111.10 class MKMultiPointMBS

111.10.1 class MKMultiPointMBS

Function: The MKMultiPoint class is an abstract superclass used to define shapes composed of multiple points.
Notes: You should not create instances of this class directly. Instead, you should create instances of the MKPolyline or MKPolygon classes. However, you can use the method and properties of this class to access information about the specific points associated with the line or polygon.
Subclass of the MKShapeMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

111.10.2 Methods

111.10.3 Constructor

Function: The private constructor.

111.10.4 coordinates as CLLocationCoordinate2DMBS()

Function: Retrieves points associated with the shape and converts them to coordinate values.
Notes: This method converts the map points into coordinates before returning them to you.

111.10.5 Properties

111.10.6 coordinateCount as Integer

Function: The number of points associated with the shape.
Notes: (Read only property)
CHAPTER 111. MAPKIT

111.11 class MKOverlayPathViewMBS

111.11.1 class MKOverlayPathViewMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The MKOverlayPathView class represents a generic overlay that draws its contents using a CGPath data type.

**Notes:**
You can use this class to implement simple path-based overlay views or subclass it to define additional drawing behaviors. The default drawing behavior of this class is to apply the object’s current fill attributes, fill the path, apply the current stroke attributes, and then stroke the path.

If you subclass, you should override the createPath method and use that method to build the appropriate path for the overlay. You can invalidate this path as needed and force the path to be recreated using whatever new data your subclass has obtained.
Subclass of the MKOverlayViewMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

111.11.2 Methods

111.11.3 Constructor

111.11.4 Properties

111.11.5 fillColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The fill color to use for the path.
**Notes:** (Read and Write property)

111.11.6 lineWidth as Double

MBS MacFrameworks Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The stroke width to use for the path.
**Notes:**
111.11. CLASS MKOVERLAYPATHVIEWMBS

The default value of this property is 0.
(Read and Write property)

111.11.7 strokeLineColor as NSColorMBS

Function: The stroke color to use for the path.
Notes: (Read and Write property)
111.12 class MKOverlayViewMBS

111.12.1 class MKOverlayViewMBS

Function: The MKOverlayView class defines the basic behavior associated with all overlay views.

Notes:

An overlay view provides the visual representation of an overlay object that is, an object that conforms to the MKOverlay protocol. This class defines the drawing infrastructure used by the map view but does not do any actual drawing.

The Map Kit framework provides several concrete instances of overlay views. Specifically, it provides overlay views for each of the concrete overlay objects. You can use one of these existing overlay views or define your own subclass if you want to draw the overlay contents differently.

Subclass of the MKViewMBS class.

111.12.2 Methods

111.12.3 Constructor(Overlay as Variant)

Function: Initializes and returns the overlay view and associates it with the specified overlay object.

Notes:

overlay: The overlay object to use when drawing the overlay on the map. This object provides the data needed to draw the overlay’s shape. This object is retained by the overlay view.

Returns an initialized overlay object.

Upon initialization, the frame of the overlay view is set to CGRectZero. The map view sets the size and position of the view at display time, and you should not change those values yourself.

111.12.4 Properties

111.12.5 Overlay as Variant

Function: The overlay object containing the data for drawing.

Notes: (Read only property)
111.13. class MKPinAnnotationViewMBS

111.13.1. class MKPinAnnotationViewMBS

Function: The MKPinAnnotationView class provides a concrete annotation view that displays a pin icon like the ones found in the Maps application.

Notes:
Using this class, you can configure the type of pin to drop and whether you want the pin to be animated into place.
Subclass of the MKAnnotationViewMBS class.

111.13.2. Methods

111.13.3. Constructor

Function: The private constructor.

See also:

- 111.13.4 Constructor(annotation as Variant, reuseIdentifier as string = "")

111.13.4. Constructor(annotation as Variant, reuseIdentifier as string = "")

Function: The constructor.

See also:

- 111.13.3 Constructor

111.13.5. Properties

111.13.6. animatesDrop as Boolean

Function: Whether to animate the dropping of the pin.

Notes: (Read and Write property)
111.13.7  pinColor as Integer

**Function:** The color of the pin head.
**Notes:**
The Maps application uses different pin colors for different types of map annotations. Your own map annotation should use the available pin colors in the same way.
(Read and Write property)

111.13.8  Constants

111.13.9  ColorBlue = 2

MBS MacFrameworks Plugin, Plugin Version: 14.1. **Function:** One of the color constants.
**Notes:** The head of the pin is blue. Purple pins indicate user-specified points on the map.

111.13.10  ColorGreen = 1

MBS MacFrameworks Plugin, Plugin Version: 14.1. **Function:** One of the color constants.
**Notes:** The head of the pin is green. Green pins indicate starting points on the map.

111.13.11  ColorRed = 0

MBS MacFrameworks Plugin, Plugin Version: 14.1. **Function:** One of the color constants.
**Notes:** The head of the pin is red. Red pins indicate destination points on the map.
111.14. class MKPlacemarkMBS

111.14.1 class MKPlacemarkMBS

**Function:** A MKPlacemark object stores placemark data for a given latitude and longitude.

**Notes:**
Placemark data includes information such as the country, state, city, and street address associated with the specified coordinate. Placemarks are typically generated by a MKReverseGeocoder object, although you can also create them explicitly yourself.

A placemark is also an annotation and conforms to the MKAnnotation protocol, whose properties and methods include the placemark coordinate and other information. Because they are annotations, you can add them directly to the map view.

Subclass of the MKAnnotationMBS class.

111.14.2 Methods

111.14.3 Constructor(coordinate as CLLocationCoordinate2DMBS, addressDictionary as dictionary)

**Function:** Initializes and returns a placemark object using the specified coordinate and Address Book dictionary.

**Notes:** You can create placemark objects manually for entities for which you already have address information, such as contacts in the Address Book. Creating a placemark object explicitly avoids the need to query the reverse geocoder object for the same information.

See also:

- 111.14.4 Constructor(Latitude as Double, Longitude as Double, addressDictionary as dictionary) 16425

111.14.4 Constructor(Latitude as Double, Longitude as Double, addressDictionary as dictionary)

**Function:** Initializes and returns a placemark object using the specified coordinate and Address Book dictionary.

**Notes:** You can create placemark objects manually for entities for which you already have address information, such as contacts in the Address Book. Creating a placemark object explicitly avoids the need to query the reverse geocoder object for the same information.

See also:
111.14.3 Constructor(coordinate as CLLocationCoordinate2DMBS, addressDictionary as dictionary)

111.14.5 Properties

111.14.6 addressDictionary as Dictionary

**Function:** A dictionary containing the Address Book keys and values for the placemark.  
**Notes:**  
The keys in this dictionary are those defined by the Address Book framework and used to access address information for a person. For a list of the strings that might be in this dictionary, see the Address Property constants in ABPerson Reference.  
(Read only property)

111.14.7 administrativeArea as String

**Function:** The state associated with the placemark.  
**Notes:**  
If the placemark location was Apple’s headquarters, the value for this property would be the string "CA" or "California".  
(Read only property)

111.14.8 coordinate as CLLocationCoordinate2DMBS

**Function:** The coordinate of the placemark.  
**Notes:** (Read only property)

111.14.9 CoordinateLatitude as Double

**Function:** The coordinate of the placemark.  
**Notes:** (Read only property)
111.14.10 CoordinateLongitude as Double

Function: The coordinate of the placemark.
Notes: (Read only property)

111.14.11 country as String

Function: The name of the country associated with the placemark.
Notes: If the placemark location was Apple’s headquarters, the value for this property would be the string “United States”.
(Read only property)

111.14.12 countryCode as String

Function: The abbreviated country name.
Notes: This string is the standard abbreviation used to refer to the country. For example, if the placemark location was Apple’s headquarters, the value for this property would be the string ”US”.
(Read only property)

111.14.13 locality as String

Function: The city associated with the placemark.
Notes: If the placemark location was Apple’s headquarters, the value for this property would be the string ”Cupertino”.
(Read only property)

111.14.14 postalCode as String

Function: The postal code associated with the placemark.
Notes:
If the placemark location was Apple’s headquarters, the value for this property would be the string "95014".
(Read only property)

**111.14.15 subAdministrativeArea as String**

**Function:** Additional administrative area information for the placemark.
**Notes:**
Subadministrative areas typically correspond to counties or other regions that are then organized into a larger administrative area or state. For example, if the placemark location was Apple's headquarters, the value for this property would be the string "Santa Clara", which is the county in California that contains the city of Cupertino.
(Read only property)

**111.14.16 subLocality as String**

**Function:** Additional city-level information for the placemark.
**Notes:**
This property contains additional information, such as the name of the neighborhood or landmark associated with the placemark. It might also refer to a common name that is associated with the location.
(Read only property)

**111.14.17 subThoroughfare as String**

**Function:** Additional street-level information for the placemark.
**Notes:**
Subthroughfares provide information such as the street number for the location. For example, if the placemark location was Apple’s headquarters (1 Infinite Loop), the value for this property would be the string "1".
(Read only property)

**111.14.18 thoroughfare as String**

**Function:** The street address associated with the placemark.
**Notes:**
The street address contains the street name. For example, if the placemark location was Apple’s headquarters, the value for this property would be the string "Infinite Loop". (Read only property)
111.15 class MKPointAnnotationMBS

111.15.1 class MKPointAnnotationMBS

Function: The MKPointAnnotation class defines a concrete annotation object located at a specified point.

Example:

dim mapview as MKMapViewMBS // your map view

    // new pin
dim pin as new MKPointAnnotationMBS

    pin.coordinate = mapView.centerCoordinate
    pin.title = "Hello"

    // show on map
    mapView.addAnnotation pin

Notes:
You can use this class, rather than define your own, in situations where all you want to do is associate a point on the map with a title.

Subclass of the MKShapeMBS class.

111.15.2 Methods

111.15.3 Constructor

Function: The constructor.

Example:

dim mapview as MKMapViewMBS // your map view

    // new pin
dim pin as new MKPointAnnotationMBS

    pin.coordinate = mapView.centerCoordinate
    pin.title = "Hello"

    // show on map
    mapView.addAnnotation pin
111.15.4 Properties

111.15.5 coordinate as CLLocationCoordinate2DMBS

Function: The coordinate point of the annotation, specified as a latitude and longitude.
Notes: (Read and Write property)

111.15.6 CoordinateLatitude as Double

Function: The coordinate point of the annotation, specified as a latitude and longitude.
Notes: (Read and Write property)

111.15.7 CoordinateLongitude as Double

Function: The coordinate point of the annotation, specified as a latitude and longitude.
Notes: (Read and Write property)
111.16 class MKPolygonMBS

111.16.1 class MKPolygonMBS

Function: The MKPolygon class represents a shape consisting of one or more points that define a closed polygon.
Notes: The points are connected end-to-end in the order they are provided. The first and last points are connected to each other to create the closed shape.

When creating a polygon, you can mask out portions of the polygon by specifying one or more interior polygons. For the polygons you specify, this class uses the even-odd fill rule to determine the final occupied area. When applied to overlapping polygons, this rule can cause specific regions to be masked out (and thereby removed) from the total occupied area. For more information about how fill rules are applied to paths, see "Paths" in Quartz 2D Programming Guide.
Subclass of the MKMultiPointMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

111.16.2 Methods

111.16.3 Constructor

Function: The private constructor.

111.16.4 interiorPolygons as MKPolygonMBS()

Function: The array of polygons nested inside the receiver.
Notes: When a polygon is rendered on screen, the area occupied by any interior polygons is masked out and not considered part of the polygon.

111.16.5 Operator_Convert as MKAnnotationMBS

Function: Creates an annotation object for this polygon.
111.16. CLASS MKPOLYGONMBS

111.16.6 polygonWithCoordinates(coords() as CLLocationCoordinate2DMBS) as MKPolygonMBS

Function: Creates and returns an MKPolygon object from the specified set of coordinates.
Notes:
coords: The array of coordinates defining the shape. Returns a new polygon object.
See also:

• 111.16.7 polygonWithCoordinates(coords() as CLLocationCoordinate2DMBS, InteriorPolygons() as MKPolygonMBS) as MKPolygonMBS

111.16.7 polygonWithCoordinates(coords() as CLLocationCoordinate2DMBS, InteriorPolygons() as MKPolygonMBS) as MKPolygonMBS

Function: Creates and returns an MKPolygon object from the specified set of coordinates and interior
polygons.
Notes:
coords: The array of coordinates defining the shape.
interiorPolygons: An array of MKPolygon objects that define one or more cutout regions for the receiver’s
polygon.

Returns a new polygon object.
See also:

• 111.16.6 polygonWithCoordinates(coords() as CLLocationCoordinate2DMBS) as MKPolygonMBS
111.17 class MKPolygonViewMBS

111.17.1 class MKPolygonViewMBS

**Function:** The MKPolygonView class provides the visual representation for an MKPolygon annotation object.

**Notes:**
This view fills and strokes the area represented by the annotation. You can change the color and other drawing attributes of the polygon by modifying the properties inherited from the MKOverlayPathView class. This class is typically used as is and not subclassed.
Subclass of the MKOverlayPathViewMBS class.

111.17.2 Methods

111.17.3 Constructor(polygon as MKPolygonMBS)

**Function:** Initializes and returns a new overlay view using the specified polygon overlay object.

**Notes:** polygon: The polygon overlay containing the information about the area to be drawn. This object must have at least three points defining the polygon in order for this view to draw the corresponding path.

111.17.4 Properties

111.17.5 Polygon as MKPolygonMBS

**Function:** The polygon overlay object that contains the information used to draw the overlay.

**Notes:** (Read only property)
111.18. class MKPolylineMBS

111.18.1 class MKPolylineMBS

Function: The MKPolyline class represents a shape consisting of one or more points that define connecting line segments.

Notes:
The points are connected end-to-end in the order they are provided. The first and last points are not connected to each other.
Subclass of the MKMultiPointMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

111.18.2 Methods

111.18.3 Constructor

Function: The private constructor.

111.18.4 Operator Convert as MKAnnotationMBS

Function: Creates an annotation object for the polyline.

111.18.5 polylineWithCoordinates(coords() as CLLocationCoordinate2DMBS) as MKPolylineMBS

Function: Creates and returns an MKPolyline object from the specified set of coordinates.

Notes:
coords: The array of coordinates defining the shape. The data in this array is copied to the new object.
Returns a new polyline object.
111.19 class MKPolylineViewMBS

111.19.1 class MKPolylineViewMBS

Function: The MKPolylineView class provides the visual representation for an MKPolyline annotation object.
Notes: This view strokes the path represented by the annotation. (This class does not fill the area enclosed by the path.) You can change the color and other drawing attributes of the path by modifying the properties inherited from the MKOverlayPathView class. This class is typically used as is and not subclassed. Subclass of the MKOverlayPathViewMBS class.

111.19.2 Methods

111.19.3 Constructor(polyline as MKPolylineMBS)

Function: Initializes and returns a new overlay view using the specified polyline overlay object.
Notes: polyline: The polyline overlay object containing the information about the path to be stroked. This object must have at least two points defined in order for this view to draw the corresponding path.

111.19.4 Properties

111.19.5 Polyline as MKPolylineMBS

Function: The polyline overlay object that contains the information used to draw the overlay.
Notes: (Read only property)
111.20. CLASS MKREVERSEGEOCODERMBS

111.20 class MKReverseGeocoderMBS

111.20.1 class MKReverseGeocoderMBS

Function: The MKReverseGeocoder class provides services for converting a map coordinate (specified as a latitude/longitude pair) into information about that coordinate, such as the country, city, or street.

Notes: A reverse geocoder object is a single-shot object that works with a network-based map service to look up placemark information for its specified coordinate value.

111.20.2 Methods

111.20.3 cancel

Function: Cancels a pending reverse-geocoding request.

Notes: You can use this method to cancel a pending request and free up the resources associated with that request. If the request has already returned or has not yet begun, calling this method has no effect.

111.20.4 Constructor

Function: The private constructor.

See also:

- 111.20.5 Constructor(control as MapKitViewControlMBS, coordinate as CLLocationCoordinate2DMBS) 16437
- 111.20.6 Constructor(control as MapKitViewControlMBS, latitude as Double, longitude as Double) 16438

111.20.5 Constructor(control as MapKitViewControlMBS, coordinate as CLLocationCoordinate2DMBS)

Function: Initializes the reverse geocoder with the specified coordinate value.

Notes: coordinate: The map coordinate whose placemark information you want to retrieve.

See also:

- 111.20.4 Constructor 16437
- 111.20.6 Constructor(control as MapKitViewControlMBS, latitude as Double, longitude as Double) 16438
**111.20.6 Constructor(control as MapKitViewControlMBS, latitude as Double, longitude as Double)**

**Function:** Initializes the reverse geocoder with the specified coordinate value.

**Notes:** coordinate: The map coordinate whose placemark information you want to retrieve.

See also:

- 111.20.4 Constructor 16437
- 111.20.5 Constructor(control as MapKitViewControlMBS, coordinate as CLLocationCoordinate2DMBS) 16437

**111.20.7 start**

**Function:** Starts the reverse-geocoding process asynchronously.

**Notes:** You should call this method only once to begin the reverse-geocoding process. This method submits the coordinate value to the map server asynchronously and returns. Once the process is complete, the results are delivered to the associated delegate object.

**111.20.8 Properties**

**111.20.9 coordinate as CLLocationCoordinate2DMBS**

**Function:** The coordinate whose placemark data you want to retrieve.

**Notes:** (Read only property)

**111.20.10 Handle as Integer**

**Function:** The internal object reference.

**Notes:** (Read and Write property)

**111.20.11 latitude as Double**

**Function:** The coordinate whose placemark data you want to retrieve.

**Notes:** (Read only property)
111.20. **CLASS MKREVERSEGEOCODERMB**

111.20.12 **longitude as Double**

**Function:** The coordinate whose placemark data you want to retrieve.

**Notes:** (Read only property)

111.20.13 **placemark as MKPlacemarkMBS**

**Function:** The result of the reverse-geocoding operation.

**Notes:**

The value of this property is nil by default. After a successful reverse-geocoding operation, it is set to the placemark object that was generated.

(Read only property)

111.20.14 **Querying as Boolean**

**Function:** A Boolean value indicating whether the receiver is in the middle of reverse-geocoding its coordinate.

**Notes:**

This property contains true if the process is ongoing or false if the process is done or has not yet been initiated.

(Read only property)
111.21 class MKShapeMBS

111.21.1 class MKShapeMBS

Function: The MKShape class is an abstract class that defines the basic properties for all shape-based annotation objects.

Notes:
This class must be subclassed and cannot be used as is. Subclasses are responsible for defining the geometry of the shape and providing an appropriate value for the coordinate property inherited from the MKAnnotation protocol.
Subclass of the MKAnnotationMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

111.21.2 Methods

111.21.3 Constructor

Function: The private constructor.
111.22. CLASS MKUSERLOCATIONMBS

111.22 class MKUserLocationMBS

111.22.1 class MKUserLocationMBS

Function: The MKUserLocation class defines a specific type of annotation that identifies the user’s current location.
Notes:
You do not create instances of this class directly. Instead, you retrieve an existing MKUserLocation object from the userLocation property of the map view displayed in your application.
Subclass of the MKAnnotationMBS class.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

111.22.2 Methods

111.22.3 Constructor

Function: The private constructor.

111.22.4 Properties

111.22.5 location as CLLocationMBS

Function: The current location of the device.
Notes:
This property contains nil if the map view is not currently showing the user location or if the user’s location has not yet been determined.
(Read only property)

111.22.6 updating as Boolean

Function: A Boolean value indicating whether the user’s location is currently being updated.
Notes: (Read only property)
111.23 class MKViewMBS

111.23.1 class MKViewMBS

Function: The class for a view.
Notes: This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

111.23.2 Methods

111.23.3 Constructor

Function: The private constructor.

111.23.4 Properties

111.23.5 className as string

Function: The name of this MKView class.
Notes: (Read only property)

111.23.6 classPath as string

Function: The path of this view class.
Notes: Useful for debugging to know what super classes the view has.
(Read only property)

111.23.7 Handle as Integer

Function: The internal object reference.
Notes: (Read and Write property)
111.23.8 options as Dictionary

**Function:** The options dictionary.
**Notes:** (Read only property)

111.23.9 viewPrototypeName as String

**Function:** The view prototype name.
**Notes:** (Read only property)
Chapter 112

MarkDown

112.1 class MarkdownDocumentMBS

112.1.1 class MarkdownDocumentMBS

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. \textbf{Function:} The class to process markdown text.

112.1.2 Methods

112.1.3 Compile(flags as Integer = 0) as boolean

112.1.4 Constructor(data as string, flags as Integer = 0)

\textbf{Notes:}

Text should have \texttt{EndOfLine.Unix} as newline character.
Text must be in UTF-8 encoding to work best.

See also:

- 112.1.5 Constructor(file as folderitem, flags as Integer = 0)
112.1.5  Constructor(file as folderitem, flags as Integer = 0)

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates a new document with the content of the file.
**Notes:**
Text should have EndOfLine.Unix as newline character.
Text must be in UTF-8 encoding to work best.
See also:
- 112.1.4 Constructor(data as string, flags as Integer = 0)

112.1.6  CSS as string

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Creates CSS for the html code.

112.1.7  Document as string

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Generates HTML document.
**Notes:** Creates HTML if needed.

112.1.8  Footnotes as MarkdownFootnoteMBS()

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Queries list of foot notes.

112.1.9  GenerateCSS(File as folderitem) as Integer

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Generates a css file.
**Notes:** Returns number of bytes written. Or -1 on any error.

112.1.10  GenerateHTML(File as folderitem) as boolean

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Generates a html file.
112.1.11 Properties

112.1.12 Author as MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The author line. **Notes:** Can be nil if not used. (Read only property)

112.1.13 Code as MarkdownParagraphMBS

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Intermediate code generated by compile. **Notes:** (Read only property)

112.1.14 Compiled as Boolean

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether document is compiled already. **Notes:** (Read only property)

112.1.15 Date as MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The date line. **Notes:** Can be nil if not used. (Read only property)

112.1.16 ExtraFootnotePrefix as String

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The extra footnote prefix.
Notes: (Read and Write property)

112.1.17 Handle as Integer

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Internal object reference. **Notes:** (Read only property)

112.1.18 HasHTML as Boolean

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether html is available. **Notes:** Set to true when html is generated. (Read only property)

112.1.19 Title as MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The title line. **Notes:** Can be nil if not used. (Read only property)

112.1.20 URLBase as String

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The URL base. **Notes:** (Read and Write property)

112.1.21 Constants

112.1.22 kAutoLink = & h4000

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values. **Notes:** make http://foo.com link even without <>s
112.1.23  **kCDATA = & h80**
MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values. 
**Notes:** generate code for xml ![CDATA [...]]

112.1.24  **kExtraFootnote = & h200000**
MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values. 
**Notes:** Enable markdown extra-style footnotes.

112.1.25  **kInputMask = & h00030000**
MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values.

112.1.26  **kIsLabel = & h08000000**
MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values.

112.1.27  **kNoAlphaList = & h80000**
MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values. 
**Notes:** Forbid alphabetic lists.

112.1.28  **kNoDivQuote = & h40000**
MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values. 
**Notes:** Forbid >% class% blocks.

112.1.29  **kNoDList = & h100000**
MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values. 
**Notes:** Forbid definition lists.
112.1.30  kNoExt = & h40

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values.  
**Notes:** Don’t allow pseudo-protocols.

112.1.31  kNoHeader = & h10000

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values.  
**Notes:** Don’t process header blocks.

112.1.32  kNoHTML = 8

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values.  
**Notes:** Don’t allow raw html through AT ALL

112.1.33  kNoImage = 2

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values.  
**Notes:** Don’t do image processing, block `<img>`.

112.1.34  kNoLinks = 1

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values.  
**Notes:** Don’t do link processing, block `<a>` tags.

112.1.35  kNoPants = 4

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values.  
**Notes:** don’t run smartypants.

112.1.36  kNoRelaxed = & h200

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values.  
**Notes:** emphasis happens /everywhere/
112.1.37  kNoStrikethrough = & h800

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values.  
**Notes:** Forbid strikethrough.

112.1.38  kNoSuperscript = & h100

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values.  
**Notes:** no A `B

112.1.39  kNoTables = & h400

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values.  
**Notes:** Disallow tables.

112.1.40  kSafeLink = & h8000

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values.  
**Notes:** Paranoid check for link protocol.

112.1.41  kStrict = & h10

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values.  
**Notes:** Disable SUPERSCRIPT, RELAXED_EMPHASIS.

112.1.42  kTabStop = & h20000

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values.  
**Notes:** Expand tabs to 4 spaces.

112.1.43  kTagText = & h20

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values.  
**Notes:** process text inside an html tag; no * <em>, no <bold>, no html or [ ] expansion
### 112.1.44 kTOC = & h1000

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values.  
**Notes:** Do table-of-contents processing.

### 112.1.45 kUserFlags = & h0FFFFFFFF

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag values.
112.2   class MarkdownFootnoteMBS

112.2.1   class MarkdownFootnoteMBS

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for a foot note.
**Notes:** This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

112.2.2   Methods

112.2.3   Constructor

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

112.2.4   Properties

112.2.5   Document as MarkdownDocumentMBS

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The back reference to the markdown document.
**Notes:** (Read only property)

112.2.6   Flags as Integer

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The flags.
**Notes:**
Can be zero or a combination of kFlagExtraBookmark and kFlagReferenced.
(Read only property)

112.2.7   Height as Integer

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The dimensions for image link.
**Notes:** (Read only property)
112.2.8 Link as String

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** What this footnote points to.  
**Notes:** (Read only property)

112.2.9 RefNumber as Integer

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The reference number.  
**Notes:** (Read only property)

112.2.10 Tag as String

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tag for the reference link.  
**Notes:** (Read only property)

112.2.11 Title as String

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The title of the footnode.  
**Notes:** (Read only property)

112.2.12 Width as Integer

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The dimensions for image link.  
**Notes:** (Read only property)

112.2.13 Constants

112.2.14 kFlagExtraBookmark = 1

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the footnode flags.
112.2. CLASS MARKDOWNFOOTNOTE MBS

112.2.15 kFlagReferenced = 2

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the footnode flags. **Notes:** Set if this footnote is referenced.
112.3 class MarkdownLineMBS

112.3.1 class MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class for a line in the markdown text.
**Notes:**
Each input line is read into a Line, which contains the line, the offset of the first non-space character [ this
assumes that all tabs will be expanded to spaces! ], and a pointer to the next line.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

112.3.2 Methods

112.3.3 Constructor

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

112.3.4 Properties

112.3.5 Count as Integer

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The kind of this line.
**Notes:**
See kKind* constants.
(Read only property)

112.3.6 DLE as Integer

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The leading indent on the line.
**Notes:** (Read only property)
112.3.7 Document as MarkdownDocumentMBS

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The back reference to the markdown document.
**Notes:** (Read only property)

112.3.8 Flags as Integer

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Special attributes for this line.
**Notes:**
Can be combination of kFlag* constants.
(Read only property)

112.3.9 Kind as Integer

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The line type.
**Notes:**
See kKind* constants.
(Read only property)

112.3.10 NextLine as MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The next line.
**Notes:** (Read only property)

112.3.11 Text as String

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The text of the line.
**Notes:** (Read only property)
112.3.12 Constants

112.3.13 kFlagChecked = 2

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag constants. **Notes:** The line was already processed.

112.3.14 kFlagPipeChar = 1

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the flag constants. **Notes:** line contains a `|`

112.3.15 k_kindCode = 1

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the kind values. **Notes:** Code

112.3.16 k_kindDash = 3

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the kind values. **Notes:** Dash line

112.3.17 k_kindEqual = 5

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the kind values. **Notes:** Equal line

112.3.18 k_kindHR = 2

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the kind values. **Notes:** HR line
112.3. CLASS MARKDOWNLINEMBS

112.3.19  kKindText = 0

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the kind values.  
**Notes:** Text line

112.3.20  kKindTilde = 4

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the kind values.  
**Notes:** Tilde line
112.4  class MarkdownParagraphMBS

112.4.1  class MarkdownParagraphMBS

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The class ofr a paragraph.

**Notes:**
A paragraph is a collection of Lines, with links to the next paragraph and (if it’s a QUOTE, UL, or OL) to
the reparsed contents of this paragraph.
This is an abstract class. You can’t create an instance, but you can get one from various plugin functions.

112.4.2  Methods

112.4.3  Constructor

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The private constructor.

112.4.4  Properties

112.4.5  Align as Integer

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The paragraph alignment.

**Notes:**
Can be kAlignPara, kAlignImplicit or kAlignCenter.
(Read only property)

112.4.6  Document as MarkdownDocumentMBS

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The back reference to the markdown document.

**Notes:** (Read only property)
112.4. **CLASS MARKDOWNPARAGRAPHMBS**

112.4.7 **Down as MarkdownParagraphMBS**

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Recompiled contents of this paragraph.  
**Notes:** (Read only property)

112.4.8 **hNumber as Integer**

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The header level for HDR.  
**Notes:** (Read only property)

112.4.9 **Ident as String**

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** ID tag for quote.  
**Notes:** (Read only property)

112.4.10 **Lang as String**

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** lang attribute for CODE  
**Notes:** (Read only property)

112.4.11 **NextParagraph as MarkdownParagraphMBS**

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The next paragraph.  
**Notes:** (Read only property)

112.4.12 **Text as MarkdownLineMBS**

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** All the text in this paragraph.  
**Notes:** (Read only property)
112.4.13 Typ as Integer

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The type of paragraph. 
**Notes:**
See kType* constants. 
(Read only property)

112.4.14 Constants

112.4.15 kAlignCenter = 2

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the alignment constants. 
**Notes:** Center

112.4.16 kAlignImplicit = 0

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the alignment constants. 
**Notes:** Implicit alignment

112.4.17 kAlignPara = 1

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the alignment constants. 
**Notes:** Paragraph

112.4.18 kTypeAL = 9

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the type codes. 
**Notes:** AL

112.4.19 kTypeCode = 1

MBS Tools Plugin, Plugin Version: 15.1. **Function:** One of the type codes. 
**Notes:** Code
112.4.20  \textbf{kTypeDL} = 6

MBS Tools Plugin, Plugin Version: 15.1. \textbf{Function}: One of the type codes.  
\textbf{Notes}: DL

112.4.21  \textbf{kTypeHDR} = 11

MBS Tools Plugin, Plugin Version: 15.1. \textbf{Function}: One of the type codes.  
\textbf{Notes}: HDR

112.4.22  \textbf{kTypeHR} = 12

MBS Tools Plugin, Plugin Version: 15.1. \textbf{Function}: One of the type codes.  
\textbf{Notes}: HR

112.4.23  \textbf{kTypeHTML} = 4

MBS Tools Plugin, Plugin Version: 15.1. \textbf{Function}: One of the type codes.  
\textbf{Notes}: HTML

112.4.24  \textbf{kTypeListItem} = 10

MBS Tools Plugin, Plugin Version: 15.1. \textbf{Function}: One of the type codes.  
\textbf{Notes}: ListItem

112.4.25  \textbf{kTypeMarkup} = 3

MBS Tools Plugin, Plugin Version: 15.1. \textbf{Function}: One of the type codes.  
\textbf{Notes}: Markup

112.4.26  \textbf{kTypeOL} = 8

MBS Tools Plugin, Plugin Version: 15.1. \textbf{Function}: One of the type codes.  
\textbf{Notes}: OL
112.4.27 \texttt{kTypeQuote} = 2

MBS Tools Plugin, Plugin Version: 15.1. \textbf{Function}: One of the type codes.  
\textbf{Notes}: Quote

112.4.28 \texttt{kTypeSource} = 14

MBS Tools Plugin, Plugin Version: 15.1. \textbf{Function}: One of the type codes.  
\textbf{Notes}: Source

112.4.29 \texttt{kTypeStyle} = 5

MBS Tools Plugin, Plugin Version: 15.1. \textbf{Function}: One of the type codes.  
\textbf{Notes}: Style

112.4.30 \texttt{kTypeTable} = 13

MBS Tools Plugin, Plugin Version: 15.1. \textbf{Function}: One of the type codes.  
\textbf{Notes}: Table

112.4.31 \texttt{kTypeUL} = 7

MBS Tools Plugin, Plugin Version: 15.1. \textbf{Function}: One of the type codes.  
\textbf{Notes}: UL

112.4.32 \texttt{kTypeWhitespace} = 0

MBS Tools Plugin, Plugin Version: 15.1. \textbf{Function}: One of the type codes.  
\textbf{Notes}: Whitespace
Chapter 113

Math

113.1  class BigNumberErrorExceptionMBS

113.1.1  class BigNumberErrorExceptionMBS

**Function:** The exception class for big number math.  
**Example:**

```vbnet
dim b as new BigNumberMBS(5)
dim c as BigNumberMBS = BigNumberMBS.Zero

// raises exception due to division by zero
dim x as BigNumberMBS = b/c
```

**Notes:**

Raised when operations fail due to division by zero, invalid numbers or overflow/underflow.  
Subclass of the RuntimeException class.
113.2  class BigNumberMBS

113.2.1  class BigNumberMBS

Function:  The class for a big number.
Notes:  This is floating point number with 320 bits, precise for over 100 digits before the dot.
So if you want to store currency or other values where rounding should not happen, better store values
multiplied, e.g. in cents.

Compared to normal double values, you have 5 times the bits.
And we check for math errors and raise exceptions if something goes wrong.

113.2.2  Methods

113.2.3  Abs as BigNumberMBS

Function:  Queries absolute value.
Example:

```vba
dim o as BigNumberMBS = new BigNumberMBS(-123)
dim z as BigNumberMBS = o.Abs
```

MsgBox z.StringValue

Notes:  Removes sign.

113.2.4  Add(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

Function:  Adds a number.
Example:

```vba
dim x as new BigNumberMBS(2)
dim d as new BigNumberMBS(3)
dim p as BigNumberMBS = x.Add(d)
```

MsgBox p.StringValue  // shows 5
113.2.5 BitAnd(other as BigNumberMBS) as BigNumberMBS

**Function:** Calculates bitwise AND operation.  
**Example:**

```vbnet
Dim x As New BigNumberMBS(17)  
Dim y As New BigNumberMBS(16)  
Dim r As BigNumberMBS = x.BitAnd(y)  

MsgBox r.StringValue
```

113.2.6 BitOr(other as BigNumberMBS) as BigNumberMBS

**Function:** Calculates bitwise or operation.  
**Example:**

```vbnet
Dim x As New BigNumberMBS(17)  
Dim y As New BigNumberMBS(16)  
Dim r As BigNumberMBS = x.BitOr(y)  

MsgBox r.StringValue
```

113.2.7 BitXOr(other as BigNumberMBS) as BigNumberMBS

**Function:** Calculates bitwise xor operation.  
**Example:**

```vbnet
Dim x As New BigNumberMBS(17)  
Dim y As New BigNumberMBS(16)  
Dim r As BigNumberMBS = x.BitXOr(y)  

MsgBox r.StringValue
```
113.2.8 Constructor

**Function:** Initialize the number with zero value.
**Example:**
```
dim o as BigNumberMBS = new BigNumberMBS
MsgBox o.StringValue
```

- 113.2.13 Constructor(value as Int64)
- 113.2.14 Constructor(value as Single)
- 113.2.15 Constructor(value as String)
- 113.2.16 Constructor(value as UInt32)
- 113.2.17 Constructor(value as UInt64)

113.2.9 Constructor(other as BigNumberMBS)

**Function:** Initialize the number with other value.
**Example:**
```
dim o as BigNumberMBS = new BigNumberMBS(2.5)
dim c as BigNumberMBS = new BigNumberMBS(o)
MsgBox c.StringValue
```

See also:
- 113.2.8 Constructor
- 113.2.10 Constructor(value as Currency)
- 113.2.11 Constructor(value as Double)
113.2. **CLASS BIGNUMBERMBS**

- 113.2.12 Constructor(value as Int32)
- 113.2.13 Constructor(value as Int64)
- 113.2.14 Constructor(value as Single)
- 113.2.15 Constructor(value as String)
- 113.2.16 Constructor(value as UInt32)
- 113.2.17 Constructor(value as UInt64)

113.2.10 **Constructor(value as Currency)**

**Function:** Creates a new number object with a currency object.

**Example:**

```vba
dim v as Currency = 123.456
dim b as new BigNumberMBS(v)
MsgBox b.StringValue
```

See also:

- 113.2.8 Constructor

- 113.2.12 Constructor(value as Int32)
- 113.2.13 Constructor(value as Int64)
- 113.2.14 Constructor(value as Single)
- 113.2.15 Constructor(value as String)
- 113.2.16 Constructor(value as UInt32)
- 113.2.17 Constructor(value as UInt64)

113.2.11 **Constructor(value as Double)**

**Function:** Initialize the number with double value.

**Example:**

```vba
dim o as BigNumberMBS = new BigNumberMBS(2.5)
MsgBox str(o.DoubleValue)+" = "+str(o.StringValue)#ga
```
113.2.12 Constructor(value as Int32)

**Function:** Creates a new number with a 32-bit integer.

**Example:**

```vba
dim v as Int32 = 123
dim b as new BigNumberMBS(v)
MsgBox b.StringValue
```

- 113.2.17 Constructor(value as UInt64)
113.2. CLASS BIGNUMBERMBS

113.2.13 Constructor(value as Int64)

Function: Creates a new number with a 64-bit integer.
Example:

dim v as Int64 = 123
dim b as new BigNumberMBS(v)
MsgBox b.StringValue

See also:

• 113.2.8 Constructor
• 113.2.9 Constructor(other as BigNumberMBS)
• 113.2.10 Constructor(value as Currency)
• 113.2.11 Constructor(value as Double)
• 113.2.12 Constructor(value as Int32)
• 113.2.14 Constructor(value as Single)
• 113.2.15 Constructor(value as String)
• 113.2.16 Constructor(value as UInt32)
• 113.2.17 Constructor(value as UInt64)

113.2.14 Constructor(value as Single)

Function: Creates a new number with a 32-bit floating point number.
Example:

dim v as Single = 123
dim b as new BigNumberMBS(v)
MsgBox b.StringValue

See also:

• 113.2.8 Constructor
• 113.2.9 Constructor(other as BigNumberMBS)
• 113.2.10 Constructor(value as Currency)
113.2.15 Constructor(value as String)

Function: Initialize the number with string value.

Example:

```vba
dim o as BigNumberMBS = new BigNumberMBS("123.456")
MsgBox o.StringValue
```

See also:

- 113.2.8 Constructor
- 113.2.9 Constructor(other as BigNumberMBS)
- 113.2.10 Constructor(value as Currency)
- 113.2.11 Constructor(value as Double)
- 113.2.12 Constructor(value as Int32)
- 113.2.13 Constructor(value as Int64)
- 113.2.14 Constructor(value as Single)
- 113.2.16 Constructor(value as UInt32)
- 113.2.17 Constructor(value as UInt64)

113.2.16 Constructor(value as UInt32)

Function: Creates a new number with an unsigned 32-bit integer.

Example:

```vba
dim v as UInt32 = 123
dim b as new BigNumberMBS(v)
```
113.2. CLASS BIGNUMBERMBS

MsgBox b.StringValue

See also:

- 113.2.8 Constructor
- 113.2.9 Constructor(other as BigNumberMBS)
- 113.2.10 Constructor(value as Currency)
- 113.2.11 Constructor(value as Double)
- 113.2.12 Constructor(value as Int32)
- 113.2.13 Constructor(value as Int64)
- 113.2.14 Constructor(value as Single)
- 113.2.15 Constructor(value as String)
- 113.2.17 Constructor(value as UInt64)

113.2.17 Constructor(value as UInt64)

Function: Creates a new number with an unsigned 32-bit integer.
Example:

dim v as UInt64 = 123
dim b as new BigNumberMBS(v)
MsgBox b.StringValue

See also:

- 113.2.8 Constructor
- 113.2.9 Constructor(other as BigNumberMBS)
- 113.2.10 Constructor(value as Currency)
- 113.2.11 Constructor(value as Double)
- 113.2.12 Constructor(value as Int32)
- 113.2.13 Constructor(value as Int64)
- 113.2.14 Constructor(value as Single)
- 113.2.15 Constructor(value as String)
- 113.2.16 Constructor(value as UInt32)
113.2.18 Divide(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

**Function:** Divides the number.

**Example:**

```vba
dim x as new BigNumberMBS(8)
dim d as new BigNumberMBS(2)
dim p as BigNumberMBS = x.Divide(d)

MsgBox p.StringValue // shows 4
```

113.2.19 E as BigNumberMBS

**Function:** Returns a number with value zero.

**Example:**

```vba
dim b as BigNumberMBS = BigNumberMBS.e
MsgBox b.StringValue
```

113.2.20 Equals(other as BigNumberMBS) as Boolean

**Function:** Checks if two numbers are the same.

**Example:**

```vba
dim o as BigNumMBS = new BigNumMBS(123)
dim z as BigNumMBS = new BigNumMBS(123)

if o.Equals(z) then
    MsgBox "equal"
else
    Break // error
end if
```

**Notes:** Returns true if equal.
113.2. CLASS BIGNUMBERMBS

113.2.21 Exp(value as BigNumberMBS) as BigNumberMBS

**Function:** Calculates $e^\text{value}$.
**Example:**
```
    dim x as new BigNumberMBS(2)
    dim p as BigNumberMBS = BigNumberMBS.Exp(x)
```
```
    MsgBox p.StringValue  // shows $e^2 = 7.38$
```

113.2.22 Floor as BigNumberMBS

**Function:** Removes any fraction part.
**Example:**
```
    dim o as BigNumberMBS = new BigNumberMBS(2.3)
    dim s as BigNumberMBS = o.Floor
```
```
    MsgBox s.StringValue
```
```
    dim a as BigNumberMBS = new BigNumberMBS(-2.3)
    dim b as BigNumberMBS = a.Floor
```
```
    MsgBox b.StringValue
```

113.2.23 Frac as BigNumberMBS

**Function:** Extracts the fraction part.
**Example:**
```
    dim o as BigNumberMBS = new BigNumberMBS(2.5)
    dim s as BigNumberMBS = o.Frac
```
```
    MsgBox s.StringValue
```
```
    dim a as BigNumberMBS = new BigNumberMBS(-2.5)
    dim b as BigNumberMBS = a.Frac
```
```
    MsgBox b.StringValue
```
113.2.24 GetStringValue(Base as Integer = 10, scientific as boolean = false, scientificFrom as Integer = 15, round as Integer = -1, TrimZeros as Boolean = true, comma as String = ".") as String

**Function:** Queries string value.
**Example:**
```vba
dim o as new BigNumberMBS(1234)
// show as hex
MsgBox o.GetStringValue(16)
```
```vba
// show as number with comma and 3 digits
dim z as new BigNumberMBS(12.345)
MsgBox z.GetStringValue(10, false, 15, 3, true, ",")
```

**Notes:**
- **Base:** The base of the number system. Normally 10, but also 16 for hex is common.
- **scientific:** Whether to use scientific notation.
- **scientificFrom:** How many digits we show.
- **Round:** Whether to round to n digits.
- **TrimZeros:** Whether to trim unneeded zeros.
- **comma:** The character to use as decimal dot.

113.2.25 HalfPi as BigNumberMBS

**Function:** Returns a number with value pi/2.
**Example:**
```vba
dim b as BigNumberMBS = BigNumberMBS.HalfPi
MsgBox b.StringValue
```

113.2.26 Ln(value as BigNumberMBS) as BigNumberMBS

**Function:** Calculates natural logarithm.
113.2. CLASS BIGNUMBERMBS

Example:

```vbnet
dim x as new BigNumberMBS(2)
dim p as BigNumberMBS = BigNumberMBS.Ln(x)
MsgBox p.StringValue  // shows ln(2) = 0.69
```

113.2.27 Ln10 as BigNumberMBS

Function: Returns a number with value ln(10).
Example:

```vbnet
dim b as BigNumberMBS = BigNumberMBS.Ln10
MsgBox b/StringValue
```

113.2.28 Ln2 as BigNumberMBS

Function: Returns a number with value ln(2).
Example:

```vbnet
dim b as BigNumberMBS = BigNumberMBS.Ln2
MsgBox b.ToStringValue
```

113.2.29 Log(value as BigNumberMBS, base as BigNumberMBS) as BigNum-

erMBS

Function: Calculates logarithm in a given base.
Example:

```vbnet
dim x as new BigNumberMBS(100)
dim d as new BigNumberMBS(10)
dim p as BigNumberMBS = BigNumberMBS.Log(x, d)
MsgBox p.ToStringValue  // shows ln(100)/ln(10) = 2
```
113.2.30  Max as BigNumberMBS

Function: Returns a number with maximum value.
Example:

dim b as BigNumberMBS = BigNumberMBS.Min
MsgBox b.StringValue

113.2.31  Min as BigNumberMBS

Function: Returns a number with minimum value.
Example:

dim b as BigNumberMBS = BigNumberMBS.Min
MsgBox b.StringValue

113.2.32  Modulate(other as BigNumberMBS) as BigNumberMBS

Function: Modulates a number.
Example:

dim x as new BigNumberMBS(17)
dim y as new BigNumberMBS(3)
dim r as BigNumberMBS = x.Modulate(y)
MsgBox r.StringValue

Notes: Similar to mod keyword in Xojo.

113.2.33  Modulate2 as Integer

Function: Modulates by 2.
Example:

dim x as new BigNumberMBS(8)
dim y as new BigNumberMBS(9)
MsgBox str(x.Modulate2)+" "+str(y.Modulate2)

Notes: Returns 0 or 1.

113.2.34 Multiply(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

Function: Multiplies two numbers.
Example:

dim x as New BigNumberMBS(8)
dim d as New BigNumberMBS(2)
dim p as BigNumberMBS = x.Multiply(d)

MsgBox p.StringValue // shows 16

See also:
- 113.2.35 Multiply(value as Integer) as BigNumberMBS
- 113.2.36 Multiply(value as UInt32) as BigNumberMBS

113.2.35 Multiply(value as Integer) as BigNumberMBS

Function: Multiply by an integer.
Example:

dim x as New BigNumberMBS(2)
dim p as BigNumberMBS = x.Multiply(3)

MsgBox p.StringValue // shows 6

See also:
- 113.2.34 Multiply(other as BigNumberMBS, round as boolean = true) as BigNumberMBS
- 113.2.36 Multiply(value as UInt32) as BigNumberMBS
113.2.36 Multiply(value as UInt32) as BigNumberMBS

Function: Multiply by an unsigned integer.
Example:

dim x as new BigNumberMBS(17)
dim r as BigNumberMBS = x.Multiply(3)

MsgBox r.StringValue

See also:
- 113.2.34 Multiply(other as BigNumberMBS, round as boolean = true) as BigNumberMBS
- 113.2.35 Multiply(value as Integer) as BigNumberMBS

113.2.37 Nan as BigNumberMBS

Function: Returns a number with value NaN.
Example:

dim b as BigNumberMBS = BigNumberMBS.Nan
MsgBox b.StringValue

113.2.38 Negate as BigNumberMBS

Function: Negates the number.
Example:

dim o as BigNumberMBS = new BigNumberMBS(123)
dim z as BigNumberMBS = o.Negate

MsgBox z.StringValue

113.2.39 NumberWithCurrency(value as Currency) as BigNumberMBS

Function: Creates a number with a currency value.
113.2. CLASS BIGNUMBERMBS

Example:

```vbnet
dim v as Currency = 123.456
dim b as BigNumberMBS = BigNumberMBS.NumberWithCurrency(v)
MsgBox b.StringValue
```

113.2.40 NumberWithDouble(value as Double) as BigNumberMBS

Function: Creates a number with a 64-bit floating number.

Example:

```vbnet
dim v as Double = 123.456
dim b as BigNumberMBS = BigNumberMBS.NumberWithDouble(v)
MsgBox b.StringValue
```

113.2.41 NumberWithInt32(value as Int32) as BigNumberMBS

Function: Creates a number with a signed 32-bit integer.

Example:

```vbnet
dim v as Int32 = 123
dim b as BigNumberMBS = BigNumberMBS.NumberWithInt32(v)
MsgBox b.StringValue
```

113.2.42 NumberWithInt64(value as Int64) as BigNumberMBS

Function: Creates a number with a signed 64-bit integer.

Example:

```vbnet
dim v as Int64 = 123
dim b as BigNumberMBS = BigNumberMBS.NumberWithInt64(v)
MsgBox b.StringValue
```
113.2.43    NumberWithInteger(value as Integer) as BigNumberMBS

Function: Creates a number with an integer.
Example:

    dim v as Integer = 123
    dim b as BigNumberMBS = BigNumberMBS.NumberWithInteger(v)

    MsgBox b.StringValue

113.2.44    NumberWithSingle(value as single) as BigNumberMBS

Function: Creates a number with an 32-bit floating point number.
Example:

    dim v as Single = 123
    dim b as BigNumberMBS = BigNumberMBS.NumberWithSingle(v)

    MsgBox b.StringValue

113.2.45    NumberWithString(value as String) as BigNumberMBS

Function: Creates a number with value from string.
Example:

    dim v as String = "123"
    dim b as BigNumberMBS = BigNumberMBS.NumberWithString(v)

    MsgBox b.StringValue

113.2.46    NumberWithUInt32(value as UInt32) as BigNumberMBS

Function: Creates a number with an unsigned 32-bit integer.
Example:

```vbnet
dim v as UInt32 = 123
dim b as BigNumberMBS = BigNumberMBS.NumberWithUInt32(v)
MsgBox b.StringValue
```

### 113.2.47 NumberWithUInt64(value as UInt64) as BigNumberMBS

**Function:** Creates a number with an unsigned 64-bit integer.

**Example:**

```vbnet
dim v as UInt64 = 123
dim b as BigNumberMBS = BigNumberMBS.NumberWithUInt64(v)
MsgBox b.StringValue
```

### 113.2.48 NumberWithUInteger(value as UInteger) as BigNumberMBS

**Function:** Creates a number with an unsigned integer.

**Example:**

```vbnet
dim v as UInteger = 123
dim b as BigNumberMBS = BigNumberMBS.NumberWithUInteger(v)
MsgBox b.StringValue
```

### 113.2.49 NumberWithVariant(value as Variant) as BigNumberMBS

**Function:** Creates a number based on a variant.

**Example:**

```vbnet
dim v as Variant = 123.456
dim b as BigNumberMBS = BigNumberMBS.NumberWithVariant(v)
MsgBox b.StringValue
```
Notes: Internally redirects to other NumberWith functions based on the value type.

113.2.50 One as BigNumberMBS

Function: Returns a number with value one.
Example:

```vbnet
dim b as BigNumberMBS = BigNumberMBS.One
MsgBox b.StringValue
```

113.2.51 Operator_Add(other as BigNumberMBS) as BigNumberMBS

Function: Adds a number.
Example:

```vbnet
dim a as new BigNumberMBS(3)
dim b as new BigNumberMBS(4)

// add
dim c as BigNumberMBS = a + b

MsgBox c.StringValue
```

113.2.52 Operator_AddRight(other as BigNumberMBS) as BigNumberMBS

Function: Adds a number.
Example:

```vbnet
dim a as new BigNumberMBS(3)
dim b as new BigNumberMBS(4)

// add
dim c as BigNumberMBS = a + b

MsgBox c.StringValue
```
113.2.53  Operator_Compare(other as BigNumberMBS) as Integer

Function: Compares two numbers.

Example:

```vbscript
    dim a as new BigNumberMBS(1.2)
    dim b as new BigNumberMBS(1.2)
    dim c as new BigNumberMBS(1.3)

    if a = b then
        // ok
    else
        break
    end if

    if a < c then
        // ok
    else
        Break
    end if

    if c > b then
        // ok
    else
        break
    end if
```

113.2.54  Operator_Convert as String

Function: Converts big number to string automatically.

Example:

```vbscript
    dim b as new BigNumberMBS
    dim n as Double = 5

    // convert from double to big number automatically
    b = n

    // convert to string automatically
    MsgBox b
```
### 113.2.55 Operator_Convert(value as String)

**Function:** Converts a string to a big number.

**Example:**

```vbnet
dim b as new BigNumberMBS
dim n as string = "5"

// convert from string to big number automatically
b = n

// convert to double automatically
dim d as Double = b
MsgBox str(d)
```

See also:

- 113.2.54 Operator_Convert as String

### 113.2.56 Operator_Divide(other as BigNumberMBS) as BigNumberMBS

**Function:** Divides two numbers.

**Example:**

```vbnet
dim a as new BigNumberMBS(9.3)
dim b as new BigNumberMBS(3.0)

dim r as New BigNumberMBS = a / b
MsgBox r.StringValue
```

### 113.2.57 Operator_DivideRight(other as BigNumberMBS) as BigNumberMBS

**Function:** Divides two numbers.
113.2.58  Operator_IntegerDivide(other as BigNumberMBS) as BigNumberMBS

Function: Calculates an integer divide.
Example:

dim a as new BigNumberMBS(9.3)
dim b as new BigNumberMBS(3.0)

dim r as BigNumberMBS = a \ b

MsgBox r.StringValue

Notes: Same as normal divide, but removes fraction part.

113.2.59  Operator_IntegerDivideRight(other as BigNumberMBS) as BigNumberMBS

Function: Calculates an integer divide.
Notes: Same as normal divide, but removes fraction part.

113.2.60  Operator_Modulo(other as BigNumberMBS) as BigNumberMBS

Function: Calculates the modulo of two numbers.
Example:

dim a as new BigNumberMBS(9.3)
dim b as new BigNumberMBS(3.0)

dim r as BigNumberMBS = a mod b

MsgBox r.StringValue
113.2.61 Operator_ModuloRight(other as BigNumberMBS) as BigNumberMBS

**Function:** Calculates the modulo of two numbers.

113.2.62 Operator_Multiply(other as BigNumberMBS) as BigNumberMBS

**Function:** Multiply two numbers. 
**Example:**

```vbnet
dim a as new BigNumberMBS(3)
dim b as new BigNumberMBS(4)

// just multiply
dim c as BigNumberMBS = a * b
```

MsgBox c.StringValue

113.2.63 Operator_MultiplyRight(other as BigNumberMBS) as BigNumberMBS

**Function:** Multiply two numbers.

113.2.64 Operator_Negate as BigNumberMBS

**Function:** Negates a number. 
**Example:**

```vbnet
dim a as new BigNumberMBS(3)

// negate
dim c as BigNumberMBS = -a
```

MsgBox c.StringValue
113.2.65 Operator\_Power(other as BigNumberMBS) as BigNumberMBS

**Function:** Calculates power of two numbers.
**Example:**
```vba
dim a as new BigNumberMBS(3)
dim b as new BigNumberMBS(4)

// pow
dim c as BigNumberMBS = a ^ b
```
```vba
MsgBox c.StringValue
```

113.2.66 Operator\_PowerRight(other as BigNumberMBS) as BigNumberMBS

**Function:** Calculates power of two numbers.

113.2.67 Operator\_Subtract(other as BigNumberMBS) as BigNumberMBS

**Function:** Subtracts one number from other.
**Example:**
```vba
dim a as new BigNumberMBS(3)
dim b as new BigNumberMBS(4)

// subtract
dim c as BigNumberMBS = a - b
```
```vba
MsgBox c.StringValue
```

113.2.68 Operator\_SubtractRight(other as BigNumberMBS) as BigNumberMBS

**Function:** Subtracts one number from other.
113.2.69 Pi as BigNumberMBS

**Function:** Returns a number with value pi.
**Example:**
```vbnet
dim b as BigNumberMBS = BigNumberMBS.Pi
MsgBox b.StringValue
```

113.2.70 Pow(other as BigNumberMBS) as BigNumberMBS

**Function:** Calculates the power of the number.
**Example:**
```vbnet
dim x as new BigNumberMBS(2)
dim o as new BigNumberMBS(5)
dim p as BigNumberMBS = x.Pow(o)
MsgBox p.StringValue // shows 32
```

113.2.71 Round as BigNumberMBS

**Function:** Rounds the number.
**Example:**
```vbnet
dim o as BigNumberMBS = new BigNumberMBS(2.3)
dim s as BigNumberMBS = o.Round
MsgBox s.StringValue
```
```vbnet
dim a as BigNumberMBS = new BigNumberMBS(-2.3)
dim b as BigNumberMBS = a.Round
MsgBox b.StringValue
```
113.2. SetStringValue(Text As String, Base as Integer, byref AfterText as String, Byref ValueRead as boolean)

Function: Parses number from string.
Example:

```vba
// set to 1.2 and show
dim o as new BigNumberMBS

dim after as string
dim ValueRead as Boolean

o.SetStringvalue "1.2 hello", 10, after, ValueRead

MsgBox "value: " + o.Stringvalue + EndofLine + "after: " + after
Break
```

Notes:
Returns also the text after the given text following the number.
Also sets ValueRead if a value was read.

113.2.73 Sqrt as BigNumberMBS

Function: Calculates the square root.
Example:

```vba
dim o as BigNumberMBS = new BigNumberMBS(256)
dim s as BigNumberMBS = o.Sqrt

MsgBox s.StringValue
```

113.2.74 Subtract(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

Function: Subtracts a number.
Example:
CHAPTER 113. MATH

```vbs
Dim x As New BigNumberMBS(2)
Dim d As New BigNumberMBS(3)
Dim p As BigNumberMBS = x.Subtract(d)
MsgBox p.StringValue '// shows -1
```

### 113.2.75 TwoPi as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a number with value 2 * PI. **Example:**

```vbs
Dim b As BigNumberMBS = BigNumberMBS.TwoPi
MsgBox b.StringValue
```

### 113.2.76 Zero as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a number with value zero. **Example:**

```vbs
Dim b As BigNumberMBS = BigNumberMBS.Zero
MsgBox b.StringValue
```

### 113.2.77 Properties

### 113.2.78 CurrencyValue as Currency

MBS DataTypes Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets/Queries currency value. **Example:**

```vbs
Dim u As Currency = 1234.5678
Dim b As New BigNumberMBS(u)
MsgBox str(b.CurrencyValue)
```

**Notes:** (Read and Write property)
113.2. CLASS BIGNUMBERMBS

113.2.79 DoubleValue as Double

Function: Get or Set the double value.
Example:

```vba
dim o as BigNumberMBS = new BigNumberMBS(2.5)

MsgBox str(o.DoubleValue)+" = "+str(oStringValue)
```

Notes: (Read and Write property)

113.2.80 Int64Value as Int64

Function: Get/Set value as Int64.
Example:

```vba
dim u as Int64 = & h7FFFFFFFFFFFFFF // maximum Int64
dim b as new BigNumberMBS(u)
MsgBox str(b.Int64Value)

dim one as new BigNumberMBS(1)
b = b + one

// raises exception due to overflow
MsgBox str(b.Int64Value)
```

Notes: (Read and Write property)

113.2.81 IntegerValue as Integer

Function: Get or Set the integer value.
Example:

```vba
dim o as BigNumberMBS = new BigNumberMBS(2.5)

MsgBox str(o.IntegerValue)+" = "+str(o.StringValue)
```
113.2.82  **IsInteger as Boolean**

**Function:** Whether this number is an integer.  
**Example:**

```vba
    dim o as BigNumberMBS = new BigNumberMBS(1)
    dim z as BigNumberMBS = new BigNumberMBS(1.5)

    if o.IsInteger then
        MsgBox o.StringValue + " is integer"
    else
        break // error
    end if

    if z.IsInteger then
        break // error
    else
        MsgBox z.StringValue + " is not integer"
    end if
```

**Notes:**

If true, there are no digits after the dot.  
(Read only property)

---

113.2.83  **IsNan as Boolean**

**Function:** Whether this is an invalid number.  
**Example:**

```vba
    dim o as BigNumberMBS = BigNumberMBS.zero
    dim z as BigNumberMBS = BigNumberMBS.Nan

    if z.IsNan then
        MsgBox z.StringValue + " is NaN"
    else
        break // error
    end if
```
if o.IsNan then
break // error
else
MsgBox o,StringValue+" is not NaN"
end if

Notes: (Read only property)

113.2.84 IsNegative as Boolean

Function: Whether this value is negative.
Example:

dim o as BigNumberMBS = BigNumberMBS.one
dim z as BigNumberMBS = BigNumberMBS.one.Negate

if z.IsNegative then
MsgBox z,StringValue+" is negative"
else
break // error
end if

if o.IsNegative then
break // error
else
MsgBox o,StringValue+" is not negative"
end if

Notes: (Read only property)

113.2.85 IsZero as Boolean

Function: Checks if value is zero.
Example:

dim o as BigNumberMBS = BigNumberMBS.one
dim z as BigNumberMBS = BigNumberMBS.zero

if z.IsZero then
MsgBox z.StringValue + " is zero"
else
break // error
end if

if o.IsZero then
break // error
else
MsgBox o.StringValue + " is not zero"
end if

Notes: (Read only property)

113.2.86 StringValue as String

Function: Get or set string value of text.
Example:

// set to 1.2 and show
dim o as new BigNumberMBS("1.2")
MsgBox o.StringValue

// set to 2.3
o.StringValue = "2.3"
MsgBox o.StringValue

Notes: (Read and Write property)
See also:

- 113.2.89 StringValue(Base as Integer) as String

113.2.87 UInt64Value as UInt64

Function: Get/Set value as UInt64.
Example:

dim u as UInt64 = 12345678901234567890
dim b as new BigNumberMBS(u)
MsgBox str(b.UInt64Value)
113.2. CLASS BIGNUMBERMBS

Notes: (Read and Write property)

113.2.88 VariantValue as Variant

Function: Queries/Sets value with variant.
Notes:
Floating point values are given as Double.
Integer types as Int32, Int64 or UInt64.
If value exceeds the ranges of those data types, we fall back to string.

When setting, the value is converted to a big number similar to NumberWithVariant.
(Read and Write property)

113.2.89 StringValue(Base as Integer) as String

Function: Get/Set string value with a given base.
Example:
```
dim o as new BigNumberMBS(1234)

// show as hex
MsgBox o.StringValue(16)
```

Notes: (Read and Write computed property)
See also:
- 113.2.86 StringValue as String
113.3 Globals

113.3.1 IsValidCreditCardNumberMBS(Number as String) as boolean

Example:
MsgBox "test 49927398716 gives " + str(IsValidCreditCardNumberMBS(“49927398716”)) + EndOfLine + "test 49927398717 gives " + str(IsValidCreditCardNumberMBS(“49927398717”))

Notes:
This function implements the Luhn algorithm. This is a simple checksum formula used to validate a variety of identification numbers, such as credit card numbers, IMEI numbers, National Provider Identifier numbers in US and Canadian Social Insurance Numbers. Returns true on success or false on failure.

If this function returns false, you can be sure the number is not valid. But if the function returns true, you may want to check the number online with some database.

113.3.2 ACosHMBS(x as Double) as Double

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function computes the inverse hyperbolic cosine of the real argument x.
Example:
MsgBox str(ACosHMBS(5))

Notes:
acosh(1) returns +0.
acosh(x) returns a NAN for x <1.
acosh(+infinity) returns +infinity.

113.3.3 ACosMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function computes the principal value of the arc cosine of x in the range [ 0, pi ] .
Example:
113.3. GLOBALS

MsgBox str(ACosMBS(5))

Notes:
acos(1) returns +0.
acos(x) returns a NAN for |x| > 1.

113.3.4 ArithmeticShiftMBS(value as UInt64, count as Integer) as UInt64

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Does an arithmetic Shift of value and cares for the sign (+ or -).
**Example:**

msgbox str(ArithmeticShiftMBS(5,3))

// displays 40 which is 5*(2^3) = 5 * 8

Notes: Always using 32bit.

113.3.5 ASinHMBS(x as Double) as Double

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function computes the principal value of the arc sine of x in the range [-pi/2, +pi/2].
**Example:**

MsgBox str(ASinHMBS(5))

Notes:
asin(+-0) returns +-0.
asin(x) returns a NAN for |x| > 1.

113.3.6 ASinMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function computes the principal value of the arc sine of x in the range [-pi/2, +pi/2].
**Example:**
DECLARE ASINMBS(5)

Notes:

asin(+0) returns +0.
asin(x) returns a NAN for |x| > 1.

113.3.7 ATan2MBS(x as Double, y as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function computes the principal value of the arc tangent of y/x, using the signs of both arguments to determine the quadrant of the return value.

**Example:**

MsgBox str(ATan2MBS(3,4))

Notes:

atan2(+0, -0) returns +pi.
atan2(+0, +0) returns +0.
atan2(+0, x) returns +pi for x < 0.
atan2(+0, x) returns +0 for x > 0.
atan2(y, +0) returns -pi/2 for y > 0.
atan2(-y, -infinity) returns +pi for finite y > 0.
atan2(-y, +infinity) returns +0 for finite y > 0.
atan2(+infinity, +x) returns +pi/2 for finite x.
atan2(+infinity, -infinity) returns +3*pi/4.
atan2(+infinity, +infinity) returns +pi/4.

113.3.8 ATanHMBS(x as Double) as Double

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function computes the inverse hyperbolic tangent of the real argument x.

**Example:**

MsgBox str(ATanHMBS(5))

Notes:

atanh(+0) returns +0.
atanh(+1) returns +infinity.
atanh(x) returns a NaN for \( |x| > 1 \).

### 113.3.9 ATanMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The atan() function computes the principal value of the arc tangent of x in the range \([-\pi/2, +\pi/2]\).  
**Example:**
MsgBox str(ATanMBS(5))

**Notes:**
atan(+0) returns +0.
atan(+infinity) returns +\(\pi/2\).

### 113.3.10 BitClearMBS(value as UInt64, mask as UInt64) as UInt64

MBS Util Plugin, Plugin Version: 6.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Clears the bits in the mask from the value.  
**Example:**
MsgBox bin(BitClearMBS(& b1111, & b0110)) // 1001

**Notes:** Does not work for 64 bit integers.

### 113.3.11 BitCountMBS(value as UInt64) as Integer

MBS Util Plugin, Plugin Version: 6.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
Counts the number of bits set.  
**Example:**
MsgBox str(BitCountMBS(& b101)) // 2  
MsgBox str(BitCountMBS(& b10101)) // 5  
MsgBox str(BitCountMBS(& b111111111100001111)) // 16  
MsgBox str(BitCountMBS(& hFFFFFFFF)) // 32

**Notes:** Does not work for 64 bit integers.
113.3.12 BitExclMBS(value as UInt64, bitNumber as Integer) as UInt64

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Does an bitwiseAnd using the value and bitwisenot of 2^bitNumber.
Or: Switches off the bit bitNumber inside value.

**Example:**
```
msgBox str(BitExclMBS(80,4))
```

' displays 64 which is 80 without 16 = 2^4+2^5 without 2^4

**Notes:** Always using 64-bit.

113.3.13 BitInclMBS(value as UInt64, bitNumber as Integer) as UInt64

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Does an bitwiseOr using the value and 2^bitNumber
Or: Switches on the bit bitNumber inside value.

**Example:**
```
msgBox str(BitInclMBS(64,4))
```

' displays 80 which is 64 + 16 = 64 + 2^4

**Notes:** Always using 64-bit.

113.3.14 BitIsSetMBS(value as UInt64, bitNumber as Integer) as Boolean

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Tests whether a certain bit is set inside the value

**Example:**
```
dim bool as boolean

bool=BitIsSetMBS(80,4)
` true, because 2^4=16 is included in 80=2^4+2^6
```

**Notes:** Always using 64-bit.
113.3.15 **BitValMBS**(bitNumber as Integer) as UInt64

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns $2^{\text{bitNumber}}$

**Example:**

```plaintext
msgBox str(BitValMBS(5))
' displays 32
```

**Notes:** Always using 64-bit.

113.3.16 **BitwiseDiffMBS**(x as UInt64, y as UInt64) as UInt64

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns all bits of val1 which are not in val2.

**Example:**

```plaintext
msgBox str(BitwiseDiffMBS(65,80))
' displays 1, because 65=$2^0+2^5$ includes $1=2^0$, which is not part of $80=2^4+2^5$.
```

**Notes:** Always using 32bit.

113.3.17 **BitwiseNAndMBS**(x as UInt64, y as UInt64) as UInt64

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** negates both values and does bitwiseAnd on them.

**Example:**

```plaintext
msgBox str(bitwiseNandMBS(65,80))
' displays -82
```

**Notes:** Always using 32bit.

113.3.18 **BitwiseNOrMBS**(x as UInt64, y as UInt64) as UInt64

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** negates both values and does bitwiseOr on them.

**Example:**

```plaintext

```
msgBox str(bitwisenorMBS(65,80))
' displays -65

Notes: Always using 32bit.

113.3.19 BitwiseNotMBS(value as UInt64) as UInt64

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Does an bitwise negation of value.
**Example:**
msgBox str(BitwiseNotMBS(5))
' displays -6

Notes: Always using 32bit.

113.3.20 BitwiseRotateMBS(value as UInt64, count as Integer, offset as Integer, width as Integer) as UInt64

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Does an bitwise rotation of value.
**Example:**
msgBox str(BitwiseRotateMBS(5,2,0,32))
' displays 20

Notes: Always using 32bit.

113.3.21 ConvertFromFloat16MBS(Number as UInt16) as Single

MBS Util Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts a 16bit floating point number to a 32bit floating point number.
**Example:**
dim h1 as UInt16 = ConvertToFloat16MBS(1.0)
dim f1 as single = ConvertFromFloat16MBS(h1) // should be 1.0
113.3. GLOBALS

```vbnet
Dim h2 As UInt16 = ConvertToFloat16MBS(-1.0)
Dim f2 As Single = ConvertFromFloat16MBS(h2) ' should be -1.0

Dim h3 As UInt16 = ConvertToFloat16MBS(1000.0)
Dim f3 As Single = ConvertFromFloat16MBS(h3) ' should be 1000.0

Dim h4 As UInt16 = ConvertToFloat16MBS(-1000.0)
Dim f4 As Single = ConvertFromFloat16MBS(h4) ' should be -1000.0

Dim inf As Single = 65504.0
Dim h5 As UInt16 = ConvertToFloat16MBS(inf)
Dim f5 As Single = ConvertFromFloat16MBS(h5) ' should be 65504

Dim nan As Single = Sqrt(-1)
Dim h6 As UInt16 = ConvertToFloat16MBS(nan)
Dim f6 As Single = ConvertFromFloat16MBS(h6) ' should be NAN

Break ' check in debugger
```

113.3.2 ConvertToFloat16MBS(Number As Single) as UInt16

MBS Util Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts a 32bit floating point number to a 16bit floating point number. **Example:**

```vbnet
Dim h1 As UInt16 = ConvertToFloat16MBS(1.0)
Dim f1 As Single = ConvertFromFloat16MBS(h1) ' should be 1.0

Dim h2 As UInt16 = ConvertToFloat16MBS(-1.0)
Dim f2 As Single = ConvertFromFloat16MBS(h2) ' should be -1.0

Dim h3 As UInt16 = ConvertToFloat16MBS(1000.0)
Dim f3 As Single = ConvertFromFloat16MBS(h3) ' should be 1000.0

Dim h4 As UInt16 = ConvertToFloat16MBS(-1000.0)
Dim f4 As Single = ConvertFromFloat16MBS(h4) ' should be -1000.0
```
dim inf as single = 65504.0
dim h5 as UInt16 = ConvertToFloat16MBS(inf)
dim f5 as single = ConvertFromFloat16MBS(h5) // should be 65504

dim nan as single = sqrt(-1)
dim h6 as UInt16 = ConvertToFloat16MBS(nan)
dim f6 as single = ConvertFromFloat16MBS(h6) // should be NAN

Break // check in debugger

Notes: This loses precision as 16bit fit less bits than 32 bit.

113.3.23 CosHMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This function computes the hyperbolic cosine of x.
**Example:**
MsgBox str(CosHMBS(5))

Notes:
cosh(+0) returns 1.
cosh(+infinity) returns +infinity.

113.3.24 CosMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
This function computes the cosine of x (measured in radians).
**Example:**
MsgBox str(CosMBS(5))

Notes:
cos(+0) returns 1.
cos(+infinity) returns a NaN.
113.3.25 CurrencyAddMBS(value1 as Currency, value2 as Currency) as Currency

MBS Util Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds two currency values. **Notes:** This function uses 64bit integer math to avoid rounding issues.

113.3.26 CurrencyDivMBS(value1 as Currency, value2 as Integer) as Currency

MBS Util Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Divides currency value by integer. **Notes:** Rest is ignored. This function uses 64bit integer math to avoid rounding issues.

113.3.27 CurrencyMulMBS(value1 as Currency, value2 as Integer) as Currency

MBS Util Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Multiplies currency value with integer. **Example:**

```xojo
dim c1 as Currency = 1234567890.1234

// in xojo
dim c3 as Currency = c1 * 12345

// with plugin
dim c4 as Currency = CurrencyMulMBS(c1, 12345)

// verify by 64bit math
dim c5 as Int64 = 12345678901234
dim c6 as int64 = c5 * 12345

// and plugin is correct
MsgBox str(c3)+" "+str(c4)+" "+str(c6)
```

**Notes:** This function uses 64bit integer math to avoid rounding issues.
113.3.28 CurrencySubMBS(value1 as Currency, value2 as Currency) as Currency

MBS Util Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Subtracts value2 from value1. **Notes:** This function uses 64bit integer math to avoid rounding issues.

113.3.29 CurrencyValueMBS(value as string) as Currency

MBS Util Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses string into currency value. **Notes:** Replacement for val() which works better with large numbers and raises exceptions on errors.

113.3.30 DoubleToExtendedStrMBS(x as Double) as string

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the double as an 80bit Float stored inside a ten byte string. **Example:**

```vba
dim s as string
dim d as Double
d=5
s=DoubleToExtendedStrMBS(d)
msgBox s
d=extendedStrToDoubleMBS(s)
msgBox str(d)
```

**Notes:** Returns "" if there is not enough memory to create the string.

113.3.31 Exp2MBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function computes 2^x, the base-2 exponential of x. **Example:**

MsgBox str(Exp2MBS(5))

**Notes:**
113.3. GLOBALS

exp2(+-0) return 1.
exp2(-infinity) return +0.
exp2(+infinity) return +infinity.

113.3.32 ExpMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function: This function computes e^x, the base-e exponential of x. Example:
MsgBox str(ExpMBS(5))

Notes:
exp(+0) return 1.
exp(-infinity) return +0.
exp(+infinity) return +infinity.

113.3.33 ExtendedStrToDoubleMBS(v as string) as Double

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. Function: Returns the 80bit Float as a double. Example:
dim s as string
dim d as Double
d=5
s=DoubleToExtendedStrMBS(d)
msgBox s
d=extendedStrToDoubleMBS(s)
msgBox str(d)

Notes:
Returns NAN (255) if the string is not valid. e.g. "". Returns always NAN on Windows.
113.3.34 FacMBS(x as Integer) as Double

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates (value!).

**Example:**

```vba
Sub Open()
    // Fill a listbox with Fac values:
    Dim x As Integer
    Dim y As Double
    For x = 1 To 100
        ListBox1.AddItem Format(x, "0")
        y = FacMBS(x)
        If y = 0 Then
            Exit
        Else
            ListBox1( letztenIndex, 1) = Format(y, "0")
        End If
    Next
End Sub
```

**Notes:**

```vba
MsgBox str(FacMBS(5))
' displays 120 which is 1*2*3*4*5
```

113.3.35 FloorMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function returns the largest integral value less than or equal to x.

**Example:**

```vba
MsgBox str(FloorMBS(5.45))
```

**Notes:**

```vba
floor(+-0) returns +-0.
floor(+-infinity) returns +-infinity.
```
113.3.36  **FRExpMBS(inputx as Double, byref expValue as Integer) as Double**

MBS Util Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** Breaks floating-point number into normalized fraction and power of 2.  
**Example:**

```vba
dim x as Double = 123.456

dim y as Integer
dim r as Double = FRExpMBS(x, y)

MsgBox str(x)+"": ""+str(y)+""""+str(r)
```

**Notes:**
This function breaks the floating-point number value into a normalized fraction and an integral power of 2. They store the integer in the int object pointed to by exp.

The functions return a number x such that x has a magnitude in the interval [ 1/2, 1) or 0, and value = x*(2^exp).

frexp(+0, exp) returns +0, and stores 0 in the object pointed to by exp.

frexp(+infinity, exp) returns +infinity, and stores an unspecified value in the object pointed to by exp.

frexp(Nan, exp) returns a Nan, and stores an unspecified value in the object pointed to by exp.

113.3.37  **HiWordMBS(i as Integer) as Integer**

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.  **Function:** Returns the high word part of the integer.  
**Example:**

```vba
MsgBox hex(HiWordMBS(&H12345678)) // shows 1234
```

**Notes:** equal to bitwiseshiftright(i,16)
113.3.38 **HypotMBS(x as Double, y as Double) as Double**

MBS Util Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function computes the $\sqrt{x^2+y^2}$ without undue overflow or underflow. **Example:**

MsgBox str(HypotMBS(3,4)) // shows 5

**Notes:**

- hypot(x, y), hypot(y, x), and hypot(x, -y) are equivalent.
- hypot(x, +0) is equivalent to fabs(x).
- hypot(+-infinity, y) returns +infinity even if y is a NaN.

113.3.39 **IsFiniteMBS(x as Double) as boolean**

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the parameter is finite. **Example:**

```vbnet
dim x as Double
x=1/0
if not IsFiniteMBS(x) then
    msgbox "the result is Infinite."
end if
```

113.3.40 **IsInfMBS(x as Double) as boolean**

MBS Util Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the double passed in is an infinity value. **Example:**

```vbnet
dim e as Double = 0.0000000000000000000000000000000000000000000000001
dim d as Double = 1.0/e/e/e/e/e/e
MsgBox str(d)+" is inf: "+str(IsInfMBS(d))
```
113.3.1 GLOBALS

113.3.41 **IsNANMBS(x as Double) as boolean**

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the parameter is not a number.

**Example:**

```vba
dim x as Double
x=sqrt(-1)
if isnanMBS(x) then
  msgbox "the square root of -1 is not correct."
end if
```

113.3.42 **Log10MBS(x as Double) as Double**

MBS Util Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function computes the value of the logarithm of argument x to base 10.

**Example:**

```vba
MsgBox str(Log10MBS(5))
```

**Notes:**

- \( \log_{10}(1) \) return +0.
- \( \log_{10}(x) \) return a NaN for \( x < 0 \).
- \( \log_{10}(+\infty) \) return +\( \infty \).

113.3.43 **Log2MBS(x as Double) as Double**

MBS Util Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function computes the value of the logarithm of argument x to base 2.

**Example:**

```vba
MsgBox str(Log2MBS(5))
```

**Notes:**

- \( \log_{2}(1) \) return +0.
- \( \log_{2}(x) \) return a NaN for \( x < 0 \).
- \( \log_{2}(+\infty) \) return +\( \infty \).
113.3.44  **LogicalShiftMBS**(value as UInt64, count as Integer) as UInt64

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Does an logical Shift of value and doesn’t take care for the sign (+ or -).

**Example:**

```
msgbox str(LogicalShiftMBS(5,3))
```

**Notes:** Always using 32bit.

113.3.45  **LogMBS**(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function computes the value of the logarithm of argument x to base e.

**Example:**

```
MsgBox str(LogMBS(5))
```

**Notes:**

- \( \log(1) \) return +0.
- \( \log(x) \) return a NaN for \( x < 0 \).
- \( \log(+\infty) \) return +\( \infty \).

113.3.46  **LoWordMBS**(i as Integer) as Integer

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the low word part of the integer.

**Example:**

```
MsgBox hex(LoWordMBS(& H12345678))  // shows 5678
```

**Notes:** equal to bitwiseand(i, & HFFFF)

113.3.47  **PowMBS**(x as Double, y as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function computes x raised to the power y.
113.3. GLOBALS

Example:

MsgBox str(PowMBS(5,5))

Notes:

`pow(+0, y)` returns `+infinity` for `y` an odd integer `<0.`
`pow(+0, y)` returns `+infinity` for `y` `<0` and not an odd integer.
`pow(+0, y)` returns `+0` for `y` an odd integer `>0`.
`pow(+0, y)` returns `+0` for `y` `>0` and not an odd integer.
`pow(-1, +infinity)` returns `1`.
`pow(1, y)` returns `1` for any `y`, even a NaN.
`pow(x, +0)` returns `1` for any `x`, even a NaN.
`pow(x, y)` returns a NaN for finite `x` `<0` and finite non-integer `y`.
`pow(x, -infinity)` returns `+infinity` for `| x | <1`.
`pow(x, -infinity)` returns `+0` for `| x | >1`.
`pow(x, +infinity)` returns `+infinity` for `| x | >1`.
`pow(-infinity, y)` returns `-0` for `y` an odd integer `<0`.
`pow(-infinity, y)` returns `+0` for `y` `<0` and not an odd integer.
`pow(-infinity, y)` returns `-infinity` for `y` an odd integer `>0`.
`pow(-infinity, y)` returns `+infinity` for `y` `>0` and not an odd integer.
`pow(+infinity, y)` returns `+0` for `y` `<0`.
`pow(+infinity, y)` returns `+infinity` for `y` `>0`.

Range errors may occur.

113.3.48 RoundMBS(x as Double, decimals as Integer = 0) as Double

MBS Util Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. Function:
This function returns the integral value nearest to `x` rounding half-way cases away from zero, regardless of the current rounding direction.
Example:

MsgBox str(RoundMBS(5,5))

dim lines(-1) as string

for i as Integer = -5 to 5
    lines.Append str(i)+" : "+Format(RoundMBS(123456789.123456789, i), "0.000000")
next

MsgBox join(lines,EndOfLine)
113.3.49 SinHMBS(x as Double) as Double

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function computes the hyperbolic sine of x.
**Example:**
MsgBox str(SinHMBS(5.5))

**Notes:**
sinh(+0) returns +0.
sinh(+infinity) returns +infinity.

113.3.50 SinMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function computes the sine of x (measured in radians).
**Example:**
MsgBox str(SinMBS(5.5))

**Notes:**
sin(+0) returns +0.
sin(+infinity) returns a NaN.

113.3.51 SqrtMBS(x as Double, y as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This function compute the yth root of x.
**Example:**

dim r,x,y as Double
r=SqrtMBS(x,y)
// r^y=x
Notes:
sqrt(-0) returns -0.
sqrt(x,y) returns a NaN if the root can’t be calculated.

### 113.3.52 \textbf{TanHMBS}(x \text{ as }\text{ Double}) \text{ as Double}

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. \textbf{Function:} This function computes the hyperbolic tangent of x.

\textbf{Example:}

\texttt{MsgBox str(TanHMBS(5.5))}

\begin{itemize}
  \item tanh(+-0) returns +-0.
  \item tanh(+-infinity) returns +-1.
\end{itemize}

### 113.3.53 \textbf{TanMBS}(x \text{ as }\text{ Double}) \text{ as Double}

MBS Util Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. \textbf{Function:} This function computes the tangent of x (measured in radians).

\textbf{Example:}

\texttt{MsgBox str(TanMBS(5.5))}

\begin{itemize}
  \item tan(+-0) returns +-0.
  \item tan(+-infinity) returns a NaN.
\end{itemize}

### 113.3.54 \textbf{DoubleToInt64MBS}(value \text{ as }\text{ Double}) \text{ as }\text{ Int64}

MBS Util Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. \textbf{Function:} Converts a double value to Int64.
113.3.55 DoubleToUInt64MBS(value as Double) as UInt64

MBS Util Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts a double value to UInt64 correctly.

**Example:**

```java
// set d to a very high UInt64 value
dim d as Double = pow(256.0, 8.0) - 10000

// RB will convert to Int64 here! so number is cut to 9... instead of 18...
dim u1 as UInt64 = d

// plugin does it right
dim u2 as UInt64 = DoubleToUInt64MBS(d)

MsgBox str(u1) + " " + str(u2)
```

**Notes:** Real Studio converts UInt64 to Double with an intermediate Int64 which breaks big numbers. This function does it correctly.

113.3.56 Int64ToDoubleMBS(value as Int64) as Double

MBS Util Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts an Int64 to Double.

113.3.57 UInt64ToDoubleMBS(value as UInt64) as Double

MBS Util Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts an UInt64 to Double.

**Example:**

```java
dim d as Double = 18446744073709541376
MsgBox str(d) // fails

dim e as Double = UInt64ToDoubleMBS(18446744073709541376)
MsgBox str(e) // works
```

**Notes:** Real Studio likes to use Int64 internally when doing math with UInt64, so we added this method to fix it.
113.4  class SplineMBS

113.4.1  class SplineMBS

This class calculates a 2D cubic spline. Function:

Notes: The curve goes smooth through all points.

113.4.2  Methods

113.4.3  a(index as Integer) as Double

Function:
The constant part of the coefficient.

113.4.4  b(index as Integer) as Double

Function:
The 1st order coefficient.

113.4.5  c(index as Integer) as Double

Function:
The 2nd order coefficient.

113.4.6  calc(x as Double) as Double

Function:
Calculates the Y value on the spline for a given X value.

113.4.7  Constructor(X() as Double, Y() as Double)

Function:
The constructor.
Raises an exception for invalid arrays passed, e.g. different size.
Calculates the spline curve coefficients and sets count property.

### 113.4.8 d(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The 3rd order coefficient.

### 113.4.9 x(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The x value for this coefficient.

### 113.4.10 y(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The y value for this coefficient.

### 113.4.11 Properties

### 113.4.12 count as Integer

MBS Util Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**
The number of coefficients.
**Notes:** (Read and Write property)
113.5. **MODULE SUNTIMESMBS**

### 113.5 module SunTimesMBS

MBS Util Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A helper module to calculate sunset/sunrise times.

**Example:**

// may be an hour off due to daylight saving time

dim d as new date

dim jd as Double = SunTimesMBS.CalcJulianDate(d.day, d.Month, d.Year)

// Koblenz, Germany
const latitude = 50.356667
const longitude = 7.593889

// Miami, FL
'const latitude = 25.787778
'const longitude = -80.224167

dim sr as Double = SunTimesMBS.CalcSunriseUTC(jd, latitude, longitude)
dim ss as Double = SunTimesMBS.CalcSunsetUTC (jd, latitude, longitude)

d.gmtoffset = 0
d.hour = 0
d.minute = 0
d.second = 0

dim base as Double = d.totalseconds
d.totalseconds = sr* 60 + base

MsgBox "Sunrise: " +d.longdate+" " +d.longtime

d.totalseconds = ss* 60 + base

MsgBox "Sunset: " +d.longdate+" " +d.longtime

**Notes:** The example code above works well, but seems not to take into account the daylight saving time.
113.5.2 Methods

113.5.3 CalcJulianDate(day as Integer, month as Integer, year as Integer) as Double

113.5.4 CalcSunriseUTC(JD as Double, latitude as Double, longitude as Double) as Double

Notes:
Returns time on date in minutes.
Use CalcJulianDate to calculate the JD parameter.

113.5.5 CalcSunsetUTC(JD as Double, latitude as Double, longitude as Double) as Double

Notes:
Returns time on date in minutes.
Use CalcJulianDate to calculate the JD parameter.
Chapter 114

Media Keys

114.1 class MediaKeysMBS

114.1.1 class MediaKeysMBS

Function: Catch some special keys with this class.

Example:

```plaintext
dim m as MediaKeysMBS // global property!

// app initialization
m = new MediaKeysMBS

// set which keys to watch for
m.Keys(MediaKeysMBS.kMediaKeyEject) = MediaKeysMBS.kModeEventAndBlock

// and start
m.startWatchingMediaKeys
```

Notes:
First written to catch play, fast and rewind keys from Apple keyboards.
Later extended to also catch other keys.
Still not all keys are available on all keyboards.

Please have only instance of this class running your application.
114.1.2 Methods

114.1.3 Constructor

Function: Initializes the key watcher.

114.1.4 Keys(keyCode as Integer) as Integer

Function: Which keys should be intercepted and handled by your application.
Example:

dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyEject) = MediaKeysMBS.kModeEventAndBlock

Notes: (Read and Write computed property)

114.1.5 startWatchingMediaKeys

Function: Starts watching for keys.
Example:

dim m as MediaKeysMBS // global property!

// app initialization
m = new MediaKeysMBS

m.Keys(MediaKeysMBS.kMediaKeyEject) = MediaKeysMBS.kModeEventAndBlock
m.startWatchingMediaKeys

114.1.6 stopWatchingMediaKeys

Function: Stops watching for keys.
Example:
114.1. CLASS MEDIAKEYSMBS

\[\text{dim m as MediaKeysMBS} \quad // \text{global property}\]

// when closing media window
m.stopWatchingMediaKeys

Notes: The destructor calls this for cleanup.

114.1.7 Events

114.1.8 receivedMediaKeyEvent(e as NSEventMBS, keyCode as Integer, keyFlags as Integer, keyState as Integer, keyRepeat as Integer)

Function: The event called when the user uses one of the special keys we listen for.

Notes:
If you don’t get the event, did you make sure all conditions are right?

- Requires Mac OS X 10.5
- Keys(x) set to kModeEventAndBlock or kModeEventAndPass for the keys you need?
- startWatchingMediaKeys called?
- your object is still alive in your application?

114.1.9 Constants

114.1.10 kMediaKeyBrightnessDown = 3

MBS MacFrameworks Plugin, Plugin Version: 11.2. Function: One of the key constants.

Example:
\[\text{dim m as new MediaKeysMBS} \quad // \text{your MediaKeys object}\]

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyBrightnessDown) = MediaKeysMBS.kModeEventAndBlock
114.1.11  \texttt{kMediaKeyBrightnessUp} = 2

MBS MacFrameworks Plugin, Plugin Version: 11.2. \textbf{Function:} One of the key constants. 
\textbf{Example:}

\begin{verbatim}
dim m as new MediaKeysMBS // your MediaKeys object

  // watch for this key
m.Keys(MediaKeysMBS.kMediaKeyBrightnessUp) = MediaKeysMBS.kModeEventAndBlock
\end{verbatim}

114.1.12  \texttt{kMediaKeyCapsLock} = 4

MBS MacFrameworks Plugin, Plugin Version: 11.2. \textbf{Function:} One of the key constants. 
\textbf{Example:}

\begin{verbatim}
dim m as new MediaKeysMBS // your MediaKeys object

  // watch for this key
m.Keys(MediaKeysMBS.kMediaKeyCapsLock) = MediaKeysMBS.kModeEventAndBlock
\end{verbatim}

\textbf{Notes:} Caps Lock

114.1.13  \texttt{kMediaKeyContrastDown} = 12

MBS MacFrameworks Plugin, Plugin Version: 11.2. \textbf{Function:} One of the key constants. 
\textbf{Example:}

\begin{verbatim}
dim m as new MediaKeysMBS // your MediaKeys object

  // watch for this key
m.Keys(MediaKeysMBS.kMediaKeyContrastDown) = MediaKeysMBS.kModeEventAndBlock
\end{verbatim}

114.1.14  \texttt{kMediaKeyContrastUp} = 11

MBS MacFrameworks Plugin, Plugin Version: 11.2. \textbf{Function:} One of the key constants. 
\textbf{Example:}

\begin{verbatim}
dim m as new MediaKeysMBS // your MediaKeys object

  // watch for this key
\end{verbatim}
114.1. CLASS MEDIAKEYSMBS

m.Keys(MediaKeysMBS.kMediaKeyContrastUp) = MediaKeysMBS.kModeEventAndBlock

114.1.15  kMediaKeyDownArrow = 9

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the key constants. **Example:**

dim m as new MediaKeysMBS // your MediaKeys object

    // watch for this key
m.Keys(MediaKeysMBS.kMediaKeyDownArrow) = MediaKeysMBS.kModeEventAndBlock

114.1.16  kMediaKeyEject = 14

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the key constants. **Example:**

dim m as new MediaKeysMBS // your MediaKeys object

    // watch for this key
m.Keys(MediaKeysMBS.kMediaKeyEject) = MediaKeysMBS.kModeEventAndBlock

**Notes:** Eject key

114.1.17  kMediaKeyFast = 19

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the key constants. **Example:**

dim m as new MediaKeysMBS // your MediaKeys object

    // watch for this key
m.Keys(MediaKeysMBS.kMediaKeyFast) = MediaKeysMBS.kModeEventAndBlock

**Notes:** Fast key. On by default.
114.1.18  kMediaKeyHelp = 5

MBS MacFrameworks Plugin, Plugin Version: 11.2.  **Function:** One of the key constants.  
**Example:**

dim m as new MediaKeysMBS  // your MediaKeys object

    // watch for this key
m.Keys(MediaKeysMBS.kMediaKeyHelp) = MediaKeysMBS.kModeEventAndBlock

114.1.19  kMediaKeyIlluminationDown = 22

MBS MacFrameworks Plugin, Plugin Version: 11.2.  **Function:** One of the key constants.  
**Example:**

dim m as new MediaKeysMBS  // your MediaKeys object

    // watch for this key
m.Keys(MediaKeysMBS.kMediaKeyIlluminationDown) = MediaKeysMBS.kModeEventAndBlock

114.1.20  kMediaKeyIlluminationToggle = 23

MBS MacFrameworks Plugin, Plugin Version: 11.2.  **Function:** One of the key constants.  
**Example:**

dim m as new MediaKeysMBS  // your MediaKeys object

    // watch for this key
m.Keys(MediaKeysMBS.kMediaKeyIlluminationToggle) = MediaKeysMBS.kModeEventAndBlock

114.1.21  kMediaKeyIlluminationUp = 21

MBS MacFrameworks Plugin, Plugin Version: 11.2.  **Function:** One of the key constants.  
**Example:**

dim m as new MediaKeysMBS  // your MediaKeys object

    // watch for this key
m.Keys(MediaKeysMBS.kMediaKeyIlluminationUp) = MediaKeysMBS.kModeEventAndBlock
114.1.22  

**kMediaKeyLaunchPanel = 13**

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the key constants. **Example:**

```vbnet
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyLaunchPanel) = MediaKeysMBS.kModeEventAndBlock
```

114.1.23  

**kMediaKeyMute = 7**

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the key constants. **Example:**

```vbnet
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyMute) = MediaKeysMBS.kModeEventAndBlock
```

**Notes:** Sound Mute

114.1.24  

**kMediaKeyNext = 17**

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the key constants. **Example:**

```vbnet
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyNext) = MediaKeysMBS.kModeEventAndBlock
```
114.1.25  kMediaKeyNumLock = 10

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the key constants. **Example:**

```plaintext
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyNumLock) = MediaKeysMBS.kModeEventAndBlock
```

**Notes:** Num Lock key

114.1.26  kMediaKeyPlay = 16

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the key constants. **Example:**

```plaintext
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyPlay) = MediaKeysMBS.kModeEventAndBlock
```

**Notes:** Play key. On by default.

114.1.27  kMediaKeyPower = 6

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the key constants. **Example:**

```plaintext
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyPower) = MediaKeysMBS.kModeEventAndBlock
```

**Notes:** Power Key
114.1. CLASS MEDIAKEYSMBS

114.1.28  kMediaKeyPrevious = 18

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the key constants.

**Example:**

dim m as new MediaKeysMBS // your MediaKeys object

    // watch for this key
    m.Keys(MediaKeysMBS.kMediaKeyPrevious) = MediaKeysMBS.kModeEventAndBlock

**Notes:** Previous key

114.1.29  kMediaKeyRewind = 20

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the key constants.

**Example:**

dim m as new MediaKeysMBS // your MediaKeys object

    // watch for this key
    m.Keys(MediaKeysMBS.kMediaKeyRewind) = MediaKeysMBS.kModeEventAndBlock

**Notes:** Rewind Key. On by default.

114.1.30  kMediaKeySoundDown = 1

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the key constants.

**Example:**

dim m as new MediaKeysMBS // your MediaKeys object

    // watch for this key
    m.Keys(MediaKeysMBS.kMediaKeySoundDown) = MediaKeysMBS.kModeEventAndBlock

**Notes:** Sound down
114.1.31  kMediaKeySoundUp = 0

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the key constants.
**Example:**

```vbnet
dim m as new MediaKeysMBS ' your MediaKeys object

' watch for this key
m.Keys(MediaKeysMBS.kMediaKeySoundUp) = MediaKeysMBS.kModeEventAndBlock
```

**Notes:** Sound up

114.1.32  kMediaKeyUpArrow = 8

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the key constants.
**Example:**

```vbnet
dim m as new MediaKeysMBS ' your MediaKeys object

' watch for this key
m.Keys(MediaKeysMBS.kMediaKeyUpArrow) = MediaKeysMBS.kModeEventAndBlock
```

114.1.33  kMediaKeyVideoMirror = 15

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the key constants.
**Example:**

```vbnet
dim m as new MediaKeysMBS ' your MediaKeys object

' watch for this key
m.Keys(MediaKeysMBS.kMediaKeyVideoMirror) = MediaKeysMBS.kModeEventAndBlock
```

114.1.34  kModeBlock = 1

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the mode constants.
**Notes:** Block the event.
114.1. CLASS MEDIAKEYSMBS

114.1.35  kModeEventAndBlock = 2

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the mode constants. **Notes:** Call the receivedMediaKeyEvent event and block the event.

114.1.36  kModeEventAndPass = 3

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the mode constants. **Notes:** Call the receivedMediaKeyEvent event and pass the event to other applications.

114.1.37  kModePass = 0

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the mode constants. **Notes:** Pass event to other applications.
Chapter 115

MediaLibrary

115.1  class MLMediaGroupMBS

115.1.1  class MLMediaGroupMBS

Function: The MLMediaGroup class provides groupings for media objects from a single source of media, such as iTunes or Aperture.

Notes:

The media objects — individual files containing a piece of media such as a photo, song, or movie — are referenced by one or more groups within each media source. These groupings serve as filters, providing hierarchical structure to the collection of objects in each source.

The structure of the group hierarchy is specific to each media source, but all sources have certain commonalities. For example, every source has a single root media group, which contains all groups and objects within that source. It is the highest-level parent group in the hierarchy and each of its descendant groups contains its own subgroups and their objects. All groups have a reference to their parent within the hierarchy. A group with no descendants contains only its own objects. If a media group does not contain any objects, it is not visible in the hierarchy.

A media group has an array of attributes which can change at any point. For example, a media group may have certain attributes that describe its objects, but these attributes appear only after the objects for that group have been loaded. When any media group attribute changes, observers are notified via KVO notification. For information about handling attributes that change, see Cocoa Bindings Programming Topics.

Every media group has a unique identifier as well as a type identifier. In certain cases, multiple groups within a source can have the same type identifier. For descriptions of group type identifiers, see MediaLibrary Constants.

All MLMediaGroup properties are read-only, so this information can be accessed but not altered.
115.1.2 Methods

115.1.3 childGroups as MLMediaGroupMBS()

MBS Mac64bit Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A list of child groups contained in the media group.

115.1.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

115.1.5 mediaObjects as MLMediaObjectMBS()

MBS Mac64bit Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A list of media objects in the media group. **Notes:** This accessor property is nonblocking. If there is no data yet, it returns nil and automatically triggers an internal asynchronous request. A KVO notification will be sent via the main thread when data arrives.

115.1.6 MLAertureAllPhotosTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the identifiers for media group types in the Aperture media source. **Notes:** The media group that represents all photos in Aperture.

115.1.7 MLAertureAllProjectsTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the identifiers for media group types in the Aperture media source. **Notes:** The media group that represents all projects in Aperture.
115.1.8  MLApertureFacebookAlbumTypeIdentifier as String
